One technique for avoiding control limitations where the stock of a foreign corporation is wholly-owned by a widely-held domestic (U.S.) corporation, is to distribute the stock of the foreign subsidiary pro rata to the shareholders of the U.S. parent while pairing, or "stapling" the stock of the two separate entities by restricting the transfer of the stock of one without transferring the stock of the other. In some cases, the stock certificates of the stapled entities are printed on both sides of a single document. If the stock ownership of the domestic U.S. parent corporation is sufficiently widely-held, then the pro rata distribution of the stock of the foreign subsidiary to the shareholders of the U.S. parent will in most cases avoid the concentration of control in a few U.S. shareholders which is necessary for the corporation to be treated as a foreign personal holding company or controlled foreign corporation.

In the domestic context, stapled stock is used to enable those entities such as real estate investment trusts (REITs) and regulated investment companies (RICs), which are limited by statute to passive investments (in real property and securities respectively), to diversify their investments by pairing the stock of the REIT or RIC with the stock of another company which engages in a business which could not be carried on by the REIT or RIC.[62] In the case of a REIT (although not a RIC), which is prohibited from owning more than ten percent of the stock of another corporation,[63] it also cannot carry on the prohibited business in subsidiary form. To avoid these limitations, the stock of a newly formed subsidiary is distributed pro rata to the shareholders of the REIT or RIC in the same manner as the stock of a controlled foreign subsidiary would be distributed to the stockholders of its domestic parent.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The IRS approved this type of pairing transaction when undertaken by a REIT in a private letter ruling issued in 1979.[64] The distribution of the stock of the subsidiary to the REIT's shareholders, however, is taxable as a dividend to those shareholders since a REIT, by its nature, cannot satisfy the active trade or business requirement of §355 of the Code.[65] In many such paired stock split-offs, the "business purpose" requirement also will not be satisfied. In Rev. Proc. 81-4,[66] however, the IRS announced that it will not rule on the validity of a paired stock transaction where the activities of the REIT and the stapled corporation continue to be "integrated".

A third situation arises in the area of multiple surtax exemptions and multiple accumulated earnings tax credits. Sections 1561 and 1563 limit the ability of component members of a controlled group of corporations to accumulate multiple tax benefits in cases where one or more corporations are under common control. While the parent-subsidiary controlled group is the most obvious control situation, §1563 also covers brother-sister control groups in certain cases. Section 1563 covers corporations in which five or fewer persons own directly or indirectly at least 80 percent of the total combined voting power or at least 80 percent of the total value of shares of all classes of stock of each corporation or more than 50 percent of the voting power and 50 percent of the value of the stock of each corporation. This takes into account the stock ownership of each person to the extent that it is identical with respect to each corporation.[67] The statute arguably may not cover, however, the widely-held paired stock arrangement described above.

B. Overview

1. Statutory Changes

Section 136 of the Act adds §269B ("Stapled Entities"). Subsection (a) of §269B sets forth the general rules to be applied in the taxation of domestic and foreign stapled entities. First, if a domestic and foreign corporation are stapled entities, the foreign corporation shall be treated as a domestic corporation.[68] Next, §269B treats stock of a second corporation which is stapled to a first corporation as owned by the first corporation for purposes of §1563.[69] Finally, §269B provides that, in determining whether any stapled entity is a REIT or a RIC, all entities which are stapled with respect to each other shall be treated as one entity. The statute also contains a broad directive to the Secretary to prescribe regulations necessary to prevent avoidance or evasion of Federal income tax through the use of stapled entities, including regulations providing the extent to which one of such entities shall be treated as owning the other entity.[70]

The term "entity" includes, in addition to corporations, partnerships, trusts, associations, estates or any other form of carrying on a business or activity.[71] A "stapled entity" is any group of two or more entities if more than 50 percent in *value* of the beneficial ownership in each consists of stapled interests.[72] An interest is considered to be stapled if "by reason of form of ownership, the restrictions on transfer, or other terms or conditions, in connection with the transfer of 1 of such interests the other interests are also transferred or required to be transferred".[73]

In general no treaty or any other provision of the law shall be construed as permitting an exemption from the requirements of §269B. This provision, however, like many other provisions of the section is substantially modified by the effective dates summarized below.

2. Effective Dates

Section 269B is effective in general on the date of enactment of the Act (June 18, 1984). There are, however, six exceptions to the effective date which are designed to except from or substantially modify the result of the application of §269B to certain stapled entities in existence prior to the effective date.[74]

First, the Act provides that with respect to entities which were stapled on June 30, 1983, §269B shall take effect on January 1, 1985, or January 1, 1987 in the case of stapled interests in a foreign corporation. Next, the Act provides that it shall not apply to those REITs which were part of a group of stapled entities where all members of the group were stapled as of June 30, 1983 and, as of June 30, 1983 such group included one or more REITs. Third, the provisions applicable to stapled domestic and foreign corporations shall not apply to a "qualified Puerto Rican corporation" and a domestic corporation which were stapled on June 30, 1983. For this purpose, a "qualified Puerto Rican corporation" is a corporation which is described in §957(c) of the Code, so long as that corporation does not own any stock of a corporation which is not described in §957(c).[75] Fourth, the Act provides an exception for entities which were stapled as of June 30, 1983 and enjoyed a treaty benefit as of such date so that §269B of the Code shall not override such benefit. Fifth, there is a relief provision for those foreign and domestic corporations which, as of June 30, 1983, were stapled entities. Under this exception, the domestic corporation may treat the stapled foreign entity as a subsidiary to the extent of the stapled interests if such election is made not more than 180 days after the date of enactment in a manner to be prescribed by the Secretary of the Treasury or his delegate. The election thereafter may be revoked only by the Secretary or his delegate. Lastly, the Act provides that §269B(a) shall not apply to a "qualified real estate investment trust" which is part of a group of stapled entities created pursuant to a written board of directors resolution adopted before April 15, 1984 where all members of such group were stapled entities as of June 16, 1985. For this purpose a "qualified real estate investment trust" means any REIT, at least 75 percent of the gross income of which is derived from interest on obligations secured by mortgages on real property. Such interest must be at an arm's-length rate or a rate not more than one percent greater than the associated borrowing cost of the trust, and any real property held by the trust is not used in the trade or business of any other member of the stapled group.

C. Detailed Analysis

1. General Rules

Section 269B of the Code was designed to limit the abuse of the tax system and its special tax benefits (such as those granted to REITs) which result from the formal separation of control arising from the stapling of related entities.[76] In addition to the concerns illustrated by the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

examples in the Introduction, the Ways and Means Committee was concerned that the stapling of a taxable entity to a nontaxable entity or an entity subject to tax at a considerably lower rate might result in the opportunity to shift profits away from the taxable entity through improper transfer prices or other means which, while subject to correction under §482 have proven difficult to correct in practice.[77]

Section 269B(a)(1) treats stapled domestic and foreign corporations as two domestic corporations. Since the result of this would be to subject the stapled foreign corporation to U.S. tax on its worldwide income, the Act provides an exception in the effective date provisions for those foreign and domestic corporations which were stapled entities on June 30, 1983. The U.S. corporation in that case may elect to treat all of the stapled interests in the foreign corporation as owned by the U.S. corporation. In many cases this will result in the stapled foreign corporation being treated as a controlled foreign corporation or a foreign personal holding company.[78] The U.S. corporation therefore would be subject to tax on the undistributed foreign personal holding company income or subpart F income attributable to the stapled stock. Since the U.S. corporation would not be taxable on any of the earnings attributable to stock held by non-U.S. shareholders, this election generally would result in a smaller tax on the income of the stapled foreign entity than would be imposed if it were treated as a domestic corporation under §269B(a)(1).

Since all stapled entities will be treated as one in determining whether any corporation is a REIT or a RIC, §269B(a)(2) will reduce significantly the abuse of the tax benefits provided to those corporations, most of which will have to choose between abandoning their favorable tax status or decontrolling their stapled entities. A similar result will obtain where, for purposes of §1563 two stapled corporations are treated as one. These corporations, if they retain their stapled status, will lose the benefit of any multiple surtax exemptions and the denial of multiple accumulated earnings tax credits.[79] The House Committee Report notes, in addition, that under the standard rules governing consolidated returns, neither stapled U.S. corporations nor stapled U.S. and foreign corporations will be eligible to file consolidated returns. A contiguous country stapled corporation might, however, be eligible to consolidate under the rules described in §1504(d) if the election to treat the stapled entity as a subsidiary to the extent of the stapled interest is in effect.[80]

As noted above, two or more interests will be considered stapled if "by reason of form of ownership, restrictions on transfer, or other terms or conditions, in connection with the transfer of 1 of such interests the other such interests are also transferrred or required to be transferred."[81] The House Committee Report gives two examples of situations in which the terms and conditions of ownership will not result in the interests of two corporations being considered stapled. In the first, under a standard death redemption agreement, two U.S. citizens, each of whom own 50 percent of a U.S. corporation and a foreign corporation, have obligated their estates to sell all of the shares of the first shareholder to die, while each corporation has agreed to buy those shares. The Report notes that these shares are not stapled so long as each shareholder may trade shares of the two corporations freely before death.[82] A similar result would obtain where, instead of a death redemption agreement, the shares were subject to a right of first refusal in the corporation or the other shareholder at a certain price. In this case the shares would not be considered stapled so long as either shareholder might dispose of his interest in one corporation without disposing of his interest in the other.[83]

Since the Act defines "stapled entities" to mean any group of two or more entities where more than 50 percent in *value* of the beneficial ownership of each consists of stapled interests, it is conceivable that, in order to avoid §269B, U.S. corporations may attempt to formally "destaple" 50 percent of the beneficial ownership in the related entity, much in the same way as, in the controlled foreign corporation situation, there have been attempts to "decontrol" a foreign subsidiary through the formal transfer of voting rights to foreign interests. It may be anticipated that litigation, similar to that which has arisen under the controlled foreign corporation provisions, may arise concerning the extent to which 50 percent in value of an entity is in fact stapled to another such entity. Regulations to be promulgated under the directive of §269B(b) might effectively deal with this situation.

2. Exceptions

The effective date provisions provide a number of exceptions, outlined above, to the general provisions of Code §269B. One of these, the election to treat a stapled foreign entity as a subsidiary, has been discussed above. The general rule, that the stapled stock provisions will override treaties, will not restrict the availability of treaty benefits for entities stapled on June 30, 1983, so long as the treaty is not renegotiated.[84] The exception for U.S. corporations stapled to pre-existing Puerto Rican corporations was inserted because, under the possessions corporation rules (Code §936), tax benefits comparable to those of stapling are accorded to certain Puerto Rican corporations.[85] Finally, the Committee has indicated that the exception for pre-existing stapled REITs was inserted because the Internal Revenue Service, in private letter rulings, has explicitly sanctioned the stapling of REITs in the past.[86]

The Act provides all corporations, both foreign and domestic, which were stapled as of June 30, 1983 with a period of time in which to "destaple" their interests. Domestic corporations have until January 1, 1985 to destaple while domestic corporations which are stapled to foreign corporations have until January 1, 1987.

IV. Loss Deferrals Under §267 for Controlled Group Transactions

Expense and interest deductions for amounts owing from an accrual-basis entity to a cash-basis entity, which were formerly disallowed, are now, as a result of TRA §174, merely deferred until the expense or interest is actually paid and the cash-basis entity recognizes income. The former grace period for expenses or interest paid during the 2½ months following the close of the taxable year, during which time payments were not subject to disallowance under §267(a)(2), has been repealed. Now, any delay in payment by an accrual-basis taxpayer to a related cash-basis taxpayer will result in postponement of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the deduction for the expense or interest until actual payment.

The Act amends §267(b) to broaden the relationship rules. The extension of the relationship rules will apply to both the disallowance of loss on a sale or exchange of property between related parties and to the deferral of deductions for unpaid expenses and interests owed by an accrual-basis taxpayer to a cash-basis taxpayer. Section 267 will now apply to transactions between a partnership and a corporation which are commonly controlled, and to transactions between an S corporation and a C corporation which are commonly controlled (whether by one individual, as under prior law, or by more than one person). The Act also extends §267 to transactions between groups of controlled corporations. Corporations will be treated as members of a controlled group if they satisfy the tests of §1563(a), except that a 50 percent control test will be substituted for the 80 percent control test of §1563(a). In the case of a transaction between members of a controlled group of corporations, the disallowance of a loss on the sale or exchange of property under §267(a)(1) will not apply. Instead, losses will be deferred until the property is disposed of to an unrelated third party in a transaction which results in recognition of gain or loss under consolidated return principals. Loss on a transfer to a DISC or on certain sales of inventory to a foreign member of the same controlled group, and certain foreign currency losses, will not be subject either to disallowance or deferral.

V. Amendments to the Accumulated Earnings Tax

A. Introduction

1. Background

Part 1, subchapter G of the Code imposes, as a penalty tax, an accumulated earnings tax on corporations that are formed or availed of to avoid shareholder-level taxation by accumulating earnings. Under §531, the tax is equal to the sum of 27½ percent of the first $100,000 of "accumulated taxable income," plus 38½ percent of any additional accumulated taxable income. The term "accumulated taxable income" means the taxable income of the corporation, with adjustments provided in §535(b), reduced by the sum of the §561 deduction for dividends paid and the accumulated earnings credit (generally, a minimum of $250,000). For this purpose, adjustments to taxable income currently permitted include, *inter alia,* (a) deductions for capital losses in excess of capital gains (*i.e.*, losses disallowed under §1211(a)), and (b) net §1201 gain, determined without regard to the capital loss carryback or carryover and reduced by taxes attributable to such gain (computed by taking any capital loss carryback or carryover into account).

The accumulated earnings tax applies to every corporation (other than a personal holding company, a foreign personal holding company, or an exempt organization) having the requisite tax-avoidance purpose. There has been some dispute as to whether the accumulated earnings tax applies to corporations the stock of which is widely held. The Service has taken the position that a publicly-held corporation is not immune to the tax,[87] but the case law on the point is conflicting.[88] The question has arisen because of the perceived difficulty in making a "formed or availed of" determination when no shareholder or limited group of shareholders is in a position to control corporate affairs.

2. Outline and Purpose of New Provisions

Section 58 of the Act amends §532 (describing corporations subject to the accumulated earnings tax) by adding subsection (c). Subsection 532(c) clarifies that the application of the accumulated earnings tax shall be determined without regard to the number of shareholders.

The Act also substantially modifies the definition of accumulated taxable income so as to reduce the amount of capital gain and loss deductions currently permitted as adjustments under §535(b). In the case of a holding or investment company, the deduction for capital losses is completely disallowed.

These modifications reflect the legislative determination that there is no longer any justification for permitting accumulations to offset business losses (since most business losses are treated as ordinary losses), especially in the case of a holding or investment company. According to the House Report, certain investment companies formed to accumulate dividend income have been able to utilize the deductions for capital gains and losses to avoid both the accumulated earnings tax and the regular tax on capital gains by carefully allocating capital gains and losses over the years and, in effect, double-counting capital losses for purposes of the accumulated earnings tax computation.[89]

3. Effective Date

The accumulated earnings tax amendments will apply to taxable years beginning after July 18, 1984, the date of enactment of the Act.

B. Detailed Analysis

1. Clarification as to Publicly-Held Corporations

Subsection 532(c) provides that the number of shareholders of a corporation is irrelevant for purposes of determining the application of the accumulated earnings tax. Despite this clarification, the Service may have difficulty establishing the proscribed purpose with respect to a widely-held company that is not controlled by an individual or a small group of shareholders, when the statutory presumption under §533 (relating to accumulations beyond the reasonable needs of the business) is not available.

2. Treatment of Capital Gains and Losses

The Act retains the adjustment to taxable income for net capital gains, less taxes attributable to such gain. However, the adjustment must be computed by taking into account, as short-term capital losses, any net capital losses incurred during the preceding taxable year. The effect of this revision may be to reduce the capital gain adjustment that would have been available under prior law.

> *Example*: A Corp. has taxable income of $110,000 for the taxable year ended December 31, 1986, of which $10,000 is the excess of net long-term capital gain of $20,000 over a net short-term loss of $10,000. Such loss includes a capital loss carryover from the preceding taxable year of $8,000. Under prior law, the capital gain adjustment for A Corp. would have been $15,200 ($20,000 net long-term capital less $2,000 net short-term capital loss computed without regard to the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

$8,000 carryover, less taxes of $2,800 attributable to the net capital gain of $10,000 (computed with regard to the $8,000 carryover)). Under the new rules, the adjustment is only $7,200 (the $8,000 carryover being subtracted from $15,200).

The Act also retains, but reduces, the adjustment for capital losses. The adjustment is in an amount equal to the net capital loss of the corporation (without regard to carryovers),[90] reduced by the lesser of "nonrecaptured capital gains deductions" or the corporation's accumulated earnings and profits account as of the close of the preceding taxable year.[91] "Nonrecaptured capital gains deductions" is the aggregate amount of allowable net capital gain adjustments for the prior taxable years beginning after December 31, 1984, that were not used to reduce the net capital loss adjustment in those years.[92]

Example: A Corp. has $40,000 net capital loss for the taxable year ended December 31, 1987. For the taxable years 1985 and 1986, A Corp. had $20,000 in allowable net capital gains adjustments, of which $10,000 was used to reduce the net capital loss adjustment for taxable year ended December 31, 1986. A Corp.'s net capital loss deduction for 1987 is $30,000 ($40,000 minus ($20,000 minus $10,000)). The Conference Report makes clear that the same net capital gain adjustment (less taxes attributable thereto) will not be used to reduce the adjustment for net capital losses more than once.[93]

The requirement that net capital loss carryovers be included in computing the net capital gains adjustment effectively prevents a corporation from counting capital losses twice in computing accumulated taxable income. Similarly, reductions to the capital loss adjustment for previously unrecaptured capital gains adjustments will prevent adjustment for both net capital losses and net capital gains in any taxable year.

The Act also adds subsection 535(b)(8), containing special rules applicable to mere holding and investment companies. First, the capital loss adjustment will no longer be available to such companies.[94] Second, however, the net capital gains adjustment will be available, but only to the extent the gain does not exceed §1212 capital loss carryovers to the taxable year.[95] Finally, for all purposes of subchapter (c), the accumulated earnings and profits of a holding or investment company, at any time, shall not be less than they would have been had §535(b), as amended by the Act, applied to all taxable years beginning after the date of enactment.

VI. Increase in Corporate Preference Reduction and Technical Changes [Act §§68 and 712(a)]

A. Introduction

TEFRA added §291 to the Code, providing for a 15 percent cutback in certain corporate tax preferences. Section 57(b) of the Code makes adjustments to the corporate minimum tax to prevent the combination of that tax and the cutback provision from unduly reducing the tax benefit from a preference.[96]

Section 291 reduced the excess of percentage depletion otherwise allowable for iron ore and coal (including lignite) over the adjusted basis of the property by 15 percent.[97] However, only 71.6 percent of the excess of the allowable depletion allowances for these minerals over the adjusted basis of the property was treated as a corporate tax preference under the minimum tax.[98]

The bad debt reserve deduction (under §§585 or 593) was reduced by 15 percent of the amount by which the otherwise allowable deduction exceeds the amount that would have been allowable on the basis of actual experience.[99] Only 71.6 percent of the excess of the allowable deduction over what would be allowable based on actual experience was treated as an item of tax preference under the minimum tax.[100]

In the case of a financial institution, 15 percent of the otherwise allowable interest deduction allocable to debt incurred or continued to purchase tax-exempt obligations acquired after 1982 was disallowed.[101]

The deemed dividend distribution by a domestic international sales corporation (DISC) to a corporate shareholder (under §995(b)(1)(F)(i)) was increased by 15 percent to 57 1/2 percent of certain taxable income.[102]

The amount treated as ordinary income on the sale or other disposition (including certain nonrecognition transactions) of §1250 property by a corporation was increased by 15 percent of the additional amount which would be treated as ordinary income if the property were subject to recapture under §1245.[103] The minimum tax preference for the remaining 85 percent of the capital gain which would have been ordinary income under §1245 was reduced by 28.4 percent (*i.e.*, 71.6 percent of the remaining 85 percent of the §1250 preference would be treated as a preference for puposes of the corporate minimum tax).[104]

Fifteen percent of the basis of pollution control facilities to which an election under §169 applies was treated as if the election did not apply.[105] The minimum tax preference for the remaining property for which five-year amortization was elected was reduced by 28.4 percent.[106]

In the case of an integrated oil company, 15 percent of the amount otherwise allowable for intangible drilling costs under §263(c) was capitalized to the oil, gas, or geothermal property and deducted ratably over a 36-month period beginning with the month the costs were paid or incurred.[107]

Fifteen percent of the amounts otherwise allowable as deductions under §§616 and 617 to a corporation were capitalized and treated as if they were used to acquire recovery property assigned to the five-year class. ACRS deductions were allowed beginning with the year the expenses were incurred, and the investment tax credit was available in the year the expenses were paid or incurred.[108]

B. Overview

1. Increase in Corporate Preference Reduction

The 1984 Deficit Reduction Act generally increases the 15-percent preference cutback to 20 percent. The benefits of the new FSC legislation in the Act will be reduced by 6 ¼ percent in the case of a corporate FSC shareholder. The cutback in the depletion allowance for coal and iron ore remains unchanged. The 71.6 percent preference inclusion rule for the add-on minimum tax will be decreased to 59 5/6 percent. In addition, certain technical changes are made in order to clarify TEFRA.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

2. Effective Dates

The amendments to §§291 and 57 are generally applicable to taxable years beginning after December 31, 1984. The amendments to §291(a)(1) (affecting sales and other dispositions of §1250 property) will apply to sales or other dispositions after December 31, 1984, in taxable years ending after that date. The amendments made to §291(a)(5) (affecting pollution control facilities) will apply to property placed in service after December 31, 1984, in taxable years ending after that date. The amendments made to §291(b) (affecting drilling and mining costs) will apply to expenditures after December 31, 1984, in taxable years ending after that date. The technical changes made by Act §712(a) are retroactive to the TEFRA effective dates (generally, for taxable years beginning after December 31, 1982).

C. Detailed Analysis

1. Twenty Percent Cutback in Corporate Tax Preferences

a. Depletion for Coal and Iron Ore

The excess of percentage depletion otherwise allowable for iron ore and coal (including lignite) over the adjusted basis of the property is reduced by 15 percent, as under prior law.[109] Also as under prior law, 71.6 percent of the excess of the allowable depletion allowances for these minerals over the adjusted basis of the property is treated as a corporate tax preference under the minimum tax.[110]

b. Bad Debt Reserves

The bad debt reserve deduction (under §585 or §593) is now reduced by 20 percent of the amount by which the otherwise allowable deduction exceeds the amount which would have been allowable on the basis of actual experience.[111] Only 59 5/6 percent of the excess of the allowable deduction over what would be allowable based on actual experience is treated as an item of tax preference under the minimum tax.[112]

c. Tax Exempt Interest

In the case of a financial institution, 20 percent of the otherwise allowable interest deduction allocable to debt incurred or continued to purchase tax-exempt obligations acquired after 1982 is disallowed.[113]

d. Exempt Foreign Trade Income of a FSC

The Act reduces the benefits to corporate shareholders of the new foreign sales corporation (FSC) provision, also added by the Act. The amount of exempt foreign trade income on which tax may be deferred under §923(a)(2) is reduced from 32 percent to 30 percent, a reduction of 6 ¼ percent.[114] Alternatively, the amount of exempt foreign trade income on which tax may be deferred under §923(a)(3) is reduced from 16/23 to 15/23, also a reduction of 6 ¼ percent. Thus, the Act reduces the tax benefits available under the new FSC provision by 6 ¼ percent.

e. Section 1250 Property

The amount treated as ordinary income on the sale or other disposition (including certain nonrecognition transactions) of §1250 property by a corporation will be increased by 20 percent of the additional amount which would be treated as ordinary income if the property were subject to recapture under §1245 instead of §1250.[115] The minimum tax preference for the remaining 80 percent of the capital gain which would have been ordinary income under §1245 is reduced by 40 1/6 percent. In other words, 59 5/6 percent of the remaining 80 percent of the §1250 preference enters into the corporate minimum tax computation.[116]

f. Pollution Control Facilities

Twenty percent of the basis of pollution control facilities to which an election under §169 would otherwise apply will be treated as if the election did not apply.[117] The minimum tax preference for the remaining property for which five-year amortization is elected will be reduced by 40 1/6 percent. Thus, 59 5/6 percent of the remaining 80 percent of the §169 preference will be treated as a preference for purposes of the corporate minimum tax.[118]

g. Intangible Drilling Costs

In the case of an integrated oil company, 20 percent of the amount otherwise allowable for intangible drilling costs under §263(c) will be capitalized to the oil, gas, or geothermal property and deducted ratably over a 36-month period beginning with the month the costs are paid or incurred.[119]

h. Mineral Exploration and Development Costs

Twenty percent of the amounts otherwise allowable as deductions under §§616 and 617 to a corporation will be capitalized and treated as if they are used to acquire recovery property assigned to the five-year class. ACRS deductions are allowed beginning with the year expenses are paid or incurred, and the investment tax credit is available in the year the expenses are paid or incurred.[120]

2. Technical Changes

The Act provides that the additional gain recognized as ordinary income on the disposition of §1250 property by reason of §291 is treated, for all purposes of the Code (such as §§170, 341, 453B, and 751), in the same manner as other §1250 gain.[121]

Since the investment tax credit is generally not allowed for property used outside the United States, the Act provides that no investment credit is allowed for mineral exploration and development costs with respect to mineral deposits located outside the United States.[122]

The Act clarifies that, for purposes of applying the preference cutback of §291 with respect to interest of financial institutions used to carry tax-exempt bonds, amounts paid in respect of deposits, investment certificates, or withdrawable or repurchased shares are treated as interest, whether or not designated as interest.[123]

The Act clarifies the language providing for coordination of the 36-month amortization of drilling and mining costs (which are otherwise disallowed by §291(b)(1)) with cost depletion under §611. The portion of the adjusted basis of any property which is attributable to amounts disallowed by §291(b)(1) will not be taken into account for purposes of determining depletion under §611.[124]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

VII. Nonrecognition of Gain or Loss on Stock Warrants by Issuers

A. *Background*

A corporation may, for any number of reasons, issue options to purchase shares of its stock. These are generally termed stock warrants. Typically, they have expiration dates substantially in excess of exchange traded stock options or those written off the exchange by third parties. At one time, it was generally assumed that amounts received by a corporation in exchange for such warrants should be credited to paid-in capital. If and when the warrants were exercised, the exercise price plus the amounts previously credited would be credited to stockholder equity. In other words, any consideration received for the issuing of warrants should be treated the same as amounts received in exchange for stock of the issuer.[125]

The IRS, however, in 1972, announced the position that amounts received by a corporation in exchange for warrants issued by it should be treated the same as premiums received by the grantor of stock option, *i.e.* should be treated as income if the warrants expire unexercised. From this, it also followed that if the warrants were repurchased by the issuer, gain or loss should be recognized as in the case of a closing transaction under §1234(b).[126] In Rev. Rul. 72-198, 1972-1 C.B. 223, the IRS ruled that where corporation X issued warrants on its stock to the shareholders of corporation Y in exchange for Y stock, and where the warrants expired unexercised, corporation X realized ordinary income in the amount of the fair market value of the Y stock at the time of the exchange.[127] This ruling generated immediate protests, and its application was delayed and made prospective.[128] While the American Bar Association, Section of Taxation, recommended to Congress that it take action to overrule Rev. Rul. 72-198, no such action was taken in the 1976 TRA. In the committee report relating to §1234(b), it was stated that this issue was open to question, but was not considered by Congress in connection with the revision of §1234. The report concluded "[N]o inference is intended (for the past or for the future) with respect to whether the expiration of warrants issued by a corporation should, or should not, result in recognition of taxable income to the corporation." [129] This problem was, therefore, left as unfinished legislative business.

B. *Overview*

Section 57(a) of the Act amends §1032 (relating to the exchange of stock for property) by adding at the end of the section the following sentence: "No gain or loss shall be recognized by a corporation with respect to any lapse or acquisition of an option to buy or sell its stock (including Treasury stock)."

This amendment is effective as to options acquired or lapsed after July 18, 1984, the date of enactment, in taxable years ending after that date.[130]

C. *Detailed Analysis*

Under the statute, no *gain* or *loss* is recognized by a corporation from the *expiration* or the *acquisition* of an option to *purchase* or *sell* its own stock. In other words, the corporate grantor of such options is not treated as is the grantor of an option to buy or sell the stock of some third party under §1234(b). While it has long been settled that no income is recognized from the receipt of a premium for the writing or granting of an option to purchase stock or securities, since prior to the time the option either lapses or is exercised there is no closed transaction, the tax consequences of such lapse or exercise was for a long time somewhat unclear. In the case of the grantor of an option with respect to the stock of a third party, this was settled by the enactment of §1234(b). The committee's comments quoted above, show that it was unclear whether this rule applied to warrants. The amendment to §1032 makes it clear that not only is no gain recognized upon the lapse of a call or put options granted with respect to the grantor's own stock, but that no gain or loss is recognized where the option is "repurchased," *i.e.* the grantor makes payment to the option holder for the cancellation of the grantor's obligation under the option.

Of course, where options of this kind are granted in exchange for property or for services, the transaction should be treated the same as transactions involving the grantor's stock. Section 1032 has no effect on this aspect of such transaction. Valuation problems will always be present where the warrants (or put options) are untraded, as has been experienced in cases where warrants are issued as part of an investment unit.[131]

Comment: Under the effective date provision of Act §57(b), amended §1032 applies only to options acquired or lapsed after the date of enactment (July 18, 1984) in taxable years ending after that date. This leaves open the question of the validity of Rev. Rul. 72-198 with respect to acquisitions and lapses occurring before such effective date. It may be considered unfortunate by some that this effective date was not made retroactive to put an end to potential litigation concerning this matter. The IRS, position it is submitted, is a weak one at best and, if a court can be persuaded to hold it valid, would be unfair to many corporate issuers who, prior to 1972, reasonably relied on the prevailing view that amounts received for warrants (premiums as well as the exercise price when exercised) should be treated for all purposes as amounts received for stock. On the other hand, those taxpayers who claimed and were allowed loss deductions where outstanding warrants were repurchased or redeemed are protected against deficiencies for years still open.

Finally, the new provisions are effective even though the warrant issued or granted by the corporation relates to specific shares of treasury stock held by the issuer.

VIII. Repeal of Stock for Debt Exception for Cancellation of Debt Income

A. *Introduction*

For more than fifty years, it has been clear that a creditor's cancellation or extinguishment of a debtor's indebtedness generates taxable income to the debtor to the extent that the face amount of the debt extinguished exceeds the fair market value of any property received in consideration for the extinguishment, even though the debtor receives no cash or other property at the time.[132] However, where the debtor is a corporation that transfers its own stock to the creditor as consideration for the extinguish-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ment, the courts and the IRS have traditionally taken the position that no taxable income arises even if the fair market value of the stock issued is less than the face amount of the debt cancelled, on the theory that the creditor has simply changed the form that its claim against the debtor corporation has taken.[133]

The rule that the issuance of stock in satisfaction of debt did not result in cancellation of indebtedness income was nearly eliminated, and was modified somewhat, by the Bankruptcy Tax Act of 1980.[134] Section 2(a) of H.R. 5043, passed by the House of Representatives in March 1980, would have taxed as gross income the difference between the face amount of any corporate debt — other than a debt that constituted a security within the meaning of section 166 of the Code — and the fair market value of stock issued in consideration for the cancellation of such debt. However, that provision was dropped by the conference committee considering the Bankruptcy Tax Act.

Two modifications of the stock-for-debt exception were enacted in the Bankruptcy Tax Act of 1980. First, Code §108(e)(8)(A) was added, making the exception inapplicable where only a "nominal or token" amount of stock was issued in exchange for extinguishment of any debt, including securities. The legislative history of this provision indicated that the determination of when only a "nominal or token" amount of stock had been issued would be based upon all facts and circumstances considering whether the former creditor received a real equity interest in the former debtor.[135] The second exception added §108(e)(8)(B), making the stock-for-debt exception inapplicable where an unsecured creditor received a disproportionate amount of stock in a workout. This would involve stock having a fair market value in relation to the face amount of a debt extinguished of less than fifty percent as great as the ratio of stock received by all participating unsecured creditors in the workout to the total face amount of unsecured debt extinguished.

Where either of these exceptions to the stock-for-debt exception applies, the debtor corporation realizes gross income equal to the difference between the face amount of the debt extinguished and the fair market value of the stock issued. However, under §§108(a)(1)(C), 108(c) and 108(d)(4), the former debtor corporation may elect to reduce the basis of its depreciable assets, which are deemed to include real property held for sale to customers in the ordinary course of business and interests in partnerships holding depreciable property, in lieu of an immediate recognition of income.[136]

B. Detailed Analysis

1. Legislative History

Section 59 of H.R. 4170, as passed by the House of Representatives, provided for the repeal of the stock-for-debt exception effective for transfers of stock after the date of enactment. The bill provided for exceptions where the debt extinguishment occurred in a "title 11 case" — *i.e.*, pursuant to a bankruptcy or insolvency proceeding filed under title 11 of the United States Code — or where the debtor corporation was insolvent. The House Ways and Means Committee report accompanying H.R. 4170 gave two reasons for eliminating the exception. First, the report noted the inequity of a nonrealization rule where stock is issued in consideration for the extinguishment of debt, as compared to the rule that income is realized when a debtor corporation uses the proceeds of stock issued to third parties to extinguish a debt at less than its face amount. In this latter situation, the debtor corporation would realize cancellation of indebtedness income because no stock would be issued directly in consideration for extinguishment of the debt. Second, the report noted somewhat spuriously that retirement of a debt without tax permits a debtor corporation to issue new debt having the same debt service obligation but at a higher interest rate so that a greater portion of its payments would be deductible interest. However, it would not appear that extinguishing old debt and issuing new debt in a lower face amount but carrying a greater interest rate would be in the interest of any debtor corporation because the corporation would thereby have the use of less money. Barring the right to call its obligations a profitable debtor corporation would probably not be permitted to extinguish its debt at a discount while an unprofitable corporation would have no advantage in obtaining larger interest deductions.

S. 2130, as passed by the Senate, contained no provision concerning the stock-for-debt exception to cancellation of indebtedness income. The Conference Committee retained the House version, including the exceptions for title 11 cases and insolvent debtors, and added one permanent and four transitional exceptions to the new rules.[137]

2. Analysis of New Rules

a. Elimination of Stock-for-Debt Exception

Section 59(a) of the 1984 TRA added §108(e)(10)(A) providing that, where a debtor corporation issues stock in exchange for the extinguishment of any of its debt, the debtor corporation is treated as having satisfied the debt with an amount of cash equal to the fair market value of the stock issued. In other words, the difference between the face amount of the debt so extinguished less the fair market value of the stock issued therefor constitutes gross income realized.

Because any debt so satisfied is by definition debt issued by a corporation, it will be "qualified business indebtedness" within the meaning of §108 and thus the debtor corporation may elect to reduce the basis of its depreciable assets, defined to include real property held for sale to customers in the ordinary course of business and interests in partnerships holding depreciable property, rather than take the forgiven debt into income.[138]

Two other preexisting exceptions to recognition of cancellation of indebtedness income are also potentially available to many corporations satisfying debts at a discount with stock. First, §108(e)(2) would preclude realization of income by a cash basis debtor corporation that issues stock in exchange of debts the payment of which would have given rise to deductions. Thus, for example, if a cash method corporation promises to pay $100 for ordinary services to an employee or independent contractor and satisfies such debt with $80 worth of stock, the corporation would recognize no income even though the face amount of the debt exceeded the fair market value of the stock issued by $20.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Second, §108(e)(5) provides that the satisfaction of purchase money indebtedness at a discount results in a purchase price adjustment rather than income recognition. Thus, where a corporation satisfies its debt to a purchase money creditor with stock having a fair market value less than the amount of the debt extinguished, the debtor corporation would not realize any income but would reduce its basis in the property purchased.[139]

Example: Corp. D, an accrual method real estate dealer which is neither insolvent nor involved in a title 11 case and which owns property held for sale to customers having a basis of $500, owes C $100 for services rendered. On March 1, 1985, Corp. D issues its own stock having a fair market value of $60 to C in satisfaction of the debt. Corp. D realizes $40 of income but may elect to reduce to $460 the basis of its property held for sale to customers in the ordinary course of business. If Corp. D were a cash method taxpayer, it would realize no income on the transfer of stock in exchange for extinguishment of the debt because the payment of $100 to C would have been deductible. If Corp. D's debt to C were a purchase money debt, Corp. D would realize no income and would have to reduce the basis of the property purchased by $40.

Unlike §2(a) of H.R. 5043 that was passed by the House of Representatives in 1980, §108(e)(10) does not contain an exception to the income recognition rules for stock issued in consideration for the surrender of a security. Moreover, although §1032 was not amended by the 1984 TRA, the conference report on the act states that §1032 does not override the new rules governing stock issued for debt.[140] Therefore, it appears that corporations converting bonds into stock in otherwise tax free recapitalizations under §368(a)(1)(E) [141] must be aware of the possibility of income recognition to the extent that the face amount of each bond surrendered exceeds the fair market value of stock issued therefor. This problem will always be present where the fair market value of the bonds so exchanged is less than their face value.

The same possibility may arise whenever an acquiring corporation in a merger or otherwise tax free reorganization was indebted to the acquired corporation and the debt is extinguished in the reorganization. Although the risk is not great where a premium is paid by the acquiring corporation for the assets acquired and although it is not clear how the stock issued in the reorganization would be allocated to the indebtedness extinguished, this risk would be present where the face amount of indebtedness extinguished exceeded its fair market value. The problem would not be present in a reorganization where the acquired corporation survived the reorganization, as in a (B) reorganization, and continued to hold the outstanding indebtedness.

Example: Corp. T has assets worth $200, including $20 worth of Corp. A bonds having a face value totalling $30. In a merger qualifying under §368(a)(1)(A), Corp. T merges with and into Corp. A, with the shareholders of Corp. T receiving $200 worth of Corp. A voting common stock. Because the bonds would be extinguished as a matter of law, it would appear that Corp. A would realize $10 worth of gross income as the result of extinguishment of the bonds in the reorganization. Had Corp. A acquired all of the stock of Corp. T in a (B) reorganization and had the bonds remained outstanding in Corp. T's hands, no discharge of indebtedness income would have arisen.

b. Exception for Title 11 Cases and Insolvent Debtors

Code §108(e)(10)(B) provides that gross income does not include any difference between the face amount of debt extinguished and the fair market value of stock issued in exchange therefor if the issuance of stock is pursuant to a federal bankruptcy proceeding or to the extent that the debtor corporation is insolvent. Because the prior stock-for-debt exception to income realization applies in those cases, the debtor corporation in such cases need not reduce its tax attributes — which is the price other insolvent corporations or corporations undergoing title 11 proceedings pay for nonrecognition of cancellation of indebtedness income. However, the stock-for-debt exception as applied to insolvency cases outside of federal bankruptcy proceedings prevents income realization only to the extent of insolvency.

Example: Corp. D has liabilities exceeding the fair market value of its assets by $30. On January 1, 1985, it issues stock having a fair market value of $60 in satisfaction of a liability having a face amount of $100. Corp. D realizes no income with respect to $30 of the difference between the face amount of the debt and the fair market value of the stock and need not reduce any of its tax attributes with respect to that $30. Corp. D would realize $10 income on the transaction but could elect to reduce the basis of its depreciable assets by that amount in lieu of recognizing the income. Had Corp. D paid $60 cash for the extinguishment of the liability, it would have had to reduce its net operating loss carryovers or certain other tax attributes by $30 and would have had the election of reducing the basis of its depreciable assets by $10 or of recognizing $10 of income.

1984 TRA does not eliminate the two pre-existing exceptions to the stock-for-debt exception to cancellation of indebtedness income — for nominal stock issuance and for disproportionately low amounts of stock given to certain unsecured creditors in a workout. Presumably, these exceptions continue to apply to the issuance of stock in consideration for the extinguishment of debt in title 11 cases and by insolvent corporations. Thus, where an insolvent corporation or a corporation involved in a federal bankruptcy case satisfies debts with unusually small amounts of stock, tax attributes may be reduced. In the case of an insolvent corporation, to the extent that the cancellation of indebtedness income exceeds the amount of insolvency, the corporation may have to either reduce the basis of its depreciable assets or recognize cancellation of indebtedness income.

3. Exception for Post-1985 Qualified Workouts

The first §59(b)(1) of the 1984 TRA [142] adds §108(e)(10)(C), providing that the general rules of §108(e)(10)(A) — that a corporate debtor's gross income includes the excess of the face amount of any debt extinguished over the fair market value of stock issued in exchange therefor — does not apply to stock issued in a "qualified workout". For this purpose, the term "qualified workout" is defined as a plan under which stock is transferred to creditors in satisfaction of indebtedness if (i) due to cash flow and credit problems the corporation transferring the stock will have difficulty meeting its liabilities

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

coming due in the next twelve months to such an extent that there is a substantial threat of involuntary bankruptcy or insolvency proceedings, (ii) the debtor corporation reports to its shareholders this fact and the fact that it is undergoing a workout, (iii) the holders of that least fifty percent of the corporation's total debt approve such a plan, and (iv) at least 25 percent of the corporation's total indebtedness is extinguished by the plan. The Conference Committee Report relating to this exception indicates that it will apply only if the plan is reasonably related to avoiding an insolvency or bankruptcy proceeding.[143] Presumably this provision will not immunize from income realization under Code §108(e)(8)(B) transfers of stock in a workout to unsecured creditors who received less than fifty percent of the proportionate amount of stock issued to all unsecured creditors in the plan.

The effective date of this provision is tied to the effective date for implementation of the 1976 Tax Reform Act changes to Code §382. Implementation of those provisions is scheduled for January 1, 1986. Because of the already effective exceptions to the new stock-for-debt rule of income recognition in title 11 cases and for insolvent corporations, when this exception is effective, the prior law stock-for-debt exception to cancellation of indebtedness income will apply in most cases where a financially troubled corporation issues stock in satisfaction of its debt. However, the Conference Committee Report indicates that a broad review of the interaction of the rules of §§382 and 108(e)(10) is to occur before the qualified workout exception is to be effective.[144]

4. Effective Date and Transition Rules

Elimination of the stock-for-debt exception to cancellation of indebtedness income is generally effective for transfers of stock after July 18, 1984, the date of enactment of the 1984 TRA. However, there are four exceptions to this transition rule, one of which may apply indefinitely and the other three of which would apply only to pre-1985 transfers of stock. All of these exceptions were added by the Conference Committee.

a. Exercise of Pre-June 7, 1984 Options or Conversion Rights

The second of the two sections designated §59(b)(2) in the 1984 TRA contains an exception to the new stock-for-debt rules where stock is issued in consideration for the extinguishment of indebtedness pursuant to a pre-June 7, 1984 option. The Conference Committee Report makes clear that this exception applies to convertible debentures and similar instruments and immunizes the issuing corporation from income realization whenever the option is exercised or the conversion occurs.[145] Apparently, the option or conversion right need not be in writing for the exception to apply.

b. Pre-1984 Transfers

Section 59(b) of the 1984 TRA also contains three exceptions for certain pre-January 1, 1985 transfers of stock in consideration for the extinguishment of debt. The first of these is for stock transfers pursuant to a written contract binding at all times on and after June 7, 1984, but only if the transferee of the stock held the debt so extinguished at all times on June 7, 1984.[146] The second of these exceptions applies where a debtor corporation transfers stock to another corporation, which on June 7, 1984, owned at least 75 percent of the fair market value of the debtor corporation's stock if, immediately after the transfer, the transferee of the stock owns at least 80 percent of the fair market value of the transferor corporation's stock.[147] The third of these exceptions, which will no doubt have broad application, is for transfers of stock covered by a November 1983 debt restructure agreement which was specified in a registration statement filed with the Securities and Exchange Commission on March 7, 1984.[148]

IX. Preferred Stock Eligible for §1244 Treatment [Act §481]

A. Introduction

Under Code §1244, if an individual sustains a loss on stock that meets certain definitional criteria, referred to as "§1244 stock," and if the stock was issued to that individual or to a partnership of which that individual was a partner at the time of issuance, up to $50,000 of the loss (or $100,000 in the case of a husband and wife filing a joint return) will be treated as an ordinary loss.[149] The definitional criteria, generally speaking, have historically been as follows: (1) the stock must be common stock;[150] (2) it must be issued in exchange for money or property other than stock or securities;[151] (3) if the issuing corporation is not a new corporation, more than 50 percent of its income over its five most recent taxable years must have been derived from sources other than royalties, rents, dividends, interest, annuities, and sales or exchanges of stock and securities;[152] and (4) the issuing corporation must have no more than $1,000,000 in equity capital at the time of issuance, including the stock in question.[153] Thus, preferred stock has historically been ineligible to be §1244 stock, and losses on preferred stock are ordinarily treated as capital losses.

B. Overview

The Act makes preferred stock as well as common stock eligible to be §1244 stock.

C. Detailed Analysis

Section 481 of the Act deletes from the definitional criteria of §1244 stock the requirement that such stock be common stock by deleting the word "common" where it prefaces the word "stock" in the definition of §1244 stock set forth in §1244(c)(1). In addition, the word "common" is deleted where it prefaces the word "stock" in §1244(d)(2), under which certain stock deriving its basis from §1244 stock can be treated as §1244 stock. The definition of §1244 stock is otherwise unaffected by the Act.

The legislative history of Act §481 [154] reflects Congress' desire, in modifying §1244, "to encourage new venture capital." The amendment is effective for stock issued after July 18, 1984, the date of enactment of the Act in taxable years ending after that date.[155]

X. Tax Exemption for Federal Home Loan Mortgage Corporation Repealed

A. *Introduction*

The Federal Home Loan Mortgage Corporation, commonly called "Freddie Mac," was chartered in 1970 and is authorized to purchase or make commitments to purchase residential mortgages from the Federal Savings and Loan Insurance Corporation, Federal Home Loan Banks, any member of a Federal Home Loan Bank, or other financial institutions whose deposits or accounts are insured by an agency of the United States.[156] Freddie Mac may hold, sell, or otherwise dispose of such mortgages or interests in mortgages. Most of the funds raised by Freddie Mac come from sales of participating certificates, commonly called PCs, which represent pools of mortgages that Freddie Mac has purchased. Freddie Mac retains an interest in such pools, and guarantees payment on the certificates to purchasers.

Under a "non-Code" statute,[157] Freddie Mac was exempted from all federal, state, and local income taxation, although real property held by Freddie Mac was, and remains, subject to state and local taxation.[158] TRA 1984 repeals the federal income tax exemption, effective January 1, 1985,[159] and provides other technical changes arising from the imposition of the new tax.[160]

The apparent genesis of this proposal is the recommendation of the President's Private Sector Survey on Cost Control (the so-called "Grace Commission") to tax Freddie Mac. A Committee Print prepared by the staff of the Joint Committee on Taxation notes,

> "Effectively, [Freddie Mac] acts as a mortgage company. To the extent that [Freddie Mac] is able to maintain a strong financial position and to expand its services, it can be argued that [Freddie Mac] should not be treated differently than other mortgage companies that are not exempt from Federal income tax. It may be appropriate, however, to provide transitional rules if the exemption is repealed." [161]

B. *Overview*

The Federal Home Loan Mortgage Corporation becomes subject to Federal income tax on January 1, 1985. TRA 1984 also delineates rules that measure the cost basis of assets held on January 1, 1985, special net-operating loss rules (that parallel the rules of the Federal National Mortgage Corporation - "Fannie Mae"), as well as rules pertaining to the treatment of "participating certificates" and "replacement obligations". Special dividend received deduction rules are also provided for dividend income received by shareholders of Federal Home Loan banks that is attributable to dividend income of the Federal Home Loan Banks from Freddie Mac.

C. *Detailed Analysis*

1. *The Dividend Received Deduction*

The stock of Freddie Mac is owned by the 12 Federal Home Loan Banks (FHLB's), which are owned by federally chartered savings and loans. Under pre-TRA 1984 law, dividends received by savings institutions from a FHLB were non-deductible,[162] since FHLBs are tax-exempt.[163] Under the TRA 1984, dividends received from an FHLB out of its current year earnings and profits allocable to dividends from Freddie Mac, and dividends out of accumulated earnings and profits to the extent measured below, are "deductible"; that is, they are subject to the tax treatment of Code §§243-246.[164] For dividends paid out of current year earnings and profits, the amount "deductible" is computed as follows: [165]

1. *The Dividend Received Deduction*

The stock of Freddie Mac is owned by the 12 Federal Home Loan Banks (FHLB's), which are owned by federally chartered savings and loans. Under pre-TRA 1984 law, dividends received by savings institutions from a FHLB were non-deductible,[162] since FHLBs are tax-exempt.[163] Under the TRA 1984, dividends received from an FHLB out of its current year earnings and profits allocable to dividends from Freddie Mac, and dividends out of accumulated earnings and profits to the extent measured below, are "deductible"; that is, they are subject to the tax treatment of Code §§243-246.[164] For dividends paid out of current year earnings and profits, the amount "deductible" is computed as follows: [165]

$$\frac{\text{Dividends Received by FHLB from Freddie Mac}}{\text{Total E + P of the FHLB for the year}}$$

If the dividends paid by the FHLB exceeds the bank's current year earnings and profits, the proportion of the dividends paid out of accumulated earnings and profits that is "deductible" is determined as follows: [166]

$$\frac{\text{Dividends received by the FHLB from Freddie Mac which are out of E + P of Freddie Mac for taxable years after December 31, 1984, and not taken into account in measuring the dividend out of the current year E + P}}{\text{Total accumulated earnings and profits of the FHLB as of the time such dividend is paid}}$$

For purposes of measuring the accumulated earnings and profits of an FHLB, the amount of accumulated earnings and profits on January 1, 1985, is the amount of retained earnings on that date.[167] The accumulated earnings and profits of Freddie Mac on January 1, 1985 is zero.[168]

2. *Net Operating Loss Carryovers of Freddie Mac*

In general, corporations can carry net operating losses back three years and forward fifteen years.[169] Net operating losses of the Federal National Mortgage Association, Fannie Mae, arising in 1982 or later years, to the extent that they exceed mortgage disposition losses, can be carried back ten years and forward for five years.[170] Fannie Mae mortgage disposition losses can be carried back three years or forward for fifteen.[171]

Under the TRA 1984, Freddie Mac is subject to the same carryover rules for net operating losses and mortgage disposition losses as Fannie Mae, for Freddie Mac losses occurring in taxable years beginning after December 31, 1984.[172] Net operating losses, capital losses and excess credits of Freddie Mac cannot be carried back and applied

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

against income, etc., in years prior to 1985 since such years are nontaxable to Freddie Mac and such carryovers would thus provide no value to the corporation. Such amounts can be carried forward to other allowable years.[173]

3. Treatment of Participating Certificates

Under TRA 1984, income rights of Freddie Mac with regards to mortgage pool participation certificates, PCs, or similar interests in mortgages sold or issued by Freddie Mac before 1985 have no basis. Income of Freddie Mac from the sale or exchange of such certificates or interests in mortgages is taxable in the year the income is received, even if it is attributable to services, guarantees made, or other sources, before 1985.[174] Freddie Mac may not apply depreciation or amortization deductions with regards to income rights from participation certificates, collateralized mortgage obligations, or similar obligations sold or issued by Freddie Mac before January 1, 1985.[175] For purposes of determining the gain upon the sale of such income rights the basis is treated as zero.[176] Gain realized by Freddie Mac on the sale of income rights after March 15, 1984, and before January 1, 1985, are recognized on January 1, 1985.[177]

4. Treatment of Replacement Obligations

Freddie Mac may not apply deductions for interest accruing after December 31, 1984, for obligations created after March 15, 1984, that the Treasury Department determines to be a replacement for an equity or debt interest of a person, including a Federal Home Loan Bank, which existed on March 15, 1984.[178] This treatment, however, does not apply to any replacement obligation that was not created for tax avoidance purposes.[179]

D. Effective Date and Basis Rules for Assets Held by Freddie Mac on January 1, 1985

The effective date of provisions of 1984 TRA §177 is January 1, 1985, unless otherwise stated. Special basis rules for assets held on that date are noted below.

The TRA 1984 includes a set of basis rules that attempt to ensure that pre-1985 appreciation or decline in value of Freddie Mac assets are not taken into account for tax purposes. For purposes of determining gain on the sale of Freddie Mac assets — other than tangible depreciable property and any right to receive income under a mortgage PC or similar instrument — held on January 1, 1985, the basis on January 1, 1985, is the higher of the adjusted basis of the asset or the fair market value on that date.[180] For purposes of determining loss, the adjusted basis on January 1, 1985 is the lower of the two figures.[181] If the amount realized upon sale of such assets is between the adjusted basis and fair market value on January 1, 1985, no gain or loss is recognized.

For tangible depreciable property held by Freddie Mac on January 1, 1985, the adjusted basis of the property as of such date is the lower of its fair market or the adjusted basis.[182] This rule attempts to prevent Freddie Mac from claiming deductions based on pre-1985 depreciation.[183]

[12] H.R. Rep. No. 432, Part II, 98th Cong., 2d Sess. 1205-1206 (1984).

[13] In PLR 8030007 (April 14, 1980), a Technical Advice Memorandum, it was conceded that §269 did not apply to a situation in which a corporation had a substantial business purpose for acquiring managerial control (50 percent in this case) of two subsidiaries, even though two classes of common stock existed and voting rights were disproportionately allocated to one class for a period of years. The ruling concluded that because the parent corporation had a principal business purpose for acquiring managerial control, no further business purpose was required for the acquisition and ownership of the increment of voting power between managerial control (50 percent) and the 80 percent required for affiliation under §1504(a).

[18] Act §60, amending §1504(a).

[19] Revised §1504(a) begins, "For purposes of this subtitle . . .".

[20] Prior to the enactment of the "controlled group of corporations" definition in §1563 by the Tax Reform Act of 1969 (P.L. 91-172), the use of the affiliated group definition to fix related party status among corporations was more widespread in the Code than it is today. For example, under the investment credit provisions, whether related corporations could utilized separate $25,000 amounts in calculating the amount of taxes such credits could offset depended on the corporations' status as an affiliated group. *See* §46(a)(5), prior to amendment by the Tax Reform Act of 1969. Under present law, the availability of separate $25,000 amounts for investment credit purposes is determined under the controlled group rules of §1563(a). *See* former §46(a)(6) which has been incorporated by the TRA, Act §473, into the general business credit of §38(c)(3)(B). It should be noted that any group of corporations qualifying as an affiliated group under either the old or new versions of §1504(a) will generally constitute a controlled group of corporations under §1563(a).

[36] *See* Regs. §1.1502-75(d)(3), for the definition of a "reverse acquisition".
[37] The Subchapter S rules have a rule comparable to the one described above that bars a former Subchapter S corporation, or its successor, from filing a new Subchapter S election for the five-year period following a termination of the election. Regs. §1.1372-5(b) defines a successor corporation for Subchapter S purposes as any corporation (i) where at least 50 percent of the stock is owned directly or indirectly by the same persons who, at any time during the first taxable year for which the Subchapter S termination was effective, owned 50 percent or more of the stock of the corporation with respect to which the election was terminated, and (ii) which acquires a substantial portion of the assets of such corporation or a substantial portion of the assets which were assets of that corporation. The stock ownership portion of this definition of the successor corporation does not appear relevant in the consolidated return context because the reconsolidation question does not arise until the affiliated group reacquires stock having 80 percent of the voting power of the former affiliate's stock and 80 percent of the value of all outstanding stock of the former affiliate. This means that the focus in the definition on a "substantial portion of assets" may provide some further indication of the approach the consolidated return Regulations will take in defining a "successor".

CHAPTER 34

AMENDMENTS TO TAX TREATMENT OF REGULATED INVESTMENT COMPANIES

Deborah M. Beers, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Regulated Investment Companies In General

A regulated investment company (RIC), like certain real estate investment trusts (REITs), is treated for tax purposes as a conduit through which income from investments may be distributed to shareholders without being subject to tax at the corporate level. The corporation is allowed a deduction for dividends paid (or deemed paid) to its shareholders. In order to qualify as a RIC, a corporation must satisfy numerous requirements relating to its status and income during the taxable year. If any of these requirements are not met for the taxable year, a RIC will be taxed on its corporate income without regard to the special RIC deduction for dividends paid. These requirements are set forth generally in §§851 and 852 of the Code.

First, a RIC must be a domestic corporation, other than a personal holding company as defined in §542, which, at all times during the taxable year, either (1) is registered under the Investment Company Act of 1940 (either as a management company or as a unit investment trust) or (2) is a common trust fund excluded from the definition of "investment company" under the Investment Company Act of 1940 and not included in the definition of "common trust fund" in §584(a).

Second, a corporation will not be eligible for RIC treatment unless it affirmatively has elected such treatment in its return for the first taxable year to which it wishes the election to apply. The election thereafter continues and is irrevocable for all succeeding taxable years unless the corporation becomes disqualified by reason of failing to satisfy one or more of the requirements for RIC status.

Third, the corporation must satisfy certain gross income and investment requirements set forth in §851(b). Thus, at least 90 percent of a RIC's gross income must be derived from dividends, interest, payments with respect to securities loans, and gains from the sale or other disposition of stock or securities. Not more than 30 percent, however, of a RIC's gross income may be derived from the sale or disposition of stock or securities held for less than three months and, at the close of each quarter of the taxable year, at least 50 percent of the value of a RIC's total assets must be represented by cash and cash items, government securities and securities of other regulated investment companies, and certain other securities. Not more than 25 percent of the value of a RIC's total assets may be invested in the securities of any one issuer or of two or more issuers which the RIC controls and which are determined to be engaged in the same or similar trades or businesses or related trades or businesses as the RIC.

Fourth, §852 requires that, in order to be taxed as a RIC, a corporation must distribute to its shareholders at least 90 percent of its investment company taxable income for the taxable year (determined without regard to the dividends paid deduction) and 90 percent of its tax-exempt interest income for the year. A corporation which is subsequently determined, through an adjustment to its income or deductions for the taxable year, to have failed to meet the distribution requirements, may avoid disqualification as a RIC by paying a "deficiency dividend" under §860.

A RIC which meets the above requirements is taxed only on the undistributed portion of its net income at the corporate rates regularly applicable to the net ordinary and capital gains income of a corporation.[1]

B. Personal Holding Companies In General

A personal holding company (PHC) pays a tax of 50 percent on its undistributed personal holding company income.[2] The term "personal holding company" means a corporation which satisfies certain gross income and stock ownership requirements set forth in §542. To satisfy the gross income test, at least 60 percent of the adjusted ordinary gross income of a PHC must consist of personal holding company income which, in general, includes interest, dividends, rents and royalties.[3] In addition, the stock ownership test requires that, during the last half of the taxable year, more than 50 percent in value of a corporation's outstanding stock must be owned actually or constructively by or for not more than five individuals.[4]

In the absence of a statutory prohibition, a PHC might qualify as a RIC, since PHC income (consisting in large part of dividends and interest) is similar to the types of income earned by RICs. As noted above, however, prior to the Act, §851(a) excluded from the definition of the term "regulated investment company" any personal holding company as defined in §542. Thus, the Internal Revenue Service has ruled that a RIC which, due to constructive ownership, becomes a PHC by reason of five or fewer individuals continuing to own 50 percent of the RIC's stock at any time during the last half of the taxable year, will lose its status as a RIC effective as of the beginning of the tax year.[5]

C. Accounting for Short-Term Government Obligations

Under §454(b) of the Code, original issue discount on short-term obligations of the United States, or of a State, a possession of the United States, or any political subdivision thereof, or of the District of Columbia is considered to accrue for tax purposes on the date on which the obligation is paid at maturity, sold, or otherwise disposed of. Short-term obligations are those having a fixed maturity date not exceeding one year from the date of issue. Accrual basis taxpayers thus are not taxable on the discount until the obligation matures. In the case of a RIC which uses the accrual method of accounting, this rule with respect to the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

taxation of discount on short-term government obligations is at variance with the book accounting methods used in accounting for and computing distributions to shareholders.

II. Overview

A. Statutory Changes

Section 1071 of the Act amends the rules with respect to taxation of regulated investment companies in three ways:

First, the Act amends §851(a) of the Code to permit a PHC to be a RIC. In connection with this amendment the Act amends §852(e)(1) to provide that, in the case of a RIC which is a PHC, undistributed investment company taxable income will be subject to tax at the highest corporate rate (currently 46 percent).

Second, the Act amends §852(a) of the Code to provide that a corporation will not be eligible for RIC treatment unless (1) the RIC provisions apply to the company for all taxable years ending after November 8, 1983 or, (2) at the close of the taxable year, the company had no accumulated earnings and profits from a non-RIC taxable year. Section 852 also was amended by adding a new subsection (e) to provide a deficiency dividend procedure which would permit those companies having accumulated earnings and profits from a taxable year which later is determined to be a non-RIC taxable year to distribute within the 90-day period beginning on the date of the determination the accumulated earnings and profits of the non-RIC year. If the dividend deficiency procedure is followed the RIC will not lose its status as a RIC for years subsequent to the determination year. The Act in addition provides for the payment of interest by the RIC at the annual rate established under §6621 on an amount equal to 50 percent of the accumulated earnings and profits from the non-RIC taxable year for the period beginning on the last day prescribed for payment of the tax imposed for the non-RIC year and ending on the date the determination is made.

Third, the Act amends §852(b)(2) by adding a new subparagraph (F) to provide that a RIC may elect to accrue ratably the discount on short-term government obligations without regard to the requirements of §454(b).

B. Effective Dates

The amendments made by §1071 of the Act with respect to RIC status for personal holding companies and with respect to RIC status of corporations having previously accumulated earnings and profits from non-RIC taxable years generally are effective for taxable years beginning after December 31, 1982.[6] An exception is provided, however, for investment companies which were RICs for years ending before November 8, 1983, where such companies subsequently are determined to have failed to qualify as RICs for any of such years. In such case, no earnings and profits accumulated in any taxable year ending before January 1, 1984, shall be taken into account.[7] A further exception is provided for investment companies which began business in 1983 (and were not successors to another corporation), so that earnings and profits accumulated during their first taxable year will not be taken into account for purposes of applying the prohibition on the accumulation of pre-RIC earnings and profits contained in amended §852(a)(3)(B).[8] In addition, corporations which between December 31, 1981, and November 8, 1983, were engaged in the active conduct of a trade or business, sold substantially all of their operating assets, registered under the Investment Company Act of 1940 either as a management company or a unit investment trust, and qualified as a RIC for the first taxable year beginning after November 8, 1983, will be taxed as a RIC for such first taxable year ending after November 8, 1983, without being required to distribute the earnings attributable to the non-RIC years.[9]

The amendments with respect to accounting for short-term government obligations are retroactive and apply to taxable years beginning after December 31, 1978.[10]

III. Detailed Analysis

A. PHCs May Qualify As RICs

The amendment made by §1071(a) of the Act permits a PHC to qualify as a RIC but imposes a tax at the highest corporate rate (currently 46 percent) on the investment company taxable income of a RIC which is also a PHC. Since undistributed personal holding company income is taxed at 50 percent under §541, the election to be taxed as a RIC presents a slight rate advantage, assuming that the RIC provisions preempt the PHC provisions. The legislation is silent, however, on the coordination of the two provisions.

Both the House and Senate committee which considered this change believed that a PHC should be able to elect RIC status since the Subchapter S Revision Act of 1982 allows a PHC to elect subchapter S status and thus have its income taxed directly to the shareholders without the imposition of a corporate tax.[11] While the shareholders of an S corporation in general are taxable on the income of the corporation in a manner similar to the taxation of partnerships, however, a regulated investment company shareholder is taxed only on the income distributed or deemed distributed to him, with the corporation bearing the tax on the undistributed investment company income at rates generally applicable to corporations under §11 of the Code. The Subchapter S Revision Act of 1982 also provided for a tax at the corporate level to be imposed on the portion of the passive income of an S corporation representing accumulated earnings from a "pre-S" year.[12] In this respect the S corporation rules are similar to the amendments to the RIC provisions discussed below which deal with previously accumulated earnings and profits of a corporation electing to be taxed as a RIC.

B. Pre-RIC Accumulated Earnings and Profits

1. Effect on RIC Qualification

The Act amends §852(a) to provide that a corporation will not be eligible for RIC treatment unless it had elected such treatment for all taxable years ending after November 8, 1983, or at the close of the taxable year, the company had no accumulated earnings and profits from a non-RIC taxable year. The committees were concerned that operating corporations would accumulate earnings and profits, sell operating assets, invest the profits in passive investment assets, and then elect one of the types of entities (such as an S corporation or a RIC) that is treated as a conduit for tax purposes, thus converting their holdings from operating

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

assets into investment assets without distributing the earnings from the operating activities.[13] As noted above, the Subchapter S Revision Act of 1982 included, in §1375, a limitation on the use by an S corporation of passive income accumulated during a "pre-S" year. The amendment made by the Act to §852(a) of the Code, therefore, is designed to prevent corporations from electing RIC status and exempting themselves from the corporate tax on those earnings. The prohibition on electing RIC status where there are accumulated earnings and profits from a pre-RIC year, therefore, primarily is directed at preventing the *future* election of RIC status by a corporation without a prior distribution of those earnings and profits.

2. Deficiency Dividend Procedure

The Act includes a procedure, similar to the deficiency dividend procedure in §860, for those corporations which may be subject to a determination resulting in disqualification as a RIC for any taxable year. A corporation in such case will not be prohibited from requalifying as a RIC by reason of having accumulated earnings and profits from the year to which the determination relates if, within 90 days after the determination is made, the corporation distributes property in an amount equal to the accumulated earnings and profits attributable to the non-RIC year (less any interest charge).[14] This distribution is not includible in the dividends paid deduction for the taxable year in which it is made,[15] and must be taken into account by the shareholders as a dividend under §301 of the Code.[16]

The Act provides for the imposition of an interest charge at the annual rate established under §6621 on an amount equal to 50 percent of the accumulated earnings and profits attributable to the non-RIC year. Interest will be imposed from the last day prescribed for the payment of tax imposed for the non-RIC year to the date on which the determination is made. As under §860, the deficiency dividend procedure is not available if the determination contains a finding that the loss of RIC status was due to fraud with an intent to evade tax.[17] Also as under §860, the term "determination" means a decision by the Tax Court, or a final judgment decree or other order of any other court of competent jurisdiction; a closing agreement under §7121 of the Code; or an agreement between the RIC and the Secretary of the Treasury agreeing to the loss of RIC status for any taxable year.[18]

3. Exceptions Provided by Effective Date Provisions

While the deficiency dividend procedure would appear to provide relief in the case of any RIC established after November 8, 1983 which had accumulated earnings and profits attributable to a non-RIC year, the effective date provisions of the Act provide further relief to certain investment companies established or registered before that date. In the case of any investment company to which the RIC provisions applied prior to November 8, 1983, no earnings and profits accumulated in any taxable year ending before January 1, 1984 need be taken into account under §852(a)(3)(B). The deficiency dividend procedure thus need not be resorted to by these corporations for earnings accumulated prior to taxable year 1984. Similarly, an investment company which began business in 1983 need not take into account earnings and profits accumulated during its first taxable year.

The Act also contains an exception for operating companies which, between December 31, 1981 and November 8, 1983, sold substantially all of their assets and became registered under the Investment Company Act of 1940, if the RIC provisions applied to those companies in their first taxable year beginning after November 8, 1983. The effect of this exception is to treat those companies as if they were RICs for all taxable years ending on or after November 8, 1983 for purposes of §852(a)(3)(A), and exempt them from the requirement to distribute pre-RIC earnings and profits. This exception (which was added in the Conference and is described as a "transitional rule")[19] appears to provide an opportunity for those corporations which have completed all of the economic steps necessary to elect RIC status by November 7, 1983, and do elect such status for their first taxable year beginning after November 8, 1983, to retain their accumulated non-RIC year earnings and profits without distributing them. Since such corporations, assuming the economic qualifications had been met by November 7, 1983, and depending upon the start of their taxable year, could elect RIC status at any time up to November 8, 1984, the Act appears to provide a "window period" for those corporations with accumulated earnings which are able to take advantage of this opportunity.

C. Accounting For Short-Term Government Obligations

The amendment permitting a RIC to accrue for income tax purposes the discount on a short-term government obligation on a ratable basis is intended to permit the RICs to conform the income tax accounting rules for short-term government obligations with the book accounting methods employed by RICs. The Act provides that a RIC must elect this treatment with respect to short-term government obligations in a manner to be prescribed by regulations of the Internal Revenue Service.[20] The amendment is effective retroactively to taxable years beginning after December 31, 1978.

Chapter 35

CHANGES AFFECTING SUBCHAPTER S CORPORATIONS *

A. L. Suwalsky, Jr., Esq.
Silverstein and Mullens
Washington, D.C.

I. Technical Corrections to S Corporation Provisions [Act §§721, 712(b), 722(e)]

A. Introduction — A History of Subchapter S and Its Problems

The original Subchapter S provisions were enacted in 1958 as a measure intended to help small business.[1] At the time the Internal Revenue Code of 1954 was being drafted, the Senate Finance Committee would have authorized corporations with 10 or fewer individual shareholders to elect to be taxed under the partnership rules of Subchapter K.[2] The House bill did not contain a companion provision, however, and the measure died in the Conference Committee. When the rules we now refer to as "Subchapter S" were subsequently enacted in 1958,[3] the concept had changed markedly, although it still afforded shareholders the state law benefits of incorporation without subjecting the income of the entity to tax at both corporate and shareholder levels. Further, shareholders were allowed to deduct corporate losses on their individual tax returns (to the extent of their bases) as do partners. However, unlike partners, Subchapter S shareholders did not receive additions to basis for corporate indebtedness.[4]

Subchapter S quickly became popular, but as its provisions were supplemented by rulings, regulations and court decisions, it turned out to be one of the most complex and difficult parts of the Internal Revenue Code. Conceived to "... permit businesses to select the form of business organization desired, without necessity of taking into account major differences in tax consequences,[5] the provisions of Subchapter S have been so widely misunderstood that it has repeatedly been described in court decisions as "a trap for the unwary." [6]

Many of the earlier difficulties with Subchapter S stemmed from the often repeated misconception that a Subchapter S corporation is an "incorporated partnership." While this concept had substantial validity during the drafting of the 1954 Code, the Subchapter S corporation as it emerged from the legislative process in 1958 was by no means an "incorporated partnership." Except as specifically changed by the Subchapter S rules, all of the "normal" corporate provisions of Subchapter C apply to Subchapter S corporations. Thus, a Subchapter S corporation could have accumulated earnings and profits even though all income was taxed to its shareholders currently.

Subchapter S introduced very important non-partnership concepts such as "undistributed taxable income" and "previously taxed income." Each shareholder had to report his pro rata share of the corporation's income on his own personal tax return whether or not such income was distributed to him. Since in many cases corporate earnings were retained to build up the business, problems frequently resulted. After the end of the taxable year this undistributed income became "previously taxed income," funds which the shareholder was entitled to withdraw from the corporation without incurring any additional tax liability. Frequently, however, these undistributed profits on which a tax had been levied at a rate up to 70 percent became "locked-in."

Distributions to a shareholder in a given year were not considered to include any amount of previously taxed income until the shareholder had received in cash an amount equal to his share of the corporation's current earnings and profits for that year; nothing but money (neither notes nor tangible or intangible property) was deemed to carry out previously taxed income from the corporation. Distributions of property were characterized as either a return of capital (reducing a shareholder's basis in his stock), dividends (if the corporation had accumulated earnings and profits), or capital gains, if neither of the foregoing applied. Thus, a shareholder who had paid taxes on income never distributed to him might find that a distribution in kind of corporate assets, for example, a piece of real property that was in excess of the corporation's needs, would be a further taxable event. In addition, this previously taxed income was personal to the taxpayer and did not follow the stock if he died or sold his shares. Hence, the concept of "locked-in" income.

Subchapter S stockholders frequently tried to get around these situations by thinly capitalizing their corporations and then lending their firms the necessary operating capital. Interest on the loan was deductible by the corporation and repayment of principal was not a taxable event to the shareholder. The Internal Revenue Service attempted to discourage this practice by declaring such debt to be a "second class of stock." Since a Subchapter S corporation could only have one class of stock, such a finding meant that the corporation's Subchapter S status was terminated retroactive to the issuance of the debt and a corporate tax was owed on top of the ordinary income tax which had already been paid by the shareholders.[7] The second class of stock issue was litigated for years, and although the Service lost many of the cases, the prospect of litigation certainly had a chilling effect.

Retroactive termination of a Subchapter S election with severe tax consequences could also occur if the corporation had too much of the wrong kind of income, *i.e.*

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

"passive" income. Much litigation took place to determine what types of businesses Subchapter S corporations could engage in. Worse yet, a corporation in an admittedly active business could, through circumstances beyond its control, have a disproportionately small amount of active income in a given year and thus have its election terminated. Reinstatement after termination of Subchapter S status was not available as a matter of right until five years had passed (although the Commissioner might sometimes be persuaded to exercise his discretion to permit reacquisition of Subchapter S status in a shorter period of time).

Because the use of Subchapter S corporations was so widespread, momentum for reform built up over a number of years and some changes for the better were made. No major reform took place however, until 1982, when fundamental alterations were made by the Subchapter S Revision Act of 1982 (P.L. 97-354) (hereinafter the "1982 Act"). The 1982 Act changed the tax treatment of Subchapter S corporations to more nearly resemble that accorded to partnerships, with some items of income and loss passing through to the shareholders in proportion to their interests rather than being accounted for at the corporate level. Many of the traps for the unwary were removed from the statute. With certain exceptions, S corporations were allowed to have unlimited "passive" income and thus could be used as investment vehicles. The permissible number of shareholders was enlarged to 35. S corporations [8] may issue stock of one class with different voting rights, including stock which has no voting rights at all. S corporations may now derive all of their income from sources outside the United States. Corporate losses allocated to shareholders can be carried forward indefinitely. An S corporation will not be considered to generate or to have earnings and profits after December 31, 1982 except for, and to the extent of, pre-1983 accumulated earnings and profits. Distributions (other than out of pre-1983 earnings and profits) are tax free to the extent of the shareholder's basis in his stock and the indebtedness of the corporation to him. Additional technical changes were made to cause the tax treatment of S corporation shareholders to more closely resemble that of partners. Again, however, caution is advised in this respect—Subchapter S corporations are still not "incorporated partnerships."

B. Overview of 1984 Legislation

The Subchapter S Revision Act of 1982 was found to have a number of inadequacies and inconsistencies which Congress and the Service felt needed to be remedied by legislation. In addition, changes in other parts of the Code made conforming changes necessary in the Subchapter S area. This Chapter discusses these so-called technical and conforming corrections. Some of the issues addressed by the 1984 legislation arise from errors and omissions in the 1982 legislation, others from a lack of conformity between the congressional intent as expressed in the legislative history and the words of the statute itself, or ambiguities in the 1982 legislative language, or omissions, or other items leading to a lack of symmetry.

Changes made by the Tax Reform Act of 1984 (P.L. 98-369, hereinafter the "Act" or "TRA 1984") are summarized below. A more detailed explanation follows in Part C.:

(1) The basis of a shareholder's stock is to be adjusted for the taking or recapture of the investment credit. A corresponding adjustment is to be made to the accumulated adjustments account (if applicable).

(2) The corporation's accumulated earnings and profits (if any) are to be reduced by the amount of any investment credit recapture.

(3) Several changes are to be made respecting the accumulated adjustments account of a corporation that has accumulated earnings and profits: (i) Losses may serve to create a negative balance in the account, in which case the negative balance must be offset by future income before tax free distributions can be made by the corporation; (ii) Nondeductible expenses not related to the production of tax-exempt income will also cause a reduction of the accumulated adjustments account; and, (iii) If distributions during a taxable year exceed the account balance after the year's adjustments have been made, then the amount of the accumulated adjustments account will generally be deemed to have been divided *pro rata* among all distributions made that year.

(4) Election of S corporation status may be made within two months and 15 days after the start of a short taxable year even if such year is less than two and one-half months in length. If such election is not timely made, but if it would be timely for the following year, then the election is deemed to have been made for the following year. Pre-1981 Subchapter S corporations whose status was voluntarily revoked before 1982 may reelect Subchapter S status without waiting five years.

(5) The Conference Report makes it clear that an election can only be revoked by the vote of a majority of *all* shares of the corporation, *not* just a majority of the *voting* stock of the corporation.

(6) A trust beneficiary may elect to have his trust treated as a "Qualified Subchapter S Trust" by making the appropriate election within two months and 15 days (rather than 60 days) after the trust acquires stock of the Subchapter S corporation. If the trust becomes disqualified by reason of failure to meet distribution requirements, the election is terminated as of the first day of the first taxable year beginning after the year in which the trust ceased to be a Qualified Subchapter S Trust.

(7) No gain will be recognized by an S corporation upon the distribution of appreciated property in complete liquidation under §336 or on sales of such property in connection with a §337 liquidation. The corporation will recognize no gain on the distribution of stock in a reorganization in which §§354, 355 or 356 are applicable.

(8) Changes are made in the discharge of indebtedness provisions of §108(d) to require the basis reduction election be made at the corporate rather than the shareholder level. The corporation will not be required to recognize income upon the contribution to it of its debt the basis of which had been reduced (pursuant to §1367(b)) by the pass-thru of losses after 12/31/80. A technical change is made to §108(d) regarding reduction of tax attributes in bankruptcy/insolvency.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(9) In the year the debt of a Subchapter S corporation to its shareholder becomes worthless, such shareholder's share of corporate losses will still be applied to reduce the basis of such debt; this will have the additional effect of reducing the shareholder's short term capital loss for such worthless debt.

(10) Where losses have been applied to reduce a shareholder's basis in a debt owed to him by a Subchapter S corporation, subsequent income of the corporation allocated to such shareholder will restore the basis of the debt only to the extent it was reduced in a taxable year of the corporation beginning after December 31, 1982.

(11) If a corporation (regular corporation) elects to become an S corporation, its corporate tax preference items remain applicable for the first three taxable years after a Subchapter S election.

(12) A Subchapter S election will now terminate on the first day during its taxable year on which a formerly inactive subsidiary has gross income. This eliminates the possibility of a deliberate termination retroactive to the beginning of the year.

(13) (i) A corporation acquiring an S corporation which elects to treat the acquisition as a §338 purchase of assets will be allocated the tax consequences flowing from such election; (ii) The §1362(e)(3)(B) allocation of items of income and loss on a daily basis over the two short taxable years which may result from the termination of a Subchapter S election is no longer available if there is a sale or exchange of 50 percent or more of the stock of the corporation during the S corporation's termination year — instead there must be a "closing of the books" as of the last day of Subchapter S status; (iii) If all of the persons were shareholders in the corporation at any time in the year of termination and all persons who are shareholders on the first day following termination consent to a "closing of the books" as of the last day of Subchapter S status the §1362(e)(3)(B) allocation can be precluded.

(14) During the year following termination of Subchapter S status, with the consent of all shareholders receiving cash distributions from the corporation, such distributions will be treated as taxable dividends in order to avoid the imposition of accumulated earnings and personal holding company taxes.

(15) A corporation may elect to have the passive income rules imposed by the 1982 Act apply only for taxable years beginning after 1982 (vice 1981). By making such an election, an S corporation more than 20 percent of whose taxable income for its taxable year beginning in 1982 was passive can elect to terminate its Subchapter S election as of the beginning of that year, thus avoiding the tax on excessive passive investment income imposed by §1375. Another newly enacted provision allows the Commissioner to waive the tax on passive income in some cases.

(16) TRA 1984 changes to §1378(c) make the clarification that the grandfather provisions of the subsection cover a corporation which made an election before October 19, 1982 to be effective for a taxable year beginning in 1983. It makes the further clarification that an estate which held stock in the S corporation on December 31, 1982, is deemed to be a "qualified transferor" for purposes of the "permitted year" rules of §1378(c).

(17) For purposes of the attribution rules of §318, shareholders are treated as partners and an S corporation is treated as a partnership. This rule does not apply to make a nonshareholder constructively a shareholder.

(18) Interest and other deductible expenses owed by an accrual basis Subchapter S corporation to a cash basis related taxpayer may not be deducted prior to the time they are included in the income of such related taxpayer.

(19) For purposes of determining liability for capital gains taxes at the corporate level, the §1374(c)(2) exception has been broadened to allow the Commissioner discretion to ignore the existence of a predecessor corporation.

(20) A conforming amendment has been made to §1367(a)(2)(E) to reflect changes made by the 1982 Act.

C. Detailed Analysis

1. Investment Credit Basis Adjustment [9]

The Tax Equity and Fiscal Responsibility Act of 1982 (P.L. 97-248, hereinafter "TEFRA") required reduction of the basis of depreciable property by one half of the allowable investment credit (unless the taxpayer elected to take a reduced credit). The Act clarifies the operation of the basis reduction provisions with respect to partnerships and Subchapter S corporations. Where the basis of property owned by an S corporation is adjusted either upward or downward because of the allowance or recapture of investment credit, a corresponding adjustment is to be made to the basis of the stock of the shareholders of the corporation. The Conference Report states that corresponding adjustments are to be made to the accumulated adjustments accounts of S corporations which have accumulated earnings and profits. Presumably, such adjustments could cause the balance in the account to become negative, in which case it would have to be restored before the shareholder could receive tax free distributions. *See* C,3, *infra.*

Effective Date: As if included in TEFRA.

2. Investment Credit Recapture [10]

Act §721(e) provides a clarifying amendment to §1371(c) and (d) of the Code by stating that investment credit recapture amounts reduce the earnings and profits ("E & P") of an S corporation that has accumulated E & P. The omission of recapture amounts from subsection 1371(c) was an apparent oversight by the drafters of the 1982 Act.

Effective Date: As if included in the Subchapter S Revision Act of 1982 (hereafter the "1982 Act.")

3. Accumulated Adjustments Accounts [11]

The Act makes several changes in the provisions relating to the maintenance and operation of accumulated

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

adjustment accounts by S corporations still having accumulated E & P.[12]

a. Losses of the corporation reduce the accumulated adjustment account [13] and may result in a negative balance therein.[14] While it is clear that distributions in excess of the (positive) balance in the account would constitute taxable distributions from E & P to the extent thereof, the 1982 Act did not address the issue of negative balances. The House Report makes it clear that the account may be reduced below zero and that the account must be rendered positive again (through the generation of corporate taxable income) before further tax-free distributions can be made.[15]

b. Nondeductible expenses not related to the production of tax-exempt income will also cause a reduction in the accumulated adjustments account, presumably on the grounds that such expenditures either produced a benefit for the shareholders or were nondeductible because of public policy considerations. No explanation is provided in the committee reports.

c. After adjusting the account for items of income and loss and credit and deduction at the end of the year, a "look-back" to the year's distributions is required; if they exceeded the adjusted amount in the account, the account is to be allocated *pro rata* among all distributions. The Treasury is given the authority, however, to promulgate regulations varying this rule. The Conference Report states: "It is anticipated that this authority would be used to provide a different rule where substantial amounts of stock in the corporation are sold or exchanged during the taxable year."

Effective Date: As if included in 1982 Act.

4. Additional Rules for Elections [16]

a. Election of Subchapter S status for a short taxable year can be accomplished within two months and 15 days of the start of that year even if the short year is less than two and a half months in length. The change was made to remedy an anomaly in §1362(b).

b. If an election for a short taxable year is untimely for that year, it will be considered as made for the following taxable year if timely for that year. This eliminates a possible formalistic quibble which in times past might have foreclosed an election for either year.[17]

c. The Act makes it clear that revocations that occurred before the effective date of the 1982 Act, as well as involuntary terminations, will not bar a re-election within five years under §6(e) of the 1982 Act.

Effective Dates: The provisions of paragraphs a and b above are effective for elections made after October 19, 1982. Paragraph c is effective as if included in the 1982 Act.

5. Vote Required for Revocation of Election [18]

The Conference Report explains the apparent conflict between the statute and the Senate summary of the 1982 Act by stating that the summary is in error. A majority vote of *all* stock, *not just voting stock*, is necessary to revoke a Subchapter S election.

6. Qualified Subchapter S Trusts [19]

The period of time during which a beneficiary (or his legal representative) may elect to have his trust treated as a Qualified Subchapter S Trust is extended from 60 days to two months and 15 days after such trust becomes the owner of S corporation stock. The election is made with respect to the stock of each S corporation held by the trust. The purpose of the change is to bring this section into conformity with other election provisions.

If the trust becomes disqualified by reason of a failure to meet the distribution requirements of §1361(d)(3)(B) (but continues to meet the requirements of §1361(d)(3)(A)), the Subchapter S election of the corporation(s) whose stock the trust holds is *not* terminated retroactively but on the first day of the first taxable year of the corporation beginning *after* the year in which the trust ceased to be a Qualified Subchapter S Trust. It should be noted that the rule requiring termination as of the day the trust fails to meet any of the requirements of §1361(d)(3)(A) remains unchanged. Presumably, the reason for the amendment was to preclude manipulation of tax consequences after a look-back at the year's financial results.

Effective Date: As if included in 1982 Act.

7. Corporate Liquidations and Tax-Free Property Distributions [20]

The 1982 Act (§1363) required S corporations to realize gain upon a distribution of appreciated property to shareholders as if the property had been sold at its fair market value since the shareholders became entitled to claim a fair market value basis in the property received. Although the Senate Report on the 1982 Act contains the exception "... other than distributions in complete liquidation of the corporation, ..." this is not self-evident from the statute. The Act codifies this exception. The House Report also states that it is intended that the non-recognition provisions of §337 will continue to apply to sales of property after adoption of a plan of complete liquidation.

Observation: If a shareholder distributee of appreciated property owns 80 percent or more of the corporation's stock, directly or by attribution, §1239 will operate to convert the corporation's gain on a distribution of depreciable property to ordinary income. The corporation's gain will be allocated to all the shareholders in proportion to their shareholdings. Accordingly, care must be taken not to unwittingly change capital gain to ordinary income.

The Act also states by way of clarification that the corporation will recognize no gain on the distribution of stock in a reorganization where the receipt of such stock is tax free to the shareholders under §§354-56.

Effective Date: As if included in 1982 Act.

8. Treatment of Discharge of Indebtedness [21]

a. The 1982 Act required that elections under §108(b)(5) or (d)(4) (relating to the reduction of basis of depreciable property in conjunction with a discharge of indebtedness) be made at the individual shareholder level. The TRA 1984 does away with this rule and places the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

election at the corporate level, as in a C corporation. The House Report states that this was done in order to treat all corporate shareholders in the same manner. The change would appear advantageous to Subchapter S shareholders, some of whom might not have been able to take advantage of the basis reduction option.

b. A second benefit to shareholders in the discharge of indebtedness area is the rule contained in new subsection 108(d)(7)(C) that a shareholder's contribution to the capital of his corporation of a debt owed by it to the shareholder will not result in income to the corporation. Formerly §108(e)(6) caused the corporation to have cancellation of indebtedness income to the extent that the shareholder's basis in the debt had been reduced by the pass-thru of corporate losses to the shareholder. Now such basis reduction will be disregarded for purposes of §108(e)(6). Previously, cancellation by a shareholder of a low basis debt owed him by the corporation might have caused the shareholder to recognize taxable income.[22]

c. In the case of a discharge of indebtedness in a Title 11 case or insolvency, except where the indebtedness discharged is excluded from gross income by reason of being qualified business indebtedness, any loss or deduction which is disallowed for the taxable year of the discharge because the shareholder has insufficient basis in his stock or the corporation's debt to him, is to be treated as a net operating loss for such year and subject to reduction pursuant to §108(b) prior to the other tax attributes set out therein. This provision is not discussed in the committee reports but is apparently designed to soak up tax benefits which might arise out of insolvency.

Effective Dates: In the case of paragraphs a and c, the changes are effective as if included in the 1982 Act. Changes described in paragraph b are effective as to contributions to capital made after December 31, 1980.

9. Treatment of Worthless Debt [23]

In the year the debt of an S corporation to a shareholder becomes worthless, such shareholder's share of corporate losses is applied first to reduce the basis of his stock before the shareholder becomes entitled to claim any deduction for worthless stock. The change made by the Act provides that after the basis of the stock is exhausted the year's losses will next be applied to reduce the basis of any debt of the corporation to the shareholder. This will diminish or eliminate the §166(d) short term capital loss for the worthless debt.

Effective Date: As if included in 1982 Act.

10. Application of Debt Restoration Rules [24]

This amendment was enacted to make it clear that where losses have been applied to reduce a shareholder's basis in a debt owed to him by the corporation, subsequent income of the corporation allocated to such shareholder will restore the basis of the debt *only* to the extent such basis was reduced in a taxable year of the corporation beginning after December 31, 1982.

Observation: If, for example, the taxpayer holds pre-1983 zero basis open account debt of the corporation, he might investigate the feasability of contributing same to the corporation, or at least of causing the debt to be reduced to a written obligation so that its eventual repayment will not result in ordinary income.

Effective Date: As if included in 1982 Act.

11. Corporate Preference Items [25]

Prior to the enactment of TRA 1984, §291 corporate preference items were not applicable to an S corporation. Such entity's individual tax preference items pass through *pro rata* to their shareholders. During the process of drafting the TRA 1984 the Ways and Means Committee perceived that some C corporations might be electing Subchapter S status in order to reduce their tax liability arising from certain isolated transactions. Accordingly, §1363 was amended to provide that the regular corporate preference rules will apply (in addition to the S corporation rule) for the first three taxable years after a regular corporation elects Subchapter S status.

Effective Date: As if included in 1982 Act.

12. Inactive Subsidiaries [26]

Generally, an S corporation's election is terminated if it is a member of an affiliated group. An exception is provided if the corporation owns only an inactive subsidiary, *i.e.*, a corporation which during the S corporation's taxable year had not commenced doing business or had *taxable* income. It was perceived that this rule permitted a degree of manipulation since if it were violated the election would be terminated as of the beginning of the S corporation's taxable year. The TRA 1984 amends §1361 to provide that an S corporation's election will terminate on the day its subsidiary has *gross* income. Contributions to capital by a shareholder will not constitute gross income.

Effective Date: As if included in 1982 Act.

13. Accounting Treatment on Termination of Election [27]

a. A corporation purchasing the stock of an S corporation may elect to treat such acquisition as a purchase of assets under §338. The acquired corporation's Subchapter S election terminates on the date of acquisition and it is treated as if it had sold its assets to a new C corporation whose first day of existence was the following day. The Act provides that recapture income arising out of the §338 election is reported by the C corporation. This change protects the selling shareholders from the tax consequences of an event beyond their control, the §338 election.

b. Under §1362(e)(3) the shareholders may elect to have all tax items for the S short year allocated to the S short year rather than accepting an allocation of the termination year's items on a *pro rata* daily basis. The Act amends §1362(e)(3)(B) to require the unanimous consent to such closing of the books by all persons who were shareholders during the S short year and all persons who were shareholders on the first day of the C short year.

c. Where there is a sale or exchange of 50 percent or more of the corporate stock in the S termination year, the books must be closed at the end of the S short year and the *pro rata* allocation prescribed by §1362(e)(2) is not applicable. This change also protects the selling shareholders from unanticipated tax consequences.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Effective Dates: The provisions of paragraph a will not apply if the purchasing corporation can establish that a contact for the purchase of the S corporation stock entered into on or after October 19, 1983 and before enactment was negotiated on the contemplation that §1362(e)(2) (the *pro rata* allocation over the entire S termination year) would apply. The other provisions of paragraph a, b, and c are effective as if part of the 1982 Act.

14. Cash Distributions Following Termination [28]

Under the 1982 Act a distribution of cash by a corporation within one year after its S election terminates is tax free to the extent of the amounts in the accumulated investment account. The Act permits the shareholders to whom such distributions are made during the post termination transition period to (unanamously) elect to receive taxable distributions of earnings and profits. The purpose of the amendment is to allow shareholders to avoid the imposition of personal holding company and accumulated earnings taxes in appropriate cases.

Effective Date: As if included in 1982 Act.

15. Passive Income Rules for 1982 [29]

The 1982 Act amendments to the passive income rules, preventing an S election from terminating by reason of excess passive income for a single taxable year, were made effective for years beginning after December 31, 1981. The TRA 1984 allows an S corporation to elect to have such rules apply only for taxable years beginning after 1982. This allows a corporation which had excess passive income in 1982 to cause the termination of its election as of the beginning of that year, thus avoiding the tax on excess passive income imposed by §1375. It seems unlikely that many corporations will utilize this election.

A perhaps more useful related provision allows the Commissioner to waive the tax on passive investment income if a corporation determined in good faith that it had no Subchapter C earnings and profits at the close of a taxable year and it was later determined that the corporation did, in fact, have such E & P and if, within a reasonable time after discovery of same, such earnings were distributed.

Effective Date: As if included in 1982 Act.

16. Taxable Years of Existing S Corporations [30]

Under the 1982 Act, an S corporation must use a "permitted taxable year" (12/31 or another year end allowed by the Commissioner) rather than a fiscal year of its choice if it has a more than 50 percent change in ownership after December 31, 1982 (with certain exceptions), if it seeks to change its taxable year, or if it elects Subchapter S status after October 19, 1982, the effective date of the 1982 Act provision. Act §721(m) grandfathers corporations which made an election before October 19, 1982, effective for a taxable year beginning in 1983.

One of the exceptions to the 50 percent change of ownership rule covers stock acquired by reason of death. Act §721(q) makes the clarification that stock held by the estate of a decedent on December 31, 1982 may qualify as stock acquired by reason of death, for purposes of the change of ownership rules.

Effective Date: As if included in 1982 Act.

17. Attribution Rules [31]

Under §318 of the Code, a partner is deemed to own a proportionate share of the corporate stock owned by the partnership and a partnership is deemed to own all the stock owned by the partners. Attribution of stock ownership in a corporation occurs only with respect to shareholders owning 50 percent or more in value of the corporation's stock. Act §721(j) changes this rule to provide that S corporations are to be treated as partnerships and S corporation shareholders as partners. The rule is not to be applied to make a non-shareholder constructively a shareholder.

Effective Date: As if included in 1982 Act.

18. Special Rules for Certain Expenses of S Corporations [32]

Interest and other deductible expenses owed by an accrual basis Subchapter S corporation to a related taxpayer are now allowable as deductions no earlier than the day on which such amount is includable in the gross income of the payee. This is a companion provision to §174 of the Act which amends §267 of the Code respecting partnerships and is a part of the overall tightening up of the related party rules.

Effective Date: As if included in 1982 Act.

19. Treatment of Predecessor Corporation Under Section 1374 [33]

Section 1374 is designed to stop the avoidance of capital gains taxes by a C corporation which makes a "one shot" Subchapter S election because of a non-recurring capital gain. Generally, a capital gains tax is not payable by an S corporation which has had an election in effect for the three preceeding taxable years or if it is a new corporation and it and any predecessor has been in existence less than four taxable years. The Act amends §1374(c)(2) to allow the Commissioner discretion to ignore the existence of a predecessor corporation.

Effective Date: As if included in 1982 Act.

20. Basis Adjustments in Subchapter S Stock for Percentage Depletion [34]

Act §722(e)(2) sets out a conforming amendment relating to §3(a) of the 1982 Act which added new subparagraph (c)(13) to §613A providing that in the case of S corporations, depletion deductions for oil and gas properties are to be computed separately by each shareholder.

Effective Date: For taxable years beginning after December 31, 1982.

II. Elections to Treat Subchapter S Income Under Prior Law for Purposes of Investment Interest Limit [35]

Section 1066 of TRA 1984 [36] states that for taxable years of S corporations beginning in 1983 or 1984, a shareholder may elect that any "qualified income" (income other than personal service income) which a shareholder takes into account by reason of being a shareholder "... shall be treated for purposes of section 163(d) ... as such income would have been treated but for the enactment of the [1982 Act]." However, the Conference Report cautions that "No inference is intended as to the proper interpreta-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tion of prior law." [37] For a more detailed discussion *see* Chapter 8 (III).

Effective Date: As if included in 1982 Act.

III. Treatment under Subchapter S of Commodity and Option Dealers

Code §1374 imposes a tax on certain capital gains realized by an S corporation. To facilitate S corporation elections by options and commodities dealers, Act §102(d) exempts from this provision any gain or loss that is attributable to regulated futures contracts or a related property. In addition, for purposes of computing the passive investment income of an S corporation under §1362(d)(3) (relating to the termination of election of an S corporation having passive investment income exceeding 25 percent of gross receipts), these gains and losses shall not be taken into account. Finally, the Act provides that a commodities or options dealer may make an S corporation election within 75 days after the date of enactment of the Act, regardless of the usual requirement that the election be made on or before the 15th day of the third month of the taxable year.

For a complete discussion of these provisions, see Chapter 27.

IV. Revision of §267 Rules as Applied to S Corporations

The rule deferring the deduction of expenses and interests owed by an accrual-basis taxpayer to a related cash-basis taxpayer, applicable only to obligations of an S corporation to its shareholders under prior law, will now be extended to the obligations of a shareholder to an S corporation, obligations of partnerships to partners, and obligations of partners to partnerships. The former exception from the rule for amounts owing from an S corporation to a shareholder with less than a 2 percent interest in the S corporation has been eliminated. The rule requiring deferral of a deduction for expenses or interest of an accrual-basis taxpayer owed to a related cash-basis taxpayer until actual payment will also apply to a partnership or S corporation that owns a partnership interest in a lower-tier partnership and another partner in the lower-tier partnership, and to an S corporation or partnership and any person related (within the meaning of §267(b) or §707(b)(1)) to partners in the partnership, shareholders in the S corporation, or partners in a lower-tier partnership in which the upper-tier partnership or S corporation owns an interest. The rule will not apply to guaranteed payments to which §707(c) is applicable. Instead, the prior law requirement continues, that a partner must include such payments as ordinary income for his taxable year during which the partnership's taxable year in which the partnership deducted such payments ends. The Act also contains an exception for certain resyndications of low-income housing (within the meaning of §189(e)(5)) permitting the deduction of specified expenses and interest incurred in connection with the resyndication.

The Act amends §267(b) to broaden the relationship rules. The extension of the relationship rules will apply to both the disallowance of loss on a sale or exchange of property between related parties and to the deferral of deductions for unpaid expenses and interests owed by an accrual-basis taxpayer to a cash-basis taxpayer. Section 267 will now apply to transactions between a partnership and a corporation which are commonly controlled, and to transactions between an S corporation and a C corporation which are commonly controlled (whether by one individual, as under prior law, or by more than one person). The Act also extends §267 to transactions between groups of controlled corporations. Corporations will be treated as members of a controlled group if they satisfy the tests of §1563(a), except that a 50 percent control test will be substituted for the 80 percent control test of §1563(a). In the case of a transaction between members of a controlled group of corporations, the disallowance of a loss on the sale or exchange of property under §267(a)(1) will not apply. Instead, losses will be deferred until the property is disposed of to an unrelated third party in a transaction which results in recognition of gain or loss under consolidated return principals. Loss on a transfer to a DISC or on certain sales of inventory to a foreign member of the same controlled group, and certain foreign currency losses, will not be subject either to disallowance or deferral.

---

* Parts II and III were prepared respectively by Samuel M. Maruca, Esq. and Douglas E. Jacobs, Esq., of Silverstein and Mullens, Washington, D.C.

[1] Until recently, Subchapter S corporations were referred to in the statute as "Electing Small Business Corporations."

[2] Amendment 259 to H.R. 8300, 83rd Cong., 2d Sess., proposing IRC §1351 (Subchapter R, Part I). See Senate Rept. 1622, pp. 118-19 and House Rept. 2543 (the Conference Report) p. 72.

[3] As section 64 of the Technical Amendments Act of 1958 (P.L. 85-866) which added §§1371-1377 to the Code.

[4] Except for debts of the corporation to a shareholder, as to that shareholder, pursuant to §1366(d).

[5] Senate Rept. 1983, 85th Cong., 2d Sess., p. 87.

[6] Ironically, the small businessmen Subchapter S was designed to aid have often found that expensive (and perhaps hard to obtain) expert tax advice may be required to avoid encountering serious tax problems.

[7] This additional tax was sometimes enough to render the hapless corporation insolvent.

[8] The Act introduced the "S Corporation" and "C Corporation" terminology; "Subchapter S" and "regular corporation" remain in general use, however.

[9] Act §712(b); Code §48(q)(6); H.R. Rep. No. 432 (Part 2) 98th Cong., 2d Sess., (1984) p. 1613 (hereafter House Report). H.R. Rep. No. 861, 98th Cong., 2d Sess., p. 1226 (hereafter Conf. Report).

CHAPTER 36

NEW AND AMENDED RULES RELATING TO TRANSACTIONS BETWEEN PARTNERSHIPS AND PARTNERS

Robert E. Falb, Esq.
and
Samuel M. Maruca, Esq.
Silverstein and Mullens
Washington, D.C.

I. Overview

Subchapter K of the Code contains a comprehensive body of rules for the taxation of partnerships. The hallmark of these rules is their flexibility, allowing partners a broad range within which to shape business arrangements to meet their needs with minimum constraints imposed by the Code. These rules permit partners to allocate among themselves, relatively freely, the tax benefits and detriments of their business arrangement. To the extent that the partners' agreement is respected by the Service, partners may achieve a high degree of certainty and predictability as to tax results.

The flexibility of Subchapter K, however, has also permitted sponsors of tax shelters to accomplish the sale of tax benefits in a manner disassociated, wholly or partially, from the economic substance of the underlying business arrangement. In response to this perceived abuse, the Service at first attempted to constrict the definition of a "partnership" in order to make this form of business organization less available to sponsors of tax shelters. That effort met with only limited success. More recently, Subchapter K has been amended to impose rules designed to eliminate specific abuses or to ameliorate particular concerns. These amendments have precluded retroactive allocations and allocations without substantial economic effect, limited certain deductions claimed by partnerships, and overhauled the rules for reporting, examining and litigating items in partnership and partners' tax returns.

The Tax Reform Act of 1984 continues this trend of specific amendments to particular provisions of Subchapter K. But in the process of attempting to end abuses of the partnership form in tax-sheltered arrangements, the flexibility generally characterizing Subchapter K — particularly the ability of partners to agree among themselves concerning the tax consequences of their actions — has been markedly reduced. Instead, partners and partnerships will be constrained to adhere more closely to intrinsically less flexible patterns to be established in Treasury regulations, with a consequential increase in the uncertainty and unpredictability of ultimate tax results. It remains to be seen whether the Treasury will be able to prescribe rules which will be broad enough to cover the diverse business arrangements encompassed within the term "partnership," but are effective enough to eliminate the perceived abuses of tax shelters.

II. Mandatory Allocations with Respect to Contributed Property

A. Background

Typically, when a partnership is formed, the economic relationship between or among its partners is based on their agreement concerning the economic value of each partner's contribution to the business. If two partners form an equal partnership in which one contributes $1,000 in cash and the other contributes $1,000 in property, they would expect to share the economic profits and losses of the venture equally. Thus, if the property were sold for $1,500, each partner should realize an economic gain of $250.

However, because no gain or loss is recognized when property is contributed to a partnership,[1] the tax consequences of the transaction described above do not necessarily follow its economic consequences. Since the contribution of property to a partnership is a nontaxable transaction, the basis of the contributed property to the partnership is the same as its basis to the contributing partner.[2] As a result, there may be a difference between the value of property contributed to a partnership and its basis, and that difference may distort the tax consequences of a partnership transaction. Thus, in the above illustration, if the basis of the contributed property is $800, the partnership will realize taxable income of $700 upon a sale of the property for $1,500. If that taxable income is also allocated equally between the partners in accordance with their agreement, the partner who contributed $1,000 in cash and realized a $250 economic gain will be taxed on $350 of taxable income, while the partner who contributed $1,000 in property and realized (at least for the moment) a $450 economic gain ($200 in precontribution appreciation and $250 in post-contribution appreciation) will also be taxed on $350 of taxable income. This distortion is, in theory, a temporary one, because if the partnership were liquidated and its net assets distributed in accordance with the partners' agreement, the amount of the distributions in relation to the basis of each partner in his partnership interest would compensate for and correct the initial distortion caused by the difference between the value of the contributed property and its basis. For example, after the sale, the partner who contributed cash would have a basis of $1,350 in his partnership interest (his $1,000 capital contribution plus his $350 share of taxable income), but would receive a distribution of $1,250 (one-half of the partnership's assets),

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

resulting in a $100 loss. That loss, in theory, offsets the excess $100 of taxable income, bringing the partner's economic and tax situation into balance. Similarly, the partner who contributed property would have a basis of $1,150 (his $800 of cost plus basis property plus his $350 share of taxable income), and would receive a distribution of $1,250, resulting in $100 of additional taxable income. Again, economic and tax consequences are brought to balance because the partner should ultimately realize $450 of taxable income in respect of a $450 economic gain.[3]

While the distortions caused by any difference between the value of contributed property and its basis are, in theory, self-correcting, the mechanism for that correction is, at best, imperfect. Correction may not occur until the partnership is liquidated, potentially an extended period of time. Moreover, the character of the taxable income or loss (as capital or ordinary) realized during the operating phase of a partnership's life may be different from the character of such income or loss realized at liquidation. Finally, correction will not occur if the death of a partner intervenes, resulting in an adjustment to the basis of his partnership interest to reflect its value at the date of death.

Given these difficulties, the Code (prior to its amendment by the 1984 Act) provided partners with an optional method for eliminating any distortion caused by the difference between the value of contributed property and its basis. Under §704(c)(2), partners could allocate depreciation, depletion or gain or loss among themselves "in a manner which takes into account all or any portion of the difference between the adjusted basis and the fair market value of contributed property at the time of contribution." This option permitted partners to allocate any part or all of the precontribution difference between the basis and value of contributed property to the property-contributing partner, thereby currently eliminating some or all of the difference between tax and economic results at the outset rather than at liquidation of the partnership. Section 704(c)(2) was expressed as an option on the theory that any distortion between tax and economic results principally affected the partners themselves and was mutually offsetting between or among them, with little, if any, adverse tax revenue effect. Therefore, partners were given great latitude to adjust tax and economic results among themselves in any manner they deemed suitable.

B. Reasons for Change

In enacting §71 of the Tax Reform Act of 1984, Congress determined that the latitude allowed to partners to allocate precontribution gains or losses was subject to abuse and should be terminated. Both the Ways and Means Committee and the Finance Committee found that, because partners often have significantly different tax positions, "special rules are needed to prevent an artificial shifting of tax consequences between the partners." For example, precontribution gains or income could be shifted to a partner who is tax exempt, who is in a lower tax bracket, or who has expiring net operating loss carryovers. Conversely, built-in losses in contributed property could shift to high rate partners in need of tax shelter. A similar potential for abuse arises when a cash-method partner contributes earned but uncollected income or incurred but not paid expenses to a cash-method partnership. The post-contribution income or expense could be shifted to another partner, resulting in tax avoidance.

C. Explanation

To preclude this abuse, §71 of the 1984 Act amends §704(c) of the Code to require that the allocation of tax consequences between or among partners reflect the difference between the fair market value of contributed property and its basis to the partnership. Similar rules are to be prescribed for cash-method partnerships to ensure that items of income or expense that economically accrued prior to contribution are allocated to the contributing partner and not shifted improperly to other partners. These rules are to be provided in Treasury regulations. The legislative history contemplates that these regulations will require, rather than permit (as under prior law), that precontribution gains or losses, when realized, be allocated to the contributing partners. Similarly, depreciation or depletion would be allocated to each money-contributing partner based on the value of the partnership property (determined by reference to his cash contribution) rather than the partnership's basis in the property.

> *Example 1*: *A* and *B* form an equal partnership to which A contributes $1,000 in cash and *B* contributes $1,000 in inventory having a basis to *B* of $800. If the inventory is sold for $1,500, §704(c)(2), as amended, requires that the taxable income allocable to *B* would be $450, consisting of the $200 precontribution appreciation plus his one-half share of the partnership's post-contribution income; the rest of the taxable income of $250 would be allocable to *A*. *B* cannot shift income to *A* by means of their partnership agreement.
>
> *Example 2*: *C* and *D* form an equal partnership to which *C* contributes $1,000 in cash and *D* contributes $1,000 in equipment having a basis of $1,600. Assuming a 20 percent annual depreciation rate, the partnership would be entitled to a deduction of $320 per year. Since *C*'s investment in the partnership gives him a one-half interest in depreciable property worth $1,000, at the time of contribution, *C* would be entitled to aggregate depreciation of $500, or $100 per year, under amended §704(c)(2); the remaining $220 depreciation deduction must be allocated solely to *D*. *D* cannot, therefore, shift that depreciation to *C* by virtue of their partnership agreement.

It should be noted that the fair market value of contributed property is the key factor in the now-mandatory allocation of taxable income or loss, depreciation and depletion. Adjustments to the partners' agreement concerning the fair market value of contributed property could be used to shift the tax consequences among partners. In Example 2, for instance, if the partners valued the equipment at $1,600 and partner C issued his note for $600 to the partnership as an additional capital contribution, it is possible that C would be entitled to a depreciation deduction of $160 rather than $100.

In light of the foregoing possibility, the Report of the Senate Finance Committee ("Senate Report") states that "[g]enerally, the fair market value of contributed property will be determined by reference to the arm's-length dealings of the various partners as reflected in their capital accounts

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

if the parties have sufficiently adverse interests and normally will not be upset by the Treasury except in cases of manipulations or abuse. The committee anticipates that the regulations may require a partnership to file a statement of the agreed fair market value of contributed property with the partnership return for the year in which the contribution is made." [4] Given the increased importance that the fair market value of contributed property will have in the calculus of allocating tax benefits and burdens among partners, there could be closer IRS scrutiny of transactions incident to the organization of a partnership, and the tax consequences of those transactions will not be determinable by agreement of the partners themselves and, consequently, will be substantially less predictable.

In its consideration of the legislation, it became apparent to the Finance Committee that mandatory allocations among partners of the difference between the adjusted basis and value of property must be eliminated through special allocations of depreciation or depletion. Any new rules will have to address the various problems posed when more than one property is contributed by a partner (*i.e.*, whether the basis of several properties can be aggregated); when more than one partner contributes property; when property has built-in depreciation or investment credit recapture; when contributed property is disposed of in exchange for property having a substituted basis; when there are disproportionate profit and loss-sharing arrangements provided in the partnership agreement; and when property is retained by the partnership after the contributing partner disposes of his partnership interest. Given this list of concerns, it is evident that any Treasury regulations under §704(c)(2) will, of necessity, be at least as complex as those now proposed under §704(b).[5]

In short, the now mandatory allocation of gains, losses, depreciation and depletion to reflect the difference between the value and the basis of property contributed to a partnership does reduce (but not wholly eliminate) the potential for tax avoidance by shifting the incidence of tax among partners in a partnership agreement. As a result of this change, the rules governing the taxation of partnership have become less flexible and the results somewhat less predictable; it is likely that tax practitioners will be faced with another intricate set of partnership regulations implementing this mandatory allocation and then abating its consequences in certain circumstances.

D. Effective Date

The mandatory allocation provision applies to property contributed after March 31, 1984, in taxable years ending after that date.

III. Character of Gain or Loss on Contributed Property

A. Background

The character of gain or loss on the disposition of property distributed by a partnership to a partner is generally determined with reference to the distributee-partner. This general rule does not apply, however, if the distributed property consists of unrealized receivables or inventory items. Section 735 provides that in the case of unrealized receivables,[6] gain or loss on disposition by the distributee-partner is treated as ordinary income or ordinary loss, regardless of the duration of the distributee-partner's holding period.[7] Gain or loss on the sale or exchange of inventory items [8] is treated in the same manner, but only if it is sold or exchanged by the distributee-partner within five years from the date of distribution.[9] The purpose of these provisions is to prevent partners from converting potential ordinary income gain on partnership assets into capital gain. Even if the distributed receivables or inventory would be considered investment property in the hands of the distributee, any gain on a subsequent sale, even gain attributable to post-distribution appreciation, will be ordinary in nature (subject to the five-year limit for inventory).

B. Reasons for Change

Prior to the Tax Reform Act of 1984, the Code did not provide specific rules for characterizing gain or loss on disposition by a partnership of property contributed by a partner. Under case law and IRS rulings, this determination generally is made at the partnership level.[10] With respect to property contributed to a partnership, the absence of restrictions similar to those applicable to contributed property (§735) has permitted taxpayers to alter the character of potential gain or loss by contributing property to a partnership and causing the partnership to dispose of the property. For example, a real estate dealer may convert potential ordinary income gain into capital gain by contributing the real estate to a non-dealer partnership for subsequent sale by the partnership. The gain realized on the sale flows through the partnership to the partner under §702. Conversely, a taxpayer who owns capital assets that have declined in value may convert the potential capital loss into ordinary loss by contributing the assets to a partnership that is engaged in trading similar assets.

The Report of the Committee on Ways and Means ("House Report") evidences a particular concern on the part of Congress that prior law enabled an investor in securities to receive the benefit of capital gain on appreciated stock by selling it himself, while converting capital losses on stock to ordinary losses through the simple mechanism of a partnership contribution. The new provisions are designed to obviate this abuse by fixing the character of gain and loss on certain types of property (generally, the same properties subject to §735) at the time of contribution to the partnership.

C. Overview of Amendments

Act §74 essentially imports the rules of §735 into Subpart A, part II of subchapter K (relating to contributions to a partnership) as new §724. The character of potential gain on unrealized receivables will be permanently fixed as of the date of contribution. In the case of inventory items and property having built-in capital loss potential, the ordinary income asset characterization will expire five years after the date of contribution.

If property subject to the restrictions of §735 and new §724 is transferred in a nonrecognition transaction (other than a §351 exchange), the tax treatment mandated by §735 or §724 (as the case may be) will attach to the property received in the exchange ("substituted basis property").

By special provision, the characterization rules under §§735 and 724 will not apply to property used in a trade or

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

business (*i.e.*, §1231 property), regardless of whether the property is held for the period required under §1231(b).

D. Effective Dates

The new rules will apply to property contributed to a partnership or distributed by a partnership after March 31, 1984, in taxable years ending after that date.

E. Explanation

1. Contributed Property

New §724(a) provides that property constituting an unrealized receivable in the hands of a partner will retain that character indefinitely in the hands of the partnership. Disposition of the property by the partnership will generate ordinary income or loss. An "unrealized receivable" is any right to payment for inventory or services (to the extent not previously included in income by the contributing partner).[11]

Property that was an inventory item in the hands of the contributing partner will retain that characterization for a five-year period commencing on the date of contribution. For purposes of this section, the term "inventory item" includes (1) §1221(1) property (stock in trade and property held by the contributing partner primarily for sale to customers); (2) any other noncapital assets, other than §1231 property; and (3) foreign investment company stock.[12] Section 1231 property that was not held prior to the contribution for the holding period required under §1231(b) will not be treated as inventory property for purposes of §724.[13] Thus, §1231 property that would have qualified for capital gain treatment had the contributing partner continued to hold it will not receive less favorable treatment after the contribution.

The rules applicable to inventory items also apply in the case of property having capital loss potential in the hands of the contributing partner.[14] The partnership must retain such property for a minimum of five years if it is to avoid capital loss treatment on disposition. A premature disposition will result in capital loss to the extent that the adjusted basis to the contributing partner exceeded the fair market value of the property at the time of the contribution (*i.e.*, to the extent of losses that were not realized by the partner prior to the contribution.[15]

2. Substituted Basis Property

In the case of any property that is subject to the rules of §§724 and 735, a disposition by the partnership or the distributer-partner, respectively, in a nonrecognition transaction will not purge the property of its ordinary income or capital loss characterization.[16] This rule applies to a series of nonrecognition transactions as well.[17] The House Report states, however, that these "basis tainting rules" are intended to apply only for the period during which the property would have been treated as ordinary income or capital loss property had it not been disposed of. Thus, for example, property received by a partnership in a tax-free disposition of capital loss property occurring three years after contribution of the capital loss property will retain its capital loss character for two rather than five years.

The substituted basis rule does not apply to stock of a C corporation received in a §351 exchange. Because corporate gains and losses, unlike those of a partnership or S corporation, do not pass through to the owner of the business, the corporate form does not permit the conversion of gain or loss through contributions and distributions of property. The potential for abuse, therefore, is not present in the case of a §351 transaction.

IV. Treatment of Payments for Property or Services

A. Background

Under the taxing scheme of Subchapter K, a partnership is not, as such, a taxable entity.[18] Instead, items of income, gain, loss, deduction or credit attributable to partnership activities flow through and are taxed directly to the partners. Partners are free to allocate these items by agreement among themselves, provided that the allocation reflects the economic substance of the underlying business arrangement.

Although a partnership is not a tax-paying entity, the income and expenses incurred in the course of the partnership's business are determined at the partnership level in the same manner as in the case of any taxpayer.[19] A partnership is therefore subject to the usual rules governing computation of taxable income. Amounts paid by a partnership for new buildings or improvements to property must be capitalized, rather than currently deducted.[20] The Code specifically provides that no deduction is permitted for expenses incurred in organizing a partnership or in promoting or selling partnership interests,[21] although partnership organizational expenses may be amortized over five years at the election of the partnership.[22]

When a partnership pays a third party (*i.e.*, a non-partner) for property or services, the proper tax treatment of the expenditure under the foregoing principles is relatively clear. The situation is otherwise in the case of payments by a partnership to a partner. The tax effects of such payments depend upon the capacity in which the partner engaged in the transaction. If, in providing property or services to his partnership, the partner acted in his capacity as a non-partner, the transaction is viewed as having occurred between the partnership and a third party, and is taxed in accordance with the general provisions of the Code.[23] On the other hand, if the partner acted as a partner in the transaction, amounts paid to him by the partnership are generally treated as a distributive share of partnership income.[24] Whether a partner is acting as a partner or in his capacity as a third party depends upon all of the facts and circumstances surrounding the transaction. Under the Treasury Regulations, the substance of the transaction, rather than its form, is controlling.[25]

B. Reasons for Change

The legislative history of the 1984 Act evidences a concern on the part of Congress that the partnership form has been used to avoid Code rules governing the characterization of items of income and expense. For example, if a partner provides services to his partnership in the form of managing and supervising the construction of a shopping center, the partnership must capitalize amounts paid to the partner as part of the cost of the shopping center. If instead of paying the partner directly, and without regard to the income generated by the shopping center, the partnership specially allocates a share of its income (and makes a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

corresponding distribution of cash) to the partner, the partnership has effectively skirted the capitalization requirement. The allocation of income in payment for services reduces the taxable income otherwise allocable to the remaining partners, just as if the partnership had taken a current deduction in the amount of the payment.

In this example, the tax consequences to the service partner are identical whether he receives payment directly or in the form of an allocation of income and concomitant distribution. But, as noted by the Senate Finance Committee, the latitude in gain allocation afforded partnerships may permit a service partner to convert ordinary income into capital gain.[26] This will occur if the partnership specially allocates capital gain income and makes a distribution to the partner in payment for services.

A similar tactic has been used to convert part of the purchase price for real estate into a current deduction. In *Ellison v. Comr.*,[27] the Tax Court held that reserved rents paid by two partnerships to the sellers of two apartment buildings constituted part of the purchase prices for the buildings, and therefore must be included in the taxable income of the partnership. The petitioners argued unsuccessfully that the sellers received the reserved rents as distributive shares of partnership income.

Of greatest concern to Congress is the treatment of organization and syndication expenses. As noted above, neither organizational nor syndication expenses of a partnership are deductible currently. Organizational expenses may be amortized over five years (or capitalized and recovered over the life of the partnership), but syndication expenses are never deductible.[28] An allocation of partnership income and a related distribution to a partner that in substance constitute payment for the partner's services in organizing or syndicating the partnership in effect permits a current deduction for these expenses.

C. *Overview and Effective Date*

TRA §73 amends §707(a) to provide that if (1) a partner performs services for or transfers property to a partnership, (2) the partnership makes a related allocation and distribution to the partner, and (3) the provision of services or property and the allocation and distribution, viewed together, are "properly characterized" as a transaction between the partnership and a non-partner, then the transaction will be so characterized.[29] The partnership will be required to treat the payments as if made to a non-partner for purposes of tax accounting and the computation of the partnership's taxable income.

The Act authorizes the Secretary of the Treasury to promulgate regulations for implementing the new provision, which will apply to services performed or property transferred after February 29, 1984.[30]

D. *Explanation*

Drafting regulations that clearly delineate the circumstances in which the new provision will apply will not be an easy task. Arrangements for disguising capital expenditures of a partnership as income allocations coupled with cash distributions may be difficult to distinguish from bona fide allocations and distributions to partners. Under long-standing partnership taxation rules, the contribution of property to a partnership in exchange for an interest in the partnership is a nonrecognition transaction.[31] Moreover, a partner *qua* partner is entitled to share in the income generated by his efforts on behalf of the partnership, or by property he has contributed to the partnership's business.

The Report of the Senate Finance Committee describes, in considerable detail, the factors that should be taken into account under the regulations in determining whether an allocation and distribution is made to a partner in his capacity as such. The first factor, considered to be the most important, is whether the payment is subject to the risk of the partnership's business. The theory here is that to the extent an allocation and distribution to a partner is reasonably certain to occur, the partner is acting in an individual capacity in providing services or property and should be treated as, in effect, an independent contractor. Conversely, the presence of substantial entrepreneurial risk as to the amount and fact of payment is characteristic of a genuine allocation and distribution. As examples of risk-limiting arrangements, the Report refers to "capped" allocations and allocations fixed as to duration, when it is "reasonably certain" that the partnership will have sufficient income to pay the stipulated amount.

One obvious difficulty with this concept is that it requires a prediction as to the amount of income that will be generated by the partnership's business. In some instances, for example where the partnership owns fullyleased commercial real estate, profits may be predicted with some confidence. In other types of enterprises, however, there may be no basis for projecting an income stream with any accuracy. Unless the Treasury is able to devise workable standards for gauging the likelihood of an allocation, much uncertainty will accompany tax planning in this area.

Comment: It will be interesting to observe not only how, but *when* the possibility of payment will be measured. Theoretically, the likelihood of payment should be determined at the time of the transaction, not years later when the partnership has in fact made (or not made) the payment.

The second and third factors discussed in the Senate Report are more susceptible to quantification in regulations. These factors are the duration of the payee's partnership status and the timing of the payment in relation to the provision of services or property. If partner status is transitory, an allocation and distribution resembles a fee rather than a return on investment, and the "partner" will be viewed as having joined the partnership for tax-motivated purposes. If an allocation and distribution is proximate in time to the performance of services or transfer of property by the recipient partner, the transactions are likely to be regarded as related. Conversely, allocations remote in time from the provision of services or property are more likely to be respected (in part because the risk of nonpayment increases with time). With respect to these factors, the regulations could provide numerical tests or presumptions which, even if arbitrary, would to some degree reduce the uncertainty inherent in a facts and circumstances standard.

The fourth factor focuses on the recipient partner's motivation in becoming a partner, *i.e.*, whether based on the facts and circumstances it appears that tax consider-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ations caused the association. This factor does not appear to contribute significantly to the analysis. Apart from the difficulties usually incurred in applying a standard based on the taxpayer's subjective intentions, it would seem that the test will involve nothing more than a reconsideration of the other specific factors set out in the Report.

The fifth factor is whether the allocation in question is disproportionately large in relation to the recipient partner's continuing interest in partnership profits. A short-term allocation that is larger than the recipient's general profits interest suggests that the allocation is a disguised fee. This factor is functionally related to the question of the duration of a partner's status as a partner. Each factor measures the substantiality of the partner's relationship to the partnership to determine whether the partner providing services or property is doing so in his capacity as a partner.

The sixth and final factor is whether the requirement that capital accounts be respected under §704(b) and the proposed allocation regulations [32] makes disguised payments for property economically unfeasible, and therefore unlikely to occur. The Report states that this will generally be the case unless, for example, the property contributed by the partner is undervalued, resulting in an understatement of the partner's capital account. The precise thrust of this factor is unclear. The underlying theory apparently is that when a partner's capital account reflects the full value of contributed property, a further special allocation of income and distribution to the partner (which would not reduce his capital account balance) would be unacceptable to the remaining partners. If capital accounts are respected, the recipient partner will be entitled to receive the full value of the property on liquidation (assuming no further allocations and distributions) despite the prior distribution to him of cash commensurate with the property's value.

The Senate Report specifically contemplates the bifurcation of an allocation and distribution in certain circumstances. If an allocation is determined to be only partly related to services or property provided by the recipient, the provision will apply so as to recharacterize the appropriate portion of the allocation.

The Senate Report provides two examples [33] illustrating the application of the foregoing factors. In the first example, a partnership constructs an office building that is projected to generate $100,000 of annual gross income. The architect of the building (whose normal fee would be $40,000) contributes cash to the partnership in return for (1) a 25 percent partnership interest, (2) a 25 percent share of net income, and (3) an allocation of $20,000 per year of gross income for the first two years after leaseup. The partnership agreement requires that $20,000 in cash be distributed to the architect in each of the first two years. For the following reasons, the allocation and distribution would be treated as a fee under §707(a):

> (1) The allocation is fixed in amount and there is a substantial probability that the partnership will have sufficient gross income and cash to make the allocation and distribution;
>
> (2) The architect's general profits interest is small in relation to the allocation at issue;
>
> (3) The distribution is close in time to the provision of the services; and
>
> (4) Based on all of the circumstances surrounding the transaction, it appears that the architect became a partner primarily for tax reasons.

The example goes on to state that if the partnership agreement allocates 20 percent of gross income (rather than $20,000) for two years, the tax treatment of the allocation will depend on the likelihood that the architect will receive substantially more or less than the imputed $40,000 fee. If the building was constructed on speculation (*i.e.*, the partnership may have difficulty leasing the building), the allocation might, even though a gross income allocation, be treated as a genuine distributive share, since the architect would assume a risk of nonpayment. His fortunes (unlike those of a third-party contractor) would be at the risk of the business.

The second example demonstrates that even allocations that are contingent in amount may be treated as fees:

> "[A] partnership is formed to invest in stock. The partnership admits a stock broker as a partner. The broker agrees to effect trades for the partnership without the normal brokerage commission. In exchange for his partnership interest, the broker contributes 51 percent of partnership capital and receives a 51 percent interest in residual partnership profits and losses. In addition, he receives an allocation of gross income that is computed in a manner which approximates his foregone commissions. It is expected that the partnership will have sufficient gross income to make this allocation. The agreement provides that the broker will receive a priority distribution of cash from operations up to the amount of the gross income allocation. In this case, even though the broker/partner's special allocation appears contingent and not substantially fixed as to amount, it is computed by means of a formula like a normal brokerage fee and effectively varies with the value and amount of services rendered rather than with the income of the partnership. Thus, this contingent gross income allocation along with the equivalent priority distribution should be treated as a fee under Sec. 707(a), rather than as a distributive share and partnership distribution."

Again, however, it is assumed for purpose of this example that the partnership will have sufficient income to make the intended allocation. Once this assumption is made, fee characterization inevitably results, based on the risk analysis as set forth in the Report. By specifying in reasonable detail the means by which probability of payment is to be measured, the regulations would greatly reduce the uncertainties attending economic risk analysis.

V. New Restrictions on Disguised Sales

A. Background

Under Code §721, the contribution of property to a partnership in exchange for a partnership interest is generally a non-recognition event. The contributing partner re-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ceives a basis for his partnership interest equal to his adjusted basis in the transferred property. Under §731, a distribution of partnership assets is not taxable to the recipient partner except to the extent that the amount of cash distributed exceeds the partner's basis in his partnership interest. A partner is, therefore, entitled to a return of his capital investment in the partnership before recognizing any gain.

The tax treatment of a sale of property by a partner to his partnership is very different from the treatment of a capital contribution under §721. A sale is taxed under §707, and is treated as occurring between a partnership and a partner acting other than in his capacity as a partner. The selling partner recognizes gain on the sale computed by applying general rules for determining gain or loss on the disposition of property.[34] The partnership generally must capitalize the purchase price of the property and recover the cost over the applicable recovery period (if any).

It is sometimes difficult to distinguish a contribution of property to the capital of a partnership from a sale. The regulations provide only limited guidance in this area. Under Regs. §1.721-1(a), the tax treatment of a purported contribution of property depends upon the underlying substance of the transaction, and not its form. If a transfer of property results in the receipt by the transferor-partner of money or other consideration, including a promissory obligation fixed in amount and time for payment, the transaction is a sale and not a contribution. In addition, the regulations disallow tax-free treatment of a distribution under §731 if, within a short period before or after a contribution of property, other property is distributed to the contributing partner, or the contributed property is distributed by the partnership to another partner.[35] The transfer of property and accompanying distribution are treated as an exchange between the contributing partner and the partnership, or between the partners.[36]

Taxpayers and the Service have frequently tangled in litigation over the proper characterization of a transfer of property by a partner to a partnership. The courts have generally ruled in favor of the taxpayer. In *Otey v. Comr.*,[37] a leading case, the Commissioner attempted unsuccessfully to recharacterize a transaction structured by the taxpayer as a contribution of property under §721. The taxpayer and a developer had formed a partnership that was to develop an apartment complex. As his capital contribution to the partnership, the taxpayer contributed to the partnership real property having an adjusted basis of $18,500 and a fair market value of $65,000. Under the partnership agreement, the taxpayer was to receive the first $65,000 of the proceeds of a construction loan anticipated to be made to the partnership. The agreement provided further that profits, losses and distributions would be shared equally, except for the priority distribution of loan proceeds to the taxpayer. Shortly after the taxpayer transferred the property to the partnership, the partnership closed a construction loan, in the amount of $870,300, for which the partners were jointly and severally liable. On the day the loan was closed, the partnership distributed $32,500 to the taxpayer. Within five months, the partnership had made additional distributions to the taxpayer until he had received a total of $64,750, or approximately the fair market value of the contributed property.

On these facts, the Tax Court held that the transaction was a genuine contribution of property. The court based its decision on the following factors:

(1) The transaction was structured by the parties as a contribution to capital and there was no artificiality in the form selected;

(2) The property constituted the sole asset and business of the partnership, and therefore must have been transferred by the taxpayer to the partnership in his capacity as a taxpayer;

(3) The property was the only non-borrowed capital in the partnership and was a prerequisite to any borrowing by the partnership;

(4) The taxpayer was personally liable on the construction loan. Thus, the taxpayer bore the risk that the business would be unsuccessful and he would be called upon to return the cash that had been distributed to him;

(5) The transaction was a customary partnership capitalization in which the partner who puts up a proportionately greater share of partnership capital receives preferential distributions designed to equalize capital accounts; and

(6) The taxpayer could have accomplished the same results without the use of a partnership by simply mortgaging the property himself. Thus, the partnership form was not used to mask an otherwise taxable transfer.

In other cases, the IRS has taken the position that transfers of cash or property to a partnership by new partners, coupled with a distribution to existing partners in reduction of their partnership interests, should be recast as a sale of partnership interests taxable under §741. In *The Jupiter Corporation v. U.S.*,[38] the plaintiff was a general partner in a real estate joint venture. At the inception of the partnership, the plaintiff loaned approximately $4,000,000 to the partnership as partial financing for construction of an apartment building. Following completion of the project, the partnership entered into negotiations with a group of prospective investors, with the intention of using newly-invested funds to repay the plaintiff. These negotiations resulted in the sale of a limited partnership interest to a group of real estate investors. The partnership agreement provided for priority distributions to the new investors. The plaintiff would retain control as general partner over the partnership's business. The partnership thereafter distributed to the plaintiff a portion of the cash contributed by the investors.

The court held that the substance of the transaction matched its form. The parties could not have accomplished by sale what had been accomplished by reorganizing the partnership. Even though the plaintiff's general partnership interest was decreased following admission of the investors, the plaintiff retained total control over management of the partnership. Moreover, the investors, who desired limited liability and an assured return on capital, had no interest in assuming the obligations of a general partner.[39]

The legislative history of the 1984 Act reflects a dissatisfaction on the part of Congress with the results in *Otey*

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

and similar cases. According to the Senate Report, the transactions at issue in these cases are "economically indistinguishable" from sales of real estate or partnership interests.[40] The TRA amendments are intended to insure that purported contributions of property are treated in a manner consistent with the underlying economic arrangement of the parties.

B. Section 707(a) Amendment and Effective Date

New §707(a)(2)(B) provides as follows:

> "TREATMENT OF CERTAIN PROPERTY TRANSFERS. – If –
>
> (i) there is a direct or indirect transfer of money or other property by a partner to a partnership, (ii) there is a related direct or indirect transfer of money or other property by the partnership to such partner (or another partner), and (iii) the transfers is described in clauses (i) and (ii), when viewed together, are properly characterized as a sale of property,
>
> then such transfers shall be treated either as [occurring between the partnership and one who is not a partner] or as a transaction between two or more partners acting other than in their capacity as members of the partnership."

The Act authorizes the Secretary of the Treasury to prescribe regulations for implementing this provision.[41]

The new rule will apply generally in the case of transfers of property occurring after March 31, 1984. The Act sets forth certain exceptions to the March 31, 1984 effective date. Specifically, the new rule will not apply to a transfer that is made pursuant to a binding contract that was in effect on March 31, 1984, and at all times thereafter prior to the transfer.[42] The new rule is also inapplicable to a transfer made before December 31, 1984, if (1) the transfer was proposed in a written private offering memorandum circulated before February 28, 1984; (2) the out-of-pocket costs with respect to the offering exceeded $250,000 as of that date; (3) any encumbrances placed on the property in anticipation of the transfer secure obligations for which neither the partnership nor any partner is liable; and (4) the transferor is the sole general partner of the partnership.[43]

C. Explanation

In promulgating regulations to implement the new disguised sale provision, the Treasury is urged to keep in mind that the provision is directed at abusive practices, rather than genuine business arrangements reflecting the relative value of the partners' economic contributions to the partnership.[44] The provision is not intended to prohibit a partnership from providing by agreement for preferential distributions to partners, such as distributions intended to correct disparities in capital accounts arising from contributions of property.[45] Similarly, the provision will not affect distributions if they are reflected in capital accounts maintained in accordance with the proposed §704(b) allocation regulations.[46] The legislative history states that the rule will not be applied to a distribution that is accompanied by a corresponding allocation of income or gain, but that the new provision governing payments for property or services could apply in that situation.[47]

The Senate Report encourages the Treasury to adopt a bright-line test for determining whether a contribution and a distribution are related. The Report states that the regulations may provide for a period, such as three years, during which contributions and distributions will be presumed to be related.[48]

Comment: The obvious advantage to this formulation is that it provides a reasonable degree of certainty as to the treatment of a transaction. Nevertheless, the taxpayer should have the opportunity to show, based on all of the circumstances surrounding the transaction, that a disguised sale did not take place. If the regulations were to apply a three-year period in all events, many legitimate distributions would be subject to recharacterization as purchase payments.

With respect to transactions of the type involved in the *Otey* case, the legislative history takes conflicting positions. On the one hand, the Senate Report in effect states that the *Otey* case was wrongly decided, *i.e.*, that the transaction was the economic equivalent of a sale and should have been treated as such for tax purposes. On the other hand, the Senate and Conference Reports emphasize that the new provision will apply to a distribution of loan proceeds only to the extent that responsibility for repayment is shifted to the other partners or to the partnership's assets:

> "[W]hen a partner of a partnership contributes property to the partnership and that property is borrowed against, pledged as collateral for a loan, or otherwise refinanced, and the proceeds of the loan are distributed to the contributing partner, there will be no disguised sale under the provision to the extent the contributing partner, in substance, retains liability for repayment of the borrowed amounts (*i.e.*, to the extent the other partners have no direct or indirect risk of loss with respect to such amounts) since, in effect, the partner has simply borrowed through the partnership. However, to the extent the other partners directly or indirectly bear the risk of loss with respect to the borrowed amounts, this may constitute a payment to the contributing partner." [49]

As previously noted, one of the factors leading the court in *Otey* to hold for the taxpayer was that the partner contributing the property assumed the risk that the partnership's business would falter and that he would be required to return the loan proceeds distributed to him.[50] In light of the ambiguity in the legislative history, whether a transaction structured in this manner would survive scrutiny under the new rule is uncertain. It seems clear, however, that an assumption of liability in respect of contributed property will support to some extent a claim for taxation under §721. The other side of the coin is that the proceeds of a nonrecourse financing will likely be treated as proceeds from the sale of the property, unless other factors suggest that the taxpayer has somehow assumed a meaningful economic burden with respect to repayment of the loan.

The Senate Report specifically contemplates that under some circumstances, a transaction may be split into a sale component and a contribution component. This treatment may be appropriate where, for example, the taxpayer has personal liability for only a portion of loan proceeds distributed to him during the relevant period, or where the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

distributions are not approximately equal to the fair market value of the contributed property.

Legislative explanations of the new disguised sale provisions leave many unanswered questions, at least some of which may be resolved in the forthcoming regulations. Given the difficulties inherent in distinguishing sales from contributions in the partnership context, however, the Treasury faces what may prove to be an exasperating task.

VI. Allocation of Partnership Liabilities

A. Background

Under Code §704(d), a partner is permitted to deduct partnership losses only to the extent of the adjusted basis in his partnership interest as of the end of the year in which the losses were incurred. A partner's original basis for his interest generally includes the amount of money and the adjusted basis of property contributed to the partnership by the partner.[51] This original basis is increased by the partner's distributive share of partnership income and decreased by distributions under §733 and the partner's distributive share of partnership losses.[52]

Cash, property and partnership income are not the only sources of basis for a partnership interest. Section 752(a) provides that an increase in a partner's share of partnership liabilities (or an increase in the partner's individual liabilities due to the assumption by the partner of partnership liabilities) will be treated as a contribution of money by the partner, increasing the basis for his partnership interest commensurately. For this purpose, mortgage indebtedness is considered a liability of the owner of the mortgaged property (to the extent of fair market value).[53]

The rules for allocating liabilities among partners are set forth in Regs. §1.752-1(e), which provides as follows:

> "A partner's share of partnership liabilities shall be determined in accordance with his ratio for sharing losses under the partnership agreement. In the case of a limited partnership, a limited partner's share of partnership liabilities shall not exceed the difference between his actual contribution credited to him by the partnership and the total contribution which he is obligated to make under the limited partnership agreement. However, where none of the partners have any personal liability with respect to a partnership liability (as in the case of a mortgage on real estate acquired by the partnership without the assumption by the partnership or any of the partners of any liability on the mortgage), then all partners, including limited partners, shall be considered as sharing such liability under section 752(c) in the same proportion as they share the profits." [Example omitted.]

Under the regulations, partners, including limited partners, are entitled to share in the nonrecourse liabilities of the partnership in the ratio in which they share profits. The reason for this allocation is that such liabilities will be amortized (if they are paid at all) only out of partnership profits.

The ability of limited partners to share in the partnership's nonrecourse liabilities, coupled with the exclusion of real estate investment from the ambit of §465 at risk rules, has fostered the use of nonrecourse financing by syndicated partnerships engaged in real estate projects. The basis increase attributable to nonrecourse mortgage liability enables the partners to deduct losses financed by debt for which they have no personal liability. Perhaps more than any other factor, this right to share nonrecourse liability for basis purposes is responsible for the exponential growth of the tax-sheltered real estate investment in the recent past. The potential benefits are substantial, even for a moderately affluent taxpayer.

> *Example*: Each of 10 investors contributes $10,000 in cash to a partnership in exchange for a limited partnership interest and a 9.9 percent share of the partnership profits. The partnership makes a $100,000 downpayment on a $1,000,000 office building, financing the balance of the purchase price with a nonrecourse mortgage. Each investor may report up to $11,800 in depreciation deductions alone for the first year that the building is in service, worth approximately $5,000 to a 42 percent bracket taxpayer filing a joint return. If not for the right to include nonrecourse liabilities in basis, the investor would be limited to $10,000 of losses in year one, and no further losses could be claimed (assuming no further increase in basis).[54]

The availability of nonrecourse mortgage financing is therefore critical to the success of a tax-sheltered real estate syndication. Prospective lenders are generally hesitant to provide such financing, however, since the lender bears the risk of economic depreciation in the mortgaged property. For this reason, the lender will often demand security, in addition to the mortgage, from either the borrower or third parties. On the other hand, the partnership as borrower will attempt to structure the loan so as to preserve the right of the partners to include the debt in the basis of their partnership interests.

One device that has been utilized to accommodate the competing interest of borrower and lender in this context is the general partner guaranty. In the recent decision in *Raphan v. U.S.*,[55] the United States Claims Court held that general partner personal guaranties of a partnership's otherwise nonrecourse mortgage financing did not alter the nonrecourse nature of the debt. The partners in Raphan were permitted to include the debt in basis, thereby increasing the amount of deductible losses from partnership operations. This ruling was based on the court's finding that in providing guaranties to the mortgagee, the guarantors acted other than in their capacity as partners. According to the court, upon payment of the debt by the general partner guarantors, the general partners would be subrogated to the foreclosure rights of the lender, placing them in a non-partner position. Thus, the guarantor-partners, as such, were not "personally liable" within the meaning of Regs. §1.752-1(e).[56]

Shortly after the Claims Court's decision in *Raphan*, the Service issued Rev. Rul. 83-151.[57] In that ruling, the Service held that a general partner's personal guaranty of his partnership's nominally nonrecourse mortgage loan makes the general partner personally liable to the extent that the value of the property securing the loan is insufficient to cover the amount due. On the facts of the ruling, the limited partner was not liable for any amount in excess

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

of his original capital investment, and was not required to contribute any additional funds to the partnership. The limited partner was not permitted any additional basis on account of the loan or otherwise.[58]

B. Reasons for Change

The legislative history completely rejects the *Raphan* holding, but suggests that Congress viewed the decision in that case as symptomatic of inadequacies in the §752 regulations themselves. These regulations are considered outdated and inadequate for dealing with new commercial lending arrangements involving assumptions, indemnity agreements and various types of guaranties.

C. Explanation of Provision

Act §79(a) provides that §752 shall be applied without regard to the result in *Raphan*. Act §79(b) provides the Treasury with virtually carte blanche authority to revise and update the §752 regulations, "to take account of current commercial practices and arrangements . . ." [59] The Treasury is advised that the new regulations should focus on the manner in which the partners (and any related persons) share the economic risk of loss.

Comment: This directive provides little, if any, guidance as to how the current regulations should be revised. Although they may not be perfect, the current regulations already implement this basic risk analysis.

It is not intended that the revised regulations will alter to any significant extent the present rule permitting a basis step-up with respect to genuine nonrecourse indebtedness. Rather, the regulations will remove present uncertainties as to the kinds of financing arrangements that will qualify as nonrecourse for §752 purposes. Presumably, the revisions will prescribe the proper treatment of, for example, a general partner's agreement to guarantee a certain level of cash flow from operations of a real estate partnership. Under present law, it is not clear whether this type of guarantee affects the status of otherwise nonrecourse mortgage indebtedness of the partnership. Another area of uncertainty is the effect of fluctuations in the partners' sharing ratios on the allocation of liabilities, both recourse and nonrecourse. Current rules provide for allocation of nonrecourse liabilities in accordance with profit-sharing percentages, since the liabilities will be amortized out of future profits. A change in these percentages should also result in a reallocation of nonrecourse liabilities. The revised regulations could provide a mechanism for accomplishing this result in specific cases.

Although the delegation of nearly untrammeled regulatory authority is no doubt disquieting to the real estate development industry, it seems unlikely that the Treasury will treat every type of security given by a partner as transforming the otherwise nonrecourse nature of partnership debt. In recently-issued Rev. Rul. 84-118, the Service held that the amount of a partial recourse mortgage loan could be split into recourse and nonrecourse portions for purposes of §752. This ruling suggests that the Service may take a flexible position in the new regulations.

D. Effective Date

Under the Conference Report, the legislative rejection of *Raphan* is to be made effective, by regulation, as of March 1, 1984. The regulations otherwise are to apply prospectively from the date of their adoption.

VII. Changes Affecting Partnership Basis

The TRA makes four changes in the basis rules for partnership interests. With the exception of the prohibition on so-called "California basis strips," the changes are in the nature of technical corrections.

A. California Basis Strips

Section 754 provides for an election allowing partnerships to adjust the basis of partnership assets upon distribution of partnership assets (§734 adjustment) and upon sale or exchange of a partnership interest (§743 adjustment). Once the election is made, however, it must apply regardless of whether basis in partnership assets is increased or decreased. Congress became concerned that use of tiered partnerships could lead to manipulation of the basis adjustment rules, as evidenced by the following example from the Ways and Means Committee Report:

> "For example, assume that partnership AB holds two assets, asset 1 with a basis of 0 and a fair market value of $100 and asset 2 with a basis of $100 and a fair market value of $100. A distribution of asset 2 to partner A, who has a zero basis for his interest, would result in A holding the asset at a zero basis, and the basis of asset 1 will be increased to $100, assuming that the partnership has a section 754 election in effect. Thus, if asset 1 is sold, no gain or loss will be realized, but if asset 2 is sold, A will realize $100 gain. However, if asset 2 is instead contributed to a second partnership in which partnership AB has a major interest (*e.g.*, 99 percent), its basis will remain at $100. A distribution of AB's interest in the second partnership to partner A will result in the basis of the interest being reduced to zero but (if the second partnership does not have a section 754 election in effect) the basis of asset 2 will remain $100. Thus, the effect is an increase in total basis of assets so that, in this example, both asset 1 and asset 2 can subsequently be sold without recognition of gain. While the basis of A's interest in the second partnership would be reduced by $100, this would not have any effect so long as A retains his interest in the partnership. A could cause asset 1 to be sold and reinvest the proceeds through the second partnership without recognizing any gain."

This potential manipulation is eliminated by TRA §78 which amends §734(b) to provide that no basis adjustment is available with respect to the distribution of partnership interests unless the partnership whose interest is distributed also has a §754 election in effect.

The amendment is effective for distributions after March 1, 1984.

B. Section 48(q) Adjustment

Section 48(q) requires that a taxpayer reduce the recovery basis of any property for which investment tax credit is claimed by an amount equal to 50 percent of the credit. TRA §712(b) amends §48(q) to make clear that where such a reduction is made to the recovery basis of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

partnership assets, appropriate reductions are made to the partners' bases in their partnership interests.

C. *Basis Adjustment for Depletion*

TRA §722(e) amends §705(a)(3) to read:

> "The adjusted basis of a partner's interest in a partnership shall, except as provided in subsection (b), be the basis of such interest determined under section 722 (relating to contributions to a partnership) or section 742 (relating to transfers of partnership interests) —
>
> * * *
>
> decreased (but not below zero) by the amount of the partner's deduction for depletion for any partnership oil and gas property to the extent such deduction does not exceed the proportionate share of the adjusted basis of such property allocated to such partner under section 613A(c)(7)(D)."

Prior to the change, the section read as follows:

> "The adjusted basis of a partner's interest in a partnership shall, except as provided in subsection (b), be the basis of such interest determined under section 722 (relating to contributions to a partnership) or section 742 (relating to transfers of partnership interests) —
>
> * * *
>
> decreased (but not below zero), by the amount of the partner's deduction for depletion under section 611 with respect to oil and gas wells."

The change is retroactive to January 1, 1975.

D. *Sections 722 and 723 Basis Adjustments*

Sections 722 and 723 are amended to clarify that only gain recognized under §72(b) gives rise to a basis adjustment under those sections.

VIII. Extension of Section 267 Rules to Partnerships

The rule deferring the deduction of expenses and interests owed by an accrual-basis taxpayer to a related cash-basis taxpayer, applicable only to obligations of an S corporation to its shareholders under prior law, will now be extended to the obligations of a shareholder to an S corporation, obligations of partnerships to partners, and obligations of partners to partnerships. The former exception from the rule for amounts owing from an S corporation to a shareholder with less than a 2 percent interest in the S corporation has been eliminated. The rule requiring deferral of a deduction for expenses or interest of an accrual-basis taxpayer owed to a related cash-basis taxpayer until actual payment also applies to certain partnerships and S corporations. The rule applies to transactions between: (i) partnerships and any person owning, directly or indirectly, a capital or profits interest therein; (ii) S corporations and any shareholder thereof; and (iii) any partner in an upper-tiered partnership which owns, directly or indirectly, a capital or profit interest in a lower-tiered partnership. The deduction denial rule also applies to any person related to a person described in (i) through (iii), above, within the meaning of §267(b) or §707(b)(1). Rule (iii) above applies only if the transaction relates either to the operations of, or an interest in, the lower-tiered partnership. The rule will not apply to guaranteed payments to which §707(c) is applicable. Instead, the prior law requirement continues, that a partner must include such payments as ordinary income for his taxable year during which the partnership's taxable year in which the partnership deducted such payments ends. The Act also contains an exception for certain resyndications of low-income housing (within the meaning of §189(e)(5)) permitting the deduction of specified expenses and interest incurred in connection with the resyndication.

---

[1] §721.
[2] §723.
[3] Alternatively, if the partnership's distributions were made in accordance with the partners' capital accounts computed by reference to the tax basis, as required by Prop. Regs. §1.704-1, the first partner's capital account will be $1,350 for tax purposes and he should then receive distributions of $1,350, while the second partner's capital account is $1,150 for tax purposes and he should receive distributions of that amount. Again, economic and tax results would be the same, but the parties will not have achieved the desired equal sharing of post-contribution profits.

[50] *Otey v. Comr.*, 70 T.C. at 820.
[51] §722.
[52] §705.
[53] §752(c).
[54] These figures are based on pre-1984 Act depreciation rules. The 1984 Act extended the cost recovery period for real property from 15 to 18 years. *See* Act §111(a).
[55] 83-2 USTC ¶9613 (Cl. Ct. 1983).
[56] The conclusion of the *Raphan* court is subject to dispute. When the mortgaged property is the partnership's sole asset and is worth less than the outstanding liability, the guarantor-general partner's "right over" against the partnership (and the property) will leave him in no better position economically than if the debt were a full recourse liability of the partnership. In either case, the general partner bears the risk that the value of the property at foreclosure will be insufficient to pay the mortgage debt. In the case of a true nonrecourse loan, it is the lender who shoulders this risk.
[57] 1983-2 C.B. 105.
[58] It is worth noting that the Service, in a number of cases, has taken the position that limited partner guarantees of partnership debt do not result in a basis step-up. *See, e.g., Block v. Comr.*, 41 T.C.M. 546 (1980); *Brown v. Comr.*, 40 T.C.M. 725 (1980).

Chapter 37

NEW AND REVISED PROVISIONS DEALING WITH SHIFTS IN, OR TRANSFERS OF, PARTNERSHIP INTERESTS

Robert E. Liles, II, Esq.
Silverstein and Mullens
Washington, D.C.

I. Allocation of Partnership Items Upon Change in Partnership Interests

A. Introduction

1. Background

Section 706(c)(2)(B) provides that the distributive share of a partner who sells or exchanges less than his entire interest in a partnership or has his interest reduced (whether by entry of a new partner, partial liquidation, gift or otherwise) is determined by taking into account his varying interests in the partnership during the taxable year. The intent of this provision was to prevent retroactive allocations of partnership deductions upon entry of new partners into the partnership.[1] However, the provision failed to properly account for the impact of other Code provisions, and taxpayers have been able to structure transactions within the rules of the Code which have the effect of allowing entering partners deductions for partnership items incurred prior to their entry into the partnership.

Under the cash basis method of accounting, items are deductible upon payment rather than as the liability for payment is incurred.[2] By delaying payment of partnership items until after the new partners are admitted, the partnership may reasonably take the position that newly-admitted partners are entitled to deductions which are attributable to the pre-admission part of the year. Thus, a partner admitted late in the twelfth month of the partnership year can obtain a full year's deductions if the payment of the liabilities occurs after his admission.

A similar effect may be obtained through the use of "tiered" partnerships. Section 706(a) provides that a partner takes partnership items into account "for any taxable year of the partnership ending within or with the taxable year of the partner." Some taxpayers have used this provision to argue that where one partnership (upper tier partnership) owns an interest in another partnership (lower tier partnership), the last day of the lower tier partnership's taxable year is the day upon which the upper tier partnership recognizes all items of income and loss from the lower tier partnership. Thus, by admitting new upper tier partners shortly before the end of the lower tier taxable year, the newly-admitted upper tier partners can get the benefit of deductions which are attributable to periods prior to their entry into the upper tier partnership. The House Ways and Means Committee Report contains the following example:

> Assume that Parent partnership owns a 90 percent interest in Subsidiary partnership and that both Parent and Subsidiary use calendar year taxable year. Assume further that Subsidiary has a $10,000 loss for the calendar year 1983, and that Parent's distributive share is $9,000. If Partner A buys an 80 percent interest in Parent at the close of business on December 31, 1983, Parent may make an interim closing of its books on December 20, 1983, in order to determine A's distributive share of partnership items. Parent may take the position that, for tax purposes, it incurs its entire $9,000 portion of Subsidiary's loss on December 31, 1983, *i.e.*, at the close of Subsidiary's taxable year, regardless of when the loss was actually incurred by Subsidiary. Partner A will, therefore, claim a $7,200 loss on his 1983 return (Parent's $9,000 loss multiplied by his 80 percent interest in the partnership on December 31, 1983) rather than the $19.73 that he would be entitled to under a proportioned share computation (*i.e.*, $9,000 x 80% x 1/365 days).

The Internal Revenue Service has taken the position that §706(a) does not mean that an upper tier partnership's share of the lower tier partnership's loss is sustained on the last day of the lower tier partnership's taxable year. In Rev. Rul. 77-311, 1977-2 C.B. 218, the Service said that an upper tier partnership's share of any items of gain, loss, deduction, or credit of a lower tier partnership would be considered to be realized or sustained by the upper tier partnership at the same time and in the same manner as the items are sustained by the lower tier partnership.

2. Outline of New Provisions

TRA §72 amends §706 by adding a new subsection (d). Section 706(d) provides that certain deductions of a cash basis partnership ("allocable cash basis item") are assigned to partners on an accrual basis, day-by-day, during any year in which there is a change in any partner's interest in the partnership. Where the item is properly assignable to a prior partnership taxable year, it is assigned to the first day of such taxable year.

With respect to multi-tiered partnership structures, §706(d)(3) essentially adopts the position of Rev. Rul. 77-311 by providing that each upper tier partner's distributive share of lower tier items is determined by assigning the appropriate portion of each item to the appropriate days during which the upper tier partnership is a partner in the lower tier partnership and by allocating the portion as-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

signed to any such day among the partners in proportion to their interests in the upper tier partnership at the close of such day.

In addition to the specific changes made to eliminate the cash basis and tiered partnership problems, the Treasury Department is given broad authority to promulgate regulations which prescribe methods for taking into account the varying interests of the partners in a partnership during the taxable year.

3. Effective Date

The new provisions apply to amounts attributable to periods after March 31, 1984 and, in the case of multi-tiered partnerships, to amounts paid or incurred by the lower-tier partnership after March 31, 1984.

B. Detailed Analysis

1. General Provisions

Section 706(d)(1) provides that except for the specific rules provided for cash basis and multi-tiered partnerships, each partner's distributive share of partnership items for any taxable year in which there is a change in any partner's interest in the partnership shall be determined by the use of methods prescribed by regulations which take into account the varying interests of the partners in the partnership during such taxable year. While the regulations are unlikely to be issued for sometime, it can be expected that they will reflect the sort of economic accrual concept similar to that touted in other sections of the TRA. Moreover, the regulations will probably attempt to set forth principles which will forestall problems similar to those presented by cash basis and multi-tiered partnerships. It is expected that regulations will include a monthly convention whereby partners entering by the 15th of the month are deemed partners on the 1st, and partners entering thereafter are deemed partners on the 1st of the following month.[3]

2. Cash Basis Partnerships

Section 706(d)(2)(A) provides that allocable cash basis items of cash basis partnerships are to be allocated among the partners by assigning the appropriate portion of each item to each day in the period to which it is attributable and by allocating the portion assigned to any such day among the partners in proportion to their interests at the close of such day. "Allocable cash basis items" include interest, taxes, payments for services, rents or lease payments and any other item specified by regulations to be prescribed.[4]

Example: Partnership AB begins the year owned 50 percent by A and 50 percent by B and is a cash basis, calendar year partnership. The partnership makes quarterly interest payments of $150,000 each on March 31, June 30, September 30 and December 31, an annual real estate tax payment of $300,000 on July 1, and an annual equipment rental payment (in arrears) on December 15 of $100,000. The partnership admits C as a partner on September 1 with a 10 percent interest (A and B equally diluted) and admits D as a partner on December 1 with a 20 percent interest (A and B, but not C, equally diluted). The first and second quarter interest payments are allocated 50-50 between A and B. The third quarter interest payment is assigned 62/92 to the period prior to C's entry to the partnership and 30/92 to the period during which C is a partner. The fourth quarter interest payment is allocated 61/92 to the period before D became a partner and 31/92 to the period after D became a partner. Thus, each partner's share of the $600,000 interest deduction is as follows:

A and B (each)		
Q1	50% x $150,000	$ 75,000
Q2	50% x $150,000	75,000
Q3	50% x 62/92 x $150,000	50,543
	45% x 30/92 x $150,000	22,011
Q4	45% x 61/92 x $150,000	44,755
	35% x 31/92 x $150,000	17,690
		$284,999
C		
Q3	10% x 30/92 x $150,000	4,891
Q4	10% x $150,000	15,000
		$ 19,891
D		
Q4	20% x 31/92 x $150,000	$ 10,109

Assuming that the real estate tax assessment is for the calendar year, the $300,000 tax payment would be allocated as follows:

$300,000/365 = $821.918

A and B (each)	
50% x 243 x $821.918 =	$ 99,863
45% x 91 x $821.918 =	33,658
35% x 31 x $821.918 =	8,918
	$142,439
C	
10% x 122 x $821.918 =	$ 10,027
D	
20% x 31 x $821.918 =	$ 5,095

Assuming that the lease payment is also for the calendar year, the lease payment would be allocated as follows:

$100,000/365 = $273.973

A and B (each)	
50% x 243 x $273.973 =	$ 33,288
45% x 91 x $273.973 =	11,219
35% x 31 x $273.973 =	2,973
	$ 47,480
C	
10% x 122 x $273.973 =	$ 3,342
D	
20% x 31 x $273.973 =	$ 1,698

Observation: As can be seen with regard to the lease payment above, the new rules operate to prevent D from

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

taking a deduction for payments with respect to the use of the property prior to the time he becomes a partner. The new rules work to D's benefit, however, with respect to annual cash payments made prior to the time he becomes a partner. Under the cash method, D would not normally be entitled to any deduction with respect to the real estate tax payment since the payment was made prior to his admission as a partner. Under §706(d)(2), however, the accrual-type assignment acts to give him a share of the deduction.

2. Cash Basis Items Attributable to Periods Before or After the Taxable Year

Where an allocable cash basis item is attributable in part to the preceding or succeeding taxable year, that portion is assigned to the first day of the taxable year of payment or the last day of the taxable year of payment, respectively.[5] To prevent abuses, the amount so assigned to the first day of a taxable year may only be allocated among partners who were partners in the partnership during the period to which such amount is attributable in accordance with their varying interests during the preceding period.[6] If part of the amount is properly allocable to a former partner who is not a partner in the year of payment, the partnership must capitalize the amount and treat it under §755.[7]

Example: ABC partnership is a calendar year, cash basis partnership. A, B and C each own equal 1/3 shares. On December 15, C sells his entire interest to D. On January 1, E is admitted as a partner, with each partner thereafter having a 25 percent interest. On January 31, the partnership pays a $75,000 rent obligation which is attributable to November, December, and January. Under §706(d)(2)(A), $25,000 is assigned to January and is deductible by A, B, D and E in four equal shares of $6,250 each. The $50,000 attributable to November and December is assigned to January 1 under §706(d)(2)(C)(i). Because E was not a partner in the period to which the $50,000 relates (November and December), he is not allocated part of the deduction. The $50,000 is allocated among A, B, C and D in accordance with their varying interests during November and December. Accordingly, the November payment is allocable $8,333 each to A, B and C, and the December payment is allocable $8,333 each to A and B and $4,167 each to C and D. Thus, in the year of payment, A and B will each deduct $22,916 ($8,333 + $8,333 + $6,250), D will deduct $10,417 ($4,167 + $6,250) and E will deduct $6,250. Because C is not a partner on January 1, his share of $12,500 ($8,333 + $4,167) is capitalized by the partnership and treated under §755.

3. Multi-Tiered Partnership Structures

To prevent the use of multi-tiered partnerships as a means of making retroactive allocations to partners, §706(d)(3) provides that the distributable shares of upper-tier partners which are attributable to lower-tier items are determined by assigning the appropriate portion of each lower-tier item to the appropriate days during which the upper-tier partnership is a lower-tier partner and then allocating the portion assigned to any such day among the upper-tier partners in proportion to their upper-tier partnership interests at the close of such day.[8] Thus, lower-tier items flow up to upper-tier partners as if the upper-tier partnership were itself generating its proportionate share of the lower-tier items.

II. Recognition of Corporate Gain Upon Distribution of Partnership Interests

New §386 provides that distributions of partnership interests by a corporation under §§311 or 336 and sales of partnership interests in §337 liquidations shall not be entitled to nonrecognition treatment under those sections to the extent that the partnership holds property which would not qualify for nonrecognition treatment if held directly by the corporation. Section 386 is described in detail in Chapter 31 (VII).

III. Application of Section 751 to Tiered Partnerships

Section 751(a) provides that the amount of consideration received by the transferor of a partnership interest which is attributable to the partnership's unrealized receivables or substantially appreciated inventory is considered an amount realized upon the sale or exchange of a noncapital asset. Unrealized receivables are rights to payment for (noncapital) goods delivered or services rendered to the extent such amounts have not been taken into income under the partnership method of accounting.[9] The term also includes certain defined amounts, such as the depreciation recapture inherent in partnership property, which would be realized if the property had been sold at its fair market value. Substantially appreciated inventory is inventory whose fair market value exceeds both 120 percent of its adjusted basis and 10 percent of the fair market value of all partnership property other than money.[10]

The Conference Report states that some taxpayers have argued that §751 can be avoided by the use of multi-tiered partnerships.[11] Thus, if unrealized receivables or substantially appreciated inventory are held by a lower-tier partnership, the taxpayers argue that disposition of an upper-tier interest does not cause the transferor to recognize ordinary income under §751.

TRA §76 amends §751 to provide that an upper-tier partnership will be deemed to hold its proportionate share of lower-tier unrealized receivables and inventory items.[12] Thus, transfer of upper-tier partnership interests will be subject to §751.

The amendment is effective for distributions made after March 31, 1984,[13] in taxable years ending after such date.

IV. Exchange of Partnership Interests Disqualified from Section 1031 Treatment

Section 1031(a) provides that no gain or loss is recognized if property held for productive use in trade or business or for investment is exchanged solely for property of a like kind to be similarly held. TRA §77 amends section 1031(a) to provide that partnership interests are specifically excluded from property qualified for nonrecognition treatment under section 1031.[14]

This change is discussed in detail in Chapter 29 (I).

CHAPTER 38

1984 TRA PROVISIONS RELATING TO TAX SHELTERS

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

For purposes of this discussion, a "tax shelter" is an investment, usually in the form of a limited partnership interest, which generates a deduction or deductions which can be used by the investor to offset income unrelated to the investment. The deduction will almost invariably serve only to defer the payment of tax, and will be reflected in an item or items of taxable income in some later year or years. "Tax shelters" will also refer to tax motivated transactions by means of which ordinary income is converted to capital gain.

Anti-tax shelter provisions have been enacted in successive revenue acts since 1969. Congress intended that the general reduction in marginal tax rates effected by ERTA (P.L. 97-34) in 1981 would dampen, if not put an end to, the tax shelter industry, especially when combined with a number of anti-sheltering provisions (notably the tax straddle rules). But this proved to be overly optimistic since, for various reasons, tax shelters continued to proliferate. TEFRA (P.L. 97-248) contained numerous provisions aimed at tax shelters; one of the most important was the addition of partnership audit procedures, concentrating heavily on the additional information reporting requirements and severe penalties for the promotion, aiding and abetting of abusive tax shelters. The 1984 TRA continues the TEFRA reforms in three major areas which are discussed below.

II. Compliance

This area of anti-shelter legislation relates to the capacity of the IRS to detect tax-shelter transactions so that timely action may be taken to inform potential investors of possible penalties, and to discourage or enjoin the creation of abusive shelters. It also relates to the addition of new information reporting provisions (together with appropriate penalties for failure to comply), and the increasing of penalties already provided.

Act §141 enacts §6111 requiring for the first time the registration of tax shelters with the Service. A tax shelter for purposes of registration is defined as any investment with respect to which one could reasonably infer from promoter or seller representations that the ratio of gross deductions (counting 200 percent of any credit as a deduction) to the amount invested will exceed 2 to 1 as of the close of any of the first five years. In addition, the investment must be one that is required to be registered under federal or state securities laws or exempt from such registration pursuant to an exemption that requires the filing of a notice; alternatively, the investment must be a substantial investment (total of $250,000 offered for sale and at least five investors). §6111(c). A further tax shelter measure imposed by §6112, enacted by Act §142, is to require organizers and sellers of potentially abusive tax shelters "to maintain investor lists." The new registration and investor list requirements, including the temporary regulations implementing them, are discussed at length in Chapter 43, II, A and B.

Two additional tax shelter oriented provisions were enacted in Act §§143 and 144. The first raises the penalty on promoters and sellers of abusive tax shelters to the greater of $1,000 or 20 percent of the gross income to be derived from the activity. The second establishes a higher interest rate, equal to 120 percent of the regular rate, for underpayments attributable to "tax motivated transaction." A tax motivated transaction includes (i) any valuation overstatement of 150 percent or more, (ii) any loss or investment credit disallowed under the at-risk rules, (iii) any straddle, (iv) any accounting method listed in regulations that substantially distorts income, and (v) any other transaction designated as tax motivated by regulations.

III. Time Value of Money

Act §§41-44 (subtitle C — Treatment of Bonds and Other Debt Instruments) contain a number of provisions which will affect tax shelters of various kinds, especially real estate shelters.

A. Real Estate Shelters

Real estate tax shelters provide investors with pass through losses based principally on depreciation (cost recovery), interest deductions, and investment credits where the assets acquired include §38 property. Shelter operators have often arranged purchase terms so as to overstate the purchase price, while understanding the true interest charge. So long as interest at a rate of 9 percent simple interest was charged, no adjustment could be made under §483 to characterize any of the payments of the sales price as unstated interest. The overstated sales price gave rise to depreciation (cost recovery) deductions and, where allowable, investment credits. Section 1274, as enacted by the TRA, together with §§1271–1288, replaces the repealed provisions of §§1232, 1232A, and 1232B. Under §1274, a debt instrument issued in exchange for property (other than a farm sold by an individual or small business for less than

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

$1,000,000), where total payments to be made under such instrument exceeds $250,000, will be charged with imputed interest at 120 percent of the applicable federal rate (AFR), unless the instrument bears interest of at least 110 percent of the AFR. The AFR is the average yield of U.S. Government securities. It is updated every 6 months by the Treasury Department. This rate is applied on the basis of semiannual compounding. The "imputed principal amount" of the instrument is treated as the sale price of the property for all tax purposes, and the imputed interest is includible in the income of the note holder and deductible by the issuer over the life of the note as original issue discount (OID). Where the property is financed by tax exempt bonds issued by a municipality, county, etc., for purposes of §163 (allowing interest deductions), the AFR is adjusted to reflect the lower rates paid on tax exempt bonds. The developer's obligation in the latter case need not carry the full federal rate to escape interest imputation.

Section 483 was also amended by Act §41(b) to adopt the same AFR test and imputation rules. In addition, as to any sales after March 1, 1984, no interest will be accruable which is not properly allocable to the taxable year using a constant interest rate computation. This means that the maximum interest deduction for any one year is the actual yield to maturity of the obligation (which is determined on the basis of the principal amount of the obligation and all payments to be made thereunder) multiplied by the unpaid principal amount at the time of each payment and adjusted to reflect the time period since the last payment. Semiannual compounding is required.

B. Leveraged Market Discount Bond Shelters

Shelters involving the leveraged acquisition of bonds at market discount will no longer be feasible because of §§1276-1278. Under these rules, any gain from the sale or exchange of a bond purchased at market discount (*i.e.*, where the purchaser's basis is less than the stated redemption price at maturity) is treated as ordinary income to the extent of the market discount accrued while the bond was held by the person realizing such gain. Market discount is accrued on a straight line or constant interest basis at the election of the taxpayer. Interest on indebtedness incurred or continued to purchase or carry a market discount bond is disallowed to the extent it does not exceed the market discount accrued with respect to such bond during the taxable year. The disallowed interest is allowed in the year the bond is disposed of. All TRA changes relating to imputed interest and market discount are fully analyzed in Chapter 21.

IV. Tax Straddles

The deferral of income tax through regulated futures contracts straddles was largely ended by the reforms enacted by ERTA (§§263(g), 1092, and 1256 were the principal reform provisions). These did not usually involve tax shelters as such, meaning limited partnerships and similar arrangements for the passing through of deductions and losses. However, further tightening of the straddle rules was seen as necessary by Congress.

A frequently encountered shelter scheme after the ERTA reforms was the limited partnership engaged as an options market maker. Under §1234(b)(3), gains and losses of such an entity are ordinary (rather than short-term capital) losses. Market makers could purchase or grant stock options while holding offsetting direct ownership positions in the stock. Losses on the options could be passed through to the partners. Under the amendments made to Code §1092 by Act §101, direct ownership of stock, when offset by an option position in the same stock is a position in personal property and both positions are, therefore, subject to the loss deferral rule of §1092(a)(1). Gains and losses from the granting of options by a market maker are, under the post-TRA 1984 §1256 rules, subject to 60/40 treatment (*i.e.*, 60 percent long-term, 40 percent short-term capital gain or loss) unless an election under §1256(d) (relating to certain "mixed straddles") is made. In the case of any gain or loss from "dealer equity options" which are allocable to limited partners or limited entrepreneurs (*see* §1256(e)(3)), §1234(b)(3) does not apply, and all such gains or losses are treated as short-term gains or losses.

Another shelter device was to form a limited partnership dealing in commodities or other property with respect to which offsetting positions qualifying as hedges (as defined by §1256(e)) would be established. The loss deferral rules of §1092 and the mark to market and 60/40 rules of §1256 did not apply to such hedging transactions. Gains and losses from these transactions were accorded ordinary income treatment. While §1256(e)(3), containing special rules for "syndicates" (*i.e.*, partnership or other entity [other than a corporation which is not an S corporation] if more than 35 percent of the losses are allocable to limited partners or limited entrepreneurs), made the hedging transaction exception inapplicable to such syndicates, Congress further provided in post-TRA 1984 §1256(e)(5) additional limitations on hedging losses which may be passed through to such limited participants, allowing any losses only to the extent of the taxable income of the limited participant attributable to the trade or business in which the hedging transactions were entered into (taxable income to be determined not taking into account the hedging transactions).

The offshore commodity fund was utilized as a species of shelter in that a foreign corporation could acquire positions in personal property offsetting positions entered into by its shareholders without running afoul of the tax straddle rules. Section 1092(d)(3), as added by the Act characterizes stock in such a corporation as a position in personal property effectively disallowing losses on the stock or on the shareholder position where there is unrecognized gain from the offsetting position as of the end of the year.

V. Accounting Changes

Act §91 amended Code §461, adding subsections (h) and (i). Under subsection (h), in determining whether an amount has been incurred with respect to an item during any taxable year, the all events test is not to be treated as met any earlier than when "economic performance" with respect to the item occurs. Thus, an accrual basis taxpayer may not deduct expenses relating to the purchase of goods, performance of services, or its obligation for interest until such goods have been provided, the services have been performed or the interest obligation has accrued through the passage of time. Shelters based on tax deferral through the prepayment of such expenses will no longer be feasible.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Where the shelter is a cash basis entity, deductions for payment for such items is not allowable any earlier than the time when such item would be treated as incurred under subsection (h). An exception is made, to the extent of a partner's basis in the partnership, determined without regard to partnership liabilities or any amount borrowed by the partner with respect to the partnership which was arranged by the partnership or the promoter, or, in other words, to the extent of the cash or the fair market value of property contributed by the partner to the partnership. A deduction is allowed in a taxable year where economic performance occurs within 90 days after the close of the partnership's taxable year. For these purposes, a partnership is defined as any enterprise (other than a C corporation) in which the interests offered were required to be registered by federal or state law, or a "syndicate" as defined by §1256(e) (*see* discussion above), or any tax shelter within the meaning of §6661(b)(2)(C)(ii).

VI. Summation

The foregoing review of TRA 1984 tax shelter measures is by no means exhaustive, but is intended to point out the major compliance oriented and substantive provisions. The Act also makes changes in the partnership rules, analyzed in Chapters 36 and 37, to render the partnership a less malleable form for allocating tax shelter benefits among partners. The Act amends the corporate tax rules to curb the use of various techniques developed by corporations to shelter corporate income. The relevant corporate amendments are described in Chapter 31. Lastly, the TRA expands the related party rules for partnerships and S corporations in §267 to preclude the mismatching of income and deductions between related parties for such typical tax shelter items as interest and management fees. The related party amendments are analyzed in Chapter 9.

