FOREWORD

Despite the magnitude of the material which follows, we are eager to assure our readers that the content of this comprehensive analysis of the Tax Reform Act of 1984 represents much more than a testament to the growing complexity of the Internal Revenue Code and, more generally, to the federal taxing process in the United States. The enactment of these wide-ranging tax amendments by the Congress in mid-1984, itself an extraordinary legislative feat, reflects the relentless momentum of global economic and social tensions, and, at the same time, the intense sensitivity of tax rules to these dynamics.

In this volume, Tax Management has sought to produce commentary with substance which will extend beyond mere recitation and outline of the new rules as enacted by the Congress and elaborated by the tax-writing congressional committees. To the extent feasible (given the time demands of the profession for delivery of this material and the inevitable complexities of production and distribution), we have sought to analyze the implications of each of the provisions and to indicate, wherever possible, their application in practical business settings. Certain of the new provisions represent major statutory changes. Materials relating to time value of money (sections 1273-1274), to the new foreign international sales corporation (sections 921-927), to changes in the tax treatment of fringe benefits (sections 125(d), 132, 4977), and to the treatment of divorce and separation (sections 71, 215, 1041) illustrate a few, but by no means all, of the important areas which have been revised. Certainly, problems respecting tax compliance, as reflected *inter alia* in changes in partnership tax treatment and penalty provisions are critical parts of the new law which must be understood by all professionals.

We are, of course, keenly aware of the fact that, as time passes and the implications of the new provisions become clearer (or modified as ever-changing economic conditions continue to alter), new interpretations will become appropriate. Doubtless also, our many readers will observe areas in which additional commentary is appropriate. These and other additional input will be reflected in direct revisions to our portfolios and/or in ongoing materials reflected in changes and additions which will continuously appear.

Tax Management stands ready, as a genuinely cooperative professional effort, to welcome constructive comments from our many qualified contributors. We hope that each of you will continue to play a part in this process.

The task of creating this volume represents the work of a multitude of persons at Silverstein and Mullens and at Tax Management, Inc., without whose intense dedication this effort could not have been completed.

VIII. **Extension of Rapid Amortization for Rehabilitating Low-Income Housing** A-16
A. Introduction A-16
B. Analysis A-16
C. Effective Dates A-16

CHAPTER 7 — MODIFICATIONS TO THE CHARITABLE CONTRIBUTION DEDUCTION RULES

I. **Changes Affecting Percentage Limitations and Carryovers [Act §301]** A-19
A. Introduction A-19
B. Overview A-19
1. Carryover of Excess Contributions A-19
2. Percentage Limitations A-19
3. Certain Contributions of Publicly-Held Stock A-20
4. Effective Dates A-20
C. Detailed Analysis A-20
1. Carryover of Excess Contributions A-20
2. Percentage Limitations A-20
3. Certain Contributions of Publicly-Held Stock A-21

II. **New Substantiation Requirements for Charitable Contributions** A-21
A. Introduction A-21
B. Overview A-22
1. Overvaluation Penalty A-22
2. Independent Appraisals Required A-22
3. Donee Reporting Requirement A-22
4. Effective Dates A-22
C. Detailed Analysis A-22
1. Overvaluation Penalty A-22
2. Independent Appraisal Requirements A-23
3. Donee Reporting Requirement A-24

III. **Increase in Standard Mileage Rate for Charitable Usage of Automobile** A-25
A. Introduction A-25
B. Overview A-25

IV. **Allowance of Charitable Deduction for Certain Reformed Split-Interest Transfers [Act §1022]** A-25
A. Introduction A-25
B. Detailed Analysis A-25

V. **Transitional Rule for Certain Contributions of Qualified Conservation Easements** A-25
A. Introduction and Overview A-25
B. Detailed Analysis A-26

CHAPTER 8 — MODIFICATIONS IN THE INTEREST DEDUCTION RULES

I. **Interest Deductions Affected by New and Revised Provisions Related to the Time Value of Money [Act §§41-44, 92 and 172]** A-27
A. Overview A-27
1. Original Issue Discount (§§1271-1275) A-27
2. Amended §483 A-27
3. Market Discount Bonds (§§1276-1278) A-27
4. Short-Term Obligations (§§1281-1283) A-28
5. Deferred Payments for the Use of Property or for Services (§467) A-28
6. Below-Market Loans A-28