Chapter 39

THE TREATMENT OF BELOW MARKET INTEREST LOANS

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

In *Dickman v. Comr.*,[1] the Supreme Court held that an interest-free or below-market interest rate loan to a family member without consideration results in a gift from the lender to the borrower for gift tax purposes. There are no cases that have considered whether such loans have any income tax consequences. However, where interest-free or below-market interest loans have been made to employees or shareholders, the courts have held that such loans do not give rise to taxable income.[2]

In the belief that interest-free and below-market interest loans have been utilized to circumvent various tax rules, such as the assignment of income rules and grantor trust rules in the case of family loans, and the corporate income rules in the case of corporate-shareholder loans,[3] Congress has adopted statutory rules for the treatment of such loans.

Effective as to loans made after July 18, 1984, §7872 added by Act §172(a) provides the following rules.[4]

In the case of a loan all of which is repayable upon the demand of the lender (a demand loan) made during any calendar year, there will be computed as of December 31 of such year the amount of interest which would have been payable by the borrower had interest been charged at the "applicable federal rate" (AFR) [5] for any period during the year in which the demand loan was outstanding. If the interest charged on such loan (if any) was less than the amount thus computed, it is known as "foregone interest." Where there is foregone interest the amount thereof is treated as if it had been transferred by the lender to the borrower and retransferred by the borrower to the lender on December 31 as interest. Where the demand loan is a gift loan (*i.e.* the foregoing of interest is treated as a gift under gift tax principles) the deemed transfer to the borrower is includible as a gift for gift tax purposes (subject to the special exemptions explained below). Otherwise, the deemed transfer will have tax consequences depending on the relationship of the parties.

Where the loan is other than a demand loan, it is a "term loan." In this case, where the loan is a gift loan, for income tax purposes (but not for gift tax purposes) the loan is treated in the same manner as a demand loan. That is, interest is computed at the AFR on the principal amount of the loan as if it had been charged (where interest less than the AFR was charged as determined by discounting all payments to be made under the loan terms at the AFR) and such foregone interest is deemed paid by the lender to the borrower on December 31, and retransferred by the borrower to the lender on the same date as interest.

Where the loan is a term loan, and is not a gift loan, the payments to be made are discounted at the AFR. The sum of their present values is the principal amount of the loan. Where the amount actually loaned exceeds this amount (*e.g.* where the lender has loaned, say, $38,000 to be repaid in installments over a two year period without interest or with interest below the AFR, and the sum of the present value of all payments discounted at the AFR is $32,000) there is deemed transferred by the lender to the borrower on the date of the loan of an amount equal to the difference between the amount loaned and the principal amount of the loan as computed by discounting the payments at the AFR ($6,000 in the example set forth above). In such a case, the borrower is treated as having issued a debt instrument having original issue discount (OID) in an amount equal to the deemed transfer. The OID rules of §1272 and §1273 will apply to this deemed debt instrument Where such below-market interest term loan was a gift loan, the amount of the deemed transfer ($4,000 in the example) is treated as a gift. The income tax consequences are as described in the preceding paragraph.

Exceptions to these rules are provided where the outstanding balance of the below-market interest loan (including all loans between the lender and borrower) does not exceed $10,000. Also, for any day on which the outstanding balance of a gift loan made directly between individuals does not exceed $100,000, the amount treated as retransferred from the borrower to the lender as of the last day of the year is not to exceed the borrower's net investment income (a *de minimis* amount of $1,000 is ignored) for the year. "Net investment income" is defined, generally, in §163(d).

These rules apply to: (1) all gift loans, (2) loans from (by) an employer to (from) an employee, (3) loans from (by) a corporation to (from) a shareholder, (4) any loan a principal purpose of which is tax avoidance through interest arrangements, and (5) other types of loan as will be provided by regulations where the interest arrangements have a significant effect on the tax liability of either the lender or borrower.

CHAPTER 40

LIMITATIONS ON INVESTMENT TAX CREDIT AND ACRS FOR LUXURY AUTOMOBILES

Robert E. Liles, II, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Background

Taxpayers are entitled to claim an investment tax credit and to take depreciation deductions for automobiles used in their trade or business. Prior to ERTA, the amount of the credit and the length of the depreciation period were dependent on the useful life of the automobile, which was usually in the three to five year range.[1] Thus, prior to ERTA, an automobile used in a trade or business produced a 3 percent investment tax and was depreciated over three to five years. ERTA classified automobiles as three year recovery property and provided a 6 percent investment tax credit for such property. However, as a result of the basis reduction instituted by TEFRA where an investment credit is claimed (the reduction is equal to 50 percent of the credit allowed) only 97 percent of the cost of the automobile can be recovered over three years. If an election is made to take a 4 percent investment tax credit, no basis reduction is required for purposes of ACRS.[2]

When automobiles are used for both business and personal purposes, only the percentage of the cost corresponding to the percentage of business use is creditable and only the percentage of the basis corresponding to the percentage of business use was entitled to ACRS. Where the percentage of business use decline after the credit year, part of the credit subject to recapture.[3] Proof of the relative percentages of business and personal use could be rather lax, however, and the rule of *Cohan v. Comr.*[4] is often invoked by taxpayers. This led to frequent litigation.

Impetus for the change in treatment of credits and deduction with respect to automobiles used in business arose from two concerns. First, there was concern that the tax system was underwriting automobiles whose cost and luxury far exceeded that needed for their business utility. One committee report expresses the view that beyond a certain level, "the extra expense of a luxury automobile operates as a tax-free personal emolument which the committee feels should not qualify for tax credits and deductions."[5] Second, the Internal Revenue Service has long been concerned that the proof requirements for the relative percentages of business and personal use of automobiles has led to widespread abuse. The TRA automobile provisions are designed to address these concerns.

B. Outline of New Provisions

TRA of 1984 places limits on both the use of investment tax credits and ACRS deductions with respect to passenger automobiles.[6] Investment tax credit is limited to $1,000.[7] ACRS deductions are limited to $4,000 in the first year and $6,000 in each year thereafter until the cost of the automobile is recovered.[8] These limits apply before any reduction for the percentage of personal use.[9]

Where business use of automobiles and certain other defined property does not exceed 50 percent of the use of the property, no investment tax credit is allowed and cost recovery of the property is prolonged.[10] If business use initially exceeds 50 percent and the percentage in later years falls below 50 percent, the excess of the ACRS deduction allowed in prior years over the amount which would have been allowed if the prolonged recovery rate had been used is recaptured and the slower rate must be used for the property in all future years.[11] Similar limitations will be prescribed by the Secretary to lessees (but not lessors) of property to eliminate any advantage in leasing.

TRA §179 amends §274(d) to require contemporaneous substantiation (*i.e.*, logs or receipts) for travel expenditures, entertainment expenses, business gifts and business use of automobiles and other property subject to the 50 percent rule described above.[12] TRA §179 adds a penalty for return preparers who fail to notify their clients of the substantiation rules [13] and creates a rebuttable presumption that taxpayers who claim §274(d) expenditures without adequate substantiation have been negligent in filing their returns.[14]

C. Effective Dates

The limitations on investment tax credit and ACRS deductions apply to property placed in service after June 18, 1984 in taxable years ending after such date and property leased after June 18, 1984 in taxable years ending after such date.[15] The new limitations do not apply to property which is acquired or leased pursuant to a binding contract in effect on, and at all times after, June 18, 1984, and which is placed in service or first used by the taxpayer before January 1, 1985.[16] For real property (such as entertainment facilities), the binding contract rule is satisfied if the property subject to the contract is placed in service by January 1, 1987.

The stricter substantiation rules (and the penalties which attach thereto) are effective for taxable years beginning after December 31, 1984, regardless of when the subject property was placed in service.[17]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

II. Detailed Analysis

A. *Limits on Investment Tax Credit and ACRS*

1. *Definitions*

a. *Passenger Automobiles*

The $1,000 investment tax credit and $4,000 and $6,000 ACRS limitations apply only to "passenger automobiles." [18] A "passenger automobile" is any four-wheeled vehicle which is manufactured primarily for use on public streets, roads, and highways with a gross vehicle weight rating of 6,000 pounds or less.[19] The definition specifically excludes vehicles used directly in the business of transporting persons or property for compensation or hire such as taxicabs, limousines operated by a limousine service, ambulances, hearses, and delivery or moving vehicles.[20] In addition, §280F(d)(5)(B)(iii) permits the Treasury Department to issue regulations excluding specific types of trucks or vans.

b. *Listed Property*

The 50 percent business use threshold (including ACRS recapture) applies to "listed property." [21] In addition, the §274(d)(4) substantiation rules are expanded to cover "listed property." [22] Listed property is:

(1) any passenger automobile;

(2) any other property used as a means of transportation;

(3) any property of a type generally used for purposes of entertainment, recreation, or amusement;

(4) any computer or peripheral equipment, with the exception of equipment used exclusively at a regular business establishment (including a home office qualifying under §280A(c)(1);

(5) any other property specified in regulations.[23]

The description of other property in (2) above subjects not only two-wheeled vehicles (predominantly motorcycles but also, potentially, bicycles) and aircraft to the 50 percent threshold and substantiation requirement, but will also include those four-wheeled vehicles such as taxicabs and delivery vehicles which are specifically excluded from the $1,000 investment tax credit and $4,000-$6,000 ACRS limitations in the definition of passenger automobile. It is also important to note that while a computer located at a regular business establishment will not be subject to the new 50 percent threshold and substantiation requirements, the old investment tax credit and ACRS business-personal percentage rules and proof requirements will continue to apply.[24]

c. *Qualified Business Use*

Qualified business use is any use in a trade or business [25] with the exception of (1) leasing to a person (or to anyone related to such person) who owns more than five percent of the stock or more than five percent of the combined voting power in a lessor corporation or more than five percent of the capital or profits interest in a lessor which is not a corporation ("five percent owner"); (2) use of the property as compensation for services of a five percent owner (or person related to a five percent owner); or (3) use of the property as compensation for services of a person who is not a five percent owner if an amount is not included in gross income (with appropriate withholding) with respect to the use.[26] Business aircraft are not subject to the three exceptions if at least 25 percent of the total use of the aircraft during the taxable year consists of business use other than that described in the three exceptions.[27]

Example: Corporation A has a corporate jet which is used by its officers and directors in the course of their business travel. The chairman of the board of A and president of A each own more than five percent of the A stock. On occasion, the jet is used by the chairman or president for personal travel, or the spouse of the chairman or president may accompany the chairman or president on a business trip where the spouse's travel would not qualify as a business expense. In such circumstances, A properly reports the value of the use of the jet as compensation to the chairman or president. Provided that the business use of A's jet exceeds 25 percent of the total use of the jet, A is entitled to treat the personal and spouse use of the jet as business use in computing the percentage of business use for purposes of investment tax credit and ACRS deductions.

It has long been clear that use of an automobile for commuting is not a business use.[28] The Conference Report for TRA of 1984 goes further to state that even where business is conducted or work performed during the commute, the trip is not considered a business use of the automobile.[29] Thus, use of a mobile telephone during commuting or other personal trips to make business calls does not transform the use of the car into a business trip. Similarly, commuting with colleagues for the purpose of holding business meetings does not qualify the use of the car as a business use.

Observation: Section 280F(e) gives the Secretary authority to issue regulations, including regulations with respect to items properly included in, or excluded from, the adjusted basis of listed property. The Conference Report indicates that one of the purposes of these regulations is to "ensure that taxpayers do not attempt to evade the restrictions on the investment credit and depreciation log, for example, separating an automobile into its component parts." [30] The intent of the provision is clear with respect to such "components" as engine, chassis, etc. The growth of cellular telephone and mobile telephones installed in automobiles presents an interesting problem. Is the installed telephone a component which is added to automobile basis and, therefore, subject to the investment tax credit and ACRS limitations? Or are investment tax credit and ACRS computed separately for the telephone? The better answer would seem to be the latter, since the mobile telephone would not seem to be the sort of "component" which leads to the evasion contemplated by the Conference Report. Moreover, it would seem that in the commuting example discussed above, the use of the mobile phone for a business call should be treated as a business use while the use of the car for commuting is considered personal.

Section 280F(d)(3) elevates the standard for employee deductions for use of listed property to "convenience of the employer" and "condition of employment" tests. Thus, the new standards evoke the principles contained in Regs. §1.119-1 with respect to employee meals and lodging fur-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

...ined by the employer. The Conference Report at 1027 specifically invokes the principles of *Dole v. Comr.*[31]

d. Business Use Percentage

The business use percentage is the percentage of use of any listed property during the taxable year which is qualified business use.[32] TRA leaves to regulations the determination of appropriate bases for determining the percentage of use. The Conference Report states that with respect to automobiles, a mileage basis could be authorized or "[f]or example, regulations could provide that if an automobile is used 5 days a week for business purposes and is available 2 days a week for personal purposes, in no event may the taxpayer consider more than five-sevenths of the use to be allocable to business purposes." [33]

Observation: The Conference Report would appear to endorse the days-per-week method of allocating business and personal use of automobiles only as an upper limit on the business use percentage. If days-per-week is allowed as a primary method of allocation, it would seem that the effect would be to include the taxpayer's commuting in the business use. As discussed above, this is not intended. Moreover, given the increased substantiation requirements discussed below, it would seem that a mileage-based percentage will be required.

The Conference Report is even less clear with respect to allocation methods for property other than automobiles.

e. Property Predominantly Used in Qualified Business Use

Property is "predominantly used in qualified business use if the business use percentage for the taxable year exceeds 50 percent." [34] This is the 50 percent threshold for investment tax credit and ACRS qualification and for ACRS recapture.

f. Straight-line Method over Earnings and Profits Life

Straight-line depreciation is used where the listed property fails the 50 percent threshold (is not predominantly used in qualified business use) and is used for calculating ACRS recapture where property initially meets the 50 percent threshold but fails in later years.[35] In the case of automobiles and other three-year recovery property, the earnings and profits life is five years; for five-year property the earnings and profits life is 12 years; and for 18-year real property, the earnings and profit life is 35 years.[36] Under this method, depreciation is taken ratably over the earnings and profits life of the asset.

g. Excess Depreciation

Excess depreciation is the excess of the recovery deductions taken by the taxpayer with respect to listed property in any year prior to the year in which the property is not predominantely used in qualified business use over "the amount which would have been so allocable if the property had not been predominantly used in a qualified business use for the taxable year in which it was first placed in service." [37]

Comment: Although the definition of excess depreciation is ineptly drafted, apparently the intent is that the taxpayer recapture the excess of recovery deductions over depreciation calculated using the straight-line method over earnings and profits life and that business use percentage for the first year of service not be reduced to 50 percent.[38] The Comment may be illustrated as follows:

Example: A purchases a car on January 1, 1985 for use in his business at a cost of $16,000. In 1985 and 1986, the car is used 100 percent in business. ACRS deductions in 1985 and 1986 are $4,000 and $6,000, respectively. In 1987, however, the business use percentage drops to 40 percent. A's excess depreciation is $3,600, calculated as follows:

1985		
ACRS		$4,000
Straight-line over E&P (using ½ year convention) ($16,000 x .1)	1,600	
Business use percentage	100%	
Recalculated Depreciation		$1,600
Excess		$2,400

1986		
ACRS		$6,000
Straight-line over E&P	3,200	
Business use percentage	100%	
Recalculated Depreciation		$3,200
Excess		$2,800
Total Excess Depreciation ($2,400 + $2,800)		$5,200

The excess depreciation calculation does not require the 100 percent business use percentage to be reduced to 50 percent.

2. Investment Tax Credit Limit for Passenger Automobiles

Section 280F(a)(1) limits investment tax credit for passenger automobiles to a maximum of $1,000. The net effect is to disallow an investment tax credit to the extent the purchase price of an automobile exceeds $16,666.67.[39] This limitation is permanent and not merely an annual limitation with the excess being carried over.

The limitation applies prior to any percentage reduction for personal use.[40] If the taxpayer uses the automobile for personal purposes 25 percent of the time in the first year the automobile is placed in service, the maximum credit allowable on the automobile is $750. Similarly, the $1,000 limitation is applied before any reduction in the credit pursuant to an election under §48(q)(4) to take a reduced credit in lieu of reduction of the basis of property for purpose of ACRS.[41] If the taxpayer makes a §48(q)(4) election, the ITC limit is reduced to $667.

Note: The investment tax credit limitation is only a maximum (and not minimum) amount. If the taxpayer places a $10,000 car in service, the investment tax credit (assuming 100 percent business use) is $600, not $1,000.

Observation: Section 48(q)(1) states that where a credit is determined under §46(a)(2) with respect to §38 property, the basis of the property is reduced by 50 percent of the amount of the credit "so determined." The §280F limitation is separate from the §46(a)(2) determination.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Thus, the question is raised as to whether the basis reduction under §48(a)(1) is of the §46(a)(2) amount before or after limitation by §280F. While not covered explicitly in the TRA of 1984, examples in the Conference Report indicate that Congress intended the only sensible solution: where the $1,000 limitation applies, the maximum basis reduction is $500.[42]

Example: The taxpayer purchases a passenger automobile for $30,000. Assuming no personal use, the investment tax credit is $1,000 rather than $1,800. Similarly, the taxpayer's ACRS recovery basis is $29,500 after adjustment under §48(q)(1) rather than $29,100.

The $1,000 ITC limitation will be adjusted annually for the increase in the consumer price increase ("CPI") of the automobile component for the calendar year over the CPI automobile component for October 1983. The adjustment is made for the calendar year in which the automobile is first placed in service.[43]

3. ACRS Limitation for Passenger Automobiles

Section 280F(a)(2) limits the amount of recovery deduction for the first taxable year of the recovery period to $4,000 and for each succeeding year to $6,000, until the cost of the passenger automobile is recovered. Thus, during the three-year recovery period, a taxpayer will recover a maximum of $16,000. Unlike the investment tax credit limitation, however, ACRS recovery for cost of automobiles in excess of $16,000 is not disallowed, but deferred.[44] Automobiles costing up to $22,000 are recovered over four years, up to $28,000 over five years, up to $34,000 over six years, and so on.

The annual limitation applies prior to any percentage reduction for personal use.[45] If the taxpayer uses the automobile for personal purposes 25 percent of the time in the first year the automobile is placed in service, the maximum ACRS deduction would be $3,000 ($4,500 for 25 percent personal use in succeeding years). However, for the purpose of determining the unrecovered cost available for deduction in later years, the percentage of personal use is ignored.[46]

Example: The taxpayer purchases a passenger automobile for $28,000 and makes a §48(q)(4) election to reduce the investment tax credit to $667 rather than reduce the recovery basis by $500. The percentage of personal use of the automobile is 20 percent in each of the first five years the automobile is in service. The ACRS deductions are $3,200 for the first year and $4,800 for the second through fifth years. At the end of five years, the cost is "fully" recovered because the unrecovered cost is reduced $4,000 for the first year and $6,000 for the second through fifth years as if the automobile was only used for business purposes.

Like the ITC limitation, the $4,000 and $6,000 amounts are maximums. For automobiles costing less than $16,000, the recovery percentages of §168(b)(1) control.

Example: The taxpayer purchases a $10,000 automobile and makes a §48(q)(4) election. The automobile is not used for personal purposes. The taxpayer's recovery deductions are $2,500, $3,800 and $3,700 for the first, second and third years, respectively.

Like the $1,000 ITC limitation, the $4,000 and $6,000 limits will be adjusted annually for the increase in the CPI automobile component for the calendar year over the CPI automobile component for October of 1983. The adjustment is made for the calendar year in which the automobile is first placed in service.[47]

4. Limitations on and Recapture of ITC and ACRS When Listed Property Not Predominantly Used in Trade or Business

Investment tax credit and ACRS deductions are further limited for passenger automobiles and other listed property where the property is not predominantly used in a qualified business use (*i.e.*, where the business use percentage does not exceed 50 percent) in any year.[48] It is important to note that the 50 percent requirement is only satisfied by qualified business use, not merely by use in the production of income. Thus, while use in the production of income is added to business use for comparison to personal use and annual reduction of ACRS and ITC, use of listed property in the production of income does not count in the 50 percent test.

Example: The taxpayer purchases a personal computer for use in his business, to follow his investments, and for use by his children as entertainment. In year one, business use accounts for 60 percent, investment use 25 percent, and personal use 15 percent. The year one ACRS deduction is 85 percent of the five-year recovery amount. In year two, the business use percentage is 50 percent, investment use 35 percent, and personal use 15 percent. Because the business use percentage does not exceed 50 percent, the personal computer is not predominantly used in a qualified business. Thus, the limitations of §280F(b) will apply, notwithstanding the fact that personal use did not increase.

If the business use percentage of listed property falls to 50 percent or below, the listed property ceases to be §38 property. Where the failure occurs in the first year of service no credit is allowed, and where the failure occurs in later years the property is subject to recapture.[49] Under Regs. §1.47-1(c)(1), if property ceases to be §38 property for a reason that cannot be specifically identified with a date, it is deemed to lose its §38 status as of the beginning of the taxable year. Due to this sale and the operation of the recapture rules in §47(a)(5) for recovery property, if a passenger automobile is used for the production of income and for personal purposes 50 percent or more of its use in the first year after the year the auto is placed in service, the entire ITC will be recaptured. If this 50 percent threshold is reached in the second full year, 66 percent of the ITC previously allowed is subject to recapture, and if such threshold is reached in the third year, the recapture percentage is 33 percent. The ITC is not subject to recapture thereafter. Similarly, if five-year listed property is used in qualified business use 50 percent or less of the time in any of its first five years of service, all or part of the ITC will be recaptured.

If the business use percentage of listed property falls to 50 percent or less, the taxpayer also loses the right to use ACRS for such taxable year and all subsequent years, and must instead use the straight-line method over the earnings and profits life.[50] In addition, the excess depreciation, if any, is recaptured and included in income in the year the business use percentage first falls to or below 50 percent.[51]

Example: The taxpayer purchases a passenger automobile for $20,000 for use in business. In the first year of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

its use, the taxpayer uses the car 75 percent in the business, 15 percent for the production of income, and 10 percent for personal use. The taxpayer claims a $900 investment tax credit ($1,000 [since that is less than 6% × $20,000] × .90) and reduces the recovery basis to $19,500. The first year's ACRS deduction is $3,600 ($4,000 × .9). In the second year, the taxpayer uses the car 60 percent for business, 15 percent for production of income, and 25 percent for personal use. Under Regs. §1.47-2(e), the increased personal use triggers partial recapture of the credit. The amount of recapture is $150 ([.9 − .75] × 1,000). The ACRS deduction for the second year is $4,500 ($6,000 × .75). In the third year, the taxpayer uses the car 50 percent for business, 25 percent for production of income, and 25 percent for personal use. Under Regs. §1.47-2(e), there would be no recapture since the percentage of personal use did not increase between year 2 and year 3. Under §280F(b)(1), however, the car ceases to be §38 property because the automobile is not predominantly used in qualified business. Accordingly, the taxpayer must calculate investment credit recapture in accordance with the rules of §47(a)(5). This requires applying to the remaining ITC of $750, the recapture percentage of 66 percent specified for 3-year recovery property in service for more than one full year after the date placed in service. As a result, the taxpayer recaptures the remaining $750 of ITC in year 3. Also, because the business use percentage is 50 percent, the taxpayer must recapture excess depreciation and convert to the straight-line method over the earnings and profits life. The maximum annual deduction on the straight-line method over the earnings and profits life is $4,000 (20,000 × .2).[52] The excess depreciation is $1,500 ([$3,600 + $4,500] - [$4,000 × .9 + $4,000 × .75]). The taxpayer's ACRS deduction for the third year is $3,000 ($4,000 × .75). The maximum ACRS deduction in the fourth and fifth years is $4,000, even if the business use percentage is 100 percent.

Observation: Once the cost of an automobile exceeds $30,000, there can be no recapture and the change from ACRS to straight-line over the earnings and profits life makes no difference. This is because the $4,000 and $6,000 ACRS limits continue to apply even when the straight-line method over earnings and profits life is used. Thus, when the cost of the automobile is $30,000, the five-year straight-line amount is $6,000 and this exceeds the first-year limit and equals the maximum deduction which could be claimed whether or not the business use percentage exceeds 50 percent. This phenomenon does not occur with other listed property because only passenger automobiles are subject to the ACRS cap. It should also be noted that the impact of the use of the straight-line method over earnings and profits life will be more pronounced on five-year listed property (computers and transportation equipment other than passenger automobiles) as well as listed real property (entertainment facilities). This is because the earnings and profits life for five-year property is 12 years, and the earnings and profits life for 18-year real property is 35 years.

Comment: Example 4 of the Conference Report incorrectly computes ITC recapture in a situation where qualified business use of an automobile violates the 50 percent limit in a year subsequent to the years the car was placed in service. Based on 80 percent business use in 1984, the year placed in service, Example 4 accurately computes an allowable ITC of $536. Business use remains at 80 percent during 1985 but falls to 45 percent in 1986. The example calculates an ITC recapture as follows: $536 × .35 (which is .80 − .45) × .66 (§47(a)(5) percentage) = $123.82. However, because the 50 percent business use limit is breached, the car ceases to be §38 property in its entirety in 1986. Thus, the insertion of a personal use factor (.35) in the ITC recapture computation is incorrect. The entire amount of the previously allowed ITC of $536 should be applied to the .66 recapture percentage of §47(a)(5), resulting in a recapture of $353.76. Staff members of the Joint Committee on Taxation have confirmed that the latter amount is accurate.

5. Lease Limitations

The ACRS and the ITC limitations do not apply to lessors of listed property who are engaged in the business of leasing.[53] Thus, car leasing companies will be entitled to full ITC and ACRS deductions on leased passenger automobiles. Additionally, the lessee's percentage of personal and business use percentage of a listed item does not affect the availability of ITC and ACRS deductions to the lessor. The exemption would not apply, however, to employers who lease company cars to employees unless the employer is in the leasing business.

Lessees, however, will be subject to both the passenger automobile and listed property limitations on ITC and ACRS deductions. Section 280F(c)(2) provides that deductions for rentals or other payments under a lease which exceeds 30 days are only allowable to the extent of the "applicable percentage" of the payments to be determined by tables published by the Treasury Department. The tables are not yet available; however, the intent is that reduction of the deduction should substantially equal the limitations contained in §§280F(a) and (b).

B. Substantiation Requirements

TRA §179(b) adds listed property to the items subject to the §274(d) substantiation requirements and upgrades the quality of substantiation requirements to require contemporaneous records. This means that business usage of passenger automobiles, other transportation vehicles, personal computers and entertainment property may no longer be approximated, but must be proved as to the amount of expense or use, the time and place of use, the business purpose for the use, and the business relationship to the taxpayer of persons using the property. In addition, all deductions subject to §274(d) (including travel expenses and business gifts) will have to be substantiated by *contemporaneous* records. This will require logs where the use of property is in issue and receipts where payments have been made to others.[54] Failure to maintain the log or receipts will result in automatic disallowance of the deduction except when records have been destroyed by circumstances beyond the taxpayer's control, such as fire or flood.[55]

C. Requirement of Preparers' Disclosure

TRA §179(b)(2) requires tax return preparers to notify customers of the substantiation requirements of §274(d) and obtain a written statement from the taxpayer confirming that adequate contemporaneous records have been kept with respect to any deduction under §274(d). Failure of the preparer to make the notification or obtain the statement will result in a $25 per violation penalty unless the preparer proves that the failure is due to reasonable cause and not

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

willful neglect. It is anticipated that either the acceptable language will be published by the Internal Revenue Service or the IRS will create a form to be used in obtaining the certification from the taxpayer.[56]

D. *Penalties for Failure to Substantiate*

Section 6653(h) provides that where the taxpayer fails to maintain the adequate contemporaneous records required under §274(d), it will be presumed that the resulting deficiency arises from the taxpayer's negligence. This presumption is only rebuttable by clear and convincing evidence to the contrary.

It can be expected that in claiming such deductions on the return the taxpayer will be required to certify that the records have been kept.[57] Thus, failure to maintain automobile logs and receipts for the other specified deductions will attract a virtually automatic five percent penalty if the deduction is claimed on the return. The Conference Report also contains the threat that claiming of a deduction in the absence of the required records "is also potentially fraud." [58]

Chapter 41

MINIMUM TAXES

Javed A. Khokhar, Esq.
and
William C. Wicker, Esq.
Silverstein and Mullens
Washington, D.C.

I. Corporate Minimum Tax Rules Amended

A. *Introduction*

1. *Background*

Under §56 of the Code, corporations are required to pay a minimum tax on certain tax preferences. The minimum tax applies in addition to the corporation's regular income tax. The amount of the minimum tax is 15 percent of the corporation's tax preferences in excess of the greater of: (a) the regular income tax paid by the corporation (referred to as the "regular tax deduction" in §56(c)), or (b) $10,000. *See* §56(a).

The tax preference items included in the base for the minimum tax computation are specified in §57. With respect to corporations, these items are: (1) accelerated depreciation on real property in excess of straight-line depreciation over the useful life or recovery period; (2) amortization of certified pollution control facilities (the excess of 60-month amortization over depreciation otherwise allowable); (3) in the case of certain financial institutions, the excess of the bad debt reserve deductions over the amount of those deductions computed on the basis of actual experience; (4) percentage depletion in excess of the adjusted basis of the property; and (5) 18/46 of the corporation's net capital gain.

In addition to being subject to the minimum tax, certain corporate tax preferences are subject to the cutback provisions of §291 of the Code. Added to the Code by TEFRA (P.L. 97-248), §291 requires a direct reduction in certain corporate preference items. Prior to the 1984 TRA, the required reduction was 15 percent of each item. That is, in computing the corporation's regular income tax, the amount of each preference item factored into this computation was required to be reduced by 15 percent if the item was subject to §291.

Section 57(b) prescribes an adjustment to the corporate minimum tax to prevent the combination of that tax and the cutbacks under §291 from reducing the marginal tax benefit from a preference to an amount less than that available prior to the enactment of §291. The preference items subject to cutbacks under §291 and the pre-1984 TRA treatment of these items are described below.

a. Depletion for Coal and Iron Ore

In the case of iron ore and coal (including lignite) the otherwise allowable percentage depletion deduction under §613 was reduced by 15 percent of the excess of percentage depletion deductions otherwise allowable under §613 for the taxable year over the adjusted basis of the property at the close of the taxable year (determined without regard to the depletion deduction for the taxable year). Only 71.6 percent of the preference as thus cut back was treated as a corporate tax preference under the minimum tax. *See* §291(a)(2).

b. Bad Debt Reserves

In the case of a financial institution to which §585 or §593 applies, the bad debt reserve deduction was reduced by 15 percent of the amount by which the otherwise allowable deduction for the taxable year for a "reasonable addition to a reserve for bad debts" exceeded the amount which would have been allowable on the basis of actual experience. Only 71.6 percent of the preference as thus cut back was treated as an item of tax preference under the minimum tax. *See* §291(a)(3) (*Certain Financial Institution Preference Items); see also* §291(e)(1)(A).

c. Tax Exempt Interest

In the case of a financial institution to which §585 or §593 applies, 15 percent of the otherwise allowable interest deduction allocable to debt incurred or continued to purchase or carry tax-exempt obligations acquired after 1982 was disallowed. *See* §291(a)(3); *see also* §291(e)(1)(B).

d. DISC

The deemed dividend distribution by a domestic international sales corporation (DISC) to a corporate shareholder was increased by 15 percent, to 57-1/2 percent of certain taxable income. This change had the effect of reducing the related tax benefit from DISCs by 15 percent. *See* §291(a)(4).

e. Section 1250 Property

The amount treated as ordinary income on the sale or other disposition of §1250 property (real estate) by a corporation during the taxable year was increased by 15 percent of the excess of the amount which would have been treated as ordinary income if the §1250 property were subject to recapture under §1245 (the rule applicable to personal property) over the amount otherwise treated as ordinary income under §1250. The minimum tax preference for the remaining 85 percent of the capital gain which would have been ordinary income under §1245 was reduced by 28.4 percent and, thus, was equal to 71.6 percent of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

18/46 of the gain, or approximately 28 percent of the gain. *See* §291(a)(1).

f. Pollution Control Facilities

Fifteen percent of the basis of pollution control facilities to which an election under §169 applied was treated as if the election did not apply. The minimum tax preference for the remaining property for which five-year amortization was elected was reduced by 28.4 percent. *See* §291(a)(5).

g. Intangible Drilling Costs

In the case of an integrated oil company, 15 percent of the amount otherwise allowable as a deduction for intangible drilling costs (under §263(c)) was capitalized to the oil, gas or geothermal property and deducted ratably over a 36-month period beginning with the month the costs were paid or incurred. *See* §291(b)(1)(A).

h. Mineral Exploration and Development Costs

Fifteen percent of the amounts otherwise allowable as deductions under §§616 and 617 to a corporation were capitalized and treated as if they were used to acquire recovery property assigned to the five-year class. ACRS deductions were allowed beginning with the year the expenses were paid or incurred, and the investment tax credit was available in the year the expenses were paid or incurred. *See* §291(b)(1)(B).

2. Reasons for Change

Congress believed that "some of the tax preferences enacted over the years should be scaled back further in light of the large budget deficits." Because of the deficit, Congress decided to increase the 15-percent cutback to 20 percent.

B. Overview

TRA §68 increases the preference cutback (other than for coal and iron ore percentage depletion) from 15 to 20 percent. A similar adjustment to the new Foreign Sales Corporation (FSC) provision is made. Specifically, in the case of a corporate FSC shareholder, the benefits of the provision are reduced by 5/85.

To prevent a double tax impact of the increase in the preference cutback, Act §68 makes a corresponding adjustment to the corporate minimum tax. The 71.6 percent preference inclusion for the minimum tax is decreased to 59-5/6 percent.

As previously indicated, the cutback in the depletion allowance for coal and iron ore remains unchanged, *i.e.*, it continues to be 15 percent.

These amendments generally apply to taxable years beginning after, and transactions after, 1984.

C. Detailed Analysis

With one exception, Act §68 amends §291 by substituting "20 percent" for "15 percent" each place it appears in the section. The exception is §291(a)(2). The cutback percentage in that paragraph remains 15 percent. Thus, as amended, §291 requires a 20 percent reduction in the tax preference items subject to the section with the exception of the depletion deduction for iron ore and coal (including lignite). That deduction continues to be cut back only 15 percent.

To avoid a double tax impact of the increased cutback, Act §68 amends §57. Section 57, as stated earlier, enumerates and defines the tax preference items subject to the corporate minimum tax. As amended, §57 provides that, for purposes of the minimum tax, the preference amounts computed with respect to the amortization of pollution control facilities, the reserving of bad debts and §1250 capital gains, shall be deemed to be 59-5/6 percent of the amount they would otherwise be. Thus, the amount of these preference items included in the base for the corporate minimum tax is not the full amount, but only 59-5/6 percent thereof. Prior to the 1984 TRA, the amount included was 71.6 percent of the full amount.

The post-TRA 59-5/6 percent figure prevents the combination of the minimum tax and the 20-percent preference cutback from reducing the tax benefit from a taxpayer's marginal dollars of preference by more than it would be cut back under an unadjusted minimum tax (*i.e.*, by a minimum tax with a base that included the full amount of the tax preference items, not merely 59-5/6 percent of this amount).

Example: Assume a corporate taxpayer which has a 46 percent marginal regular tax rate, has paid more than $10,000 of regular tax, has tax preferences in excess of regular tax liability, and has $100 of excess amortization from pollution control facilities. Prior to the enactment of §291, the taxpayer received a regular tax benefit of $46 from this preference. The preference, however, led to a direct minimum tax of $15 (the 15 percent minimum tax rate times the $100 preference), as well as an indirect minimum tax of $6.90 through the reduction in the deduction for regular taxes under the minimum tax ($46 times 15 percent). Thus, the net tax benefit from the preference, at the margin, was $24.10.

When this calculation is modified to reflect the enactment of §291 and its amendment by the TRA, a 20 percent cutback must be factored into the calculation. Under this cutback, the excess amortization preference is reduced to $80. This, in turn, reduces the regular tax benefit of the preference to $36.80 (46 percent times $80). Including only 59-5/6 percent of the preference amount ($47.87, or $80 times 59-5/6 percent) in the minimum tax base reduces the direct minimum tax to $7.18 (15 percent times $47.87). Together with the indirect minimum tax, through the reduction in the deduction for regular taxes (15 percent times $36.80, or $5.52), this reduces the total tax benefit of the preference to $24.10 ($36.80 minus $7.18 minus $5.52). Thus, if only 59-5/6 percent of the preference item is taken into account for minimum tax purposes, the tax benefit from the taxpayer's marginal dollar of preference is the same as it would be if only an unadjusted minimum tax (without §291 preference cutback) were applied to the preference.

Since the cutback percentage for the depletion deduction for coal and iron ore remains 15 percent, the amount by which this preference item is reduced for purposes of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

computing the corporate minimum tax remains the same. That is, 71.6 percent of what would otherwise be the amount of this item is included in the base for computing the minimum tax.

Act §68 cuts back, in the case of a corporate shareholder, the benefits available under the new Foreign Sales Corporation provision. These benefits are codified in §923 of the Code. Act §68 amends §923(a) by substituting "32 percent" for "34 percent" in paragraph (2) and "16/23" for "17/23" in paragraph (3).

The amendments made by Act §68 generally apply to taxable years beginning after 1984. The amendments respecting the §1250 capital gain preference cutback apply to sales or other dispositions after 1984. The amendments respecting the preference cutback for pollution control facilities apply to property placed in service after 1984. The amendments respecting the preference cutback for drilling and mining costs apply to expenditures after 1984.

II. Alternative Minimum Tax Rules Amended

A. Introduction

For taxable years beginning after 1982, §55, as amended by TEFRA (P.L. 97-248) imposes on individuals, estates, and trusts, an alternative minimum tax equal to the excess of gross alternative minimum tax over the regular tax for the taxable year.[1] "Regular tax" in this context is a term of art because before comparing it with the gross alternative minimum tax, certain adjustments are required to be made: the "regular tax"[2] as computed under the normal Code rules is recomputed by disregarding the taxes imposed by §§72(m)(5)(B), 72(g), 402(e), 408(f), 409(c), and 667(b), and is reduced by nonrefundable credits allowed under Subpart A of part IV of subchapter A.

The gross AMT is determined by applying a flat 20 percent rate to the taxpayer's "alternative minimum taxable income" less the exemption amount specified in §55(f)(1).[3] Conceptually, the determination of "alternative minimum taxable income" is a two-step process:

(i) AMT adjusted gross income is computed by using the regular tax adjusted gross income as the starting point; and

(ii) AMT adjusted gross income is reduced by certain specified below-the-line itemized deductions to arrive at alternative minimum taxable income.

The following adjustments are required to the regular tax adjusted gross income to arrive at AMT adjusted gross income.[4]

(a) Any amount included in gross income under §667 is excluded,[5]

(b) The regular tax net operating loss deduction is replaced by the alternative tax net operating loss deduction as defined in §55(d); and

(c) The sum of items of tax preference is added back to gross income.

Note: In lieu of a current deduction, §58(i) provides the taxpayer with an option to write-off certain tax preference items *i.e.*, (§173) circulation, (§174(a)) research and experimental, (§263(a)) mining exploration and development, and (§616(a) and §617) intangible drilling and development expenditures) over a longer period of time and eliminate the preference amount for such items.

Once AMT adjusted gross income has been computed, alternative minimum taxable income is obtained by deducting the sum of alternative tax itemized deductions from AMT adjusted gross income. Alternative tax itemized deductions are defined to include the following below the line deductions:

(i) casualty and wagering losses under §§165(c)(3) and 165(d) respectively;

(ii) medical expenses under §213 (as modified by §55(e)(7));

(iii) charitable contributions under §170;

(iv) qualified interest as defined in §55(e)(3); and

(v) estate taxes under §691(c).

No nonrefundable credit, except the foreign tax credit, is allowed against gross alternative minimum tax.

From the mechanism of computing AMT liability as outlined above, it is apparent that, not only the items of tax preference, but also all below-the-line deductions (other than alternative tax itemized deductions) and all nonrefundable credits (other than the foreign tax credit) contribute to the taxpayer's AMT liability. Thus, for example, to the extent a below-the-line deduction for interest expense is permitted for the regular tax purposes but not for AMT purposes, it will contribute to the taxpayer's AMT liability.

The Tax Reform Act of 1984 (P.L. 98-369) makes a number of substantive, technical, and conforming amendments to the AMT rules contained in §§55-58.

B. Detailed Analysis

Sections 111(e), 555(a)(2), 711(a), and 722(a)(1) of the 1984 TRA amend §§55-58. These changes are discussed below.

1. Net Investment Income Limitation Includes a Net Loss from a Limited Business Interest

TRA §711(a)(4) amends Code §55(e)(8) to provide that the net investment income limitation on below-the-line non-housing qualified interest deductions includes a loss from a limited business interest.

a. Background

Section 55(e)(1) allows AMT adjusted gross income to be reduced by "qualified interest expense" to arrive at alternative minimum taxable income.

Qualified interest expense, which does not include investment interest carried forward under §163(d)(2) for regular tax purposes,[6] has two components: (i) qualified housing interest; and (ii) non-housing qualified interest.

(1) Qualified Housing Interest

Qualified housing interest includes interest paid or accrued by the taxpayer during the taxable year on indebtedness incurred in acquiring, constructing, or substantially rehabilitating the following two types of properties:[7]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(i) Property which is the principal residence of the taxpayer (within the meaning of §1034) at the time the interest is paid or accrued; and

(ii) Property which is a qualified dwelling used during the taxable year either by the taxpayer, his spouse, a brother, sister, or an ancestor or lineal descendant. "Qualified dwelling" includes a house, apartment, condominium. or mobile home not used on a transient basis.[8]

Qualified housing interest is deductible in computing alternative minimum taxable income without any restriction.

(2) Non-Housing Qualified Interest

Non-housing qualified interest includes personal interest, investment interest allowable for the taxable year under §163(d), interest paid or accrued on indebtedness incurred to purchase or carry a limited business interest,[9] and all other non-housing interest which is not allowed as an adjustment to gross income.

While qualified housing interest is allowable without restriction for AMT purpose, the deduction for non-housing qualified interest is severely limited. Under §55(e)(3)(B), a deduction for such interest is allowable in computing alternative minimum taxable income only to the extent of the taxpayer's qualified net investment income for the taxable year.

Qualified net investment income is defined as the excess of qualified investment income over qualified investment expenses.[10]

"*Qualified Investment Income*" means the sum of the following items of income:

(i) Gross income from interest, dividends, rents, and royalties to the extent such income is not derived from a trade or business;[11]

(ii) Any amounts recaptured as ordinary income under §§1245, 1250, and 1254 where the gain does not derive from carrying on a trade or business (*i.e.*, ordinary income recapture on disposition of property held for investment);[12]

(iii) Capital gain net income attributable to the disposition of property held for investment;[13]

(iv) Tax-exempt interest and dividends, within the meaning of §§116 and 128, included in the minimum tax base as items of tax preference by §57(a)(1);[14] and

(v) Income derived by a taxpayer from a "limited business interest." [15] A limited business interest is defined to include a partnership as a limited partner or as a shareholder in an S corporation where the shareholder does not actively participate in the management of the corporation.[16]

Observation: "Qualified investment income" for §55 purposes is broader than "investment income" for §163(d) purposes. For example, "investment income" as defined in §163(d)(3)(B) does not include: (i) interest and dividends excluded under §§116 and 128; (ii) long-term capital gains; and (iii) net income from a limited business interest.

"*Qualified Investment Expenses*" are those deductions which are directly connected with the production of qualified investment income subject to the following limitations:[17]

(i) Only those expenses (including interest) which are an adjustment to gross income qualify as "qualified investment expenses." An expense, even though directly connected with the production of qualified investment income, does not qualify as a "qualified investment expense" if it is a below-the-line deduction. Thus, while the interest expense which is allowable in computing adjusted gross income will reduce the taxpayer's qualified investment income, the interest expense which is an itemized deduction will not reduce qualified investment income.

(ii) Deductions that are not allowed in computing the minimum tax base are not taken into account in computing qualified net investment income. Thus, those deductions which are items of tax preference are not considered qualified investment expenses.

Comment: This avoids the "double whammy" effect which would result if the expenses were first included in the minimum tax base as items of tax preference and were again allowed to reduce the taxpayer's qualified investment income limit on the non-housing itemized interest.

(iii) Interest paid or accrued on indebtedness incurred for the purpose of purchasing or carrying a limited business interest is a below-the-line deduction for purposes of the §55 tax and, therefore, is not considered a qualified investment expense.[18]

Comment: This treatment of interest is a mixed bag of blessings and evils. It is a blessing because it does not reduce the qualified net investment income limitation on the non-housing itemized interest. It is evil because such interest becomes subject to the qualified net investment income limitation and may give rise to AMT liability.

(a) Qualified Net Investment Income Limitation on Non-housing Interest

As is apparent from the foregoing discussion, the qualified net investment income limitation serves an important function: it determines directly the amount of non-business interest (other than housing interest) that may be deducted in computing alternative minimum taxable income, and indirectly, the amount of such interest which is subject to the AMT.

But for §55(e)(8) (providing a special treatment for limited business interests), the computation of the qualified net investment income limitation would be a relatively simple and straightforward task. Disregarding §55(e)(8) for a moment, the most commonly-encountered types of investment income are likely to be dividends, interest, and capital gain net income. Since the expenses directly allocable to earning these types of income are likely to be minimal, the computation of qualified net investment income involves the simple procedure of adding the different types of investment income and subtracting the expenses directly connected with such income. A slight conceptual difficulty may arise where a taxpayer has more than one type of investment income and the expenses directly connected with one category of investment income exceed the income in that category. For example, a taxpayer may have $10,000 of dividend income, $15,000 of rental income from

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

a property subject to net lease within the meaning of §163(d), and $18,000 of expenses (*i.e.*, depreciation, interest, insurance, maintenance, etc.) directly connected with the rental income for the taxable year. In this situation, the question may be asked whether the $3,000 of excess expenses connected with rental income reduce the $10,000 dividend income for purposes of computing the qualified net investment income limitation. Phrased differently, the question is whether, for purposes of determining qualified net investment income limitation, various items of investment income and items of allocable expenses are aggregated separately before netting. If the answer is in the negative and income and allocable expenses for each category of investment income are required to be netted separately, a second question arises. This question is whether the excess of expenses allocable to one category of investment income will reduce investment income from another category. This second question is moot, however, because the statute clearly answers the first question in the affirmative. Section 55(e)(5)(A) provides that qualified net investment income equals the excess of: (i) qualified investment income; over (ii) qualified investment expenses. Since §55(e)(5)(B) defines "qualified investment income" as *the sum of* various items of income specified in subclauses (ii)-(iii) of that subsection, it is apparent that all items of investment income must be aggregated before subtracting the directly connected expenses. Thus, if a taxpayer has $10,000 of capital gain net income and $2,000 of expenses allocable to such income, and $15,000 of rental income derived from property subject to a net lease within the meaning of §163(d) and $18,000 of allocable expenses, his net investment income will be determined as follows:

Net Investment Income =

[Investment Income] − [Investment Expenses]
= [$10,000 + $15,000] − [$2,000 + $18,000]
= $5,000

Section 55(e)(8), as originally enacted by TEFRA, however, introduced an uncertainty in the net investment income computation. Section 55(e)(8)(A), which mandates that interest expense pertaining to a limited business interest is a below-the-line deduction, was added to the Code during the Conference Committee deliberations on TEFRA.

Comment: The Conference Committee perhaps realized that this provision, standing alone, would create a double whammy for AMT purposes. Such interest might not be deductible for lack of qualified net investment income while the income generated by the limited business interest would be subject to AMT. Perhaps, to alleviate this hardship, §55(e)(8)(B) (which provides that income derived from a limited business interest is qualified investment income) was added to ensure that, to the extent a limited business interest produced income, interest expense pertaining to such limited business interest would be deductible for AMT purposes.

There were no conceptual or practical difficulties in applying §55(e)(8) so long as a limited business interest did not generate a loss. Where a taxpayer suffered a net loss from his limited business interests, however, the question arose: would such a loss enter into the net investment income computation? The answer depended upon the legislative intent behind §55(e)(8)(B). If the intent was to remove the "double whammy" effect of banishing interest expense pertaining to a limited business interest below-the-line, the obvious conclusion was that a net loss from limited business interests could not enter into the qualified net investment income computation. This conclusion was further bolstered by a failure of the statutory language to: (i) make the distributive share of deductions from a limited business interest "qualified investment expense," and (ii) mention the word "loss" in conjunction with the word "income" in §55(e)(B)(8). Instead, that provision simply states that:

> "Any income derived from a limited business interest shall be treated as qualified investment income."

Further, nothing in the legislative history indicated that "any income," as used in §55(e)(8)(B), included a loss.

As is apparent from the following excerpt, however, the Joint Committee Staff explanation of TEFRA interpreted §55(e)(8)(B) to include a loss:[19]

> "... However, interest on indebtedness incurred to acquire or carry a limited partnership interest or an interest in a subchapter S corporation (in the case of a person who does not actively participate in the management of the corporation) is "below-the-line" interest for purposes of the minimum tax and therefore is subject to the net investment income limitation on the interest deduction. Further, net income or *loss* taken into account, directly or indirectly, from such an interest will be considered net investment income for the purposes of the net investment income limitation on the interest deduction." [Emphasis supplied.]
>
> "Thus, for example, assume a taxpayer had $100,000 of dividend income and also held a limited partnership interest in a partnership all of whose income is derived from a trade or business. The taxpayer's distributive share of partnership income included $200,000 of gross income and $300,000 of deductions which are not preferences (including partnership deductions for business interest). Because the partnership items are treated as items of investment income and investment expense to the limited partners for purposes of computing net investment income, the taxpayer would have no net investment income for the taxable year ($300,000 gross investment income less $300,000 investment expenses) and, therefore, could deduct no "below-the-line" interest (other than eligible housing interest), including interest on debt used to purchase or carry the limited partnership interest."

Doubts, however, continued to persist about the Joint Committee's explanation. One commentator believed that the Joint Committee's interpretation was an afterthought and that the issue would have to be decided by the courts:

> "This interpretation appears to be an afterthought. The statute specifically treats "income" from limited business interests as 'qualified investment income.' The statute neither mentions including losses in arriving at qualified net investment income nor treating deductions

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

from such activities as qualified investment expenses. If the drafters intended this result, treatment for such items should have been specifically mentioned."

"... Without further legislative support for this position, however, final determination as to whether limited business losses reduce qualified net investment income for purposes of the AMT will have to be made by the courts. The best solution is for Congress to clarify its intent with respect to the treatment of such losses." [20]

(b) 1984 TRA Resolves the Controversy

TRA §711(a)(4) resolves the controversy. It amends §55(e)(8)(B) to include the word "loss" in that subparagraph. As amended, §55(e)(8)(B) reads:

"Any income or loss derived from a limited business interest shall be taken into account in computing qualified net investment income."

Since the amendment is supposedly a technical correction, and since TRA §711(a) does not contain an effective date provision, the amendment presumably is effective as of the original date of enactment of §55(e)(8).

To illustrate the application of amended §55(e)(8), the Conference Report [21] includes the same example as given by the Joint Committee Explanation of TEFRA.[22]

The net affect of the amendment is that, in certain situations, an investor in a limited business interest may be worse off from an AMT standpoint than he would be if he made no investment.

Example: Assume a taxpayer, for the relevant taxable year, had $100,000 of dividend income; $50,000 of personal interest expense and $30,000 of interest expense on indebtedness incurred to purchase a limited business interest. The taxpayer's distributive share from the limited partnership in the relevant taxable year included $200,000 of gross income and $300,000 of deductions which are not tax preference items. Under amended §55(e)(8), the $100,000 net loss from the limited partnership wipes out the $100,000 dividend income and, consequently, the taxpayer, in computing alternative minimum taxable income, cannot deduct any of the $80,000 non-housing itemized interest expense.

Note that, in the above example, the taxpayer would be better off not making an investment in the limited partnership because, in that case, he would be able to deduct $50,000 personal interest expense in computing alternative minimum taxable income.

2. Amendments to Section 58(i) Election Rules

a. Background

Section 58(i), added to the Code by TEFRA, provides the taxpayer with an opportunity to avoid preference income with respect to certain specified expenditures, i.e., circulation, research and development, mineral exploration and development, and intangible drilling and development expenditures. Under §58(i), a taxpayer's deductions for these expenditures are not treated as tax preference items if the taxpayer elects to amortize these expenditures over a longer period of time. The period for amortization of all expenditures specified in §58(i) is generally 10 years. Section 58(i)(4), however, provides the taxpayer with a special election to amortize intangible drilling and development costs over a period of five years.

TRA §711(a)(2) makes a clarifying amendment to the special election rules of §58(i)(4). TRA §711(a)(3) reduces the amortization period for circulation expenditures from 10 to three years.

b. Section 58(i)(4) Election Rules Clarified

TRA §711(a)(2) amends §58(i)(4)(A) to add the parenthetical phrase "(with respect to wells located in the United States)" after the words "intangible drilling costs." Thus, a taxpayer will be able to make the special five-year election provided in §58(i)(4) only with respect to intangible drilling costs allocable to oil and gas wells located in the United States.

The amendment is of a clarifying nature. Since the special §58(i)(4) election entitles the taxpayer to an investment tax credit for the IDCs and since the investment tax credit is generally not available with respect to property used outside the United States, it is logical that the §58(i)(4) election should be restricted to IDCs incurred with respect to wells located in the United States.

c. Ten-Year Amortization Period for Circulation Expenditures Reduced to Three Years

Prior to the TRA, the taxpayer, in lieu of taking a current deduction under §173, was required to elect a 10-year period of amortization for the circulation expenditures to avoid the preference item for such expenditures.

This 10-year period was unrealistic because, according to industry experience, the subscriptions generated by circulation expenditures have an average life of three years. Also, since a current deduction for circulation expenditures under §173 is not a preference item for corporate taxpayers, the 10-year amortization requirement of §58(i) placed non-corporate taxpayers at a distinct disadvantage as compared to corporate taxpayers.

Congress, therefore, reduced the required period of amortization under §58(i) from 10 to three years for circulation expenditures. Thus, noncorporate taxpayers may avoid the preference amount with respect to circulation expenditures by electing to amortize such expenditures over a three-year period.

3. Other Technical Amendments

The TRA makes three other technical amendments discussed below.

(1) Section 711(a)(1) amends §55(f)(2) (defining "regular tax") to clarify that, for purposes of computing a taxpayer's AMT liability, regular tax will not be reduced by any investment credit recapture. This amendment ensures that a taxpayer is not able to avoid recapture of the investment credit upon the disposition of investment credit property by reason of being subject to AMT.

(2) Under Code §87, the taxpayer is required to include in gross income an amount equal to the amount of alcohol fuel credit allowable to the taxpayer for the taxable year. Since alcohol fuel credit is not allowed against the AMT, to

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

balance the scale, TRA §711(a)(5) amends §55(b)(1) (defining alternative minimum taxable income) to provide that any amounts included in gross income under §87 will be disregarded in computing alternative minimum taxable income.

(3) The Technical Corrections Act of 1982 added a provision to clarify that amortization of low income housing under §167(k) remained a tax preference item but erroneously added that provision to §57(a)(12)(A). TRA §722(a)(1) rectifies this error. It strikes §167(k) from §57(a)(12)(A) and inserts it in §57(a)(12)(B), where it logically belongs.

4. Conforming Amendments

Finally, a couple of conforming amendments to the minimum tax rules are also worthy of note:

(1) With certain exceptions, most real property placed in service by the taxpayer after 1980 could be depreciated under ACRS over as short a period as 15 years. TRA §111, however, increases this minimum recovery period to 18 years. TRA §§111(e)(5), (6), and (7) make conforming amendments to §57(a)(12) (setting forth the computation of the preference amount for property depreciated under the ACRS) to reflect the increase in the recovery period of real property from 15 to 18 years. Thus, under amended §57(a)(12)(B), the preference amount for 18-year real property is equal to the amount by which the deduction allowed under §168(a) exceeds the deduction which would have been allowed had the property been written off using the straight-line method over 18 years. The preference amount for low income housing is equal to the amount by which the deduction allowed under §168(a) exceeds the deduction which would have been allowed had the property been depreciated using the straight-line method over 15 years.

(2) TRA §555 makes certain technical amendments to the incentive stock option rules (ISO) of Code §422A. Under §422A, there are generally no tax consequences when an ISO is granted or exercised. The recipient is generally taxed at capital gains rate when the stock received pursuant to the exercise of an ISO is sold. The exercise of an ISO, however, gives rise to a tax preference amount which is subject to the alternative minimum tax. One of the requirements for an option to qualify under §422A is that the option price must equal or exceed the fair market value of the stock at the time the option is granted. To insure that the fair market value requirement is not avoided, TRA §555 makes two amendments to the ISO rules of §422A: (i) the determination of fair market value is required to be made without regard to any restriction other than a restriction which, by its terms, will never lapse; and (ii) a change in the terms of an option to make it nontransferable in order to qualify as an ISO will be treated as a grant of a new option.

TRA §555(a)(2) makes a conforming change to §57(a)(10) (defining the preference amount for an incentive stock option) by adding a new sentence at the end thereof. The sentence makes it clear that, for purposes of determining the fair market value of a share of stock, any restriction, other than a restriction which by its terms will never lapse, shall be disregarded.

---

[1] Although the alternative minimum tax (AMT) is, in effect, a true alternative tax in that it is imposed only when it exceeds the regular tax as defined in §55(f)(2) for the taxable year, technically, the regular tax continues to be imposed and the amount of the alternative minimum tax imposed under §55 is the excess of the gross AMT over the regular tax.

[2] *See* §55(f)(2). The discussion in this paragraph does not take into account the amendment made to the definition of the term "regular tax" by the Tax Reform Act of 1984. All section references herein are to the 1954 Internal Revenue Code as amended and the regulations promulgated thereunder unless otherwise specified.

[3] The exemption amount is $40,000 for joint returns, $30,000 for single returns, and $20,000 for married individuals filing separately and estates and trusts.

CHAPTER 42

AN OVERVIEW OF THE TRA CHANGES AFFECTING REAL ESTATE

Patrick G. Dooher, Esq.
Silvertein and Mullens
Washington, D.C.

I. Introduction

The TRA has enacted numerous provisions that will affect the acquisition, development, ownership, use, and disposition of real property. Consistent with the TRA's principal purpose of raising revenue, the thrust of the TRA changes relating to real estate is to diminish the tax benefits accorded real estate. Among the more notable examples of this are the lengthening of the ACRS depreciation period for most real property from 15 to 18 years, and the new installment sale recapture rules requiring full recognition of recapture income in the year of disposition.

Although the TRA amendments are generally unfavorable, certain changes should prove advantageous. For example, the long-term capital gains holding period is reduced to six months, and the 60-month write-off provided for the costs of rehabilitating low-income housing is extended through 1986.

The ensuing portions of this Chapter will identify the major TRA changes, both favorable and unfavorable, affecting real property. Cross-references indicating the chapter in which a change is analyzed in detail will also be supplied.

II. Acquisition and Development

Some of the more significant TRA changes relating to the acquisition and development of real property are in the tax-exempt bond area. Tax-exempt industrial development bonds may no longer be used to finance the acquisition of existing facilities unless the facilities are substantially rehabilitated within two years after acquisition; limitations are also placed on the use of industrial development bonds to finance the purchase of land. An analysis of all TRA changes relating to industrial development bonds may be found in Chapter 20, II.

On a more positive note, the TRA extends state and local authority to issue tax-exempt mortgage subsidy bonds through 1987. Proceeds of mortgage subsidy bonds may be loaned to first-time home buyers (or other home buyers who have not owned a principal residence within three years) at a lower interest rate than the rate charged by commercial mortgage lenders. Moreover, beginning in 1985, the TRA provides state and local governments with the authority to issue mortgage credit certificates to first-time home buyers in lieu of issuing mortgage subsidy bonds. A recipient of a mortgage credit certificate is entitled to claim a credit against federal income tax equal to a percentage (set by the state or local government and ranging from 10 to 50 percent) of the mortgage interest paid or incurred by the recipient during the year. For a full analysis of the extension of the mortgage subsidy bond provisions and the new mortgage credit certificate, *see* Chapter 20, I.

Another important TRA change relating to the financing of real property acquisitions is the extension of the original issue discount rules after 1984 to purchase money notes given by a purchaser to a seller of real property where the note does not carry an adequate interest rate. If the original issue discount rules apply, two major consequences ensue: (i) a portion of the deferred purchase price is recharacterized as interest deductible by the purchaser but includible in the seller's income on an economic accrual basis when paid, in the case of a cash basis taxpayer, or when due, in the case of an accrual method taxpayer; and (ii) due to the imputation of interest, the basis of the property acquired is reduced both for purposes of computing depreciation and for purposes of determining gain or loss on a subsequent disposition. The original issue discount rules are fully described in Chapter 21.

The TRA amends §189 to require corporations to capitalize construction period interest and taxes on residential real property (other than low-income housing). The Act also revises §195 to mandate the capitalization of start-up expenditures prior to the commencement of an active trade or business, including expenditures of the type held deductible under §212 in *Hoopengarner v. Comr.*, 80 T.C. 538 (1983) (ground rents). The §§189 and 195 capitalization requirements are discussed in Chapter 11, I and II, respectively.

Demolition losses are no longer deductible after 1983, whether incurred to prepare land for construction, lease, or any other purpose. Such losses must be capitalized as part of the basis of land. This TRA amendment is described in Chapter 12, IX.

Finally, the TRA renders less attractive a tax-savings technique often used in condominium conversions. It involved the use of a corporation to sell approximately 40-50 percent of the condo units, paying a corporate level tax, followed by the distribution of the remaining units in complete liquidation of the corporation, thereby obtaining a basis step-up in these units to fair market value. Since the corporation had realized a "substantial part" of the income from the conversion, the corporation was not collapsible, and the gain recognized by the shareholders on liquidation was therefore taxable at capital gains rates. The shareholders would then complete the conversion at no further gain.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The TRA amends the collapsible corporation rules to raise the substantial part requirement to two-thirds of the taxable income to be derived from the corporate property, which means that only one-third of a condominium conversion can be achieved at capital gains rates. The new collapsible corporation rules are fully analyzed in Chapter 31, VI.

III. Ownership and Use of Real Property

One of the principal tax benefits provided to owners of depreciable real property held for use in a business or for investment purposes is cost recovery under the ACRS. Prior to enactment of the ACRS, the depreciation period assigned real property generally depended on its projected economic life, usually at least 30 years. The ACRS fixed the recovery period for real property at 15 years, thereby effectively increasing the rate at which property was depreciated by 100 percent. The TRA, in response to Congress's concern that the 15-year period provided overly generous depreciation deductions resulting in the churning of real estate, lengthened the recovery period for real property to 18 years, except low-income housing. The new 18-year life, the exception for low-income housing, plus the half-month convention adopted by the TRA for computing cost recovery for 18 year-property placed in service or disposed of, are discussed in Chapter 6, I.

The TRA further lengthens the recovery period to a minimum of 40 years for any real property leased to a tax-exempt organization, governmental unit, or foreign person in a disqualified lease. A lease may be treated as disqualified if (i) tax-exempt financing obtained through the exempt entity financed the leased property at least in part, (ii) a fixed option to purchase the property exists, (iii) the lease term exceeds 20 years, or (iv) the property was the subject of a sale and leaseback. Real property will be excepted from the tax-exempt use restrictions if no more than 35 percent of the property is leased to an exempt entity of if the term of the lease is less than three years. The tax-exempt entity leasing rules are analyzed in full in Chapter 18.

On the other hand, the TRA extends the 60-month amortization rules for the costs of rehabilitating low-income housing through 1986, and restores the 60-month amortization rules for the costs of removing architectural and transportation barriers for the handicapped and elderly through 1985. A discussion of these provisions may be found in Chapter 6, VI and VII.

The TRA makes two changes of note to the rehabilitation credit. The Act denies the credit for rehabilitation expenditures allocable to property that will be tax-exempt use property. However, it liberalizes the 75 percent external wall requirement, permitting the retention of only 50 percent of a building's walls as external walls if certain conditions are met. The rehabilitation credit amendments are further described in Chapter 15, II.

In the lease area, new §467 must be considered whenever there is a rental agreement under which (i) rents increase during the term of the agreement, or (ii) at least one rental payment allocable to the use of the leased property during the calendar year will not be paid until the second calendar year after the year in which the use occurs. Section 467 will apply only if aggregate payments under the agreement exceed $250,000. If applicable, an interest element may be imputed under §467, and the lessor and lessee must report rental and interest income and deductions on an accrual basis, irrespective of their methods of accounting. Special rules apply to long-term leases and sale-leaseback transactions where the rent increases can be ascribed to tax avoidance motives. It should also be noted that regulations may be prescribed under §467 providing for comparable rules where rents decrease during the term of the lease. For a complete analysis of §467, *see* Chapter 22.

IV. Dispositions

One beneficial change made by the TRA is to reduce the holding period for long-term capital gain treatment to six months, effective for property acquired after June 22, 1984, and before 1988. This change is discussed in Chapter 28, I.

On balance, however, the TRA provisions affecting the disposition of real property are unfavorable. The installment sale reporting rules are amended to require full recognition of recapture income in the year of an installment sale, regardless of the amount of payments in that year. A new recapture rule is provided for disposition of §1231 property, such as real property used in a trade or business, requiring that capital gain under §1231 be recharacterized as ordinary income to the extent of ordinary losses under §1231 in the preceding five years. The installment sale and §1231 recapture rules are analyzed in Chapters 26, III, and 28, III, respectively.

The §1031 like-kind exchange rules, under which gain is not recognized on the transfer of property to the extent like-kind property is received in exchange, have been amended by the TRA in two respects. First, the TRA overrules case law that allowed tax-free like-kind exchanges of partnership interests. Second, the TRA restricts the period within which a like-kind exchange may be completed. These changes are described in Chapters 37, IV, and 29, II. Chapter 37, as well as Chapter 36, also describes the many other changes in the area of the taxation of partnerships; the partnership is one of the most common forms of owning real property, and the TRA changes to partnership taxation are extensive.

V. Compliance

The TRA enacts three compliance measures relating to real estate transactions. First, the TRA generally imposes a withholding obligation on the purchaser of a U.S. real property interest from a foreign owner. This withholding requirement is analyzed in Chapter 63. Second, the Act requires information reporting by persons who, in connection with a trade or business, receive mortgage interest payments exceeding $600 on a mortgage. The TRA also imposes information reporting requirements on lenders who foreclose or learn that property securing debt has been abandoned. For a discussion of the latter two new reporting requirements, *see* Chapter 43, II, C.

CHAPTER 43

AMENDMENTS RELATING TO COMPLIANCE PROVISIONS

Patrick G. Dooher, Esq.
Charles E. Taylor, Esq.
and
Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Background

One of the major aims of the Tax Equity and Fiscal Responsibility Act of 1982 [1] (TEFRA) was the improvement of taxpayer compliance. To this end, TEFRA strengthened various criminal and civil penalties, such as increasing the maximum fine for tax evasion from $10,000 to $100,000 ($500,000 for corporations) in §7201, and imposing an additional civil fraud penalty under §6653 equal to 50 percent of the interest payable on the portion of an underpayment attributable to fraud. TEFRA also enacted various new penalties, such as an immediately assessable $500 penalty [2] imposed on taxpayers filing frivolous returns in order to discourage the many protest returns that were inundating the system.

The 1982 Act also sought to broaden and render more effective another traditional method of inducing taxpayer compliance, information reporting. For example, in order to increase the reporting of tip income by employees, new tip reporting requirements were imposed on employers in §6053. In response to the growing so-called underground economy, the broker return rules of §6045 were revised to clarify that brokers engaged in barter transactions were subject to those rules.

Finally, the 1982 legislation sought to utilize what is perhaps the most effective compliance measure, withholding. TEFRA enacted in §§3451-3454 a mandatory 10-percent withholding tax on interest and dividends.[3] This withholding endeavor proved unsuccessful, however, as it met with considerable popular resistance. It was repealed early in the 90th Congress by the Interest and Dividend Tax Compliance Act of 1983, leaving the withholding measure ineffective as if it had never been enacted,[4] although a remnant survives in the form of the backup withholding rules of §3406.[5]

B. Overview of TRA Changes

The Tax Reform Act of 1984 [6] continues the TEFRA policy of seeking to raise revenues through new or improved compliance measures. The Act adds or strengthens various reporting and penalty provisions although, not surprisingly, it does not add to the existing withholding rules in the domestic area [7] except for certain technical changes to backup withholding.

The Act also focuses on another compliance tool, substantiation. One substantiation measure, buried in the section of the Act concerning luxury automobiles and listed property, that will affect many business taxpayers commencing in 1984 is to stiffen the substantiation requirements of §274(d) by requiring the maintenance of adequate "contemporaneous records" [8] rather than merely "adequate records" or "sufficient evidence corroborated by (the taxpayer's) own statement." This stiffer substantiation rule will apply with respect not only to listed property but also to travel and entertainment expenses previously subject to §274(d). More rigorous substantiation will also be required in the case of charitable contributions of property whose claimed value exceeds $5,000; the Act [9] directs the Treasury to issue regulations no later than the end of 1984 to require taxpayers making such gifts to obtain a qualified appraisal of the property.

Among the major additions in the reporting area, the Act mandates the furnishing of returns with respect to mortgage interest received in a trade or business,[10] cash payments of more than $10,000 received in a trade or business,[11] certain foreclosures and abandonments,[12] and partnership exchanges where unrealized receivables are involved.[13]

In conjunction with the new substantiation and reporting requirements, the Act adds to or amends various existing penalty provisions to enforce the new requirements. The return preparer penalty of Code §6695 is amended to impose a $25 penalty whenever a return preparer fails to advise the taxpayer of the §274(d) substantiation requirements and obtain written confirmation that such requirements were met.[14] Also, for purposes of the negligence penalty, the TRA adds a presumption that failure to comply with the §274(d) substantiation requirements was negligence.[15] The over valuation penalty of §6659 is revised [16] to provide a penalty equal to a flat 30 percent of the tax liability understatement where a claimed charitable valuation is 150 percent or more of the correct value, and to limit the Service's authority to waive this penalty except where a qualified appraisal was obtained. The Act also amends the general penalties for failure to properly file information returns and information statements, found in Code §§6652 and 6678.[17]

Perhaps the area receiving the greatest amount of attention under the TRA compliance provisions is the tax

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

shelter. The TRA enacts Code §6111 [18] to require for the first time the registration of tax shelters with the Internal Revenue Service. Under Code §6112, organizers and sellers of a "potentially abusive tax shelter" must maintain investor lists.[19] The Act also enacts two new penalties, §§6707 and 6708, to enforce the new registration and investor list requirements.[20] Temporary regulations in question-and-answer form implementing these new provisions have already been issued by the Service.[21]

The next section of this Chapter will review all of the Act compliance provisions, commencing with the new tax shelter registration and investor list requirements. Ensuing sections of this Chapter will analyze the revised, simplified estimated tax rules for noncorporate taxpayers and the new church audit procedures.

II. Analysis of the TRA Compliance Provisions

A. Tax Shelter Registration

1. Statutory Outline

Section 6111(a) requires any tax shelter organizer to register the shelter with the Secretary (in such form and in such manner as the Secretary prescribes) not later than the day on which interests in the shelter are first offered for sale. Upon registration, the Service will furnish to the tax shelter a registration number which, under §6111(b) must be furnished to each investor in the shelter and must be used by the investor on the investor's individual return.

Section 6111(c) defines a tax shelter as any investment with respect to which it can reasonably be inferred that gross deductions (treating 200 percent of any credits as deductions) will exceed the investor's investment by more than 2-1 at the end of any year within the first five years. Further, the shelter must be required to be registered under federal or state security laws, must be sold pursuant to a securities exemption where notice is required, or must be a substantial investment ($250,000 and five investors).

Section 6111(d) defines a tax shelter organizer as either (1) the person principally responsible for organizing the tax shelter or (2) certain other persons participating in the organization, management, or sale of the shelter.

Under §6111(e), the Secretary is authorized to prescribe regulations relating to certain registration requirements, including the authority to prescribe exemptions from the registration requirements.

Section 6707 provides a penalty of (i) $500, or, if greater, (ii) the lesser of 1 percent of the aggregate amount invested or $10,000. A penalty of $100 is prescribed for each failure to furnish a tax shelter identification number, and a $50 penalty is imposed for each failure to include the registration number on an individual return.

2. Definition of Tax Shelter

Registration of an investment is not required unless it is in fact a "tax shelter". Under §6111 an investment must meet two requirements in order to be classified as a tax shelter:

> (1) the investment must be one where a person could reasonably infer, from representations made, or to be made, in connection with any offer for sale of any interest of the investment, that the tax shelter ratio for any investor may be greater than 2 to 1 as of the close of any of the first five years ending after the date on which the investment is offered for sale; and
>
> (2) the investment must be either required to be registered under a federal or state securities law or sold pursuant to an exemption from registration requiring the filing of a notice with a federal or state agency regulating securities; alternatively, is satisfied if there is a substantial investment.

a. Tax Shelter Ratio

For purposes of the first requirement, the tax shelter ratio, with respect to any year, is the ratio that the aggregate amount of deductions and 200 percent of the credits which are represented as potentially allowable to an investor for all periods up to (and including) the close of any year, bears to the investment base for the investor as of the close of that year.[22]

The temporary regulations under §6111 [23] take the expansive view that deductions for purposes of the ratio are the amount of gross deductions and other similar tax benefits potentially allowable without reduction by any gross income to be derived or expected from the investment. Similarly, "credits" are the gross amount of credits potentially allowable without regard to any possible tax liability resulting from the investment or any potential credit recapture. A deduction or credit may be considered to be represented as potentially allowable through explicit representations made in connection with the offering for sale of an interest in the investment. For example, an advertisement stating that "purchase of restaurant includes trade fixtures (5-year write-off and investment tax credit)" is an explicit representation of tax benefits.[24] Once an explicit representation is made all associated deductions or credits will be inferred.[25] If the amount of the deduction is not specifically represented, it should be reasonably estimated based on economic value or economic projections. The temporary regulations provide that reasonable estimate must assume use of the most accelerated allowable ACRS deductions.[26]

Interest incurred in connection with the investment and explicitly represented as being potentially allowable must be taken into account. A deduction, however, such as a loss deduction from worthlessness, that is not intended need not be taken into account.[27]

The investment base for any year is the total amount of money and the adjusted basis of other property (reduced by any liability to which the other property is subject) that must be unconditionally contributed or paid to the tax shelter on or before the close of the year by the investor.[28] The investment base does not include any cash borrowed from the organizer or any other interested party, or any person related to such persons, unless the cash must be unconditionally repaid by the investor by the close of the year for which the determination is being made.[29] Also excluded is any amount borrowed from an unrelated person if the loan was arranged by a participating (or related) person, unless such amount must be unconditionally repaid by the close of the year.[30] The investment base must further be reduced by any direct or indirect borrowing from a lender located outside the U.S. of which a participating (or related) person knows or has reason to know.[31] Lastly,

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

amounts held for the benefit of investors in liquid assets, such as marketable securities or checking accounts, must be excluded.[32]

If the relationship of the gross deductions, as computed above, to the investment base, as determined above, is greater than 2 to 1 at the close of any of the first five years with respect to even one investor in the investment, the investment meets the first half of the tax shelter definition.[33]

b. Regulated Investments; Substantial Investments

The second half of the tax shelter definition requires the investment either to be registered under any federal or state law regulating securities, such as the Securities Act of 1933, or to be exempt from federal or state securities registration by reason of the filing of a notice with a federal or state securities agency.[34]

Alternatively, the second part of the tax shelter definition will be satisfied if the investment is a "substantial investment". An investment is substantial if the aggregate amount that may be offered for sale to all investors exceeds $250,000 and five or more investors are expected to invest.[35] Under the temporary regulations,[36] the aggregate amount offered for sale is considerably broader than the investment base as it includes the fair market value of all property contributed, in contrast to the adjusted basis used for investment base purposes, and the principal amount of all debt received in exchange for interest in the investment, regardless of whether the debt proceeds are included in the investment base.

In appropriate circumstances, investments may be aggregated in order to determine whether the $250,000 amount is exceeded and whether there are at least five investors. Investments will be aggregated if they are similar investments offered by the same person or related persons.[37] The temporary regulations illustrate this principle with the following example adopted from the Conference Report of the Act.[38]

> *Example*: An investment sponsor develops similar arrangements involving eight different partnerships, each investing in separate but similar assets (such as master recordings), each with a different general partner and each with three different limited partners. If each partner will invest $11,000, there will be 32 investors, one general partner plus three limited partners times 8 partnerships, creating an aggregate investment of $352,000 (32 partners times $11,000). Each partnership will constitute part of a substantial investment. Moreover, if representations are made that $1,000 in credits and $3,000 in deductions will be available to each limited partner in the first year, and the limited partners have invested only $1,000 cash with the balance financed through $10,000 in nonrecourse obligations, the tax shelter ratio is 5 to 1 and the sponsor must register all the partnerships.

3. Registration Exceptions

Under the authority contained in §6111(e)(3), the temporary regulations provide two exceptions to the registration rules. First, the regulations except sales of residences primarily to persons expected to use the residences as their principal place of residence.[39]

Observation: That the regulations specifically set out personal residences as an exception is interesting not because it is in any way surprising but because it indicates the Service's view that the registration requirements are so expansive they could encompass home sales.

Second, the sales or leases of tangible personal property (except master sound recordings, motion picture or television films, video tapes, lithograph plates, or other property relating to a literary, musical, or artistic composition) by the manufacturer (or affiliated member) of the property primarily to persons who are expected to use the property in their principal active trade or business are excepted from the registration requirements.[40]

4. Who Must Register Tax Shelter and When

Once it is determined that an investment is a shelter and that it is not excepted from the registration requirement, the person responsibile for registering the shelter and the date by which it must be registered must be determined.

The shelter must be registered by the tax shelter organizer, who may be one of several people. In general, the tax shelter organizer is the person principally responsible for organizing the tax shelter (the "principal organizer").[41] If this person does not register the tax shelter on the day on which an interest in the shelter is first offered for sale, any other person who participated in the tax shelter's organization will be treated as a tax shelter organizer. If none of these persons register the shelter by that first day, then any person who participates in the tax shelter's management at a time when the shelter is not registered will be treated as a tax shelter organizer. If the shelter still remains unregistered and a person who participates in the sale of interests at a time when the person knows or has reason to know that the shelter has not been registered, then that person will be treated as a tax shelter organizer.[42]

Practitioners should note that preparation of any of the documents or materials relating to the tax shelter, such as the preparation of a tax opinion, financial statement, or appraisal can be classified as participation in the organization of the tax shelter, but such activity will be excluded as participation if the person performing the act is not related and does not participate in any of the profits or risks of the shelter. For example, an unrelated attorney who charges a flat hourly fee for the preparation of SEC registration documents will not be treated as participating in the tax shelter organization. However, if that same attorney charged a fee equal to one percent of the value of the units in the shelter sold, the attorney would be considered a participant.[43]

Management of the shelter includes such acts as managing the shelter assets, directing the shelter's business activity, or acting as general partner.[44] A manager who is unrelated to the principal organizer and whose compensation is not contingent on shelter performance will not be treated as participating in the organization of the tax shelter.[45]

A person who sells or solicits sales of interests in the tax shelter participates in the sale of the tax shelter. No exclusion is provided such participants based on their being unrelated and their not receiving contingent compensation

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

with respect to the shelter. Presumably the reason for the denial of the exclusion stems from an assumption that all sales of interests will be on a commission basis and, therefore, dependent on the successful sales of the interests.

A person can be treated as a tax shelter organizer even though that person does not make any representations concerning tax benefits if that person knows or has reason to know that representations of tax benefits have been made.[46]

A principal organizer or participant in the organization of the tax shelter must register the shelter by the day on which the first offering or sale of the interests in the tax shelter occurs, unless a designation agreement is in effect in which a designated organizer is responsible for registering the shelter by that first day.[47] A manager of a tax shelter is responsible for registering an unregistered shelter by that first day, or if later, by the day on which the manager's participation in management of the shelter commences.[48] A seller of a tax shelter interest must register an unregistered shelter at the time the seller knows or has reason to know of the failure to properly register. If no registration number is received by the seller within 30 days after the seller first offers tax shelter interests, the seller is deemed to know that a registration has not occurred. This 30-day rule is significant because it implies that the Service will screen shelter registration returns rapidly, perhaps allowing the Service time to seek an injunction or notify investors regarding a shelter it views as abusive.[49]

Managers and sellers can be the parties to a designation agreement along with a principal organizer and other participants in the organization under which one person is designated as the tax shelter organizer responsible for registering the shelter.[50] However, a designation agreement will not relieve a person classified as a tax shelter organizer from the requirement of registering a shelter where the designated organizer fails to do so.[51]

5. Miscellaneous Rules

Within seven days of receipt of a tax shelter registration number from the Service, the tax shelter organizer must provide a copy of the notice to the principal organizer or to any persons who the shelter organizer knows or has reason to know are participating in the sale of shelter interests. A designated organizer must also provide a copy of the notice within seven days to all persons who signed the designation agreement.[52]

Once a shelter has been registered the registration is effective for the year of registration and all subsequent years; amendments to the registration statement need not be filed even though the underlying facts concerning the shelter have changed.[53] However, if a shelter is resyndicated, registration must be made anew unless the tax shelter organizer for the original sale is also the organizer for the resyndication and the facts pertaining to the resale were reflected in the original registration application.[54]

A shelter is registered by filing a completed Form 8264, Application for Registration of Tax Shelter.[55] Separate 8264 forms may be required for multiple investments that are aggregated in determining whether there is a substantial investment.[56] A timely mailed Form 8264 will constitute a timely registering of the shelter.[57]

The registration number for a shelter must be furnished to the purchasers of interests in the shelter by sellers of the interest. It must be furnished at the time of sale or, if later, within seven days after the seller or transferor of the interest receives the registration number. For interests sold in a tax shelter before September 1, 1984, the effective date of the registration requirement, the registration number must be furnished to all investors who acquired their interests before the effective date by December 31, 1984.[58]

The Service has prescribed in the temporary regulations the form of notice for communicating the registration number to purchasers.[59] This notice must include the name and address of the shelter, the taxpayer identification number, the registration number, and certain legends informing the investors (i) where and when the registration number must be used, (ii) that Form 8271, Investor Reporting of Tax Shelter Registration Number, must be attached to the return reporting shelter deductions or credits, and (iii) that issuance of the registration number does not in any way constitute Service approval of the investment or claimed tax benefits.

6. Penalties

Under §6707(a), a tax shelter organizer who fails to register a shelter on or before the date appropriate for that organizer or who files false or incomplete information with respect to the registration is liable for a penalty equal to the greater of $50 or one percent of the aggregate amount invested in the tax shelter (up to a maximum $10,000). There is a $10,000 maximum penalty if there was intentional disregard of the registration requirements. On the other hand, the failure to register or to file the proper information may be excused for reasonable cause.[60] A principal organizer or a participant in the organization of a tax shelter is subject to the penalty under §6707(a) by failing to file by the day on which interest is first offered even though a manager or seller subsequently registers the tax shelter.[61]

Under §6707(b)(1), any person required to furnish the registration number who fails to do so is subject to a $100 penalty for each such failure. A $50 penalty is imposed under §6707(b)(2) on any person who fails to include the registration number on a return where the number is required. This latter penalty will not, however, by imposed if the failure is due to reasonable cause.

7. Effective Dates

New §§6711 and 6707 apply to any tax shelter, any interest in which is first sold to any investor after August 31, 1984.[62] Under a transitional rule,[63] in determining whether an investment is a tax shelter by reason of substantial investment test, only offers for sale after August 31, 1984, will be taken into account. Under the temporary regulations, an investment will be considered a substantial investment if there are expected to be five or more investors on or after September 1, 1984, and the aggregate amount for sale on or after that day is expected to exceed $250,000. Amounts received from sales before September 1, 1984 are not taken into account in computing the amount of the penalty for failure to register.[64]

Note: The temporary regulations, 306.6707-1T, Answer 5, excuse the penalty for failing to register a shelter when

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

required during September 1984 if the shelter is registered on or before September 30, 1984.

If a seller is required to furnish a registration number by December 31, 1984, to investors who bought interests in the shelter before September 1, 1984, the liability for the failure to furnish the registration number under §6707(b)(1) is deemed to arise on December 31, 1984.[65]

B. Maintenance of Investor Lists for Potentially Abusive Tax Shelters

1. Statutory Outline

Section 6112(a) requires any person who organizes any potentially abusive tax shelter or who sells any interest in such a shelter to maintain a list (i) identifying each person who is sold an interest in the shelter and (ii) containing such other information which may be required in regulations. Under §6112(b), a potentially abusive shelter is any shelter for which registration is required under §6111, or any entity, investment plan or arrangement, or other plan or arrangement of a type the Secretary determines by regulations as having a potential for tax avoidance or evasion.

Section 6112(c) requires any person obliged to maintain a list of investors to make that list available for inspection upon request. This list must be retained for seven years unless otherwise provided in regulations. If lists are required of two or more persons, only one person will be required to maintain the list under regulations to be prescribed.

Under §6708, a person who fails to maintain an investor list in accordance with §6112 is liable for a penalty of $50 for such failure, unless the failure is due to reasonable cause and not to willful neglect. The maximum penalty for any calendar year will not exceed $50,000.

2. Potentially Abusive Shelter — Definition

Perhaps in recognition of the expansive definition of registration-required tax shelters under §6111, as implemented by the §6111 temporary regulations, the Service in the temporary regulations under §6112 provides that the §6111 definition will be the only definition of potentially abusive tax shelter for the present.[66] In declining to exercise the authority to classify other arrangements as potentially abusive, the Service stated that the extent, if any, to which it would elaborate on the definition would be left for future regulations.[67]

3. Organizers and Sellers

a. Definitions

Under §6112, organizers of potentially abusive tax shelters and sellers of such shelters are required to maintain an investor list. The temporary regulations provide that the organizer, for this purpose, is the person who is a principal organizer of the tax shelter for purposes of §6111.[68] Sellers for purposes of the list requirement are as follows:

(1) any organizer, underwriter, broker, or dealer (or similar person who transfers any interest in the tax shelter);

(2) any agent who negotiates the transfer of any tax shelter interest for the tax shelter, any organizer, or any other person described in the preceding paragraph (1); and

(3) any investor who transfers any tax shelter interest.[69]

A tax shelter interest is defined as including the right to participate in a tax shelter by reason of (i) a partnership interest, a shareholder interest, or a beneficial interest in a trust, (ii) any interest in property (including a leasehold interest), or (iii) the entry into a leasing arrangement or a consulting, management, or other agreement for the performance of services.[70]

b. Organizer Lists

An organizer is required to list those persons who acquire interests in the tax shelter by reason of (i) a transfer of an interest made by the organizer or through an agent of the organizer, (ii) any transfer of an interest made by the tax shelter or through an agent of the shelter, (iii) any transfer of an interest made by or through a person related to the organizer or the tax shelter (within the meaning of §168(e)(4)), (iv) any transfer of an interest of which the organizer is informed, and (v) any other transfer of which the organizer knows or has reason to know.[71] Moreover, an organizer has a duty to make reasonable inquiry with respect to transfers of interests in the tax shelter made by a seller who acquired the interest from (1) the organizer (2) related persons, (3) the tax shelter or (4) a person related to the tax shelter. The organizer is liable for the breach of this duty which results in the omission of a name or names on the organizer's investor list.[72]

c. Seller Lists; Designation Agreements

A seller must list the identity of each person who acquired an interest in the tax shelter from the seller or, if the seller is an agent, each person who acquired an interest through the seller.[73] Organizers and sellers may, in a writing signed by all parties involved, designate one organizer to maintain the investor list required under §6112.[74] Sellers and organizers who are signatory to a designation agreement will not be subject to the §6708 penalty for failing to maintain an investor list, provided that the seller or organizer (i) submits to the designated person all of the information that the organizer or seller otherwise would be required to maintain on a list, and (ii) provides each investor with a notice setting forth the investor list requirements should the investor transfer his interest in the shelter subsequently.[75] If a designated person fails to maintain the list, the designated person is liable for the §6708 penalty.

The notice requirement to inform investors of their duty to maintain a list applies as well to sellers who do not sign designation agreements. The notice must advise that the list requirement can be satisfied by incorporating information respecting subsequent sales with the list maintained by the seller.[76]

4. List Format

An organizer or seller may maintain an investor list on paper, card file, magnetic media, or in any other form provided the method of maintaining the list enables the Service to determine without undue delay or difficulty the following information:

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(1) the name of the tax shelter and its registration number;

(2) the taxpayer identification number (TIN), if any, of the shelter,

(3) the name, address, and TIN of each person required to be included on the list;

(4) the number of units acquired by each person included on the list;

(5) the acquisition date of each interest;

(6) the name of the person from whom the interest was acquired, if the interest was not acquired from the person maintaining the list; and

(7) the name and address of each agent of the person maintaining the list.

If an investor maintains the list, only requirements (1), (3), and (5) must be included.[77]

5. Retention and Availability Requirements

The list must be retained for seven years following the date on which the last acquisition of an interest required to be included on the list is made; in certain instances the period may be longer.[78] If the organizer or seller is a corporation or partnership that is dissolved or liquidated before the end of the seven-year or longer period, the list must be retained by the person under state law responsible for winding up the affairs of the partnership or corporation. If state law does not specify any person, the directors of the corporation or general partners of the partnership shall be responsible.[79] The list must be made available upon request to the Service as soon as practicable but in no event later than 10 calendar days after request, which need not be in the form of an administrative summons.[80]

6. Penalties

Under §6708, any person who fails to observe the list requirements is subject to a $50 penalty for each failure unless the failure is due to reasonable cause and not willful neglect. Each omission of a person required to be identified on the list is treated as a separate failure, for example, if 100 persons are omitted, the person responsible for the list will be liable for a $5,000 penalty under Temp. Regs. 301.6708-1T, Answer 1. The penalty may also be imposed for failure to include all of the required information with respect to an investor includible on the list.[81] In addition, even if the list is properly maintained, the failure to supply the list to the Service within 10 days will give rise to the penalty. In this circumstance the penalty will equal $50 multiplied by all investors included on the list that was not furnished.[82] The maximum penalty for any calendar year is $50,000. Separate $50,000 limitations, however, exist with respect to each separate shelter for which the list must be maintained.[83]

7. Effective Date

Section 6112 and the related penalty under §6708 apply to any tax shelter interest which is first sold to any investor after August 31, 1984.[84] Accordingly, if interests in a tax shelter are sold both before and after August 31, 1984, the investor list need be maintained only with respect to interests sold by the organizer after August 31, 1984.[85]

C. New Return Requirements for Cash Receipts, Foreclosures and Abandonments, Partnership Exchanges, and Donated Property Dispositions

1. Statutory Outline

The Act adds §§6050H, 6050I, 6050K, 6050J, and 6050L to require the filing of information returns with respect to the following cases: (i) certain mortgage interest received in a trade or business, (ii) substantial cash receipts in a trade or business, (iii) certain foreclosures and abandonments of property securing indebtedness, (iv) exchanges of partnership interests with unrealized receivables, and (v) certain dispositions of donated property.

Under §6050H(a), any person engaged in a trade or business who, in the course of the trade or business, receives from any individual at least $600 of mortgage interest for any calendar year must file an information return. Section 6050H(b) sets forth the requirements for the contents of the return. Under §6050H(c), a governmental unit, and any agency and instrumentality thereof, is made subject to these return requirement rules. Section 6050H(d) requires that an information statement be sent to each individual reported on the return. Section §6050H(e), defines "mortgage" for purposes of §6050H. Section 6050H(f) provides that only the first person receiving interest that is reportable must file the information return.

Section 6050I(a) provides that any person engaged in a trade or business who in the course of that business receives more than $10,000 in cash in one transaction (or two or more related transactions) must file an information return meeting the requirements of §6050I(b). Section 6050I(c) sets forth the exceptions to the return requirement, the principal exception being for cash reportable under the Bank Secrecy Act. Under §6050I(d), foreign currency is treated as cash for purposes of §6050I. Section 6050I(e) requires the furnishing of an information statement to any person who will be included in the information return.

Section 6050J(a) requires the filing of an information return by any person who, in connection with a trade or business conducted by such person, lends money secured by property and who (i) in full or partial satisfaction of any indebtedness acquires an interest in such property or (ii) has reason to know that such property has been abandoned. Under §6050J(b), the return requirement does not apply to any loan to an individual secured by an interest in tangible personal property that is held for personal purposes. The information return must meet the requirements set out in §6050J(c). Section 6050J(d) extends the information return requirement to governmental units. Under §6050J(e), information statements must be furnished to those persons with respect to whom an information return is filed. Under §6050J(f), the Secretary is authorized to prescribe regulations extending the return requirement to other dispositions.

Section 6050K(a) requires a partnership to file an information return, except to the extent provided in regulations, if there is an exchange described in §751(a) of any interest in the partnership during any calendar year. Under §6050K(b), information statements must be furnished to the transferor and transferee in such an exchange. Under §6050K(c), the transferor in a §751(a) exchange is re-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

quired to notify the partnership of the exchange, and the partnership is not required to file an information return until such notification.

Under §6050L, if a donee of any charitable deduction property disposes of such property within two years after receipt, the donee must file an information return, and, under §6050L(c), an information return with respect to such a disposition must be furnished to the donor at such time and in such manner as prescribed in regulations. Section 6050L(b) defines "charitable deduction property" as any property (other than publicly traded securities) for which a charitable deduction was claimed under §170 if the claimed value of property (plus all similar items) exceeds $5,000.

Failure to satisfy the foregoing information return or information statement requirements may result in the imposition penalties under §6652, relating to information returns, or §6678, relating to information statements.

2. Mortgage Interest Reporting

a. General

A lender or other person who, in the course of a trade or business, receives at least $600 of mortgage interest from any individual for any calendar year is required to file an information return.[86] According to the Conference Report,[87] the $600 threshold for reporting will apply on an obligation by obligation basis; if interest is received on two different obligations secured by the same real property, it need not be aggregated into one report but may be reported separately. Thus, for example, if a lender holds first and second mortgages from the same individual secured by the same property and receives $1,000 of mortgage interest on the first mortgage and $550 on the second mortgage for a calendar year, mortgage interest reporting appears to be required only with respect to the first mortgage.

Reporting is required only with respect to mortgages on real property.[88] In addition, regulations may provide exceptions from this reporting requirement where such exceptions are consistent with effective reporting of mortgage interest and the matching of the reports with a specific line on the tax return.[89] For example, regulations may provide an exception from reporting interest paid on credit cards secured on real property if such interest is most likely to show on returns as interest on credit cards rather than home mortgage interest.[90] However, the regulations may not except any interest reporting on Schedule A as home mortgage interest.[91]

Under §6050H(f), if mortgage interest is received by one person on behalf of a second person, only the person first receiving the interest must make an information return, unless regulations provide otherwise.

The information return requirements apply to governmental units, such as housing agencies that provide mortgages with the proceeds of mortgage subsidy bonds, without regard to the trade or business requirement.[92]

In addition to the information return requirement, an information statement must be provided to each individual with respect to whom an information return must be filed.[93]

b. Form and Contents of Return

Under §6050H(b), the information return must be in the form prescribed by the Secretary and contain (i) the name and address of the individual from whom the mortgage interest is received, (ii) the amount of the interest received for the calendar year, and (iii) such other information as may be prescribed. Presumably, the Secretary will require the use of forms 1096 and 1099.[94] Providing a copy of Form 1099 to the mortgage interest payor will presumably satisfy the information statement requirement of §6050H(d).[95]

Although not specified in the statute, the payor's taxpayer identification number will likely be an additional item that must be furnished on the information returns and statements. The Conference Report [96] states the expectation that recipients of mortgage interest will require the payor to furnish his taxpayer identification number as part of the mortgage loan approval or closing process for mortgage loans entered into after 1984. The Report further states that, for mortgage loans in existence on December 31, 1984, it is anticipated that regulations will require mortgage interest recipients to request, at least once a year, the payor's taxpayer identification number unless the recipient already has that number in its accounting system. These requests for taxpayer identification numbers may be included in the recipient's regular mailings of either payment coupon booklets or annual statements to the payor, and separate mailings will not be required unless the recipient does not otherwise contact the payor at least once each year.

The Conference Report [97] additionally states that the first request for the taxpayer identification number must be made as soon as practicable and in no event later than the first mailing by the recipient to the payor in 1985. Recipients will be required to notify payors that the Service requires the payor to furnish its taxpayer identification number in order to verify the payor's mortgage interest deduction and that a $50 penalty may be imposed if the payor fails to furnish such number. Any payor who makes these annual requests for taxpayer identification number will not be subject to penalty for failure to include the number because of the payor's failure to supply the requested number.

Lastly, the Conference Report [98] states that it intends the Secretary to coordinate the information statement requirement with other requirements, such as those of Federal mortgage programs, that similar statements be furnished, so that duplicative reporting is minimized.

Note: In the effective date provisions,[99] relief from the imposition of any penalty under §6652 is granted for any failure to supply a taxpayer identification number with respect to amounts received before January 1, 1986, on any mortgage obligation in existence on December 31, 1984.

3. Reporting of Substantial Cash Transactions

a. General

Any person engaged in a trade or business who receives, in the course of the trade or business, more than $10,000 in cash or foreign currency in one or more related transactions must report it to the Service and provide the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

payor with a statement.[100] Reporting is required even if the receipt of the cash does not constitute income in the trade or business of the recipient and regardless of whether consideration is returned for the cash or whether cash is received for the recipient's account or the account of another.[101] For example, the receipt of cash in connection with the purchase of goods or services, the purchase or exchange of property, the opening of a deposit or credit account, the purchase of gambling chips, or any similar transaction will be subject to reporting.[102]

Reporting is required with respect to two or more related transactions if the total cash received for those transactions exceeds the $10,000 threshold. The Conference Report furnishes the following example of the related transaction rule.[103]

> *Example:* Assume that an individual purchases an $8,000 item and a $1,500 item at an auction. The auction house adds a 10 percent commission and 5 percent local sales tax. The individual pays the total $10,972.50 bill in cash. The auction house must report that transaction even if two separate bills of $9,240 and $1,732.50 are presented for each item.

b. Form and Contents of Returns and Statements

Under §6050I(b), the return must be in the form prescribed by the Secretary and must contain (i) the name, address, and taxpayer identification number of the person from whom the cash was received, (ii) the amount of cash received, (iii) the date and nature of the transaction, and (iv) such other information as may be required.

The information statement to be furnished to the payor must contain (i) the name and address of the person making the information return and (ii) the total cash received by the person making the information return.[104] The information statement must be provided to the payor on or before January 31 of the year following the calendar year for which the information return must be filed.[105]

c. Exceptions

Information returns are not required on cash payments that are received (i) in a transaction reported under the Bank Secrecy Act (31 U.S.C.), if the Secretary determines that the report under this provision would duplicate the Bank Secrecy report, or (ii) by certain specified financial institutions described in the Bank Secrecy Act (31 U.S.C. §5312(a)(2)(A), (B), (C), (D), (E), (F), (G), (J), (K), (R), and (S)). Those entities that had been exempted by the Treasury from Bank Secrecy reporting, such as certain dealers in precious metals, stones, or jewels, pawn brokers, loan or finance companies, insurance companies, and travel agencies, will be subject to the Act's return requirements.[106] If these exempted entities are subsequently required to report under the Bank Secrecy Act, the Secretary can provide that a duplicative return under §6050I need not be made.

The Conference Report [107] states that it understands the Treasury is considering extending certain Bank Secrecy Act reporting to casinos and other establishments. The Report provides that the Secretary can eliminate any duplicative reporting requirement under §6050I to take into account the extension of Bank Secrecy Act reporting requirements.

4. Foreclosures and Abandonments Security

a. General

Under §6050J(a), an information return must be made by any person who, in connection with a trade or business, lends money secured by property, and who later either acquires an interest in the property in full or partial satisfaction of the indebtedness or has reason to know the property has been abandoned. In addition, under §6050J(b), an information statement must be furnished to the borrower owning the property that was subject to the reporting requirement.

Under temporary regulations that have been issued implementing §6050J (Temp. Regs. §1.6050J-1T) a person need not be engaged in the trade or business of lending money in order to be subject to the reporting requirements of §6050J.[108] For example, if an automobile dealer lends money to a purchaser in order to purchase an automobile, and that auto is security for the loan, the dealer would be subject to the reporting requirement. Similarly, an oil promoter who lends money to an investor to enable the investor to invest in the oil well, which is security for the loan, would be subject to the reporting requirement. In the case of pools, fixed investment trusts, or similar arrangements by which undivided beneficial interests or participations in an indebtedness are offered, the trustee, record owner, or person acting in similar capacity is subject to the reporting requirements; the owners of such undivided beneficial interests or participations are not subject.[109] Similarly, in the case of corporate, tax-exempt, or other bond issues, the owners or holders of a bond issue are not required to report; the reporting obligation is placed on the trustee or person acting in similar capacity.[110]

Under §6050J(b), the return requirement does not apply to any loan (i) made to an individual and (ii) secured by an interest in tangible personal property that is neither held for investment nor used in a trade or business. However, the temporary regulations require reporting if such personal property is held for both personal use and business use.[111] Reporting is also required with respect to indebtedness secured by a personal residence since the residence is real property and not personal property.[112]

If a lender knows that property customarily held for personal purposes will be used for business or investment, the lender is subject to the reporting requirements.[113] A lender is considered to know such information if the information is included on the records of the lender or an agent pertaining to the loan, or is known to the lender or the agent's officers, partners, principals, or employees, but only if such information was acquired in the course of their ordinary business activities on behalf of the lender. For example, if the borrower notes on the loan agreement or disclosure statement an intention to use the property in his business, the lender is subject to the reporting requirement. Similarly, if the borrower notifies the lender of an intention to convert the property from personal to business use, the lender is subject to the reporting requirement.[114] For purposes of the reporting requirement, a lender may rely on a system established by the lender to classify loans according to the use of property securing the loan if the classification system is designed and maintained to ensure accuracy in identifying the use of the property.[115]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

A lender is considered to acquire an interest in property that is security for indebtedness on the earlier of the date title is transferred to the lender or the date possession and the burdens and benefits of ownership are transferred to the lender. If local law provides an objection period within which the borrower and other appropriate parties may object to the lender's proposal to retain the property in satisfaction of the indebtedness, the lender's interest is deemed to be acquired on the date the objection period expires. Similarly, if the lender purchases the property at a foreclosure or an execution sale, the lender is treated as acquiring an interest in the property on the later of the date of the sale or the date the borrower's right of redemption, if any, expires.[116]

The lender's taking possession of the property for limited purposes, such as completing construction, will not be treated as the acquiring of an interest in the property.[117] However, the acquisition of an interest in a partnership, trust, or other entity that holds assets securing the loan is treated as the acquisition of an interest in the underlying assets or property, and the reporting requirements apply to the acquisition of the interest in the partnership, trust, or other entity.[118]

If a third party purchases the property securing the loan at a foreclosure, execution, or similar sale, the lender is still required to report. If the proceeds of such sale are applied to satisy all or any portion of the lender's loan, or if the lender's security interest foreclosed upon is terminated, reduced, or otherwise impaired by reason of the sale, the lender will be treated as having reason to know that the property has been abandoned as of the date of the sale.[119]

For purposes of the reporting requirements, an abandonment is deemed to occur when "the objective facts and circumstances indicate that the borrower intended to and has permanently discarded the property from use." [120] Whether a lender has reason to know that property securing a loan has been abandoned will be determined under all the facts and circumstances concerning the property's status.[121] A lender becomes subject to the information return requirement as of the date the lender knows or has reason to know that the property has been abandoned.[122] However, if the lender reasonably expects to commence foreclosure, execution sale, or similar proceedings within three months of having reason to know that the property has been abandoned, the lender must report as of the date he acquires an interest in the property or the date a third party purchases at a foreclosure, execution, or similar sale.[123]

Example: On December 31, 1985, a lender learns that property securing its loan has been abandoned and reasonably expects to commence foreclosure proceedings within three months. If the lender does not in fact commence foreclosure proceedings by March 31, 1986, the lender's obligation to report arises on this day. Although the lender must provide information on the abandonment as of the date the lender first had reason to know of the abandonment (December 31, 1985), the information return with respect to the abandonment need not be filed with the Service before February 28, 1987, and a statement furnished to the borrower before January 31, 1987.[124]

Where the lender subsequently transfers his interest in the indebtedness to another person, such as to the Federal National Mortgage Association, only the subsequent holder is subject to the reporting requirement, in this case the Federal National Mortgage Association.[125] However, if multiple lenders have loaned money secured by the same property, all the lenders are subject to the reporting requirement if one lender forecloses upon the property and the other lenders know or have reason to know that a foreclosure has occured that terminates, reduces, or otherwise impairs their security interests in the property.[126]

b. Return Contents

The information return required by §6050J must be made on forms 1096 and 1099, except that the return preparer may use a form containing provisions substantially similar with those of forms 1096 and 1099 if the preparer complies with revenue procedures relating to substitute forms.[127] The return must contain the following information:

(i) the name and address of the borrower with respect to this secured indebtedness;

(ii) the borrower's taxpayer identification number;

(iii) a general description of the property;

(iv) whether the borrower is personally liable on the loan;

(v) the date on which the lender acquired an interest on the property or first knows, or has reason to know, that the property has been abandoned;

(vi) the amount of indebtedness outstanding at the time of acquisition or the time the lender knows or has reason to know that the property has been abandoned;

(vii) the amount of indebtedness satisfied by the acquisition, if an acquisition;

(viii) if the borrower is personally liable, the fair market value of the property at the time of acquisition or at the time of abandonment;

(ix) any other information as may be required by forms 1096 and 1099.[128]

If the borrower is a partnership, only the taxpayer identification number of the partnership must be reported.[129]

If there is more than one borrower on a single secured loan, a separate return must be made with respect to each borrower on that loan unless the lender knows that the borrowers hold the property as tenants by the entirety or as community property.[130]

The requirement that the return contain a general description of the property is satisfied by including information that sufficiently identifies the property. For real property, the property's address will suffice unless it is unavailable or would not sufficiently identify the property, in which case a legal description must be provided. For personal property the type, make, and model (where applicable) of the property should be provided. However, in the case of a single loan secured by several items of personal

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

property. a general description consists of the type and category of the pieces acquired or abandoned, such as office equipment where the loan is secured by desks and typewriters.

In general, each acquisition and abandonment required to be reported by a lender for a taxable year must be reported on a separate return. But if a single loan secures more than one piece of property, separate returns will not be required when a person acquires an interest in, or knows or has reason to know the abandonment of, more than one piece of property that is security for the single loan in a taxable year. Instead, one return must be made for all the acquisitions and one return for all the abandonments of the property that is a security for such a loan for the taxable year.[132]

c. Time for Filing Return

An information return with respect to an abandonment or foreclosure during the calendar year must be filed on or before the February 28 of the year following the calendar year in which the acquisition of an interest in the property occurs or in which the lender knows or has reason to know of the abandonment of the property.[133] The return must be filed with the appropriate Internal Revenue Service Center.[134] The information returns must be filed on magnetic media to the extent required by §6011(e).[135]

d. Information Statement

The borrower with respect to whom an information return is filed must be supplied an information statement, mailed to the borrower at the borrower's last known address, no later than the January 31 of the year following the calendar year in which the acquisition or abandonment of property occurs.[136] The information statement must include the name and address of the person required to make the information return or the name and address of the governmental unit or agency subject to the return requirement. In addition, the information provided on the information return must be included as well as a legend that such information is being reported to the Service.[137] The information statement requirement may be satisfied by furnishing the borrower a copy of the Form 1099 that is filed with the Service.[138] In the case of multiple borrowers, a separate information statement must be furnished to each borrower with respect to which a separate return is required under §6050J.[139]

A person required to file returns may request an extension of up to 30 days within which to furnish information statements to borrowers if good cause for the request can be shown.[140] The extension request must be in writing, addressed to the director of the Service Center where the information returns must be filed, must contain a concise statement of the reasons for requesting the extension, and should be filed not earlier than September 30 of the year in which the acquisition of an interest in the property occurs, or during which the lender knows or has reason to know of the abandonment of the property, and not later than the January 15 of the following year.[141]

e. Foreign Borrowers

The reporting requirements do not apply if the property securing the loan is located outside the U.S. and at any time before the lenders required to report, the borrower furnishes the lender with a statement, signed under penalty of perjury, that the borrower is an exempt foreign person. A borrower is an exempt foreign person if the borrower (i) is not a U.S. citizen or resident, or U.S. corporation or other U.S. entity, (ii) is not subject to the provisions of §877, and (iii) at the time the statement is furnished, is not, or reasonably expects not to be, engaged in a U.S. trade or business during the current year in connection with the loan or property securing the loan.[142] If the borrower ceases to be an exempt foreign person, the lender must be notified in writing within 30 days of this change in status and the exemption from the reporting requirement will no longer apply.[143]

5. Reporting of §751(a) Partnership Exchanges

Under §6050K, the transferor partner must promptly notify the partnership of the sale or exchange of a partnership interest involving unrealized receivables or substantially appreciated inventory. Upon notification, the partnership is required to file an information return stating the name and address of the transferee and transferor involved in such exchange and such other information as may be prescribed in regulations.[144] In addition, information statements must be supplied to the transferor and transferee partners in such an exchange showing the name and address of the partnership filing the information return and the information shown on the return with respect to the transferor and transferee.[145] The information statements must be supplied on or before the January 31 following the calendar year for which the information return is made.[146]

A partnership is not required to make an information return until notified of the exchange.[147]

6. Reporting of Dispositions of Charitable Deduction Property

If the charitable donee of any "charitable deduction property" sells, exchanges, or otherwises disposes of such property within two years of receipt, the donee must make a return showing the following information:

(i) the name, address, and taxpayer identification number of the donor;

(ii) a description of the property;

(iii) the date of the contribution;

(iv) the amount received on disposition; and

(v) the date of disposition.[148]

Section 6050L(b) defines "charitable deduction property" as any property (other than publicly traded securities) for which a charitable deduction under §170 was claimed if the claimed value of the property (plus the claimed value of all similar items of property donated by the donor to one or more charitable donees) exceeds $5,000. Under §6050L(d), publicly traded securities are defined as securities for which market quotations are readily available on an established securities market as of the date of the charitable contribution of the securities.

The charitable donee is required to furnish a copy of the return to the donor at the time and in the manner as may be prescribed in regulations.[149]

The Conference Report [150] states that regulations are to provide that the donor (as part of the donor appraisal

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

requirements for which regulations must be issued) must (i) submit the appraisal summary to the donee for the donee's acknowledgement signature, and (ii) inform the donee of any donation of similar items made during the same year. The donee's acknowledgement signature on the summary appraisal is not to be construed as indicating the donee's agreement with or acceptance of the amount claimed for the donated property on the appraisal summary.[151]

7. Penalties

The Act [152] amends the penalty provisions of §6652(a) and §6678(a) to apply those penalties for a failure to meet the information return requirements or information statement requirements of the foregoing new reporting provisions. The penalty under §6652(a) for the failure to file the appropriate return is equal to $50 per failure, subject to a maximum of $50,000 for any calendar year. The penalty will not be imposed if the failure is due to reasonable cause and not to willful neglect.

If there is intentional disregard of the information return requirements, the $50,000 limitation will not apply.[153] Moreover the penalty is raised to $100 with respect to each failure to satisfy the information return requirements relating to (i) mortgage interest under §6050H, (ii) cash receipts under §6050I, and (iii) foreclosures and abandonments under §6050J.[154] In the case of the intentional disregard of the return requirements respecting partnership exchanges under §6050K and dispositions of charitable deduction property under §6050L, the minimum penalty will be equal to 10 percent of the aggregate amount of the items required to be reported.[155]

The penalty for failing to furnish the information statements required of persons who must be reported on information returns is equal to $50 per failure, subject to a maximum of $50,000.[156] The penalty may be executed if the failure is due to reasonable cause not to willful neglect.[157]

A penalty may also be imposed under §6678(c),[158] on the transferor of a partnership interest who fails to notify the partnership of the §751(a) exchange, unless the failure is due to reasonable cause and not to willful neglect. The penalty is equal to $50 for each failure to give notice.

Observation: Section 6678(c) provides for the imposition of the penalty for failing to "furnish the notice required by §6050K(c)(1) on the date prescribed therefor." However, §6050K(c)(1) provides merely that the transferor of the partnership interest must "promptly notify" the partnership without specifying a precise date for notice. Presumably, regulations will prescribe a date beyond which notice to a partnership will not be deemed "prompt".

8. Effective Dates

The §6050H requirements for reporting mortgage interest generally apply to amounts received after December 31, 1984.[159] However, as previously mentioned, no penalty will be imposed under §6652 as to any obligation in existence on December 31, 1984, for any failure to supply a taxpayer identification number with respect to amounts received before January 1, 1986.[160]

The §6050I reporting requirement for substantial cash receipts applies to amounts received after December 31, 1984.[161]

The return requirements relating to foreclosures and abandonments of security under §6050J apply with respect to acquisitions of property and abandonments of property after December 31, 1984.[162]

The return requirements relating to §751 partnership exchanges under §6050K apply with respect to exchanges after December 31, 1984.[163]

Lastly, the reporting requirements of §6050L for dispositions of charitable deduction property apply to contributions of such property made after December 31, 1984, in taxable years ending after such date.[164]

D. Other New or Amended Reporting Provisions

1. Individual Retirement Accounts (IRAs)

The Act [165] amends §408(i), relating to the reports that must be filed by trustees and issuers of IRAs, to require that the report must identify the years to which the IRA contributions relate. The Conference Report states that the trustee may require that the owner of the IRA certify as to which year a contribution relates and that the trustee may rely on that certification except in unusual circumstances.[166]

The Conference Report [167] further provides that the date by which the trustee's report must be provided to the Service and the periods to which the report relates are to be specified in regulations. It is intended that generally trustees will be required to report only once a year on the aggregate total contributions relating to a particular taxable year, but regulations may provide for more frequent reporting if it is appropriate to do so. The date by which such reports must be provided to the Service is left to the regulations; the reports could be required by the end of May on all IRA contributions relating to the taxable year with respect to which the individual's tax return was due on the preceding April 15.

In addition to the foregoing revision of the IRA reporting requirement, the Act [168] increases the penalty in §6693(a) for failing to provide IRA reports from $10 to $50.

The Act amendments apply to IRA contributions made after December 31, 1984, except that the increase in the penalty applies to failures occurring after July 18, 1984.[169]

2. Information Statements With Respect to Short Sales

The Act [170] adds new §6045(d) to require a broker who (i) transfers securities to a customer for use in a short sale or similar transaction, and (ii) receives (on behalf of the customer) a payment in lieu of a dividend, tax-exempt interest, or such other items which may be prescribed in regulations, to furnish the customer with a written statement identifying the payment as being in lieu of the dividend, tax-exempt interest, or such other item as prescribed. The reason for this new information statement requirement is that neither the dividend exclusion of §116 for individuals nor the dividends-received deduction of §243 for corporations is available with respect to payments in lieu of dividends. Moreover, since payment in lieu of tax exempt interest is not interest, an exclusion under §103 is also not available. Because no reporting requirement existed under pre-TRA law, customers whose securities were borrowed by a broker to enable other customers to complete

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

short sales (generally securities held in margin accounts) were not informed of the borrowing and they continued to exclude or deduct the in lieu payments.

Observation: Since the 85-percent dividends-received deduction of §243 is a considerable tax benefit to corporations, it is quite likely that corporations will be reluctant to agree to the use of securities in the margin accounts to complete short sales in the future, unless they are in some way compensated for the tax benefit lost by the receipt of an in lieu of payment rather than the dividend itself. The $100 dividend exclusion of §116 is, obviously, a less substantial benefit and may not be of as great concern. However, even if it is assumed that brokers do not have a legal duty to apprise customers of the tax consequences of payments in lieu of dividends, it is probably advisable that brokers inform their customers of the consequences in order to promote good customer relationships.

In addition to the information statement requirement, the Secretary is authorized to prescribe regulations to require the broker to file an information return including the information contained in the information statement. The Conference Committee [171] states that it is expected the Secretary will exercise this authority for all types of payments for which information could be useful. The Committee further states that the Secretary should also provide that no return regarding dividend payments need be made if it unnecessarily duplicates any return required to be made under this new reporting rule.

The new information statement requirement applies to payments received after December 31, 1984.[172]

3. *State and Local Refunds*

Under §6050E, state and local governments are required to report to the Service all tax refunds greater than $10, and they must furnish an information statement reporting the amount of the refund to the taxpayer in the January of the year following the year of the refund. The Act [173] amends this provision to provide that an information statement will not be required if it is determined (in the manner provided by the regulations) that the recipient of the refund did not claim itemized deductions in a taxable year giving rise to a refund. The Conference Report [174] observes that all refunds, whether made to itemizers or non-itemizers, must continue to be reported to the Service. The Report further states that it anticipates that reporting to the Service will not be burdensome on states since most states have already entered into information exchange agreements that provide for the furnishing of this information to the Service. The Report urges the Secretary to consider terminating any information exchange agreement under §6103 with any state that does not report refunds to the taxpayer.

The relaxing of the information statement requirement applies to payments or refunds, and credits and offsets made, after December 31, 1982.[175] However, the Conference Report [176] states the expectation that no punitive action will be taken against any state or local government, or officer or employee thereof, who failed to provide to taxpayers the information statement required under §6050E before January 1, 1985.

4. *Return Information to Beneficiaries of Estates and Trusts and to Shareholders of S Corporations*

Section 6034A, added by the Act,[177] requires that the fiduciary of any estate or trust making the return for the estate or trust required under §6012(a) for any taxable year to furnish, on or before the date on which the return is filed, a statement containing the return information required by the Secretary to each beneficiary (i) who receives a distribution from the estate or trust with respect to the taxable year, or (ii) to whom any item with respect to such taxable year is allocated.

Moreover, the Act [178] adds §6037(b), relating to returns of Subchapter S corporations, to require Subchapter S corporations required to file a return for any taxable year to furnish a copy of such return information as may be required by regulations to each person who is or was a shareholder at any time during such taxable year.

Further, the Act [179] amends the §6678(a) penalty for failure to furnish information statements, extending that penalty to a failure to provide return information to beneficiaries or Subchapter S shareholders as required by §6034A or §6037(b), respectively. The §6678(a) penalty is $50 for each return information statement not furnished up to a maximum of $50,000.

These provisions are effective for taxable years beginning after December 31, 1984.[180]

5. *Amendments to the Tip Reporting Requirements*

Under §6053(c), as added by TEFRA,[181] a large food or beverage establishment must allocate to employees as tips the excess of 8 percent of gross receipts over tips reported by the employees to the employer. The Service can reduce the 8 percent figure to 5 percent where the Service determines that the percentage of gross receipts constituting tips is less than 8 percent. A large food or beverage establishment is one customarily employing more than 10 employees on a typical business day during the preceding calendar year.

The Act [182] makes several liberalizing changes in the tip reporting requirements. First, §6053(c)(3) is amended to provide that either the employer or a majority of the employees of the employer may petition the Service for a reduction in the percentage of gross receipts required to be allocated, and to provide that the minimum percentage required to be allocated is reduced from 5 to 2 percent. It should be noted, however, that the Conference Report states the expectation that an establishment would ordinarily not be able to prove entitlement to the 2-percent rate.[183]

Moreover, §6056(c)(4) is amended to provide that in testing for whether an establishment is subject to the tip reporting requirements, a person owning at least 50 percent of the value of the stock of the corporation operating the establishment shall not be treated as an employee.

The TRA also mandates that the Secretary prescribe regulations within one year of the date the TRA was enacted, July 18, 1984, describing the applicable record-keeping requirements for tipped employees.[184]

These TRA amendments apply to calendar years beginning after December 31, 1982.[185]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

6. Miscellaneous Reporting Amendments

The Act [186] amends §6042(b), relating to the exceptions from the dividend reporting requirements of §6042(a), to except from reporting distributions or payments to any person described in §6049(b)(4).

The Act [187] amends the broker return requirements of §6045(c) to provide that a broker can include any governmental unit and any agency or any instrumentality thereof. However, no penalty will be imposed with respect to any governmental unit required to file a return by reason of the foregoing amendment for any payment before January 1, 1985.

These two amendments are effective as if they had been included in the TEFRA provisions to which they relate.[188]

E. Modifications Affecting Penalties and Interest

1. Increase in Promoter Penalty

Under §6700(a), a promoter who, in connection with an organization or sale of a tax shelter, made false or fraudulent statements or gross valuation overstatements on a material matter was subject to a penalty equal to the greater of $1,000 or 10 percent of the gross income derived or to be derived by the promoter from the shelter. The Act [189] raises this penalty to the greater of 20 percent of the gross income derived or to be derived from the shelter or $1,000.

This amendment is effective on July 19, 1984.[190]

2. Injunction Against Aiding or Abetting Tax Liability Understatement

Under §7408(a), the Secretary may request that a civil action be brought to enjoin any person engaging in conduct subject to penalty under §6700, such as the promoter or seller of a tax shelter who makes false statements in connection with the shelter. The Act [191] amends §7408 to provide that injunctions may be sought against persons subject to penalty under §6701. Section 6701 subjects to penalty any person who (i) aids, procures, or advises with respect to the preparation or presentation of any portion of the return, affidivat, claim, or any other document in connection with any tax matter, (ii) knows that such portion will be used in connection with any material tax matter, and (iii) knows that such portion, if used, will result in an understatement of tax liability of another person.

The reason for expanding the scope of the §7408 injunction was a concern that §6700 may be read too narrowly to preclude application of §6700 after the shelter had been organized, thereby preventing injunctions for such activities as providing false partnership returns.[192] The inclusion of the reference to §6701 in §7408 eliminates this concern.

The Conference Report states that no inference should be drawn that the general injunctive power of the district courts under §7402(a) is in any way limited by the injunctive relief provided under §7408 or the relief provided under §7407 to enjoin income tax preparers. The Report expressed its approval of a case that reached this result, *U.S. v. Landesberger*, 692 F.2d 501 (8th Cir. 1982).[193]

The amendment to §7408 is effective on July 19, 1984.[194]

Note: Because the Claims Court does not have jurisdiction to issue injunctions under §7408, the Act [195] amended §7422 to provide that no action may be brought in the Claims Court for a refund or credit of the §§6700 and 6701 penalties.[196]

3. Revisions in the Valuation Penalty

a. Background

Section 6659 provides for a penalty on valuation overstatements by individuals, closely held corporations, and personal service corporations. The penalty is computed in the following manner. If the claimed valuation is 150 percent or more, but not more than 200 percent, of the correct value, the penalty is equal to 10 percent of the tax liability understatement attributable to the overvaluation. If the claimed valuation is 200 percent or more, but not more than 250 percent, of the correct value, the penalty is equal to 20 percent of tax liability understatement. If the claimed valuation exceeds 250 percent of correct value, the penalty is equal to 30 percent of the tax liability understatement.

This penalty may be imposed only if the tax liability underpayment attributable to the valuation overstatement is at least $1,000 and only if the property has been held for no more than for 5 years.[197] In addition, the Service may waive all or part of the penalty if the taxpayer can establish a reasonable basis for the valuation claimed on the return and that the claim was made in good faith.[198]

The penalty applies to overvaluations only; it does not apply to undervaluations made for estate or gift tax purposes.

b. Overvaluation Penalty Amendments

The Act makes three changes relating to valuation penalties. First, §6659(c) is amended [199] to eliminate the exception to the application of the penalty for property held for more than five years.

Second, §6659(f) [200] prescribes special rules for valuation overstatements on "charitable deduction property". Under §6659(f)(1), the penalty will equal 30 percent of the tax liability understatement attributable to the overvaluation where the claim valuation is 150 percent or more of the correct value. Further, §6659(f)(2) limits this Service's authority to waive the overvaluation penalty with respect to charitable deduction property unless it is determined that (i) the claimed value of the property was based on a qualified appraisal made by a qualified appraiser, and (ii) the taxpayer made a good faith investigation of the value of the contributed property, in addition to obtaining the appraisal.

For purposes of the foregoing special rules, "charitable deduction property" is defined as any property for which the taxpayer has claimed a charitable deduction under §170, other than securities for which market quotations were readily available on an established securities market as of the date of the contribution.[201] The terms "qualified appraiser" and "qualified appraisal" will be defined in regulations to be prescribed under §170(a)(1).[202]

c. Valuation Understatement Penalty

Finally, the Act [203] adds a new penalty for valuation understatements for purposes of estate or gift taxes. Section

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

6660 provides for an addition to tax in the case of an estate or gift tax underpayment attributable to a valuation understatement that is 66⅔ percent or less of the correct value. This penalty is computed as follows. If the claimed valuation is 50 percent or more but not more than 66⅔ percent of the correct value, the penalty is equal to 10 percent of the tax liability understatement attributable to the incorrect valuation. If the claimed valuation is 40 percent or more but less than 50 percent of the correct value, the penalty is equal to 20 percent of the tax liability understatement. If the claimed valuation is less than 40 percent of the correct value, the penalty is equal to 30 percent of the tax liability understatement.

The penalty will not be imposed if the underpayment is less than $1,000 for any taxable period (or, in the case of the estate tax, with respect to the estate of the decedent).[204] The Service may waive the penalty if the taxpayer establishes that there was a reasonable basis for the valuation claimed and that such claim was made in good faith.[205]

d. Effective Date

The foregoing new valuation provisions apply to returns filed after December 31, 1984.[206]

4. Penalty for Instituting Frivolous Tax Court Proceedings

Under §6673, as amended by TEFRA,[207] if a taxpayer institutes or maintains an action in the Tax Court primarily for delay or if the taxpayer's position in the Tax Court proceedings is frivolous or groundless, the Tax Court is empowered to award damages to the U.S. of up to $5,000. TEFRA raised the maximum damage award from $500 to $5,000. This increase applied with respect to any action or proceeding in the Tax Court commenced after December 31, 1982.[208]

The Act[209] amends the effective date provisions of TEFRA to provide that the $5,000 maximum can be awarded against taxpayers with proceedings in the Tax Court as of 120 days after the enactment date of the Act (September 15, 1984), even though the suit may have been commenced on or before December 31, 1982.

5. Criminal Penalty for Fraudulent Withholding Certificate or Failure to Supply Information

Section 7205(a) imposes a criminal penalty on any individual who willfully supplies false or fraudulent information, or who willfully fails to supply information, with respect to withholding exemption certificates. This criminal penalty is to be imposed in lieu of any other penalty, except the civil penalty provided by §6682. A similar criminal penalty is imposed on any individual who willfully makes a false certification in connection with backup withholding on interest and dividends.

The Act[210] amends §7205 to delete the language that this penalty is in lieu of any other penalty and to substitute that this penalty is in addition to any other penalty. Thus, for example, a criminal penalty for tax evasion under §7201 may be sought even though the §7205 penalty is also possible. The Conference Report[211] states that no inference should be drawn concerning the correct intepretation of pre-TRA law on this issue. The Report further states that to the extent that *U.S. v. Williams*, 644 F.2d 696 (8th Cir. 1981) might be considered contrary authority, the rationale of that decision no longer applies.

The foregoing amendment of §7205 is effective for actions and failures to act occurring after July 18, 1984.

6. Penalty for Failure to Supply TIN for Alimony Payments

Section 215(c), as amended by the Act,[212] provides that regulations may be prescribed under which any individual receiving alimony or separate maintenance payments must furnish the taxpayer identification number to the individual making such payments. Further, the individual making such payments may be required to include the tax identification number on the individual's return for the taxable year in which such payments are made. These reporting rules are designed to ensure that the payor's deduction for an alimony payment is matched by a corresponding inclusion in the recipient's income.

Under §6676(c) as added by the Act,[213] any individual who fails to comply with the regulations prescribed under §215 either to furnish the taxpayer identification number to another person or to include another person's taxpayer identification number on the individual's return at the prescribed time will be liable for a penalty of $50 for each such failure. This penalty may be excused if it is shown that such failure is due to reasonable cause and not to willful neglect.

The new reporting and penalty rules are generally effective with respect to divorce or separation instruments executed after December 31, 1984. It should be noted that the foregoing new provisions were enacted as part of divorce simplification section of the Act, which is fully analyzed in Chapter 13.

7. Penalty for Failure to Comply With OID Information Requirements

Under §1275(c)(1),[214] regulations may be prescribed requiring that any debt instrument with original issue discount (OID) show the amount of the OID and the issue date. Section 1275(c)(2) further provides that, in the case of any issue of publicly offered debt instruments having OID, the issuer must, under regulations to be prescribed, furnish the following information: the amount of the OID, the issue date, and such other information with respect to the issue as may be required in regulations.

Section 6706[215] imposes a penalty of $50 on the issuer for each instrument with respect to which there is a failure to show the information required to be set forth on the instrument under §1275(c)(1). Any issuer who fails to comply with the requirements of §1275(c)(2) by the prescribed date (determined with respect to any extension of time for filing) is liable for a penalty equal to 1 percent of the aggregate issue price of the issue (up to a maximum of $50,000), unless the failure is due to reasonable cause and not willful neglect.[216] The §6707 penalty is an assessable penalty not subject to deficiency procedures.[217]

The §6706 penalty is generally applicable to taxable years ending after July 18, 1984.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

8. Penalty for Failure to Notify Certain Pension Recipients

Under §3405, withholding is required on pensions, annuities, and nonperiodic distributions from employer deferred compensation plans, unless the recipient elects not to have withholding. Section 3405(d)(10)(B) requires the payor of a periodic payment or nonperiodic distribution to provide a recipient with notice of the election not to withhold.

Section 6652(i), added by the Act,[218] imposes a penalty on the payor for failure to furnish the notice required by §3405(d)(10)(D) at the prescribed time in an amount equal to $10 for each such failure. The total penalty that can be imposed on a payor for all such failures during any calendar year shall not, however, exceed $5,000. The failure may be excused if it is due to reasonable cause and not willful neglect. If a penalty is imposed under this section, it must be paid on notice and demand of the Secretary and in the same manner as tax.

Section 6652(i) is effective as if it had been included in the pension withholding provisions as enacted by TEFRA. The TEFRA withholding provisions were generally effective for payments made after December 31, 1982.[219]

9. Failure to Request Change in Accounting Method

Section 446(e) requires the taxpayer to obtain the consent of the Service before changing a method of accounting for tax purposes. According to the Senate Finance Committee Report,[220] some taxpayers using improper accounting methods have argued that no requirement exists that they request permission to change from the improper to a proper accounting method and, therefore, they assert the Service's failure to consent to an accounting method change as a defense to, for example, the negligence penalty.

To remedy this potential abuse, the Act [221] adds new §446(f) to provide that, if the taxpayer does not request the Service's consent to a change in accounting method, the absence of the Service's consent to a change in accounting method will not be taken into account (i) to prevent the imposition of any penalty or addition to tax or (ii) to diminish the amount of such penalty or addition to tax.

Comment: Under Regs. §1.481-1(a)(2), a taxpayer is not to take into account any §481 adjustment (an adjustment made to prevent double inclusions in income or double deductions stemming from an accounting method change) attributable to pre-1954 years. The rule of this regulation applies, however, only if the change in accounting method is not initiated by the taxpayer. Thus, for a Service-initiated change, a taxpayer may permanently exclude from income any positive §481 adjustment attributable to pre-1954 years. Section 461(f) will pose a dilemma to taxpayers who have used a method of accounting since before 1954 that is now determined to be improper. This new provision clearly requires taxpayers to initiate the change in order to prevent the imposition of penalties for use of the improper method. On the other hand, if the taxpayer initiates the change under this provision, the taxpayer will likely lose the benefit of the exclusion for any §481 positive adjustment attributable to pre-1954 years during which the improper method was employed.

The Conference Report [222] states an understanding that the Service's general practice is to permit a taxpayer who has not been notified of an audit and who wishes to change from an improper accounting method to a proper method for its taxable year that includes the date of enactment of §461(f) (July 18, 1984) but is precluded from doing so because the deadline for requesting a change for its current taxable year has passed, is generally not subject to a penalty arising from use of the improper method in the current taxable year. This is so, provided the taxpayer requests permission to change methods as soon as practicable, but in no event later than the due date (with extensions) of the taxpayer's return for its current taxable year.

Section 461(f) applies to taxable years beginning after July 18, 1984.[223]

10. New Interest Provisions

a. Increased Interest Rate for Tax-Motivated Transactions

Under §§6601 and 6621, a taxpayer must pay interest on underpayments of tax at a rate generally equal to the prime rate, compounded daily. Section 6621(d), added by the Act,[224] provides for an increased rate of interest, equal generally to 120 percent of the prime rate, on any substantial underpayment of tax attributable to "tax-motivated transactions". Under §6621(d)(2), an underpayment is substantial if the amount of underpayment for the year attributable to one or more tax-motivated transactions exceeds $1,000.

A tax-motivated transaction for purposes of §6621(d) is any one of the following:[225]

(i) Any valuation overstatement of 150 percent or more;

(ii) Any loss or any investment credit disallowed by reason of the at-risk rules;

(iii) Any straddle (as defined in §1092(c) without regard to §1092(d)(e)); and

(iv) Any use of an accounting method specified in regulations as possibly resulting in substantial distortions of income for any period.

Note: The Conference Committee [226] anticipates that regulations may consider the following deductions and other claimed tax benefits to arise from accounting methods that may result in a substantial distortion of income:

(i) Farm syndication deductions disallowed under §464;

(ii) Prepaid interest deductions disallowed to a cash method taxpayer under §461(g);

(iii) Interest deductions disallowed for exceeding the effective rate of interest, such as under the rule of 78s;

(iv) Improper deductions for syndication expenditures;

(v) Deductions disallowed under the related party rules of §267(a)(2) with respect to taxpayers' having different accounting methods;

(vi) Failure to treat deferred rental payments in accordance with new §467, as added by the Act; and

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(vii) Prepaid expense deductions of tax shelters disallowed under new §461(i), as added by the Act.

The foregoing transactions are not the only transactions that can be classified as tax motivated for purposes of §6621(d); regulations may be issued specifying other types of transactions that will be treated as tax motivated. These regulations must take into account the ratio of tax benefits, the cash invested, the methods of promoting the use of this type of transaction, and other relevant considerations.[227]

Any regulations prescribed with respect to accounting methods or other tax motivated transactions will apply only to interest occurring after a date specified in the regulations, which must be after the date on which such regulations are prescribed.[228]

Section 6621(d) provides that, in the case of any Tax Court proceeding for a redetermination of the deficiency, the Tax Court will also have jurisdiction to determine the portion (if any) of the deficiency that is a substantial underpayment attributable to tax motivated transactions.

Section 6621(d) applies with respect to interest accruing after December 31, 1984.[229]

Observation: After concluding its description of §6621(d), the Conference Committee[230] reviews various steps Congress has taken to assist the Tax Court in reducing its backlog of cases, such as the provisions for awarding damages in frivolous suits and the tax straddle rules. The Committee believes these provisions should suffice to enable the Tax Court to manage its docket. The Committee then goes on to state that the Service also has responsibility in reducing this backlog, observing that the Service's settlement policy should be fair and flexible, and that only appropriate cases should be litigated. Significantly, the Committee expresses its approval of the Service's recent change in policy of not routinely settling tax shelter cases by permitting taxpayers to deduct out of pocket expenses, calling this a "constructive change in policy". Of greater significance is the Committee's statement that the Service should impose, without hesitancy in appropriate circumstances, the available penalties. The Committee noted in particular that the negligence and fraud penalties are not currently being applied in a large number of cases where they would be appropriate. Given this statement, practitioners should not be surprised if the Service begins asserting the application of penalties more aggresively hereafter.

b. Interest on Certain Penalties

Section 6601(e) generally provides for interest on penalties and additions of tax only from the date of notice and demand to the date of payment. However, an interest element is added to the negligence and fraud penalties under §6653 taking into account the period from the last day prescribed by law for the payment of tax to the date of the assessment of the tax (or the date of payment of tax, if earlier).

The Act[231] revises §6601(e)(2) to provide for the imposition of interest on the amount of the following penalties, commencing with the due date of the return:

(i) The failure to file penalty of §6651(a)(1);

(ii) The gross valuation overstatement penalty of §6659;

(iii) The estate state and gift valuation understatement penalty of §6660; and

(iv) The substantial understatement penalty of §6661.

The foregoing revision of §6601(e)(2) applies to interest accruing after July 18, 1984, except with respect to additions to tax for which notice and demand is made before such date.[232]

F. Miscellaneous Compliance Amendments

1. Backup Withholding Amendments

The Act makes a number of amendments to the backup withholding rules §3406. First, the Act[233] amends §3406(e)(1) to provide that the Treasury may require a recipient of payments potentially subject to backup withholding to furnish the recipient's taxpayer identification number under penalties of perjury only with respect to dividends, interest, patronage dividends, and amounts subject to broker reporting. This amendment codifies the position taken in the temporary regulations implementing the backup withholding rules.[234] Certification under penalties of perjury may not be required for other reportable payments; however, the Treasury may require the certification of a taxpayer identification number despite this restriction after the Treasury notifies the payor that the taxpayer identification number furnished by the recipient is incorrect.[235]

Second, the Act[236] sets forth the circumstances under which a broker must notify a payor that a recipient, who has acquired a readily tradable instrument through the broker, is subject to backup withholding. Under §3406(d)(2), as amended by the Act, the broker must notify the payor if, (i) the payee fails to furnish his taxpayer identification number to the broker in the manner required under §3406(a)(1)(A), (ii) the Secretary notifies the broker before the acquisition that the taxpayer identification number furnished by the payee is incorrect, (iii) the Secretary notifies the broker before the acquisition that the payee is subject to backup withholding, or (iv) the payee does not provide certification under penalties of perjury to the broker.

Third, §3406(c) is amended by the Act[237] to allow the Service to inform a payor enough of the reasons why a recipient is being placed on backup withholding to enable the recipient and payor to know how withholding can be stopped. According to the Conference Report,[238] the Service will notify the payor at the time notice is sent that the payee is subject to backup withholding and that backup withholding is being imposed either because the taxpayer identification number furnished by the payee is incorrect or because of notified payee underreporting. The Service, however, cannot disclose the nature or the details of the payee's underreporting.

Fourth, the Act[239] provides rules for the treatment of estates and trusts under the backup withholding provisions. Section 643(d) provides that an estate or trust and its beneficiaries should allocate any credit for backup withholding based on the manner in which the entity and its beneficiaries take into account the payment with respect to which backup withholding has occurred. Any backup withholding credit allocated to a beneficiary must be included

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

in the beneficiary's income and the estate or trust is allowed a deduction in an amount equal to the credit allocated to the beneficiaries.

Finally, the Act [240] provides a separate set of backup withholding type rules for pension withholding. Section 3405(d)(12) provides that, if the recipient of a payment subject to pension withholding fails to furnish a taxpayer identification number to the payor in the manner required by the Secretary, or the Secretary notifies the payor before any payment or distribution that the taxpayer identification number furnished by the recipient is incorrect, any election out of pension withholding by the recipient will be disregarded. Moreover, the rule that a recipient is treated as a married individual claiming three exemptions for purposes of pension withholding will not be followed with the result that the recipient will be treated as a single individual claiming no exemption if no withholding exemption certification is in effect.[241] The Conference Committee states that it anticipates a recipient's Social Security number will be considered to have been properly furnished so long as, before January 1, 1985, the recipient provides the number in a manner acceptable to the payor.[242] If the recipient has previously furnished the number in response to a request relating to pension withholding or backup withholding, or if the payor has otherwise obtained the number, the number is considered to have been properly furnished. On or after January 1, 1985, the Social Security number must be furnished in the manner prescribed by the Secretary, for example, under penalties of perjury.

These amendments are generally effective as if they had been included in the Interest and Dividend Tax Compliance Act of 1983,[243] which was effective for payments made after December 31, 1983.[244] The Act amendment restricting certification to interest, dividends, patronage dividends, and amounts subject to broker reporting is effective July 18, 1984.[245] The new pension withholding provisions are effective for payments or distributions after December 31, 1984, unless the payor elects to have the amendment apply to payments or distributions before 1985.[246]

2. Limitations Period Extended for Contributions to Capital

Under §118(b), a regulated public utility is not required to include an amount that is a "contribution in aid of construction" in income if the contribution is not included in the utility's rate base for rate-making purposes and if it is expended before the end of the second taxable year following the year of receipt. If not so expended, it is includable in the utility's income for the year of receipt.

Section 118(c), added by the Act,[247] extends the statute of limitations for the year in which a payment described in §118(b) is received. Under §118(c)(1), the period for assessing any deficiency attributable to any part of such a contribution will not expire before the end of three years from the date the Service is notified by the utility (in the manner prescribed by the Service) that (i) the utility has expended the contribution, (ii) the utility does not intend to spend the contribution, or (iii) the utility has failed to spend the contribution within the required period. Under §118(d)(2), the deficiency may be assessed before the expiration of the 3-year period set forth in §118(c)(1), notwithstanding any other provision of the Code that would otherwise prevent assessment.

Section 118(c) is effective for expenditures with respect to which the second taxable year following the year of receipt ends after December 31, 1984.

3. New Substantiation Requirements

The Act provides new substantiation rules for charitable contributions of property. The Act also amends §274(d) to impose a stricter substantiation requirement with respect to such expenses as travel and entertainment expenses, automobiles, and other listed property.

III. Penalty for Underpayment of Estimated Tax by Individuals [Act §§411-414] — Code Section 6654 Revised

A. Introduction

1. Existing Section 6654

a. Background

Existing §6654 [248] imposes a penalty on individuals who do not pay their quarterly estimated income tax payments by the due dates. The penalty is basically a nondeductible interest charge based on the rate for underpayment of income tax in §6621 — currently 11 percent. It is calculated from a due date until (i) the payment is made, or (ii) until the original due date of the return (generally April 15 for calendar year individuals), if that is earlier. Quarterly installment payments for calendar year individuals are due on April 15, June 15, and September 15 of that year and January 15 of the following year. Income taxes withheld, whether on wages, pensions, annuities, interest or dividends, are deemed payments of estimated income tax.

No underpayment generally occurs if estimated income tax payments made by a due date equal 20 percent (16.67 percent for farmers and fishermen) of the income tax due in the current year times the number of quarterly payments required to be made by that due date. If the general rule indicates that an underpayment has occurred, there are four exceptions currently available so that an individual may avoid this penalty.

The most commonly used exception excuses the penalty if the estimated payments of an individual by the date of a required payment equal 25 percent of his income tax liability in the immediately preceding year (which must have included 12 months) times the number of required payments due at that time. There also is a small amount exception which waives the penalty if the taxpayer's current income tax liability less the income taxes withheld does not exceed $400 ($500 in 1985 and thereafter).

The penalty is waived if the estimated payments by a due date equal 20 percent (16.67 percent for farmers and fishermen) of the tax on actual annualized income earned in the months before the due date times the number of installments due. There is an exception for individuals who have made estimated payments which equal 90 percent of the income tax due on the income earned in the months prior to the due date of the installment. Finally, the penalty is excused if the estimated payments equal the taxpayer's income tax liability calculated using the facts and income from the preceding taxable year but using the rate and exemptions applicable to the current taxable year.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The Commissioner does not have the discretion to waive the penalty. There are no estimated tax payments required for the alternative minimum tax.[249]

b. Reasons for Change

The House Ways and Means Committee indicated that its objective in revising the estimated tax provisions was to equalize the treatment of taxpayers who had income tax withheld from their wages and those who made estimated income tax payments.[250] Thus the alternative minimum tax was added as a tax for which estimated payments must be made. The Congress intended to simplify the Internal Revenue Code so it consolidated all the provisions relating to estimated tax payments in one section and eliminated two of the more complex exceptions to the underpayment of estimated taxes.[251]

Congress appeared concerned that a penalty could be imposed where a delay in a required payment was caused by extreme hardship and wanted to give the Internal Revenue Service the discretion to waive the penalty. The Treasury Department indicated that any waiver provision should be strictly limited since the penalty represents merely an interest charge and without the penalty there will be no interest charged on the delayed amount.[252]

2. Revenue Ruling 83-111

Effective January 1, 1984, the Internal Revenue Service had proposed to change the crediting of income tax overpayments from a prior year to estimated tax payments in the current year.[253]

That change would prohibit individuals (or corporations) from applying overpayments shown on a tax return to any quarterly installment payments required prior to the time they filed an income tax return electing to apply the overpayment to such installment payments. Thus, an individual who qualified for an automatic four month extension for filing his income tax return and did not file that return until August 1 could not apply that overpayment shown on that return to the installment payments due April 15 or June 15.

Revenue Ruling 83-111 revoked Rev. Rul. 77-475,[254] which had held that an income tax overpayment could be applied to an installment due prior to the time a tax return was filed. However, the Second Circuit Court held in *Avon Products, Inc. v. U.S.*,[255] that if a corporation applies an overpayment of income tax to an estimated tax installment and the Internal Revenue Service later determines that the corporation did not have as large an overpayment as it originally claimed, interest on the underpayment runs from the date the corporation filed its return electing to apply the overpayment to estimated tax payments and not from the date on which the installment of estimated tax was due. The effect of this decision was to preclude the Internal Revenue Service from collecting any interest on an underpaid estimated tax installment from the date the installment was due until the date on which the tax return was filed. Accordingly, the Service revised its ruling position to prevent the Government from losing any interest on installment payments paid from income tax overpayments.

B. Overview

1. Summary of Revision

The revision of §6654 is intended to simplify the structure of the estimated income tax requirements. It basically consolidates a number of existing statutory provisions while making the following basic changes. The final two penalty exceptions noted above, those which considered 90 percent of the actual tax due by the date of the installment and the tax based on the prior year's income using current years rates and exemptions, have been repealed. Estimated payments will now be required for the alternative minimum tax.

The Internal Revenue Service will have the discretion to waive this penalty in certain cases which involve extraordinary circumstances, such as the destruction of books and records, and the taxpayer's death, serious illness, disability or retirement. The Act includes a provision which overrules Rev. Rul. 83-111 and allows an individual who has automatically extended the due date for filing his return to apply any overpayment on his return to estimated payments due before the return is filed. Various provisions relating to estimated taxes of individuals contained in §§6015, 6073 and 6153 are repealed because they have been incorporated in §6654.

A proposal contained in an early tax simplification bill to delay the payment of the June 15 required installment until July 15 was opposed by the Treasury Department and was not enacted.[256]

2. Effective Date

The new provisions are generally effective for taxable years beginning after December 31, 1984. However, the waiver provision becomes effective for taxable years beginning in 1984 and the overruling of Rev. Rul. 83-111 is effective as of January 1, 1984.

C. Detailed Analysis

1. Individuals Covered

Individuals who have income which is not subject to income tax withholding or those whose withholding does not substantially cover their income tax liability are required to make four quarterly payments to cover their current year income tax liability. In determining the amount of installment estimated payments required, the amount of taxes withheld on wages, pensions, annuities, dividends, and interest are deemed payments of estimated taxes.[257] Accordingly, taxpayers whose sole source of income is from wages and other payments which are subject to withholding are subject to this penalty only if they are significantly underwithheld.[258] In addition, if the difference between the tax shown on an individual's return and the amount of his withholding is less than $500 ($400, for taxable years beginning after December 31, 1983 and before January 1, 1985), no penalty will be imposed.[259]

Observation: Persons whose withholding covers their income tax liability with respect to items on which income tax is withheld generally will not be subject to estimated income tax payments if income upon which there is no withholding does not exceed $1,000.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

2. Due Dates for Required Quarterly Installments

Individual taxpayers are required to make four payments of estimated tax in each taxable year. If an individual's tax year ends on December 31, his payments are due April 15, June 15 and September 15 of the current taxable year and January 15 of the following taxable year.[260] An individual who files his income tax return and pays the full amount of tax due by January 31 of the following taxable year is excused from making the fourth (but not any prior) quarterly payment.[261] If an individual has a fiscal taxable year, the payments are due on the 15th day of the fourth, sixth, ninth and thirteenth months following the beginning of the taxable year.[262] Like a calendar year taxpayer, a fiscal year taxpayer who files his income tax return and pays the tax due by the last day of the first month in the following taxable year will be excused from making the fourth quarterly estimated payment.[263]

3. Amount of Required Quarterly Installments

In the revision of §6654, there are three alternatives available to an individual in determining the amount of each required quarterly installment. An individual may use one exception for one installment and a different one for another installment. Each of these alternatives depends on a determination of tax. For purposes of §6654, taxes include the income tax imposed by Chapter 1 of the Code including all credits against the income tax other than the credit for income taxes withheld in §31.[264] Taxes also include the self-employment tax imposed on the individual and the alternative minimum tax.[265]

The required estimated payment of an individual will be the lesser of Alternatives 1 or 2 below unless the individual can establish that the installment required by Alternative 3 is smaller.[266]

a. Alternative 1 — 80 percent of Current Income Tax

The first alternative requires four equal quarterly installments of 20 percent of the tax shown on the individual's current income tax return, or if no tax return is filed, then 20 percent of the actual tax due for such year.

Note: If the individual selects this alternative, he will owe the remaining 20 percent of the income tax on the original due date for his income tax return.

b. Alternative 2 — 100 percent of Prior Year Income Tax

The first alternative may be of little use to many individuals in planning the amount of their estimated payments because they may not be able to accurately project their income tax for the current year many months prior to its end. Accordingly, many individuals will rely on paying 25 percent of the amount shown on their prior year income tax return.[267] To qualify for this alternative, an individual must have filed an income tax return for the prior year and that taxable year must have consisted of 12 months.[268]

c. Alternative 3 — Annualization of Current Income Tax

The final alternative involves a very complex determination of the taxable income, alternative minimum taxable income and adjusted self-employment income of an individual during the months prior to the due date of an installment.[269] Generally, the individual must determine the amount of income he would earn in a complete year if his earnings were identical to the incomes he earned in the months before the required payment is due. Since the Ways and Means Committee Report indicates that there is no change intended in the annualization of taxable income and adjusted self-employment income, the existing regulations under §6654 will probably control that calculation.[270]

Comment: There is no guidance as to a method of annualizing alternative minimum taxable income. It would be consistent with the rules for annualizing taxable income that an individual must annualize the components of alternative minimum taxable income (*i.e.*, adjusted gross income, items of tax preference, net operating losses, itemized deductions and trust throw-back distributions) based on all transactions occurring in the months prior to the due date of an installment.

The individual then computes the three taxes on the projected annual income. The required installment for the period is determined by (i) multiplying 20 percent times the annualized amount of the taxes; (ii) multiplying that product by the number of the installment (*i.e.*, 1st, 2nd, 3rd or 4th); and (iii) subtracting the amount of all previous required installments from that product.

The Act includes a provision which "recaptures" the benefit of annualization in any subsequent required payment. When individuals use the annualization alternative, they also must calculate the reduction in payment from using this alternative (*i.e.*, the difference between the required payment determined by annualizing income and the lesser of the first two alternatives). The next required payment which is not determined by annualization will be increased by the reduction from prior periods when the individual used annualization.[271]

Note: This requirement will insure that individuals with cyclical income do not pay less than 80 percent of current year income taxes or 100 percent of the preceding year income taxes. For example, an individual with no income in the first three months of the taxable year will not make a first quarterly estimated payment. If he or she does not use the annualization method in any subsequent quarter, that individual would have only paid 60 percent of his current income tax liability or 75 percent of his prior year liability if there was no recapture provision. This type of avoidance was not allowed under §6654 before this revision and could have allowed individuals in these exceptional cases, to substantially defer payment of income taxes.

Comment: The extreme complexity of these calculations, especially when the alternative minimum tax is applicable, may discourage use of this alternative.

4. Period of Underpayment

The period of an underpayment begins on the last due date for an installment and continues until the installment is paid or until the original due date of the return, whichever is earlier.[272]

5. Amount of Underpayment

An underpayment occurs when the amount of the installment paid on or before a due date is less than the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

required quarterly payment.[273] As in prior law, the amount of income tax withheld on wages, pensions, annuities, interest and dividends will also be counted as estimated income tax payments for purposes of determining if the penalty is due. In addition, the Internal Revenue Service can promulgate regulations under which excess windfall profits taxes may be used as estimated tax payments. Unless the taxpayer proves otherwise, one-fourth of the withholding will be deemed paid on the required date for each installment.[274]

If a taxpayer so desires, he can prove the date and amount of each withheld amount and have those amounts credited against his estimated tax liability on the actual date on which the amounts were withheld. The individual may elect to determine the actual date of withholding for estimated payment purposes for wages and not elect to make that determination for withholding on other income (*i.e.*, backup withholding on interest and dividends and withholding on pension and annuity payments) and vis versa.[275]

Comment: It appears that an individual may generally wish to exercise this option. Now that the ordering of payments is first credited to the oldest obligation, an individual can reduce the underpayment more quickly by making this election. For example, if an individual underpaid his installment due April 15 by $600 and has $200 of taxes withheld on the first day of each month, his underpayment will be reduced to $400 on May 1 and $200 on June 1. Under prior law, the $600 of income taxes would first be credited to the liability on June 15 and then any excess would be applied to the outstanding underpayment.

If there is an underpayment of tax in a prior installment, the payment in the current quarter is first applied to the oldest unpaid obligation and then to the more recent underpayments.[276] This is a change from prior law where payment of an installment on a due date was first applied to the current installment and then to deficiencies in prior installments.

Comment: As noted in the immediately preceding comment, this change can help reduce an individual's underpayment more quickly.

6. Calculation of Penalty

The penalty equals the §6621 rate for the period of the underpayment (11 percent per annum until January 1, 1985) multiplied by the amount of the underpayment.[277]

Example: If an individual omits his fourth installment payment due on January 15, 1984, in the amount of $2,000, the penalty is calculated as follows:

$1/15/84 - 4/15/84 = 90$ days

Interest Rate = 11 percent [278]

$\$2000 \times .11 \times 90/365 = \$54.25$

7. Waivers of Penalty

The statute defines several situations which the Congress considers to involve extreme hardship and, accordingly, an inappropriate time to impose the penalty. If there is a casualty, disaster or other unusual circumstance where the imposition of the penalty would "be against equity and good conscience," the Internal Revenue Service will have the discretion to waive the penalty. Such a waiver should be available if an individual's books and records are destroyed by fire or other casualty. The death or serious illness of the taxpayer should satisfy the standard for waiving the penalty. An individual who substantially overstates his income tax liability on his current year return should not be subject to the penalty.[279]

Those persons who are newly retired or disabled may be excused from the estimated tax underpayment penalty if the Internal Revenue Service determines that the individual had a reasonable cause and did not willfully neglect the payment. There is no real guidance from the Congress as to how it intends this waiver provision to operate. Typically, the year in which an individual retires, either because of age or disability, is a year in which his tax liability fluctuates greatly. This fluctuation may arise from lump sum termination benefits and may be the first time the individual is subject to estimated tax requirements. The Internal Revenue Service will have the discretion to determine if the individual willfully neglected the installment payment obligation and it may apply this section in a narrow or a broad fashion. Because of this discretion, a taxpayer will not want to use this exception in planning his estimated tax payments.

The conferees also indicated that an individual who applies an overpayment on his return to his estimated tax payments and whose overpayment is applied against a nontax liability should have the penalty waived if he did not receive notice of the offset prior to the due date for the estimated payment.[280]

8. Special Rules for Farmers and Fishermen

Farmers and fishermen are subject to less stringent standards for making estimated payments than other individual taxpayers. A person is considered a farmer or fisherman in a taxable year if his gross income from farming or fishing (including oyster farming) in that taxable year, or as shown by his tax return in the preceding taxable year, is at least two-thirds of his gross income from all sources.[281]

These individuals are only required to make a single estimated payment on January 15 of the following taxable year (or the 15th day of the first month after the end of a fiscal taxable year).[282] The amount of the required installment must equal at least two-thirds (instead of 80 percent) of the current year income tax due. Alternatively, a farmer or fisherman may make a single estimated payment equal to his prior year income tax liability. The annualization alternative available to other taxpayers is not of any benefit to farmers or fishermen since they are only required to make a single payment.

Calendar year farmers and fishermen are exempt from the estimated tax payment requirements if they file their income tax returns and pay their entire tax liabilities by March 1 of the year in which their returns are due.[283]

9. Short Taxable Years

The Commissioner has the discretion to prescribe regulations for determining the estimated payments due in short taxable years.

Comment: The existing regulations under §§1.6654-3, 1.6153-3, and 1.6015(g)-1 will likely be used to determine the estimated tax payments due during a taxpayer's short

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

taxable year. If the existing format is used, the payments would be made as follows:

Months In Short Period				
At Least		But Less Than	Number of Payments	Dates of Payments - Generally
0	-	4	0	
4	-	6	2	15th day of 4th month and of 1st month of succeeding year
6	-	9	3	15th day of 4th and 6th months and of 1st month of succeeding year
9	-	12	4	15th day of 4th, 6th and 9th months and of 1st month of succeeding year

10. Credit of Tax Overpayments as Estimated Tax Payments

The Act overrules Rev. Rul. 83-111, which the Internal Revenue Service released in the mid-1983.[284] Thus, an individual may still apply an overpayment of income tax to a quarterly required payment due prior to the time the individual's return is filed.

Example: A calendar year taxpayer may request an automatic extension to file his individual income tax return for four months after the due date (August 15) if he pays an estimate of the full amount of tax due on April 15. If the taxpayer does not file his income tax return until August 15, he can still apply the overpayment to the estimated tax payments on April 15 or on June 15 even though he will not make the election to do so until the return is filed on August 15.

The Internal Revenue Service had intended to apply Rev. Rul. 83-111 to estimated payments made after December 31, 1983. The effective date of this provision (taxable years beginning in 1984) will mean that Rev. Rul. 83-111 will not apply to any individual.

11. Miscellaneous Amendments

This section also repeals the requirement contained in §§6015, 6073, and 6153 that individuals must file declarations of estimated taxes with the Internal Revenue Service.[285]

IV. Restrictions on Church Tax Inquiries and Examinations

A. Background

For historical and Constitutional reasons, organizations claiming to be "churches" occupy a privileged status under the internal revenue laws. Organizations organized and operated exclusively for religious purposes are exempt from tax under §501(a) [286] and contributions made to a church or a convention or association of churches are deductible under §170(a) and §170(c).[287] Organizations claiming church status enjoy considerable latitude in the granting of tax exempt status. "Religious activities" assume a wide variety of forms. Most churches regard their financial records and membership lists as highly confidential. They are not required to furnish, to the IRS periodic statement of income and expenses as are most other persons, including many classes of charitable organizations.[288] As a result, once an organization has acquired tax exempt status as a church, its operations are shielded from IRS scrutiny unless and until the IRS makes a demand on the church for the production of its books and records. Such a demand may be made under the sweeping powers accorded the IRS under §7602 (authorizing the use of administrative summonses) of any person for the purpose of investigating the tax liability of any person. This power has very few restrictions, and is liberally interpreted by the courts.[289] Such power may be used by the IRS virtually at its whim so long as it is in pursuance of the investigation of civil tax liability of any person (including tax exempt organizations). In the case of churches, however, Congress felt that some restrictions should be placed on this authority, since unbridled IRS access to church books and records and other confidential or sensitive data might be viewed as coming uncomfortably close to governmental interference with the free expression of religious beliefs.

The 1969 Tax Reform Act (P.L. 91-172) extended to churches a tax on unrelated business income and imposed annual reporting requirements on most other tax exempt organizations. Section 121(f) of the 1969 Act [290] added to §7605(c) by restricting the examination of churches. The subsection provided that no examination of books of account of a church (or convention or association of churches which were also exempted from annual reporting) was to be made to determine whether it may be engaged in carrying on an unrelated business or may be subject to the tax imposed by §511 unless a high ranking IRS officer (no lower than a regional commissioner) "believes that such organization may be so engaged and so notifies the organization in advance of the examination." It was further provided that no examination of the religious activities of such an organization was to be made "except to the extent necessary to determine whether such organization is a church . . . and no examination of the books of account of such an organization shall be made other than to the extent necessary to determine the amount of tax imposed by this title." This language was interpreted by the IRS in Regs. §301.7605-1(c)(2). Under them, a church's books could be examined (after notice) to the extent necessary to determine its qualification under §501(c)(3) as organized and operated exclusively for religious purposes, or as an organization contributions to which are deductible under §§170, 545, 556, 642, 2055, 2106 and 2522. Such examination was also authorized to obtain information concerning payments to other persons who are taxable and to determine the amount of tax, if any, imposed by the Code on such organization. These regulations also provided that no examination was to be made unless believed necessary by a regional commissioner.

The administration of these statutory and regulatory provisions and their interpretation by the courts gave rise to numerous problems. The form and contents of the notice required was unclear, as was the time as of which it was required. Summonses were almost routinely issued to investigate initial or continuing qualification of organizations claiming church status for tax exemption and exemption

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

from reporting requirements. Contentions were made by churches that their books of account could not be examined for this purpose under the statute (whose wording was far from a model of clarity on this point). It was unclear, also, whether §7605(c) placed any restrictions on church examinations where the IRS was investigating an individual taxpayer claiming deductions for contributions to a church or, as became a widespread tax evasion device, that he had no taxable income since he has assigned all of his earnings to the church under a "vow of poverty." Mail order ministries and related schemes by persons so "ordained" involving the conveyance of their homes and cars to their wholly controlled "churches" while continuing to reside in the homes as "parsonages" using purported salaries as ministers for living expenses, became a serious compliance problem. Aside from the belief and notice by regional commissioner requirement (which, as pressure to deal with noncompliance grew, became a mere formality) one question posed was what was meant by the phrase "to the extent necessary?" Did this in any way restrict the scope of a summons issued in the investigation of a church's qualification for exempt status? It was argued by some that §7605(c) was not a restriction of but an addition to the IRS's investigatory powers since it specifically authorized investigation into a purported church's religious activities.

In one leading case involving the investigation of a "family church" scheme, summonses were issued to both the "pastor" of the church and to the church in investigating (1) whether the church qualified as an exempt organization, (2) whether contributions to it were deductible under §170(c)(2) (defining charitable contribution in terms of the characteristics of the recipient), (3) whether the church was taxable under §§511-514 (tax on unrelated business income), and (4) whether the pastor was individually liable for any tax on payments and other benefits received from the church.[291] The lower court held that no restrictions applied under §7605(c) to the summons issued to the pastor individually, even though the information sought would reveal how much of the church's income inured to his benefit and would thus have a bearing on its exempt status. It did, however, limit the scope of the summons issued to the church to a stricter "need to know" standard. The court of appeals held that the §7605(c) limitations apply only to the investigation of unrelated business activity and income as distinguished from qualification for exempt status under §501(c)(3). It rejected the argument that the investigation of the church's religious activities constituted the establishment of religion prohibited by the Constitution. While affirming the restrictions of §7605(c) on the scope of examination of unrelated business activity, the court upheld the summons insofar as it required the production of all the church's books and records, correspondence files, lists of officers, directors, trustees, or ministers, specimens of publications, names of other persons ordained, evidence of sacerdotal functions, documents reflecting the "creeds, precepts, doctrines, practices and disciplines" espoused, and information relating to "vows of poverty." This decision is typical and most other circuit courts of appeal appear to hold similar views.[292]

Congress decided that the purposes and intent of §7605(c) were unclear, as evidenced by the regulations cited above and the numerous court decisions, conflicting on some points, interpreting the statute. Act §1033(a) effectively repeals §7605(c), replacing it by a cross reference to §7611 (enacted by Act §1033(b)) defining the restrictions applicable to the examination of churches. The vastly expanded and quite elaborate rules set forth in §7611 represent an effort to deal with the often delicate Constitutional issues involved in this area while allowing the IRS ample authority to compel the production of documents where necessary to enforce compliance in an area which has become notorious for providing havens for tax evasion and avoidance.

B. Overview

Act §1033(a) adds to subchapter A of chapter 78 (relating to discovery of liability and enforcement of title) §7611 (after redesignating §7611 as §7612). Act §1033(c) strikes out all of §7605(c), replacing it by a cross reference to §7611. Under §7611, the Commissioner is prohibited from beginning a "church tax inquiry" before fulfilling two sets of requirements referred to as the "reasonable belief requirements" and the "notice requirements." [293]

1. The "Belief" and "Notice" Requirements

The "reasonable belief" requirements are met if an "appropriate high level Treasury official" reasonably believes that the church:

> (a) May not be exempt, by reason of its status as a church, from tax under §501(a), or
>
> (b) May be carrying on an unrelated trade or business (within the meaning of §513), or otherwise engaged in taxable activities.[294]

The "inquiry notice requirements" [295] are met if before the beginning the inquiry, the Secretary provides written notice to the church of the inquiry. The contents of the notice are set forth in §7611(a)(3)(B). It must include:

> (i) An explanation of why the inquiry is being made and its general subject matter; and
>
> (ii) A general explanation of relevant administrative and Constitutional provisions, the right to a conference before any examination of records, and the Code provisions relating to the inquiry.

2. The "Church Tax Examination:" Notice Requirement and Scope

Only when the above requirements have been satisfied, may an examination be made, but such examination may be made only:

> (a) In the case of church records, to the extent necessary to determine the liability for and the amount of any tax imposed by the Code; and
>
> (b) In the case of religious activities, to the extent necessary to whether an organization claiming to be a church is a church for any period.[296]

Any "examination notice" must be provided to the church and to an appropriate IRS regional counsel 15 days before the beginning of the examination. Also, the church must be given reasonable time to participate in a conference (to be described in §7611(b)(3)), but only if the church requests such conference before the examination

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

begins. This examination notice must be provided to the church no earlier than the 15th day after the date on which the church was provided the inquiry notice. The examination notice must contain a copy of the inquiry notice, a description of the records and activities to be examined, an offer to have a conference between the church and the IRS in which it will be attempted to resolve any IRS concerns relating to the examination, and copies of all documents collected or prepared by the IRS for use during the examination (but only those whose disclosure is required by the Freedom of Information Act.) [297]

The regional counsel receiving a copy of the examination notice may, if he chooses, submit to the regional commissioner an advisory objection to the examination.

Once an examination has begun, after compliance with the above described formalities, the examining agent may proceed to examine all books and records relevant to the inquiry so long as the restrictions of §7611(b)(1) are observed; he is not limited to the documents described in the examination notice.[298]

3. Periods Within Which IRS Must Take Action

A church examination must be completed and a final determination made with respect to the matters examined within two years from the examination notice date.[299] Where a notice of inquiry is not followed by an examination notice, the inquiry must be completed and a final determination made within 90 days from the notice date.[300]

These periods are suspended for any period during which: (1) judicial proceedings brought by the church relating to the examination are pending or on appeal, (2) such a proceeding brought by the Secretary to compel compliance by the church with reasonable requests made in the course of church examination are pending or on appeal, (3) the IRS is prevented from taking any action in the examination by reason of a judicial order issued under §7609 (referring to an action brought under the third-party recordkeeper provisions by the taxpayer under investigation to quash a summons). The periods are also suspended for any period in excess of 20 days (but not exceeding six months) in which the church fails to comply with reasonable demands for the production of records or other information. The church and the IRS may agree upon a suspension.[301]

4. Approval by Regional Counsel Needed to Revoke Exempt Status or Determine Deficiency

In addition to these restrictions on examination, the statute also provides that the IRS may determine that a church is not exempt under §501(a) as described in §170(c), or determine a deficiency against the church. Additionally, the IRS may assess any assessable penalty against the church only if the appropriate regional counsel determines in writing that the above described formalities have been complied with by the IRS and also approves, in writing, of the proposed action.[302]

5. Limitations Periods

Section 7611(d)(2) contains special rules relating to the limitations periods. Where the IRS revokes the church's exempt status under §501(a), any deficiency (other than a deficiency based on §511) may be assessed only for the three most recent taxable years ending before the examination notice date. If a church is not exempt under §501(a) for any of these three years, the deficiency may be determined for the six most recent years.

Where the audit results in the determination that there is a deficiency in respect to the unrelated business tax imposed by §511, an assessment may be made with respect to the six most recent years ending before the examination date.

These limitations periods are not to be construed as extending any limitations period otherwise applicable.[303]

6. Stay of Enforcement Proceedings

In the event of an action brought by the U.S. to enforce a summons issued to a church, the enforcement proceedings are to be stayed if there has not been substantial compliance with the notice, conference, and approval requirements set forth above until the court finds that all practicable steps have been taken to correct such noncompliance.[304] The periods for completion of the inquiry or examination and the making of final determinations under subsection (c)(1) (*i.e.*, the 90 day and 2 year periods) are not suspended during the period for such stay.

7. Limitation of Grounds for Resisting a Summons

No suit is to be maintained and no defense may be raised in any proceeding (other than the assertion of noncompliance with the notice, conference, and approval requirements) by reason of noncompliance by the Secretary with the provisions of §7611.

8. Five Year Rule

Where a church examination or inquiry by the IRS is completed and does not result in a revocation, notice of deficiency, or assessment of a penalty, or in a request by the IRS for a significant change in operational practices of the church (including the adequacy of accounting practices), then no other inquiry or examination may begin within five years from the date of the notice of examination or notice of inquiry (whichever is appropriate) unless approved by the Assistant Commissioner for Employee Plans and Exempt Organizations or such inquiry or examination does not involve the same or similar issues involved in the preceding inquiry or examination. For purposes of the preceding sentence, an inquiry or examination is to be treated as completed no later than the expiration of the time limits set forth in §7611(c)(2).[305] The five year period commences on the date of the notice of inquiry or of examination, whichever is appropriate.[306] The implications of the §7611(f) rules are discussed below in C.

9. Rules Relating to Declaratory Judgment Proceedings

For purposes of §7428 (providing for declaratory judgments relating to status and classification of organizations under §501(c)(3), etc.) a revenue agent's final report (in a church audit) is to be considered as a "determination of the Secretary" under §7428(a)(1), and a church receiving such report will be considered as having exhausted the administrative remedies available to it for purposes of §§7428 and 7430.[307]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

10. Definitions

Subsection (h) of §7611 contains the following definitions:

(1) "Church": (a) any organization claiming to be a church, and (b) any convention or association of churches.

(2) "Church tax inquiry": any inquiry to a church (other than an examination) to serve as a basis for determining whether the church is exempt under §501(a) or is carrying on a unrelated trade or business or other taxable activities.

(3) "Church tax examination": any examination for purposes of making a determination described in (2) of church records pursuant to a request or summons, or of the church's religious activities.

(4) "Church records": all corporate and financial records, minute books, and lists of members and contributors.

Not included: records acquired pursuant to a §7609 (third-party recordkeeper) summons or from any governmental agency.

(5) "Inquiry notice date": the date the notice with respect to a church inquiry is provided under subsection (a).

(6) "Examination notice date": the date the notice with respect to a church tax examination is provided under subsection (b).

(7) "Appropriate high-level IRS official": the Secretary or his delegate of rank no lower than a "principal IRS officer for a region".

Section 7611 does not apply to:

(a) Any criminal investigation;

(b) Any inquiry or examination relating to the tax liability of any person other than a church;

(c) Termination and jeopardy assessments (§§6851 and 6861);

(d) Any willful attempt to evade tax; or

(e) Any knowing failure to file a return of tax imposed by the Code.

11. Extension of Subpoena Authority

Section 7428 is amended by adding subsection (d) providing that in any action brought under §7428 in the district court for the District of Columbia, a subpoena requiring the attendance of a witness at a trial or hearing may be served at any place in the United States.[308]

C. *Detailed Analysis*

1. General

The statutory provisions outlined above are obviously a compromise between the need for dealing with widespread noncompliance or tax avoiders attempting to exploit the privileges of bona fide religious organizations and the concern of churches and church groups regarding what is perceived as unjustifiable IRS access to and scrutiny of financial records as well as unwarranted investigations into religious beliefs. The statute makes it clear that the IRS may, after certain conditions have been complied with, examine a church's records to the extent necessary to determine whether it may be liable for any tax, and examine its religious activities to the extent necessary to determine whether the organization qualifies as a "church."

2. "Church Tax Inquiry" and "Church Tax Examination" Requirements

The requirement of §7605(c) that a regional commissioner must believe an organization to be engaged in unrelated business activities and notify the organization of such belief before an examination could begin was a rather vague one. It was unclear whether this was also required (belief and notice) before an examination of the organization's religious activities. Under the new statutory provisions, before a summons can be validly issued to an organization claiming status as a "church" (presumably both for purposes of §501(c)(3) and §170(c)), the IRS must take a number of preliminary steps, clearly defined, within stated time limits. If these steps have not been taken, any action to enforce the summons may be stayed until such steps have been taken. The possible consequences of such a stay will be discussed below.

First, an IRS officer, not below the rank of regional commissioner, must receive in writing an opinion, containing the relevant facts and circumstances, that a given purported church "may not be exempt, by reason of its status as a church, from tax under §501(a)." [309]

Observation: Section 501(a) exempts from tax organizations described in subsections (c) as (d). Neither of these subsections mentions the term "church." The term "church" is used only in §170(b)(1)(A) which lists the organizations a charitable contribution to which may be deducted up to 50 percent of the contribution base of a taxpayer. "Charitable contribution" is defined in §170(c) again without mention of the term "church." The terms used in §§501(c)(3) and 170(c)(1)(2), in almost identical language, are "a corporation, trust, or community chest, fund or foundation", "organized and operated exclusively for religious ... purposes." If an organization does not qualify under §501(a) by reason of its failure to qualify under §501(c)(3) (*i.e.*, it is not organized and operated exclusively for religious purposes), it cannot qualify under §170(c). This is undoubtedly what is referred to in the language of §7611(a)(2)(A).

This opinion must alternatively (or may, in addition) provide ground for believing that the organization may be carrying on an unrelated trade or business (as defined by §513) or some other taxable activity.

Secondly, the regional commissioner must find such opinion credible. The statute does not require, but one may infer that some written memorandum of the regional commissioner's reaction to this opinion must be recorded.

The next set of requirements preliminary to a church tax examination is the sending to the church a "notice of inquiry." It appears to be contemplated that at this stage, the church will be given an opportunity to reply to the notice of inquiry, although this is not clear. In any event, the statute clearly contemplates the cessation of these

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

procedures after the notice of inquiry has been sent and before a notice of examination has been provided.[310] After the notice of inquiry, the IRS must wait for 15 days before taking the next step, the sending of a notice of examination to both the church and the appropriate regional counsel. The statute describes what information the inquiry notice must contain,[311] as well as what the notice of examination must include:[312] a copy of the inquiry notice, a description of the records sought, an offer of a church-IRS conference, and a copy of all documents relating to the examination which the IRS would have to disclose in proceedings under the FOIA. Reasonable time must be given the church to prepare for a conference if one is elected (such conference is not mandatory if the church declines the offer). Only after the conference, if one is held, but no earlier than 15 days after the examination notice, an appropriate IRS summons may be issued to the church. Also, regional counsel has 15 days after receipt [313] of the copy of the notice of examination provided him to lodge an advisory objection to such examination. It is to be inferred that the summons may not issue until such recommendation has been reviewed by the IRS and action of some kind taken rejecting the objection.

3. Scope of Examination

The examination, once these preliminary steps have been taken, may then be initiated. Such examination under §7611(b)(1) may be made only in the case of church records, to the extent necessary to determine the church's liability for any tax, and, in the case of religious activities, to the extent necessary to determine whether an organization claiming to be a church is a church for any period.

Observation: Thus, the statute contemplates that church *records* may be examined to determine whether the church is liable for any tax. This would, of course, include its tax exempt status, its sources of income, its payments or provision of benefits to any other person(s), any profit making activities carried on by it, etc. *Religious activities* may also be examined to determine whether it qualifies as a "church." This would also bear on the question of tax exemption as well as the deductibility of any contributions made to it. Such activities could include the holding of services, the existence of some creed, doctrines, body of beliefs, etc. which qualify as "religious". It could also include the ordaining of ministers, the identity and number of communicants, and the like. This area of inquiry is apparently viewed as being distinct from the church's financial operations. Query whether the church's records may not be relevant to an examination of its religious activities. Can the records be demanded by a summons in aid of examining religious activities? Note that the term "records" is used in §7611(b)(1)(A) in lieu of the "books of account" referred to in form §7605(c), and is defined by subsection (h) as "all corporate and financial records kept by a church, including corporate minute books and lists of members and contributors." [314] Such records could, obviously, reveal information not only relating to unrelated business income but to payments or receipts which might provide grounds for revocation of the church's §501(c)(3) exemptions.

4. Time Limitations on Inquiries and Examinations

Once a notice of inquiry has been provided, and it is not followed up by a notice of examination within 90 days, the IRS must complete the inquiry and "make a final determination with respect thereto" within such 90 day period.[315] Unless this period is suspended, under the provisions of §7611(c)(2), a notice of examination provided after the 90 day period has elapsed is apparently invalid.[316] Also, once a notice of examination has been duly provided, the investigation or examination must be completed, and a final determination made with respect thereto, within two years after the examination notice date.[317]

Various suspension periods for the two year and 90 day periods are provided, as set forth within the Overview, in §7611(c)(2).

5. Regional Counsel Approval Required

Upon the completion of the examination, there is yet another procedural hurdle to be passed. Before the IRS makes its final determination that an organization is not a church that (i) is exempt under §501(a).[318] or (ii) is described in §170(c),[319] or send a deficiency notice for any tax involved in a church tax examination, or assess any assessable penalty (*i.e.*, the penalties prescribed by subchapter B of chapter 63 which may be assessed without regard to the deficiency procedures of §6211 et seq.), it is first necessary for the appropriate regional counsel to determine in writing that there has been substantial compliance with the requirements of §7611 and, further, that he approves of the IRS final determination, also in writing.[320] This is referred to below as a §7611(d)(1) approval. Revocation letters, deficiency notices, and penalty assessments without it may give rise to a stay of judicial proceedings. *See* 7, below.

6. Special Limitations Periods

Section 7611(d)(2) sets forth limitations periods applicable to the assessment of any taxes resulting from a church examination. These are set forth in the Overview and need no additional explanation.

7. Stays of Enforcement Proceedings

Where a church refuses or fails to comply with an IRS summons issued in a church tax examination, and the Government brings a summons enforcement action, where the church files a motion for a stay of the proceedings relying on failure to comply with §7611 as grounds for its noncompliance, it is limited to asserting that there has not been substantial compliance by the IRS with (1) the notice requirements of §7611(a) and (b) (inquiry and examination notices), (2) the conference requirement of §7611(b)(3)(A),[321] or (3) the approval requirement of §7611(d)(1) (if applicable).

Note: Approval under (d)(1) is required only after the examination has been completed and before an IRS final determination is made. This will hardly ever, it would seem, be an issue in an action to enforce a summons issued in the course of an examination. The stay, if the court finds the church's assertions have merit, is to be granted until the court finds that all practicable steps have been taken to correct the noncompliance. During the period of such stay the 2 year period within which an examination, once initiated, must be completed, is not suspended during such stay.[322] As explained below, this is the basis of the sole sanction imposed on the IRS for its failure to substantially comply with §7611.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

8. The 5 Year Rule

Section 7611(f) provides that if a church tax inquiry or examination is completed and does not result in a revocation, notice of deficiency, or assessment of a penalty, or in a request by the Secretary for an significant change in the operational practices of the church (including the adequacy of accounting practices) no other inquiry or examination is to begin within "the applicable 5 year period," unless approved by the Assistant Commissioner, Employee Plans and Exempt Organizations or such inquiry or examination involves different issues from those previously considered.

For purposes of this subsection, an inquiry or examination shall be treated as completed no later than the expiration of the applicable period under §7611(c)(1). The "applicable 5 year period" means the 5 year period "beginning on the date the notice taken into account for purposes of (c)(1) was provided. For purposes of the preceding sentence, the rules of subsection (c)(2) shall apply." [323]

Putting all of these statutory provisions together, the following rules will apply:

> Where a notice of inquiry is provided and is not followed up within 90 days by a notice of examination (with the 90 day period to be suspended as provided in subsection (c)(2)), the 5 year period commences from the date of the notice of inquiry. Generally, no new notice of inquiry (required preliminary to an examination) may be provided for a period of 5 years from the date of the inquiry notice. Similarly, where a notice of examination is provided, and within 2 years from the date of such notice, the IRS has not issued a deficiency notice or revocation letter or assessed a penalty, the 5 year period during which no new examination may be commenced begins with the date of the examination notice.

There are some exceptions. First, where, after an inquiry or examination notice, the IRS timely (within the 90 day/2 year period) informs the church that its operational or accounting procedures or methods are unacceptable, the 5 year period does not commence. The church will presumably be given an opportunity to make the needed corrections, but the IRS may commence the examination procedures (beginning with an inquiry notice) at any time. Secondly, the provisions suspending the 90 day/2 year periods will apply for this purpose. Thirdly, where a summons enforcement action is brought, and the taxpayer makes a credible claim that the IRS has failed substantially to comply with the statutory requirements, as explained above, and a stay is granted, the 90 day or (much more likely) 2 year period is not suspended. Thus, if a good faith effort to follow these procedures is not made, and a stay is granted in the enforcement action, the IRS may find itself barred from commencing a new examination for 5 years, a sufficiently severe sanction to insure that there is IRS compliance with the §7611 procedures. The church, on the other hand, may not avail itself of the IRS failure to comply with §7611 for any other purpose; its sole remedy is to bring about a stay of any judicial proceedings to enforce a summons.

9. Examinations of Persons Other than Churches

The provisions of §7611 apply only to the examination of churches. They do not apply to the examination of persons claiming deductions for contributions made to organizations claiming to be churches or who have received payments in money or in kind from such organizations and who have not claimed church status (primarily individuals). The Conference Committee Report [324] states that the conferees intend that inquiries or examinations relating to the tax status or liability of persons other than the church (including contributors to the church) will not be subject to §7611. These may include, according to the report: (1) determinations regarding the inurement of church funds to an individual or organization which may result in the denial of such person's deduction for charitable contributions to the church, (2) determinations that the income of such an individual has been assigned to the church or that contributions have been excessive, (3) determinations regarding a vow of poverty of an individual followed by a transfer of property or an assignment of income or services to the church. The report states, "The IRS may inquire of a church regarding these matters without being considered to have commenced a church tax inquiry and may proceed to examine church records relating to these issues (including enforcement of a summons for access to such records) without following the requirements [of §7611]." Such inquiries and examinations must be limited to the facts and circumstances relevant to the individuals' tax liability. Thus, the IRS may examine church records to determine, for example, transfers of money or property made to the individual under investigation, his use of church property for personal purposes. Likewise, a church's records could be examined to determine whether an individual has assigned income to the church, in connection with his donation of property or transfer of a business to the church. On the other hand, the IRS, without compliance with §7611, cannot examine a list of contributors or members in the possession of the church for the purpose of ascertaining its overall financial structure merely because such structure may be relevant to the church's qualification as a tax exempt entity and, therefore, indirectly relevant to the deductibility of an individual's contributions in general. The IRS is cautioned not to attempt to use examinations of individuals as a means for bypassing §7611, but it is added that the repeated refusal of a church to respond to inquiries regarding an individual's tax liability will be grounds for initiating a church tax inquiry.

The committee comments that routine IRS questions addressed to a church will not be considered a church tax inquiry for §7611 purposes. These might include questions as to whether an information return or returns have been filed, or compliance with employment tax withholding etc.[325] The church may also be requested to aid the IRS in locating third-party (*e.g.*, bank) records, including the church's chartered name, state and year of incorporation, location of bank deposits, etc. without complying with §7611. Failure to respond to such inquiries may be grounds for commencing a church tax inquiry.

It is emphasized that in view of the widespread use of claimed church status to evade tax, the §7611 procedures are not applicable to cases involving failures to file a return

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

or willful attempts to evade or defeat taxes, or any other tax avoidance schemes utilizing what are claimed to be religious organizations, including mail order ministries and store front churches.

10. Failure to Comply with §7611 Not a Defense

The Committee Report affirms the comments made in the detailed analysis that a church's only remedy for IRS violation of the §7611 procedures is the stay to be granted in any enforcement action where there has been a substantial failure (with IRS good faith efforts to comply to be taken into account) to comply with the notice, conference, and approval requirements (as explained above) which may result in barring further IRS examination for the 5 year period. Failure to follow §7611 procedures may not be raised as a defense against the enforcement of a summons or the revocation of a church's tax exempt status. Further, the conferees intend that a church not be able to litigate "the issue of the reasonableness of the assistant commissioner's belief" in approving the commencement of a church tax inquiry.

Chapter 44

ADMINISTRATIVE AND PROCEDURAL PROVISIONS

Harrison B. McCawley, Esq
Silverstein and Mullens
Washington, D.C.

I. Introduction

The provisions of the 1984 TRA to be discussed below relate to a variety of matters, mostly those concerning the more efficient operation of the Treasury Department, the payment and collection of taxes, and the administration of the internal revenue laws.

II. Explanation of Provisions

A. Deposits of Taxes

The mode or time for the collection of taxes not specifically provided for in the Code (such as employment taxes and payments of estimated taxes) are provided by regulations issued under §6301. Section 6302(c) authorizes the Secretary to designate various enumerated depositories or financial agents of the U.S. to receive taxes at such times and under such conditions as the Secretary may prescribe. Section 7502 (included in Chapter 77—Miscellaneous Provisions) sets forth the general rule that timely mailing is to be treated as timely filing of returns, claims, statements and other documents required to be filed and payments required to be made within a prescribed period. Under this rule, if a payment is to be made on a certain date, it is treated as so made if, as evidenced by a U.S. postmark stamped on the envelope or other container, it was mailed on or before such date. Subsection (e) of §7502 extends this rule to deposits of taxes required to be made under regulations prescribed under the authority of §6302(c). Under §7502(e), a deposit is considered as timely made if the date of mailing falls on or before the second day before the prescribed date for making payment if placed in the mail with sufficient postage and properly addressed to the appropriate depository.

Section 157(a) of the Act amends §7502(e) by adding paragraph (3) providing that this rule does not apply to any deposit of $20,000 or more by any person required to deposit the tax more than once a month. As to such persons, therefore, the deposit will be treated as untimely where the funds are not actually deposited with the depository on or before the date prescribed, irrespective of the date such deposit was mailed. This amendment applies to deposits required to be made after July 31, 1984.[1]

B. Review of Jeopardy Assessments

Section 7429 of the Code provides for the prompt review by the Secretary at the request of a taxpayer of any termination or jeopardy assessment made under the provisions of §6851 or §6861. Where the Secretary upholds the assessment, §7429(b) allows the taxpayer to bring a civil action in an appropriate U.S. district court for a determination as to whether or not the making of the assessment was reasonable and the amount so assessed is appropriate under the circumstances. Under paragraph (2) of §7429(b), the district court's determination must be made within 20 days after the action was commenced. There is no provision relating to service of process on the U.S. Where such service is not properly effected in time to give the Government an opportunity to present its case, the 20 day time limit unduly prejudices the Government. Act §446(a), effective as to actions commenced after July 18, 1984, adds to §7429(b)(2) a sentence providing that if the court determines that proper service on the U.S. was not made within 5 days of the commencement of the action, the running of the 20 day period is not to begin before the date on which proper service was made on the U.S.

C. Extension of Limitation Period for Assessment of Tax Shown on Amended Return

Section 6501(a) sets forth the general rule that the amount of any tax for any taxable year must be assessed within 3 years of the date the return for such year was filed (whether or not timely filed). Subsection (c) of §6501 provides a number of exceptions to this general rule (false return, no return, extension by agreement, etc.). Under these rules, where an amended return is filed on, or within a day or two of, the last day of such 3 year period, showing additional tax due for the taxable year, the IRS will not have time to make the appropriate assessment, with the result that the IRS is barred from collecting such additional tax and is also barred from asserting any civil penalty for the failure to report such tax liability and make timely payment (except in cases where the fraud penalty is properly imposed despite the amended return). Act §447(a) remedies this technical defect by adding to §6501(c) paragraph (7) providing that where any written document, signed by the taxpayer, and showing additional tax due for the taxable year, is filed within 60 days before the expiration of the 3 year period, the assessment period does not expire until 60 days after the date on which such document was received by the IRS.

This amendment applies with respect to any documents received by the IRS after July 18, 1984.

D. Defaulted Guaranteed Drafts Used for Tax Payments

Section 6311(b)(1), relating to the payment of taxes by check or money order, provides that where a check or money order tendered in payment of a tax is not duly paid, the person tendering such instrument remains liable for the tax and for all penalties and interest as if such tender had

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

never been made. In other words, such instrument is treated as a nullity. In the case of a certified, treasurer's or cashier's check, or money order, §6311(b)(2), prior to amendment by the TRA provided that, in addition to the application of the rule provided by paragraph (1) (taxpayer ultimately liable), the U.S. has a lien on all of the assets of the maker of such instrument (bank, trust company, etc. on which drawn) for the amount of the instrument. This claim is given absolute preference, by the statute, over all other claims against such person of whatever nature.

Act §448(a) amends §6311(b)(2) by extending these same provisions to guaranteed drafts. Where such a draft issued by a financial institution is tendered in payment of a tax and is not paid when presented, in addition to its right to assert its claim against the taxpayer in default, the Government has a claim secured by a lien on all the assets of the financial institution, and its claim against such institution has priority over all other claims. This amendment is effective on July 18, 1984.

E. Technical Corrections to Partnership Audit Provisions

Subchapter C of chapter 63 was added by TEFRA (P.L. 97-248) as one of the Act's major anti-tax shelter provisions, the so-called partnership audit rules (Tax Treatment of Partnership Items; §§6221-6232). This set of rules is somewhat complex, and technical corrections were found necessary to strike out obvious errors as well as better to carry out the intent and purpose of the rules.

TRA §714(p) (part of title VII—Technical Corrections) amending title IV of the Code, makes the following amendments to subchapter C of chapter 63:

There is added to the end of subchapter C §6233 which provides that where an entity files a partnership return for a year and it is later determined that the entity was not a partnership for the year, then, to the extent provided by regulations, the provisions of subchapter C are extended to such entity, its items, and persons holding interests therein. A similar rule is provided for S corporations. (Subchapter D extends the audit procedures of C to S corporations and their shareholders).[2] Also where an entity files a partnership or S corporation return for a year and it is determined that there was no entity for the year, regulations are to provide for the application of rules similar to those described above (*i.e.*, to the extent practicable, the rules of subchapter C or D are to apply).[3]

In addition to §6233, subchapter C is amended by various technical and clerical amendments.

Section 6230(c)(1) is amended by striking out superfluous words "(or erroneously computed the amount of any such credit or refund)."

Section 6231(d)(1) is amended to make it clear that in determining whether a partner who is disposing of his interest in the partnership is entitled to notice of administrative actions taken by the IRS depends on the taxpayer's proportionate interest in the partnership as of the moment immediately before such disposition.[4]

In §6231(f), the obviously erroneous use of the term "deduction" where "loss" was intended is corrected.[5]

Section 6603(q) is amended to add a cross reference: for extension of the period for windfall profit tax items of partnerships, *see* §6229 as made applicable by §6232, and §6613(h) is amended to add a cross reference relating to the period of limitation for windfall profits tax items of partnerships: *see* §6227(a) and subsections (c) and (d) of §6230 as made applicable by §6232.[6]

CHAPTER 45

NEW PROVISIONS AFFECTING TAX COURT PROCEDURES AND TAX COURT JUDGES

Douglas E. Jacobs, Esq.
Silverstein and Mullens
Washington, D.C.

I. Background

Under present law, taxpayers using the "small tax case" procedure may appear pro se or be represented by any person admitted to practice before the Tax Court. Such proceedings are generally conducted in a more informal atmosphere and the Court's opinion is final and may not be appealed. Prior to the 1984 Act, small tax cases were generally cases involving $5,000 or less for any one taxable year or period.[1]

Present law provides that the Chief Judge of the Tax Court may assign to the Court's commissioners for hearing and decision any declaratory judgment proceeding, any small tax case proceeding, and any other proceeding where the amount in dispute does not exceed $5,000, subject to such review as the Court may provide.[2]

Prior to amendment by the 1984 Act, §7461 provided that all reports of the Tax Court and all evidence received by the Court were open to public inspection, except that after its decision in a case became final, the Court could permit the withdrawal of documents from the record or make such other disposition thereof as it deemed advisable. Rule 103(a) of the Tax Court's Rules of Practice and Procedure provides that the Court may make any order which justice requires to protect a party or other person from annoyance, embarrassment, oppression, or undue burden or expense, including an order requiring that a deposition or other written materials be placed under seal, that a trade secret or other information not be disclosed or be disclosed only in a designated way, or that documents or information be filed in sealed envelopes to be opened only as directed by the Court.[3]

Ordinarily, the Tax Court has jurisdiction only to redetermine the correct amount of the deficiency for the taxable year or years of the taxpayer that are before the Court.[4] Under the Act, the otherwise applicable interest rate for periods after 1984 will be increased by 50 percent with respect to tax-shelter items arising with respect to any year. To determine the amount of any deficiency or overpayment attributable to a tax-shelter syndicate item, it will be necessary to compare the deficiency or overpayment as finally determined to the deficiency or overpayment that would have existed if the taxpayer's treatment of the items had been determined to be correct. The difference will be the overpayment attributable to the tax-shelter syndicate items.[5]

Section 6673 gives the Tax Court discretionary authority to award damages of up to $5,000 against taxpayers who institute or maintain proceedings primarily for delay or upon frivolous grounds. TEFRA increased the maximum amount from $500 to $5,000, and provided that the penalty could be asserted when proceedings were "maintained" as well as "instituted" effective for any action or proceeding in the Tax Court commenced after December 31, 1982.[6]

II. Detailed Analysis

A. Increase in Jurisdictional Limits for Small Cases [Act §461]

The Act raises the dollar limit in small tax cases to $10,000.[7]

B. Proceedings Which May Be Assigned to Special Trial Judges [Act §463]

A technical change is made to allow the Chief Judge of the Tax Court to assign any proceeding to a Special Trial Judge for hearing and to write proposed opinions, subject to review and final decision by a Tax Court judge, regardless of the amount in issue. However, Special Trial Judges will not be authorized to enter decisions in cases assigned pursuant to §7456(d)(4).

C. Special Trial Judges [Act §464]

The title of Tax Court commissioner is changed to "Special Trial Judge."[8]

D. Publicity of Tax Court Proceedings [Act §465]

The Act clarifies that the Tax Court may take any action necessary to prevent the disclosure of trade secrets and other confidential information.[9] This conforms the statute to existing Rule 103(a) of the Tax Court's Rules of Practice and Procedure.

E. Jurisdiction to Determine Whether Any Portion of a Deficiency Is a Substantial Underpayment Attributable to a Tax Motivated Transaction [Act §144(a)]

In order to determine the amount of any deficiency or overpayment attributable to a tax-shelter syndicate item, it will be necessary to compare the deficiency or overpayment as finally determined to the deficiency or overpayment that would have existed if the taxpayer's treatment of the items had been determined to be correct. Consequently, the Act confers jurisdiction on the Tax Court separately to determine whether any portion of a deficiency is a substantial underpayment attributable to a tax motivated transaction after the final determination of the deficiency.[10]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

F. Penalty for Frivolous Proceedings [Act §160]

The Act provides that, in addition to its current application, the penalty under §6673 can be applied to any proceeding before the Tax Court as of 120 days after the date of enactment.[11] This 120-day period enables taxpayers who maintain proceedings before the Tax Court that are potentially subject to damages under §6673 because of this amendment to withdraw or settle those proceedings before the imposition of damages.[12]

G. Effective Dates

The amendment to §7463(a) (increasing the jurisdictional limit for small tax cases) became effective on the date of enactment (July 18, 1984). The amendment to §7456(b) (relating to proceedings which may be assigned to special trial judges) is effective retroactively as if it were enacted as part of the Miscellaneous Revenue Act of 1982 (which became effective October 25, 1982). The amendment to §7456 (changing the name of Commissioners of the Tax Court to Special Trial Judges) became effective on the date of enactment (July 18, 1984). The amendments to §7461 (relating to publicity of proceedings) became effective on the date of enactment (July 18, 1984). Section 6621(d)(4) (conferring jurisdiction on the Tax Court to determine the portion of a deficiency which is a substantial underpayment attributable to tax motivated transactions) will apply with respect to interest accruing after December 31, 1984. The amendment to §292(e)(2) of the Tax Equity and Fiscal Responsibility Act of 1982 (permitting application of the penalty for frivolous proceedings to pending Tax Court proceedings) applies to cases pending in the Tax Court 120 days after the date of enactment (November 15, 1984 is 120 days after the date of enactment).

Chapter 46

NEW AND REVISED RULES GOVERNING EMPLOYEE FRINGE BENEFITS AND STOCK OPTIONS

Diane J. Fuchs, Esq.
Silverstein and Mullens
Washington, D.C.

I. New Provisions Affecting Fringe Benefits

A. Introduction

Code §61 [1] defines gross income as including "all income from whatever source derived," including "compensation for services." On several occasions, the Supreme Court has held that §61 "is broad enough to include in taxable income any economic or financial benefit conferred on the employee as compensation, whatever the form or mode by which it is effected." [2] In addition, for purposes of Social Security and Unemployment Insurance payroll taxes (FICA and FUTA, respectively) and income tax withholding, the Code defines wages as all remuneration for employment, including the cash value of remuneration not paid in cash.[3] The regulations issued pursuant to these sections indicate that the value of any non-cash item is to be determined by the excess of its fair market value over any amount paid by the recipient for the item.[4]

As a practical matter, over time, a variety of exceptions to the economic benefit test set forth by the Supreme Court have been created. Thus, today the treatment of in-kind compensation is governed not by a broad inclusion rule but by statutory provisions, regulations, and administrative rulings and public practices that create exceptions to the inclusion rule. Before the Act, for example, many fringe benefits had been statutorily excludable from an employee's gross income. Among these so-called "statutory" fringe benefits were: (1) qualified pension, profit sharing, and stock bonus plans; (2) group-term life insurance (under $50,000); (3) accident or health benefits; (4) up to $5,000 of death benefits; (5) group legal services; (6) dependent care assistance; (7) certain benefits provided to members of the Armed Services; and (8) parsonage allowances.[5] Apart from the statutorily excepted benefits, there are large numbers of employee benefits provided in the form of tangible property, services, discounts and other types of non-cash compensation that, as a matter of public perception, constitute non-taxable income.

The erosion of the tax base through the expanding use of these so-called "non-statutory" fringe benefits led the Treasury Department in 1975 to issue a discussion draft of proposed regulations containing rules for determining whether various fringe benefits constitute taxable compensation. The proposed rules would have continued the tax exeptions for many of the then-existing exclusions of non-statutory fringe benefits that were based on judicial authority or administrative practice. However, the rules also would have required the taxation of many employee fringe benefits that had not been taxed previously and that were regarded by the business community as working fringes that should be tax-exempt for all times. The proposed regulations were withdrawn in 1976 following considerable controversy.

Because of its inability to agree on how to approach the controversy, beginning in 1978, Congress enacted a series of moratoriums prohibiting the Treasury Department from issuing regulations under §61 relating to the tax treatment of fringe benefits.[6] The last moratorium, enacted as part of the Economic Recovery Tax Act of 1981, expired on December 31, 1983. In December, 1983, the Treasury provided assurances to Congress that it would not issue any regulations or rulings or change any of its administrative practices to alter the tax treatment of non-statutory fringe benefits before January 1, 1985.[7] This assurance gave Congress an opportunity to enact legislation it had been considering in earnest for over a year.[8]

During the moratorium on the issuance of regulations, the taxation of non-statutory fringe benefits was determined on a case-by-case basis and, as a result of a lack of guidance in the field, taxation of such benefits varied from place-to-place across the U.S. depended on the policy of the particular IRS district in which the taxpayer filed.

Dissatisfied with existing practices and concerned about erosion of the tax base, Congress considered several pieces of legislation during the course of a year-and-a-half and then adopted as part of the Act provisions that specifically treat the income tax aspects (as well as the Social Security and unemployment insurance tax and income withholding) of nonstatutory fringe benefits.

By enacting these fringe benefit rules for income and payroll tax purposes, Congress intended to address three concerns. First, it wanted to accommodate, in many cases, the long-established practices in certain industries whereby employees are provided, either free or at a discount, goods and services which the employer sells to the general public. Congress was aware that, in many instances, business purposes are served by the present practices under which employers provide a broad group of employees the products and services which the employer sells to the public.[9]

Secondly, Congress wished to establish clear guidelines in the area of fringe benefits so that taxpayers in identical situations would no longer be treated differently. Third, Congress was concerned about the fact that, without any well-defined limits on the ability of employers to compensate their employees tax-free by using a medium other than

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

cash, new practices might emerge that could shrink the income tax base significantly and further shift a disproportionate tax burden to those individuals whose compensation is primarily or exclusively in the form of cash.[10]

B. *Overview*

1. *Provisions*

The Act excludes certain fringe benefits from a recipient employee's gross income for federal income tax purposes and from the wage base for purposes of income tax withholding, FICA, FUTA, calculating the Social Security benefit base, and the Railroad Retirement Tax. The excluded fringe benefits are those that qualify under categories defined in the bill including (1) no-additional-cost services, (2) qualified employee discounts, (3) working condition fringes, (4) de minimis fringes, and (5) qualified tuition reductions. The Act also contains special exclusionary rules for parking or eating facilities provided to employees, athletic facilities, and the demonstration use of employer-provided automobiles by full-time automobile salespeople. Some exclusions apply to benefits provided not only to the employee but also to the spouse and dependent children of a current employee, or to former employees who left employment due to retirement or disability, and to their widows and dependent children. In the case of many of the categories of fringe benefits, a nondiscrimination rule is applied so that, if benefits are provided to officers, owners or highly compensated employees on a discriminatory basis, the exclusion will not be available to such individuals.

The Act clarifies that, where a benefit does not qualify for exclusion under the Act, the benefit will be considered taxable to the recipient under §61 and §83 (and will be includable in wages for employment tax purposes) at the excess of its fair market value over any amount paid by the employee for the benefits.

2. *Effective Date*

For the most part, the provisions of the bill take effect on January 1, 1985. The tuition reduction exclusion however, applies with respect to education furnished after June 30, 1985 in taxable years ending after that date. This different effective date was added to permit teachers and university employees to finish out the 1984-85 school year before becoming subject to the new rules.

C. *Detailed Analysis*

1. *General Taxation of Fringe Benefits*

The Act added new §§132 and 117(d) to the Code to exclude from income certain fringe benefits that qualify in one of five general categories: (1) no-additional-cost services, (2) qualified employee discounts, (3) working condition fringes, (4) de minimis fringes, and (5) qualified tuition reductions.[11] It also excludes these categories of fringe benefits from employment taxes (including Social Security, Railroad Retirement and Unemployment taxes) and from the income tax withholding rules, and from the Social Security benefit base.[12]

Specifically, §531(d)(1), (3) and (4) respectively, of the Act amend §3121(a) and §209 of the Social Security Act (defining wages for Social Security tax and benefit purposes), §3306(b) (defining wages for purposes of the unemployment tax) and §3401(a) (defining wages for purposes of income tax withholding) by adding paragraphs to each section indicating that the definition of wages will not include any benefit provided to (or on behalf of) an employee if, at the time such benefit is provided, it is reasonable to believe that the employee will be able to exclude the benefit from income under §117 or §132. Section 3231(e), defining compensation for purposes of the Railroad Retirement Tax Act, was similarly amended.[13]

Any fringe benefit not excludable under the Act is treated as gross income. The Act amended §61(a)(1) (defining gross income) to specifically indicate that fringe benefits are items of income.[14] The House and Conference reports emphasize that any fringe benefit that does not qualify for exclusion under the Act (for example, free or discounted goods or services which are limited to corporate offices) and that is not excluded under another statutory fringe benefit provision of the Code is taxable to the recipient under Code §61 and 83, is includable in wages for employment tax purposes. The amount to be included is the excess of the benefit's fair market value over any amount paid by the employee.[15]

Comment: The amendments to §§61, 3121, 3304, 3306 and §209 of the Social Security Act were described in the statute as "clarifying" amendments. Nevertheless, some practitioners argue that, because the specific language including benefits was not there before, there was not sufficient authority under prior law to tax benefits that were tax-exempt by administrative practice. Tax Management understands that standard disclaimer language stating that no inferences as to prior law should be drawn because of the clarifying amendment was inadvertently omitted from the Conference Report but may be picked up in the Blue Book. With the exception of de minimis fringe benefits, §132 does not apply to any fringe benefits that are treated expressly in any other section of Chapter C of the Internal Revenue Code.[16] The Act expressly authorizes the issuance of regulations that are necessary or appropriate to carry out the purposes of §132, thereby lifting the moratorium on fringe benefit regulations. The regulations are to be consistent with the language of the bill and the legislative history as reflected in the House Report and the Statement of Managers. Thus, for example, as stated in the House Report, the Act does not modify the existing rules under which benefits to military personnel, such as subsistence, housing, and uniform allowances are excludable from gross income.[17]

The Act also directs the Secretary of the Treasury to issue regulations concerning the time and manner in which tax will be collected on non-cash fringe benefits.[18] The Conference Report provides guidance concerning the scope of this regulatory authority. It states that, to the maximum extent practicable, the regulations issued by Treasury should provide for collection (or payment) of FICA taxes under §§3101 and 3111 with respect to non-cash fringe benefits in a calendar quarter not later than the time that cash or wages are reported. The regulations may also provide similar rules for the other employment taxes covered by the Act.[19]

Comment: Although the Act has authorized the issuance of regulations in an area that will be very difficult for employers to implement without further guidance, Tax Management understands that, as of August 15, 1984, this

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

regulations project is not considered one of the "high priority" regulations to be issued as promptly as possible after passage. Thus, it is highly unlikely that regulations will be issued by the general effective date of the fringe benefit provisions, January 1, 1985.

2. Categories of Excludable Benefits

a. No-Additional-Cost Service

The entire value of a no-additional-cost service is excludable by an employee provided certain nondiscrimination requirements are met.[20]

A no-additional-cost service is any service provided by an employer to an employee (for use by the employee) if the service is offered for sale to customers in the ordinary course of the line of business of the employer in which the employee is performing services and the employer incurs no substantial additional cost (including forgone revenue) in providing the service to the employee.[21] (Any amount paid by the employee for the service is not considered in determining the employer's cost.)

(1) Employee

The Act defines employee to include persons in addition to those currently and actually employed. With respect to a line of business of an employer, the term employee includes former employees in the line of business who separated from service due to retirement or disability and any widow or widower of an employee who either died while employed by the employer in such line of business or who retired or was disabled following employment in that line of business.[22] The Act also treats spouses and dependent (or orphaned) children of employees as employees.[23] Dependent parents, however, are not dependents for this purpose.

Query: Whether a widow or widower could continue to receive tax-free benefits after remarriage. Regulations may address this issue.

(2) Line of Business

The House Report clarifies that a single employer has more than one line of business if, after aggregating businesses under common control, the products or services the employer sells to nonemployee customers fall into more than one industry group. The report directs that the Treasury, in preparing regulations, may take into account the business segments into which corporations divide themselves for financial reporting purposes or, to refer to the standard industrial classifications used for other governmental purposes.[24]

Under the line of business limitation, an employer that provides airline and hotel services to the general public is considered to consist of two separate lines of business. Thus, employees of the airline business of the employer may not exclude the value of free hotel rooms provided by the hotel business of the employer, and vice versa. The House Report states that the purpose of the line of business limitation is to avoid, to the extent possible, the competitive imbalances and inequities which would result from giving the employees of a conglomerate or other large employer with several lines of business a greater variety of tax-free benefits than could be given to the employees of a small employer with only one line of business.[25] Note, however, that, if an employee provides services that directly benefit more than one line of business of the employer, the individual is treated as performing services in all such lines of business. A chief executive officer, for example, may exclude the value of no-additional-cost services provided by either the airline or hotel line of a business of the employer if he/she provides services which directly benefit both those lines of business.[26]

(3) Employers and Reciprocal Agreements

For purposes of §132, all employees of a group of related employers will be treated as employees of a single employer if the employers are treated as a single employer under §414(b), (c) or (m).[27]

The Act permits reciprocal agreements among unrelated employers in the same line of business so that they can provide no-additional-cost services to each other's employees if certain requirements are met. The service must be provided under a written agreement between the employers and neither of the employers may incur any substantial additional costs in providing the service.[28]

(4) Nondiscrimination

No-additional-cost services must be provided on a nondiscriminatory basis in order for any officer, owner or highly compensated employee of the employer to obtain an exclusion for the benefit. This special nondiscrimination rule requires that the no-additional-cost service be available on substantially the same terms to each member of a group of employees which is defined under a reasonable classification set up by the employer and which does not discriminate in favor of officers, owners, or highly compensated employees.[29]

Comment: As in the case of the §125 cafeteria plan nondiscrimination rule, only the highly compensated (officers and owners) are penalized if the rule is violated.

(5) Grandfather Provisions

The Act provides some relief for an employer with several lines of business that had previously permitted employees in one line of business to obtain no-additional-cost fringe benefits from another of its lines of business. If an employer wishes to take advantage of the grandfather provision, the employer must make an election and meet several requirements. First, the employee must have worked in a line of business of the employer which was a line of business of the employer on January 1, 1984. Second, the employer must have offered the no-additional-cost service benefits in that particular line of business to substantially all of the employees in all of its lines of business which existed on January 1, 1984. (The grandfather rule does not apply, however, with respect to no-additional-cost services provided in accordance with reciprocal agreements between employers). Thus, where an election is made and these two requirements are met, all employees of any line of business of the employer which was in existence on January 1, 1984 are treated, for purposes of Code §§132(a)(1) and 132(a)(2), as employees of the particular line of business (which was in existence on January 1, 1984) in which such goods or services are offered for sale by the employer.

If the election is made, it applies on a calendar year basis and applies to the first calendar year following the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

year of election and to all subsequent years unless revoked by the employer. The Conference Report states that a revocation must be made prior to the beginning of the calendar year to which the grandfather rule is meant to apply. The Treasury has been authorized to issue regulations concerning the manner in which the election is to be made. The statute provides that, for purposes of the grandfather rule, all members of the same affiliated group of corporations are treated as one corporation. A group of corporations is an affiliated group if it meets the definition of §1504. Under these rules, a corporation is part of an affiliated group if it is connected through stock ownership with a common parent corporation and provided certain specific percentage of stock ownership rules are met.

Use of the elective grandfather rule is not without potential cost. An employer that elects the grandfather rule may be subject to a 30 percent excise tax. The Act provides that for any calendar year in which the grandfather rule election is in effect, if the aggregate fair market value of all excludable no-additional-cost service benefits and qualified employee discount benefits (whether or not excludable only pursuant to the grandfather rule) provided by the employer during the calendar year to all its employees exceeds 1 percent of total compensation paid to all employees of the employer for the year, a 30 percent excise tax will be imposed on the employer. This tax is not deductible. The Conference Report indicates that the computation takes into account all employees in all lines of business of the employer, including lines of businesses to which the elected grandfather rule does not apply (*e.g.*, where the line of business did not exist on January 1, 1984).

Comment: The special elective grandfather rule which was drafted as an expansion of the non-elective grandfather rule (discussed in C, 2, b, (1), *infra,*) was referred to as the "AT&T and GE" rule because it was added after the non-elective grandfather rule specifically to provide relief to those companies. Ironically, the addition of the 1 percent rule late in the legislative process may, in fact, preclude the relief intended.

(6) Examples

This exclusion, for example, would permit an airline exclusively in the air travel line of business to provide free travel on a standby basis to its own employees provided the service is made available to a reasonable classification of employees and is not utilized disproportionately by owners, officers, or highly paid employees. An employee may exclude the entire fair market value of the free travel under this rule because the service is provided at no substantial additional cost to the employer. In addition, one airline can provide this service to employees of another airline provided there is a written reciprocal agreement between the employers. If the airline also has a hotel line of business, or if the airline is part of an affiliated group of corporations in which a related corporation conducts a hotel business, an employee in the airline line of business would not be permitted to exclude the cost of hotel accommodations provided to him by the company's hotel line of business or by a related company engaged in the hotel business.[30]

The no-additional-cost service rule would also preclude employees of a consumer goods manufacturer who travel for personal purposes on a company plane (even if the plane is making a trip for company business) from excluding the value of the airfare from income because the service is not the type generally provided by the employer to the general public in the line of business in which the employee recipient works.[31]

b. Qualified Employee Discount

(1) General

A second exclusion is provided for qualified employee discounts.[32] The exclusion applies regardless of whether the discount is provided through a reduction in price or a cash rebate.[33] An employee discount is the amount by which the price of goods and services provided to an employee by an employer is less than the price at which the goods or services are offered by the employer to customers who are not employees.[34]

The type of goods or services that may be provided at a discount are those that are offered for sale to customers in the ordinary course of the line of business of the employer in which the employee is performing services.[35] The discounted value of real property and of personal property held for investment are not permitted to be excluded from income.[36] For example, the exclusion would not apply to discounts on employee purchases of securities, gold coins, and residential or commercial real estate.[37] This limitation was adopted because investment property lends itself to sale at close to the same price as the employer would sell to its customers and Congress did not want to provide favorable tax treatment in this situation.[38] Thus, an employee of a brokerage house may purchase stock and receive an excludable discount on the commission, but any discount allowed on the price of the stock itself is not eligible for the exclusion.[39]

The discount exclusion for services is limited to 20 percent of the price at which the services are offered to nonemployee customers.[40] For property, the discount exclusion is limited to a gross profit percentage.[41] The gross profit percentage is the percent that the employer's aggregate profit with respect to such property (i.e. aggregate sales price less aggregate cost to employer) is of the aggregate sale price of the property.[42] The computation of the profit percentage must be made on the basis of all property offered to customers in the line of business in which the employee is performing services and must be based on the employer's experience during a representative period.[43] Although obviously intended to provide some flexibility, "representative period" is not defined in the Act nor does the legislative history provide any guidance as to the meaning of the phrase.

The line of business limitation rules for treatment of a single employer consisting of more than one line of business are the same as those applicable in the no-additional-cost service situation. *See* discussion at C, 2, a, (2), *supra.* The discount exclusion, however, is not available for goods or services provided by another employer, whether or not a reciprocal agreement exists, except where commonly controlled businesses are treated as one employer. Merchandise held for sale in the retail department store line of a business of a firm, for example, is eligible for the discount exclusion if purchased at a discount by an employee of the firm who works in that line of business. Similarly, an employee who works for a manufacturer assembling appliances is eligible

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

for the discount exclusion if the employee purchases the assembled appliances from the manufacturer-employer at a discount. On the other hand, if an employee works for a company that consists of more than one line of business, such as a company consisting of a retail department store business, a hotel business, and an electrical component manufacturing business, an employee is eligible for the discount exclusion only for merchandise or services offered to customers in the ordinary course of business in the particular line of business in which the employee works.

The same grandfather rule applicable to no-additional-cost services described in C, 2, a, (5), *infra*, applies to qualifying employee discounts, except that the exclusion for reciprocal agreements between employers is eliminated because such agreements are not permitted generally for qualified discounts under §132(c).[44]

The Act contains a special non-elective grandfather rule for an affiliated group of companies operating retail department stores. For purposes of this grandfather rule, an affiliated group is defined as it is in §1504, without regard to subsections (b)(2) (relating to insurance companies taxed under §§802 or 821) and (b)(4) (relating to corporations as to which a §938 possessions tax credit is in effect for the taxable year). If, as of October 5, 1983, the employees of one member of an affiliated group were entitled to employee discounts (for services as well as for consumer goods) at the retail department stores operated by another member of such group and the primary business of the affiliated group generally is the operation of a retail department store, then, for purposes of applying the qualified employee discount rules of §132(a)(2), the employer will be treated as engaged in the same line of business as any other member of the affiliated group.[45] The excise tax provisions, applicable to the elective grandfather rule discussed in C, 2, a, (5), *supra*, is not applicable here.

Comment: This rule was part of the House bill and was referred to by those involved in the legislative process as the "Sears" rule, since it was adopted to provide relief for Sears employees.

The exclusion is available only where a qualified discount is provided on a nondiscriminatory basis.[46] The rules are the same as those applicable to no-additional-cost service. *See* discussion in C, 2, a, (4), *supra*.

The definition of the employees to whom the discount may be provided is the same as that applicable to no-additional-cost services.[47] *See* discussion in C, 2, a, (1), *supra*.

(2) Special Rule for Leased Sections of Department Stores

For purposes of the qualified discount, the Act permits certain employees who work on the floor of a department store but are not the employees of the operator of the department store to be treated as if they were employees of the operator for purposes of the discount exclusion. The provision applies to a so-called "leased section" of a department store. A leased section of a department store is any part of a department store where over-the-counter sales of property are made under a lease or similar arrangement and where it appears to the general public that individuals making such sales are employed by the person operating the department store.[48] The Act provides that a leased section of a department store, such as a cosmetic counter selling the cosmetics of a particular manufacturer, will be treated as part of the line of business of the person operating the department store and the employees in that leased section will be treated as employees of the person operating the store for purposes of obtaining the benefits of qualified discounts offered by the store to its regular employees.[49]

c. Working Condition Fringe

(1) General

A working condition fringe benefit is any property or service provided to an employee which, if the employee had paid for such property or service, would have been allowable as a deduction under either §162 (ordinary and necessary business expenses) or §167 (depreciation for business property).[50] Such benefits, by virtue of their nature, may be provided only to current employees (and not their spouses or children). The nondiscrimination rules do not apply to these benefits.

Examples of working condition fringe benefits are the value of the use by an employee of a company car or airplane for business purposes. While the use of a company car or plane for personal purposes is not excludable, mere incidental personal use of a company car, such as a small detour for a personal errand, might qualify for exclusion as a de minimis fringe.[51] *See* discussion in C, 2, d, *infra*. Other examples of working condition fringes are employer subscriptions to business periodicals for an employee where the employee requires such periodicals to perform his duties [52] and the provision of bodyguards, or the use of a car and driver for the employee's safety.[53] The payment by an employer of the real estate broker's commission on the sale of an employee's house to assist the employee in moving to another job site for the employer would not be excludable as a working condition fringe because the direct payment of the commission expense by the employee would not have been deductible by the employee as a §162 business expense.[54]

(2) Consumer Product Testing

Although not addressed specifically by the statute, the House Report indicates that the fair market value of the use of consumer goods that are manufactured for sale to nonemployee customers and which are provided to employees for product testing and evaluation outside the employer's office is excluded as a working condition fringe only if each of six requirements are met. First, consumer testing and evaluation of the product must be an ordinary and necessary business expense of the employer. Second, the business reason must necessitate that the testing and evaluation be performed off premises by employees. Third, the item must be furnished to the employee only for purposes of testing and evaluation. Fourth, the item must be made available to the employee for no longer than necessary to test and evaluate its performance and must be returned at the completion of the testing and evaluation period to the employer. Fifth, the employer must impose limitations on the employee's use of the item which significantly reduced the value of any personal benefit to the employee and last, the employee must submit detailed reports to the employer on the testing and evaluation.[55] The fifth requirement is satisfied, for example, if the employer places limitations on

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the employee's ability to select among different models or varieties of products, the employer's policy provides for the employee, in appropriate cases, to purchase or lease at his own expense the same type of item of that being tested, and the employer requires that members of the employee's family generally cannot use the item.[56] The House Report also points out that, if products are furnished under a testing and evaluation program only to officers, owners, or highly compensated employees, this fact may be considered in determining whether the goods are furnished for testing and evaluation purposes or for compensation purposes.[57] The Conference Report clarifies that, where an employee pays or reimburses the employer for personal use of the testing item, gross income will not include such personal use.[58]

(3) Demonstration Automobile Use

The Act permits qualified automobile demonstration use as an excludable working condition fringe benefit.[59] Such use is excludable if it primarily facilitates the salesperson's performance of services and if there are substantial restrictions on the salesperson's personal use of the automobile. The salesperson must be a full time salesperson and the use must be in the sales area in which the automobile dealer's sales office is located.[60] The Conference Report states that this exclusion is not available to part-time auto salespersons, mechanics, or the dealer's bookkeeper.[61]

Comment: The House Report states that the exclusion applies to part-time salespersons. The conferees limited the scope of the original provision following an informal survey of practices in local IRS Districts which revealed that, in some Districts, the IRS was requiring that the value of the use of a demonstration automobile by part-time salespersons be included in income.

(4) Parking Privileges

The Act treats employer-provided parking privileges on or near the business premises of the employer as a working condition fringe benefit,[62] and no nondiscrimination requirement is applicable.[63] The nondiscrimination provision that was part of the House bill was dropped in Conference, according to a Treasury official who was present after Senator Long remarked, "We don't want the IRS out there in every parking lot in America."

Comment: Structurally, the parking exclusion was made part of the working condition fringe benefit section of the Act and therefore consideration of whether the parking is deductible under §162 as a business expense might be required. Tax Management understands, however, that the Conferees intended that parking be excluded without respect to the §162 deduction rule.

Comment: Tax Management understands that the Conferees did not intend to sanction arrangements whereby an employee arranged for a reduction in salary in order to receive the parking benefits provided by an employer. Such an arrangement would contravene the new cafeteria plan rules discussed *infra*.

d. De minimis fringe

(1) General

The fair market value of de minimis fringe benefits are excluded from income. The term is defined as any property or service which has such a small value as to make accounting for it unreasonable or administratively impractical.[64] The Act does not incorporate the aggregation language for de minimis benefits found in the House version of the bill, but rather makes reference to the frequency with which similar fringes are provided by the employer to its employees and requires that the frequency be considered among other relevant factors in determining if the benefit is de minimis.[65] De minimis fringe benefits may be provided not only to employees but also to independent contractors and need not meet a nondiscrimination standard.

Comment: This section was carefully drafted to include an exclusion for benefits to independent contractors whereas all other categories of excludable fringe benefits operate only with regard to employees. Thus, for example, the typing of an occasional personal letter for a corporate director who is not an employee would be an excludable de minimis fringe benefit.

Examples of benefits which generally would be excludable as de minimis fringes are the typing of personal letters by an employee's secretary, occasional company cocktail parties or picnics for employees, occasional supper money or taxi fare because of overtime work, $15 per month transit passes, traditional holiday gifts of property with a low fair market value, occasional theater or sporting event tickets, coffee and doughnuts, and the occasional use of the company copying machines.[66] The Conference Report states that where an employer exercises sufficient control over the personal use of a copying machine such that substantially all (at least 85 percent) of the use of the machine is for business purposes, the employer may treat any personal use as a de minimis fringe.[67]

(2) Subsidized Eating Facilities

The Act provides for the treatment of certain eating facilities operated by an employer as a de minimis fringe. For such treatment, the facility must be located on or near the business premises of the employer and the revenue derived from the facility must normally equal or exceed the direct operating costs of the facility.[68] Neither the statute nor the legislative history provide guidance concerning what constitutes "direct operating costs" nor is there guidance on how to calculate the benefit for purposes of income reporting when revenues do not at least equal costs.

A nondiscrimination standard is applied to eating facilities. The standard requires that an officer, owner or highly compensated employee may exclude eating facility benefits only if access to the facility is available on a nondiscriminatory basis. That is, on substantially the same terms to each member of a group of employees that is defined under a reasonable classification set up by the employer and which does not discriminate in favor of employers, owners or highly compensated employees.[69]

Comment: The exclusion for certain eating facility privileges is essentially an all-or-nothing safe harbor. If an employer's direct operating costs are generally covered by revenues received from the facility, any benefits received by employees in the form of a reduction in the cost of food will be excludable. However, if an employer's revenues are lower than its costs in operating the facility, the subsidized value of the meal will be income to the employees. Such a result could cause significant administrative problems in

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

determining the amount of a benefit with regard to each employee.

The requirement that revenues at least equal basic cost appears to be inconsistent with Congress' articulated concern that the record-keeping difficulties involved in identifying which employees eat which meals on particular days, as well as the values and costs for each meal are too great and therefore require a general safe harbor provision for eating facilities.[70]

Query: Whether an employer will be permitted to also serve food in its facility to members of the general public.

Tax Management understands that there has been some discussion that the Bluebook drafted by the Joint Committee may address this issue and that employees may not be entitled to an exclusion where the facility is not exclusively for employees even if the revenues raised from the facility equal or exceed the costs involved.

Note that this provision in the Act does not alter the rules under §119 concerning free meals provided on an employer's premises to employees for the convenience of the employer. Such benefits will remain excludable from income to the extent provided under §119.[71]

e. Tuition Reductions

Also excluded from gross income under the Act is any qualified tuition reduction.[72] A qualified tuition reduction is the amount of any reduction in tuition that is provided to an employee of an educational institution (as defined in §170(b)(1)(A)(ii)) for pre-graduate level education at that educational institution or at any other educational institution described in §170(b)(1)(A)(ii).[73] The reduction can also be provided to the broader range of individuals treated as employees under §132(f). *See* C, 2, a, (1), *supra.*

Tuition reductions must meet nondiscrimination standards. Reduction must be available on substantially the same terms to each member of a group of employees which is defined under a reasonable classification set up by the employer and which does not discriminate in favor of officers, owners, or highly compensated employees.[74]

Comment: The Act did not adopt a provision in the House bill that would have provided that availability of the benefit only to faculty members is not a discriminatory classification. Although not explicitly dealt with in the Conference Report, statements made during the Conference indicate that the conferees did not believe that a reasonable classification of employees is a classification that includes only faculty members.

This provision applies to qualified tuition reductions for education furnished after June 30, 1985, in taxable years ending after that date.[75]

The Act's tuition reduction provisions do not effect the rules concerning scholarships and fellowships under §117(b). Under prior and present law, gross income does not include scholarships or fellowships, subject to certain limitations, unless the amounts are paid as compensation for services or for studies or research primarily for the benefit of the grand tour. Regs. §1.117-3(a) provides that the remission of the tuition of a child of a faculty member provided by another educational institution under a tuition-exchange plan is considered a scholarship. Note that, while the Act did not follow the House provision which contained an exclusion for graduate tuition reduction provided to teaching and research associates or assistants, the Conference Committee noted that tuition reductions for graduate education remain eligible for exclusion as scholarships under §117(b) if they satisfy the requirements of that provision.[76]

Comment: Tax Management understands that the potential usefulness of §117(b) in many cases will be substantially limited because it requires the inclusion in income of that part of a scholarship or fellowship grant that represents payment for teaching, research, or other services in the nature of part-time employment required as a condition of receiving the grant.

f. On-Premises Gyms and Other Athletic Facilities

The Act provides a general exclusion from gross income for the value of any on-premises athletic facility provided by an employer to his employees and does not contain a nondiscrimination requirement. An on-premises athletic facility is any gym or other athletic facility that is located on the premises of the employer, operated by the employer, and substantially all the use of which is by employees of the employer, their spouses, and their dependent children.[77] The term dependent child is defined as it is defined for purposes of qualified employee discounts and no-additional-cost services. *See* discussion in C, 2, a, (1), *supra.*

Comment: The Act did not amend §274(e)(5) containing deduction rules for employer-provided recreational expenses including expenses for recreational facilities. For such an expense to be deductible, the expense must be primarily for the benefit of employees and not for employees who are officers, shareholders or highly compensated. Tax Management understands that the Conferees did not adopt a nondiscrimination rule in conjunction with the employee exclusion rules because they believed that the restrictions on employer deductions for athletic facilities were sufficient. In addition, such nondiscrimination rules would have made taxable to the Senators their use of their new gymnasium.

g. Faculty Housing

The Act does not create new rules with regard to faculty housing. Rather, it generally follows the Senate provisions by imposing a moratorium on the issuance of income tax regulations providing for the inclusion in gross income of the excess of the fair market value of qualified campus lodging over the greater of either the operating costs paid in furnishing the lodging or the rent received. The moratorium applies only with respect to lodging furnished after December 31, 1983 and before January 1, 1986.[78] Qualified campus lodging is defined as lodging located on or in close proximity to a campus of an educational institution and provided by such institution to an employee or to a spouse or dependent.[79] The educational institution is defined with reference to §170(b)(1)(A)(ii) and dependent is defined within the meaning of §152 of the Code.

The Conference Report warns that no inference should be made by the imposition of the moratorium as to the proper income tax treatment of faculty housing furnished prior to 1984 or after 1985.[80]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Comment: Tax Management understands that this provision was added in order to stop IRS audit activity with regard to four New England schools. The provision, as worded, does not effect the desired result because the moratorium does not apply to IRS audits of practices underway before 1978. The IRS was involved in auditing the practices at the four schools before 1978.

h. Effective Date

The provisions concerning these new statutory fringe benefits will take effect January 1, 1985.[81] The tuition reduction exclusion, however, applies with respect to education furnished after June 30, 1985 in taxable years ending after that date[82] and the moratorium with respect to qualified campus lodging will apply only with respect to lodging furnished after December 31, 1983 and before January 1, 1986.[83]

II. Amendments Relating to Cafeteria Plans

A. Introduction

1. Legislative Background

In the six months preceeding the passage of the 1984 Tax Reform Act, the federal income tax treatment of benefits provided under Code §125 cafeteria plans became extremely controversial. The controversy began with the issuance of an IRS news release, I.R. 84-22, February 10, 1984. The release formally signaled, for the first time since the enactment of §125 in 1978, the Service's position with regard to many of the innovative arrangements set up by employers under the rubric of §125. I.R. 84-22 indicated that the IRS, after six years without publishing guidance in an actively-developing area, would take a restrictive view concerning what types of arrangements would be permitted under §125 and would retroactively tax benefits received under "ZEBRA" and "flexible spending account" arrangements.

On May 2, 1984, the Service followed I.R. 84-22 by issuing proposed regulations under §125, in question-and-answer format, concerning the tax treatment of cafeteria plans. *See* 394 T.M., *Employee Fringe Benefits.* Essentially, the proposed Regulations incorporated the position the IRS signaled in I.R. 84-22. There was, however, some relief provided as to the proposed retroactive application of the provisions with regard to flexible spending accounts. *See* II, A, 3 *infra.*

Until I.R. 84-22 was issued in February, followed by the proposed regulations in May, it did not appear that Congress would legislate substantially on cafeteria plans in the 1984 TRA. The House bill contained a small provision that would have amended the definition of cafeteria plans to exclude from the list of benefits that could be provided under §125 those that would be excludable from gross income under the fringe benefit provision of the bill.[84] The Senate bill did not contain any provisions concerning cafeteria plans although Sen. Packwood had drafted several proposals. Once the controversy concerning the IRS' position taken in I.R. 84-22 and the proposed regulations intensified, however, Sen. Packwood and Rep. Conable, both key tax writers and members of the Conference Committee considering the House and Senate tax bills, became instrumental in drafting and promoting proposed legislation for adoption by the Conference. This legislation, essentially, would have imposed dollar limits on cafeteria plans and reversed the IRS with regard to the retroactive application of its proposed regulations. In the end, the Conferees adopted provisions that were significantly more streamlined than these comprehensive proposals. To understand the impact of the TRA provisions, it is necessary to examine some of the prevalent pre-TRA practices they were designed to address.

2. Cafeteria Plans and Variations

Cafeteria plans are arrangements under which an employee is given a choice between taxable and non-taxable benefits. Under the existing IRS constructive receipt doctrine, an employee is taxable if he has a *right to receive* taxable benefits regardless of whether, by his own election, he in fact receives non-taxable benefits.[85] Section 125 was enacted as part of the 1978 Revenue Act (P.L. 95-600, §134(a)) to permit employees to choose between taxable and non-taxable benefits without being subject to tax under the constructive receipt doctrine if the non-taxable benefit was chosen.[86]

Under pre-TRA law, the taxable benefits offered under a cafeteria plan were typically benefits such as cash and additional paid vacation. Non-taxable benefits typically included (§79) group-term life insurance, (§105) accident and health insurance, qualified (§120) group legal services and (§129) dependent care assistance programs. In a basic cafeteria plan, a participant must elect the specific benefits to be received before the benefits become currently available. A benefit is deemed to be currently available if the participant is free to receive it currently at his discretion or can receive it currently if an election or notice of intent to receive the benefit is given. Essentially, under the basic type of cafeteria arrangement, the plan puts the employee "at risk" with respect to the non-taxable benefits elected. Thus, if an employee elects reimbursement but incurs no such covered expenses, or incurs such covered expenses in an amount less than the amount of reimbursement selected therefor, the employee must be ineligible for further benefits or payment of any kind under the plan for that year. This type of plan is clearly permitted under the proposed regulations.

A flexible spending account is an account in a cafeteria-type plan that is established for an employee from which the selected benefits are paid. The account typically is funded with a participant's salary reduction contributions from pre-tax income and any unused amounts in the account are nonforfeitable and may be carried over to the following year, returned to the participant in cash, or used for some other purpose. The ability to purchase covered benefits in pre-tax dollars and the flexibility afforded by such arrangements are among the most attractive features of such plans. The proposed regulations, generally, deny such arrangements the benefits of §125(a) (*i.e.*, the avoidance of constructive receipt), although they make it clear that, under appropriate circumstances, §125 cafeteria plans may be funded with salary reduction contributions. *See* discussion of proposed regulations, *infra.*

Another variation on the basic cafeteria plan is a zero balance reimbursement arrangement (ZEBRA). Under this type of arrangement, no fund or account is established for

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the employee at the beginning of the year. Rather, the employer "reimburses" the employee for the expenses of benefits chosen at the end of the year by deducting such expenses from the employee's regular salary. Again, the proposed regulations effectively prevent such arrangements from qualifying under §125. *See* discussion, *infra.*

3. Proposed Regulations

The proposed §125 regulations cover a broad range of cafeteria plan issues. Among the more significant are the following.

a. Salary Reduction Arrangements Permitted

The proposed regulations permit the use of salary reduction contributions to fund §125 cafeteria plans, but indicate that, to avoid constructive receipt, an employee must elect to forego a specified amount of a future year's salary in the year before the salary is actually earned.

b. Use-it-or-Lose-it Rule

The proposed regulations indicate that an employee's ability to carry over unused benefit amounts from one year to a future year is, in effect, a deferral of the receipt of compensation. Because, under §125(d)(2), cafeteria plans may not offer deferred compensation (other than an election to defer salary under a §401(k) cash-or-deferred arrangement) the proposed regulations provide that a plan must contain a "use-it-or-lose-it" rule. Under such a rule, the benefit elected by an employee must be used during the plan year for which it is elected or forfeited if the plan is to qualify under §125. The proposed regulations also indicate that such an election will not be deemed to have been made if the election may be revoked (other than as a result of the occurrence of certain specified events such as marriage, divorce, death or termination of employment.)

c. Nondiscrimination

The proposed regulations indicate that benefits offered under discriminatory cafeteria plans will be taxable to highly paid employees (generally officers, more-than-5-percent shareholders and highly-compensated individuals) on the basis of the maximum taxable benefits that such employees could have elected to receive. Thus, even though such a participant may have selected non-taxable benefits, he will be taxed on the maximum amounts of taxable benefits that he could have chosen under the plan. Employees other than highly-compensated employees will not be taxed as a result of the plan being discriminatory.

For a cafeteria plan to be considered nondiscriminatory under the proposed regulations, three types of non-discrimination requirements must be satisfied. First, the plan must be nondiscriminatory as to benefit availability. Thus, each participant must have an equal opportunity to select non-taxable benefits. Second, the plan must be nondiscriminatory as to benefit selection. thus, the actual selection of non-taxable benefits under the plan must be nondiscriminatory. Highly-compensated employees must not proportionately select greater non-taxable benefits than other participants. Third, the plan must not discriminate in favor of highly-compensated participants in operation. This could occur if the plan's duration is timed for a period during which highly compensated participants would select a particular benefit (e.g., the provision of an orthodonture benefit timed to coincide with the attainment of adolescence by the children of highly-compensated employees).

d. Effective Dates and Transition Rules

The proposed regulations are effective (when finalized) [87] generally for cafeteria plan years beginning after 1978. Several special relief and grandfather-type rules are provided, however, to permit plans to be amended to comply with the rules. For example, a cafeteria plan that failed to satisfy one of the several specified rules for plan years beginning before May 7, 1984, will be deemed in compliance with §125 for past years under the proposed regulations if, by September 4, 1984, the plan is amended to operate in accordance with the rules. Some of the rules that are specified include the rule prohibiting the carryover of unused benefits from one plan year to a subsequent plan year if the participants were neither permitted to carry over the unused benefits for more than one plan year nor to convert them into other benefits that may be carried over into another year. Another such specified rule is the rule limiting the revocability of benefit elections.

B. Overview of New Provisions

The TRA, essentially, provides temporary protection for certain past practices and makes a few substantive changes to the pre-TRA rules. Eventually, however, the TRA provisions permit the proposed regulations to take effect.

The TRA also limits the types of benefits that can be offered under §125 cafeteria plans to cash and fringe benefits that are excludable from gross income under a specific Code section. Further, specifically excluded from the types of benefits that can be offered under cafeteria plans are (§117) scholarships, (§124) van pooling and post-TRA §132 statutory fringe benefits such as tuition discounts. Non-cash taxable benefits may not be offered.

The TRA also added a limit on the amount of benefits that can be provided to key employees within the meaning of §416(i)(1) under a cafeteria plan. Under post-TRA §125(b)(2), no more than 25 percent of the total non-taxable benefits provided under a plan can be provided to key employees in a plan year. If the 25 percent limit is exceeded, key employees will be taxed as though they had received taxable benefits to the maximum extent possible under the plan.

Most significant, however, is the transitional relief provided to existing practices. General transitional relief is provided under TRA §531(b)(5) for cafeteria plans that were in existence on February 10, 1984 (the date of the issuance of I.R. 84-22. The relief allows certain cafeteria plans (including ZEBRA plans) which failed as of February 10, 1984 and continued to fail thereafter to satisfy the proposed regulations to operate through the end of 1984 (or, if earlier, the effective date of any modification of the plan to provide additional benefits) without the application of the proposed regulations. The Act also contains special transitional relief for the forfeiture or "use it or lose it" rule in the proposed regulations. If a plan was in existence on February 10, 1984, it will qualify as a cafeteria plan even though it fails to comply with the forfeiture restrictions in the proposed regulations. This transitional rule, however, requires that the plan be modified before January 1, 1985

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

to comply with the restrictions. The transitional relief is not available for benefits provided after July 1, 1985 (or the effective date of any plan modification to provide additional benefits, if earlier). The Act also permits the application of the transitional relief to plans that were not in existence on February 10, 1984 if substantial implementation costs had been incurred by that date.

The Act imposes additional reporting and recordkeeping requirements on employers maintaining cafeteria plans and permits the Secretary of Treasury to select employers who will be required to provide additional information. Act §531(b)(6) mandates that the Secretary of Health and Human Services, in cooperation with the Secretary of Treasury, conduct a study of the effects of cafeteria plans on the containment of health care costs. The report on this study must be submitted to the House Ways and Means Committee and the Senate Finance Committee no later than April 1, 1985.

C. *Detailed Analysis*

1. *Benefits Includable in Cafeteria Plans*

Under pre-TRA law, a cafeteria plan was defined as a written plan under which all participants are employees and the participants may choose among two or more benefits. The benefits that could be chosen could be non-taxable benefits or cash, property and other taxable benefits.[88] Under pre-TRA law, certain statutory fringe benefits could not be included in a cafeteria plan. For example, scholarships and grants (§117), van pooling (§124) and educational benefit plans (former §127 which expired December 31, 1983).

The Act amends the definition of cafeteria plans to indicate that participants may choose among only cash or non-taxable benefits. Thus, unlike prior law, the Act does not permit taxable benefits, with a few minor exceptions discussed *infra*, to be included in a cafeteria plan.

Specifically, the Act amends the definition of cafeteria plans to indicate that participants may choose among two or more benefits consisting of cash and "statutory non-taxable benefits."[89] The Act defines "statutory non-taxable benefits" as any benefit which is not includable in the gross income of the employee by reason of an express provision of the income tax rules of the Code except for benefits excludable under §117 (scholarships and grants), §124 (employer-provided van pooling), §127 (educational benefits), or the TRA's statutory fringe benefits set forth in post-TRA §132.[90]

Statutory non-taxable benefits include (§105) accident and health insurance, (§120) qualified group legal services, and (§129) dependent care assistance programs. Paid vacation is also a non-taxable benefit, provided it cannot be deferred beyond the taxable year or cashed out. The Act expands the scope of benefits includible in a cafeteria plan by indicating that the term "statutory non-taxable benefit" covers §79 group-term life insurance even if it exceeds the $50,000 non-taxable limit of §79(a).[91]

Note: With regard to group term life insurance, only the House Report, picked up by reference in the Conference Report, states that such insurance on the employee's spouse or children will be treated as a non-taxable benefit.[92] There is no statutory language to this effect. Under current regulations, up to $2,000 of group term life insurance for dependents is excludible.[93] Because the Act states that the only tax-free benefits includible in a plan are those that are tax-free by the express provisions of the Act, it is arguable that, absent express statutory language, the $2,000 of dependents' insurance cannot be part of a cafeteria plan.

Comment: The TRA limitations concerning what benefits may be provided in a cafeteria plan will have an impact on those plans that previously included taxable benefits as an alternative to cash. Such benefits as, for example, parking, auto insurance and vacation homes can no longer be offered through a cafeteria plan. Tax Management understands the Treasury sought this limit because of the problems involved in establishing a value for such benefits and difficulty with enforcement.

2. *Limitation on Benefits to Key Employees*

Under pre-TRA law, tax-free benefits available under a cafeteria plan were not excludable from the gross income of a highly-compensated participant if the plan discriminated with regard to eligibility or benefits and contributions.[94] Act §531(b)(3) amends §125(b) to provide that the exception to the constructive receipt doctrine provided by §125(a) not only will not be available to the highly-compensated if the plan discriminates, but also, if more than 25 percent of the aggregate of all benefits provided to employees under the plan are provided to key employees, key employees will be taxed as though they received all available taxable benefits under the plan.[95]

Comment: The Conference Report indicates that in determining the portion of the total nontaxable benefits that is provided to key employees, coverage under a plan (e.g., an accident or a health plan) and not actual expense reimbursements will be counted.[96]

For purposes of this provision, "key employee" is defined under §416(i)(1).[97] Thus, a key employee is an employee who, at any time during the plan year or any of the four preceding plan years, is: (i) an officer of the employer; (ii) an employee having annual compensation from the employer of more than $45,000 (for 1984, i.e., 150 percent of the §415(c)(1)(A) dollar limit) and owning (or considered as owning within the attribution rules of §318), one of the 10 largest equity interests in the employer; (iii) a 5-percent owner of the employer; or (iv) a 1-percent owner of the employer having annual compensation from the employer of more than $150,000.[98]

As previously mentioned, statutory nontaxable benefits provided to key employees may not exceed 25 percent of the aggregate of such benefits provided for all employees under the plan. In computing the amount of statutory nontaxable benefits, the Act provides that §79 group-term life insurance benefits that exceed $50,000 should be excluded.[99]

The Act provides guidance concerning when key employees in a discriminatory plan should include taxable benefits in income. The benefits provided to highly-compensated participants or key employees under a discriminatory plan will be treated as received or accrued in the taxable year of the participant or key employee in which the plan year ends.[100]

3. Transition Rules for Certain Cafeteria Plans and Benefits

a. General Transitional Rule

The Act provides a general transitional rule for cafeteria plans and benefits offered under such plans if the plan was in existence on February 10, 1984 but failed as of that date (and continued to fail thereafter) to satisfy rules relating to §125 under the proposed regulations. Such plans and benefits will qualify for §125 treatment only until the earlier of January 1, 1985, or the effective date of any plan modification to provide additional benefits after February 10, 1984.[101]

Essentially, as a result of this general transition rule, cafeteria plans (including ZEBRA plans) in existence on February 10, 1984 (the date of the IRS' news release) will be permitted to operate as cafeteria plans through the end of 1984 (or, if earlier, the effective date of any plan modification to provide additional benefits) without regard to the proposed regulations. The Conference Report provides as an example that if, on February 10, 1984, a flexible spending arrangement failed to satisfy the proposed regulation's rules relating to accident or health plans, and thereafter continues to fail such rules because the arrangement provides for the cash-out or carryover of unused amounts at the end of the plan year, the arrangement will be treated as qualifying as an accident or health plan until the earlier of the two transition dates.[102]

b. Special Transitional Rule with Regard to Advanced Election Benefit Banks

Where a benefit offered under a cafeteria plan that was in existence on February 10, 1984 failed on that date (and continued to fail thereafter) to satisfy the rules of §§105, 106, 120 or 129 under the proposed regulations because the employee was assured of receiving amounts available but unused for covered reimbursement during the year without regard to whether he incurred coverage expenses, the benefit will not fail to be a nontaxable benefit solely because of the failure to comply with the proposed regulations. Relief is provided only with respect to benefits provided under cafeteria plans before the earlier of July 1, 1985 or the effective date of any plan modification to provide additional benefits after February 10, 1984.[103]

Comment: The inclusion of the "continued to fail thereafter" language raises several questions. If a plan, which was terminated after February 10, 1984 because the employer was not able to comply with the proposed regulations, was reactivated, would the plan have to comply with the TRA rules or would it qualify under the transitional rule? Tax Management understands that this situation is colloquially referred to as "the dead ZEBRA phenomenon" and that it is clear that any resurrection of the plan would have to comply with the TRA rules and would not be covered by the transitional rules. A second question is whether the more common situation in which an employer suspended the plan following February 10, 1984 will be considered a *de facto* termination? Tax Management understands that this is colloquially referred to as "the frozen ZEBRA phenomenon" and that it is likely that, if contributions to such plans resume, such plans will be covered by the transitional rules.

Essentially, this special transition provision provides relief with respect to the forfeiture ("use-it-or-lose-it") rules in the proposed regulations. If a plan was in existence on February 10, 1984, and the employee was required to fix the amount of the contributions to be made on his behalf before the beginning of the period, and cash is not available before the end of the year (or termination of employment, if earlier), the plan will be a cafeteria plan even though it fails to comply with the forfeiture restrictions in the proposed regulations. This transitional rule requires, however, that the plan be modified before January 1, 1985 to comply with these restrictions. The transitional relief expires for benefits provided after July 1, 1985 (or the effective date of any modification to provide additional benefits, if earlier).[104]

Query: What if a plan in existence on February 10, 1984 that did not comply with the forfeiture restrictions continues not to comply and then is terminated on January 1, 1985? Is this a "modification to comply" with the restrictions so as to qualify the 1984 operation of the plan for this special transitional relief?

In lieu of distributing taxable cash to a participant at the end of the applicable period of coverage, the Conference Report indicates that it would also be permissible for the unused amounts to be carried over to the succeeding year.[105] An arrangement could also permit a participant to terminate contributions during the period of coverage or to change the rate or amount of contributions during the period of coverage on account of certain changes in family status or a change in employment status from full-time to part-time, or vice versa. The conferees intended that this special transition relief would be available to arrangements that, on February 10, 1984 and thereafter, failed to satisfy the above restrictions if such arrangements were modified before January 1, 1985 to comply with the restrictions. The special relief under this rule is for benefits provided before the earlier of July 1, 1985, or the effective date of any modification of the arrangement to provide additional benefits if the modification becomes effective after February 10, 1984. Again, the conference agreement does not prevent the application of the proposed regulations after the earlier of the applicable dates.[106]

Comment: The heart of the controversy concerning ZEBRA arrangements is the amount of potential revenue loss. According to Treasury data, more than $130 billion in after-tax dollars is spent on nondeductible medical expenses alone by employees covered by employer health plans. If all these employers sponsored ZEBRAs with medical benefits, the $130 billion would be deductible. This statistic should be compared with the 1978 revenue cost estimate for cafeteria plans which was "less than $5 billion."

Note: From April to July 1984 there was correspondence between personnel at the Department of Treasury, the Department of Health and Human Services, the IRS, and Cong. Conable and Sen. Packwood on cafeteria plan issues that demonstrate the concerns and reasoning of those involved in developing cafeteria plan policy.[107]

4. Transition Rules Apply to Substantially Implemented Plans

Where a plan was not in existence on February 10, 1984 and therefore would not come within the transitional

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

rules described *supra*, but the employer has incurred substantial implementation costs before February 10, 1984, the Act allows such cafeteria plans to be treated as though they existed on February 10, 1984.[108]

Although a definition of substantial implementation costs was not included in the statute, the Conference Report provides some guidance. If an employer has incurred, as of February 10, 1984, either more than $15,000 of implementation costs or more than half the total costs of implementing the cafeteria plan, the transition rules are to be available. The conferees also indicated that total implementation costs are the costs of designing and installing computer programs for operation of the plan and the costs of printing cafeteria plan brochures for employees.[109]

Comment: Tax Management understands that the Service will take a restrictive position on what will satisfy the substantial implementation rules. Thus, for example, it is unclear whether the payment of $15,000 for an opinion of outside legal counsel and a draft of a plan will be considered substantial implementation costs because legal fees are neither computer program nor printing costs. The issue should be resolved in regulations.

Note: Costs associated with more than one plan of the same employer are to be allocated among the plans on the basis of the number of participants in the plans.[110]

5. Reporting Requirements

The Act imposes reporting requirements on employers maintaining cafeteria plans during any taxable year that begins after 1984. Such employers are required to file a return (in a time and manner prescribed by the Secretary of the Treasury in regulations) including the following information for each plan year:

(1) The number of employees of the employer.

(2) The number of employees participating under the plan.

(3) The total cost of the plan during the taxable year.

(4) The name, address and taxpayer identification number of the employer and the type of business in which the employer is engaged.[111]

Note: Tax Management understands that a statistically significant number of employers (from .5 to 1 percent) will be selected based on a sampling from the first set of returns and will be required to file more complicated returns. The additional returns are likely to require information on the types of benefits provided under the plan and a breakdown of benefits by amount and type, according to various wage brackets of active employees. The data will show both whether the plan tends to discriminate in operation and how widespread is the use of these statutory fringe benefits under the plan across different income brackets.

Employers are also required to maintain records necessary to demonstrate whether the requirements of Act §531(b) are met.[112]

Further, the Act imposes a $25 per day penalty (up to $15,000) for failure to file the required information returns if the failure is not due to reasonable cause.[113]

6. Study of Effects of Cafeteria Plans on Health Care Costs

Act §531(b)(6) requires the Secretaries of Health and Human Services and the Treasury to jointly conduct a study of the effects of cafeteria plans on containing health care costs. That report is to be submitted to the House Committee on Ways on Means and the Senate Committee on Finance no later than April 1, 1985.[114]

The Conference Report directs that the study examine the impact which the use of cafeteria plans (including flexible spending arrangements) has on the containment of health care costs and that it recommend what modifications might be desirable with respect to the cafeteria plan rules to optimize their potential to reduce medical costs (balanced against the fulfillment of other health care policy goals).[115] The conferees also requested an analysis of the advisability of establishing federal guidelines relative to the type of medical plans that can qualify for cafeteria plan treatment in a manner similar to that applicable to qualified pension plans and of the advisability of adding additional benefits to cafeteria plans.[116] The conferees further required that the operation of the nondiscrimination rules and the forfeitability requirements under cafeteria plans, and the effects of such provisions on the federal tax base and on health care cost containment, be studied.[117]

III. Changes Relating to Group Term Life Insurance

A. Introduction

Employees may exclude from gross income amounts paid by their employer in their behalf to purchase up to $50,000 of §79 group-term life insurance.[118] If the employer provides more than $50,000 in coverage, the employee must include the cost of the excess, less any contributions that the employee made to the purchase, in gross income.[119] The cost of the amount that must be included in income is based on a table prepared by the IRS.[120] The table contains uniform premium costs that are substantially less than actual cost especially for those who have reached age 64.

The §79 rules also contain a nondiscrimination requirement which, essentially, denies the favorable tax treatment to key employees in a discriminatory plan. Under pre-TRA (post-TEFRA) law, if the plan was discriminatory, key employees had to include in income the full cost of group-term life insurance purchased on their behalf based on the amounts in the IRS uniform premium cost table. Under pre-TRA law, the rules of §79 did not cover disabled or retired employees and, therefore, the entire cost for providing life insurance in any amount to such employees was excludible from their gross income. In addition, the nondiscrimination requirements did not apply to the disabled or to retirees.

Apparently believing that the application of §79 to retired employees was too generous, Congress amended the provision to cut back benefits to retirees and to include retirees in testing for discrimination.

B. Overview of the TRA Rules

1. Provisions

The Act generally makes three changes to the pre-TRA treatment of group-term life insurance. First, after the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

TRA, retirees, as well as active employees, will not be permitted to exclude more than the cost of $50,000 of group-term life insurance from gross income. Second, the nondiscrimination rules will be applied to plans covering retired employees as well as active employees. Third, if a plan discriminates, key employees and retirees will have to include in income the actual cost of the insurance benefit rather than the uniform premium cost prescribed by the Treasury.[121]

2. Effective Date

In general, TRA §223 applies to taxable years beginning after December 31, 1983. The Act, however, contains a grandfather provision that provides relief for some participants in existing plans. The post-TRA group-term life insurance rules do not apply to any plan in existence before January 1, 1984, with respect to any employee who was employed before January 1, 1984 and who retires under the plan if the employee reached age 55 by January 1, 1984. This grandfather provision does not apply, however, to any individual retiring after December 31, 1986 if the plan discriminates after that date.

C. Detailed Analysis

1. General Provisions

a. Section 79 Extended to Former Employees

Section 79(a) excludes from the gross income of an employee for any taxable year the cost of up to $50,000 of group-term life insurance if the insurance is carried directly or indirectly by the employer.[122] (Any amount paid by the employee toward the purchase of such insurance increases the excludible amount.)[123]

Section 79(b) permits retired and disabled employees to exclude the total amount of premiums paid by a former employer on any amount of group-term life insurance even if it exceeds $50,000.

For determining cost for insurance in excess of $50,000, the Treasury has issued a uniform premium cost table, Table I. This table establishes premium costs on the basis of five-year age brackets.[124] If an employee has attained age 64, the cost of his group-term life insurance is computed under Table I as if he were age 63.[125]

The Act provides that retired employees will be treated as employees for purposes of §79 and, therefore, retired employees may not exclude more than the cost of $50,000 of employer-provided group-term life insurance.[126]

Thus, the $50,000 limit on the amount of group-term life insurance that may be provided tax-free to employees also applies, after the TRA, to retired employees. The provision, however, does not apply to those who have terminated employment because of disability. Disabled employees may continue to exclude the cost of providing group-term life insurance in any amount.[127]

The Act's amendment to §79 does not alter Table I. Therefore, if an employer carries life insurance in excess of $50,000 for a retired employee, the amount that will be included in the retired employee's gross income for that year will be computed under Table I. In addition, because Table I "tops-off" at age 63, the benefit will be computed at the age 63 cost.

2. Amount of Inclusion Where Plan is Discriminatory

TEFRA (P.L. 97-248) amended §79 to include nondiscrimination requirements for taxable years beginning after December 31, 1983.[128] The nondiscrimination rules require that where a plan is discriminatory, key employee (defined by reference to §416(i)) participants must include the full Table I cost of the employer-provided benefit in gross income.[129]

The TRA amended the TEFRA nondiscrimination provisions by requiring that a key employee in a discriminatory plan include the actual cost of the employer-provided group-term life insurance rather than the cost computed under Table I.[130] Thus, if the nondiscrimination standard is not met and the retired employee is a key employee, the actual cost of the coverage (without the $50,000 exclusion) will be included in his gross income. The consequences of prohibiting the use of the Table I where a plan is discriminatory is that the actual cost which must be included is likely to be greater than the Table I amount. The Senate Report provides an example of the cost differential. It indicates that at age 65, the premium cost in Table I was, at the time of that report, $1.17 per $1,000 of insurance. A retiree, age 65, who receives $100,000 of group-term would recognize $702 of income which would produce, under the tax tables in effect in 1984, a maximum of $351 in additional income tax. By contrast, the rate schedules of one major company set the premium for $100,000 of individual term coverage for a 65-year-old male in excess of $3,000 per year.[131]

3. Testing for Discrimination

Neither the statute nor the Conference Report provides guidance concerning how, for purposes of determining if a plan is discriminatory, insurance coverage for retired employees should be tested with respect to coverage for active employees.

The Senate Finance Committee Report indicates that, for purposes of determining whether a plan is discriminatory, insurance coverage for retired employees should be tested separately from insurance for active employees because employers often provide lower group-term benefits to retired employees and this reduction of benefits under a plan generally reflects a retired employee's reduced need for insurance coverage to replace his earning potential.[132] At one point in the legislative process, it was generally believed that the failure to include in the Senate Bill language implementing a separate testing procedure was an inadvertent omission which would be corrected in Conference. The language that emerged from Conference, however, also did not specifically implement this separate testing requirement. Further, although the Conference Report stated that it generally follows the Senate amendment, it made no specific reference to the separate testing discussion in the Senate Report nor did it set out any special guidance concerning whether retiree plans should be tested separately.

Query: Whether for purposes of determining whether a plan is discriminatory, insurance coverage for retired employees should be tested separately from insurance for active employees.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

4. Cost of Group Term Life Insurance Coverage Included in Income of Retiree for Year in Which Coverage is Received

The TRA amended §83(e) (relating to the application of §83) by indicating that the §83 rules concerning when to include in income property transferred in connection with the performance of services, do not apply to the cost of group-term life insurance to which §79 applies.[133] The effect of the amendment to §83 is that the cost of group-term life insurance coverage will be included in the income of the retiree for the year in which the coverage is received, whether or not the benefit of retirement coverage vests upon retirement.

Comment: The Conference Report indicates that, by adopting the Senate amendment, including the clarification of when the group-term life insurance benefit for a retired employee is included in income, the Conferees did not intend to affect in any way the determination of whether the form of the benefit received by an employee upon retirement constitutes group term life insurance for purposes of §79.[134]

5. Effective Date

The amendments made by the 1984 TRA to §§79 and 83 generally apply to taxable years that begin after 1983.

6. Nonapplicability Provisions for Existing Plans

There are certain nonapplicability or grandfathering provisions for existing plans. Essentially, the amendments made to §§79 and 83 do not apply to any pre-January 1, 1984 plan with respect to any pre-January 1, 1984 employee who retires under such plan, if the employee had reached age 55 by January 1, 1984. The provisions also do not apply to any employees who retired before January 1, 1984. The grandfather protection is not available, however, for any individual retiring after 1986, if the plan is discriminatory after that date.

Comment: Not only is the grandfather rule applicable to any group-term life insurance plan of the employer, but the statute clarifies that a successor plan of a successor employer is also covered by the grandfather rules.[135]

The Senate Report indicates that the term "employer" may be interpreted broadly to allow employee transfers between comparable plans by an affiliated group.[136] Also, for these purposes, a successor employer refers to a situation in which an employer assumes the group term insurance obligations of another employer because of a business merger or acquisition, but does not refer to a new employer when an individual covered by a plan changes jobs and becomes covered by the new employer's group-term life insurance plan.[137] There is no statutory language to this affect, and the Conference Report does not specifically pick up this language from the Senate Report. Therefore, it is unclear whether the statute permits transfers between comparable plans offered by an affiliated group and also whether a successor employer refers to a situation in which an employer assumes the group-term insurance obligations of another employer because of a business merger or acquisition.

The Act indicates that the coverage provided to employees who retired on or before December 31, 1986, will not be taken into account for purposes of determining whether the plan is discriminatory after December 31, 1986.[138]

IV. Changes Affecting Incentive Stock Options

A. Introduction

In 1981, as part of ERTA (P.L. 97-34)Congress added §422A to the Code establishing a new type of tax-favored stock options—incentive stock options (ISOs). Basically, under §422A, an employee realizes no income upon receiving or exercising an incentive option, and his gain upon the ultimate sale of stock acquired with the option is subject to tax at capital gain rates, provided that the employee does not transfer the stock within two years after the option is granted and within one year after the date of exercise.[139] The "bargain" element realized by an optionee upon exercise of an ISO (*i.e.*, the difference between the option price and the fair market value of the stock on the exercise date) is a preference item for purposes of the alternative minimum tax. A controversy has existed, however, as to the effect of restrictions on the fair market value of qualified stock and the corresponding amount of tax preference. Although the minimum tax regulations provide that, in calculating the amount of the tax preference, only nonlapse restrictions reduce the fair market value of qualified stock, the Tax Court rejected this position in *Gresham v. Comr.*, 79 T.C. 322 (1982).

To qualify for the favorable tax treatment described above, an incentive option and the plan under which it is granted must satisfy a number of criteria specified in §422A. One of the specific requirements imposed by the statute is that the option price of an incentive option must equal or exceed the fair market value of the stock at the time the option is granted. The statute also provides that the fair market value requirement will be satisfied when the parties make a good faith effort to value the stock subject to the option.

Because it apparently believed that §83 principles should generally govern the determination of the fair market value of stock subject to incentive options, the Senate proposed that the incentive stock option and alternative minimum tax rules be amended to provide that the fair market value of stock be determined without regard to any restrictions other than restrictions which, by their terms, will never lapse. The Senate also proposed a technical change in the rules governing modifications of incentive options. Although the House version of the Act did not contain parallel provisions, the Conference Committee adopted the Senate measures in the final bill.

B. Overview

The 1984 Act added a new paragraph to §422A(c) which provides that, for purposes of determining whether the fair market value of stock equals the option price, stock shall be valued without regard to any restriction other than a restriction which, by its terms, will never lapse.[140] The statute also added a parallel provision to §57(a)(10) to provide that, under the alternative minimum tax, the item of tax preference arising from the exercise of an incentive

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

stock option will be calculated by determining the value of the stock without regard to restrictions that will lapse in the future.[141]

The Act also amended §425(h)(3) by removing the exclusion from the definition of the term "modification" which previously had existed for an amendment to an option to impose the transferability restrictions of §422A(b)(5). In light of this amendment, when an option is amended to include the requisite transferability restrictions, the option must be repriced to the current fair market value of the stock to qualify as an incentive option.

The amendment to §422A(c) applies to options granted after March 20, 1984, except that the amendment does not apply to an incentive stock option granted before September 20, 1984, pursuant to a plan adopted or corporate action taken by the board of directors of the grantor corporation before May 15, 1984. The amendment to the alternative minimum tax apparently generally applies to options exercised after March 20, 1984; however,in the case of an option issued after March 20, 1984, pursuant to a plan adopted or corporate action taken by the board of directors of the grantor corporation before May 15, 1984, the amendment shall apply only to options exercised after December 31, 1984. Finally, the amendment regarding the definition of "modification" in §425(h)(3) presumably applies to modifications of options occurring after March 20, 1984.

Note: The effective dates of the latter two provisions are ambiguous inasmuch as the effective date provisions make erroneous references to the operative subsections of §555.

C. *Detailed Analysis*

1. *Effect of Restrictions on the Valuation of Stock Subject to Incentive Stock Options*

Section 422A(b)(4) provides that the option price of an incentive stock option must equal or exceed the fair market value of the stock on the date the option is granted. This fair market value rule will be deemed to be satisfied where the parties make a good faith effort to calculate the fair market value of the stock.[142]

New §422A(c)(10) provides that the fair market value of stock shall be determined without regard to any restriction other than a restriction which, by its terms, will never lapse. The legislative history suggests that Congress believed that restrictions might be added to incentive stock to circumvent the fair market value rule of §422A(b)(4).[143]

In drafting the amendment to §422A(c), Congress drew upon the statutory language and valuation principles of §83(a). That section provides that, in determining the amount of income realized by a person who receives property in exchange for performing services, the fair market value of such property is determined without regard to any restriction other than a restriction which, by its terms, will never lapse. Section 83(a) taxes the difference between the value of the property and the amount paid for the property.[144] Thus, in drafting §83, Congress recognized that restrictions which are permanently attached to property (commonly known as "nonlapse restrictions") can affect its value and should be taken into account when calculating the amount of income taxed under §83.

Although the statutory language of §83(a) appears broad enough to include most permanent restrictions which encumber property received by an employee, the Service has defined the term "nonlapse restriction" in a relatively narrow manner. The regulations under §83 provide that a nonlapse restriction is a:

> "permanent limitation on the transferability of property (i) which will require the transferee of the property to sell, or offer to sell, such property at a price determined under a formula, and (ii) which will continue to apply to and be enforced against the transferee or any subsequent holder (other than the transferor)." [145]

Comment: For a detailed analysis of the regulation quoted above and its underlying legislative history, see 384 T.M., *Restricted Property—Section 83.* As noted in 384 T.M., it can be argued that the definition in the regulation is unduly restrictive in light of the committee reports explaining §83.

The Service presumably will adopt the principles in the §83 regulations in interpreting new §422(c)(10). Further, if the Service were to promulgate regulations adopting the standards in the §83 regulations as governing for purposes of §422A, a taxpayer who ignored those regulations presumably could have difficulty in demonstrating that he met the good faith exception to the fair market value requirement of §422A(b)(4).

2. *Alternative Minimum Tax*

Under the alternative minimum tax, the "bargain" element realized by an optionee upon his exercise of an incentive stock option is an item of tax preference.[146] Thus, if an optionee exercises an incentive option with an option price of $10 per share when the fair market value of the stock is $15, he will include in his items of tax preference $5 for each share of stock acquired.

Note: When Congress created incentive options by adding §422A to the Code it determined that the difference between the option price of an incentive option and the fair market value of the stock at the date of exercise should not be treated as an item of tax preference. *See* H.R. Rep. No. 215, 97th Cong., 1st Sess. 234 (1981). The revised alternative minimum tax enacted by TEFRA, however, included as an item of tax preference the amount by which the fair market value of stock acquired by an ISO optionee exceeds the option price. The Code treats this amount as a tax preference item for the year in which an incentive option is exercised.

Regs. §1.57-1(f)(3) provides that, in determining the fair market value of stock acquired pursuant to the exercise of a qualified stock option, restrictions other than nonlapse restrictions have no effect on value. The Tax Court held in *Gresham v. Comr.*[147] that this regulation was invalid because it exceeded the scope of the underlying statute. Specifically, the court reasoned that the former §57(a)(6),[148] which simply measured tax preference as the difference between the option price and the "fair market value" of stock, could not be read to support the position that restrictions other than nonlapse restrictions could be ignored when valuing stock. The court also contrasted §83(a) which, of course, expressly includes the valuation rules which the Service attempted to impose through its

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

regulations adopted under §57. Although *Gresham* considered only the application of the minimum tax to qualified options, the rationale of the decision was equally applicable to incentive options and §57(a)(10).

The 1984 Act amended §57 to overrule the Tax Court's decision in *Gresham* and impose valuation rules identical to those added to §422A. Thus, §57(a)(10) now provides that, for purposes of determining the amount of an optionee's tax preferences, the fair market value of stock acquired pursuant to the exercise of an incentive option shall be determined without regard to any restriction other than a nonlapse restriction.[149] This amendment ensures that common principles will govern the valuation of stock under both the alternative minimum tax and the general incentive stock option rules.

3. Modification of Incentive Stock Options

Under §425(h)(1), the modification, extension, or renewal of an incentive option is treated as the granting of a new option. The term "modification" generally includes "any change in the terms of the option which gives the employee additional benefits under the option."[150] Inasmuch as a modification is treated as the grant of a new option, the "new option" must meet, at the time of the modification, all the statutory requirements applicable to incentive options. Thus, if an incentive option is modified within the meaning of §425(h) and the stock subject to the option has appreciated since the date of original grant, the option price must be reset to the fair market value of the stock on the date of the modification in order for the option to qualify as an incentive option.

Prior to the enactment of the 1984 Act,§425(h)(3) excluded from the definition of "modification" a change in the terms of an option to impose the transferability restriction of §422A(b)(5). This latter section provides that an incentive option may not be transferable by the optionee other than by will or the laws of descent and distribution, and must be exercisable only by the employee during his lifetime. The Act amended §425(h)(3) to delete this exclusion from the definition of the term modification.[151] Thus, if an option is amended to conform to the nontransferability requirement of §422A, the amendment will be treated as the grant of a new option, which must satisfy all of the applicable incentive option rules as of the date of the modification (*e.g.*, the option price must equal the fair market value of the stock on that date, etc.).

Comment: The Act's legislative history does not reveal Congress' purpose for the amendment to the modification rules. The amendment is somewhat curious in light of the fact that §425(h) allowed qualified and restricted options (the predecessors of incentive options) to be amended to include similar transferability restrictions without the amendments creating a modification.

V. Changes Affecting Restricted Property Elections

A. Introduction

In 1969, Congress enacted §83 of the Internal Revenue Code in response to the disparity in the tax treatment of restricted stock plans and other types of deferred compensation arrangements.[152] Although Congress was concerned primarily with the favorable tax treatment afforded restricted stock plans, the statute was drafted with broader application. It provides that whenever any kind of property is transferred to an employee in connection with the performance of services it is includable in income (to the extent the value of the property exceeds the amount paid) in the first taxable year the property is transferrable and not subject to a substantial risk of forfeiture.

Section 83 permits a taxpayer to elect to include in gross income at the time the property is initially transferred the excess of the property's value (determined without regard to restrictions) over the amount paid.[153] This election must be made within 30 days of the transfer of property.[154]

Section 83 has been subject to several legal attacks on its broad application.[155] In one such case, *Alves v. Comr.*,[156] a taxpayer challenged the applicability of §83 to his purchase of his employer's stock at fair market value. Until *Alves*, it was widely believed that non-discount or non-bargain purchases of employer stock by employees were not covered by §83(a). The Tax Court, affirmed by the 9th Circuit, held that the stock, although initially transferred for fair market value, was transferred in connection with the performance of services and therefore was subject to §83(a). The court said that Mr. Alves could have made a §83(b) election at the time of initial transfer thereby avoiding tax on the subsequent appreciation in value, but because Mr. Alves had not made the election, he was subject to taxation on the appreciated value at the time the property became transferrable and not subject to a substantial risk of forfeiture.[157]

B. Overview of TRA Provision

The Court's holding caught many in the business community by surprise and left many taxpayers who were instrumental in starting successful firms in the 1970s and 1980s and who had not made §83(b) elections in a large potential tax liability situation. In response, Congress amended the election provisions of §83(b) to provide a one-time extension of time to make the election to those who acquired restricted stock during the specified time period.[158]

Section 556 of the 1984 TRA permits those who bought stock at fair market value (in connection with the performance of services) after June 30, 1976 and before November 18, 1982, the date of the Tax Court decision in *Alves*, to make a §83(b) election for the stock without regard to the 30 day limit, provided the employer consents to the election.[159]

C. Detailed Analysis

Section 556 of the Act permits a person to whom property was transferred in connection with the performance of services after June 30, 1976 and before November 18, 1982, the date of the *Alves* Tax Court opinion, to make a §83(b) election on his income tax return for the first taxable year ending after July 18, 1984. For individuals using a calendar tax year, the election should be made on their 1984 tax return. This remedial election is only permitted if the taxpayer paid fair market value for the property (regardless of any restrictions on the property other than a restriction which, by its terms, will never lapse) and the election must be consented to by the person who transferred the property, typically the employer.[160]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The provision requires that the election contain information currently required by the Secretary of Treasury for making §83(b) elections. The period for assessing any tax attributable to the transfer of property which is the subject of the election is held open for three years from the date of election.

Comment: Although Congress has determined that it will provide remedial relief to certain taxpayers who paid fair market value for property received in connection with the performance of services and who neglected to make a §83(b) election within the 30 day period prescribed by §83(b), the relief provided did not assist Mr. Alves because the transfer of property in his case took place before June 30, 1976. The June 30, 1976 date was adopted in response to a specific request by the special interest group (not connected with Mr. Alves) that promoted the relief provision.

Although it, too, would not have provided relief to *Alves,* the Senate floor amendment contained a larger window within which transfers could be the subject of an election. In the Senate amendment, the election would have applied with respect to transfers of property made after June 30, 1976 and before the date of enactment of the 1984 TRA. In Conference, however, the window period was cut to the time between June 30, 1976 and the date the Tax Court reached its decision in *Alves.* This presumably reflects the conferees' belief that those receiving transfers after the date of the *Alves* decision had due notice that the transfer would be subject to §83(a) and that, to avoid adverse consequences, a §83(b) election should be made.

Comment: This result appears to be a bit harsh, even for those represented by counsel, because of the time it takes to disseminate a new opinion and to restructure arrangements to satisfy its requirements.

While Act §556, extending the time for making §83(b) elections, provides some relief to those who received property within the specified time period and who choose during the period provided to make the election, the amendment has no effect on the future application of §83.[161] Further, the amendment in no way alters the conclusions of the Tax Court and the 9th Circuit concerning the fact that stock transferred to an employee at fair market value in a factual situation similar to Mr. Alves' is the "transfer of property in connection with the performance of services." Thus, with the adoption of TRA §556, Congress has not signalled an intent to limit the scope of the applicability of §83, an issue which has been the subject of much recent litigation.

[83] Act §531(g).
[84] H. Rep., p. 1608-9. The House bill provision was included at the request of the Administration and, in fact, was an item in the 1983-84 Budget.
[85] Prop. Regs. §1.61-16 would have required that the choice between taxable and non-taxable benefits not only be made before the amounts become payable to the employee (as required by some courts that had reviewed the constructive receipt issue), but also that such choice be made a sufficient length of time before the amounts are payable to avoid the application of the constructive receipt doctrine. The proposed §61 regulations implied that the deferral election had to be made before the services were performed which gave rise to the compensation to avoid the application of principles of constructive receipt.
[86] The passage of §125 can be viewed as a reaction to Prop. Regs. §1.61.16. In effect, §125 protects employees that make their election (to chose either taxable or non-taxable benefits) before performing their services.
[87] At the IRS hearings on the proposed regulations held July 26, 1984, Service personnel expressed their intent to re-propose regulations by the end of August, 1984.

[158] *See* Senator Tsongas' statement in which he introduced the amendment to §83(b). Cong. Rec., p. S4509 (4/12/84).
[159] The provision was introduced for the first time on the Senate floor on April 12, 1984 by Senator Tsongas of Massachusetts. In his floor statement, Mr. Tsongas said that the purpose of his amendment was to prevent an unintended tax result where restricted stock is sold by a start-up company to its founders for full fair-market value. He pointed to the *Alves* case and said that it appears that §83 might make such a sale a taxable event to the employee, entitling the company to a tax deduction, unless the employee files an election to include a zero amount in his taxable income within 30 days after his stock purchase. Mr. Tsongas said, "This is a questionable tax policy result and its main impact will fall on founders of new successful high technology and other enterprises who have no warning that such a tax trap could be involved in a routine corporate formation." (Cong. Rec., p. S4509-S4510 (4/12/84).) Sen. Tsongas emphasized that it was the intention of the amendment to provide a cure procedure for those who had failed in the past to make elections in the typical start-up situation. In essence, "[t]he Act provides a one-time opportunity for taxpayers to make an election to include zero in gross income with respect to property acquired before a specific date. The amendment will have no affect on the future application of §83." (Cong. Rec., p. S4510 (4/12/84)).
[160] Act §556.

Chapter 47

NEW RULES FOR WELFARE BENEFIT PLANS

Diane J. Fuchs, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. *Overview*

In enacting §§511 through 513 of the Tax Reform Act of 1984 (the Act) Congress sought to correct certain perceived abuses and inequities involving employer-provided welfare and deferred compensation benefits. Some of the specific perceived abuses are the use of retired lives reserve accounts (RLRs) and stabilization funds maintained by insurance companies to accumulate funds to pay life insurance and health and disability insurance benefits to executives after retirement, excessively funded severance pay plans, the use of voluntary employee beneficiary associations (VEBAs) to purchase facilities such as ski chalets and obtain full current deductions, and the reversion of accumulated VEBA assets to employers or key employees.[1]

Under prior law, an employer's entire contribution to a welfare benefit fund (WBF) was deductible in the year it was made rather than at the time the benefit was provided. Such treatment differed from deductions for employer contributions to nonqualified deferred compensation plans, for example, in that generally contributions to the latter are not allowed until an amount is includable in the gross income of the employee under §83. Congress has concluded that such favorable tax treatment for welfare benefit funds is inappropriate in view of the favorable tax treatment already provided to employees in the form of the exclusion of many of the benefits provided by WBFs from adjusted gross income.[2] Congress has also determined that the prior rules under which employers could take deductions for plan contributions well in advance of when the benefits were paid were not desirable because they allowed tax-free accumulation of funds. Such an accumulation, especially in a fund that is also tax-exempt, as in the case of a VEBA, gave WBFs tax-shelter potential.[3]

Congress was also concerned about the lack of clarity in the distinction between welfare benefits and unfunded benefits that are deferred compensation. This lack of clarity has generated litigation and, in one case, a court has held that a benefit treated by the Service as deferred compensation was, in fact, a welfare benefit.[4]

B. *Outline of New Provisions*

The Act imposes limitations on the amount of contributions to WBFs that are permitted as deductions,[5] it revises the unrelated business income rules to prohibit the accumulation of unlimited surpluses in VEBAs and qualified group legal service plans (GLSOs),[6] provides the new nondiscrimination requirements for WBFs,[7] imposes a new excise tax on certain disqualified benefits,[8] imposes additional reporting requirements on VEBAs and GLSOs seeking non-profit organization status,[9] and clarifies the distinction between welfare benefits and unfunded deferred compensation.[10]

The overall impact of these provisions will be to require accrual basis employers to account for deductions for contributions to WBFs as though they were on a cash basis, reduce the employer deduction benefits of maintaining WBFs, limit the accumulation of assets in such plans generally, and particularly with regard to retirement, health and insurance benefits for key employees, and to make WBFs far more expensive to administer by necessitating an actuary's certification in order to obtain the higher deduction limits. As a result of these changes, the greatest impact will be felt by smaller employers that will essentially have to comply with the safe harbor limits for deductions because they cannot afford, or do not choose to obtain, actuarial certification.

C. *Effective Date*

Although there are several exceptions, the general effective date for the Act §511 provisions setting limits on deductions to WBPs, amending the unrelated business income provisions, and imposing new excise taxes with respect to WBPs is for contributions paid or accrued on or after January 1, 1986. The general effective date for the Act §512 rules concerning unfunded deferred benefits is for amounts paid or incurred on or after July 18, 1984 (the Act's enactment date) and the effective date for the Act §513 nondiscrimination requirements with regard to VEBAs and GLSOs is for "years" beginning after 1984.

II. Detailed Analysis

A. *Funded Welfare Benefit Plans*

1. *Coverage*

While the major impact of the WBF provisions will be on VEBAs, the provisions apply more broadly. Act §511(a) added Code §419(e)(1), which defines "welfare benefit fund" as any fund that is part of a plan of an employer through which the employer provides welfare benefits to its employees and beneficiaries.[11] Welfare benefits are defined in new §419(e)(2) as all benefits except those (a) provided under a qualified retirement-type plan to which §404 or §404A (relating to certain foreign deferred compensation plans) applies, (b) involving a transfer of property in connection with the performance of services that is deductible by an employer under §83(h), or (c) involving a vacation pay accrual election under Code §463.[12] In addition to tax-exempt social clubs, VEBAs, supplemental unemployment benefit trusts (SUBs), and GLSOs, the term

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

"fund" includes retired lives reserve accounts (RLRs) and stabilization accounts typically held for employers (or VEBAs) by insurance companies.[13] Any trust, corporation or other organization not exempt from income tax is also considered a welfare benefit fund.[14] Even when there is no plan, but the arrangement of employer contributions or benefits has the effect of a plan, the Act treats the arrangement as a WBF.[15] Plans for independent contractors, if such plans would be WBFs but for a lack of the employee-employer relationship, also are treated as WBFs.[16]

2. Deduction Limits

The Act provides rules for determining the timing and the amount of an employer's deduction for a contribution to a WBF. It contains an exception from these rules for plans to which 10 or more employers contribute and no one employer contributes more than 10 percent of the total contributions.[17]

Under the Act, a contribution which is otherwise deductible under the Code will be deductible under new Code §419 in the taxable year in which paid only to the extent that it does not exceed the qualified cost of the plan for the taxable year.[18] Qualified costs are the direct costs for the taxable year plus certain additions to "qualified asset accounts" for the taxable year within the limits imposed by new §419A(b), *i.e.*, reserves.

a. Qualified Direct Cost

A qualified direct cost for any taxable year of the employer is the aggregate amount (including administrative expenses) which would have been allowed as a deduction to a cash method taxpayer with respect to benefits provided during the taxable year if the taxpayer had provided the benefits directly on a current basis.[19] For example, in the case of a self-insured medical reimbursement plan, the qualified direct cost equals the actual benefit payment made to employees for the taxable year, plus an allocable share of the administrative costs of providing such benefits.[20]

For purposes of determining the qualified direct cost, a benefit is treated as provided when the benefit would be includable in the gross income of the employee (or would be includable in the employee's gross income but for a provision of the Code).[21]

Whereas, generally, the Act reflects a Congressional desire to limit perceived abuses involving the contribution of facilities to WBFs, the Act carves out special favorable treatment for child care facilities. In determining qualified direct cost, the adjusted basis of the facility is deductible over a period of 60 months. To obtain this special treatment, the child care facility must be tangible property of a character subject to depreciation and located in the United States. Further, it must be used primarily for the children of the employees of the employer.[22]

b. Qualified Asset Account

(1) General Limitation

Additions to a qualified asset account are only permitted where a WBF self-funds a reserve set aside to pay insurance-type benefits such as disability benefits, medical benefits, supplemental unemployment or severance pay benefits, and life insurance benefits.[23] A primary thrust of the new WBF provisions is to limit accelerated additions to such an account.[24]

In the past, acceleration resulted from basing the deduction on an obligation to fund a plan in the aggregate rather than on an obligation to pay specific benefits. The new limitations were imposed to assure that no more than the amount estimated to be necessary under actuarial assumptions (such assumptions must be reasonable in the aggregate) are used to fund the liabilities of the plan for the amount of claims incurred but unpaid (as of the close of the taxable year) for benefits permitted under the plan, and for the administrative costs of providing such benefits.[25] The Conference Report states that claims are incurred only when an event entitling the employee to benefits, such as a medical expense, a separation, a disability, or a death, actually occurs.

The allowable reserve includes amounts for claims estimated to have been incurred but which have not yet been reported, as well as those claims which have been reported but have not yet been paid.[26] An example of an incurred but unpaid claim is the occurrence of the death of an employee during the year under a plan that provides for payment to a survivor of the employee for the survivor's remaining life. The qualified asset account may include the estimated present value of the future stream of benefits payable to the survivor, using reasonable assumptions as to earnings of the fund and mortality experience.[27]

Essentially, the Act permits reserves up to specified safe harbor limits and permits higher reserves in certain instances provided the employer does not exceed the statutory limits and obtains actuarial certification.[28]

(2) Special Limitations Applying to Specific Types of Benefits

In addition to the general rule for permissible reserve accounts, the Act provides special rules for specific types of benefits.

(i) Additional Reserve for Post-Retirement Medical and Life Insurance Benefits

The asset account rules expressly permit an additional reserve for post-retirement medical and life insurance benefits provided certain limitation and nondiscrimination requirements are met. *See* new §419A(e).

This type of retirement benefit reserve must be funded over the working lives of covered employees and must be actuarially determined (using assumptions that are reasonable in the aggregate) on a level basis as necessary for either post-retirement medical benefits (determined on the basis of current medical costs), or post-retirement life insurance benefits.[29] The account is limited to the amount of life insurance that would be tax-free to the employee under §79 (employer-provided group-term life insurance) or §101(b) (employee death benefits). The §101(b) amount is determined by substituting $50,000 for $5,000. Under the new §79 rules, the maximum available life insurance for a retiree is $50,000 and this exclusion is only available if the plan is nondiscriminatory under the new §79 rules.[30] In addition, in order for post-retirement medical and life insurance benefits to be included in the account, they must be nondiscriminatory as defined under new Code §505.[31]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(ii) SUB or Severance Pay Benefits

If the WBF provides SUB or severance pay benefits, the account limit is 75 percent of the average annual qualified direct costs of such benefits for any two of the immediately preceding seven taxable years plus the average annual administrative costs for the relevant two years allocable to SUB or severance pay benefits.[32] The SUB or severance pay benefit payable to any individual that may be taken into account for this purpose may not exceed an amount that is payable at an annual rate of 150 percent of the limit in effect under §415(c)(1)(A) (the limit on annual additions to §401(a) defined contribution plans). For 1984, the account limit would be $45,000.[33]

(iii) Disability Benefits

The Act provides that disability benefits payable to individuals may not be credited to the qualified asset account to the extent that the benefits are payable at an annual rate that exceeds either the 75 percent of the individual's average compensation for his high three years (within the meaning of §415(b)(3)) or the limitation in effect under §415(b)(1)(A)) (the limit on annual benefit accruals for §401(a) defined benefit plans), whichever is lower.[34] For 1984, the latter limitation would be $90,000.

c. Safe Harbor Limits

The Act provides that unless there is an actuarial certification of the account limit for any taxable year, the account limit for the year may not be more than the sum of the various safe harbor limits for the different types of benefits in any such year.[35] The safe harbor for short-term disability benefits for any taxable year is 17.5 percent of the qualified direct costs for the immediately preceding taxable year. The safe harbor for medical benefits is 35 percent of the qualified direct costs (other than insurance premiums) for the immediately preceding taxable year.[36] For SUB or severance pay benefits, the safe harbor is the same as the amount otherwise permitted to be taken into account. (That is, the average annual qualified direct costs for such benefits for any two of the immediately preceding seven taxable years.) The Act does not prescribe a safe harbor for long-term disability or life insurance benefits. Rather, the establishment of such limits will be prescribed by regulation.[37]

Comment: These safe harbor limits may not provide a complete safety net. The Conference Report states that, even if the safe harbor limits are satisfied, the taxpayer must show that the reserves are reasonable under the facts of the particular case. Actuarial input may also be required.[38]

d. Separate Accounts for Key Employees

Although the Conference did not adopt a Senate proposal to define and limit top-heavy VEBA benefits paid to key employees, the Act does contain certain provisions requiring special separate account treatment for contributions to fund certain benefits for key employees.

Contributions to fund post-retirement medical and life insurance benefits provided with respect to a key employee must be made to a separate account for each key employee and benefits provided with respect to the key employee must be paid from this account.[39] Presumably, this provision was an accommodation to the Senate's concern that, because there are no vesting requirements for VEBAs, amounts contributed for those who are no longer employees could be used for the benefit of key employees upon termination of the plan. The Act also provides that any amount attributable to medical benefits allocated to a key employee account must be treated as an annual addition to a defined contribution plan for purposes of applying the §415(c) limits on annual additions to defined contribution plans.[40] For these purposes, the Act defines key employee as the term is defined in §416(i). Thus, the definition includes 5-percent owners and certain officers and highly paid employees.[41]

e. Collectively Bargained Plans

The Act requires that the Treasury Department publish final regulations by July 1, 1985, establishing special (higher) reserve limit principles for qualified asset accounts maintained under welfare benefit funds maintained pursuant to collectively bargained plans.[42] The Conference Report indicates that in establishing these limits, the Treasury is directed to presume that reserves in collectively bargained welfare benefit funds are not excessive because of the arm's length negotiations between adversary parties inherent in the collective bargaining process.[43]

f. Elective Aggregation

The Act permits an employer to elect to aggregate two or more WBFs to treat them as one fund for purposes of determining the deduction limit.[44]

Comment: Although there is no explicit tie-in between new §419A (account limits rules) and §505 (nondiscrimination rules), the Conference Report indicates that the election to aggregate must be consistent for deduction and discrimination purposes. For example, if an employer elects to aggregate two plans for deduction purposes, those plans must be aggregated when testing for discrimination.[45]

g. Transitional Rule

The Conference Agreement provides for a transition period during which fund reserves that exceed the new limits may be reduced without adverse consequences. The transition rule applies to WBFs that were in existence on June 22, 1984. Essentially, the rule requires no more than a 20 percent reduction in the reserve per year over a four-year period. This is accomplished by permitting a larger reserve for the first four years following the effective date than is otherwise permitted under the account limit rules. Specifically, for the first year, the account limit for the year may be increased to the sum of the new limit (determined without regard to the transitional rule) and 80 percent of the excess reserve amount. The Act defines the excess reserve amount for any year as the excess of the reserve as of the end of the first plan year ending after July 18, 1984 over the limit determined without regard to the transitional rule. For the second, third, and fourth succeeding years, 60, 40, and 20 percent, respectively, of the excess reserve amount for such years is to be added to the limit determined under the rules. Thus, plans are permitted to retain up to 80 percent of their excess in the first year but only 60 percent and so on in the succeeding years.[46]

h. After-Tax Income

The new deduction limits require that the qualified cost of a WBF for any taxable year must be reduced by the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

after tax income of the WBF for the taxable year. The Act provides that in determining the gross income of a WBF, contributions and other amounts received from employees will be taken into account.[47]

i. Carryover of Excess Contributions

The Act provides that amounts that exceed the fund's qualified cost for the taxable year will be treated as an amount paid by the employer to the WBF during a succeeding taxable year.[48] Thus, there is automatic attribution of any excess to a succeeding year.

3. Unrelated Business Income

The Act extends certain unrelated business income rules that previously only applied to tax-exempt recreational clubs and VEBAs to SUBs and GLSOs.[49] In addition, it places a limit, not previously imposed, on the size of the reserve that a VEBA (SUB or GLSO) is permitted to accumulate. Reserves in excess of the permitted amount are treated as unrelated business income.

Specifically, the Act amends §512(a)(3) which previously permitted a VEBA to set aside earnings on plan assets without being subject to the unrelated business income tax, provided the excess was used to provide benefits under the plan.[50] The Act limits the amount of this set-aside by providing that earnings on VEBA, SUB and GLSO assets will be tax-free only to the extent that the amount of the reserve set aside under §512(a)(3)(B) does not exceed the limits established under the new account limit provisions.[51]

In computing the permissible set-aside, several special rules must be considered. First, any reserves for post-retirement medical benefits that have been considered in establishing the §419A(c)(2) asset account limit must be subtracted.[52] Second, the set-aside may not include the value of a facility used to provide recreational and other benefits.[53] Third, and perhaps most significant, the Act provides grandfathering relief for retirement medical and life insurance benefits including RLR arrangements.[54] There is no limit on the permissible set-aside attributable to an existing reserve for post-retirement medical or life insurance benefits. The term "existing reserve" for post-retirement medical or life insurance benefits is defined as the amount of assets set aside at the close of the last plan year ending before July 18, 1984.[55]

Comment: This transition relief applies to an existing reserve only to the extent that the accumulated amount does not exceed the amounts permitted under the principles of prior RLR rulings. (*e.g.*, Rev. Ruls. 69-382, 1969-2 C.B. 28, and 73-599, 1973-2 C.B. 40.) [56]

The Act also provides that all future payments of medical or life insurance benefits to retirees under all plans of the employer are to be charged against the reserve to which the transition rule applies.[57]

There is a general exception to the restrictions imposed on the amount of permissible set-aside where substantially all of the contributions to the VEBA, SUB or GLSO are made by employers who are tax-exempt throughout the five-taxable year period ending with the taxable year in which the contributions are made.[58] Thus, for example, if a VEBA was established for teachers, and substantially all contributions to the VEBA are made by tax-exempt school districts employing the teachers, the Act's unrelated business income amendments would not apply to the VEBA and there would be no restriction on the amount of the set-aside other than the requirement that the set-aside be used to provide permissible benefits. The limit on the set-aside, however, does apply to more-than-10-employer VEBAs, SUBs and GLSOs that are otherwise exempt from the deduction limitations.

4. Excise Taxes

The Act adds a new 100 percent excise tax on an employer that provides disqualified benefits through a WBF.[59] A disqualified benefit is defined as: (1) any medical or life insurance benefit with respect to a key employee if it is not paid from a separate account as provided under §419A(d); (2) any post-retirement medical or life insurance benefit provided with respect to a retired employee if the plan is discriminatory (under the rules of new §505(b)(1)) [60]; and (3) any portion of a WBF reverting to the benefit of the employer.[61]

Comment: The Act potentially subjects VEBAs to a double tax. One is an unrelated business tax for amounts not set aside in accordance with the reserve rules of Code §419A and the other is the excise tax on certain disqualified benefits. It is possible for both taxes to apply so that not only would the trust pay the unrelated business taxes on the excess reserve, but the 100 percent excise tax could also apply on the same amounts so that the next tax paid would, in effect, exceed 100 percent.[62]

5. Effective Date

The new rules with regard to deduction limits, unrelated business income set-asides and the excise tax apply to contributions paid or accrued after December 31, 1985, in taxable years ending after that date.[63] There is a special rule for plans maintained pursuant to collective bargaining agreements and for contributions of facilities. With respect to collectively bargained plans in effect on July 1, 1985 (or ratified on or before that date), the provisions of Act §511 do not apply to years beginning before the date on which the last of the collective bargaining agreements relating to the plan terminates.[64]

There is also a special effective date rule for contributions of facilities.[65] The new provisions will apply to the contribution of a facility (or assets to purchase a facility) to a WBF after June 22, 1984 unless the facility is placed in service before January 1, 1987 and the facility is either acquired or improved by the fund pursuant to a binding contract in effect on June 22, 1984 or the construction of the facility began before that date.[66]

6. Impact of New Premature Accrual Rules

Of particular interest is the impact of the new accounting rules (restricting premature accruals) on WBF contributions until such time as the new WBF rules become effective. Under new §461(h)(5)(D) of the Code, the premature accrual rules do not apply if another Code provision specifically provides for a deduction for a reserve for estimated expenses. However, since the WBF rules in new Code §§419 and 419A are not effective until 1986, the Service may take the position that the premature accrual rules will apply until the WBF rules become effective.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Comment: The net effect of these premature accrual rules may be to eliminate any deduction for accrued but unpaid WBF contributions and to prohibit any deduction until the employee has performed such services as are required to be entitled to the benefit provided by the WBF. Such an interpretation could result in a substantial delay in the deduction for the WBF contribution.

B. New Nondiscrimination and Reporting Requirements

1. Nondiscrimination Requirements

The Act establishes new nondiscrimination standards for VEBAs and GLSOs. The standards are the traditional nondiscrimination rules applied to other employee benefits such as those for medical reimbursement plans under §105(h). No VEBA or GLSO, with the exception of plans maintained pursuant to a collectively bargained agreement, will be exempt from tax under §501(a) unless these nondiscrimination requirements are met.[67] The new standards are intended to be a codification of existing regulatory provisions.

Under the Act, the coverage of a VEBA or a GLSO must be nondiscriminatory and benefits must be provided on a nondiscriminatory basis. The new standards specifically require that each class of benefits be made available to a classification of employees that does not favor the highly compensated. The classification must be described in the plan and the Treasury must determine that it is not discriminatory. In addition, each class of benefits must not be provided in a manner that discriminates in favor of highly compensated employees.[68]

In testing whether the benefits are available to a nondiscriminatory classification of employees, employees who decline to make required contributions must be considered.[69] On the other hand, in testing for discrimination, certain employees who are not covered by a plan may be excluded from consideration. These employees are those who have not attained the age of 21, who have not completed three years of service with the employer, work less than half-time, are included in the collective bargaining unit (if the benefits involved have been the subject of good faith bargaining), or are nonresident aliens.[70]

The Act specially provides that life insurance, disability, severance pay, or supplemental unemployment compensation benefits will not be considered to fail to meet the nondiscrimination requirements merely because the benefits bear a uniform relationship to the total compensation, or the basic or regular rate of compensation of employees covered by the plan.[71]

The nondiscrimination rules define highly compensated individuals in the same manner that that term is defined in §105(h)(5) for purposes of uninsured medical reimbursement plans with the exception, however, that "10 percent" is substituted for "25 percent."[72] A highly compensated employee, therefore, is one of the five highest paid officers, a shareholder owning more than 10 percent of the employer, or an employee who is among the highest paid 10 percent of all employees.

The Act provides that, in testing a VEBA or GLSO for discrimination, employer aggregation rules similar to the rules of §414(b), (c), (m), and (n) apply. (Section 414(n) is applied without regard to paragraph (5).)[73] Also, as noted *infra*,[74] the Conference Report, at page 1159, provides that if plan aggregation for discrimination purposes is elected, it also must be utilized when calculating the new deduction limits.

Where the Code contains specific nondiscrimination rules for a particular benefit provided under a §501(c)(9) or §501(c)(20) trust, the new general nondiscrimination requirements in the Act will be met only if the specific nondiscrimination requirements for the benefit are satisfied.

Although the Act does not specifically address the issue of the integration of benefits with Social Security, the Conference Report clarifies that, in determining Social Security integration, generally, a VEBA cannot take into account disability benefits under Social Security, if those benefits are also taken into account under a qualified retirement plan of the employer covering the same employees.[75] Thus, the intention is to prohibit double integration although there is no statutory provision to this effect.

Comment: The conferees' limits on integration apply only to VEBAs[76] and would not apply to insurance accounts. If a disability benefit were provided through an insurance arrangement it might be integrated with Social Security even though the employer's retirement plan fully utilized Social Security benefits in integrating the retirement plan. As a result, employers may seek to provide long-term disability benefits outside VEBAs.

The nondiscrimination requirements are effective for years beginning after December 31, 1984.[77] However, the Act indicates that, for any benefits in pay status as of January 1, 1985, an employer may elect to exclude from consideration all disability or severance payments.[78] This provision, however, will not apply to any payment if a plan amendment to increase benefits is adopted after June 22, 1984.[79]

2. Additional Reporting Requirements

In order to be treated as a tax-exempt organization under §501(c)(9) and (20), the organization must give notice to the Secretary of the Treasury that it is applying for exempt status. (The Secretary will indicate in regulations how that notice shall be given.) Organizations in existence on July 18, 1984 that have not applied for exempt status must apply within one year from that date.[80]

3. Effective Date

The new nondiscrimination and reporting requirements apply to years beginning after December 31, 1984.[81]

C. Unfunded Deferred Benefits

1. Background

Under prior law, neither the Code nor Treasury regulations provided a definition that clearly distinguished welfare benefits from deferred benefits. Section 512 of the Act is designed to provide the distinction by establishing the presumption that benefits are deferred unless provided through a welfare benefit fund as that term is defined in Act §419(e)[82] or is vacation pay regarding which an accrual basis taxpayer has made a §463 election.[83] The Act also clarifies that, where a benefit method or arrangement has the effect of deferring compensation, it will be treated as a deferred compensation plan even though there is no plan.[84]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The distinction between unfunded deferred compensation and welfare benefits is significant because the special deduction timing rules and rules for measuring deductions that apply to amounts paid under a plan of deferred compensation do not apply to deductions for welfare benefits.[85] A deduction is allowed to an employer for a contribution paid under a nonqualified plan of deferred compensation only in the employer's taxable year that ends in the year the contribution is includible in the employee's gross income if separate accounts are maintained.[86] Apparently, in enacting §512, Congress wished to indicate its disapproval of the decision in *Greensboro Pathology Associates, P.A. v. U.S.*,[87] in which the Court of Appeals for the Federal Circuit held that a plan providing educational benefits to the children of employees was a welfare plan rather than a plan of deferred compensation. As a result, the employer was allowed a current deduction for contributions to the plan.[88]

2. Description Of Provision

Act §512 amends Code §404(b) (relating to method of contributions having the effect of a plan) to clarify that, where there is no plan, if the arrangement of employer contributions or compensation has the effect of a stock bonus, pension, profit-sharing, annuity plan or any other plan, including an unfunded plan, that defers receipt of compensation, the rules of Code §404(a) rather than §162 or §212 will apply.[89] The rules of Code §404(a) require generally that an employer may take a deduction for a contribution to a non-qualified plan only in the taxable year during which the contribution is includable in the gross income of the employee.[90] In addition, Act §512 clarifies that any plan providing deferred benefits (other than compensation) will be treated as a deferred compensation plan.[91] Further, it provides that the determination of when an amount is includible in gross income must be made without regard to any of the tax provisions that exclude such benefits from gross income.[92] For example, if an employer maintains a qualified plan providing legal services to employees pursuant to Code §120, the employee may exclude the employer's contribution from gross income. The employer, on the other hand, may deduct the contribution only in the year the amount would have been includable in the employee's gross income but for Code §120.

The provision contains an exception from treatment as an unfunded deferred compensation plan for certain vacation pay arrangements. Specifically excepted are benefits for which an accrual basis taxpayer has made an election under Code §463 [93] and extended vacation pay plans maintained pursuant to a collective bargaining agreement in effect on June 22, 1984.[94] With respect to such collectively bargained benefits, Act §512 will apply only after the agreement terminates. (The Act clarifies that any plan amendment made solely to conform to the requirements added by Act §512 will not be treated as a termination of the collective bargaining agreement.)

Of particular importance is language in the Conference Report that limits the scope of the new provision to exclude the payment of bonuses or other amounts shortly after the close of the taxable year in which significant services have been performed. The Report indicates that Congress does not intend such benefits to be considered as deferred compensation or as a deferred benefit plan if amounts are paid within 2½ months after the close of the taxable year in which the services were performed.[95]

Act §512 is effective on July 18, 1984 for amounts paid or incurred after that date in taxable years ending after that date.[96]

III. Implications

In general, the new rules will not have an effect on a cash basis employer's deductions for payments in connection with unfunded benefits but will affect accrual basis employers because it will treat them as though they were on the cash basis with respect to unfunded benefits. The new rules will have the greatest impact on funded plans. They clearly limit deductions for contributions to WBFs, and such limitations are likely to be felt more by small plans than larger plans to the extent that small plans, due to cost considerations, choose to conform to the safe harbor limits that, as a rule, will permit lower deductions than under assumptions that are actuarially certified.[97] In addition, set-asides of income earned by SUBs, VEBAs, and GLSOs, to the extent they exceed the deduction limits, with some modifications, will be treated as unrelated business income. Although this will not affect existing reserves for post-retirement medical and life insurance benefits (whether held by the VEBA or in an RLR), future reserves for such benefits will be severely restricted. The new excise tax on discriminatory post-retirement medical or life insurance benefits may lead to the revision or curtailing of this type of plan since many such plans would be discriminatory within the meaning of the new rules. Last, the new rules effectively eliminate any reversion of assets to the benefit of the employer by imposing 100 percent excise tax on such a reversion. In addition, the requirement that post-retirement medical and life insurance benefits for key employees be paid only from a separately established account will prevent using plan assets attributable to contributions for non-key employees to provide additional benefits to key employees at plan termination.

[19] New Code §419(c)(3).

[20] H. Rep., p. 1277. The House Report provides several examples of how the qualified direct cost rules pick up other rules in the Code that generally limit deductions with respect to WBF contributions. For example, if an employer contributes amounts that the WBF uses to purchase land used for an employee recreational facility, no deduction is allowed for this contribution because §263 of the Code would not have allowed the deduction if the employer had purchased the land directly. Similarly, other expenses of a WBF (such as maintenance expenses) with respect to such a facility would be a qualified direct cost giving rise to employer deductions only if the requirements of §274 are satisfied. WBF expenditures for insurance that would not have been deductible under §264 if made directly by the employer are not qualified direct costs and thus, no deductions are available to the employer with respect to such expenditures. H. Rep., pp. 1277-1278.

[21] The House Report provides the following example: "[i]f an employer contributes to a fund to pay premiums or considerations for insurance under a plan, then the qualified direct cost for the year would be determined on the basis of the cost of the insurance for the period for which the coverage is provided, without regard to whether any part of that cost is excludable from the gross income of an employee. On the other hand, to the extent the liability is self-insured, the time at which benefits would be includable would be based on the time at which benefits are paid, rather than the time of current insurance coverage, because this is the time when benefits would be included if the self-insured benefits were provided directly by the employer on an unfunded basis." H. Rep., p. 1278, footnote 13.

CHAPTER 48

NEW PROVISIONS FOR ESOPs

William C. Wicker, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Background

An employee stock ownership plan ("ESOP") is a qualified plan under which employer stock is held for the benefit of employees. The stock, which is held by one or more tax-exempt trusts under the plan, may be acquired through direct employer contributions or with the proceeds of a loan to the trust. Dividends paid on stock held in trust for employees may be distributed to employees or may be held in the trust. Prior to the TRA, gain realized on the sale of employer securities to an ESOP was generally recognized and was taxed as capital gain.

An ESOP under which an employer contributes stock or cash in order to qualify for a credit against income tax liability is referred to as a tax credit ESOP. Under §44G(a)(2), the credit is limited to a prescribed percentage of the aggregate compensation of all employees under the plan. For compensation paid or accrued in calendar years 1983 and 1984, the credit is limited to one-half of 1 percent. Prior to the TRA, with respect to compensation paid or accrued in 1985-87, the limit was three-quarters of 1 percent. No credit is provided with respect to compensation paid or accrued after December 31, 1987.

An ESOP that borrows to acquire employer stock is referred to as a "leveraged ESOP." Under a leveraged ESOP, the employer is allowed a deduction, within limits, for contributions to the plan which are applied by the plan to repay loan principal. Such limits apply notwithstanding the deduction limits applicable to other qualified plans sponsored by the employer. No deduction limit applies to an employer's ESOP contributions that are applied by the plan to pay interest on the loan.

Employer securities that have been allocated to participants' accounts under a tax credit ESOP may not be distributed for 84 months after the date of allocation. The 84-month holding period requirement does not apply in the case of (1) death, disability, or separation from service, (2) certain transfers of participants to acquiring employers, and (3) certain sales of subsidiaries.

B. Reasons for Change

Congress believed that, in light of the budget deficits, it was appropriate to freeze the maximum income tax credit for contributions to a tax credit ESOP at one-half of 1 percent of payroll. Congress also believed, however, that "alternative tax incentives, applicable with respect to both tax credit ESOPs and leveraged ESOPs, are important to encourage employee stock ownership."

II. Overview

Prior to the TRA, the limit on the tax credit for employer contributions to an ESOP was scheduled to increase from one-half of 1 percent of payroll in 1983 and 1984 to three-fourths of 1 percent in 1985. Act §14 freezes the limit at one-half of 1 percent through 1987. After 1987, the credit is scheduled (as under prior law) to expire.

The TRA contains a number of tax incentives designed to encourage employee stock ownership. First, the legislation permits a tax-free rollover of the proceeds from the sale of a business to an ESOP or to certain worker-owned cooperatives, provided (1) the proceeds are reinvested in the securities of another business and (2) immediately after the sale, the ESOP owns at least 30 percent of the value of employer securities. Second, a corporate deduction is allowed for dividends paid on ESOP stock, provided the dividends are paid out currently to employees. Third, a bank, insurance company, or other commercial lender is permitted to exclude from income 50 percent of the interest received on loans to ESOP sponsors, provided the loan proceeds are used to finance an ESOP's acquisition of employer stock. Fourth, liability for estate taxes may be assumed by an ESOP in return for a transfer from the estate of stock of an equal value, provided the company sponsoring the ESOP guarantees payment of the taxes.

The provisions are effective for tax years beginning after July 18, 1984.

III. Detailed Analysis

A. Tax-Free Rollover on Sale to Employees

Act §541 adds Code §1042. Section 1042 accords nonrecognition to gain from certain sales of employer stock to ESOPs or worker-owned cooperatives. For a sale to qualify for nonrecognition treatment, several requirements must be satisfied.

First, the seller must elect nonrecognition under §1042. The election must be filed not later than the due date (including extensions) for filing the seller's income tax return for the taxable year in which the sale occurs.

Second, if the sale is to an ESOP, the seller must file with the Service a written statement executed by the employer of the employees covered by the ESOP. In the statement, the employer must consent to the application of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

post-TRA §4978(a), which imposes an excise tax on certain dispositions of employer securities by an ESOP or a worker-owned cooperative. Alternatively, if the sale is to a worker-owned cooperative, the seller must file with the Service a written statement executed by an authorized officer of the cooperative. As with the other alternative, the written statement must consent to the application of §4978(a). The excise tax imposed by §4978 is discussed later in this chapter.

Third, the securities sold to the ESOP or worker-owned cooperative must be "qualified securities." Qualified securities are employer securities (as defined in §409A(l)) which (1) are issued by a domestic corporation that has no securities outstanding that are readily tradable on an established securities market, (2) have been held by the seller for more than one year at the time of the sale and (3) were not received by the seller in a distribution from a qualified plan or in a transfer pursuant to an option or other right to acquire stock to which §§83, 422, 422A, 423 or 424 applies.

Fourth, the sale must be to an ESOP as defined in §4975(e)(7) or to an "eligible" worker-owned cooperative. An eligible worker-owned cooperative is any organization (1) which is described in §1381, (2) a majority of the membership of which is composed of employees of the organization, (3) a majority of the voting stock of which is owned by members, (4) a majority of the board of directors of which is elected by the members on the basis of one person, one vote, and (5) a majority of the allocated earnings and losses of which are allocated to members on the basis of patronage, capital contributions, or some combination of patronage and capital contributions.

Fifth, the ESOP or worker-owned cooperative must own, immediately after the sale, at least 30 percent of the total value of the qualified securities of the employer outstanding at that time.

Sixth, no portion of the assets of the ESOP or cooperative attributable to qualified securities acquired by the ESOP or cooperative pursuant to the sale can accrue under the ESOP, or be allocated by the cooperative, for the benefit of the seller, any person who is a member of the family of the seller (within the meaning of §267(c)(4)), or any other person who owns (after application of §318(a)) more than 25 percent in value of any class of outstanding qualified securities.

Seventh, the seller must purchase "qualified replacement property" within the "replacement period." "Qualified replacement property" means any securities (as defined in §165(g)(2)) issued by a domestic corporation which does not, for the taxable year in which such securities are issued, have passive investment income (as defined in §1362(d)(3)(D)) that exceeds 25 percent of the gross receipts of the corporation for that taxable year. "Replacement period" means the period which begins three months before the date on which the sale of securities to the ESOP or worker-owned cooperative occurs and which ends 12 months after the date of the sale.

If all of these requirements are satisfied, any gain realized on the sale will be recognized only to the extent that the amount realized on the sale exceeds the cost to the seller of the qualified replacement property purchased by him. The seller's basis in the replacement property is equal to its purchase price reduced by the amount of gain not recognized on the sale to the ESOP or worker-owned cooperative. If more than one item of replacement property is purchased, the basis of each item shall be reduced by an amount determined by multiplying the total gain not recognized on the sale by a fraction. The numerator of that fraction is the cost of the item of replacement property in question. The denominator is the total cost of all such items of property.

The seller's holding period in qualified replacement property includes his holding period for the qualified securities which he sold to the ESOP or worker-owned cooperative.

The period of limitations for assessing any deficiency with respect to gain realized but not recognized on the sale does not expire before three years from the date on which the seller notifies the Service of (1) the seller's cost of acquiring replacement property, (2) the seller's intention not to acquire replacement property, or (3) the seller's failure to acquire replacement property within the replacement period.

No acquisition of securities by an underwriter in the ordinary course of his trade or business as an underwriter, whether or not guaranteed, is to be treated as a sale for purposes of §1042.

Section 1042 applies to sales of securities in taxable years beginning after July 18, 1984.

B. Tax on Certain Dispositions of Employer Securities

Act §545 adds Code §4978. Section 4978 imposes an excise tax on certain dispositions of employer securities by ESOPs or worker-owned cooperatives. The excise tax applies if, during the three-year period after the date the ESOP or cooperative acquired any qualified securities in a sale to which §1042 applied, the ESOP or cooperative disposes of any qualified securities and either (1) the total number of shares held by the ESOP or cooperative after the disposition is less than the total number of qualified securities held immediately after the earlier sale qualifying for nonrecognition or (2) the value of qualified securities held by the ESOP or cooperative after the disposition is less than 30 percent of the total value of all qualified securities as of the disposition.

If these conditions are satisfied, an excise tax is imposed on the disposition. The tax is generally equal to 10 percent of the amount realized on the disposition. In applying this formula, however, the amount realized that is taken into account is not to exceed that portion applicable to qualified securities acquired in the nonrecognition sale. This portion is to be determined as if the securities so allocable were disposed of before any other securities. Further, in applying the 10 percent formula, the amount realized on any distribution to an employee for less than fair market value is to be determined as if the qualified security had been sold to the employee at fair market value.

The tax imposed by §4978 must be paid by the person that made the written statement consenting to the application of the tax that was required under §1042. Thus, if the disposition of qualified securities is by an ESOP, the tax

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

must be paid by the employer. If the disposition is by a cooperative, the tax must be paid by the cooperative.

For purposes of the tax, a distribution of qualified securities is generally treated as a disposition. However, the tax does not apply with respect to any distribution (or sale) which is made by reason of (1) the death of the employee, (2) the retirement of the employee after the employee has attained 59½ years of age, (3) the disability of the employee (within the meaning of §72(m)(5)), or (4) the separation of the employee from the employer's service for any period which results in a one-year break in service (within the meaning of §411(a)(6)(A)). Additionally, in the case of any exchange of qualified securities for stock of another corporation in a reorganization described in §368(a)(1), the exchange is not treated as a disposition for purposes of the tax.

Both tax credit and leveraged ESOPs are subject to the tax. For purposes of the tax, "qualified securities" has the same meaning it has in §1042. Similarly, "worker-owned cooperative" has the same meaning it has in §1042.

The tax is effective for taxable years beginning after July 18, 1984.

C. Deduction for Dividends Paid on ESOP Stock

Act §542 adds Code §404(k). Section 404(k) allows a corporate employer to deduct dividends paid on stock held by an ESOP provided certain conditions are satisfied. First, the dividend must be paid in cash. Second, it must be paid with respect to stock held on the record date for the dividend by a tax credit or leveraged ESOP which is maintained by the distributing corporation or by any other corporation that is a member of a controlled group that includes the distributing corporation. Third, the dividend must be paid, in accordance with the plan provisions, to the participants in the ESOP or, alternatively, the dividend must be paid to the plan and then distributed in cash to the participants not later than 90 days after the close of the plan year in which the dividend is paid.

If a dividend is deductible to the corporate employer under this provision, the recipient of the dividend will not be entitled to a dividend exclusion under §116. Act §542 amends §116 to make it inapplicable to deductible dividends paid on stock held by an ESOP. If §116 were not made inapplicable to such dividends, some or all of the earnings represented by the dividends would go untaxed. They would not be taxed at the corporate level since the corporation is entitled to a deduction. Further, up to a specified ceiling, they would not be taxed at the shareholder level since the shareholder would be entitled to an exclusion from gross income under §116.

No withholding is required with respect to deductible dividends paid on stock held by an ESOP. This result is achieved through Act §542's amendment of §3405(d)(1)(B).

Section 404(k) applies to taxable years beginning after July 18, 1984.

D. Partial Exclusion of Interest Earned on ESOP Loans

Act §543 adds Code §133. Section 133 permits banks, insurance companies and other corporate commercial lenders to exclude from gross income 50 percent of the interest received with respect to a "securities acquisition loan." A securities acquisition loan is any loan to a corporate employer or ESOP, the proceeds of which are used to acquire employer securities (within the meaning of §409A(1)) for the ESOP.

If the loan is made to the employer rather than the ESOP, the legislative history indicates that the employer must, in turn, lend the proceeds to the ESOP. Regardless of whether the loan to the ESOP is direct or made via the employer, the ESOP must use the loan proceeds to purchase employer securities.

It is not necessary, however, that the entire loan proceeds be used to purchase employer securities. Section 133 applies even if only a portion of the proceeds are used for this purpose. In such a case, however, the interest excluded from gross income is limited to the portion of the interest received that is allocable to the loan proceeds used to purchase the employer securities.

Section 133 does not apply to loans between members of a controlled group of corporations. The section refers to §409A(1)(4) for the definition of a controlled group. Further, §133 does not apply to interest on loans between an ESOP and the employer maintaining the ESOP or between an ESOP and any member of a controlled group of corporations that includes the employer.

For purposes of §133, "ESOP" has the same meaning it has in §4975(e)(7).

Section 133 applies to loans used to acquire employer securities after July 18, 1984.

E. Assumption of Estate Tax Liability by ESOP or Cooperative

Act §544 adds §2210 to the Code. Section 2210 permits, under certain circumstances, an ESOP or worker-owned cooperative to assume a decedent's estate tax liability in return for a transfer from the estate of employer securities having an equal value. The transfer of employer securities to the ESOP or cooperative may take one of three forms: (1) The securities may be "acquired from the decedent" by the ESOP or cooperative; (2) They may "pass" from the decedent to the ESOP or cooperative; or (3) They may be transferred by the executor to the ESOP or cooperative.

If a transfer as described occurs and if the executor elects the application of §2210 and files certain agreements with the Service, the executor is relieved of liability for payment of that portion of the estate tax which the ESOP or cooperative is required to pay under §2210(b). Under this subsection, the ESOP or cooperative must pay that portion of the decedent's estate tax which is equal to the lesser of (a) the value of the employer securities transferred to the ESOP or cooperative which is included in the decedent's gross estate, or (b) the estate tax imposed on the decedent's taxable estate reduced by the sum of the credits allowable against such tax.

Election of §2210 must be made before the due date (including extensions) for filing the estate tax return. Similarly, the written statements required to be filed by the executor in conjunction with the election must be filed before that date. The written statements required to be

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

filed are: (1) a written agreement signed by the plan administrator of the ESOP, or by an authorized officer of the cooperative, consenting to the assumption of estate tax liability by the ESOP or cooperative; and (2) in the case of assumption of estate tax liability by an ESOP, a written agreement signed by the employer maintaining the ESOP in which the employer consents to the application of §2210(d).

Under §2210(d), an employer maintaining an ESOP that has agreed to assume estate tax liability under §2210 is required to guarantee (in such manner as the Treasury may prescribe) the payment of the estate tax liability assumed by the ESOP, including any interest payable under §6601 which is attributable to the assumed liability.

The ESOP or cooperative, if it qualifies, may elect under §6166 to defer payment of the estate tax liability assumed by it. An election to defer payment is allowed, however, only if the executor of the decedent's estate also elects §6166 treatment with respect to employer securities includible in the estate. If the ESOP or cooperative elects §6166, the election must be filed with the Service before the due date (including extensions) for filing the estate tax return.

For purposes of §2210, "employer securities" has the same meaning it has in §409A(1). "ESOP" has the meaning assigned to it in §4975(e)(7). "Worker-owned cooperative" has the same meaning it has in §1042. Finally, "plan administrator" has the meaning assigned it in §414(g).

In connection with the enactment of §2210, Act §544 adds Code §6018(c). Under §6018(c), in the case of an election under §2210, the executor is required to file an estate tax return with respect to the portion of the estate tax that is in excess of the tax assumed by the ESOP or cooperative. The plan administrator of the ESOP, or the cooperative, as the case may be, is required to file an estate tax return with respect to that portion of the tax that is assumed by the ESOP or cooperative.

Sections 2210 and 6018(c) apply to estates of decedents which are required to file returns on a date (including any extensions) after July 18, 1984.

CHAPTER 49

REVISED DISTRIBUTION AND TAXATION RULES FOR QUALIFIED PLANS AND IRAs

Patrick G. Dooher, Esq.
Silverstein and Mullens
Washington, D.C.

I. Required Distribution Rules for Qualified Plans and IRAs

A. Introduction

1. Qualified Plans

Section 401(a)(14) requires that a qualified plan provide for the payment of benefits to the participant, unless the participant otherwise elects, no later than the 60th day after the end of the plan year in which (i) the participant reaches the earlier of age 65 or the normal retirement age of the plan, (ii) the 10th year after the participant commences participation in the plan, or (iii) the participant terminates his service with the employer, whichever is the latest of these three events. Prior to the enactment of the Tax Equity and Fiscal Responsibility Act of 1982 (P.L. 97-248), no additional mandatory distribution requirements existed except with respect to plans covering self-employed individuals (H.R. 10 Plans). In the case of H.R. 10 Plans, distributions were generally required to commence not later than the year in which the employee attained age 70½ or retired, whichever event was later.[1]

TEFRA [2] revised §401(a)(9) to extend the H.R. 10 Plan rules to all qualified plans, effective generally for plan years beginning after 1983.[3] Under §401(a)(9)(A), a plan is not qualified unless it provides that each employee's entire interest in the plan will be distributed, or will begin to be distributed, to the employee no later than the taxable year in which he reaches age 70½ or, if later, the year in which he retires. In the case of a key employee who is a participant in a top-heavy plan, distributions must begin in the year the employee attains age 70½, regardless of when he retires. If an employee's interest is not completely distributed in the first year that a distribution is required under §401(a)(9)(A), the interest must be distributed over one of the four following periods:

(a) The life of the employee;

(b) The joint lives of the employee and the employee's spouse;

(c) A period not extending beyond the life expectancy of the employee; or

(d) A period not extending beyond the joint life expectancy of the employee and the employee's spouse.

Regulations to implement the foregoing distribution rules are to be prescribed. Although at the time of enactment of the TRA regulations under §401(a)(9) had yet to be issued, the Service did provide interim guidelines in Notice 83-23.[4] The Service in this Notice has taken the position that generally the IRA distribution rules set forth in Regs. §1.408-2(b)(6) will apply to qualified plans in determining the minimum payment that must be made once distributions must commence. Under this regulation, the fixing of the minimum payment period, based on life expectancy, can be made only once at age 70½. This rule is more restrictive than the distribution rules that applied to H.R. 10 plans since the regulations for such plans permitted the periodic redetermination of life expectancy over which the minimum distributions must be made.[5] By periodically redetermining life expectancy, the minimum payment period is extended. Since §401(a)(9) was intended to be an extension of the H.R. 10 Plan rules, the Service position in Notice 83-23 is arguably incorrect.

Under §401(a)(9)(B), as amended by TEFRA, mandatory distributions of a participant's interest in a qualified plan are required after the participant's death. Generally, all qualified plans must provide for distribution of the employee's entire interest, or completion of distributions if payment has commenced, within 5 years after the employee's death. If the distribution has commenced to the employee's surviving spouse and the surviving spouse dies before receipt of the employee's full interest, the remaining portion of the employee's interest must be distributed within five years after the death of the surviving spouse. This five-year rule does not apply, however, if the distribution of the employee's interest has commenced and such distribution is for a period of years not exceeding the life expectancy of the employee or the joint life expectancy of the employee and spouse.

The §401(a)(9) required distribution rules, as added by TEFRA, were generally effective for plan years beginning after December 31, 1983.[6]

2. IRAs

Sections 408(a)(6) and (7) and 408(b)(3) and (4) set forth mandatory distribution requirements for individual retirement plans (IRAs) substantially similar to those imposed by TEFRA for qualified plans.[7] The chief difference between the qualified plan required distribution rules and the IRA required distribution rules is that benefits must commence under an IRA by the end of the taxable year in which the owner attains age 70½, without regard to whether the owner has retired.

B. Outline of New Provisions

The TRA [8] completely revises §401(a)(9) to provide greater flexibility in the required distribution rules, particu-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

larly where such distributions are made to beneficiaries other than the spouse of a participant. The Senate Finance Committee Report [9] explains that the revision of §401(a)(9) stemmed from a concern that the section was unduly restrictive. The Committee observed that a participant may desire to provide one or more individuals, other than the participant's spouse, the right to receive a portion of the participant's retirement benefits remaining at death in a form based on the life or lives of the beneficiary or beneficiaries.

As amended by the TRA, §401(a)(9) provides that a plan must require distribution of a participant's entire interest no later than April 1 of the calendar year following the plan year in which the participant reaches age 70½, or retires, (unless the employee is a 5-percent owner), whichever is later. Alternatively, the participant's interest must commence on that April 1 and be paid over the life of the participant, the lives of the participant and the designated beneficiary, or a period not extending beyond the life expectancy of the participant or joint life expectancy of the participant and the designated beneficiary.

If the participant dies before his entire interest has been distributed and distributions have commenced before death, the remaining portion of the participant's interest must be distributed at least as rapidly as distribution would have occurred under the method in effect prior to death. If benefits had not begun before the participant's death, the participant's entire interest must generally be distributed within five years of the death of the participant, with two exceptions. The first exception permits distribution over the life or life expectancy of the designated beneficiary, provided distributions begin no later than one year after the participant's death. The second exception permits distribution of the participant's interest over the surviving spouse's life or life expectancy, with distributions commencing no later than the date on which the participant would have attained age 70½.

Under regulations to be prescribed, "similar" mandatory distribution rules will be provided for IRAs.

C. *Effective Dates*

1. In General

The amendments made to the required distribution rules by the TRA apply to "years" beginning after December 31, 1984.[10] Thus, §401(a)(9), as revised by the TRA, applies to plan years beginning after 1984, and the required distribution rules to be applied to IRAs pursuant to regulations authorized by §408(a)(6) and (b)(3) will apply to taxable years of the IRA owner beginning after 1984. Governmental plans, however, are not subject to the new required distribution rules until plan years beginning after 1986.[11] If a plan is maintained pursuant to one or more collective bargaining agreements ratified no later than July 18, 1984, the revised distribution rules do not apply to years beginning before the earlier of (i) the date on which the last of the collective bargaining agreements relating to the plan terminates (determined without regard to any extension of such agreement after July 18, 1984), or (ii) January 1, 1988.[12]

2. Repeal of TEFRA Required Distribution Rules

The TRA [13] repeals the required distribution rules added by TEFRA. The repeal is effective as if it had been included in TEFRA.[14] Under a transitional rule in the TRA [15] distributions made subsequent to 1984 in accordance with a designation made before January 1, 1984, by an employee pursuant to a designation permitted under a TEFRA transitional rule [16] will not result in disqualification under revised §401(a)(9).

Observation: The repeal of the TEFRA required distribution rules by the TRA means that the pre-TEFRA required distribution rules, which applied only to H. R. 10 Plans, will remain in effect until the end of 1984. Although TEFRA also amended the IRA post-death distribution rules to require generally that IRA post-death distributions be completed no later than five years after the death of the owner or the owner's surviving spouse, thereby eliminating the formerly available option of purchasing an immediate annuity payable for the life of a beneficiary or beneficiaries of the owner or the owner's spouse upon death, the TRA does not repeal this change.[17] Accordingly, the more restrictive TEFRA post-death required distribution rules for IRAs will continue to apply to individuals dying during 1984, unless technical corrections are subsequently enacted restoring the pre-TEFRA post-death distribution rules for 1984.

D. *Detailed Analysis*

1. Qualified Plans

a. Pre-Death Distributions

As revised by the TRA, §401(a)(9)(A) requires that a qualified plan contain provisions providing for the distribution of the "entire interest of each employee to the employee no later than the required beginning date." Alternatively, the entire interest must be distributed over one of the following periods:

(i) The life of the employee;

(ii) The lives of the employee and the "designated beneficiary;"

(iii) A period not extending beyond the life expectancy of the employee; or

(iv) A period not extending beyond the life expectancy of the employee and the designated beneficiary.

If one of the above four alternatives is selected, the distributions must commence not later than the required beginning date, in accordance with regulations to be prescribed.

Although the employee's entire interest is subject to the foregoing required distribution rules, the Conference Committee states that this "entire interest" is not intended to include permissible and ancillary benefits, such as lump sum death benefits, that are not available to the employee.[18]

The "required beginning date" is defined in §401(a)(9)(C) as the April 1 of the calendar year following the later of (i) the calendar year in which the employee attains age 70½ or (ii) the calendar year in which the employee retires. If an employee is a 5-percent owner (as defined in §416(i)(1)(B)(i)) with respect to the plan year

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ending in the calendar year in which such employee attains age 70½, the "required beginning date" is the April 1 of the calendar year following such employee's age 70½ year, unless the plan involved is an Employee Stock Ownership Plan that is prohibited under §409(d) from distributing employer securities allocated to that employee for the 84-month specified in §409(d).

Example: Assume that a 5-percent owner is a participant in an employee stock ownership plan, and employer securities are allocated to this participant in April of 1985 and April of 1986. Further assume that the participant reaches age 70½ in 1987, and the only amounts allocated to his account on April 1, 1988, the date distributions otherwise must commence, are the employers securities allocated in 1985 and 1986. If the 5-percent owner does not die, become disabled, or retire, distributions with respect to the employer securities allocated in April 1985 need not commence until May of 1992 and distributions with respect to the securities allocated in April 1986 need not commence until May 1993.

Note: The rule that a 5-percent owner must commence distribution at 70½, without regard to retirement, is more liberal than the former rule mandating distributions at that age for key employees in a top-heavy plan. However, the 5-percent owner rule applies irrespective of whether the plan is top-heavy.

As mentioned above, the rule permitting the distribution of the participant's entire interest over a period based on life expectancy is to be implemented through regulations. The Conference Report [19] states an intention that these regulations will require that distributions over any of the permissible periods must satisfy a minimum distribution rule similar to the distribution rules presently provided. Under present law,[20] the annual distribution must not be less than the balance in the participant's account at the beginning of the particular year in the required distribution period divided by the life expectancy of the participant (or the joint life expectancy of the participant and the participant's spouse). Although the current rules allow life expectancy, and thus the minimum distribution period, to be determined only once,[21] §401(a)(9)(D) provides that life expectancy of a participant and the participant's spouse (other than in the case of a life annuity) may be redetermined. Such redeterminations may not take place more frequently than annually.

Observation: By stretching out the minimum distribution period through recalculation of life expectancy, greater income deferral can be achieved. Also, in the case of a defined contribution plan, the period during which the participant's remaining account balance can accumulate income tax-free is expanded, thereby increasing the total distributable amount.

If the minimum distribution is made over the joint life expectancy of the participant and a non-spouse beneficiary, it is intended that Treasury regulations provide a method of recalculation under the minimum distribution rule that takes into account the change in the life expectancy of the participant but not the change in the life expectancy of the non-spouse beneficiary.[22]

The minimum distribution rule will be satisfied by a defined benefit pension plan if distributions over a permissible period take the form of "substantially nonincreasing annual payments." [23] However, under certain circumstances, it is intended that the regulations will permit the defined benefit pension plan distributions to increase, such as to reflect cost-of-living increases, cash refunds of employee contributions upon an employee's death, an increase in annual benefit payments to the employee upon the death of the employee's beneficiary, and increases based on investment experience.[24] But in no event may increasing payments be permitted if the effect of the increase is avoidance of the minimum distribution rules.[25]

The Conference Report [26] provides that a defined contribution plan will satisfy the minimum distribution rule if the payments are subject to an irrevocable payout schedule that satisfies the minimum distribution rule. Moreover, a defined benefit pension plan or a defined contribution plan may satisfy the minimum distribution rule by distributing an immediate annuity contract providing for payments that satisfy the minimum distribution rule (*e.g.*, provides for substantially nonincreasing annual payments).

The Conference Report [27] also states that plan distributions, including distributions under annuity contracts, must continue to satisfy the incidental benefit rule of present law.[28] The incidental benefit rule generally requires that a qualified plan must not permit any form of distribution under which the present value of the payments projected to be made to the participant, while living, is not more than 50 percent of the present value of the total payments projected to be made to the participant and the participant's beneficiaries.[29] However, distributions satisfying the rules relating to qualified joint and survivor annuities in §401(a)(11) will satisfy the incidental benefit rule.[30]

b. Post-Death Distributions

Section 401(a)(9)(B)(i) requires that a qualified plan specifically provide that if a participant's entire interest has commenced over one of the four permitted periods, and the participant dies before that entire interest has been distributed, the remaining portion of such interest must be distributed at least as rapidly as under the method of distribution in effect prior to death. The Conference Report [31] furnishes the following example:

Example: If a participant elected to receive benefits in the form of equal annual installments for a term of 20 years (a term not extending beyond the life expectancy of the participant), and the participant died after benefits had been paid for 10 years, the participant's remaining interest can be distributed in equal annual installments over a term not exceeding 10 years. The Conference Report further states, however, that the beneficiary can elect to accelerate payments of the remaining interest.

Comment: If the designated beneficiary of the participant who dies is the participant's spouse, and the method of distribution being used prior to the participant's death is to provide equal annual installments over the period measured by the joint life expectancy of the participant and the participant's spouse, it is not entirely clear whether the minimum distribution period can be recomputed after the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

participant's death to take into account increases in the spouse's life expectancy. Generally, a payment period based on two life expectancies will be substantially longer than a period based on a single life expectancy. However, if the spouse survives for a long enough period of time, the spouse's single life expectancy will exceed the minimum distribution period based on the joint life expectancy of the deceased participant and the participant's spouse. Since, as previously mentioned, §401(a)(9)(D) permits the redetermination of the life expectancy of an employee and an employee's spouse, there is a basis for permitting the post-death redetermination of the minimum distribution period using the surviving spouse's single life expectancy. However, a question exists as to whether a redetermination of the minimum distribution period after death satisfies the rule that the remaining portion of the participant's interest be distributed at least as rapidly as the distribution method being used prior to death. It should also be noted, as will be described below, that if distributions have not begun at death and post-death distributions are based on a beneficiary's life expectancy, the blanket position is taken that life expectancy may not be recalculated. Presumably, regulations will clarify this issue.

Under §401(a)(9)(B)(ii), a qualified plan must further provide that if a participant dies before distribution of the participant's interest has begun, the entire interest of the participant must be distributed within five years after the death of the participant. Two exceptions to the five-year rule are provided. Under the first exception,[32] if (i) any portion of the participant's interest is payable to (or for the benefit of) a designated beneficiary, (ii) such portion will be distributed in accordance with regulations for the life of such designated beneficiary (or over a period not extending beyond the life expectancy of such beneficiary), and (iii) the distributions begin no later than one year after the date of the participant's death or such later date as may be prescribed in regulations, then the portion payable to the designated beneficiary will be treated as having been completely distributed on the date on which such distributions begin. The Conference Report [33] states that it is intended that this exception will apply only if the amounts are paid to the beneficiary under rules satisfying the minimum distribution rule applicable to pre-death distributions. The Report further states that recalculation of life expectancy is not permitted under this exception.

Comment: The Conference Committee's blanket statement that redetermination of life expectancy is prohibited would appear to rule out a redetermination even if the surviving spouse is the designated beneficiary. Although, as will be described, the second exception applies a special rule for the surviving spouse of a participant, the principal effect of the second exception is to postpone the time when distributions to the surviving spouse must commence. Otherwise, the requirements of the exception are grafted from those of second the first exception.

Regulations may be issued under the first exception providing exceptions to the rule that benefits must commence to a designated beneficiary within one year after death. As one example, the Conference Report [34] notes that an exception may be appropriate if a beneficiary cannot be located. However, the Conference Report further states that the regulations could require that catch-up distributions be made with respect to amounts deferred under exceptions to the one-year commencement of distribution rule.

The second exception to the five-year rule for post-death distributions essentially provides a rule postponing the commencement date for post-death distributions if the designated beneficiary is the surviving spouse of the participant and the remaining portion of the participant's entire interest will be distributed over the surviving spouse's life or over a period not extending beyond the life expectancy of the spouse.[35] In this case, the date on which the distributions are required to begin will not be "earlier than the date on which the employee would have attained age 70½".

Observation: In contrast to the statutory language, the Conference Report [36] states that the distributions must commence "no later than the date" on which participant would have attained age 70½. Regulations can obviously reconcile this difference between the Conference Report and the statute by providing that distributions must commence on the day the participant would have reached the age 70½. However, in view of the statutory language, implying that a later commencement date may be established, it would not be surprising if the regulations provided some flexibility in selecting a commencement date beyond the exact date on which the participant would have reached age 70½, such as permitting payments to begin with the first month following the date in which that age would have been reached, in order to ease potential administrative burdens in complying with the special exception.

The second exception further provides that if the surviving spouse dies before the distributions to the spouse begin in accordance with the second exception, the five-year rule is to be applied as if the surviving spouse were the participant. Thus, any portion payable to the surviving spouse must be distributed within five years after the spouse's death.

Note: The Conference Report [37] states that it is intended that payments to the surviving spouse will satisfy the exception to the five-year distribution rule if payments are made pursuant to a qualified joint and survivor annuity meeting the requirements of §401(a)(11).

Section 401(a)(9)(F) contains an interesting rule that, under regulations to be prescribed, any amount paid to a child shall be treated as if it had been paid to the surviving spouse if such amount becomes payable to the spouse upon the child's reaching majority (or other designated event permitted under regulations). For example, if a participant dies before distributions commence, and the participant has elected that distributions after death be paid over spouse's life expectancy, the participant presumably will be able to designate that a portion of the annual minimum distribution payment be paid to one or more of his children during minority, which portion will revert to the participant's spouse when the children reach age of majority. Use of this income-splitting feature should lower the tax burden on the family of the participant during the period the children must be provided with support, yet it will not diminish the security of the surviving spouse since the portion directed to the children will eventually revert back to the spouse.

Comment: It does not appear that a plan must specifically provide for the application of the exceptions to the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

five-year rule for post-death distributions. Neither of the exceptions is prefaced by the requirement that the plan incorporate the exception in the plan document. Further, the exceptions are drafted in terms of providing that the five-year rule is satisfied if there is compliance with the exceptions.

2. IRAs

The TRA [38] repeals the mandatory distribution rules formerly contained in §§408(a)(6) and (7) and 408(b)(3) and (4), requiring instead that regulations be issued prescribing rules similar to the rules of §401(a)(9) for the distribution of IRA benefits. Presumably, the regulations will continue the rule that IRA benefits must commence when the owner reaches age 70½, but perhaps setting the commencement date for benefits as the April 1 of the calendar year following the year in which the IRA owner reaches 70½, which is the date provided in §401(a)(9).

The new TRA provisions overrule the Regs. §1.408-2(b)(6) rule that the determination of life expectancy is made only at the time the IRA owner attains age 70½ and cannot be recalculated to take into account subsequent increases in life expectancy.[39] Of course, life expectancy can be recalculated only with respect to the IRA owner and the owner's spouse.[40]

II. Rollovers of Partial Distributions

A. Introduction

In general, when a participant receives a distribution from a qualified plan or IRA, the participant is taxable on the distribution. If the distribution is from a qualified plan and consists of the balance credited to the participant, the participant has three options available: (i) the distribution may be taxed using the favorable 10-year income averaging rules of §402(e)(4); (ii) to the extent the distribution is attributable to amounts contributed in pre-1974 years, it is taxable at capital gain rates under §402(a)(2) unless the participant elects [41] to have the entire distribution treated under the 10-year income averaging rules; or (iii) the participant may elect to roll over all or part of the distribution to another qualified plan or IRA under §402(a)(5) and be subject to tax (at ordinary income rates) only on amounts not rolled over. If the distribution is from an IRA, only the third option, the rollover option, is available. However, in contrast to the requirement applicable to qualified plans that the distribution consist of the entire balance to the credit of the employee,[42] an IRA distribution may be rolled over even if it is only a partial distribution from the IRA.[43]

In order to qualify for rollover treatment, the distribution must be rolled over within 60 days of the date of distribution.[44] Rollover treatment is also available to a surviving spouse who is the recipient of a lump sum distribution from a qualified plan.[45] Substantially similar rollover rules are provided for qualified annuities and tax-sheltered annuities under §403.[46]

In addition to the foregoing options, if a lump sum distribution includes employer securities with unrealized appreciation, the unrealized appreciation is generally not includible in the participant's gross income until the securities are sold or exchanged, regardless of whether all or a portion of the distribution is rolled over to another plan.[47]

B. Analysis

The TRA [48] amends §402(a)(5) to permit rollover treatment for partial distributions out of qualified plans, qualified annuity plans, and tax-sheltered annuity contracts. To qualify for rollover treatment, the partial distribution must meet the following requirements:[49]

> (1) The distribution must be at least equal to 50 percent of the balance to the credit of the employee in the plan, determined immediately before the distribution. Only the balance within the particular plan must be considered for purposes of the 50 percent requirement; amounts in other plans maintained by the same employer that otherwise must be aggregated for lump sum distribution purposes need not be taken into account under the partial distribution 50 percent test;
>
> (2) The distribution must not be one of a series of periodic payments;
>
> (3) The employee must elect rollover treatment for the partial distribution at the time and in the manner prescribed by regulations.

The entire partial distribution need not be rolled into the IRA; a taxpayer may retain a portion and be taxed on that amount.[50]

The election of rollover treatment for a partial distribution carries with it several detrimental tax consequences. The primary consequence is that 10-year income averaging and capital gains treatment will no longer be available with respect to any ensuing distribution out of that plan or out of any other plan maintained by the same employer that must be aggregated for lump sum distribution purposes.[51] A corollary to this rule is that any partial distribution rolled into the IRA may not subsequently be rolled back into a qualified plan or qualified annuity.[52] Consequently, it will not be possible to requalify the partial distribution for 10-year income averaging and capital gains treatment by the transfer of the distribution back to a qualified plan or annuity.[53] Moreover, upon a partial distribution that includes unrealized appreciation attributable to employer securities, taxation of the unrealized appreciation will no longer be deferred until the securities are sold or exchanged by the recipient.[54] Of course, if the securities are rolled into the IRA, taxation of the unrealized appreciation will be deferred until such time as the securities are distributed.

The maximum amount of a partial distribution that may be rolled into the IRA is the amount that would be includible in the participant's gross income.[55] Thus, any previously taxed amounts that the participant contributed to the qualified plan are not eligible for rollover, as is the case when the participant receives a lump sum distribution from the plan.

In a conforming change, §402(a)(7) has been amended to provide that the surviving spouse is to be treated in the same manner as the participant for purposes of the rollover rules. Thus, a surviving spouse who receives a qualifying distribution may elect to roll that distribution into an IRA and defer taxation.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

C. *Effective Date*

The new rules permitting the rollover of a partial distribution from a qualified plan to an IRA is effective for distributions made after July 18, 1984, in taxable years ending after that date.[56]

III. TRA Changes Affecting Taxation of Distributions

A. *Distributions from Employee-Funded Plans*

1. *Introduction*

Under present law, a qualified pension or annuity plan, tax-sheltered annuity contract, or government plan may be funded substantially or solely by employee contributions.[57] Although employee contributions to a qualified plan are generally not deductible,[58] an employee will enjoy a tax-free accumulation of earnings on the contributions until such time as they are distributed.

The chief limitation on employee contributions to a qualified plan, whether or not deductible, is that they may not have a discriminatory effect in favor of officers, shareholders, and highly compensated employees.[59]

Under §72,[60] nondeductible employee contributions may be withdrawn from a qualified pension or annuity plan without penalty, and amounts withdrawn before annuity payments begin from such a plan are treated as a return of nondeductible contributions not includible in gross income.[61] Withdrawals in excess of the amount of nondeductible contributions are, however, includible in income.[62]

The favorable treatment of nondeductible employee contributions to qualified pension plans and tax-sheltered annuities and government plans led to what Congress perceived to be an abuse.[63] According to the Senate Finance Committee Report,[64] certain financial institutions began promoting master and prototype qualified pension plans providing for no employer contributions but only nondeductible employee contributions. The Committee likened such plans to "tax-favored savings and brokerage accounts," noting "the ready availability of amounts attributable to employee contributions" to such plans, and stated its belief that the tax treatment of such plans should be changed to ensure their use as "bona fide retirement plans." [65]

2. *Analysis*

In response to the perceived abuse, Congress amended §72(e) to provide effectively that where substantially all of the accrued benefits under a qualified plan are derived from employee contributions, distributions from the plan will be treated as income until all income has been withdrawn.[66] A qualified plan for this purpose includes a qualified annuity plan and tax-sheltered annuity as well as a qualified plan described in §401(a). A plan is subject to this rule if 85 percent of the total contributions during a "representative period" are derived from employee contributions.[67] The "representative period" will be determined under regulations; the Conference Report suggests that five years might be representative under such regulations.[68] However, the Conference Report adds [69] that if less than 85 percent of the total contributions for all years during which the plan is in existence are employee contributions, the plan will not be subject to the new rules.

Comment: Under §72(g)(1), a 5-percent penalty tax is imposed on the amount of the distribution from an annuity contract includible in gross income, subject to several broad exceptions set forth in §72(g)(2). One exception to the penalty is provided for distributions from a qualified plan or annuity or tax sheltered annuity "described in subsection (e)(5)(D)." [70] It is not clear whether this exception will prevent the imposition of the penalty on taxable withdrawals from an employee-funded plan. Section 72(e)(7)(A) provides that §72(e)(5)(D) "shall not apply to any amount received" from an employee-funded plan. This language could be read as treating the withdrawal as being made from a plan not "described" in §72(e)(5)(D), in which case the 5-percent penalty would apply to the taxable portion of the withdrawal. However, the legislative history makes no mention of §72(g) or the penalty, potentially indicating that the penalty was not intended to be imposed on such withdrawals.

Under §72(e)(7)(C), a plan maintained by the Federal Government or instrumentality of the Federal Government will be aggregated with other such plans for purposes of the 85 percent test if the plan is "actively administered" by the Government or instrumentality. It will not be aggregated if administered by a commercial financial institution.[71]

The Conference Report [72] states that it is intended that contributions to a qualified cash or deferred arrangement under §401(k) pursuant to a salary reduction agreement not be treated as employee contributions to the extent the contributions are not currently includible in gross income.

The Conference Report [73] further states that it is intended that the 85 percent test will be applied by aggregating an existing thrift or savings feature associated with an employer-funded defined benefit arrangement. This aggregation is to be made only if the employer has consistently treated the two features as a single plan, such as by obtaining one determination letter and filing one annual return with respect to both features. Moreover, the Conference Report states that voluntary employee contributions to a qualified, defined benefit pension plan are not treated as a separate defined contribution plan merely because the voluntary contributions are considered contributions to a defined contribution plan in applying the overall §415(e) limits on contributions and benefits.

Note: The new rules treating amounts withdrawn from employee-funded plans as allocable first to income cannot be circumvented by characterizing the withdrawals as loans from the plan. Under §72(p)(3), as amended by the TRA,[74] an employee-funded plan described in §72(e)(7) will not be treated as a qualified plan for purposes of §72(p) which, as will be described below, permits certain loans of up to $50,000 from qualified plans to be received without income tax consequences. It should also be noted that under §72(e)(4), a loan out of an annuity contract or secured by an annuity contract will be treated at the distribution subject to the income characterization rules of §72(e)(2) and (e)(3).

3. *Effective Date*

The foregoing amendments to §72(e) and (p) will apply to any amount received or loan made by an employee-funded plan after October 16, 1984.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

B. Clarification of Loan Rules

1. Introduction

Effective generally for loans made after August 13, 1982,[75] TEFRA enacted §72(p) which provides that any loan from a qualified employer plan to a participant or beneficiary will be treated as having been received by such individual as a distribution.[76] Under §72(p)(2), a loan will not be treated as a distribution to the extent that the loan does not exceed the lesser of (i) $50,000 or (ii) "1/2 of the present value of the nonforfeitable accrued benefit of the employee under the plan (but not less than $10,000)." The exception is available only for a loan that must, by its terms, be repaid within five years, with an exception for certain loans related to a personal residence.

Although it was intended in TEFRA to set a $10,000 minimum for loans that would qualify under the foregoing exception, the statute did not clearly accomplish this result. The "but not less than $10,000" in the parenthetical could be regarded as establishing that an employee's vested benefit for purposes of the loan exception was a minimum of $10,000, in which case the minimum loan amount would be one-half of this amount or $5,000.