II. **Expenses Related to Short Sales [Act §56]** A-28
A. Summary of New Statutory Provisions A-28
1. Payments in Lieu of Dividends A-28
2. Investment Interest A-28
3. Denial of Deduction for Short-Sale Connected Expenses A-28

III. **Elections to Treat Subchapter S Income Under Prior Law for Purposes of Investment Interest Limit** A-29
A. Introduction A-29
B. Detailed Analysis A-29

CHAPTER 9 — RELATED-PARTY DEDUCTION RULES OF §267 REVISED

I. **Introduction** A-30

II. **Overview** A-31
- A. Amendments to §267 A-31
- B. Effective Dates A-32

III. **Detailed Analysis** A-32
- A. Matching of Deduction and Corresponding Income Item A-32
- B. Special Rules for Partnerships and S Corporations A-32
- C. Relationship Rules of §267(b) Extended A-33

CHAPTER 10 —TREATMENT OF EXPENSES RELATED TO SHORT SALES

I. **Background** A-36
- A. Mechanics of a Short Sale A-36
- B. Treatment of "In Lieu of Dividend" Payments A-36
- C. Indebtedness Incurred to Carry Tax-Exempt Securities A-37

II. **Overview** A-37
- A. Code Sections Amended A-37
- B. Amendments to §263 A-37
- C. Amendments to §163(d) A-37
- D. Amendments to §265 A-37
- E. Effective Date A-38

III. **Detailed Analysis** A-38
- A. General Observations A-38
- B. The Amendments to §263 A-38
- C. Investment Interest Includes in Lieu of Dividend Payments A-39
- D. New §265(5) A-39

CHAPTER 11 — AMORTIZATION OF START-UP EXPENDITURES AND CONSTRUCTION PERIOD INTEREST AND TAXES

I. **Amortization of Start-up Expenditures** A-41
- A. Introduction and Summary A-41
- B. Detailed Analysis A-41
- C. Effective Date A-42

II. **Modification of Rules Governing Construction Period Interest and Taxes** A-42
- A. Background A-42
- B. Expansion of §189 Coverage A-42
- C. Effective Date A-42

CHAPTER 12 — MISCELLANEOUS AMENDMENTS AFFECTING DEDUCTIONS

I. **Percentage Depletion for Secondary and Tertiary Production [Act §25(b)]** A-43
- A. Introduction A-43
  - 1. General A-43
  - 2. Transfer of Certain Oil and Gas Properties A-43
- B. Overview A-43
  - 1. Summary of Amendments A-43
  - 2. Effective Date A-43
- C. Detailed Analysis A-43
  - 1. Availability of 15 Percent Percentage Depletion Deduction for Post-1983 Secondary and Tertiary Production A-43
  - 2. Applicability of §613A(c)(9) Transfer Restrictions to Transfers of Secondary and Tertiary Production Property A-44

II. **Cutback in Corporate Tax Preferences and Technical Changes** A-44

III. **Deduction for Golden Parachute Payments Limited** A-44

IV. **Ten Year NOL Carryback Period for Deferred Statutory or Tort Liability Deductions [Act Section 91d]** A-45
- A. Introduction A-45
- B. Overview A-45
  - 1. In General A-45
  - 2. Special Rule for Nuclear Power Plants A-45
- C. Detailed Analysis A-46
  - 1. In General A-46
  - 2. Nuclear Power Plant Decommissioning Losses A-46

V. **At Risk Limitations for Certain Corporations Liberalized** A-47

VI. **Medical Expense Deduction Allowed for Certain Lodging Expenses [Act §482]** A-47
- A. Introduction A-47
- B. Overview A-48
  - 1. Certain Lodging Expense Deductible as Medical Care A-48
  - 2. Effective Date A-48
- C. Detailed Analysis A-48
  - 1. Lodging Expense A-48
  - 2. Application of the Law A-48