2. Analysis

a. Minimum Loan Amount

The TRA[77] amends §72(p)(2)(A) to clarify that the minimum loan amount is $10,000. Under the amended provision, the loan, together with other outstanding loans from the plan, will not be treated as a distribution to the extent that such loans do not exceed the lesser of (i) $50,000, or (ii) "the greater of (1) one-half of the present value of the nonforfeitable accrued benefit of the employee under the plan, or (2) $10,000." Thus, under the revised version of §72(p)(2), a loan of up to $10,000 would not be treated as a distribution regardless of the amount of the employee's vested benefit.

The TRA[78] makes two additional minor substantive changes to the loan provisions of §72. First, §72(o)(3)(A) is amended to provide that the §72(p)(2) exception does not apply to loans attributable to voluntary deductible employee contributions to a qualified plan. Since such voluntary deductible contributions are a substitute for an employee IRA, and the IRA provisions prohibit loans from IRAs,[79] this change brings such contributions into closer accord with the IRA provisions.

The second TRA change is an amendment to §72(p)(2)(A) providing that the present value of the employee's vested benefit for purposes of the loan exception is determined without counting any accrued benefit attributable to deductible employee contributions.

Note: One final TRA change[80] with a tangential relationship to the loan provisions is the repeal of §404(f). This section provided that the repayment of a loan from a qualified plan by an "owner-employee" (generally a 10-percent owner of the business sponsoring the plan) is treated as a contribution to the plan on behalf of the owner-employee for purposes of the deduction limitations of §404. It should be noted, however, that the TRA has made no change in the prohibited transactions rules to permit loans to be made to plans that cover "owner-employees."

3. Effective Date

All of the foregoing amendments are part of the technical corrections provisions of the TRA. Thus, they are effective as if they had been included in the TEFRA provisions to which they relate.[81] Since the loan provisions under TEFRA were generally effective for loans made after August 13, 1982, these provisions are also effective with respect to such loans.

It should be noted that under a transitional rule to the TEFRA effective date,[82] a "qualified refunding loan" is not treated as a distribution under §72(p) to the extent such loan was repaid before August 14, 1983. For purposes of this rule, a "qualified refunding loan" was any loan made after August 13, 1982, and before August 14, 1983, to the extent the loan was used to make a "required principal payment." A "required principal payment" was defined as any principal repayment on a loan made under the plan which was outstanding on August 13, 1982, if the repayment was required to be made after that date and before August 14, 1983.

The TRA makes two changes to this transitional rule. First, the qualified refunding loan rule is extended to demand loans outstanding on August 13, 1982.[83] Second, the TRA[84] extends the time for making and repaying a qualified loan to January 1, 1985 with respect to individuals who are not key employees within the meaning of §416(i)(2).

IV. Estate Tax Exclusion Repealed

A. Introduction

Section 2039(c) provides an estate tax exclusion for the value of an annuity or other payment receivable by any beneficiary, other than the participant's executor, under a qualified plan or retirement annuity contract, a §403(b) annuity contract, and certain Armed Forces and other governmental pension and survivor plans. The exclusion is available only if the annuity or other payment is not in the form of a lump sum distribution (except where the beneficiary elects to forego the favorable 10-year income averaging treatment accorded such distributions under §402(a)(2) and only if the annuity is not attributable to accumulated deductible employee contributions.[85]

A comparable estate tax exclusion is provided for IRAs under §2039(e).

TEFRA cut back what was an unlimited estate tax exclusion by adding §2039(g), effective for estates of decedents dying after December 31, 1982.[86] Under §2039(g), the exclusion under §2039(c) and (e) was reduced to a maximum of $100,000.

B. Analysis of Repeal

The TRA[87] completely repeals the estate tax exclusion in §2039(c) and (e) for qualified plans and annuities, governmental plans, and IRAs. Also repealed are the special provisions relating to the exclusion in §2039(f), requiring that the favorable income tax treatment for lump sum distributions not be elected, and §2039(g), limiting the exclusion after 1982 to $100,000.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Section §2039(c) continues the limited exclusion of former §2039(d) for certain interests created under community property laws. If the spouse of an employee on whose behalf contributions or payments are made by an employer to a qualified plan, annuity, or tax-sheltered annuity predeceeases the employee, the spouse's gross estate does not include the value of any interest in such plan of annuity to the extent the interest (i) is attributable to employer contributions or payments, and (ii) arises solely by reason of the spouse's interest in community income under the community property laws of the state.

C. *Effective Date*

The repeal of the estate tax exclusion applies to the estates of decedents dying after December 31, 1984.[88] An exception to the repeal, subject to the $100,000 limitation, is provided the estate of any decedent who irrevocably elected the form of benefit before July 18, 1984, and is in pay status on December 31, 1984. Only the form of benefit must have been selected; it is not required in order for this exception to apply that a beneficiary also have been designated.[89]

A similar extension has been retroactively provided by the TRA, by amending the effective date provisions of TEFRA, to continue the unlimited estate tax exclusion with respect to the estate of any decedent who is a participant in any plan and in pay status on December 31, 1982, and who irrevocably elected before January 1, 1983 the form of benefit.[90]

[6] TEFRA, §242(b)(1).
[7] The required distribution rules for IRAs were in effect prior to the TEFRA-imposed rules for qualified plans. However, TEFRA §243 amended §408(a)(7) and (b)(4) to eliminate the option previously available permitting the purchase of an immediate annuity payable for the life of the beneficiary or beneficiaries of the IRA plan owner or the owner's spouse. Thus, after TEFRA, IRA distributions were required to be completed no later than five years after the owner's or surviving spouse's death except when the distribution was for a fixed period of years not exceeding the owner's life expectancy of the joint life expectancy of the owner and the owner's spouse.

Chapter 50

MISCELLANEOUS CHANGES AFFECTING QUALIFIED PLANS AND IRAs

Patrick G. Dooher, Esq.
Silverstein and Mullens
Washington, D.C.

I. Amendments to the Top-Heavy Rules

A. *Introduction*

TEFRA [1] enacted the "top heavy" requirements in §416, effective generally for plan years beginning after December 31, 1983. If a qualified plan is top-heavy, it must meet stricter requirements relating to vesting, minimum benefits, includible compensation, and distribution of benefits. A top-heavy plan satisfies the vesting requirements if it provides for either three-year "cliff" vesting or six-year graded vesting.[2] The minimum benefit that must be provided to non-key employees by a top-heavy defined benefit plan must equal, for each year of service, at least 2 percent of the employee's average compensation over the five highest consecutive years of service in a top-heavy plan, but in no event is the total minimum benefit required to exceed 20 percent of the employee's average compensation over such five highest years of service.[3] The minimum contribution that must be provided non-key employees in a top-heavy defined contribution plan must equal at least 3 percent of the employee's compensation for the year, unless key employees receive a contribution which is a lesser pecentage of compensation, in which case the minimum contribution percentage for all non-key employees may equal the maximum percentage for any of the key employees.[4] The top-heavy minimum benefit or minimum contribution must be determined without consideration of Social Security benefits.[5] In addition, the minimum contribution requirement is determined for a defined contribution plan without regard to amounts contributed pursuant to a salary reduction arrangement. Similarly, salary reduction contributions are not counted for purposes of determining the amount that has been contributed to such a plan on behalf of a key employee.

Under §416(d), no more than $200,000 of compensation can be taken into account in determining contributions or benefits under a top-heavy plan. This $200,000 amount is subject to cost-of-living adjustments made in the same manner as adjustments to the annual addition limit for defined contribution plans in §415(c)(1)(A).

Under §401(a)(9), as enacted by TEFRA, a qualified plan was required to provide that distributions to a key employee in a top-heavy plan commence no later than the year in which the key employee reaches age 70-1/2, regardless of when the key employee retires. However, as explained in Chapter 49, I, *supra*, the TRA has revised the distribution rules of §401(a)(9) to require the commencement of distributions only with respect to "5-percent owners" without regard to whether the plan is top-heavy. An additional rule affecting distributions to key employees in top-heavy plans is that a distribution to a key employee before the employee reaches age 59-1/2 is subject to a 10-percent penalty tax, unless the distribution is made on account of death or disability.[6]

The definition of a top-heavy plan is set forth in §416(g). Under the definition, a plan is a top-heavy plan if more than 60 percent of the aggregate account balances (in a defined contribution plan) or more than 60 percent of the present value of total accrued benefits (in a defined benefit plan) has been accumulated for the benefit of key employees. A plan may also be top-heavy if it is required to be aggregated in a "top-heavy group," as described in §416(g)(2)(B). Under §416(g)(2)(A), aggregation is required for any plan in which a key employee is a participant and for any other plan of the employer enabling a plan with a key employee participant to meet the nondiscrimination or participation requirements of §401(a)(4) or §410. In determining the accrued benefits of any employee or the amount of the account of any employee for purposes of classifying a plan as top-heavy, amounts distributed to the employee continue to be counted until five years after distribution.[7]

Section 416(i) provides that, for purposes of the top-heavy rules, key employees are: (i) officers of the employer, (ii) the 10 employees owning the largest interests in the employer, (iii) 5-percent owners of the employer, or (iv) 1-percent owners of the employer receiving annual compensation from the employer in excess of $150,000.

Section 401(a)(10)(B) requires that the top-heavy provisions must be specifically incorporated in a qualified plan. The top-heavy rules also apply to governmental plans.[8]

B. *Analysis of Top-Heavy Amendments*

1. *Treatment of Salary Reduction Arrangements*

The TRA [9] repeals §416(c)(2)(C), which provided that any employer contribution attributable to a salary reduction arrangement will not be taken into account for purposes of the minimum contribution requirements to a top-heavy defined contribution plan. Under §401(k), an amount deferred at the election of the employee into a qualified cash-or-deferred arrangement is considered an employer contribution. Salary reduction amounts will thus have a two-fold effect on the minimum contribution rules for top-heavy defined contribution plans. On the one hand, amounts deferred to key employees will be treated as

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

employer contributions on their behalf and may result in the imposition of, or increase in, a minimum benefit for non-key employees. On the other hand, amounts deferred by non-key employees (treated as employer contributions) may result in the elimination or decrease in the minimum contribution required of the employer. The ensuing examples illustrate the two potential consequences.

Example 1: Assume that a top-heavy profit-sharing plan has a qualified cash or deferred arrangement. Further assume that the only contributions to the plan for the year are pursuant to employee elections under the cash or deferred arrangement. If the plan covers three key employees, two of whom defer 2 percent of their salary and the third of whom defers 4 percent, the 3-percent minimum benefit must be provided all non-key employees under §416(c)(2). Prior to the repeal of §416(c)(2)(C), no minimum benefit would have been required since the salary deferred by the key employees would not have been considered for purposes of the minimum contribution rules.

Example 2: Assume the same facts as in the preceding example. Further assume that all the non-key employees deferred 1.5 percent of their compensation to the profit sharing plan. The 1.5 percent of compensation deferred will be considered in determining the additional amounts that the employer must contribute to satisfy the minimum contribution requirement. Thus, the employer must contribute an additional 1.5 percent of each non-key employee's compensation to satisfy the minimum contribution requirement.

Comment: As a practical matter, the deferral rates among non-key employees may vary considerably. Some may defer at a substantial rate; others may not defer any compensation. Although, in such a case, the employer theoretically might satisfy the minimum contribution test by contributing sufficient amounts on behalf of only those employees who fail to defer at least 3 percent, in practice it is likely the employer will be compelled to make a 3-percent contribution on behalf of all non-key employees as a matter of fairness. A 3-percent (or greater) contribution may prove advantageous in any event since it should allow "highly compensated" employees to increase their rates of deferral.[10]

A second change made by the TRA [11] relating to the minimum contribution requirement for top-heavy plans is to specify that the minimum contribution requirement applies to a top-heavy Simplified Employee Pension (SEP). Under §416(i)(6), a SEP is treated as a defined contribution plan for purposes of the top-heavy requirements. The TRA revises the qualification requirements of SEPs to provide that a top-heavy SEP must meet the 3-percent minimum contribution requirement in §416(c)(2) for top-heavy defined contribution plans.

Note: The minimum contribution requirement is the only top-heavy requirement that must be extended to SEPs since the IRA and SEP requirements are generally at least as stringent as the other top-heavy requirements. Under §408(a)(4), a contribution to an IRA or a SEP must be 100 percent vested when made. Section 401(k)(3)(C) requires that no more than $200,000 of total compensation of each employee covered by a SEP be considered in computing contributions to the SEP. Sections 408(a)(6) and (b)(3) require that IRA and SEP distributions begin no later than the April 15th of the year following the year in which the plan owner attains age 70-1/2, and §408(f) imposes a 10-percent penalty tax on distributions to a plan owner before the attainment of age 59-1/2.

2. Changes Affecting Top-Heavy Classification

The TRA amends the top-heavy definition in §416(g) in two respects. First, the TRA [12] clarifies that, for purposes of the rule requiring that distributions within the preceding five years be taken into account in determining top-heavy status, distributions within the past five years from a terminated plan must be taken into account. Distributions from a terminated plan must be considered, however, only if the terminated plan would have been required to be included in an aggregation group. That is, the terminated plan must have covered one or more key employees, or the terminated plan must have been a plan enabling a plan covering a key employee to meet the nondiscrimination or participation requirements of §401(a)(4) or 410.

Second, the TRA [13] adds a rule to the effect that, if any individual has not received any compensation from any employer maintaining the plan (other than plan benefits) at any time during the five-year period ending at the time top-heavy status must be determined, any accrued benefit or account of such individual shall not be taken into account in determining the plan's top-heavy status. Thus, for example, if an employee retires and benefits from the plan are distributed to him over his life expectancy, all amounts previously distributed as well as the remaining accrued benefit or account balance will not be taken into account in determining top-heavy status once five years have elapsed from the retirement date to the top-heavy determination date.

Observation: This rule should also apply to beneficiaries of the employee if the employee dies before benefits commence or during the period benefits are paid, assuming the beneficiaries are not employed by the former employer of the employee. If the beneficiary of the employee is employed by the same employer, the beneficiary does not appear to fall within this rule by reason of the receipt of "compensation" from the employer maintaining the plan. Thus, the deceased employee's remaining interest in the plan, plus distributions in the preceding five years, must continue to be taken into account for top-heavy determination purposes until five years after the beneficiary retires from the employer maintaining the plan. It is unclear whether this result is intended since the legislative history does not address this issue.

3. Key Employee Definition Liberalized

The TRA makes several clarifying and liberalizing changes in the definition of a key employee. The first change [14] is to revise the definition of "key employee" to include any employee, rather than merely any participant in an employer plan.

The second TRA amendment [15] provides that, for purposes of the key employee definition, an officer of the employer is treated as a key employee only if the officer has annual compensation greater than 150 percent of the amount in effect under §415(c)(1)(A) (the annual addition

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

limit for defined contribution plans, which for 1984 is $30,000) for any of the five plan years considered in testing whether an employee is a key employee. Thus, for example, if a plan's top-heavy status is being tested for 1984, an officer will not be counted as a key employee if the officer's compensation in the 1980-84 testing period did not exceed $45,000, which is 150 percent of the §415 defined contribution plan limit. A related TRA change [16] provides that any of the 10 employees owning the largest interest in the employer will be treated as key employees only if their compensation exceeds the §415(c)(1)(A) defined contribution plan limit, which as previously mentioned is $30,000 for 1984.

A further TRA amendment [17] provides that, for purposes of treating the 10 employees owning the largest interests in the employer as key employees, if two employees have the same interest in the employer, the employee having the greater annual compensation from the employer shall be treated as having the larger interest.

Finally, the TRA [18] makes it clear that the aggregation rules of §414(b), (c), and (m) do not apply for purposes of determining ownership of the employer by the top 10 employees, as well as by the 1-percent and 5-percent owners.

4. Qualification Requirements

The TRA [19] amends §401(a)(10)(B) to exempt all governmental plans from the top-heavy requirements. Thus, governmental plans will not be subject to the top-heavy requirements and will not have to incorporate the top-heavy rules in plan documents.

The TRA [20] sets forth rules on the steps that may be taken if final regulations implementing the top-heavy rules are not published by January 1, 1985. If final regulations are not published under §416 (as in effect before the date of enactment of the TRA changes, July 18, 1984) before January 1, 1985, the Secretary is instructed to publish before such date plan amendment provisions that may be incorporated in the plan to meet the top-heavy requirements. If a plan is amended to incorporate the Secretary's plan amendment provisions (assuming no regulations are published by 1985), the plan will be treated as meeting the top-heavy requirements during the period such amendments are in effect, but not later than six months after final regulations implementing §416, as in effect before the TRA amendments, are published. If neither final regulations nor plan amendments are published by January 1, 1985, the plan will meet the top-heavy requirements if the plan is amended to incorporate such requirements by reference.

The plan should designate, in incorporating the top-heavy requirements by reference, the specific top-heavy alternatives that will be utilized where options exist. Otherwise, the employer will be treated as having elected the requirements with respect to each employee that provide the maximum vested accrued benefit for such employee. The Conference Report [21] furnishes the following example.

> *Example:* If a plan is amended to incorporate the top-heavy plan rules by reference without specifying the vesting schedule, the plan is deemed to provide a vesting schedule that maximizes the vested, accrued benefits of each non-key employee. Thus, if a particular non-key employee separates from service after two years of service, the plan is considered to have incorporated the graduated vesting schedule with respect to that employee, and that employee would have a 20-percent vested accrued benefit. If another non-key employee covered by the same plan has at least three years of service, the plan is considered to have incorporated the three-year, 100 percent vesting schedule as to that employee. Similarly, in a top-heavy group of plans that are amended to incorporate the top-heavy requirements by reference without specifying the plan or plans under which the minimum benefits or minimum contributions are provided, then a non-key employee in any plan required to be aggregated in the top-heavy group must be provided with the minimum contribution or benefit under each plan that is within the top-heavy group in which the employee participates.

Note: The Conference Report [22] states that the publication of final regulations substantially similar to the proposed regulations, issued in question-and-answer format March 15, 1983, (48 Fed. Reg. 10868), will constitute the issuance of final regulations for purposes of the foregoing plan amendment rules.

C. Effective Dates

The foregoing TRA provisions are effective for plans years beginning after December 31, 1983,[23] except that the provisions excluding benefits of an employee not employed for the last five years and the provisions providing for consideration of amounts contributed under salary reduction arrangements for minimum contribution purposes are effective for plan years beginning after December 31, 1984.[24]

II. Qualified Cash or Deferred Arrangements

A. Introduction

Section 401(k) permits a qualified profit-sharing or stock bonus plan to offer participants an election to defer compensation and have that deferred compensation be contributed by the employer to the participant's behalf. This option may be provided only if certain requirements are met. One requirement is that the deferred amounts contributed to the plan must be fully vested after contribution. Second, the deferred amounts may not be distributable to participants or beneficiaries earlier than upon retirement, death, disability, separation from service, hardship, or the attainment of age 59-1/2.

Under §401(k)(3), a cash or deferred arrangement is treated as satisfying the nondiscrimination requirements of §401(a)(4) and §410(b)(1)(B) if amounts deferred by highly compensated employees satisfy either of two tests. The first test is met if the actual deferral percentage for highly compensated employees is not more than the actual deferral percentage for all other eligible employees multiplied by 150 percent. The second test is met if (i) the actual deferral percentage for highly compensated employees does not exceed that percentage for all other eligible employees by not more than 3 percentage points, and (ii) the actual deferral percentage for highly compensated employees is not more than 250 percent of the actual deferral percentage of all other eligible employees. For purposes of these alter-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

native tests, an employee is considered highly paid if the employee is one of the highest paid one-third of the employer's employees.[25]

Under either of the alternative tests, Social Security taxes paid by the employer may not be considered. Prop. Regs. §1.401(k)-1(a)(3), however, provides that a cash or deferred arrangement will be qualified, even though neither test is satisfied, if the general nondiscrimination requirements of §401(a)(4) and §410(b)(1) are satisfied. Since the general nondiscrimination rules permit employer-paid Social Security taxes to be treated as employer contributions for purposes of the nondiscrimination tests, highly compensated employees may defer wages in excess of the Social Security wage base, ($37,800 for 1984) based on the employer's Social Security tax rate (5.7 percent for 1984).[26]

Section 401(k) was enacted by the Revenue Act of 1978.[27] The 1978 Act grandfathered cash or deferred money purchase pension plans, as well as profit-sharing and stock bonus plans, in existence on June 27, 1974, through 1979. Section 401(k) was made applicable, however, as mentioned above, only as to profit-sharing and stock bonus plans, effective for years beginning after 1979, and no new rules were provided for pre-ERISA money purchase pension plans with salary reduction arrangements after such time.

B. Analysis of TRA Changes

1. Mandatory Application of Alternative Tests

In response to Congress's concern [28] that utilization of Social Security integration, as permitted under the general nondiscrimination rules, permits too great a difference between the actual deferral by highly paid employees and the deferral by other employees, §401(k)(3) has been amended to make mandatory the satisfaction of one of the alternative tests under which the deferral percentages of highly-compensated employees are compared to the deferral percentages of all other employees.[29]

If a cash or deferred arrangement is not qualified because of a failure to meet one of the tests, an elective deferral made under the arrangement is treated as an employee contribution that is not automatically excludible under §402(a)(8), but which may be wholly or partially deductible by the employee under §219(a) and (e) as a qualified voluntary employee contribution, assuming the plan accepts such contributions. A plan will continue to be a qualified plan under §401(a) even if the cash or deferred arrangement is not qualified if the plan continues to meet the usual qualification requirements.[30]

A second change made by the TRA to §401(k)(3) [31] is to insert a requirement that, if two or more plans including cash or deferred arrangements are treated as one plan under the general nondiscrimination requirements, the cash or deferred arrangements included in such plans must also be treated as one arrangement for purposes of satisfying either of the alternative tests. If two or more cash or deferred arrangements of an employer must be aggregated, the deferral percentage for any employee is the sum of the deferral percentages for that employee under each of the arrangements.

Note: The Conference Report [32] states that the foregoing amendments are not intended to change the rule contained in Prop. Regs. §1.401(k)-1(a)(2) that nonelective contributions by an employer to a cash-or-deferred arrangement may be considered in applying the alternative tests. The Report adds that such contributions are taken into account only if the contributions are fully vested when made and satisfy the withdrawal restrictions (such as the age 59-1/2 or hardship rules) applicable to elective deferrals under a qualified cash or deferred arrangement.

2. Pre-ERISA Money Purchase Pension Plans

The TRA [33] makes permanent the grandfather rules for pre-ERISA money purchase pension plans. Post-TRA §401(k)(5) extends the qualified cash-or-deferred arrangement rules of §401(k) to "pre-ERISA money purchase plans," which are defined as a pension plan that is a defined contribution plan that was in existence on June 27, 1974, and, which on that date, included a salary reduction arrangement. Section 401(k) will apply, however, to such a plan only if neither employer nor employee contributions under the plan exceed the limits under the plan's contribution formula in effect on June 27, 1974. Further, amounts in the plan attributable to salary reduction contributions may not be distributable to participants or other beneficiaries of a pre-ERISA money purchase plan earlier than upon retirement, death, disability, or separation from service. The rule permitting distribution of such amounts from a profit-sharing or stock bonus plan in the case of hardship or attainment of age 59-1/2 does not apply to pre-ERISA money purchase plans.

C. Effective Dates

The TRA provisions requiring satisfaction of one of the alternative tests are effective for plan years beginning after December 31, 1984.[34] An exception is provided, however, for a cash or deferred arrangement maintained on June 8, 1984, by a state government that was issued a determination letter on December 6, 1982.[35]

Note: The Conference Report [36] states that no inference should be drawn from this effective date provision as to whether a state government may maintain a profit-sharing plan. Note, however, that the Service has ruled in GCM 38283 that a non-profit organization exempt from tax under §501(c)(3) can establish a qualified profit-sharing plan for its employees despite the absence of "profits" in a conventional sense.

The TRA provisions extending §401(k) to pre-ERISA money purchase plans are effective with respect to plan years beginning after July 18, 1984.[37] Under a transitional rule, applicable for plan years beginning after 1979 and on or before July 18, 1984, rules similar to those in §135(c)(2) of the Revenue Act of 1978 shall apply to such plans.[38]

III. Contribution, Benefit, and Deduction Limits for Qualified Plans

A. Introduction

Section 415 imposes limits on contributions and benefits that may be provided to participants under qualified plans. Under §415(c)(1), as amended by TEFRA,[39] the limit on annual additions (generally consisting of the sum of employer contributions, plan forfeitures, and a specified percentage of employee contributions) allocated to a par-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ticipant's account in a defined contribution plan for a year may not exceed the lesser of $30,000 (for 1984) or 25 percent of the participant's compensation. The §415(b)(1) limit on the annual benefit that may be provided a participant under a defined benefit plan is the lesser of $90,000 (for 1984) or 100 percent of the participant's average compensation for his high three consecutive years. TEFRA [40] imposed the requirement that actuarial adjustments be made to a defined benefit plan's normal retirement benefit if it begins before age 62 or after age 65 for purposes of testing whether the $90,000 limitation has been satisfied.

Section 415(e) imposes an overall limit on contributions and benefits if an employee participates in both a defined contribution and defined benefit pension plan maintained by the same employer. The overall limit is computed by determining the fraction of each separate limit used in each plan by an employee and adding the two fractions together. TEFRA [41] generally reduced the overall limit on the sum of the two fractions from 1.4 to the lesser of 1.25 times the applicable dollar limitation or 1.4 times the applicable percentage of compensation limit. In so reducing the overall limit, TEFRA [42] provided a special transition rule for computing the defined contribution plan fraction for years ending after December 31, 1982, in §415(e)(6). The fraction created by this rule is known as the "transition fraction."

Under §401(h), a pension or annuity plan may provide post-retirement medical, sickness, accident, and hospitalization benefits to participants, their spouses and their dependents if (i) such benefits are subordinate to the retirement benefits provided by the plan, (ii) a separate account is established and maintained for such benefits, (iii) the employer's contribution to such separate account are reasonable and ascertainable, (iv) amounts in such account cannot be diverted to any other purpose than providing post-retirement medical benefits, and (v) any amount remaining in such account after satisfaction of post-retirement medical benefits must be returned to the employer. Post-retirement medical benefits are not taken into account for purposes of the §415 limits on contributions and benefits that may be provided under a defined benefit pension plan.

Although §415(d) provides that the dollar limits under §415 are adjusted annually for cost-of-living increases, determined in the same manner as Social Security benefits are adjusted, TEFRA [43] suspended cost-of-living adjustments until 1986. Beginning in 1986, the limits were to be adjusted for post-1984 cost-of-living increases.[44]

B. Analysis

1. Clarification of the §415 Limits

In a technical change, the TRA [45] amends §415(e)(6) to clarify that the special transitional rule for computing the defined contribution plan fraction for years ending after 1982 applies only to plans that were in existence on or before July 1, 1982.

2. Cost-Of-Living Adjustments Suspended

The TRA [46] amends §415(d)(2) and (3) to suspend the cost-of-living adjustments in the dollar limits for defined contribution and defined benefit plans until 1988. Commencing in 1988, these limits will be adjusted for post-1986 cost-of-living increases in accordance with the formula for providing cost-of-living increases in Social Security benefits.

3. Post-Retirement Medical Benefits for 5 Percent Owners

The TRA [47] enacted a new §401(h)(6) to provide that a defined benefit plan providing medical benefits for retired employees must maintain a separate medical benefit account for any participant who, at any time during any of the five preceding plan years, is a 5-percent owner of the sponsoring employer (as defined in §416(i)(1)(B)(i)). Post-retirement medical benefits (to the extent attributable to plan years beginning after March 31, 1984, for which the employee is considered a 5-percent owner) must only be payable to such employee, the employee's spouse and the employee's dependents, from such separate account. As noted in the Ways and Means Committee Report accompanying the TRA,[48] the medical benefits provided under a defined benefit plan must meet the general nondiscrimination standards. The TRA [49] further amends §415 to provide that contributions allocated to an individual medical account, as described in post-TRA §401(h)(6), which is part of the defined benefit plan, must be treated as an annual addition to a defined contribution plan for purposes of §415(c). Thus, the amount allocated to the individual medical account must be included in determining whether the defined benefit plan and any defined contribution plan of the employer meet the separate limits and the overall limit provided with respect to such plans. According to the Ways and Means Committee Report,[50] regulations may be issued providing that an amount allocated to a medical benefit account under a defined benefit plan before the effective date of the TRA provision can be reallocated to the individual medical account of a participant without treatment as an annual addition described in §415(c).

4. Repeal of Special Limits on H.R. 10 Plans

Continuing the policy of TEFRA to eliminate the distinctions between plans for self-employed individuals and corporate plans, the TRA [51] repeals several additional limits on plans for self-employed individuals that were overlooked in TEFRA. For example, the special limitation in §401(e) on plan contributions to pay premiums on annuity or life insurance contracts on the life of owner-employees under a H. R. 10 plan is repealed.

An additional change of note is the amendment of §404(a)(8)(D) to provide that the earned income of the self-employed individual for purposes of determining the maximum allowable deduction for contributions to a qualified plan is determined without regard to the deductions allowable for contributions to such plan.

C. Effective Dates

The TRA changes clarifying (i) that actuarial adjustments are made to the dollar benefit limitation and not to the benefit itself and (ii) that the special transition rule for defined contribution plan fractions applies only to plans in existence on or before July 1, 1982, are effective as if included in TEFRA.[52] The postponement of cost-of-living

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

adjustments to the §415 dollar limits until 1988 is effective for plan years beginning after December 31, 1983.[53] The amendments requiring the establishment of individual medical accounts for post-retirement medical benefits for 5-percent employees and subjecting such plans to the §415 limits are effective for plan years beginning after March 31, 1984.[54]

The technical corrections repealing additional special limits on plans covering self-employed individuals are effective as if included in TEFRA.[55] Note that, in a clarifying change, the TRA [56] provides that the repeal of the special deduction rules in §§404(e) and 1379(b) (as in effect before the enactment of TEFRA) shall not be applied to any defined benefit H.R. 10 plan subject to §401(j).

IV. Affiliated Service Groups, Employee Leasing and Collective Bargaining Agreements

A. Introduction

1. Affiliated Service Groups

Under §414(m), all employees of organizations constituting an "affiliated service group" must be treated as employed by a single employer for purposes of various plans qualification requirements. The plan qualification requirements covered by §414(m) include nondiscrimination requirements under §401(a)(3) and (4), the vesting requirements under §§401(a)(7) and 411, and the top-heavy requirements of §416. An affiliated service group consists of a service organization, including organizations performing management functions, and one or more related organizations for whom the services are performed.[57] Section 414(m)(6) defines "organization" for purposes of these provisions to include a corporation, partnership, or other organization, and further provides that, in determining ownership, the constructive ownership rules of §267(c) apply.

Section 414(m)(6) provides that regulations may be issued to prevent avoidance of any employee benefit requirement covered under §414(m) by the use of separate organizations with respect to service organizations.

2. Leased Employees

Section 414(n), added by TEFRA,[58] requires that certain leased employees be treated as employees of the recipient of the leased employee's services for purposes of various qualified plan requirements similar to the requirements covered by §414(m). Under §414(n), to be classified as a "leased employee," the person providing services to the recipient must meet three requirements:

(i) The services must be provided pursuant to an agreement between the recipient and the leasing organization;

(ii) The person must have performed such services for the recipient (or for the recipient and related persons) on a substantially full-time basis for at least one full year; and

(iii) The services must be of a type historically performed in the business field of the recipient by employees.

Section 414(n)(5) provides a safe harbor under which a leased employee will not be treated as an employee of the recipient of the services if the leased employee is covered by a plan maintained by the leasing organization meeting certain requirements.

3. Collective Bargaining Agreements

Many of the requirements imposed by the qualified plan rules and the Code sections governing statutory fringe benefit programs do not apply to plans or programs maintained pursuant to a collective bargaining agreement. For example, §416(i)(4) provides that the vesting, minimum contribution or benefit, and compensation requirements of the top-heavy rules do not apply to any employee included under a collective bargaining agreement where retirement benefits have been the subject of good faith collective bargaining.

B. Analysis

1. Affiliated Service Groups

The TRA [59] amends §414(m)(6)(B) to provide that the broader constructive ownership rules of §318(a) will apply in determining ownership for purposes of the affiliated service group rules, rather than the narrower §267(c) constructive ownership rules.

Observation: In the same section of the TRA that amends §414(m)(6) to substitute the constructive ownership rules, the TRA [60] repeals §414(m)(6) in a conforming amendment to another TRA change, new §414(o), providing the Treasury with broader regulatory authority to prevent the avoidance of the affiliated service group rules and the leased employee rules. The repeal appears inadvertent. In all likelihood, Congress intended to repeal former §414(n)(6), redesignated as of 1984 as §414(m)(7), which provides the Treasury with comparable authority to issue regulations to prevent avoidance with respect to the affiliated service group rules.

2. Employee Leasing

The TRA [61] makes two changes in the employee leasing area. First, §414(n)(2) is amended to clarify that a leased employee includes only those individuals who are not otherwise employees of the lessee. This clarification was made in response to a concern that certain individuals have interpreted the present safe-harbor rule for employee leasing under §414(n)(5) as overriding traditional common-law employee rules.[62]

A second change, as mentioned above, is to extend the Treasury's regulatory authority to prescribe regulations to prevent the avoidance of the qualified plan requirements and other employee benefit requirements through the use of the employee leasing and other arrangements as well as separate organizations.[63]

The Conference Report [64] states that it is not implied that regulations issued under this provision could be applied only prospectively. This statement appears to constitute an open invitation to the Treasury to issue retroactive regulations.

The Conference Report [65] gives as an example of a situation that might be covered under these regulations the situation where professionals are hired as leased employees of their own professional corporations to avoid the nondiscrimination rules applicable to qualified plans. The Report further states that this is not the sole situation in which

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

employee leasing is used to avoid the qualified plan requirements, but adds that it is not intended to imply that legitimate uses of employee leasing are necessarily abuses, giving as an illustration the historical business practice of temporarily assigning company employees to temporary projects. This situation is not subject to the new regulatory authority provided the project has an ascertainable termination date and it is not customary under the circumstances to hire permanent employees for such a project.[66]

3. Determination of Collective Bargaining Agreement

In response to the concern that owners, officers, and executives of certain employers were forming collective bargaining units to qualify for the exception to various qualified plan rules for collective bargaining agreements, the TRA [67] adds §7701(a)(46) to provide that, in determining whether a collective bargaining agreement between an employee representative and one or more employers exists, the term "employee representative" does not include any organization more than one-half of the members of which are employees who are owners, officers, or executives of the employer.

C. *Effective Dates*

The TRA amendments substituting the broader constructive ownership rules of §318(a) are effective for taxable years beginning after December 31, 1984.[68] However, the inadvertent repeal of §414(n)(6) is effective on July 18, 1984, the date the TRA was enacted.[69]

The clarification of the definition of a leased employee for purposes of the leased employee provisions is also effective for taxable years beginning after December 31, 1983.[70]

The broadening of the Treasury's regulatory authority in §414(o) is effective July 18, 1984, although, as discussed above, the regulations issued under this provision may be retroactive in effect. The provision relating to collective bargaining agreements is effective on April 1, 1984.[71]

V. Amendments Affecting IRAs and SEPs

A. *Introduction*

Sections 219(a) and (b) allow a deduction for an annual deductible contribution to an individual retirement plan (IRA) equal to the lesser of $2,000 or 100 percent of compensation. Under §219(f)(3), a contribution can be made to an IRA and be deducted for the taxable year if it is made no later than the time prescribed by the law for filing the return for that taxable year, including extensions thereof. Thus, if a calendar year taxpayer decides to make a $2,000 contribution to an IRA for 1983, and the taxpayer extends the time for filing his 1983 return to August 15, 1984, the taxpayer will have until August 15, 1984 to contribute the $2,000 to the IRA and obtain a deduction for 1983.

Under §219(b)(4), alimony received by a divorced individual can be taken into account for purposes of determining an IRA contribution and deduction if certain requirements are met. This special provision applies to a divorced individual only if (i) an IRA was established for the benefit of that individual at least five years before the beginning of the calendar year in which the decree of divorce or separate maintenance was issued, and (ii) for at least three of the five most recent taxable years of the former spouse of the divorced individual ending before the taxable year in which the decree was issued, the former spouse paying the alimony was allowed a deduction under the spousal IRA rules for contributions for the benefit of the individual. If the foregoing conditions are met, the IRA deduction limit for such divorced individual is not less than the lesser of (i) $1,125 or (ii) the sum of the individual's compensation and qualifying alimony includible in the individual's gross income for the year.

Section 219(b)(2) raises the dollar limit for an IRA deduction from $2,000 to $15,000 in the case of a simplified employee pension (SEP). However, the percentage of compensation limit on deductions to a SEP is 15 percent, in lieu of the 100 percent limit generally applicable to IRAs under §219(b). SEPs, the requirements for which are set forth in §408(k), are generally IRAs established on behalf of qualifying employees to which the employer makes nondiscriminatory contributions.

B. *Analysis*

The TRA shortens the period during which a contribution for a taxable year may be made to an IRA. Under §219(f)(3)(A), as amended by the TRA,[72] the contribution must be made by the time for filing the return for a taxable year, *not* including extensions thereof. Thus, a taxpayer on a calendar year who desires to make a contribution to an IRA for 1984 must make that contribution by April 15, 1985, regardless of whether the taxpayer obtains an extension of time for filing the 1984 return.

The TRA simplifies considerably the rules under which a divorced spouse can make a deductible contribution to an IRA based on alimony. Under §219(f)(1), as amended by the TRA,[73] all alimony received by a divorced spouse is treated as compensation for purposes of the IRA deduction limit. The eligibility restrictions in §219(b)(4) have been repealed, including the restriction limiting the IRA deduction based on alimony to $1,125. Thus, a divorced spouse may now contribute up to $2,000 of alimony, which is the general IRA maximum, and obtain a deduction for the amount contributed.

Finally, the TRA raises the dollar limit on deductions to a SEP from $15,000 to the limitation in effect for defined contribution plans under §415(c)(1)(A). As described above, the defined contribution limit is $30,000 for years 1984 through 1987.[74]

Note: In a technical oversight, the TRA failed to make a conforming change in §219(b)(2)(C), which provides a special rule reducing the $15,000 dollar limit by the amount of Social Security or self employment taxes taken into account under the SEP integration rules in §408(k)(3)(D) in the case of officers, shareholders, or owner-employees.[75]

C. *Effective Dates*

The TRA amendment shortening the period during which IRAs may be funded applies to contributions made after December 31, 1984.[76] The provisions liberalizing the IRA rules for alimony apply to taxable years beginning after December 31, 1984.[77] The TRA change raising the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

SEP dollar limit to $30,000 is effective for years beginning after December 31, 1983.[78]

VI. Repeal of Qualified Bond Purchase Plans and Individual Retirement Bonds

A. *Introduction*

Section 405 provides that an employer-sponsored bond purchase plan will be a qualified plan if it satisfies various requirements. Bonds under such a plan must be issued in the names of the individual employees on whose behalf they are purchased and must be nontransferable. The bonds, and interest earned thereon, are not includible in an employee's gross income until the bonds are redeemed, which cannot occur until the employee dies, becomes disabled or attains age 59-1/2. The bond proceeds may be rolled over to an IRA but do not qualify for 10-year forward averaging or long-term capital gains treatment under §402.

Under §219, a taxpayer is allowed a deduction under the IRA limits, generally equal to the lesser of $2,000 or 100 percent of compensation, for the purchase of a qualified retirement bond described in §409. A qualified retirement bond is one issued under the Second Liberty Bond Act that accumulates interest until the time of redemption. The bonds are issued in the name of the individual on whose behalf they are purchased and are not transferable. Upon redemption, the bonds may be rolled into an IRA but are otherwise fully includible in gross income. A 10-percent additional income tax is imposed on redemption proceeds if the bond is redeemed before the owner attains the age 59-1/2, dies, or becomes disabled. In addition, a retirement bond ceases to bear interest in the year the owner becomes age 70-1/2, and the value of the bond at such time must be included in the owner's gross income.

In a news release dated April 27, 1982, the Treasury announced that the sales of bonds issued for the purposes of these provisions would be discontinued effective April 30, 1982.[79]

B. *Analysis*

The TRA[80] repeals as deadwood the qualified bond purchase plan and qualified retirement bond provisions. As a transitional measure, §405(d)(3)(A) (as in effect before its repeal) is amended to provide that the redemption proceeds of a bond purchased under a qualified bond purchase plan may be rolled over tax-free to a qualified plan. If such a rollover is made, the rollover amounts must be subject to separate accounting in the recipient plan, and are not eligible for capital gain, or 10-year forward averaging, or the special nonrecognition treatment accorded the net unrealized appreciation in employer securities.[81]

C. *Effective Dates*

The repeal is generally effective for obligations issued after December 31, 1983. The provisions relating to rollovers are effective with respect to redemptions made after July 18, 1984.[82] A transitional rule[83] provides that a bond purchased under a qualified bond purchase program may be redeemed at any time notwithstanding the attainment of age 59-1/2.

VII. Special Interest Provisions

The TRA contains various qualified plan provisions providing relief to certain classes of taxpayers. These provisions will be briefly mentioned here.

First, the TRA[84] eliminated the retroactive application of the withdrawal liability rules of the Multiemployer Pension Plan Amendments Act of 1980. The MPPAA was enacted on September 26, 1980, and it provided that its withdrawal liability rules applied retroactively to employers withdrawing from multi-employer defined benefit pension plans after April 28, 1980. The Supreme Court, in *PBGC v. R.A. Gray & Co.*,[85] ruled that such retroactive application of the withdrawal liability rules was constitutional. The TRA nullifies the retroactive application of the withdrawal provisions of the Act, providing for refunds of amounts paid by a withdrawing employer who fell within the period of retroactive application.

Second, the TRA[86] provides specific pension portability rules for the employees of AT&T and its former subsidiaries in order to reflect the split-up of AT&T. These provisions are extensively described in the Conference Report accompanying the TRA.[87]

Third, the TRA provides special relief for certain pension plan distributions received during 1976 and 1977 and rolled over into an IRA.[88]

Fourth, the TRA[89] provides relief from partial termination provisions in the case of the turnover of Trans-Alaskan Pipeline employees if certain requirements are met.

Finally, under the TRA,[90] the required distribution rules for qualified plans and IRAs do not apply to the extent that plan balances are held by an insuer that, on March 15, 1984, is engaged in a rehabilitation proceeding under an applicable state insurance law, such as Baldwin-United.

CHAPTER 51

CHANGES AFFECTING EMPLOYMENT TAXES

Harrison B. McCawley, Esq.
and
Donald J. Mathison, Esq.
Silverstein and Mullens
Washington, D.C.

I. Application of SECA to Commodity and Option Dealers [Act §102(c)]

A. Self-Employment Tax — Section 1402 Amended

Act §102(c) amends §1402 (relating to definitions for purposes of the tax on self-employment income) to add a new subsection (i). Under this subsection, notwithstanding §1402(a)(3)(A) (which excludes gain or loss from the sale or exchange of a capital asset), there is not to be excluded any gain or loss (for purposes of determining income subject to the self employment tax) from §1256 contracts or property related to such contracts where such gain or loss is attributable to the normal course of the taxpayer's activity of dealing in or trading §1256 contracts. Further, the §1202 capital gains deduction is not to apply. *See* §1402(i)(1)(A) and (B).

"Section 1256 contracts" is defined in §1256(b), as amended by Act §102(a) (*see* discussion in Chapter 27). For purposes of these provisions, §1402(i)(2) defines "options dealer" as having the same meaning as in §1256(g)(8) *(i.e.*, a market maker or specialist registered with a national exchange subject to CTFC regulation), and "commodities dealer" as a person actively engaged in trading §1256 contracts who is registered with a domestic board of trade under CTFC regulations.

B. Amendments to the Social Security Act

The same Act section (§102(c)) amends §211 of the Social Security Act by adding a new subsection (h)(1) containing provisions identical to those of the amendments to §1402, *supra.*

II. FUTA "Wages" to Include Tips

A. Introduction

Under the Federal Unemployment Tax Act ("FUTA"),[1] an employer is subject to a minimum net federal tax of 0.8 percent on the first $7,000 of "wages" paid annually to each employee. Under pre-TRA law, tips and gratuities were excluded from the definition of "wages" if paid directly to an employee by a customer of the employer and not accounted for by the employee to the employer.[2] For purposes of this rule, tips received by an employee are "accounted for" only to the extent the employee reports the tips to his employer and the tips bear a relationship to the total amount of the employee's remuneration. Applying these regulations, the Service has held that tips received by an employee constitute "wages" when they are reported in writing by the employee to the employer and taken into the account by the employer to the extent permitted in determining the employee's compensation under state or federal minimum wage laws.[3]

By contrast, for purposes of the Federal Insurance Contributions Act ("FICA"),[4] tips are treated as "wages" and are taxable as such except to the extent they are not paid in cash or, if paid in cash, are less than $20 per employee per month.[5] Every employee who receives tips in the course of his employment constituting "wages" for FICA purposes must report tips to his employer on a monthly basis.[6]

B. Overview

The Act has brought the FUTA definition of "wages," where tips are concerned, into conformity with the FICA definition of the same term.

C. Detailed Analysis

Section 1073 of the Act adds Code §3306(f), under which "wages," for FUTA purposes will, henceforth, include tips received while performing services constituting employment and included in a written statement furnished the employer pursuant to §6053(a). The legislative history indicates that, in enacting this provision, Congress wished to expand the eligibility for unemployment insurance benefits for employees who receive tips.[7] This result is thought likely to follow since the definitions of "wages" under state unemployment insurance statutes generally follow the FUTA definition and eligibility for benefits generally depends upon the amount of an employee's "wages" under the state statute to which he is subject.

The amendment will generally become effective on January 1, 1986.[8] The effective date is one year later, however, in the case of any state where the legislature did not meet in a regular session sometime during 1984 after the TRA's enactment date (July 18, 1984) and did not meet in any session before the enactment date and continuing for at least 25 calendar days after such date.[9]

Washington, D.C.

I. Deferral of Scheduled Reductions in Maximum Gift and Estate Tax Rates [Act §21]

A. Introduction

The Economic Recovery Tax Act of 1981 (ERTA) reduced the maximum rate of transfer tax [1] from 70 percent on taxable estates over $5 million, to 50 percent on taxable estates over $2.5 million.[2] This reduction was to be accomplished by simply removing the top brackets from the rate scale and imposing a maximum rate of 50 percent at $2.5 million.

However, the reduction in the maximum rate was not immediate; rather, the reduction from 70 to 50 percent was to be accomplished in 5 percent increments over four years, fully effective in 1985. Thus, for gifts made and decedents dying in 1982, the maximum tax rate was 65 percent on transfers in excess of $4 million, for 1983, the maximum rate was 60 percent on transfers in excess of $3.5 million; and for 1984, 55 percent on transfers in excess of $3 million. The rate was scheduled to be 50 percent on transfers in excess of $2.5 million in 1985 and thereafter.[3]

B. Overview

1. TRA Amendment

The maximum gift and estate tax rate remains at 55 percent on transfers in excess of $3 million in 1984 through 1987. The rate will be reduced to 50 percent on transfers in excess of $2.5 million in 1988.

2. Effective Date

The provision is effective for gifts made, and estates of individuals dying, after December 31, 1983.

C. Detailed Analysis

Section 21 of the Tax Reform Act of 1984 delays the completion of the scheduled incremental reduction in the maximum transfer tax rate. The incremental reduction does not resume until 1988; the effective result is a postponement of three years in the reduction of the maximum rate to 50 percent.

Observation: The change will have no impact on all but the largest estates, and even then the impact may be slight. For example, assuming pre-TRA law, in 1985, the federal estate tax would have imposed a 50 percent tax on transfers in excess of $2.5 million. Therefore, assuming a $10 million estate, as to the first $5 million of value ($2.5 million times two spouses), the analysis of how to split the estate to minimize taxes would revolve around the normal conflict between estate equalization and estate tax deferral, tempered by individual family considerations.

However, for the second $5 million of net worth, the marginal tax bracket applicable to the transfer would have been 50 percent regardless of which estate (husband's or wife's) bore the tax.

This result would hold true even if appreciation occurred between the deaths of the two spouses. However, at the death of the second spouse, only those assets included in the surviving spouse's estate would receive a stepped-up basis. Thus, in situations where no real tax savings can be obtained by equalizing the estates, the general practice is to utilize the unlimited marital deduction to pass the balance of the estate directly to the surviving spouse, and not through a bypass or family trust, so as to achieve a higher basis for eventual sale of the family's assets.

The Tax Reform Act's mandated delay in the reduction in the maximum transfer tax rate for another three years would seem only to buttress already existing planning considerations set forth above, because of the possibility of the estate of the surviving spouse being subject to tax at a lower rate than the estate of the prior deceased spouse.

II. Estate and Gift Tax Treatment of Property Settlements Incident to Divorce

Act §425 amends §§2043 and 2516 of the Code. The amendment of §2516 extends the period to enter into a property settlement agreement (for purposes of avoiding gift tax) to one year after the divorce. By virtue of the amendment of §2043, an estate tax deduction is allowed for transfers pursuant to claims arising under a written property settlement agreement if (1) the transfers are in satisfaction of marital or property rights and (2) the agreement would have qualified the transfers as non-taxable for gift tax purposes under §2516.

These amendments are applicable to estates of decedents dying after, and to lifetime transfers after, July 18, 1984.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The amendments are discussed in greater detail in Chapter 13 of this portfolio.

III. Interest-Free and Below-Market Loans Give Rise to Gift Tax Consequences [Act §172]

A. Background

In *Dickman v. Commissioner*,[4] the Supreme Court held that an interest-free demand loan in an intrafamily setting results in a taxable gift. At the very moment the Supreme Court was issuing this landmark decision, Congress was considering legislative proposals to impose income as well as gift tax consequences with respect to below market and interest-free loans.

After the Seventh Circuit Court of Appeals held in *Crown v. Comr.*[5] that interest-free demand loans did not result in gift tax liability, the use of interest-free loans among family members enjoyed wide popularity as a tax planning tool. Touted as superior to the *Clifford* trust as a means of shifting income, it seemed to offer many of the benefits of the short-term trust without the related restrictions and formalities. Moreover, its purpose of shifting income from a higher-bracket taxpayer (usually a parent) to a lower-bracket taxpayer (usually the parent's child) could be accomplished without subjecting the lender to a ten-year wait before the property could be reclaimed. The dramatic facts in the Crown case (the taxpayer and his two brothers made interest-free loans in excess of $18 million to 24 different trusts) further encouraged taxpayers to utilize the interest-free loan arrangement as long as the courts and Congress were willing to sustain it.

The Internal Revenue Service had consistently argued that interest-free loans made in an intrafamily setting are within the reach of the federal gift tax laws. However, until *Dickman*, taxpayers successfully argued that interest payments imputed with respect to interest-free loans were not gifts for Federal gift tax purposes.

In *Dickman*, the Supreme Court held that the gift tax was designed to encompass all transfers of property and property rights having significant value and that the interest-free loan of funds is a "transfer of property by gift" within the meaning of that statute. The Court concluded that transfers of property "by whatever means effected" are subject to gift tax.

Even though the facts of *Dickman* involved use of a substantial amount of cash for an indefinite time, the opinion seems to extend to the use of any type of valuable property interest. The opinion discusses the rent-free use of property and the interest-free use of cash as similar grants of the use of property. In each case, the Court found that there is a measurable economic value associated with the use of the property transferred.

While the Supreme Court held that interest-free loans are subject to the gift tax, the Court remanded the case so the Tax Court could determine how the gift should be valued. Untouched by the *Dickman* decision was the question of the income tax consequences of such a loan. The Service had taken the position that, in the case of an interest-free loan to an employee or shareholder, the borrower derives an economic benefit that should be included in income. However, the Service's position on this issue had been rejected by a long line of cases.[6]

In the Act, Congress incorporated both income and gift tax provisions in a comprehensive and complex set of rules to be applied if a loan is interest-free or is made at an interest rate below the "market rate" designated by the statute. The income tax treatment of such loans is discussed at Chapter 39. This section will discuss the gift tax consequences of such loans.

B. Overview

1. Explanation of Provision

Act §172 adds new Code §7872, which imposes a set of rules for interest-free demand and term loans, and for loans made at below-market rates. Generally these rules provide as follows:

(1) The lender is deemed to have made a loan to the borrower requiring payment of interest at a stated applicable Federal rate of interest;

(2) The borrower is deemed to have paid interest to the lender at the stated applicable Federal rate of interest as of the end of each year; and

(3) The lender is deemed to have either (i) made a gift, (ii) paid compensation, or (iii) paid a dividend to the borrower of the imputed interest which is deemed paid on the loan.

The statute divides such loans into two categories, "gift loans" defined as any below-market loan where the foregoing of interest is in the nature of a gift, and "compensation-related loans", "corporation-shareholder loans" and other loans which have interest arrangements found to have a significant effect on any federal tax liability of the lender or borrower. In the case of gift loans, the lender is taxed on the imputed interest and is deemed to have made a gift of the interest back to the borrower.

2. Effective Dates

The new law applies generally to term loans made after June 6, 1984, and demand loans outstanding after that date. If a demand loan that is outstanding on June 6, 1984 is repaid within 60 days of the date of enactment, (*i.e.*, September 16, 1984), the Act will not apply. If the loan is not repaid by September 16, 1984, it will be subject to the new rules as of June 7, 1984.

The Conference Report states that no inference as to the proper treatment of loans before June 6, 1984 is intended.[7] Neither the statute nor the Reports prohibit the retroactive applicaton of *Dickman*.

C. Detailed Analysis

If a gift loan is below-market both income and gift tax liability may result. Different rules govern the income and gift taxation of such gift loans. This section deals with the gift tax rules. The income tax rules are discussed in Chapter 39.

1. Loans Covered by New Law

Act §172 adds new Code §7872 entitled "Treatment of Loans with Below-Market Interest Rates." A demand loan will be subject to this provision if the interest is payable on

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the loan at a rate less than the "applicable Federal rate." A term loan will be subject to this provision if the amount loaned exceeds the present value of all payments due under the loan.

Section 7872(a), providing for the treatment of gift loans, defines such loan as any below-market loan where the foregoing of interest is in the nature of a gift. The Act treats the value of the foregone interest as though it had been paid to the lender and then transferred back to the borrower as a gift. In the case of a demand loan the deemed gifts of the foregone interest to the borrower are treated as gifts for each year the loan is outstanding and are to be valued semi-annually. The gift term loan will be valued based on the discount rate in effect when the loan is made.

2. Foregone Interest

The term "foregone interest" means the excess of the amount of interest which would have been payable if interest accrued at the applicable Federal rate and was payable annually on the last day of the calendar year over any interest actually payable on such loan. This amount is deemed to be transferred to the lender and retransferred to the borrower (which is the gift transaction).

If the loan is a demand loan, the gift is valued as of December 31 each year the loan is outstanding. If the demand loan continues beyond one calendar year there will be annual gift tax consequences.

If the loan is a term loan the gift is valued at the time the loan is made as if the borrower received that day cash equal to the excess of the loan over the present value of all payments due under the loan, using a discount rate, compounded semi-annually, equal to the applicable Federal rate. The amount is deemed to be transferred on the date of the loan so there will be only one gift transfer in a term loan situation.

3. Applicable Federal Rate

Under the Act, the amount of the gift resulting from a below-market loan is based on the applicable Federal rate. The applicable Federal rate is determined under Code §1274(d) each October and April and is effective the following January 1 and July 1. This rate is based on the average market yield during the preceding 6 months on outstanding U.S. obligations with maturities under 3 years. For demand gift loans, the applicable Federal rate is the Federal short term rate in effect under §1274(d) for the period for which the amount of foregone interest is being determined. Because the rate is subject to change every six months, the amount of foregone interest and thus the amount of the gift must be valued semi-annually.

For term gift loans, the applicable Federal rate is the applicable Federal rate in effect under §1274(d), as of the day on which the loan was made, compounded semi-annually. Thus, term loans are valued based on the discount rate in effect when the loan is made.

Act §172(c)(4) states that for both demand and term loans the applicable Federal rate until January 1, 1985, shall be 10 percent, compounded semiannually.

4. $10,000 De Minimis Exception for Gift Loans

In the case of a gift loan, the Act provisions do not apply if the aggregate of all lender's loans to the same borrower does not exceed $10,000, regardless of the interest rate charged. This exception is applicable to loans "directly between individuals" so apparently the exception will not apply to estates, trusts, family partnerships, corporations and the like. For purposes of determining whether this exemption applies, a husband and wife are considered one person. However, the exception will not apply if the loan is "directly attributable to the purchase or carrying of income producing assets." This exemption also applies for income tax purposes.

Thus, if a father loans his daughter $9,000 and she pays for her law school tuition and buys a new car with the money, the loan will not be subject to gift tax. If the daughter puts the money in an interest bearing account, the Act provisions will apply. In the latter case, the gift still may be exempt from gift tax under the father's annual gift tax exclusion.

5. Regulatory Exception for Loans with No Tax Consequences

The Act provides that regulations should be issued exempting transactions "the interest arrangements of which have no significant effect on any Federal tax liability of the lender or the borrower." The House Report cites student loans, father's loan to son to pay for his current educational expenses, and insurance policy loans.[8]

6. Loans Made before June 6, 1984

a. Application of Dickman Case

The Act provisions cover the period from June 6, 1984. A vigorous lobbying effort to include a provision in the Act prohibiting the retroactive application of *Dickman* failed. As a consequence, the *Dickman* decision applies to pre-June 6, 1984 loans. Where no gift tax return has been filed for the period, the gift tax statute of limitations will not have begun to run.

The *Dickman* case also could apply to certain post-June 6, 1984 loans. The statutory rule appears to apply only to cash loans, not to the rent-free or low-rent use of property in kind, while the *Dickman* decision seemed to include such transfers within its reach. Since *Dickman* was not repealed by the statutory provision, the Supreme Court case still should control the gift tax consequences of the use of such in-kind property.

b. IRS Information Release 84-60

In Information Release 84-60,[9] the Internal Revenue Service explained the circumstances under which it would not require the reporting of pre-1984 interest-free demand loans and detailed the method for valuing the gifts resulting from such loans for which reporting is required. The Service stated that the value of gifts resulting from interest-free demand loans outstanding prior to January 1, 1984 could be determined by imputing interest at the lesser of the statutory interest rate for federal tax refunds and deficiencies or the annual average rate for three-month Treasury Bills. The release then set forth the applicable rate for 1960 through 1983:

1983	8.6%
1982	10.6%
1981	12.0%
1980	11.5%

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

1979	6.0%
1978	6.1%
1977	5.2%
1976	4.9%
1975	5.8%
1974	6.0%
1973	6.0%
1972	4.0%
1971	4.3%
1970	6.0%
1969	6.0%
1968	5.3%
1967	4.3%
1966	4.8%
1965	3.9%
1964	3.5%
1963	3.1%
1962	2.7%
1961	2.3%
1960	2.9%

The Service stated that, for administrative convenience, it will not require gift tax reporting for interest-free demand loans made before January 1, 1984, if the amount of the gift, valued as set forth above, is less than the annual exclusion for the year, or, alternatively, if the average outstanding balance for all interest-free demand loans made in a particular year to a single donee did not total, in the aggregate, more than $50,000 (if made by a single taxpayer) or $100,000 (if made by a married taxpayer).

For example, in 1978, if a married donor has made a loan of $98,360 to a donee, he would not have to report the transfer. The amount of the gift ($6,000) comes within the annual exclusion, which was $6,000 for a married donor in 1978. Moreover, because the principal amount did not exceed $100,000, the transfer also would fall within the second reporting exception.

This "rule of administrative convenience" applies regardless of whether the donor has otherwise made gifts to the same donee during the same year. If the above rules do not exempt a donor from being required to report a gift resulting from an interest-free loan, the gift is calculated on the entire amount of the interest-free loan, without reduction for the amount that would fit within the above rules.

IR 84-60 does not apply to loans outstanding on or after January 1, 1984. There is thus a gap in coverage from the period January 1, 1984 to June 6, 1984.

7. Application of New Rules and Planning Considerations

a. New §7872 is so broadly structured that it could apply to almost any situation involving below-market and interest-free loans. Consider the following common situations: trustee makes loan to beneficiary, estate beneficiary makes loan to executor, trustee of decedent's irrevocable life insurance trust makes loan to decedent's executor, grantor makes loan to trusts he has created. Loans between these types of entities are often made because of the temporary liquidity needs of the borrower and, in many cases, the borrower and the lender, although separate entities and separate taxpayers, have the same beneficial owners. The gift tax consequences of these arrangements now must be considered in view of the Act provisions.

b. The Act probably will eliminate the appeal of interest-free and below-market loans in most estate plans, although the use of small loans which come within the available exclusions and exceptions still may be attractive. Of course, the income tax consequences of such transactions must be analyzed. The estate planner will be considering alternatives to these devices and may once again turn to the *Clifford* trust. Practioners should keep in mind the effect of the new ten percent actuarial tables in valuing the income interest. The present value of an income interest for ten years under the ten percent tables is approximately 61 percent of the corpus, in contrast to approximatey 44 percent under the six percent tables.

The term of a *Clifford* trust must be at least ten years. In some cases, the grantor may not want to wait ten years for the return of his property. In those cases, if the grantor is married, a practical alternative to the *Clifford* trust may be the spousal remainder trust. The spousal remainder trust is similar to the *Clifford* trust, but, instead of the property reverting to the donor, the property will pass to the donor's spouse when the trust terminates. Because the donor has retained no reversionary interest, the provisions of Code §673, which mandate the ten-year term, should not be applicable. In a situation in which there is marital harmony, the use of the spousal remainder trust may be a satisfactory alternative. However, this arrangement would be open to challenge if both spouses created identical trusts.

Another way to transfer funds to persons in a lower income tax bracket is by use of the annual gift tax exclusion. The higher income taxpayer may transfer up to $10,000 per donee ($20,000 with gift-splitting) per year without gift tax consequences.

c. If gift loans are to be made and the lender wishes to avoid application of the Act, the interest payable may not be less than the "applicable Federal rate." In the case of a term loan the applicable Federal rate is fixed as of the day the loan is made. The note thus could provide for interest payable at a rate equal to the current applicable Federal rate.

However, in the case of a demand loan, the gift is treated as a series of one-day term loans, requiring computation of the foregone interest semi-annually because the Federal short-term rate may change every six months. Even if the interest payable is not less than the applicable rate at the creation of the loan, the Federal short-term rate could increase. If this occurs the interest payable would be below-market and the loan would be subject to the Act provisions.

In order to avoid this result, the note could be written with a self-adjusting clause which is tied to the applicable Federal rate. For example, the note could state that "interest shall be payable at a rate equal to the 'applicable Federal rate' as that term is used in Section 7872(e)(1)(A) of the Internal Revenue Code of 1954, as amended."

IV. Repeal of Estate Tax Exclusion for Qualified Plans and IRAs

Section 2039(c) provides an estate tax exclusion for the value of an annuity or other payment receivable by any beneficiary, other than the participant's executor, under a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

qualified plan or retirement annuity contract, a §403(b) annuity contract, and certain Armed Forces and other governmental pension and survivor plans. The exclusion is available only if the annuity or other payment is not in the form of a lump sum distribution (except where the beneficiary elects to forego 10-year income-averaging for purposes of the income tax) and only to the extent the annuity is not attributable to accumulated deductible employee contributions.[10] A comparable estate tax exclusion is provided for IRAs under §2039(e).

TEFRA diminished considerably the value of the estate tax exclusion for qualified plans and IRAs by reducing the maximum exclusion to $100,000, effective for the estates of decedents dying after 1982.[11]

The TRA [12] completes the work begun by TEFRA, repealing the estate tax exclusion entirely with respect to the estates of the decedents dying after 1984. Certain exceptions are provided. For a discussion of the exceptions, see Chapter 49, IV.

Comment: If the spouse of the decedent is designated as the beneficiary of the qualified plan or IRA benefits, repeal of the estate tax exclusion should have no impact due to the availability of the unlimited marital deduction. If the qualified plan or IRA benefits are payable to a beneficiary other than the decedent's spouse, and the value of such benefits when added to the value of the other property includible in the decedent's taxable estate exceed the unified credit, the value of the benefits will be subject to the estate tax. However, since the qualified plan or IRA benefits will constitute income in respect of the decedent,[13] the estate tax attributable to such benefits will provide the recipient of the benefits with an income tax deduction under §691(c).

Observation: Although the repeal of the estate tax exclusion is an unfavorable development from an estate planning standpoint, another TRA change in the qualified plan and IRA requirements may prove beneficial. The TRA revises and liberalizes the post-death required distribution rules for qualified plan and IRA benefits that have not yet commenced at the time of the participant's death. Under the new post-death required distribution rules where distributions have not commenced, the benefits may be paid over the life of the designated beneficiary (who need not be the participant's spouse) or over a period not extending beyond the life expectancy of the designated beneficiary, so long as distributions begin no later than one year after the date of the participant's death. An even more favorable rule is provided if the designated beneficiary is the participant's spouse. In such case, the payment of benefits need not commence until the date on which the participant would have reached 70-1/2. More significantly, §401(a)(9)(F), as added by Act §521, contains an interesting rule that permits income-splitting of the qualified plan or IRA benefits among the participant's spouse and minor children without diminishing the security of the surviving spouse. Under this new provision, any amount paid to a child shall be treated as if it had been paid to the spouse if such amounts become payable to the spouse upon the child's reaching majority (or other event permitted under the regulations). Thus, the distribution of the qualified plan or IRA benefits can be pegged to the spouse's life expectancy, split among the children and the spouse during the children's minority, and eventually revert to the spouse. It should be kept in mind, however, that to the extent the benefits are diverted to the children during minority, such amounts will not qualify for the marital deduction. For a complete analysis of the new required distribution rules, see Chapter 49, I.

V. New Rules Under Which ESOPs Assume Liability for Certain Estate Tax Payments

Under §2210 of the Code, which was enacted in Act §544, liability for estate taxes may be assumed by an ESOP in return for a transfer from the estate of stock of an equal value, provided the company sponsoring the ESOP guarantees payment of the taxes.

Section 2210 is analyzed in depth in Chapter 48 of this Portfolio.

VI. Housing Bonds Not Exempt From Estate and Gift Taxation [Act §§641 and 642]

A. Introduction

In *Haffner v. U.S.*[14] an Illinois Federal court held that public housing agency notes and bonds are not only immune from income tax but also are not subject to gift and estate taxes. The obligations in *Haffner* were "project notes" issued pursuant to the Housing Act of 1937, which was intended to aid slum clearance and low-rent housing projects. Section 11(b) of the 1937 U. S. Housing Act, provides that such obligations are "exempt from all taxation now or hereafter imposed by the United States. . ."

In *Haffner*, the decedent died on March 15, 1979, owning project notes valued on the date of his death at over $1,000,000. His executors disclosed the existence of these notes on his federal estate tax return but stated that they were not taxable as a result of §11(b). The *Haffner* court, holding that the §11(b) exemption from "all taxation" includes estate and gift taxation, wrote an exhaustive summary of the history of this legislation and concluded that it showed a clear intent on the part of Congress to exempt these obligations from all taxation.

The Government has filed an appeal in *Haffner*, which will be heard by the Court of Appeals for the Seventh Circuit. In addition, in Information Release 84-89 (August 14, 1984) the Service announced that it will continue to follow Rev. Rul. 81-63, which concluded that a decedent's transfer of project notes was includable in his gross estate.

The provision of the Act which deals with the issue raised in *Haffner* did not appear in either the House or Senate bills but was added in conference. Although the Conference Report gives no indication of the reason for changing (or clarifying) the law, during discussions at a conference committee meeting the conferees indicated that they felt the Housing Act provision did not exempt project notes from estate and gift taxation.

B. Overview

1. Description of New Provision

Section 641 of the Act provides that, for estates of decedents dying after June 18, 1984 and gifts made after that date, any statute exempting property from taxation will not exempt the transfer from estate, gift and generation-skipping taxes. Section 642 of the Act imposes a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

reporting requirement on taxpayers who transferred project notes between January 1 and June 18, 1984 and imposes a penalty tax if the transfers are ultimately held to be taxable.

2. Effective Dates

The provision applies to estates of decedents dying, and transfers made, on or after June 19, 1984. The Act also states that the rule denying exemption from estate and gift taxes applies to any transfer, even if made before June 19, 1984, if an estate or gift tax return was filed reporting the transfer as subject to tax. The Act also provides that no inference should be made that a transfer before June 19, 1984 is exempt from federal estate and gift taxes. With respect to transfers of project notes from January 1, 1984 to June 18, 1984, the Act requires a taxpayer to report certain information regarding any transfers of such notes.

C. Detailed Analysis

1. Project Notes Not Exempt from Transfer Tax

Section 641 of the Act, a non-Code provision, reflects Congress' intention to clarify the provisions of the Housing Act. Section 641(a), which attempts to overrule the *Haffner* decision, states that any existing law which exempts property from taxation does not exempt the transfer of such property from federal estate, gift and generation-skipping transfer taxes.

Even if the *Haffner* case is affirmed on appeal, §641(a) of the Act, denying exemption from estate, gift and generation-skipping taxes, will apply to transactions occurring on or after June 19, 1984. Accordingly, if project notes are owned by a decedent, or transferred by a donor, on or after June 19, 1984, they will be subject to such taxes.

In cases where a decedent owned project notes and died before June 19, 1984, or where transfers were made before that date, the Act provides different rules, the application of which depends on how the decedent's executor, or the donor, treated the transaction. Where the executor or the donor filed an estate or gift tax return reporting the transfer as subject to Federal estate or gift tax, §641(b)(2) makes the rule of §641(a) applicable to such transfers, even if the transfers were made before the general effective date of June 19, 1984. This provision purports to prevent claims for refunds, based on *Haffner*, where an estate or gift tax return was filed reporting the transfers as subject to federal estate or gift tax.

Section 641(b)(3) of the Act states that no inference shall arise from the above rules that any transfer before June 19, 1984 is exempt from Federal estate and gift taxes. Presumably the "no inference" provision applies only where the transfer was not reported as subject to tax.

The Act thus provides a double standard for transfers made before June 19, 1984. Accordingly, if reported as taxable, a transfer would be subject to the provision denying exemption, even if the *Haffner* case is affirmed. In cases where the transfer was not reported as taxable, "no inference" arises with regard to the transfer. Thus, under the Act, the estate or donor is decidedly better off if the transfer was not reported as taxable. Presumably, where the executor or donor disclosed the transfer on the return but did not report it as taxable, the transaction would be within the "no inference" category.

Whether or not the Act's attempt to apply the legislation to pre-existing obligations, and its double standard for such application, is unconstitutional will no doubt be challenged in the courts. However, such challenge would become moot if the *Haffner* case is overturned on appeal. Until these issues are resolved, it may be prudent to file refund claims or amended returns in cases which are not barred by the applicable period of limitations, even in cases where the statute purports to bar such claims.

2. Reporting Requirements

Section 642 of the Act requires the taxpayer to report the date and amount of any transfers of project notes made after December 31, 1983 and before June 19, 1984 and such other information regarding the transfer as regulations to be prescribed by the Secretary may require. Any taxpayer failing to provide the information required will be liable for a penalty equal to 25% of the excess of the tax payable assuming the transfer is subject to tax, over the tax payable assuming such transfer is not subject to tax. If *Haffner* is overturned by the Seventh Circuit, this provision will allow the Service to determine which transfers may be subject to tax.

VII. Special Interest Provisions

Section 1028 of the Act is a special interest provision which provides a special credit for Federal estate tax imposed on the estates of Nell J. Redfield and Elizabeth Schultz Rabe for transfers of real property to Toiyabe National Forest.

CHAPTER 53

INSTALLMENT PAYMENT ELECTION UNDER SECTION 6166 PERMITTED FOR CERTAIN HOLDING COMPANY STOCK; REPEAL OF INVESTMENT ASSET EXCEPTION

Ronald D. Abramson, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. *Corporate Holding Company*

Prior to the effective date of the 1984 Tax Reform Act (P.L. 98-369), it was unclear whether a corporation the sole asset of which was all of the stock of an active corporation would be treated for tax purposes as carrying on the trade or business of its subsidiary. In two private letter rulings, PLR 8130175 (May 1, 1981) and PLR (TAM) 8134012 (April 30, 1981), the Service ruled that the §6166 election to pay federal estate tax in installments would not be available for a decedent's interest in a corporate holding company, even if the parent owned 100 percent of the stock of an operating subsidiary.

The Service's pre-TRA position was not necessarily required by the statute. First, the entity attribution rule could apply to attribute the assets constituting a trade or business of an active subsidiary to a passive holding company because §6166(b)(2)(C) attributes "property" from a corporation to its shareholders. Second, pursuant to the mandate to issue regulations in §6166(i), the Service has the authority to prescribe rules permitting corporate holding companies to qualify under appropriate circumstances for §6166 treatment.

Section 6166 is intended to prevent illiquid estates from having to dispose of interests in active businesses solely to pay estate taxes where a substantial amount of the estate's value is concentrated in closely held businesses. As stated in the Senate Finance Committee Report:[1]

> "Because liquidity problems may arise whether the closely held business interest is owned directly or indirectly through a holding company, the committee believes it is appropriate to permit certain holding companies to be 'looked through' to determine whether an individual owned a qualifying interest in a closely held business."

B. *Investment Asset Exception*

Under the existing regulations,[2] if a partnership or corporation carries on a trade or business, "it is not necessary that all of the assets of the partnership or the corporation be utilized in the carrying on of the trade or business." Section 20.6166A-2(c)(2) of the regulations is to the same effect:

> "[T]he decedent's entire interest in the partnership, or . . . the corporation, constitutes an interest in a closely held business even though a portion of the partnership or corporate assets is used for a purpose other than the carrying on of a trade or business."

It was unclear, under pre-TRA law, what percentage of the total assets of the partnership or corporation could be investment assets. Assuming that an appropriate percentage of business assets can be determined, there does not appear to be any requirement that the contribution of investment assets to a partnership or corporation be motivated by a bona fide business purpose. Finally, since the date for testing a stock or partnership interest as a closely held business interest is the "time immediately before the decedent's death," transfers of investment assets in "contemplation of death" should be recognized for purposes of §6166.

By comparison, in the case of a proprietorship, the estate tax attributable to investment assets is not eligible for §6166 treatment. However, working capital can qualify as a trade or business asset.

According to the Senate Finance Committee Report,[3] the investment asset exception should be repealed because similar rules should be applied in valuing a decedent's closely held business interest regardless of whether that business is operated as a proprietorship, a partnership, or a corporation.

II. Overview

Section 6166, as amended by §1021 of the Act, permits the executor to elect to qualify holding company stock for the deferral provisions of §6166; however, the 15-year deferral period is reduced to 10 years and the special 4 percent interest rate is eliminated. Appropriate adjustments to the acceleration rules are provided.

Passive assets owned by partnerships and corporations will be disregarded when determining whether the business qualifies for the benefits of §6166. This provision applies whether or not the executor makes the election relating to holding company stock. This is the same rule that now applies to proprietorships.

III. Detailed Analysis

A. *Corporate Holding Company*

1. *Qualification of Certain Holding Company Stock as Business Company Stock*

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The Act added §6166(b)(8) to permit an executor to elect to treat stock in certain holding companies, which own stock in a "business company" (defined in §6166(b)(8)(D)(ii)), as stock in such business company. If the executor makes the election, the special 4-percent interest rate and the five-year deferral of principal payments are not available.[4]

A complicated and stringent set of rules must be applied in utilizing the TRA election as follows:

1. The business company must meet the requirements of §6166. Thus, the business company must have 15 or fewer shareholders or the decedent must own 20 percent or more of the corporation's voting stock.[5]

2. The value of the business company must exceed 35 percent of the value of the decedent's adjusted gross estate.[6]

3. Indirectly owned business stock can be combined with other directly owned business stock (plus stock attributed from family members) to qualify the estate under §6166.

4. In case of multiple holding companies, a corporation will be looked through only if at least 20 percent of the total value of the corporation is included in the decedent's gross estate, either directly, or indirectly through a qualifying interest in another, higher tier, corporation. The following is an example from the Senate Finance Committee Report.[7] If the business company were a fourth-tier subsidiary, the value of that company could be considered for purposes of §6166 only if the decedent directly owned at least 20 percent of the value of the first-tier holding company, and indirectly owned at least 20 percent of each of the second-tier and third-tier holding companies.

5. The look-through provision for multiple holding companies is applied successively to the stock of each business company in the chain, stopping at the earlier of (i) the corporation of which the decedent owns less than the required 20-percent interest, or (ii) the business company which the executor elects not to look through.

6. Pursuant to §6166(b)(8)(C), the value of voting stock in a business company may only be reflected through the value of voting stock in higher-tier holding companies to determine whether the decedent satisfies the 20 percent voting stock requirement in §6166(b)(1)(C)(i). The value of lower-tier voting stock may not be reflected through the value of nonvoting stock in any higher-tier corporation for purposes of the 20-percent test because that test requires voting stock to be owned by the decedent. By comparison, for purposes of the 35-percent test, the value of both voting and nonvoting stock in the business company may be reflected through the value of stock in higher-tier holding companies since, unlike the 20-percent test, the 35-percent test in §6166(a)(1) does not require the decedent to own voting stock.

7. According to the Senate Finance Committee Report,[8] the value of holding company stock that is treated as business company stock is the value of such stock for federal estate tax purposes, unaffected by the treatment of such stock as stock of a lower-tier active business corporation.

2. Special Acceleration Provisions If Holding Company Rules Apply

The Act adds the following three special rules under the acceleration provisions if the executor makes an election to treat holding company stock as business company stock:

1. Under post-TRA §6166(g)(1)(E), any disposition of holding company stock or withdrawal of money or other property from the holding company is treated as a disposition of, or withdrawal from, the business company.

2. Under post-TRA §6166(g)(1)(F), if the holding company disposes of any stock in the business company or withdraws money or other property from the business company, the disposition or withdrawal is included in determining whether an acceleration occurs. According to the Senate Finance Committee Report,[9] the "Treasury Department will issue regulations to ensure that dispositions or withdrawals from the corporation carrying on an active business are considered only once in determining whether tax is accelerated."

3. Finally, under post-TRA §6166(g)(2)(C), if an estate has undistributed net income in any year, dividends paid to any holding company by the business company are treated as if the dividends were paid to the decedent's estate to the extent of the decedent's ownership (direct or indirect) of the holding company.

3. Repeal of Investment Asset Exception for Corporations and Partnerships

The Act added §6166(b)(9) to provide that, in the case of an interest in a partnership or corporation, passive assets (property not directly related to the reasonable needs of the conduct of the active trade or business) are to be disregarded for purposes of §6166. This rule applies to all estates electing under §6166, whether or not the special holding company election is made.

Property contributed to the qualified business must be used directly in the active conduct of the trade or business. Assets will be considered passive unless they form part of a partnership's or corporation's working capital or constitute reasonable reserves for financing of a specifically identified project. The following example is contained in the Senate Finance Committee Report.[10] A reserve for expansion of a factory building that is reasonably expected to be completed within two years of the time the contributions to the reserve fund are made would be a reasonable reserve.

Section 6166(b)(9)(B)(ii) defines "passive asset" to include stock in another corporation unless the stock of such subsidiary is (i) treated as business company stock pursuant to the post-TRA election procedure contained in §6166(b)(8), or (ii) the stock of an active corporation. To be an active corporation, a corporation must own 20 percent or more in value of the voting stock of the active corporation or such active corporation must have 15 or fewer shareholders, and 80 percent or more of the value of such corporation must be attributable to assets used in carrying on a trade or business.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The Senate Finance Committee Report [11] also recognizes three situations in which stock held by one corporation in another corporation may not be a passive asset. First, where a group of corporations (whether or not controlled for purposes of §6166) is functionally related (*e.g.*, a manufacturing corporation may own all or a part of the stock in one or more of its supplier corporations). Second, where a group of corporations (whether or not controlled for purposes of §6166) are engaged in unrelated lines of business but are subject to varying degrees of common ownership and managerial control and direction. Third, where corporations form a controlled group of corporations as defined in §1563.

According to the Senate Finance Committee Report,[12] the regulations will provide rules similar to the rules governing the accumulated earnings tax (§531).

> "However, the committee does not intend that the accumulated earnings tax rules be followed in any case where those rules differ from the present rules under the installment payment provision pursuant to which business and personal assets are segregated in the case of proprietorships unless the difference is necessary because of the partnership or corporate form of business operation."

Finally, the Senate Finance Committee Report [13] provides that, where only a portion of a partnership interest or of stock in a corporation qualifies for purposes of §6166, and a part of such partnership interest or stock is disposed of (or property withdrawn from such partnership or corporation) only a portion of the sales proceeds or property withdrawn will be counted against the 50-percent threshold amount specified in §6166(g)(1)(A). For example, if 75 percent of the stock in a corporation qualified under §6166 and the stock was sold, only 75 percent of the sales proceeds would be treated as a disposition for purposes of the acceleration rules. However, it may be appropriate to trace proceeds where specific assets are withdrawn from the business.

4. Effective Dates

The TRA rules apply to estates of individuals dying after the Act's date of enactment, July 18, 1984.[14] Thus, with respect to individuals dying before the date of enactment, the availability of §6166 for holding company stock will remain an open and troublesome issue.

CHAPTER 54

CHANGES AFFECTING DEDUCTIONS FROM GROSS ESTATE

Lynn K. Pearle, Esq.
Silverstein and Mullens
Washington, D.C.

I. Rules for Reforming Governing Instruments Creating Charitable Split-Interest Trusts Made Permanent [Act §1022]

A. *Introduction*

To correct certain perceived abuses in the use of charitable split-interest trusts, the Tax Reform Act of 1969[1] introduced a series of complex and technical requirements which must be met to obtain the desired charitable income, gift, or estate tax deduction. The 1969 Act added Code §§2055(e)(3) and 2522(c) which provide that an estate or gift tax deduction is not allowed for transfers of property to a trust which has both charitable and noncharitable interests unless, in the case of a remainder trust, the trust takes one of three qualifying forms: (i) a charitable remainder annuity trust;[2] (ii) a charitable remainder unitrust;[3] or (iii) a pooled income fund.[4] A deduction also is allowed for a remainder interest in a farm or personal residence and for an income interest passing to a charity, if the income interest is either a guaranteed annuity or a unitrust.

To assist practitioners, the Service published Rev. Rul. 72-395,[5] which provides detailed sample provisions, drafting requirements, and options that can be used to satisfy the §2055(e)(2) requirements for charitable remainder trusts. No comparable ruling was issued with respect to charitable lead trusts. In 1974, Congress enacted Code §2055(e)(3), which allowed reformations of defective trusts during a transitional period to comply with the requirements of the 1969 TRA. The transitional period was extended several times.[6] The last relief provision allowed corrected trusts to qualify if the trust or will was executed before December 31, 1978, and the reformation was completed by December 31, 1981.

Note: After the transitional rule expired, courts were willing to "construe" split-interest trusts to allow the estate to obtain the sought-after estate tax charitable deduction when they found that such a result was warranted by the facts and was consistent with the testator's intent.[7]

The Congressional committees considering the 1984 TRA found that disqualification under the split-interest rules remained a problem and usually resulted in reduced amounts passing to charity. The committees believed that a permanent rule permitting reformation of split-interests trusts should be permitted, with safeguards to avoid abuse.

B. *Overview*

1. *Description of the TRA Provision*

Act §1022 amends Code §2055(e)(3) to provide a permanent rule for reforming split-interest trusts if certain requirements are satisfied. Reformation will be allowed, in the case of a charitable remainder trust, where the noncharitable beneficiary's interest is expressed in terms of an annuity or unitrust interest. Reformation also is possible if judicial proceedings are begun within a specified time.

2. *Effective Dates*

The provision applies to reformations made after December 31, 1978. A special rule opens the statute of limitations for one year after the TRA's enactment date to permit credits or refunds of tax. In addition, in applying the 90-day period for commencement of judicial proceedings, where an instrument does not comply with the guaranteed annuity or fixed unitrust concepts of the 1969 TRA, the 1984 Act provides that the period will not expire before the 90th day after the 1984 Act's enactment date. Since enactment occurred on July 18, 1984, such reformation proceedings must begin on or before October 16, 1984.

C. *Detailed Analysis*

1. *Reformable Interest*

Under the 1984 TRA provision, reformation will be allowed if one of the following two requirements is met. First, the instrument must express the noncharitable beneficiary's interest in terms of an annuity or unitrust interest. The Senate Report states that a trust would not meet this requirement if the governing instrument provides powers of invasion for a non-charitable beneficiary.[8]

If the first requirement is not met, reformation may also be accomplished if a judicial proceeding to correct the trust is commenced within 90 days after the filing date (including extensions) of the estate tax return on which a charitable deduction is claimed. If no estate tax return is required, the proceeding must be commenced within 90 days after the due date (including extensions) for the first required income tax return of the trust.

Note: Although the statute itself does not include this requirement, the Senate Report[9] expresses Congress' intent that, for the commencement of a judicial proceeding to be timely, the pleading must describe the nature of the defect. According to the committee report, the filing of a general protective pleading will not suffice.

The first requirement was intended to allow reformation if, on the face of the document, there was an intent to comply with the 1969 Act. The statute states that, to be a "reformable interest," all payments to persons other than an organization described in Subsection (a) [*i.e.*, charitable organizations] are expressed either in specified dollar amounts or a fixed percentage of the fair market value of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the property." [10] This language provides an objective test in cases involving a charitable remainder trust, where the unitrust or annuity payment must be made to persons other than charitable organizations. It is unclear, however, how this requirement should be interpreted in cases involving a charitable lead trust, where the unitrust or annuity payment is made to charitable organizations. Although it appears that the statute was intended to apply the same standards for reformation to both charitable lead and remainder trusts, the language of this section does not seem to be drafted to apply to charitable lead trusts.

2. Qualified Interest

If the interest meets one of the above two requirements, it is a "reformable interest." A "reformable interest" may become, through a qualified reformation, a "qualified interest" if two additional requirements are met. First, the reformation may not change the actuarial value of the charitable interest by more than 5 percent. Second, the durations of the charitable and noncharitable interests may not change. A noncharitable interest in a charitable remainder trust of more than 20 years, however, may be reduced to 20 years.[11] In that case, the Senate Report states that the annual distribution to the noncharitable beneficiary must be increased so that the actuarial value of the charitable and noncharitable interests remain the same.[12]

3. Qualified Reformation

Qualified reformation may be achieved by any method permissible under local law (reformation, amendment, contribution) as long as all relevant parties are bound by the change.

The Act also provides that a reformation of the trust is deemed to occur when: (i) the noncharitable beneficiary dies; or (ii) a specific portion of the trust passes to charity, before the estate tax return is due (including extensions). In the case of the death of the noncharitable beneficiary, presumably, the deduction still should take into account the beneficiary's interest.

Both *inter vivos* and testamentary trusts may be reformed. In the case of testamentary trusts, the reformation is retroactive to the date of death and, in the case of *inter vivos* trusts, it is retroactive to the date of creation.

If a qualified reformation is achieved, a deduction will be allowed for the lesser of the actuarial value of the charitable interest after the reformation or the amount of deduction that would have been allowed under the instrument prior to the reformation if such deduction had not been disallowed.

4. Conforming Changes in Other Code Sections

These rules are applied in the income and gift tax Code (§§(170)(f) and 2522(c)), by general incorporating references. Post-TRA Code §2055(e)(3)(H) directs the Secretary of the Treasury to prescribe regulations concerning the taxation of trusts under subchapter J which are reformed pursuant to the provision. These regulations should confirm that a reformed charitable remainder trust is exempt from federal income tax. The Secretary also is to prescribe comparable rules permitting the reformation of charitable transfers involving remainder interests in pooled income funds, farms, and personal residences, which are to be consistent with the rules for charitable remainder and lead trusts.

In addition, the Act amends Code §664, relating to charitable remainder trusts. Under this provision, a charitable remainder trust may provide for a "qualified contingency" without being disqualified. For instance, it will be permissible to provide for a charitable remainder trust to terminate either on the death of a beneficiary, or on the beneficiary's remarriage. This contingency will be disregarded in valuing the charitable remainder.

5. Planning Considerations

Under the TRA's reformation statute, the planner must carefully examine existing documents to see if reformation is necessary. If the trust does not substantially comply with the 1969 Act, or if it is unclear whether it does, federal proceedings may have to be instituted as quickly as possible. One way to give the planner more time for an analysis of the trust would be to seek an extension of time for filing the federal estate tax return. Problems often arise when the estate tax return is audited, however, which usually will occur after the 90-day period.

II. Availability of Marital Deduction for Usufruct Interests Clarified [Act §§1027(a) and (b)]

A. Introduction

ERTA (P.L. 97-34) enacted Code §2056(b)(7), which permits an executor to elect to claim an estate tax marital deduction for certain qualifying life income interests ("QTIP" property) transferred to the spouse. In civil law jurisdictions such as Louisiana, a surviving spouse may receive a usufruct interest in property, which is comparable to a legal life estate. A usufruct interest may be in consumable or nonconsumable property.

There was some question whether the QTIP election could be made with respect to usufruct interests for life in consumable property under the Louisiana Civil Code because that law does not trace the usufruct property to find if the property is later included in the surviving spouse's estate.

B. Overview

1. Description of Provision

The Act provides that a QTIP election is available with respect to a usufruct interest for life under Louisiana law.

2. Effective Date

The provision applies as if included in ERTA §403.

C. Detailed Analysis

1. Usufruct Interest Qualifies as QTIP

Act §1027(a) amends Code §2056(b)(7)(B)(ii) to provide that a usufruct interest for life qualifies as QTIP property. The Act accomplishes this by redefining "qualified income interest for life" to include interests under which "the surviving spouse is entitled to all of the income from the property, payable annually or at more frequent intervals, or has a usufruct for life in property . . ."

The Conference Report clarifies that the QTIP election will be available for both consumable and non-consumable

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

property.[13] This is significant because, under Louisiana law, consumable property is commingled with the spouse's own property and Louisiana law does not provide for tracing. The Conference Report explains that, in the case of a usufruct for life in nonconsumable property, if a QTIP election is made with respect to such property, it is to be treated as included in the surviving spouse's estate under Code §2044. In the case of a usufruct for life in consumable property, if a QTIP election is made with respect to such property, it will be treated as included in the surviving spouse's estate under Code §2044 to the extent of the remainderman's claim against the spouse's estate and includable under Code §2033 to the extent of any excess value. The claim of the surviving spouse's estate for contribution from the remainderman under Code §2207A would be limited to the amount of tax attributable to the portion of property includable under Code §2044.

2. No Deduction Allowed Under Code Section 2053(c)

TRA §1027(b) amends Code §2053(c) to provide that no deduction will be allowed to the surviving spouse's estate for a claim against the estate by a remainderman if the claim relates to a usufruct interest included in the surviving spouse's estate under Code §2044. These rules make the tax consequences of a QTIP election with respect to a usufruct interest consistent with the QTIP rules in common law states.

Chapter 55

CHANGES IN ALTERNATE VALUATION DATE ELECTION RULES

Lynn K. Pearle
Silverstein & Mullens
Washington, D.C.

I. Background

Code §2032 provides that an executor may elect to value assets for estate tax purposes on the alternate valuation date instead of on the date of death. The alternate valuation date is six months after the decedent's death or, if earlier, the date of disposition of the assets. Prior to the 1984 TRA, §2032(c) provided that the executor must elect the alternate valuation on a timely-filed federal estate tax return. The estate tax value becomes, under §1014(a)(2), the income tax basis of the assets.

Although §2032 was intended as a relief provision, the election to use the alternate valuation date could be made regardless of whether the assets increased or decreased in value. The executor generally makes the election when assets declined in value. Where assets increase in value but the estate has no federal estate tax liability because of available credits or deductions, however, executors have found it advantageous to elect alternate valuation to increase the estate tax value and thereby increase the basis of the assets to the heirs. Congress felt that use of the alternative valuation date in these circumstances was an abuse.

II. Overview

A. Explanation of Provision

The Act provides that the alternate valuation date may be elected only if the election will decrease both the value of the gross estate and the estate's federal estate tax liability. The Act also provides that the election may be made on a late return.

B. Effective Date

The provision is effective with respect to estates of decedents dying after the TRA's enactment date, July 18, 1984.

TRA §1024(b)(2) provides a special transitional rule for electing the alternate valuation date for estates of decedents dying before enactment of the Act. A late election may be made if: (i) the time to seek a credit or refund has not expired; (ii) the election would have complied with the TRA (*i.e.*, alternate valuation would result in both a reduction of tax and a reduction of the gross estate); and (iii) such a claim for credit or refund is filed within 90 days of the Act's enactment date. If an election is made under this transitional rule, the period for assessing deficiencies which are attributable to the election is extended to two years from July 18, 1984.

III. Detailed Analysis

A. Restriction on Use of Alternate Valuation Date

Act §1023 added Code §2032(c) to permit an executor to elect the alternate valuation date only where both the total value of the gross estate and the federal estate tax liability of the estate are reduced. The approach taken in the Act, requiring both the total value of the estate and the tax liability to decrease by the election, however, could lead to some unintended results. For example, assume decedent dies in 1984 bequeathing his shares of closely-held stock to his children and his highly speculative real estate investment to his spouse. The stock is worth $400,000 at his death and $325,000 six months later. The real estate is worth $1,000,000 at death and $1,125,000 six months later.

If an election could be made to use the alternate valuation date, this estate would have no federal estate tax liability because the real estate passing to the spouse would qualify for the marital deduction and the stock passing to the children would absorb the unified credit exemption equivalent amount of $325,000 for decedents dying in 1984. Under the TRA, however, the executor would not be eligible to make the election because the total gross estate is greater at the alternate valuation date than at the date of death. Under these facts, because the alternate valuation date could not be elected, the estate would incur some federal estate tax liability.

B. Availability of Alternate Valuation Date

TRA §1024 added Code §2032(d) which provides that the election to use the alternate valuation date may be made on a federal estate tax return that is not timely filed.

The TRA provision states that the election may be made on the estate tax return filed for the estate, provided the return is filed no more than one year after the time prescribed by law (including extensions) for its filing. The Act also provides that, once the election is made, it is irrevocable.

A further requirement, that the alternative valuation must be elected on the first estate tax return filed for the estate, appears in the Conference Report [1] but not in the statute. This requirement should not apply in the case of a timely filed return. If the return is not timely filed, however, the election may have to be made on the first filed return.[2]

[1] Conf. Rept. No. 98-861, 98th Cong. 2nd Sess. 1243 (1984).

[2] *See* PLR 8418005, where the Service held that an election to treat certain property as qualified terminable interest property ("QTIP") was invalid because it was made on a second estate tax return that was filed after the due date. Section 2056 provides that a QTIP election must be made on "the return of tax imposed by §2001." According to the Service in PLR 8418005, this means the last return filed on or before the due date of the return or, if a timely return is not filed, the first estate tax return filed after the due date. The same reasoning could apply with respect to the alternate valuation election.

Chapter 56

TAX TREATMENT OF PROPERTY DISTRIBUTED IN KIND BY AN ESTATE OR TRUST [ACT §81]

Lynn K. Pearle, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Under pre-TRA law, if property was distributed in kind and if such property had appreciated in value since it was acquired by an estate or trust, the beneficiary would receive a stepped up basis equal to the fair market value of the property on the date of distribution, to the extent that the distribution attracted distributable net income (DNI).[1] This tax-free basis adjustment provided a rare opportunity to obtain an increase in basis without realizing gain. The tax-free basis adjustment was available in the case of any distribution of appreciated property which attracted DNI except a distribution of appreciated property in satisfaction of a pecuniary bequest. In that case, the beneficiary received a stepped up basis but the adjustment was not tax-free because the estate or trust realized gain on the distribution.[2]

II. Overview

A. Description of Provision

Act §81 enacted Code §643(d) which provides that, where appreciated property is distributed in kind to a trust or estate beneficiary, the fiduciary may elect to have the gain or loss recognized at the trust level. If such an election is made, the property will carry out distributable net income to the beneficiary to the extent of the property's fair market value and the beneficiary's basis will be stepped-up to fair market value. If no election is made, the distribution will be treated as carrying out distributable net income only to the extent of the lesser of the adjusted basis of the property or its fair market value and the beneficiary will receive a carryover basis in the property.

B. Effective Date

The provision applies to trust distributions after June 1, 1984 in taxable years ending after that date.

III. Detailed Analysis

Act §81 added Code §643(d). Under §643(d)(1) and (2), if the executor or trustee does not make an election, when the fiduciary makes a distribution to a beneficiary of an asset in kind (as opposed to cash) the basis of the property in the hands of the beneficiary will be the fiduciary's adjusted basis of the property, (i.e., the beneficiary will receive a carryover basis). In this case, no gain or loss is recognized by the trust or estate.

Code §643(d)(1) and (3) provide that the fiduciary may elect to recognize gain or loss at the trust or estate level. If this election is made, the beneficiary's basis will be stepped up to fair market value.

The tax-free basis adjustment provided tax planners with a significant income tax planning tool. The planner must now consider that one taxpayer, either the trust/estate or the beneficiary, will recognize gain or loss and determine which one it should be. Several factors will have to be considered, including the relative tax brackets of the trust/estate and the beneficiary, the type of asset to be distributed and the amount that asset has appreciated or depreciated, whether the asset will appreciate or depreciate in the future, and whether the beneficiary plans an immediate sale of the asset.

These rules do not apply to distributions such as specific bequests and charitable distributions, which do not carry out distributable net income. Moreover, the rules do not affect the rule providing a basis adjustment for property received in a satisfaction of a pecuniary bequest, where, under current law, gain is realized by the trust or estate.

Chapter 57

STRICTER RULES FOR AGGREGATION OF MULTIPLE TRUSTS

Lynn K. Pearle, Esq.
Silverstein & Mullens
Washington, D.C.

I. Introduction

Multiple trusts have been used by tax planners to split income among several entities to take advantage of the progressive rate tables. After the 1969 Tax Reform Act, regulations were promulgated [1] which provided that trusts with substantially the same grantor and beneficiaries and with no substantially independent purposes are to be treated as one trust for income tax purposes, if the principal purpose of the trusts was tax avoidance.

The courts, however, have been liberal in finding the existence of separate trusts, particularly where the trusts have been separately administered.[2] Further, the Tax Court, in *Stephenson Trust v. Comr.*,[3] a 1983 case, ruled that the Treasury regulation was invalid because it was inconsistent with the Code.

II. Overview

A. Description of Provision

The Act reverses *Stephenson Trust v. Comr.* and provides a statutory rule for aggregating trusts for income tax purposes. Under the Act, two or more trusts will be treated as a single trust if: (i) the trusts have substantially the same grantors and beneficiaries; and (ii) a principal purpose of the trusts is the avoidance of federal income tax.

B. Effective Date

The provision applies to taxable years beginning after March 1, 1984.

III. Detailed Analysis

Act §82 enacts Code §643(e) entitled "Treatment of Multiple Trusts." The subsection provides a rule for aggregating multiple trusts, similar to that of the regulation invalidated by *Stephenson Trust v. Comr.* The statutory rule, however, is more restrictive than the regulation and should make it easier for the Service to assert that multiple trusts should be consolidated for income tax purposes.

The regulation provided that multiple trusts shall be aggregated if three conditions existed: the trusts must have: (1) "no substantial independent purposes (such as independent dispositive purposes);" (2) "the same grantor and substantially the same beneficiary;" and (3) "the avoidance or mitigation" of income taxes "as their principal purpose." By contrast, §643(e) provides that consolidation will result if two conditions exist: (1) the trusts must have "substantially the same grantor or grantors and substantially the same primary beneficiary or beneficiaries;" and (2) "a principal purpose" of the trusts must be the avoidance of federal income tax.

Under the regulation, if it could be shown that the trusts had substantially independent purposes (expressed by different dispositive provisions) the trusts would not be consolidated. In planning to avoid consolidation under the regulation, it was important to carefully consider the purposes of each separate trust and to articulate those differences in each trust's dispositive provisions. The statutory rule, however, does not look to the purposes of the trusts (except with regard to the tax avoidance test). Thus, if the trusts express different purposes by their dispositive provisions, this may not avoid consolidation under §643(e).

The regulation provided that consolidation would occur if the trusts have the "same grantor and substantially the same beneficiary." Section 643(e) reads: "substantially the same grantor or grantors and substantially the same *primary* beneficiary or beneficiaries. . . ." [emphasis added]. Again, the statute is stricter than the regulation. If multiple trusts have the same life income beneficiaries but different remaindermen, the trusts probably would not be consolidated under the regulation. Since §643(e) requires only that the "primary beneficiary or beneficiaries" be the same, however, trusts having different remaindermen could be treated as one trust. Moreover, the statute states that a husband and wife shall be treated as one person, a requirement that was not found in the regulation.

Finally, the regulation provided for consolidation if the trusts have tax avoidance as "their principal purpose. . . " The statute provides for consolidation if "a principal purpose" is tax avoidance. Thus, under §643(e), the Service only has to show that the trusts serve a tax avoidance purpose (which could be one among several other non-tax motivated principal purposes), to aggregate the trusts. Under the regulation, the Service had to find that the single "principal purpose" of the multiple trusts was tax avoidance.

The Senate Report sets forth two examples to be considered by the Treasury when it issues regulations with respect to §643(e).[4] The first illustrates a situation where the Committee expects that the regulations would treat the multiple trusts as one trust:

> "A establishes, with the principal purpose for the avoidance of Federal income tax, trust 1 for the benefit of his sister S1, his brother B1, and his brother B2; trust 2 for the benefit of his sister S2, his brother B1, and his brother B2; trust 3 for the benefit of his sister S1, his sister S2, and his brother B1; and trust 4 for the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

benefit of his sister S1, his sister S2, and his brother B2. Under each trust instrument, the trustee is given discretion to pay any current or accumulated income to any one or more of the beneficiaries."

The second example illustrates a situation in which the Committee feels that the multiple trusts should not be aggregated:

"X establishes two irrevocable trusts for the benefit of X's son and daughter. Son is the income beneficiary of the first trust and the trustee (Bank of P) is required to pay all income currently to son for life. Daughter is the remainder beneficiary. X's daughter is an income beneficiary of the second trust and the trust instrument permits the trustee (Bank of D) to accumulate or to pay income, in its discretion, to daughter for her education, support and maintenance. The trustee also may pay income or corpus to son for his medical expenses. Daughter is the remainder beneficiary and will receive the trust corpus upon son's death."

In setting forth the second example the Senate Report states:

"Where there are substantial independent purposes, and tax purposes are not a principal purpose of the existence of separate trusts, the trusts will not be aggregated." [5]

Note: Although the statute does not include a substantially independent purpose test (as the regulation did), the Senate Report seems to indicate that this test still should be considered in determining whether the multiple trusts should be aggregated. It may be that the regulations will impose this test, even if it is not required by the statute.

CHAPTER 58

NET GIFTS MADE BEFORE MARCH 31, 1981, DO NOT RESULT IN INCOME TO THE DONOR

Lynn K. Pearle, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A "net gift" arises when a donor makes a gift on the condition that the donee pay the gift tax imposed on the transfer. In *Diedrich v. Comr.*,[1] the U.S. Supreme Court affirmed an Eighth Circuit case which held that net gifts will result in gain to the donor to the extent that the gift taxes exceeded the donor's adjusted bases in the transferred property. The Eighth Circuit case was decided on March 4, 1981. Prior to the Eighth Circuit and Supreme Court *Diedrich* cases, several courts had held that net gifts did not result in income to the donor even if the donee pays a gift tax in excess of the donor's basis in the transferred property.[2]

II. Overview

A. Description of New Provisions

Section 1026 of the Act provides that no income will be recognized to donors who made net gifts before March 4, 1981. This is a non-Code provision.

B. Effective Date

The provision is effective on the date of enactment, July 18, 1984. The period of limitations for filing a refund claim resulting from inclusion in income by a donor making a pre-March 4 net gift is extended or reopened for up to one year after July 18, 1984, so that refund claims may be filed in cases where the period of limitations has expired.

III. Detailed Analysis

The House report states that the provision applies to both Federal gift tax and to any gift tax imposed by a state.[3] The House Report also states that this provision does not apply where the gift tax actually was paid by the donor and not the transferee.[4] This seems to be an unnecessary restriction because the *Diedrich* case only applies when the gift tax is paid by the transferee.

By barring the retroactive application of the *Diedrich* decision, Congress recognized that taxpayers had relied on prior cases which had held that net gifts do not result in any amount realized by the donor. This provision reflects Congress' sensitivity to the problems created when taxpayers have relied on case law favorable to their position. However, with respect to the issue of the gift tax consequences of interest-free loans, where there also was prior case law favorable to the taxpayer on which taxpayers had relied, Congress refused to bar the retroactive application of another Supreme Court decision, *Dickman v. Comr.*[5]

The *Diedrich* provision was included only in the House bill. The Senate bill originally included a provision relating to disclaimers which would have allowed a person to disclaim interests created by transfers occurring before November 15, 1958, within 90 days of enactment. This provision would have created a 90-day window during which disclaimers could be made even if such disclaimer would not be allowed under present law. Present law is controlled by *Jewett v. Comr.*,[6] where the Supreme Court ruled that the period for making a disclaimer is measured by the original transfer and not when a contingent interest becomes vested. However, this provision was dropped in conference and was not enacted.

CHAPTER 59

REVISION OF PRIVATE FOUNDATION RULES

Jerry J. McCoy, Esq.
Silverstein and Mullens
Washington, D.C.

In the Tax Reform Act of 1969, Congress created an elaborate regulatory structure for private foundations. A series of hearings before the House Ways and Means Committee and the Senate Finance Committee brought forth examples of numerous foundation practices which Congress decided should be prevented. The rules enacted in 1969 included sanctions against self-dealing, preventing sales, leases, loans and other transactions between a private foundation and its "disqualified persons";[1] a minimum distribution requirement, limiting the ability of foundations to accumulate funds;[2] a limitation on the ability of foundations to hold interest in business enterprises such as corporations and partnerships;[3] a prohibition on investments which might jeopardize the ability of a private foundation to carry out its charitable purposes;[4] and limitations on expenditures for certain purposes, such as lobbying, grants to individuals, grants to other private foundations, and electioneering, as well as any grants for non-charitable purposes.[5]

These restrictions were imposed in the form of a set of two-level excise taxes. Upon committing a transgression, the offending foundation would encounter a first-level excise tax at a relatively low level (*e.g.*, 5 percent to 15 percent). Thereafter, if the violation was not corrected by discontinuing or reversing the offending act, a second-level tax at a much higher rate (*e.g.*, 25 percent to 200 percent of the amount involved) would apply.

In addition to these taxes imposed on the foundation, several of these provisions also impose a two-tier tax on foundation managers who participate in the violation or refuse to correct the violation. The 1969 Act also imposed an excise tax on the investment income of private foundations.[6] This tax, originally imposed at a 4 percent rate, was reduced to 2 percent by the Revenue Act of 1978 (P.L. 95-600).

These rules were made applicable to "private foundations," which were defined in §509(a) as all organizations exempt under §501(c)(3) with the exception of four specific categories of organizations; the excepted group included traditional charities such as churches, schools and the like, publicly-supported organizations, and related organizations which provide support to other public charities.[7]

Since the 1969 Act, Congress had never given these provisions a thorough review. The 1984 Act represents the first re-examination of the overall operation of the private foundation rules since their enactment in 1969. The Subcommittee on Oversight of the House Ways and Means Committee held extensive hearings in the Summer of 1983 on the operation of the private foundation rules. As a result of this re-examination, the 1984 Act includes a number of provisions designed to alleviate operating problems under the existing rules.

I. Liberalization of Excise Tax Rules Pertaining to Investment Income of Private Foundations [Act §§302 and 303]

A. Exemption of Certain Operating Foundations

1. Overview

Private operating foundations are typically museums, libraries, or other organizations which devote their assets or income to the active conduct of charitable operations, rather than making grants to other organizations. Such organizations often have difficulty meeting the public support tests of §§509(a)(2) and 170(b)(1)(A)(vi), particularly when they have sizable endowments. Investment income does not qualify as public support. Thus, unless it can raise substantial contributions from the general public, such an organization will be a private foundation, subject to all of the private foundation rules and excise taxes, including the 2 percent tax on the net investment income of private foundations.

The Act alleviates the application of the tax on investment income by creating a new classification, the "exempt operating foundation." An organization which qualifies as an exempt operating foundation is exempt from the §4940 tax, and also may receive grants from private foundations without causing the granting foundation to encounter the "expenditure responsibility" rules of §4945.

2. Detailed Analysis

Section 302(a) of the Act enacts new Code §4940(d) to grant certain private operating foundations (as defined in §4942(j)(3)) exemption from the tax on investment income, effective for taxable years beginning after 1984. The beneficiaries of this change are "exempt operating foundations" as defined in new §4940(d)(2). These include any private foundation which meets four tests:

(a) The foundation must be a private operating foundation as defined in §4942(j)(3);

(b) It must have been publicly supported (*i.e.*, meet the requirements of either §170(b)(1)(A)(vi) or §509(a)(2)) for the year in question.[8] Note that this test is not applicable in the case of an organization which qualified as a private operating foundation as of January 1, 1983;

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(c) At all times during the year, at least 75 percent of the organization's governing body must consist of individuals who are not "disqualified individuals," and the governing body must be broadly representative of the general public.[9] A disqualified individual for this purpose is defined as a substantial contributor (as defined in §507(d)(2)), any owner of more than 20 percent of the voting power in a corporation (or a like percentage of the profits interest of a partnership, or the beneficial interest of a trust or unincorporated enterprise) which is a substantial contributor to the foundation, or any member of the family (within the meaning of §4946(d)) of any of the foregoing disqualified individuals.[10] For purposes of determining ownership in other entities, the constructive ownership rules of §§4946(a)(3) and (4) are applicable; and

(d) None of the officers of the foundation at any time during the year in question may be "disqualified individuals" as defined above.

Effective Date: Although the new rule is generally applicable for taxable years beginning after December 31, 1984, a special transition rule is provided for certain existing foundations. A foundation which was a private operating foundation (as defined in §4942(j)(3)) as of January 1, 1983, will be treated as meeting the requirement of new §4940(d)(2)(B) that it be publicly supported for at least 10 taxable years. This, in effect, provides a permanent exemption for most of these private operating foundations. It seems likely that many of such organizations will have difficulty in meeting the 10-year public support test; if this proves to be the case, the exclusion for exempt operating foundations will serve primarily to benefit these existing organizations.

In addition to exemption from the tax on investment income, the new category of "exempt operating foundation" also provides relief from the expenditure responsibility requirements of §4945(d)(4). Under this change, a private foundation which makes a grant to an exempt operating foundation need not exercise expenditure responsibility with respect to the grant.[11] The expenditure responsibility rules are discussed in greater detail *infra*. This change is applicable to grants made after December 31, 1984, in taxable years ending after that date.

B. Reduction in Tax for Private Foundations Meeting Increased Payout Requirement

1. Overview

The second change in the excise tax on net investment income is potentially applicable to any private foundation. In essence, the tax on investment income is reduced from 2 percent to 1 percent for a given taxable year if the amount the foundation distributes for charitable purposes, computed on a five-year average, is increased by an equivalent amount.

2. Detailed Analysis

Section 303(a) of the Act creates new Code §4940(e), which reduces the investment income tax from 2 percent to 1 percent if the following requirements are met:

(a) The qualifying distributions (as defined in §4942(g)) made by the foundation for the year are at least equal to a required amount;[12] and

(b) The foundation's distributions during the five taxable years preceding the year in question have averaged at least 5 percent of its assets.[13]

The required amount of qualifying distributions referred to in item (a) above is determined by adding together two elements. First, the amount of the foundation's assets for the year [14] multiplied by the "average percentage payout for the base period." [15] This refers to the average percentage of assets distributed as qualifying distributions over the five preceding taxable years.[16] Second, the amount determined in the preceding step is added to 1 percent of the foundation's net investment income for the current taxable year. If the current year's qualifying distributions equals or exceeds the amount calculated in this fashion, the current year's tax on net investment income under §4940 will be assessed at a 1 percent rate rather than 2 percent.

If a private foundation is a successor, by merger or otherwise, to another foundation, the experience of that predecessor is taken into account for purposes of the five-year average computation described above. The treatment of foundations which have participated in reorganizations, etc., will be dealt with in Regulations.[17]

Effective Date: This amendment is applicable to taxable years beginning after December 31, 1984.

II. Amendments to Taxes on Failure to Distribute Income [Act §304]

A. Introduction

Section 4942 imposes an excise tax on the failure of a private foundation to make payouts at specified minimum levels, either as direct expenditures to accomplish charitable purposes or as grants to public charities or private operating foundations.[18] In general, to avoid excise tax under §4942, a private non-operating foundation must make qualifying distributions, by the end of the following year, at least equal to 5 percent of the fair market value of its net investment assets for the year, less the amount of tax under §4940 on its net investment income for the year. The payout requirements of §4942 are inapplicable to a private operating foundation as defined in §4942(j)(3). However, to qualify for private operating foundation status, a foundation must meet certain minimum payout requirements.

B. Overview

1. Grant Administrative Expenses

To avoid the excise tax on failure to distribute income, a private foundation must make "qualifying distributions" in the prescribed amount. Under prior law, all administrative expenses incurred for charitable purposes could be taken into account as qualifying distributions. Section 304(a) of the Act amends Code §4942(g) to impose (in new §4942(g)(4)) an additional limitation on the extent to which grant administrative expenses may be counted in satisfaction of the payout requirements.

The purpose of this limitation is to insure that more foundation expenditures will actually reach charitable beneficiaries.[19] Under this rule, a foundation must actually pay out an amount equal to 4.35 percent of its net investments assets; this payout may take the form of grants or

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

contributions, program-related investments, expenditures directly for the act of conduct by the foundation of its exempt activities, or qualified administrative expenses. Thus, the amount of grant administrative expenses which may be taken into account for this purpose is limited to 0.65 percent of net investment assets (5.00 percent distribution requirement less the 4.35 percent amount described above).

2. Technical Amendment Requiring Redistribution of Program-Related Loan Repayments, Etc.

Immediately prior to the Economic Recovery Tax Act of 1981, §4942 required a private non-operating foundation to distribute the greater of 5 percent of its net investment assets or all of its net income. The 1981 Act repealed the rule that had required distribution of any excess of net income over the minimum investment return, thus limiting the payout requirement to a straight 5 percent of net investment assets. This amendment set the stage for a technical inconsistency.

Some of the amounts taken into account as qualifying distributions for purposes of the minimum distribution requirement may eventually be returned to the foundation. An example would be a program-related loan, such as a scholarship loan. Such amounts are loaned to accomplish a charitable purpose, and hence give rise to a qualifying distribution allowance in the year in which the loan funds are disbursed. Subsequently, when the borrower repays the loan, the foundation has in effect received a return of the amount originally distributed. Other examples include proceeds received from the sale of an asset originally used in the foundation's charitable operations, or amounts set aside (and claimed as a qualifying distribution under §4942(g)(2)) but not eventually used for the anticipated charitable purpose.

Prior to the 1981 Act, such a recovery would increase the net income of a foundation and, thus, would increase correspondingly the amount the foundation would be required to distribute. Repeal of the income approach in 1981, however, left no mechanism for requiring a foundation to redistribute amounts recovered in this fashion.

Section 304(b) of the Act amends Code §4942(d)(1) to add back to the foundation's required minimum payout, loan repayments, proceeds from asset dispositions, and unused set-asides, where such items were previously taken into account as qualifying distributions.

Effective Dates: Both the limitation on administrative expenses and the increase in the required distribution for certain repayments are effective for taxable years beginning after December 31, 1984.

C. *Detailed Analysis*

1. Grant Administrative Expenses

Section 304(a) of the Act enacts new Code §4942(g)(4), providing that the maximum amount of grant administrative expenses which may be counted as qualifying distributions toward the minimum payout requirement is 0.65 percent of net investment assets (*i.e.*, of the minimum investment return base as computed under §4942(e)(1)).[20] This computation is made on the basis of a three-year average, so that the grant administrative expenses taken into account are limited to the excess of 0.65 percent of the net investment assets of the foundation for the current year and the two immediately preceding taxable years over the aggregate grant administrative expenses paid during the two preceding taxable years and taken into account as qualifying distributions.

The limitation does not apply with respect to administrative expenses incurred by a foundation directly for the active conduct of its exempt activities. Thus, if one activity of the foundation is to provide direct assistance to other charities, either in the conduct of their charitable operations or in fund raising, the salary of the foundation's employee performing such work for the other charity does not constitute a grant administrative expense. For example, assume that X Foundation is a private non-operating foundation whose principal purpose is to relieve poverty and suffering. X has salaried employees in various areas of the country. X devotes 75 percent of its expenditures to grants to charitable organizations, with the remaining 25 percent devoted to a soup kitchen and shelter for homeless individuals. The administrative expenses incurred by X in its grant making activities are considered grant administrative expenses. However, the administrative expenses associated with the operation of the soup kitchen and the provision of shelter are not considered grant administrative expenses for purposes of this rule. Thus, the expenses of the direct providing by X foundation through employees of food and shelter to individuals through the operation of the soup kitchen and the shelter are treated as incurred directly for the act of conduct of the foundation's exempt activities, rather than as expenses allocable to contributions of food and shelter.[21]

Under a transitional rule, the amount of grant administrative expenses in any base period year which began before January 1, 1985, cannot exceed 0.65 percent of the foundation's net investment assets for such year. For example, if a foundation's actual grant administrative expenses for 1983 amounted to 0.90 percent of net investment assets, the computation of the new limitation for 1985 would assume that the percentage for 1983 was only 0.65 percent.[22]

The limitation applies only with respect to the §4942 payout rules, and does not affect other private foundation rules governing payment of expenses by a private foundation. For example, if a foundation pays excessive compensation to a foundation manager, this would constitute an act of self-dealing under §4941(d) and a taxable expenditure under §4945(d)(5), whether or not such expenses violated the new grant administrative expense limitation. On the other hand, the mere fact that a foundation's grant administrative expenses exceeded the 0.65 percent limitation would not itself establish that any of such expenses constituted, for example, taxable expenditures under §4945(d)(5).[23]

The Conference Committee directs the IRS to modify Form 990-PF, the private foundation information return, to require more information on expenditures by both non-operating and operating foundations.[24] The new breakdown is to include in both categories of expenditures (such as grants, direct operating expenditures, program-related investments, other investments, administrative expenses, etc.) and types of administrative expenses (*e.g.*, separate line items within each of such categories for salaries, rent, legal

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

fees, accounting fees, consultant fees, utilities, traveling expenses, etc.), as well as a statement of the accounting principles and practices used for these allocations.

The information gleaned from the revised forms will be used for a Treasury Department study of the administrative expenses incurred by foundations, to be submitted to Congress by January 1, 1988. This study is to examine the following issues:

(1) The amount of qualifying distributions which actually reach charitable beneficiaries;

(2) The administrative costs of such payouts;

(3) The effect of the revised general definition in §4942(g)(1)(A) of the administrative expenses which are eligible to be qualifying distributions; and

(4) The additional information provided by the revised form concerning categories and types of administrative expenses and the basis for allocation.

In addition, §304(a)(2) of the Act amends Code §4942(g)(1)(A) (the general definition of a qualifying distribution) to make it clear that only "reasonable and necessary" administrative expenses may be taken into account as qualifying distributions. Approval of the amount of a director's fee or other foundation expenditure by a state attorney general or other official is not to be taken as establishing that such amounts or expenditures are reasonable or not excessive for purposes of any of the private foundation tax provisions.[25]

Regulations are also authorized to provide special rules for the application of the new limitation to the qualification of "conduit" foundations under §170(b)(1)(E)(ii).[26] Under that provision and §170(e)(1)(B), contributions by individuals to a qualifying foundation (often referred to as a "conduit" foundation) receive favorable treatment if the foundation makes qualifying distributions (which are treated as corpus distributions) equal to 100 percent of the amount of contributions received in the year; the required distributions must be within two and one-half months after the close of that year. The newly authorized regulations will provide that the grant administrative expense limitation can be expressed solely for this purpose as 15 percent of the amount of such redistributed contributions.[27] In addition, appropriate conforming and coordinating rules with respect to a statement of the grant administrative expense limitation as a percentage of net investment assets are also authorized.

2. *Technical Amendment Requiring Redistribution of Program-Related Loan Repayments, Etc.*

Section 304(b) of the Act amends Code §4942(d)(1) to provide that the basic distribution requirement is the sum of the minimum investment return (*i.e.*, 5 percent of net investment assets) plus the amounts described in §4942(f)(2)(C). The latter section refers to (1) repayment to the foundation of amounts previously treated as qualifying distributions (*e.g.*, scholarship loans); (2) amounts received on dispositions of assets, the acquisition cost of which was previously treated as a qualifying distribution; and (3) amounts previously set aside for a charitable project but not used for such purpose.

III. Amendments Affecting the Excess Business Holdings Rules [§§307-310]

A. Introduction

A central concern of Congress in the 1969 Act was the ownership by foundations of large holdings in businesses. Congress concluded that the abilities of a private foundation to hold such interest should be limited for several reasons. First, it was felt that ownership of business interests would distract managers of such foundations from the charitable activities which should be their principal focus. In addition, it was felt that a business owned by a tax-exempt organization might realize an unjustified competitive advantage over businesses owned by taxable interests.

As a result, the 1969 Act enacted §4943, which generally limits the combined ownership of a business corporation and its disqualified persons to not more than 20 percent of voting stock.[28] Thus, if disqualified persons own 5 percent of the voting stock of a corporation, the foundation itself may hold 15 percent. The combined holdings may total 35 percent if persons other than disqualified persons have effective control of the corporation. A special *de minimis* rule permits a private foundation to own up to 2 percent of the voting stock of a corporation regardless of the amount owned by disqualified persons. Also, a foundation is not limited in its ability to hold an interest in a business functionally related to the foundation's charitable programs, or in any business which derives at least 95 percent of its gross income from passive sources.

If the foundation acquires holdings by gift or bequest after May 26, 1969, and such acquisition causes the foundation holdings to exceed the permitted limits, the foundation has five years to dispose of the gift or bequest. Purchases of stock by a foundation after May 26, 1969 do not qualify for the five-year grace period, and if purchases cause the holdings to exceed the permitted level, immediate excise tax penalties may result, as the five-year grace period is inapplicable. A limited 90-day grace period is provided for a foundation to reduce its holdings as required after purchases by a disqualified person.

A key date in applying the excess business holdings rules is May 26, 1969. If a foundation's holdings on that date exceeded the applicable 20 percent or 35 percent limitation, such rulings could be retained for a period, subject to gradual reduction over several phases. Under the first phase, deadlines were imposed for combined foundation-disqualified person holdings to be reduced to 50 percent of voting stock (or, if less, 50 percent of the value of all outstanding shares), as follows:

Ownership on May 26, 1969	Deadline to Reach 50 percent Combined Holdings:
Over 95% (foundation alone)	May 26, 1989
Over 75% (combined holdings)	May 26, 1984
Over 50% (combined holdings)	May 26, 1979

After expiration of the first phase, a second set of requirements comes into play. (1) If disqualified persons do not own over 2 percent of the business at any time during the second phase (*i.e.*, the 15-year period following the close of the first phase), the combined holdings of the foundation

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

and its disqualified persons must be reduced to not more than 35 percent by the end of that 15-year period. If at any time after the end of the second phase, the holdings of disqualified persons exceed 2 percent, then the foundation itself cannot hold more than 25 percent. (2) If disqualified persons own more than 2 percent at any time during the second phase, then at all times thereafter the combined holdings of the foundation and its disqualified persons are limited to 50 percent, with no more than 25 percent of the voting stock being held by the foundation.

In addition, a "downward ratchet" rule applies to limit certain acquisitions. Under this rule, if, at any time, there is any reduction in the holdings of a private foundation or in the combined holdings of the foundation and its disqualified persons, then those holdings can never go up again to the former permitted level.

B. Detailed Analysis

1. Disposition of Post-1969 Holdings Acquired by Gift or Bequest

Section 307 of the Act amends Code §4943(c) to give the Internal Revenue Service discretionary authority to allow an additional five-year period for disposition of an unusually large post-1969 gift or bequest of diverse business holdings or holdings with a complex corporate structure.[29] The foundation must establish that it made diligent efforts to dispose of the holdings within the initial five-year period, and that because of the size and complexity or diversity of the holdings, disposition within the initial five-year period has not been possible except at a price substantially below fair market value.

In addition, the foundation must submit to the Service before the end of the initial five-year period a plan for disposing of all the excess business holdings involved in the extension, and the same plan must be submitted to the Attorney General or other state official having jurisdiction over the foundation's disposition of its excess business holdings. Any response received from the Attorney General or other official as to the plan must be submitted to the IRS. Finally, the IRS must determine that the foundation's plan for disposition of its excess business holdings can reasonably be expected to be carried out before the close of the extension period.

One possible technical flaw in the new statute may produce an unintended restriction in its availability. The opening clause of §4943(c)(7) indicates that relief may be available with respect to "diverse business holdings or holdings with complex *corporate* structures" (emphasis supplied). This may be read as limiting the applicability of this relief provision to a complex *partnership* structure. No legislative purpose for such a limitation appears. Perhaps the Regulations could be drafted in such a manner to interpret "corporate" in this context as a generic term referring to business entities, and not to corporations alone.

Effective Dates: As a general matter, a five-year extension is available for business holdings with respect to which the initial five-year period of §4943(c)(6) ends on or after November 1, 1983. However, any plan submitted to IRS by the 60th day after the date of enactment (*i.e.*, on or before September 17, 1984) shall be treated as being submitted before the close of the initial five-year period as required by new §4943(c)(7)(B).

2. Exception to "Downward Ratchet" Rule

Section 308 of the Act amends Code §4943(c)(4)(A)(ii) to provide a limited exception to the downward ratchet rule. Under that exception, reductions of less than 2 percent in a foundation's holdings will be disregarded if (1) decreases are due solely to the issuance of stock in the business enterprise (or to an issuance of stock coupled with subsequent redemptions); (2) the net percentage decrease to be disregarded does not exceed 2 percent; and (3) the number of shares held by the private foundation is not affected by the issuance of stock or any redemption of stock which was coupled to the issuance of stock. Any increase in the number of shares held by the foundation resulting solely from a stock split applicable to all holders of the same class of stock will likewise be disregarded.[30]

If this exception applies to a given situation, the limitations on the holdings of the foundation and the combined foundation/disqualified person holdings will not be reduced by the amount of the net decrease. Should the net percentage decrease exceed 2 percent, the exception is completely inapplicable and, as under prior law, the limit on the maximum holdings of the private foundation will be permanently reduced by the amount of the decrease.[31]

Effective Date: This amendment is applicable to increases and decreases occurring after the date of enactment of the 1984 Act (*i.e.*, after July 18, 1984).

3. Eligibility for 20-Year First Phase

Section 309 of the Act amends Code §4943(c)(4)(B)(i) to modify the divestiture rules applicable during the first phase. Under the new rule, the 20-year first phase period to reduce pre-1969 excess business holdings applies if the combined holdings of the private foundation and disqualified persons exceeded 95 percent on May 26, 1969. Prior to this amendment, the 20-year period was applicable only where holdings of the foundation alone exceeded 95 percent.

Effective Date: This amendment is effective as if originally included in §101(b) of the Tax Reform Act of 1969.

4. Modification of Second and Third Divestiture Phases

Section 310 of the Act amends Code §4943(c)(6) to provide a private foundation with five years to dispose of excess business holdings in certain circumstances. Section 4943(c)(6) provides a five-year period for disposition of gifts and bequests, as described above. The new relief under this provision is available where the private foundation's maximum business holdings must be reduced to 25 percent of the voting stock by reason of the acquisition by disqualified persons of more than 2 percent of the business enterprise during either the second or third phase of the divestiture rules. Where this occurs the foundation is allowed five years to dispose of the excess over 25 percent.

The legislative history suggests in part that this five-year period may not be extended pursuant to new §4943(c)(7), as added to the Code by Act §307(a).[32] However, this limitation does not appear in the statute, and it is likewise absent from the Senate Report. Accordingly, there would appear to be a valid basis for seeking a discretionary extension under new §4943(c)(7), notwith-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

standing the gratuitous statement to the contrary in the House Report.

Effective Date: This amendment applies to acquisitions made after the date of enactment (*i.e.*, after July 18, 1984).

IV. Substantial Contributor Definition Relaxed [Act §313]

A. Introduction

The concept of the "disqualified person" is significant for purposes of several private foundation provisions. The prohibition on self-dealing applies to acts and transactions between a private foundation and those persons who are disqualified persons with respect to it. As noted above, the prohibition on excess business holdings relies upon the term as well. Under §4946(a), a foundation's disqualified persons generally include the following:

(i) Substantial contributors.

(ii) Foundation officers, directors or trustees ("foundation managers").

(iii) A more-than-20 percent owner of a business which is a substantial contributor.

(iv) Members of the family of any of the foregoing.

(v) A corporation, partnership, trust or estate in which other disqualified persons have a 35 percent or greater interest.

In general, a "substantial contributor" is a person who has contributed to the foundation more than 2 percent of all contributions received by the foundation through the close of the year in which the contribution is made; substantial contributor status follows only if the contributions in question exceed $5,000.[33] Reflecting the somewhat harsh approach taken by Congress in fashioning the private foundation rules, the law prior to the 1984 Act provided that a person who was once qualified as a substantial contributor would retain that status forever.

In connection with the 1984 Act, Congress decided on reconsideration that prior law was unnecessarily restrictive in requiring that a person once classified as a substantial contributor would forever remain a substantial contributor. To avoid unintended harsh circumstances, the Act provides that a person who has sufficiently terminated his or her connection with and control over a private foundation will no longer be treated as a disqualified person if a sufficiently long period of time has passed since that person has made any contribution to the foundation or has had any relationship with the foundation, and if much larger contributions to the foundation have been made by some other person.

A less restrictive rule was deemed especially appropriate for application in cases where a person makes relatively small contributions in the early years of a foundation and an unrelated person makes the substantially larger contribution later.

B. Detailed Analysis

Section 313 of the Act enacts new Code §507(d)(2)(C), providing that a person will no longer continue to be treated as a substantial contributor of a private foundation if three requirements are met.

First, neither the person in question nor any related person made a contribution to the foundation at any time within the 10-year period ending at the close of the taxable year in question.[34] For this purpose, a person is "related" if he or she would be a disqualified person under §4946 by reason of his or her relationship to the substantial contributor. In the case of a corporate contributor, any officer or director of the corporation is to be considered a substantial contributor.[35]

Second, at no time during the 10-year period described above was the person in question or any related person a foundation manager of the private foundation. In this instance again, the special definition of related person provided in new §507(d)(2)(C)(ii) is applicable.[36]

Third, the aggregate contributions made by such person and all related persons are determined by the Internal Revenue Service to be insignificant when compared to the aggregate amount of contributions to such foundation made by one other person.[37] For purposes of this rule, appreciation on contributed property occurring while held by the foundation is to be taken into account.[38]

The legislative history indicates that contributions "generally are to be considered insignificant" if they amount to less than 1 percent of a contribution made by the other person, adjusted for appreciation as indicated above. Thus, if a $250,000 cash gift was made in 1969, that would be considered insignificant in comparison to a gift of $100,000,000 made by another person in 1979. Likewise, a gift of stock worth $250,000 in 1969 would be considered insignificant in comparison to a gift of $107,000,000 in 1979, even if the value of the contributed stock appreciated from $250,000 in 1969 to $1.2 million as of the date of the $107,000,000 gift in 1979. However, a gift of $250,000 of stock in 1969 would not be insignificant in comparison to a gift of $107,000,000 by another person in 1979, if the contributed stock had appreciated in value to $15,000,000 over this 10-year period.[39]

Effective Date: The new substantial contributor rule of §507(d)(2)(C) is applicable to taxable years beginning after December 31, 1984.

V. Abatement of First-Tier Taxes in Certain Cases [Act §305]

A. Introduction

As a general matter, any violation of the private foundation rules (§§4941 thru 4945) results in an automatic penalty tax. The legislative history of the 1969 Act makes it clear that this result was intended, irrespective of whether there may be mitigating circumstances (*e.g.*, if the offense was inadvertent).[40]

The possibility of a tax, which may be quite substantial in amount, upon an innocent offender, created a significant potential for inequitable results. In the 1984 Act, Congress acknowledged that the automatic first-tier penalties were stricter than necessary to enforce the foundation requirements in some circumstances.[41] Thus, the Act grants Internal Revenue Service discretionary authority to relieve a foundation from the first-tier penalty tax provided (1) the violation was due to reasonable cause and not to willful

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

neglect, and (2) the violation was corrected within the applicable correction period.

Congress determined, however, that there was no justification for extending the abatement authority to acts of self-dealing. The legislative history gives two reasons for this conclusion. In the first place, the penalty tax for self-dealing violations is payable by the self-dealer rather than the foundation. In addition, "commercial transactions between disqualified persons and foundations are generally prohibited." Presumably, the latter reason is meant to suggest that an inadvertent or innocent self-dealing offense is unlikely in any event because the self-dealing rules are designed to impose a blanket prohibition; as practitioners familiar with the application of those rules are well aware, however, it is deceptively easy to run afoul of the self-dealing rules unknowingly.

B. Detailed Analysis

Section 305 of the Act creates a new §4962 granting discretionary authority to the Internal Revenue Service to abate first-tier chapter 42 private foundation taxes other than the tax on self-dealing imposed under §4941(a). The definitions formerly set forth in old §4962 are moved to new §4963.

Abatement under §4962 will be available only if it is established to the satisfaction of the Secretary that (1) the taxable event was due to reasonable cause and not to willful neglect, and (2) such event was corrected within the applicable correction period for such event. Only a first-tier (*i.e.*, "initial" tax) under §4942(a), 4943, 4944(a), or 4945(a) may be abated; no abatement is to be available with respect to the second-tier or "additional" taxes imposed under the private foundation provisions. A violation due to ignorance of the law is not to qualify for abatement under this provision.[42]

Effective Date: The new abatement authority applies to taxable events occurring after December 31, 1984.

VI. Miscellaneous Changes [Act §306]

A. Introduction

1. Definition of Disqualified Person

As described above, the self-dealing rules of §4941 prohibit most transactions between a disqualified person and a private foundation. In addition, the excess business holdings rules of §4943 limit the aggregate ownership of voting stock or comparable interest in the business enterprise which a private foundation and all of its disqualified persons may own.

The individuals who are included in the category of disqualified persons are substantial contributors to the foundation, foundation officers, directors or trustees, over-20-percent owners of businesses which are substantial contributions, and members of the family of these individuals.[43] For the latter purpose, disqualified family members have since 1969 included an individual's spouse, ancestors, and all lineal descendants (and their spouses).[44]

Congress acknowledged that this rule created difficulties by making it necessary to keep in perpetuity all lineal descendants of a disqualified person. Weighing these difficulties against the need to preserve the integrity of the foundation rules, it determined that relaxation of the rule was appropriate.[45] Accordingly, lineal descendants more distant than great grandchildren will not be treated as disqualified persons, effective January 1, 1985.

2. Public Disclosure Requirements

A private foundation is required to file an annual information return with the IRS on Form 990PF. A copy of this return must also be furnished to the Attorney General or corresponding official in the state having jurisdiction over the foundation.[46] Form 990PF includes comprehensive information concerning income, expenses, assets, liabilities, contributions, employees and other information concerning the private foundation, its operations, grants, officers and employees, and the like.

Information required to be furnished on Form 990PF is made available to the public by the Internal Revenue Service.[47] Moreover, a copy of Form 990PF must be made available to the public at the principal office of the foundation. The foundation must publish a newspaper notice of its availability by the due date for filing the return. This notice must include the address of the foundation office and the name of its principal manager.[48]

A foundation which fails (without reasonable cause) to file its Form 990PF in timely fashion, incurs a penalty imposed on the foundation of $10 per day, up to a maximum of $5,000.[49] In addition, if the failure continues after reasonable demand by the Internal Revenue Service (without reasonable cause) an additional sanction of $10 per day, up to a maximum of $5,000 (as to any one return) is imposed upon the officer or employee failing to file the return.

Congress concluded that the reporting and disclosure requirements applicable to private foundations serve a dual function by providing valuable information for purposes of tax administration as well as informing the general public. To help accomplish these aims, the 1984 Act requires that the newspaper notice of availability of private foundation returns include, in addition to the address of the foundation's office, its telephone number. Also, the Committee Reports direct the Internal Revenue Service to increases its efforts to enforce the public disclosure requirements.[50]

B. Analysis

1. Definition of Disqualified Person

Section 306(a) of the Act amends Code §4946(d) to define the members of the family of a disqualified person as including only his spouse, ancestors, children, grandchildren, great grandchildren, and the spouses of children, grandchildren, and great grandchildren. This change means that descendants of a disqualified person more remote than great grandchildren will no longer themselves be disqualified persons with respect to the foundation. This would not be the case, of course, if such distant descendants, or any intervening generations, independently became disqualified persons (*e.g.*, by achieving substantial contribution status). That is, an individual will be relieved of disqualified person status only if neither he, his spouse, his parents, his grandparents, nor his great grandparents are disqualified persons.

Effective Date: The revised definition of family member takes effect on January 1, 1985. Thus, as of that date,

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the distant descendants affected by the change will cease to be disqualified persons.

2. Public Disclosure Requirements

Section 306(b) of the Act amends Code §6104(d) to include the telephone number of the private foundation's principal office and in the information which must be included in the public notice published in a newspaper regarding the availability of the foundation's annual information return. While this is a relatively straightforward statutory change, it seems likely that operating problems may arise. For example, many smaller foundations do not have a telephone listed in the name of the foundation. In this case, it seems likely that the Internal Revenue Service will require by regulations that some other appropriate phone number be included. Thus, if the foundation office is in the home of the founder, or in his or her place of business, the phone number of such home or business might be required.

While the amendment to §6104(d) is the only statutory amendment in this area, the legislative history of the provision directs the Internal Revenue Service "to enforce fully the present-law rules relating to foundation annual information returns (Form 990PF), including the imposition, in appropriate cases, of penalties for failure to file a (complete) return where the return as filed fails to provide all required information." [51] The House and Senate Reports also call upon IRS to facilitate the flow of appropriate information to state officials entitled thereto, and to coordinate more closely with the states to maximize the benefits to be derived from this information.[52]

Effective Date: The amendment to §6104(d) takes effect on January 1, 1985. This is a curious effective date for a return provision; presumably, the foundation telephone number will be required to be included in notices published on or after January 1, 1985. Thus, if a foundation's taxable year ends August 30, 1984, its return would be due by January 15, 1985 (and the public notice would be required to be filed by the same date); it seems that such a foundation might avoid the telephone number requirement in this one instance by publishing its notice prior to January 1, 1985.

VII. Expenditure Responsiblity Rules

A private foundation which makes a grant to an organization other than a public charity must exercise "expenditure responsibility" over the grant.[53] In effect, this requires the granting foundation to monitor the grantee's use of the granted funds so as to be certain they are devoted solely to proper uses. In the hearings underlying this part of the 1984 Act, Congress heard testimony concerning difficulties encountered in complying with the expenditure responsibility rules.[54]

Without amending the Code or enacting any legislation on the subject, the Conference Committee included in its report, language directing the Treasury Department to review its regulations governing expenditure responsibility and modify any requirements found to be unduly burdensome or unnecessary.[55] As part of this review, Treasury is specifically instructed to modify the required grantor reports to IRS.

CHAPTER 60

CHANGES RELATING TO EXEMPT ORGANIZATIONS

Jerry J. McCoy, Esq.
Silverstein and Mullens
Washington, D.C.

I. Exemption from the Unrelated Business Tax for Certain Games of Chance

A. *Introduction*

Organizations which are exempt from federal income taxation are nevertheless subject to tax on their income derived from an unrelated trade or business.[1] In general, the tax on unrelated business income applies to income received from any trade or business which is not substantially related to the organization's exercise or performance of its exempt activities. For this purpose, the determination of whether a business is related to the organization's exempt purpose is made without reference to the organization's need for income or funds or the use it makes of the profits derived.

Section 513(f) of the Code provides that any trade or business which consists of conducting bingo games will not give rise to unrelated trade or business income. For purposes of this exclusion, a qualifying bingo game must meet certain tests set forth in §513(f)(2). The 1984 Act extends the bingo exemption to certain games of chance which, under state law, are permitted to be conducted only by non-profit organizations.

B. *Overview and Analysis*

Section 311(a) of the Act provides (without amending the Code) that for purposes of Code §513, the term "unrelated trade or business" does not include any trade or business which consists of conducting any game of chance, provided three tests are met.

First, the game of chance must be conducted by a non-profit organization. Second, the conduct of such game by the organization must not violate any state or local law. And third, a state law in effect as of October 5, 1983, must have permitted the conduct of such game of chance by non-profit organizations but prohibited the conduct of such a game by other organizations.

The structure of this provision seems likely to create some ambiguities in practice. First, the fact that §513(f) is left unchanged, referring only to bingo games, may create some misunderstanding among exempt organizations which might be beneficiaries of the new rule. This coupled with the October 5, 1983 test date suggests reluctant acceptance of the underlying legislative policy by Congress.

As a practical matter, the drafting approach used for the state law test may present administrative difficulties in practice. For example, if one reads the statute literally it requires that "a State law" in effect as of October 5, 1983 must both permit non-profit organizations to conduct the games in question and forbid its conduct by organizations which are not non-profit in nature. This raises a question concerning the operation of this rule in a situation where, for example, the criminal code of a given state forbids their conduct of a game of chance, but the state's non-profit corporation statute permits the game in question to be conducted by non-profit corporations. Legislative history, to the extent it bears on this point, suggests that the exemption should be available under these circumstances; this rule is summarized in the House Committee Report by stating that "as of October 5, 1983, there was a State law in effect that permitted the conducting of the game of chance only by a non-profit organization."[2]

Even if this issue is favorably resolved, other questions will undoubtedly arise. The term "game of chance" is not defined in the Act or the legislative history, and there is no guidance as to whether games involving an element of skill, such as poker, would be covered by the new exemption.

Effective Date: The new rule is applicable to games of chance conducted after June 30, 1981, in taxable years ending after that date.

II. Non-Profit Day-Care Centers Qualify as §501(c)(3) Organizations [Act §1032]

A. *Introduction*

The categories of non-profit organizations granted tax exemption under §501(c)(3) include entities organized and operated exclusively for religious, charitable, educational, and other purposes, which meet certain other requirements. Contributions to such organizations are deductible for income, estate and gift tax purposes.[3]

Non-profit day-care centers have been granted exemption from tax under §501(c)(3) by the Internal Revenue Service under certain conditions. Where enrollment is based on a family's financial need or the need of a child for the program, or where the center provides an educational program through a professional staff of qualified teachers for pre-school children of working parents, exemption has been allowed.[4] While the parents of children enrolled in the program (or the employer of the parents) received some benefit from the operation of the programs in question, those private benefits were held incidental to the public benefits resulting from the center's operation, and tax exemption was thus granted. In *San Francisco Infant School, Inc. v. Comr.*,[5] the Tax Court held a child care organization exempt in circumstances where the custodial

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

services of the center were found to be incidental to its educational activities. On the other hand, in *Baltimore Regional Joint Board Health and Welfare Fund v. Comr.*,[6] a center was denied exemption where its operation failed to serve the community as a whole.

Congress concluded that the definitional difficulties which had arisen with respect to non-profit child care organizations should be clarified. Accordingly, Congress determined that certain non-profit day-care organizations which make their services available to the general public should be considered to have educational purposes, without regard to the existing interpretation of that term as applied to such day-care organizations.[7]

Accordingly, the Act provides that the term "educational purposes" as used in §§501(c)(3), 170, 2055, and 2522, include the providing of care for children (away from their homes) provided two tests are met. First, substantially all of the child care provided by the organization must be designed to enable individuals to pursue gainful employment. Second, the services provided by the organization must be made available to the general public.

B. Overview and Analysis

Section 1032(a) of the Act creates new Code §501(k), prescribing the treatment of certain organizations providing child care. Under that rule, the term "educational purposes" as used in §§501(c)(3), 170(c)(2), 2055(a)(2), and 2522(a)(2), will include the providing of care of children away from their homes if two additional tests are met. First, substantially all of the care provided by the organization must be for purposes of enabling individuals to be gainfully employed. Second, the services provided by the organization must be available to the general public.

If these tests are met, the organization will be considered organized and operated for "educational purposes" for purposes of its own exemption from Federal tax. Additionally, contributions and bequests to the organization will be deductible for income, estate and gift tax purposes.

The legislative history indicates that new §501(k) is not intended to affect the meaning of the terms "educational" or "charitable" for any purpose other than considering the child care organizations described in the provision as having educational purposes.[8] Presumably this is designed to prevent organizations other than the type described in §501(k) from attempting to draw conclusions regarding the statutory purpose and legislative policy of the new provision as a basis for classifying its own program as "educational" or "charitable." Nevertheless, certain ambiguities are created. First, while new §501(k) provides only that the affected child care organizations will be deemed to have "educational" purposes, the admonition in the legislative history indicates that both "educational" and "charitable" are somehow involved. Presumably this is designed to foreclose reliance on new §501(k) as evidence of what might be "charitable" purposes for some other organization. Nevertheless, this reference in the legislative history may have the opposite effect, creating some inference that the affected organizations are "charitable" as well as "educational."

Another issue presented is whether new §501(k) does or does not describe an organization which is "educational" for purposes of other Code provisions which simply refer to "purposes described in §170(c)(2)" as a shorthand means of indexing all of the various types of activities which qualify for deductibility of contributions and tax exemption. For example, §4942(g)(1)(A) and §4942(g)(1)(B) make such a reference in describing the types of foundation distributions which may be taken into account toward discharging the foundation's distribution obligations under the private foundation excise tax provisions. Similarly, §170(e)(1)(B)(i) makes such a reference in describing certain property contributions to governmental units which are deductible at full fair market value. Query whether a private foundation grant benefiting a §501(k) organization, or a property contribution to a governmental unit to be used by such an organization qualify as made for an educational purpose under these provisions. Alternatively, does the admonition in the legislative history that §501(k) will not affect the meaning of the terms "educational" or "charitable" for any other purpose preclude such a conclusion. Tax Management believes that the legislative history should not be read in this restricted fashion, but presumably this must await clarification by eventual regulations.

III. Section 514(c)(9) Exception Extended to Certain Educational Institutions and Title Holding Corporations [Act §1034]

A. Introduction

Although tax-exempt organizations in general are subject to tax on their unrelated business taxable income, as discussed above, most types of passive income are excludible for this purpose. The general exclusion for passive income is not available, however, for income from a property which is debt-financed.[9] Section 514 of the Code taxes all exempt organizations on income from "debt-financed property." In general, property used for non-exempt purposes and with respect to which an "acquisition indebtedness" exists is generally classified as debt-financed property. There are numerous exceptions and limitations under §514, including transitional and "grace period" rules which enable the use or disposition of certain encumbered property without tax consequences.

Prior to the 1984 Act, an exception was provided to the rule requiring taxation of debt-financed property. Under the exception, indebtedness incurred by a qualified pension trust as a result of the acquisition or improvement of real property was excluded from "acquisition indebtedness" under §514(c)(9).

The 1984 Act extends the §514(c)(9) exemption to certain educational institutions and affiliated support organizations.

B. Overview and Analysis

Section 1034 of the Act amends Code §514(c)(9) to provide generally that indebtedness incurred by a "qualified organization" in acquiring or improving real property will not constitute acquisition indebtedness for purposes of §514, provided certain conditions are met. Qualified organizations for this purpose include an educational organization (described in §170(b)(1)(A)(ii)), affiliated support organizations of such an institution, or any qualified pension, profit sharing or stock bonus trust qualifying under §401.[10]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The exception of §514(c)(9) is unavailable in a variety of circumstances. *First*, the acquisition price for the real property acquisition or improvement must be a fixed amount determined as of the date of the acquisition (or the completion of the improvement). *Second*, the amount of the indebtedness or any amount payable with respect thereto, or the time for payment of any such amount, may not be dependent in whole or in part upon the revenue or profits derived from the property. *Third*, the real property may not, after its acquisition, be leased by the qualified organization to the seller or to any person related to the seller within the meaning of §§267(b) or 707(b). *Fourth*, the real property may not be acquired by a qualified pension trust from a person related to the plan under which the trust is formed, or a related person. *Fifth*, no seller or person related to the seller may provide financing in connection with the acquisition or improvement. *Sixth*, the real property may not be held by a partnership unless the partnership independently meets the tests of §§514(c)(9)(B)(i) through (v) and either (1) all of the partners are qualified organizations within the meaning of §514(c)(9)(C) as described above, or (2) each allocation to a partner of the partnership which is a qualified organization is a "qualified allocation" within the meaning of §168(j)(9). This latter provision refers to the tax-exempt entity leasing provisions, described, *supra*, in Chapter 18. In determining whether all of the partners are qualified organizations for purposes of the first part of this test, an organization will not be treated as a qualified organization if any of its income is unrelated business taxable income determined without regard to §514(c)(9).

The legislative history makes it clear that the Treasury is authorized to prescribe regulations dealing with the effect of guaranteed payments (as defined in §707(c)) under this rule. It is contemplated that those regulations will provide that guaranteed payments to partners will not disqualify an otherwise qualified allocation so long as the payments are reasonable in amount and are made to all partners in proportion to their capital in the partnership. The Conference Report indicates that a distribution which is equal to the most appropriate federal rate (referring to new §1274(d)) will be regarded as reasonable in amount for this purpose.[11] Despite this, the Conference Report contemplates that the regulations on this point will be drafted so as to prevent avoidance of the qualified allocation rules by a partnership making disproportionately large guaranteed payments to its tax-exempt partners for the use of their capital.[12]

Finally, the Conference Report contemplates that transfers of encumbered property with liabilities exceeding the transferor's basis will give rise to income to the transferor in the case of property transferred to a tax-exempt organization in accordance with present law; this is to be true particularly where the transfers are designed to avoid ordinary income recapture on the property.[13] The effect of this provision in the legislative history is not clear, since there would seem to be nothing in §514(c)(9) which would alter the present law regarding transfers of encumbered property.

Effective Date: In general, §514(c)(9) as amended takes effect with respect to indebtedness incurred after the date of enactment. Two special transition rules are provided, however.

Under the first transition rule, the amendment is not applicable to indebtedness incurred before January 1, 1985, by certain partnerships if the indebtedness is incurred with respect to property acquired before such date. Partnerships relying upon this transition rule must meet three rules. First, before October 21, 1983, the partnership was organized, had filed a request for exemption with the Department of Labor, and a private placement memorandum had been circulated stating the maximum amount of interests in the partnership that would be offered. Second, the interest in the property to be acquired by the partnership was described in this private placement memorandum. And third, the marketing of partnership interests in the partnership is completed within two years after the date of enactment of the 1984 Act (July 18, 1984) or the date the Department of Labor exemption is published in the Federal Register, whichever is later. The aggregate amount of interest subject to such transition rule may not exceed the maximum amount listed in the private placement memorandum.

The second transition rule relates to indebtedness on certain property acquired before January 1, 1986 by certain partnerships, provided the indebtedness is incurred with respect to property acquired before that date. The partnerships subject to this transition rule are those which were organized before March 6, 1984, and publicly announced by that date the maximum amount of interest which would be sold in the partnership; in addition, the marketing of partnership interests in the affected partnerships must be completed not later than October 16, 1984, and the aggregate amount of interest in the partnership does not exceed the maximum amount announced by the partnership before March 6, 1984. In the case of property acquired pursuant to a written contract which was binding on January 1, 1986 and at all times thereafter will be treated as acquired before that date, provided the property is placed in service not less than six months after the date the contract was entered into.

CHAPTER 61

DEFINITION OF A RESIDENT ALIEN

Javed A. Khokhar, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The United States applies a special tax regime to nonresident alien individuals. For example, a nonresident alien individual not engaged in a U.S. trade or business is subject to U.S. tax at a flat 30[1] percent (or a lower treaty rate) tax (collected by withholding at source)[2] on the gross amounts of U.S. source fixed or determinable, annual or periodical (FDAP),[3] and certain other types of income.[4] A nonresident alien individual engaged in a U.S. trade or business, who does not maintain an office in the United States, is subject to U.S. tax at graduated rates on the net amounts of all U.S. source income[5] except the amounts described in §871(a) which are not effectively connected with the alien's U.S. trade or business.[6] If a nonresident alien individual, who is engaged in a U.S. trade or business, maintains an office in the United States, specified categories of such individual's foreign source income are also treated as income effectively connected with a U.S. trade or business and, thus, fall within the U.S. tax net.[7]

Resident alien individuals, on the other hand, are taxed by the United States at graduated rates applicable to U.S. citizens on net income derived from U.S. as well as foreign sources.[8] Due to the differences in the tax regimes applicable to resident and nonresident alien individuals, the amount of U.S. tax liability varies under the two regimes depending upon the income mix (both as to source and type of income) of the individual. Thus, under one set of facts, the tax regime applicable to nonresident alien individuals may yield a lower U.S. tax while, under a different set of facts, the tax regime applicable to resident alien individuals may yield a lower U.S. tax. Consequently, an alien may desire to be classified as a "resident" or a "nonresident" alien of the United States depending upon which regime yields a lower U.S. tax. In the U.S. tax scheme applicable to aliens, the concept of "residence" occupies a highly significant place.

A. The Concept of Residence Under Prior Law

Oddly enough, prior to the Tax Reform Act of 1984 (P.L. 98-369), the term "residence" was not defined anywhere in the Code. The regulations under §871, however, did attempt to fill in the breach. Regs. §1.871-2(b) provides that:

> "An alien actually present in the United States who is not a mere transient or sojourner is a resident of the United States for purposes of the income tax. Whether he is a transient is determined by his intentions with regard to the length and nature of his stay. A mere floating intention, indefinite as to time, to return to another country is not sufficient to constitute him a transient. If he lives in the United States and has no intention as to his stay, he is a resident. One who comes to the United States for a definite purpose which in its nature may be promptly accomplished is a transient; but if his purpose is of such a nature that an extended stay may be necessary for its accomplishment, and to that end the alien makes his home temporarily in the United States, he becomes a resident, though it may be his intention at all times to return to his domicile abroad when the purpose for which he came has been consummated or abandoned. An alien whose stay in the United States is limited to a definite period by immigration laws is not a resident of the United States within the meaning of this section, in the absence of exceptional circumstances."

A determination of resident status began with the presumption that aliens, by reason of their alienage, are nonresident aliens.[9] On the other hand, physical presence in the United States for as little as one year raised a countervailing presumption that the alien was a resident.[10] This, however, did not mean that an alien present in the United States for less than one year could not be classified as a resident. The presumption of alienage could always be overcome by evidence showing a definite intention on the part of the alien to acquire U.S. residency, such as participation by the taxpayer and his/her family in the social and religious life of his/her community and enrollment of his/her children in local schools.[11] In many circumstances even a relatively short period of physical presence, when coupled with the purchase of a dwelling, was considered sufficient to constitute an alien a resident of the United States.[12] In the well-publicized case of *Park v. Comr.*,[13] the taxpayer came and stayed in the United States for brief periods of time in each of the taxable years (1972-1975) in question. Based on the facts that the taxpayer owned a home in the United States, made large and extensive real estate investments, engaged in extensive business activities in the United States, led an extremely prominent social life in the United States, and generally spent more time in the United States than in his native Korea, the Tax Court held that the taxpayer was not a mere "transient or sojourner" in the United States.

On the other hand, the mere fact that an alien was physically present in the United States for a year or more was never, in and of itself, considered enough to constitute an alien a resident of the United States. Physical presence within the United States for one year or more, while sufficient to displace the presumption of nonresidence, did not necessarily resolve the question of the taxpayer's intent

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

regarding the nature and length of his/her stay; *i.e.*, whether he/she was a mere transient or sojourner. Thus, an alien present in the United States for one year or more could be regarded as a nonresident alien if it could be established by evidence that he/she was a mere transient or sojourner.[14] In a number of post World War II cases, aliens were held to be nonresident aliens despite their long physical presence in the United States.[15]

It is obvious from the foregoing that, prior to the Tax Reform Act of 1984, two factors were required to coincide before an alien could be considered a resident of the United States:

(i) Physical presence in the United States, and;

(ii) An intention to reside in the United States with some permanence.

1. The Physical Presence Factor

A nonresident alien could not be classified as a resident alien of the United States unless the alien was physically present within the borders of the United States and there was some permanence as to the physical presence. In *Begassiere v. Comr.*,[16] the Tax Court, in holding that the taxpayer was not a resident alien of the United States, observed:

> "It is obvious ... that a nonresident alien cannot establish a residence in the United States by intent alone since there must be an act or fact of being present, of dwelling, of making one's home in the United States for some time in order to become a resident of the United States. Some permanence of living within the borders is necessary to establish residence." [17]

The Tax Court, in *Adams v. Comr.*,[18] again made a similar observation:

> "In our opinion, [taxpayer's] occasional and limited stays in Florida (amounting to approximately 70 days in each year) and his other activities in Florida did not cause the line between nonresidency and residency to be crossed. Some permanence of living within borders is necessary to establish residence ... It takes more than the use of a house as a closet for golfing and other sporting gear, or even sporadically to sleep and eat, to convert it into a home. It may well be that [taxpayer] intended to make Florida his residence — perhaps as early as 1953 — but his intent was never accompanied by the requisit physical presence. Both elements are necessary to establish residence."

2. The Intent Factor

Once it was established that an alien's physical presence within the U.S. borders had some permanence, the alien could be classified as a resident of the United States only if it was further established that he/she was not a mere transient and that he/she intended to make the United States his/her home, if not permanently, then for an extended period of time.[19] Whether the alien is a transient is determined by his/her intentions with respect to the length and nature of his/her stay in the United States.[20] If he/she lives in the United States and has no definite intention with respect to his/her stay, he/she is classified as a resident of the United States.[21]

In making a determination with regard to the alien's intentions, such factors as the purpose and the character of the alien's visit,[22] the relocation of the alien's family,[23] acquisition of a home in the United States by the alien,[24] the alien's cultural and social ties with the United States,[25] the alien's business and investment ties with the United States,[26] maintenance of bank accounts in the United States,[27] and filing of tax returns by the alien with his home country as a resident [28] are considered.

Perhaps the most weighty factor bearing upon the alien's intent was the type of visa used to enter the United States. As noted earlier, Regs. §1.871-2(b) provides that "an alien whose stay in the United States is limited by the immigration laws is not a resident of the United States ... in the absence of exceptional circumstances." Aliens entering the United States whose stay is limited by immigration laws include: employees of foreign governments (A-visa holders); business visitors and tourists (B-visa holders); aliens in transit (C-visa holders), alien crew members of ships and aircraft (D-visa holders); treaty traders and investors (E-visa holders); students (F-visa holders); employees of international organizations (G-visa holders); temporary workers and trainees (H-visa holders); foreign correspondents (I-visa holders); exchange visitors (J-visa holders); and intra-company transfers (L-visa holders). The fact that an alien was present in the United States on one of the visa categories enumerated above was by no means itself sufficient to establish conclusively that he/she was a nonresident alien. If such an alien could establish that he/she was not a mere transient, then he/she was classified as a resident of the United States. In Rev. Rul. 64-285,[29] for example, an E-visa holder who was present in the United States for more than a year was held to be a resident of the United States. In Rev. Rul. 67-159,[30] F and J visa holders, who were present in the United States continuously for two years, were held to be residents of the United States. In *Siddiqi v. Comr.*,[31] the taxpayer came to the United States on an F-visa for five years. The Tax Court held that the taxpayer was a resident because his purposes in coming to the United States were of such a nature that required an extended stay. In some early cases, the Tax Court and the Fourth Circuit had similarly ruled that some A and B visa holders who repeatedly applied for extensions of stay were residents of the United States.[32] Finally, in *Escobar v. Comr.*,[33] the Tax Court ruled that the taxpayer was a resident of the United States despite the fact that she was a G-visa holder (employee of an international organization). In rejecting the Commissioner's argument that the taxpayer was a nonresident because her stay in the United States was limited by immigration laws, the Tax Court observed that the taxpayer and her family "own a home in Maryland, where they keep all their belongings. They have Maryland drivers' licenses and keep their bank accounts in the U.S. They maintain no residence in Chile, and are treated as nonresidents of Chile for Chilean income tax purposes. The family is involved in various social and community activities in Maryland."

Aliens who entered the United States on an immigrant visa (or who, after entering the United States on a nonimmigrant visa, applied for an immigrant visa) were generally regarded as resident aliens of the United States. Admission to the United States for permanent residence, however, was not a sure ticket to "resident status" either. It was possible

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

that the alien's intentions did not coincide with the characterization given the alien's stay by his/her visa.[34] Consequently, notwithstanding the fact that an alien was admitted for permanent residence, if the alien's stay in the United States resembled that of a nonresident alien, the alien was classified as a nonresident alien for tax purposes.[35] In *Jellinek v. Comr.*,[36] the taxpayer entered the United States on an immigrant visa. After determining that he could not find immediate employment in the United States, the taxpayer left. Thereafter, the taxpayer came to the United States for brief periods of time in order to keep his re-entry permits alive. The Tax Court held that:

> "It appears that [taxpayer]'s intent to establish residence in the United States was at all times conditional upon his finding suitable employment here and when that condition was not met the intent was abandoned before the fact of residence was ever established."

In *Adams v. Comr.*,[37] the taxpayer, his wife and their children came to the United States on immigrant visas. The taxpayer bought a house in Florida for his wife and children and left for his native Canada while leaving the family behind in Florida. During each of the three taxable years in question, the taxpayer spent no more than 70 days in the United States. The Tax Court held that:

> "[Canada] was the center of gravity of his life ... [he] continued to spend the bulk of his time in Canada, his principal business activities continued to be centered there, he continued to live in the family residence in [Canada] ... his clothing and personal belongings remained there. Under all the facts and circumstances of this case and giving appropriate weight to the presumption of nonresidency contained in the respondent's regulations, we conclude that [taxpayer] was a nonresident alien of the United States during the taxable years before us."

Finally, in Rev. Rul. 76-82, the taxpayers commuted to work in the United States from Canada and Mexico and were classified as "special immigrants." The Service ruled that because the taxpayers came to the United States merely to work, their actions did not evidence any intention to abandon their residences in Canada and Mexico to take up new residences in the United States.

The foregoing discussion of the body of law dealing with the concept of "residence" makes it clear that the determination of residence was largely a subjective exercise requiring a careful analysis of the facts and circumstances of each case. It is not surprising, therefore, that tax planning and tax compliance for alien individuals with U.S. contacts was a difficult and uncertain practice at best.

B. Abandonment of U.S. Residence Under Old Law

Under the law in effect prior to the Tax Reform Act of 1984 (P.L. 98-369), U.S. residence was abandoned the same way it was acquired. In order to be regarded a nonresident alien of the United States, a U.S. resident was required to physically depart from the United States and establish an intent to abandon his/her U.S. resident status. Thus, an alien who acquired U.S. residence retains such status during periods of temporary absence in a foreign country, particularly if he/she obtained a valid re-entry permit and returned to the United States in time.[38] The alien individual was required to take some affirmative action evidencing an intent to abandon the resident status.[39] Such affirmative action could include: transfer of personal possessions out of the United States, relocation of the alien's family in a foreign country, sale of the U.S. residence, establishment of a home in a foreign country, securing of foreign residence permits, and lapse of affiliation with social, religious, and other organizations in the United States.[40]

In *Ermogeni v. Comr.*,[41] the Tax Court ruled that a French citizen, who was a U.S. resident for eight years before being transferred to Africa on an indefinite assignment by his employer, did not intend to abandon his U.S. residence because, among other reasons, he continued to own a home in New York and he claimed continuous residence in the United States when applying for naturalization on his return to the United States.

In *Marsh v. Comr.*,[42] a Japanese citizen married a U.S. citizen and established her residence in the United States. In 1966, she accompanied her husband to Vietnam and returned to the United States in 1970. She claimed that during 1966-1969, she was a nonresident alien. The Court ruled that the taxpayer's mere absence from the United States for four years did not, in itself, destroy her resident status and that she merely intended to accompany her husband.

It is apparent, therefore, that a U.S. residence, once acquired, is not easily abandoned. If anything, it requires more activity to establish an "intent to abandon" than to establish an "intent to acquire" U.S. residence.

C. The Impetus for Change

The House Ways and Means Committee Report summarizes the impetus for change as follows:[43]

> "The committee believes that the tax law should provide a more objective definition of residence for income tax purposes. The committee believes that present law does not provide adequate guidance with respect to residence status. The committee understands that an objective definition may allow some aliens who should be taxable as residents to avoid resident status, and would impose resident status on some aliens who are not residents under the current rules. On balance, however, the committee finds that certainty that the bill's objective definition provides outweighs other considerations."

II. Overview

Section 138 of the Tax Reform Act of 1984 (P.L. 98-369), inserts Code §7701(b) to provide, for the first time, a statutory definition of the term "resident."

Under §7701(b), an alien individual is treated as a resident of the United States for a calendar year if such individual satisfies either of the following two tests:

(1) The alien is a lawful permanent resident of the United States under the immigration laws at any time during the calendar year (*i.e.*, the green card test);[44] or

(2) The alien satisfies the substantial presence test.[45]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Under the substantial presence test, an alien individual is treated as a resident of the United States for a calendar year in either of the following two situations:[46]

(i) The alien is physically present in the United States for 183 days or more during the calendar year; or

(ii) The sum of the days the alien is physically present in the United States during the current calendar year, plus one-third the number of days the alien is physically present in the United States during the first preceding calendar year, plus one-sixth the number of days the alien is physically present in the United States during the second preceding year equals or exceeds 183 days.

Note: The resident or nonresident status of an alien is determined on a calendar year basis.

For purposes of the "substantial presence" test, an alien individual's presence in the United States in the following capacities is disregarded:

(i) As a foreign government-related individual (A-visa and G-visa holders);[47]

(ii) As a teacher or trainee (but only up to a maximum of 2 years);[48]

(iii) As a student (but only up to a maximum of 5 years);[49]

(iv) By reason of a medical condition which arose while the alien was present in the U.S.;[50] and

(v) As a commuter from Mexico or Canada.[51]

There are two exceptions to the "substantial presence" test:

(1) An alien individual is not treated as a resident of the United States under the substantial presence test if such individual is present in the United States for 30 days or less during the calendar year in question;[52] or

(2) An alien individual is not treated as a resident of the United States under the "substantial presence" test if such individual was present in the United States for less than 183 days during the calendar year in question and can establish that he/she has closer connections with and a tax home in a foreign country.[53]

Finally, §7701(b) does not override U.S. tax treaties. Consequently, if an alien individual is treated as a resident of a foreign country under the tie-breaking rules of a U.S. tax treaty, such individual is a nonresident alien of the United States under §7701(b) but only for purposes of applying the treaty provisions.

New Code §7701(b) is generally effective for taxable years beginning after December 31, 1984.[54]

III. Detailed Analysis

Section 138 of the Tax Reform Act, at the very least, achieves one indisputable distinction: for the first time in the history of the Internal Revenue Code it provides a statutory definition of the terms "nonresident alien" and "resident alien." While §7701(b)(1)(A) (as added by §138 of the Act) defines the term "resident alien" in a positive manner, the term "nonresident alien" is defined in a negative and indirect way. Section 7701(b)(1)(B) provides that an individual is a nonresident alien of the United States if such individual is: (i) not a citizen of the United States, and (ii) not a resident alien of the United States. Thus, an alien individual satisfies the definition of a "nonresident alien" if such individual does not fit the definition of a "resident alien."

A. Definition of a "Resident Alien"

The definition of a "resident alien" as provided in §7701(b) is significantly different from the prior definition of this term as provided under Regs. §1.871-2(b) and the case law. An individual who qualified as a "resident alien" under the prior law may not qualify as a resident alien under §7701(b). Conversely, an alien individual who would be a nonresident under the prior law may fit the definition of a "resident alien" provided in §7701(b). It is important to note, therefore, that the scope of the definition of a "resident alien" in §7701(b) is not all-embracing. The purposes for which the new definition is valid are limited expressly by the statute and the legislative history. The old definition of this term continues to have some vitality.

1. The Scope

The new definition of a "resident alien" in §7701(b) applies only for purposes of determining the U.S. income tax liability of individuals who are not citizens of the United States. As discussed below, the statute and the legislative history pinpoint three situations in which the §7701(b) definition does not apply.

a. Section 7701(b) Does Not Apply for Estate and Gift Tax Purposes

The estate and gift tax rules that apply to nonresident aliens (nondomiciliaries to be more exact) are significantly different from the rules that apply to citizens and resident aliens (domiciliaries to be more exact).[55] The concept of "residence" (or domicile to be more exact) is equally important for purposes of estate and gift taxation of the alien individuals.

The regulations provide and the courts agree that, for estate and gift tax purposes, a resident is one who at the time of his/her death (or at the time of making the gift) has his/her domicile in the United States.[56] The concept of "domicile" is the same as the concept of "residence" under pre-TRA 1984 rules except that "domicile" requires more permanence than "residence." For example, an individual physically present in the United States can be considered a resident if his/her purpose in coming to the United States required an extended stay.[57] By contrast, an individual cannot be considered to have his/her domicile in the United States unless he/she intends to reside in the United States permanently. For purposes of determining the "issue of domicile" it is not a fleeting, casual, or sporadic intention which controls, but a serious conception of home."[58] Thus, the basic distinction between the concepts of "residence" and "domicile" is that an intention to make a temporary home in the United States was considered enough for the former, while the latter required an intent to make a permanent home in the United States.

Nevertheless, since the estate and gift tax provisions in the statute use the terms "resident" and "nonresident

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

alien", rather than "domiciliary" and "nondomiciliary," the definition of the term "resident" in §7701(b) would, in the absence of an express exception, override the concept of "domicile" in the estate and gift tax area. This problem is, however, resolved by §7701(b)(1), which states specifically that the definition of the terms "resident alien" and "nonresident alien" as provided therein do not apply for purposes of Subtitle B (which contains the estate and gift tax provisions of the Code). Consequently, the concept of domicile continues to apply for purposes of determining the estate and gift tax liability of alien individuals.

b. Section 7701(b) Does Not Apply for §911 Purposes

U.S. citizens and resident aliens are entitled to certain exclusions from gross income with respect to their foreign source earned income.[59] However, in order to claim these exclusions, the taxpayer must establish either: (i) that he/she was physically present in the foreign country (countries) on 330 days in any consecutive 12-month period;[60] or (ii) that he/she is a bona fide resident of a foreign country (or countries) for an uninterrupted period that includes an entire taxable year.[61]

The regulations under §911 (and §913) have traditionally provided that §871 principles apply in determining whether a U.S. citizen is a bona fide resident of a foreign country. The courts have generally applied Regs. §1.871-2(b) and the criteria developed in the domestic area for purposes of determining whether a U.S. citizen qualifies as a bona fide resident of a foreign country.[62]

If the §7701(b) definition of a "resident" is applied in the §911 context, it would render meaningless the physical presence test of §911(d)(1)(B) because a U.S. citizen who is present in a foreign country (or countries) for 183 days in calendar year will qualify as a bona fide resident under the substantial presence test of Code §7701(b)(3).

The definition of the term "resident alien" in §7701(b) does not, by its own terms, apply for §911 purposes. Section 7701(b) provides a definition of when an alien qualifies as a resident alien of the United States. It does not attempt to define when a citizen would be considered a bona fide resident of a foreign country. While in the past, the rules governing the definition of a resident alien of the United States have been borrowed for purposes of determining when a U.S. citizen qualified as a bona fide resident of a foreign country, the House Ways and Means Committee Report explicitly states that the new definition of a resident alien of the United States in §7701(b) is not applicable for purposes of determining when a U.S. citizen qualifies as a bona fide resident of a foreign country under §911(d)(1)(A).[63]

Thus, Regs. §1.871-2(b) and the case law which governed the determination of resident status of alien individuals prior to the enactment of §7701(b) will continue to apply for purposes of determining the resident status of U.S. citizens in foreign countries under §911(d)(1)(A).

c. Section 7701(b) Does Not Apply to Estates and Trusts

The Conference Committee Report (accompanying H.R. 4170) clarifies that the definition of a "resident alien" in §7701(b) does not in any way affect the determination whether a trust (or estate) is a U.S. or a foreign trust (or estate) except insofar as that determination itself turns on the resident or nonresident status of an alien individual.[64]

2. The Term "Resident Alien" Defined

Under §7701(b), an alien individual qualifies as a resident alien of the United States if he/she satisfies either one of the following two tests:[65]

(i) The Lawful Permanent Resident Test; or

(ii) The Substantial Presence Test.

These two tests are discussed in detail below.

a. The Lawful Permanent Resident Test

Section 7701(b)(1)(A)(i) provides that an alien individual is treated as a resident alien of the United States for a calendar year if at any time during the calendar year such individual is a lawful permanent resident of the United States. An alien individual qualifies as a lawful permanent resident of the United States at any given time if: (i) such individual has the status of having been lawfully accorded the privilege of residing permanently in the United States as an immigrant in accordance with the immigration laws; and (ii) such status has not been revoked and has not been administratively or judicially determined to have been abandoned.[66]

It is apparent, therefore, that resident status under this test is totally divorced from the length of physical presence in the United States. An alien individual who is issued a "green card" under the immigration laws becomes a resident alien of the United States for U.S. income tax purposes on the first day he/she is physically present in the United States as a lawful permanent resident regardless of whether he/she is so present in the United States for one day or 100 days.[67] Similarly, a "green card" holder who comes to the United States for only a few days in each calendar year just to keep his/her "permanent resident" status alive is a resident alien for income tax purposes. This sweeping rule is justified by the Ways and Means Committee Report as follows:

> "The committee believes that aliens who have entered the United States as permanent residents and who have not officially lost or surrendered the right to permanent U.S. residence should be taxable as U.S. residents. These persons have rights that are similar to those afforded citizens (including the right to enter the United States at will); equity demands that they contribute to the cost of running the government as much as citizens." [68]

Once an alien acquires resident status under this test, such status continues until such time as: (i) the alien surrenders his/her "green card;" (ii) the "green card" is revoked by the immigration authorities; or (iii) it is administratively or judicially determined that the alien has abandoned his/her lawful permanent resident status under the immigration laws. Thus, resident status for tax purposes continues until such time as "permanent resident alien" status under immigration laws is officially lost or abandoned. It is not enough to establish that the individual comes to the United States so infrequently that, upon close scrutiny, he/she is no longer entitled to a permanent resident status. There must be an actual surrender of the green

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

card, or an official revocation of the green card, or an actual administrative or judicial determination of an abandonment of such status for the loss of resident status to be effective.

Comment: The lawful permanent resident test represents a significant change from the prior law. Under the prior law, admission to the United States for permanent residence pursuant to the Immigration and Nationality Act did not *per se* establish residence for Federal income tax purposes.[69] If such individual's stay in the United States resembled that of a nonresident alien, he/she was treated as a nonresident alien.[70] In *Jellinek v. Comr.*,[71] and *Adams v. Comr.*,[72] for example, the taxpayers, who were "green card" holders, were held to be nonresident aliens for Federal income tax purposes. Under the new law, the taxpayers in both *Jellinek* and *Adams* would qualify as resident aliens for Federal income tax purposes.

b. The Substantial Presence Test

An alien individual not lawfully admitted as a permanent resident under the immigration laws may, nevertheless, qualify as a resident alien of the United States for Federal income tax purposes if such individual meets the substantial presence test of §7701(b)(3).

Comment: An alien individual who is lawfully admitted as a permanent resident under the immigration laws of the United States may or may not also qualify under the substantial presence test as a resident alien of the United States for Federal income tax purposes. If an individual qualifies as a resident alien for a calendar year under both tests, his/her residency starting date is the earlier of (i) the first day he/she was present in the United States as a lawful permanent resident, or (ii) his/her residency starting date under the "substantial presence" test.[73]

The substantial presence test is essentially a numerical test. It is satisfied if the alien individual is physically present in the United States for a certain number of days either in the current calendar year or over a three-year look-back period. This test is described in the House Ways and Means Committee Report:

> "It is just as clearly appropriate to treat as residents individuals who spend significant time in the United States. While there is no single system that is perfect, the committee believes that a regime that depends on length of stay meets the criteria of objectivity and establishing nexus to the United States and is appropriate. Almost all individuals present in the United States for more than half a year should be taxable as U.S. residents. Moreover, individuals who repeatedly spend significant amounts of time in the United States should have to note their presence with the Internal Revenue Service; if they do not have a closer connection with a foreign country than with the United States and a tax home in that foreign country, they, too, should be taxable as U.S. residents. The committee believes that an average of 122 days of presence over a three year period is significant amount of time for the purposes of imposing U.S. tax in such circumstances, but that an individual who is present for fewer than 31 days in a year should not be subject to this rule for that year." [74]

According to §7701(b)(3), an alien individual qualifies as a resident alien of the United States for a calendar year under the substantial presence test in either of the following two situations:

> (i) If the alien is physically present in the United States for 183 days or more during the calendar year; or
>
> (ii) If the sum of the days the alien is physically present in the United States during the current calendar year, plus one-third the number of days the alien is physically present in the United States during the first preceding calendar year, plus one-sixth the number of days the alien is physically present in the United States during the second preceding calendar year, equals or exceeds 183 days.

Comment: Both parts of the substantial presence test, as described above, are far from satisfactory. One hundred and eighty-three days in a single calendar year is too short a stay in the United States to make an alien individual a resident of the United States. Too many unsuspecting tourists and casual visitors (*i.e.*, aliens who come to visit their relatives in the United States) are likely to fall within the clutches of this test. One can anticipate the reactions of a foreigner who, in a single calendar year, makes two 3-month visits to the United States as a tourist, for example, when he/she finds out that the penalty for enriching the U.S. economy [75] is a U.S. tax at graduated rates on his/her worldwide income. The second part of the substantial presence test, which is designed to effectuate "an average of 122 days of presence over a three year period" rule expressed in the committee report, also fails to achieve its objective. It would seem that the test would achieve the purpose behind the 122-day rule if it results in bringing any alien who spends 366 days (122 x 3) in the United States over a three-year look-back period within the substantial presence test net. The structure of this test does not produce this result, however. An alien can spend as many as 455 days in the United States over a three-year period and still avoid the substantial presence test. For example, an alien who is present in the United States for 182 days in the second preceding year, 182 days in the first preceding year, and 91 days in the current year does not meet the substantial presence test. Another defect in the three-year lookback test is that it treats the alien as a resident only in the current calendar year even though he/she spent significant amounts of time in the U.S. in the prior two calendar years. Consider the example of an alien who is present in the United States for 182 days in the second preceding year, 182 days in the first preceding year, and 360 days in the current year. Although this individual has spent in the United States 724 out of a maximum of 1095 days in the three-year look-back period, he/she is treated as a resident only in the current calendar year. A superior structure for the substantial presence test would treat an alien individual as a resident of the United States for a calendar year if the alien is present in the United States for 270 days during such year. Under this alternative structure, an alien individual who is present in the United States for a total of 550 days over a three-calendar year period would also be treated as a resident of the United States for all three calendar years.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Since the substantial presence test turns upon the number of days an alien individual is physically present in the United States, the rules governing the numerical day-count are extremely important. These rules are discussed in detail immediately below.

(1) The Rules Governing the Day-Count

Section 7701(b)(6) provides that an individual shall be treated as present in the United States on any day if such individual is physically present in the United States at any time during such day. Thus, the day of arrival in the United States as well as the day of departure from the United States will count.

Observation: Contrast this rule with the day-count rule for §911 purposes, which provides that a full day's presence in a foreign country is a continuous period of twenty-four hours beginning with midnight and ending the following midnight.[76] The day of departure often does not count as a full day under this rule.

For purposes of the substantial presence test, if an alien individual is present in the United States in certain capacities, the days present in such capacities do not count. For example, if an alien is present in the United States as an "exempt individual," or if an alien's presence in the United States is prolonged due to a medical condition, such presence is not taken into account when counting the number of days for the "substantial presence test" purposes. The following paragraphs discuss in detail the situations in which physical presence in the United States is disregarded.

(a) Exempt Individuals

An alien individual who is actually physically present in the United States is treated as not being present in the United States on any day if on such day he/she is treated as an "exempt individual."[77] Basically, there are three categories of individuals who are treated as "exempt individuals":[78]

Foreign government related individuals,

Teachers or trainees; and

Students.

(i) Foreign Government-Related Individuals

Foreign government related individuals include the following:

(i) An individual holding a visa which the Secretary (after consultation with the Secretary of State) determines represents full-time diplomatic or consular status (*i.e.*, generally, the A-visa holders);[79]

(ii) An individual who is a full-time employee of an international organization (*i.e.*, generally G-4 visa holders);[80] and

(iii) An individual who is a member of the immediate family (*e.g.*, spouse or child) of an individual described in (i) and (ii) above (*i.e.*, generally A and G-4 visa holders).[81]

Comment: The A and G visa holders are entitled under immigration laws to bring domestic servants from foreign countries into the United States. For example, a G-4 visa holder may bring a nonresident alien domestic servant into the United States on a G-5 visa. From the apparent language of the statute, domestic servants do not appear to be included in the category of exempt individuals.

The House Ways and Means Committee Report, in describing the exemption for foreign government-related individuals, assumes that such individuals' presence in the United States is temporary.[82] As a matter of fact, such individuals may be present in the United States for as little as one year or for as many as 20 years or more. A majority of the employees working for international organizations are career employees and, consequently, the length of their stay in the United States can hardly be described as temporary. Nonetheless, the statutory language and the committee reports are clear and unambiguous on this point. An alien individual present in the United States as a foreign government-related individual is always a nonresident alien regardless of whether he is present in the United States for 20 years or more.

Comment: Section 7701(b) changes the result reached in *Escobar v. Comr.* and PLRs 7740001 and 7740002, where the Tax Court and the Service ruled that the taxpayers, who held G-4 visas, were resident aliens of the United States.[83] Under §7701(b), these taxpayers will no longer be considered as resident aliens of the United States.

Although there is no doubt as to the impact of the §7701(b) on those foreign government-related individuals who are nonresident aliens under the old law, it is not clear whether those foreign government-related individuals who have filed their U.S. tax returns as resident aliens for past years would suddenly be required to switch and henceforth file their returns as nonresident aliens. The statute is silent on this point and a clarification, perhaps in the forthcoming regulations, is in order.

Comment: The exemption of foreign government-related individuals from the substantial presence test is by no means a grace measure. On the contrary, the tax impact of this measure is largely negative from the standpoint of the taxpayers involved. Although the salaries of these individuals are exempt from U.S. tax under §894 (provided they are not U.S. citizens), other income earned by these individuals as well as their spouses is subject to U.S. tax. As was illustrated in *Escobar*, if such individuals are treated as residents they are entitled to file joint returns and, thus, lower taxes are applied to them. Since, in a typical situation, these individuals (and their spouses) have minimal foreign source income and substantial non-exempt U.S. source income, §7701(b) implies higher U.S. tax liabilities for these individuals.

Comment: The exemption from U.S. presence applies for purposes of the substantial presence test only. Consequently, those foreign government-related individuals who have applied for and have been accorded lawful permanent resident status will be treated as resident aliens of the United States. Although their own salaries remain tax-exempt under §894, they will be able to file joint returns with their spouses and continue to enjoy the benefits of income-splitting for their non-salary income and the income of their spouses.

(ii) Teachers and Trainees

The term "teacher or trainee" means any individual who is temporarily present in the United States under

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

subparagraph (J) of section 101(15) of the Immigration and Nationality Act (other than as a student) and who substantially complies with the requirements for being so present (*i.e.*, the J-visa holders).[84]

Section 101(15)(J) of the Immigration and Nationality Act as in effect on July 18, 1984, defines a J-visa holder as:

> ". . an alien having a residence in a foreign country which he has no intention of abandoning who is a bona fide student, scholar, trainee, teacher, professor, research assistant, specialist or leader in a field of specialized knowledge or skill, or other person of similar description, who is coming temporarily to the United States as a participant in a program designated by the Secretary of State, for the purpose of teaching, instructing, lecturing, studying, observing, conducting research, consulting, demonstrating special skills, or receiving training, and who, if he is coming to the United States to participate in a program under which he will receive graduate medical education or training also meets the requirements of §1182 of this title, and the alien spouse and minor children of any such alien if accompanying him or following to join him."

A J-visa holder's presence in the United States is disregarded for the substantial presence test purposes only under the following conditions:

> (i) A J-visa holder must establish that he/she has substantially complied with the visa requirements. For this purpose it will not be enough to merely show that the visa has not been revoked. For tax purposes, an independent redetermination as to substantial compliance with the visa terms is required. Thus, if a J-visa holder accepts employment in violation of the visa terms, such individual will be regarded as a resident alien of the United States, assuming he/she otherwise satisfies the substantial presence test.
>
> (ii) A J-visa holder ceases to be an exempt individual after he/she has claimed exemption for any 2 calendar years during the preceding 6 calendar years as a teacher, trainee, or a student.[85]

The net effect of the exemption of J-visa holders from the substantial presence test is that such individuals will be treated as nonresident aliens for 2 calendar years in any 6 calendar year period. In the third year, however, they will be treated as resident aliens provided they spend at least 183 days in the United States.

Comment: The new law changes the result reached in Rev. Rul. 67-159, where the Service ruled that a J-visa holder, who was present in the United States for a continuous period of 2 years, was a resident alien of the United States.

(iii) Students

The term "student" means any individual who is temporarily present in the United States under subparagraph (F) of §101(15) of the Immigration and Nationality Act or as a student under §101(15)(J) of such Act, and who substantially complies with the requirements of being so present.[86]

Section 101(15)(F) of the Immigration and Nationality Act, as in effect on July 18, 1983, defines a student as:

> "an alien having a residence in a foreign country which he has no intention of abandoning who is a bona fide student qualified to pursue a full course of study and who seeks to enter the United States temporarily and solely for the purpose of pursuing such a course of study at a college, university, seminary, conservatory, academic high school, elementary school, or other academic institution or in a language training program in the United States particularly designated by him and approved by the Attorney General after consultation with the Secretary of Education, which institution or place of study shall have agreed to report to the Attorney General the termination of attendance of each nonimmigrant student, and if any such institution of learning or place of study fails to make reports promptly the approval shall be withdrawn . . ."

Exemption from the substantial presence test for students applies only under the following conditions:

> (i) Like a J-visa holder, an F-visa holder must also establish that he/she has substantially complied with the terms of his/her visa.[87] It is not enough to show that the visa has not been revoked. An independent redetermination as to substantial compliance with the visa terms is required for tax purposes. Consequently, a student who holds a valid visa but who, upon scrutiny, is found to have accepted unauthorized employment, for example, would be regarded as a resident alien, provided he/she otherwise satisfies the substantial presence test.
>
> (ii) Generally, a student who has claimed exemption from the substantial presence test as a teacher, trainee, or student for five calendar years will be treated as a resident alien in the sixth calendar year (assuming he/she otherwise satisfies the substantial presence test) unless he can establish to the Commissioner's satisfaction that: (a) he has substantially complied with the term of his visa; and (b) he does not intend to reside permanently in the United States.[88] On the question of intent, perhaps the rules developed prior to the enactment of §7701(b) would govern.[89]

Comment: For an F-visa holder who does not earn any income, it is immaterial whether he/she is treated as a resident or a nonresident. But if an F-visa holder has any foreign source income, it is crucial that such individual substantially comply with the terms of his/her visa in order to avoid resident status. If an F-visa holder has U.S. source income, however, it may be to his/her advantage to be treated as a resident by violating the terms of his visa, but this may create problems with immigration authorities.

(b) Individuals with Medical Conditions

An individual is not treated as present in the United States on any day if such individual was unable to leave the United States on such day due to a medical condition which arose while the individual was present in the United States.[90] For example, suppose A comes to the United States on January 1, 1985, on business and is scheduled to leave the United States on March 30, 1985. However, on March 25, 1985, he suffers an accident and is hospitalized until July 15, 1985. Under the 183-day test, A would normally be considered a resident for 1985. However, he would not be treated as present in the United States from

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

March 25, 1985 through July 15, 1985 because of the medical condition exemption. Thus, if A leaves the United States immediately after July 15, 1985, he would not qualify as a resident under the substantial presence test.

Note that the medical condition must have arisen while the alien individual was present in the United States for this exemption to apply. Thus, an alien who comes to the United States for medical treatment and stays here long enough to satisfy the substantial presence test would be treated as a resident alien of the United States. Neither the statute nor the legislative history, however, provides any guidance as to pre-existing medical conditions which the aliens are not aware of until they are physically present in the United States. Would such a medical condition be considered to arise when the alien is first afflicted by it or would it be considered to arise when the alien first discovers it. The answer to this question could mean the difference between resident and nonresident status for the alien individual.

Penalizing nonresident aliens, who come and stay in the United States for long periods of time for medical treatment, with resident status is justified by the House Ways and Means Committee Report thus:

> "The Committee also believes, however, that the Federal Government has contributed to the creation of medical facilities in the United States that are second to none in the world, and that aliens who come to the United States for medical treatment and stay for extended periods of time should be subjected to the bill's regular rules." [91]

Comment: Contrast this rationale with the committee's rationale for justifying the exemption of teachers, trainees, and students from the substantial presence test: "Exceptions to the general rules for some students, teachers, and trainees will allow the United States to maintain its paramount position in the field of education." [92] One might question why foreign students, teachers, and trainees need U.S. tax incentives to avail themselves of the opportunities in this country. Particularly what is the correlation between tax incentives for foreign students, teachers, and trainees and the United States' paramount position in the field of education? On the other hand, if there is a class of foreigners who deserve U.S. benevolence, it is the foreign sick, if for no other reason, than on grounds of fairness.[93] At any rate, there is more behind the exemption for students, teachers, trainees, and the non-exemption for the foreign sick than the stated rationale. The real reason for these rules is that they are advantageous from the standpoint of the U.S. Treasury. Foreign students, teachers, and trainees earn small incomes in the United States. Since the U.S. Treasury can collect more taxes by taxing such individuals as nonresidents than by taxing them as residents, such individuals are exempt from the substantial presence test. As for the foreign sick, U.S. Treasury will collect no income taxes by treating them as nonresident aliens; hence, the non-exemption for such individuals from the substantial presence test.

Comment: The U.S. Congress, by imposing a potential U.S. income tax liability on the worldwide income of the foreign sick who choose to come to the United States for medical treatment, may have created an opportunity for a new type of offshore commercial enterprise; *i.e.*, offshore medical facilities.

(c) Commuters from Canada and Mexico

An individual who regularly commutes to employment (or self-employment) in the United States from a place of residence in Canada or Mexico is not treated as being present in the United States on any day on which he/she so commutes for purposes of the substantial presence test.[94]

In order for this exemption to apply, the alien must have a place of residence in Canada or Mexico and he/she must regularly commute to a place of employment (or self-employment) in the United States.

Comment: Whether this provision is harmful or beneficial to commuters will depend upon the circumstances of each individual. If the alien commuter has no non-U.S. income, this provision may be harmful. On the other hand, if the alien commuter has substantial non-U.S. income, U.S. taxation as a nonresident alien is beneficial.

(d) Days in Transit

If an alien individual is in transit between two points outside the United States, his physical presence in the United States for less than 24 hours shall be disregarded for purposes of the substantial presence test.[95]

(2) Exceptions

An alien individual falling within the four corners of the substantial presence test is nevertheless treated as a nonresident alien in two situations. These two exceptions are discussed below.

(a) The 31-Day Exception

An alien individual who is present in the United States for less than 31 days in any calendar year is not treated as a resident alien of the United States for such calendar year under the substantial presence test.[96] For example, suppose A is present in the United States for 30 days during the current calendar year, for 330 days during the first preceding calendar year, and for 300 days in the second preceding calendar year. Under the substantial presence test, A would normally be a resident alien of the United States for the current calendar year (30 + 330/3 + 300/6 = 190). However, since A is present in the United States for less than 31 days, he is not treated as a resident in the current calendar year under the 31-day exception.

Comment: Although an alien individual may escape classification as a resident alien under the 31-day exception, such individual may still be subject to U.S. tax under §877(b) by virtue of the anti-avoidance rule discussed at C, 3, The Anti-Avoidance Rule, *infra*.

(b) The Closer Connection/Tax Home Exception

An alien individual who is not present in the United States for 183 days in the current calendar year but who qualifies as a resident alien under the substantial presence test, is, nevertheless, treated as a nonresident alien for the current calendar year provided the following conditions are met:[97]

> (i) The alien individual establishes that, for the current calendar year, he/she has a tax home in a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

foreign country and has closer connection with such foreign country than with the United States, and

(ii) The alien individual neither had an application pending for adjustment of status nor took other steps to apply for status as a lawful permanent resident of the United States at any time during the current calendar year.[98]

(i) Tax Home/Closer Connection Requirement

The term "tax home," for purposes of this exception, has the same meaning as it has in §911(d)(3) without regard to the second sentence thereof.[99] Section 911(d)(3) provides that:

"The term 'tax home' means, with respect to any individual, such individual's home for purposes of §162(a)(2) (relating to traveling expenses while away from home). An individual shall not be treated as having a tax home in a foreign country for any period for which his abode is within the United States."

Thus, for purposes of the tax home/closer connection exception, an alien individual will be considered to have a tax home in a foreign country if his/her home is in the foreign country for purposes of the §162(a)(2) deduction, even though such individual has a house or an apartment in the United States.

Under §162(a)(2), an individual can deduct business-related travel expenses if three conditions are met: (i) the expenses are incurred while away from home; (ii) the expenses are incurred in pursuit of a trade or business; and (iii) the expenses are necessary and reasonable in amount. The concept of "home" for purposes of this deduction has been highly controversial. The Service, with the Tax Court's support, has consistently taken the position that the taxpayer's principal place of business is his "tax home."[100] Several courts of appeals, however, including the Second, Fifth, Sixth, Eighth, and Ninth Circuits, have either rejected or limited the vocational interpretation of the term "tax home" and instead given it the conventional meanings of abode or residence.[101] Normally, however, a taxpayer is expected to live in the vicinity of his principal place of business or employment; therefore, it generally makes little difference whether "tax home" is defined in terms of "abode" or "principal place of business."

Consequently, an alien individual may establish that his/her tax home is in a foreign country by showing that his/her principal place of business and "abode" are located in such foreign country. If the alien has no principal place of business because of the nature of his/her trade or business, such individual may be able to establish a "tax home" in a foreign country by showing that his/her permanent abode is located in such foreign country (where his/her family resides, for example).

Comment: Because of a lack of agreement among various courts and the Service as to what constitutes a "tax home" and because of the difficulties inherent in applying this test to certain categories of individuals (*e.g.*, jet-setters, entertainers, and athletes, who frequently travel to and spend substantial amounts of time in the United States), the application of this test is likely to be a problematic area.

Proving a "tax home" in a foreign country, of course, is only one-half of the story. In order to come within the exception, the alien individual must also establish that he/she has a closer connection with the country of his/her tax home than with the United States. Neither the statute nor the legislative history provides any guidance as to how or what factors will be taken into account to show a closer connection with a foreign country. In the absence of any specific provisions, one can speculate that all those factors which were taken into account in determining an alien's intentions as to the length and nature of his/her stay in the United States under the prior law (*e.g.*, the purpose and character of alien's visits to the United States, whether the taxpayer relocates his/her family to the United States, whether the taxpayer buys a home in the United States, the taxpayer's business and investment ties with the United States as compared to his/her business and investment ties with the foreign country, the taxpayer's social and cultural ties with the United States as compared to such ties with the foreign country, taxpayer's bank accounts in the United States as compared to such accounts in the foreign country, and whether the taxpayer files tax returns with the foreign country as a resident)[102] may be considered. If this approach is adopted, assigning the degree of importance and the balancing of various factors will be required for a closer connection determination.

Regardless of what approach is used for a closer connection determination, this inquiry, by its own nature, is likely to remain a factual inquiry and, thus, a source of uncertainty and controversy.

(ii) Lack of Adjustment of Status Request

The closer connection/tax home exception is not available to an alien individual who either: (i) has an application for adjustment of status to a permanent resident alien pending during the current calendar year, or (ii) has taken other steps during the calendar year to apply for status as a lawful permanent resident.

Under the immigration laws, a relative of the alien may apply for the alien to become a lawful permanent resident of the United States. Such application is disregarded for purposes of the closer connection/tax home exception. This exception becomes unavailable only when the alien individual takes an affirmative step to seek permanent resident alien status. When another individual has begun the immigration procedure on behalf of the alien individual, the filing of a Biographic Information form (*i.e.*, Form G-325A) will, for example, constitute an affirmative step.

(iii) Annual Statement Requirement

Section 7701(b)(7) authorizes the Secretary to issue regulations requiring those alien individuals claiming an exemption or an exception from the substantial presence test in the following situations to file annual statements setting forth the bases on which such exemption or exception is claimed:

(i) Alien individuals who claim an exception from the substantial presence test by establishing a closer connection/tax home in a foreign country;[103]

(ii) Alien individuals who claim to be "exempt indi-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

viduals" (foreign government-related individuals, teachers, trainees, and students);[104] and

(iii) Alien individuals who claim exemption from the substantial presence test on account of a medical condition.[105]

B. Rules for Determining the Beginning and Ending Dates of Residency Period

An alien individual acquiring U.S. residency may not necessarily do so on the first day of the calendar year. If such an individual acquires U.S. residency sometime after the first day of the calendar year and was not a resident in the prior years, he/she will be a dual status alien for such calendar year.[106] This, in effect, means that the alien will be a nonresident alien (and, thus, will generally be taxable on U.S. source income only) for that portion of the year which falls before the residency starting date, and a resident alien (and, thus, subject to U.S. tax on worldwide income) for that portion of the calendar year which falls before the residency terminating date. Similarly, an alien individual abandoning U.S. residence may do so before the last day of the calendar year. If so, the alien will be considered a resident alien for that portion of the year which falls before the residency abandoning date, and a nonresident alien for the balance of the year. The residency starting date and the residency ending date, therefore, can mean a significant difference in the alien's U.S. tax liability.

The rules pertaining to a determination of the residency starting date and the residency ending date are summarized below.

1. Residency Starting Date

Different rules apply to alien individuals depending upon whether they acquire U.S. residency under the substantial presence test or under the lawful permanent residence (green card) test.

a. Substantial Presence Test

An alien who acquires U.S. residency under the substantial presence test, but who was not a U.S. resident in the prior year,[107] begins his/her U.S. residency on the first day during the calendar year when he/she was physically present in the United States.[108] There is, however, an exception to this general rule. If the alien satisfies the following conditions, nominal presence in the United States is disregarded for purposes of determining the residency starting date:

(i) The alien meets only the substantial presence test during the calendar year; and

(ii) The alien can establish that, during the time of this nominal presence in the United States, he/she had a closer connection with a foreign country than with the United States.[109]

"Nominal presence" is defined as a period of presence not exceeding 10 days.[110]

The purpose behind the nominal presence exception is to permit brief visits to the United States prior to the commencement of actual residence for either business or house-hunting.

Example 1: A, a Chile citizen and resident, has never been a resident of the United States for tax purposes. On February 10, 1985, A comes to the United States for a business meeting. He leaves the United States on February 19, 1985. On May 10, 1985, A comes back to the United States on business and stays here until November 1, 1985, on which date he departs for Chile. Since A is present in the United States for more than 182 days during the calendar year 1985, he is a resident alien of the United States for 1985. However, his residency starting date is May 10, 1985. A's presence in the month of February is disregarded under the nominal presence exception because he establishes that during the period of February 10 — February 19 he had a closer connection with Chile than with the United States. Consequently, non-U.S. source income earned by A prior to May 10, 1985, is not subject to U.S. income tax.

Example 2: A, a citizen and resident of Mexico, has never been a resident of the United States for tax purposes. On January 1, 1985, A comes to the United States as a tourist and stays here until January 20, 1985. A comes back to the United States on business on June 1, 1985, and stays here until November 11, 1985, on which date he departs for his native Mexico. Since A is present in the United States for more than 182 days during the calendar year 1985, A is a resident alien of the United States for 1985. A's residency starting date is January 1, 1985, because his presence in the United States as a tourist is not excepted under the nominal presence exception on account of the 10-day limitation. Thus, income earned by A from U.S. as well as non-U.S. sources during the entire calendar year 1985 will be subject to U.S. income tax.

b. Lawful Permanent Resident Test

An alien, who acquires U.S. residency under the lawful permanent resident (green card) test but who was not a U.S. resident in the prior calendar year, begins his/her U.S. residency on the first day during the calendar year when he was physically present in the United States as a lawful permanent resident of the United States.[111] The nominal presence exception does not apply to an alien individual who acquires U.S. residency under this test.

If an alien individual satisfies both the substantial presence and the green card test in a calendar year, his/her residency starting date is the earlier of: (i) the first day he/she was present in the United States as a lawful permanent resident, or (ii) his/her residency starting date under the substantial presence test. These rules are illustrated by the following examples:

Example 1: A, a citizen and resident of Brazil, has never been a resident of the United States for tax purposes. He comes to the United States as a tourist on January 10, 1985, and stays here until January 19, 1985, when he departs for Brazil. A returns to the United States on June 15, 1985, as a lawful permanent resident of the United States. On August 20, 1985, A returns to his native Brazil and does not come back to the United States in 1985. A is a resident alien of the United States for tax purposes under the green card test for the calendar year 1985. His residency starting date is June 15, 1985, when he was first present in the United States as a lawful permanent resident.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Example 2: Assume the same facts as above except that A, instead of returning to Brazil on August 20, 1985, stays on in the United States for the balance of the calendar year 1985. A qualifies as a resident alien of the United States under both the green card and the substantial presence test for calendar year 1985. However, the residency starting date under both tests is June 15, 1985, because A's presence in the U.S. from January 10 — January 19 is disregarded for purposes of the substantial presence test under the nominal presence exception as A is able to establish closer connections with Brazil.

Example 3: A, a citizen and resident of Singapore, has never been a resident of the United States for tax purposes. He comes to the United States on January 10, 1985, as a tourist and leaves on January 30, 1985. A comes back to the United States on July 1, 1985, as a lawful permanent resident and stays in the United States until the end of 1985. A satisfies both the green card and the substantial presence test for the calendar year 1985. A's residency starting date under the green card test is July 1, 1985. However, his residency starting date under the substantial presence test is January 10, 1985. Consequently, A's residency starting date is January 10, 1985.

2. *Residency Ending Date*

Just like the rules pertaining to the residency starting date, the rules governing the residency ending date differ depending upon whether the alien qualified as a resident under the substantial presence test or the lawful permanent resident test.

a. *The Substantial Presence Test*

An alien individual, who qualified as a resident alien of the United States for tax purposes in the current calendar year under the substantial presence test but who does not qualify as a resident alien of the United States for tax purposes in the following calendar year, terminates his U.S. residency on that day of the current calendar year when he/she was last physically present in the United States.[112] For purposes of determining the residency terminating date, nominal presence in the United States after the residency terminating date is disregarded provided the alien individual can establish that during this nominal presence period he/she had a closer connection with a foreign country than with the United States.[113] The purpose behind this nominal presence exception is to allow brief presence in the United States (for example, for business or for sale of a U.S. residence) without extending U.S. resident status. The nominal presence exception, however, does not apply if the U.S. presence exceeds 10 days.[114]

Example: A, a citizen and resident of Colombia, is physically present in the United States from January 15, 1985, to August 30, 1985, on which date he leaves for his native Colombia. A returns for a business meeting in the United States on December 5, 1985, and leaves on December 12, 1985. A qualifies as a resident alien of the United States for the calendar year 1985. Since A establishes that for the period of December 5, 1985, through December 12, 1985, he had a closer connection with Colombia than with the United States, A's U.S. residency terminating date is August 30, 1985, because his presence in the month of December is disregarded under the nominal presence exception.[115]

b. *The Lawful Permanent Resident Test*

An alien, who is a U.S. resident for tax purposes during the current calendar year under the green card test but who is not a U.S. resident in the following calendar year, terminates U.S. residency on the first day during the calendar year on which he/she ceases to be a lawful permanent resident.[116]

An alien individual who is not a U.S. resident in the following calendar year but who satisfies both the green card and the substantial presence test in the current calendar year terminates his U.S. residency on the later of: (i) the first day he/she ceases to be a lawful permanent resident, or (ii) the last day he/she was a resident alien of the United States under the substantial presence test.

Example 1: A, a citizen and resident of Venezuela comes to the United States on January 15, 1985, on business but does not return to his country. On February 20, 1985, he is accorded the status of a lawful permanent resident of the United States. On June 15, 1985, A's green card is revoked and he is deported to Venezuela. A's residency in the United States begins on February 20, 1985 and ends on June 15, 1985.

Example 2: A, a citizen and resident of Kuwait, comes to the United States for the first time on January 5, 1985. He is accorded the status of a lawful permanent resident on February 15, 1985. A surrenders his green card on August 10, 1985, and leaves the United States on that date. A returns to the United States on December 2, 1985. A establishes that for the period of December 2, 1985, through December 9, 1985, he had a closer connection with Kuwait than with the United States. A qualifies as a resident alien of the United States for the calendar year 1985 under both the green card and the substantial presence test. Under the green card test, A's residency in the United States terminates on August 10, 1985, the day he surrenders his green card. Also, since A's physical presence in the United States in December is disregarded under the nominal presence exception, A's residency in the United States under the substantial presence test also terminates on August 10, 1985. Thus, A's U.S. residency terminates on August 10, 1985.

Example 3: Assume the same facts as in Example 2 above except that after surrendering his green card on August 10, 1985, A stays on in the United States until August 20, 1985. In this case A's residency under the green card test ends on August 10, 1985, but his U.S. residency under the substantial presence test ends on August 20, 1985. Thus, A's residency in the U.S. would be considered to have terminated on August 20, 1985.

Example 4: Assume the same facts as in Example 2 above except that A is not able to establish that, for the period of December 2, 1985, through December 9, 1985, he had a closer connection with Kuwait than with the United States. In this case, A's residency in the United States during the calendar year 1985 terminates on August 10th under the green card test but on December 9th under the substantial presence test.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Thus, A's residency in the United States in 1985 would be considered to have terminated on December 9, 1985.

3. Lapse of U.S. Residency

In the case of an alien individual, who qualifies as a resident alien of the United States for a portion of the current calendar year which begins after January 1 under the residency starting date rules discussed above, the residency starting date is deemed to be January 1 provided the alien also qualified as a resident alien of the United States in the preceding calendar year.[117]

Example 1: A, an alien individual who is a citizen and resident of Panama, first comes to the United States on July 1, 1985, and leaves for Panama on December 31, 1985. A comes back to the United States on May 15, 1986, and stays on until November 16, 1986, when he again leaves for his native Panama. Under the normal residency starting date rules, A begins his residency in the calendar year 1986 on May 15. However, since A qualified as a U.S. resident for the calendar year 1985, A's residency starting date for the calendar year 1986 is January 1, 1986.

Similarly, in the case of an alien individual, who qualifies as a resident alien of the United States for tax purposes only for a portion of the current calendar year which ends before December 31st under the general residency ending date rules discussed above, the U.S. residency date is deemed to be December 31st if the alien individual again qualifies as a U.S. resident alien in the following calendar year.[118]

Example 2: A, an alien individual who is a citizen and resident of Saudi Arabia, comes to the United States for the first time on January 15, 1985, and leaves for his native Saudi Arabia on July 18, 1985. A returns to the United States on February 1, 1986, as a lawful permanent resident of the United States. For the calendar year 1985, A's residency in the United States would end on July 18, 1985, under the general residency ending date rules. However, since A qualifies as a U.S. resident in the calendar year 1986, A's residency in the United States for calendar year 1985 is deemed to end on December 31, 1985.

Thus, if an alien individual qualifies as a U.S. resident for only portions of two consecutive calendar years, his/her U.S. residency does not lapse but continues through both years.

Example 3: Assume the same facts as in Example 2 and assume further that A's permanent resident status remains intact through the end of 1986, when he surrenders his green card and returns to his native Saudi Arabia. A's U.S. residency in calendar year 1985 is deemed to end on December 31, 1985, because he is a U.S. resident for the following calendar year. In the calendar year 1986, A's U.S. residency is deemed to begin on January 1 (even though he first entered the United States as a lawful permanent resident on February 1) because he qualified as a U.S. resident in the preceding calendar year. Provided A does not qualify as a resident alien in calendar year 1987, A's U.S. residency in 1986 is deemed to end on December 31, the day he surrenders his green card and leaves the United States. Thus, A's U.S. residency period in the U.S. begins on January 15, 1985, and ends on December 31, 1986.

For purposes of the residency lapse rules, it is immaterial whether an individual qualifies as a U.S. resident under the substantial presence test or the green card test.

C. The Anti-Avoidance Rule

Spurred by a concern that long-time U.S. residents may interrupt their U.S. residency briefly to avoid U.S. tax, the Congress included §7701(b)(9), which provides a limited anti-avoidance rule. Under §7701(b)(9), if an alien individual satisfying the "initial residency period" requirement interrupts his/her U.S. residency for less than three calendar years, such individual is subject to U.S. tax during his/her period of nonresidency under §877(b) provided the tax imposed by §877(b) is greater than the tax imposed by §871. Thus, taxation under §877(b) ensues only if the following conditions are satisfied:

(i) The alien individual satisfies the "initial residency period" requirement;

(ii) The alien individual ceases to be a U.S. resident after satisfying the "initial residency period" requirement;

(iii) The alien individual resumes U.S. residency within the prescribed time limit; and

(iv) The tax imposed by §877(b) is greater than the tax imposed by §871.

The period for which taxation under §877(b) is imposed is that period which begins after the close of the "initial residency period" and which ends on the day before the alien individual resumes his/her U.S. residency.

1. Initial Residency Period

An alien individual satisfies the initial residency period requirement if such individual is a U.S. resident for tax purposes for a period of time which includes at least three consecutive calendar years.[119] Thus, the anti-avoidance rule of §7701(b)(9) is not triggered if the alien individual at no time qualified as a resident alien for a period of time which includes at least three consecutive calendar years.

Example 1: A, a citizen and resident of Syria, first comes to the United States on January 1, 1985. He leaves for his native Syria on October 5, 1985. On January 15, 1986, A returns to the United States as a lawful permanent resident alien. On March 15, 1986, A goes back to Syria. On December 31, 1987, A surrenders his green card. Under the rules discussed in the foregoing sections, A begins his U.S. residency on January 1, 1985, and ends it on December 31, 1987. Since A's period of U.S. residency includes at least three consecutive calendar years, he meets the "initial residency period" requirement.

Example 2: A, a citizen and resident of Hong Kong, first enters the United States as a lawful permanent resident on February 1, 1985. He leaves the United States on March 15, 1985 and surrenders his green card on November 10, 1986. A comes back to the United States on June 5, 1988 and returns to Hong

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Kong on December 5, 1988. A, therefore, qualifies as a U.S. resident for the period beginning on February 1, 1985, and ending on November 10, 1986, and for the period June 5, 1988, through December 5, 1988. In this case, although A qualifies as a U.S. resident for three calendar years (1985, 1986, and 1988), A does not meet the "initial residency period" requirement since the calendar years are not consecutive.

It should be emphasized that all that is necessary is that the residency period include three consecutive calendar years. It is not necessary that the residency period extend over 36 months. An alien individual may be a U.S. resident for as few as 14 months and still satisfy the three consecutive calendar years requirement.

Example 3: A, a citizen and resident of Nigeria, enters the United States on December 1, 1985, as a lawful permanent resident of the United States. On January 31, 1987, he surrenders his green card and departs from the United States. A qualifies as a resident alien of the United States for the period beginning on December 1, 1985, and ending on January 31, 1987. Since A's period of residence in the United States includes three consecutive calendar years (*i.e.*, 1985, 1986, and 1987), he meets the "initial residency period" requirement even though his U.S. residency period spanned only 14 months.

2. Time Limit for Resumption of U.S. Residency

For the anti-avoidance rule to apply, the alien individual (who satisfies the initial residency period requirement as discussed above) must resume his/her U.S. residency before the close of the third calendar year beginning after the close of the initial residency period.[120]

Example 1: A, a citizen and resident of Hong Kong, first enters the United States on January 20, 1985, as a lawful permanent resident of the United States. He departs the United States on January 30, 1985. On November 30, 1987, his green card is revoked. A returns to the United States on June 2, 1990, and stays here through December 2, 1990. A qualifies as a U.S. resident for the period beginning on January 20, 1985, and ending on November 30, 1987, thus satisfying the initial residency period requirement. A again qualifies as a U.S. resident for the period beginning on June 2, 1990, and ending on December 2, 1990. Since A became a resident of the United States again before the close of the third calendar year (*i.e.*, 1990) beginning after the close of the initial residency period (*i.e.*, November 30, 1987), he is subject to tax under §877(b) for the intervening period of nonresidency (*i.e.*, December 1, 1987 through June 1, 1990).

Example 2: Assume the same facts as in Example 1 above except that A returns to the United States on July 2, 1990. In this case, A does not qualify as a resident of the United States in 1990 because he is present in the United States for only 182 days. Consequently, A will escape taxation under §877(b).

3. Taxation Under §877(b)

Section 877(a) provides that if a U.S. citizen renounces his/her U.S. citizenship and one of the principal purposes of such renunciation is to avoid U.S. Federal income or estate and gift taxes, then for a period of up to 10 years such expatriate is subject to tax under §877(b). Tax determined under §877(b), however, applies only if it exceeds the amount of tax that would be payable under §871.[121]

Section 877(b) assigns expatriates to a hybrid category: (i) it treats them like resident aliens in that they can neither take advantage of the 30 percent tax rate on U.S. source investment type income nor benefit from the 183-day rule prescribed in §871(a)(2) for U.S. source capital gains;[122] and (ii) at the same time it treats them like nonresident aliens in that they are subject to tax only on U.S. source noneffectively connected income and income effectively connected with a U.S. trade or business.[123] Section 877(b) is complimented by §877(c), which provides special source rules for purposes of determining the tax under §877(b). Under §877(c), gain derived from the sale of: (i) property (other than stock or debt obligations) located in the United States; (ii) stock of a domestic corporation, and (iii) debt obligations issued by U.S. persons or federal, state, or local governments are U.S. source income regardless of the property source of income rules prescribed in §§861(a)(6) and 862(a)(6).

The impact of §877(b), therefore, is to tax the expatriates on their U.S. source investment income and gain derived from U.S. assets (as described in §877(c)) at the graduated rates regardless of the 183-day rule of §871(a)(2) and the source of income rules prescribed in §§861(a)(6) and 862(a)(6).

Example 1: A, a citizen of the United States and a calendar year basis taxpayer, owns stock in a U.S. corporation. With a view to avoid U.S. tax, A migrates to France on April 5, 1985. On April 10, 1985, A formally renounces his U.S. citizenship. On April 30, 1985, A disposes of his stock in the U.S. corporation. A's gain from the disposition of the stock is not subject to U.S. tax under §871 because during the taxable year in question (*i.e.*, calendar year 1985) A was not present in the United States for 183 days or more.[124] However, since one of A's principal purposes in renouncing his citizenship was the avoidance of federal income tax, his gain from the disposition of stock is subject to U.S. tax at graduated rates under §877(b).

Example 2: A, a citizen of the United States and a calendar year basis taxpayer, owns some extremely valuable paintings for which he has received an offer from the London Museum of Art. With a view to avoid U.S. federal income tax on the gain which A would derive from a sale of the paintings, he leaves the United States on July 2, 1985. On July 10, 1985, he formally renounces his U.S. citizenship. On July 25, 1985, A consummates the sale of the paintings but stipulates in the contract of sale that the title to the paintings passes to the London Museum of Art in London. A's gain is not exempt from U.S. tax under §871(a)(2) because he was present in the United States for 183 days or more during the year of the sale. But since the title passes outside the United State, A's gain is exempt from U.S. tax under §871 as foreign source income. However, since one of A's principal purposes in renouncing his U.S. citizenship was the avoidance of U.S. federal income tax, his gain is subject to U.S. tax by virtue of §§877(b) and (c).

4. Application of §877(b) to Nonresident Aliens

Section 877(b) applies to an expatriate only if one of the principal purposes of the renunciation of U.S. citizenship was the avoidance of federal income or estate and gift taxes. The element of tax avoidance, however, is not required for purposes of applying the anti-avoidance rule of §7701(b)(9). Thus, if an alien individual satisfies the initial residency period requirement, ceases to be a U.S. resident, and again becomes a U.S. resident within the prescribed time limit, he/she is subject to U.S. tax under §877(b) on income earned during the intervening period of nonresidency regardless of any tax avoidance motive.

The net effect of the anti-avoidance rule is to treat the alien individual as a resident for the intervening period of nonresidency, but only for the limited purpose of taxing U.S. source investment income and the gain derived from: (i) the sale of property located in the United States, and (ii) the sale of stock in U.S. corporations and certain securities.

Comment: The true penalty imposed by the anti-avoidance rule is to prevent an alien from reacquiring U.S. residency within the time limit prescribed in §7710(b)(9)(B). In any case where an alien individual would owe substantial U.S. taxes under the rule of §7701(b)(9), it probably would be advisable for such individual to wait until the period prescribed in §7701(b)(9)(B) has elapsed before reacquiring U.S. residency.

Comment: The anti-avoidance rule of §7701(b)(9) has a limited anti-avoidance effect. It only prevents an alien individual from avoiding U.S. income tax on U.S. source investment income or income derived from property and certain U.S. stock or securities. An alien individual may go in and out of U.S. resident status with impunity to avoid potential U.S. income tax on foreign source income or income derived from property located in a foreign country.

D. The Taxable Year of an Alien

Section 7701(b)(8) provides that an alien individual who is not already on a fiscal year basis must adopt as a taxable year the calendar year. This rule makes sense because the resident or nonresident status of aliens is determined on a calendar year basis and the adoption of a fiscal year would provide the alien individual with the undesirable ability to reduce U.S. taxes by shifting income from one taxable year to another.

An alien individual, who is already on a fiscal year basis and who qualifies as a resident alien of the United States for a calendar year, shall be treated as a resident of the United States with respect to any portion of his/her taxable year which falls within such calendar year.[125]

Example: A, a citizen and resident of Mexico, is engaged in a U.S. trade or business since 1983. For U.S. tax purposes, he is on a September 30th fiscal year basis. A comes to the United States on May 10, 1985, and stays here until November 10, 1985, on which date he leaves for his native Mexico. Assuming that A does not become a resident of the United States in 1986, he qualifies as a U.S. resident for the period beginning on May 10, 1985, and ending on November 10, 1985. Consequently, for his fiscal year ending on September 30, 1985, A will be taxed as a U.S. resident for the period which begins on May 10, 1985, and ends on September 30, 1985. For his fiscal year which ends on September 30, 1986, A will be taxed as a U.S. resident for the period which begins on October 1, 1985, and ends on November 10, 1985.

E. Section 7701(b) Does Not Override U.S. Tax Treaties

Because of the conflicting internal laws of various tax jurisdictions an individual may qualify as a resident of more than one jurisdiction. In such a situation, the question arises: which jurisdiction has the right to tax such individual. If the jurisdictions involved do not have a tax treaty in effect, the individual may be out of luck because he/she may be taxed by both jurisdictions as a resident. In certain cases, however, where there is an income tax treaty in effect, the jurisdictions involved may resolve the issue of taxing jurisdiction by applying the so-called "tie-breaker" rules in the treaty. The recently negotiated U.S. tax treaties, for example, provide such "tie-breaker" rules.[126] These "tie-breaker" rules, which are patterned after Article 4 of the United States Model Income Tax Treaty, basically provide that where an individual is a resident of both Contracting States according to the internal laws of those States, then his status shall be determined as follows:

(i) He shall be deemed to be a resident of the State in which he has a permanent home available to him; if he has a permanent home available to him in both States, he shall be deemed to be a resident of the State with which his personal and economic relations are closer (*i.e.*, center of vital interests);

(ii) If the States in which he has his center of vital interest cannot be determined, he shall be deemed to be a resident of that State in which he has his habitual abode;

(iii) If the individual has an habitual abode in both States, or in neither of them, he shall be deemed to be a resident of that State of which he is a national; and

(iv) If he is a national of both States or of neither of them, the competent authorities of the two contracting states shall settle the question by mutual agreement.

The legislative history of Code §7701(b) makes it clear that where an individual, who is a resident of the United States under §7701(b), qualifies as a resident of the treaty partner under the tie-breaker rules, such individual shall be treated as a resident of the treaty partner. However, the treaty provisions override the Code provisions only for the limited purpose of taxation under the treaty. For purposes of internal U.S. taxation, such individual will continue to be treated as a U.S. resident.

The House Ways and Means Committee Report, in pertinent part, provides that:

"The definition of resident alien contained in the bill could conflict with existing treaty obligations of the United States. That is, the definition in the bill could cause an alien to be a U.S. resident, while "tie-breaker" rules in an income tax treaty could indicate that the alien is a resident of the treaty partner (*see, e.g.*, Article 4 of the U.S. Model Income Tax Treaty, and Article 4(2) of the U.S.–United Kingdom Income Tax Treaty). The committee does not intend to override treaties on this point; therefore, in such a case, the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

treaty definition will prevail, and such an alien will not be taxable as a resident of the United States." [127]

The Conference Committee Report, in pertinent part, provides that:

> "The conferees do not intend that the conference agreement override treaty obligations of the United States. For example, an alien who is a resident of the United States under the new statutory definition but who is a resident of a treaty partner of the United States (and not a resident of the United States) under a United States income tax treaty will be eligible for the benefits that the treaty extends to residents of the treaty partner. However, notwithstanding the treatment of the alien as a resident of the other country for treaty purposes, the conference agreement will treat the alien as a U.S. resident for purposes of the internal tax laws of the United States. For example, if the alien owns more than 50 percent of the voting power of a foreign corporation, the foreign corporation will be a controlled foreign corporation §957)." [128]

F. *The Effective Date and Transitional Rules*

Section 138(b) of the Tax Reform Act of 1984 provides that, generally, the provisions of §7701(b) are applicable to tax years beginning after December 31, 1984. Thus, if an alien individual is present in the United States for 183 days in the calendar year 1984, such individual will not qualify as a resident alien of the United States. Similarly, except as discussed below, an alien individual's U.S. presence in the calendar year 1984 and earlier years will not count for purposes of the 3-year look-back part of the substantial presence test.

For purposes of applying the "substantial presence" and the "green card" tests, §138(b) of the Act also provides two transitional rules:

> (i) For purposes of applying the 3-year look-back part of the substantial presence test, an alien individual's presence in the United States during the calendar year 1984 will count if the alien qualified as a U.S. resident at the close of calendar year 1984 under the law then in effect. If the alien qualified as a U.S. resident under the law then in effect for both 1983 and 1984, his/her presence in both years will be taken into account.[129]
>
> (ii) For purposes of applying the lawful permanent resident test to calendar year 1985, an alien individual will be considered to start his U.S. residency on January 1, 1985, if such individual was: (i) a lawful permanent resident of the United States throughout the calendar year 1984 regardless of whether he/she was physically present in the United States; or (ii) physically present in the United States at any time during the calendar year 1984 while he/she was a lawful permanent resident of the United States.[130]

G. *Planning Considerations*

Because of the significant U.S. income tax consequences that flow from an acquisition or termination of U.S. resident status, careful planning is required each time an alien either acquires or abandons U.S. residency. The following discussion attempts to illustrate some of the planning opportunities available under the new §7701(b)(9).

1. *Pros and Cons of Resident Alien Status*

The tax regime that applies to resident aliens of the United States is radically different from that which applies to nonresident aliens. Upon classification as a resident alien of the United States, some of the U.S. tax consequences that will follow include:

> (i) The alien individual will be subject to U.S. income tax on his/her worldwide income;
>
> (ii) If the alien individual owns stock in a U.S. corporation, such corporation may be classified as a personal holding company with its attendant U.S. tax consequences;
>
> (iii) If the alien individual owns stock in a foreign corporation, such corporation may be classified as a foreign personal holding company, a foreign investment company, or a controlled foreign corporation with the attendant U.S. tax consequences (including reporting obligations) to U.S. shareholders;
>
> (iv) The application of §§367 and 1491 where the alien individual makes a property transfer to a foreign entity after the residency starting date;
>
> (v) If the alien individual is a settlor of a foreign trust which qualifies as a grantor trust, the alien individual becomes subject to U.S. tax on the trust income; and
>
> (vi) If the alien individual is a beneficiary of a foreign trust settled by a U.S. grantor, the grantor becomes subject to U.S. income tax on the trust income attributable to property transferred to the trust by such grantor (§679).

On the other hand, an alien individual, who is classified as a U.S. resident, enjoys certain advantages over a nonresident alien. For example:

> (i) A resident alien may deduct foreign source losses against U.S. source income;
>
> (ii) A resident alien may file a joint return (a §6013(g) or (h) election may be necessary for this purpose), and is entitled to other deductions, exclusions, and credits unavailable to a nonresident alien; and
>
> (iii) A resident alien may avoid altogether or minimize foreign taxes on his/her foreign source income under the extensive U.S. tax treaty network.

Considering the pros and cons of the resident alien status (some of which are described above), a nonresident alien, who expects to qualify as a resident alien for the calendar year in question either under the "green card" test or the substantial presence test, may take certain planning steps before entering the United States. These steps may include, among others, the following:

> (i) The alien individual may accelerate foreign source income that he/she expects to receive after acquiring U.S. residency;
>
> (ii) If the alien owns appreciated property, he/she may sell it (avoiding carefully, however, the 183-day

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

rule of §871(a)(2) if the capital gain is U.S. source income) and acquire new property;

(iii) The alien may complete all transfers of property to foreign entities before acquiring U.S. residency in order to avoid §§367 and 1491; and

(iv) The alien may consider reducing his/her ownership in U.S. and foreign corporations to avoid the potentially adverse consequences under the PHC, the FPHC, the FIC, and the CFC provisions of the Code.

2. Planning Opportunities Under the New §7701(b)

Along with its flaws and weaknesses, §7701(b) has one overriding merit: it lends certainty to an area where certainty was badly needed. Section 7701(b) provides alien individuals with a remarkable ability to obtain the best possible U.S. tax results by simple planning in the following two areas:

(i) Control of the resident or the nonresident status in a given calendar year; and

(ii) Control of the residency beginning and the residency terminating dates.

In a given calendar year, for example, a nonresident alien may be better off as a resident for U.S. tax purposes. Conversely, a resident alien of the United States may be able to obtain better U.S. tax results in a given year by terminating U.S. tax residency. Similarly, it may be crucial for a prospective or current U.S. resident to plan his/her residency beginning date and residency terminating date (as the case may be) carefully to minimize U.S. tax burden in the relevant calendar year.

a. Control of the Resident or Nonresident Status

An alien individual has very little control over the acquisition of resident alien status under the "green card" test because such alien's eligibility to apply for a lawful permanent resident alien status and the amount of time required for the processing and approval of the application depend largely upon the immigration laws and regulations. Once an alien individual has been accorded the resident status, however, he/she can control the calendar year in which he/she desires U.S. residency for tax purposes by simply controlling the date on which he/she first enters the United States as a lawful permanent resident. Termination of the resident alien status under the "green card" test, on the other hand, is easy. It simply requires the surrendering of the "green card" and leaving the United States.[131]

The fact that the acquisition of resident alien status under the "green card" test is beyond the control of an alien individual is not of much consequence because the alien can always utlilize the substantial presence test to achieve the resident alien status. Thus, if the alien individual determines that it would be to his/her advantage to be taxed as a resident alien in a particular calendar year, all that is required is that the alien spend a maximum of 183 days [132] in the United States during such calendar year. Conversely, where an alien, who has been a long-time resident alien of the United States, determines that it would be to his/her advantage to be taxed in the United States as a nonresident alien in a particular year, he/she may achieve that status by simply limiting his/her presence in the United States to the required number of days in the relevant calendar year.

Comment: The substantial presence test provides an alien individual great flexibility in the sense that such individual may change his/her status from nonresident alien to resident alien and back to nonresident alien on a year to year basis. The only limitations on this are the alien's own ability, willingness, and desire to spend a certain required number of days in the United States, and the anti-avoidance rule of §7701(b)(9). This flexibility, however, is not available under the "green card" test.

The following examples illustrate some of the planning opportunities offered by §7701(b):

Example 1: A, a citizen and resident of country B, owns two businesses X and Y. A conducts X business in France and Y business in the United States. In 1985, A starts business Z in country C. For the calendar year 1985, A has a taxable income of $500,000 from business X, a taxable income of $2.5 million from business Y, and a net loss of $1.5 million from business Z. If, for the calendar year 1985, A is taxed as a nonresident alien, he will owe U.S. income tax on $2.5 million taxable income. If, on the other hand, A is taxed as a resident alien, he will be subject to U.S. income tax on $1.5 (.5 + 2.5 - 1.5) million taxable income. It would, therefore, be advantageous for A to qualify as a U.S. resident alien in the calendar year 1985.

Example 2: A, a citizen and resident of foreign country B, is engaged in a U.S. trade or business. In the calendar year 1985, A has no foreign source taxable income, $800,000 in U.S. source royalty, interest and dividend income which is not effectively connected with A's U.S. business, and a $800,000 loss from the U.S. business. If, for the calendar year 1985, A is taxed as a nonresident alien, he will owe $240,000 in U.S. withholding tax (*i.e.*, 30% of $800,000). However, A may eliminate this U.S. tax liability by becoming a resident of the United States in the calendar year 1985.

Example 3: A, a citizen of foreign country B, qualifies as a resident alien of the United States for the calendar year 1985 under the substantial presence test. A owns valuable paintings in which his basis is $500,000. A foreign art museum offers to buy these paintings from A for $2.5 million. A may avoid U.S. tax on the $2 million of gain by delaying the sale until 1986 and then becoming a nonresident alien in the calendar year 1986.

b. Control of the Residency Starting Date and Residency Ending Date

The residency starting date and the residency terminating date rules make it clear that it is totally within the alien individual's power to determine the date on which his/her residency starts and the date on which it ends. It involves nothing more than the simple mechanics of fixing the date of entry into the United States and the date of departure from the United States.[133]

Careful planning with respect to the residency starting date and the residency ending date can translate into significant U.S. tax savings.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Example 1: A, a citizen and resident of foreign country B, sold an office building located in B for $10 million on an installment basis in 1981. The fifth and final installment of $2 million is due on March 20, 1985. A plans to become a U.S. resident in 1985. He would be well-advised to arrive in the United States after March 20, 1985, and after receiving the last installment.

Example 2: A, a citizen of the foreign country B, owns valuable paintings in which he has a basis equal to $500,000. A comes to the United States for the first time on January 15, 1985. On July 15, 1985, a foreign museum offers to buy the paintings from A for $2.5 million. If A sells the paintings immediately, he would be subject to U.S. tax on his $2 million gain. However, if A departs from the United States and then sells the paintings, his gain would not be subject to U.S. tax provided, of course, he does not again become a U.S. resident in calendar year 1986.

c. Other Planning Pointers

(1) How to Avoid Resident Status When Prolonged U.S. Presence Is Necessary

If, for any reason, an alien individual must remain in the United States for a period of more than 182 consecutive days, such individual should attempt to spread this presence over a two-calendar year period in order to avoid resident alien status.

Example: A, a wealthy and distinguished citizen of an oil-rich state, suffers from a chronic ailment. He is advised by a U.S. hospital on May 30, 1985, that he requires surgery and post-surgery care by the hospital's medical staff for a period extending over 7 months. During the calendar year 1985, A expects an income of $10 million from non-U.S. sources. If A stays on in the United States and enters the hospital for surgery and post-surgery care, he would qualify as a resident alien for the calendar year 1985. He would, therefore, owe U.S. income tax on his $10 million income. However, if A returns to his country and comes back to the United States on July 30, 1985,[134] undergoes medical treatment, and again returns to his country on March 1, 1986, he will not qualify as a U.S. resident either for 1985 or for 1986. His $10 million income would, thus, avoid U.S. income tax.

Comment: An alien individual may spend 364 consecutive days in the United States without qualifying as a U.S. resident provided this period of presence in the United States is equally spread over two consecutive calendar years.

(2) Planning for Foreign Government-Related Individuals

Treatment of foreign government-related individuals as nonresident aliens holds two adverse U.S. tax consequences:

(i) Such individual's U.S. source investment income (*e.g.*, dividends and capital gains) becomes subject to a flat 30 percent withholding tax; and

(ii) Such individuals cannot file joint returns with their working spouses.

These individuals may consider the following steps in order to minimize the adverse U.S. tax impact:

(i) Apply for a permanent resident alien status;

(ii) Consider switching from U.S. investments to foreign investments; and

(iii) Consider earning the types of U.S. source interest income which is exempt from U.S. withholding tax in the hands of nonresident aliens.

---

CHAPTER 62

THE 30 PERCENT U.S. WITHHOLDING TAX ON PORTFOLIO INTEREST REPEALED

Javed A. Khokhar, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. The Applicable Rules of Law [1]

The United States imposes a flat 30-percent tax (subject to reduction under an applicable tax treaty provision) on the gross amount of U.S. source fixed or determinable, annual or periodical income (*e.g.*, dividends, interest, rent, and royalties) and certain other income (*e.g.*, OID, gains described in §§402(a)(2) and 403(a)(2)) derived by a nonresident alien individual or a foreign corporation provided such income is not effectively connected with the U.S. trade or business of such individual or corporation.[2] This 30-percent tax is generally collected by withholding at source by the person making the payment (*i.e.*, the withholding agent) and therefore, is referred to as the "30-percent withholding tax." [3]

If, however, the types of income described above are effectively connected with the recipient's U.S. trade or business of the foreign investor, such income is not subject to the 30-percent withholding tax, but instead is taxed at the regular graduated rates of U.S. tax on a net basis.[4]

Various Code provisions exempt from the 30-percent withholding tax certain categories of interest income, which under the general source of income rules [5] would be considered U.S. source income. The categories of exempt interest include the following:

(i) Interest derived by nonresident aliens and foreign corporations from deposits in U.S. banks and similar institutions, provided such interest is not effectively connected with a U.S. trade or business;[6]

(ii) Original issue discount income of nonresident aliens and foreign corporations on obligations maturing in six months or less;[7]

(iii) Interest paid to nonresident aliens and foreign corporations by a domestic corporation which earns less than 20 percent of its gross income over a 3-year base period from U.S. sources (the so-called "80/20 company");[8]

(iv) Interest paid to nonresident aliens and foreign corporations on certain debt obligations which were part of an issue with respect to which an election had been made for purposes of the expired Interest Equalization Tax;[9]

(v) Interest income (other than interest derived from commercial activities in the United States) derived by a foreign government from investments in the U.S. securities.[10]

In addition to the statutory exemptions, U.S. source interest income derived by a nonresident alien individual or a foreign corporation may be either exempt or subject to a reduced rate of withholding tax under an income tax treaty signed by the United States with the nonresident alien's or the foreign corporation's country of residence. For example, under the U.S. income tax treaties with Austria, Denmark, Finland, West Germany, Greece, Hungary, Iceland, Ireland, Luxembourg, the Netherlands and the Netherlands Antilles, Norway, Poland, Sweden, the U.S.S.R., and the U.K., the U.S. source interest income is exempt from withholding tax. Under the income tax treaties with Belgium, Canada, Egypt, Morocco, and the Philippines, the withholding tax rate on interest is reduced to 15 percent; and it is reduced to 10 percent under the income tax treaties with France, Japan, and Romania. It should be noted, however, that the exemption or the reduced withholding rate of tax is available under an income tax treaty only with respect to that interest income which is not effectively connected with a U.S. trade or business conducted through a permanent establishment.

In order to secure a treaty exemption or reduction from U.S. withholding tax on U.S. source interest income, a foreign resident is required to file Form 1001 (Ownership, Exemption, or Reduced Rate Certificate). This Form requires the disclosure of the identity and address of the owner of the bond. In the case of a bearer bond, the Form 1001 must be presented to the payor by or on behalf of the foreign owner with each coupon.

The Code imposes an information reporting obligation on any person who makes payments of interest (including original issue discount) aggregating $10 or more during any calendar year.[11] This requirement to file an information return is also imposed on any person who collects interest as a nominee and makes payments out of the interest income so collected aggregating $10 or more.[12] Interest, for purposes of the information reporting requirement, is defined to include interest on any obligation issued in registered form, or of a type offered to the public (other than an obligation with maturity of less than one-year and held by a corporation).[13] It also includes interest paid on bank deposits, CD's, and similar obligations of banks and savings institutions; interest on amounts held by insurance companies, investment companies, and brokers; and interest on any

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

other amounts designated by the Secretary unless specifically excluded by §6049(b)(2).[14]

Reportable interest, however, does not include interest on an obligation of a natural person or an obligation the interest on which is exempt under §103 or any other provision of law (without regard to the identity of the recipient).[15] Also excluded from reporting requirement are the following types of interest payments:

(i) Any amount subject to withholding under §§1441 or 1442;

(ii) Any amount which would be subject to withholding under these sections by the payor but for the fact that: (a) such amount is income from foreign sources; (b) the payor is exempt from the application of §1441(a) by reason of §1441(c) or a tax treaty; or (c) such amount is original issue discount.[16]

Reportable interest also does not include (except to the extent provided by the regulations) any amount which is income from sources outside the United States or is paid by:[17]

(i) A foreign government or international organization or any agency or instrumentality thereof;

(ii) A foreign central bank of issue;

(iii) A foreign corporation not engaged in a U.S. trade or business;

(iv) A foreign corporation less than 50 percent of whose gross income from all sources over a 3-year base period is effectively connected with a U.S. trade or business; and

(v) A partnership not engaged in a U.S. trade or business and composed wholly of nonresident alien individuals or persons listed in (i)–(iii) above.

An information return is also required under §6041 with respect to payment of interest (but only if the aggregate amount of the payment is $600 or more) which does not meet the definition of the term "interest" in §6049.

In 1982, in response to the Service's concern regarding poor compliance with the reporting requirements pertaining to interest and dividends, the U.S. Congress enacted as part of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) Code §§3451-3456, which require a 10-percent withholding tax on all dividend and interest payments. These withholding provisions, however, provoked considerable opposition primarily by banks and other financial institutions. Consequently, the Interest and Dividend Compliance Act of 1983 (P.L. 98-67) repealed §§3451-3456 and enacted §3406, which imposes a back-up withholding requirement on two types of reportable payments: (i) reportable interest and dividend payments; and (ii) certain other reportable payments. Under §3406, if the payee fails to furnish his/her Taxpayer Identification Number (TIN) to the payor in the manner required, or where the Service informs the payor that the TIN furnished by a payee is incorrect, the payor of reportable interest (or other payments) is required to withhold and remit to the Treasury 20 percent of such payment.

TEFRA also enacted provisions requiring registration of certain obligations issued by corporations and governmental agencies or instrumentalities. Section 310 of TEFRA amended the Second Liberty Bond Act to provide that all long-term obligations (*i.e.*, obligations with a maturity of more than one year from the date of issue) of a type offered to the public issued by a corporation or a governmental unit must be in registered form. Obligations of natural persons and privately-placed corporate notes are not required to be in registered form. Also exempt from the registration requirement is an obligation (i) which is issued under arrangements reasonably designed to ensure that it will be sold (or resold in connection with original issue) only to persons who are not U.S. persons, (ii) the interest on such obligation is payable only outside the United States and its possessions, and (iii) there appears on the face of the obligation a statement that any United States person who holds such obligation will be subject to limitations under the U.S. income tax laws.

Any registration-required obligation that is not in registered form attracts certain penalties: (i) §4701 imposes an excise tax on the issuer of the obligation; (ii) the exemption under §103 is unavailable for interest on such an obligation; (iii) a loss deduction is denied under §165 for such an obligation; (iv) a deduction under §163 for interest paid on such obligation is denied; (v) an earnings and profits adjustment is denied for interest paid on such obligations; and (vi) the gain upon the disposition of such an obligation is ordinary income.

B. Background

The repeal of the 30-percent withholding tax on portfolio interest was spurred by a congressional desire to provide U.S. corporations with direct access to foreign capital markets on a tax-free basis without the necessity of having to set-up a complex structure involving an intermediary finance company in a tax treaty jurisdiction, such as, the Netherlands Antilles. The need to create an international finance subsidiary was dictated to U.S. corporations by the realities of the Eurobond market.

First, in all Eurobond issues, the issuer typically pays interest, premiums, and principal net of any tax which might be withheld at source. Since not all investors in these bonds could claim an exemption from the U.S. withholding tax on interest under an applicable treaty,[18] the U.S. issuer would be required to shoulder the burden of the U.S. withholding tax on any direct borrowing.

Comment: In all Eurobond issues floated by U.S. companies through international finance subsidiaries, the issuer reserved the right to call the bonds in the event that a withholding tax was imposed on interest or principal. This was a precautionary step against the eventuality that, through a change either in the law or an administrative interpretation of the law, the tax consequences of the transaction were different from those anticipated.

Second, the U.S. companies' competitors in the Eurobond market generally do not have a withholding tax concern. Borrowers from foreign countries avoid the withholding tax at source either through extraterritorial finance subsidiaries (*e.g.*, West German borrowers), through specific statutory exemptions (*e.g.*, the Netherlands and Sweden), or by reason of issuing bonds denominated in foreign currencies (*e.g.*, Japan). A U.S. company desiring to borrow directly in the Eurobond market, therefore, would be at

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

a severe competitive disadvantage because of the U.S. withholding tax.

Finally, given the interest rate differential between the domestic market and the Eurobond market, the withholding tax cost made the total cost of borrowing in the Eurobond market commercially and economically unfeasible.

For U.S. companies seeking access to the cheaper Eurobond market, it was necessary, therefore, to find a solution to the U.S. withholding tax on interest. Such a solution was typically found in the shape of a finance subsidiary in the Netherlands Antilles.[19]

The Netherlands Antilles finance subsidiary arrangement worked as follows: The U.S. company would set up a wholly-owned subsidiary in the Netherlands Antilles by contributing generally one-third of the amount it intended to borrow in the Eurodollar market to the equity capital of such subsidiary. The Antilles subsidiary would then float a bond issue for the desired amount in the Eurobond market through an established network of underwriters and financial institutions. The underwriters and financial institutions then sold the bonds to individuals, banks, investment companies, insurance companies, and pension funds. Since the finance subsidiary had no established creditworthiness, the U.S. parent company usually guaranteed the subsidiary's obligations in order to make them saleable. The finance subsidiary then lent the proceeds of the bond issue (and sometimes also the equity capital) back to the parent at an interest rate which typically was one percentage point higher than the interest rate paid by the subsidiary on its obligations.

The tax consequences that the U.S. parent hoped to achieve by this arrangement were as follows:

(i) Under Article VIII of the U.S.-Netherlands Antilles treaty, an exemption was claimed from U.S. withholding tax on interest paid by the U.S. parent company to the Antilles finance subsidiary;

(ii) Under the internal laws of the Netherlands Antilles, interest paid by the Antilles finance subsidiary to the foreign lenders was free of any withholding tax;

(iii) The Netherlands Antilles finance subsidiary usually obtained a ruling from the Antilles revenue authorities that it was entitled to a deduction for the interest paid to foreign lenders, so that it paid the Antilles income tax at the normal rates (28% - 30%) only on the "spread" (*i.e.*, the difference between the interest charged to the U.S. parent and affiliates and interest paid to foreign lenders, which was usually one percentage point);

(iv) The "spread" was currently taxable to the U.S. parent as Subpart F income, but this income was more than offset by the sizeable interest deduction which the U.S. parent claimed for interest paid to the Antilles finance subsidiary. As a result, the Antilles income tax attributable to the Subpart F inclusion, which was claimed as a deemed paid foreign tax credit, absorbed the U.S. parent's excess foreign tax credits.[20]

(v) Since the Antilles finance subsidiary was not considered to be engaged in a U.S. trade or business, interest paid by it to foreign lenders was not subject to the second-tier U.S. withholding tax.[21]

(vi) The foreign lenders were also not subject to any U.S. or Antilles estate, gift, or inheritance tax with respect to the securities of the Antilles finance subsidiary.

C. *Reasons for Repeal*

The Senate Finance Committee Report summarizes the reasons for the repeal of the 30-percent withholding tax on U.S. source portfolio interest paid to nonresident alien individuals and foreign corporations as follows:[22]

"The committee believes it important that U.S. businesses have access to the Eurobond market as a source of capital. The Committee believes that the imposition of a withholding tax on portfolio interest paid on debt obligations issued by U.S. persons may impair the ability of U.S. corporations to raise capital in the Eurobond market. International bond issues are often exempt from withholding taxes and estate taxes imposed by foreign governments. By contrast, U.S. bond issues generally are not exempt from U.S. withholding tax, although as indicated above there is a patchwork of statutory exceptions to the withholding tax and the tax is frequently reduced or eliminated by treaty.

"As explained above, to avoid the withholding tax, U.S. corporations seeking access to the Eurobond market generally establish international finance subsidiaries that issue Eurobonds, almost all of which are incorporated in the Netherlands Antilles. Exemption from withholding tax is claimed under the U.S. income tax treaty with the Netherlands, as extended to the Netherland Antilles.

"The committee believes that if tax-free access to the Eurobond market is important, such access should be direct. In the committee's view, the current practice by U.S. corporations of issuing Eurobonds through finance subsidiaries located in the Netherlands Antilles, rather than directly from the United States, is neither economical nor indicative of sound tax policy. The committee is informed that the current practice imposes additional cost burdens on the issuing corporations and, in many cases, provides incomplete access to the Eurobond market. The cost of Eurobond borrowing to U.S. corporations would probably be lower were Eurobonds issued directly from the United States, utilizing existing U.S. office resources and personnel.

"At the same time, the risk that U.S. withholding tax could be imposed on interest paid on Eurobonds issued by U.S. corporations sometimes makes it difficult to trade U.S. obligations in international bond markets since holders of international obligations desire assurance that there will be no withholding tax on any interest income which they may derive. To satisfy this desire of foreign lenders, U.S. corporate borrowers, as explained above, typically indemnify the foreign bondholders against all U.S. withholding tax should the IRS successfully attack the claimed exemption or the Netherlands Antilles tax treaty be changed to eliminate the basis for the claimed exemption. This also raises the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

cost which a U.S. borrower must incur when it goes into foreign markets to raise capital.

"For these reasons, the committee believes that the 30-percent withholding tax on interest paid to foreign corporations and non-resident alien individuals by a U.S. borrower on portfolio debt investments generally should be repealed. This will allow U.S. corporations direct access to the Eurobond market.

"The committee is concerned, however, that repeal of the withholding tax, without a transitional period, may have a substantial negative impact on the economy of the Netherlands Antilles. Because repeal of the withholding requirement will make it unnecessary for U.S. corporations to route borrowings through the Antilles, the use of the Antilles as a financial center is likely to be substantially reduced. The committee is informed that offshore financing activities currently generate a large portion of the Antilles budget. The committee believes that while tax treaties should not be used as a basis for establishing conduits whose existence results in a transfer of revenues from the U.S. Treasury, the Antilles should have some time to adjust to tax law changes that will affect its economy."

II. Overview

Section 127 of the Tax Reform Act of 1984 (P.L. 98-369) amends §§871, 881, 864(c)(2), 1441, 1442, and 2105. Under these amendments, portfolio interest received by nonresident aliens and foreign corporation from U.S. sources on obligations issued after July 18, 1984, is not subject to the 30-percent U.S. withholding tax. The term "portfolio interest" means interest (including original issue discount) paid on two types of obligations: (i) bearer obligations which are described in §163(f)(2)(B); and (ii) registered obligations with respect to which the United States person, who would otherwise be required to withhold tax (hereinafter referred to as the "withholding agent"), has received a statement that the beneficial owner of the obligation is not a United States person. Interest paid on obligations incurred before July 18, 1984, and assumed by a U.S. person is not exempt from the 30-percent U.S. withholding tax. Additionally, portfolio interest paid to nonresident aliens or foreign corporations is not exempt from the 30-percent withholding tax in the following cases:

(i) Portfolio interest received by a 10-percent shareholder in the payor corporation;

(ii) Portfolio interest received by a partner who owns 10-percent or more of the capital or profits interest in the payor partnership;

(iii) Portfolio interest (other than interest paid on an obligation of the United States) received by a bank on an extension of credit made pursuant to a loan agreement entered into in the ordinary course of business;

(iv) Portfolio interest received by a controlled foreign corporation from a person who is a "related person" within the meanings of §864(d)(4); and

(v) Portfolio interest which is effectively connected with the recipient's U.S. trade or business.

Finally, any obligation, the interest on which would be free from the 30-percent withholding tax if received by the decedent at the time of his death, is not property located within the United States within the meaning of §2105 and, thus, is free from U.S. estate tax liability.

III. Detailed Analysis

A. The General Rule

Portfolio interest (including original issue discount) from U.S. sources received by a foreign corporation [23] or a nonresident alien individual [24] after July 18, 1984, on obligations issued after July 18, 1984,[25] in taxable years ending after July 18, 1984, is free of any United States tax and, therefore, not subject to the 30-percent withholding tax.[26] Portfolio interest paid on obligations issued prior to July 18, 1984, however, is not exempt from U.S. tax. Consequently, if a U.S. person assumes the obligations issued by a foreign corporation prior to July 18, 1984, the interest paid on such obligations will be subject to U.S. withholding tax.

Comment: This provision was probably included as a concession to the Netherlands Antilles. If the U.S. companies had been allowed to assume the existing obligations of their finance subsidiaries, there would have been a mass exodus of the finance companies from the Antilles precipitating a financial crisis in that country.

B. "Portfolio Interest" Defined

The term "portfolio interest" means interest paid on the following two types of obligations: (i) bearer obligations which are described in §163(f)(2)(B), and (ii) registered obligations with respect to which the U.S. withholding agent has received a statement to the effect that the beneficial owner is not a United States person.[27]

1. Bearer Obligations

Interest paid on an obligation which is not in registered form qualifies as "portfolio interest" (and for exemption from the 30-percent U.S. withholding tax) only if the obligation is described in §163(f)(2)(B). A "registration-required" obligation is defined by §163(f)(2)(A) as an obligation other than an obligation which:

(i) Is issued by a natural person;

(ii) Is not of a type issued to the public;

(iii) Has a maturity (at issue) of not more than one year; or

(iv) Is described in §163(f)(2)(B).

A bearer obligation meets the requirements of §163(f)(2))B) if:

(i) There are arrangements reasonably designed to ensure that the obligation will be sold (or resold in connection with the original issue) only to a person who is not a United States person;

(ii) Interest on the obligation is payable only outside the United States and its possessions; and

(iii) On the face of the obligation there is a statement that any United States person who holds such obligation will be subject to limitations under the United States income tax laws.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Thus, interest paid on a foreign-targeted bearer obligation (as described above) qualifies as "portfolio interest" if the obligation is not issued by a natural person, is of the type offered to the public, and has a maturity of more than one year.[28]

Temp. Regs. §1.163-5(c) provides detailed guidance as to when an obligation is considered to be described in §163(f)(2)(B).

a. Obligations Described in §163(f)(2)(B)

The determination whether an obligation meets the requirements of §163(f)(2)(B) is required to be made on an obligation-by-obligation basis.[29] An obligation that is initially issued to a named payee but may later be converted into bearer form will not be considered to be issued pursuant to arrangements reasonably designed to ensure sale to non-U.S. persons.[30] Also, an obligation in bearer form issued directly by, or guaranteed by a U.S. Government-owned agency or a U.S. Government-sponsored agency (*e.g.*, Federal National Mortgage Association, Federal Home Loan Banks, the Federal Loan Mortgage Corporation, the Farm Credit Administration, and the Student Loan Marketing Association) is not considered to meet the requirements of §163(f)(2)(B).[31]

(1) Obligations Designed for Sale to Non-U.S. Persons

An obligation will be considered to have been issued under arrangements reasonably designed to ensure its sale to non-U.S. persons only if the conditions of one of the following paragraphs are met:

(i) In connection with the original issuance of the obligation, the obligation is offered for sale or resale only outside the United States and its possessions, is delivered only outside the United States and its possessions, and is not required to be registered under the Securities Act of 1933 because it is intended for distribution to persons who are not United States persons.[32] The issuer, however, prior to the issuance of the obligations, must have made a good faith determination backed by a written opinion of counsel that the obligations are not required to be registered under the Securities Act of 1933 because they are intended for distribution to non-U.S. persons.

(ii) The obligation is registered under the Securities Act of 1933, or the obligation is exempted from registration by reasons of section 3 or 4 of such Act, or the obligation does not qualify as a security under the Securities Act of 1933 and all of the following conditions are met:[33] (a) in connection with the original issuance, the obligation is offered for sale or resale only outside the United States and its possessions and is delivered outside the United States and its possessions;[34] (b) the issuer, each underwriter and each member of the selling group covenants that it will not, in connection with the original issuance of the obligation, offer to sell or resell the obligation in bearer form to a United States person other than certain financial institutions;[35] (c) in connection with its sale or resale during the original issuance of the obligations, each underwriter and each member of the selling group (or the issuer) sends a confirmation to the purchaser of the bearer obligation that the purchaser represents that it is not a United States person (other than certain financial institutions;)[36] (d) in connection with the original issuance of the obligation, the obligation is released in definitive form to the person entitled to physical delivery thereof only upon presentation of a certificate signed by such person stating that such obligation is not being acquired by or on behalf of, or for offer to resell or for resale to a United States person (other than certain financial institutions);[37] and (e) the issuer, underwriter, or member of the selling group does not have actual knowledge that the certificate referred to in (d) above is false.[38]

(iii) The obligation is issued only outside the United States and its possessions by an issuer that does not significantly engage in interstate commerce with respect to the issuance of such obligation either directly or through its agent, an underwriter, or a member of the selling group.[39] Where the issuer is a U.S. person, it will meet this requirement only if: (a) it is engaged through a branch in active banking business abroad; (b) the obligation is issued outside the United States by the branch in connection with that trade or business; (c) the obligation that is so issued is sold directly to the public; and (d) the issuer maintains documentary evidence that demonstrates that the purchaser is not a U.S. person.[40]

(2) Interest Payable Outside the United States

Interest will be considered to be payable only outside the United States and its possessions if payment of such interest can be made only upon presentation of a coupon, or upon making demand for payment, outside of the United States and its possessions to the issuer or a paying agent.[41] The fact that the interest payment may be made by a draft drawn on a United States bank account or by wire or other electronic transfer from a United States bank account does not affect this result.[42]

Interest payments will not be considered to be made outside the United States if the interest is paid to a person (other than certain financial institutions) by a transfer of funds into an account maintained by the payee in the United States, or mailed to an address in the United States, provided the interest is paid on an obligation issued by a U.S. person, a controlled foreign corporation (as defined in §957(a)), or a foreign corporation 50 percent or more of whose worldwide gross income over a three-year base period is effectively connected with a U.S. trade or business.[43] Also, interest will be considered to be paid in the United States if a coupon is presented, or demand for payment is made, to the issuer or its paying agent in the United States or its possessions even if the funds are paid into an account, maintained by the payee outside the United States or its possessions.[44]

However, if interest becomes payable at the office of the issuer or its U.S. paying agent because the full amount of interest payment at the offices of the foreign paying agents becomes illegal or is effectively precluded due to the imposition of exchange controls, the interest will be considered to be payable outside the United States and its possessions, provided the issuer has appointed paying agents located outside the United States and its possessions with the reasonable expectation that such paying agents will be able to pay the interest in United States dollars.[45]

(3) The Legend on the Face of the Obligation

A bearer obligation must have the following legend in English on the face of the obligation and on any interest coupons which may be detached therefrom: "Any United States persón who holds this obligation will be subject to limitations under the United States income tax laws, including the limitations provided in §165(j) and 1287(a) of the Internal Revenue Code.[46]

b. Secretary May Exclude An Obligation from Section 163(f)(2)(B)

Prior to 1984, §163(f)(2)(C) empowered the Secretary to require by regulations that an obligation be registered even if it met the requirements of §163(f)(2)(B) provided the obligation was of a type used frequently in avoiding federal taxes.

Section 127(f) of P.L. 98-369 amends §163(f)(2)(C) to provide the Secretary with even broader powers to require registration. Under amended §163(f)(2)(C)(i), the Secretary may specify, by regulations, the types of registration-required obligations meeting the requirements of §163(f)(2)(B) which must be issued in registered form regardless of whether or not such obligations are of a type frequently used in avoiding federal taxes.

The first hint of the use of this power by the Secretary came on September 7, 1984. On that date, consistent with the U.S. Treasury's earlier decision not to issue its securities in bearer form, Secretary Regan announced that bearer securities that are backed by U.S. government securities (including any obligations issued by a federal agency) will not be permitted. To implement this decision, the Treasury is expected to issue regulations under §163(f)(2)(C)(i) to provide that §163(f)(2)(B) will not apply to: (i) pass-through or participation certificates backed by U.S. government securities; (ii) interests in fixed investments or grantor trusts or custodial arrangements funded with U.S. government securities; (iii) debt obligations collateralized with U.S. government securities; (iv) securities backed by securities guaranteed as to interest or principal by the U.S. government; or (v) other similar instruments or interests. The types of securities referred to (i) through (v) above, therefore, will be required to be issued in registered form.

2. Registered Obligations

The term "portfolio interest" also includes interest paid on an obligation:

(i) which is in registered form, and

(ii) with respect to which the United States withholding agent has received a statement that the beneficial owner of the obligation is not a United States person.

a. The Term "Registered Form" Defined

The term "registered form" has the same meanings as given such term by §163(f).[47] An obligation is in registered form if:[48] (i) the obligation is registered as to both principal and any stated interest and any transfer of the obligation may be accomplished only through the surrender of the old instrument and the reissuance by the issuer of the old instrument to the new holder or the issuance of a new instrument to the new holder by the issuer; or (ii) the right to the principal of, and stated interest on, the obligation may be transferred only through a book-entry system.

An obligation is considered transferrable only through a book-entry system if the ownership of an interest in the obligation is required to be reflected in a book entry, whether or not physical securities are issued. A book entry is a record of ownership that identifies the owner of an interest in the obligation.[49]

b. The Statement Requirement

As stated earlier, interest paid on a registered obligation qualifies as "portfolio interest" only if the U.S. withholding agent receives a statement that the beneficial owner is not a U.S. person. Such statement may be made either by the beneficial owner of the obligation or by a securities clearing organization, a bank, or other financial institution that holds customers' securities in the ordinary course of its trade or business.[50]

If the initial purchaser of a registered obligation is a person other than an individual (*e.g.*, a financial institution), the statement requirement is satisfied if the withholding agent receives a statement made under penalties of perjury by the beneficial owner certifying that the owner is not a U.S. person.[51] If, however, the initial purchaser is an individual, the required statement must be signed by the beneficial owner under penalties of perjury, certify that the beneficial owner is neither a citizen nor resident of the United States, and provide the name and address of the beneficial owner.[52] The statement may be made, at the option of the withholding agent, on Form W-8 or on a substitute form that is substantially similar to Form W-8.[53] The statement must be received by the withholding agent in the calendar year in which the payment of interest is made or collected or in either of the two preceding calendar years. The withholding agent, however, may require the statement from the payee each time it makes a payment to, or collects an amount on behalf of, the payee. The withholding agent is required to retain the statement for at least four years following the end of the last calendar year during which the payment was made or an amount was collected.[54]

If the information provided on the statement changes, the beneficial owner must so inform the withholding agent within thirty days of such change.[55]

If the initial purchaser of a registered obligation is a custodian (*i.e.*, a securities clearing organization, a bank, or other financial institution that holds customers' securities in the ordinary course of its trade or business), the statement must be signed under penalties of perjury by an authorized representative of the custodian institution and must state: (i) that the institution has received from the beneficial owner a Form W-8 or a substitute form stating that such owner is not a U.S. person; or (ii) that it has received from another financial institution a similar statement that it, or another financial institution acting on behalf of the beneficial owner, has received the Form W-8 or substitute form from the beneficial owner.[56]

In the case of multiple financial institutions between the beneficial owner and the withholding agent, the certificate must be given by each financial institution to the one above it in the chain. Although no particular form is

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

required for the certificate, it must provide the name and address of the beneficial owner and a copy of the Form W-8 provided by the beneficial owner must be attached to it. If the information on the form W-8 changes, the beneficial owner is required to inform the financial institution within thirty days of the change and the financial institution must promptly so inform the withholding agent. The financial institution is also obligated to notify the withholding agent if it has actual knowledge that the information has changed but has not been notified of such change by the beneficial owner.[57]

The withholding agent receiving the certificate is required to make an information return on Form 1042S of the payment with respect to which the certificate is required for the calendar year. Also, the withholding agent is required to attach the certificate with Form 1042S.[58]

If the withholding agent does not receive the certificate described in the foregoing paragraphs, it is required to withhold tax under §§1441(a) and 1442(a) even if the interest otherwise qualifies as "portfolio interest."[59]

Certification requirements are slightly different for registered obligations targeted to foreign markets,[60] interest on which is paid to a registered owner at a foreign address provided the registered owner is a financial institution described in §871(h)(4)(B) (*i.e.*, a securities clearing organization, a bank, or other financial institution that holds customers' securities in the ordinary course of its trade or business). In such a case, the U.S. withholding agent may treat the interest as "portfolio interest" (and thus not subject to withholding) if it does not have actual knowledge that the beneficial owner is a U.S. person and if it receives a statement: (i) identifying the obligation with respect to which the statement is given; (ii) stating that the beneficial owner is not a U.S. person; and (iii) identifying and providing the address of the person providing the statement.[61] The statement must be provided with respect to each interest payment within the period beginning 90 days prior to the interest payment.[62] If the statement is provided by a clearing organization, it must be based on a written statement from the member organization to which the interest is paid that the beneficial owner is not a U.S. person. If the information provided in the statement changes, the person providing the statement must so inform the U.S. withholding agent (or the clearing organization) within thirty days of the change. The statement must be retained in the records of the U.S. withholding agent (or the clearing organization) for at least four years from the end of the calendar year in which it was received.[63]

Finally, the Secretary is authorized by statute to declare by written determination published at least one month prior to payment of interest on any obligation that a statement made with respect to such payment of interest by any clearing organization, bank, or financial institution (described in §871(h)(4)(B)) is unacceptable.[64]

3. Exceptions

Interest that is effectively connected with the recipient's U.S. trade or business does not qualify as "portfolio interest." In addition, certain interest, which otherwise qualifies as "portfolio interest," does not qualify as such when received by certain persons. These exceptions to the definition of "portfolio interest" are discussed below.

a. Interest Received by a Ten Percent Shareholder

The term "portfolio interest" does not include interest received by a ten-percent shareholder.[65] In the case of an obligation issued by a corporation, the term ten-percent shareholder means any person who owns ten percent or more of the total combined voting power of all classes of stock of such corporation entitled to vote.[66] In determining whether a recipient owns the requisite ten percent stock, the attribution rules of §318(a) apply with the following two modifications:[67] (i) §318(a)(2)(C) shall be applied without regard to the 50-percent limitation, and (ii) any stock which a person is treated as owning after application of §318(a)(4) shall not, for purposes of applying paragraphs (2) and (3) of §318(a), be treated as actually owned by such person.

In the case of an obligation issued by a partnership, the term ten-percent shareholder means any person who owns ten percent or more of the capital or profits interest in such partnership.[68] For purposes of determining whether a recipient owns the requisite ten percent capital or profits interest in the partnership, the statute directs the Secretary to prescribe attribution rules similar to those that apply in determining ten percent ownership in a corporation.[69]

The Conference Committee Report notes that some taxpayers may attempt to circumvent the ten-percent shareholder exception by entering into a back-to-back loan arrangement. For example, the foreign shareholder may lend money to an unrelated foreign party that relends that money at discount to the U.S. taxpayer. In such cases, the Conference Committee directs the IRS to use means at its disposal to determine whether back-to-back loans exist.[70]

b. Interest Received by Foreign Banks

"Portfolio interest" does not include the interest received by foreign banks on an extension of credit pursuant to a loan agreement entered into in the ordinary course of their banking business.[71] This exception, however, does not apply to interest paid on obligations of the United States government. Thus, interest received by foreign banks on U.S. obligations will qualify as "portfolio interest."

The observation made in the previous paragraph dealing with ten-percent shareholders with respect to back-to-back loans also applies to foreign banks.[72] Consequently, a foreign bank will not be able to avoid this exception by entering into a back-to-back loan arrangement.

c. Interest Received by a CFC From a Related Person

"Portfolio interest" does not include interest received by a controlled foreign corporation from a related person as defined in §864(d)(4).[73]

Section 864(d)(4) defines the term "related person" to include: (i) any person who is a related person within the meaning of §267(b); (ii) any United States shareholder within the meanings of §951(b); and (iii) any person who is related to a U.S. shareholder within the meanings of §267(b).

d. Inadequate Exchange of Information Exception

If the Secretary determines that the exchange of information is inadequate between the United States and a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

foreign country to prevent the evasion of United States income tax by U.S. persons, the Secretary may publish a statement in writing providing that, beginning on a specified date, the payments of interest to any person within such foreign country (or payments addressed to, or for the account of, persons within such foreign country) shall not qualify as "portfolio interest." [74] Interest paid before the statement's publication date, however, will qualify as "portfolio interest." [75]

C. *Special Rules for Controlled Foreign Corporations*

A foreign corporation, which is a controlled foreign corporation within the meanings of §957(a), may earn U.S. source interest that qualifies as "portfolio interest" and for exemption from the thirty-percent U.S. withholding tax.

Comment: Note, however, that interest received by a CFC from a related person does not qualify as "portfolio interest" (see the discussion under III, B, 3, c, *supra*).

Section 881(c)(4), however, provides rules which effectively ensure that such interest will be taxed currently in the hands of the CFC's U.S. shareholders. Section 881(c)(4) provides that in the case of "portfolio interest" received by a CFC, the following exceptions to foreign base company income will not apply:

(i) The exception contained in §954(b)(3) (which provides that if the foreign base company income of a CFC is less than ten percent of gross income, no part of the CFC's gross income is treated as foreign base company income);

(ii) The exception contained in §954(b)(4) (which provides that foreign base company income does not include any item of income derived by a CFC which is not formed or availed of for tax avoidance purposes); and

(iii) A number of exceptions to the Subpart F foreign personal holding company income rules provided in §954(c) are also rendered inapplicable. These exceptions include: (a) §954(c)(3)(B) relating to certain income derived in the active conduct of a trade or business; (b) §954(c)(3)(C) relating to certain income derived by an insurance company; and (c) §§954(c)(4)(A) and (B) relating to certain income received from related persons.

The Conference Committee Report makes it clear that the "portfolio interest" received by a CFC from U.S. sources will, upon inclusion in the U.S. shareholders' gross income, retain its U.S. source character under §904(g) without regard to any exception from 904(g) available for other income.[76] Thus, U.S. source "portfolio interest" income of a CFC will not enable its U.S. shareholders to utilize their excess foreign tax credits.

D. *Resolution of the Audit Issue*

The international finance company arrangements of U.S. companies are susceptible to attack on a number of grounds. For example, some have argued that since the foreign lenders look ultimately to the U.S. parent company for payment of the principal and interest, the debt obligations of the finance company are in fact the obligations of the U.S. parent. Thus, interest paid on such obligations is subject to U.S. withholding tax. Alternatively, the creation of a finance company may be viewed as having as its principal purpose the avoidance of the withholding tax on the U.S. parent and, hence, the exemption from withholding does not apply in accordance with §269. In recent years the Service, in fact, has challenged a number of arrangements involving international finance companies organized by U.S. companies in the Netherlands Antilles.[77]

In conjunction with the repeal of the thirty-percent withholding tax on portfolio interest, the U.S. Congress also resolved this audit issue. The rules in §127(g)(3) of the Tax Reform Act of 1984 provide in substance that the obligations of the finance companies will be treated the obligations of such companies. This virtually ensures that the tax results anticipated by U.S. companies when they organized the finance subsidiaries will in fact prevail.

Specifically, §127(g)(3) provides that interest paid by the U.S. parent or other U.S. affiliate to a controlled foreign corporation shall be treated as payment of interest to a resident of the country in which the CFC is organized, provided the following conditions are met:

(i) The CFC was in existence on or before June 22, 1984;[78]

(ii) The principal purpose of the CFC on the date of interest payment was issuing its obligations, holding short-term obligations and lending proceeds of such obligations to affiliates (*i.e.*, persons related to it within the meaning of §482);[79]

(iii) The interest payments must be made on an obligation of a person which is related to the CFC within the meanings of 482;[80]

(iv) The interest must be paid on an obligation of related U.S. person issued before June 22, 1984;[81] and

(v) The CFC meets the conditions of Rev. Ruls. 69-377, 69-501, 70-645, and 73-110 on the date of interest payment.[82] These four rulings were issued during the period when the Interest Equalization Tax (IET) was in effect, and the rulings were repealed by Rev. Rul. 74-464 when the IET expired. Basically, the Service sanctioned the existence of international finance companies in these four rulings based on the fulfillment of certain conditions.

Revenue Ruling 69-377 held that the interest paid on debt obligations of a domestic subsidiary with a 5:1 debt-equity ratio, convertible into stock of its U.S. parent and guaranteed by such parent, was deductible under §163 as long as the obligations were held by a person other than the parent or its affiliates.

Revenue Ruling 69-501 involved facts identical to Rev. Rul 69-377, except that the finance subsidiary was a foreign company. The Service accepted the 5:1 debt-equity ratio.

Revenue Ruling 70-645 cited Rev. Rul. 69-377 as authority for the proposition that solely for purposes of the IET and certain income tax purposes, debt obligations issued by wholly-owned financing subsidiaries of domestic parent corporations will be deemed to be indebtedness of such subsidiaries if the amount borrowed by the financing subsidiary does not exceed five times its equity capital.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

In Rev. Rul. 73-110, the Service held that, for IET exclusion purposes, a domestic parent corporation must recompute the debt-equity ratio of its wholly-owned foreign financing subsidiary at the current exchange rate whenever it withdraws equity capital or the subsidiary issues foreign debt obligations.

E. Information Reporting and Backup Withholding

In T.D. 7967 (49 Fed. Reg. 33239) and T.D. 7972 (49 Fed. Reg. 34340), the Service issued temporary regulations in questions and answers form relating to the repeal of 30 percent withholding tax and to the application of information reporting and backup withholding to certain obligations held by foreign persons in light of the repeal. The following discussion summarizes the information reporting and backup withholding requirements as they pertain to bearer obligations, foreign targeted registered obligations, and foreign-non-targeted registered obligations.

1. Information Reporting and Backup Withholding on Bearer Obligations

a. Portfolio Interest Paid by an Issuer or its Agent

Unless the issuer or its agent has actual knowledge that the recipient of portfolio interest ("payee") is a United States person, there are no reporting or backup withholding requirements with respect to payments of U.S. source portfolio interest made outside the United States.[83] Whether a payment of interest is made outside the United States shall be determined in accordance with Q & A 37 of Temp. Regs. §35a.9999-3.[84] Notwithstanding the provisions of Q & A 37, however, payment shall not be considered to be made outside the United States if the interest is paid to a United States address whether by mail or electronic transfer.[85]

b. Foreign Source Interest Paid by a U.S. Person or a CFC

Interest paid by a foreign finance subsidiary or (*i.e.*, a CFC) or a U.S. person who derives 20 percent or less of its gross income over a three-year base period from U.S. sources (*e.g.*, a Netherlands Antilles finance company) is considered foreign source interest.

Unless the issuer or its agent has actual knowledge that the recipient is a United States person, there are no reporting or backup withholding requirements with respect to payments of foreign source interest by a CFC or a U.S. person made outside the United States.[86] In determining whether interest payment is made outside the United States, the provisions of Q & A 37 of Temp. Regs. §35a.9999-3 apply. However, for interest paid after November 20, 1984, on obligations issued after September 21, 1984, payment shall not be considered made outside the United States if interest is paid to a United States address, Q & A 37 notwithstanding.[87]

c. Foreign or U.S. Source Interest Paid by Custodians, Nominees, or Agents

Payment or collection of interest described in (a) and (b) above, outside the United States by a person acting in its capacity as a custodian, nominee, or other agent of the payee with respect to such payment or collection is generally not subject to the reporting and back-up withholding requirements.[88] However, the payment or collection of interest outside the United States by a custodian, nominee, or other agent of the payee may be subject to the information reporting requirements under §6049 if the agent falls in one of the following three categories:[89] (i) a United States person (*e.g.*, a foreign branch of a U.S. bank); (ii) a controlled foreign corporation as defined in §957(a); or (iii) a foreign corporation 50 percent or more of whose worldwide gross income over a three-year base period is effectively connected with a U.S. trade or business.

A U.S. person, a CFC, or a foreign corporation acting as an agent of the payee is nonetheless exempt from information reporting requirements if the payee is an exempt recipient (within the meanings of Regs. §1.6049-4(c)(1)(ii)) or it has documentary evidence that the payee is not a citizen or resident of the United States.[90] Such evidence may include a written indication from the payee (*e.g.*, appearing on an account application form) that the payee is neither a citizen nor a resident of the United States. The mere fact, however, that the payee has provided an address outside the United States is insufficient evidence to establish for this purpose that the payee is neither a citizen nor a resident of the United States. For payments made before November 20, 1984, on accounts opened on or before August 22, 1984, an affidavit by an employee of the agent stating that the employee knows, or the payee has represented orally, that the payee is not a U.S. person will be sufficient evidence of such foreign status. For all other payments, an affidavit of an employee will be sufficient to establish the foreign status of the payee only if the affidavit states that the employee has a reasonable basis founded on documentary evidence for believing that the payee is neither a citizen nor a resident of the United States.[91]

If the payment or collection of interest by an agent is not subject to information reporting under §6049 as described above, it is also exempt from reporting requirements under 6041.[92]

Finally, even if the payment or collection of interest outside the United States by an agent of the payee is subject to information reporting under §6049 (*e.g.*, where the payee is a U.S. person), the agent is not subject to the backup withholding requirements.[93] The backup withholding issue, however, is under study and the Service may at some future time subject the agent of the payee to backup withholding requirements in the case described above.

2. Information Reporting and Backup Withholding on Registered Obligations

a. Non-Targeted Registered Obligations

As discussed under III, B, 2, b, *supra*, payments on registered obligations that have not been targeted to foreign markets are exempt from the 30-percent withholding tax only if the beneficial owner is identified by either a Form W-8 or by a certificate from a financial institution to the effect that it has received a Form W-8.[94] The 30-percent withholding under §§1441 and 1442, however, does not apply (regardless of whether Form W-8 is received) if the interest is paid, or collected on behalf of, an exempt recipient at an address within the United States, or if the interest is paid to a non-exempt recipient at an address within the United States and backup withholding under §3406 applies.[95]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

In the case of "portfolio interest" paid on a non-targeted registered obligation, the information reporting under §§6041 and 6049 and backup withholding under §3406 does not apply if the payee has furnished Form W-8 (or substitute form), and if the payor does not have actual knowledge that the payee is a United States person.[96]

b. Foreign-Targeted Registered Obligations

As discussed under III, B, 2, b, *supra*, Form W-8 is not required to avoid thirty-percent withholding tax with respect to interest paid on certain registered obligations that have been targeted to foreign markets. However, a substitute certificate that merely states that the beneficial owner is not a United States person is required with respect to interest paid by a U.S. person on those obligations to a registered owner outside the United States, provided the registered owner is a financial institution that holds customers' securities in the ordinary course of trade or business.[97] The substitute certificate must: (i) identify the obligation with respect to which it is given; (ii) state that the beneficial owner is not a United States person; and (iii) identify and provide the address of the person providing the certificate.[98]

In the case of "portfolio interest" paid on a foreign-targeted registered obligation, neither the reporting requirements of §§6041 and 6049 nor the backup withholding requirements of §3406 apply if the certificate referred to above is provided to the payor, and if the payor does not have actual knowledge that the beneficial owner is a United States person.[99] However, collection outside the United States of portfolio interest on a registered obligation by a person acting as a custodian, nominee, or other agent is subject to information reporting under §6049 if the custodian, nominee, or other agent falls in one of the following three categories: (i) a U.S. person (*e.g.*, a foreign branch of a U.S. bank); (ii) a controlled foreign corporation as defined in §957(a); or (iii) a foreign corporation 50 percent or more of whose worldwide gross income over a three-year base period was effectively connected with a U.S. trade or business.[100]

The U.S. person, the CFC, or the foreign corporation that collects interest on a registered obligation outside the United States in its capacity as a custodian, nominee, or other agent may nevertheless avoid the reporting requirements of §6049 if: (i) the payee is an exempt recipient under Regs. §1.60459-4(c)(1)(ii); or (ii) the agent has documentary evidence in its files that the payee is not a citizen or resident of the United States.[101] In this regard, the same evidentiary standards that apply to bearer obligations in similar situations are applicable here.[102]

F. Exemption from Estate Tax

In conjunction with the repeal of the 30-percent withholding tax on portfolio interest, §127 of the Tax Reform Act of 1984 also eliminates any potential U.S. estate tax liability of nonresident alien individuals for obligations the income from which, if received by the decedent at the time of his death, would be exempt from the withholding tax. Since U.S. estate tax liability applies only to that portion of a nonresident alien's estate which is located in the United States, §127 of the Act achieves this result by providing that the obligations, the interest on which is exempt from the thirty percent withholding tax, are considered property located outside the United States.

Specifically, §127(d) of the Act amends Code §2105(b) to provide that the following assets shall not be deemed property within the United States:

> (i) Amounts described in §861(c), if any interest thereon would be treated under §861(a)(1)(A) as foreign source income were such interest received by the decedent at the time of his/her death;[103]
>
> (ii) Deposits with a foreign branch of a domestic corporation or domestic partnership if such branch is engaged in commercial banking business;[104] and
>
> (iii) Debt obligations, if, without regard to whether a statement meeting the requirements of §871(h)(4) has been received, any interest thereon would be eligible for exemption from tax under §871(h)(1) were such interest received by the decedent at the time of his/her death.

The amendments to §2105(b) are effective for obligations issued after July 18, 1984, with respect to the estates of decedents dying after July 18, 1984.[105]

G. Effective Date

The exemption from the thirty-percent withholding tax on U.S. source "portfolio interest" received by nonresident aliens and foreign corporations applies only to interest received after July 18, 1984, on obligations issued after July 18, 1984, in taxable years ending after such date.[106]

---

[1] The discussion under this subsection does not take into account the changes made by the Tax Reform Act of 1984 (P.L. 98-369).
[2] §§871(a) and 881(a). Unless otherwise indicated, all references herein are to the Internal Revenue Code of 1954, as amended.
[3] §§1441 and 1442.
[4] §§871(b) and 882(a).
[5] Under the general rule of §861(a)(1), interest paid by an obligor who is a resident of the United States is U.S. source income.
[6] §§861(a)(1)(A) and 861(c).
[7] §§871(a)(1)(C) and 881(a)(3).
[8] §861(a)(1)(B).

[12] §6049(a)(2).
[13] §6049(b)(1).
[14] *Id.*
[15] §6049(b)(2)(A) and (B).
[16] §§6049(b)(2)(C) and 6049(b)(5).
[17] §6049(b)(2)(D).
[18] A statutory withholding tax exemption is also not available generally to a foreign investor in long-term U.S. corporate obligations.
[19] It should be pointed out that a Netherlands Antilles subsidiary was utilized only in those cases where the loan proceeds were intended for utilizaton by the U.S. parent itself or its U.S. affiliates. Where the loan proceeds were intended for use solely by the foreign affiliates, the U.S. parent would simply set up a finance subsidiary in the United States. Since such a company qualified as an 80-20 company, interest paid by it to foreign lenders was free of U.S. tax as foreign source income.
[20] A companion provision in the Tax Reform Act of 1984 (*i.e.*, section 121 of P.L. 98-369, which adds a subsection (g) to §904 of the Code) would preserve the U.S. source attribute of the Antilles finance subsid-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

iary's income when such income is taxed to the U.S. parent as Subpart F income. Consequently, no foreign tax credit will be available to the U.S. parent for Antilles income tax paid with respect to such income.

[21] *See* §861(a)(1)(C) which provides that interest paid by a foreign corporation, less than 50 percent of whose worldwide gross income over a three-year base period is effectively connected with a U.S. trade or business, is foreign source income.

Chapter 63

FIRPTA WITHHOLDING PROVISIONS

Douglas E. Jacobs, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The Foreign Investment in Real Property Tax Act of 1980 ("FIRPTA") generally taxes the gains realized by nonresident aliens and foreign corporations upon the disposition of United States real property interests. Prior to the enactment of FIRPTA, tax on the disposition of a United States real property interest would have been imposed only if the gain were effectively connected with a United States trade or business or, in the case of nonresident alien individuals, the seller were present in the United States for 183 days or more during a taxable year. As enacted, FIRPTA envisioned relying on information reporting requirements to enforce its provisions.

Gains and losses of foreign investors on the disposition of United States real property interests generally are treated as if they were effectively connected with a United States trade or business of the foreign investor.[1] Thus, under FIRPTA, net gains are generally taxable to foreign investors at the same graduated capital gains rates that apply to United States taxpayers.[2] In the case of individual investors, tax is imposed at a minimum rate of 20 percent of net gains or 20 percent of alternative minimum taxable income, whichever is less.[3]

FIRPTA taxes gains on the disposition of interests in real property (including interests in mines, wells, or other natural deposits) located in the United States or the Virgin Islands.[4] The term "interest in real property" includes fee ownership and co-ownership of land or improvements, easements, leaseholds of land or improvements thereon, options to acquire land or improvements thereon, and options to acquire leaseholds of land or improvements thereon.[5] Moreover, the term includes such interests as life estates, remainders, and reversions.[6] Proposed Treasury Regulations provide that the term includes any direct or indirect right to share in the appreciation in the value of, or in the gross or net proceeds or profits generated by, United States real property.[7] Moveable walls, furnishings, and other personal property associated with the use of real property are considered real property for purposes of FIRPTA.[8]

United States real property interests also include certain holdings in United States real property holding corporations, as defined in §897(c)(2).[9] A United States real property holding corporation is any corporation (whether foreign or domestic) the fair market value of whose United States real property interests is at least 50 percent of the sum of the fair market value of its United States real property interests, its interests in foreign real property, and any other assets used in a trade or business during the taxable year.[10] Any interest in a domestic corporation, other than an interest solely as a creditor, is treated as a United States real property interest unless the taxpayer establishes that the corporation was at no time a United States real property holding corporation during the period after June 18, 1980, during which the taxpayer held the interest, or the five-year period preceding the disposition of the interest, whichever is shorter.[11]

In determining whether a corporation is a United States real property holding corporation, a corporation that is a partner in a partnership takes into account its proportionate share of all assets of the partnership. The same rules apply to trusts and estates in which a corporation has an interest and to a chain of partnerships, trusts, or estates in which a corporation has an interest.[12] Constructive ownership rules also apply to a controlling interest held by a corporation in another corporation with respect to assets held by the controlled corporation.[13] A "controlling interest" is defined as 50 percent or more of the fair market value of all classes of stock of a corporation.[14]

In general, gains from the disposition of an interest in a United States real property holding corporation are subject to tax. However, no tax is imposed on the sale of publicly traded corporate stock by an investor who, throughout the test period defined in §897(c)(1)(A)(ii), owned five percent or less of the class of stock sold.[15]

FIRPTA does not tax gains on the disposition of stock in a foreign corporation. Instead, §897(d) taxes foreign corporations on distributions to prior shareholders (whether or not in liquidation) of appreciated United States real property interests, or on the sale of appreciated United States real property interests in connection with liquidation of the corporation. Tax is imposed notwithstanding any nonrecognition provisions of the Code unless the distributee who receives appreciated property from a foreign corporation takes a carryover basis in the property and, viewed at the time of receipt of the property, would be subject to tax on a subsequent distribution of the property. FIRPTA also authorizes the issuance of regulations providing to what extent the nonrecognition provisions of the Code will apply.[16] Such regulations have not yet been issued.

Except to the extent otherwise provided in regulations, gain is recognized by a foreign investor under FIRPTA on the transfer of a United States real property interest to a foreign corporation if the transfer is made as paid in surplus or as a contribution to capital. The gain equals the fair market value of the property transferred over the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

adjusted basis of the property and any other gain recognized by the transferor.[17]

If a foreign corporation holds a United States real property interest, and under any treaty obligation of the United States is entitled to nondiscriminatory treatment with respect to that interest, then the foreign corporation may elect to be treated as a United States corporation for purposes of FIRPTA.[18] All of the shareholders must consent to the election and consent to taxation on any gain from the disposition of the interest under FIRPTA even if a treaty to which the United States is a party would not permit such taxation.[19] If a class of stock in a foreign corporation is traded on an established securities market, then only a person who holds more than five percent of that class of stock need affirmatively consent to the election.[20] The election may not be revoked without the consent of the IRS.[21]

FIRPTA provides United States shareholders of a foreign corporation holding United States real property interests that adopts a plan of liquidation with a credit against any tax imposed on the surrender of their stock.[22] The credit is available to United States shareholders who acquired their stock before June 18, 1980 (the effective date of FIRPTA) and have held it continuously since then. The United States shareholder is deemed to realize income equal to, and to receive a credit against tax equal to, his proportionate share of the tax imposed on the liquidating foreign corporation on the distribution or liquidating sale of its United States real property interests.[23]

Gain of a foreign investor on the disposition of an interest in a partnership, trust, or estate is subject to tax under FIRPTA to the extent that the gain represents the investor's pro rata share of appreciation in the value of United States real property interests of the entity. This provision contemplates implementation by regulations, but these have not yet been issued.[24]

Distributions to foreign shareholders by a real estate investment trust (REIT) are treated as gains on the sale of a United States real property interest to the extent of the shareholder's pro rata share of the net capital gain of the REIT on the disposition of United States real property interests.[25] In the case of REITs controlled by United States persons, sales of REIT shares by foreign shareholders are not subject to tax.[26]

Since enactment, FIRPTA has provided for enforcement of the tax on foreign investors through a system of information reporting designed to identify foreign owners of United States real property interests. Prior to amendment by the 1984 Act, §6039C required reporting by United States real property holding corporations, foreign or domestic partnerships, foreign or domestic trusts, and foreign or domestic estates in which a foreign investor held an interest. In addition, a foreign investor who directly owned United States real property interests worth $50,000 or more was required to file an information return.

The Internal Revenue Service has had difficulty developing regulations interpreting the information reporting requirements. The information reporting requirements of FIRPTA have been postponed by the Internal Revenue Service for years 1980 through 1983 pending the issuance of final regulations. Since final regulations have not been issued, no information reporting is presently required.[27]

In order to simplify the administration of FIRPTA and to ensure collection of the tax, the Senate version of the 1984 Act required withholding of tax on dispositions of United States real property interests. To the extent that withholding was required on a transaction, the reporting requirements of FIRPTA would be superseded. The withholding obligation would fall on any transferee, transferee's agent, or settlement officer with respect to an acquisition of a United States real property interest from a foreign person. The withholding tax would be equal to the smallest of: (i) 28 percent of the amount realized (sales price) in the case of a corporate transferor, or 20 percent of the amount realized in the case of an individual transferor; (ii) the fair market value of the portion of the transferee's consideration that was within the withholding agent's control at any time; or (iii) the transferor's maximum tax liability, defined to include tax under §871(b)(1) or §882(a)(1) by reason of the disposition, plus any unsatisfied withholding liability caused by prior foreign ownership of such interest.[28]

As to any given payment, the Senate bill did not require withholding unless the transferee, transferee's agent, or the settlement officer received notice or knew that the transferor was a foreign person. The transferor's agent was required to furnish such notice and was obligated to make reasonable inquiry into whether the transferor was a foreign person. A transferor's agent would have been entitled to rely in good faith on a written statement of the transferor that the transferor was not a foreign person. In the event that the transferor's agent failed to notify the transferee, liability for withholding fell upon the transferor's agent instead of the transferee.

The Senate bill would not require withholding where the transferor furnished to the transferee a "qualifying statement" from the IRS that the transferor was exempt from tax or provided adequate security for the transferor's tax liability. The Senate bill also contained exceptions from withholding in the case of any acquisition of real property for $200,000 or less to use as the principal residence of the transferee, or for any transfer of stock of a corporation on an established securities market.

In order to implement the provision that withholding should not exceed the maximum tax liability of the transferor, the Senate bill contained a procedure for establishing the maximum tax liability. Upon request, the Internal Revenue Service would have been required to furnish a computation of the maximum tax liability of the transferor within 30 days.

The Senate bill provided that the fair market value of property as well as cash was subject to withholding. The withholding obligation also applied to the amount of any indebtedness assumed by the transferee, or subject to which the transferee took the property, but only if such indebtedness was incurred within two years of the transaction.

The Senate bill provided that, pursuant to regulations, a domestic partnership, the trustee of a domestic trust, or the executor of a domestic estate was required to withhold tax from amounts in its custody which were attributable to the disposition of a United States real property interest, and were either: (i) includable in the distributive share of a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

partner of the partnership who was a nonresident alien individual or a foreign corporation, partnership, trust, or estate; or (ii) includable in the income of a beneficiary of the trust or estate who was a nonresident alien individual or a foreign corporation, partnership, trust, or estate; or (iii) includable in the income of a nonresident alien individual or a foreign corporation, partnership, trust, or estate under the grantor trust rules of §671.

The Senate bill provided for withholding in the case of any transaction involving a United States real property interest on which gain was recognized under §897(d) or §897(e), relating to distributions (including liquidating distributions) by foreign corporations. The bill required the foreign corporation to withhold 28 percent of the net gain deemed realized on the transaction.

The Senate bill would have applied to the disposition of any United States real property interests acquired more than 30 days after the date of enactment.

The Conference Committee substantially modified the Senate bill. The modifications made by the Conference Committee will be discussed in the explanation of the 1984 Act below.

II. Overview

A. FIRPTA Withholding Requirements

Except as otherwise provided, new §1445 of the Code requires any transferee to withhold tax on the disposition of a United States real property interest (as defined in §897(c)) by a foreign person. The normal withholding rate will be ten percent of the amount realized on the disposition.

No withholding is required if one of five exemptions applies to a transaction under §1445(b). First, a transferee will be relieved of any withholding obligation if the transferor furnishes to the transferee an affidavit by the transferor stating, under penalty of perjury, that the transferor is not a foreign person and the transferor's United States taxpayer identification number ("non-foreign affidavit"). The Internal Revenue Service is authorized to prescribe regulations requiring a transferee to furnish to the Service a copy of any nonforeign affidavit upon which the transferee intends to rely. Second, no withholding will be required upon the disposition of an interest in a domestic corporation if the domestic corporation furnishes to the transferee an affidavit stating, under penalty of perjury, that the domestic corporation is not and has not been a United States real property holding corporation (as defined in §897(c)(2)) during the test period specified in §897(c)(1)(A)(ii). Third, a transaction is exempt from withholding if the transferee of a United States real property interest receives a "qualifying statement" satisfying regulations to be prescribed by the Internal Revenue Service. A "qualifying statement" is a statement by the Internal Revenue Service that either the transferor is exempt from tax under FIRPTA, the transferor or the transferee has provided adequate security for payment of the tax, or the transferor or the transferee has made other arrangements for the payment of the tax. The Service will prescribe regulations establishing procedural rules for requests for qualifying statements. The statute requires the Service to take action on a request for a qualifying statement within 90 days of receipt of the request. Fourth, a transferee who acquires property for use by him as a residence will not be required to withhold FIRPTA tax if the total purchase price for the property does not exceed $300,000. Fifth, no withholding is required on a disposition of shares of a class of stock that is regularly traded on an established securities market.

The obligation to withhold tax will not exceed the amount that the Internal Revenue Service determines to be the transferor's maximum tax liability. Either the transferor or the transferee may request a determination of the transferor's maximum tax liability from the Service. In the event of overwithholding, a transferor may seek an early refund of any amount withheld in excess of the transferor's maximum tax liability. The amount overwithheld, however, will not bear interest. As in the case of requests for qualifying statements under §1445(b)(4), the Service will have 90 days in which to respond to a request for a determination of the transferor's maximum tax liability.

At the request of either the transferor or the transferee, the Service may prescribe a reduced amount of withholding if the Service determines that reduced withholding will not jeopardize the ultimate collection of the tax. This provision is similar to the §1445(b)(4) qualifying statement exemption, which permits either the transferor or the transferee to provide security in lieu of withholding. The period within which the Service will be required to respond to a request for reduced withholding is also 90 days after receipt of the request.

A transferor's agent or a transferee's agent who has actual knowledge that a nonforeign affidavit or an affidavit that a domestic corporation is not a United States real property holding corporation is false, but fails to notify the transferee that the affidavit is false, may become liable for withholding to the extent of the agent's compensation derived from the transaction. In the case of a transferor's agent whose principal is a foreign corporation, the agent will be liable to the extent of his compensation for failure to notify the transferee that the transferor's affidavit is false, even in absence of proof of actual knowledge on the part of the agent.

The Act provides several special rules relating to corporations, partnerships, trusts, or estates. A domestic or foreign partnership, trust, or estate must withhold tax equal to ten percent of the fair market value of any United States real property interest distributed to a foreign partner or beneficiary if the distribution is subject to FIRPTA tax under the regulations to be prescribed under §897(g). As regulations have not yet been promulgated under §897(g), the scope of the withholding obligation under this provision is uncertain. Also to the extent provided in regulations, the transferee of an interest in a partnership, trust, or estate may be required to withhold tax equal to ten percent of the amount realized by the transferor on the disposition of the interest in the partnership, trust, or estate. A domestic partnership, the trustee of a domestic trust, or the executor of a domestic estate must withhold tax equal to ten percent of any amount in its custody that is attributable to the disposition of a United States real property interest and is includable in the income of a foreign partner or beneficiary. A foreign corporation is required to withhold tax equal to 28 percent of the amount of net gain recognized on a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

distribution to shareholders under §897(d) or §897(e). If a domestic corporation that is or has been a United States real property holding corporation during the test period specified in §897(c)(1)(A)(ii) redeems stock from a foreign shareholder in a transaction taxable under §302 or makes a liquidating distribution to a foreign shareholder, the corporation must withhold tax equal to ten percent of the amount realized by the foreign shareholder.

Section 1445 contains no exemption from withholding corresponding to the election under §897(i) for a corporation to be treated as a domestic corporation. However, the Conference Report directs the Internal Revenue Service to prescribe regulations allowing foreign shareholders in a foreign corporation electing §897(i) treatment to credit against their FIRPTA tax liability on a liquidating distribution any tax withheld on a qualifying §337 liquidation-related sale of a United States real property interest.

The Act generally repeals the information reporting requirements of FIRPTA. However, the act amends §6039C to authorize the Internal Revenue Service to prescribe regulations requiring reporting by foreign persons holding direct investments in United States real property interests. A foreign person will be treated as holding direct investment in United States real property interests if the foreign person did not engage in a trade or business in the United States at any time during the calendar year and the foreign person directly held, at any time during the calendar year, United States real property interests with a fair market value at least equal to $50,000.

B. Effective Date

The withholding rules will apply to dispositions of United States real property interests that occur on or after January 1, 1985, regardless of the date on which a foreign transferor originally acquired the United States real property interest. The changes in the information reporting requirements are effective retroactively to calendar year 1980.[29]

III. Detailed Analysis

A. Withholding of Tax on Dispositions of United States Real Property Interests

1. General Rule

Except as otherwise provided, new §1445 of the Code requires any transferee to withhold tax on the disposition of a United States real property interest (as defined in §897(c)) by a foreign person. The normal withholding rate will be 10 percent of the amount realized on the disposition.[30]

The structure of the withholding scheme required by §1445, as well as the required rate of withholding, differs substantially from the provision in the Senate bill. The Conference Report states that:

> "The Conference Agreement differs from the Senate amendment in requiring withholding *unless* one of five exemptions applies. The Senate amendment generally would have required withholding only if the would-be withholding agent had actual knowledge or had received formal notice that the seller was foreign. The Senate amendment would have imposed a general requirement on the transferor to notify the transferee (as well as any transferee's agent or settlement officer) if the transferor was a foreign person. It would also have imposed a general requirement on any transferor's agent to make a reasonable inquiry concerning the transferor's status and to notify the transferee if the agent had reason to believe that the transferor might be a foreign person. The conference agreement eliminates these two general requirements." [31]

By imposing a general duty of withholding and providing clear exemptions, while removing the uncertainties of the duty of investigation which would have been imposed under the Senate bill, the conference agreement appears to have created a simpler, more workable mechanism for FIRPTA withholding.

2. Exemptions from Withholding

a. Transferor Furnishes Non-foreign Affidavit

A transferee will be relieved of any withholding obligation if the transferor furnishes to the transferee an affidavit by the transferor stating, under penalty of perjury, that the transferor is not a foreign person and the transferor's United States taxpayer identification number.[32] The transferee will not be relieved of its withholding obligation if the transferee has actual knowledge that the nonforeign affidavit is false, or if the transferee receives notice from an agent of either the transferor or the transferee that the nonforeign affidavit is false.[33]

The Internal Revenue Service is authorized to prescribe regulations requiring a transferee to furnish to the Service a copy of any non-foreign affidavit upon which the transferee intends to rely. If the Service prescribes such regulations and a transferee fails to furnish a copy of a non-foreign affidavit in the time and manner required by the regulations, then the transferee will lose the benefit of the non-foreign affidavit exemption and the withholding obligation will remain.[34]

b. Domestic Corporation Furnishes Affidavit That It Is Not a United States Real Property Holding Corporation

No withholding will be required upon the disposition of an interest in a domestic corporation if the domestic corporation furnishes to the transferee an affidavit by the domestic corporation stating, under penalty of perjury, that the domestic corporation is not and has not been a United States real property holding corporation (as defined in §897(c)(2)) during the test period specified in §897(c)(1)(A)(ii).[35] As in the case of a non-foreign affidavit, an affidavit that a domestic corporation is not a United States real property holding corporation will not protect the transferee if the transferee has actual knowledge that the affidavit is false or the transferee receives notice from an agent of the transferor or the transferee that the affidavit is false.[36] A purchaser of stock will also lose the protection of an affidavit that a domestic corporation is not a United States real property holding corporation if the Internal Revenue Service requires transferees to furnish a copy of such an affidavit to the Service and the purchaser fails to furnish a copy of the affidavit as required.[37]

The prudent purchaser of a United States real property interest, including an interest in a domestic corporation

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

which may be a United States real property holding corporation, will obtain from the seller a non-foreign affidavit or an affidavit that the seller is not a United States real property holding corporation. The Conference Report warns of the consequences of failure to obtain either of the two affidavits:

> "Under the Conference Agreement and the provisions of FIRPTA, a purchaser of non-publicly traded stock in a domestic corporation is potentially liable for withholding unless he obtains a non-U.S. RPHC affidavit from the corporation or a non-foreign affidavit from the seller. If the purchaser obtains neither, he will be liable for withholding if the seller is in fact a foreign person, the domestic corporation was in fact a U.S. RPHC during the base period specified Code sec. 897(c)(1)(A)(ii), and the purchaser does not receive a qualifying statement." [38]

c. Transferee Receives Qualifying Statement

A transaction is exempt from withholding if the transferee of a United States real property interest receives a qualifying statement satisfying regulations to be prescribed by the Internal Revenue Service.[39] A "qualifying statement" is a statement by the Internal Revenue Service that either the transferor is exempt from tax under FIRPTA, the transferor or the transferee has provided adequate security for payment of the tax, or the transferor or the transferee has made other arrangements for the payment of the tax.[40] A further requirement for issuance of a qualifying statement is that either the transferor or the transferee must pay or provide adequate security for the payment of unsatisfied withholding liability from past transactions as well as from the transaction with respect to which the qualifying statement is sought.[41]

The Conference Report provides an example of a situation where the Service should issue a qualifying statement. Where the consideration paid by the transferee for a United States real property interest is not sufficient to cover the withholding liability for the transaction, a qualifying statement should be requested from and issued by the IRS. This might occur whenever the downpayment is less than ten percent of the total purchase price, since the ten percent withholding liability is computed based on total purchase price rather than on the amount of payments actually made by the transferee. In such a case, a qualifying statement will be issued "if the requirements for such a statement are otherwise satisfied and no abuse is involved." [42] Presumably, the real property which is the subject of the transaction will often be used to provide "adequate security" in cases where the downpayment is insufficient to cover the withholding liability.

The Service will prescribe regulations establishing procedural rules for requests for qualifying statements. The statute requires the Service to take action on a request for a qualifying statement within 90 days after receipt of the request.[43] The conferees substituted the 90-day deadline for the 30-day deadline in the Senate bill after the Internal Revenue Service pleaded insufficient resources to meet the 30-day deadline.[44] Whatever the merits of the Service's position, the longer deadline will reduce the utility of the qualifying statement if only those who are farsighted enough to make a request at least 90 days before closing a transaction can safely rely on the exemption.

d. Acquisition of Residence for Not More Than $300,000

A transferee who acquires property for use by him as a residence will not be required to withhold FIRPTA tax if the total purchase price for the property does not exceed $300,000.[45] The conference agreement liberalized a similar exemption in the Senate bill by increasing the limitation on the purchase price from $200,000 to $300,000, and by eliminating the requirement that the property be used by the transferee as his *principal* residence.

e. Publicly Traded Stock

No withholding is required on a disposition of shares of a class of stock that is regularly traded on an established securities market.[46] The securities market on which the stock is traded need not be located in the United States.[47] The exemption from withholding is more liberal than the exemption from FIRPTA tax under §897(c)(3). Although a shareholder who owns more than five percent of a class of publicly-traded stock at any time during the test period defined in §897(c)(1)(A)(ii) may be liable for tax under FIRPTA on gain from the disposition of his stock, the transferee will not be liable for withholding as long as the stock is publicly traded.

3. Limitations on Amount Required To Be Withheld

a. Maximum Tax Liability of Transferor

The obligation to withhold tax will not exceed the amount that the Service determines to be the transferor's maximum tax liability.[48] The Senate Finance Committe described the method of computing the transferor's maximum tax liability as follows:

> "The transferor's maximum tax liability consists of two elements: first, the maximum amount that the Treasury (upon request of the transferor or the withholding agent) determines that the transferor could owe on his gain on the sale, discussed below, and second, any unsatisfied prior withholding tax liabilities caused by prior foreign ownership with respect to the transferred property that, under the bill, were previously required to be withheld but were not withheld. The first element, the maximum tax that the transferor could owe on the sale, is to be calculated on a transaction by transaction basis at the highest possible tax rate for that transaction. For example, if a nonresident alien purchased unimproved land on January 1, 1985, for $100,000 and sold the land on September 1, 1985, for $110,000, his maximum tax liability would be $2,000, *i.e.*, 20 percent, the highest marginal tax rate for long-term capital gains of an individual, times $10,000, his net gain. Neither offsetting transactions (completed or anticipated) nor the presumed absence of other income during the taxable year would enter into the calculation of the maximum tax that the transferor could owe on the sale." [49]

Either the transferor or the transferee may request a determination of the transferor's maximum tax liability from the Internal Revenue Service.[50] The Conference Report, however, contains language restricting requests by

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

transferees for determination of the transferor's maximum tax liability: "However, transferees may request a maximum tax liability determination only to cure over-withholding errors. The procedure is not intended to be utilized to relieve transferees from withholding responsibility *before* a transaction occurs." [51] The Conference Report then proceeds to cast doubt on this apparently clear warning by stating that "Transferees may request a determination of maximum tax liability before or after a disposition." [52] The Conference Report does not make it clear why a transferee should seek a determination of the transferor's maximum tax liability before a disposition, if the determination cannot relieve the transferee from withholding responsibility. One may hope that the regulations will shed some light on the rather obscure explanation in the Conference Report.

A transferor may seek an early refund of any amount withheld in excess of the transferor's maximum tax liability.[53] This provision is intended to allow a transferor to seek a refund of overwithholding prior to the time that the transferor could otherwise file a Federal income tax return. The amount overwithheld, however, will not bear interest.[54]

Regulations are to be prescribed governing requests for determinations of a transferor's maximum tax liability and requests for early refunds of amounts overwithheld.[55] As in the case of requests for qualifying statements under §1445(b)(4), the Service will have 90 days in which to respond to a request for a determination of the transferor's maximum tax liability.[56]

b. Discretionary Reduction of Amount of Withholding Required

At the request of either the transferor or the transferee, the Service may prescribe a reduced amount of withholding if the Service determines that reduced withholding will not jeopardize the ultimate collection of the tax.[57] This provision is similar to the §1445(b)(4) qualifying statement exemption, which permits either the transferor or the transferee to provide security in lieu of withholding. It is conceivable that if a foreign transferor possesses substantial assets in the United States, the Service would not require the posting of a bond or other security and would utilize the authority of §1445(c)(2) to reduce the amount of withholding required.

The statute contemplates regulations governing requests for reductions in the amount of withholding required.[58] As in the case of requests for qualifying statements under §1445(b)(4) and requests for determinations of a transferor's maximum tax liability under §1445(c)(1), the Service will be required to respond to a request for reduced withholding within 90 days after receipt of the request.[59]

4. Liability of Transferor's or Transferee's Agents

A transferor's agent or a transferee's agent who has actual knowledge that a non-foreign affidavit or an affidavit that a domestic corporation is not a United States real property holding corporation is false, but fails to notify the transferee that the affidavit is false, may become liable for withholding to the extent of the agent's compensation. The liability of an agent for withholding in case of a failure to give notice is in addition to any penalties imposed under other provisions of the Code or other laws (civil and criminal).[60]

In the case of a transferor's agent whose principal is a foreign corporation, the agent will be liable to the extent of his compensation for failure to notify the transferee that the transferor's affidavit is false, even in the absence of proof of actual knowledge on the part of the agent. The Conference Report states: "The conferees believe that any agent deriving compensation from a foreign corporate principal in a real estate transaction will know that his or her principal is in fact foreign. The chances of ignorance in such a case are so remote that the Conference Agreement precludes a claim of ignorance." [61]

A "transferor's agent" is any person who represents the transferor in any negotiation related to the transaction with the transferee or any transferee's agent, or in settling the transaction.[62] A "transferee's agent" is any person who represents the transferee in any negotiation related to the transaction with the transferor or any transferor's agent, or in settling the transaction.[63] A settlement officer will not be treated as a transferor's agent or a transferee's agent merely because he receives or disburses any portion of the consideration for the transaction or records any document in connection with the transaction.[64]

5. Special Rules Relating to Corporations, Partnerships, Trusts, or Estates

a. Distributions by Domestic or Foreign Partnerships, Trusts, or Estates

A domestic or foreign partnership, trust, or estate must withhold tax equal to ten percent of the fair market value of any United States real property interest distributed to a foreign partner or beneficiary if the distribution is subject to FIRPTA tax under the regulations to be prescribed under §897(g).[65] As noted above, regulations have not yet been promulgated under §897(g), so the scope of the withholding obligation of a partnership, trust, or estate under this provision is uncertain. The Conference Report notes that, while most distributions by partnerships, trusts, and estates are not generally taxable, such distributions may be taxable for purposes of FIRPTA under the §897(g) regulations.[66]

b. Dispositions of Interests in Partnerships, Trusts, or Estates

To the extent provided in regulations, the transferee of an interest in a partnership, trust, or estate may be required to withhold tax equal to ten percent of the amount realized by the transferor on the disposition of the interest in the partnership, trust, or estate.[67] Unlike §1445(e)(4), this provision makes no reference to regulations under §897(g), but will presumably complement §1445(e)(4) and coordinate with the regulations to be prescribed under §897(g).

c. Disposition of United States Real Property Interests by Partnerships, Trusts, and Estates

A domestic partnership, the trustee of a domestic trust, or the executor of a domestic estate must withhold tax equal to ten percent of any amount in its custody that is attributable to the disposition of a United States real property interest (other than a disposition covered by §1445(e)(4) or (e)(5)), and is either (1) includable in the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

distributive share of a partner of a partnership who is a foreign person, or (2) includable in the income of a beneficiary of the trust or estate who is a foreign person, or (3) includable in the income of a foreign person by reason of the grantor trust rules of §671.[68] Aside from the reduction in the rate of withholding, this provision is essentially unchanged from the version in the Senate bill.

d. Distributions by Foreign Corporations

A foreign corporation is required to withhold tax equal to 28 percent of the amount of net gain recognized on a distribution to shareholders under §897(d) or §897(e).[69]

e. Distributions by United States Real Property Holding Corporations to Foreign Shareholders

If a domestic corporation that is or has been a United States real property holding corporation during the test period specified in §897(c)(1)(A)(ii) redeems stock from a foreign shareholder in a transaction taxable under §302 or makes a liquidating distribution to a foreign shareholder, the corporation must withhold tax equal to ten percent of the amount realized by the foreign shareholder.[70] The FIRPTA withholding provisions impose no independent withholding obligation on dividend distributions from United States real property holding corporations to foreign shareholders, which are already subject to the general provisions requiring withholding of tax from dividend distributions.[71] The Conference Report notes that withholding by a domestic corporation from distributions to foreign shareholders is necessary because dispositions of United States real property interests by the corporation would not have been taxed under FIRPTA. A disposition by a domestic corporation would not be subject to FIRPTA tax because, by definition, a domestic corporation is not a "foreign person," even if all of the shareholders are foreign persons.[72]

The Conference Report notes that if all gain from the disposition of United States real property interests by a corporation was recognized at the corporate level, an interest in the corporation would not be a United States real property interest subject to tax upon disposition under FIRPTA.[73] This might occur, for example, where a corporation chose not to elect §337 nonrecognition treatment for gain realized in the course of liquidation. In such a case, a qualifying statement granting exemption from withholding should be available.[74]

f. Corporations Making the §897(i) Election

Section 1445 contains no exemption from withholding corresponding to the election under §897(i) for a corporation to be treated as a domestic corporation. Consequently, a sale of a United States real property interest by a foreign corporation in the course of a complete liquidation may be subject to withholding despite the election by the corporation to be treated as a domestic corporation for purposes of FIRPTA. Since the corporation is still treated as a domestic corporation for purposes of the substantive provisions of FIRPTA, although not for purposes of the withholding provisions, the corporation may elect nonrecognition treatment of a sale in connection with its liquidation under §337. The Conference Report directs the Internal Revenue Service to prescribe regulations allowing foreign shareholders in a foreign corporation electing §897(i) treatment to credit against their FIRPTA tax liability on a liquidating distribution any tax withheld on a qualifying §337 liquidation-related sale of a United States real property interest.[75]

6. Information Reporting Requirements

The 1984 Act generally repeals the information reporting requirements of FIRPTA. However, the Act amends §6039C to authorize the Internal Revenue Service to prescribe regulations requiring reporting by foreign persons holding direct investments in United States real property interests. A foreign person will be treated as holding direct investments in United States real property interests if the foreign person did not engage in a trade or business in the United States at any time during the calendar year, and the foreign person directly held, at any time during the calendar year, United States real property interests with a fair market value at least equal to $50,000.[76]

For purposes of determining whether a foreign person directly holds United States real property interests worth $50,000, constructive ownership rules will apply. United States real property interests held by a partnership, trust, or estate shall be attributed proportionately to the partners or beneficiaries.[77] United States real property interests held by the spouse or minor child of an individual shall be attributed to the individual.[78]

If a foreign person is required to pay tax under FIRPTA or file a return, the return should be filed with the United States in the case of any interest in real property located in the United States or an interest in a United States domestic corporation.[79] In the case of an interest in real property located in the Virgin Islands or an interest in a Virgin Islands domestic corporation, the return should be filed with the Virgin Islands.[80]

CHAPTER 64

FOREIGN SALES CORPORATIONS

James F. Miller, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. *Original DISC Legislation*

Title V of the Revenue Act of 1971 [1] authorized the creation of domestic international sales corporations ("DISCs") by adding §§991 through 997 to the Code. A DISC is not taxable on its profits, but its shareholders are taxable on the DISC's profits that are either distributed or deemed distributed. Federal income tax is deferred on that portion of DISC profits that are neither distributed nor deemed distributed. Under the original legislation, one-half of the DISC's income was taxable as a deemed distribution to its shareholders, whether distributed or not, and tax was deferred on the remaining one-half of DISC income until the income was actually distributed, a shareholder disposed of his DISC stock, the DISC was liquidated, the corporation ceased to qualify as a DISC, or the DISC election was terminated or revoked by the shareholder(s).

To qualify for this method of taxing export income, a DISC must be incorporated under the laws of any of the states or the District of Columbia, have only one class of stock, have outstanding capital stock with a par or stated value of at least $2,500, elect to be treated as a DISC, and satisfy the "gross receipts" and "gross assets tests."

The "gross receipts test" requires that at least 95 percent of the corporation's gross receipts consist of "qualified export receipts." In general, "qualified export receipts" are receipts, including commission receipts, derived from the sale or lease for use outside of the United States of "export property," or from the furnishing of services related or subsidiary to the sale or lease of export property. Dividends on stock of a related foreign export corporation and interest on any obligation which is a qualified export asset are also considered qualified export receipts. "Export property" must be manufactured, produced, grown, or extracted in the United States. Exports subsidized by the U.S. government or exports intended for ultimate use in the United States do not qualify as export property. A DISC may not engage in manufacturing, producing, growing, or extracting export property.

The "gross assets test" requires that at least 95 percent of the corporation's assets be "qualified export assets." "Qualified export assets" include inventories of export property, necessary operational equipment and supplies, trade receivables from export sales (including commissions receivable), producer's loans, working capital, investments in related foreign export corporations, obligations of domestic corporations organized solely to finance export sales under guaranty agreements with the Export-Import Bank, and obligations issued, guaranteed, or insured by the Export-Import Bank or the Foreign Credit Insurance Association.

A DISC may act as a principal or as an agent with respect to export property. Its activities can be performed for or on behalf of related or unrelated parties. There is no requirement for a DISC to have employees or real operations. Because of the opportunity for tax deferral, the methods for allocating income between a DISC and its related suppliers are an important part of the DISC legislation. The allocation is determined either on an "arm's-length" basis or under one of two special pricing rules. An allocation can be made allowing the DISC to earn taxable income not exceeding the greater of:

(i) taxable income based upon the price actually charged the DISC by its supplier, if that price is justifiable under the §482 transfer pricing regulations (referred to as the §482 or arm's-length method);

(ii) four percent of the qualified export receipts attributable to the sale of export property plus 10 percent of the related export promotion expenses, which are the ordinary and necessary expenses incurred to obtain qualified export receipts (referred to as the 4 percent of gross receipts method); or

(iii) fifty percent of the combined taxable income ("CTI") of the DISC and its related supplier attributable to qualified export receipts plus 10 percent of the related export promotion expenses (referred to as the 50 percent of CTI method).

Neither the four percent of gross receipts method nor the 50 percent of CTI method can be applied to create a loss for the related supplier while the DISC is earning a profit.

B. *Statutory Amendments*

The Tax Reduction Act of 1975 [2] denied DISC benefits to profits arising from exports of products in short domestic supply, as determined by the Commerce Department under the Export Administration Act or by Executive Order of the President. The 1975 Act also removed DISC benefits from exports of natural resource products (*e.g.*, oil, gas, and minerals) subject to a percentage depletion allowance. The Tax Reform Act of 1976 excluded renewable resources, such as timber, from the natural resource products ineligible for DISC benefits.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The Tax Reform Act of 1976 [3] also included incremental provisions limiting DISC benefits to increases in exports above a certain base period. DISC benefits are limited to the income attributable to export gross receipts in excess of 67 percent of the average export gross receipts over a four-year moving base period. DISCs with adjusted taxable income of $100,000 or less are exempt from the incremental rule; the exemption is phased out as adjusted taxable income increases from $100,000 to $150,000.

In applying the incremental provisions, a DISC's export gross receipts are treated as equal to zero for those base period years in which the DISC did not exist. To prevent a controlling shareholder from gaining an advantage by shifting exports between multiple DISCs, the sales of all DISCs identifiable as part of a controlled group are combined in calculating base period exports.

The 1976 Act also reduced the DISC deferral on sales of military goods to one-half of the amount otherwise allowed. In addition, the Act also lengthened the period for recapture of the deferred tax in the event of disqualification or termination of DISC status to twice the number of years of the DISC's existence, up to a maximum period of 10 years.

The Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) [4] increased the deemed distribution rate from a DISC to a corporate shareholder from 50 percent to 57.5 percent of taxable income. This provision, which reduces DISC benefits for such shareholders by 15 percent, applies for tax years of DISCs beginning after 1982.

C. *Reasons for Change*

For several years, the DISC has been the subject of a dispute between the United States and other signatories of the General Agreement on Tariffs and Trade (GATT), who contend that the DISC provisions amount to an illegal export subsidy which violates the GATT. In 1976, a GATT panel determined that the DISC, as well as certain export tax practices of Belgium, France, and the Netherlands, had some characteristics of an illegal export subsidy. While the United States has not conceded that DISC violates the GATT, the United States agreed to the adoption of the GATT Panel Reports on the DISC and the related tax practices of Belgium, France, and the Netherlands in December 1981. The adoption of all four Panel Reports, however, was subject to an important Understanding.

The Understanding is a formal agreement stating that GATT signatories are not required to tax export income attributable to economic processes located outside their territorial limits. Furthermore, the Understanding states that arm's-length pricing principles should be observed in transactions between exporting enterprises and foreign buyers under common control. Finally, the Understanding states that the GATT does not prohibit the adoption of measures to avoid the double taxation of foreign source income.

A debate in the GATT Council, the ruling body of the GATT, ensued in early 1982 on the interpretation of the Understanding as it applied to the DISC. The European Community (EC) argued that the DISC was an illegal export subsidy because it allowed indefinite deferral of direct taxes on income from exports earned in the United States. The United States defended the DISC on the grounds that its effect on trade as an incentive for exports approximated the effect of the territorial system of taxation used by our European trading partners and found to be consistent with the GATT in the December 1981 Understanding. The majority of the GATT Council members, however, were persuaded by the arguments against the DISC and urged the United States to bring the DISC clearly into conformity with the GATT. The EC went one step further in requesting authorization from the GATT Council to take retaliatory action against the United States. Specifically, the EC wanted to increase trade restrictions on $2.3 billion in U.S. exports to the EC. Other countries also expressed an interest in receiving compensation for the DISC.

To remove the DISC as a contentious issue and to avoid further disputes over retaliation, the United States made a commitment to the GATT Council on October 1, 1982, to propose legislation that would address the concerns of other GATT members. In March 1983, the Reagan Administration approved the general outlines of a proposal to replace the DISC with a simpler, GATT-legal, territorial-type system of taxation for U.S. exports. Since under GATT rules, a country need not tax income from economic processes occurring outside its territory, the Reagan Administration proposal provided that certain income from economic activities occurring outside the United States is exempt from U.S. tax. The activities related to that income were to be undertaken by a foreign sales corporation located outside the U.S. customs territory. A foreign tax credit would not be available with respect to such income. International double taxation would be avoided by use of the exemption method. The proposal was designed to conform with the letter and spirit of the GATT, while providing benefits to exporters comparable to those of DISC at approximately the same revenue cost to the U.S. Treasury.

The proposal creating the foreign sales corporation (the "FSC") was eventually adopted by Congress as Title VIII of the Tax Reform Act of 1984. With certain transition rules, it is generally effective for taxable years of an FSC beginning on or after January 1, 1985. In general, where FSC provisions are identical to or substantially similar to present law DISC provisions, rules comparable to the rules in regulations issued pursuant to the DISC provisions will be applied to the FSC.

II. Overview

A. *General*

Sections 801-805 of the Tax Reform Act of 1984 adds §§921-927 to the Code, which generally replace the system of DISCs with a new system of FSCs. In the typical case, a U.S. parent will form an FSC for the purpose of making its export sales. Provided it satisfies certain requirements, a portion of an FSC's export income will be exempt from U.S. tax at both the corporate and domestic corporate shareholder levels. By requiring certain sales activities to be performed outside the United States, it is hoped that the FSC will comport with the provision in the GATT Understanding requiring tax exempt income to be derived from economic processes located outside the United States. These activities must be performed outside the U.S. cus-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

toms territory either directly by the FSC, or for it on a contract basis.

To comply with the Understanding, the income of the FSC will be determined using arm's-length prices, either actual prices for sales between unrelated, independent parties, or, for sales between related parties, by using the pricing procedures prescribed under §482 of the Code. Alternatively, one of two allocation rules, designed for administrative convenience to approximate arm's-length pricing, may be used.

Under the Act, the accumulated tax-deferred income of a DISC will be deemed previously taxed income and therefore exempt from taxation. Because certain small exporters may find it difficult to comply with the foreign management and activity requirements, the Act provides two options available only to small businesses.

B. Requirements of Foreign Sales Corporation

An FSC must be formed or organized under the laws of any jurisdiction other than the 50 States, the District of Columbia, and Puerto Rico with which the United States maintains an exchange of information agreement (or a treaty providing for the exchange of information).

The shares in the FSC (other than directors' qualifying shares) must be owned directly by no more than 25 persons. An FSC may issue more than one class of stock but may not issue preferred stock.

The FSC must maintain an office outside the United States territory (the foreign office). The foreign office of the FSC need not be maintained in the country of incorporation or organization of the FSC nor in the country where the FSC conducts its principal business.

The FSC must maintain a summary of its permanent books of account at the foreign office and the records which it is required to keep under §6001 at a location within the United States.

The FSC must have at least one director who is not a resident of the United States (defined by the Act to include Puerto Rico). The director may reside in any jurisdiction outside the United States.

A foreign corporation organized in an eligible possession or other foreign jurisdiction must elect to be treated as an FSC.

The FSC may not be a member, at any time during the taxable year, of any "controlled group of corporations" of which a DISC is a member.

The taxable year of an FSC will be required to be the same year as a majority shareholder (unlike current DISC law).

C. Effect of Qualification as an FSC

Foreign trade income ("FTI") is defined as income (including both profits and commissions) derived in connection with the FSC's "foreign trading gross receipts" ("FTGR"). A portion of the FSC's FTI ("exempt FTI") will not be subject to U.S. direct taxation and will be eligible for distribution to U.S. corporate shareholders on a tax-exempt basis.

Exempt FTI is attributable to FTGR that arise from certain economic activity actually conducted outside the U.S. customs territory. This foreign activity is necessary to meet the GATT requirement that any tax exemption be related to economic processes occuring outside the territorial limits of the exporting country.

If an FSC purchases "export property" from an independent party, or if "export property" is transferred to an FSC from a related party on the basis of §482 transfer pricing rules, 32 percent (or 30 percent in cases involving corporate FSC shareholders) of the FSC's income will be exempt from U.S. tax.

If one of two "special administrative pricing rules" is used by a taxpayer to allocate income to the FSC, tax exempt FTI will be determined under corollary administrative allocation rules to equal either 16 percent (15 percent in cases involving corporate FSC shareholders) of CTI or 1.27 percent (1.19 percent in cases involving corporate FSC shareholders) of FTGR, up to a limit of 32 percent (30 percent in the case of corporate FSC shareholders) of CTI.

D. Export Property

"Export property" generally means property manufactured, produced, grown, or extracted in the United States for direct use, consumption, or disposition outside the United States. Exports of products with respect to which a deduction for depletion is allowable, other than oil and gas and primary products from oil and gas, will be considered "export property" and eligible for FSC benefits.

E. Foreign Trading Gross Receipts

1. Qualified Transactions

Gross receipts from the following transactions may give rise to FTGR:

(i) The sale, exchange, or other disposition of export property;

(ii) The lease or rental of export property that is used by the lessee outside the United States;

(iii) The performance of services that are related and subsidiary to the sale, exchange, lease, rental, or other disposition of export property by the FSC;

(iv) The performance of engineering or architectural services for construction projects located outside the United States; and

(v) The performance of managerial services in furtherance of the production of FTGR (so long as at least 50 percent of the FSC's gross receipts for the taxable year is derived from activities described in (i), (ii), and (iii), *supra*).

FTGR does not include any interest, dividends, income from intangibles, or other types of investment income. In addition, it does not include income from certain unqualified transactions.

2. Foreign Management and Foreign Activity Tests

a. Foreign Management

In order for an FSC's gross receipts to qualify as FTGR, (i) all meetings of the board of directors of the FSC and all shareholder meetings must be outside the United States; (ii) the principal bank account of the FSC must be maintained outside the United States at all times during

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the taxable year; and (iii) all dividends, legal and accounting fees, and salaries of officers and members of the board of directors of the FSC disbursed during the taxable year must be disbursed out of bank accounts of the FSC maintained outside the United States.

b. Foreign Activity Tests

The FSC also will be required to satisfy certain sales activity and foreign direct cost tests in order for its gross receipts to qualify as FTGR.

(1) Sales Activity

The FSC (or its agent) must participate outside the United States in either the solicitation, negotiation, or making of the contract with regard to the transactions that give rise to FTGR. Solicitation includes telephone, telegraph, and mail communications to unrelated customers, either actual or potential, but does not include advertising. Negotiation includes any communication by the FSC, or its agent, to a customer or potential customer relating to the terms of sale. Acceptance means formal legal acceptance of a contract.

(2) Foreign Direct Costs

With respect to each transaction, the FSC must incur foreign direct costs equal to at least 50 percent of the total direct costs associated with five of the following activities (or foreign direct costs equal to at least 85 percent of the direct costs associated with each of two of them):

(i) Advertising and sales promotion;

(ii) Processing customer orders and arranging for delivery of the export property;

(iii) Transportation from the time of acquisition by the FSC (or, in the case of a commission relationship, from the beginning of such relationship for such transaction) to the delivery to the customer;

(iv) Determination and transmittal of a final invoice or statement of account and the receipt of payment; and

(v) Assumption of credit risk.

F. Transfer Pricing Rules

To comply with the December 1981 GATT Understanding, arm's-length pricing principles will govern the transfer of export property from the U.S. supplier to its related FSC. Hence, the allocation of income between the FSC and its suppliers is based on arm's-length standards. Taxpayers may allocate income to the FSC based on prices (i) charged between unrelated parties not under common control, or (ii) determined under any of the pricing methods described in the §482 regulations. Alternatively, as a matter of administrative convenience, the taxpayer may use one of the following two "special administrative pricing rules" for allocating income to the FSC: (i) the 23 percent of CTI method; or (ii) the 1.83 percent of FTGR method.

To be eligible to use either of the administrative pricing rules, the FSC (or its agent) must perform all of the sales activities and all of the activities relating to disposition of export property for purposes of the foreign direct cost test. These activities may be performed in any location, including the United States.

G. Taxation of FSC Shareholders

Tax exempt FTI will not be subject to U.S. direct taxation at the FSC level nor included in the income of a U.S. shareholder under Subpart F. In addition, domestic corporate shareholders will be allowed a 100 percent dividends received deduction with respect to actual dividends from distributed earnings attributable to the tax-exempt FTI. The dividends received deduction will be in lieu of a foreign tax credit or deduction for foreign taxes. Double taxation is therefore avoided by use of the exemption instead of the credit method. Other earnings of the FSC will remain taxable to the domestic corporate shareholder on a current basis and will be eligible for a foreign tax credit. A shareholder of an FSC that is not a domestic corporation will not be allowed a dividends received deduction with respect to FSC distributions.

H. Small Business Exception

In order to provide relief for the small exporters who may find the foreign economic activity requirements onerous, small businesses will be eligible for two alternatives to the FSC rules: the interest charge DISC and the small FSC.

A DISC with $10 million or less of qualified export receipts may elect to continue to be treated as a DISC. Deemed distributions with regard to base period exports (the incremental provisions) and to one-half of the DISC's income would be eliminated. Thus, except for export sales of military property, substantially all of the DISC's income will be eligible for tax deferral, but the tax otherwise due on the deferred income will be subject to a deductible arm's-length interest charge based on the Treasury bill rate. If the DISC's qualified export receipts exceed the $10 million threshold, income attributable to the excess receipts will be deemed distributed to the shareholders and fully taxable. The DISC, however, may continue to qualify as a DISC. Any excess above the $10 million threshold cannot be channeled through an FSC.

Alternatively, if a corporation elects small FSC status, it will not be required to meet the foreign management and foreign economic process requirements in order to have FTGR. If foreign trading gross receipts exceed $5 million, the income derived from receipts in excess of the $5 million threshold will not qualify as foreign trading gross receipts. No exemption to the requirements for use of the administrative pricing rules is provided for small FSCs. Foreign trading gross receipts of FSCs within a controlled group shall be aggregated for purposes of calculating the $5 million gross receipts threshold.

III. Detailed Analysis

A. Qualification as an FSC

1. General

A corporation's status as an FSC is tested each year. In order for a corporation to qualify as an FSC for a taxable year, it must meet the following statutory requirements for that year:

(i) The corporation must be created or organized under the laws of any foreign country, which, at the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

time of incorporation, maintains with the United States either an exchange of information agreement (as described in §274(h)(6)(C)) or an income tax treaty with respect to which the Secretary of the Treasury certifies that the exchange of information program with such country under such treaty is satisfactory. In addition, an FSC may be created or organized under the laws applicable to any possession of the United States (*i.e.*, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, and the Virgin Islands of the United States, but not the Commonwealth of Puerto Rico).[5]

(ii) The corporation may have no more than 25 shareholders at any time during the taxable year;[6]

(iii) The corporation may not have any preferred stock outstanding at any time during the taxable year;[7]

(iv) During the taxable year, the corporation must maintain an office located outside the United States in a foreign country which meets certain exchange of information requirements (see (i), *supra*), or in any possession of the United States;[8]

(v) The corporation must maintain a set of the permanent books of account (including invoices) at its office located outside the United States;[9]

(vi) During the taxable year, the corporation must maintain at a location within the United States the records which it is required to keep under §6001;[10]

(vii) At all times during the tax year, the corporation must have a board of directors which includes at least one individual who is not a resident of the United States;[11]

(viii) At no time during the taxable year may the corporation be a member of any "controlled group of corporations" of which a DISC is a member;[12]

(ix) The corporation must have made a valid election to be treated as an FSC, and that election must be in effect for the taxable year;[13] and

(x) The corporation's taxable year must be the same as the taxable year of that shareholder (or group of shareholders with the same 12-month taxable year) who has the highest percentage of voting power.[14]

Observation: Unlike the DISC, the FSC is not required to meet a "qualified export receipts" test or "qualified export assets" test.[15]

2. Incorporation Outside U.S. Customs Territory

As an initial matter, an FSC must qualify as a corporation under U.S. law. A foreign entity classified as a corporation under §7701(a)(3) (*e.g.*, associations, joint-stock companies, and insurance companies) will be considered a corporation for purposes of this requirement.

An FSC must be created or organized under the laws of a United States possession or any foreign country that is either (i) a party to an exchange of information agreement that meets the standards of the Carribean Basin legislation,[16] or (ii) an income tax treaty partner of the United States if the Secretary of the Treasury certifies that the exchange of information program with that country under the treaty is satisfactory.

Observation: The Finance Committee stated that it was "aware that exchange of information with certain countries, such as Switzerland, is limited because of the restrictions of their domestic law ... [and] that exchange of information programs may be ineffective if corporate stock may be issued in bearer share form."[17] It stated further that it "expects that the Secretary of the Treasury will take such factors into account in determining whether to qualify a country under this provision."[18] Whatever leeway may have been intended by the Finance Committee with respect to a U.S. treaty partner's obligation with regard to exchange of information appears to have been narrowed considerably by the Conference Agreement, however, where the conferees stated that they "intend that a foreign country, to qualify for this treatment, not be a country that has a statute (or other stated policy) which denies the IRS access to the home office of the FSC for audit purposes ... [and] that the Treasury assure itself of access to the home office of a FSC before certifying a treaty partner or before entering into an exchange of information agreement."[19]

Observation: On July 24, 1984, the Treasury Department released a "Discussion Draft" of an exchange of information agreement designed to satisfy the requirements of the Carribean Basin legislation. The agreement sets forth methods for the exchange of information designed to assist the contracting parties in enforcing their tax laws. Pursuant to the terms of the Discussion Draft, information concerning any person that may be subject to tax in one or both of the contracting countries is to be exchanged without regard to the residence or nationality of that person or of the person who was in possession of the information. As of this writing, it appears unlikely that any Carribean nations will enter into an exchange of information agreement along the lines of the Discussion Draft. They fear that their status as offshore financial centers may be irrevocably harmed by allowing the United States access to corporate financial records.

Observation: In the short term, it appears that U.S. possessions will be the most likely locations for the establishment of FSCs, since the Tax Reform Act of 1984 bars U.S. possessions from taxing any foreign trade income of FSCs derived before January 1, 1987.[20]

A U.S. taxpayer forming an FSC will be subject to Code provisions (*e.g.*, §367) regarding transfers of property out of the United States. These provisions —substantially modified by Section 131 of the Act — provide that certain transfers of appreciated property made in the course of corporate organization, reorganization, or liquidation can be made without recognition of gain to the corporation involved or its shareholders. All other transfers will be taxable. Qualified transfers generally will follow existing IRS guidelines for issuing favorable rulings. Although the mandatory ruling requirement of prior law for tax-free transfers of property from the U.S. to foreign corporations has been eliminated, taxpayers will be required to notify the IRS about outbound property transfers in accordance with regulations to be issued. Except to the extent provided in regulations, these rules will not apply to transfers made before January 1, 1986 (or, if later, the date one year after

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the date on which the corporation ceases to be a DISC), to an FSC of "qualified export assets" (as defined in §993(b) of the Code) held on August 4, 1983, by a DISC in a nontaxable reorganization or incorporation described in §§351 or 368(a)(1).

3. Shareholder Limitation

An FSC may have no more than 25 shareholders at any time during the taxable year. The Finance Committee Report clarifies that a member of the corporation's board of directors that holds qualifying shares required to be owned by a resident of the country under whose laws the FSC is organized will not be counted as a shareholder for this purpose.[21]

4. FSC Stock

An FSC may not have any preferred stock outstanding during the taxable year. The Finance Committee stated that it "intends that a FSC will be allowed to create more than one class of common stock for bona fide business purposes." [22] Thus, a number of small unrelated exporters might set up an FSC to handle their export sales. Each exporter would be issued a different class of common stock, which would pay dividends to each class in proportion to the exports marketed by the owner of that class through the FSC.[23]

The Finance Committee cautioned, however, that one or more of the rights of a class stock may be disregarded if the right has the effect of avoidance of Federal Income Tax. As an example, it noted that dividend rights may not be used to direct dividends from exempt foreign trade income to shareholders that have taxable income and to direct other dividends to shareholders that have net operating loss carryovers.[24]

5. Maintenance of Office Outside the United States

An FSC must maintain an office located outside the United States, although more than one FSC may share an office and the office need not be located in the country in which the FSC is organized.[25] The Finance Committee stated its intention that the office must constitute a "permanent establishment" under income tax treaty concepts to satisfy this requirement.[26]

Observation: The existence of a "permanent establishment" provides a treaty nexus for taxation of the taxable business income and "effectively connected" investment income of nonresident aliens and foreign corporations. While each treaty is a law unto itself, all U.S. treaties may be analyzed in terms of a three-fold test for determining permanent establishment status, namely: (i) the assets test (which assets, buildings, offices and "other fixed places of business" will constitute a permanent establishment); (ii) the agency/relationship test (which agencies and business relationships — dependent agents, independent agents, purchasing agents, partnerships, subsidiaries, and related entities — will or will not constitute a permanent establishment in the absence of a fixed place of business); and (iii) the activities test (which activities are permissible even through a fixed place of business (*e.g.*, the mere purchase of goods, promotional activities, and casual warehousing) and which activities may themselves constitute a permanent establishment according to the degree of sales or business activity involved).

Of the three tests, the assets test appears most appropriate for determining whether a corporation meets the foreign or possessions office requirement. Under this test, mere existence of a fixed business situs in the taxing state will not alone constitute a permanent establishment. Judicial and administrative treaty interpretations require that a fixed place of business be continuously and not sporadically used to engage in business in the taxing state. Thus, under the assets test, a permanent establishment (and, therefore, a FSC foreign or possessions office) will exist only if there is both a fixed place of business and the continuous use of such business situs for commercial activity.[27]

6. Maintenance of Permanent Books of Account

An FSC must maintain a set of the permanent books of account at its office outside the United States. According to the Finance Committee, the permanent books of account must include "at least the quarterly income statements and a year-end balance sheet of the FSC." [28]

7. Maintenance of Records, Statements, and Special Returns

Under §6001, all persons who are required to pay or collect any Internal Revenue tax (except for wage earners and farmers) must keep permanent books of account or records that are sufficient to establish the correct amount of income, credits, deductions, and other matters required to be reported on their returns. An FSC must maintain such books and records at a location within the United States during the taxable year.

8. Nonresident Director

At all times during a taxable year, the FSC must have a board of directors which includes at least one individual who is not a resident of the United States. The nonresident member of the FSC board of directors may be a citizen of the United States, however.[29]

Observation: As a practical matter, two nonresident directors are advisable because the FSC provisions make no allowances for unexpected vacancies on the board.

9. Controlled Group of Corporations Cannot Include FSC and DISC

An FSC cannot be a member of a "controlled group of corporations" of which a DISC (after December 31, 1984, the only DISCs will be "interest charge DISCs," as described in III, G, *infra*) is a member. For FSC purposes, the term "controlled group of corporations" means —

(i) *Parent-Subsidiary Controlled Group* — One or more chains of corporations connected through stock ownership with a common parent corporation if —

(a) stock possessing more than 50 percent of the total combined voting power of all classes of stock entitled to vote or more than 50 percent of the total value of shares of all classes of stock of each of the corporations, except the common parent corporation, is owned, directly or indirectly, by one or more of the other corporations; and

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(b) the common parent corporation owns stock possessing more than 50 percent of the total combined voting power of all classes of stock entitled to vote or more than 50 percent of the total value of shares of all classes of stock of at least one of the other corporations, excluding, in computing such voting power or value, stock owned directly by such other corporations;

(ii) *Brother-Sister Controlled Group* — Two or more corporations if five or fewer persons who are individuals, estates, or trusts own, directly or indirectly, stock possessing —

(a) more than 50 percent of the total combined voting power of all classes of stock entitled to vote or more than 50 percent of the total value of shares of all classes of stock of each corporation, and

(b) more than 50 percent of the total combined voting power of all classes of stock entitled to vote or more than 50 percent of the total value of shares of all classes of stock of each corporation, taking into account the stock ownership of each such person only to the extent such stock ownership, is identical with respect to each such corporation.

(iii) *Combined Group* — Three or more corporations each of which is a member of a group of corporations described in paragraph (i) or (ii), and one of which —

(a) is a common parent corporation included in a group of corporations described in paragraph (i), and also

(b) is included in a group of corporations described in paragraph (ii); and

(iv) *Certain Insurance Companies* — Two or more insurance companies subject to taxation under §802 which are members of a controlled group of corporations described in paragraphs (i), (ii) or (iii). Such insurance companies shall be treated as a controlled group of corporations separate from any other corporations which are members of the controlled group of corporations described in paragraph (i), (ii), or (iii).[30]

10. Election

In order for a corporation to be treated as an FSC for a taxable year, an election must be made by that corporation "in such manner as the Secretary shall prescribe."[31] Presumably, the election will be made by filing a form similar to Form 4876 (the form currently filed by DISCs) with the Internal Revenue Service center with which the corporation will file its income tax return. Once made, the election remains in effect until revoked, even though the corporation may fail to be treated as an FSC (thus being taxed on all its foreign trade income) for a taxable year because it does not meet one of the qualification tests for that year.[32]

a. Time of Election

The time for electing to be treated as an FSC varies depending upon whether the corporation is electing for its first taxable year or for a later year. If the corporation is electing for its first taxable year, then, according to the expressed intention of the Finance Committee,[33] the election must be made on or before the 90th day after the beginning of its first taxable year. If the election is for a taxable year which is not the first taxable year of the corporation, then the election must be made during the last 90 days of the year preceding the year for which the election is to be effective.[34]

Observation: Under section 805(b)(2)(A) of the Act, taxes are forgiven on accumulated DISC income with respect to actual distributions made after December 31, 1984, by a DISC (or former DISC) that is a qualified DISC on December 31, 1984. However, if the parent of a DISC with accumulated income organizes a corporation, and if that corporation makes an FSC election during the 90-day period immediately preceding January 1, 1985 (the effective date of the FSC provisions), the FSC election will automatically terminate the DISC election under regulations to be prescribed by the Secretary pursuant to section 805(b)(5) of the Act,[35] which was added during Conference. However, the Finance Committee stated its intention that "a newly formed corporation . . . be permitted to make an election on or before the 90th day after the beginning of its first taxable year."[36] Thus, §927(f)(1)(A) provides, in part, that "the Secretary may give his consent to the making of an election at such other times as he may designate" consistent with the intent of the Finance Committee and the statute. Accordingly, the Treasury Department has indicated its intention to allow foreign corporations owned by parents of existing DISCs whose accumulated income qualifies for tax forgiveness to make an FSC election on or before the 90th day after January 1, 1985.

b. Shareholders' Consent

An election is valid only if each person who was a shareholder of the electing corporation on the first day of the first taxable year for which the election is effective consents to the election.[37] It is assumed that a shareholder may consent by signing either the consent on a form similar to Form 4876 (applicable to DISCs) or a separate statement of consent attached to such a form.

c. Termination of Election

An election to be treated as an FSC may be voluntarily revoked or involuntarily terminated.[38] An electing corporation may revoke its election at any time after the first year for which the election is effective.[39] A revocation made during the first 90 days of a taxable year is effective for that taxable year, and all subsequent taxable years. However, revocation made after the first 90 days is effective for all taxable years following the current taxable year.[40]

The Treasury is empowered to issue regulations prescribing the manner in which a termination of election shall be made.[41] Presumably, the revocation will be made in a manner consistent with the rules applicable to DISCs.[42] Accordingly, the corporation may revoke the election by filing a statement that the FSC election is revoked with the Service center with which the corporation filed its election. If the corporation has filed a return since electing FSC status, then the statement of revocation would be filed with the Service center with which the corporation filed its last return.

An FSC election automatically terminates if the corporation fails to qualify as an FSC for five consecutive

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

taxable years.[43] Once an election has been terminated, the corporation can again be treated as an FSC for later taxable years, but only if it files a new election.[44]

11. Taxable Year of FSC

Under §441(h), the taxable year of the FSC must be the taxable year of the majority shareholder (or group of shareholders with the same 12-month taxable year) who has the highest percentage of "voting power" (as determined on the basis of total combined voting power of all classes of stock of the corporation entitled to vote). If two or more shareholders (or shareholder groups) are tied for the highest percentage of "voting power," the taxable year of the FSC will be the same 12-month period as that of any such shareholders (or shareholder groups). In cases where there is a subsequent change of ownership, the Secretary of the Treasury is directed to prescribe regulations under which these rules will apply, but "only if such change is a substantial change of ownership."

Observation: These rules also apply to DISCs established after March 21, 1984.

B. Effect of FSC Qualification

1. Exempt Foreign Trade Income Exclusion

If a corporation qualifies as an FSC for a taxable year, a portion of its foreign trade income will be exempt from Federal income tax.

Observation: The major advantage of an FSC over a DISC is that the exemption is permanent; there is no recapture of the benefit in future years by corporate shareholders if dividends are paid or the FSC no longer satisfies qualification requirements.

"Foreign trade income" ("FTI") is defined as gross income of an FSC attributable to "foreign trading gross receipts" and includes both the profits earned by the FSC itself from exports and commissions earned by the FSC from products or services exported by others.[45] Foreign trading gross receipts ("FTGR"), in turn, are defined as the gross receipts of an FSC which are attributable to the export of certain goods and services.[46]

To achieve exemption, the FSC provisions treat FTI as foreign source income which is not effectively connected with the conduct of a trade or business within the United States.[47] The portion of FTI that is treated as exempt FTI depends on the "pricing rule" used to determine the amount of FTI earned by the FSC.[48] If the amount of income earned by the FSC is based on arm's-length pricing between unrelated parties, or between related parties under the rules of §482, then exempt FTI is 32 percent (30 percent in cases involving corporate shareholders of FSCs) [49] of the FTI derived from the transaction.[50] For these purposes, FTI will not include any income attributable to patents, inventions, models, designs, formulas, or processes whether or not patented, copyrights (other than films, tapes, records, or similar reproductions, for commercial or home use), good will, trademarks, trade brands, franchises, or other like property.[51]

On the other hand, if the income earned by FSC is determined under the "special administrative pricing rule,"[51][52] then the exempt FTI is 16/23 (15/23 in the case of corporate FSC shareholders) [53] of the FTI derived from the transaction.[54] Where applicable, the "special administrative pricing rules" permit a transfer price on a sale to an FSC (or FSC commissions) which will yield FTI equal to (1) 1.83 percent of the FTGR derived from the sale, or (2) 23 percent of the combined taxable income ("CTI") of the FSC and the transferor which is attributable to the FTGR derived from the sale, but in no event may the amount in (1) exceed 2 times the amount in (2) (*i.e.*, 46 percent of CTI).[55]

Thus, if one of the two "special administrative pricing rules" is used, tax-exempt FTI will equal either (1) 1.27 percent (1.19 percent in cases involving corporate FSC shareholders) of FTGR, or (2) 16 percent (15 percent in cases involving corporate FSC shareholders) of CTI, but in no event may the amount in (1) exceed 2 times the amount in (2) (*i.e.*, 32 percent (30 percent in cases involving corporate FSC shareholders) of CTI).

Any deductions of the FSC properly apportioned and allocated to the FTI derived by the FSC from a transaction will be allocated on a proportionate basis between exempt and nonexempt FTI.[56] Thus, deductions allocable to exempt FTI may not be used to reduce the taxable income of the FSC.

The following example illustrates the determination of exempt FTI using the three "pricing rules":

> *Example*: An FSC purchases export property from a related supplier and sells the property for $1,000 of FTGR. The FSC incurs expenses attributable to the sale of $225. The FSC's cost of goods sold (*i.e.*, transfer price) is $756.70 under the 1.83 percent of FTGR method and $752 under the 23 percent of CTI method. (For examples as to how these transfer prices were derived under the facts as set forth in this example, see the detailed discussion of the "special administrative pricing rules" in III, E, *infra*). It is assumed that if the FSC's cost of goods sold is $720, the price can be justified as satisfying the standards of §482. Finally, it is assumed that the shareholder of the FSC is a corporation. Thus, under the tax preference rules as amended by the Act (*see* footnote 49, *supra*), exempt FTI will be 15/23 of FTI (where the "special administrative pricing rules" are used) and 30 percent of FTI (where the transfer price to the FSC was determined under §482).

The FSC's FTI, exempt FTI, and expenses properly apportioned and allocated to FTI from the transaction are as follows:

(a) *If the transfer price to the FSC was determined under the 1.83 percent of FTGR method:*

FTGR	$1,000.00
Less cost of goods sold	(756.70)
FTI	$ 243.30
Exempt FTI (15/23 x $243.30)	$ 158.67
Expenses allocable to exempt FTI (158.67/243.30 x $225)	(146.73)

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Taxable income of FSC not subject to U.S. tax ($158.67 - $146.73)	$ 11.94

(b) *If the transfer price to the FSC was determined under the 23 percent of CTI method:*

FTGR	$1,000.00
Less cost of goods sold	(752.00)
FTI	$ 248.00
Exempt FTI (15/23 x $248)	$ 161.73
Expenses allocable to exempt FTI (161.73/248 x $225)	(146.73)
Taxable income of FSC not subject to U.S. tax ($161.73 - $146.73)	$ 15.00

(c) *If the transfer price to the FSC was determined under Section 482:*

FTGR	$1,000.00
Less cost of goods sold	(720.00)
FTI	$ 280.00
Exempt FTI (30% x $280)	$ 84.00
Expenses allocable to exempt FTI (84.00/280 x $225)	(67.50)
Taxable income of FSC not subject to U.S. tax ($84 - $67.50)	$ 16.50

2. Non-exempt Foreign Trade Income, Investment Income, and Carrying Charges

Section 921(d) provides that: (i) all FTI other than exempt FTI and so-called "section 923(a)(2) non-exempt income";[57] (ii) all interest, dividends, royalties, and other investment income[58] received or accrued by FSC; and (iii) all carrying charges[59] received or accrued by an FSC will be treated as income effectively connected with a trade or business conducted through a "permanent establishment" of such corporation within the United States. FTI other than exempt FTI and "section 923(a)(2) nonexempt income" generally will be taxed currently and treated as derived from sources within the United States, rather than as foreign source income, for purposes of the foreign tax credit limitation (*see* §904).[60] Investment income and carrying charges generally will be taxed currently to the FSC, subject to the normal sourcing and foreign tax credit rules (*see* §904).

Observation: The fact and numbers necessary to compute commissions to be paid a commission agent FSC will not generally be available for several months after the close of a taxable year. Thus, unless regulations allow a contractual arrangement whereby a commission agent FSC may be paid its commissions for a taxable year up to, for example, the due date of the related supplier's tax return, a portion of that payment could be regarded as a carrying charge or imputed interest taxed currently to the FSC.

"Section 923(a)(2) non-exempt income" will be taxed to the FSC as if it were not a FSC. In other words, the FSC may be taxed on such income if it were "effectively connected" with the conduct of U.S. business, or the FSC's shareholder may be taxed because it is subject to Subpart F.

3. Denial of Tax Credits and Treaty Benefits

An FSC may claim no credit other than the foreign tax and possessions tax credit,[61] the credit for tax withheld at source on nonresident aliens and foreign corporations,[62] and the credit for tax imposed on certain uses of gasoline and special fuels.[63] The foreign tax credit that may be claimed by an FSC is limited, however, to income, war profits, and excess profits taxes paid or accrued with respect to all FSC income other than FTI.[64] An FSC may not claim any benefits under any income tax treaty between the United States and any foreign country.[65]

4. Participation in International Boycotts

Pursuant to §927(e)(2), the Secretary of the Treasury is directed to issue regulations that will "limit" the exempt FTI of an FSC that participates in or cooperates with an international boycott. In addition, an FSC's exempt FTI will be "limited" to the extent that any illegal bribe, kickback, or other payment is made for an official employee or agent of a government.

The statute does not define how the regulations issued by the Secretary of the Treasury will "limit" an FSC's exempt FTI. However, the Finance Committee Print suggests that such regulations may be similar to Treas. Regs. §1.995-2(a)(b), which require DISC shareholders to recognize constructive dividends of pro rata shares of DISC income earned while the DISC participated in an international boycott, and the sum of any illegal bribe, kickbacks, or other payments paid on or in behalf of a DISC directly or indirectly to an official, employee, or agent in fact of a government.

C. Export Property

Central to the concept of the FSC is "export property." Like the DISC, the FSC provisions were enacted to encourage the sale abroad of this type of property.

1. In General

FSC "export property" is property which is not "excluded property" or "property in short supply" and meets all of the following three tests:

(i) It is "manufactured, produced, grown, or extracted in the United States by a person other than a FSC;"[66]

(ii) It is "held primarily for sale, lease, or rental in the ordinary course of trade or business, by, or to, a FSC, for direct use, consumption, or disposition outside the United States;"[67] and

(iii) Not more than 50 percent of its fair market value "is attributable to articles imported into the United States."[68]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Observation: Section 927(d)(3) clarifies that for purposes of the FSC, the term "United States" includes the Commonwealth of Puerto Rico. Thus, "export property" would include property manufactured, produced, grown, or extracted in Puerto Rico.

Observation: Because the FSC definition of "export property" closely tracks the DISC definition, it may be assumed, except where otherwise indicated, that the DISC regulations underlying the DISC definition of "export property" [69] will carry over to the FSC.

2. Manufactured, Produced, Grown, or Extracted

Property is "export property" only if it is manufactured, produced, grown or extracted in the United States by any person provided that person is not qualified as an FSC and is not treated as an FSC.[70] Thus, manufacture or production by a FSC prevents property from qualifying as export property.

3. Destination

"Export property" must be held primarily for sale or lease in the ordinary course of trade or business to an FSC or to any other person, and such sale or lease must be for direct use, consumption or disposition outside the United States.[71] However, property leased or rented by an FSC for use by a corporation related to the FSC is not export property.[72]

Property is generally considered sold for direct use, consumption, or disposition outside of the United States if it satisfies the so-called "destination test." The Finance Committee echoed the current DISC regulations [73] in stating its intention that "the destination test ... will be considered satisfied if the FSC delivers the property to a carrier or freight forwarder for ultimate delivery, use, or consumption outside of the United States" and that "[t]his rule will apply without regard to (1) the F.O.B. point or place of passage of title, (2) whether the purchaser is a United States or foreign purchaser, or (3) whether the property is for use of the purchaser or for resale." [74]

4. Excluded Property

As with the DISC provisions, the term "export property" does not include "excluded property,"[75] defined as:

> (i) property leased or rented by a FSC for use by any member of a controlled group of corporations of which such FSC is a member;" [76]
>
> (ii) patents, inventions, models, designs, formulas, or processes whether or not patented, copyrights (other than films, tapes, records, or similar reproductions, for commercial or home use), goodwill, trademarks, trade brands, franchises, or other like property;[77]
>
> (iii) oil or gas (or any primary product thereof);[78] or
>
> (iv) products the export of which is prohibited or curtailed to effectuate the policy set forth in paragraph (2) (C) of section 3 of the Export Administration Act of 1979 (relating to the protection of the domestic economy).[79]

In addition, property that is manufactured, produced, grown, or extracted in the United States by a person other than an FSC which the President has determined is in short supply and which he has so designated in an executive order will not be treated as export property during the period beginning with the date specified in the executive order and ending with the date specified in the executive order setting forth the President's determination that the property is no longer in short supply.[80]

a. Leases

As a general rule, if property is leased to a member of the "controlled group of corporations" which includes the FSC, it is "excluded property"; *i.e.*, it is not export property. As with the DISC, however, it is assumed that if the second member of the group in turn leases the property to an unrelated party for use predominantly outside of the United States, then that property is not excluded property.[81]

This second member could be domestic or foreign.[82] If the unrelated party subleases the property to a member of the same "controlled group of corporations" as the FSC, then the property would not be export property.[83] Thus, it is the ultimate use of the property which determines whether property is leased to a member of the "controlled group of corporations" in a manner which results in excluding the property.

Observation: In the case of films, tapes, records, or similar reproductions, the ultimate use of the property is considered to be the sale or exhibition of the property to the general public.[84] For example, film prints leased by an FSC to a foreign member of a "controlled group of corporations," which makes copies from the prints and then leases the copies to foreign persons who are not members of such group for showing to the general public, are not disqualified because the ultimate use of the prints is for leasing of the copies outside such group.[85]

b. Natural Resources

The only natural resources specifically excluded from the definition of "export property" are oil or gas (or any "primary product" thereof). Coal and uranium products, and other depletable products (other than oil and gas), specifically excluded from the definition of "export property" under the DISC rules will not be excluded under the FSC legislation, however.[86]

D. Foreign Trading Gross Receipts

1. In General

The key to whether an FSC has exempt FTI for a taxable year is whether any of its gross receipts for such year qualify as "foreign trading gross receipts" ("FTGR").

Generally, "gross receipts" are the total amounts received or accrued by a person from the sale, lease or rental of property held primarily for sale, lease, or rental in the ordinary course of trade or business, and gross income from all other sources.[87] In the case of a transaction which gives rise to a commission, the term "gross receipts" is defined to mean the amount of the gross receipts derived by the principal from the sale, lease, or rental of the property on which the commission arose.[88] Thus, in the case of a commission agent FSC, the reference to gross receipts is really a reference to the gross receipts of the principal of the FSC.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

An FSC's gross receipts will qualify as FTGR only if the following three requirements are met: (i) the gross receipts of the FSC must be attributable to the sale, exchange, or other disposition of export property, the lease or rental of export property, for services related and subsidiary to the sale or less of export property, engineering and architectural services, or export management services;[89] (ii) the management of the FSC during the taxable year must take place outside the United States;[90] and (iii) the economic processes with respect to a particular transaction must take place outside the United States.[91]

2. Qualified Transactions

Transactions generating gross receipts eligible for treatment as FTGR are similar to those that give rise to "qualified export receipts" for purposes of the DISC rules.[92] In view of the fact that the Finance Committee made direct reference to the regulations regarding "qualified export receipts" in explaining the transactions qualified to generate FTGR,[93] it may be assumed that the such regulations will be modified and substantially carried over to the FSC.

a. Sales of Export Property

FTGR includes gross receipts from sales, exchanges, or other dispositions of export property made directly by the FSC, as well as by any principal for whom the FSC acts as a commission agent.[94] The sale, exchange, or other disposition must be pursuant to a contract entered into with the purchaser by the FSC, or by the FSC's principle.[95]

b. The Lease or Rental of Export Property

Leases or rentals of export property by a FSC, or by any principal for whom the FSC acts as a commission agent, to unrelated persons using such property outside the United States will produce FTGR.[96] Presumably, such property must be held by the FSC (or by a principal for whom the FSC acts as a commission agent with respect to the lease) either as an owner or lessee at the beginning of the term of such lease, and the FSC must qualify as an FSC for its taxable year in which the term of the lease begins.[97]

c. Services Related and Subsidiary to the Sale or Lease of Export Property

Gross receipts from the performance of services which are both related to and subsidiary to any qualified sale, exchange, lease, rental, or other disposition of export property by the corporation providing the services may qualify as FTGR. The services must actually be furnished by the FSC which realized income from the sale or exchange of the export property, or by the person who sold or leased the export property to which the services relate. In the latter case, the FSC must act as a commission agent with respect to the sale or lease of the property and with respect to the services.[98]

d. Engineering and Architectural Services

Gross receipts from engineering or architectural services on foreign construction projects which are either located abroad or proposed for location abroad may qualify as FTGR. Presumably, the services must actually be performed by the FSC or by a person who has contracted with the FSC to furnish the services, provided that the FSC acts as principal with respect to the furnishing of the services or as the commission agent with respect to the services. If, as under the DISC rules, the services can also be provided by a related supplier, the FSC would have to be a commission agent with respect to the services pursuant to a supplier's agreement.[99]

e. Export Management Services

Gross receipts for certain managerial services provided to an unrelated FSC (or DISC) may qualify as FTGR. As under the DISC rules, it may be assumed that the services must aid the other FSC (or DISC) in realizing FTGR. Like the DISC system, at least 50 percent of the gross receipts of the FSC providing the services for the year must consist of gross receipts derived from the sale or lease of export property or the furnishing of related and subsidiary services.[100] Management services will include, for example, preparing export market studies and contacting potential foreign purchasers.[101]

Observation: The FSC provisions originally passed by the Senate expanded the benefits for managerial services beyond those available under the DISC provisions.[102] Although the bill as passed requires that an FSC or DISC have at least 50 percent of its income from exporting before income from managerial services provided to an unrelated party will be accorded beneficial treatment, the conferees agreed to ask the Treasury Department for a study on services.[103] In particular, the conferees stated their expectation that the study "consider the revenue impact of FSC benefits for services" and directed the Secretary of the Treasury, in consultation with the Office of the United States Trade Representative, to undertake a study of the advisability of providing the benefits allowed under the FSC election "for profits from services performed in the United States and sold outside the United States."[104] The Treasury Department is to report on the results of this study to the Senate Finance Committee and the House Ways and Means Committee by January 18, 1985.

f. Gross Receipts Not Included in FTGR

Gross receipts from the sale, lease, or other disposition of export property or from qualified services will not constitute FTGR if: (i) they arise from the sale or lease of export property or the furnishing of services for ultimate use in the United States; (ii) they arise from the sale or lease of export property or the furnishing of services accomplished by a subsidy granted by the United States or by any instrumentality of the United States; (iii) they arise from the sale or lease of export property or the furnishing of services for use by the United States or any instrumentality of the United States where the use of the export property or the services is required by law or regulations; (iv) they arise from the sale or lease of export property or furnishing of services to another FSC which is a member of the same controlled group of corporations of which the transferor FSC is a member; and (v) they constitute investment income or carrying charges.[105]

(1) Ultimate Use Test

Property which is sold or leased for ultimate use in the United States does not give rise to FTGR.[106] This provision appears unnecessary since such property is not export property in any event.[107] Accordingly, rules for determining whether this exclusion applies will presumably be identical

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

to the rules for determining when property is held for use outside the United States.[108]

(2) Use by the United States

Sales or leases of export property for use by the United States, or the furnishing of engineering or architectural services to the United States, or any instrumentality thereof will not constitute FTGR if such use of export property or services is required by law or regulation.[109]

(3) Subsidized Transactions

Sale, lease, or other disposition of export property or the furnishing of otherwise qualified services will not give rise to FTGR if the transaction is pursuant to a subsidy granted by the United States or any of its instrumentalities.[110] Current DISC regulations list several programs that may qualify as subsidies for this purpose.[111]

(4) Intra-Group Transactions

Transactions between related FSCs cannot give rise to FTGR of those FSCs.[112] For example, a sale by one FSC to a related FSC will not give rise to FTGR of the first FSC, but a sale by the second FSC of those same goods to an unrelated foreign purchaser will result in FTGR of the second FSC.[113]

(5) Investment Income and Carrying Charges

Investment income and carrying charges are excluded from the definition of FTGR.[114] Investment income includes interest, dividends, rent (except from a qualified lease or rental of export property), royalties, annuities, the income and the gain from trading in stocks, securities or commodities (and certain futures), and other miscellaneous passive income.[115] Carrying charges include any amount in excess of the price for an immediate cash sale and any other unstated interest.[116]

Observation: Income attributable to excluded gross receipts will not be FTI and, therefore, no portion of such income will be exempt from tax. For example, investment income and carrying charges will be included in the taxable income of the FSC and, therefore, subject to full U.S. tax. However, such income will be eligible for foreign tax credits.

3. Foreign Management

The gross receipts of an FSC will be eligible to be treated as FTGR for the taxable year only if the "management" of the FSC during such taxable year takes place outside the United States.[117] The "management" of an FSC fulfills this requirement for the taxable year if:

(i) All meetings of the board of directors of the FSC and all meetings of the shareholders of the corporation are outside the United States;

(ii) The principal bank account of the FSC is maintained outside the United States at all times during the taxable year; and

(iii) All dividends, legal and accounting fees, and salaries of officers and members of the board of directors of the FSC paid during the taxable year are disbursed out of bank accounts of the corporation maintained outside the United States.

Observation: Although the three statutory management activities must take place outside the United States during a particular taxable year, they need not take place in the foreign country or U.S. possession in which the FSC is incorporated.

a. Situs of Board of Directors and Shareholders Meetings

The statute does not require that the board of directors and shareholders actually meet during the taxable year, but requires only that such meetings take place outside the United States. In addition, the statute and the Committee Reports do not indicate whether proxies may be used for shareholders meetings. Regulations should address the regularity and manner of holding such meetings, which, in any event, would have to be conducted pursuant to the commercial laws of the possession or country of incorporation.

Query: What is the location of conference telephone meetings of the board of directors? Assuming such meetings may take place under the law of the possessions or country of incorporation, the location could be determined by the location of the majority of participants.

b. Principal Bank Account

Although the principal bank account of the FSC must be maintained outside the United States at all times during the taxable year, neither the statute nor the Committee Reports do not indicate whether proxies may be used for shareholders meetings. Regulations should address the regularity and manner of holding such meetings, which, in any event, would have to be conducted pursuant to the commercial laws of the possession or country of incorporation.

c. Disbursement of Dividends, Legal and Accounting Fees, and Salaries of Officers and Board Members

FSCs must disburse all "dividends, legal and accounting fees, and salaries of officers and [board] members" from any (*i.e.*, not necessarily the principal) bank account(s) outside the United States. This requirement raises potential issues where a U.S. parent company pays employee salaries or vendor fees (in particular, audit and accounting fees) for activities affecting the entire affiliated group, but then rebills the proper portion of the total salaries or fees to other U.S. and foreign affiliates. In such cases, it would appear that as long as an FSC is billed and pays its U.S. parent or other affiliate for its share of the total cost out of a bank account of the United States, the statutory requirement will be met even though the parent's initial payment of the entire amount was disbursed from an account within the United States. This result would apply whether the FSC is billed by the parent at the time of its payment to the vendor or at some later date (*e.g.*, IRS determination of a §482 adjustment with respect to the amount to be paid by the FSC). In any event, accurate records should be maintained in order to trace such payments.

Query: Must officers and directors of an FSC be paid a salary by the FSC for acting in their respective capacities? The statute and the Committee Reports are silent on this point. Presumably, officers and directors of an FSC will be full-time employees of the related supplier or other related

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

company who often do not receive compensation for acting in similar capacities for other related subsidiaries.

4. Foreign Economic Processes

The gross receipts of an FSC from any transaction will be eligible to be treated as FTGR only if the "economic processes" with respect to such transaction take place outside the United States. Such "economic processes" relate to (i) the sales portion of the transaction and (ii) the direct costs incurred by the FSC with respect to the transaction.[118] In either case, the FSC may enter into a contract with an agent for the performance of certain activities.[119] In this regard, the statute directs the Secretary of the Treasury to prescribe "such regulations as may be necessary" with regard to the economic process requirement in the case of commissions, rentals, and furnishing of services.[120]

Observation: In all cases where a FSC or its agent must perform certain activities, the FSC may contract with its U.S. parent or with any other party, related or unrelated, to act as its agent.[121]

a. Sales Portion of the Transaction

The gross receipts from a transaction will not be eligible to be treated as FTGR unless the FSC, or a person under contract with the FSC, participates outside the United States in the solicitation (other than advertising), negotiation, or making of the contract relating to the transaction.[122] This requirement will be satisfied if the FSC, or its agent, performs any one of these three activities with respect to a transaction outside the United States. The activities need not be performed in the country or U.S. possession in which the FSC is incorporated.

(1) Solicitation

For purposes of the statute, "solicitation" refers to the "communication (either by telephone, telegraph, mail, or in person) by the FSC, or its agent, to a specific, targeted, potential customer regarding a transaction." [123]

(2) Negotiation

For purposes of the statute, "negotiation" includes any "communication by the FSC, or its agent, to a customer or potential customer of the terms of sale, such as the price, credit, delivery, or other specification." [124]

(3) Making of a Contract

For purposes of the statute, the term "making of a contract" includes "the performance by the FSC, or its agent, of any of the elements necessary to complete a sale, such as making an offer or accepting the offer." [125] In addition, the written confirmation by the FSC, or its agent, to the customer of an oral agreement which confirms variable contract terms or specifies (directly or by cross reference) additional contract terms will be considered the "making of a contract." [126]

Observation: The location of a solicitation, negotiation, or making of the contract is determined by the place where the activity is initiated by the FSC, or its agent.[127]

Query: Will export orders which are received in the United States by the related supplier, consolidated, and then forwarded to the FSC for official acceptance satisfy the sales portion of the economic process requirement? The statute and the Committee Reports are silent on this point. The related suppliers arguably should not be considered to have initiated acceptance if it merely collects orders before passing them on to the FSC for acceptance. Such a routing would avoid disrupting current order flow to the related supplier and eliminate the danger of a communications failure between customer and supplier which could result in lost U.S. exports.

Observation: The Finance Committee Print provides that the sales requirement will be considered to have been met with respect to sales to a single customer during any taxable year if "(1) the export property consists of either fungible products, or products which are substantially similar (*i.e.*, enumerated in a product category of the *Standard Industrial Classification Manual* and for manufactured products, a seven-digit level in the Bureau of the Census, *Numerical List of Manufactured Products*); (2) the products are sold by the FSC (or its agent) under a single contract; (3) the contract has a term of one year or less which specifies the material terms of each such sale; and (4) if the FSC or its agent performs any one of the three activities once with respect to all such sales." [128] The fact that the contract in such an arrangement must have a term of one year or less appears aimed at GATT concerns that sufficient foreign activity take place with respect to particular transactions. (The longer the term of the contract, the less significant may be the foreign activity associated with the groupings of transactions covered by the contract.) On the other hand, if a long term (*i.e.*, greater than one year) contract does not require the foreign purchaser to acquire all of the export property available under the contract, and, therefore, requires additional solicitation and negotiation by the FSC (or its agent) in order to sell such property, then it appears such a contract would generate adequate foreign activity for GATT purposes.

b. Direct Cost Tests

(1) The 50-Percent and 85-Percent Tests

Gross receipts from a transaction will not be eligible to be treated as FTGR unless the "foreign direct costs" incurred by the FSC attributable to the transaction equal or exceed 50 percent of the "total direct costs" incurred by the FSC with respect to the transaction (or the FSC meets an alternative 85-percent test, described below).[129]

Example: FSC A incurs total direct costs of $100 with respect to a transaction. Such costs are divided equally among the five foreign activity categories (*i.e.*, total direct costs with respect to each foreign activity category equal $20). Ten dollars of the total direct costs attributable to each foreign activity constitutes foreign direct costs. Thus, the foreign direct costs with respect to the transaction total $50. The FSC will satisfy the 50 percent test.

The term "total direct costs" means, with respect to any transaction, the total direct costs incurred by the FSC attributable to five categories of activities relating to the disposition of export property: (i) "advertising and sales promotion;" (ii) "the processing of customer orders and the arranging for delivery of the export property;" (iii) "transportation from the time of acquisition by the FSC (or, in the case of a commission relationship, from the beginning

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

of such relationship for such transaction) to the delivery to the customer;" (iv) "the determination and transmittal of a final invoice or statement of account and the receipt of payment;" and (v) "the assumption of credit risk.[130] The activities generating "total direct costs" are those performed at any location within or without the United States by the FSC or any person acting under contract with the FSC.[131]

The term "foreign direct costs" means, with respect to any transaction, the portion of the total direct costs which are attributable to activities performed outside the United States.[132] Although the activities must be performed outside the United States, either the FSC or any person (*e.g.*, the FSC's parent) acting under contract with a FSC may perform the activities.

As noted above, the requirement that the foreign direct costs incurred by the FSC equal or exceed 50 percent of the total direct costs incurred by the FSC attributable to a transaction may be met by an alternative 85-percent test. Under this alternative test, an FSC will be treated as satisfying the requirement that economic processes take place outside the United States if the foreign direct costs incurred by the FSC attributable to any two of the five activities relating to disposition of the export property equal or exceed 85 percent of the total direct costs of each of those two activities.[133]

Example: FSC B incurs total direct costs of $100 with respect to a transaction. Such costs are divided equally among the five foreign activity categories (*i.e.*, total direct costs with respect to each foreign activity equal $20). The foreign direct costs attributable to three of the foreign activities total $15. The foreign direct costs attributable to each of the remaining two foreign activity categories are $17. The foreign direct costs attributable to the transaction total $49. Thus, the FSC will not meet the 50-percent test. However, because the $17 in foreign direct costs incurred by the FSC attributable to each of two of the five activities relating to the transaction equal 85 percent of the total direct costs (*i.e.*, $20) of each of those activities, the FSC satisfies the alternative 85-percent test.

Observation: The Finance Committee Print states that "[o]nly the direct costs paid or accrued by the FSC *or its agent* will be taken into consideration in meeting the direct cost test." (Emphasis supplied.)[134] The implication of that statement is that the direct cost tests may be satisfied with respect to payments actually paid or accrued by an FSC agent. That implication finds no support in the statute, however, which requires that the total direct costs be incurred by the FSC (although the activities relating to such costs may be performed either by the FSC or any person acting under contract with the FSC).[135] Thus, if an FSC agent pays or accrues any direct costs with regard to any of the activities set forth in the statute, such costs must be reimbursed by the FSC in order to meet the direct cost tests.

Observation: The Finance Committee Print provides that "[i]t is not necessary to incur expenses in all categories to use either the 50-percent or the 85-percent tests . . . [and if] no costs are incurred with respect to the activities in the category, that category will not be taken into account in meeting the requirement."[136]

Query: Suppose an FSC incurs total direct costs of $100 with respect to a transaction and that such costs are attributable to only two of the five foreign activity categories (in other words, the FSC incurs no expenses in the other three foreign activity categories). Suppose further that the foreign direct costs with respect to the transaction total $50. The FSC satisfies the 50-percent test, but not the 85-percent test. However, since the 85-percent test is simply an alternative test designed to enable an FSC to satisfy the direct cost requirement in cases where it cannot meet the 50-percent test, the FSC's failure to meet the 85-percent test should have no adverse consequences.

Observation: A different direct cost test may be applied for different transactions or groupings; *i.e.*, the 50-percent test can be used in one transaction while the 85-percent test can be used in another.[137]

Observation: The principal problem with respect to the foreign direct cost test will be cost accounting. The discussion of each foreign activity category will illustrate this fact.

(2) Categories of Activities

Five categories of activities generate the "total direct costs" which must be incurred by the FSC, but these activities may be performed at any location (*i.e.*, not necessarily the foreign country or U.S. possession in which the FSC is incorporated) by the FSC or any person acting under a contract with such FSC.

(a) Advertising and Sales Promotion

This category includes two distinct activities — "advertising" and "sales promotion." Thus, if costs are incurred by an FSC with respect to either activity, this category will be satisfied. The Finance Committee Print defines "advertising" as "an appeal, related to a specific product or product line made through any medium and directed at all or a part of the general population of potential export customers."[138] Advertising not related to a specific product or product line, such as the cost of corporate image building, and advertising primarily directed at customers in the United States will not be considered advertising for purposes of the statute.[139]

The Finance Committee Print defines "sales promotion" as "an appeal made in person to a potential export customer for the sale of the specific product or product line made in the context of trade shows or annual customer meetings."[140] The cost of trade shows and annual customer meetings (including payments to organizers or other persons hired for the event), but not the cost of salaries and commissions of direct sales people, will be considered total direct costs of sales promotion for purposes of the statute.[141]

Observation: Under certain circumstances, "sales promotion" for purposes of the direct cost test aspect of the foreign economic processes requirement may also constitute "solicitation" for purposes of the sales portion aspect. For example, if the FSC (or a FSC agent) has entered into a long-term (over one year) contract for the sale, lease, or other disposition of export property with a foreign customer which does not require the foreign customer to purchase or

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

lease all of the export property that might be available under the contract, the FSC (or the FSC agent) will have to communicate with (*i.e.*, solicit) the customer regarding export property as it becomes available in order to conclude another sale or lease. Such communication might well take place in the context of an annual customer meeting, and, therefore, constitute "sales promotion."

Observation: With respect to the location of advertising and sales promotion activity, the Finance Committee Print provides as follows: "For determining foreign direct costs, the location of the advertising activity will be determined by the place where it is aired, displayed, published, or otherwise presented to the potential customer. With respect to broadcast media, such as radio or television, the location will be determined by the place to which the signal is transmitted. In the case of print media, the location will be determined by where the publication is distributed, not where it is printed. The location of trade promotion activity will be determined by where the customer meeting or trade show is held." [142]

Query: Are all direct costs associated with an advertising compaign, commercial, etc., which is planned, developed, coordinated, produced and paid for in the United States, but aired only outside the United States, considered foreign direct costs? If the ad is aired or distributed only outside the United States, all direct costs associated with the ad arguably should be considered foreign costs, without regard to where they occurred.

(b) Processing Customer Orders and Arranging For Delivery

This category includes two separate activities — "processing customer orders" and "arranging for delivery." Thus, if costs are incurred by an FSC with respect to either of these activities, this category will be satisfied.

The Finance Committee Print defines "processing customer orders" as "notifying the related supplier of the order and of the requirements for delivery of the export property." [143] The Finance Committee Print defines "arranging for delivery" as "taking necessary steps to ship the export property to the customer in accordance with the requirements of the order, but . . . not . . . packaging, crating, and similar pre-transportation costs." [144] The direct costs of "arranging for delivery" will include the cost of salaries for clerks, telephone, telegraph, and documentation, but not shipping expenses.[145]

Observation: Delivery can occur within or outside the United States.[146] For example, an FSC will be considered to have arranged for delivery if the FSC or its agent contacted a trucking company and shipping line to provide transportation for a particular shipment from an interior point in the United States to the location outside the United States where the buyer assumes title.

Observation: In the case of certain property, where the normal industry practice is to make delivery at or near the place of manufacture of such property within the United States, an FSC will be considered to have arranged for delivery if the FSC or its agent notifies the buyer of the time and place of delivery.[147]

(c) Transportation

The Finance Committee Print defines "transportation" as "the activity undertaken by the FSC or its agent for shipping the export property during the period it owns such property." [148] Total direct costs of "transportation" will include expenses incurred by the FSC or its agent for transporting the export property, but not transportation costs paid directly by the customer.[149] The amount of total direct costs treated as foreign direct costs will be determined on the basis of the ratio of mileage outside the U.S. customs territory to total transportation mileage.[150]

Observation: If the FSC is acting as a commission agent, transportation will be the activity that is undertaken to ship the export property after the commission relationship begins, even if the relationship begins after the property leaves U.S. customs territory.[151]

Observation: With respect to fungible commodities, total direct costs will include only those transportation costs which are incurred after goods have been identified to a contract.[152]

Observation: Attention to shipping terms regarding passage of title to the buyer may be important in determining whether the buyer or the seller are viewed as transporting the goods. Thus, a buy-sell FSC could take title to the export property at the U.S. port of embarkation and hold title until it passes to the customer, either at sea or at a later stage, and all of the transportation costs during such period would be foreign direct costs provided they are not directly paid by the customer.

(d) Determination and Transmittal of the Final Invoice or Statement of Account and the Receipt of Payment

This category includes two separate activities — the "determination and transmittal" of the final invoice and the "receipt of payment." Accordingly, if costs are incurred by the FSC with respect to either activity, this category will be satisfied.

The Finance Committee defines "determination and transmittal" as "the assembly of the final invoice or statement of account and the forwarding of the document to the customer." [153] It defines "final invoice" as "the invoice upon which payment is made by the customer." [154] An invoice transmitted after payment is made, as a receipt for payment, would satisfy this definition. The Finance Committee Print further defines "statement of account" as "any summary statement transmitted to a customer giving the status of transactions occurring within an accounting period that does not exceed one taxable year." [155]

Observation: A single final invoice or statement of account can cover more than one transaction with one customer.[156] Presumably, therefore, a "statement of account" could be prepared by an FSC (or its agent) on an annual basis with respect to groups of transactions completed pursuant to the terms of a long-term (*i.e.*, greater than one year) contract.

The direct costs with regard to the "determination and transmittal" of a final invoice or statement of account include the costs of office supplies, office equipment, clerical salaries, mail, etc., if directly attributable to the assem-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

bly and transmittal of a final invoice or statement, but not the engineering or cost accounting functions involved in the establishment of a price.[157] For example, the cost of assembling the statement of account at the FSC's foreign office and mailing it from that office to the customer would meet this definition.[158]

The Finance Committee Print defines "receipt of payment" as "the crediting of the FSC bank account by the amount of proceeds associated with the transaction." [159]

Observation: The Finance Committee Print provides that the "total direct costs for this activity include all the expenses incurred by the FSC for maintaining a bank account in which the payment is deposited." [160] This seems somewhat at odds with the concept of the foreign economic processes requirement, since both the sales portion and direct cost portion of the requirement are to be applied on a transaction-by-transaction basis (except where grouping of transactions is permitted). Assuming, nevertheless, that the Finance Committee description of the "receipt of payment" activity and its associated costs is correct, then this activity may be satisfied where an FSC maintains its principal bank account outside the United States pursuant to the FSC foreign management requirements.[161]

Observation: Initial payment may be received in the United States as long as the proceeds are transferred immediately to a bank account of the FSC outside the United States.[162]

(e) Assumption of Credit Risk

The Finance Committee Print defines this category as "bearing the economic risk of nonpayment with respect to a sale, lease, or contract for the performance of services." [163] An FSC will be considered to bear such risk if it contractually bears such risk and if either a debt becomes uncollectible within the accounting period,[164] or an addition is made to the bad debt reserve [165] of the FSC that is allowed as a deduction under present law.[166]

If a debt becomes uncollectible within the accounting period or an addition is made to the bad debt reserve of the FSC, the FSC must subtract from its FTI the appropriate percentage of the FSC's (and related supplier's) bad debt expense.[167] The bad debt expense will be roughly equivalent to the transfer price based upon either the actual stated price of export property (in transactions between unrelated parties), an arm's-length pricing approach (*see* §482), or one of the two "special administrative pricing rules."

The following examples illustrate the manner in which the foreign direct costs (*i.e.*, the amount subtracted from FTI) associated with a transaction with respect to which an FSC has assumed the credit risk may be calculated. In each example, the FSC has purchased export property from a related supplier and sold the property for what would have been $1,000 of FTGR. The FSC has incurred expenses attributable to the sale of $225. The combined taxable income of the FSC and the related supplier would have been $100, if there had been actual payment. It is assumed that if the related supplier sold the export property to the FSC at a price of $720, the price could be justified as satisfying the standards of code §482. Further, it is assumed that the transfer price in each transaction is equivalent to the bad debt expense. Finally, it is assumed that the shareholder of the FSC is a corporation, and that, therefore, where income is determined without regard to the administrative pricing rules, 30 percent of FTI derived from a transaction will be exempt, and that where income is determined with regard to administrative pricing rules, 15/23 of FTI derived from such transaction will be exempt. (*See* footnote 49, *supra.*)

Example: *Transaction using §482 pricing method:*

30% x $720 (bad debt expense) = $216

$216 is the FSC's foreign direct cost of assuming the credit risk of the transaction.

Example: *Transaction using the 23 percent of CTI method:* [168]

23% x $752 (bad debt expense) [169] = $172.96.

$176.96 is the FSC's foreign direct cost of assuming the credit risk of the transaction.

Example: *Transaction using 1.83 percent of FTGR method:* [170]

$$\frac{\text{\$18.30 (FSC's taxable income—1.83\% X FTGR)}}{\text{\$100 (CTI from the transaction)}} \times \text{\$756.70 (bad debt expense)}\ ^{171} = \$138.47$$

$138.47 is the FSC's foreign direct cost of assuming the credit risk of the transaction.

Observation: The Finance Committee Print explains that in some circumstances, a taxpayer may not have any receivables that become uncollectible within the taxable year; even though the taxpayer was contractually assuming the risk of loss, there is no actual loss or bad debt expense.[172] In such cases, "the FSC will be considered to bear the risk of loss, only if it incurs an actual loss (or is allowed to deduct an addition to a bad debt reserve under present law) in at least one year within a three year period." [173] In this regard, the Finance Committee Print contains the following example: if an FSC contractually assumes the risk of loss but incurs no bad debt expenses in the first two years of operations as an FSC, it cannot satisfy the assumption of credit risk activity in the third year unless it actually incurs a loss in that year. However, even if the FSC does not incur a loss in a third year, it would still be treated as having satisfied the assumption of credit test in the first two years. If the FSC then incurs a loss in the fourth year, it could use the credit test in the fourth, fifth and sixth years.[174]

Query: A key point apparently missed by the Finance Committee in its discussion of the FSC's assumption of credit risk is that *actual* costs must be incurred for purposes of the direct cost requirement. The fact that a FSC may somehow "satisfy" the assumption of credit risk activity, without incurring costs, should not help an FSC meet the direct cost test.

c. Burden of Proof

A provision in the FSC provisions originally passed by the Senate would have shifted the burden of proof with respect to the foreign management and economic process requirements to the Secretary of the Treasury if a written statement addressing the issue had been filed by an officer of the corporation.[175] The statute, as passed, does not include this provision because the conferees believed that the Senate provision "created an undesirable precedent." [176] The conferees stated their intention, however, that the IRS administer the foreign presence provisions "in a manner which facilitates the establishment of FSC and carries out the objectives of the statute." [177]

E. Transfer Pricing Rules

1. Introduction

As a general rule, all transactions between related parties must be conducted at arm's-length.[178] The Commissioner has been given the authority to reallocate amounts between related businesses if he determines that it is necessary in order to prevent evasion of taxes or clearly to reflect the income of related organizations.[179] Because entities qualifying as DISCs could operate (and, as discussed in III, G, *infra*, may continue to operate, to a degree, as "interest charge DISCs") without substance, the application of §482 would have resulted, in many cases, in no income being allocated to the DISCs. In order to make the DISC work, Congress established special intercompany pricing rules whereby a DISC would receive a share of the income from export sales without actually contributing substantially to these transactions.[180]

The FSC foreign organization, management, and economic process requirements are designed to give the FSC greater substance than the DISC in order to satisfy the GATT rules. Nevertheless, because the activities associated with the economic process requirement may be performed by a person (*e.g.*, an FSC parent) acting under a contract with an FSC, it is possible that the FSC's role with respect to transactions of export property may be minimal. Thus, as with the DISC, Congress found it necessary to establish "special administrative pricing rules" to ensure that a FSC would get a share of the income from export sales, although its foreign activity with regard to a transaction may have been insignificant. In this regard, the Finance Committee stated its intention that "the pricing principles that govern the determination of the taxable income of a FSC comply with the GATT rule." [181]

To accomplish that result, §925 provides two alternative safe-havens which may be used to establish a transfer price or a commission if their use results in more income being allocated to the FSC than would otherwise be allocated under §482. These two safe-havens are the 1.83 percent of FTGR method [182] and the 23 percent of CTI method.[183] An FSC eligible to use these two methods must use the rule that produces the greater amount of FTI.[184] However, the amount determined under the 1.83 percent of FTGR method with respect to any transaction may not exceed two times the amount which would be determined under the 23 percent of CTI method.[185] For purposes of applying these pricing methods, CTI is determined without regard to the exclusion of exempt FTI in §921.[186] FSCs ineligible to use either of these two methods must compute FTI based upon the sale price actually charged (but subject to the rules provided in §482).[187]

2. Conditions on Use of Special Administrative Pricing Rules

In order for the "special administrative pricing rules" to apply, three conditions must be met: (i) the transaction must involve the sale, lease, or other disposition of export property to an FSC by a person described in §482 (*e.g.*, a person "owned or controlled directly or indirectly by the same interests");[188] (ii) all of the five "economic process activities" [189] with respect to which the direct costs are taken into account for the 50-percent foreign direct costs test must be performed by the FSC or by another person acting under a contract with the FSC;[190] and (iii) all of the activities relating to the solicitation (other than advertising), negotiation, and making of a contract for the sale must be performed by the FSC (or by another person acting under contract with the FSC).[191]

Observation: The second and third requirements regarding the use of the special administrative pricing rules can be met wherever the activities are performed. In other words, the activities do not have to be performed outside the United States in order for the FSC to be eligible to use the special administrative pricing rules. It is only necessary that the activities be performed by the FSC or by another person acting under contract with the FSC.

Example: The Finance Committee Print sets forth the following example to illustrate the interaction of the requirements for the use of the "special administrative pricing rules" and the foreign economic process requirements:

P, a domestic corporation, owns all of the stock of S, a corporation organized under the laws of a foreign country that qualifies as a FSC for the taxable year. P manufactures product A, which it sells to S for resale to export customers. During S's taxable year, S sells 10 units of A to F, a foreign customer. The terms of the sale are FOB P's plant in Seattle. P, acting as agent for S, performed all of the solicitation and negotiation activities with respect to the transaction with F. S accepted F's offer of purchase at its office in the foreign country. S incurred expenses of $90 for the cost of advertising, $85 of which was attributable to print advertising in the Asian editions of trade magazines. S also incurred $10 of direct costs for trade shows in the United States promoting sales of A to domestic and foreign customers, and $25 of direct costs (incurred outside the United States) in processing P's order. No costs are associated with arranging for the delivery or the transportation of the product because of the terms of sale. S incurred all of the credit costs associated with the transaction. S compensated P on an arm's-length basis for its services.

S will be allowed to use one of the two administrative pricing rules to determine its transfer price from P for the units of A sold in the transaction, because S or an agent of S performed all of the economic process activities with respect to the transaction. S will also satisfy the foreign economic process requirements with respect to the transaction because (i) S participated in making the contract outside of the United States, and

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(ii) 85 percent of S's direct costs for two of the five categories of activities subject to the direct cost test (advertising and sales promotion and processing of customer orders and arranging for delivery) were attributable to activities occurring outside the United States. (S's direct costs include payments to P for services rendered).[192]

Query: For purposes of an FSC's eligibility to use the "special administrative pricing rules," must costs be incurred by the FSC in all five activity categories associated with the direct cost test? For example, if an FSC (or its agent) contractually assumes the credit risk with regard to a transaction, will the fact that the FSC actually incurs no costs with respect to that contractual assumption of the credit risk (*i.e.*, performance) bar the FSC from using the "special administrative pricing rules"? The answer appears to be "No." Section 925(c) (relating to requirements for use of the "special administrative pricing rules") requires only that the economic process activities be "performed" by the FSC (or its agent).

Observation: If due to the nature of its business an FSC never performs a particular foreign activity, will that FSC be barred from using the "special administrative pricing rules?" For example, suppose an FSC leases export property to its parent's wholly-owned subsidiary (which, in turn, leases such property to a corporation outside the "controlled group of corporations"). Due to the "brother-sister corporation" nature of the lessor-lessee relationship, the FSC has not agreed to assume the credit risk since there essentially is none. On the face of the statute, the FSC could not use the "special administrative pricing" rules.

3. *Computation of Transfer Price*

a. *Grouping of Transactions*

The computation of the transfer price is required to be made on a transaction-by-transaction basis. However, the Finance Committee stated its intention that "regulations allow the grouping of transactions." [193] Current DISC regulations, which are expected to be carried over to the FSC, permit transfer price computations to be made on a grouping of products or product line basis.[194] Pursuant to the regulations, a taxpayer must choose a product or produce line which conforms to industry or trade usage, or which conforms to the two digit major groups (or any inferior classification or combination thereof, within a major group) of the Standard Industrial Classification as prepared by the Statistical Policy Division of the Office of Management and Budget, of the Executive Office of the President.[195] As a practical matter, this means that a taxpayer may make the computations with respect to related lines of goods in the aggregate for a taxable year rather than having to make the computations for each sale. Administratively, this is particularly helpful to the manufacturer of high volume low-cost items like pencils. The DISC regulations provide that once the taxpayer has chosen to group transactions for one year, the grouping applies to all transactions with respect to the particular product or product line during that year.[196] With respect to transactions involving goods not included in the grouping, the computations must be made on a transaction-by-transaction basis.

b. *1.83 Percent of FTGR Method*

This safe-haven allows the FSC to realize taxable income attributable to a sale in an amount equal to 1.83 percent of the FTGR derived from the sale of the export property.[197] The 1.83 percent of FTGR test applies both to transactions in which the FSC actually purchases the goods for resale and to transactions in which the FSC is a commission agent (and receives a commission with respect to the sale for export of the goods).[198] If the FSC is a commission agent, it would be entitled to a direct payment equal to 1.83 percent of the FTGR, that is, generally 1.83 percent of the underlying sales price. If, however, the FSC actually incurred expenses in connection with the export sale, then the amount of the commission which the FSC could receive would be an amount equal to 1.83 percent of the FTGR from the sale plus any expenses incurred.[199]

Example: Assume an FSC purchases export property from a related supplier and sells the property for $1,000 of FTGR. The FSC incurs expenses attributable to the sale of $225. The FSC's taxable income and the transfer price to the FSC from the transaction, using the 1.83 percent of FTGR method, would be as follows:

FSC taxable income—1.83 of FTGR	$ 18.30
Supplier's Transfer Price to FSC Sales Price	1,000.00
Less:	
FSC Expenses	$ (225.00)
FSC Profits	(18.30)
Total	$ (243.30)
Supplier's Transfer Price to FSC	$ 756.70

Observation: If the supplier's cost of goods sold and expenses allocable to the sale in the example were $756.70, all of the profits would be in the FSC. However, the related supplier would realize a loss on the transaction if those expenses exceeded $756.70. In this regard, the Finance Committee stated its intention that "the administrative pricing rules will be applied under rules which will prevent pricing at a loss to the related supplier" and its belief that "the Secretary of the Treasury should consider whether the present [DISC] regulations accomplish this purpose." [200] Current DISC regulations prohibit the use of the safe-haven rules where they result in a loss to the related supplier.[201]

c. *Twenty-Three Percent of CTI Method*

Under the 23 percent of CTI method, the transfer price on a sale by a related supplier to an FSC is the price which permits the FSC to realize 23 percent of the CTI of the FSC and the related supplier attributable to the FTGR from the sale.[202] If the FSC acted as a commission agent with respect to a transaction, then the FSC would be entitled to a commission equal to 23 percent of CTI plus the cost to the FSC of the transaction.[203]

CTI is the taxable income from the export sale or sales of the FSC and its related supplier. Current DISC regula-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tions define CTI as gross receipts of the DISC and the related supplier reduced by the costs of the DISC and related supplier which relate to those gross receipts.[204] Under the DISC regulations, gross receipts are to be reduced by expenses, losses, and other deductions definitely related to the gross receipts, plus a ratable portion of other expenses, losses, and deductions not definitely related to a class of gross income. Presumably, the DISC regulations will be modified and carried over to the FSC.

Example: An FSC purchases export property from a related supplier and sells the property for $1,000 of FTGR. The FSC incurs expenses attributable to the sale of $225. The related supplier's cost of goods sold attributable to the export property is $550. The related supplier's expense incurred in connection with the sale of the export property is $125. For purposes of this example, it is assumed that the related supplier has no other deductible expenses. The combined taxable income of the FSC and its related supplier and the FSC's taxable income and the transfer price to the FSC from the transaction, using the 23 percent of CTI method, would be as follows:

(a) *Combined Taxable Income:*

FSC's FTGR	$1,000.00
Cost of goods sold of related supplier	(550.00)
Combined gross income	$ 450.00
Less expenses:	
Direct expenses of related supplier	$ 125.00
Direct Expenses of FSC	225.00
Total expenses	$ (350.00)
CTI	$ 100.00

(b) *FSC's taxable income and transfer price under 23 percent of CTI method:*

FSC taxable income—23% of CTI ($23.00)	$ 23.00
Supplier's transfer price to FSC: Sales price	$1,000.00
Less:	
FSC expense	$ (225.00)
FSC profit	(23.00)
Total	$ (248.00)
Supplier's transfer price to FSC	$ 752.00

d. Marginal Costing

The Finance Committee stated its intention that regulations allow "marginal costing." [205] Marginal costing is a method of allocating costs for purposes of determining the CTI of an FSC and its related supplier. It would be available only where the 23 percent of CTI method of computing a transfer price or commission is adopted by the taxpayer. While the statute [206] mandates publication of regulations providing for marginal costing, no statutory guideline as to the meaning of the term is provided. However, guidance may be found in the detailed DISC regulations setting forth the rules for the use of marginal costing for purposes of the DISC 50 percent of combined taxable income method of computing transfer prices.[207]

Under these regulations, only the marginal or variable costs of producing and selling a particular item, product, or product line need be taken into account for purposes of computing combined taxable income.[208] Because fixed costs need not be taken into account, combined taxable income is increased under these regulations with a resulting increase in the income of the DISC. The marginal costs will, of course, still be deductions of the related supplier.

Marginal costing is available only if the DISC is seeking to establish or maintain a foreign market for sales of an item, product, or product line of export property [209] for the taxable year. A DISC is treated as establishing or maintaining an export market if the marginal costing rule will yield a greater amount of income than would be yielded under the combined taxable income provisions without marginal costing.[210] Thus, as a practical matter, marginal costing is available in those cases in which the taxpayer would want to make use of it. Presumably, the DISC regulations with respect to marginal costing willl be carried over in modified form to the FSC.

e. Post-Transaction Year Computations

Section 924(a) provides that a FSC may apply whichever pricing method allocates the greatest amount of taxable income to the FSC. The basic policy is to ensure that the FSC will realize a high percentage of the taxable income from any export sale with respect to which it is a party. In furtherance of this statutory purpose, the Finance Committee Print notes that "[u]nder the administrative pricing rules, the transfer price from the related supplier to the FSC may be computed after the FSC sells the goods to a customer" and that the "FSC and its related supplier may make adjustments upwards or downwards following the close of the taxable year in which the FSC sells the goods."

F. Taxation of FSC Shareholders

1. Ordering Rules for Distribution to Shareholders

Distributions to a shareholder of an FSC made out of earnings and profits are treated as coming first out of an FSC's earnings and profits attributable to FTI, and then out of "any other earnings and profits" (*e.g.*, investment income, carrying charges, and certain receipts not included in FTGR pursuant to §924(f)(1)), regardless of whether the corporation has ceased to be an FSC before the distribution.[211]

2. Distributions to U.S. Shareholders

a. 100 Percent Dividends-Received Deduction

A U.S. corporate shareholder will generally be allowed a 100 percent dividends-received deduction for amounts distributed out of earnings and profits of another corporation attributable to FTI for a period during which such other corporation was an FSC, but not for amounts distributed out of earnings and profits attributable to "section 923(a)(2) nonexempt income." [212] Thus, there will be: (i) no

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

corporate level tax on exempt FTI; (ii) only a single-level corporate tax (at the FSC level) on nonexempt FTI (other than "section 923(a)(2) nonexempt income"); and (iii) corporate tax at both the FSC and the shareholder levels on "section 923(a)(2) nonexempt income", investment income, and certain other receipts (*e.g.*, receipts not included in FTGR pursuant to §924(f)(1)).

Observation: The Finance Committee Print states that "distributions to a noncorporate shareholder of a FSC that are not attributable to foreign trade income will be subject to tax in the same manner as distributions from a foreign corporation that has not elected to be treated as a FSC." [213] That statement implies that distributions to a noncorporate shareholder of a FSC that are attributable to FTI will not be subject to tax. Nothing in the FSC provisions or the underlying legislative history supports that implication, however. Thus, it may be assumed that noncorporate shareholders must report the entire amount of an FSC dividend as income.

Observation: To the extent a corporate shareholder of an FSC distributes dividends attributable to FTI to its individual shareholders, these amounts will be taxed.[214]

b. Subpart F Income Considerations

Under the Subpart F provisions of the code, the U.S. shareholders of a "controlled foreign corporation" ("CFC") [215] are taxed by reference to the tainted income ("Subpart F income") [216] of their CFC as if they have received that income as a current dividend, even though no amount has in fact been paid out to them.[217] Section 801(b)(4) of the Act adds §951(e) to the Subpart F provisions to ensure that FTI (other than "section 923(a)(2) nonexempt income"), investment income, and carrying charges will not be treated as Subpart F income for purposes of determining the amounts included in gross income of FSC shareholders as constructive dividends.

Observation: The Finance Committee Print states that an FSC "will not be required or deemed to make distributions to its shareholders." [218] This statement does not account for the fact that the amendments made by the Act to the Subpart F provisions do not exclude from their scope "section 923(a)(2) nonexempt income" and certain receipts not included in FTGR pursuant to §924(f)(1). Nothing in the Act will prevent the deemed distribution of such income from an FSC to its shareholders in cases where the FSC and its shareholders otherwise come within the Subpart F provisions.

Observation: Section 801(f) of the Act authorizes the Secretary of the Treasury to exclude property related to the "export activities" of the FSC from the Subpart F rules relating to investments by controlled foreign corporations in U.S. property.[219] This amendment may exclude from the scope of Subpart F investments in export receivables. However, the FSC's income from factoring such receivables will be subject to immediate U.S. taxation if such receivables are acquired (directly or indirectly) from related U.S. persons and the obligors under such receivables are U.S. persons.[220]

c. Foreign Personal Holding Company Income Considerations

For purposes of determining which corporations meet the definition of a foreign personal holding company ("FPHC"), §552 sets forth both a "gross income test" and a "stock ownership test." Under the gross income test, at least 60 percent of the gross income of a foreign corporation for the taxable year must be foreign personal holding company income for it initially to qualify as an FPHC.[221] After initial qualification as an FPHC, the gross income test will be satisfied if the corporation in any subsequent year has foreign personal holding company income equal to at least 50 percent of its gross income during the taxable year.[222] Section 553 defines foreign personal holding company income to be that portion of a corporation's gross income which consists generally of dividends, interest, royalties and annuities, gains from the sale or exchange of stock or securities and commodity futures transactions, distributions from a trust or estate, amounts received under personal service contracts, amounts received as compensation for the use of corporate property by major stockholders, and rents where they constitute less than 50 percent of the corporation's gross income.

The "stock ownership test" requires that at any time during the taxable year more than 50 percent in value of the outstanding stock of a foreign corporation must be owned directly or indirectly by or for not more than five individuals who are citizens or residents of the United States.

The FPHC rules appear applicable to the FSC and, thus, where the "gross income test" and "stock ownership test" are satisfied, FSC investment income will qualify as foreign personal holding company income.[223] Accordingly, FSC shareholders may be required to recognize constructive dividends with respect to such income.[224]

d. Foreign Tax Credit Considerations

Under §901(h) as added by Section 801(d) of the Act, no credit will be permitted for foreign taxes on FSC dividends attributable to FTI (other than §923(a)(2) nonexempt income). However, foreign taxes on FSC dividends attributable to "section 923(a)(2) nonexempt income," investment income, carrying changes or receipts arising from certain transactions that are excluded from FTGR pursuant to §924(f)(1) will be fully creditable.

Observation: Under §904(d)(1)(D), distributions from an FSC (or former FSC) out of earnings and profits "attributable to foreign trade income" are subject to a separate foreign tax credit limitation. In view of §901(h), it appears that the only FTI affected by §904(d)(1)(D) will be "§923(a)(2) nonexempt income."

e. Gains from Sales or Exchanges of FSC Stock

If a U.S. shareholder, who owns 10 percent or more of the total combined voting power of all classes of stock entitled to vote of an FSC at any time during the 5-year period ending on the date of the sale or exchange when the FSC was a CFC,[225] sells or exchanges stock in the FSC, then the gain recognized on the sale or exchange of such stock is included in the U.S. shareholder's gross income as a dividend to the extent of the earnings and profits of the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

FSC attributable to such stock that were accumulated while the stock was held by the U.S. shareholder while the FSC was a CFC.[226] Under §1248(d)(6), the earnings and profits of an FSC attributable to FTI will be excluded from earnings and profits for purposes of determining the gain on sale of FSC stock. However, investment income, carrying charges, and receipts arising from unqualified transactions that are excluded from FTGR pursuant to §924(f)(1) will be included in earnings and profits for purposes of determining the gain on the sale of such stock.

3. Distributions to Foreign Shareholders

Both foreign corporate and noncorporate shareholders are taxed on FSC dividends to the extent attributable to the FSC's FTI, as if the dividends were both U.S. source and "effectively connected" with the conduct of trade or business carried on through a permanent establishment in the United States.[227] This treatment subjects the dividends to U.S. tax at normal rates on net income (and without foreign tax credits) and precludes the application of treaty exemptions or reduced tax rates. To the extent that the FSC's dividends are not attributable to FTGR, this rule will not apply.

Observation: This rule may discourage foreign individuals and corporations from becoming shareholders in FSCs. This is particularly significant in view of the fact that there is no minimum U.S. shareholder ownership percentage requirement under the FSC provisions. (Indeed, an FSC need not be owned by any U.S. shareholders.) The practical effect of this rule, therefore, may be that most FSC shareholders will be U.S. corporations or individuals.

G. Small Exporters

The Finance Committee "recognize[d] that small exporters may find it difficult to comply with certain of the foreign presence and economic activity requirements," and, therefore, provided two alternatives to the FSC — the "small FSC" and the "interest-charge DISC."[228] Out of "concern that without a special effort by the Administration many small businesses which wish to export property will avoid making an election to become [a small] FSC or . . . [an interest charge] DISC because they fear that such an election will lead to undue complexity and a large administrative burden," the conferees expressed their "hope that small business will be given special encouragement and assistance by the specialized Commerce Department in establishing and operating small FSCs and small DISCs."[229]

1. Small FSCs

a. Qualification

In order to qualify as a small FSC, a corporation must meet the same requirements as an FSC, except that it must elect small FSC status rather than FSC status.[230]

Query: What must a small FSC do if it wishes to become a regular FSC? The statute and Committee Reports are silent on this point. Presumably, the small FSC election should be revoked within the period prescribed in §927(f)(3) and a regular FSC election made at that time.

Under §922(b)(2), a corporation electing small FSC status may not be a member at any time during the taxable year of a "controlled group of corporations"[231] which includes an FSC, unless such other FSC has also made an election to be treated as a small FSC which is in effect for such year.

b. Effect of Qualification as a Small FSC

(1) No Foreign Management and Foreign Economic Process Requirements

An FSC that elects to be a small FSC need not meet the foreign management and foreign economic process requirements in order to have FTGR.[232]

(2) Small FSC Limitation on Amount of FTGR

In determining the exempt FTI of a small FSC, any FTGR that exceeds $5 million will not be taken into account.

Observation: Neither the statute nor the Committee Reports explain how FTGR in excess of $5 million will be taxed to a small FSC and its shareholders. Presumably, that portion of the FTGR in excess of $5 million allocable to transactions using the "special administrative pricing rules" will be taxed currently to the small FSC as U.S. source income. With respect to such income, U.S. corporate shareholders would be entitled to the 100 percent dividends received deduction. A foreign tax credit would not be allowed to the small FSC with respect to foreign taxes on such income and foreign taxes on small FSC dividends attributable to such income would be treated as noncreditable foreign taxes. On the other hand, that portion of the amount of a small FSC's FTGR in excess of $5 million allocable to transactions based upon the sale price actually used (but subject to the rules provided in §482) might be Subpart F income carrying foreign tax credits. U.S. corporate shareholders would receive no dividends nor deduction with respect to distributions of such income. In any event, a small FSC (like an FSC) will have to keep accurate records of the pricing method used for each of its transactions.

If the FTGR of a small FSC exceeds the $5 million limitation, the corporation may select the gross receipts to which the limitation is allocated.[233] Thus, a small FSC may choose to allocate the $5 million limitation to gross receipts attributable to transactions where the profit margin is high; in such cases, the amount of exempt FTI would be greater than if the limitation were allocated to low-margin transactions.

Example: A small FSC has $5 million of FTGR with respect to transactions in which the aggregate cost of goods sold (*i.e.*, the total transfer prices for such transactions) is $4 million. Assuming a corporate shareholder of the small FSC and that the "special administrative pricing rules" were used in such transactions, exempt FTI would equal 15/23 of $1 million ($5 million minus $4 million), or $652,173.90. The same small FSC also has $5 million of FTGR with respect to transactions in which the aggregate cost of goods sold is $2 million. Exempt FTI would be 15/23 of $3 million ($5 million minus $2 million), or $1,956,521.70. Since the greater amount of exempt FTI is allocable to the $5 million of FTGR with the greater profit margin, the small FSC will allocate the $5 million limitation to the $5 million of FTGR with a higher profit margin.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

For purposes of the $5 million limitation and its allocation, small FSCs which are members of the same "controlled group of corporations" will be treated as a single corporation.[234] Regulations will prescribe how the $5 million limitation will be allocated among members of a controlled group.[235]

(3) "Special Administrative Pricing Rules" Requirements Applicable to Small FSCs

The Finance Committee Print clarifies that in order to use the "special administrative pricing rules," a small FSC is held to the same requirements as an FSC. Accordingly, a small FSC must meet two requirements. The first requirement is that all of the five "economic process activities" with respect to which the direct costs are taken into account for the 50 percent foreign direct cost test must be performed by the small FSC or by another person acting under contract with the small FSC. The second requirement is that all the activities relating to sales activity (*i.e.*, the solicitation (other than advertising), negotiation, and making of the contract for a sale) must be performed by the small FSC or by another person acting under contract with the FSC. Of course, these two requirements can be met wherever the activities are performed (*i.e.*, the activities do not have to be performed outside the United States).[236]

2. Interest Charge DISCs

a. General

A DISC may continue to defer income attributable to $10 million or less of "qualified export receipts."[237] Deemed distributions relating to base period exports (the "incremental rule") and to one-half of the DISC's income will be eliminated; thus, substantially all of the DISC's income attributable to $10 million or less of qualified export receipts may be deferred. However, unlike the present-law DISC, an interest charge will be imposed on the shareholders of the DISC.[238] The amount of the interest will be based on the tax otherwise due on the deferred income computed as if the income were distributed. The interest rate will be tied to the T-bill rate.

Observation: An interest-charge DISC will, in the early years of operation, result in a better cash flow than a small FSC. However, in future years, the small FSC will experience a more positive cash flow than the interest-charge DISC, because the DISC-related deferred tax liability will accumulate to a point at which the annual interest charge imposed upon such liability will exceed the difference between the actual current tax using a DISC and the higher total tax that would have resulted had a small FSC been used.

b. The $10 million "Qualified Export Receipts" Deferral

Pursuant to amended §995(b)(E), a shareholder of a DISC will be treated as having received a dividend with respect to his stock in an amount which is equal to his pro rata share of the "taxable income of the DISC attributable to qualified export receipts of the DISC for the taxable year which exceed $10 million." Thus, a shareholder of a DISC will not be taxed currently on income attributable to $10 million or less of "qualified export receipts." For purposes of applying the $10 million limitation, all DISCs which are members of the same controlled group will be treated as a single corporation.[239] Regulations will proscribe how the $10 million limitation will be allocated among members of a controlled group.[240]

c. Calculation of Interest Charged

For each taxable year, a shareholder of a DISC will pay interest in an amount equal to the product of the "shareholder's DISC-related deferred tax liability" for such year and the "base period T-bill rate."[241]

(1) Shareholder's DISC-Related Deferred Tax Liability

The "shareholder's DISC-related deferred tax liability" means, with respect to any taxable year of a shareholder of a DISC, the amount which would be the "tax liability" of the shareholder for the taxable year if the "deferred DISC income" of such shareholder for such taxable year were included in gross income as ordinary income minus the actual amount of the "tax liability" of such shareholder for such taxable year.[242]

Observation: Section 68(d) of the Act amends §995(b)(1)(F)(i) (relating to deemed distributions) to reduce the annual "deemed" dividend of one-half of a DISC's income (57½ percent for a corporate shareholder) to 1/17th of the DISC's income. Although the Conference Report (at page 975) makes clear Congress' intent that the 1/17th deemed dividend apply only where the shareholder is a corporation, the language of the Act itself does not reflect this limitation.

The calculation of a "shareholder's DISC-deferred tax liability" will be made without regard to carrybacks to such taxable year.[243] The Secretary of the Treasury is directed to prescribe regulations to provide any adjustments necessary to the accounts of the DISC and to the amount of any carryover or carryback of the shareholder in the case of net operating losses, credits, and carryovers and carrybacks of losses and credits.[244]

The term "tax liability," as used in the definition of "shareholders' DISC-related deferred tax liability," means the amount of the income tax imposed for the taxable year reduced by allowable credits (other than the credit for tax withheld on wages, the earned income credit, and the credit against taxes imposed upon certain uses of gasoline and special fuels).[245]

"Deferred DISC income" means, with respect to any taxable year of a shareholder, the shareholder's pro rata share of accumulated DISC income (for periods after 1984) of the DISC as of the close of the "computation year" minus the amount of the "distributions-in-excess-of-income" for the taxable year of the DISC following the "computation year."[246] The "computation year" is the taxable year of the DISC which ends with (or within) the taxable year of the shareholder which precedes the taxable year of the shareholder for which the amount of "deferred DISC income" is being determined.[247] "Distributions-in-excess-of-income," with respect to any taxable year of a DISC, equals the amount of actual distributions to the shareholder out of accumulated DISC income minus the shareholder's pro rata share of the DISC income for such taxable year.[248]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Observation: The higher the amount of the shareholder's "distributions in excess of income," the less will be the shareholder's "deferred DISC income," and, thus, the lower will be the shareholder's "DISC-related deferred tax liability." The shareholder's "distributions in excess of income" will be reduced (and his "DISC-related deferred tax liability" will be increased) by "qualified export receipts" in excess of the $10 million limitation, because such amounts increase the shareholder's pro rata share of the DISC income for a taxable year and, thus, reduce the difference between such amount and the amount of actual distributions to the shareholder out of accumulated DISC income for purposes of determining the shareholder's "distributions in excess of income."

Example: Taxpayer A is a 10 percent corporate shareholder in DISC B. A is on the calendar year and B is on a fiscal year which ends September 30. Assume that A's pro rata share of accumulated DISC income (for periods after 1984) as of September 30, 1986 was $50,000. In 1987, A receives actual distributions of accumulated DISC income in the amount of $100,000. In 1987, B's "qualified export receipts" total $10,400,000. The deemed distribution to A of such "qualified export receipts" for 1987 is $98,823.50 ($40,000 (*i.e.*, 10 percent x $400,000 — the amount in excess of the $10 million limitation) plus $58,823.50 (*i.e.*, 10 percent x 1/17th of $10,000,000)). A's 1987 tax liability (at a 46 percent rate) equals $91,458.81 (*i.e.*, 46 percent of $198,823.50 ($100,000 in actual distributions plus $98,823.50 in deemed distribution)).

Calculation of A's DISC-related deferred tax liability:

(a) *Distribution-in-excess-of-income:*

A's 1987 actual distributions out of accumulated DISC income minus A's pro rata share of DISC income for 1987	$100,000.00 — 98,823.50
A's distributions-in-excess-of-income	$1,176.50

(b) Deferred DISC income:

A's pro rata share of post-1984 accumulated DISC income as of close of computation year (September 30, 1986) minus	$50,000.00
A's distributions-in-excess-of-income	- 1,176.50
A's deferred DISC income	$48,823.50

(c) *A's 1987 tax liability including deferred DISC income:*

A's 1987 taxable income	$198,823.50
+ A's deferred DISC income	$ 48,823.50
	$247,647.00
A's tax liability (at a 46% rate) =	$113,917.62

(d) *A's DISC-related deferred tax liability:*

A's 1987 tax liability including deferred DISC income	$113,917.62
- A's actual 1987 "tax liability"	$ 98,823.50
A's DISC-related deferred tax liability	$ 15,094.12

(2) "Base Period T-bill Rate"

The rate of interest imposed on a shareholder's "DISC-related deferred tax liability" is determined by reference to the "base period T-bill rate." The "base period T-bill rate" is the annual rate of interest that is equivalent to the average investment yield of U.S. T-bills with maturities of 52 weeks which were auctioned during the one-year period ending on September 30th of the calendar year ending with the close of the taxable year of the shareholder.[249] The Secretary of the Treasury will be expected to publish this rate in October of each year.[250]

Example: Assume that the "base period T-bill rate" determined by the Secretary of the Treasury as of September 30, 1987, is 12 percent. The interest on A's "DISC-related deferred tax liability" in the above example (*i.e.*, $15,094.12) would be $1,811.29.

d. Payment, Assessment and Collection of Interest

The interest on "DISC-related deferred tax liability" will be due at the same time the shareholder's regular tax is required to be paid. It will be paid to the Treasury, not to the DISC, and will be fully deductible.

e. Technical DISC Amendments

(1) Definition of DISC

Section 992(a)(1) (defining DISC) has been amended by §802(c)(1) of the Act to provide that a DISC is not "a member of any controlled group of which an FSC is a member." This revision of the definition of DISC meshes with §804(b)(5) of the Act which provides that "[u]nder regulations prescribed by the Secretary, if any controlled group of corporations of which a DISC is a member establishes a FSC, then any DISC which is a member of such group shall be treated as having terminated its DISC status."

(2) Treaty Partner Residents

Section 801(d)(10) clarifies present law to make it clear that a resident of a treaty partner cannot avoid tax on DISC distributions.[251] This clarification was effective on June 22, 1984.

H. Special Rules

1. "Qualified Cooperatives"

The FSC provisions contain three special rules for agricultural products marketed through a so-called "qualified cooperative." A "qualified cooperative" generally will be an organization that qualifies under §521 (relating to

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

exempt farmers' cooperatives).[252] The special FSC rules relating to such cooperatives concern: (i) calculation of CTI for purposes of the 23 percent of CTI "special administrative pricing rule;" [253] (ii) the extent to which FTI will be treated as exempt income to the FSC;[254] and (iii) the extent to which the 100 percent dividends-received deduction is available to a cooperative shareholder of an FSC.[255] The Finance Committee emphasized that these special rules will be available "only if the income of the cooperative eligible for FSC benefits is based on arm's-length transactions between such cooperative and its members or patrons." [256] The Committee stated its intention that such restriction "should prevent the cooperative and its members or patrons from getting additional FSC benefits from transfer prices that do not reflect the fair market value of the property sold to or through the cooperative by its members or patrons." [257]

a. CTI Computations

In any case in which a "qualified cooperative" sells export property to an FSC, the CTI of the cooperative and the FSC will be computed without taking into account "patronage dividends," [258] "per-unit retain allocations," [259] and certain "deductions for nonpatronage distributions" [260] under §1382 (relating to the taxable income of cooperatives).

The Finance Committee stated that as a result of this special rule, "the cooperative will not be required to distribute the income attributable to exempt foreign trade income (generally [15]/23 of foreign trade income) to benefit from the exemption from corporate level tax on this income." [261] Since under §521 there is no corporate-level tax with respect to amounts attributable to patronage dividends, per-unit retain allocations, and certain deductions for nonpatronage distributions, such amounts will be allocable to otherwise non-exempt FTI (generally 8/23 of FTI), rather than FTI that is already exempt regardless of §521. This special rule will apply only to the cooperative shareholder of the FSC and not to members or patrons of the cooperative that may be cooperatives themselves (higher-tier cooperatives).[262]

b. Exempt FTI Distribution Requirement

The second rule provides that 100 percent of the FTI determined with regard to the "special administrative pricing rules" will be treated as exempt income to the FSC, but only if such income is distributed to the cooperative shareholder for any taxable year before the due date for filing the return of tax for such taxable year.[263] If such income is not distributed currently, it will be taxed at the FSC level.

The effect of this rule is to make the FSC essentially a pass-through entity to the members of the cooperative. In other words, only at the cooperative shareholder level will such FTI be characterized as exempt or not exempt. The Finance Committee Print clarified that "[d]istributions from the FSC to the cooperative shareholder that are attributable to foreign trade income treated as exempt foreign income [(generally 15/23 of foreign trade income)] will be includible in the taxable income of the cooperative (*i.e.*, income eligible for distribution as a patronage dividend as defined in §1388(a)(3))." [264] Non-exempt FTI (generally 8/23 of FTI), which was not taxed at the FSC level, will be taxed at the member or patron level. The Finance Committee Print further makes clear that distributions by an FSC attributable to FTI will be considered attributable first to nonexempt FTI (even if such income is treated as exempt income at the FSC level).[265]

c. No 100 Percent Dividends Receive Deduction for Distributions of Nonexempt FTI

The final special rule with respect to "qualified cooperatives" provides that the cooperative shareholder of an FSC will not be allowed the 100 percent dividends-received deduction for distributions from the FSC that are attributable to nonexempt FTI.[266] The Finance Committee Print explains that the bill provides this rule "because although the nonexempt foreign trade income is treated at the FSC level as exempt in this case, the committee intends that this portion of the income be includible in the income of the members and patrons without the deferral accorded to exempt foreign trade income." [267] Like other corporations, the cooperative will be allowed a dividends-received deduction for distributions attributable to exempt FTI but not for distributions attributable to investment income and carrying charges.

2. Exporters of Military Property

Two special rules are available for exporters of so-called "military property" (*i.e.*, "any property which is an arm, ammunition, or implement of war designated in the munitions list published pursuant to the Military Security Act of 1954 (22 U.S.C. 1934)" (*see* §995(b)(3)(B))). The rules concern (1) the foreign direct cost test and (2) calculations of FTI.

a. The Foreign Direct Cost Test

Sales of certain "military property" must be made through the United States Government to foreign governments. Accordingly, because of negotiations and other activities with the United States Government, many of the expenses incurred by an FSC in connection with such sales must be incurred within the United States. The Finance Committee "recognize[d]" these characteristics of foreign military sales and, therefore, stated that it "intends" that for purposes of the 50 percent and alternative 85 percent tests, the FSC's expenses and the expenses of the United States Government in connection with such sales "will not be taken into account." [268]

b. Exempt FTI Attributable to Sales of "Military Property"

The Secretary of the Treasury has been empowered to prescribe regulations which will reduce by half the amount of exempt FTI that an FSC might otherwise have had (either with or without regard to the "special administrative price rules") with respect to its FTGR for the taxable year attributable to the disposition of, or services relating to, "military property."

c. Webb-Pomerene Export Organizations

Webb-Pomerene export organizations [269] may be shareholders of an FSC. Members of a Webb-Pomerene organization will be allowed to sell products through an FSC to the Webb-Pomerent organization and, thus, benefit from the FSC provisions as well as the special provisions under the 1918 Webb-Pomerene Export Trade Act.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

d. Foreign Tax Credit Limitation of Related Parties

A special rule (§927(e)(1)) governs the source of income earned by a person related to an FSC (within the meaning of §482 (*i.e.*, "owned or controlled directly or indirectly by the same interest")) from transactions giving rise to FTGR of an FSC. Pursuant to regulations to be prescribed by the Secretary of the Treasury, the foreign source income of such related person will be reduced to the amount of foreign source income it would have had if its exports had been made through a DISC using the transfer pricing rule most comparable to the one used by the FSC. For this purpose, the DISC "4 percent of gross receipts method" [270] is analogous to the FSC "1.83 FTGR method;" [271] the DISC "50 percent CTI method" [272] is analogous to the FSC "23 percent of CTI method;" [273] and the DISC §482 pricing rule [274] is analogous to the FSC §482 pricing rule.[275]

It was Congress' intention that this special sourcing rule result in foreign source income that is comparable to the foreign source income on the same transaction under the DISC provisions.[276] The table below from the Finance Committee Print [277] illustrates the application of the DISC provisions to a DISC's parent with excess foreign tax credits that exports by selling to its DISC. In the particular transaction illustrated, the export sale has resulted in a profit of $100. The table presupposes that 50 percent of the parent's income from the export sale is foreign source income, as might be the case under §863(b) (related to income partly from within and partly from without the United States). The table assumes a 17 percent deferral rate for CTI of DISC and parent:

DISC—50/50 Split of CTI—§863(b)

(Exporter With Excess Foreign Tax Credits)

Parent		DISC	
U.S. source (taxable)	$25	Deferred	$17
Foreign source (exempt)	25	Deemed distribution	33
	$50		$50
Taxable:			
U.S. source income of parent			$25
Deemed distribution—separate basket			33
			$58
Exempt:			
Foreign source income of parent			$25
Deferred in DISC			17
			$42

The following table from the Finance Committee Print [278] illustrates the application of the FSC provisions (absent the special rule governing the source of income) to facts identical to those in the above table. It presupposes that the export sale is subject to the FSC "23 percent of CTI method."

FSC—77/23 Split of CTI Absent Resourcing Rule

(Exporter With Excess Foreign Tax Credits)

Parent		FSC	
U.S. source (taxable)	$38.50	Exempt	$17
Foreign source (exempt)	38.50	Taxable	6
	$77.00		$23
Taxable:			
U.S. source income of parent			$38.50
Taxable income of FSC			6.00
			$44.50
Exempt:			
Foreign source income of parent			$38.50
Exempt in FSC			17.00
			$55.50

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Under the DISC provisions, the parent's share of CTI is $50. The parent's foreign source income might be $25 under the DISC provisions. Exemption of $55.50 under the FSC provisions (absent the special resourcing rule) would exceed the combination of exemption and deferral of $42 for a parent of a DISC with excess credits under the DISC provisions (with a 17 percent deferral rate).[279] To maintain parity with the DISC, the FSC special resourcing rule would reduce the foreign source income of the parent in the FSC example (absent resourcing rule) from $38.50 to $25, which would result in an exemption of $42 (comparable to the DISC). The parent's U.S. source income would increase, under this special rule, from $38.50 to $52. The following table from the Finance Committee Print [280] illustrates the effect of the special resourcing rule:

FSC—77/23 Split of CTI With Resourcing Rule

(Exporter With Excess Foreign Tax Credits)

Parent		FSC	
U.S. source (taxable)	$52	Exempt	$17
Foreign source (exempt)	25	Taxable	6
	$77		$23
Taxable:			
U.S. source income of parent			$52
Taxable income of FSC			6
			$58
Exempt:			
Foreign source income of parent			$25
Exempt in FSC			17
			$42

I. Effective Dates and Transition Rules

1. Effective Dates

a. General

The FSC provisions and the amendments to the DISC provisions generally apply to transactions after December 31, 1984, in taxable years ending after that date.[281] The amendments to §441 that require the taxable year of the DISC and the FSC to conform to the taxable year of the majority shareholder apply to any DISC established after March 21, 1984.[282] The provision that clarifies present law to make it clear that a resident of a treaty partner country cannot avoid tax (under §996(g)) on DISC distributions is effective on June 22, 1984.[283]

b. Special Rule for Certain Contracts

(1) Taxpayers Using the Completed Contract Method of Accounting

A special transitional rule for long-term contracts provides that the foreign management test [284] and the economic process test [285] "shall not apply" to any contract with respect to which the taxpayer uses the completed contract method of accounting and which an FSC (1) entered into before March 16, 1984, or (2) was entered into by the FSC after March 15, 1984, and before January 1, 1985, pursuant to a written plan to enter into such a contract which was in effect on March 15, 1984.[286]

(2) Contracts Entered Into Before March 16, 1984

A further special transitional rule for long-term contracts provides that the foreign management test [287] and the economic process test [288] "shall not apply" to any contract which an FSC enters into before March 16, 1984.[289] This special transitional rule applies only to the first two taxable years of the FSC ending after January 1, 1985, "or such later taxable years as the Secretary of the Treasury may designate." [290]

(3) Contracts Entered Into After March 15, 1984, and Before January 1, 1985

A final special transitional rule for long-term contracts provides that the foreign management test [291] and the economic process test [292] "shall not apply" to contracts entered into after March 15, 1984, but before January 1, 1985.[293] The special transitional rule applies only to the first taxable year of the FSC ending after January 1, 1985, "or such later taxable years as the Secretary of the Treasury may designate." [294]

Observation: The Act provides that the foreign management and economic process tests "shall not apply" to the above-described long-term contracts. The rule described in (1) applies for all future years of an FSC; the rule described in (2) applies to an FSC's first two taxable years ending after January 1, 1985; and the rule described in (3) applies for an FSC's first taxable year ending after January 1, 1985. By using the term "shall not apply," the Act

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

appears to mean that (for the period of time allotted an FSC under the particular rule) the FSC's gross receipts will qualify as FTGR without regard to the foreign management and economic process tests. The Senate Finance Committee Print, however, states (at pp. 660-661) that with respect to all three rules, "the taxpayer will be treated as having satisfied the foreign presence tests for periods before and the economic process tests with respect to costs incurred before December 31, 1984." Thus, even though the Act itself makes those tests inapplicable to FSCs for the period of time allotted under the particular rule, the Senate Finance Committee would have the tests apply to activities taking place and costs incurred with respect to the contract after December 31, 1984, and during the periods of time that the Act itself states they are inapplicable. The nature of a long-term contract means that activities will take place and costs will be incurred over the life of the contract. If the special long-term contract rules are to have any effect whatsoever in terms of providing transitional relief, the terms of the Act (rather than the Committee Print) ought to apply.

Query: Must such long-term contracts have been entered into by the FSC itself, or may the FSC's parent (or other related party for whom the FSC acts as a commission agent) have entered into the contract? Neither the Act nor the legislative history clarifies this matter, although the staffs of the Senate Finance Committee and the Joint Committee on Taxation drafted the transition rules with the view that a parent could be considered the principal of a commission agent FSC for purposes of the special long-term contract transition rules.

Query: In all three of the special long-term contract transition rules, a corporation that qualifies as an FSC after December 31, 1984, will be treated as having satisfied the foreign management and foreign economic process tests with regard to the contracts described in the special rules for gross receipts received prior to specified periods of time. Does the deemed satisfaction of those tests mean, in addition, that all of the foreign sales activities (*i.e.*, solicitation, negotiation, and making of the contract) and all five foreign activities for direct cost purposes will be deemed to have been performed for purposes of the "special administrative pricing rules"? Given that the long-term contract transition rules are designed to help FSCs avoid unnecessary hardship, it would be consistent with that purpose to deem the requirements for the use of the "special administrative pricing rules" to have been satisfied.

2. Transition Rules for DISCs

a. December 31, 1984, Close to DISCs' Taxable Years

The taxable year of all existing DISCs will close on December 31, 1984, regardless of whether a DISC may be on a fiscal-year basis.

b. "Qualified Export Assets" Test Made Inapplicable

Section 992(a)(1)(B) provides that for a taxable year, "the adjusted basis of the qualified export assets . . . of the corporation at the close of the taxable year [must] equal[ ] or exceed[ ] 95 percent of the sum of the adjusted basis of all assets of the corporation at the close of the taxable year." As a measure of relief to fiscal year DISCs that would have had to struggle to satisfy the "qualified export assets" test for the short taxable year ending December 31, 1985, the Act makes the "qualified export assets" test inapplicable to any taxable year ending on December 31, 1984.[295]

c. Underpayments of Estimated Tax

To the extent provided in regulations prescribed by the Secretary of the Treasury, no addition to tax will be made (pursuant to §6654 or §6655) with respect to any underpayment of any installment required to be paid before April 13, 1985, to the extent the underpayment was created or increased by reason of the termination of a DISC's taxable year on December 31, 1984.[296]

d. Exemption of Accumulated Disc Income from Tax

Actual distributions of any accumulated "DISC income" [297] of a DISC or former DISC qualified as a DISC on December 31, 1984, which is derived before January 1, 1985, will be treated as "previously taxed income." [298] The tax exemption for accumulated DISC income will not apply to that portion of accumulated DISC income that may have been deemed distributed as a result of the revocation of a DISC election or the failure of a DISC to qualify prior to requalification and prior to the earning of income that is eligible for forgiveness.[299]

e. Installment Treatment of Certain Deemed Distributions

If a shareholder of a DISC so elects, any "qualified distribution" (*i.e.*, any deemed distribution (within the meaning of §995(b)) from a DISC attributable to income derived by the DISC in the first taxable year of the DISC which begins in 1984 after the date in 1984 on which the taxable year of the shareholder begins) will be treated as received by the shareholder in ten equal installments; the installments will be treated as received on the last day of each of the ten taxable years of the shareholder which begins after the shareholder's taxable year beginning in 1984.[300] Regulations to be prescribed by the Secretary of the Treasury may allow taxpayers to accelerate this inclusion if they elect to do so.[301] A shareholder may elect such installment treatment even though the DISC may cease to exist after December 31, 1984.[302]

Example: A DISC's taxable year ends January 31, and the corporate shareholder of the DISC is a calendar year taxpayer. In 1984, the corporate shareholder will include in income the deemed distributions from the DISC for the DISC's year ending on January 31, 1984, and, absent the ten-year spread, the deemed distributions for the eleven-month taxable year ending on December 31, 1985. Almost two years of deemed distributions will be includible in income in 1984. However, if a shareholder of a DISC so elects, the deemed distributions for the eleven-month period ending December 31, 1984, will be spread over a ten-year period and includible in the income of the shareholder in ten equal installments on December 31st of 1984 through 1993.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

3. Special Rule for Export Trade Corporations

Export Trade Corporations ("ETCs") may elect to discontinue operating as ETCs or elect to be FSCs. If an ETC so elects before January 1, 1985, the previously untaxed income attributable to earnings derived before January 1, 1985, will be treated as previously taxed income.[303]

Observation: ETCs that do not elect to discontinue operating under the ETC rules may continue to operate as ETCs. However, no portion of the untaxed income of the ETC will be treated as previously taxed income.[304]

[22] *Id.*
[23] *Cf.*, Rev. Rul. 73-442, 1973-2, C.B. 296. The Service ruled there that where a shareholder's proportionate share of a corporation's receipts, assets, property, and income is based on the size of his transactions with the corporation rather than the number of shares which he owned, there is more than one class of stock, and, therefore, the corporation cannot qualify as a DISC. The ruling, effectively quashing the method by which a number of small unrelated exporters might have set up a DISC to handle their export sales, apparently will not apply to FSCs.

[46] §924(a). For a detailed discussion of FTGR, *see* III, D, *infra*.
[47] §921(a).
[48] §923(a)(1).
[49] Section 68(b) of the Act amends paragraph (4) of §291(a) (relating to corporate tax preference items) to provide that "[i]f a corporation is a shareholder of the FSC, in the case of taxable years beginning after December 31, 1984, section 923(a) shall be applied with respect to such corporation by substituting —
(A) '30 percent' for '32 percent' in paragraph (2), and
(B) '15/23' for '16/23' in paragraph (3)."
[50] *See* §923(a)(2), which provides that where the "special administrative pricing rules" set forth in §§925(a)(1) and (2) do not apply, "32 percent of the foreign trade income derived from such transaction shall be [exempt from tax]." The Finance Committee Print clarifies that in such cases, arm's-length pricing or the §482 rules apply. S. Rep. No. 169 (Vol. I), 98th Cong., 2d Sess., 638 (1984).
[51] §923(a)(2).
[52] §925(a)(1) and (2). For further discussion of the special administrative pricing rules, *see* III, E, *infra*.
[53] *See* footnote 49, *supra*.
[54] §923(a)(3).
[55] §§925(a)(1) and (2); 925(b); 925(d).
[56] §921(b).
[57] §927(d)(6) defines "section 923(a)(2) non-exempt income" as "any foreign trade income from a transaction with respect to which paragraph (1) or (2) [(*i.e.*, the special administrative pricing rules)] of section 925(a) does not apply and which is not exempt foreign trade income." Since under §923(a)(2), 32 percent (30 percent in cases involving corporate shareholders of FSCs) of the FTI derived from a transaction will be treated as exempt FTI in the case of any transaction to which the special administrative pricing rules do not apply, "section 923(a)(2) non-exempt income" equals 68 percent (70 percent in cases involving corporate shareholders of FSCs) of FTI.
[58] §927(c) defines "investment income" as —
"(1) dividends,
(2) interest,
(3) royalties,
(4) annuities,
(5) rents (other than rents from the lease or rental of export property for use by the lessee outside of the United States),
(6) gains from the sale or exchange of stock or securities,
(7) gains from futures transactions in any commodity on, or subject to the rules of, a board of trade or commodity exchange (other than gains which arise out of a bona fide hedging transaction reasonably necessary to conduct business of the FSC in the manner in which such business is customarily conducted by others),
(8) amounts includible in computing the taxable income of the corporation under part I of subchapter J, and
(9) gains from the sale or other disposition of any interest in an estate or trust."
[59] §927(d)(1) provides that the term "carrying charges" means both "carrying charges" and "under regulations prescribed by the Secretary, any amount in excess of the price for an immediate cash sale and any other unstated interest."
[60] §921(d).
[61] §27(a).
[62] §33.
[63] §34.
[64] §906(b)(5). In this regard, section 801(d)(2) of the Act amends §904(d)(1) so that FTI (other than "section 923(a)(2) non-exempt in-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

come") will be taken into account under a separate limitation for purposes of determining the foreign tax limitation of an FSC.

[164] In this regard, §166(a) provides a deduction for "any debt which becomes worthless within the taxable year." Section 166(b) provides that "the basis for determining the amount of the deduction for any bad debt shall be the adjusted basis provided in section 1011 for determining the loss from the sale or other disposition of property." In the case of property included as inventory (the most likely FSC export property), §1011 cross references §1013, which provides that the basis for such property will be the "last inventory value thereof."
[165] §166(c) provides that in lieu of the bad debt deduction provided in §166(a), "there shall be allowed (in the discretion of the Secretary) a deduction for a reasonable addition to a reserve for bad debts."

Chapter 65

TRANSFERS OF PROPERTY OUTSIDE THE UNITED STATES—§§367 and 1491 [1]

Leonard B. Terr, Esq.
and
Richard J. Safranek, Esq.
Sutherland, Asbill & Brennan
Washington, D.C.

I. Overview

A. *Introduction*

Subchapter C of the Code (specifically, §§332, 351, 354, 355, 356, and 361) provides for nonrecognition of gain to a transferor of assets or stock in connection with certain exchanges involving the organization, reorganization, or liquidation of a corporation. However, where such an exchange involves a transfer by a U.S. person to a foreign corporation (*i.e.*, a so called "outbound" transfer), §367(a) may deny such nonrecognition treatment by denying corporate status to the foreign transferee. Prior to the Tax Reform Act of 1984 amendments, nonrecognition treatment generally was denied in respect of such outbound transfers unless the U.S. transferor timely requested and obtained a ruling from the Internal Revenue Service to the effect that the transfer did not have a principal tax avoidance purpose.

The scope of §367(a) was and as amended will continue to be extremely broad. It applies to any direct transfer by a U.S. person to a foreign corporation pursuant to an exchange falling within one or more of the specified nonrecognition provisions, such as the organization of a foreign corporation pursuant to a §351 exchange,[2] the direct acquisition of a U.S. corporation by a foreign corporation pursuant to a reorganization under §§368(a)(1)(B), (C), (D) or (F),[3] or the liquidation of a U.S. subsidiary into its foreign parent under §332.[4] Moreover, a particular transaction may trigger the application of §367(a) even though it does not involve a direct transfer by a U.S. person to a foreign corporation and may appear even to fall outside the specified nonrecognition provisions. For example, the statute applies to certain "indirect" outbound transfers,[5] such as a transfer to a foreign corporation by a foreign or U.S. partnership having one or more U.S. partners,[6] a transfer by a foreign grantor trust of which a U.S. person is treated as the owner,[7] and a transfer of stock or assets to a U.S. corporation in exchange for stock of a foreign corporation in control of the transferee U.S. corporation pursuant to a "triangular" reorganization.[8]

Section 367(a) also applies to certain "constructive" exchanges,[9] such as a contribution of property to the capital of a foreign subsidiary,[10] a termination of the §1504(d) status of a contiguous country subsidiary that had been included in a domestic corporation's affiliated group,[11] the "reclassification" of a foreign partnership as a foreign corporation,[12] and certain intercorporate sales of stock subject to §304.[13]

In some instances, a taxpayer could "elect" to have §367(a) apply in the case of certain "overlap" transactions that qualify both as "foreign-to-foreign" reorganizations within §367(b) and as outbound §351 or §361 exchanges within §367(a).[14] Finally, certain transactions that initially may not appear to involve an outbound transfer of appreciated property, such as the organization of a foreign subsidiary with U.S. currency,[15] nevertheless may be considered to involve a transfer of valuable intangible property with respect to which §367 applies, such as the right to use the parent's corporate name,[16] the right to enter into certain contractual arrangements with third parties,[17] or existing goodwill or going concern value associated with the parent's direct operations in particular foreign countries.[18]

The pre-1984 legislative history of §367(a) indicates that the tax avoidance sought to be prevented in the case of "outbound" transactions was the permanent removal from U.S. taxing jurisdiction of the previously untaxed income or gain inherent in certain types of appreciated property.[19] To accomplish this purpose, the Service developed certain objective standards that were set out in published "Guidelines" applicable to the issuance of §367(a) rulings.[20] These Guidelines generally described when the Service would issue a favorable §367(a) ruling and, often by implication, when it would not. One set of limitations related to the transaction itself and, if those provisions were not satisfied, a favorable §367(a) ruling generally would not be issued and the U.S. transferor would be forced to recognize gain on the entire transaction. For example, the Guidelines established as threshold requirements for a favorable ruling that (1) the transferred property be devoted by the transferee to the active conduct of a trade or business abroad, and (2) the foreign transferee have need for a substantial investment in fixed assets in such business (or be engaged in the purchase and sale abroad of manufactured goods).[21] In addition, favorable treatment was generally not given to transfers of stock under §368(a)(1)(B) and triangular reorganizations in which the stockholders of the acquired U.S. corporation owned after the exchange more than 50 percent of the acquiring corporation's stock.[22]

A second set of limitations contained in the Guidelines related to the transferred assets and identified certain "tainted" assets the outbound transfer of which generally would be presumed to be in pursuance of the prohibited tax

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

avoidance purpose. In the case of such transfers, issuance of a §367(a) ruling ordinarily could still be obtained for the overall transfer but it would be conditioned on the transferor's agreeing to currently recognize as a "toll charge" the income or gain inherent in the "tainted" assets.[23]

The types of income or gain inherent in "tainted" assets in respect of which tax avoidance was presumed and a toll charge generally was imposed included: (i) appreciation in the value of certain investment assets, such as stock or securities, that may be sold or otherwise disposed of by the transferee foreign corporation;[24] (ii) passive income attributable to certain intangibles, or rents or royalties to be received in connection with property that may be leased or licensed by the transferee;[25] and (iii) fully "matured" income that had effectively been earned but had not yet been reported by the U.S. transferor, such as the income reflected in accounts receivable and inventory.[26]

In addition, where the transferor had incurred losses for U.S. purposes in respect of the assets being transferred abroad (typically the assets associated with a foreign branch operation), the Service, notwithstanding the Tax Court's rejection of its position in *Hershey Foods Corp. v. Comr.*,[27] ordinarily conditioned the issuance of a favorable ruling on the transferor's agreeing to include in income the amount of the cumulative net losses incurred by the branch since its inception (not to exceed the gain realized on the transfer) reduced by any "overall foreign loss" recaptured under §904(f)(3).[28] By contrast, favorable rulings generally were issued without any condition in respect of the transfer of fixed assets, most intangibles, and other property to be devoted by the transferee foreign corporation to an active trade or business abroad.[29]

The foregoing Guidelines and rulings positions represented only presumptions and thus theoretically could be modified or rebutted where the facts and circumstances of a particular case otherwise established the absence, or existence, of the prohibited tax avoidance purpose.[30] However, favorable rulings under the "facts and circumstances" exception were issued only rarely.[31] The "reasonableness" of an adverse ruling or toll charge could be challenged in the Tax Court under the §7477 declaratory judgment procedure enacted in 1976, a procedure that was utilized by taxpayers with consistent success. *Kaiser Aluminum & Chemical Corp. v. Comr.*,[32] struck down the Service's refusal to permit a tax-free transfer of stock which, in the court's view, represented more of an operating asset than a passive investment security. The first declaratory judgment proceeding under §7477, *Dittler Bros. Inc. v. Comr.*,[33] required the Service to take into account transferor intent notwithstanding the inability to satisfy the terms of the Guidelines. *Hershey Foods* [34] successfully challenged the validity of the loss "recapture" requirement of Rev. Rul. 78-201 in connection with foreign branch incorporations.

B. Substantive Changes Effected by the Tax Reform Act of 1984

The tax avoidance purpose standard and the ruling requirement have been eliminated. Under the 1984 Act, gain generally must be recognized on a transfer of appreciated property to a foreign corporation pursuant to one of the "tax-free" exchanges described in §367(a). The principal exception to this general, automatic toll charge rule is for transferred property that will be used by the transferee in "the active conduct of a trade or business outside of the United States." [35]

However, certain types of property are made ineligible for the active trade or business exception and their transfer to a foreign corporation will result in automatic recognition of gain. Such "tainted assets" include inventory, installment obligations, accounts receivable, foreign currency or property denominated in foreign currency, intangible property, and property being leased by the transferor (except where leased to the transferee). §367(a)(3)(B). For this purpose, transfers of general partnership interests are to be treated as transfers of each U.S. partner's pro rata share of partnership assets. §367(a)(4). The Secretary is authorized to exempt certain transactions by regulation from the general automatic toll charge rule. §367(a)(5).

Stock and securities, which formerly were treated as tainted assets under the Guidelines (subject to limited exceptions), are omitted from the statutory list of tainted assets and, according to the Committee Reports, their outbound transfer ordinarily will be deemed by regulation to meet the active business test for nonrecognition treatment (i) where the transfer falls within the Guidelines' or certain newly developed exceptions, or (ii) where the transferor enters into a special closing agreement to ensure recognition of gain in the event of a subsequent disposition of the stock by the transferee.

The branch loss recapture toll charge of Rev. Rul. 78-201 [36] has been codified. Under the new provision, upon the incorporation abroad of a foreign branch that has operated at a net loss the U.S. transferor must recognize as ordinary income the cumulative net amount of the prior losses (reduced by the amount, if any, recaptured under §904(f)(3)) to the extent of the gain realized on the transfer. §367(a)(3)(C).

Under a special set of rules applied to transfers of intangible property, a transferor generally will be treated as having sold the intangibles for payments that are "contingent upon the productivity, use or disposition of such property" and must include such constructive payments in income annually over the useful life or lives of the transferred intangibles (or currently, if the transferee disposes of the intangibles). §367(d).

Although §336 is not one of the nonrecognition provisions enumerated in §367(a)(1), a special rule will require recognition of gain by liquidating domestic corporations on distributions of appreciated property to their foreign shareholders (whether or not pursuant to a §332 liquidation) to the extent required under regulations that are to adopt "principles similar to the principles" of §§367(a) and (d).

The provisions of §§1491-1494, which impose a 35 percent excise tax on outbound transfers of appreciated property to foreign partnerships, trusts, estates and noncontrolled foreign corporations (as paid-in surplus or capital contributions) are amended to require the application of "principles similar to the principles of §367." §§1492(2)(B) and 1494(b).

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

C. *Procedural Changes Effected by the Tax Reform Act of 1984*

It is no longer necessary to obtain an IRS ruling with respect to transfers described in §367(a), although the Committee Reports make clear that rulings will continue to be obtainable on a discretionary basis.

The declaratory judgment provisions of §7477, which granted the Tax Court jurisdiction to review the reasonableness of IRS rulings under §367(a), are repealed. Act §131(e). A notification procedure is established under which each U.S. person that makes an outbound §367(a) or §367(d) transfer or §367(e) liquidating distribution will be required to report the transaction on an information return to be filed in the time and manner prescribed by regulations. Failure to file the return will toll the applicable statute of limitations and, unless due to reasonable cause, will subject the transferor to a 25 percent penalty. Act §131(d).

D. *Effective Dates*

The 1984 Act amendments generally are effective with respect to transfers or exchanges occurring after December 31, 1984. If a request for a ruling was filed prior to March 1, 1984, however, the old rules will continue to apply even if the transfer occurs after 1984.

Although the new liquidating distribution rules under §367(e) are effective January 1, 1985, §367(e) by its terms requires implementing regulations and thus may not become effective until some later date.

Under a special transitional rule, transfers of intangible property occurring after June 6, 1984, but before January 1, 1985, will be deemed to be in pursuance of a principal tax avoidance purpose and, thus, to be ineligible for nonrecognition treatment under applicable pre-1984 Act rules, unless a "waiver" of this automatic toll charge is obtained from the Service.

II. Detailed Analysis

A. *The General Automatic Toll Charge Rule*

The general rule under §367(a)(1), as amended by §131 of the 1984 Act, is that gain must be recognized when appreciated property is transferred to a foreign corporation in connection with an exchange otherwise qualifying for tax-free treatment under §§332, 351, 354, 355, 356 or 361.

1. *Scope of the General Rule*

Except for the special rules governing outbound transfers of intangibles (§367(d)) and liquidating distributions (§367(e)), the basic scope and mechanics of §367 are not materially altered by the 1984 Act amendments. The toll charge mechanism continues to operate by denying corporate status to a foreign corporate transferee in connection with certain specified Subchapter C transactions in respect of which the transferee's corporate status is a prerequisite to the transferor's (and possibly other parties') eligibility for nonrecognition treatment. The amended statute applies, as did prior law, to direct, indirect and constructive outbound transfers pursuant to statutory nonrecognition provisions that otherwise would permit the tax-free expatriation of U.S. stock or assets into foreign corporate solution outside the reach of direct U.S. tax jurisdiction. It applies only to "transfers," not to loans, leases, licenses or other transactions involving less than full and irrevocable relinquishment by the transferor of all substantial rights in the subject property.[37] It applies only to transfers of "property," not to the right to enter into executory contracts, or other items that do not rise to the level of a valuable proprietary right or interest.[38] Although relief from the automatic toll charge is provided by statutory (and regulatory) exception, many of the substantive standards formerly applied under the rulings Guidelines will continue to have relevance in determining the results of transactions under the amended statutory scheme.

2. *The "Foreign Party Stock" Exception*

New §367(a)(2) preserves the prior law exception for outbound transfers of stock or securities of a foreign corporation which is a party to the exchange or reorganization. By virtue of this exception, as under prior law, the general rule of §367(a)(1) is made inapplicable to the recapitalization of a foreign corporation that qualifies as a reorganization under §367(a)(1)(E), and to contributions of transferor or transferee stock or securities to a foreign corporate transferee.[39] This exception also might continue to have relevance in foreign holding company reorganizations, permitting a U.S. parent's transfer of the stock of its foreign operating subsidiary to an existing or newly-formed foreign holding company to be subject solely to the §367(b) regulations applicable to foreign-to-foreign "B" reorganizations rather than to the §367(a) standards applicable to outbound §351 transfers of stock. However, the legislative history leaves uncertain whether the current rule granting priority to "B" treatment in "B"-§351 overlap cases will be retained.[40]

B. *The Active Trade or Business Exception*

1. *In General*

The principal exception to the general automatic toll charge rule is contained in §367(a)(3)(A), which provides that the general rule will not apply, and thus that gain need not be recognized, with respect to "any property transferred to a foreign corporation for use by such foreign corporation in the active conduct of a trade or business outside of the United States." Assets which produce passive income, such as interest or rent, ordinarily will not satisfy the active trade or business exception. In addition, other types of property that otherwise might satisfy the exception, such as inventory and receivables, are specifically excluded from tax-free treatment.[41]

The active trade or business exception is drawn from Sec. 3.02 of the Guidelines, under which a favorable §367(a) ruling ordinarily was issued if the transferred "property is to be devoted by the transferee foreign corporation to the active conduct, in any foreign country, of a trade or business. . ." The Service is urged to issue regulations by January 1, 1985, the effective date of the amendments, prescribing the standards that are to be used in determining whether the active trade or business test is satisfied.[42] In the interim, taxpayers are authorized to rely on current IRS rulings practice under the Guidelines' active business standard, as reflected in private letter rulings upon which the regulations presumably will be modeled.[43]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

2. The "Managerial and Operational Activities" Standard

In a series of private letter rulings, some issued since the amendments made by the 1984 Act were proposed,[44] the Service stated that the "active trade or business" test will be satisfied only if the foreign transferee conducts both managerial and operational activities using its own employees.[45] The rationale for this interpretation was the Service's view that the Guidelines' active business requirement generally should have the same meaning as the identical phrase in §355(b), which limits tax-free "spin-offs" to situations where the distributing corporation and the controlled corporation have been and will continue to be "engaged . . . in the active conduct of a trade or business." In a succession of revenue rulings focusing on the §355(b) active business test,[46] the Service had held that §355, "by requiring that a trade or business be *actively conducted*, connotes substantial management and operational activities directly carried on by the corporation itself, and not the activities of others outside the corporation, including independent contractors." This position subsequently was adopted in the proposed regulations under §355(b).[47]

In PLR 8305036, characterization of tenant farmers as independent contractors rather than employees prevented an outbound transfer of Canadian farm land from satisfying the "operational" prong of the Guidelines' active business test and led to an adverse ruling on the transaction.[48] In *Dittler Bros., Inc. v. Comr.*, the Tax Court held that under the Guidelines' "facts and circumstances" exception the outbound transfer of know-how (rub-off lottery tickets) did not have a principal tax avoidance purpose, even though the transferee's activities were conducted exclusively through related corporations on an independent contractor basis. However, the court indicated that it "might be inclined to sustain respondent's adverse determination" if the transferee's conduct of an active business was, as it is now, an absolute requirement.[49]

If the forthcoming regulations adopt the Service's current interpretation of the active business test, the ability to meet the statutory exception could well turn on whether particular employees abroad are viewed as performing *both* managerial *and* operational activities. As recent rulings suggest, this requirement could present a serious obstacle to foreign oil and gas and other natural resource exploration and development ventures. Given the magnitude of the costs and risks involved, such ventures often are carried out under joint operating agreements that delegate day-to-day operational responsibilities to one co-venturer. The remaining co-venturers, notwithstanding substantial capital commitments, generally are not engaged in day-to-day operational activity, but nevertheless are actively involved in the monitoring and analysis of testwell data and in a broad range of decisions regarding drilling, recovery, and other procedures under the joint operating agreement. Although the Service formerly had granted favorable clearance to outbound transfers of oil and gas working interests (as distinguished from most overriding royalty and similar "passive" interests) without regard to the transferee's operator status, recent rulings have taken the position that the active business requirement ordinarily will not be met, and nonrecognition treatment thus will not be available, unless more than 50 percent of all working interest properties transferred represent operating interests; *i.e.*, properties in respect of which the transferor possesses (and the transferee will assume) operating control.

In PLR 8407012, for example, none of the transferor's employees was viewed as performing the requisite "operational" functions. Thus, an adverse ruling was issued because the transferor was not the operator in respect of the transferred oil and gas working interest properties and, thus, was not engaged in day-to-day drilling activities, even though its employees performed substantial related activities in connection with the development of the properties under the joint operating agreement. If the functions performed by the transferee's engineer and geologist employees could have been characterized as "operational" as well as managerial, a favorable ruling might have been obtainable.

How the foreign corporation's business is characterized also may be important under the active business test. For example, in Rev. Rul. 73-237,[50] a corporation was held for §355(b) purposes to be actively engaged in the general contracting business (by preparing bids, negotiating contracts, purchasing equipment and supplies, and supervising subcontractors) although its employees were not directly engaged in any day-to-day construction activity.

3. The "Foreign" Business Requirement

Section 367(a)(3)(A), like the Guidelines provision on which it is modeled, requires that the transferee foreign corporation conduct its business outside the United States.[51] Nonrecognition treatment ordinarily would be unavailable in respect of a transfer of the assets of a domestic business to a foreign corporation where the transferee planned to continue the business in the United States after the transfer. The Service formerly had been willing to grant favorable clearance with respect to a foreign parent's §332 liquidation of its domestic subsidiary, even where the subsidiary's U.S. business would be continued by the parent in branch form, apparently in recognition of the fact that a foreign corporation generally is taxed on its effectively connected U.S. branch income in a manner comparable to a U.S. corporation.[52] However, recent rulings have taken the position that such a transfer is proscribed by the Guidelines' requirement that the transferred property be devoted by the transferee to the conduct of an active business abroad, not in the United States.[53]

Under the Guidelines, stock transfers were tested under somewhat different criteria than transfers of assets, with the foreign situs requirement being applied primarily to the latter. This distinction likely will be retained under the statutory active business exception. For example, where a foreign corporation acquires control of a domestic corporation in an outbound "B" reorganization, the foreign situs requirement presumably will be deemed to be satisfied even though the subsidiary is engaged in business in the U.S.[54]

4. The "Transferee's" Business

Although §367(a)(3)(A) literally requires that the property transferred to a foreign corporation be used by "such corporation" in an active business, the regulations hopefully will preserve the existing rule permitting the property to be retransferred to a lower-tier foreign subsidiary. The Service's longstanding position under the Guide-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

lines had been to permit transfers "from one controlled corporation to another," with the "ultimate recipient of the property [being] required to satisfy" the active trade or business test.[55] Similarly, the current rulings practice of permitting property transferred to a foreign corporation to be retransferred to a foreign partnership hopefully also will be continued.[56]

5. Application of the Active Business Exception to Partnership Interests

Section 367(a)(4) provides that the active business exception is to be applied to outbound transfers of partnership interests by treating the transaction as a transfer by each U.S. partner of its pro rata share of the partnership assets. The Committee Reports indicate that since the focus of §367(a)(4) is on transfers of partnership interests, it represents an extension of the rule contained in Regs. §1.367(a)-1(b)(3), which treats U.S. partners as having transferred a proportionate share of partnership assets only when the *partnership* transfers its assets.[57] In fact, however, the Service's existing rulings practice has been to apply the relevant Guidelines' standards with respect to the underlying partnership assets in cases involving the transfer of general partnership interests. If the partnership held "tainted" assets, such as inventory or portfolio securities, a favorable §367 ruling ordinarily would be issued only if the U.S. partner-transferor agreed to include in income as a toll charge its proportionate share of the gain attributable to the partnership's tainted assets.[58] This should also be the result (albeit without a ruling) under §367(a)(4).[59]

The foreign transferee of a partnership interest generally will be treated as using the transferred partnership interest in an active trade or business if the partnership's assets are so used by the partnership. This, too, was the rule prior to the 1984 Act.[60] Where tiered partnerships are involved, so that the assets of the partnership whose interest is transferred consist of interests in a second partnership, the regulations likely will provide that §367(a) will be applied as though the second partnership's assets had been transferred.[61]

Although §367(a)(4) makes no distinction between limited and general partnership interests, the Committee Reports state that the "rule will not apply to most transfers of limited partnership investments." [62] According to the Committee Reports, such interests are comparable to stock and are to be treated as stock in applying §367(a).[63] Since the treatment of outbound stock transfers under the amended provisions (as discussed below) represents a substantial liberalization of pre-1984 Act treatment, it is possible that the intention of the Committee Reports was to extend such liberalized treatment to limited partnership interests as well. Given the Service's largely unfavorable treatment of such interests under the Guidelines, however, it is questionable whether such a change in treatment in fact was intended.

Limited partnership interests generally were treated as tainted assets under the Guidelines.[64] The sole exception to this treatment was the case of an incorporating transfer in which all partners participated. In such cases, the Service looked to the underlying assets of the partnership and each U.S. partner, both limited and general, was required to recognize its proportionate share of gain attributable to any tainted assets held by the partnership.[65] Whether or not the forthcoming regulations adopt rules similar to those applicable to transfers of stock, those rules hopefully will include the exception for incorporating transfers in recognition of the fact that the exception would produce a result consistent with the treatment of a transfer of assets by the partnership, followed by a distribution of the transferee stock to the limited and general partners.

C. "Tainted" Assets Ineligible for the Active Business Exception

1. In General

In a provision modeled after Secs. 3.02(1)(a) and (b) of the Guidelines, §367(a)(3)(B) lists several categories of "tainted" assets which, even if otherwise transferred for use by the foreign transferee in an active business, are deemed to be ineligible for tax-free treatment. Although gain therefore must be recognized on the transfer of any such assets, tax-free treatment may be obtained with respect to any non-tainted assets transferred (*i.e.*, assets not falling within any of the tainted categories), provided they satisfy the active trade or business exception.[66]

The categories of tainted assets listed in §367(a)(3)(B) are inventory, installment obligations, accounts receivable, foreign currency and property denominated in foreign currency, and certain property with respect to which the transferor is a lessor. Also included is a broad collection of intangible property. (Except in the case of outbound §332 liquidations to which new §367(e) applies, §367(d) (as discussed below) generally removes intangible property from the ambit of the general toll charge rule of §367(a), subjecting such property instead to a separate set of taxing rules.) [67]

Although stock and securities were considered tainted assets under the Guidelines,[68] under the 1984 Act amendments such property is omitted from the statutory list of tainted assets and may receive tax-free treatment if the active business exception is satisfied.[69] Similarly, although there are no statutory provisions comparable to Secs. 3.02(1)(a)(iv) and (1)(b)(ii) of the Guidelines, which generally required gain to be recognized on the transfer of property which was likely to be sold, leased, or otherwise disposed of by the transferee, the Committee Reports suggest that such transfers in most cases would not satisfy the active business exception and, thus, would continue to result in recognition of gain.[70]

2. Inventory

As under the Guidelines, §367(a)(3)(B)(i) treats as a tainted asset "property described in paragraph (1) . . . of section 1221" (*i.e.*, stock in trade of the taxpayer or other property of a kind which would properly be included in the inventory of the taxpayer). The Service's rulings position under the Guidelines, which may well continue to be applied under the 1984 Act provision, is that "inventory" encompasses not only finished goods, but also raw materials and work-in-process. This point, however, should be clarified in the regulations.

The Service's stated rationale for prohibiting tax-free transfers of inventory was that inventory by definition is virtually certain to be sold by the transferee shortly after

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the transfer and its transfer abroad merely represents a diversion of income that could as easily have been earned by the transferor within U.S. tax jurisdiction. In addition, the benefit of U.S. tax deferral in respect of such income is particularly inappropriate in that the cost of the materials and labor necessary to produce the inventory likely has been or will be claimed by the U.S. transferor as a deduction against its U.S. tax liability.[71] These same considerations presumably influenced the decision to include inventory within the statutory list of tainted assets.

3. Installment Obligations and Accounts Receivable

Also as under the Guidelines, §367(a)(3)(B)(ii) requires recognition of gain on the transfer of "installment obligations, accounts receivable, or similar property."[72] If the income represented by a receivable has already been included in income, the taxpayer's basis will have been increased accordingly and no additional gain should be recognized on its transfer in an exchange described in §367. Conceivably, however, the fair market value of the receivable at the time of transfer could exceed its face amount and, in the absence of an exception in the regulations, additional gain could be recognized.

4. Foreign Currency

Under §367(a)(3)(B)(iii), "foreign currency or other property denominated in foreign currency" is made ineligible for tax-free treatment under the active business exception. Although such property is not listed as a tainted asset in the Guidelines, it was so treated in Rev. Rul. 81-4 as well as in a succession of private letter rulings.[73] This position is premised on the historic treatment of foreign currency as "property" for U.S. tax purposes, and the application of the "two transaction" principle for purposes of determining the tax consequences of foreign currency transactions (sales, repayments of borrowings, etc.). Under that principle, the foreign currency aspect of the transaction is treated as a separate transaction from the underlying transaction and, thus, may separately give rise to taxable gain or loss (depending upon the relevant exchange rate and U.S. dollar basis in the acquired currency) without regard to the results of the underlying transaction.[74]

The Senate Report notes that "other property denominated in foreign currency" includes foreign currency receivables and installment obligations.[75] Where such property is transferred abroad, a separate toll charge will be imposed (in addition to the toll charge in respect of the receivables or installment obligations themselves) to reflect any exchange gain realized by the U.S. transferor as a result of an increase in the dollar value of the underlying foreign currency between the date the property was acquired and the date of transfer.[76] However, under the normal principles applicable to determining the character of foreign exchange gain or loss, such character generally will be the same as the character of the gain or loss recognized on the underlying transaction; *e.g.*, ordinary in the case of trade account receivables.[77]

On the other hand, where the foreign currency has appreciated in value in relation to the U.S. dollar and produces exchange losses to the U.S. transferor in respect of the transferred receivables, installment obligations, or other foreign currency denominated property, such losses are not recognized in connection with the transfer; nor reduce the amount of gain or income includible with respect to the underlying asset (if a tainted asset). Moreover, exchange losses attributable to one class of foreign currency receivables may not be "netted" against exchange gains attributable to others.[78]

The House and Senate Reports state that "other property denominated in foreign currency" also will be considered to include "accounts payable" (and apparently other liabilities and obligations) denominated in foreign currency, noting specifically that such "property" had not been considered to fall within the tainted asset category under the Guidelines.[79] Although the Senate Report definition is not inadvertent, it may be questioned whether it is appropriate to treat the foreign currency amount of a payable or other liability as an item of property. If a taxpayer's liability is lower in dollar terms at the time of discharge than at the time incurred by reason of a decline in the dollar value of the foreign currency in which such liability is denominated, it could be argued that the resulting "gain" is more in the nature of discount or reduced interest cost than taxable gain, or might be treated as discharge of indebtedness income excludible under §108 (subject to §1017 basis adjustments).[80]

The treatment of foreign currency payables as tainted assets also could produce somewhat anomalous results by virtue of the inability to net gains and losses. For example, a transfer of the assets of a foreign branch with accounts payable roughly in balance with accounts receivable could result in recognition of gain with respect to one but no offsetting loss with respect to the other. Just how the regulations will deal with this new item of "property" for §367 purposes remains to be seen.

5. Property Leased by the Transferor

Section 367(a)(3)(B)(v), which is modeled after Sec. 3.02(1)(b)(i) of the Guidelines, treats as a tainted asset "property with respect to which the transferor is a lessor at the time of the transfer, except that this clause shall not apply if the transferee was the lessee." The stated rationale for the Guidelines provision was to prevent the diversion from U.S. tax jurisdiction of passive income that could have been as easily received by the U.S. transferor as by the foreign transferee.[81] By contrast, where the transferred property is being leased to the transferee, the Service ordinarily ruled favorably under the Guidelines on the premise that the potential for diversion was minimal because the foreign transferee, which had been using the property, would be unlikely to dispose of it after the transfer.[82]

6. Other Tainted Assets

Except for intangible assets, which are discussed separately below, the statute lists no other categories of tainted assets. The Committee Reports contemplate, however, that passive investment-type assets (*e.g.*, certain non-working oil and gas and mineral interests) which in the past had been treated by the Service as tainted assets,[83] in most cases will fail to meet the active business exception and will continue to be ineligible for tax-free treatment.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

D. Property Likely to be Leased by the Transferee to Third Parties

Both the House and Senate Reports indicate that, in appropriate circumstances, tax-free treatment may be obtained under the active business exception even though the transferred property will be leased to third parties by the transferee rather than used directly in the transferee's business.[84] Tax-free treatment will not extend to property which is already subject to a lease, however, as such property is specifically made ineligible for the active business exception.[85]

Ordinarily, rental income is considered passive income to the lessor and any attempt to transfer property generating rental income to a foreign corporation will result in recognition of gain for failure to satisfy the active business exception. Under Sec. 3.02(1)(b)(iii) of the Guidelines, property likely to be leased by the transferor was specifically characterized as a tainted asset, the transfer of which would generally be subject to a toll charge. An exception was developed to cover situations where the foreign transferee conducted an active leasing business. As formalized in Rev. Proc. 80-14,[86] and as adopted in the 1984 Act Committee Reports,[87] tax-free treatment may be obtained on the transfer of property that will be leased by the transferee provided the following requirements are satisfied:

(i) The property will be leased to persons who will not use the property in the U.S.;

(ii) The foreign transferee will have employees performing substantial marketing, customer servicing, repair, and maintenance activities with respect to the leased property; and

(iii) The foreign transferee will have need for a substantial investment in fixed assets of the kind transferred.

E. Treatment of Stock and Securities

1. In General

Stock and securities, which represent the principal category of property that was formerly treated as a tainted asset category under the Guidelines, is omitted from the list of tainted assets enumerated in new §367(a)(3)(B). Although the availability of nonrecognition treatment in respect of an outbound transfer of stock or securities literally turns on whether the active business exception can be met, the Committee Reports direct that the regulations prescribe the circumstances under which the active business exception will be deemed to be met.

In particular, the Committee Reports indicate that outbound stock or securities transfers generally should be deemed to meet the active business exception (and thus qualify for nonrecognition treatment) under those circumstances with respect to which favorable treatment formerly had been granted under the Guidelines and IRS rulings practice (described below).[88] In addition, the Committee Reports contemplate that the regulations will specify certain newly-developed exceptions under which such transfers will be deemed to qualify for nonrecognition treatment as well as provide a special closing agreement procedure pursuant to which such treatment will be available in "appropriate" cases (and subject to certain conditions), even where none of the specific regulatory exceptions is met.[89]

2. The Guidelines Exceptions

a. The 50 Percent-or-Less Ownership Exception

Several types of outbound reorganizations involving the acquisition of domestic corporations by foreign corporations or their domestic subsidiaries were permitted to be effected on a tax-free basis under the Guidelines. A threshold question that determined which of several Guidelines' tests would be applied by the Service was whether the reorganization involved a transfer of assets by the acquired domestic corporation (in which case the tainted asset and related rules would be applied and, presumably, will continue to be applied under the 1984 Act amendments) or a transfer of stock by the-acquired corporation's shareholders (in which case certain special rules, described below, would be applied).[90]

The types of reorganizations which have been (and should continue to be) treated for §367 purposes as outbound transfers of stock by the acquired domestic corporation's shareholders include the following: (i) a "B" reorganization, in which a foreign corporation (or its domestic subsidiary) acquires "control" of a domestic corporation solely in exchange for the foreign corporation's voting stock;[91] (ii) a reverse triangular merger under §§368(a)(1)(A) and (a)(2)(E), in which a domestic subsidiary of a foreign corporation merges into a second domestic corporation, whose shareholders receive voting stock of the foreign parent;[92] (iii) a forward triangular merger under §§368(a)(1)(A) and (a)(2)(D), in which a domestic corporation is merged into a domestic subsidiary of a foreign corporation in exchange for the foreign parent's stock;[93] and (iv) a triangular "C" reorganization, in which a domestic corporation transfers substantially all of its assets to a domestic subsidiary of a foreign parent in exchange for voting stock of the foreign parent.[94]

Under the Guidelines, gain realized on the transfer of stock or securities in connection with one of the foregoing reorganizations generally had to be recognized unless, after the reorganization, the shareholders of the acquired domestic corporation owned stock of the acquiring foreign corporation possessing no more than 50 percent of the voting power of such stock.[95] If after the reorganization the acquired domestic corporation's shareholders owned 80 percent or more of the acquiring foreign corporation's stock, the transaction was tested under the Guidelines criteria applicable to §351 stock transfers and ordinarily resulted in the recognition of gain unless the "same country" exception applied (as discussed below).[96]

The professed rationale for the Guidelines' 50 percent-or-less ownership exception was that the acquired corporation's shareholders should not be in a position after the reorganization to dictate a possibly tax-free sale by the foreign corporation of the acquired domestic corporation's stock.[97] For example, in PLR 8121093, even though the domestic corporation's shareholders acquired less than 50 percent of the acquiring foreign corporation's voting stock, a favorable §367(a) ruling was denied under the Guidelines' facts and circumstances exception because the large block of stock which they did acquire gave them effective

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

control.[98] In light of the rationale advanced for the 50 percent test, the regulations adopting this exception under the 1984 Act amendments appropriately might exempt all reorganizations involving widely-held corporations on the theory that in such cases no group of shareholders will ordinarily have the power to effect a pre-planned sale following the reorganization.

b. The "Same Country" Exception

A second exception under current law to the general prohibition on tax-free transfers of stock is the "same country" exception. Under the "same country" exception, which has long been the principal tax-free route by which a domestic corporation could place a foreign operating company under a foreign holding company or by which foreign brother-sister corporations could be realigned into a parent-subsidiary structure, stock (but not securities) may be transferred tax-free provided: (i) the corporation whose stock is transferred is incorporated in the same foreign country as the transferee; (ii) a substantial part of the assets of the transferred corporation are used in a trade or business carried on in such country; (iii) after the transfer the transferee holding company will own at least 80 percent of the stock of the transferred corporation; and (iv) after the transfer, the transferee in turn will be at least 50 percent owned by persons who, immediately prior to the exchange, controlled the corporation whose stock was transferred.[99] Transfers which meet these requirements presumably will be deemed to satisfy the new active business exception and will continue to be accorded tax-free treatment.

To qualify for the same country exception the foreign holding company must be "controlled" by the transferor within the meaning of §368(c). Thus, unless the "solely for voting stock" requirement of §368(a)(1)(B) is not satisfied, a transfer qualifying for the same country exception normally should qualify both as an outbound §351 transfer and as a foreign-to-foreign "B" reorganization. Regs. §1.367(b)-4(b) provides that such transfers generally will be considered foreign-to-foreign "B" reorganizations subject to the rules set forth in Regs. §7.367(b)-7, rather than outbound §351 transfers of stock subject to §367(a).[100] The Senate Report states that such "overlap" transfers should be tested solely under §367(a) as outbound §351 transfers, which reverses the priority rule contained in the current regulations.[101] However, the Conference Report appears to take a somewhat different view, stating that the Service "will carefully consider whether there are cases where [such a] transfer should be treated as a §351 exchange." [102]

Characterization as a foreign-to-foreign "B" reorganization ordinarily would be more favorable to taxpayers than outbound §351 treatment in that current, tax-free treatment would not be dependent upon satisfaction of the "same country" or other exceptions or the entry into a closing agreement.[103] In addition, under Regs. §7.367(b)-9(c), the earnings and profits of the acquired corporation (and any lower tier subsidiaries) would be automatically included in the earnings and profits of the acquiring corporation, whereas an actual, post-transfer distribution of such earnings and profits following a §351 transfer may have given rise to Subpart F income.[104] On the other hand, there are circumstances in which combining the earnings and profits of the acquired corporation and its subsidiaries with the earnings and profits of the acquiring corporation may not be desirable; *e.g.*, where the effect would be to dilute a high effective rate of foreign tax paid with respect to the acquiring corporation's earnings and profits for foreign tax credit purposes. Moreover, Regs. §7.367(b)-4(b) in some cases exacted a current §1248 toll charge as the price for foreign-to-foreign "B" treatment, an additional cost that might not be present if outbound §351 treatment made the transaction eligible for nonrecognition under one of the forthcoming regulatory exceptions.

c. The Kaiser Aluminum Exception

A third, rather limited exception to the treatment of stock as a tainted asset developed in response to the Tax Court's decision in *Kaiser Aluminum and Chemical Corporation v. Comr.*[105] The taxpayer in that case successfully challenged an unfavorable §367(a) ruling on the ground that the stock which it had transferred to a foreign corporation, although representing a minority interest that did not qualify for the "same country" exception, was in substance an operating asset and should not be characterized as stock for purposes of the Guidelines. Ownership of the stock both entitled and required the stockholder to take and pay for a proportionate share of raw materials produced by the company, and the stock thus ensured a source of supply for the foreign transferee.[106]

3. The "Substantial Ownership" "Integrated Business" Exception

The House and Senate Reports indicate that, in addition to continuing the Guidelines' exceptions, the regulations also will identify certain other circumstances under which an outbound transfer of stock will be deemed to satisfy the active business exception and, thus, be entitled to nonrecognition treatment even though such treatment would not have been available under the Guidelines. According to the Committee Reports, such "additional circumstances" should include "substantial ownership by the transferee in the corporation whose stock is transferred, and integration of the business activities of that corporation with the business activities of the transferee." [107]

The rationale for such an "integrated business" exception apparently would be similar to the rationale for the Guidelines' "same country" exception; namely, that under such circumstances the likelihood should be minimal that the transferee will dispose of the transferred stock after the transaction. In view of this similarity, it would appear likely that "substantial ownership" would be similarly defined in the regulations to require at least 80 percent control (within the meaning of §368(c)) of the transferred corporation by the transferee. However, the intended parameters of the "integrated business" requirement are somewhat less certain.

It is possible that the regulations will require merely financial or managerial "integration" of a type normally present in most groups of commonly controlled corporations. Under this approach, a transfer of operating subsidiary stock to an existing or newly formed holding company might satisfy the exception if the holding company, even though not directly engaged in any business, performed general policymaking, managerial, financial and other

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

"stewardship" functions on behalf of or for the benefit of the operating subsidiary.

On the other hand, the regulations could adopt a stricter test that might require "operational" integration. Such a concept might be modeled after the "complete business" concept developed in the revenue rulings involving application of the Rev. Rul. 78-201 loss recapture toll charge to outbound transfers of all or part of several foreign branches or divisions of a single taxpayer.[108] By analogy to those rulings, as discussed in more detail below, the businesses of separate corporations might be considered "integrated," even though the corporations are domiciled and operate in different countries, if the businesses involve the same product line or vertically integrated phases of the same line; *e.g.*, where one corporation manufactures components (or extracts minerals) for assembly (or processing) by the other into finished products or where one corporation is responsible for marketing the output of another. Operational integration also might be evidenced under the rulings by reference to such factors as common purchasing, accounting, personnel and record-keeping departments, a common sales force, headquarters staff and management team, shared manufacturing facilities and processes, and/or substantially identical customers and distribution channels. However, such an approach could make the exception generally unavailable to pure holding company structures and even to many horizontally-integrated corporate groups.

Alternatively, the regulations could take a middle course between managerial and operational integration, perhaps adopting principles analogous to those developed by the courts in determining whether and to what extent a group of corporations constitutes a "unitary business."[109] Under this approach, the relevant indicia of integration might include centralization of management and policy-making functions, intercorporate financing and guarantee arrangements, personnel and technical services sharing arrangements, and similar evidences of "mutual interdependence" between or among the relevant corporations.

Given the relatively narrow ambit of the Guidelines' exceptions, the new "integrated business" exception, depending upon its breadth, could well become the primary technique for realigning the structure of foreign corporate groups on a tax-free basis. How broadly the regulations define this exception, however, will likely turn on how broad a role the Service decides to carve out for itself in connection with the new closing agreement procedure.

4. Closing Agreements

The Committee Reports state that, even where none of the regulatory exceptions are satisfied, an outbound transfer of stock still may be effected on a tax-free basis in "appropriate" cases if the transferor enters into a specially-designed closing agreement. According to the Committee Reports, such a closing agreement could contain the transferor's agreement, presumably to be executed pursuant to a rulings request filed before the close of the taxable year in which the transfer is effected, that the transferred stock will not be disposed of by the foreign transferee within a specified "substantial" period following the transfer (*e.g.*, 15 years), and that, in the event of such a disposition, the transferor will pay U.S. tax as if it had been required to recognize gain on the original transfer (*i.e.*, with the gain computed by using the basis and fair market value of the stock as of the date of the initial transfer) together with interest on any tax due for the period from the initial transfer to the date of the subsequent disposition.[110]

The Committee Reports carefully indicate that the closing agreement procedure may not be appropriate in all cases, but that "when the outbound transfer of stock or securities not registered or traded on any securities exchange and which represent a majority interest in a foreign corporation is at issue, the principles underlying the use of closing agreements could have a beneficial impact both on the transferor's willingness to undertake the transaction, and the Internal Revenue Service's ability to enforce section 367."[111]

Taxpayers have long argued for the use of closing agreements in the context of transfers of stock to foreign corporations and the Tax Court in *Kaiser Aluminum* indicated that a closing agreement would have been appropriate in that case.[112] With the exception of a case factually similar to *Kaiser Aluminum*, however, such as the oil refinery ruling earlier discussed,[113] the Service generally has declined to enter into closing agreements.[114] It typically has justified this position by reference to perceived administrative difficulties in enforcing closing agreements and to the impossibility of foreseeing all possible tax ramifications of the transfer and providing for them in advance.[115]

In the closing agreement entered into in PLR 8313099, the taxpayer agreed that for a period of five years or until the statute of limitations had expired on the year of transfer, whichever occurred earlier, there would be no disposition of the transferred stock outside of the affiliated group. In the event of any such prohibited disposition the transferor agreed to recognize gain on its original transfer and pay any tax arising therefrom with interest. The transferor was required annually to notify the district director having audit jurisdiction over its return that no prohibited disposition had occurred. If any such disposition were to occur, the transferor was required within 30 days thereof to furnish a detailed notice of the relevant facts both to the district director and to the Associate General Counsel (Technical).[116]

In recognition of the Service's practical enforcement concerns, the Committee Reports suggest that the special §367 closing agreement procedure may call for the transferor to annually certify compliance with the closing agreement, to file annually a waiver of the statute of limitations on assessment, and to post adequate security to ensure payment of any tax later due as a result of a disposition of the transferred stock by the transferee.[117]

F. Exemptions from the Automatic Toll Charge

New §367(a)(5) authorizes the Secretary to promulgate regulations exempting certain transfers of property from the automatic toll charge rule of §367(a)(1).

The intended scope of this regulatory authority is not clear from the Committee Reports. It is possible that regulations under this provision might provide for specific exceptions from tainted asset classification in particular cases, thus permitting the excepted items to be tested under the general active business exception. On the other hand, it may be contemplated that regulations simply would deem

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the active business exception to be satisfied in respect of certain nontainted assets, such as machinery and equipment, that ordinarily should satisfy the exception in any event.

Analogous regulatory authority was created in 1976 under §367(a)(2), ostensibly to eliminate the ruling requirement and to establish automatic treatment in conformity with settled rulings practice in respect of certain routine types of transactions. Since this authority was never exercised, it is difficult to predict precisely what use may be made of new §367(a)(5). At the least, however, the provision should offer a "catchall" mechanism to correct, without need of further legislation, any problems that may arise in administering the general automatic toll charge rule.

G. Incorporation of a Foreign Loss Branch

1. Statutory Scheme

New §367(a)(3)(C) establishes a special, "branch loss recapture" exception to the general active business exception of §367(a)(3)(A), under which nonrecognition of gain generally will be wholly or partially precluded in connection with outbound transfers of property incident to the incorporation of a foreign loss branch.

Under the new provision, except as provided in regulations, all or a portion of any gain realized upon the outbound transfer to a foreign corporation of appreciated assets associated with a foreign loss branch must be recognized currently by a U.S. transferor. The amount required to be recognized is the excess of (1) pre-transfer branch losses with respect to which deductions previously were allowed to the transferor, over (2) the sum of (a) any post-loss year taxable income of the branch through the close of the year of transfer, plus (b) any amount recognized under §904(f)(3) on account of the transfer. Such amount is to be treated for Chapter 1 purposes as foreign source income having the same character (ordinary or capital) as the previously deducted losses.

2. Genesis of the Statutory "Loss Recapture" Rule

a. Rev. Rul. 78-201 [118]

Section 367(a)(3)(C) represents a codification of the so-called "added amount" toll charge first formally articulated by the Service in Rev. Rul. 78-201. In that ruling, P, a domestic corporation engaged in the manufacture and sale of plastic radio and television components, had operated since 1975 a foreign branch, A, which had experienced steadily declining losses ($50X, $30X, and $10X, respectively) through its initial three years of existence (1975 through 1977). During these years, P operated other foreign branches which produced aggregate net income in excess of the losses of A (*i.e.*, P did not incur an "overall foreign loss" within the meaning of §904(f)(2) for any of the relevant years). In late 1977, the assets of A were transferred to a wholly-owned foreign subsidiary newly-organized in the foreign country in which A's business had been conducted. P requested the requisite §367(a)(1) ruling that the transfer was not in pursuance of a principal tax avoidance purpose and would qualify for nonrecognition treatment under §351.

Acknowledging that the transferred assets met the Guidelines' requirements (under §3.02(1)) for the issuance of a favorable §367 ruling, Rev. Rul. 78-201 noted that the losses incurred by the branch prior to its incorporation had the effect of reducing P's worldwide income subject to Federal income tax. The ruling stated that "as a result of the incorporation of the foreign branch, the income to be produced by these operations will not be taken into account by [P] and, thus, will not increase the amount of [P's] worldwide income subject to Federal income tax." Accordingly, the ruling concluded that the transfer "will be deemed to be in pursuance of a plan having as one of its principal purposes the avoidance of Federal income taxes within the meaning of section 367 of the Code," unless P agreed to recognize in the year of the transfer an amount of ordinary foreign source income equal to the sum of A's prior losses ($90X).[119]

b. Hershey Foods Corp. v. Comr. [120]

In codifying Rev. Rul. 78-201, new §367(a)(3)(C) also legislatively overrules the Tax Court decision in *Hershey Foods Corp. v. Comr.* In that case, the Tax Court held "unreasonable" under the §7477 declaratory judgment standard the Service's imposition of the Rev. Rul. 78-201 toll charge as a condition to the issuance of a favorable §367 ruling on the incorporation of Hershey's Canadian loss branch.

The court observed that the judicial analysis and "ranking" of taxpayer motives under the "substantial evidence" standard of review established in *Dittler Brothers* [121] was necessary only if "some tax avoidance potential" were found to exist. In the court's view, the requisite tax avoidance potential could not be found to exist in the case at hand solely by virtue of the fact that the foreign branch to be incorporated had incurred U.S. tax-reducing losses.

The opinion went on to respond to the Service's contention that the loss recapture requirement was necessary to ensure the clear reflection of income. The opinion noted that the clear reflection doctrine is to be applied on an annual, not a transactional, basis, and that no evidence was advanced that Hershey's income had not been clearly reflected in each of the years it suffered losses from its branch operations. According to the court, "every foreign incorporation of a United States business operating abroad takes the future profits involved outside of United States tax jurisdiction. We fail to perceive any crucial difference between a domestic corporation's foreign incorporation of a foreign loss branch and its foreign incorporation of a foreign profit branch. In both cases, only future, currently unearned, operating income is being removed from the clutches of Federal income taxation."

Although not developed in the parties' briefs, the court on its own initiative dismissed the possible contention that recapture could be justified under the tax benefit inclusionary rule, noting that the incorporation of a branch did not constitute the "recovery" of previously deducted expenses necessary to trigger the application of that rule.

The court also observed that the legislative objective of §367 in the outbound context is to prevent the avoidance of U.S. tax by means of the tax-free removal from U.S. tax jurisdiction of those types of assets (*e.g.*, inventory, know-how or stock) "that might carry passive income which could just as easily be earned or realized in the United States or income which had essentially already been

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

earned." In contrast, Rev. Rul. 78-201 improperly "looks to currently unearned, future operating (not passive) income as the income upon which tax is being avoided."

Finally, the court held that the Service's position was preempted by the 1976 amendments to §904, which reflected Congress' intent to provide a comprehensive and exclusive legislative solution with respect to any unwarranted tax benefits arising from the tax treatment of foreign losses, including losses associated with the foreign branch operations of U.S. taxpayers. That legislative solution consisted of (i) the repeal of the per-country method of calculating the annual limitation on the foreign tax credit, thereby requiring the "netting" of overall foreign source losses against overall foreign source income for foreign tax credit purposes; (ii) recharacterization of certain succeeding year foreign source income as U.S. source income under §904(f)(1) so as to "recapture" prior year foreign losses in excess of foreign income; and (iii) immediate recapture of such excess foreign losses under §904(f)(3) upon a disposition of foreign branch assets. According to the court, the purpose of these amendments was "to ensure, in the long run, that foreign losses reduce only foreign income — any foreign loss matched against United States source income either will cause a recharacterization of later foreign source income as United States source income or will itself be recognized upon a disposition of foreign branch assets. Thus, the objective of Congress, that United States income bear its Federal income tax share, is met."

By contrast, the court observed, the application of the foregoing legislative steps combined with the Rev. Rul. 78-201 recapture mechanism would improperly result in the "double counting" of a U.S. parent's foreign branch losses —"first, to reduce other foreign source income and thus to reduce foreign tax credits, and second, as additional foreign source income. In effect [by sustaining the Service's position], we would undermine the whole rationale behind the foreign tax credit — the prevention of double taxation."

c. Service's Rulings Position After Hershey

The Service has not acquiesced in the *Hershey* decision but has continued to apply and refine Rev. Rul. 78-201 with respect to a variety of outbound §351 and 361 transactions. Post-*Hershey* letter rulings [122] have reflected a gradual shift in rationale from the "mismatching," clear reflection underpinnings of the early rulings toward a more refined interpretation of the tax benefit doctrine, derived in material part from an expansive reading of the Supreme Court's decision in *Bliss Dairy*.[123]

In *Bliss Dairy*, a corporation that had purchased feed for use in its farming operations and had properly deducted the cost of acquiring the feed in that year, was liquidated under §333 during the first week of the succeeding year. Since the feed was unconsumed as of the date of liquidation, the shareholders, who continued the business as sole proprietors, were able to allocate a portion of their stock basis to this asset under §334(c) while also claiming an immediate deduction. The Service contended that the corporation must include an amount equal to the portion of the shareholders' stock basis allocated to the unconsumed feed, relying on the tax benefit rule as interpreted in Rev. Rul. 74-396 [124] and *Tennessee-Carolina Transportation* [125] to require the recoupment of previously deducted amounts, notwithstanding the absence of an actual "recovery," where an event occurring in a subsequent period was "inconsistent" with the basis for the prior deduction. Upholding the Service's position, the Supreme Court noted that the tax benefit rule was designed not merely to tax recoveries but to correct artificial results flowing from the application of annual accounting principles by substituting in appropriate cases the results that would have obtained under a transactional system of taxation. Since the deduction in *Bliss Dairy* was premised on full consumption of the feed in the corporation's business and conversion of the property to shareholder use through its distribution was inconsistent with this premise, the liquidation itself was an inconsistent event that justified application of the tax benefit rule to override §336 and require the corporation's recoupment of the prior deduction.

In PLR 8427066,[126] the Service justified its imposition of a Rev. Rul. 78-201 toll charge upon the incorporation of an unprofitable foreign partnership (FP) by its U.S. partners P, a domestic parent, and S, its domestic subsidiary, on the ground that, under the tax benefit rule as interpreted in *Bliss Dairy*, the incorporation of FP was "a transaction which is fundamentally inconsistent with the prior deductions taken by P and S."

By contrast to a liquidation such as that involved in *Bliss Dairy*, a §351 incorporation generally has been viewed as a mere "change in form" from direct to indirect ownership [127] with respect to which the judicial exceptions to nonrecognition treatment, such as the assignment of income and tax benefit doctrines, have been considered inapplicable.[128] Further, in Rev. Rul. 72-528,[129] the Service held that the tax benefit rule normally could only be applied to recoup deductions representing the cost of acquiring, as in *Tennessee-Carolina* and *Bliss Dairy*, unconsumed, short-lived tangible assets, as distinguished from goodwill, going concern value and such similar intangible assets having indeterminate lives as typically are involved in a §351 incorporation of a branch operation.

In PLR 8427066, the Service appears to have overcome such distinctions between a liquidating distribution of previously expensed cattle feed in *Bliss Dairy* and the outbound §351 incorporation of a foreign loss partnership on the theory that "[b]y virtue of §367, the operative provisions of §351 do not prevent an inclusion in income in this instance." In other words, whatever theoretical obstacles might exist to prevent the tax benefit rule from overriding §351 in the context of a purely domestic incorporating transaction according to the Service apparently do not prevent its operation in the context of an outbound transaction where the application of §351 is itself made contingent upon the satisfaction of §367 anti-tax avoidance principles, including tax benefit principles.

PLR 8427066 also took issue with certain of the other conclusions regarding the validity of Rev. Rul. 78-201 reached by the Tax Court in the *Hershey* decision. With respect to the court's views on the "clear reflection" doctrine, the letter ruling declared that Rev. Rul. 78-201 "focuses on past deductions" in recognition of the fact that "[t]he Code permits business deductions because of the symmetrical expectation that [they] will be eventually offset by the recognition of income." According to the ruling, absent Rev. Rul. 78-201 recapture, this "symmetri-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

cal expectation" would be frustrated, resulting in an improper "distortion of income," because the incorporation abroad of FP would permit P and S to avoid ever having to recognize the income generated by FP's business which otherwise would offset the deductions previously allowed to P and S.

With respect to the *Hershey Foods* court's conclusion that §367 is limited to the taxation of untaxed earnings and appreciation inherent in the particular assets being transferred abroad, the letter ruling noted that the literal terms of §367(a)(1) are "phrased in terms of the gain to be recognized on the entire transfer; the statute is not limited to only certain classes of property." Finally, with respect to the court's holding that Rev. Rul. 78-201 is preempted by the 1976 amendments to §904, the letter ruling observed that the limited "overlap" between Rev. Rul. 78-201 and §904(f) (which has been eliminated under the priority rule established by Rev. Rul. 80-246 [130]) "does not preclude the application of the revenue ruling" because the legislative history of §904(f) evidences no intent to limit the operation of §367, and because "Rev. Rul. 78-201 seeks to correct an income distortion, while §904(f) prevents the abuse of the foreign tax credit provisions."

d. The Congressional Response

In developing the statutory loss recapture rule now contained in §367(a)(3)(C), Congress apparently was persuaded that the theoretical shortcomings of Rev. Rul. 78-201 identified by the Tax Court in the *Hershey Foods* opinion were rendered moot by the elimination of the tax avoidance purpose standard, were limited to *Hershey Foods'* special facts, and/or otherwise were based on incorrect inferences regarding Congressional intent in 1976.

In explaining the codification of Rev. Rul. 78-201, the Conference Report indicated that the statutory loss recapture mechanism generally should be applied "in a manner consistent with the IRS' published rulings under present law." [131] Rulings issued subsequent to Rev. Rul. 78-201 clarified a number of uncertainties regarding the intended scope and application of the loss recapture rule in particular contexts, including the operation of the gain limitation, the interaction with §904(f)(3), the consequences of partial transfers involving the retention of loss assets, and the consequences of transfers of multiple branches or divisions of the same taxpayer or of affiliated taxpayers. According to the Committee Reports, these amplifications, described below, are to continue to govern the application of the new recapture provision. However, certain other potential ramifications of the provision, such as its relationship to the new rules concerning intangibles transfers and "tainted" asset toll charges, the scope of the "branch" concept, and the possibility of relief from recapture in cases involving no tax benefit, are only partially defined in the Committee Reports and existing rulings and ultimately will require regulatory clarification.

3. The Gain Limitation

Section 367(a)(3)(C) by its terms limits the amount of losses that may be recaptured on a branch incorporation to the amount of gain realized on the transaction. The statute generally adopts the Service's current rulings position regarding the gain limitation.

The Service only recently conceded the necessity for a gain limitation. In Rev. Rul. 80-163,[132] the Service had taken the contrary view, ruling that the full amount of losses must be recaptured under Rev. Rul. 78-201, even though in excess of the amount of gain realized on the transfer. Although some taxpayers transferring only tainted assets or assets having limited value effectively could escape the recapture toll charge by simply proceeding without a ruling and treating the transaction as a taxable exchange,[133] the Service's position was particularly harsh with respect to taxpayers transferring substantial amounts of appreciated, nontainted assets (including goodwill and going concern value) the nonrecognition of gain on which was conditioned on payment of the Rev. Rul. 78-201 toll charge. In the course of the *Hershey* litigation, the Service in fact initially agreed to a gain limitation, but subsequently revoked that decision shortly before issuance of Rev. Rul. 80-163. Two years later, the Service reconsidered its position and issued Rev. Rul. 82-146,[134] revoking Rev. Rul. 80-163. As clarified in subsequent letter rulings,[135] the revocation signalled the Service's adoption of the gain limitation for purposes of applying Rev. Rul. 78-201. As a result of the 1984 Act amendments, the limitation now has statutory authority.

4. Relationship of Loss Recapture to Other §367 Toll Charges

a. "Tainted" Asset Toll Charges

The Service's rulings position generally has been that the Rev. Rul. 78-201 toll charge should be reduced by the amount of any toll charges imposed under the Guidelines on the transfer of "tainted" assets in connection with the same exchange.[136] The rationale for this offset rule apparently has been that the Rev. Rul. 78-201 toll charge is limited to the cumulative *net* amount of losses incurred by the branch from its inception through the incorporating transfer, and that any toll charges imposed on the transfer of the branch's tainted assets should be considered gross income of the branch for the taxable year of the transfer for purposes of computing the recapturable cumulative net loss.

The status of this offset rule under the new provisions is uncertain. The House Report expressed the intent that the loss recapture rule "operate — to the extent possible — independently of other rules imposing tax on transfers of appreciated property to foreign corporations." [137] It illustrated this principle through an example involving the incorporation of a foreign branch with prior losses of $100. The taxpayer transferred tainted assets of the branch with "built-in gain" of $30, and goodwill worth $90, with a basis of zero. On these facts, the House Report stated that the result would be a tax "on $120 — not $100." In other words, in the House Report's view, no offset would be permitted against the amount of the $100 loss recapture toll charge for the amount of the $30 tainted asset toll charge. (According to the House Report, if the goodwill had been worth $60 rather than $90, the result would have been a tax on $90.) Rather, the two toll charges would be imposed independently, with the loss recapture toll charge being limited only by the amount of gain realized on the transfer in excess of any recognized gain (*e.g.*, pursuant to the tainted asset toll charge).

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The Senate Report was silent on the offset rule. However, the Conference Report, in adopting the Senate amendment, noted that "in applying the rule requiring gain recognition, a pre-incorporation loss is reduced by taxable income derived by the foreign branch in a taxable year after the taxable year in which the loss was incurred and before the close of the taxable year of the transfer." [138] This "technical modification," although not specifically reflected in the statute itself, could be interpreted as conveying the Conference Committee view that a toll charge imposed on the transfer of tainted assets pursuant to the incorporation of a loss branch will be considered "taxable income derived by the foreign branch ... before the close of the taxable year of the transfer," and thus will reduce the amount of pre-incorporation loss subject to the recapture toll charge. However, it is not entirely clear whether a tainted asset toll charge (as distinguished from branch operating income) will be considered taxable income of the branch for this purpose. The issue hopefully will be resolved in the regulations.

b. The Intangibles Toll Charge

The Conference Report indicates that the transfer of intangibles generally will be subject to the special rule for intangibles (new §367(d), discussed at II, I, *infra*), not the loss branch recapture rule.[139] This presumably means that to the extent a foreign branch's pre-incorporation losses are attributable to intangibles, the transfer of such intangibles pursuant to the incorporation of the loss branch will be treated as a deemed sale of the intangibles subject to the constructive royalty provisions of §367(d). In such a case, the branch losses attributable to intangibles apparently would not be recapturable under §367(a)(3)(C).

It is not clear from the Conference Report just how the portion of branch losses attributable to intangibles is to be determined for purposes of the foregoing priority rule. The assets of insurance, engineering, and other service business branches might consist largely, if not exclusively, of intangibles. Most if not all of the cumulative net losses of such a branch thus might be considered attributable to such intangibles and, therefore, excepted from §367(a)(3)(C) upon the transfer of the intangibles pursuant to the incorporation of the branch. However, would losses that are demonstrably caused by market and other factors unrelated to the branch's intangibles also be excepted from the loss recapture rule? And how would the portion of the losses of a manufacturing branch that are attributable to intangibles, as distinguished from depreciation, R&E, and similar deductions, be determined for purposes of delimiting the scope of §367(a)(3)(C) recapture?

It is possible that the statement in the Conference Report as to the priority of §367(d) over §367(a)(3)(C) was intended to confirm that any intangibles transferred in connection with the incorporation of a loss branch generally would be treated as tainted assets to the extent subject to the "deemed sale" toll charge of §367(d), and that the §367(d) toll charge in respect of such property should reduce the amount of loss subject to recapture under §367(a)(3)(C) (consistent with the Service's rulings practice but contrary to the implication contained in the House Report previously discussed). However, if the intent of the Conference Report was to confirm the continued applicability of the "offset rule," it is not clear why this intent was limited solely to intangibles (as distinguished from all tainted assets). The more plausible explanation would seem to be that the Conference Report statement was specifically directed at intangibles-related losses.[140] The forthcoming regulations hopefully will clarify this point.

5. The §904(f)(3) Overlap

Section 367(a)(3)(C) by its terms grants priority of application to §904(f)(3) in situations where both recapture provisions may apply by removing from the amount of recapturable losses "the amount which is recognized under §904(f)(3) on account of the transfer." [141]

Under §904(f)(3), if property used predominantly outside the United States in a trade or business is disposed of by a taxpayer (other than to a domestic corporation in a §381(a) distribution or transfer) in a year in which such taxpayer has an overall foreign loss remaining unrecaptured, the taxpayer will be deemed to recognize any gain on the disposition, regardless of whether a nonrecognition provision (*e.g.*, §351) otherwise would apply, to the extent of the lesser of (1) the excess of the fair market value of the transferred assets over their adjusted basis or (2) the full amount of the taxpayer's cumulative overall foreign losses not previously recaptured under §904(f)(1).[142] An "overall foreign loss" is defined as the excess of properly allocable expenses over gross income from foreign sources for a particular taxable year.

If a transferor does not have an unrecaptured overall foreign loss, §904(f)(3) will not apply to the asset transfer and only §367(a)(3)(C) (and any other applicable toll charges) potentially will apply. If the transferor has an overall foreign loss, the income imputed to it under §904(f)(3) is treated as foreign source income under that section, but is then converted to U.S. source income by virtue of the application of §904(f)(1).[143] The net effect is to cause a "recapture" of all or a portion of the transferor's overall foreign loss by requiring the transferor to report a specified amount of U.S. source income for the year it makes an outbound transfer of its foreign situs assets.

Prior to the Service's issuance of Rev. Rul. 80-246,[144] an open question existed as to whether Rev. Rul. 78-201 and §904(f)(3) could be applied simultaneously, thus potentially recapturing the same losses twice. This issue had been raised in the *Hershey Foods* litigation to support Hershey's argument that §904(f) (together with the repeal of the per country limitation on the foreign tax credit) preempted the application of Rev. Rul. 78-201. The Service was under some pressure to attempt to remove the potential for any overlapping application of the two recapture mechanisms.

Amplifying the facts of Rev. Rul. 78-201 to indicate that the U.S. parent had no other foreign operations, income, or losses and that the branch losses had resulted in an overall foreign loss, Rev. Rul. 80-246 held that the full amount of such overall foreign losses was to be recaptured solely under §§904(f)(3) and 904(f)(1), without any additional recapture being required under Rev. Rul. 78-201. In other words, the ruling concluded that, to the extent of any overlap, §904(f)(3) would preempt Rev. Rul. 78-201, apparently on the theory that the income resulting from the application of §904(f)(3) will offset, and in Rev. Rul. 80-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

246 eliminate, the cumulative net losses that otherwise would be recapturable under Rev. Rul. 78-201.

In codifying the priority rule of Rev. Rul. 80-246, the Committee Reports nevertheless made clear that the §367(a)(3)(C) recapture amount could not be reduced by the amount of any losses previously recaptured under §904(f)(1), even though the effect of applying both provisions potentially could be tantamount to a "double counting" of the same losses — first, to trigger conversion of later foreign income to U.S. source income to the extent of such losses for foreign tax credit purposes, and second, to require recognition of gain to the extent of the same losses upon incorporation of the branch.[145]

6. The "Branch" Concept

The loss recapture toll charge under §367(a)(3)(C) is limited by its terms to the transfer of the assets of "a foreign branch" of a U.S. person. The term "branch" is not defined in the new provision, the Committee Reports, nor elsewhere in the Code and regulations. Authorities in other contexts, such as those involving the branch requirement for adoption of the profit and loss method of branch accounting, generally describe a branch as involving regular, ongoing substantive business activity conducted at a foreign office or other fixed place of business by the U.S. company's employees or agents.[146] If this description generally were adopted for §367(a)(3)(C) purposes, losses would be recapturable if derived from business operations conducted at a foreign office, but might not be recapturable in the absence of such an office.

The existence of a foreign branch was not a prerequisite to recapture under Rev. Rul. 78-201 and its progeny. However, the somewhat analogous concept of a "complete business" or "single business" was developed by the Service in a series of rulings involving the application of the loss recapture toll charge to partial transfers, simultaneous transfers of profitable and unprofitable divisions, and simultaneous transfers of the branches of affiliated taxpayers. Since the Conference Report indicates that §367(a)(3)(C) is to be applied in a manner consistent with these rulings,[147] they should have continued relevance with respect to the scope of the branch concept.

In Rev. Rul. 80-247,[148] P, a domestic corporation, was engaged in the exploration, development and sale of mineral properties in the United States and in country A through its branch. The branch incurred losses for taxable years 1977 through 1979 totaling $300X, which were used to offset P's worldwide taxable income. P's income from its other foreign branches exceeded the losses from its country A branch. On January 1, 1980, P incorporated a portion of the branch assets in Newco, a country A corporation. Losses of $100X that were directly attributable to properties having no commercial value were not transferred in the transaction but were instead abandoned as worthless. The question presented was whether the losses allocable to the non-transferred assets ($100X of the $300X loss) would have to be recaptured under Rev. Rul. 78-201 as a condition to obtaining a favorable §367 ruling. Holding that the full $300X of losses was subject to the recapture requirement, the ruling reasoned that "P's mineral exploration, development and property sales operations in country A was a complete business operation in itself, and that the losses incurred by that business were unrelated to P's other worldwide business operations." According to the ruling, since P's branch "was comprised of both the properties that were transferred and the properties that were not transferred ... P effectively incorporated the entire branch A business. It was the business and not the specific parcels of property that incurred the losses."

The "complete business" concept was extended in Rev. Rul. 81-82,[149] which held that where separate branches or divisions bear a sufficiently close operational relationship to one another to constitute a complete business operation distinct from other operations conducted by the taxpayer, the profits and losses of all components of such business may be combined for purposes of determining the net amount of losses subject to Rev. Rul. 78-201 recapture upon the incorporation of that business. In the ruling, P, a domestic corporation, operated five divisions in country A: a totally separate garment division (division #1, which generated $300X of profits for the years 1977 through 1979); two plastics components divisions (divisions #2 and #3, which had $300X of losses and $150X of profits, respectively) located in different regions of country A, which, although treated as separate for financial reporting and accounting purposes, had common purchasing, accounting, personnel and record-keeping departments, a common sales force, headquarters staff and management team, identical manufacturing facilities and processes, and substantially identical customers and distribution channels; and two television manufacturing divisions (divisions #4 and #5), each of which sold its manufactured components exclusively to the other for assembly into finished products, and both of which shared common purchasing, accounting, record-keeping and headquarters staff departments, and had substantially the same employees, operational facilities, and managements.

On January 1, 1980, P transferred all of the property of divisions #1 through #4 to Newco, a country A subsidiary, but continued to operate division #5 as a branch. On these facts, the ruling held that: (i) the garment division (#1) was a complete business in itself and, since profitable, would not be subject to Rev. Rul. 78-201 in connection with the transfer; (ii) the two plastics divisions (#2 and #3) constituted a complete business and their profits and losses could be "netted" for purposes of determining the amount of recapturable losses, if any; and (iii) the two television divisions (#4 and #5) also constituted a complete business with integrated operations and under Rev. Rul. 80-247 the losses of both would be subject to Rev. Rul. 78-201 recapture, even though the assets of one of the divisions were not transferred in the transaction.

In Rev. Rul. 81-89,[150] the Service applied the "complete business" concept to the simultaneous transfer of the branches of affiliated taxpayers. In the ruling, which closely paralleled the facts in *Hershey Foods*, P, a domestic manufacturer of plastic components, incurred losses from its country A branch operations of $200X for each of the years from the inception of the branch in 1977 through 1979. S, which was engaged in the same business as P and became a wholly-owned domestic subsidiary of P following a "B" reorganization on January 1, 1979, earned profits from its separate country A branch operations, also established in 1977, of $100X for each of the years 1977 through

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

1979. P and S elected to file a consolidated return for 1979 and subsequent years and, during those years, integrated their respective branch operations so that the branches shared common purchasing, accounting, personnel, and record-keeping departments; a common sales force, headquarters staff, and management team; and had substantially the same customers, employees, distribution channels, operational facilities and processes.

On January 1, 1980, P and S transferred the assets of their respective branches to Newco pursuant to a transaction qualifying under §351 which met the requirements of §3.02(1) of the Guidelines. P agreed to the Rev. Rul. 78-201 toll charge but requested that it be determined by treating the P and S branches as a single business from the time of their inception in 1977, thus reducing the total toll charge from $600X to $300X. The ruling held that the toll charge could be determined by treating the two branches as a single business only for 1979, when the consolidated return was filed and the branch operations were completely integrated, thus reducing the toll charge for that year from $200X (P's losses) to $100X (P's losses less S's profits of $100X).

Since the foregoing rulings generally involved fully-developed foreign branch (or divisional) operations, they contribute little to demarcation of the "interior" boundary line between branch and nonbranch status. Nevertheless, they are highly pertinent to demarcation of the outer boundaries of the branch concept. In particular, they highlight a dimension of the branch concept that could well prove to be a trap for the unwary under the automatic recapture mechanism of §367(a)(3)(C). A taxpayer incorporating abroad a profitable division, line of business, or branch might find itself unexpectedly subject to the loss recapture rule if the transferred operation were considered to be part of a "complete business" that encompassed other, unprofitable divisions, business lines, or branches, even though the latter were not transferred in the transaction. Although the rulings to date appear to have applied principles similar to those applied in the unitary tax context, the precise parameters of those principles are not yet entirely clear. Given the potentially significant ramifications of applying the "complete business" concept under §367(a)(3)(C), it is hoped that the regulations will provide a detailed explanation, including examples, of the intended application of those principles.

It is unclear whether the requirement of a "foreign branch" effectively will preclude the application of §367(a)(3)(C) in respect of foreign partnerships and individuals. This result could be supported under the literal terms of the new provision, although it would represent a departure from the Service's prior rulings position under Rev. Rul. 78-201.

In Rev. Rul. 80-293,[151] P, a foreign partnership engaged in the farming business in Country Z, incurred net losses for each year prior to 1977. A pro rata portion of the losses was taken into account by X, a domestic corporate partner of P, which reduced the amount of X's worldwide income subject to U.S. tax for such years. However, P earned net profits beginning in 1977, when interests in P were acquired by A and B, U.S. resident individuals. In 1978, P transferred its farming assets to Y, a newly-formed country Z corporation, pursuant to a transaction qualifying under §351 that met the requirements of §3.02(1) of the Guidelines. On these facts, the ruling held that X would be required to include in income for the year of the transfer a Rev. Rul. 78-201 toll charge equal to its proportionate share of the sum of P's prior losses as a condition to obtaining the requisite §367 ruling on the transfer. However, since P earned net profits while A and B were partners, so that A and B were unable to utilize P's net losses, the ruling held that the Rev. Rul. 78-201 toll charge would not apply to A and B in connection with the transfer.

7. Collateral Consequences — Source, Character, Basis, Earnings & Profits

Section 367(a)(3)(C) specifically provides for the treatment of the loss recapture toll charge as foreign source income, which is consistent with prior law.[152] However, the Conference Agreement modified the Senate bill and prior law to provide for characterization of the toll charge by reference to the character (capital gain, ordinary income, foreign oil-related income, foreign oil and gas extraction income, etc.) of the previously incurred losses.[153] As explained in the Conference Report, "[i]f a branch incurred a capital loss (or a foreign oil extraction loss) in an earlier year, its later incorporation would yield capital gain (or foreign oil extraction income)." [154] The principal impact of this modification will be to reduce the ability to obtain an offsetting foreign tax credit advantage in respect of the toll charge by requiring capital gain treatment (rather than ordinary income treatment as under prior law) to the extent the recapturable losses consisted of capital losses.[155]

The Conference Report also indicates that, as under prior law, the basis of the transferred assets in the transferee's hands, as determined under the carryover basis rule of §362, is to be increased by the amount of the loss recapture toll charge imposed under §367(a)(3)(C).[156] In addition, it would appear, again as under prior law, that the transferor's earnings and profits will be increased by the amount of such toll charge.[157]

8. Exceptions

Under the prefatory clause of §367(a)(3)(C), the Secretary is authorized to except certain transactions from the loss recapture toll charge. The Committee Reports provide few clues as to which transactions, if any, might fall within such an exception. The House Report states that "[t]he Committee is aware that foreign branch losses may offset foreign source income that is effectively exempt from U.S. tax by virtue of the foreign tax credit. In that case recapture may not always be appropriate. If the foreign branch of a U.S. person incurs a loss that offsets high-taxed foreign income, that income would be free of U.S. tax anyway under the foreign tax credit." [158] The Senate Report, in noting the *Hershey Foods* decision, suggested that the decision may be reconcilable with §367(a)(3)(C) on the ground that "[i]n that case the branch losses had not resulted in a tax benefit to the U.S. corporation because the corporation had foreign tax credits that would have eliminated U.S. tax on foreign income in any event." [159]

Statements such as the foregoing, which are premised on the perceived tax benefit rationale for §367(a)(3)(C), suggest that the regulations may well except from the loss

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

recapture toll charge situations in which otherwise recapturable losses did not give rise to any prior tax benefit to the transferor, by virtue of available foreign tax credits,[160] possibly domestic operating losses, or otherwise.

H. Incorporation of Domestic Branch

The Conference Report states that the regulations under the amended §367(a) "will require gain recognition on the transfer of assets that were used in the United States, to the extent of depreciation deductions previously claimed by the taxpayer with respect to the transferred property," in a manner consistent with the foreign branch loss recapture rule of §367(a)(3)(C).[161]

No specific provision to this effect is contained in the statute as enacted. Nor is any reference to such a rule contained in the House Report or Senate Report. Further, it appears questionable whether such a rule, even if prescribed in the regulations, would be considered to fall within the scope of any of the new §367(a) provisions, or otherwise be effective to override the apparently contradictory provisions of §§1245(b)(3) and 1250(d)(3).

I. Treatment of Intangible Property

1. Statutory Scheme

New §367(d)(1) removes outbound transfers of intangible property from the general automatic toll charge rule of §367(a) (except in the case of outbound liquidations subject to §336) and subjects such transfers to a separate set of rules.[162] Under the rules contained in §367(d)(2), a U.S. transferor transferring intangibles to a foreign corporation pursuant to a §351 or §361 exchange is treated as having sold the intangibles in exchange for "payments which are contingent upon the productivity use or disposition of such property." [163] Where the transferred intangibles are retained by the transferee, the U.S. transferor must include in income annually over the useful life or lives of the intangibles "amounts which reasonably reflect the amounts which would have been received" had the U.S. transferor entered into a contract for the sale of the intangibles in exchange for such annual, contingent payments.[164] Where the intangibles are disposed of (directly or indirectly) by the transferee following the transfer, the U.S. transferor must include in income currently an amount that reasonably reflects the amount which would have been received had the transferor sold the intangibles in exchange for "payments which are contingent upon the disposition" of the intangibles.[165] The amounts so included by the transferor are to be treated in all cases as U.S. source ordinary income.[166] However, the foreign transferee is permitted to reduce its earnings and profits by such amounts as and to the extent included in income by the transferor.[167]

2. Definition of Intangible Property

For purposes of §367(d), the term "intangible property" is broadly defined, by reference to §936(h)(3)(B), to mean any (i) patent, invention, formula, process, design, pattern, or knowhow; (ii) copyright, literary, musical, or artistic composition; (iii) trademark, trade name, or brand name; (iv) franchise, license, or contract; (v) method, program, system, procedure, campaign, survey, study, forecast, estimate, customer list, or technical data; or (vi) any similar item which has substantial value independent of the services of any individual.

Notwithstanding its apparent breadth, the foregoing definition is subject to two important caveats. First, as discussed below, there is strong evidence in the Committee Reports suggesting that the regulations will exclude goodwill, going concern value, trademarks, trade names and similar "marketing" intangibles from the definition of "intangible property" for both §§367(d) and 367(a)(3)(B)(iv) purposes, thus permitting such intangibles to be transferred abroad tax-free provided only that the active business exception is satisfied (presumably under principles similar to those contained in the existing Guidelines applicable to such intangibles).[168]

Second, even where an outbound transfer involves an item ostensibly described within one of the §936(h)(3)(B) categories, §367(d) presumably will not apply unless transfer of the item also qualifies under the particular circumstances involved as a "transfer of property" for purposes of both §367 and §351 or §361. The criteria applicable to determining whether particular intangibles constitute "property" for §367 purposes were developed through a series of rulings and revenue procedures that may have increased relevance under the new statutory scheme. Under these criteria, the outbound transfer of patents and patent rights, for example, has been considered a transfer of property for §367 purposes only if "all substantial rights" in such property are granted exclusively and in perpetuity to the transferee pursuant to the transfer — a requirement that, as applied by reference to the §1235 standard for "sale or exchange" treatment, ordinarily would exclude a grant that is limited geographically, in duration, in field of use, in claims or inventions covered, is terminable at will by the grantor, or prohibits sublicensing or assignment.[169] Notwithstanding the foregoing criteria, at least one court decision, *E.I. DuPont de Nemours & Co.*,[170] has adopted a more expansive view of the "transfer of property" requirement for §§351 and 367 purposes, holding those provisions to apply to a U.S. parent's royalty-free, nonexclusive patent license to its wholly-owned French subsidiary on the theory that, although all rights under the patents were not transferred, the rights which were transferred nevertheless "were perpetual, irrevocable, and quite substantial in value." [171] Although the Service to date has not followed *DuPont*, query whether §367(d) might prompt it to reevaluate this position.

The Service has developed similar criteria to determine the "property" status of know-how, another item included within the definition of "intangible property" under §367(d). Under these criteria, a transfer of know-how generally has been treated as a property transfer for §367 purposes only if: (i) the know-how is secret; (ii) the transfer is exclusive and includes "all substantial rights" within the territory of one or more countries; (iii) the grant is in perpetuity; and (iv) the transferee's country of operation affords substantial legal protection against unauthorized disclosure and use of the know-how.[172]

Whether the Service will adhere to the foregoing concepts in applying new §367(d) is a point that hopefully will be clarified in the forthcoming regulations.[173] Possibly even more troublesome under the new statutory scheme, however, are those types of intangibles with respect to which the state of the law regarding their "property" status continues to be unsettled. A prime example involves contracts and

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

contract rights, which are specifically included within the §367(d) definition of "intangible property."[174] At what point contract rights rise to the status of property was at issue in two recent §367 court cases, *Hospital Corp. of America v. Comr.*[175] and *Shell Oil Co.*,[176] and one case under §721, *U.S. v. Stafford*.[177] In the *Hospital Corp. of America* case, the court held that the right to enter into and perform a hospital management contract in Saudi Arabia that was made available by a U.S. parent to its second-tier Cayman Islands subsidiary represented merely a "business opportunity" rather than a "legally enforceable right in specific property" and, thus, that no transfer of property had occurred to which §367 could apply. In the *Shell Oil Co.* case, in which the Government conceded that no tax avoidance purpose was involved (thereby mooting, without conceding, the transfer of property issue), the latter unresolved issue related to the right to negotiate a reinsurance contract with two Allstate companies which Shell had reserved in connection with entering into insurance contracts with those companies and which it made available to its second-tier Bermuda reinsurance subsidiary.[178] In *U.S. v. Stafford*, however, a letter of intent, which was specifically found not to be enforceable under applicable state law, was nevertheless held to constitute "property" for purposes of §721, thereby allowing nonrecognition of gain on its contribution to a partnership in exchange for a partnership interest. With the possible applicability of new §367(d) now at stake, the question of when contract rights rise to the level of "property" likely will assume even greater significance.

3. Types of Transfers Subject to 367(d)

Section 367(d) by its terms applies only to transfers described in §§351 and 361. Thus, an outbound distribution of intangible property in connection with a §332 liquidation, as discussed below, will be subject to the general automatic toll charge rule applicable to tainted assets rather than to §367(d).[179]

4. Amount of the §367(d) Toll Charge

a. Intangibles Retained By the Transferee

Where the transferred intangibles are not disposed of but are retained by the transferee following the transfer, §367(d)(2)(A)(ii)(I) provides that the amount to be included in income by the transferor is to equal "amounts which reasonably reflect the amounts which would have been received . . . annually in the form of [payments contingent upon the productivity, use, or disposition of such property] over the useful life of [the transferred property]" if such property had been sold in exchange for such payments rather than being transferred in exchange for stock.

Precisely what amounts "would have been received" by reason of such a deemed sale/exclusive license may be difficult to ascertain in many cases, which is one reason why some taxpayers formerly assigned intangibles to their foreign subsidiaries rather than selling them outright or licesing them in return for an appropriate royalty. The §482 regulations applicable to the transfer or use of intangible property indicate that the best measure of the required "arm's length" royalty rate ordinarily will be the rate charged by the licensor to unrelated parties for use of the same or similar intangibles under the same or similar circumstances.[180] In the absence of such "comparables," the regulations list a number of factors to be taken into account in determining an arm's length rate, including the prevailing rates in the same industry for similar property, the terms of the license (*e.g.*, its exclusive character and geographical scope), the uniqueness of the property, the degree and duration of protection afforded to the intangibles under applicable foreign law, prospective profits to be realized by the licensee through its use of the intangibles, the start-up expenses required of the licensee, and the costs incurred by the licensor in developing the intangibles.

Typically, a royalty will take the form of a fixed or variable percentage of gross sales or revenues, although there is also precedent for utilizing a percentage of net profits. The requirement of §367(d)(2)(A)(i) that the payments deemed to be received by the transferor be "contingent upon the productivity or use" of the intangibles appears to contemplate that the amount of such payments will be determined in a manner consistent with normal, arm's length practice; *i.e.*, that the payments ordinarily must represent a fixed or variable percentage of the transferee's gross sales, profits or some equivalent base reflecting the relative value and contribution of the intangibles to the transferee's business. However, the fact that the statute requires only that the amount of such payments "reasonably reflect" the otherwise applicable arm's length charge suggests that some latitude was intended and that strict adherence to §482 standards may not be required.

The aspect of the §367(d) toll charge that represents the most significant departure from prior practice under the Guidelines is its intended duration. Section 367(d)(2)(A)(ii)(I) requires that the payments deemed to be received by reason of the constructive sale/license must be included in the transferor's income "annually . . . over the useful life" of the transferred intangibles. Some intangibles, such as trademarks and trade names, have indeterminate useful lives. If such intangibles are included within the definition of "intangible property" for §367(d) purposes, therefore, the transferor presumably will be required to include the constructive payments in income annually for an indefinite period.

Similar problems arise in respect of other types of intangibles, such as know-how, the "useful life" of which may depend upon when the item ceases to be secret or protectible under local law and becomes a matter of public knowledge. In such cases, the regulations hopefully will provide that no further amounts need be included in income. However, "useful life" can be an elusive concept in many contexts and defining its varying parameters in respect of the various types of intangibles and various factual situations that potentially could arise under §367(d) unquestionably will present a keen regulatory challenge.

By virtue of the "useful life" measure, the amount of the §367(d) toll charge in many cases will exceed the amount that formerly would have been imposed as a "tainted asset" toll charge under the Guidelines (or that would have been includible in the case of an outright sale of the intangibles). This is because the amounts to be included in income must reflect not only the value of the intangibles at the time of transfer (as under the Guidelines) but also their future value, which could increase substantially (*e.g.*, as the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

transferee's business becomes increasingly profitable) over the useful lives of the intangibles. In addition to the risk of annually increasing toll charges, §367(d) also effectively could require a "revaluation" of the transferred intangibles at the end of each successive year following the transfer in order to establish the appropriate amount to be included in income for such year.

b. Intangibles Disposed of by the Transferee

Section 367(d)(2)(A)(ii)(II) provides that the amount to be included by the transferor "in the case of a disposition (whether direct or indirect)" of the transferred intangibles following the transfer is the amount that "reasonably reflects" the amount which would have been included "at the time of the disposition" if the transferor had sold the intangibles for "payments which are contingent upon the . . . disposition" of the intangibles. Although the statutory language is not lucid, the Conference Report makes clear that the amount of the toll charge in the case of such a post-transfer "disposition" will depend on the value of the transferred intangibles at that time.[181] Thus, even after including annual toll charges in income, the §367(d)(2)(A)(ii)(II) toll charge may well exceed in amount the toll charge that would have been imposed if the intangibles had originally been treated as tainted assets under the Guidelines (or had been sold outright to the transferee rather than being transferred in exchange for stock).

With respect to the intended scope of the term "disposition," although §367(d) applies to transfers described in both §§351 and 361, it is obvious that §361 transfers in connection with an outbound "C" or "D" reorganization could not fit easily into the "useful life" toll charge prescribed under §367(d)(2)(A)(ii)(I), for the simple reason that the domestic corporate transferor of intangibles in such a case will be liquidated in connection with the reorganization.[182] In such cases, taxation should result under the disposition rule of §367(d)(2)(A)(ii)(II), which applies to "indirect" as well as direct dispositions of the transferred intangibles. The Committee Reports indicate that this provision is intended to include a disposition by the transferor domestic corporation of the *stock* of the transferee foreign corporation.[183] Since an outbound "C" or "D" reorganization, as distinguished from an outbound §351 transfer, will involve a distribution by the transferor domestic corporation to its shareholders of the transferee foreign corporation's stock in complete liquidation of the transferor, such a distribution apparently will be treated as an "indirect disposition" of the transferred intangibles by the liquidating transferor, thus triggering a toll charge under §367(d)(2)(A)(ii)(II) which generally should equal the amount of toll charge that would have been imposed if §367(d) had not applied and the "tainted asset" rules were in effect.[184]

The foregoing interpretation of the "indirect disposition" rule effectively would except all §361 exchanges pursuant to outbound acquisitive reorganizations from the more onerous, "useful life" toll charge, thus limiting that toll charge solely to outbound §351 transfers and subjecting §361 exchanges solely to the "disposition" toll charge. Aside from the pragmatic considerations that might have influenced this result (*i.e.*, the nonexistence of a transferor on whom the continuing, "useful life" toll charge could be imposed), the policy reasons for such a distinction are not entirely evident. The statute itself, at §367(d)(1), purports to apply all of "the provisions of this subsection" without distinction to both §§351 and 361 exchanges. Moreover, there is no clear indication in the Committee Reports that §351 transfers were alone intended to be subject to the "useful life" toll charge, with §361 exchanges subject only to the "disposition" toll charge.

Post-transfer "indirect dispositions" other than by reason of the liquidation of the transferor pursuant to a "C" or "D" reorganization (*e.g.*, a post-transfer sale or other disposition of some or all of the transferred intangibles by the transferee) also would trigger the "disposition" toll charge. However, the fact that other transactions also might trigger that toll charge does not explain why the statute would have made §361 exchanges uniformly subject only to the "disposition" toll charge. It is conceivable, albeit unlikely, that the regulations could adopt a somewhat different interpretation than that offered above. For example, some mechanism might be developed in the regulations under which a liquidating transferor's liability for future year "useful life" toll charges could be "carried over" to its U.S. shareholders after the liquidation. Absent any suggestion of such a novel approach either in the statute or the Committee Reports, however, the most likely and reasonable interpretation, whatever its policy justification, would seem to be that the "useful life" toll charge should be limited to §351 transfers. The regulations hopefully will clarify this point.

The regulations hopefully also will clarify what other post-transfer events will be deemed to trigger the "disposition" toll charge, as well as the manner in which the amount of the toll charge is to be determined in such cases. For example, if the transferee sells only some of the transferred intangibles after the transfer, is the toll charge to be imposed on the transferor only to the extent of the intangibles sold with the "useful life" toll charge continuing to apply with respect to the intangibles retained by the transferee? Would the transferee's licensing of some or all of the intangibles to another party trigger the "disposition" toll charge? How would the "useful life" toll charge be affected by an acquisition of the transferor following the transfer? Or by a post-transfer acquisition of the transferee pursuant to a reorganization? [185]

5. Source, Character, Earnings & Profits, and Basis Consequences of the §367(d) Toll Charge

Section 367(d)(2)(C) requires that the amount of any §367(d)(2)(A) toll charge included in income be treated as U.S. source ordinary income. As a consequence of domestic source treatment, the amount of the toll charge will be includible in the denominator but not in the numerator of the §904(a) foreign tax credit limitation fraction. Thus, in addition to imputing taxable income to the transferor, §367(d) in many cases (*e.g.*, where the transferor or its U.S. affiliated group is in or near an excess credit position) will also operate to reduce the amount of foreign tax credits that currently may be claimed against the transferor's (or its affiliated group's) U.S. tax liability.

By contrast, if the intangibles were licensed instead of being transferred in exchange for stock, the royalty pay-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ments generally would be treated as foreign source income to the transferor.[186] Similarly, if the intangibles were sold outright to the transferee, the gain or income recognized on the sale might have been treated as foreign source income if the normal title passage rules dictated such treatment.[187] In addition, if the transferred intangibles were of a type excepted by regulation from the definition of "intangible property" and subject to a toll charge (if at all) only under the general rule of §367(a)(1), the toll charge could be treated as foreign source to the same extent as it would be so treated in the case of an outright sale.[188] Given the potentially costly results of U.S. source treatment, therefore, it may be anticipated that in many cases taxpayers will choose the licensing or outright sale alternatives over a transfer in exchange for stock to the extent the intangibles involved fall within the ambit of the §367(d) provisions.

The outright sale alternative also could be preferable from the tax standpoint to a §367(d) transfer in those cases where the gain recognized on such a sale otherwise could be treated as capital gain rather than ordinary income. Section 1249 requires ordinary income treatment only if the foreign transferee is more than 50 percent-controlled by the transferor, which it might not be in the case of an outbound "C" reorganization or the formation of a joint-venture or consortium company under §351. Moreover, the categories of intangibles covered under §1249 are not coterminous with §367(d) and, thus, §1249 may well not apply to a sale of particular types of intangibles the transfer of which otherwise would trigger an ordinary income toll charge under §367(d). Similarly, although a sale for contingent payments of a franchise, trademark or trade name may result in ordinary income under §1253, §367(d) applies to a broader range of intangibles than §1253.

Section 367(d)(2)(B) permits the earnings and profits of the transferee foreign corporation to be reduced by the amount of any §367(d) toll charge included in income by the transferor. This correlative adjustment apparently is intended to place the transferee in the same position it would have been had it actually made the "payments" which are included in the transferor's income. The adjustments will have an effect on future dividends or Subpart F income of the transferee, the taxability of which to the transferee's U.S. shareholders generally is limited by the amount of the transferee's earnings and profits. However, to the extent the transferee is less than 100 percent-owned by the transferor, the benefit to the transferor of such adjustments obviously will be diluted proportionately. Further, if the transferee were subject to U.S. tax directly (*i.e.*, by virtue of being engaged in a U.S. trade or business), such adjustments would not (as would an actual deduction) reduce the transferee's U.S. income tax liability in respect of the profits effectively connected with its U.S. business.

Neither the statute nor the Committee Reports contain any indication as to the intended basis consequences of the §367(d) toll charge. The "disposition" toll charge, which except for character and source is determined in the same manner as are "tainted asset" toll charges, possibly could result in a step up in the basis of the transferred intangibles in the transferee's hands, and of the transferee stock in the transferor's hands, by the full amount of such toll charge.[189] Such a result also might be premised on the statutory treatment of the transfer as a deemed sale.[190] However, since §367(d) does not in terms alter the nature of the underlying transaction as a §351 or §361 exchange and since the §367(d) toll charge is treated as ordinary income rather than capital gain, it would appear that neither the transferee's basis in the intangibles nor the transferor's basis in the stock is affected by the toll charge. Moreover, even if basis adjustments otherwise could be supported, it is not clear how such adjustments could be made on a continuing basis in the case of the "useful life" toll charge. The regulations hopefully will clarify this point.

6. *Application of §367(d) to Service Businesses — "Marketing" vs. "Manufacturing" Intangibles*

Absent ameliorative provisions in the regulations, §367(d) could be particularly harsh with respect to the incorporation of foreign service businesses, such as insurance companies, banks, other financial institutions, engineering, construction and similar businesses. The principal assets necessary to the conduct of a manufacturing business (other than patents and know-how) may consist of fixed assets (machinery and equipment) that would not fall within either the tainted asset categories or the §367(d) intangibles rule and generally could be transferred tax-free under the active business exception. By contrast, the principal assets necessary to the conduct of most service businesses — particularly where such businesses previously were conducted by the U.S. transferor in branch form — typically will consist of intangibles, such as goodwill, going concern value, names, service marks, marketing data, computer software and other intangible property having substantial value independent of the services of any individual.

An outright sale of such intangibles, or their licensing in return for an arm's length royalty, could be prohibitively costly and/or could place the subsidiary at a competitive disadvantage as compared with its foreign-owned counterparts. In addition, in some cases the licensing option may not be available as a practical matter by virtue of local exchange control restrictions on (or confiscatory taxation of) royalty payments.[191] Moreover, the Committee Reports suggest that a key legislative rationale for §367(d) was to "recapture" the special U.S. tax incentives (*e.g.*, the §44F credit for "qualified research expenses," the §174 current deduction for R&E expenditures, the TEFRA exception (extended by §126 of the 1984 Act) from the §861 R&E expense allocation rules for U.S. situs research activities) granted to U.S. developers of certain types of intangibles upon the expatriation of the "fruits" of such subsidized development. However, since those tax incentives relate principally to "manufacturing" intangibles, it may be questioned whether the professed legislative objective is appropriately served by taxing service business and service related "marketing" intangibles, the development of which neither received nor was entitled to such incentives.

Notwithstanding the breadth of the §367(d) definition of intangible property, the Committee Reports contain strong indications that at least under some circumstances certain types of nonmanufacturing intangibles may be excepted by regulation from §367(d) and subjected instead to the general active business test of §367(a). The House Report expresses the expectation that a "transfer of goodwill or going concern value developed by a foreign branch will be treated under [the active business] exception rather

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

than the separate rule applicable to intangibles." [192] The Senate Report more broadly contemplates that "ordinarily, no gain will be recognized on the transfer of goodwill or going concern value for use in an active trade or business. Similarly, it is expected that regulations will provide that gain will not be recognized on transfers of marketing intangibles (such as trademarks or trade names) in appropriate cases." [193] The Conference Report appears to adopt the Senate view, albeit somewhat obliquely, stating that "[t]he conferees wish to clarify that, as under present law, gain will generally be recognized under section 367(a) on transfers of marketing intangibles (such as trademarks or trade names) for use in connection with a U.S. trade or business, or in connection with goods manufactured, sold, or consumed in the United States." [194]

The reference in the Conference Report to the taxation of U.S.-nexus intangibles is a clear reference to the Guidelines' criteria that presumably would continue to be applied under the §367(a)(3)(A) active business exception if, as the Committee Reports suggest will be the case, "marketing" intangibles are excluded by regulation from the definition of "intangible property" for purposes of both §367(d) and the tainted asset category under §367(a)(3)(B)(iv). (The "tainted asset" intangibles would then have relevance solely for purposes of §332 liquidations subject to §367(e).)

Under the Guidelines' standards, intangibles were treated as tainted assets and a toll charge was imposed on their outbound transfer if they constituted (i) U.S. intangibles to be used in connection with either a U.S. trade or business or the manufacture of goods for sale or consumption in the United States,[195] (ii) foreign intangibles to be used in connection with the sale of goods manufactured in the United States,[196] or (iii) U.S. or foreign intangibles likely to be licensed by the transferee.[197] If these standards were to continue to be applied under the statutory active business exception with respect to "marketing" intangibles, goodwill and going concern value excluded from the definition of "intangible property" for §367(d) and tainted asset purposes, it would follow that most service businesses generally could continue, as under present law, to incorporate their foreign operations on a tax-free basis provided that those businesses lacked the prohibited U.S. nexus.[198]

Whether the regulations under §367(d) will interpret the Committee Report cues broadly enough to permit continued nonrecognition treatment in respect of the outbound transfer of "marketing" and related intangibles remains to be seen. Moreover, even if those cues are acted upon, it is not at all clear where the line appropriately should be drawn between "marketing" and "manufacturing" intangibles. While names, trademarks and similar items are specially mentioned as excludible items in the Committee Reports (along with goodwill and going concern value), on which side of the line should contracts or contract rights, franchises, customer lists, computer software, various types of non-manufacturing know-how, and innumerable other items fall?

7. Planning Considerations

To the extent §367(d) would apply to an outbound §351 or §361 transfer of intangible property, taxpayers generally will choose to make such property available to the foreign subsidiary either by licensing the property or by selling it outright to the subsidiary.

If the sale alternative is selected, the sale ought to be in consideration for cash or possibly notes rather than stock. A purported "sale" for stock likely would be viewed as a §351 (or §361) transfer subject to §367(d). If notes are used, the notes should be formalized in writing, bear arm's length terms, and be repaid (with interest) in accordance with a periodic repayment schedule. The use of demand notes (or open account debt), particularly in the case of a wholly-owned transferee, would expose the sale to possible recharacterization as an equity contribution and, thus, even absent any issuance of transferee stock, as a §367(c) transfer subject to §367(d). In addition, care should be taken in the valuation of the intangibles to be sold. If full value is not received, the excess of the value given over the value received may be treated as a capital contribution subject to §§367(c) and 367(d).[199]

Similarly, if the licensing alternative is selected, care should be exercised in drafting the terms of the agreement so as to ensure its characterization as a license rather than as an assignment, which could subject the transaction to §§367(c) and 367(d) even though no transferee stock is issued. Thus, substantial rights in the intangible property (such as the licensor's right to terminate the license at will) should be retained by the transferor, the license should be nonexclusive, and it should be subject to other limitations concerning the geographical coverage and use of the subject property. Although, as earlier noted, the Service to date has not adopted the *DuPont* decision's expansive concept of a "transfer of property," this position could change.

8. Transitional Rule

Like §131 of the 1984 Act generally, the special tax treatment of intangible assets under §367(d) is effective with respect to transfers occurring after December 31, 1984, unless a ruling request was pending on March 1, 1984. A special rule for intangible property was incorporated when the bill emerged from conference, however, which (unless a ruling request was pending on March 1, 1984) effectively amends present law with respect to transfers of intangible assets occurring after June 6, 1984 and before January 1, 1985.[200] Transfers of intangible assets during this period are deemed to be for a principal tax avoidance purpose and gain must therefore be recognized under §367(a) (not §367(d)) whether or not the present Guidelines would have permitted tax-free treatment.

The presumption of tax avoidance on transfers of intangible assets is theoretically absolute, but a waiver of the interim rule may be requested, in which case the old rules will be applicable.[201] Issuance of a ruling in which the Service finds no tax avoidance purpose on a transfer of intangible property will be considered a waiver of the interim rule.[202] The Conference Report directs the Secretary to "carefully examine transfers of intangibles before giving such a waiver," and further notes that "[t]ransfers of intangibles that are not fully developed or that are not essential to the active conduct of a trade or business abroad should not be given a waiver." [203] Nevertheless, in cases where a transaction had been planned for some period prior to the rule change, or where the transfer is of goodwill, "marketing" intangibles or similar items which the Com-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

mittee Reports indicate might be excluded from §367(d) in any event, the Service may be willing to issue a waiver.

On August 31, 1984, the IRS issued Temp Regs. §1.367(a)-4T, which set forth the standards that will be applied to of waivers of the transitional rule for transfers of intangible property occurring after June 6, 1984 and before January 1, 1985. The temporary regulations describe four specific and fairly limited circumstances under which such waivers will be granted. There is also a rather tightly drawn "facts and circumstances" exception.

Temp. Regs. §1.367(a)-4T(c)(1) provides that the transitional rule will be waived if: (i) the transferor elects to apply the post-1984 rules of §367(d); (ii) the transferor purchased the intangible property from an unrelated third party, claimed no research and development deductions or credits with respect to the property, and would have received a favorable ruling on the transfer under the Guidelines; (iii) the transfer is required by a foreign government as a necessary condition of doing business in that country or is compelled by a genuine threat of immediate expropriation; or (iv) the transferred intangible property consists of goodwill, going concern value, or similar intangible property that was developed by a foreign branch.

The first exception is not particularly helpful. Any transferor desiring the tax treatment prescribed under §367(d) could simply delay its transfer until 1985, while in the meantime granting a license to the foreign transferee. The second exception is also of limited utility. Unless the transferred intangibles have appreciated in value considerably since their purchase, §367 normally will have only negligible impact on the transfer.

The scope of the third exception is unclear. Does it contemplate absolute legal compulsion under threat of prosecution? Or will a transfer of intangible property be considered "compelled" by a foreign government where the foreign law simply prohibits royalty payments abroad or otherwise exacts a prohibitively high tax on such payments? The alternative provision of the third exception, the expropriation clause, apparently operates on the premise that a taxpayer would be willing to commit still more assets to a country that already has threatened "immediate expropriation" of its business.

Under the fourth exception, a tax-free transfer is permitted of goodwill, going concern value, and "similar intangible property" developed by a foreign branch. One open issue in this connection is whether certain assets (*e.g.*, corporate name, trade names, trademarks, customer lists, contracts and other "non-manufacturing" intangibles) are sufficiently "similar" to goodwill or going concern value to be included in the exception. Since these items are specifically listed in the definition of "intangible property" under Regs. §1.367(a)-4T(a) (which tracks the §936(h)(3)(B) definition incorporated into new §§367(a)(3)(B)(iv) and (d)(1)), the omission of any specific reference to such items in the fourth exception could be considered intentional. On the other hand, it could be argued that the term goodwill, which is not specifically listed in the §936(h)(3)(B) definition, encompasses a variety of discrete intangible assets which are specifically listed in that definition. A second problem area involves distinguishing goodwill and similar items that have been "developed by a foreign branch" from those items that have been developed by the worldwide (non-branch) operations of the home office. It is hoped that whatever goodwill exists in a country where a branch operates will be attributed to the branch for this purpose.

In addition to the four specific exceptions, Temp. Regs. §1.367(a)-4T(c)(3) establishes a "facts and circumstances" exception under which the transitional rule may be waived provided the transfer is not being made during 1984 for the purpose of avoiding application of new §367(d). Circumstances indicating that a transfer is not being timed to avoid §367(d) include (but are not limited to): (i) the existence of a binding commitment that was entered into with an unrelated party or foreign government before June 6, 1984; (ii) the existence prior to March 1, 1984, of a documented plan to transfer the intangible assets before January 1, 1985; and (iii) anticipated use of the transferred intangible assets by the transferee immediately or soon after the transfer. Although Temp. Regs. §1.367(a)-4T(c)(3) states that this last factor, standing alone, generally will not be sufficient to obtain a waiver, it is not clear what further showing will be required. A mere desire to begin operations during 1984, absent some business necessity, apparently would not satisfy the Service.[204] Moreover, even a timely plan or commitment will not necessarily ensure the granting of a waiver; the regulations provide that "the earlier the plan or commitment was made, the greater is the probability that a waiver will be given."

Unless the taxpayer elects to have §367(d) apply, a waiver of the transitional rule in no case will be granted unless the taxpayer satisfies the three tests of Temp. Regs. §1.367(a)-4T(c)(2). First, no waiver will be granted for the transfer of intangible assets which would not have received a favorable ruling under Secs. 3.02(a)(iv) and (b)(i)-(iv) of the Guidelines (which generally withhold favorable clearance where the transferred intangibles will be licensed or sold by the transferee, or where they will be used in connection with a U.S. business). Second, a stricter active business test than that applied under the Guidelines must be satisfied. Adopting a phrase from the Conference Report, the temporary regulations state that a waiver will only be granted if the intangible assets are "essential to the active conduct of a trade or business by the transferee."[205] To be "essential" to the transferee's trade or business it must either be illegal to sell the products or services to which the intangibles relate without access to such intangibles by ownership, license, or otherwise or, in the alternative, it must be impossible without such intangibles to realize a level of earnings reasonable for the transferee's trade or business from sales of such products or services in that country. How to determine a reasonable level of earnings for this purpose is unclear.

Finally, no waiver will be granted for intangible property unless it is "fully developed;" *i.e.*, it has been used in a trade or business or no further significant research and development expenses are required or expected to be incurred prior to its use by the transferee.

Although some flexibility may continue to exist in the rulings process, the temporary regulations generally will make it quite difficult to obtain any meaningful waiver of the transitional rule for pre-1985 transfers of intangible property. Where such a waiver is not obtainable, the avail-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

able options will be limited to either transferring the intangibles pursuant to a taxable sale or exchange or licensing them to the transferee.

J. *Outbound Liquidations*

1. *In General*

Under new §367(e), to the extent provided in regulations, a domestic corporation that makes a distribution of appreciated property to its foreign shareholder(s) in complete liquidation will be required to recognize gain on the distribution (notwithstanding §336) "under principles similar to the principles" of §367. Section 367(e) apparently is not self-executing, but is to become effective "to the extent provided in regulations." If the regulations are issued sometime after the January 1, 1985, effective date of §367(e), they presumably will have effect only prospectively.

Enactment of §367(e) corrects what was perceived to be a deficiency in the provisions of §367. Under pre-1984 Act law, domestic subsidiaries of foreign corporations generally could be liquidated with little or no U.S. tax cost. Although, absent a ruling, §367 would prevent the liquidation from qualifying for tax-free treatment under §332, the foreign parent merely would be viewed as a non-corporate shareholder and the transaction would be converted to a §331 liquidation.[206] Since §336 was not one of the provisions enumerated in §367, that provision would ensure nonrecognition treatment to the liquidating domestic corporation notwithstanding the absence of a §367 ruling. Although the foreign parent theoretically would recognize gain absent §332 protection, the gain would not be subject to U.S. tax if the foreign parent were not engaged in a U.S. trade or business with which such gain could be considered effectively connected.[207] Treatment as a §331 liquidation would cause the domestic corporation to lose, where relevant, the otherwise applicable exemptions from depreciation and investment credit recapture.[208] However, even where recapture applied, its cost often was less than the gain that the distributing corporation would have had to realize under §367 in order to qualify its foreign parent for tax-free treatment under §332.

2. *Application of the "Principles of §367"*

Among the "principles of §367" that likely would be applied to outbound liquidating distributions would be the tainted asset rules of §367(a)(3)(B). Under those rules, gain ordinarily would be required to be recognized by the liquidating corporation to the extent the assets distributed in liquidation included assets falling within any of the defined categories of tainted assets. This result would be consistent with Sec. 3.01(2) of the Guidelines, which tested §332 liquidations under the rules applicable to §351 transfers and required recognition of gain with respect to the distribution of any tainted assets.[209]

Even if no tainted assets are distributed in liquidation, §367(e) possibly still could require that the transaction satisfy the active business test of §367(a)(3)(A) as a condition to the applicability of §336. Although application of the active business requirement may appear anomalous in respect of a liquidating domestic corporation whose business is being wound up rather than relocated offshore (*e.g.*, as a branch of its parent), such an approach is not without precedent.

Although the Guidelines generally applied to outbound §332 liquidations the same standards applicable to outbound §351 transfers, until recently the Guidelines' requirement that the foreign transferee devote the transferred assets to the conduct of an active business outside the United States seemed not to be applied to outbound §332 liquidations.[210] For example, in PLR 8210030, a foreign bank liquidated its domestic subsidiary and continued the subsidiary's operations in U.S. branch form. Although a tainted asset toll charge was imposed on the stock and securities distributed to the foreign parent, the transaction otherwise was accorded tax-free treatment under §332. The foreign parent represented that the transferred assets "will be used in the active conduct of a trade or business." Omitted from the standard representation was the phrase "in a foreign country." Similarly, in PLR 8149038, a domestic corporation was required to pay a toll charge on its tainted assets, but was otherwise permitted to liquidate under §332 even though the foreign parent continued the liquidated subsidiary's U.S. business.[211]

However, in PLR 8334013,[212] the Service reversed this position, holding that the active *foreign* business requirement was applicable to an outbound §332 liquidation and that a favorable §367 ruling would not be issued where a foreign parent would continue the business of its liquidated domestic sales subsidiary in *U.S.* branch form. This result was reached notwithstanding the taxpayer's argument, and willingness to enter into a closing agreement, to the effect that the foreign parent's U.S. tax liability in respect of its effectively connected U.S. branch income would be identical to the U.S. tax liability of the domestic subsidiary prior to the liquidation. Whether the regulations under §367(e) will adhere to the Service's current rulings position, which effectively prohibit "domestic branching" by foreign parents of U.S. subsidiaries on a tax-free basis, remains to be seen. What might be taken into account by the Service in evaluating the regulatory options on this issue is that, to the extent the liquidating corporation recognizes capital gain rather than ordinary income under §367(e), an overall tax benefit might be obtained since the foreign parent presumably will acquire a stepped-up basis in the U.S. branch assets for purposes of future ordinary depreciation and amortization deductions.[213]

The special rules for "intangible property" contained in §367(d) apply only to transfers described in §351 or §361 and should not be applicable for purposes of §367(e). Nevertheless, gain ordinarily will be recognized on any liquidating distribution of "intangible property" by virtue of its tainted asset treatment under §367(a)(3)(B). On the other hand, to the extent goodwill, names, trademarks, and similar intangibles are excluded by regulation from the definition of "intangible property," an outbound liquidating distribution of such items might qualify for nonrecognition treatment, presumably subject, however, to satisfaction of the active business exception as previously discussed.

The loss recapture rules of §367(a)(3)(C) ordinarily should be inapplicable to an outbound liquidation, except perhaps where the liquidating domestic corporation operated a foreign loss branch. As noted earlier, the Conference Report indicates that an outbound transfer of property that has been used in a domestic business will trigger recapture of any depreciation deductions previously claimed in re-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

spect of the transferred property.[214] Absent express statutory authorization, it would seem questionable whether this statement, standing alone, could have the effect of overriding §§1245(b)(3) and 1250(d)(3), which exempt corporations that distribute assets in §332 liquidations from depreciation recapture. Whether the statement nevertheless somehow could be viewed to embody a "principle of §367," such that the IRS by regulation could impose such a recapture rule under §367(e), is somewhat more troublesome. The statement seems gratuitous, but it perhaps could be engrafted onto §367 under the broad regulatory authority granted by the statute.[215]

3. Planning Considerations

Section 367(e) by its terms is not limited to liquidations that would qualify under §332 if §367 were satisfied. It applies to any distribution of appreciated property to which §336 applies, which includes liquidations in which the tax consequences to the shareholders are determined under §331. However, §367(e) should not apply to non-liquidating distributions in respect of which the distributing domestic corporation is taxable (if at all) under §311. Although the general rule under §311(d)(1) is that corporations must recognize gain on distributions of appreciated property, there are several exceptions that, albeit in situations primarily involving non-corporate shareholders, might permit appreciated property to be distributed without recognition of gain to the distributing corporation.[216]

Another approach that could prove advantageous in situations where the tainted asset or active business rules otherwise might present obstacles to tax-free treatment under §367(e) would involve the use of §337, which permits a liquidating domestic corporation to sell its property free of tax provided it is liquidated within 12 months from adoption of the plan of liquidation. By converting its assets on a tax-free basis into cash (which when distributed would not be appreciated property),[217] the domestic corporation should be able to distribute the cash to its foreign shareholders in liquidation without triggering any recognition of gain under §367(e) (although the recapture provisions, previously discussed, would be applicable). The foreign shareholders should not be subject to U.S. tax on the gain recognized under §331 provided the gain is not effectively connected with a U.S. trade or business of the shareholder.[218]

K. Outbound Transfers Subject to §1491

An outbound transfer of property to a foreign corporation as paid-in surplus or as a contribution to capital (except where §367 applies),[219] or an outbound transfer of property to a foreign partnership, trust, or estate, unless excepted under §§1492 or 1494(b) will subject the U.S. transferor to an excise tax equal to 35 percent of the gain not otherwise recognized on the transfer.[220] The tax is due and payable "at the time of the transfer," [221] unless a pre-transfer exemption has been obtained. A Form 926 information return also must be filed at such time, whether or not an exemption has been obtained.[222] In lieu of paying the 35 percent excise tax on a transfer subject to §1491, the transferor may elect under §1057 to recognize gain on the transfer, thereby obtaining an increase in basis for the transferred assets and, except to the extent gain is recaptured as ordinary income, a lower rate of tax on the transfer.[223]

Prior to the 1984 Act, relief was obtainable from the 35 percent excise tax (without making a §1057 election) if the transferor could establish, pursuant to a ruling request filed either before or after the transfer, that tax avoidance was not one of the principal purposes of the transfer.[224] The Service generally applied the same Guidelines' standards in issuing rulings under §1492 (advance rulings) and §1494(b) (requests for abatement of tax) as it applied under §367. The 1984 Act amendments to §367 necessitated complementary changes to the §1491 excise tax provisions.[225]

The 1984 Act has amended §1492 by eliminating the statute's tax avoidance purpose standard and providing that the excise tax will not be imposed on "a transfer . . . with respect to which the taxpayer elects (before the transfer) the application of principles similar to the principles of §367." Similarly, §1494(b) has been amended to provide that, "Under regulations prescribed by the Secretary, the [excise] tax may be abated, remitted, or refunded if the taxpayer, after the transfer, elects the application of principles similar to the principles of §367."

Neither the House Report nor the Senate Report indicates how "the principles of §367" are to be applied to transfers described in §1491.[226] The Conference Report merely reiterates the statutory directive, noting that "all of the principles of Section 367 (including the special rules for intangibles) are applicable for purposes of the excise tax rules." [227]

Applicable "§367 principles" presumably will be considered to encompass the tainted asset and active business rules. If no §1057 election is made, the excise tax apparently will be imposed in respect of any §1491 transfer of property that either constitutes a tainted asset or otherwise will not be devoted by the transferee to an active business abroad.[228]

Other "§367 principles" may prove more difficult to apply in the §1491 context. For example, it is unclear how, or whether, the "useful life" toll charge of §367(d)(2)(A) could be imposed on a transfer of "intangible property" to a foreign partnership. Would the excise tax be imposed on an annual basis in respect of amounts deemed to be received each year as "payments contingent upon the productivity, use or disposition" of the transferred property? [229] If so, would the foreign partnership be entitled to deduct a like amount, by analogy to the "principle" of §367(d)(2)(B) which permits a foreign corporation to reduce its earnings and profits by the amount included in the income of the transferor? A special allocation of such deduction to the transferor could well neutralize the effect of the §1491 tax.[230]

The "principles" of the foreign branch loss recapture rules of §367(a)(3)(C) arguably should not be applied to §1491 transfers to foreign partnerships. Since the transferor will remain taxable on any post-transfer income realized by the partnership from the transferred assets, there will not be the "mismatching" in such a case that the loss recapture rules were designed to prevent. Pending regula-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tions, however, caution is required in light of the Conference Committee's directive that "all" principles of §367 be applied under §1491.[231]

The procedure under §1492 for obtaining relief from the excise tax by electing the "principles of §367" prior to a §1491 transfer has not been provided by statute. Since §367 contains generally self-executing, objective rules, a taxpayer in the interim should be able simply to send notice to its district director or to the IRS National Office stating its intention to apply the principles of §367. Whether those principles are properly applied should be a matter for determination on audit. However, the Conference Report contains the cryptic statement that: "as under present law, the taxpayer is to make the showing required under §1492 before the transfer." [232] Under "present law," a showing is required that the taxpayer does not have a principal tax avoidance purpose for the transfer, a standard that has been eliminated by the 1984 Act amendments. Hopefully, the Service will clarify this point before the amended provisions take effect.

L. Procedural Changes

1. Ruling Requests and Declaratory Judgments

With the enactment of objective standards, the transferor in an exchange described in §367(a) need no longer satisfy the Commissioner that tax avoidance is not one of its principal purposes in making the transfer. The mandatory ruling requirement has therefore been repealed.[233] Also repealed is §7477, which created a declaratory judgment procedure permitting taxpayers to challenge in the Tax Court the "reasonableness" of an adverse §367 ruling or toll charge.[234]

Although rulings are no longer mandatory, the Committee Reports indicate that taxpayers should continue to have the opportunity to request a ruling.[235] Whether or not to issue a §367 ruling in any particular case will be discretionary with the Service, although the Committee Reports emphasize that rulings generally should be issued upon request.[236] The ability to obtain a ruling could present a problem in those situations where the statutory requirement at issue turns on factual questions, such as whether the foreign transferee will be actively engaged in a trade or business outside the United States. The Service's policy generally has been not to rule on factual matters,[237] and the Service has indicated that it ordinarily will not rule on whether a foreign taxpayer is engaged in a U.S. trade or business.[238] The Service will rule, based on financial information submitted by the taxpayer, that for purposes of §355(b) an active trade or business has been conducted over the past five years.[239] However, it is more difficult to rule on whether an active trade or business *will* be conducted in the future, an issue which in the §355 context is generally covered with a taxpayer representation to that effect.[240]

2. The Notification Requirement

Any U.S. person who makes a transfer of property to a foreign corporation in connection with an exchange described in §367 (*i.e.*, §§332, 351, 354, 355, 356, and 361) is required by new §6038B to file an information return with the Service containing such information regarding the transfer as the Secretary by regulations will prescribe. Information returns also will be required when a liquidating domestic corporation makes a §336/367(e) distribution to a foreign shareholder, whether or not the shareholder's tax liability is tested under §332 or §331.[241] Section 6038B does not apply to transfers described in §1491, but a reporting requirement already exists for such transfers.[242]

Unless the failure to file the information return required by §6038B is "due to reasonable cause and not to willful neglect," a penalty is imposed for nonfiling equal to 25 percent of the amount of gain realized on the exchange.[243] In addition, failure to file the information return tolls the statute of limitations, which will not expire until 3 years after the date on which the Secretary receives the required notification.[244]

The "tolling" effect of not filing a §6038B notice could become a "trap for the unwary" in cases where the applicability of §367 is uncertain; *e.g.*, the transfer of an intangible item that may or may not constitute a "transfer of property" for §367 purposes. In such a case, the Service would be free to challenge the taxpayer's characterization at any time. Whether "reasonable cause" would be found if such a challenge were successful, permitting abatement of the penalty, presumably would depend on the relative strength of the taxpayer's position. As in the case of the Form 926 information return for §1491 transfers, noncompliance with which similarly tolls the applicable limitations period, taxpayers undertaking transactions that arguably must be reported under §6038B may be well advised to file a "protective" §6038B return, reflecting therein the taxpayer's position that no §367 transfer has occurred.

M. Effective Dates

1. In General

The amendments made by §131 of the 1984 Act are generally effective with respect to transfers or exchanges occurring after December 31, 1984.[245] The old rules will continue to apply, however (regardless of when the transfer occurs), to any transfer which was described in a ruling request filed with the Service prior to March 1, 1984.[246]

2. Planning Considerations

Since many of the prior rules governing outbound transfers of property will continue to apply under the amended provisions, there will not necessarily be any advantage to making a §367 transfer prior to January 1, 1985 (the effective date of the amendments). There are several instances, however, where making a transfer during 1984 may be desirable. (It is presumably now too late in the year to obtain a §367 ruling prior to making a transfer before the amendments take effect. A taxpayer must therefore be willing to make the transfer without an advance ruling, resorting if necessary to the Tax Court declaratory judgment procedure (which continues to be effective with respect to pre-1985 transfers, regardless of when the adverse ruling on such transfer is issued) if the Service rules unfavorably.

A taxpayer might consider making a transfer prior to January 1, 1985, if a favorable ruling likely would not be issued by the Service under the objective standards in the Guidelines (which presumably will be the objective standards under the Tax Reform Act of 1984), but a strong

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

factual showing could be made that tax avoidance is not one of the principal purposes of the transfer.

A taxpayer confronting a large Rev. Rul. 78-201 toll charge upon the incorporation of a foreign loss branch (and statutory loss recapture under §367(a)(3)(C) if the transaction occurs in 1985) might consider a 1984 transaction as a means to preserve the opportunity for possible declaratory judgment relief on authority of *Hershey Foods*.

A foreign parent contemplating the liquidation and "domestic branching" of its U.S. subsidiary might wish to effect the liquidation (without a ruling) in 1984 before §367(e) becomes effective to preclude §336 treatment.

Although a favorable §367 ruling on a transfer of at least certain types of "intangible property" no longer may be obtainable by virtue of the 1984 Act transitional rule, in some circumstances it still could be advantageous to make such a transfer during 1984, before §367(d) takes effect. Although gain or income likely would be recognized under §367(a) (absent a "waiver" of the transitional rule), the amount of such gain or income would be fixed, its character in certain instances would be capital, and steps could be taken to support characterization of the income (whether ordinary or capital) as foreign source income. (The same result of course also could be achieved even after 1984 by an outright sale of the property rather than a transfer in exchange for stock.)

By contrast to the foregoing, a taxpayer contemplating a transfer of stock under circumstances that would not qualify for tax-free treatment under the Guidelines might consider postponing (rather than accelerating) the transaction until 1985 in order to take advantage of the liberalized standards for securing tax-free treatment of such transactions (including the closing agreement procedure) contemplated in the Committee Reports.

[89] *Id.*

[90] Outbound "C" and "D" reorganizations, involving a domestic corporation's transfer of substantially all of its assets to an acquiring foreign corporation, are the most common examples of reorganizations that have been (and should continue to be) considered transfers of assets for §367 purposes. *See, e.g.*, PLR 8330059 (Apr. 26, 1983); PLR 8312089 (Dec. 22, 1982); PLR 8216027 (Jan. 19, 1982).

[91] *See* Regs. §1.367(a)-1(b)(2)(ii); PLR 8109055 (Dec. 5, 1980); PLR 8316070 (Jan. 17, 1983); PLR 8303082 (Oct. 21, 1982).

[92] *See, e.g.*, PLR 8428018 (Apr. 4, 1984); PLR 7748014 (Aug. 30, 1977). *Cf.* Reg. §1.367(a)-1(b)(2)(i)(B).

[93] *See, e.g.*, PLR 8420032 (Feb. 10, 1984); PLR 8251067 (Sept. 20, 1982); PLR 8209030 (Dec. 4, 1981); PLR 8113123 (Jan. 5, 1981); Rev. Rul. 74-297, 1974-1 C.B. 84. Regs. §1.367(a)-1(b)(i)(A), which seemed literally to recharacterize a forward triangular merger as an outbound transfer of assets for §367 purposes, has not been so interpreted by the IRS. GCM 39231 (Jan. 23, 1984), issued in connection with PLR 8420032, states that such reorganizations will continue to be tested under the rules applicable to reorganizations involving transfers of stock.

[94] *See* PLR 8143019 (July 28, 1981). Regs. §1.367(a)-1(b)(iii) seems literally to treat such reorganizations as transfers of assets for §367 purposes, but GCM 39231 logically should apply to triangular "C" reorganizations to the same extent as it applies to forward triangular mergers.

[95] Guidelines Sec. 3.03(1)(d). Even if the 50% test were satisfied, a favorable ruling ordinarily would not be issued if the assets of the acquired corporation consisted primarily of stock or securities. *But see* PLR 8126126 (Apr. 6, 1981), where the stock or securities prohibition was held not to apply to a holding company which held stock in operating subsidiaries rather than portfolio investments.

[96] Guidelines Sec. 3.02(1)(a)(iii). A "facts and circumstances" test was applied (and favorable consideration was generally denied) where post-reorganization ownership of the acquiring foreign corporation fell between 50 percent and 80 percent.

[97] It is hoped that the Treasury and the Service will take the opportunity in drafting regulations to alter the present practice of including foreign as well as domestic share holders of the domestic corporation in applying the 50 percent test. *See* PLR 8334017 (May 19, 1983); PLR 8121093 (Feb. 27, 1981), *supp. by* PLR 8235071 (June 3, 1982). But see, *contra*, PLR 8241057 (July 14, 1982). Foreign shareholders not engaged in U.S. business ordinarily should have no incentive to reorganize prior to a sale of stock in a domestic corporation, since they normally can escape U.S. tax on any gain realized without need of such a pre-sale reorganization. §§871(a)(2) and 881.

[98] *See also* PLR 8426049 (Mar. 27, 1984).

[99] Guidelines, Sec. 3.02(1)(a)(iii)(B). The holding company must be a "controlled foreign corporation" as defined in §957. PLR 8401032 (Sept. 30, 1983).

[100] *See* PLR 8413035 (May 2, 1984), where a §367(c) contribution of stock was treated as not being in exchange for "voting stock" and, thus, as an outbound §351 transfer rather than a "B"-§351 "overlap."

[139] *Id.*

[140] Another possible interpretation would be that priority was granted to §367(d) in order to ensure U.S. source treatment of the resulting toll charge. However, this result would require a special priority rule only if, in the normal case, §367(a)(3)(C) were to have general priority over the tainted asset (and §367(d)) toll charges, a premise that is inconsistent with existing rulings practice. Under that practice, as noted, tainted asset toll charges generally have been applied prior to application of Rev. Rul. 78-201 (as reduced by such toll charges).

[141] §367(a)(3)(C)(ii)(II).

[142] Under §904(f)(1), recapture is accomplished by requiring the taxpayer to treat as U.S. source income in a profitable year or years subsequent to the loss year the lesser of (1) the previously unrecaptured foreign loss, or (2) at least 50 percent of its foreign source taxable income for such year. The effect of this rule is to reduce the amount of foreign source income includible in the numerator of the §904(a) foreign tax credit limitation fraction, thus reducing the amount of foreign tax credits that may be claimed against the taxpayer's U.S. tax liability for such year.

[143] There is some uncertainty as to whether §904(f)(1) applies if the transferor's overall foreign loss arises in the same year in which the asset transfer occurs. Compare the language of §904(f)(1) ("for each succeeding taxable year") with that of §904(f)(3) ("the remaining amount of the overall foreign losses . . . for such taxable year or any prior taxable year").

[144] 1980-2 C.B. 125.

[152] *See* Rev. Rul. 78-201, at II, G, 2, a, *supra*.

[153] The Service previously had characterized the Rev. Rul. 78-201 toll charge as FORI for §907(b)(1) purposes to the extent the deductions previously claimed had reduced FORI and as FOGEI to the extent the deductions had reduced FOGEI. *See* PLR 8216022 (Jan. 19, 1982); PLR 8252036 (Sept. 24, 1982); PLR 8323020 (March 4, 1983). However, in recognition of the fact that a Rev. Rul. 78-201 toll charge imposed on the incorporation of a foreign branch engaged in extraction operations ordinarily will be subject to §907(c)(4), the current rulings position appears to be that the toll charge will be treated as FOGEI without regard to whether the prior losses reduced FOGEI. §367(a)(3)(C) appears to adopt the current position, although this point should be clarified in the regulations.

[154] H.R. Rep. No. 861, 98th Cong., 2d Sess. (1984), at page 956.

[155] *See* §904(b)(2); PLR 8221009 (Feb. 19, 1982).

[156] H.R. Rep. No. 861, 98th Cong., 2d Sess. (1984), at page 956; Rev. Rul. 78-201, *supra*. The toll charge presumably will correspondingly increase the transferor's basis in the stock of the transferee pursuant to §358(a)(1)(B)(ii).

[214] H.R. Rep. No. 861, 98th Cong., 2d Sess. (1984), at page 955.

[215] Virtually every provision of §367 is prefaced with the phrase "except as provided in regulations."

[216] Section 311(d)(2)(A) exempts corporations from tax on "partial liquidations" and certain other distributions to non-corporate shareholders who own at least 10 percent of the value of the distributing corporation's stock. It would be preferable, of course, for the foreign shareholder to recognize gain on the distribution under §302 rather than dividend income under §301. Dividend distributions will be subject to U.S. withholding tax at the 30 percent statutory rate under §871(a) unless a tax treaty provides for a lower rate of tax, whereas capital gains should escape U.S. tax entirely. §871(a)(2). To the extent any U.S. withholding taxes on dividends could provide a useable credit against the shareholder's tax in his home country, however, even a 30 percent withholding tax might not necessarily make the §311 route less attractive than §367(e).

[217] Rev. Rul. 68-43, 1968-1 C.B. 146.

[218] §871(a)(2). §337(c)(3) limits the availability of a §337 sale followed by a §332 liquidation to situations where all members of the affiliated group (including for this purpose foreign corporations) that are in the same chain of ownership as the domestic corporation are also liquidated within 12 months. It may in some cases be desirable to preserve the benefits of §337 by intentionally breaking affiliation by failing the 80% stock ownership tests of §1504(a), causing §332 not to apply either to the liquidating domestic corporation or to an intervening foreign corporation. In this regard, see *Granite Trust Co. v. U.S.,* 238 F.2d 670 (1st Cir. 1956), and GCM 34820 (Mar. 24, 1972).

[219] Where the transferor "controls" a corporate transferee, so that §351 applies to the capital contribution, §367 applies rather than §1491. §§1492(1). Cf. §367(c), which treats a contribution of capital to a controlled corporation as an exchange, whether or not stock is received by the transferor.

[220] §1491.

[221] §1494(a).

Chapter 66

MODIFICATIONS TO THE CHARACTER AND SOURCE OF INCOME RULES

Javed A. Khokhar, Esq.
Silverstein and Mullens
Washington, D.C.

I. The Source of Transportation Income Rules Modified

A. Introduction

Section 124 of the Tax Reform Act of 1984 (P.L. 98-369) modifies the source rules for income derived in coastwise (*i.e.*, from one point in the United States to another point in the United States) transportation from the rental of vessels and aircraft and transportation services.

1. Current Source Rules for Rental Income

Income derived from the rental of property located within the United States,[1] or from the use of property within the United States, is United States source income.[2] On the other hand, income derived from the rental of property located outside the United States, or from the use of property outside the United States is foreign source income.[3] Thus, rental income derived from the lease of a vessel (*i.e.*, bareboat charter hire) is U.S. or foreign source income depending upon whether the vessel is located within or without the United States.

The rules governing the source of income derived in coastwise transportation from the rental of a vessel are illustrated in Rev. Rul. 75-483.[4] In Rev. Rul. 75-483, M, a domestic corporation, purchased a vessel and leased it to R, an unrelated ship operator, under a 20-year bareboat charter. The vessel was documented under the laws of the United States. R used the ship primarily in transporting property from Alaska to various points in the United States. The vessel frequently travelled outside the territorial waters of the United States while engaged in coastwise trade. The Service ruled that the location of rental property both within and without the United States is determined by its actual physical presence within and without the United States. When the vessel travelled from one port in the United States to another port in the United States and when it was used in international trade, the vessel travelled outside the United States territorial waters. Therefore, the vessel was located within the United States and without the United States at various times. Accordingly, charter hire paid by R to M was U.S. source income to the extent that the income was allocable to: (i) periods when the vessel was in a U.S. port between voyages, and (ii) periods during which the vessel was engaged in a voyage which began in a U.S. port and ended in a U.S. port provided the vessel did not travel outside the U.S. territorial waters. The charter hire was foreign source income to the extent allocable to period when the vessel travelled outside U.S. territorial waters.

2. Current Source Rules for Transportation Services Income

Income from services performed within the United States is U.S. source income.[5] On the other hand, income from services performed without the United States is foreign source income.[6] Income from transportation or other services performed partly within and partly without the United States is treated as income derived partly from sources within the United States and partly from sources without the United States.[7] Thus, the source of income derived from transportation services (*e.g.*, time or voyage charter hire, towing or barging services) depends upon the place where such services are carried on.

The issue in coastwise transportation services is whether such services are considered performed wholly within the United States or partly within and partly without the United States. In Technical Advice Memorandum 8229005, the taxpayer claimed that income derived from the performance of towing and barging services was foreign source income to the extent attributable to the travel time within Canadian waters and on the high seas. TAM 8229005 agreed:

> "With respect to transportation services between points in the United States and points without the United States, section 863(b) of the Code and section 1.863-4(b) of the regulations provide that income from such services is from sources partly within and partly without the United States. The determination of the source of income is based on th place where the transportation service is being carried on by the taxpayer. Implicit in section 1.863-4(b) is the fact that income earned in international waters or abroad is from sources without the United States. The theory behind section 1.863-4(b) is applicable to this case even though the transportation service is being carried on from points in the United States to points in the United States. Thus, transportation services performed outside the United States territorial limits should be sourced without the United States."

3. Reasons for Change

Under Rev. Rul. 75-483 and TAM 8229005, the rental as well as services income from coastwise transportation activities is predominantly foreign source income if the transport route lies primarily beyond the U.S. territorial limits. For example, U.S. persons engaged in the business of transporting crude oil from Alaska to West Coast points or, by way of the Panamanian pipeline to East Coast points, can treat income derived from such activities as foreign source income to the extent allocable to periods when the transporting vessel was outside the U.S. territorial limit. Congress considered this to be an undesirable result. The House Ways and Means Committee Report observes:

> "The committee believes that all transportation income attributable to transportation which begins and ends in the United States (or any of its possessions)

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

should be U.S. source income. That is, the committee believes that the United States should retain the primary right to tax this income. Under the present sourcing rules, carriers operating between points in the United States can obtain predominantly foreign sourcing for transportation income earned from their U.S. routes by routing their vessels or aircraft outside the three-mile limit. The transaction rarely has any connection with any country other than the United States.

"Treating transportation income attributable to transportation beginning and ending in the United States as foreign source income increases the foreign tax credit limitation of the carrier and affiliates. If the carrier or affiliates have excess foreign tax credits as a result of unrelated foreign operations, this increase in the foreign tax credit limitation effectively enables the carrier to use the excess credits to offset all or part of any U.S. tax that should be imposed on the transportation income. Thus, the carrier or its affiliates may pay little or no U.S. tax on the transportation income. The committee does not believe that such income should escape U.S. tax." [8]

B. Overview

Section 124 of the Tax Reform Act of 1984 (P.L. 98-369) adds subsection (c) to §863, which provides new source rules for income derived from coastwise transportation.

Under §863(c), all transportation income attributable to transportation which begins in the United States and ends in the United States shall be treated as United States source income. Similarly, income derived from the lease of an aircraft to an unrelated regularly scheduled air carrier shall be treated as United States source income if the aircraft is operated between the United States and a possession of the United States. Transportation income attributable to transportation which begins in the United States and ends in a possession of the United States, or vice versa, shall be apportioned between the United States and the possession on a 50-50 basis.

Transportation income includes any income derived from or in connection with the use (or hiring or leasing for use) of a vessel or aircraft, or the performance of services directly related to the use of such vessel or aircraft.

Section 863(c) is effective for transportation beginning after July 18, 1984, in taxable years ending after that date.

C. Detailed Analysis

1. General Rule

Section 863(c)(1) provides that all transportation income attributable to transportation which begins and ends in the United States shall be treated as United States source income.

This general rule does not apply to transportation income attributable to transportation between the United States and a possession of the United States. Section 863(c)(2) provides an allocation formula for income derived from such transportation.

2. Transportation Income

The term "transportation income" encompasses two separate categories of income. First, it includes any income derived from or in connection with the use, (or hiring or leasing for use) of a vessel or aircraft.[9] Thus, rental income from the bareboat charter hire of a vessel is transportation income. Also included in this category of transportation income are rentals from the leasing of containers used in connection with a vessel or an aircraft.[10]

Second, it includes any income derived from, or in connection with, the performance of services directly related to the use of a vessel or an aircraft.[11] This category includes income from a time or voyage charter hire of a vessel or an aircraft, and income from the transportation of cargo as well as persons.[12] It is important to note that the term "transportation income" includes income derived from transportation services only to the extent such services are directly related to the use of a vessel or an aircraft. The statute does not define what transportation services are considered directly related to the use of a vessel or an aircraft. The Conference Committee Report, however, does contain a few examples of transportation services which are not considered directly related to the use of a vessel or an aircraft:

"The new source rule also does not apply to income for services performed in a foreign country that are connected indirectly with transportation beginning and ending in the United States. For example, income from the operation of the Panamanian pipeline (through which oil extracted in Alaska and bound for East Coast points may pass) will not be treated as U.S. source income under the new sourcing rule. Income from the operation of foreign storage facilities used to store cargo transported between U.S. points will not be subject to new source rule. Income from services, such as refueling, performed outside the United States in connection with a trip beginning and ending in the United States also will not be treated as U.S. source income under the new provision." [13]

3. Transportation Beginning and Ending in the United States

Transportation is considered to begin and end in the United States when it begins in one of the 50 States or the District of Columbia and ends in one of the 50 States or the District of Columbia.

The House Ways and Means Committee Report and the Conference Committee Report clarify the circumstances under which the transportation of cargo and persons is considered to begin and end in the United States when the transporting vessel or aircraft makes an intermediate stop.

a. Transportation of Cargo to an Intermediate U.S. Point

Transportation of cargo will not be considered to begin and end in the United States when it involves transportation from one U.S. point to another intermediate U.S. point for purposes of refueling, maintenance, loading or unloading of other cargo, or for other business reason (*e.g.*, repackaging or recontainerization) provided the cargo is bound for ultimate delivery to a point in a foreign country.[14] Transportation of cargo in this situation, will not be considered to begin and end in the United States even where the cargo is transported on a different vessel or aircraft from the intermediate U.S. point to its ultimate destination in a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

foreign country provided: (i) the vessel or the aircraft belongs to the same taxpayer; and (ii) the cargo does not pass through U.S. customs at the intermediate U.S. point.[15] However, transportation of cargo will be considered to begin and end in the United States if (after stopping at the intermediate U.S. point prior to the cargo's ultimate delivery to a point in a foreign country): (i) a different taxpayer transports the cargo on the second leg of the trip; or (ii) the cargo passes through U.S. customs at the intermediate U.S. point.

Example 1: Pan Am airlines takes on certain cargo at Washington, D.C. for transportation to Tel Aviv. The plane carrying the cargo lands at New York where the cargo is transferred to another aircraft belonging to El Al Israel Airlines, which carries the cargo to Tel Aviv. Transportation of cargo from Washington, D.C. to New York by Pan Am is considered to begin and end in the United States because the cargo is transported from the intermediate point (*i.e.*, New York) to the foreign destination in a different aircraft belonging to a different taxpayer. Pan Am's income attributable to the transportation of this cargo will, therefore, be U.S. source income.[16]

Example 2: British Airways takes on certain cargo in Houston for transportation to London. The cargo is carried in a plane owned by British Airways from Houston to New York. At New York the cargo is transferred to another plane belonging to British Airways, which carries the cargo to London. The cargo does not pass through customs at New York. Transportation of cargo from Houston to New York is not considered transportation of cargo that begins and ends in the United States.

The same rules apply when cargo is loaded at a point in a foreign country for transportation to a point in the United States and the vessel or aircraft makes a stop at an intermediate point in the United States. Thus, if the intermediate stop is made for purposes of refueling, maintenance, loading or unloading of other cargo, or for another business reason (*e.g.*, repackaging or recontainerization), the transportation of the cargo will not be considered to begin and end in the United States. However, if the cargo is reloaded in another vessel or aircraft belonging to another taxpayer or if the cargo goes through customs at the intermediate U.S. point, the transportation of such cargo from the intermediate point to the final destination will be considered as transportation of cargo which begins and ends in the United States.[17]

b. Transportation of Persons to an Intermediate U.S. Point

Transportation of persons will not be considered to begin and end in the United States when, en route to a destination elsewhere in the United States, a stop is made at a U.S. intermediate point for refueling, maintenance, or other business reasons, if the persons begin the trip in a foreign country and do not change aircraft or vessels at the U.S. intermediate point. Similarly, transportation of persons will not be considered to begin and end in the United States when it involves transportation from one U.S. point to an intermediate U.S. point like that just noted en route to the persons' destination in a foreign country provided the persons do not change aircraft or vessels at the intermediate U.S. point.[18]

Round-trip travel from the United States to a foreign country (whether by air or a cruise ship whch calls only on foreign ports) is not transportation which begins and ends in the United States.[19]

4. Transportation Involving the Possessions of the United States

Income from transportation which begins in the United States and ends in a possession of the United States is 50-percent U.S. source income and 50-percent foreign source income.[20] Also, from the standpoint of the possession's tax laws which mirrors the Internal Revenue Code (*e.g.*, Guam), such income will be 50-percent possession source income and 50-percent foreign source income.[21] Similarly, income from transportation which begins in a possession of the United States and ends in the United States is 50-percent U.S. source income.[22]

The general rule pertaining to transportation income attributable to transportation which begins in a possession and ends in the United States (or vice versa), as described above, has one exception.[23] Section 863(c)(2)(B) provides that transportation income attributable to transportation between the United States and its possessions is 100 percent U.S. source income if the following conditions are met:

(i) The income is derived from the lease of an aircraft;

(ii) The lessor owns the aircraft;

(iii) The aircraft is §38 property;

(iv) The aircraft is leased to a regularly scheduled air carrier which qualifies as a U.S. person; and

(v) The lessee and the lessor are not members of the same controlled group (as defined in §1563).[24]

Finally, transportation income attributable to transportation between two possessions or between two points within a possession is wholly foreign source income.[25]

5. Effective Date

The source rules of §863(c) apply with respect to transportation beginning after July 18, 1984, in taxable years ending after that date.[26]

II. Certain Foreign Source Income Recharacterized as U.S. Source Income for §904 Purposes

A. Introduction

As discussed under III, A, *infra*, under §904, the amount of direct or indirect foreign tax credit available to a U.S. taxpayer against its U.S. tax liability is limited by a fraction; the numerator is the taxpayer's aggregate foreign source taxable income for the year and the denominator is the taxpayer's worldwide taxable income for the year. The greater the numerator of the fraction (*i.e.*, the foreign source taxable income) the greater the foreign tax credit limitation. A taxpayer with excess foreign tax credits may, therefore, absorb the excess credits by generating additional foreign source income. It should be noted, however, that the additional foreign source income must bear foreign taxes at an effective tax rate which is lower than the top U.S. tax rate (assuming the taxpayer is in the top tax

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

bracket). If the additional foreign source income bears foreign taxes at or near the maximum U.S. tax rate, the additional foreign tax credit limitation generated by the additional foreign taxes will be absorbed by the additional foreign taxes and the taxpayer will not derive any benefit with respect to its excess foreign tax credits.

Over the years, U.S. taxpayers with excess foreign tax credits have devised a number of techniques for absorbing the excess credits. One popular technique is the conversion of U.S. source income into low-taxed foreign source dividend income by utilizing a foreign tax haven corporation.

The dividend source of income rules are contained in Code §§861 and 862. As a general rule, the source of dividend income is governed by the payor's place of incorporation. Thus, dividends paid by a corporation incorporated in the United States (excluding the possessions) is U.S. source income,[27] and dividends paid by a corporation incorporated outside the 50 states and the District of Columbia are foreign source income.[28] These are, however, a number of exceptions to this general rule. For example, dividends paid by a domestic corporation are foreign source income if less than 20 percent of such corporation's gross income over a 3-year base period is derived from U.S. sources.[29] Similarly, a portion (or all) of the dividends paid by a foreign corporation may be U.S. source income if 50 percent or more of such corporation's gross income over a 3-year base period is effectively connected with the conduct of a U.S. trade or business.[30] Thus, under the normal Code rules, the source of the dividend distributing corporation's income is relevant to determine the source of dividend income in the hands of the recipient. However, when a U.S. corporation is deemed to have received a Subpart F distribution that carries with it foreign taxes under the rules of §960, no such tracing is utilized. Under Regs. §1.960-1(h)(1), the Subpart F income is deemed to be derived from sources within the country of incorporation of the controlled foreign corporation.

Utilizing the Subpart F rules, U.S. taxpayers have been able to absorb their excess foreign tax credits by converting U.S. source income into low-taxed foreign source income. These source converting techniques are utilized particularly in two types of transactions: Netherlands Antilles finance subsidiaries and captive foreign insurance companies.

In the case of the Netherlands Antilles finance subsidiary, U.S. corporations may raise funds in the Eurodollar Market by forming a wholly-owned Netherlands Antilles subsidiary, contributing equity capital to the N.A. company, and using such company to borrow money from foreign lenders. The N.A. company, in turn, lends the borrowed funds (and in some cases the equity capital) back to the U.S. affiliates at an interest rate higher than the rate charged by the foreign lenders. Assuming that the back-to-back loan obligations are considered bona fide debt obligations, the interest paid by the U.S. parent (or its affiliates) is considered to be exempt from the 30 percent U.S. withholding tax under Article VIII of the Income Tax Convention between the United States and the Netherlands Antilles. Further, since the finance subsidiary is not considered as engaged in a U.S. trade or business, interest paid by it to foreign lenders is not subject to the second-tier U.S. withholding tax. The difference (or "spread") between U.S. source income received by the N.A. corporation and the interest expense paid to foreign lenders, however, is subject to tax in the Netherlands Antilles at the full 30 percent rate because the N.A. corporation may not elect to be taxed at the lower 2.4% - 3% rate in order to obtain the benefit under Article VIII.

Since the "spread" (which is essentially the net U.S. source interest income of the N.A. company) is Subpart F income currently taxable to the U.S. parent, it carries with it the Netherlands Antilles tax as a potential credit against the U.S. parent's U.S. tax liability. The U.S. parent's U.S. tax liability on the Subpart F income, on the other hand, is not particularly significant because it is also entitled to a deduction for the corresponding interest expense which far exceeds the Subpart F income. However, the Subpart F income increases the U.S. parent's §904 limitation (because of the rule under Regs. §1.960-1(h)(1) which treats Subpart F income as foreign source income) and enables it to absorb excess foreign tax credits. Thus, by utilizing a single-purpose financing subsidiary in the Netherlands Antilles, a U.S. corporate borrower is simultaneously able to avoid the 30 percent U.S. withholding tax on interest paid to foreign lenders, obtain a U.S. foreign tax credit for the taxes paid to the Antilles, and absorb its excess foreign tax credits.

In the case of captive insurance companies, a U.S. company creates a foreign subsidiary in a low or zero-tax foreign jurisdiction (*e.g.*, Cayman Islands, Bermuda, or Bahamas). The foreign subsidiary insures the casualty risks of its U.S. parent and/or its U.S. affiliates. Assuming the validity of the arrangement,[31] the U.S. parent and the affiliates are entitled to a deduction under §162 for the insurance premiums paid to the captive insurance company. The foreign captive insurance company's net premium income (which is U.S. source income) and investment income (which may be either U.S. or foreign source income), on the other hand, is includible in the gross income of its U.S. shareholders as Subpart F income under §953. However, under Regs. §1.960-1(h)(1), the Subpart F income is treated as dividend income derived from foreign sources. This low-taxed Subpart F income enables the captive's U.S. parent to absorb excess foreign tax credits.

Similarly, U.S. taxpayers may set up a personal holding company in a foreign tax treaty jurisdiction which has a favorable tax regime for holding companies. The foreign personal holding company may invest in U.S. stocks and securities and earn U.S. source dividend, interest, or capital gain income at reduced withholding rates under the treaty. The undistributed foreign personal holding company income is included in the gross income of the U.S. shareholders as a dividend under §551(b). Since the dividend income is considered foreign source and bears foreign tax at a low rate, it enables the U.S. shareholders to absorb the excess foreign tax credits.

It is apparent that in each of the above cases, U.S. source income is converted into foreign source income by simply passing it through a foreign tax haven company. The House Ways and Means Committee Report, in disapproving of these source converting techniques, observes:[32]

> "The committee continues to believe that U.S. taxpayers should not pay both full U.S. tax and foreign tax on foreign income. Such double taxation could effectively prohibit U.S. taxpayers from conducting foreign

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

operations. The committee continues to believe that the foreign tax credit, which can offset U.S. tax on foreign income, is the appropriate mechanism to prevent double taxation.

"The United States, however, should receive full U.S. tax (unreduced by foreign tax credits) on income of U.S. persons that arises within the United States. The committee intends to proscribe devices that artificially convert U.S. income to foreign income, or other devices that create artificial foreign income. Such devices circumvent the foreign tax credit limitation and erode the U.S. tax base. They could have the result of making U.S. taxpayers indifferent to high foreign taxes on income that is truly foreign. Such devices for conversion of U.S. income to foreign income pass the cost of high foreign taxes from the U.S. taxpayer to the U.S. Government."

Accordingly, Congress added §121 to the Tax Reform Act of 1984, which prescribes U.S. source treatment for certain amounts (but only for purposes of §904) regardless of the fact that such amounts would be treated as foreign source income under the Code's source of income rules.

B. Overview

Section 121 of the Tax Reform Act of 1984 (P.L. 98-369) redesignates subsections (g) and (h) of §904 as subsections (h) and (i), respectively, and adds a new subsection (g).

New §904(g) recharacterizes the Subpart F income, the undistributed foreign personal holding company income, the foreign source dividend income, and the foreign source interest income derived from a U.S.-owned foreign corporation as U.S. source income to the extent such inclusions in the income of U.S. shareholders are attributable or allocable to U.S. source income of the foreign corporation. The recharacterization rule applies for purposes of §904 only.

A U.S.-owned foreign corporation is defined as any foreign corporation 50 percent or more of whose total combined voting power or the total value of all classes of stock is owned by U.S. persons.

In the case of dividends or interest income derived from a U.S.-owned foreign corporation, §904(g)(5) provides a de minimus exception. According to this exception, foreign source dividends or interest derived from a U.S.-owned foreign corporation are not recharacterized as U.S. source income if: (i) the foreign corporation has earnings and profits for the relevant taxable year, and (ii) less than 10 percent of such earnings and profits is attributable to U.S. sources.

C. Detailed Analysis

1. General Rule

Under the general rule of §904(g), the Subpart F and the foreign personal holding company inclusions with respect to a U.S.-owned foreign corporation as well as certain foreign source dividend and interest income derived from a U.S.-owned foreign corporation are recharacterized as U.S. source income to the extent such inclusions or such payments are attributable or allocable to U.S. source income of the U.S.-owned foreign corporation.

It should be noted, however, that the recharacterization rule applies only for purposes of computing the §904 limitation of the U.S. taxpayer and, for all other purposes of the Code, the income retains its foreign source character. Also, the recharacterization rule applies only to that dividend and interest income which is foreign source income to the recipient under the normal Code rules.

Example: A, a calendar-year basis U.S.-owned foreign corporation, is engaged in a U.S. trade or business. Sixty percent of A's total gross income over a 3-year period ending with the close of calendar year 1984 is effectively connected with a U.S. trade or business. On March 15, 1985, A pays $1,000 of interest to B, a U.S. corporation owning 15 percent of voting stock in A. Since, under §861(a)(1)(C), $600 of the $1,000 interest paid to B is treated as U.S. source income, only $400 of interest paid to B is subject to recharacterization as U.S. source income under §904(g).

Finally, the recharacterization rule of §904(g) applies on a year-to-year basis.

2. U.S.-Owned Foreign Corporation Defined

Section 904(g) recharacterizes certain amounts as U.S. source income only if such amounts are received from a U.S.-owned foreign corporation.

The term "U.S.-owned foreign corporation" is defined in §904(g)(6) to mean any foreign corporation in which 50 percent or more of the total combined voting power of all classes of stock or 50 percent or more of the total value of all classes of stock is held, directly or indirectly (under the constructive ownership rules of §§958(a)(2), 958(a)(3) and 318(a)(4)), by any combination of the following persons:

(i) A citizen or resident of the United States;

(ii) A domestic partnership;

(iii) A domestic corporation;

(iv) Any estate or trust (other than a foreign estate or trust, within the meaning of §7701 (a)(31)).

3. Categories of Income Subject to Recharacterization as U.S. Source Income

Only four categories of income are subject to recharacterization as U.S. source income.[33]

(i) Subpart F income with respect to a U.S.-owned foreign corporation;

(ii) Undistributed foreign personal holding company income of a U.S.-owned foreign corporation;

(iii) Interest payments made by a U.S.-owned foreign corporation; and

(iv) Dividend payments (including gain treated as dividend income under §§1246 and 1248) made by a U.S.-owned foreign corporation.

a. Subpart F and Foreign Personal Holding Company Inclusions

Section 904(g)(2) provides that the Subpart F income and the foreign personal holding company income included in the gross income of a U.S. person with respect to a U.S.-owned foreign corporation is recharacterized as U.S. source income but only to the extent the inclusions in the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

gross income of a U.S. person are attributable to the foreign corporation's U.S. source income.

This rule may be illustrated by means of an example.

Example: A foreign corporation wholly-owned by a U.S. corporation earns $100 of net income and pays a $20 dividend. Ninety dollars of the net income is attributable to the insurance of U.S. risks and $10 is attributable to the insurance of foreign risks of related parties located in other foreign countries. All of the income is Subpart F income to the U.S. parent corporation (under §953, and §954(e) as amended by the TRA 1984). Since $90 of this $100 Subpart F inclusion is attributable to U.S. source income of the foreign corporation (the $90 of net income attributable to the insurance of U.S. risks), $90 of the inclusion will be treated as U.S. source income of the parent corporation under §904(g)(2).

As a result of the $100 Subpart F inclusion, the $20 dividend is considered to be paid from previously taxed earnings and profits and is excluded from the parent corporation's gross income under §959. Section 904(g)(2), therefore, has no application to the tax-free $20 dividend.[34]

b. Interest Income Received from a Foreign Corporation

Under the general rule of §862(a)(1), interest received from a foreign corporation is foreign source income. However, such interest will be recharacterized as U.S. source income for purposes of §904 provided the following conditions are met:[35]

(i) The interest is paid or accrued by a U.S.-owned foreign corporation;

(ii) The interest is paid or accrued to a U.S. shareholder (within the meaning of §951(b)) of the U.S.-owned foreign corporation, or to any person related to a U.S. shareholder within the meanings of §267(b); and

Note: Section 904(g)(9)(B) authorizes the Secretary to promulgate regulations providing that interest paid or accrued to any person, whether or not a U.S. shareholder, will be subject to the recharacterization rule of §904(g). Such regulations may be necessary in the case of some U.S.-owned foreign corporations where only some of whose stockholders are U.S. shareholders.

(iii) The interest is properly allocable, under Regs. §1.861-8, to U.S. source income of the foreign corporation for the taxable year.

c. Dividends Received from a Foreign Corporation

Under the general rule of §862(a)(2), dividends paid by a foreign corporation are foreign source income. However, a portion of such dividends is recharacterized as U.S. source income if paid by a U.S.-owned foreign corporation. The portion of the recharacterized dividend payment is equal to the U.S. source ratio of the entire payment.[36]

The "United States source ratio" of a dividend payment equals the earnings and profits of the U.S.-owned foreign corporation derived from U.S. sources for the taxable year out of whose earnings and profits the dividend was paid or accrued, divided by the total earnings and profits of that taxable year.[37] Thus, if a dividend is paid out of the earnings and profits of a prior year, the source of earnings and profits in such prior year will control the recharacterization.

For purposes of the dividend recharacterization rule, the term "dividend" includes any gain derived from the sale or exchange of stock in a U.S.-owned foreign corporation that is treated as ordinary income under §1246 or as a dividend under §1248.[38]

The Conference Report provides the following example to illustrate the recharacterization of foreign source interest and dividend income:[39]

Example: A foreign corporation wholly owned by a U.S. corporation earns $85 of gross income, consisting of $60 of gross income from manufacturing operations in its country of incorporation, $10 of gross U.S. bank interest, and $15 of gross interest on a loan to a U.S. affiliate. The foreign corporation incurs total expenses of $115, consisting of $85 of manufacturing expenses and $30 of interest payments to its U.S. parent. The foreign corporation, thus, has a net loss of $30 for the taxable year. Assuming, for simplicity, that earnings and profits equal net income, the foreign corporation also has a deficit in earnings and profits of $30 for the taxable year. The foreign corporation pays a $20 dividend out of earnings and profits for an earlier taxable year. One hundred percent of the earlier year's earnings and profits were from foreign sources and no interest was paid to U.S. affiliates in the earlier year. The foreign corporation owns assets with a total fair market value of $500, consisting of assets used in its manufacturing operations worth $300, a $100 U.S. bank deposit, and a $100 loan to a U.S. affiliate.

To determine whether the 10-percent exception applies to the $30 of interest paid to the U.S. parent, the foreign corporation's earnings and profits for the current year must first be recomputed without any reduction for this interest paid to a U.S. shareholder. Earnings and profits recomputed in this manner equal zero ($-30 + $30). The 10-percent exception, therefore, does not apply since a requirement of the exception — that the foreign corporation have earnings and profits for the year — is not satisfied.

To determine how much of the $30 of interest payments will be treated as U.S. source income of the U.S. parent under the provision, the payments must be allocated to gross income of the foreign corporation from U.S. and foreign sources respectively. The U.S. parent corporation uses the asset method (Regs. §1.861-8(e)2)(v)) to allocate interest under the provision. Thus, it allocates $18 of the interest paid ($30 X ($300/$500)) against the foreign corporation's $60 of gross manufacturing income, $6 ($30 X ($100/$500)) against the foreign corporation's $10 of gross U.S. bank interest, and $6 ($30 X $100/$500)) against the foreign corporation's $15 of gross interest on its U.S. affiliate loan. Since all of the manufacturing income is from foreign sources and of all the interest income from U.S. sources, a total of $12 ($6 + $6) of the interest paid is properly allocable under the provision to U.S. source income of the foreign corporation. Therefore, $12 of the $30 of interest paid by the foreign corporation to its U.S. parent will be treated as U.S. source income of the U.S. parent under the provision.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Because the foreign corporation has no earnings and profits for the current year, the U.S. parent corporation has no Subpart F inclusion with respect to any separately computed net U.S. interest income earned by the foreign corporation. Any such income would otherwise be Subpart F income and, because wholly attributable to U.S. source income of the foreign corporation in this case, would be treated as U.S. source income of the parent under the provision.

Because the $20 dividend paid to the U.S. parent corporation is paid out of earnings and profits for a year for which all earnings and profits were from foreign sources, no portion of the dividend will be treated as U.S. source income of the U.S. parent under the provision.

4. De Minimis Exception

Section 904(g)(5) provides a de minimis exception for interest and dividends received from a U.S.-owned foreign corporation. Under this exception, interest and/or dividends paid or accrued by a U.S.-owned foreign corporation are not recharacterized if:

(i) The U.S.-owned foreign corporation has earnings and profits for the taxable year; and

(ii) Less than 10 percent of such earnings and profits is attributable to U.S. sources.

For purposes of the de minimis exception, the earnings and profits of a U.S.-owned foreign corporation are not reduced by any interest paid by such corporation to: (i) a U.S. person who qualifies as a U.S. shareholder within the meanings of §951(b); or (ii) any person who is related to a U.S. shareholder within the meanings of §267(b).[40]

Note: The de minimis exception does not apply to the recharacterization of the Subpart F and the Foreign Personal Holding Company inclusions.

The Conference Report contains the following example illustrating the application of the de minimus exception:[41]

> *Example:* A foreign corporation, 90 percent of the total combined voting power in which is held by a U.S. corporation, earns net income of $95 from the sale of personal property in a second foreign country. The foreign corporation also earns net dividend income (after allocation of expenses) of $5 from a U.S. money market account. All of the foreign corporation's $100 of net income is foreign base company income.
>
> Among the foreign corporation's expenses (deductions from net income) is a $20 interest payment to its U.S. parent. The foreign corporation's $95 of net sales income is from foreign sources. Its $5 of net dividend income is from U.S. sources. Assume, for purposes of this example only, that earnings and profits equal net income and that $19 of the $20 interest payment was allocated to gross foreign sales income and the remaining $1 to gross U.S. dividend income in computing the respective amounts of net income from foreign and U.S. sources.
>
> Under Subpart F, the U.S. parent corporation must include its pro rata share of the foreign corporation's $100 of foreign base company income in its gross income for the taxable year. Assume, because the U.S. parent controls 90 percent of the voting power in the foreign corporation, that its pro rata Subpart F inclusion is $90.
>
> To determine whether the 10-percent exception from resourcing may apply (*i.e.*, whether less than 10 percent of the foreign corporation's earnings and profits for the year are attributable to U.S. sources), the foreign corporation's earnings and profits are first recomputed without any reduction for the $20 interest payment to its U.S. parent. Earnings and profits recomputed in this manner equal $120. Of this amount, $6, or five percent, is attributable to U.S. sources (the $5 of net U.S. dividend income plus the $1 of the $20 interest payment previously allocated to gross U.S. dividend income in computing the amount of net income from U.S. sources).
>
> While less than 10 percent of the foreign corporation's recomputed earnings and profits for the year are, thus, attributable to U.S. sources, the 10-percent exception does not apply to Subpart F income. The portion of the U.S. corporation's $90 Subpart F inclusion attributable to U.S. source income of the foreign corporation is 5/100ths of $90, or $4.50. Therefore, $4.50 of the Subpart F inclusion will be treated as U.S. source income of the U.S. parent under the provision.
>
> The 10-percent exception does, however, apply to interest payments. Because less than 10 percent of the foreign corporation's recomputed earnings and profits are attributable to U.S. sources, the $20 interest payment made by the foreign corporation to its U.S. parent is not subject to resourcing under the provision.

5. Coordination with Section 904(f)

In case a U.S. taxpayer has an overall loss from foreign sources in a particular taxable year which is used to reduce or eliminate U.S. tax liability attributable to U.S. source income, §904(f) provides two separate rules for the recharacterization of foreign source income earned by such taxpayer in a subsequent taxable year(s) as U.S. source income:

(i) The lesser of either the amount of such prior year's loss (to the extent not recaptured in earlier years) or 50 percent of foreign source income derived in the subsequent taxable year is recharacterized as U.S. source income for which a foreign tax credit is, therefore, not available; and

(ii) If, prior to a full recapture of the overall foreign source loss, the taxpayer disposes of trade or business property which is used predominantly outside the United States, then the lesser of the amount of the unrecaptured loss or 100 percent of the gain realized on the disposition is treated as U.S. source income currently taxable to the U.S. taxpayer.

In certain cases, therefore, a U.S. taxpayer's foreign source income may be subject to recharacterization as U.S. source income under both §§904(f) and 904(g). To resolve this overlap, §904(g)(8) provides a coordinating rule: the foreign source income of a U.S. taxpayer will be recharacterized as U.S. source income first under §904(g) and then under §904(f).

6. Payments Through Intermediate Entities

Some taxpayers may attempt to circumvent the recharacterization rule of §904(g) by making interest or dividend payments through one or more entities. For example, a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

U.S.-owned foreign corporation earning U.S. source gross income might reduce the amount of income subject to recharacterization by making interest payments to a related foreign entity. In order to prevent this, §904(g)(9) authorizes the Secretary to promulgate regulations providing rules for tracing interest or dividend payments made through one or more entities. Thus, where income subject to recharacterization is reduced through payments of interest or dividend to related foreign parties, the inclusions in income of the U.S. persons on account of the related foreign parties will be subject to recharacterization. Types of inclusions in the income of U.S. persons which will trigger recharacterization include: (i) inclusions under the Subpart F rules, (ii) interest, (iii) dividends, and (iv) inclusions under §956.[42]

Example: A foreign corporation wholly owned by a U.S. corporation ("CFC-1") earns $100 of gross U.S. source dividends (that is foreign personal holding company income subject to Subpart F) but reduces its current year earnings and profits to zero by a $100 interest payment to another foreign corporation wholly owned by the same U.S. corporation ("CFC-2"). Because of the interest payment, there is no Subpart F inclusion by the U.S. parent corporation on account of CFC-1 and no dividend payable for the year by CFC-1. Thus, the U.S. parent has no current income with respect to CFC-1 that could be subjected to resourcing. Absent the special rule under discussion, the $100 of U.S. source dividends received by CFC-1 would not give rise to any resourcing of income from CFC-1 or CFC-2 that is included in the U.S. parent's gross income. To prevent this result, the regulations to be prescribed by the Secretary will, for example, subject to resourcing a Subpart F inclusion on account of CFC-2 determined with respect to its current year earnings and profits regardless of whether the 10-percent exception from resourcing would otherwise apply. The regulations will treat as U.S. source income CFC-1's $100 interest payment to CFC-2. The U.S. parent's Subpart F inclusion on account of CFC-2 consequently will be resourced to the extent of the $100 interest payment (and any other U.S. source Subpart F income of CFC-2).

7. Effective Date and Transitional Rules

a. General

Generally, §904(g) takes effect on July 18, 1984. But, for purposes of recharacterizing the income of a U.S.-owned foreign corporation for a taxable year which begins prior to July 18, 1984, and includes July 18, 1984, only such income earned by the foreign corporation after July 18, 1984 will be taken into account.[43] However, for purposes of applying the de minimus exception discussed under II, C, 4, *supra*, the earnings and profits for the entire taxable year will be taken into account.[44]

b. Transitional Rules

Section 121(b)(2) of the Tax Reform Act of 1984 provides two transitional rules which are discussed below.

(1) Exemption for Interest Paid to International Finance Subsidiaries

The first transitional rule exempts from recharacterization under §904(g) certain interest payments made to international finance subsidiaries.

Section 121(b)(2)(A) of P.L. 98-369 provides that "qualified interest" shall not be taken into account under §904(g) and, hence, will escape recharacterization as U.S. source income if received or accrued by an applicable CFC [45] before January 1, 1992.

Caveat: For purposes of applying the de minimus exception discussed under II, C, 4, *supra*, qualified interest received from an applicable CFC will be taken into account.[46]

Qualified interest [47] is defined to include interest received or accrued by an applicable CFC during any taxable year on United States affiliate obligations [48] held by an applicable CFC multiplied by a limiting fraction. The limiting fraction is equal to the aggregate principal amount of U.S. affiliate obligations held by the CFC on March 31, 1984 (but not in excess of the applicable limit, *i.e.*, the CFC's capitalization on March 31, 1984) [49] divided by the average daily principal amount of U.S. affiliate obligations held by the applicable CFC during the taxable year. In no event may the limiting fraction exceed one.

Note: Section 121(b)(2)(H) of P.L. 98-369 provides that, with respect to obligations with original issue discount (OID), the principal amount of OID-type CFC and U.S. affiliate obligations include as of any day the aggregate amount of all OID on such obligations previously includible in gross income as of that day.

The numerator of the fraction is adjusted downwards to reflect: (i) retirement of any CFC obligations [50] included in its March 31, 1984, capitalization, and (ii) a pro rata portion of the CFC's equity allocable to these retired obligations.[51]

Adjustments in the numerator are also required for OID accruing after March 31, 1984, on CFC obligations and U.S. affiliate obligations.[52] This means that the numerator will be adjusted upwards for the OID accrued after March 31, 1984, on OID-type CFC obligations. However, to the extent that the proceeds of OID-type CFC obligations included in a CFC's March 31, 1984 capitalization were used, as of March 31, 1984, to finance non-U.S. affiliate obligations, no special adjustment in the numerator will be permitted.[53]

(2) Exemption for Interest on Certain Term Obligations

The recharacterization rule of §904(g) does not apply to interest earned on term obligations held on March 7, 1984, by U.S.-owned foreign corporations that do not qualify as applicable CFCs. Also, the recharacterization rule of §904(g) does not apply to interest earned on term obligations of U.S. persons who do not qualify as U.S. affiliates (within the meaning of §121(b)(2)(E)(ii) of P.L. 98-369) that are held by an applicable CFC on March 7, 1984.[54]

(3) Separate §904 Limitation on Amounts Benefiting from Transitional Rules

The §904 limitation is required to be computed separately (as, for example, in the case of interest) with respect to any amounts derived from a U.S.-owned foreign corpora-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tion which are not recharacterized as U.S. source income under either of the two transitional rules described above.[55] Thus, foreign taxes paid by the recipient of such income on other income will not be creditable against the U.S. tax on the income that benefits from a transitional rule.

If the income in question is also subject to separate limitation under §904(d), the separate limitation rule of §121(b)(5) of P.L. 98-369 will be applied first.[56]

The application of the separate §904 limitation rule of §121(b)(5) of P.L. 98-369 is delayed until January 1, 1986, in one special interest case. The exception relates to the foreign subsidiary of a U.S. corporation engaged in manufacturing for over 50 years which issued certificates with respect to obligations on: (i) September 24, 1979, denominated in French Francs; (ii) September 10, 1981, denominated in Swiss Francs; (iii) July 14, 1982, denominated in Swiss Francs; and (iv) December 1, 1982, denominated in U.S. dollars, with a total amount not exceeding $200 million.[57]

III. Certain Amounts Characterized as Interest for §904 Purposes

A. Introduction

The United States taxes domestic corporations and individual citizens and residents on their worldwide income. This worldwide taxation may result in double taxation of the foreign source income; *i.e.*, once in the country of source and again by the United States. With a view to avoid or at least mitigate this potential double taxation of U.S. corporations and individual citizens and residents, the U.S. Congress enacted a dollar-for-dollar credit against U.S. tax for income taxes paid to foreign countries. The foreign tax credit provisions are contained in Code §§901-908 and 960.

Since the basic function of the foreign tax credit is to prevent double taxation of the foreign source income and not to reduce U.S. tax on U.S. source income, §904 provides a limitation on the foreign tax credit to ensure that the credit is not greater than the U.S. tax attributable to foreign source income. The §904 limitation is expressed in the form of a formula as follows:

$$\text{Tentative U.S. Tax Liability} \times \frac{\text{Foreign Source Taxable Income}}{\text{Worldwide Taxable Income}}$$

This §904 foreign tax credit limitation applies to most taxpayers on an overall basis: the taxpayers combine income and losses from all foreign operations in all foreign countries in the §904 formula. Because of this overall method of computing §904 limitation, taxes paid to foreign countries that exceed the top U.S. tax rate become creditable to the extent the taxpayer also has foreign source taxable income bearing a foreign tax rate lower than the top U.S. tax rate. Thus, in essence, a U.S. taxpayer with excess foreign tax credits (*i.e.* credits for foreign taxes imposed by foreign countries at a rate higher than the top U.S. tax rate which are not available in the current year and which must be carried back or carried forward) can, by generating foreign source income in a low tax foreign jurisdiction, offset U.S. tax that would otherwise apply to such low-taxed foreign source income.

Since many foreign countries do not impose any income tax on interest income earned by foreigners, a U.S. taxpayer could easily utilize its excess foreign tax credits by exporting cash to such a foreign country and earning interest income on it. This possibility, however, is foreclosed by §904(d), which provides for a separate §904 limitation on all foreign source interest income. Because of §904(d), foreign taxes imposed on non-interest income do not offset U.S. tax that applies to low-taxed foreign source interest income.

A U.S. person, however, may circumvent the §904(d) separate limitation on interest income in at least two ways. First, a U.S. person may create a foreign corporation and lend money through such a corporation to borrowers resident in countries which impose little or no income tax on interest paid to foreigners. The interest income earned by the foreign corporation is generally included in the gross income of the U.S. shareholders currently as a dividend under either the foreign personal holding company provisions (§§551-558) or the Subpart F provisions (§§951-964) of the Code. This simple technique, therefore, enables a U.S. taxpayer to convert potential interest income into dividend income. Second, a U.S. person may buy shares in a U.S. corporation (*i.e.*, a mutual fund) which invests in foreign securities the interest income from which bears little or no foreign tax. If the U.S. corporation earns more than 80 percent of its gross income from foreign sources, the dividends received by the U.S. person from such a corporation are characterized as foreign source income.[58]

Cognizant of this manipulation of the character of income, the Congress enacted §122 of the Tax Reform Act of 1984 (P.L. 98-369). The Senate Finance Committee Report observes that:[59]

> "In 1962, Congress enacted the separate foreign tax credit limitation for interest to prevent taxpayers from artificially converting U.S. source income to foreign source low taxed interest income and thus inflating the foreign tax credit limitation. It has come to the attention of the committee that under the current Treasury interpretation of the separate foreign tax credit limitation, the same result can be achieved by having interest paid to a foreign subsidiary rather than directly to the taxpayer and then by distributing that interest as a dividend. In either case, there is artificial inflation of the foreign tax credit limitation, as a result of an easily manipulable financial transaction. The committee seeks to insure the integrity of the separate foreign tax credit limitation for interest income, and to prevent U.S. taxpayers from using artificial devices to convert interest income into non-interest income.
>
> "Current law, by encouraging U.S. taxpayers to invest capital outside the United States, erodes the U.S. tax base. If taxpayers can convert low-taxed foreign interest income to non-interest income, they circumvent the foreign tax credit limitation. Then, the U.S. Treasury, and not the U.S. taxpayer, bears the burden of foreign taxes on non-interest income."

B. Overview

Section 122 of the Tax Reform Act of 1984 (P.L. 98-369) adds a new paragraph (3) to subsection (d) of §904. The new §904(d)(3) provides for the maintenance of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the character of income as interest (which is subject to a separate limitation under §904(d)(2)) when such income is earned through a foreign corporation or a regulated investment company and distributed (whether actually or constructively) to the U.S. shareholders as dividends or interest. Under the general rule of §904(d)(3), when a U.S.-owned foreign corporation, a regulated investment company, or a foreign corporation in which the taxpayer is a U.S. shareholder (within the meanings of §951(b)) pays or accrues dividends or interest, such payments are treated as interest (subject to the §904(d)(2) separate limitation) in the hands of the U.S. recipients but only to the extent the payor corporation's earnings and profits for the relevant taxable year include separate limitation interest. Under a de minimus exception, however, if the payor corporation has earnings and profits for a particular taxable year and the separate limitation interest is less than 10 percent of such earnings and profits, dividends and interest paid or accrued by such a corporation are not recharacterized as interest which is subject to the separate §904(d)(2) limitation.

C. *Detailed Analysis*

1. *The General Rule*

Section 904(d)(3), as added by P.L. 98-369, provides that certain types of payments (*i.e.*, dividends and interest) paid or accrued by a "designated payor corporation" and attributable to any taxable year of such corporation are treated as interest income (within the meanings of §904(d)(2)) in the hands of the recipient but only to the extent that the aggregate amount of such payments does not exceed the "separate limitation interest" of the payor for such taxable year.[60]

Comment: Actual dividend or constructive dividend payments under Subpart F made or accrued by a designated payor corporation retain their character as such for purposes of determining whether the taypayer is entitled to a deemed paid foreign tax credit under §§902 or 960, respectively.

2. *Types of Payments Subject to Recharacterization*

The types of payments made or accrued by a designated payor corporation which are recharacterized as interest (within the meaning of §904(d)(2)) are enumerated below:

(i) *Interest.*[61] At first blush, it appears redundant to state that interest paid by a designated payor corporation is characterized as interest in the hands of the recipient. However, the inclusion of interest in the types of payments which are recharacterized serves an important function: it decreases the separate limitation interest of the designated payor corporation.

(ii) *Constructive dividends under §551.*[62] Sections 551(a) and 551 (b) require U.S. shareholders in a FPHC to include in their gross incomes as a constructive dividends "the UFPHC1" of the FPHC for its taxable year.

(iii) *Constructive dividends under §951.*[63] Under §951, if a foreign corporation is a "controlled foreign corporation" for an uninterrupted period of 30 days during any taxable year, then every person who is a "United States Shareholder" of such corporation is required to include in gross income as a "constructive dividend" his pro rata share of the CFC's "Subpart F income" and certain other income.

(iv) *Section 1246 gain.*[64] Under §1246, any gain derived by a U.S. stockholder from the sale or exchange of stock in a Foreign Investment Company is treated as ordinary income.

(v) *Section 1248 dividend.*[65] Under §1248, the gain recognized on the sale or exchange of stock of a controlled foreign corporation by a United States person, who is a 10-percent owner, is included in the gross income of the United States person as a dividend to the extent of the CFC's post-1962 earnings and profits accumulated during the period the stock was held by the U.S. person.

3. *Designated Payor Corporation*

Payments of the types described above paid or accrued by a "designated payor corporation" are subject to recharacterization as interest. The term "designated payor corporation" is defined to include the following:[66]

(i) A United States-owned foreign corporation. A foreign corporation is U.S.-owned if 50 percent or more of the total combined voting power of all classes of stock or the total value of all shares of stock in such corporation is held directly or indirectly by United States persons.[67] For purposes of this 50-percent test, the constructive ownership rules of §§958(a)(2), 958(a)(3) and 318(a)(4) apply.

(ii) Any foreign corporation in which a U.S. person is a "U.S. shareholder" at any time during the taxable year of the foreign corporation.[68] The term "U.S. shareholder" is defined in §951(b) to include any U.S. person who owns, directly or indirectly (under the constructive ownership rules of §958), 10 percent or more of the total combined voting power of all classes of stock in the foreign corporation.

(iii) Any regulated investment company.

4. *Separate Limitation Interest*

Section 904(d)(3) recharacterizes certain payments paid or accrued by a designated payor corporation as interest (subject to the separate limitation of §904(d)(2)) only to the extent that the aggregate amount of such payments does not exceed the "separate limitation interest" of the designated payor corporation for the taxable year.

The term "separate limitation interest" is defined to mean the aggregate amount of interest income described in §904(d)(2) which is received or accrued by the designated payor corporation during the relevant taxable year reduced by the properly allocable deductions as determined under the regulations prescribed by the IRS.[69]

Note: Interest received by a designated payor corporation from another corporation (whether domestic or foreign, which is a member of the same affiliated group within the meaning of §1504), is not separate limitation interest unless such interest is attributable, directly or indirectly, to the separate limitation interest of the payor corporation.[70]

Interest described in §904(d)(2) includes all interest except the following four categories of income:

(i) Interest generated from any transaction which is directly related to the active conduct of a trade or business in a foreign country;[71]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(ii) Interest generated from the conduct of an active banking, financing, or similar business;[72]

(iii) Interest paid by a corporation in which the taxpayer owns, directly or indirectly, at least 10 percent of the voting stock;[73]

(iv) Interest earned from obligations that were acquired as a result of the disposition of a trade or business actively conducted by the taxpayer in a foreign country, or as a result of the disposition of stock or obligations in a 10-percent owned corporation.[74]

Once the total interest income (as described in §904(d)(2)) of the designated payor corporation is determined, it is reduced by the deductions that are properly allocated to such income in order to arrive at the separate limitation interest. The taxpayer may use any method of allocation prescribed in Regs. §1.861-8, provided such method is used consistently by the taxpayer for all purposes.[75] It should be observed, however, that no deduction is allowed against the interest income of a designated payor corporation for any interest paid to: (i) a U.S. person who qualifies as a U.S. shareholder (within the meanings of §951(b)) in such corporation, or (ii) any person who is related to the U.S. shareholder within the meanings of §267(b).[76]

5. De Minimis Exception

Dividends and interest paid by a designated payor corporation are not recharacterized as interest income in the hands of the recipient if the following two requirements are met:

(i) The designated payor corporation has earnings and profits for the relevant taxable year; and

(ii) Less than 10 percent of these earnings and profits are attributable to separate limitation interest.[77]

For purposes of this de minimis exception, the earnings and profits of the designated payor corporation are not reduced by any interest payments made to: (i) a U.S. person who is a "U.S. shareholder" (within the meaning of §951(b)) in such corporation, or (ii) any other person who is related to a "U.S. shareholder" within the meaning of §267(b).[78]

6. The Rules of Application

Since dividends and/or interest paid or accrued by a designated payor corporation for any taxable year are recharacterized only to the extent of such corporation's separate limitation interest for such taxable year, it is crucial to determine:

(i) To which taxable year of the designated payor corporation are the dividends and/or interest paid by such corporation attributable; and

(ii) What is the amount of separate limitation interest of the designated payor corporation for such taxable year.

The computation of the separate limitation interest amount is discussed under III, C, 4, *supra*. The rules for determining to which taxable year of the designated payor corporation are the dividends and/or interest paid or accrued by such corporation attributable are provided in §904(d)(3)(F). These rules are as follows:

(i) If any amounts are included in the gross income of a U.S. person under the FPHC or the Subpart F provisions of the Code as constructive dividends, such amounts are attributable to the taxable year of inclusion;[79]

(ii) If the designated payor corporation pays or accrues interest, such amount is attributable to the taxable year in which the interest is paid or accrued;[80]

(iii) If the designated payor corporation pays dividends, such dividends are attributable to the taxable year out of which earnings and profits are paid.[81]

If more than one type of payment is attributable to a taxable year of the designated payor corporation, §904(d)(3)(G) provides the following ordering rules. First, the FPHC and the Subpart F inclusions on account of a designated payor corporation are recharacterized as interest subject to the separate §904(d)(2) limitation. Second, if the aggregate of the FPHC and the Subpart F inclusions are less than the separate limitation interest amount of the designated payor corporation for the taxable year, any interest paid or accrued by such corporation reduces the separate limitation interest amount. Finally, if the aggregate of the FPHC, the Subpart F, and the interest amounts is less than the separate limitation interest amount of the designated payor corporation for the taxable year, any dividends paid by such corporation during the taxable year are recharacterized as interest subject to the separate §904(d)(2) limitation.

7. Distributions Through Intermediate Entities

Section 904(d)(3)(I) provides the Secretary with the authority to prescribe regulations necessary to achieve the purposes of §904(d)(3) in cases where distributions or payments are made through one or more entities. The Conference Report explains the reasons for delegating this statutory authority to the Secretary as follows:[82]

"The conference agreement retains the rule of the Senate amendment requiring the Secretary to prescribe such regulations as may be necessary to carry out the purposes of this provision in the case of distributions or payments through one or more entities. For example, a U.S. owned foreign corporation that earns separate limitation interest but that pays interest to a related foreign party would reduce the amount of income subject to characterization as separate limitation interest. The income of the related foreign corporation might not be subject to U.S. tax, so the foreign tax credit limitation would not affect the related foreign person. The Secretary is to prescribe rules so that an inclusion in income of a U.S. taxpayer on account of the related foreign corporation will be subject to recharacterization as separate limitation interest. Such an inclusion could occur, for example, under the rules of Subpart F, on a dividend or interest payment, by the related foreign corporation, or on an investment by the related foreign corporation in U.S. property.

"For example, if a controlled foreign corporation ("CFC-1") earns $100 of gross separate limitation interest (that is foreign personal holding company income subject to Subpart F) but reduces its current year earnings and profits to zero by a $100 interest payment to a related foreign party ("CFC-2"), there would be no Subpart F inclusion for the year on account of CFC-1. If there were no Subpart F inclusion on account of CFC-2 (for instance, because

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

foreign base company income made up less than 10 percent of the gross income of CFC-2), later dividends from CFC-2 would be subject to recharacterization, whether or not 10 percent of the earnings and profits of CFC-2 for the year at issue were attributable to the separate limitation interest that it received from CFC-1 or to other separate limitation interest."

8. The Effective Date

Section 904(d)(3) is generally effective as of July 18, 1984.[83] However, for purposes of computing the separate limitation interest of a designated payor corporation, interest income received or accrued by such a corporation shall be taken into account only in taxable years beginning after July 18, 1984.[84] There are two exceptions to this rule:

(i) Interest income earned by a regulated investment company with respect to investments made by a taxpayer after June 22, 1984, shall be treated as separate limitation interest;[85] and

(ii) Interest received or accrued by a designated payor corporation (which is not an "applicable CFC" as defined in §121(b)(2)(D) of P.L. 98-369) on a term obligation held by such corporation on March 7, 1984, shall not be treated as separate limitation interest.[86] An "applicable CFC" is defined in §121(b)(2)(D) to mean a controlled foreign corporation in existence on March 31, 1984, the principal purpose of which on such date was to issue and to hold the short-term obligations of affiliates and to lend the proceeds of such obligations to the affiliates.

Chapter 67

THE DEMISE OF RELATED PARTY INTERNATIONAL FACTORING OPERATIONS?

Javed A. Khokhar, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

When goods or services are sold on credit, the seller generally takes from the purchaser a receivable, which is a transferable promise to pay cash in the future. The seller may cash the receivable prior to its maturity date by selling it to a third party, a "factor" (*i.e.*, a finance company), at a discount. The seller's income realized from the sale of goods or services in such a case is reduced by the amount of the discount. When the receivable is paid, the factor realizes income in the amount of the discount.

At the time the Tax Reform Act of 1984 (P.L. 98-369) was enacted, the practice of factoring by foreign subsidiaries of trade accounts receivable of U.S. parent companies (and of U.S. and foreign affiliates) was ever so popular. In employing this technique, the U.S. multinational companies hoped to achieve, among others, the following tax advantages:

(i) To repatriate untaxed foreign earnings accumulated abroad by a controlled foreign corporation tax-free (*i.e.*, free of dividend tax) and, at the same time, to meet the short-term financing needs of the U.S. parent; [1]

(ii) To shift a portion of the income (*i.e.*, equal to the discount income) earned by the U.S. parent (or a foreign affiliate) from the sale of goods or services out of the United States (or high-tax foreign) taxing jurisdiction to a low or zero-tax foreign jurisdiction; [2]

(iii) To absorb the U.S. parent corporation's excess foreign tax credits by repatriating the low-taxed discount income accumulated by the factoring subsidiary as a dividend;

(iv) To shift funds among brother-sister foreign affiliates and to maximize the net after-tax yields on investments within the controlled group; and

(v) To accomplish the important non-tax objectives of centralized currency management and the hedging of foreign currency risks inherent in the foreign trade receivables of foreign affiliates.

A. *Typical Related Party International Factoring Arrangement*

In order to achieve the desired tax results it was imperative that the factoring arrangement be properly structured. The outlines of a successful structure were illustrated in PLR 8338043.

In PLR 8338043, P, a domestic corporation, was engaged in manufacturing and sales. P's wholly-owned subsidiary S, incorporated in foreign country A, operated manufacturing facilities and produced and distributed products to the parent's affiliates outside the United States. P and its domestic subsidiaries, X, Y, and Z, sold to S certain trade accounts receivable arising from their sale of goods to unrelated domestic and foreign customers.[3] Other pertinent facts were as follows:

(i) S purchased the trade receivables without recourse. It bore all risk and expense of collection, attorney fees, accounting fees, litigation expenses, and taxes on any account receivable.

(ii) The purchase price was a percentage of the face amount of the receivable designed to compensate S in accordance with the customary practice of factors operating at arm's length.

(iii) The transferors represented to S that the accounts sold arose from the bona fide sale and delivery of goods in the ordinary course of business and provided S with bills of sale.

(iv) Upon acquisition of the accounts, S forwarded the entire purchase price to the transferors.

(v) Obligors on the purchased receivables were notified on the invoices representing the purchased receivables to make payments directly to S.

(vi) The accounts sold were clearly identified as the property of S and segregated in the accounts of the transferors.

(vii) The factoring operations were conducted in foreign country A, where S was incorporated, under the direction of an executive officer of S. In certain cases, an unrelated agent in the United States was used where follow-up activity was necessary.

(viii) It was anticipated that S would make recurring purchases of receivables under a contract with an initial term of one year and subject to renewal for additional one-year periods.

(ix) Neither P nor any of its other subsidiaries repurchased any of the trade receivables sold to S.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

B. The Major Tax Issues Involved

Although the broad outlines of a typical factoring arrangement were clear and simple, a successful implementation required navigation around a variety of Code provisions.[4] The first major issue related to the characterization of the factoring transaction: was it a pledge of collateral for a loan or a bona fide sale?

If the sale of trade accounts receivable was characterized as a pledge of collateral for a loan from the factoring subsidiary to the transferor, the discount income was clearly interest. Under this characterization, therefore, the discount income would be subject to 30 percent withholding tax[5] and it would be currently taxable as a constructive dividend in the hands of the U.S. parent (either as foreign personal holding company income or as Subpart F foreign personal holding company income).[6]

On the other hand, if the sale of trade accounts receivable was characterized as a bona fide sale, it gave rise to two further issues: (i) was the discount income subject to U.S. withholding tax under §1442; and (ii) was the discount income taxable in the hands of the U.S. parent currently as Subpart F income.

The second major tax issue related to the treatment of the purchase by the foreign factoring company of the trade accounts receivable of its U.S. parent and other U.S. affiliates as investment in U.S. property under §956.

1. Loan v. Sale Issue

In PLR 8338043, the Service held that in evaluating whether the sale of trade accounts receivable constituted a loan or a sale, the following factors were to be considered:

(i) Which party bore the risk of loss inherent in owning the receivables;

(ii) Who had the absolute power of disposition;

(iii) Was the transferee entitled to any interest accruing on the receivables;

(iv) Who was obligated to make collections on the receivables and incur collection expenses;

(v) Who was obligated with respect to all property, excise, sales, or similar taxes;

(vi) Was the transferor entitled to hold the transferee harmless from and against any action brought against the transferee arising out of the transferor's acting as an agent for the transferee in making collections;

(vii) Were the customers notified of the transfers of their obligations;

(viii) Did the transferee retain the right to inspect the records and books of the transferor at any time;

(ix) Was the servicing of the receivables performed by the transferor and, if so, did the transferee supervise the operation;

(x) Did the transferor receive the entire face amount of the receivables transferred;

(xi) Were all receivables transferred to the transferee; and

(xii) Were any other forms of collateral pledged, such as guarantees, insurance assignments, and limitations on payment of dividends.

After enumerating these factors the Service went on to conclude that the sale of trade accounts receivables by P, X, Y, and Z to S was a bona fide sale rather than a pledge of collateral to secure a loan because: (i) S purchased the receivables without recourse; (ii) S bore all risk and expense of collection, attorney fees, accounting fees, litigation expenses, and taxes on accounts receivables; (iii) P and other transferors forwarded the invoices representing the purchased receivables to S; and (iv) the obligors on the accounts receivables were notified to make payments directly to S.

It is apparent, therefore, that a "bona fide sale"[7] characterization could be obtained for a transfer of trade accounts receivable by surrendering substantial incidents of ownership in the receivables to the factoring subsidiary.

2. The Withholding Tax Issue

In order to determine whether discount income was subject to withholding of U.S. tax under §1442, the following issues had to be resolved: (i) the characterization of the discount income; (ii) the source of the discount income; and (iii) whether the discount income was effectively connected with a U.S. trade or business.

As to the characterization issue, given the absence of any specific provisions in the Code dealing with discount income, there were three possibilities:

(i) The discount income could be characterized as interest income;[8]

(ii) The discount income could be characterized as income from the purchase and sale of personal property;[9] or

(iii) The discount income could be characterized as income from the performance of personal services.

Comment: Since the source of income rules vary depending upon the character of income, (*e.g.*, interest, income from personal services, income from the purchase and sale of personal property), the answer to the second issue would vary according to the characterization given the discount income.

PLR 8338043 as well as GCM 39220 concluded that, in the normal factoring situation, the amount of income (other than any stated interest) derived by the factor consists of a commission, which is a charge for the service of passing on credits, assuming all credit risks, and keeping the accounts. Thus, when a factoring company factors the trade accounts receivable of the transferors, it is considered to be performing a service for the transferors and the discount income generated by it is income from the performance of personal services.

With respect to the source of income issue, §§861(a)(3) and 862(a)(3) provide that income derived from the performance of personal services is sourced to the place where the services are rendered. Thus, if the U.S. parent (or another party), acting as an agent of the foreign factoring subsidiary, performed the collection activities in the United States, the discount income was U.S. source income. On the other hand, if the foreign factoring subsidiary performed

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the collection activities itself outside the United States, the discount income was foreign source income. If the factoring services were performed partly within and partly without the United States, the discount income was partly U.S. source and partly foreign source income to the foreign factoring subsidiary.[10]

As to the trade or business issue, GCM 39220 concluded that if the foreign factoring subsidiary's activities included substantial and recurring purchases of trade accounts receivable, it was engaged in the trade or business of factoring. Since the term trade or business includes the performance of personal services,[11] the discount income earned by the foreign factoring subsidiary from the factoring services performed within the United States (whether by the U.S. parent or any other agent of the factoring subsidiary) constituted income effectively connected with a U.S. trade or business. The effectively connected income, even though subject to U.S. tax at graduated rates under §11, is not subject to U.S. withholding tax provided, the taxpayer furnishes a statement referred to in Regs. §1.1441-4(a)(2).[12] If, however, the factoring services were performed outside the United States, the discount income was not treated as income effectively connected with a U.S. trade or business [13] and, hence, was free of U.S. withholding or §11 tax.

It is apparent, therefore, that discount income of the foreign factoring subsidiary could be sheltered from U.S. withholding and §11 income taxes by structuring the factoring arrangement so that all factoring services were performed outside the United States.

3. The Subpart F Income Issue

Theoretically, the discount income could be subjected to current tax in the hands of U.S. shareholders of the foreign factoring subsidiary as a constructive dividend under three different provisions of Subpart F:

(i) If the receivables qualified as "securities" within the meaning of §553(a), the discount income earned upon collection of such receivables could qualify as Subpart F foreign personal holding company income and taxed to U.S. shareholders under §§951(a)(1), 952(a)(2), 954(a)(1) and 954(c); [14]

(ii) If the foreign factoring subsidiary sold the trade accounts receivable prior to maturity, it could give rise to Subpart F foreign base company sales income which would be taxed to U.S. shareholders under §§951(a)(1), 952(a)(2), 954(a)(2), and 954(d); and

(iii) The discount income could also be subject to current tax in the hands of U.S. shareholders as Subpart F foreign base company services income under §§951(a)(1), 952(a)(2), 954(a)(3) and 954(e).

However, since trade accounts receivable never qualified as securities and since such receivables were rarely, if ever, sold prior to maturity, the only real issue was whether the discount income qualified as foreign base company services income.

Foreign base company services income is income of a controlled foreign corporation which arises in connection with the performance of technical, managerial, engineering, architectural, skilled, industrial, commercial, or similar services, but only if, those services are (i) performed by a controlled foreign corporation for or on behalf of a related person, and (ii) performed outside the controlled foreign corporation's country of incorporation.[15] GCM 39220 concluded that when a factoring company factored the trade accounts receivable of a related party it was considered to perform services for that related party. Consequently, if the factoring services were performed outside the foreign factoring subsidiary's country of incorporation (*e.g.*, in the United States by the U.S. parent or other agent of the factoring subsidiary), the discount income attributable to such services qualified as foreign base company services income.

In a typical factoring arrangement, the U.S. parent could guarantee that the discount income was not taxed to it under Subpart F by ensuring that the trade accounts receivable were not sold by the factoring subsidiary prior to maturity and that the factoring services were performed in the subsidiary's country of incorporation.

4. Section 956 Issue

Although neither PLR 8338043 nor GCM 39220 passed on the §956 issue, it was reasonably clear that §956 did not pose any serious problems in a typical related party international factoring arrangement.

Under §956, any U.S. shareholder of a controlled foreign corporation is taxed currently on its pro-rata share of the increase in the taxable year of the controlled foreign corporation's earnings invested in "United States property." The term "United States property," as defined in §956(b)(1), includes "an obligation of a U.S. person." Section 956(b)(2)(F), however, provides that the term "United States property" does not include the obligation of an unrelated U.S. corporation. Since, in a typical factoring arrangement, the foreign factoring subsidiary factored the obligations of unrelated U.S. (and foreign) corporations, the U.S. parent of the subsidiary had no potential exposure under §956.

In summary, therefore, if the factoring arrangement was patterned after PLR 8338043 and if all the factoring services were performed in the factoring subsidiary's country of incorporation, the U.S. multinational corporation could achieve the tax and non-tax advantages outlined above.

C. Reasons for Change

Concerned by the shifting of income to tax haven jurisdictions and a tax-free repatriation of untaxed foreign earnings involved in the related party international factoring operations, the U.S. Congress enacted §123 as part of the Tax Reform Act of 1984. The reasons for enacting §123 are stated in the House Ways and Means Committee Report as follows: [16]

"The committee will not condone artificial devices that shift income out of U.S. taxing jurisdiction and into tax havens. Some factoring transactions involve credit sales by U.S. sellers to U.S. buyers. There is no justification for allowing the U.S. seller to shift part of the income from this wholly domestic transaction outside the United States to a passive, related party in a tax haven.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

"Similarly, if a foreign corporation controlled by U.S. shareholders sells a receivable to a related foreign corporation, profits may be shifted from a high-tax foreign country to a tax haven. As a result, there could be deferral of current tax on that income, or generation of low-taxed foreign-source income available to absorb otherwise unusable foreign tax credits. If the bill did not apply to this situation, the factoring of receivables from one foreign subsidiary to a related foreign corporation where the discount income is not taxed by the United States or any country would give an advantage to foreign operations of a U.S. business over the U.S. operations of the same business. The committee believes, however, because there is no shifting of income into tax havens when a controlled foreign corporation factors receivables of related corporations that operate in the same country, that it is appropriate to provide an exception for such transactions.

"Furthermore, multinational corporations based in the United States are using foreign subsidiaries to factor receivables as a device for repatriating foreign earnings tax-free. The committee is concerned about the recent growth in this offshore factoring and consequent tax-free repatriation of foreign earnings. The committee believes, therefore, that taxpayers should pay tax on foreign earnings repatriated through factoring subsidiaries."

II. Overview

Section 123 of the Tax Reform Act of 1984 (P.L. 98-369) spells the demise of related party international factoring operations as such operations were known prior to the Act. It adds a new subsection (d) to §864 and a new paragraph (3) to subsection (b) of §956. These new provisions take away all the tax advantages that a U.S. taxpayer obtained under a typical factoring arrangement.

Section 864(d) ensures that the discount income earned by the foreign factoring subsidiary is taxed currently to the U.S. shareholders of the subsidiary under either the foreign personal holding company provisions of the Code (§§551-558) or under the Subpart F provisions of the Code (§§951(a)(1), 952(a)(2), and 954(c)). The factoring arrangements (where the factoring company qualifies as a controlled foreign corporation) would, therefore, no longer succeed in shifting a portion of the income attributable to the sale of goods or services from the U.S. and foreign high-tax jurisdictions to low or zero-tax foreign tax-haven jurisdictions. Section 864(d) also ensures that U.S. taxpayers cannot utilize factoring arrangements to absorb their excess foreign tax credits.

Additionally, §956(b)(3) provides a strict rule that treats the trade accounts receivables acquired from related U.S. parties under which the obligor is a U.S. person as "United States property" for purposes of §956(a). Consequently, U.S. taxpayers would no longer be able to repatriate untaxed foreign earnings tax-free.

The new provisions are effective for accounts receivable and evidences of indebtedness transferred after March 1, 1984, in taxable years ending after such date.

III. Detailed Analysis

Section 123 of the Tax Reform Act of 1984 (P.L. 98-369) launches a two-pronged attack on related party international factoring operations: (i) it subjects the U.S. shareholders of the foreign factoring corporation to current U.S. income tax, and (ii) it treats the trade accounts receivable of U.S. obligors acquired from a related U.S. person as "United States property" for §956 purposes.

A. Current Income Taxation of U.S. Shareholders

Section 864(d), as added by §123 of P.L. 98-369, ensures current taxation of the income earned by the foreign factoring corporation (*e.g.*, the discount income or stated interest) upon the collection of trade accounts receivable purchased, directly or indirectly, from a related U.S. person in the hands of its U.S. shareholders. Such taxation is accomplished by characterizing the income as interest for purposes of the foreign personal holding company (FPHC) rules and the Subpart F rules. Section 864(d) also characterizes the factoring income as interest for purposes of the §904 foreign tax credit limitation, which guarantees that the current U.S. income tax attributable to the factoring income is not reduced by the taxpayer's excess foreign tax credits.

Section 864(d) is analyzed in detail below.

1. The General Rule

The general rule of §864(d), in essence, recasts a related party factoring arrangement as if the factoring company made a loan to the obligor under the trade or service receivable who, in turn, used the money to pay for the goods or services supplied by the transferor of the trade or service receivable. Thus, if:

(i) A trade or service receivable is acquired, whether directly or indirectly,

(ii) From a related person,

(iii) Any income derived by the acquiring person from such trade or service receivable is treated as interest income.[17]

However, the interest characterization does not apply for all purposes of the Code. It applies only for purposes of the Foreign Personal Holding Company (FPHC) rules, the Subpart F rules, and the §904 foreign tax credit limitation rules.[18]

a. Acquisition of a Trade or Service Receivable

The interest characterization applies only if there was a direct or indirect "acquisition" of a "trade or service receivable."

(1) "Acquisition" Defined

Note that the statute uses the word "acquisition" rather than the word "purchase." Thus, it is not necessary that the factoring company *purchase* the trade or service receivable from a related person in order to trigger the rules of §864(d). An *acquisition* of a trade or service receivable (in whatever manner or form) is enough for §864(d) to apply.

The Conference Committee Report explains the significance of the word *"acquisition"* as follows:

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

"Income from a receivable will be subject to the rules of the conference agreement whenever the receivable or an interest in the receivable is assigned to a foreign corporation by a related party. There will be an acquisition of a receivable, for the purpose of the rule contained in the conference agreement, whether or not the person earning the income from the receivable takes title to or physical possession of the receivable, and whether the related party that transfers the rights to income from a receivable does so with or without recourse." [19]

(2) Indirect Acquisition

The recharacterization rule of §864(d) applies to a direct as well as an indirect acquisition of a trade or service receivable of a related party.

An indirect acquisition occurs, for example, where a controlled foreign corporation loans funds to another foreign corporation which, in turn, uses the funds to acquire the trade or service receivables of a related party. In such a case the interest income earned by the lending controlled foreign corporation is treated as interest within the meaning of §864(d).[20] That is, the interest income will be taxable to the U.S. shareholders of the controlled foreign corporation as Subpart F foreign personal holding company income and it will be subject to separate §904(d) limitation. The impact of this indirect acquisition rule is illustrated by the following examples:

Example 1: Controlled foreign corporation A, which is engaged in an active business in foreign country X, has accumulated sizeable cash reserves. A's U.S. parent P is in need of cash. A loans funds to an unrelated foreign corporation Y at an arm's length interest rate. Y uses these funds to purchase P's trade and service receivables, which supply P with much-needed cash. Assuming Y is unrelated to P, its factoring income is not subject to the rules of §864(d). However, interest paid by Y to A is interest within the meaning of §864(d).

Example 2: Controlled foreign corporation A, which is engaged in an active business in foreign country X, has accumulated sizeable cash reserves. A desires to make these cash reserves available to its cash-strapped U.S. parent P. Towards this end, A makes a small equity contribution and a large loan to P's newly-organized wholly-owned foreign subsidiary M. The new subsidiary M purchases the trade and service receivables of P. The factoring income earned by M is subject to the rules of §864(d). In addition, interest paid by M to A is also subject to the rules of §864(d).

(3) The Term "Trade or Service Receivable" Defined

The term "trade or service receivable" is defined to mean any account receivable or evidence of indebtedness arising out of:

(i) The disposition by a related person of property defined in §1221(1) (*i.e.*, inventory); or

(ii) The performance of services by a related person.[21]

b. The Term "Related Person" Defined

Section 864(d) applies only if a trade or service receivable is acquired from a "related person." The term related person is broadly defined. It includes:

(i) Any person who is a related person within the meaning of §267(b);

(ii) Any person who is a U.S. shareholder within the meaning of §951(b); and

(iii) Any person who is related to a "U.S. shareholder" within the meaning of §267(b).[22]

A "United States shareholder" is defined by §951(b) to mean any United States person who, either actually or constructively (within the meaning of §958), owns 10 percent or more of total combined voting power of all classes of stock entitled to vote in a foreign corporation.

Comment: The inclusion of a 10-percent U.S. owner of a foreign factoring company within the definition of a "related person" is aimed at preventing tax-free related party factoring by foreign corporations owned by several U.S. persons.

It should also be noted that the term "related person" is not restricted to U.S. persons alone. Consequently, foreign-to-foreign related party factoring is within the ambit of §864(d).

c. The Applicable Source of Income Rules

The statute itself does not specify how the factoring income, which is characterized as interest income, is to be sourced. However, guidance is provided in the Conference Report, which states:

"In applying [the general rule of §§864(d)(1) and 864(d)(2)], the conferees intend that the source rules (Code sec. 861-863) be applied as though the income from a trade or service receivable were interest on a loan to the obligor under the receivable."

"The application of the rule treating related person factoring income as interest income also will apply to determine the source of that income upon eventual inclusion of the income in the gross income of a U.S. person pursuant to the provision of the conference agreement that maintains the source of U.S. source income that flows through a foreign corporation (Code sec. 904(g))." [23]

Since under §§861-863, as a general rule, interest income is sourced at the place where the obligor is resident, factoring income earned by a foreign factoring company is U.S. or foreign source income depending upon whether the obligor under the trade or service receivable is resident in the United States or a foreign country. Also, factoring income earned by a foreign factoring company from a trade or service receivable is foreign source income if the obligor under the receivable is a U.S. corporation which is an "80-20" corporation within the meaning of §861(a)(1)(B). Similarly, factoring income earned by a foreign factoring company from a trade or service receivable is U.S. source income (at least partially), even if the obligor under the receivable is a foreign corporation, provided such corporation is a 50-50 corporation within the meaning of §861(a)(1)(C).

Finally, §904(g), which was added to the Code by §121

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

of the Tax Reform Act of 1984 (P.L. 98-369), provides that factoring income which is treated as U.S. source interest income in the hands of the foreign factoring company will retain its character as U.S. source interest income when it is included in the gross income of a U.S. shareholder of the foreign factoring company, but only for §904 purposes.

2. Factoring Income as Foreign Personal Holding Company Income (FPHCI)

a. The FPHC Provisions

The FPHC provisions (§§551-558) were enacted in 1937 to prevent U.S. shareholders from deferring or avoiding U.S. taxation through the use of foreign corporations to receive passive or personal services income. Unlike the Personal Holding Company provisions of the Code, FPHC provisions do not penalize the foreign corporation. Rather, the FPHC provisions require the U.S. shareholders to include in income their proportionate share of the foreign corporation's Undistributed Foreign Personal Holding Company Income (UFPHCI).

The term FPHC is defined in §552 as a foreign corporation which meets both a gross income test and a stock ownership test. Once a foreign corporation is determined to qualify as a FPHC, its UFPHCI must be included in the gross income of its shareholders in the manner described in §551(b).

The gross income test is met if at least 60 percent of the gross income of a foreign corporation for the relevant taxable year is FPHCI as defined in §553 (*e.g.*, interest, dividends, royalties, annuities, gain from sales or exchanges of securities, certain personal services income, certain lease payments, and rents).[24] Once a foreign corporation has qualified as a FPHC, the 60 percent test is reduced to 50 percent for subsequent years. "Gross income" for purposes of this test is computed in accordance with §555. Under the general rule of that section, the gross income of a FPHC is computed in the same manner as a domestic PHC. Thus, a FPHC includes in gross income all of its income from U.S. and foreign sources.

A foreign corporation meets the stock ownership test if, at any time during the relevant taxable year, more than 50 percent in value of its stock is owned, directly or indirectly, by (or for) not more than 5 individuals who are citizens or residents of the United States.[25] These individuals are collectively referred to as "the United States group." In determining whether the stock ownership test is met, the constructive ownership rules of §554 apply.

Once it is determined that a foreign corporation is a FPHC because it meets the gross income and stock ownership tests, each shareholder of the corporation (who is a U.S. citizen or resident) is required to include in his gross income, as a dividend, the amount he would have received if the UFPHCI were distributed on the last day of the taxable year of the company when a U.S. group existed.

b. Factoring Income as FPHCI

Under §§864(d)(1) and 864(d)(2), income earned by a foreign factoring company from trade or service receivables acquired from a related party is treated as interest income for purposes of §§551-558. Thus, this rule causes the foreign corporation to meet the gross income test of §552(a)(1). For example, if a foreign factoring company has no other type of income, it will certainly meet the gross income test of §552(a)(1). Additionally, if such a corporation also meets the stock ownership test of §552(a)(2), it will qualify as a FPHC and its UFPHCI (which will include the factoring as well as non-factoring income) will be taxed currently in the hands of its U.S. shareholders as a dividend.

Comment: The fact that factoring income is characterized as interest income for §553 purposes does not mean that it would inevitably be taxed to the foreign factoring company's U.S. shareholders currently as FPHCI. For example, if the factoring operations are conducted by an active foreign corporation which earns substantial non-factoring income, such corporation may not meet the gross income test of §552(a)(1). Alternatively, the foreign factoring company may not meet the stock ownership test of §552(a)(2). In these cases, the factoring income of the foreign factoring corporation will not be subject to current U.S. taxation as FPHCI.

Finally, note that although UFPHCI is usually included in the gross income of U.S. shareholders as foreign source dividend income, the factoring income which is U.S. source interest income in the hands of the foreign factoring corporation will retain its character as such when included in the gross income of U.S. shareholders, but only for §904 purposes.[26]

3. Factoring Income as Subpart F Income

a. Outline of Subpart F

To put the §864(d) provisions treating the related party factoring income as Subpart F income in proper perspective, a summary of the Subpart F provisions is presented below.

If a foreign corporation is a "controlled foreign corporation" for an uninterrupted period of 30 days during any taxable year, then every person who is a "United States shareholder" of such corporation must include in his gross income for the taxable year his pro rata share of the controlled foreign corporation's "Subpart F income" (and certain other income),[27] even if such income is not distributed to the shareholder.[28]

Thus, the Subpart F provisions apply only to those persons who qualify as "U.S. shareholders" of "controlled foreign corporations." Those persons who own stock in a "controlled foreign corporation" but do not qualify as "U.S. shareholders" are beyond the reach of Subpart F. Similarly persons who qualify as U.S. shareholders in a foreign corporation which is not a "controlled foreign corporation" are also beyond the reach of Subpart F.

The effect of the Subpart F provisions is to treat the U.S. shareholder's pro rata share of the "Subpart F income" (and certain other kinds of income) earned by the "controlled foreign corporation" during the taxable year as a constructive dividend taxable to the U.S. shareholder currently even though the U.S. shareholder receives no actual distribution from the controlled foreign corporation during the taxable year.

Any U.S. person may qualify as a U.S. shareholder. The term "U.S. person" includes:[29]

(i) A U.S. resident or citizen;

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(ii) A U.S. partnership;

(iii) A U.S. corporation; and

(iv) Any estate or trust (other than a foreign estate or trust as defined in §7701(a)(31)).

A U.S. person qualifies as a "U.S. shareholder" of a foreign corporation if the person:

(i) Actually owns,

(ii) Or is considered as owning,[30]

(iii) Ten percent or more,

(iv) Of the total combined voting power,

(v) Of all classes of stock entitled to vote of the foreign corporation in question.[31]

The term "controlled foreign corporation" means any foreign corporation of which more than 50 percent [32] of the total combined voting power of all classes of stock entitled to vote is either actually owned, or is considered owned,[33] by U.S. shareholders on any day of the taxable year of such foreign corporation.[34] Consequently, a foreign corporation that is owned equally by more than 10 shareholders will not qualify as a controlled foreign corporation because it will have no "U.S. shareholders". Also, certain corporations organized in the possessions of the United States are excluded from the definition of a controlled foreign corporation.[35]

Subpart F income of a controlled foreign corporation includes the following:[36]

(i) Income derived from the insurance of United States risks as determined under §953;

(ii) The foreign base company income as determined under §954;

(iii) Some international boycott income as defined in §952(a)(3); and

(iv) The amounts paid as illegal bribes or kickbacks to foreign government officials.

Excluded from the Subpart F income is income of the controlled foreign corporation which is U.S. source income effectively connected with a U.S. trade or business carried on by such corporation (unless such item is exempt from taxation (or is subject to a reduced tax rate) pursuant to a treaty obligation of the United States).

Foreign base company income, as defined in §954, includes the following:

(i) Foreign personal holding company income;

(ii) Foreign base company sales income;

(iii) Foreign base company services income;

(iv) Foreign base company shipping income; and

(v) Foreign base company oil and gas related income.

There are certain exclusions from foreign base company income which are enumerated below:

(i) Foreign base company income does not include foreign base company shipping income to the extent such income does not exceed the increase for the taxable year in qualified investments in foreign base company shipping operations of the controlled foreign corporation.[37]

(ii) If foreign base company income is less than 10 percent of gross income, no part of the gross income for the taxable year is treated as foreign base company income.[38]

(iii) Foreign base company income of a controlled foreign corporation does not include any item of income received by it if it is established to the satisfaction of the Secretary that neither the creation or acquisition of the controlled foreign corporation, nor the effecting of the transaction by the corporation giving rise to the potentially "tainted" income, had as one of its principal purposes a reduction of taxes.[39]

(iv) Foreign base company income does not include a controlled foreign corporation's income derived from the use of a vessel or an aircraft in foreign commerce between two points within the foreign jurisdiction in which the controlled foreign corporation was organized and in which the vessel or aircraft is registered.[40]

b. Subpart F Foreign Personal Holding Company Income

For purposes of Subpart F, the concept of foreign personal holding company income draws generally on the foreign personal holding company provisions of §553, with certain modifications which give effect to the anti-tax haven idea.

According to §553, FPHCI includes dividends, interest, income from stock and securities transactions, gains from commodities transactions, some items dealing with estates and trusts, personal service contract income, deemed income from the use of corporate property by a shareholder, and certain rents.

Modifications made to §553 by §954(c) include the following:

(i) Rents are included in Subpart F income without regard to the 50-percent limitation;[41]

(ii) Certain dividend, interest, and capital gain income derived from the active conduct of a trade or business is not included in FPHCI;[42] and

(iii) Certain dividend, interest, rents, and royalties income received from related persons is not included in FPHCI.[43]

The modifications that are relevant to the present discussion are discussed in more detail below.

(1) Active Trade or Business Modification

Section 954(c)(3) excludes from the Subpart F foreign personal holding company income category certain income, normally of a passive nature, which arises in the course of the active conduct of a foreign trade or business. The excluded income falls into three categories: (i) rents and royalties;[44] (ii) dividends, interest, and gains associated with banking and financing business;[45] and (iii) certain passive income associcated with the insurance business.[46]

With respect to the exclusion for investment income of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

banks and financial institutions, §954(c)(3)(B) provides that Subpart F FPHCI does not include interest, dividends, or securities gains derived from the conduct of a banking, financing, or similar business provided such income does not arise out of transactions with a related party. A controlled foreign corporation is treated as being engaged in the banking or financing business if its business consists of receiving deposits from the public, making loans to the public, dealing with the public as to bills and notes, issuing letters of credit, performing trust services, financing foreign exchange transactions, and conducting securities offerings.[47]

(2) Related Person Modification

Section 954(c)(4) excludes from the Subpart F FPHCI category certain income derived from related persons. Such income falls into three categories: (i) dividends and interest from a related person,[48] provided certain conditions are met; (ii) interest received in the active conduct of a banking or financing business from a related person engaged in a similar business, provided both parties do business predominantly with other parties;[49] and (iii) rents or royalties derived from a related person, provided the related person uses the property in the controlled foreign corporation's country of incorporation.[50]

Under §954(c)(4)(A), dividends or interest received from a related person is not Subpart F FPHCI if the following two conditions are met:

(i) The related person is organized under the laws of the same foreign country in which the controlled foreign corporation is organized; and

(ii) The related person has a substantial part of its trade or business assets located in its country of organization.

This exclusion is consistent with the tax haven base company concept that underlies Subpart F — income generated from related persons within the country of the CFC's incorporation is not foreign base company income.

Under §954(c)(4)(B), interest received by a bank, a financial institution, or a similar business entity engaged in the active conduct of a banking, financing, or similar business from a related party, which is also engaged in a similar business, is excluded from Subpart F foreign personal holding company income provided both the recipient and the payor do business predominantly with other parties.

c. Factoring Income as Subpart F Foreign Personal Holding Company Income

Sections 864(d)(1) and 864(d)(2) provide that if any person acquires a receivable from a related person any income derived from such receivable is treated as interest income for purposes of the Subpart F foreign personal holding company provisions.

Thus, if the foreign factoring company qualifies as a controlled foreign corporation, its income from factoring trade or service receivables of related parties will qualify as Subpart F foreign personal holding company income. Consequently, all "U.S. shareholders" of the foreign factoring company will be required to currently include in gross income their pro rata share of the factoring income of such company. For purposes of applying this rule, certain exclusions that are normally available from foreign base company income and Subpart F foreign personal holding company income do not apply. The exclusions that are not available to the foreign factoring company are as follows:

(i) Under §954(b)(3)(A), if foreign base company income of a controlled foreign corporation is less than 10 percent of gross income, no part of the gross income for the taxable year is treated as foreign base company income. This exclusion does not apply to related party factoring income earned by a controlled foreign corporation.[51] As a result, even if 90 percent or more of a controlled foreign corporation's gross income for a taxable year is non-foreign base company income, its related party factoring income will still be taxed currently to its U.S. shareholders as foreign base company income.

(ii) As discussed above, under §954(c)(3), interest and certain other income derived from the active conduct of a banking, financing or similar business is excluded from Subpart F foreign personal holding company income provided such income is received from a person who is not a related person within the meaning of §954(d)(3).[52] Also, under §954(c)(4)(B), interest and dividend income received in the active conduct of a banking, financing, or similar business from a related person (as defined in §954(d)(3)), which is also engaged in a similar business, is excluded from Subpart F foreign personal holding company income. Both of these exclusions do not apply to related party factoring income earned by a controlled foreign corporation engaged in a banking, financing, or similar business.[53]

Consequently, as a strict rule, any related party factoring income earned by a controlled foreign corporation engaged in a banking, financing, or similar business will be currently taxed to its U.S. shareholders as Subpart F foreign personal holding company.

(iii) As discussed above, under §954(c)(4)(A), interest and dividends received from a related person organized in and having substantial business assets in the recipient's country of organization are excluded from Subpart F foreign personal holding company income. This exclusion also does not apply to related party factoring income.[54] Consequently, if a controlled foreign corporation earns income from factoring the receivables of a foreign affiliate organized in and having substantial assets in the factoring company's country of organization, such income will be taxed currently to the factoring company's U.S. shareholders as Subpart F foreign personal holding company income.

Comment: The key to avoiding current taxation of related party factoring income as Subpart F income is to avoid the controlled foreign corporation status for the foreign factoring company.

4. Coordination of FPHC and Subpart F Provisions

Since the regular FPHC provisions and the Subpart F provisions overlap to a considerable extent, the income of a controlled foreign corporation, which also qualifies as a FPHC, is exposed to potential double taxation. Specifically, a foreign factoring company may qualify both as a FPHC and a controlled foreign corporation. In such a case, the question that must be faced is whether the related party

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

factoring income must bear a current U.S. tax both as foreign personal holding company income and as Subpart F foreign personal holding company income.

Prior to the Tax Reform Act of 1984, §951(d) resolved this overlap issue by providing that a U.S. shareholder who, for his taxable year, was subject to tax under §551(b) on the income of a controlled foreign corporation was not required to include in gross income any amount under §951(a). In other words, the regular FPHC provisions took precedence over the Subpart F provisions.

For taxable years of U.S. shareholders beginning after July 18, 1984, however, the Tax Reform Act of 1984 has changed the coordinating rules of §951(d). Under the amended §951(d), if certain income is subject to tax both under the FPHC provisions and the Subpart F provisions, such income will be taxed under the Subpart F provisions only. Hence, if related party factoring income is taxable both as foreign personal holding company income and as Subpart F foreign personal holding company income, it will be taxed only as Subpart F foreign personal holding company income.

5. Special Separate §904 Limitation for Factoring Income

a. Section 904 Limitation in General

Since the basic purpose of the foreign tax credit is to prevent double taxation and not to reduce U.S. tax, §904 provides a limitation on the amount of foreign taxes that may be claimed as a credit against U.S. tax. The structure of §904 is designed to insure that the credit is not greater than the amount of U.S. tax attributable to the foreign source income generating the foreign tax. For example, A, a U.S. corporate taxpayer in the top tax bracket (*i.e.*, 46%), pays 50x dollars in income taxes to a foreign country Y on 100x dollars of taxable income from Y; §904 will limit the foreign tax credit to 46x dollars. A, however, is allowed to carry back the excess foreign tax credits (*i.e.*, 4x dollars) for two years and forward for five years. The U.S. multinationals doing business primarily in high-tax foreign jurisdictions, therefore, are normally in an excess foreign tax credit position. The §904 limitation is expressed in the form of a formula as follows:

$$\text{U.S. tax liability} \times \frac{\text{foreign source taxable income}}{\text{worldwide taxable income}}$$

The limitation is computed on an overall basis. That is, taxable income and losses from all foreign countries are aggregated in the numerator of the fraction of the §904 limitation formula, and the limitation is then applied to all taxes paid to foreign countries on an aggregate basis. Because of this overall method of computing the §904 limitation, taxes paid to foreign countries that exceed the top U.S. tax rate become creditable to the extent the taxpayer also has foreign source taxable income bearing a foreign tax rate lower than the top U.S. tax rate. Thus, one technique for absorbing the excess foreign tax credits is to generate foreign source taxable income in a low-tax foreign jurisdiction.

A U.S. taxpayer with excess foreign tax credits and large amounts of cash on hand could easily utilize its excess credits by exporting the cash to a low-tax foreign jurisdiction and earning foreign source interest income. This possibility, however, is foreclosed by §904(d) which provides for a separate §904 limitation on all foreign source interest income.[55] Thus, low-taxed foreign source interest income does not increase the §904 limitation on foreign taxes paid on non-interest foreign source income.

The separate limitation on interest income provision of §904(d), however, does not apply in the following four cases:

(i) Interest generated from any transaction which is directly related to the active conduct of a trade or business in a foreign country;[56]

(ii) Interest generated from the conduct of an active banking, financing, or similar business;[57]

(iii) Interest paid by a corporation in which the taxpayer owns, directly or indirectly, at least 10 percent of the voting stock;[58] and

(iv) Interest earned from obligations that were acquired as a result of the disposition of a trade or business actively conducted by the taxpayer in a foreign country, or as a result of the disposition of stock or obligations in a 10-percent owned corporation.[59]

b. Separate Limitation for Factoring Income

Sections 864(d)(1) and 864(d)(2) provide that income earned by any person from factoring the trade or service receivables of a related party is interest income to the factoring company for purposes of the §904 limitation. In addition, §864(d)(5)(A)(i) provides that the four exceptions (discussed above) to the separate §904 limitation on interest provided in §§904(d)(2)(A) - §904(d)(2)(D) do not apply to income recharacterized as interest under §864(d).

Since the factoring income, when taxed to the U.S. parent as foreign personal holding company income or Subpart F foreign personal holding company income, will retain its character as interest income under §904(g), the U.S. parent will be subject to the separate §904(d) limitation on such income but without the benefit of exceptions contained in §§904(d)(2)(A) - §904(d)(2)(D). Thus, the efficacy of the factoring technique for purposes of utilizing the excess foreign tax credits of U.S. companies has been effectively eliminated.

6. Special Rule for Possessions and Virgin Islands Corporations

Section 864(d)(5)(B) provides that the benefits of §§934 and 936 will not be available to related party factoring income of Virgin Islands and Possessions corporations, respectively.

a. Possessions Corporations

(1) Puerto Rico and Possessions Tax Credit

Section 936 of the Code provides a domestic corporation with a special credit if the domestic corporation elects to be treated as a possessions corporation. This credit is equal to the U.S. tax attributable to the possessions corporation's "qualifying income."[60] The "qualifying income" consists of foreign source income derived from the active conduct of a trade or business within a possession and the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

qualified possession's source investment income.[61] All nonqualifying income is taxed in the United States at regular corporate tax rates with the allowance of normal foreign tax credit.

In order to be eligible for a §936 election, a domestic corporation must meet the following two tests: [62]

(i) It must have derived 80 percent or more of its gross income for the three-year period immediately preceding the close of the current taxable year from sources within a possession; and

(ii) It must have derived 65 percent of its gross income for the same 3-year period from the active conduct of a trade or business within a possession. The 65 percent test applies for taxable years beginning in 1985 and later. The percentage is 60 percent for taxable years beginning in 1984.

Thus, an eligible U.S. corporation, which makes a §936 election, is effectively exempt from U.S. tax on its possessions source qualifying income under the credit mechanism.

(2) The Special Rule for Possessions Corporations

Concerned that a U.S. corporation, which otherwise qualifies for a §936 election, could base its factoring operations in a possession (*e.g.*, Puerto Rico) and earn related party factoring income free of U.S. tax under the §936 credit mechanism, Congress provided a special rule in §864(d)(5)(B)(i). This concern was expressed in the Senate Finance Committee Report as follows:

"In certain cases, if the bulk of a taxpayer's income is derived from the conduct of a trade or business in a U.S. possession, and if the bulk of the taxpayer's income arises within a possession, favorable U.S. tax rules apply. For example, in the case of a U.S. corporation, foreign source business income earned in the possessions generally (most notably Puerto Rico) may be effectively exempt from U.S. tax under the possessions tax credit (sec. 936). Similarly, in the case of a Virgin Islands corporation or a U.S. corporate inhabitant of Virgin Islands, the United States may impose no tax on its income, and the Virgin Islands may reduce its tax on the corporation's income (sec. 934(b)). Under present law, it is not clear if income from factoring is derived from the active conduct of a trade or business for the purpose of these rules. Similarly, it is unclear whether factoring income arises where the factor has its place of business, where the obligor of the receivable resides or does business, or where the seller of the receivable resides or does business. If income from factoring constitutes income from the active conduct of a trade or business at the place where the factor does business, income from a factoring business in a U.S. possession may be eligible for these favorable tax rules." [63]

Section 864(d)(5)(B)(i) provides that related party factoring income (which is recharacterized as interest under §864(d)(1) for limited purposes) shall not be treated as "qualifying income" [64] eligible for the §936 credit. This denial of "qualifying income" status, however, does not apply to that portion of related party factoring income which is considered possessions source income after applying §864(d)(1). Thus, income from factoring a receivable of an obligor who is a possessions resident will not be denied the "qualifying income" status.

Comment: The special rule of §864(d)(5)(B)(i) is needed because the recharacterization of the related party factoring income as interest under §864(d)(1), together with its concomitant sourcing rules, applies only for the limited purposes of the FPHC, Subpart F, and §904 provisions. In the absence of this rule, if an electing §936 corporation were to base its factoring operations in a possession and perform all factoring services in the possession, then, under GCM 39220, its factoring income would be considered derived from the active conduct of a trade or business in a possession. Such income, therefore, would qualify for §936 credit and escape U.S. taxation.

The impact of the special rule in §864(d)(5)(B)(i) is to deny a §936 credit for related party factoring income to the extent that such income is derived from factoring the receivables of obligors who are not residents of a possession. It should be noted, however, that to the extent related party factoring income is considered derived from the active conduct of a trade or business in a possession under GCM 39220, it may enable a U.S. corporation to meet the 80 percent and the 65 percent tests of §936(a)(2).

b. The Virgin Islands Corporations

(1) Section 934

Section 934(a) limits the Virgin Islands government's power to make grants or subsidies (by way of incentives or otherwise) that reduce, directly or indirectly, income taxes payable to it. Section 934(b) excepts subsidies for Virgin Islands or U.S. corporations which meet certain requirements. Specifically, §934(b) provides that §934(a) does not apply to a U.S. or a Virgin Islands corporation's non-U.S. source income, provided the corporation meets the following two tests:

(i) It derived 80 percent or more of its gross income for the 3-year period immediately preceding the close of the current taxable year from sources within the Virgin Islands; and

(ii) It derived 65 percent or more of its gross income over the same 3-year period from the active conduct of a trade or business within the Virgin Islands.

(2) Special Rule for the Virgin Islands Corporations

Section 864(d)(5)(B)(ii) contains a special rule for Virgin Islands corporations. It provides that the exception in §934(b) does not apply to any related party factoring income which is recharacterized as interest under §864(d)(1). The exception in §934(b), however, remains available for that portion of the related party factoring income which, after applying §864(d)(1), is considered derived from the Virgin Islands sources; *i.e.*, income from factoring receivables of obligors who are resident in the Virgin Islands.

The impact of §864(d)(5)(B)(ii) is to forestall any action on the part of the Virgin Islands government to provide tax incentives with a view to attract factoring companies to the Virgin Islands.

B. U.S. Taxation of the Foreign Factoring Subsidiary

Section 864(d) is silent as to the U.S. tax treatment of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the foreign factoring subsidiary. The Conference Committee Report, however, does state that:

> "A foreign corporation earning income from a trade or service receivable of a U.S. obligor will not be taxable currently on that income (under Code sec. 881)." [65]

This statement implies that the related party factoring income recharacterized as interest under §864(d)(1) is not subject to U.S. withholding tax even where such interest is sourced to the United States. A foreign factoring subsidiary, therefore, remains subject to U.S. income tax on related party factoring income to the extent that such income is considered effectively connected with a U.S. trade or business under GCM 39220. Thus, for example, a foreign factoring subsidiary of a U.S. parent, which factors the parent's receivables on a regular basis and engages a U.S. agent for collection activities in the United States, may be subject to U.S. tax under §11 on that portion of its factoring income which is attributable to U.S. collection activities of its agent.

C. Receivables of U.S. Obligors Treated as "United States Property" Under §956

1. Section 956 Generally

Prior to 1962, U.S. shareholders of foreign corporations (which did not qualify as foreign personal holding companies) were not subject to U.S. income tax on the earnings of such corporations until the earnings were repatriated to the United States as dividend, redemptions, or liquidating distributions. United States taxpayers could, therefore, incorporate foreign entities and accumulate and multiply the earnings of these corporations free of U.S. income tax and often of foreign income taxes as well.

The U.S. Congress's concern that certain U.S. persons in control of foreign corporations were abusing the "deferral" privilege led to the enactment of the Subpart F provisions (§§951 - 971) in the Revenue Act of 1962. These provisions eliminated the deferral privilege for certain specific types of income (designated as Subpart F income) by subjecting the "U.S. shareholders" of "controlled foreign corporations" to current U.S. income tax on such income.[66] This is accomplished by treating the Subpart F income as a constructive dividend to the U.S. shareholders in the current taxable year.

As part of the Subpart F legislation, the Revenue Act of 1962 also enacted §956. Under §956, to the extent a controlled foreign corporation invests its current or accumulated earnings in the "United States property," such earnings are taxed to the "United States shareholders" of the controlled foreign corporation in the year in which the investment occurred. In enacting §956, Congress in effect provided that, when a controlled foreign corporation acquired U.S. property, the U.S. shareholders of the foreign corporation would be treated as if they received a cash dividend equal to the purchase price of the property and then contributed the cash back to the foreign corporation which purchased the property. The rationale for this treatment is described in the Senate Finance Committee Report:

> "earnings brought back to the United States . . . are substantially the equivalent of a dividend." [67]

Section 951(a)(1)(B) requires a United States shareholder of a controlled foreign corporation to include in his gross income as a constructive dividend his pro rata share (as determined under §956(a)(2)) of the foreign corporation's increase in earnings invested in United States property for such year. The calculation of the amount of the CFC's increase in earnings invested in "United States property" for a given year is made by comparing the earnings invested in U.S. property at the end of the year in question with the amount of earnings so invested at the end of the preceding year. The amount of a CFC's investment in U.S. property on a given date is the adjusted basis of the property less any liabilities. This amount is then subject to the dividend limitation. Thus, the computation of a CFC's increase in investments in U.S. property involves the following steps:

> (i) The CFC's adjusted basis (less liabilities) in all "United States property" owned by it at the end of current taxable year is compared with the CFC's current or accumulated earnings and profits in order to determine the portion of such earnings "which would have constituted a dividend had it been distributed;"
>
> (ii) The same calculation is made for the CFC as of the end of the preceding taxable year; and
>
> (iii) The result in step (ii) is subtracted from the result in step (i) in order to arrive at the CFC's increase in the United States property.

Section 956(b)(1) defines the term "United States property" to include:

> (i) Tangible property located in the United States;
>
> (ii) Stock of a domestic corporation;
>
> (iii) An obligation of a United States person; and
>
> (iv) Any right to use in the United States of a patent, a copyright, a secret process or formula, or any other similar property right.

In addition to property which it owns directly, a CFC is also considered to hold indirectly any other investments in United States property held on its behalf by a trustee, a nominee, or a second CFC controlled by the first CFC, provided the second CFC is created or availed of by the first CFC principally for the purpose of holding United States property.[68] This rule was applied by the Service in Rev. Rul. 76-192, 1976-1 C.B. 205, where a wholly-owned CFC (X) of a domestic parent (Y) sold debt obligations to underwriters for resale outside the United States. The proceeds of the sale were deposited, in the form of a demand deposit, with an unrelated foreign financial institution. Subsequently, Z, a newly formed wholly-owned subsidiary of Y, borrowed from the financial institution an amount equal to X's deposit for two years at an arm's length rate. Z then reloaned the proceeds of the loan to Y for the same term at a substantially similar interest rate. The Service ruled that an overall plan existed by which Z was availed of by X principally for the purpose of holding Y's obligations on X's behalf. Consequently, there was an investment of the earnings of X in United States property in an amount equal to Z's loan to Y to the extent of X's earnings and profits available for distribution as a dividend.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Section 956(b)(2) provides a list of investments which are not regarded "United States property":

(i) U.S. Government obligations, money, and bank deposits;

(ii) Certain export property;

(iii) Certain obligations arising out of the sale or processing of property;

(iv) Aircraft, vessels, and other property used in international transportation;

(v) The investment by an insurance company of its unearned premiums or reserves from the insurance of foreign risks;

(vi) The stock or debt obligations of unrelated U.S. corporations;

(vii) Movable property used in exploring on the U.S. continental shelf; and

(viii) Assets equal to the earnings of the CFC that have been taxed as effectively connected income.

In addition, Regs. §1.956-2(d)(2) provides that the term "obligation of a United States person" does not include: (i) any indebtedness arising out of the involuntary conversion of property which is not United States property; or (ii) any indebtedness (other than an indebtedness arising in connection with sale or processing of property) which is collected within one year from the time incurred, or which matures within one year but is not collected by reason of inability or unwillingness of the debtor to make the payment.

Finally, under §956(c), a CFC is considered holding an obligation of a United States person if it is a pledgor or guarantor of such obligation.

2. Receivables of U.S. Persons Treated as United States Property

Section 138(b) of the Tax Reform Act of 1984 adds a new paragraph (3) to subsection (b) of §956. It provides that, notwithstanding the exceptions contained in §956(b)(2), the term "United States property" includes any trade or service receivable provided:

(i) Such receivable is acquired (directly or indirectly) from a related person who is a U.S. person; and

(ii) The obligor under the receivable is a United States person.

Comment: Since the purpose of new §956(b)(3) is to prevent a tax-free repatriation of untaxed foreign earnings, it makes sense to include the receivables within the United States property net only if such receivables are acquired from a related U.S. person. Foreign-to-foreign factoring, therefore, would not result in §956 consequences.

Comment: The requirement in §956(b)(3)(A)(ii) that the obligor under the receivable be a U.S. person leaves a gap in the statutory provision because it apparently excepts from the definition of "United States property" receivables acquired from a related U.S. person if the obligor is a foreign person. One of the objectives of a related party factoring arrangement is to place the untaxed foreign earnings at the disposal of a U.S. parent without attracting a U.S. dividend tax. To the extent a foreign factoring subsidiary factors the receivables of its U.S. parent or affiliates generated from sales to foreign customers, such objective could still be achieved.

The terms "related person" [69] and "trade or service receivable",[70] as used in §956(b)(3)(A), have the same meanings as in §864(d).[71]

The Conference Report enumerates certain techniques involving the avoidance of §956(b)(3) and directs the Secretary to promulgate regulations bringing these as well as other avoidance techniques within the §956(b)(3) net.[72] These techniques and their treatment are described below:

(i) For purposes of applying §956(b)(3), the substitution of any party for the obligor will be disregarded. For example, if a U.S. purchaser of goods pays for the goods by establishing a line of credit with a foreign bank whose note the seller of the goods takes and sells at a discount to its foreign subsidiary, the income from the bank's obligation in the hands of the foreign subsidiary will be U.S. source income and the acquisition of the bank's obligation will constitute an investment in U.S. property.

(ii) The principles of Rev. Rul. 76-192 (discussed above) will apply to §956(b)(3).

Example: A, a controlled foreign corporation, has accumulated substantial earnings and profits. It organizes a wholly-owned foreign corporation B with a small equity contribution. A deposits $10 million with a foreign financial institution. Soon thereafter, B borrows $10 million from the same financial institution and uses these funds to purchase the receivables of U.S. obligors from A's U.S. parent, P. Under the rationale of Regs. §1.956-1(b)(4) and Rev. Rul. 76-192, there is an investment of the earnings of A in United States property equal to $10 million for purposes of §956(b)(3). The same result will obtain if A, instead of depositing $10 million with the foreign financial institution, contributes this amount to the capital of B.

(iii) Section 956(b)(3) will apply to treat the purchase by a CFC of an obligation of an unrelated U.S. person as an investment in U.S. property where a related U.S. person guarantees such obligation. Thus, for example, a loan by a CFC to a purchaser of goods or services of a related party will be treated as an acquisition by the CFC of the borrower's receivable if the seller (a related party) guarantees or otherwise secures payment to the CFC.

Section 864(d)(7) contains the statutory authority for the Secretary to issue regulations under §956(b)(3) foreclosing the use of avoidance techniques enumerated above (as well as any other avoidance techniques).

D. Effective Date

The provisions of §§864(d) and 956(b)(3) apply to accounts receivable and evidences of indebtedness transferred after March 1, 1984, in taxable years ending after such date.[73]

Section 123(c)(2) of the Tax Reform Act of 1984, however, provides a transitional rule for a certain Belgian corporation in existence on March 1, 1984. Under this

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

transitional rule, the U.S. shareholders of this Belgian corporation are not required, by reason of §956(b)(3), to include in gross income an amount equal to the Belgian corporation's adjusted basis on March 1, 1984, in stock of another foreign corporation (up to a maximum of $15,000,000) formed to issue bonds outside the United States to the public.

E. Related Party International Factoring Arrangements — Dead or Alive?

Section 123 of the Tax Reform Act of 1984 may have dealt a death-blow to related party international factoring arrangements as such arrangements were known prior to the Act. But related party international factoring may not be dead and buried. It is possible that related party international factoring will re-emerge in another shape or form. The application of anti-factoring rules enacted by the Act is predicated upon the foreign factoring company qualifying as a controlled foreign corporation under §957(a). Consequently, if the factoring company can avoid the CFC status, it will avoid the major impact of new §§864(d) and 956(b)(3). For example, a foreign factoring company organized in a tax haven jurisdiction and equally owned by 11 U.S. shareholders will not qualify as either a foreign personal holding company or a controlled foreign corporation. If such a factoring company performs all of the factoring activities in its country of incorporation, it will avoid all current U.S. tax both at the corporate and the shareholder level.

Section 957(c) also provides that a corporation organized or created under the laws of Puerto Rico or a possession does not qualify as a "controlled foreign corporation" if: (i) 80 percent of its gross income for the 3-year period immediately preceding the close of current taxable year was Puerto Rico or possession source income; and (ii) 50 percent or more of its gross income over the same period was derived from certain active trades or businesses conducted within Puerto Rico or a possession. Consequently, a Puerto Rican or a possession's corporation, which meets the 80-percent and the 50-percent tests of §957(c), may be used to factor the receivables of related parties.

---

[1] This could be accomplished by an injection of cash in the form of a loan or equity contribution by the cash-rich controlled foreign corporation to an existing or a newly-organized foreign factoring subsidiary, which, in turn, used the cash to purchase the U.S. parents' trade receivables.

[2] A properly structured factoring operation avoided all U.S. tax on the discount income both in the hands of the foreign factoring subsidiary and in the hands of the U.S. parent as Subpart F income.

[3] Although in this case S itself acted as a factor, the factoring operations could be performed by a separate single-purpose foreign subsidiary of the U.S. parent; *see* footnote 1, *supra*.

[4] Roin and Rosenbloom, "Bringing Foreign Profits Back to the U.S. by Factoring: How to Use This Technique," 58 J. of Tax. 164 (1983).

[5] §1442(a). Unless otherwise indicated, all references herein are to the Internal Code of 1954, as amended.

[6] §§553(a) and 954(c).

[7] Note that a "bona fide sale" characterization was not affected if the U.S. parent of the foreign factoring subsidiary performed the collection activities in its capacity as an agent of the subsidiary. GCM 39220, the background document for PLR 8338043, observes, in relevant part, that "Although the finance company had the right, under the contract with the taxpayer, to collect the accounts, it in fact did not do so. The taxpayer did not notify the customers that their accounts had been sold and, as agent for the finance company, the taxpayer collected the accounts. In the instant case, P intends to collect the accounts for [S]. We do not believe this fact indicates that the transaction is a loan."

[8] Since factoring of trade accounts receivable is basically a financing activity requiring an investment of substantial capital, the discount income, at least partially, is interest.

CHAPTER 68

AMENDMENTS TO SECTION 1248 RULES

Javed A. Khokhar, Esq.
Silverstein and Mullens
Washington, D.C.

I. Elimination of Double Taxation of Earnings and Profits of Certain CFCs

A. Introduction

Under §1248(a), gain recognized upon the sale or exchange of stock in a controlled foreign corporation ("CFC") by a United States shareholder (a U.S. person who owns directly, indirectly, or constructively at least 10 percent of the total combined voting power of all voting stock) is included in the gross income of such U.S. shareholder as a dividend to the extent of the earnings and profits of the CFC accumulated in post-1962 years during the period the stock was held by the U.S. shareholder. This basic rule also applies to deemed exchanges under §302 or §331. The Tax Reform Act of 1976 added §1248(f) to the Code, which applied a similar rule to the sale or exchange of CFC stock by a U.S. corporation in a §311, §336, or §337 transaction.

For purposes of determining the extent to which the U.S. shareholder's gain from the sale or exchange of CFC stock is characterized as ordinary dividend income under §1248, the determination of the CFC's post-1962 earnings and profits accumulated during the U.S. shareholder's period of ownership is crucial. The Code, therefore, provides extensive rules for determining the CFC's earnings and profits for §1248 purposes. The starting point is the earnings and profits used to determine whether a distribution is taxable as a dividend. However, there are several adjustments which must be made.

Section 1248(c)(1) makes inapplicable the special rule of §312(k)(4), which provides special depreciation rules for foreign corporations which have less than 20 percent U.S. income. Section 1248(c)(2) includes in the earnings and profits of the foreign corporation the earnings and profits of its subsidiaries. Section 1248(d) provides five specific exclusions from earnings and profits: amounts taxed under Subpart F, amounts excluded under §337 (12-month liquidations), earnings and profits of less developed country corporations, effectively connected income, and amounts subject to tax under §1247 (foreign investment companies). In addition, Regs. §1.1248-3(e)(3) provides an exclusion for amounts taxed as undistributed foreign personal holding company income.

Since the basic thrust of §1248 is to impose U.S. tax at ordinary income rates when untaxed foreign income is repatriated, one might conclude that the CFC's post-1962 accumulated earnings and profits should be subject to dividend tax only once. The structure of §1248 in fact achieves this result because successive owners of stock in a CFC are taxed at ordinary income rates under §1248 only with respect to those earnings and profits which were accumulated while they held the stock. The problem, however, arises when subsequent to a §1248 disposition, the CFC distributes a dividend. Unless the CFC's earnings and profits are reduced by the amount treated as a dividend under §1248, the subsequent distribution by the CFC would again cause dividend treatment on account of the same earnings and profits. In addition, if the earning and profits adjustment is not made, the new stockholder may claim a deemed paid foreign tax credit for taxes paid by the CFC which already have been credited by the previous owner.

Prior to the Tax Reform Act of 1984, both the statute and the regulations were silent on this issue. In Rev. Rul. 71-388, 1971-2 C.B. 314, however, the Service ruled that the earnings and profits of a CFC were not affected by the amount of gain (realized from the sale or exchange of the CFC stock) that was treated as a dividend under §1248. Subsequently, in Rev. Rul. 83-182, I.R.B. 1983-51, 12, the Service announced that it was reconsidering the issue and that, accordingly, the relevant part of Rev. Rul. 71-388 (holding that no earnings and profits adjustment was required for the amounts treated as dividends upon the sale or exchange of the CFC stock) was suspended.[1]

Section 133 of the Tax Reform Act of 1984 resolves the problem, although not by providing for an E&P adjustment, but by providing a mechanism which ensures that the amount of gain derived from the disposition of CFC stock and taxed as dividend income under §1248(a) or §1248(f) is not again taxed in the hands of the seller's successor-in-interest when actually distributed.

B. Detailed Analysis

Section 133(b) of the Tax Reform Act of 1984 (P.L. 98-369) adds a new subsection (e) to §959 and a new subsection (j) to §1248. Section 959(e) contains the substantive rule, whereas §1248(j) merely contains a cross-reference to §959(e). Specifically, §1248(j) provides that:

> "For provision excluding amounts previously taxed under this section from gross income when subsequently distributed, see section 959(e)."

Section 959(e) provides that:

> "For purposes of this section and section 960(b), any amount included in the gross income of any person as a dividend by reason of subsection (a) or (f) of section 1248 shall be treated as an amount included in the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

gross income of such person under section 951(a)(1)(A)."

The general rule of §959 is that when a CFC's earnings and profits are taxed to its U.S. shareholders as Subpart F income under §951(a)(1)(A), any subsequent actual distribution of such previously-taxed earnings and profits is tax-free both in the hands of the U.S. shareholder who included in gross income such earnings and profits as Subpart F income and in the hands of the U.S. shareholder's successor-in-interest.[2] Thus, under new §959(e), whenever a U.S. shareholder sells or exchanges stock in a CFC (or a U.S. corporate shareholder sells or exchanges the CFC stock in a §311, §336, or §337 transaction) and recognizes gain which is characterized as ordinary dividend income under §1248(a) (or §1248(f)), then any subsequent distribution of earnings and profits previously taxed as a §1248(a) or §1248(f) dividend to the selling or exchanging shareholder's successor-in-interest will be tax-free.

Comment: Section 959(e) places emphasis on the necessity for a U.S. person, who acquires an interest in a controlled foreign corporation, to make sure that he can later demonstrate the prior Subpart F history of the shares. Particularly, the successor-in-interest must be able to satisfy the Service that the amounts in question were previously taxed under either §1248(a) or §1248(f).

Also, the treatment of §1248(a) or §1248(f) gain as previously taxed Subpart F income for §960(b) purposes ensures that foreign tax credit is obtained only once with respect to such earnings and profits.

Section 959(e) is generally effective with respect to transactions (subject to §1248(a) or §1248(f)) occurring after July 18, 1984.[3] However, if a taxpayer makes an appropriate election, §959(e) will apply to transactions (subject to §1248(a) or §1248(f)) occurring after October 9, 1975.[4] The election must be made no later than January 14, 1985, in the manner prescribed by the Secretary.[5]

II. Section 1248 E&P to Include E&P Accumulated by a Lower-Tier Subsidiary During Periods of Direct Ownership

A. Introduction

Section 133(c) of the Tax Reform Act of 1984 (P.L. 98-369) corrects an obvious error in §1248(c)(2)(D)(ii), which, in the past, has enabled taxpayers to make an end run around §1248.

Section 1248(a) recharacterizes gain recognized on the sale or exchange of stock in a controlled foreign corporation by a U.S. person who owns directly, indirectly, or constructively 10 percent or more of the total combined voting power of all voting stock. The gain is treated as dividend income to the extent of the CFC's post-1962 earnings and profits accumulated during the period of the seller's stock ownership.

Section 1248(c)(2) provides that earnings and profits of any lower-tier foreign corporation shall be included in the earnings and profits of the first-tier foreign corporation, but not in excess of the appreciation in value of the lower-tier foreign corporation. The special rule of §1248(c)(2) applies when:

(i) §1248(a) or §1248(f) applies to a sale, exchange, or distribution by a U.S. person of stock of a foreign corporation;[6]

(ii) the U.S. person who owns stock in the foreign corporation that is being sold, exchanged or distributed, as a result of such stock ownership, is considered to own stock of a lower-tier foreign corporation by reason of §958(a)(2);[7] and

(iii) the U.S. person owned (within the meaning of §958(a) or §958(b)) at least 10 percent of the total voting power of the lower-tier foreign corporation at any time during the five-year period (ending on the date of the liquidation) when the lower-tier foreign corporation was a controlled foreign corporation.[8]

If conditions (i), (ii) and (iii) are met, the earnings and profits of the first-tier foreign corporation are deemed to include the earnings and profits of the lower-tier foreign corporation to the extent that: (i) the lower-tier foreign corporation's earnings and profits are attributable to its stock owned indirectly by the U.S. person as a result of his actual ownership of stock in the first-tier foreign corporation on the date of the sale or exchange (or on the date of any sale or exchange of the stock of the lower-tier foreign corporation occurring before the five-year period, but not in excess of the appreciation as of such date);[9] and (ii) the lower-tier foreign corporation's earnings and profits were accumulated during its taxable years beginning after December 31, 1962, while (a) the lower-tier foreign corporation was a controlled foreign corporation,[10] and (b) the U.S. person owned within the meaning of §958(a)(2) the stock of such foreign corporation.[11]

Section 958 provides rules for determining stock ownership. Section 958(a)(1) defines stock ownership as "stock owned directly and stock owned with the application of paragraph (2)." Section 958(a)(2) deals with indirect ownership through foreign entities.

The reference to §958(a)(2) in §1248(c)(2)(D)(ii) leaves a gap in the statutory scheme. For example, if the U.S. parent contributes the stock of a lower-tier CFC to a first-tier CFC and then sells the stock of the first-tier CFC, under a literal reading of §1248(c)(2)(D)(ii) the §1248 earnings and profits of the first-tier CFC will not include the lower-tier CFC's earnings and profits accumulated during the period it was owned directly by the U.S. parent. This amount, therefore, would escape dividend characterization under §1248(a).

While §133(c) of P.L. 98-369 was in draft form, the Service issued Rev. Rul. 84-72, I.R.B. 1984-20, 4, dealing with this issue. Under the facts of the ruling, P, a domestic corporation, owned directly all of the stock of foreign corporations FS1 and FS2 since their incorporation in 1964. In 1980, P transferred the stock of FS2 to FS1 for FS1 non-voting stock, and obtained favorable rulings under §§351 and 367(a). In 1981, in an unrelated transaction, P sold the FS1 stock. The Service conceded that the language of §1248(c)(2)(D)(ii) literally provides that only the earnings and profits of FS2 that were accumulated while FS2 was a subsidiary of FS1 should be aggregated with those of FS1 for purposes of §1248(a). The Service then asserted that §1248 does not really address a situation in which

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

there is a sequential mixture of direct and indirect ownership, and that the omission of the period of direct ownership from the express language of the statute was not dispositive of the issue. It pointed out that all of FS2's earnings and profits would have been aggregated with those of FS1 if, prior to 1980, FS2 had been wholly owned by FS1, which had been wholly owned by P. The Service also pointed out that §1248(a) would have applied to FS2's earnings and profits if FS2 had been sold by P before being transferred to FS1. The Service stated that a failure to aggregate all of FS2's earnings and profits with those of FS1 would be clearly unwarranted because distinction between direct and indirect ownership has no relevance to the purpose of Congress in enacting §1248. Accordingly, it held that, for purposes of §1248, the earnings and profits of FS1 included the earnings and profits of FS2 accumulated since 1964.

B. Detailed Analysis

Section 133(c) of P.L. 98-369 resolves the controversy by substituting §958(a) for §958(a)(2) in Code §1248(c)(2)(D)(ii). The amendment to §1248(c)(2)(D)(ii) is effective for transactions (subject to §1248) occurring after July 18, 1984.

Thus, for purposes of characterizing the gain as dividend income, upon the disposition of stock in a CFC by a U.S. shareholder after July 18, 1984, the earnings and profits of the CFC will include the earnings and profits of any lower-tier CFC accumulated during the period the lower-tier CFC was owned directly by the U.S. shareholder.

III. Section 1248 to Apply in Certain Indirect Transfers of Stock

A. Introduction

Section 133(a) of the Tax Reform Act of 1984 (P.L. 98-369) is aimed at a specific technique utilized by certain taxpayers to avoid §1248. The technique involves the acquisition of the widely-owned U.S. parent's stock by the CFC in exchange for its own shares and small amounts of cash.

Section 1248, which treats the gain recognized from the disposition of CFC stock by a U.S. person owning 10 percent or more of the CFC's voting stock as dividend income, is designed to prevent U.S. taxpayers from accumulating earnings free of U.S. tax in a CFC and then disposing of the stock at capital gain rates for a price that reflects the accumulated earnings and profits (which would be taxable as ordinary income if repatriated as dividends). Since the above technique attempts to circumvent this purpose of §1248, Congress included §133(a) in P.L. 98-369. The Senate Finance Committee Report observes that:[12]

> "The purpose of the provision that recharacterizes gain upon the sale or exchange of stock in certain foreign corporations is to tax the accumulated profits of active foreign corporations upon repatriation. Although section 1248 has generally carried out this policy, it has come to the committee's attention that certain transactions may circumvent the statutory rules. For example, taxpayers have taken the position that section 1248 does not apply if a foreign corporation that is wholly owned by a widely held U.S. corporation issues new shares and pays a small amount of cash in exchange for shares representing a majority interest in the U.S. corporation. If this interpretation is sustained, the shareholders of the U.S. corporation might pay a capital gains tax on the difference between the value of the foreign corporation's stock (plus the cash) and their basis in the stock in the U.S. corporation, but no ordinary income tax would be paid on the accumulated earnings and profits of the foreign corporation at that time. Further, because the transaction would result in the foreign corporation ceasing to be a controlled foreign corporation, earnings accumulated prior to the exchange could be permanently exempt from U.S. corporate tax. The committee is aware that present law is unclear, and intends no inference that the transaction works as described.
>
> "In the view of the committee, the ability to avoid ordinary income tax by causing a foreign corporation to engage in a transaction with the shareholders of its U.S. parent corporation would make a mockery of the principle of taxing accumulated earnings and profits of foreign corporations upon repatriation. The committee believes that a U.S. corporation should be required to recognize dividend income upon the acquisition of its stock by its wholly owned foreign corporation, to the extent that the U.S. corporation's ownership interest in the foreign corporation is reduced. This treatment is also appropriate in certain cases where a U.S. corporation owns less than 100 percent of a foreign corporation that is or was a controlled foreign corporation."

B. Detailed Analysis

Section 133(a) of P.L. 98-369 adds a new subsection (i) to §1248.

Section 1248(i) provides that where any shareholder of a U.S. corporation, which is a 10 percent or more corporate shareholder in a foreign corporation, exchanges stock in the U.S. corporation for the stock in the foreign corporation, for purposes of §1248, the foreign corporation's stock will be treated as if it had been issued to the 10-percent U.S. corporate shareholder and then distributed to the exchanging shareholder of such 10-percent corporate shareholder in redemption of his stock.

The term 10-percent U.S. shareholder means any domestic corporation which, as of the day before the exchange, satisfied the stock ownership requirements of §1248(a)(2).[13]

Thus, under §1248(i), when U.S. shareholders of a U.S. corporation exchange stock in the U.S. corporation for newly issued or treasury stock of a foreign corporation in which the U.S. corporation is a 10-percent or more owner, the transaction will be recast. For purposes of applying §1248, the foreign corporation will be viewed as having issued the stock to the U.S. corporation and the U.S. corporation will be treated as having distributed that stock to its U.S. shareholders in redemption of their stock. Under §1248, the U.S. corporation, therefore, would be required to recognize dividend income equal to the difference between the fair market value of the stock received by the shareholders of the U.S. corporation and the U.S. corpora-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tion's basis for its stock in the foreign corporation, to the extent of the foreign corporation's post-1962 accumulated earnings and profits.

The Senate Finance Committee Report contains the following example to illustrate §1248(i):[14]

> *"Example*: M, a U.S. corporation, is and always has been the sole shareholder of P, a foreign corporation. P, which was organized in 1959, has previously untaxed post-1962 earnings and profits of $40 million. M, whose shares are widely held, has assets worth $100 million (including P shares representing $40 million of value). In recent years, while profits from M's operations have declined, P's foreign operations have generated substantial income. M has a zero basis in the P stock. In addition, many of M's shareholders have losses in their M stock. M's shareholders transfer all of their stock in M to P in exchange for newly issued P stock representing 90 percent of the total number of outstanding P stock plus a *de minimis* amount of cash. After the exchange, P owns all of the outstanding stock of M, and the former M shareholders own stock of P with a value approximating $100 million. The principal purpose of this transaction was to enable the corporate group to retain and reinvest P's accumulated and future foreign earnings free of U.S. tax. On the basis of public and private rulings issued by the Internal Revenue Service and cases decided under the law in effect prior to enactment of the Internal Revenue Code of 1954, the parties to the transaction could take the position that the former M shareholders acquired all the P stock received by them in exchange for M stock worth $100 million, notwithstanding the fact that P's value was augmented by only $60 million dollars. *See* Rev. Rul. 84-30, 1984-9 I.R.B. 5; Rev. Rul. 57-465, 1957-2 C.B. 250; *Helvering v. Schoellkopf*, 100 F.2d 415 (2d Cir. 1938). But see *Bausch & Lomb Optical Co. v. Commissioner*, 267 F.2d 75 (2d Cir. 1959), *cert. denied*, 361 U.S. 835 (1959) (where a corporation that issued its stock in exchange for all the assets of its 79-percent owned subsidiary was treated as receiving the assets in consideration for its stock in the subsidiary by way of liquidation—to the extent of the 79-percent stock interest—rather than in a tax-free organization).
>
> "The bill taxes the transaction in accordance with its economic substance. The effect of the bill is to treat the excess of the value held by the former M shareholders after the exchange ($100 million) over the amount by which P's value was augmented ($60 million) as if M had distributed P shares equal to that difference ($40 million in the example) to its shareholders. Under the 1976 amendments to section 1248, M would recognize ordinary income of $40 million if the P stock were distributed as a dividend-in-kind or in liquidation. Similarly, under the bill, $40 million is includible in M's income as a dividend."

Section 1248(i) is effective for exchanges made after July 18, 1984, in taxable years ending after July 18, 1984.

---

[1] The Service also issued Rev. Proc. 83-88, I.R.B. 1983-51, 17, which amplified Rev. Proc. 83-22 by adding the issue to the list of areas under extensive study in which no rulings are issued.

CHAPTER 69

OFFSHORE COMMODITY FUNDS

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Background

The use of offshore commodity funds to avoid taxes or to minimize tax liability in ways the Treasury found unjustifiable involved three "loopholes" in the pre-1984 TRA statutory provisions.

A. Accumulated Earnings Tax

The accumulated earnings tax provided by §531 is imposed on any corporation formed or availed of for the purpose of avoiding tax with respect to its shareholders by accumulating earnings rather than distributing them as dividends.[1] In the case of a foreign corporation having U.S. shareholders, the tax will apply with respect to any accumulated earnings attributable to income from U.S. sources. It will not, of course, apply where the shareholders are currently taxed on such income because the corporation is a personal holding company, a foreign personal holding company, or where the corporation is a controlled foreign corporation and the shareholders have sufficiently large (10 percent or more) interests to render them liable to tax under subpart F. The subsidiary (corporation S) of a foreign parent (corporation P) having U.S. shareholders is not subject to the §531 tax where it currently distributes its earnings to P as dividends.[2] S corporation can be availed of to engage in commodity futures trading in the U.S. Gains from such trading are not taxable by the U.S. since such trading through an independent agent is not treated as being engaged in a U.S. trade or business.[3] Moreover, although the gains are U.S. source income, they do not fall within the types of such income subjected to tax under §881. The trading income earned by S may then be distributed to P. In the hands of P, dividends from its foreign subsidiary do not constitute U.S. source income. Thus, if P has no other U.S. source income and is not engaged in conducting a U.S. trade or business, it is not subject to any U.S. taxes. The futures trading gains can thus be accumulated by P free from any U.S. income tax and exempt from the §531 tax so long as its stock is widely held by the U.S. shareholders.

B. Status as Foreign Investment Company

In the situation described above, P may carry on futures trading in countries other than the U.S. Since income from this activity is clearly not U.S. source income, no §531 tax is imposed on it. Further, where a U.S. shareholder sells his stock in P, the price will reflect the accumulated earnings attributable to the foreign futures trading. While the Code permits gain from the sale of stock in a foreign corporation to be treated as long-term capital gain where the shareholder has never held a 10 percent or greater interest in the corporation,[4] §1246(a)(1) provides that such gain, irrespective of the extent of the shareholder's interest, is to be treated as ordinary income to the extent of the shareholder's ratable share of the accumulated earnings and profits of the corporation since December 31, 1962, where the foreign corporation was a "foreign investment company" at any time during which the shareholder held the stock. The definition of a "foreign investment company" is (1) a company registered under the Investment Company Act of 1940, or (2) a corporation engaged in investing, reinvesting or trading in securities within the meaning of §3(a)(1) of such Act.[5] However, commodity futures are not "securities" within the meaning of the Act. Thus, P's commodity futures trading activity does not result in its having foreign investment company status. The gain from the sale of its shares attributable to the accumulated futures trading gains will not, therefore, be treated as ordinary income under §1246.

C. Avoidance of the Straddle Rules

Section 1092(a)(1) disallows and defers to later years any deductions with respect to losses sustained from positions of a straddle to the extent they do not exceed unrecognized gains from offsetting positions of such straddle. A straddle is defined as offsetting positions with respect to personal property.[6] "Personal property," for purposes of §1092 (prior to the 1984 TRA amendments) was defined as actively traded personal property other than stock.[7] A "position" in such property was defined as an interest (including a futures or forward contract or option) in such property.[8] The offshore commodity funds (P and S corporations in the foregoing discussion) could be formed or availed of to take positions in personal property offsetting positions taken by the shareholders of P. Where such shareholder held positions were disposed of at a loss, §1092 was inapplicable since the holding of stock in P was not treated as a "position in personal property," even though such stock, because of P's (or S's) holding of positions offsetting those of the shareholders, offset the loss positions. The loss deferral rule of §1092(a)(1) was thus avoided.

II. Overview

To deal with the above described sources of tax abuse, the following amendments were made to the Code by the 1984 TRA.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

A. Amendments to Section 535 (Defining "Accumulated Taxable Income")

Act §125(a) amends §535, adding new subsection (d) which provides the general rule that, for purposes of §§531-537,[9] if 10 percent or more of the earnings and profits of any foreign corporation for any taxable year is (A) derived from U.S. sources, or (B) effectively connected with a U.S. trade or business, any distribution out of such earnings and profits (and any interest payment) received by a "U.S. owned" foreign corporation is to be treated by the latter corporation as U.S. source income. This applies to distributions received directly or through one or more entities.[10] A "U.S. owned foreign corporation" has the meaning given that term by §904(g)(6) (as added to the Code by Act §121(a)): any corporation 50 percent or more of whose stock (voting power or value) is held directly or indirectly by U.S. persons. Indirect ownership is determined by application of §958(a)(2) and (3) and §318(a). "U.S. person" is defined by §7701(a)(30).

B. Amendments to Section 1246(b)(2)

Act §134(a) amends §1246(b)(2), defining "foreign investment company," as any foreign company engaged (or holding itself out as being engaged) primarily in the business of investing, revesting, or trading in: (A) securities (as defined as §2(a)(36) of the Investment Company Act of 1940, as amended), (B) commodities, or (C) any interest (including a futures or forward contract or option) in property described in (A) or (B) at a time when 50 percent or more of the stock (voting power or value) was held directly or indirectly by U.S. persons. Indirect stock ownership is determined by applying §958(a)(2) and (3) and §318(a).

C. Amendments to Section 1092

As is discussed in detail in chapter 27, §101 of the Act made numerous amendments to §1092. Of these, the most significant for purposes of this discussion were the amendments repealing the exclusion from the definition of "personal property" exchange — traded stock options, and, especially, the amendments made to §1092(d). Under new paragraph (3) of that subsection, while stock is still excluded from the definition of "personal property," there are provided three exceptions to this rule. Stock is personal property (and, as a result, direct ownership of such stock may be treated as a position in personal property for purposes of the loss deferral rule) where (1) the offsetting position is an option with respect to the stock, (2) the offsetting position is substantially similar or related property (other than stock)[11] and (3) where the stock is "any stock in a corporation formed or availed of to take positions in personal property which offset positions taken by any shareholder."[12]

D. Effective Dates

The amendment to §535 applies to distributions and interest payments received by U.S. owned foreign corporations on or after May 23, 1983 in taxable years ending after that date.[13] In the case of a U.S. owned foreign corporation in existence on May 23, 1983, the amendment applies to taxable years beginning after December 31, 1984.

The amendment to §1246(b)(2) applies to sales and exchanges (and distributions) on or after September 29, 1983 in taxable years ending after that date.[14] In the case of a sale or exchange (or distribution) no later than July 18, 1985, the amendment will not apply with respect to stock held by the taxpayer continuously from September 29, 1983 to the date of such sale, exchange or distribution.[15]

Section 1092(d)(3)(B)(ii) applies to any positions established on or after May 23, 1983 in taxable years ending on or after that date.

III. Detailed Analysis

The amendments to §§535 and 1246 described above appear effectively to deal with two of the perceived loopholes as set forth in the background, *supra*. A foreign corporation engaged in trading in commodity futures contracts or in options on such contracts (this will, presumably include both the buying and selling of such options and the granting of such options for premiums) or in trading in commodities at any time when 50 percent or more of its stock is held by U.S. shareholders, directly or indirectly, comes within the definition of a foreign investment company for purposes of §1246.

The amendments made to §535, described above, seem somewhat broader in scope than strictly needed to deal with tax avoidance by offshore commodity funds as set forth in the Overview. Where at least 10 percent of a foreign corporation's earnings and profits are attributable to either (a) U.S. source income (whether or not taxed under §881) or (b) to income effectively connected with a U.S. business (whether or not U.S. source income), distributions of such income to any corporation, 50 percent or more of whose stock is owned, directly or indirectly, by U.S. persons, are treated as U.S. source income for purposes of §§531-537 of the Code (but not for any other purposes). Distributions include the payment of interest. One problem which may well be encountered in applying these provisions is the determination of whether a given distribution or payment of interest is made from the tainted earnings where the distributing or paying corporation has other earnings. Some apportionment formula will undoubtedly be provided by regulations.

Observation: Such apportionment formula may conflict with the source of dividend rules for foreign tax credit purposes. But, typically, foreign commodity fund corporations are organized in tax haven countries so there probably will be few credit complications.

Determining a foreign corporation's earnings and profits attributable to commodity futures trading may itself present a number of difficulties. The somewhat complex mark to market rules of §1256 will apply, since presumably, the quantum of earnings and profits is to be determined under U.S. tax laws.

Finally, the determination, for purposes of §1092(d)(3)(B)(ii), of whether a corporation trading in positions in actively traded property has been "formed or availed of" to take positions offsetting those of *any shareholder* will, in some circumstances, almost certainly give rise to disputes. Some safe harbor guidelines would seem in order so that a taxpayer holding shares of a corporation engaged in dealing in commodities or other interests in property does not have to examine the corporation's hold-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ings before investing in a position which may, if offset by another position, be subject to loss deferral. The legislation is, presumably, aimed at deliberate manipulation rather than the purely fortuitous simultaneous holding by a shareholder of a position the risk of loss with respect to which is reduced by his holding of stock of the corporation, or vise versa. It should be understood that the character of the corporation's holdings does not pass through to the shareholder. If the corporation holds, say, a regulated futures contract, its stock does not become subject to §1256. However, if it has been availed of to enter into the contract to reduce risk of loss by the shareholder who holds another such contract (which would offset the former if held by the shareholder), the stock of the corporation is a position in personal property and the shareholder thus holds a "mixed straddle" [16] to which the rules of §1092 apply."

Note that shares of stock in such a corporation constitute a position in personal property if the forbidden purpose exists with respect to any shareholder, regardless of whether or not a shareholder whose stock is treated as a position in personal property was even aware that the corporation was availed of to take offsetting positions. Thus, shareholder A, or a shareholder group of which A is a member, may cause the corporation to take positions offsetting positions held by them. Stock held by shareholder B, who played no part in this scheme, is equally tainted. Should such "innocent" shareholder enter into positions viewed under the very broad guidelines of §1092(c)(2) and (3) as "offsetting," he will be subject to the loss deferral rule of §1092(a)(1). This, however, is somewhat improbable. The language was probably framed so as to prevent any deficiencies from being challenged on the ground that the taxpayer played no role in the corporation's activities.

CHAPTER 70

STAPLED STOCK TECHNIQUE NO LONGER AVAILABLE FOR DECONTROLLING A CFC

Deborah M. Beers, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

"Stapled stock" transactions have provided a unique opportunity to decontrol certain foreign corporations where control of those corporations by U.S. persons may have a significant impact on the tax liability of the controlled corporation and its shareholders. In a "stapled stock" transaction, stock of a foreign subsidiary of a U.S. corporation is distributed pro rata to the shareholders of the U.S. parent and then paired or "stapled" to the stock of the parent by restricting the transfer of the stock of one corporation without the transfer of the stock of the other. In some cases, the stock certificates of the stapled entities are printed on both sides of a single document. If the stock ownership of the domestic U.S. parent corporation is sufficiently widely-held, then the pro rata distribution of the stock of the foreign subsidiary to the shareholders of the U.S. parent will in most cases avoid the concentration of control in a few U.S. shareholders which is necessary for the corporation to be treated as a foreign personal holding company (FPHC) or controlled foreign corporation (CFC).

A corporation may be an FPHC if, assuming certain gross income requirements are met, more than 50 percent in value of its outstanding stock is owned directly or indirectly by or for not more than five individuals who are citizens or residents of the United States (the "United States Group").[1] A United States shareholder of an FPHC is required to include in income his proportionate share of the corporation's "undistributed foreign personal holding company income." [2]

A foreign corporation may be a controlled foreign corporation if more than 50 percent of the total combined voting power of all classes of stock entitled to vote is owned, actually or constructively, by United States shareholders on any day during the taxable year of the foreign corporation.[3] A "United States shareholder" is a United States person, including a corporation, which owns, directly or indirectly, ten percent or more of the total combined voting power of all classes of stock entitled to vote of the foreign corporation.[4] Every United States shareholder of a controlled foreign corporation must include in his gross income his proportionate share of the corporation's "Subpart F" income for the year, as well as his proportionate share of certain other types of income designated in §951(a).

While the FPHC provisions define control in terms of the value of the stock held by U.S. persons and the CFC provisions define control in terms of voting power, both agree that a foreign corporation will not meet the definition of either a FPHC or a CFC if the interests of certain U.S. shareholders do not exceed 50 percent of the total interests in the corporation. Regulations promulgated under the CFC provisions [5] set forth a somewhat less than objective test for determining whether the U.S. shareholders own the requisite percentage of voting power. The regulations provide that "[a]ny arrangement to shift formal voting power away from United States shareholders of a foreign corporation will not be given effect if, in reality, voting power is retained." [6] The courts have, in general, interpreted this provision to prohibit attempts to dilute U.S. share ownership through the nominal transfer of 50 percent of the voting power of a foreign corporation to non-U.S. shareholders in those cases where the new foreign shareholders are in fact, if not formally, under the control of the U.S. owners. In *Garlock, Inc. v. Comr.*,[7] the Second Circuit, in affirming the Tax Court, found that the formal transfer of 50 percent of the voting power of a Panamanian subsidiary through the transfer of preferred stock to friendly foreign investors with the understanding (which was reflected in the board of directors minutes) that the stock would be voted in accordance with the wishes of the U.S. parent was in fact an "arrangement" to shift voting control away from the U.S. shareholders. The court found that, based on the authority of the regulations, the subsidiary was in fact a CFC. In *CCA, Inc. v. Comr.*,[8] however, the Tax Court found that the U.S. shareholders, in transferring voting control to foreign interests, had indeed surrendered the requisite percentage of voting power since the stock was transferred, without significant restrictions, to foreign shareholders with substantial adverse business interests.

The validity of achieving decontrol of a foreign corporation through the distribution and stapling of the stock of a foreign subsidiary has not been litigated, although the IRS appears to have sanctioned at least the concept of stapled stock in a published revenue ruling [9] and in a number of private rulings issued to real estate investment trusts (REITs).[10]

II. Overview

A. *Statutory Changes*

Section 136 of the Act adds a new §269B ("Stapled Entities") to the Code. Subsection (a)(1) of §269B sets forth the general rules to be applied in the taxation of stapled domestic and foreign entities. Under this provision, if a domestic and foreign corporation are stapled entities, the foreign corporation shall be treated as a domestic

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

corporation.[11] In §269B(b), the Act directs the Secretary to prescribe regulations necessary to prevent avoidance or evasion of Federal income tax through the use of stapled entities, including regulations providing the extent to which one of such entities shall be treated as owning the other entity (to the extent of the stapled interest).[12] Although the term "entity" as used in §269B includes corporations, partnerships, trusts, associations, estates or any other form of carrying on a business or activity, it will be the corporate entities which are of primary concern for foreign tax purposes.

A "stapled entity" is any group of two or more entities if more than 50 percent in *value* of the beneficial ownership in each consists of stapled interests.[13] An interest is considered to be stapled if "by reason of form of ownership, the restrictions on transfers, or other terms or conditions, in connection with the transfer of 1 of such interests the other interests are also transferred or required to be transferred."[14] The law provides that, in general, no treaty provisions or any other provisions of the law shall be construed as permitting an exemption from the provisions of §269B.

B. Effective Dates

Section 269B is generally effective in general on July 18, 1984, the date of enactment of the Act. There are a number of exceptions to the effective date, four of which specifically are directed to domestic and foreign stapled entities. First, the Act provides that, with respect to entities which were stapled on June 30, 1983, §269B shall take effect on January 1, 1985. In the case of stapled interests in a foreign corporation, however, the effective date is extended to January 1, 1987. Second, the provisions applicable to a stapled domestic and foreign corporation shall not apply to a "qualified Puerto Rican corporation" and a domestic corporation which were stapled on June 30, 1983. For this purpose, a "qualified Puerto Rican corporation" is a corporation which is described in §957(c) of the Code, so long as that corporation does not own any stock of a corporation which is not described in §957(c).[15] Third, the Act provides an exception for entities which were stapled as of June 30, 1983, and enjoyed a treaty benefit as of such date, so that §269B of the Code shall not override such benefit so long as the treaty remains in effect. Fourth, there is a relief provision for those foreign and domestic corporations which, as of June 30, 1983, were stapled entities. Under this exception, the domestic corporation may treat the stapled foreign entity as owned by the domestic corporation to the extent of the stapled interests, if such election is made by January 14, 1985 (not more than 180 days after July 18, 1984, the date of enactment) in a manner to be prescribed by the Secretary of the Treasury or his delegate. The election, once made, may be revoked only by the Secretary or his delegate.

III. Detailed Analysis

A. General Rule

Section 269B was designed in part to limit the abuse of the provisions relating to FPHCs and CFCs in situations in which formal decontrol was achieved by the stapling of related entities.[16] An additional concern in the foreign area was that the stapling of a taxable entity to a nontaxable entity (or to a foreign corporation taxed at a considerably lower rate than a domestic corporation) might result in the opportunity to shift profits away from the taxable U.S. entity through improper transfer prices or other means which, while subject to correction under §482 of the Code, have proven difficult to correct in practice.[17]

Section 269B(a)(1) treats a foreign corporation which is stapled to a domestic corporation as a domestic corporation. Therefore, the stapled foreign corporation will be subject to U.S. tax on its worldwide income. The Act provides an exception in the effective date provisions for those foreign and domestic corporations which were stapled entities on June 30, 1983. The U.S. corporation in that case may elect to treat all of the stapled interests in the foreign corporation as owned by the U.S. corporation. In many cases this will result in the stapled foreign corporation being treated as a CFC or a FPHC.[18] The U.S. corporation therefore would be subject to tax on the undistributed foreign personal holding company income or Subpart F income attributable to the stapled stock. Since the U.S. corporation would not be taxable on any of the earnings attributable to stock held by non-U.S. shareholders, however, this election generally would result in a smaller tax on the income of the stapled foreign entity than would be imposed if it were treated as a domestic corporation under §269B(a)(1). The election to treat the stapled foreign corporation as a subsidiary to the extent of the stapled interests generally would not make it eligible to file consolidated returns with the U.S. parent, except in the case of a contiguous country stapled corporation which might be eligible to consolidate under the rules of §1504(d).[19]

Since the Act defines "stapled entities" to mean any group of two or more entities where more than 50 percent in value of the beneficial ownership of each consists of stapled interests, it is conceivable that, in order to avoid §269B, U.S. corporations may attempt to formally "destaple" 50 percent of the beneficial ownership in the related entity, much in the same way as there have been attempts to "decontrol" a CFC through the formal transfer of voting rights to foreign interests. Thus, new litigation may arise concerning the extent to which 50 percent in value of an entity is in fact stapled to another such entity. Regulations to be promulgated under the directive of §269B(b) might, however, deal with this situation in a manner more specific than the regulations currently promulgated under §957.

B. Exceptions

As noted above, the effective date provisions contain four exceptions to the applicability of Code §269B to domestic and foreign stapled entities. Two of these — the delay to January 1, 1987 of the effective date for foreign entities, and the election to treat pre-existing stapled entities as owned by the domestic sister corporation — provide general relief for pre-existing structures. The exception for U.S. corporations stapled to pre-existing Puerto Rican corporations was inserted because, under the possession's corporation rules (§936), tax benefits comparable to those of stapling are accorded to certain Puerto Rican corporations.[20] The exception to the general rule that the stapled stock provisions override treaties will not restrict the availability of treaty benefits for entities stapled on June 30, 1983 so long as the treaty is not renegotiated to eliminate benefits to such stapled companies under the relevant

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

treaty. Since the draftors hope to encourage restrictions on the availability of such benefits in future treaties, this exception is limited to treaty benefits under treaties in effect on June 30, 1983.[21]

CHAPTER 71

MODIFICATION OF FOREIGN PERSONAL HOLDING COMPANY RULES

Deborah M. Beers, Esq.
Silverstein and Mullens
Washington, D.C.

I. Foreign Personal Holding Company Attribution Rules Amended [Act §§132(a) and (b)]

A. Introduction

The foreign personal holding company (FPHC) provisions have been part of the Internal Revenue Code since 1937 when they were enacted as a complement to the personal holding company (PHC) legislation of 1934 to prevent the abuse known as the foreign "incorporated pocketbook," whereby United States shareholders would accumulate in foreign corporations certain types of passive income without incurring any U.S. tax liability. Since the United States has no jurisdiction over a foreign corporation which does not have any U.S. source income, the FPHC rules require "United States shareholders" of the foreign corporation to include in gross income their proportionate share of the corporation's "undistributed foreign personal holding company income" (UFPHCI). "United States shareholders" [1] may include U.S. citizens or residents, U.S. corporations, U.S. partnerships, or estates and trusts (other than those estates and trusts whose gross income includes only income from sources within the United States). Since, prior to the 1984 amendment, the "United States shareholders" included only those individuals or entities which actually owned stock in the FPHC, a United States person could avoid the requirement of inclusion of UFPHCI in income by interposing a foreign partnership, foreign operating corporation (other than an FPHC), or foreign estate or trust between the United States person and the FPHC.

For purposes of determining which corporations meet the definition of FPHC, Code §552 sets forth both a "gross income test" and a "stock ownership test." Under the gross income test, at least 60 percent of the gross income of a foreign corporation for the taxable year must be foreign personal holding company income for it initially to qualify as an FPHC.[2] After initial qualification as an FPHC, the gross income test will be satisfied if the corporation in any subsequent year has foreign personal holding company income equal to at least 50 percent of its gross income during the taxable year.[3] Code §553 defines the foreign personal holding company income of a corporation to be that portion of its gross income which consists in general of dividends, interest, royalties and annuities, gains from the sale or exchange of stock or securities and commodity futures transactions, distributions from a trust or estate, amounts received under personal service contracts, amounts received as compensation for the use of corporate property by major stockholders, and rents (unless the rents constitute 50 percent or more of the corporation's gross income.)

The "stock ownership test" requires that at any time during the taxable year more than 50 percent in value of the outstanding stock of a foreign corporation must be owned directly or indirectly by or for not more than five individuals who are citizens or residents of the United States (the "United States group").[4] For purposes of determining the ownership of stock under this section, the attribution rules of Code §554 apply. Under those rules, prior to their amendment by the 1984 Act, stock was attributed from an entity such as a corporation, partnership, estate, or trust to its individual shareholders, partners, or beneficiaries in proportion to their interest in the corporation, partnership, estate, or trust.[5] In addition, an individual was considered to own the stock owned directly or indirectly by or for his family or by or for his partner. For this purpose, the term "family" included brothers and sisters, spouses, ancestors, and lineal descendants.[6] Also, any person having an option to acquire stock in an FPHC was considered as actually owning such stock. In certain cases, Code §554(a)(5) provides that the same stock which is considered to be constructively owned by an individual as a result of attribution from a corporation, partnership, estate, or trust or by reason of having an option to acquire stock, could be "reattributed" in order to make another the constructive owner of the stock.[7]

At least one case casts doubt on the ability of the constructive ownership rules to attribute the stock of nonresident alien siblings to U.S. family members for the purpose of determining whether or not a corporation is a FPHC.[8] In *Estate of Nettie S. Miller v. Comr.*, the Tax Court refused to attribute the stock of two Canadian sisters who owned over half of the stock of a Canadian corporation to their brother, a U.S. citizen and resident who owned no stock. Without this attribution, the corporation was not a foreign personal holding company and its U.S. shareholders, who were unrelated to the Canadian sisters, were not subject to the tax on the corporation's undistributed foreign personal holding company income. From the language of the opinion it is unclear whether the Tax Court's refusal to apply the language of the statute literally was based on the premise that the U.S. citizen to whom the stock was attributed actually owned no stock in the foreign corporation, or whether the opinion meant to restrict the application of the constructive ownership rules to bar all attribution from nonresident aliens to U.S. persons. In the opinion, the majority noted that:

> "We construe [the predecessor to §554(a)(2)] as meaning that if there are five or less U.S. shareholders who together own over 50 percent of the stock of the foreign

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

corporation, then it is a foreign personal holding company and they form the U.S. group. If there are six or more U.S. shareholders who together own over 50 percent of the stock of the foreign corporation, then the foreign corporation is not a foreign personal holding company, unless by applying [the predecessor to §554(a)(2)] the ownership of family-held stock is attributed to one family member and the effect is to have no more than five shareholders." [9]

The opinion thus may be read as limiting §554(a)(2) "strictly to concentrating stock ownership among related U.S. shareholders in order that five or less be found to have the requisite control." [10] The Internal Revenue Service has announced its nonacquiesence in this case.[11]

The FPHC attribution rules are at variance with the attribution rules under Subpart F (Code §§951-964), which was enacted in 1962 to prevent circumvention of the FPHC provisions by requiring the shareholders of a "controlled foreign corporation" (CFC) to include certain types of income (Subpart F income) in gross income. The constructive ownership rules of Subpart F (which appear in Code §958) are based upon the rules of Code §318, and therefore do not require attribution of stock ownership between siblings and prohibit attribution of stock ownership from a nonresident alien individual to a citizen or resident of the United States, thus codifying the result of the *Nettie Miller* case.

B. Overview

1. Attribution for Purposes of Determining FPHC Status

Section 132(a) of the Act amends Code §554 in two ways. First, the Act eliminates family attribution from a nonresident alien individual to a citizen or resident of the United States who is not the spouse of the nonresident alien individual, but only in those cases in which the U.S. citizen or resident does not otherwise own stock in the foreign corporation. In determining whether the U.S. citizen or resident otherwise owns stock in the foreign corporation, the amendment requires attribution (other than family attribution) from a corporation, partnership, estate or trust, or by reason of owning an option, to the U.S. citizen or resident. Second, §132(a) of the Act also provides that stock of a foreign corporation owned by a foreign partner shall not be attributed to a U.S. citizen or resident who does not otherwise own stock in the foreign corporation. For this purpose, as in the case of family attribution, the Act requires that, in determining whether the U.S. citizen or resident otherwise owns stock in the corporation, the attribution rules (other than attribution from a partner who is not related to the U.S. shareholder) must be applied.

2. Attribution for Purposes of Inclusion in Gross Income

With respect to inclusion in income of United States persons who hold no stock directly in an FPHC, but who have interposed between themselves and an FPHC a foreign entity (*e.g.*, a corporation, partnership, trust or estate) §132(b) of the Act amends §551 of the Code by redesignating subsection (f) as subsection (g) and by adding a new subsection (f) to provide that stock of a FPHC owned by a foreign partnership, estate or trust, or by a foreign corporation which is not a foreign personal holding company shall be considered as being owned proportionately by its partners, beneficiaries, or shareholders.

3. Effective Dates

Both paragraphs (a) (amending Code §554) and (b) (amending Code §551) of §132 of the Act are effective with respect to taxable years of foreign corporations beginning after December 31, 1983.[12] There is a one-year extension, to December 31, 1984, however, for certain trusts created before June 30, 1953 if (1) none of the beneficiaries of the trust was a citizen or resident of the United States at the time of its creation or within five years thereafter, and (2) if the trust does not after July 1, 1983 acquire (directly or indirectly) stock of any foreign personal holding company other than a company where substantially all of its assets were previously held by such trust or such company ceases to be a foreign personal holding company before January 1, 1985. The exception is applicable with respect to stock which is held by such a trust directly or indirectly within the meaning of §554 of the Code.

C. Detailed Analysis

1. Attribution for Purposes of Determining FPHC Status

Under the Act, as under prior law, the attribution rules of Code §554 apply for purposes of determining when a corporation has met the stock ownership test of Code §552(a)(2) and (assuming the gross income test is met) is a FPHC for the taxable year. Family attribution from a nonresident alien individual to a U.S. citizen or resident is however limited under the Act in most cases to attribution from a nonresident alien spouse to a U.S. citizen or resident so long as the U.S. citizen or resident does not otherwise own stock in the foreign corporation. Similarly, the Act limits attributions from a foreign partner to a U.S. citizen or resident partner who does not otherwise own stock in the foreign corporation.[13] The rationale for the change in family attribution as expressed by both the House and Senate was that attribution from nonresident alien family members was generally "inappropriate," particularly where the U.S. person to whom the ownership was attributed owns no stock.[14] The House and Senate versions of H.R. 4170 did not, however, restrict the amendment made by the bill to those cases in which the U.S. person actually owned stock. This restriction was added in the Conference which saw "the possibility of significant abuse [in the case where the U.S. person to whom the stock was attributed otherwise owned stock in the foreign corporation]." [15] Attribution from nonresident alien partners to U.S. citizens or residents likewise was viewed as "inappropriate" by the Senate which eliminated such attribution in those cases in which the U.S. partner does not otherwise own stock in the foreign corporation.[16] The partnership attribution provision apparently originally was inserted in the 1937 FPHC rules "[b]ecause of the close business relationship existing between members of a partnership." [17] The need for such attribution may be considerably diminished today, however, since partnership relationships often are the result of anonymous investments in public limited partnerships.

As noted, the limitations on family and partnership attribution apply only where the U.S. citizen or resident

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

does not "otherwise" own stock in the foreign corporation. In the case of family members, the U.S. citizen or resident to whom ownership would be attributed but for the amendment made by the Act may not own stock in the foreign corporation actually or constructively, determined after the application of both the attribution and the reattribution rules of §554(a) (other than family attribution). In the case of partners to whom stock ownership would be attributed but for the amendment made by the Act, such partners may not under the Act actually or constructively own stock in the foreign corporation, determined after application of both the attribution and reattribution rules of §554(a) (other than attribution from partners who are not members of a U.S. shareholder's family).[18]

The amendment to the attribution rules as finally drafted goes beyond the most restrictive interpretation of *Nettie S. Miller, supra,* since that case had refused to attribute the stock ownership of nonresident alien sisters to their brother, a U.S. citizen and resident, who had no actual ownership of stock in the Canadian corporation. The effect of any constructive ownership (other than through family membership) through which ownership might have been attributed to the U.S. citizen was not discussed in that case. In the future, therefore, U.S. taxpayers to whom ownership of a foreign holding company might be attributed by reason of family attribution (other than spousal attribution) will be exempt from such attribution only if there is no other provision of §554(a) through which stock ownership could be attributed or reattributed to them.

2. *Inclusion in Income of United States Persons Holding Interest through a Foreign Entity*

Under prior law, U.S. taxpayers have been able to interpose between themselves and a foreign personal holding company a foreign entity; *e.g.,* a foreign trust, partnership, or corporation (which was not itself a foreign personal holding company).[19] The foreign trust, in particular, has been a useful tool for providing significant income tax deferral and, in some cases, complete tax avoidance. Before 1962, no distinction was made between a foreign trust with a U.S. beneficiary and a foreign trust with a foreign beneficiary. A foreign accumulation trust created by U.S. persons for the benefit of U.S. beneficiaries was treated the same as a foreign trust created by a foreign grantor for the benefit of foreign beneficiaries. Thus, a U.S. grantor could create a trust in a foreign tax haven jurisdiction with corpus consisting of foreign securities and other foreign investment assets without any current U.S. income tax consequences to the trust. The U.S. beneficiaries were taxed only when the trust income was distributed under the old five-year throwback rule. The Revenue Act of 1962 made several changes in these rules, with the most notable being the imposition of an unlimited throwback rule on foreign accumulation trusts created by U.S. persons. In 1976, Congress enacted other reforms, which included the addition of §679 to the Code. Section 679 provides that a United States person who directly or indirectly transfers property to a foreign trust is taxed on the income of that portion of the trust attributable to the transferred property if, for the taxable year, there is a U.S. beneficiary of any portion of the trust. In addition, the 1976 Act replaced the cumbersome "exact" throwback rule and the "shortcut" throwback rule of §668 with a new mandatory five-year throwback rule for both domestic as well as foreign trusts. The Act also imposed an interest charge on the beneficiary's additional tax upon an accumulation distribution.

Since foreign entities continued even after these reforms to afford significant avoidance opportunities when interposed between a U.S. person and a foreign holding company, however, the Act attributes the ownership of stock in a FPHC by a partnership, corporation, estate or trust to its partners, shareholders, or beneficiaries. As under current law, the grantor of a trust, rather than the beneficiaries, will be treated as its owner for purposes of the foreign personal holding company rules to the extent that he is taxed on the income of the trust.[20]

The impact of the 1984 Act on a foreign accumulation trust, for example, may be seen by the following illustration: Suppose that X, a U.S. citizen, owns one-third of the stock of S, a foreign holding company. The balance of the stock of S is owned by a foreign trust. The foreign trust has two beneficiaries, Y and Z, who are husband and wife. Y, however, is a U.S. citizen and Z is a nonresident alien. Under §554(a)(1), the stock owned by the trust is considered to be owned proportionately by its beneficiaries for purposes of determining whether the stock ownership test of §552(a)(2) is met.[21] Y and Z each would have a 1/3 constructive ownership interest in S, therefore, due to attribution from the trust. Y also would be deemed to own the stock constructively owned by Z by reason of the reattribution rules of Code §554(a)(5). (Z is deemed to own her proportionate share (1/3) of the stock of S held by the trust, which is then reattributed to her spouse, Y.) Thus, since U.S. citizen Y constructively owns two-thirds (or more than 50 percent) of the stock of S, S will be considered to be a foreign personal holding company (assuming the gross income requirements are met) for the taxable year. Prior to the Act, however, X, due to his actual ownership of stock in S, would be required to report his proportionate share of foreign personal holding company income of S currently, while Y, although a constructive owner of two-thirds of the stock of S and a U.S. citizen, would not be subject to current U.S. taxation because he did not *actually* own any stock in S. Under the Act, however, Y would be considered *actually* to own his proportionate share of the stock of S held by the trust and would be taxed, along with X, on his share of the undistributed foreign personal holding company income of S.

The transitional rule with respect to certain long-term trusts, summarized above, creates a one-year extension on the application of the new "inclusion in income" rules to trusts in existence before June 30, 1953, if none of the beneficiaries of such trusts were citizens or residents of the United States at the time of their creation or within five years thereafter and if certain other requirements with respect to stock ownership by the trust are met. The purpose of this amendment appears to be to ameliorate the effect of the provision on trusts established many years ago by foreign persons solely on behalf of foreign beneficiaries for purposes unrelated to U.S. tax considerations. The amendment allows such trusts a transition period to restructure their holdings by, for instance, selling or otherwise liquidating any interest in foreign holding companies during the remainder of 1984.

II. Coordination of Subpart F Rules with the Foreign Personal Holding Company Provisions [Act §132(c)]

A. Introduction

Subpart F (Code §§951-964) was added to the Internal Revenue Code in 1962.[22] The avowed purpose of the Subpart F provisions was to prevent the use of "tax havens" to reduce or eliminate tax liabilities of United States persons both at home and abroad.[23] Under Subpart F, a United States person who owns, or is considered to own, 10 percent or more of the total combined voting power of all classes of stock entitled to vote of a "controlled foreign corporation" (CFC) is required to include in gross income his pro rata share of certain types of income of the CFC. In general, the includible income consists of: (1) the pro rata share of the CFC's "Subpart F income" for the year; (2) the pro rata share of the CFC's previously excluded "Subpart F income" withdrawn from investments in less developed countries; (3) the pro rata share of the CFC's previously excluded "Subpart F income" withdrawn from foreign base company shipping operations for such year; and (4) the pro rata share of the CFC's increase in earnings invested in U.S. property.[24]

The term "Subpart F income" includes: (1) income derived from the insurance of United States risks; (2) foreign base company income; (3) certain international boycott income; and (4) the amounts of any illegal bribes, kickbacks, or other payments made by or on behalf of the corporation during the taxable year.[25] The term "foreign base company income" in turn means for any taxable year the sum of: (1) the foreign personal holding company income; (2) the foreign base company sales income; (3) the foreign base company services income; (4) the foreign base company shipping income; and (5) the foreign base company oil-related income.[26]

"Foreign personal holding company income" required to be included in gross income under Subpart F generally includes the same types of income as are included under the FPHC rules, except that rents are included under the CFC rules without regard to the 50 percent limitation. Under the CFC rules, however, foreign personal holding company income does not include dividends and interest received from a related person which is (1) created or organized under the laws of the same foreign country in which the CFC is created or organized, and (2) has a substantial part of its assets used in its trade or business located in such same foreign country.[27]

The definition of the term "controlled foreign corporation," which appears in Code §957(a), includes any foreign corporation of which more than 50 percent of the total combined voting power of all classes of stock entitled to vote is owned, actually or constructively, by United States shareholders on any day during the taxable year of such foreign corporation. For purposes of determining whether the 50 percent ownership test is met, the constructive ownership rules of Code §958 apply. The constructive ownership rules of Code §958 are modeled on those of Code §318(a), rather than Code §554 (FPHC attribution rules), and, unlike the FPHC rules, prohibit the attribution of stock owned by a nonresident alien individual to a U.S. citizen or resident.

Because of the overlap between the definition of a CFC in Code §957 and of an FPHC in Code §552, situations will arise where a United States shareholder may be subject to tax imposed both under Subpart F and the FPHC provisions. In order to coordinate Subpart F and the FPHC provisions, Congress enacted Code §951(d) (which prior to the Act provided that a United States shareholder who was subject to tax under the FPHC provisions on the income of a CFC was not required to include in gross income any amount under Code §951(a) with respect to such company). A literal reading of §951(d) suggests that the FPHC provisions preempt the Subpart F provisions in any year in which a shareholder of an FPHC is taxed on the UFPHCI of a CFC under Code §551(b). Regulations §1.951-3 provides that the prohibition on inclusion in gross income of a shareholder of an FPHC of amounts under Subpart F is limited, however, to amounts attributable to the earnings and profits of the corporation for that taxable year. Thus, under this regulation, a U.S. shareholder of a FPHC also meeting the definition of a CFC might be required to include in income under Subpart F his proportionate share of, for example, the corporation's increase in earnings invested in United States property for such year if such investment were made out of earnings and profits attributable to one or more prior taxable years.

As might be expected, Regs. §1.951-3 has been subject of litigation; the result is a conflict between the 10th Circuit and the Court of Claims on the validity of the regulation.[28] In *Estate of Whitlock v. Comr.*,[29] the 10th Circuit upheld the validity of Regs. §1.951-3 and ruled that the stockholders of a CFC which was also an FPHC must include in their gross income increases in earnings invested in United States property which were made out of earnings and profits accumulated prior to the taxable year in issue. Six years later, the United States Court of Claims in *Estate of Lovett v. U.S.*,[30] ruled that, in accordance with the literal language of Code §951(d), a U.S. shareholder subject to tax on FPHC income during the taxable year "shall not be required to include in gross income, for such taxable year, any amount under [§951(a)] with respect to such company." The Court of Claims thus invalidated Regs. §1.951-3 to the extent that they required a U.S. shareholder of a corporation which was both a CFC and an FPHC to include in income during the taxable year the amount of its increased investment in U.S. property which was attributable to earnings and profits of prior years.

B. Overview

1. Amendment of Code §951(d)

Section 132(c)(1) of the Act amends Code §951(d) to provide that U.S. shareholders of a CFC which is also an FPHC will be taxed on the CFC's Subpart F income only under Subpart F, and not under the FPHC rules, to the extent that it otherwise would be taxable under both.

2. Same Country Dividend and Interest Rule

Section 132(c)(2) of the Act amends Code §552 (defining an FPHC) by adding a new Subsection 552(c), which excludes from the definition of foreign personal holding company income in Code §553(a)(1) any dividends or interest which are described in subsection (A) of Code §954(c)(4) of Subpart F, and are received from a related person which is not itself an FPHC.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

3. Effective Dates

The amendment made to Code §951(d), relating to the relationship between Subpart F and the FPHC provisions, is effective beginning after July 18, 1984, the date of enactment. The amendment which adds to the FPHC provisions the "same country dividend and interest rule" of Subpart F, however, is effective for taxable years of foreign corporations beginning after March 15, 1984.

C. Detailed Analysis

1. Amendments to Code §951(d)

The amendment to Code §951(d), which, prior to the Act, arguably required the provisions of Subpart F to be preempted by the FPHC rules, will, under the Act, provide that a CFC's Subpart F income will be taxable under Subpart F but not under the FPHC rules to the extent that it otherwise would be taxable under both. Therefore, a corporation which is subject to tax under the FPHC rules will not be exempt from tax under Subpart F. If income is includable under only one set of rules, it will be taxed under that set of rules. Where, as in the *Lovett* and *Whitlock* cases, a taxpayer may be taxable under Subpart F on amounts other than Subpart F income, such as increased investments in U.S. property, the taxpayer will be taxable under Subpart F whether or not it is subject to the FPHC tax.[31] The result of the *Lovett* case, therefore, is reversed by the legislation. Since the amendment is effective beginning after the date of enactment, however, and since both the Senate and House Reports [32] provide that no inference as to the proper result under present law is intended, taxpayers wishing to litigate the issue of the includability in income of amounts under Subpart F where a foreign corporation also is taxable under the FPHC provisions apparently may continue to do so, at least if and until the issue is resolved by the Supreme Court.

The effect of the change in Code §951(d) on the facts presented in the *Lovett* case may be seen by the following example: In the taxable year 1963, in which a foreign corporation qualified both as a CFC and an FPHC, the taxpayer, a U.S. shareholder, paid a tax under Code §551(b) in the amount of $405,120 on the corporation's UFPHCI. Also, in 1963, the corporation increased its investment in U.S. property by $305,820 out of earnings and profits accumulated prior to 1963. The Court of Claims, in the *Lovett* case, held that, under §951(d), the U.S. shareholder need only pay the $405,120 tax on UFPHCI. Under the Act, however, both the UFPHCI and the $305,820 increased investment in U.S. property would be taxed to the shareholder in 1963.

2. Same Country Dividend and Interest Rule

As noted above, under Subpart F (Code §954(c)(4)(A)), it has been the rule since 1962 that foreign personal holding company income does not include dividends and interest received from a related person created or organized under the laws of the same foreign country as the CFC, which had a substantial part of its assets used in its trade or business located in that same foreign country. The Act extends this exception to the FPHC provisions by adding to Code §552 a new subsection (c) excluding from *both* gross income and foreign personal holding company income the dividends and interest described in subparagraph (A) of §954(c)(4). The dividends and interest are only excluded, however, if received from a related person which is *not* a foreign personal holding company.

This provision was added by the Senate "because there appears to be no shifting of income to a tax haven when a foreign personal holding company receives interest or dividends from a related corporation organized and operating in the same country." [33] Since the Senate Finance Committee did not, however, believe that such income should count as non-foreign personal holding company income,[34] such income was excluded both from the definition of foreign personal holding company income in Code §§552 and 553, and from the computation of "gross income" in Code §552. Thus, such dividends and interest are excluded both from the numerator and the denominator of the fraction from which one determines whether the "gross income test" of Code §552(a)(1) is met. For example, if a foreign corporation has gross income consisting of $80,000 of interest received from a related operating company organized in the same country and $20,000 of gains from the sale or exchange of stock or securities,[35] the gross income requirement of Code §552(a)(1) would be satisfied: The $80,000 of interest income would be excluded from "gross income" for purposes of determining the percentage of gross income which constitutes foreign personal holding company income; and the remaining $20,000 in gains from the sale or exchange of stock or securities would account for 100 percent of the gross income of the foreign corporation, all of which would be foreign personal holding company income.

3. Remaining Differences Between Subpart F and FPHC Provisions

The amendments made by the Act, while entitled "Coordination of Subpart F with Foreign Personal Holding Company Provisions," still leave a number of differences between the two sets of provisions. One of these, the difference in the attribution rules, has been noted above. For a more detailed comparison of the remaining differences between Subpart F and the FPHC provisions, *see* Lerner and Kirschbaum, 103-2nd T.M., *Foreign Personal Holding Companies*, Chapter V, pp. A-28-A-32.

[16] S. Rep. No. 169 (Vol. I), 98th Cong., 2d Sess., p. 402 (1984).
[17] S. Rep. No. 1242, 75th Cong., 1st Sess. (1937), 1937-2 C.B. 609, 614.
[18] New Code §554(c)(2).

[19] Interposing a corporation which itself is merely a holding company would in most cases be to no avail since §555 of the Code requires inclusion in the gross income of a FPHC which was a shareholder in another FPHC the amount of the dividend that the first tier company would have received had the second tier company distributed an amount equal to its UFPHCI for the taxable year. This "deemed distribution" made it impossible to insulate a U.S. shareholder from tax on UFPHCI merely by accumulating that income in a second or lower tier subsidiary where the parent corporation had no actual income.
[20] Rev. Rul. 62-155, 1962-2 C.B. 132, holds that, for purposes of determining stock ownership under §544(a)(1), shares held by an irrevocable trust should be considered owned by its present and future beneficiaries in accordance with their actuarial interest. With respect to revocable trusts, all of the shares of the trust will be attributed to the owner of the trust.
[21] Note that under the Act, this result will obtain even though Y and Z are not husband and wife but brother and sister, since the limitation on family attribution will not apply where the U.S. family member actually or constructively owns stock in the foreign corporation. Under the Act, as under prior law, Y constructively owns the stock held by the trust.

CHAPTER 72

RULES PERTAINING TO TAXATION OF OID DERIVED BY FOREIGN INVESTORS AMENDED

Kevin Dolan, Esq.
Arthur Young & Co.
Washington, D.C.
and
Donald J. Mathison, Esq.
Silverstein and Mullens
Washington, D.C.

Section 128 of the Act has amended the rules set forth in Code §§871 and 881 and elsewhere regarding withholding on original interest discount ("OID") derived by foreign investors. The amendments have a number of purposes: (i) to clarify ambiguities created by the Revenue Act of 1971 as to the scope of OID withholding;[1] (ii) to coordinate the withholding provisions with the rules enacted in the Tax Equity and Fiscal Responsibility Act of 1982[2] ("TEFRA") relating to the accrual of OID; (iii) to subject foreign investors to the stripped coupon bond rules; and (iv) to provide for the matching of deductions for OID by an issuer on the accrual method of accounting with inclusions of OID in income by a related foreign holder.

I. Elimination of Ambiguities Created by the 1971 Revenue Act

A. Introduction

The amendments to §§871, 881, and 1441 that were made by section 313 of the Revenue Act of 1971 were intended to clarify the U.S. tax treatment of OID that is derived by nonresident aliens and foreign corporations from U.S. sources and is not effectively connected with the conduct of a U.S. trade or business. The amendments excluded OID (as defined in §1232(b)) from the term "interest," so that the taxation of OID would be governed exclusively by specific rules contained in former Code §§871(a)(1)(C) and 881(a)(3). In general, OID on bonds with a maturity of more than six months was made subject to the 30 percent withholding tax under these latter provisions. The specific taxing provisions contained in §§871(a)(1)(C) and 881(a)(3) were ambiguous, however, because they referred to §1232(a)(2)(B).

Section 1232(a)(2)(B) was the pre-1969 provision that taxed OID derived by domestic taxpayers at the time a discount obligation was sold, exchanged, or retired (and not ratably each year during which the obligation was held). The reference to §1232(a)(2)(B) was probably intended to refer only to the manner in which OID accruing during a holder's period of ownership was to be measured. It was not clear, however, that the reference to §1232(a)(2)(B) was intended to refer only to the manner of measuring OID under that section, and several ambiguities arose:

(i) Did the fact that §1232(a)(2)(B) referred only to certain corporate and government bonds mean that OID on obligations issued by other persons (individuals and partnerships) was not subject to tax under §§871(a)(1)(C) and 881(a)(3)?

(ii) Did the fact that §1232 generally referred to capital assets mean that OID on obligations which were non-capital assets in the hands of the holders was not subject to tax?

(iii) Did the fact that §1232(a)(2)(B) referred to bonds held for the long-term holding period mean that OID on obligations held for less than the long-term holding period was not subject to tax?

(iv) Finally, did the fact that §§871(a)(1)(C)(ii) and 881(a)(3)(B) referred to post-March 31, 1972, bonds that would be subject to §1232(a)(2)(B) but for the fact the bonds were issued after May 27, 1969, exempt OID on government bonds from tax since government bonds were subject to §1232(a)(2)(B) regardless of whether issued before or after 1969?

The Proposed Regulations issued in 1976 took an expansive view of the government's taxing authority and provided that OID accruing on bonds with a maturity of more than six months was taxable under §§871(a)(1)(C) and 881(a)(3) regardless of whether: (i) the issuer is a corporation, a government, or a partnership or individual; (ii) the bond is a capital asset in the hands of the holder; or (iii) the bond is held for the long-term holding period.[3] Furthermore, the regulations overlooked the defect in statutory drafting and provided that post-March 30, 1972, government bonds are subject to OID taxation.[4]

The changes made by TEFRA, and their interaction with the language of the 1971 amendments, resulted in another ambiguity as to the scope of OID withholding. Under TEFRA, government bonds issued after July 1, 1982, were made subject to the economic accrual rules of §1232A. Thus, §1232(a)(2)(B) was amended to exclude post-July 1, 1982, government bonds. If the OID provisions of §§871(a)(1)(C) and 881(a)(3) were given their literal meaning, they no longer applied to such bonds.

B. Overview

The Act has eliminated these ambiguities as to the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

scope of OID withholding, resolving each of them in favor of the taxability of OID obligations.

C. *Detailed Analysis*

Consistently with old law, new §§871(a)(1)(C) and 881(a)(3) impose a gross basis tax on U.S. source OID that is not effectively connected with a U.S. business and that accrues on an obligation while such obligation is held by a nonresident alien or foreign corporation. If the obligation is interest bearing, accrued OID is subject to U.S. withholding tax at the time interest is paid. Otherwise, OID is subject to tax at the time the obligation is sold, exchanged, or retired.

At the same time, the Act terminated the trouble-making dependence of §§871(a)(1)(C) and 881(a)(3) upon §1232(a)(2)(B). While new Code §871(g) refers to new §1272 (old §1232A) and corresponding provisions of prior law (*e.g.*, §1232(a)(2)(B)), it is clear that such reference is made only for purposes of measuring the amount of OID that is considered to accrue as of the time (payment of interest or sale or exchange) when OID becomes taxable. Furthermore, new §871(g)(1)(A) defines OID obligations subject to §§871(a)(1)(C) and 881(a)(3) to include any bond or other evidence of indebtedness having OID within the meaning of §1273 (old §1232(b) as revised). Thus, OID is subject to §§871(a)(1)(C) and 881(a)(3) regardless of whether: (i) the obligation is issued by corporations, governments, partnerships, or individuals; (ii) the obligation is a capital asset in the hands of the holder; and (iii) the obligation is held for the long-term holding period for capital assets.

Note: The exemption for obligations with a maturity of six months or less has been retained in new §871(g)(1)(B)(i), although the six months has been changed to 183 days to correspond to the term of issue of short-term Treasury bills. In addition, new §871(g)(1)(B)(ii) clarifies that municipal bonds exempt under §103 are also exempt under §§871 and 881.

The changes made to §§871(a)(1) and 881(a) are applicable to payments made on or after the 60th day after July 18, 1984 (the date of enactment of the Act) with respect to obligations issued after March 31, 1972.[5] It thus appears that the law as it existed prior to the Act will continue to apply to obligations issued before April 1, 1972.

II. Coordination with the TEFRA Rules on Accrual of OID

A. *Introduction*

Code §1232A as adopted by TEFRA (recodified as §1272 by the Act) changed the accrual of OID from a straightline method of accrual whereby a pro rata portion of OID accrued during each month the bond was held to a non-linear method of accrual that reflects the compounding of interest. Under this non-linear method, more OID accrues during the later portions of the term of the obligation since interest is effectively being paid not only on the principal (issue price) but also on interest accruing during earlier periods.

The General Explanation of TEFRA states that Congress intended the non-linear formula for accrual of OID to apply for purposes of the 30 percent withholding tax on foreign persons under §§871 and 881.[6] It has not been clear, however, that this result follows from the language of the statute.[7]

B. *Overview*

The Act makes it clear that the non-linear accrual method applies to OID instruments held by foreign investors as well as those held by U.S. persons.

C. *Detailed Analysis*

New §871(g)(2) provides that the determination of the amount of OID accruing during any period will be made under §1272 or the corresponding provisions of prior law. Thus, the non-linear formula introduced by TEFRA will apply for purposes of §§871 and 881 with respect to bonds issued generally after July 1, 1982 (the effective date of the TEFRA provisions). The non-linear formula would apply to bonds issued by natural persons, however, only if issued after March 1, 1984.[8] The formula is to be applied without regard to the exemption from the OID rules for instruments of less than six months' duration.

Note: This change relating to the manner of measuring accrued OID does not change the rules regarding when OID is recognized. Foreign investors are still subject to tax only on the sale or exchange of an OID bond or at the time of interest payments and are not subject to partial inclusion during each year the bond is held as in the case of domestic taxpayers. On the matter of the sourcing of the OID income of foreign investors, §871(g)(3) states that whether such income will be treated as derived from sources within the United States will be determined, except as otherwise provided in regulations, at the time of the interest payment or sale or exchange giving rise to such income as if the payment or sale or exchange involved the payment of interest. The legislative history indicates that Congress intended for regulations to be issued under which recognized OID would be allocated between U.S. and non-U.S. sources in cases in which the source changes (*e.g.*, by virtue of a change of residence by the issuer) between the date of issuance and the date of the payment or sale or exchange causing recognition.[9]

For the effective date of these changes, *see* I, C, *supra*.

III. Application of TEFRA Stripped Bond Rules

A. *Introduction*

Section 1232B, which was added to the Code by TEFRA, provided that in the case of interest coupons which had been detached from the corpus of the bonds, both the coupons and the stripped corpus would be treated as OID bonds subject to periodic income inclusion in the hands of domestic taxpayers. In the hands of foreign investors purchasing a stripped coupon, the investor would presumably get basis for the coupon equal to the purchase price paid for the coupon. It was unclear, however, whether the gain received by the foreign investor on a sale of the coupon before maturity was: (i) OID (and, if so, whether it was OID on an obligation with a maturity of six months or less if the coupons were six-month coupons); (ii) interest, which would be subject to 30 percent withholding; or (iii) gain, which would generally be exempt from 30 percent with-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

holding.[10] Similar ambiguities existed with respect to the tax treatment of a sale of the stripped corpus if held by a foreign investor.

B. Overview

The Act has assured that the treatment of stripped bonds and stripped coupons held by foreign investors will be the same as the treatment of those held by U.S. persons except that, in the case of foreign investors, the recognition of any OID will be deferred until sale, exchange, or retirement.

C. Detailed Analysis

Section 871(g)(4) provides that the provisions of §1286 (§1232B as enacted by TEFRA) will apply for purposes of §§871 and 881. As a result, any discount from face value on the post-July 1, 1982 purchase of a stripped bond or stripped coupon by a foreign investor will generally be treated as OID and will be subject to the 30 percent withholding tax.

Comment: It seems clear that treaty provisions that reduce or eliminate U.S. withholding tax on interest will apply (as under prior law) to OID, including that resulting from the stripped coupons provisions.

For the effective date of these changes, *see* I, C, *supra*.

IV. Matching of Related Party OID Deductions and OID Inclusions

A. Introduction

Because an accrual method obligor on an OID instrument held by a foreign investor is entitled to deduct the OID periodically during the life of the instrument, while the foreign investor recognizes OID income only upon the payment of any stated interest or upon the sale, exchange, or retirement of the instrument, the issuance or sale of OID instruments to foreign investors results in a mismatching of OID income and deductions that works to the disadvantage of the government. Both the House and the Senate Committee Reports reflect concern with the mismatching problem,[11] but neither the House bill nor the Senate bill contained any provision that would have attempted to solve it.

B. Overview

The Conference Committee added to the provisions of the Act relating to OID derived by foreign investors a new rule delaying the obligor's deduction for OID accrued but not paid with respect to an OID instrument held by a related foreign person until the time of actual payment. In effect, the provision puts accrual method taxpayers on the cash method for purposes of determining the interest deduction for OID on instruments held by related foreign persons.

C. Detailed Analysis

Subsection (c) of Act §128 adds to subsection (e) of §163 a new paragraph (3), which provides that if any debt instrument having OID is held by a related foreign person, no portion of such OID shall be allowable as a deduction to the issuer until paid. The term "related foreign person" is defined as any person (i) that is not a United States person and (ii) that is related to the issuer within the meaning of §267(b).

Note: The related-party test of §267(b) has been expanded by Section 174 of the Act.

A somewhat cryptic example in the Conference Report illustrates the application of this rule as well as the application of the rules for recognizing accrued OID income.[12] The Conference Report postulates a foreign parent of a U.S. corporation that lends the U.S. corporation funds on a discount bond providing for $30 of stated interest in a year in which $150 of OID accrues. The interest is not exempt from withholding because the Act's repeal of withholding on interest paid to foreign investors does not apply to interest paid to the foreign shareholders of a U.S. corporation. In fact, the full $30 of interest payable to the foreign shareholder will apparently be withheld — $9 constituting 30 percent of the stated interest, and the other $21 constituting 30 percent of $70 of the $150 of accrued OID. As a result of the withholding of this interest, $80 of accrued OID will be left — although the Committee Report does not say so — to be recognized upon sale, exchange, or retirement. As for the U.S. corporation, its OID deduction for the year in question is limited, under §163(c)(3), to $30.

The Conference Report notes that the new rule added to §163(e) is only a partial solution to the mismatching problem and calls for "further examination" of the problem in general. Moreover, the Conference Committee showed its awareness that its limited rule could easily be evaded by means of back-to-back loans under which a U.S. taxpayer wishing to make a discount loan to a related foreign entity loans the desired amount to an unrelated party who in turn lends an equal amount to the related entity. The Conference Report states the Committee's intention that the Internal Revenue Service should, where appropriate, investigate the capitalization of foreign-owned U.S. corporations issuing OID debt to determine whether such back-to-back loan arrangements exist.

Comment: Not only does the Act not completely address the mismatching problem, it also fails to address an acute enforcement problem relating to OID derived by foreign investors. Specifically, if a foreign investor sells an OID bond to another foreign person, the foreign buyer cannot be forced to withhold OID accruing to the foreign seller. For this reason, the proposed OID regulations issued under §1441 in 1976 required only U.S. persons to act as withholding agents. Foreign investors can easily avoid OID withholding, therefore, by selling the OID bond to a foreign bank or broker shortly before maturity (*e.g.*, one day). No withholding is (or can be) required on that sale. The next day, the foreign bank or broker redeems the bond with the U.S. issuer, who is required to withhold tax on OID accruing to the bank or broker, *i.e.*, one day's worth. The OID withholding tax is thus effectively and pervasively avoided.

New Code §163(e)(3) applies to obligations issued after June 9, 1984.[13]

CHAPTER 73

CAPTIVE INSURANCE INCOME AS SUBPART F INCOME

Donald J. Mathison, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The income of a controlled foreign corporation ("CFC") derived from the insurance of U.S. risks is included in Subpart F income,[1] and thus the U.S. shareholders of a CFC are subject to current taxation on such income.[2] In addition, the "foreign base company services income" of a CFC is included in Subpart F income,[3] and thus can also generate a current tax to the U.S. shareholders of a CFC. In theory, "foreign base company services income" can include income derived from the insurance of non-U.S. risks of parties related to the CFC. In fact, such income seldom is subject to current taxation.

The term "foreign base company services income" generally means income derived in connection with the performance of various kinds of services as to which two requirements, set forth in paragraphs (1) and (2) of Code §954(e), are satisfied: (1) the services are performed for or on behalf of any person related to the CFC under the related-person test of §954(d)(3) (essentially a control or 50-percent test); and (2) they are performed outside the country under the laws of which the CFC is created or organized. Although the performance of insurance services for a 50-percent related person satisfies the first or related-person condition, the place of performance of services, under Treasury Regulations interpreting the second or foreign-performance condition, is generally where the persons performing the services are physically located when they perform their duties.[4] Since insurance personnel employed by a CFC will customarily be physically located in the country of organization of the CFC, the practical effect of this rule is that the foreign-performance condition of §954(e)(2) will seldom be satisfied by insurance services and thus the income derived from the performance of such services for a related party is largely immunized from current taxation. Certain U.S. taxpayers have taken advantage of this fact and organized insurance subsidiaries in low-tax foreign jurisdictions to insure the risks of their other foreign affiliates. The legislative history of the Act makes it clear that Congress regards with disfavor this practice under which income from related-party insurance services has been "shift[ed] to tax haven jurisdictions."[5]

II. Overview

The Act amends §954(e) of the Code so that CFC income derived from the insurance of foreign risks of related parties will be included in Subpart F income and thus made subject to current taxation to U.S. shareholders without regard to where the insurance personnel of the CFC are physically located.

III. Detailed Analysis

Section 137 of the Act adds to the definition of "foreign base company service income" in Code §954(e), at the end thereof, a new sentence stating that, for purposes of the foreign-performance condition of §954(e)(2), services performed with respect to a policy of insurance with respect to which the primary insured is a related person will be treated as having been performed in the country within which the insured hazards, risks, losses, or liabilities occur. Thus, the effect of the physical location rule of the regulations is nullified in the case of insurance services. For example — an example taken from the Senate Finance Committee report — if a Bermuda subsidiary of a U.S. corporation insures the French risks of a French subsidiary of its parent, the income derived from the insurance services, under the law as amended by the Act, will be "foreign base company services income."[6] No inquiry will need to be made into the physical location of the CFC personnel performing the services.

Significantly, the Conference Committee, approving the addition of the aforedescribed new sentence to §954(e), adopted a more expansive definition of the term "related person" than that found in the Senate bill (there was no comparable provision in the House bill). Under the Senate bill, the term "related person" would have had the same definition for purposes of the new sentence as it has in Code §267(b), as amended by the Act. Like Code §954(d)(3), §267(b) essentially provides a control or 50-percent test for determining what persons will be treated as related. Under §137 of the Act as it emerged from the Conference Committee, however, the term "related party" has the same meaning as it has in new subsection (d) of §864, where a 10 percent or more ownership interest causes two parties to be related.

The purpose of expanding the scope of the term "related person" was "to impose tax on an insurance company owned (directly or indirectly) by a relatively small number of U.S. shareholders that use it in whole or in part to insure their foreign risks or foreign risks of parties related to them."[7] It would appear, however, that the Conference Committee failed to achieve this purpose. Because the narrower meaning of "related person" given in Code §954(d)(3) was retained for purposes of the related-party condition of §954(e)(1), and since services must satisfy

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

both conditions in order for the income therefrom to be "foreign base companies services income," it appears that income from services performed in insuring the foreign risks of a 10 percent affiliate of a CFC or its parent, where those risks were located outside the country of organization of the CFC, would not be "foreign base company services income." Although such services would satisfy the foreign-performance condition of §954(e), since they would be deemed to be performed outside the CFC's country of organization under the sentence added by the Act to Code §954(e), they would not satisfy the related-party condition. Presumably, this defect in the statute will be addressed in the forthcoming technical corrections bill.

Observation: The Senate Finance Committee Report states that, in adopting the amendment to Code §954(e) under which income from the insurance of foreign risks can be treated as "foreign base company services income," it did not intend to affect "any determination as to whether a payment made to a related insurer constitutes self-insurance, the 'premium' for which is non-deductible." [8] Presumably, this statement is attributable to a desire not to undermine the government's current litigating position that any payment to a related party for insurance necessarily constitutes self-insurance. Nevertheless, as a matter of logic, §137 of the Act would seem inconsistent with this position since, if the government is correct and there is no such thing as related-party insurance for tax purposes, then §137 is a nullity.

The amendment to Code §954(e) made by §137 of the Act is effective for taxable years of CFCs commencing after the date of enactment (July 18, 1984).

CHAPTER 74

PASSIVE U.S. SOURCE INCOME OF CERTAIN POSSESSIONS RESIDENTS SUBJECT TO 30 PERCENT WITHHOLDING

Patricia R. Lesser, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Passive or investment gross income (*i.e.*, fixed or determinable, annual or periodical income including rents, royalties, dividends, and some interest) of foreign corporations derived from U.S. sources which is not effectively connected with the conduct of a trade or business within the United States is subject to a flat 30 percent (or lower treaty rate) tax.[1] The tax is levied by way of withholding at the source.[2]

The United States, however, does not impose withholding tax on payments of passive income to corporations organized in Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands (USVI).

The Internal Revenue Code of the U.S. is generally used by the U.S. possessions as their territorial income tax law through application of the "mirror theory," *i.e.*, the name of the possession is substituted for the words "United States" wherever necessary to give the law proper effect. The mirror theory is based on the assumption that the possessions and the United States are separate tax jurisdictions, foreign to one another. Because of this assumption, the United States and each possession generally look upon one another's nationals as foreigners.

As an exception to this rule, §§881(b) and 1442(c) provide that a Guam corporation is not considered to be a foreign corporation for purposes of U.S. withholding tax on fixed or determinable annual or periodical income. Since the withholding tax on passive income is only levied upon foreign corporations, §§881(b) and 1442(c) exempt from U.S. withholding tax non-effectively-connected U.S. source passive income paid to Guam corporations. The Guam exemption was originally introduced in 1972 [3] for taxable years beginning after December 31, 1971, as an incentive to promote U.S. investments in Guam. United States source passive income not effectively connected with a U.S. trade or business received by a Guamanian corporation is therefore taxed in the hands of the recipient at the regular corporate rates of Guam.

Application of the mirror theory exempts from territorial tax Guam source passive income not effectively connected with a Guamanian trade or business when paid to a U.S. corporation.[4]

The §881 effective exemption from withholding on payments to Guam corporations also applies to payments to corporations organized in the northern Marianas since references in the Code to Guam are generally deemed to apply also to the Marianas (unless a contrary intent is expressed).[5]

With respect to the USVI, the exemption from U.S. withholding tax on passive income results from Section 28(a) of the Revised Organic Act of the Virgin Islands of 1954.[6] This section provides that "inhabitants of the Virgin Islands" satisfy their income tax obligations to the United States by paying their income tax on worldwide income to the Virgin Islands. Pursuant to this section, permanent residents or "inhabitants" of the Virgin Islands may earn U.S. source income without having to file a U.S. return or pay U.S. tax. They are exempt from withholding of U.S. tax if they reasonably expect to satisfy their USVI tax obligation under Section 28(a).[7]

USVI source fixed or determinable annual or periodical income paid after January 12, 1983, to U.S. citizens or residents and to U.S. corporations is subject to withholding tax in the USVI at a rate not to exceed 10 percent.[8] However, the Virgin Islands legislature has the power to reduce to zero the rate of withholding on payments made to U.S. persons.

The exemptions (or low rate in the case of USVI source passive income paid to U.S. persons) from withholding tax on passive income described above, together with the source rules of §861, have enabled investors from jurisdictions other than the United States or one of its possessions to avoid U.S. tax on U.S. source income.

Code §861 in effect provides that interest or dividends paid by a U.S. corporation to a foreign corporation are not subject to the 30 percent tax if less than 20 percent of the paying corporation's gross income is derived from U.S. sources. When applied to the mirror codes of the possessions, this rule (known as the "80-20 source rule") exempts from territorial withholding tax the income of a possessions corporation which derives most of its income from foreign sources, including the United States. The exemption from withholding applies regardless of whether the income of the possessions corporation is paid to a U.S. shareholder or any other foreign shareholder.

Example: A foreign corporation (other than a U.S. or a possession's corporation) sets up a subsidiary in Guam. The Guam corporation holds stock in a U.S. corporation and/or lends it money. Interest and/or dividends paid by the U.S. corporation to the Guam corporation are exempt from U.S. withholding tax under §881(b). If more than 80 percent of the income of the Guamanian corporation is from U.S. sources, the 80-20 rule [9] is satisfied. Distribution of the income of the Guamanian corporation to foreign investors is therefore exempt from territorial withholding tax. The effective rate on

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the overall transaction would probably be very low in spite of the relatively high corporate rate in Guam because the tax base (Guam net income) would probably be relatively small.

Through these provisions, the U.S. possessions, especially Guam, had hoped to become new financial centers catering to both U.S. and foreign investors and to take the place of jurisdictions, such as the Netherlands Antilles, with which the United States has concluded tax treaties and which have been threatened by the U.S. policy to limit the benefits under these treaties to bona fide residents of the treaty country. The Guam legislature even adopted legislation which it hoped would facilitate its becoming such a financial center.

The U.S. Treasury, however, issued Temporary Regulations on December 28, 1982,[10] to create an exception to the 80-20 source rule thereby thwarting the possessions' hope to attract foreign investors. The Temporary Regulations provide that for purposes of the 20 percent test, income derived from Guam, the Northern Mariana Islands, and the U.S. Virgin Islands is U.S. source income if such income is not taxed to the recipient in the possession by the jurisdiction of actual source. The application of the Temp. Regs. was illustrated in two IRS Revenue Rulings.[11]

In Rev. Rul. 83-9, a foreign corporation organized a Guam corporation. The Guam corporation received interest from its U.S. subsidiary and paid interest to the foreign corporation. Under §881(b), the Guam corporation is not treated as a foreign corporation. Thus, no withholding tax is required under §881(a) or §1442(a). Prior to the Temp. Regs. amending the 80-20 rule in §861(a)(1)(B), interest paid by the Guam corporation was treated as foreign source income if more than 80 percent of its income was derived from foreign (U.S.) sources. Under Temp. Regs. §4a.861-1(a), however, and the "mirror" code, since interest received by the Guam corporation had not been taxed in the United States, it is treated as Guam source income. The Guam corporation must, therefore, withhold 30 percent of its interest payments under §1442(a).

Revenue Ruling 83-10 involved a similar fact pattern, except the foreign corporation organized a Virgin Islands corporation. Under §28(a) of the Revised Organic Act of the Virgin Islands, no withholding is required since the recipient reasonably expects to satisfy its USVI tax obligation under Rev. Proc. 81-20, 1981-1 C.B. 690. The Virgin Islands uses a "mirror" of the U.S. code, as does Guam. Thus, prior to the Temp. Regs., the 80-20 rule of §861(a)(1)(B) would classify the interest payments by the Virgin Islands corporations as foreign source income. Temp. Regs. §4a.861-1(a), however, treats the interest in the ruling as Virgin Islands source income, since no tax was withheld by the U.S. payor under the Revised Organic Act. Consequently, the USVI corporation must withhold tax under §1442(a) on interest payments made to the foreign corporation.

On November 22, 1983, the Government of Guam challenged in court the legality of Treasury's Temporary Regulations and the IRS ruling concerning Guam.

The Tax Reform Act of 1984 amends Code §881 and §1442 to clarify the situation. These provisions were originally introduced in the House Bill [12] and were adopted in the conference agreement with a technical correction. According to the House Ways and Means Committee Report,[13] the new provisions reflect the Committee's concern with:

> "the proliferation of conduit entities that purport to shield foreign investors from U.S. tax. The committee particularly opposes artificial devices that purport to shield foreign investors from U.S. tax on dividends. If successful, these devices could allow foreign investors who buy or invest in U.S. companies a significant tax advantage over U.S. investors ... The committee believes that rules that eliminate U.S. tax on payments of passive income to corporations organized in U.S. possessions should not apply to foreign-owned corporations or to corporations that derive a large portion of their gross income from outside U.S. possessions. However, the committee does not wish to alter tax incentives that the possessions extend to U.S. investors."

II. Overview

Section 130 of the Tax Reform Act of 1984, amending §§881(b) and 1442(c), provides in effect that withholding tax at the rate of 30 percent can now be imposed on dividends, interest, rent, and other passive income not effectively connected with the conduct of a trade or business within the United States paid to a corporation created or organized in Guam or the Virgin Islands.

The withholding will not be imposed, however, if the two conditions relating to the degree of foreign ownership of the stock of the possession's corporation and to the percentage of local source income are met.

The provisions of section 130 apply with respect to Virgin Islands corporations in spite of Section 28(a) of the Revised Organic Act of the Virgin Islands.

Code §§881(b) and 1442(c), as amended by Act §130, are not subject to the mirror theory for purposes of income tax liability incurred to Guam or the Virgin Islands.

The provisions apply not only to payments to corporations organized in Guam and the Virgin Islands but also to those organized in the Northern Marianas because, as previously noted, references in the Code to Guam are deemed generally to apply to the Marianas absent expressed intent to the contrary.

III. Detailed Analysis

Code §881(b) is amended by section 130(a) to provide that, for purposes of the tax imposed on U.S. source passive income (as defined in §881(a)) received by foreign corporations, corporations created or organized in Guam or the Virgin Islands are not considered to be foreign corporations for any taxable year if two conditions are met. The two conditions are:

> (i) At all times during such taxable year less than 25 percent in value of the stock of such corporation is owned (directly or indirectly) by foreign persons; and
>
> (ii) At least 20 percent of the gross income of the corporation is shown to the satisfaction of the Secretary of the Treasury to have been derived from sources

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

within Guam or the Virgin Islands during the three-year period ending with the close of the corporation's preceding taxable year (or for such part of this period as the corporation has been in existence).

A conforming amendment is made to §1442(c) to provide that if the two conditions of §881(b)(1), as amended, are met, a corporation organized or created in Guam or the Virgin Islands is not considered to be a foreign corporation and is therefore exempt from withholding tax on U.S. source passive income.

A. Degree of Foreign Ownership

The first requirement that must be met in order to be exempt from U.S. withholding tax on passive income is that less than 25 percent in value of the stock of the Guam or Virgin Islands corporation be owned directly or indirectly by foreign persons.

The Act defines "foreign persons" [14] for purposes of §881(b)(1) as any person other than a U.S. person or a person who would be a U.S. person if the general definition of the United States [15] included references to the U.S. possessions. As a consequence, residents of the possessions are not deemed to be foreign persons in this context.

To determine whether the stock of a Guam or Virgin Islands corporation is owned by a foreign person through a partnership, estate, trust, or another corporation, the rules of attribution of §318(a)(2) must be followed. However, to determine indirect ownership through a corporation, foreign persons owning five percent or more in value of the stock of a corporation which owns the Guam or Virgin Islands corporation are deemed to be shareholders of the Guam or the Virgin Islands corporation. Although this rule is substantially more stringent than the normal attribution rule, it will, according to the Conference Committee Report,[16] "allow territorial subsidiaries of publicly traded U.S. corporations many of whose stockholders are nominees (but with less than 25 percent in value of their stock held by foreign persons owning 5 percent or more in value) to meet the ownership requirement for reduced withholding."

B. Territorial Source of Income

To avoid U.S. withholding tax on passive income, a corporation organized or created in Guam or the Virgin Islands must derive at least 20 percent of its gross income during the three-year period ending with the close of the corporation's preceding taxable year from sources within the territory.

The Conference Committee Report [17] states that this requirement makes it clear that a corporation formed in a U.S. possession is not eligible for reduced U.S. withholding tax on any U.S. source income if the possessions corporation could make payments of passive income that are free from withholding tax in the possession. This requirement assures collection of one tax on foreigners who invest in the United States.

If the ownership and gross income requirements are met, U.S. payments of passive income to the possessions corporation would be exempt from U.S. tax. However, payments by the possessions corporation to foreign investors would necessarily be subject to territorial withholding tax under the 80-20 source rules.[18] If the requirements are not met, the U.S. will impose its tax at 30 percent.

C. Effects on Mirror Rule

The rules of §§881(b) and 1442(c), as amended by TRA 1984, are not to be mirrored. Act §130 does not affect the liability to tax in Guam, the Marianas, or the Virgin Islands on passive income derived from sources in the possessions when paid to U.S. corporations. According to the House Ways and Means Committee Report,[19] such payments from sources in Guam and the Marianas will remain free of tax in those possessions, regardless of the U.S. corporation's owners or the source of its other income. Such payments from sources in the Virgin Islands remain subject to a Virgin Islands tax of up to 10 percent.[20]

D. Effective Date

The amendments introduced by Act §130 are effective for payments made after March 1, 1984, in taxable years ending after such date.

CHAPTER 75

TREATMENT OF COMMUNITY PROPERTY INCOME OF NONRESIDENT ALIENS

Patricia R. Lesser, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Prior to the Tax Reform Act of 1976,[1] married nonresident aliens were not entitled to file joint returns. Because of their inability to file joint returns, their income effectively connected with the conduct of a U.S. trade or business (which is subject to tax at graduated rates) could not be split between the spouses (and therefore benefit from lower graduated rates). However, if both spouses are nonresident aliens from a community property country, they could split the effectively connected income of one spouse to reduce their U.S. tax liability.

In general, community property law provides that one-half of the earnings of each spouse is deemed to belong to the other spouse. Income from property acquired during the marriage is deemed to be owned in equal shares by both spouses. Property acquired before the marriage or acquired by gift or inheritance during the marriage can be separate or community property. When it cannot be ascertained whether the property is separate, it is frequently presumed to be community property and the income therefrom community income.

The Supreme Court [2] has held that spouses are permitted to divide or "split" income between them for tax purposes, regardless of whose property or which spouse generated the income, if the marriage is viewed as a community under the law of the domicile of the spouse generating the income (or that of the jurisdiction where the property is located) and each spouse has a vested (rather than a mere expectant) right over income earned by the other spouse.

Community property jurisdictions exist both within and without the United States. The Internal Revenue Service and the courts have recognized a number of jurisdictions as qualifying as community property jurisdictions for U.S. tax purposes, including: (i) states (*e.g.*, California, New Mexico and Nevada); (ii) U.S. territories (*e.g.*, Puerto Rico); and (iii) foreign countries (*e.g.*, Belgium, France, Mexico, and Switzerland).

With respect to a nonresident alien married to a U.S. citizen or resident, the Tax Reform Act of 1976 [3] rendered certain community property laws inapplicable for income tax purposes for taxable years beginning after December 31, 1976. Code §879, as enacted by the Tax Reform Act of 1976, introduced the following rules governing the allocation of income between spouses. Earned income, other than trade or business income and a partner's distributive share of partnership income, is treated as the income of the spouse who rendered the personal services. Trade or business income (other than a partner's distributive share of partnership income) which is community income under community property laws applicable to such income is treated as the income of the husband unless the wife exercises substantially all of the management and control of such trade or business, in which case it is treated as the income of the wife. Any portion of a partner's distributive share of the ordinary income or loss from a trade or business carried on by a partnership which is community income or loss under the community property laws applicable to such share is included in computing the net earnings from self-employment of such partner, and not that of his or her spouse. Community income derived from the separate property of one spouse is treated as the income of such spouse. Finally, all other community income is allocated as provided under the applicable community property law.

While §879, as enacted by the 1976 Act, barred a nonresident alien married to a U.S. citizen or resident from splitting their community income, another provision enacted by the 1976 Act enabled them to split their income by filing a joint return.

Code §§6013(g) and (h), as enacted by the 1976 Act, permit a nonresident alien married to a U.S. citizen or resident to be treated as a U.S. resident if both spouses elect to file a joint return for taxable years ending on or after December 31, 1975, and agree to be taxed on their worldwide income and if they supply all necessary books and records. The election under §6013(g) applies for the taxable year for which made and remains in effect until terminated. The election under §6013(h) is available to couples in which one spouse is a U.S. citizen or resident and the other is an alien who becomes a U.S. resident during a taxable year. This is a one-time election which enables such couples to file a joint return in the year the alien becomes a resident.

Both §§879, 6013(g), and 6013(h) apply only to couples in which one spouse is a nonresident alien and the other a U.S. citizen or resident. Couples in which both spouses are nonresident aliens could, therefore, continue to split their community income if they were domiciled in a community property jurisdiction rather than in a common law jurisdiction.

Section 139 of the Tax Reform Act of 1984 expands the scope of §879(a) so that it overrides community property laws with respect to married couples in which either one or both spouses are nonresident aliens.

The reasons for the change, as stated in the House Ways and Means Committee Report, are as follows:[4]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

"The committee believes that the U.S. income tax treatment of nonresident aliens from community property countries should be the same as the U.S. income tax treatment of nonresident aliens from common law countries. A graduated income tax like that of the United States imposes less tax on a given amount of income if the income belongs to more than one person. Therefore, when married taxpayers split their income, they generally reduce their combined tax liability. The committee does not believe that nonresident aliens who earn income that is effectively connected with a U.S. trade or business should be able to split that income for U.S. tax purposes by virtue of foreign community property laws. Furthermore, it does not believe that such a couple should be taxed more favorably than a similarly situated U.S. couple."

II. Overview

Section 139 of the Act amends §879(a) to provide that, in the case of a married couple in which one or both spouses are nonresident alien individuals and who have community income for the taxable year, the community property laws will not apply with respect to earned income, income from a trade or business, partnership income, and other community income derived from the separate property of one spouse. These types of income will be taxable to the spouse generating the income in spite of the fact that the couple may be domiciled in a community property jurisdiction.

III. Detailed Analysis

For taxable years beginning after December 31, 1984, the rules of allocation of §879(a) governing community income earned by one spouse are extended to cover married couples in which one or both spouses are nonresident aliens.

Section 879(a), as amended by §139 of the Act, provides that a married couple, one or both of whom are nonresident individuals having community income for the taxable year, must allocate the income in the following way, notwithstanding any applicable community property law: (i) earned income is allocated to the spouse who rendered the personal services; (ii) trade or business income or a partner's distributive share of partnership income is allocated following the rules of Code §1402(a)(5); (iii) community income derived from the separate property of a spouse is allocated to that spouse; and (iv) all other community income is allocated following the rules of allocation of the applicable community property law.[5]

Section 138 of the Act provides a "companion rule" to §879 as amended by Act §139. Section 138 introduces a new definition of resident alien which, in effect, makes it easier for an alien with U.S. source earned income to qualify as a resident alien for U.S. tax purposes. Under these rules, an alien individual is a resident alien for any calendar year if he or she is a lawful permanent resident of the United States at any time during that year or if he or she meets a "substantial presence" test. The substantial presence test will not be met if the alien spent less than 183 days in the United States during the current year and the alien can demonstrate that he or she has a tax home in a foreign country and has closer connections with that country.

The interaction of Act §§138 and 139 may be illustrated by a recent case[6] in which the Tax Court determined that Sweden qualified as a community property jurisdiction. The taxpayer, an employee of IBM Svenska (a Swedish subsidiary of IBM), was assigned to work in New York. At all times the taxpayer and his spouse were citizens of and domiciled in Sweden. The taxpayer worked in New York for IBM on an intercompany exchange from October 21, 1975, through July 1, 1978, and was in the United States on an L-1 intercompany visa while his wife was admitted on an L-2 visa. Because they were found to be domiciled in a community property jurisdiction, the taxpayer and his spouse were allowed to file nonresident alien returns reporting only one-half of the taxpayer's U.S. earned income for the relevant taxable year.

Pursuant to §879(a), as amended by TRA 1984, the Westerdahls would no longer be able to file returns with each spouse reporting one-half of the taxpayer's U.S. earned income, even though they are domiciled in a community property jurisdiction. However, under the new U.S. resident alien definition of §138 of the Act, Mr. Westerdahl would be considered a U.S. resident alien for U.S. tax purposes. As a U.S. resident alien, he and his spouse would be entitled to make an election under §6013 to file a joint return and thereby split their income and benefit from taxation at the lower graduated rates.

The negative aspect of this election is that the nonresident alien spouse would be subject to tax in the U.S. on worldwide income.

Section 139 of the Act, amending Code §879(a), is effective for taxable years beginning after December 31, 1984.

CHAPTER 76

RESTRICTIONS ON SECTION 341(f) CONSENT FOREIGN COLLAPSIBLE CORPORATIONS

Leonard L. Silverstein, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

In the more than 30 years of its existence, §341 has proven to be one of the more effective and durable aspects of the Internal Revenue Code. Designed to prevent taxpayers from utilizing the corporate entity to avoid corporate level tax and convert ordinary income into capital gain at the shareholder level,[1] §341 has survived as a generally active Code ombudsman, (albeit with several amendments of extraordinary complexity[2]). This has occurred despite the exponential growth in size and complexity of the U.S. and world economy.

The latest amendment, in which §135 of TRA 1984 adds §341(f)(8) to the Code, is yet another manifestation of the intricacies of §341 and of taxpayers ongoing efforts to avoid these strictures. A complete and very lucid explanation of the implications and operation of §341(f), together with suggestions for its effective use is contained in 29 T.M., *Collapsible Corporations — General Coverage.*[3]

Although governmental experience with taxpayer "anti-collapsible" planning devices has served to constrain many corporate ordinary income — capital gains conversion schemes, the latest concern in Congress in this area — reflected in §135 — represents more a problem of tax administration and international tax compliance rather than a newly discovered anomaly or loophole in the operation of §341. Notwithstanding that §341 is cast[4] in terms of "a corporation," and therefore applies with the same force to both a foreign and domestic corporation, and notwithstanding that §341(f), itself an amelioratory provision enacted in 1964,[5] was carefully drafted to preclude abuse, its utilization to convert ordinary income to capital gain by U.S. persons in sales or dispositions to foreign persons apparently[6] became a matter of governmental concern.

Under §341(f), an electing corporation can guarantee capital gains to selling shareholders under circumstances in which, in the case of sales or dispositions to U.S. persons, assures the preservation of ordinary income treatment at the corporate level with respect to all "tainted," *i.e.*, so-called §341(f) assets, thereby effectively implementing the policy of the 1964 legislation.

As described by the Senate Finance Committee, a corporation to which a §341(f) election may be appropriate is a corporation:

> "... that is rapidly growing and expects to continue in business, but which holds constructed or produced properties which are worth substantially more than their cost and upon which there has not been substantial realization of the profits to be derived from the properties. The shareholders, through the sale of stock (whether or not through a single 'public offering'), would like to capitalize on the future prospects of this growing company. The buyers of the stock clearly intend to have the corporation continue in business. However, on such stock sale the corporation might be regarded as fitting precisely into the literal definition of a collapsible corporation (under sec. 341(b)) if the shareholders intended to sell the stock of the corporation prior to the realization by the corporation of a substantial part of the income to be derived from the constructed or produced property. Moreover, the corporation usually cannot qualify under any of the several existing exceptions, principally because it has not had a substantial prior business history and is growing rapidly ... [§341(f)] meets the problem described above by providing that the collapsible provisions will not apply to the sale of stock in a corporation which consents to a special type of tax treatment ... the treatment provided has the effect of assuring that ultimately there will be the same tax consequences as if the assets had been sold before the stock."[7]

The mechanism of subsection (f) requires that the corporation in question consent under regulations (which were promulgated in final form 12 years after the enactment of §341(f), in 1979)[8] to recognize gain with respect to any "subsection (f)" (*i.e.*, ordinary income) asset, whenever that asset is "disposed of."[9] Such corporate level ordinary income reorganization occurs; (a) in the case of a dividend distribution which (prior to the amendment of §311(d)(1) of the Code by §54 of TRA 1984 would not have generated a corporate level gain),[10] (b) "... an abandonment or retirement, gift, sale in a sale — and — leaseback transaction, and (c) a transfer upon the foreclosure of a security interest."[11] Further, if a subsection (f) asset is transferred in a nontaxable transaction (for example, under §351 or §332) gain will also be recognized to the consenting corporation unless the transferee corporation itself agrees to have the gain recognition provisions of §341(f)(2) apply to the same extent and in the same manner as such provisions would have applied with respect to the original consenting corporation.[12]

If the absence of litigation with respect to §341(f) during the 20 years of its existence is any measure, it would appear that this provision, in general, is serving its dual

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

purpose: On the one hand, ameliorating the ordinary income "lock in" of shareholders of young, active, and growing businesses by enabling them at capital gains rates to dispose of their shares pursuant to the §341(f) consent mechanism before the corporation has realized its full earnings potential. On the other hand, the federal fisc has been protected, since the very broad scope of the mandated corporate level ordinary income recapture assures the ultimate [13] imposition of a double tax.

It is next appropriate to observe that the problem at which §135 is aimed, was, it seems clear, not unanticipated by the Treasury department, if not at the time of enactment of §341(f) at least in the pertinent proposed and final regulations. Thus, §1.341-7(e)(3) of the final regulations treats the subject of §135:

> "In the case of a foreign corporation which files a statement of consent pursuant to paragraph (b) of this section, such statement, in addition to the information required in paragraph (b) of this section, shall also contain a declaration that the corporation consents that any gain upon the disposition of a subsection (f) asset which would otherwise be recognized under section 341(f)(2) will, for purposes of section 882(a)(2), be considered as gross income which is effectively connected with the conduct of a trade or business which is conducted through a permanent establishment within the United States." [14]

In light of the foregoing paragraph, the need for a new statutory provision may well be questioned. One response apparently lies in visualized [15] Internal Revenue Service's difficulties of assuring adequate compliance by, under §341(f), the "consenting" foreign corporation.

As stated by the Conferees:

> "Treasury regulations provide that, in the case of a foreign corporation that gives a section 341(f) consent, any gain on the corporation's disposition of a subsection (f) asset is considered gross income that is effectively connected with a U.S. trade or business (Treas. Reg. sec. 1.341-7(e)(3)). A foreign corporation is subject to the regular corporate income tax with respect to income that is effectively connected with a U.S. trade or business. The regulatory provision may have no practical effect, however, where the foreign corporation's income is not subject to U.S. taxes (because the corporation has no U.S.-source income and is not engaged in a U.S. trade or business) and the stock is sold to a foreign person." [16]

Treasury may also have believed that the absence of a practical mechanism of enforcement of the recapture provisions of §341(f) is a virtual impossibility where the corporation, (for example, a company engaged in the production but not the distribution) of a foreign film may have no U.S. operating nexus, such as a corporation organized in a tax haven jurisdiction without a treaty or other provision for the exchange of information with the United States. If, in such a case, a foreign corporation makes a proper §341(f) election, its domestic shareholders would be assured of capital gains but no correlative enforcement mechanism exists to collect the tax on the disposition, at some indefinite future date, of §341(f) assets by the foreign entity.

Another issue which may underlie enactment of §341(f)(8) derives from a long held concern that taxpayers may take the position that a foreign corporation which does not realize U.S. source income may not be subject to §341 at all. While no reference to this is made neither in the statute nor in the Committee Report, the following comment in the Report of the Conferees appears to constitute the message to the Treasury and the courts to apply §341 on a worldwide basis:

> "The provisions of section 341 make no distinction between domestic corporations and foreign corporations. Thus, the collapsible corporation rules are applicable to a foreign corporation that is used as the vehicle for the proscribed tax avoidance scheme. Rev. Rul. 56-104, 1956-1 C.B. 178. [Footnote omitted see fn. 27 of chapter.]" [17]

Section 135 attempts to solve both problems, at least from the standpoint of §341(f), by as a general rule, effectively withdrawing the opportunity for the §341(f) election in this situation. While such an approach deprives U.S. shareholders of foreign corporations from availing themselves of the benefits of §341(f), the new statute also provides for limited exceptions to the general rule. Specific situations to which the exception would apply are not identified by the Conferees. However, some indication of the intended parameters within which the exception would operate is reflected in the Report of the Conferees:

> "There is no policy reason to allow the use of the collapsible corporation device by U.S. taxpayers simply because the corporation is organized under the laws of a foreign country to engage in an activity abroad. This result may occur, however, where the stock of a foreign collapsible corporation is sold to a foreign person and the section 341(f) consent given by a foreign corporation will not be given effect if the consenting corporation is not engaged in a U.S. trade or business and stock in the corporation is sold to a foreign person. The conferees recognize that there may be cases in which a section 341(f) consent given by a foreign corporation should be given effect. Accordingly, the conference agreement authorizes the Secretary to prescribe regulations setting forth circumstances in which it would be appropriate to give effect to a section 341(f) consent given by a foreign corporation." [18]

II. Overview

Section 135 of TRA 1984 narrows the scope of §341(f) by providing as a "Special Rule for Foreign Corporations" that "Except to the extent provided in regulations prescribed by the Secretary . . .," if a foreign corporation executes a consent under §341(f)(1), such consent pursuant to §341(f)(8)(A), shall "not be effective." Thus, a selling shareholder of a foreign collapsible corporation will not enjoy the benefits of the §341(f) election. Further, under §341(f)(8)(B), any foreign transferee (whether or not a §341(f) consent has been filed) may not avail itself of the benefits of the nontaxable transfer rule of §341(f)(3)(B) even if the transferor to it has made a valid §341(f) election. Of course, if the transferor is a foreign corporation, the new provision appears to be a nullity with respect to the transferee since the transferor is barred from filing a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

consent by reason of §341(f)(8)(A), and the foreign transferee would also be barred (since it is a foreign corporation) from the consent procedure on theory that, if with respect to its future transfers, it seeks to treat itself as a transferor.

Note: It should be observed that the Secretary's authority to except certain foreign corporations from the general rule of §341(f)(8) extends to transferees as well, since the positioning of the "Except" clause makes clear that transferees as well as transferors are included in its scope. Thus, if constraints under regulations are imposed upon a foreign transferor similar, indeed more rigid conditions may be applied to a foreign transferee.[19] By the same token, any regulatory relaxation of the general rule under authority of the "Except" clause will be subject to adequate security safeguards, also applying to a future transferee.

III. Detailed Analysis

Because a complete explanation of the mechanism of §341(f) is thoroughly and lucidly explained in 49 T.M., *Collapsible Corporations — General Coverage*, there is no occasion to restate these general rules. Further, because in the *Introduction* and *Overview* portion of the materials contained therein, many of the concepts underlying §341(f)(1) have been set forth, only its principal areas of operation will be noted.

Under §341(f)(8), unless a foreign corporation can avail itself of a regulatory "safe harbor" (under circumstances yet to be described in regulations to be promulgated), a §341(f) election, made by a foreign corporation, will not be effective to protect a shareholder from the generally applicable rules of §341. For example, assume a dealer in paintings (taxable at ordinary income rates in profits) who incorporates in a corporation organized in Panama, under circumstances which would, in general, cause the dealer's corporation to constitute a collapsible foreign corporation (within the definition contained in §341(b)).[20] If such a shareholder sells his shares in the Panamanian corporation (or receives a distribution from it including a distribution in a partial or complete liquidation or a nonliquidating distribution in excess of basis) he will be taxed on the gain at ordinary income rates, unless one of the exceptions to the general rule provided in §§341(d) or 341(e), applies, notwithstanding that the Panamanian corporation seeks to execute a consent under §341(f). In addition, even if a subsequent domestic transferee (for example, a Delaware corporation) of the Panamanian corporation agrees, pursuant to §341(f)(3)(B), to be bound by such consent, the new statute will apply, notwithstanding that the transferee is a domestic corporation which itself could have initially executed a valid §341(f) consent.

Although the statute does not substantively indicate the circumstances in which the regulations will provide an exception to the general rule of §341(f)(8), the following possibilities may be noted:

(1) If a foreign corporation is otherwise engaged in business in the United States, so that — independently from the subject of the consent — such corporation regularly files a U.S. tax return and establishes to the satisfaction of the Treasury that it possesses adequate assets in the United States to support a §341(f) recapture tax, no reason appears for denial of the consent procedure. Doubtless, specific assurances will be required with respect to the adequacy, (such as through a bonding procedure) of the assets, together with a demonstrated continuity of U.S. business presence during the period in which §341(f) assets can be estimated to be in the hands of the consenting corporation.

(2) Even in the case in which no U.S. assets are present, it is not inconceivable that the regulations will permit a qualifying consent to be made if the foreign corporation can provide reliable security with respect to the potential gain which otherwise would be subject to corporate level tax in the hands of the consenting corporation. Doubtless, difficult problems will be encountered in establishing the adequacy of the security in this instance.

Finally, reference is appropriate to the statement in the Conference Report as follows:

> "The conferees acknowledge that it may be appropriate for Congress to review the relationship between the Subpart F provisions, section 1248 and section 341." [21]

Although the Conferees reference to the identified three Code provisions is somewhat cryptic, one may speculate that Congressional and Treasury technicians will focus on these factors respecting the indicated Code provisions:

(1) Under §341, all of the gain (determined without regard to earnings and profits) realized by a shareholder holding stock in a foreign collapsible corporation constitutes ordinary income, provided *inter alia*, that the shareholder owns more than 5 percent in value of the outstanding stock of the corporation and that none of the other exceptions to collapsible treatment otherwise apply.[22]

(2) Under §951, a shareholder in a controlled foreign corporation (CFC) is taxed on his *pro rata* share of the corporation's Subpart F income, a concept which is limited to the earnings and profits of the CFC.[23] Further, the test of ownership of a CFC under Subpart F requires that more than 50 percent of the total combined voting power of all classes of voting stock [24] be owned by "United States persons" who own 10 percent or more of the total combined voting power of all classes of stock of the foreign corporation.[25] Ownership, for purposes of Subpart F is in turn determined under its own rules provided in §958.

(3) Under §1248, any U.S. person who owns 10 percent or more of the total combined voting power of stock in a foreign corporation must include in income, as a dividend, that portion of the gain which does not exceed post-1962 accumulated earnings and profits of the foreign corporation.[26] Unlike the provisions of Subpart F no overriding more than 50 percent ownership test is applied for purposes of §1248.

Although the draftsmen of §341(f) evidently have viewed the discontinuities as a subject for future technical revision, the direction of change is also unclear. Whether a new rule, if enacted, would or should expand Subpart F and §1248 beyond its current earnings and profits limitation (as the Conferees seem to suggest [27]), or reduce the ordinary income taxation of 100 percent of the gain in the case of a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

collapsible corporation (which may prove too generous in the "dealer" case, described above) must await consideration of a future Congress.

In this connection, it also may be observed that somewhat similar anomalies exist in a domestic setting. For example, liquidation of a collapsible corporation will generate ordinary income to the full extent of gain, whereas liquidation of a noncollapsible corporation under §333 results in ordinary income taxation only to the extent of post-1913 accumulated earnings and profits.[28] Because §333, by definition, does not apply to a collapsible corporation, the distinction here may be regarded as appropriate. More generally, however, is the fact that the abuse to which §341 is directed *inter alia* concerns persons who, were it not for the opportunity to avoid corporate level tax, would never have incorporated. For example, a dealer in real estate would, in the absence of a corporation, realize ordinary income with respect to total gains, not just the earnings and profits accumulated by the corporation whose stock is sold. Thus, the application of ordinary income taxation to the sale of shares seems quite appropriate in that case (since the sale of stock was treated comparably to the sale of shares for purposes of §341), whereas under §951 and §1248, the statutory objective appears limited to assurance of dividend taxation of a presumably ongoing corporation's ongoing earnings. Since, by reason of newly enacted §341(f)(8), §341(f) may effectively no longer be availed of by a foreign corporation, the broader measurement of gain may well be appropriate in certain cases, such as the described situation of a U.S. dealer in real estate who incorporates land (whether situated in the U.S. or abroad) held for sale to customers in a foreign collapsible corporation. In that case, it is questionable whether an earnings and profits limitation is appropriate.

IV. Effective Date

The ostensibly straightforward effective date provisions of §135 state that such provision "shall take effect" on date of enactment, *i.e.*, on July 18, 1984. This form of effective date may be contrasted with that provided in the 1964 effective date provision of §341(f).[29] There it was stated that such provision "shall apply with respect to transactions after the date of enactment of this Act in taxable years ending after such date." The contrast between the two provisions would suggest that under §135 the pivotal factor is the date of filing of the statement of consent provided in §1.341-7(b) of the regulations under §341(f). Under Regs. §1.341-7(b)(3) such consent "... may be filed at any time ..." with the District Director having jurisdiction over the consenting corporation's income tax return.[30] Thus, it would appear that unless by reason of §135 of TRA 1984, a consent actually or constructively reaches the District Director's office before July 18, 1984, it will not avoid the constraints of §341(f)(8). Those which arrive on or after such date will be subject to the new rules.

---

[1] In the initial "classic" collapsible case, a motion picture enterprise, which typically would have been conducted in corporate form, was "collapsed" or liquidated before such corporation realized income. Another "abuse" occurred in the case of an activity which normally may not have been conducted in corporate form, such as the activities of a dealer in land. In that case, the corporate device would have been utilized to create a vehicle to hold the property and thereafter, when values had ripened, the capital gains provisions available in corporate liquidations were utilized, in lieu of sales by the dealer, which otherwise would have constituted ordinary income to him.

[22] §341(d)(1)(A). Under §341(d)(1)(B), indirect ownership is taken into account, and under §341(d) ownership of stock is determined by reference to §544.

[23] §951(a)(1)(A)(i). Under §951(a)(1)(A)(ii) and under §951(a)(1)(A)(iii), the shareholder must include in income his *pro rata* share of income withdrawn from investment in less developed countries and income withdrawn from the foreign base company shipping operations.

[24] §957(a).

[25] §951(b).

[26] §1248(a), (d).

[27] *See*, H.R. Rep. No. 861, *supra* footnote 16, at 962 note 2. "Congress has addressed the issue of the extent to which U.S. taxpayers can use foreign corporations to defer U.S. tax on foreign-source income in sections 951-964 (Subpart F) and 1248 of the Code. Under these provisions, the earnings and profits of certain foreign corporations are taxed as ordinary income to U.S. shareholders who own ten percent or more of the corporation's stock. Because the classic collapsible corporation has insignificant earnings and profits, neither Subpart F nor section 1248 prevents the use of a foreign corporation for the proscribed device."

Another possible consideration is concern that regulations identifying income subject to a consent has effectively connected U.S. source income may constitute regulations which are legislative, rather than regulatory, in nature and therefore subject to invalidation.

CHAPTER 77

MISCELLANEOUS PROVISIONS

Javed A. Khokhar, Esq.
Silverstein and Mullens
Washington, D.C.

I. Extension of Moratorium on Research and Experimental Expense Allocation Regulations

A. Introduction

U.S. residents (including domestic corporations) are subject to U.S. income tax on their income derived from worldwide sources. Since U.S. residents may also be subject to income tax in a foreign country on income derived from such foreign country, the United States allows a credit for foreign income taxes. This foreign tax credit, however, is limited to the U.S. tax liability attributable to foreign source income. The purpose of the limitation is to prevent income taxes paid to foreign countries from reducing U.S. taxes on U.S. source income. The limitation is expressed in the form of the following formula:

$$\text{Tentative U.S. Tax Liability} \times \frac{\text{Foreign Source Taxable Income}}{\text{Worldwide Taxable Income}}$$

Regs. §1.861-8 provides rules for the allocation and apportionment of the research and experimental expenses and other deductions (*e.g.*, interest, taxes, stewardship expenses, etc.) to foreign source and U.S. source gross income for purposes of computing the foreign source taxable income and the worldwide taxable income. The objective of these regulations is to match the expenses with the foreign and domestic source income generated by or related to the expenditure.

The effect of allocating an expense, such as the R & D expense, to foreign source income is to reduce the foreign source taxable income (*i.e.*, the numerator of the foreign tax credit limitation fraction) and thereby, the foreign tax credit limitation. In the case of R & D activities conducted in the United States, foreign countries generally do not allow a deduction for such expenses because the research is not conducted there. Thus, if R & D expenses of U.S.-based research activities are allocated (at least, in part) to foreign source income (as was certain to occur under Regs. §1.861-8(e)(3) prior to 1982), it will result in increasing the taxpayer's worldwide tax liability.

The possibility of increased taxes and the accompanying effect on U.S.-based R & D activity motivated the enactment of §223 of the Economic Recovery and Tax Equity Act of 1981 (ERTA). U.S. multinational businesses contended that Regs. §1.861-8(e)(3) caused U.S. business to transfer U.S.-based research activity abroad. The legislative history of §223 of ERTA indicates that Congress believed that the transfer of U.S. research activities overseas was not in the best interests of the United States.

Section 223 of ERTA suspended Regs. §1.861-8(e)(3) for a period of two years and provided that, for their two taxable years beginning after August 13, 1981, taxpayers must allocate and apportion all expenditures incurred with respect to research activities (within the meaning of §174) conducted in the United States to U.S. source income. In addition, §223 of ERTA required the Secretary to conduct a study of the effect which §1.861-8 of the regulations has on both R & D activities conducted within the United States and on the availability of the foreign tax credit. A report on the study was required to be submitted to the Congress by February 13, 1982.

The Treasury Department conducted the required study and submitted a report on June 14, 1983. In its report, the Treasury concluded that "an allocation of research and development expenses to foreign source income may increase a taxpayer's worldwide tax liability if the foreign government did not allow the apportioned expense as a deduction. Some allocation to foreign income, however, is appropriate on tax policy grounds when domestic research and development is exploited in a foreign market and generates foreign income." The report went on to recommend that, because a reduction in research and development may adversely affect the competitive position of the United States, the moratorium on Regs. §1.861-8(e)(3) should be extended for two years in order to allow Congress time to consider the report's findings and work with the Administration to develop a coherent national program of research and development incentives.

In the Tax Reform Act of 1984, the U.S. Congress accepted the Treasury's recommendation and extended the moratorium on the regulations pertaining to the allocation and apportionment of R & D expenses for two years.

B. Detailed Analysis

Section 126 of the Tax Reform Act of 1984 (P.L. 98-369) extends the moratorium on the application of Regs. §1.861-8(e)(3) for two years. It provides that, for a taxpayer's taxable years beginning after August 13, 1983, and on or before August 1, 1985, all amounts allowable as a deduction for qualified research and experimental expenditures shall be allocated to and deducted from the taxpayer's U.S. source income. Section 126(b) of the Act defines the term "qualified research and experimental expenditures" to mean expenditures which are deductible under §174 and which are allocable to research and experimental activities conducted in the United States.

Section 126(c) of the Act also provides a special rule under which a taxpayer can benefit from the moratorium

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

for its third taxable year beginning after August 13, 1981, even if such third taxable year does not begin on or before August 1, 1985.

II. Definition of FORI and Recapture of Foreign Oil Related Losses Clarified

A. Introduction

Section 211 of TEFRA (Tax Equity and Fiscal Responsibility Act of 1982) repealed the per-country loss rule of §907(c)(4). It also tightened the limitations imposed by §907 on amounts of foreign taxes paid or accrued on foreign oil and gas extraction income and nonextraction foreign oil related income which may be credited against U.S. tax under §901 by U.S. multinational oil companies.

Because the repeal of per-country extraction loss rule requires a netting of foreign oil and gas extraction income and losses from all foreign countries, a taxpayer may have an overall foreign oil and gas extraction loss in a given taxable year. If a taxpayer does have an overall extraction loss, there are no restrictions on such a loss offsetting the taxpayer's other foreign source income and U.S. source income in that order. Where a taxpayer has an overall extraction loss in a given year, §907(c)(4) (enacted by TEFRA) provides rules for the recapture of such a loss in subsequent years.

The recapture rules of §907(c)(4), however, created a special problem. Under pre-TEFRA law, foreign taxes paid on oil-related foreign source income were subject to a separate foreign tax credit limitation under §§904 and 907(b). The §904 overall limitation for foreign taxes paid on non-oil related income was computed separately. The separate limitation for oil-related income, however, was repealed by TEFRA. Consequently, for purposes of loss recapture, the distinction between oil-related and non-oil related losses was eliminated. Thus, a non-oil related loss suffered in years before 1983 could be recaptured from post-1982 oil-related income and vice versa.

To deal with this problem, §211(e)(2) of TEFRA, as amended by the Technical Corrections Act of 1982, provided a special rule. Under this special rule, for purposes of recapturing a pre-1983 loss, post-1982 income of an oil company is required to be segregated into two separate baskets: an oil-related income basket and a non-oil-related income basket. Pre-1983 oil-related loss is first recaptured from the post-1982 oil-related income basket. To the extent such loss is not fully recaptured from the oil-related income basket, it is recaptured from the non-oil-related income basket. The recapture from the non-oil-related income basket need not be recaptured more rapidly than ratably over an eight-year period beginning with the first taxable year beginning after December 31, 1982.

Section 212 of TEFRA amended §954 (adding a new subsection (h)) to include nonextraction foreign oil-related income (other than certain shipping income) of large oil producers as a new category of foreign base company income. Thus, for taxable years beginning after December 31, 1982, nonextraction oil-related income (FORI) became the fifth category of foreign base company income.

There are some discrepencies between foreign base company FORI as defined in the Senate and Conference Committee Reports to TEFRA and as defined in §954(h). Section 954(h), as enacted by TEFRA, provides that base company FORI means foreign oil-related income within the meanings of §907(c)(2). This definition clearly appears to exclude indirect FORI (as defined in §907(c)(3)) from the base company FORI. The Senate Finance Committee Report, however, clearly and explicitly appeared to include FORI earned indirectly by U.S. taxpayers in foreign base company FORI. It provided, for example, that foreign base company FORI includes dividends, interest, amounts, or a distributive share received by a CFC to the extent such dividends, interest, amounts, or distributive share is attributable to FORI.

Sections 712(e) and (f) of the Tax Reform Act of 1984 (P.L. 98-369) make technical amendments to the special rule pertaining to the recapture of pre-1983 losses, and to the definition of foreign base company FORI in §954(h) respectively.

B. Detailed Analysis

Section 712(f) of the Tax Reform Act of 1984 amends the definition of foreign base company FORI and §712(e) amends the special pre-1983 foreign oil-related loss recapture rule.

1. The Definition of Base Company FORI Amended

Section 712(f) of the Act amends §954(h) to include a cross-reference to §907(c)(3). Thus, the amended §954(h) provides that the foreign base company FORI means foreign oil-related income as defined in §§907(c)(2) and 907(c)(3).

Section 907(c)(2) provides that the term "foreign oil related income" means the taxable income derived from foreign sources from: (i) the processing of minerals extracted from oil or gas wells into their primary products, (ii) the transportation of such minerals or primary products, (iii) the distribution or sale of such minerals or primary products, and (iv) the disposition of assets used by the taxpayer in the trade or business described in (i)-(iii) above.

Section 907(c)(3) provides that the term "foreign oil related income" includes dividends, interest, amounts, or a distributive share received by a CFC to the extent such dividends, interest, amounts, or distributive share is attributable to FORI.

Thus, foreign base company FORI includes not only foreign oil-related income earned directly by the taxpayer but also such income earned indirectly by the taxpayer.

2. Special Pre-1983 Loss Recapture Rule Amended

Section 712(e) of the Act amends the special rule which provides for the recapture of pre-1983 oil-related loss from the non-oil-related income basket over an 8-year period. Specifically, §712(e) of the Act amends §211(e)(2) of TEFRA to clarify that a taxpayer may, at its option, select a period shorter than eight years for the recapture of pre-1983 oil-related loss from the non-oil-related basket.

III. Foreign Earned Income Exclusion — Scheduled Increases Postponed

The Economic Recovery and Tax Equity Act of 1981 (ERTA) repealed §913 and enacted an amended version of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

§911 providing liberal rules for the exclusion of foreign earned income of U.S. citizens and resident aliens.

Under §911(a), a qualified individual may elect to exclude from gross income for any taxable year: (i) the foreign earned income of such individual, and (ii) the housing cost amount of such individual.

Section 911(b)(2), as originally enacted by ERTA, however, provided certain limits on the maximum amount of foreign earned income that a qualified individual could claim as an exclusion for any particular taxable year. This maximum amount of exclusion was $75,000 for the taxable years beginning in 1982; $80,000 for taxable years beginning in 1983; and was further scheduled to increase by $5,000 yearly until it reached $95,000 for taxable years beginning in 1986 and thereafter.

Section 17 of the Tax Reform Act of 1984 postpones the scheduled increases for 1984 and later years in the maximum amount of foreign earned income exclusion that a qualified U.S. citizen or resident alien may claim from gross income until 1988. Thus, the maximum amount of foreign earned income exclusion under §911(b)(2) remains at $80,000 for taxable years beginning in 1984, 1985, 1986 and 1987. For taxable years beginning in 1988, the maximum limit will increase to $85,000. This limit will further increase to $90,000 for taxable years beginning in 1989, and to $95,000 for taxable years beginning in 1990 and thereafter.

IV. Restrictions on Foreign Tax-Exempt Entity Leasing

Section 168(j), added by Act §31, extends the cost recovery period for property leased to a tax-exempt entity. For this purpose, the term "tax-exempt entity" encompasses any foreign person or entity, except for a foreign partnership or other foreign pass-through entity. The Act carves out exceptions for certain property (*e.g.*, property with respect to which more than 50 percent of the gross income derived by the foreign person or entity is subject to United States income tax, or is includible in gross income under §951).

The Act also extends the restrictions on investment tax credits to property used by foreign persons or entities. Again, exceptions are provided for specific classes of property.

V. Technical Correction Made to Section 1256(g)(1): "Foreign Currency Contract"

The Technical Corrections Act of 1982, §105(c)(5)(B), amended §1256(b) defining "regulated futures contract" by adding "Such term includes a foreign currency contract." The term "foreign currency contract" was defined in §1256(g), added by §105(c)(5)(C) of the 1982 TCA, to mean a contract "which requires delivery of a foreign currency" in which positions are also traded through regulated futures contracts. It was unclear whether this definition also applied to foreign currency contracts which are settled or could be settled in cash (as was true in the case of regulated futures contracts under the definition as amended by the 1982 TCA). Section 722(a)(2) of the 1984 TRA amends §1256(g), effective as if enacted by ERTA (as were the other 1982 TCA amendments), to add after the words "delivery of," in the definition of "foreign currency contract" the words "or the settlement of which depends on the value of." Thus, cash settlement foreign currency contracts are included in the definition of regulated futures contract for purposes of §1256 prior to its amendment by §102(a) of the 1984 TRA. Act §102(a), amending §1256, effective as to positions established after July 18, 1984, includes foreign currency contracts in the definition of "§1256 contract." The definition of foreign currency contract in §1256(g) is the same as pre-enactment §1256(g), as corrected by Act §722(a)(2), *supra*. *See* discussion in Chapter 37 of the amendments made to §1256.

CHAPTER 78

AMENDMENTS TO THE EXCISE TAXES

Joseph J. Westwater, Jr., Esq.
Silverstein and Mullens
Washington, D.C.

I. Three Percent Excise Tax on Communications Services Extended (Act §26)

A. Introduction

A three percent excise tax is imposed on amounts paid for local telephone service, toll (long-distance) telephone service, and teletypewriter exchange service.[1] These services are defined in §4252. The tax is paid by the person paying for the services. Prior to the Tax Reform Act of 1984, the tax was scheduled to terminate on January 1, 1986.[2]

B. TRA Amendment

Section 26 of the Act extends the current three percent tax on communications services for two years, through December 31, 1987.

C. Effective Date

The three percent excise tax is extended to amounts paid pursuant to bills rendered prior to 1988.

II. Amendments Relating to the Windfall Profit Tax (Act §§25, 722(a)(7))

A. Introduction

1. General

The Crude Oil Windfall Profit Tax of 1980 [3] imposes a windfall profit tax on the owner of an economic interest in the oil, *e.g.*, a domestic oil producer or royalty owner.[4]

Rather than taxing "profits" however, the Act imposes an excise or severance tax on each barrel of production when the oil is removed from the premises. The tax liability equals the "tax rate" multiplied by the "windfall profit." The windfall profit equals the removal price of the oil minus the sum of a specified base price, as adjusted for inflation, and state severance taxes imposed on the windfall profit.[5] The tax rate, base price, and inflation adjustment to the base price vary depending upon the character or "tier" of the oil.[6]

Section 4991 of the Code sets forth the definitions of the various categories of oil for purposes of the tax. Generally, tier one oil is domestic crude oil discovered and put into production prior to 1979. Specifically, tier one includes domestic crude oil not treated under any other provision of the windfall profit tax.[7]

Tier two includes any oil produced from a stripper well property and any oil from an economic interest in a Naval Petroleum Reserve held by the United States.[8]

Tier three oil is newly discovered oil, heavy oil, and incremental tertiary oil.[9]

Tier one oil is generally taxed at a 70 percent rate; tier two oil generally is taxed at a 60 percent rate. Tier three oil, other than newly discovered oil, is subject to a 30 percent rate. For up to 1,000 barrels a day of tier one oil production by independent producers a 50 percent rate applies; a 30 percent rate applies for the same amount of tier two production by independent producers.[10]

Beginning in 1982, the rate on newly discovered oil was reduced to 27.5 percent and to 25 percent in 1983. Prior to the Tax Reform Act of 1984, the rate of windfall profit tax on newly discovered oil would have been 22.5 percent for 1984, 20 percent for 1985, and 15 percent for 1986 and thereafter.[11]

2. Special Rule for Net Profits Interests

The Windfall Profits Tax is imposed on the producer of the oil, that is, the owner of an economic interest. A so-called "net profits interest" is an economic interest in gross production measured by the net profit which remains after the owner of the working interest has recovered the cost of exploration, development and production. This arrangement can arise, for example, by the landowner granting a lease and retaining a right to a percentage of the net profits derived by the lessee.

According to the House Ways and Means Committee Report, because of certain interactions between the definition of producer and the 90 percent net income limitation, whereby the windfall profit tax cannot exceed 90 percent of net income allocable to each barrel of crude oil, prior to the Technical Corrections Act of 1982, it was possible to design a transaction in which the owner of a working interest in proven property could transfer the interest to another party for a very large (*e.g.*, 99 percent) net profits interest. In such manner, the new working interest owner's windfall profit tax on the production allocated to him could be limited by the net income limitation. If effectively structured, these transactions could eliminate the windfall profit tax on that portion of the oil produced that was used to pay for the cost of operating the property.[12]

The Technical Corrections Act foreclosed the use of such agreements, entered into after March 31, 1982, to eliminate the windfall profit tax on cost recovery oil. Section 201(h)(1)(E) of the Act also provided that, for net profits interest agreements which provide that 90 percent or more of the net profit is to be received by a governmental entity or charity exempt from the windfall profit tax, the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

new rules would be applicable without regard to the March 31, 1982 effective date. Thus, preexisting arrangements between governmental units or charities and private producers would be subject to the new rule if the exempt entity were entitled to 90 percent or more of the net profit.[13]

B. Overview

1. Summary of Amendments

Under the Tax Reform Act of 1984 the rate of windfall profit tax on newly discovered oil would be reduced to 22.5 percent in 1984. The rate would remain at 22.5 percent from 1984 through 1987. In 1988, the rate would be 20 percent. In 1989 and subsequent years, the rate would be 15 percent.

Additionally, the Act provides a simplified procedure under which refunds arising by reason of Section 201(h)(1)(E) of the Technical Corrections Act of 1982 for periods before 1983 may be made to a partnership rather than to the partners individually.

2. Effective Date

Revision of the tax rate on newly discovered oil applies to taxable periods beginning after December 31, 1983.[14]

Provision of the expedited procedure for refunding of overpayments of the windfall profit tax by reason of Section 201(h)(1)(E) of the Technical Corrections Act of 1982 is effective as if included in the provisions of the Technical Corrections Act.

C. Detailed Analysis

1. Deferral in Reduction of Tax Rate on Newly Discovered Oil

Section 25 of the Tax Reform Act of 1984 amends subparagraph (B) of §4987(b)(3), relating to the rate of tax on newly discovered oil,[15] by revising the table contained therein. Prior to the Act, the rate for taxable periods beginning in 1984 was 22.5 percent, in 1985 was 20 percent and in 1986 and thereafter was 15 percent. The amendment establishes a 22.5 percent rate for taxable periods beginning in 1984 through 1987, a 20 percent for taxable periods beginning in 1988, and a 15 percent for taxable periods beginning in 1989 and thereafter.

2. Overpayments of Tax Due to Section 201(h)(1)(E) of Technical Corrections Act of 1982

Section 722(a)(7) of the TRA provides an expedited refund procedure for partnerships that may have overpaid windfall profit tax due to the application of Section 201(h)(1)(E) of the Technical Corrections Act of 1982, which provided that preexisting arrangements between governmental units or charities and private producers would be subject to rules eliminating the availability of reducing windfall profit tax on cost recovery oil if the exempt entity were entitled to 90 percent or more of the net profit.

In such case, if the refund is payable to the partnership, and the partners must pay the refund to one or more exempt entities, the partnership is authorized to act for each person who was a partner at any time in the partnership claiming the refund.[16]

Notwithstanding §6511,[17] the time for filing a claim for credit or refund of any such overpayment shall not expire prior to July 19, 1985, one year after the date of enactment of the Tax Reform Act of 1984.[18]

III. Amendments Affecting Excise Taxes on Cigarettes and Distilled Spirits (Act §§27, 452, 455, 1020)

A. Distilled Spirits Excise Tax; Taxation of Certain Floor Stocks (Act §27(a) and (b))

1. Introduction

Prior to the Tax Reform Act of 1984, the excise tax on distilled spirits produced in or imported into the United States was imposed at a rate of $10.50 per gallon.[19] Imported perfumes containing distilled spirits were also subject to a $10.50 tax rate per gallon.

Distilled spirits are subject to tax when they come into existence, but the amount of tax is not determined until the spirits are removed from the bonded premises in which they are held.[20]

Prior to 1979, one of two alternative methods was used for computing the tax, depending on the alcohol content of the spirits at the time of tax determination. Under the first of these methods, the "proof gallon" method, the distilled spirits tax is based both upon the volume of distilled spirits and its alcohol content. "Proof" is measured on a scale of zero to 200. Spirits are considered to be "at proof" when they are 100 proof, *i.e.*, 50 percent alcohol. The volume of the spirits is measured in standard U.S. liquid gallons. A proof gallon, consequently, is one gallon of 100 proof spirits. Prior to the Tax Reform Act of 1984, for example, one gallon of 150 proof spirits, equal to 1.5 proof gallons, would have been subject to a tax of $15.75 (1.5 times $10.50).

The second method of taxation is the "wine gallon" method, which is based solely on volume of liquid; one U.S. gallon, 231 cubic inches, equals one wine gallon.[21] This method applied when the alcohol content was below 100 proof. For example, under prior law, one gallon of 86 proof spirits would have been subject to a tax of $10.50.

In practice, domestic producers usually withdraw the spirits from bond before they are bottled for sale, at a time when they are above 100 proof, and subsequently reduce the spirits to the proof at which they are bottled for consumption.

Under the Title VIII of the Trade Agreements Act of 1979,[22] the wine gallon method of determining the excise tax on distilled spirits generally was repealed, leaving as the basis for tax determination the proof gallon method. The only exception was that imported perfumes containing distilled spirits continue to be taxed on a wine gallon basis.[23]

2. Overview

a. Summary of Amendments

The Tax Reform Act of 1984 increases the tax rate on distilled spirits produced or imported into the United States by $2.00 per proof gallon, to $12.50 per proof gallon, effective on October 1, 1985. A like increase, to $12.50 per wine gallon, is applicable on all perfumes containing distilled spirits imported into the United States.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The Act clarifies and expands the Treasury Department's regulatory authority to prescribe the time for payment of the special tax imposed on certain floor stocks held for sale on October 1, 1985, and to exempt certain small businesses from that tax. The floor stocks tax generally will be due on April 1, 1986. Additionally, certain special *de minimis* provisions are included for small- and middle-sized wholesale and retail dealers.

b. Effective Dates

The amendments are effective on October 1, 1985.

3. Detailed Analysis

a. Distilled Spirits Excise Tax Rate

Section 5001(a)(1) is amended by §27 of the Tax Reform Act so as to increase the tax rate on distilled spirits produced or imported into the United States by $2.00 per proof gallon, to $12.50 per proof gallon. Section 5001(a)(3) is amended to increase to $12.50 per wine gallon the tax rate on all perfumes containing distilled spirits imported into the United States.[24]

A technical amendment amends paragraphs (1) and (2) of §5010(a) (relating to the credit for wine content and for flavors content) by striking out "$10.50" and inserting in lieu thereof "$12.50".[25]

b. Taxation of Certain Floor Stocks

(1) In General

The Act imposes a "floor tax" of $2.00 per proof gallon on any person[26] holding distilled spirits[27] on October 1, 1985, the effective date of the increase in the §5001 tax.

(2) Exception for Certain Small or Wholesale Retail Dealers

Dealers holding 500 wine gallons or less in volume of distilled spirits on October 1, 1985 are exempt from the floor tax,[28] provided they submit to the Secretary of the Treasury, as directed, such information as the Secretary may direct.[29]

(3) Credit Against Tax

Dealers are also accorded a credit against the floor tax in an amount equal to $800. The credit cannot exceed the amount of tax imposed.[30]

(4) Liability for Tax and Method of Payment

The person holding the distilled spirits on October 1, 1985, is liable for the floor tax of $2.00 per proof gallon. Generally, the tax is payable on or before April 1, 1986. An exception provides that dealers with gross sales receipts for the most recent taxable year not in excess of $500,000 (so called "small- or middle-sized dealers") are allowed to pay the floor stocks tax in three installments, one-third on each of April 1, 1986, July 1, 1986, and October 1, 1986.[31]

(5) Special Rules for Controlled Groups

The 500 wine gallon amount, the $800 credit, and the $500,000 gross receipts test are all to be apportioned among the members of a controlled group according to regulations to be issued by the Secretary. For these purposes, a controlled group has the meaning given the term in §1563(a), except that "more than 50 percent" is substituted for "at least 80 percent" for purposes of determining whether the stock ownership tests are met. Similar rules are to be promulgated for groups of dealers under common control when one or more are not corporations.[32]

(6) Special Rule for Imported Perfumes

Imported perfumes that contain distilled spirits and are located on the premises of any retail establishment on October 1, 1985, are exempt from the $2.00 per wine gallon floor tax.[33]

B. Refund of Excise Tax on Certain Cigarette Floor Stocks (Act §1020)

1. Introduction

TEFRA raised the tax on small cigarettes, defined as weighing not more than three pounds per thousand, from $4.00 to $8.00 per thousand. This translated to an increase in the tax on a pack of cigarettes from 8 cents to 16 cents. The tax on large cigarettes, defined as weighing more than three pounds per thousand, was also doubled.[34]

The increase applies to cigarettes removed from bonded premises after December 31, 1982, and before October 1, 1985. Thereafter, the tax rate reverts to pre-TEFRA rates.

2. Overview

a. Summary of Amendment

The Tax Reform Act of 1984 provides for a refund of tax with respect to cigarettes held for sale on October 1, 1985, on which tax, imposed at a higher rate before that date, was paid.

b. Effective Date

The amendment is effective for cigarettes held for sale on October 1, 1985.

3. Detailed Analysis

Floor stocks of cigarettes held for sale,[35] held for sale on October 1, 1985, will be eligible for a refund equal to the difference between the tax actually paid and the tax in effect on October 1, 1985 (*e.g.*, 8 cents per pack of 20 cigarettes for small cigarettes).[36]

Floor stock refunds will be paid to the manufacturers and importers who originally paid tax on the cigarettes involved. To be eligible for a refund, a manufacturer (including an importer) must submit a claim to the Bureau of Alcohol, Tobacco, and Firearms before July 1, 1986, based on a request submitted by a wholesale distributor before April 1, 1986, reflecting floor stocks refunds due such distributors and to customers of such distributors.[37]

Before (or simultaneous with) the time any payment is made or credit granted by the Treasury Department, the manufacturer also must either (1) reimburse distributors in an amount equal to the amount of the refund[38] or (2) absent such a payment to the distributor, obtain the distributor's written consent to the manufacturer's or importer's receiving the floor stocks refund with respect to cigarettes held on October 1, 1985, for sale by the wholesale distributors. Wholesale distributors must also reimburse their customers or obtain written consent as a condition of receiving any payment from a manufacturer or importer with respect

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

to cigarettes not actually held by the distributors on October 1, 1985.[39]

The manufacturer must have commercial records to substantiate the claim that the tax on the cigarettes to which the claim relates was paid.[40]

c. Requirement of Electronic Funds Transfer for Alcohol and Tobacco Excise Taxes (Act §27(c))

1. Introduction

Cigarette and alcohol excise taxes are due the following number of days after the last day of the semimonthly period when the taxable product is removed from bonded premises:

Cigarettes	25 days
Domestically produced and bulk imported distilled spirits	30 days
Bottled imported distilled spirits	15 days
Wine and beer	15 days

Example: If the distilled spirits tax becomes payable during the January 1-15 return period, the taxpayer would have until February 15 to report and pay the tax for the January 1-15 period.

Prior law generally required payment of the cigarette and alcohol product excise taxes to accompany a return for each semimonthly period.[41] There was no requirement of payment by electronic funds transfer.

2. Overview

a. Summary of Amendment

Section 27(c) of the Tax Reform Act requires taxpayers whose gross tax liability with respect to the product involved was $5 million or more during the preceding calendar year pay excise taxes on cigarettes and all alcohol products by means of electronic funds transfer to a Federal Reserve Bank.

b. Effective Date

The provision is effective for taxes required to be paid on or after September 30, 1984.

3. Detailed Analysis

a. Alcohol Products

Section 5061 is amended by adding subsection (e) which requires the payment of excise taxes imposed on distilled spirits,[42] wine,[43] and beer[44] by electronic funds transfer.

Persons who, during any twelve month period ending December 31, were liable for a gross amount of $5,000,000 in taxes on an alcohol product must, in the succeeding taxable year, make payment in this manner, regardless of the amount of excise tax due in such succeeding year. The provision applies both to domestic producers and manufacturers (including Puerto Rican and Virgin Island producers and manufacturers) and importers of taxable alcohol products.[45]

The determination as to whether a person owed $5 million in excise taxes is to be made by reference to the person's gross tax liability without regard to "drawbacks" (returns) or refunds. The term "person" includes all members of a controlled group of corporations as defined in §1563; likewise, all plants at which a person carries on business are to be aggregated.[46]

b. Tobacco Products

Section 5703(b) is amended by adding paragraph (3), which requires any person who, in any twelve-month period, was liable for a gross amount of $5,000,000 or more of tax imposed on tobacco products and cigarette papers and tubes by §5701 (or §7652), to pay such taxes in the succeeding year by electronic funds transfer to a Federal Reserve Bank.

Comment: It appears that the electronic funds transfer requirement would not apply if, for example, a single producer paid taxes of $4 million on distilled spirits and $2 million on wine in a twelve-month period, even though the total tax collected exceeds the $5 million floor. The language of new §5061(e) is couched in the disjunctive,[47] and the Finance Committee Print specifically states that the gross tax liability is to be made treating distilled spirits, wine, and beer as separate products. Contrast with this the conjunctive language of the amendment to §5703(b)[48] and accompanying Finance Committee Print language to the effect that all types of tobacco products are treated as liable for tax with respect to one product.[49]

D. Allowance of Certain Drawback Claims (Act §452)

1. Introduction

Upon the submission of a properly executed claim by a qualifying user of distilled spirits in the manufacture of food products, flavorings, or medicines unfit for beverage purposes, a return or "drawback" of a major portion of the excise tax on distilled spirits is allowed.[50]

Taxpayers claiming a drawback of distilled spirits taxes are required to maintain records to establish such qualified use.[51] Treasury regulations require, for example, quantitative formulae to be filed prior to or at the time of manufacture of the nonbeverage product.[52] Failure to comply with these requirements results in a denial of the claim.

2. Overview

a. Summary of Amendment

The Act provides that a penalty shall be imposed for violations of the regulatory requirements, in lieu of merely denying a claim for a drawback.

b. Effective Date

The amendment is effective on the first day of the first calendar month that begins more than 90 days after July 18, 1984, the date of enactment of the Act (*i.e.*, November 1, 1984).[53]

3. Detailed Analysis

Section 5134 is amended by adding subsection (c) which prohibits the denial of a drawback claim for failure to comply with statutory requirements under subpart F (Code §§5131-5134) as well as regulations issued thereunder, if the claimant can prove that the distilled spirits for which drawback is claimed were, in fact, used for the qualified purposes enumerated in section 5131.[54]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

In lieu of mere denial, the claimant is liable for a $1,000 penalty for each failure to comply with the applicable laws or regulations (unless it is shown that the failure was due to reasonable cause).[55] The aggregate amount of the penalties may not exceed the amount of the taxpayer's claim.[56]

Example: The Finance Committee Print provides that if nonbeverage products deviate from previously filed formulae, the determination of a failure to comply with the regulations would be made with respect to each separate product reflected in a drawback claim. Thus, if a manufacturer of two distinct flavors or extracts were to submit a drawback claim, and some portion of each flavor deviated from the previously filed formula, the claimant would be liable for a penalty of $2,000 (unless the failure to comply was due to reasonable cause).[57]

Section 5134(c)(3) provides that any penalty imposed shall be assessed, collected and paid in the same manner as taxes, as provided in §6662(a).

E. Fortification of Cooking Wine (Act §455)

1. Introduction

Prior to the Tax Reform Act of 1984, an excise tax was imposed at a rate of $10.50 per gallon on distilled spirits produced in or imported into the United States.[58] The amount of tax has been generally determined when the spirits are removed from the bonded premises in which they are held.[59]

In certain cases, however, distilled spirits may be removed from the bonded premises without payment of tax.[60] Prior to the Tax Reform Act of 1984, for use in the production of wine, only wine spirits or brandy were allowed to be removed absent the payment of tax under these rules.[61] Therefore, distilled spirits (other than wine spirits) used in a nonbeverage wine product had to be removed "tax paid," and claim for refund made.

2. Overview

a. Summary of Amendment

The Act expands the circumstances under which distilled spirits for use in producing nonbeverage wine products, *e.g.*, cooking wine, may be removed from a distilled spirits plant without payment of tax.

b. Effective Date

The amendment is effective on the date of enactment (July 18, 1984).[62]

3. Detailed Analysis

Section 5214(a) is amended by adding paragraph (13), which provides for the tax-free removal from a distilled spirits plant of spirits used on bonded wine cellar premises in the production of nonbeverage wine or wine products that will later be removed from the bonded wine cellar pursuant to §5362(d).[63]

Act §455(b) also amends §5005(e)(1), to relieve the original distiller of liability for tax upon the removal of the distilled spirits, and §5005(e)(2), to relieve the subsequent transporter from liability if the distilled spirits are, in fact, used in the production of nonbeverage wine products.

Section 5354 requires the calculation of the required surety bond for bonded wine cellars to be based on the amount of tax on such wine and wine spirits as were on hand or in transit. In light of the expanded category of products able to be removed tax free to a bonded wine cellar, a technical amendment allows the calculation to be based on the amount of wine and distilled spirits on hand or in transit.[64]

IV. Amendments Relating to Excise Taxes on Stills and Condensers (Act §451)

A. Introduction

Prior to the Tax Reform Act of 1984, §5101 imposed an occupational tax of $55 per year on manufacturers of stills. In addition, a tax of $22 was imposed on each still (or condenser to be used in distilling) manufactured. An exemption from these taxes was provided for stills manufactured by a proprietor of a distilled spirits plant exclusively for use in the proprietor's plant.[65]

In addition, manufacturers of stills were required to notify the Treasury Department, in writing, of the removal of a still, boiler, or other distilling vessel from the place of manufacture and the person and place to which it was delivered. The still (or other distilling apparatus) could be set up only upon receipt of a written permit from the Treasury.[66] Further, every person having possession or control over a still was required to register with the Treasury immediately after setting up the still. The registration set forth the name and address of the owner and the location, capacity and purpose of the still.[67]

B. Overview

1. Summary of Amendment

The Act repeals both the $55 per year occupational tax on manufacturers of stills and the additional $22 tax for each still.

The Act repeals the mandatory requirement of notice of manufacture and removal of a still and the requirement of permission prior to set up of a still. In lieu thereof, the Act provides that the Treasury Department may, pursuant to regulations, require manufacturers of stills, boilers, or other distilling vessels to give notice before removal of the facility. This notice (if required) would set forth the capacity of the facility, the time of removal, and the person by whom the facility is to be used. The Act retains the requirement of registration by the still user after setting up the facility.

2. Effective Date

The amendment is effective on the first day of the first calendar month that begins more than 90 days after July 18, 1984, the date of enactment of the Act (*i.e.*, November 1, 1984).[68]

C. Detailed Analysis

Subpart C of the Internal Revenue Code (§§5101 5106) is amended by repealing §§5103-5106. Section 5101 is amended. Section 5102, relating to the definition of a manufacturer of stills, remains unchanged.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Section 5101 is amended to provide the Secretary of the Treasury the discretionary authority to require the manufacturer of the still to give written notice prior to the removal of the still from the place of manufacture. Such notice must include the name of the person by whom the still is to be used, its capacity, and the date of its removal from the place of manufacturer.[69]

The Secretary may also require that no still or distilling vessel be set up without the manufacturer first giving written notice thereof to the Secretary.[70]

As under prior law, §§5616(2) and 5687 provide for penalties and forfeiture for failure to give notice of manufacture or for setting up a still without first giving notice.[71]

The mandatory requirement of registration immediately after setting up a still, pursuant to §5179, has been retained. Accordingly, the penalty and forfeiture for failure to register a still when set up, under §§5601(a) and 5616(1), remain in effect.[72]

Technical amendments are made to §§5179(b)(2) (relating to registration of stills) and §5615(2) (relating to property subject to forfeiture) to conform them to the above-mentioned changes.[73] Section 5691, which imposes a special penalty for nonpayment of special taxes relating to liquors, is amended to remove from its application manufacturers of stills.[74]

V. Repeal of Stamp Requirement for Distilled Spirits (Act §454)

A. Introduction

Prior law required distilled spirits containers transported or sold in the United States to bear a stamp indicating that the Federal excise tax on the spirits has been paid.[75] Strip stamps that satisfy this requirement, printed by the Bureau of Engraving and Printing and distributed to distillers and bottlers free of charge, generally have continued to be used on distilled spirit containers, despite regulations authorizing alternate methods of indication of payment of tax.[76]

Government-supplied strip stamps must generally be broken in order to open a distilled spirits container. Thus, the stamps act as closure devices for the containers. However, subsequent to the Distilled Spirits Tax Revision Act,[77] the presence of such stamps no longer determines conformity with Federal bottling or tax laws.

B. Overview

1. Summary of Amendment

Section 454 of the Tax Reform Act of 1984 repeals the strip stamp requirement for distilled spirits containers and associated penalty provisions.[78] However, the Act requires that distilled spirits containers, on determination of tax, bear a closure or other device designed to require breaking in order to gain access to the contents of the container.[79] The provision applies to domestically produced and imported distilled spirits. Closure devices are not required for containers having a capacity in excess of one wine gallon.

2. Effective Date

The amendments are effective July 1, 1985.

C. Detailed Analysis

1. In General

Section 454(a) of the TRA repeals §5205. Section 5301 is amended by the addition of new subsection (d) which requires distilled spirits containers, on determination of tax, bear a closure or other device designed to require breaking in order to gain access to the contents of the container.[80]

The provision applies to domestically produced distilled spirits, imported distilled spirits, and distilled spirits entering the United States from Puerto Rico and the Virgin Islands.[81]

The Finance Committee Print also states that, although government-supplied strip stamps may be affixed to containers of distilled spirits only until July 1, 1985, if strip stamps are affixed to containers of distilled spirits before that date, the Federal strip stamp on such containers shall meet the Act's requirement for an antitampering device on distilled spirits containers.[82]

2. Technical Amendments

a. Effacement of Mark or Seal

Section 5206 (relating to containers of distilled spirits) is amended to require the effacement or obliteration of any such mark or closure on empty containers.[83]

b. Penalty Relating to Marks, Brands, and Containers

Section 454(c)(11)(A) of the Act amends §5604 to provide that for each of the following offenses, an individual may be fined not more than $10,000, and/or imprisoned for not more than five years:

(1) transfer of distilled spirits absent closure required in new section 5301(d);

(2) emptying, with fraudulent intent, a distilled spirits container without breaking or defacing the closure;

(3) emptying a distilled spirits container without effacing or obliterating any mark or brand as required in section 5206(d);

(4) use a distilled spirits container that has already once been filled and fitted with a closure without removing and destroying such closure;

(5) unlawfully removing a closure or defacing a seal affixed to a distilled spirits containers;

(6) fraudulently transporting any empty container with a seal or mark affixed thereto; and

(7) fraudulently using a mark or seal that misrepresents the contents of the container.[84]

c. Containers Without Closures

Section 454(c)(12)(A) of the Act amends §5613(b) to provide that all distilled spirits found in containers without closures in compliance with Chapter 51 of the Code shall be forfeited to the United States.[85]

d. Miscellaneous

The Act makes conforming and technical amendments to the following Code sections: §5062(b) (relating to drawbacks in case of exportation);[86] §5066(a)(2) (relating to

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

bottled distilled spirits eligible for export with benefit of drawback);[87] §5116(b) (relating to cross references);[88] §5206(f);[89] §5207(a)(4) (relating to records and reports);[90] §5215(c) (relating to return of tax determined distilled spirits to bonded premises);[91] §5235 (relating to bottling of alcohol for industrial purposes),[92] §5301(c) (relating to regulation of traffic in containers of distilled spirits);[93] and §5555(a) (relating to records, statements, and returns).[94]

VI. Changes Relating to Gasoline, Tire and Vehicle Excise Taxes [Act§§731-735, 901-935]

A. Introduction

The Highway Revenue Act of 1982 (P.L. 97-424) (Title V of the Surface Transportation Assistance Act of 1982) made numerous amendments to highway use-related federal excise tax provisions. The major provisions increased the use tax on heavy trucks, increased the excise tax on gasoline, diesel fuel and special motor fuels, imposed a manufacturer's excise tax on trucks, truck trailers and semi-trailer chassis and bodies, and imposed a floor stocks tax on gasoline and unused heavy truck tires held as inventory by dealers, with floor stock refunds provided for in the event of repeal or reduction of a manufacturer's excise tax. These provisions are discussed in detail below.

1. Heavy Vehicle Use Tax

An annual excise tax is imposed on the use of public highways by any motor vehicle whose taxable gross weight[95] exceeds a prescribed minimum weight. For use occurring before July 1, 1984, the minimum weight was 26,000 pounds, and for uses occurring on or after that date, the minimum weight was increased to 33,000 pounds. Those vehicles falling below these respective weights were exempt from the tax.

The rate of tax for uses prior to July 1, 1984 was $3.00 per 1,000 pounds of taxable gross weight, or fraction thereof, while a graduated rate applied for post-June 30, 1984 uses.[96] Additionally, further increments were scheduled beginning on July 1, 1986 which were to last until termination of the excise tax on July 1, 1988.[97]

Various exemptions are provided based upon both the type of user and the extent of use. Uses by state, local and federal governments are exempt,[98] as are uses by qualified private transit buses. In addition, as of July 1, 1984, there was an exemption (regardless of taxable gross weight) for vehicles traveling less than 5,000 miles on public highways during the tax period[99] and a pro rata credit or refund was allowed for retired vehicles, whether such retirement is caused by theft, accident or other casualties.[100]

Small owner-operators, defined as persons who own and operate no more than 5 taxable vehicles, during the taxable period, were treated in a more lenient manner, so that the pre-July 1, 1984 rules continue to apply until July 1, 1985, and the provisions for mileage exemptions and pro rata refund or credit continue to apply to then until July 1, 1985.[101]

The heavy vehicle use tax is currently scheduled to expire on October 1, 1988.[102]

2. Treatment of Various Fuel Taxes

a. Diesel Fuel

Prior law provided for an excise tax of 9 cents on the sale of diesel fuel for use in a highway vehicle.[103] The tax expires on October 1, 1988. The Highway Trust Fund received appropriations of amounts equivalent to the diesel fuel tax receipts and one-ninth[104] of this amount was designated for the Mass Transit Account.

Full exemption from tax is provided for diesel fuel sold to a state, local government or nonprofit educational institution for its exclusive use.[105] Partial exemption was provided for alcohol fuel mixtures at 5 cents a gallon.[106] In the case of diesel fuel used in an intercity, local or school bus, full exemption was achieved through the use of a refund or credit for tax paid.[107]

b. Gasohol and Alcohol Fuel Mixtures

A five cent per-gallon exemption from the gasoline, diesel fuel and special motor fuel excise taxes was provided for fuels consisting of a mixture of at least 10 percent alcohol with any of these fuels.[108] For these purposes, "alcohol" was defined[109] as only alcohol which is derived from a source other than petroleum, natural gas or coal.

Where certain alcohol fuels are comprised of at least 85 percent alcohol derived from a source other than petroleum or natural gas (*e.g.*, methanol or methanol), a nine cent per gallon exemption was allowed from the excise tax on special motor fuels.[110]

An income tax credit of 50 cents per gallon was allowed where alcohol comprised at least 10 percent of the mixture in a combination of alcohol and gasoline, diesel fuel and special motor fuel[111] or where alcohol was used as a fuel, other than in a qualified fuels mixture.[112] For these purposes, alcohol was defined so as to include only that alcohol which is derived from a source other than petroleum, natural gas, or coal.

Alcohol imported into the United States for use as a fuel was subject to a duty of 50 cents per gallon.[113]

c. Certain Fuel Used in Taxicab

Taxicabs qualify for partial exemption from fuel excise tax where they are rated at above-average fuel economy and where the driver is not precluded from offering ride sharing.[114] The exemption of four cents per gallon from the excise tax or gasoline, diesel fuel and special motor fuels is created through either a refund or a credit against tax. The exemption expired October 1, 1984.

B. Detailed Analysis

1. Reduction in Heavy Vehicle Use Tax

Effective July 1, 1984, §901 of the new law restructures and reduces the tax rate so that vehicles under 55,000 pounds are exempt from the excise tax and, for vehicles exceeding that weight, the rate ranges from $100 per year plus $22.00 per 1,000 pounds (or fraction thereof) in excess of 55,000 pounds, up to a maximum rate of $550 per year for vehicles exceeding 75,000 pounds.[115]

This reduction and restructuring had its genesis in taxpayer objections to a large tax which was not necessarily correlated to the amount of business done[116] and in a Department of Transportation Report (DOT Report) sub-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

mitted to Congress in January, 1984, which was commissioned to suggest improvements to the heavy use tax, as well as alternative taxing schemes.[117]

The small owner-operator continues to receive special treatment. Under §901(b) of the Act, a one-year tax rate of $3 per 1,000 pounds of gross taxable weight applies (unless this tax exceeds the regular rate described above, in which case the regular rate applies) for the period of July 1, 1984 to June 30, 1985. Thereafter the regular rate described above applies to owner-operators as well as all other vehicle owners. The small owner-operator also received the same benefit as vehicle owners in general through the accelerated effective date (from July 1, 1985 to July 1, 1984) [118] for the 5,000 miles-and-under excise tax exemption and for the prorated tax as a result of a theft or other casualty loss. Thus, these rules are effective for all qualified vehicle owners on July 1, 1984.

Two special rules apply to provide relief for special purpose vehicles. Vehicles which are registered in a state for hauling farm commodities to and from a farm or for use directly in agricultural production on the farm are entitled under §903 of the Act to a total of 7,500 miles (instead of 5,000 miles) when determining the exemption for low mileage vehicle use.[119] The mileage exemption for all agricultural vehicles was increased from 5,000 miles to 7,500 miles by Senate floor amendment. The rationale for the increase was given by Senator Trible who cited, among other factors, the agricultural vehicle mileage increase due to rail line abandonment and grain elevator bankruptcies.[120]

Section 902 of the Act provides that vehicles used exclusively to transport harvested forest products to and from forested sites and which are registered for such use in a state are entitled to a 25 percent reduction in the use tax.[121] The tax rate for logging vehicles was to be reduced by one half under the Senate rule [122] but in Conference this was cut back to 25 percent.[123] Logging vehicles, in order to qualify, must exclusively haul harvested forest products to and from forest sites and be registered for that purpose. This rule is effective July 1, 1984.[124]

2. Treatment of Various Fuel Taxes

a. Diesel Fuel Tax

Section 911 of the Act increases the diesel fuel excise tax to 15 cents per gallon.[125] The exemption (in the form of a refund) for intercity, local, and school buses was indirectly increased, through §915 of the Act, to 15 cents per gallon, but the Act then reduced the refund by 3 cents a gallon with respect to all vehicles, except for certain qualified subsidized intracity buses.[126] A full exemption is provided for a qualified subsidized intracity bus, which is defined as any local bus seating at least 20 passengers under contract to the state or local government (or where such government pays more than a nominal subsidy for operation) and the bus offers regular scheduled routes to the general public.[127] Therefore, all intercity, local and school buses, with the exception noted, will pay a three cent a gallon diesel fuel tax, effective August 1, 1984.[128]

A one-time rebate was enacted to compensate the purchasers and holders of lighter weight diesel fuel powered vehicles (gross weight of 10,000 pounds or less) for the new higher fuel tax.[129] This so-called "diesel fuel differential amount" [130] will amount to $102 for all vehicles other than trucks and vans and, for trucks and vans, $198, in the case of qualified vehicles purchased after January 1, 1985, and before January 1, 1988. For qualified vehicles already held on January 1, 1985, the diesel fuel differential amount is calculated as a fraction of the general rate, reduced by one-sixth per year according to model year until no differential is allowed with respect to a 1978 or earlier model year diesel fuel vehicle.[131] With respect to investment tax credit and depreciation calculations, the law also requires that the basis of the diesel powered vehicle be reduced by the amount of the differential payment.[132]

b. Gasohol and Alcohol Fuel Mixtures

Effective January 1, 1985, the excise tax exemption for special fuel mixtures containing at least 10 percent alcohol (including gasohol) is increased from five cents a gallon to six cents a gallon [133] from the gasoline excise tax. The definition of "alcohol" for this purpose is modified so that alcohol derived from peat is deemed to be derived from coal and thus not entitled to exemption.[134] Section 732 of the Act clarifies that the gasoline excise tax (nine cents per gallon) applies to gasohol or other fuels which consist of at least 10 percent alcohol. Thus, a four and four-ninths cents a gallon tax applies to the sale of gasoline used in producing gasohol and a four cents a gallon tax applies to the sale of gasohol.[135] Under Code §4081(c)(2), the later separation and sale of the gasoline from the mixture is taxed at a rate of four and five-ninths cents a gallon.

Section 912(b) further amends Code §4081(c)(1) by providing that, effective January 1, 1985,[136] the four and four ninths cent per gallon tax applied to the sale of gasoline for use in producing gasohol is reduced to three and one-third cents and the four cents per gallon tax imposed on the sale of gasohol is reduced to three cents per gallon.

The five cents per gallon refund related to gasoline used to produce alcohol fuels is reduced to four and five-ninths cents and the floor stocks tax on gasohol is reduced to four cents a gallon.[137] Effective January 1, 1985,[138] however, the refund related to gasoline used to produce alcohol fuel is increased to five and two-thirds cents per gallon.[139]

The alcohol fuels credit and alcohol fuels mixture credit were increased to 60 cents per gallon [140] except that, in the case of alcohol having a proof of at least 150 but less than 190, the credit is 45 cents per gallon.[141] These provisions are effective January 1, 1985.[142]

Effective August 1, 1984, the excise tax on partially exempt ethanol or methanol fuel is cut in half from nine cents per gallon to four and one-half cents per gallon.[143]

Effective January 1, 1985, the tariff on alcohol imported for use as fuel is increased to 60 cents per gallon.[144]

c. Other Provisions Related to Fuel

(1) Fuel Used in Taxicabs

The four cents per gallon exemption for qualified taxicabs is extended to October 1, 1985.[145]

(2) Chain Operators of Retail Gasoline Stations

Section 733 of the Act amends the definition of "wholesale distributor" in Code §4082 to include a person who

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

purchases gasoline from a producer and distributes such gasoline to 10 or more retail gasoline stations which are under the common management of that person.[146] The effect of this provision is to delay the imposition of the gasoline excise tax until it is sold by the retail gasoline station recipient. The provision takes effect on October 1, 1984.[147]

3. Retail Tax on Trucks and Trailers

a. One Year Reduction in Certain Trailer Excise Taxes

For one year beginning on the date of enactment of the Act,[148] the 12 percent retail excise tax on piggyback trailers or semitrailers is reduced to six percent.[149] "Piggyback trailers or semitrailers" are defined as trailers or semitrailers which are designed principally for use in connection with trailer-on-flatcar service by rail and for which the seller has certified to the Service that the use, resale for use or other similar use of the trailer will be principally in connection with such service.[150] However, if the trailer or semi-trailer is actually used or resold for a nonqualified use, such use or resale is treated as original retail sale for which the offender must pay an additional six percent excise tax—effectively applying the full 12 percent tax from prior law.[151]

b. Calculation of Retail Tax Base

For purposes of determining the price in calculating the retail excise tax on truck trailers under Subchapter B, components used prior to being furnished by the first user of the component are excluded.[152]

4. Technical Amendments: Floor Stocks Refunds for Tires

Section 734(a) of the Act provides for floor stocks refunds for tires which are taxed at a lower rate after January 1, 1984 (but not repealed).[153] The dates on which tire dealers and tire manufacturers must submit claims (to the manufacturer and Service respectively) are extended to prior to January 1, 1985 and April 1, 1985, respectively.[154]

The floor stocks tread rubber is treated as a tax-repealed article for purposes of the floor stocks refund.[155] In addition, all provision of law, including penalties, applicable to §4081 tax or §4071(a) tax, are imposed on floor stocks taxes.[156]

Section 734 made numerous other small technical corrections to the Code, including provisions related to overpayment of tax on trucks and tires,[157] noncommercial aviation [158] and allowing wire transfers to Federal Reserve Banks where the extension of the payment due date for certain fuel taxes is involved.[159]

Amendments to the Highway Trust Fund were made by §911(d) of the Act to change the rate allocated to the Mass Transit Account to one cent per gallon and to enact conforming amendments to the income tax credit contained in §6427.[160] All of these amendments are effective on August 1, 1984.

5. Repeal of Obsolete Provisions of the Highway Revenue Act of 1982

Section 735 of the Act made numerous revisions in the Code based upon provisions which were made obsolete by the Highway Revenue Act of 1982. The major sections repealed were §§4061, 4062 and 4063, dealing with a 10 percent manufacturers' excise tax on trucks, buses, tractors and other highway vehicles, articles which would be classified as vehicle parts and exemptions for various vehicles such as ambulances.[161] The amendment takes effect as if it were included in the provisions of the Highway Act of 1982 to which they apply.

6. Studies

Five studies were ordered in conjunction with the enacted provisions described above. Three deal with the heavy vehicle use tax, one with taxicabs and one with piggyback trailer taxes.

a. Heavy Vehicles

The Secretary of Transportation is to conduct a study of whether highway motor vehicles with taxable gross weights of 80,000 pounds or more bear their fair share of the costs of the highway system.[162] This report must be submitted no later than October 1, 1987.

b. Transborder Trucking

The Secretary of Transportation is to conduct a study on the significance of Code §448 [163] on transborder trucking operations.[164] This report must be submitted no later than October 1, 1987.

c. Feasibility Study of Weight Distance Taxes

The Secretary of Transportation is to conduct a feasibility study on the ability of a weight distance truck tax to achieve the greatest equity among highway users, ease compliance costs (including an evaluation of evasion potential) and improve the efficiency of administration. The study is to include an assessment of the benefits to interstate commerce of replacing all Federal truck taxes (except fuel taxes) with a weight-distance tax.[165] It is to be submitted no later than October 1, 1987.

d. Reduced Fuel Taxes for Taxicabs

The Secretary of the Treasury (or his delegate) is to conduct a study of the reduced taxicab fuel tax rate created by the newly amended Code §6427(e).[166] The Secretary's report and recommendations are to be submitted to Congress no later than January 1, 1985.

e. Study of Piggyback Trailers

The Secretary of Transportation (in consultation with the Secretary of the Treasury) is to conduct a study of the appropriate application and level of tax imposed on piggyback trailers and semitrailers by amended Code §4051.[167] This report is to be submitted to Congress no later than May 1, 1985.

VII. Excise Tax on Sport Fishing Equipment (Act §1015)

A. Introduction

Prior to the Tax Reform Act of 1984, an excise tax of 10 percent of the sales price was imposed on the sale by a manufacturer, producer or importer of fishing rods, creels and reels, and artificial lures, files and baits (including parts and accessories).[168]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Amounts equivalent to the revenues generated by this tax are allocated to the states in partial reimbursement for their costs incurred under the sport fish restoration program.[169]

Treasury regulations require manufacturer's excise tax returns to be filed quarterly. Quarterly returns are due on the last day of the first month after the end of the quarter.[170] However, Treasury regulations generally require monthly or semi-monthly payment of excise taxes.[171] If a taxpayer is liable in any month for more than $100 of manufacturer's excise tax, the taxpayer must deposit the amount on or before the last day of the next month in an authorized depository, *e.g.*, a Federal Reserve Bank. If excise tax liability is more than $2,000 in any month of a preceding calendar quarter, then tax deposits for the following quarter must be made semi-monthly. These taxes must be deposited by the ninth day following the semimonthly period for which they are deposited.[172]

B. Overview

1. Summary of Amendment

The 10 percent tax is extended to various additional articles of sport fishing equipment, supplies and accessories, including tackle boxes. A special 3 percent tax is imposed on electric outboard motors and certain fish finders (sonar devices suitable for finding fish, except graph recorders, digital type or meter readout devices, with a maximum tax of $30 per item).

The Act generally continues the imposition of the tax at the manufacturer's level.

The Act excuses manufacturers and importers from the prior-law excise tax deposit requirements, thereby enabling these manufacturers to pay the tax on a quarterly basis with their regular Federal excise tax return.

2. Effective Date

The provisions are effective for sales occurring and for payments of tax due after September 30, 1984.

C. Detailed Analysis

1. Imposition of Tax

Section 4161 of the Code is amended to extend the 10 percent excise tax to a broad range of sport fishing equipment, including parts and accessories thereof, defined in §4162(a).[173] Additionally, a special 3 percent tax is imposed on electric outboard motors and certain fish finders.[174],The special tax on sonar devices suitable for finding fish is not to exceed $30 per sonar device.[175]

2. Definitions

Sport fishing equipment is defined in §4162(a).

A "sonar device suitable for finding fish", subject to a three percent excise tax, excludes graph recorders, digital type or meter readout devices, or combinations thereof.[176]

3. Treatment of Certain Resales

In general, the excise tax on sport fishing equipment continues to be imposed at the manufacturer's (or importer's) level. However, the Act provides that tax pursuant to §4161(a)(1) will be imposed a second time, on the sale of an article subject to tax, by any wholesale distributor or retailer who (1) is a related person[177] to the manufacturer or importer of the article sold, and (2) acquires[178] the article from an unrelated person (*i.e.*, from a party other than the manufacturer or importer).[179]

If the tax is imposed a second time on any article, a credit for prior tax paid is available, provided the wholesale distributor or retailer can document the amount of tax previously paid.[180] This documentation requirement generally will be considered as satisfied only through submission of copies of actual records of the party that previously paid the tax.[181]

The conferees also expressed concern that certain manufacturers and importers of taxable sport fishing equipment are engaged in arrangements that are not covered under the related person rules described above, but that do not represent true arm's-length dealings.

Accordingly, the Act provides that, except as provided in Treasury regulations, in situations in which intermediaries or other devices are used to reduce the amount of tax imposed pursuant to §4161(a)(1), the tax is to be imposed on a later sale.[182]

These regulations generally are to provide that a sale by a manufacturer or importer is not to be treated as a "taxable first sale" for purposes of §4161(a)(1) unless the party selling the articles (1) conducts all manufacturing or importation transactions and related documentation in its own name; (2) assumes risks of late delivery and loss and pays freight, insurance costs, and customs duties (in the case of importers); (3) has on its payroll the employees who are engaged in the manufacturing process conducted by it or who are engaged in all aspects of the importation or other distribution of articles processed by it, including dealings with manufacturers with regard to quantity, quality control, design specifications and shipping; (4) finances the manufacture or purchase of previously manufactured articles on its own account; (5) maintains inventories of the articles in its own name; and (6) earns normal profits (determined by reference to industry standards) on its sales that are to treated as taxable first sales.[183]

4. Time of Payment

Section 6302 (relating to the time for collecting tax) is amended by inserting subsection (d), providing that the excise tax on sport fishing equipment is payable in full on the date established by the Treasury Department for filing of the quarterly return of the tax.

Note: All manufacturers and importers are excused from the deposit requirements in the case of the excise tax on sport fishing equipment.

[14] Act §25(c)(1).
[15] The term "newly discovered oil" has the same meaning as given by the June 1979 energy regulations. §4991(e)(2). The IRS has issued proposed regulations conforming to the Department of Energy's most recent definition of newly discovered oil, which became effective January 1, 1981. The Tax Reform Act of 1984 makes no changes in this definition. As proposed, the regulations define newly discovered oil as crude oil produced from a newly discovered property or imputed newly discovered oil from a unitized property. A newly discovered crude oil property is (1) a new lease on the Outer Continental Shelf or (2) a property which did not produce crude oil in commercial quantities in 1978 and which is also not on the Outer Continental Shelf. A new lease is any lease of submerged acreage entered into after December 31, 1978, which did not produce crude oil in commerical quantities in 1978 and whose submerged acreage was not included in a lease which produced crude oil in commercial quantities during 1978. Crude oil produced in commercial quantities is defined as production which is sold, exchanged or retained for beneficial economic use by any operator or producer of that production. Proposed amendment to Regs. §51.4996-1(m) and (n), 47 Fed. Reg. 50306 (November 5, 1982).

[117] "Alternatives to Tax on Use of Heavy Trucks," (January 25, 1984). This report, a result of the Highway Revenue Act of 1982, directed the Secretary of Transportation, in consultation with the Secretary of the Treasury and affected parties, to determine alternatives to the heavy vehicle use tax and is summarized in JCS, -6-84 at 8-12. The DOT Report recommended a use tax exemption for vehicles under 55,000 pounds, and a tax rate of $50 plus $24 per 1,000 pounds exceeding 55,000 pounds with a maximum tax of $650. The House Bill called for exemption for vehicles less than 55,000 pounds, a tax rate of $150 (plus $20 per 1,00 pounds or fraction thereof over 55,000 pounds) and a maximum tax of $500 for vehicles exceeding 72,000 pounds. [127] Code §6427(b)(2)(B), as amended by Act §915(a).
[128] Act §915(b) of the Act.
[129] Act 911(b), amending Code §6427 by inserting subsection (g) and redesignating former subsection (g) through (m) as subsections (h) through (n) respectively.
[130] The DOT report raised the possibility of a "diesel differential tax" which, in effect, would not penalize the owners of lighter diesel-fueled vehicles and, taken in conjunction with a reduction in the heavy vehicle use tax, would treat all users more equitably. *See* statement of Robert Woodward, Tax Legislative Counsel, Dept. of Treasury before the House Ways and Means Committee (Feb. 23, 1984).
The general objective of the diesel fuel differential option was to reduce the significance of a tax that does not vary with mileage and correspondingly increase the significance of a tax which does vary with mileage. JCS -6-84 at 9. In testimony subsequent to delivery of the DOT Report, the Department of Transportation showed its preference for the DOT Report option which would increase the diesel fuel tax rate to 15 cents allowing users of diesel-powered vehicles weighing 10,000 pounds or less to recover the additional tax to them through an income tax refund.
The House Bill increased the tax to 14.5 cents per gallon while keeping partial exemptions at prior law levels and complete exemptions as complete exemptions. An "advanced rebate" of the diesel differential over the expected life of the vehicle was to be made available to original purchasers of diesel-powered vehicles weighing 10,000 pounds or less purchased after January 1, 1985 and before 1988 and to holders of such vehicles as of January 1, 1985. These qualifications, with declining rebates for earlier model years, were adopted in the final version of the law. The amount of rebate was set at $96 for a new car and $180 for a new truck, with proportionate reduction for older cars. *See* Conf. Rep. at 1230. The Senate amendment increased the diesel fuel tax to the full 15 cents, but would have imposed a July 1, 1984 effective date. The amendment also called for the additional 6 cents a gallon increase to be rebated for cars weighing less than 8,000 pounds, but this was dropped in Conference. The Senate amendment also would have granted full exemption for diesel fuel sold to state or local governments or to nonprofit educational organizations for their exclusive use, while maintaining the 9 cents a gallon tax for nongovernmental intercity, local or school buses (thus resulting in a 6 cents a gallon tax). *Id.*
The Conference Committee noted that it was their intent not to subject the diesel differential rebate to the P.L. 95-355 requirement that there be separate appropriation to effect payment of newly-enacted refundable tax credits.
[131] Under Code §6427(g)(6)(B), the table of fractions range from the full differential amount for 1984 or 1985 model year vehicles down to one-sixth for the 1979 model year.

[145] Act §914 amending Code §6427(e)(3).
[146] Act §733(a) amending Code §4082(d).
[147] Act §733(b) of the Act. ("... shall take effect on the first day of the first calendar quarter beginning after the date of enactment of this Act.") The law was enacted on July 18, 1984.
[148] Enacted July 18, 1984. An earlier bill, S. 12131 would have provided a full exemption from excise tax for piggyback trailers and semitrailers, and included a provision for the buyer to certify to the seller that the trailer or semitrailer would be used in connection with trailer-on-flatcar service. Both the Treasury and Transportation Departments opposed the bill because of the ease of conversion to a piggyback trailer through special equipment and also because of the lack of evidence that most piggybacks travel less than 3,000 miles per year on the highway, as the bill's proponents argued. *See* Statement of Robert Woodward, Tax Legislative Counsel, Department of Treasury, before Subcommittee on Taxation and Debt Management of the Senate Finance Committee, at 18-20 (October 28, 1983).
[149] Act §921, amending Code §4051 by redesignating subsection (d) as subsection (e) and inserting a new subsection (d).
[150] Code §4051(d)(2)(A) and (B) as amended by Act §921. Specifically, the seller must certify that the "trailer or semi-trailer (i) will be used, or resold for use, principally in connection with such service, or (ii) will be incorporated into an article which will be so used or resold." §4051(b)(2)(B)(i) and (ii).

CHAPTER 79

TAXATION OF LIFE INSURANCE COMPANIES AND POLICYHOLDERS

William B. Harman, Jr., Esq.
John T. Adney, Esq.,
and
Gail B. Wilkins, Esq.
Sutherland, Asbill & Brennan
Washington, D.C.

I. Introduction

A. Background

Title II of the Act constitutes the first comprehensive revision to the provisions of Part I of Subchapter L of the Code (former Code §§801-819A, now new Code §§801-818), which govern the taxation of life insurance companies, since enactment of the Life Insurance Company Income Tax Act of 1959 (the "1959 Act"). Passage of this revision followed the enactment of so-called "stopgap" legislation as part of the Tax Equity and Fiscal Reponsibility Act of 1982 ("TEFRA"),[1] which provided a two-year period (1982-1983) during which to fashion permanent changes in Part I of Subchapter L as well as in certain related policyholder tax provisions. During that period (and continuing into 1984), the taxation of life insurance companies and their policyholders was studied extensively by Congress and the Treasury Department to address substantial perceived and real difficulties that had begun to develop in the operation of the 1959 Act in the late 1970's.

The advent of high nominal interest rates in the U.S. economy at that time led both to the search for new product designs, which would be as attractive to potential insurance policyholders as were the products offered by other financial intermediaries, and to a rising tax burden for a number of companies due to declining deductibility of dividends to policyholders. The latter condition arose from the fact that the 1959 Act's mechanism for computing a company's reserve interest deduction — in particular, the so-called "Menge" adjustment used to compute the "phase I" reserve interest exclusion — was extremely sensitive to the prevailing level of nominal interest rates. Hence, as rates rose steadily during the 1970's, a number of major companies began to experience declining reserve interest deductions and, consequently, a lower level of policyholder dividend deductions by virtue of former Code §809(f). As to the former development, it turned out that the tax treatment to be accorded the new products (such as "universal" life insurance) was not entirely clear: uncertainty arose about whether the death benefit under a universal life insurance policy was excludable from income under Code §101(a), and disputes arose as to what extent "excess interest" credited with respect to a contract would be allowable as a deduction in computing a company's taxable income under the 1959 Act.

B. Overview and Effective Dates

Title II of the Act attempts to remedy what Congress perceived to be deficiencies in the 1959 Act as well as in the related policyholder tax provisions of the Code.[2] The revised company tax provisions are generally applicable to taxable years beginning after December 31, 1983,[3] while the new policyholder tax rules have varying effective dates.

The new company tax rules retain many features in common with the 1959 Act. On these points, Congress clearly expressed its intention that the carryover provisions are to be interpreted in a manner consistent with interpretations under the 1959 Act. As observed in both the Report of the House Ways and Means Committee and the Report of the Senate Finance Committee on the new law (collectively referred to as the "Committee Reports"):

> "[W]here provisions of [the 1959 Act] are incorporated in [the new law], the committee expects that, in the absence of contrary guidance in this report, the regulations, rulings, and case law under existing law may serve as interpretative guides to the new provisions."[4]

On the other hand, the Act does make a variety of significant changes in the life insurance tax rules (not the least of which is the reshuffling of all but one of the section numbers in Part I of Subchapter L). Perhaps the most fundamental of these are:

(a) Replacement of the "three-phase" system of the 1959 Act with what is said to be a "single-phase" system based on a life insurance company's total income;

(b) Prescription of a uniform, statutorily defined method by which life insurance reserves are to be computed for purposes of calculating taxable income, entailing the repeal of former Code §818(c);

(c) Broadening the definition of policyholder dividends, but confinement of the limit on their deductibility only to mutual life insurance companies based on a system designed to tax such companies on at least a reasonable return on invested "equity" (rather than based on "free investment income");

(d) In lieu of certain aspects of the dividend deduction limit and the "special" items of deduction and

deferral under the 1959 Act, moderation of the tax burden on life insurance companies by means of a 20 percent "special life insurance company deduction" and, where applicable, a "small life insurance company deduction"; and

(e) Definition of the term "life insurance contract" for federal tax purposes.

In brief, the new company tax provisions of the Code (as reshuffled) accomplish this by imposing (in new Code §801) tax at the normal corporate rates on "life insurance company taxable income," defined as "life insurance gross income" (specified in new Code §803) less "life insurance deductions." These deductions are defined in new Code §804 as the "general" deductions listed in new Code §805 and the special deductions prescribed in new Code §806. For purposes of the general deductions, the deductible amounts of reserves are described in new Code §807, the deductible policyholder dividends are defined in new Code §808 and limited for mutual companies in new Code §809, and the operations loss deduction is prescribed in new Code §810. The special accounting rules for life insurers are collected in new Code §811, and the formula for "proration" appears in new Code §812. Domestic branch operations of foreign insurers are addressed in new Code §813, and new Code §814 deals with certain foreign branch operations of U.S. companies. The so-called "phase III" tax base is preserved (as frozen at year-end 1983) by new Code §815. The rules for qualification to be taxed as a life company (including the definition of "life insurance reserves") are preserved in new Code §816, although variable contracts are now separately treated in new Code §817. The remaining definitional and transitional rules are either collected in new Code §818 or appear uncodified in Act §§216-219. Broad new authority for the IRS to reallocate, recharacterize, or otherwise adjust items involved in reinsurance transactions (not limited to those between life insurers) is granted in new Code §845.

The changes in the policyholder tax rules consist of the comprehensive definition of "life insurance contract" appearing as new Code §7702 (per Act §221), additional requirements relating to annuities under Code §72 (per Act §222), a narrowing of the favorable treatment of group-term life insurance under Code §79 (per Act §223), and a liberalization of the scope of the tax-free exchange rules of Code §1035 (per Act §224). (A House proposal to restrict further the deductibility of policy loan interest was not enacted.)

Finally, Act §231 calls for annual reports to Congress on revenue from the life insurance industry, as well as a five-year study of the new law.

II. Company Tax Provisions

A. Section 801 — Tax Imposed

Under former Code §802, a life insurance company was taxed on what was described as its "modified total income." Generally, a company was taxed on its income from all sources after allowance of deductions (referred to as its "gain (or loss) from operations"). If, however, a company's gain from operations exceeded a specified, net investment income base (known as its "taxable investment income"), its taxable income consisted of its taxable investment income plus one-half of the excess of gain from operations over taxable investment income. Taxation of the other one-half of such "excess" was deferred, in the case of stock-holder-owned ("stock") life insurance companies, through the operation of the "policyholders surplus account." Thus, life insurance companies were taxed under the 1959 Act on the basis of a so-called "three-phase" system. Generally speaking, "phase I" referred to "taxable investment income"; "phase II" referred to "gain (or loss) from operations" — *i.e.*, total income or loss from all sources; and "phase III" referred to subsequent taxation of previously deferred amounts deemed withdrawn from a company's policyholders surplus account.[5]