VII. **Changes Affecting the Casualty Loss Deduction [Act §§711(c) and 1051]** A-49
- A. Introduction A-49
  - 1. The Coordination of §165(h) with §1231 A-49
  - 2. Disaster Loss Treatment A-49
- B. Overview A-49
  - 1. Coordination of §165(h) to §1231 A-49
  - 2. Disaster Loss Deduction for Condemned Residences A-50

CHAPTER 20 — CHANGES AFFECTING TAX-EXEMPT BONDS

I. **Mortgage Subsidy Bonds** A-110
A. Introduction A-110
1. Qualified Mortgage Bonds A-110
2. Qualified Vertans' Mortgage Bonds A-110
B. Outline of New Provisions A-110
C. Effective Dates A-111
D. Detailed Analysis A-111
1. Qualified Mortgage Bond Extension A-111
2. New Reporting and Certification Requirements A-111
3. New Requirement for Qualified Veterans' Mortgage Bonds A-111
4. Miscellaneous Changes to Qualified Mortgage Bonds A-112
5. Mortgage Credit Certificates A-112
a. General A-112
b. Definition of Mortgage Credit Certificate A-112
c. Qualified Mortgage Credit Certificate Program A-113
(1) Election To Surrender Qualified Mortgage Bond Amounts A-113
(2) Section 103A Requirements A-114
(3) Additional Requirements A-114
(4) Denial of Certification Where Certain Requirements Are Not Met A-114
d. Computation and Carryover of Credit A-115
e. Reporting and Administration Requirements A-115
f. Termination and Effective Dates A-116

II. **New Limitations on Private Activity Bonds and Federally Guaranteed Bonds** A-116
A. Introduction A-116
1. In General A-116
2. Industrial Development Bonds (IDBs) A-116
a. Definition A-116
b. Exceptions A-117
c. Substantial Users A-117
3. Arbitrage Bonds A-117
4. Tax-Exemptions Outside the Internal Revenue Code A-117
B. Outline of New Restrictions A-117
C. Effective Dates A-118
D. Detailed Analysis A-119
1. Federal Guarantees A-119
a. General A-119
b. Exceptions A-119
c. Energy Subsidy Programs A-120
2. Private Activity Bond Volume Cap A-120
a. General A-120
b. Definition of Private Activity Bond A-120
c. Amount of Volume Cap A-120
d. Allocation of Volume Cap A-120
e. Elective Carryforward of Unused Cap A-120
f. Certification of Allocation A-121
3. New Arbitrage Limit for IDBs A-121
a. General A-121
b. Exceptions A-121
c. Arbitrage Profit Rebate A-121
4. New Restrictions on Acquisitions of Land or Existing Facilities A-121
a. Nonfarm Land A-121
b. Existing Facilities and Rehabilitation Expenditures A-122
c. Farmland and the First-Time Farmer Exception A-123
d. Prohibition on Acquiring Skyboxes, Airplanes, Gambling Establishments, Etc. A-123
5. New Small-Issue Provisions A-123
a. Aggregate Small-Issue Limit A-123
b. Single Projects A-124
c. Extension of Small Issue Exception for Manufacturing Facilities A-124
6. Extension of Substantial User Related Party Rules A-124
7. Mixed Use Structure Clarification A-124
8. Consumer Loan Bonds A-125
9. Repeal of Advance Refunding Exception A-125
10. Extension of §103 Restrictions to Other Exempt Obligations A-125
11. Clarification of Public Approval for Certain Airports A-125

CHAPTER 21 — TIME VALUE OF MONEY: (I) ORIGINAL ISSUE AND MARKET DISCOUNT; SECTION 483

I. **Introduction** A-127
A. Background A-127
B. Areas Requiring Further Reform and Revision A-127
1. Debt Instruments Issued for Property A-127
2. Market Discount A-128
3. Short-Term Instruments A-128
4. Tax-Exempt Obligations A-128
5. Section 483 A-129
6. Section 461(h) A-129

II. **Overview: Structural Outline of Statutory Provisions** A-129

A. Act Section 41(a) A-129
1. Subpart A A-129
2. Subpart B A-130
3. Subpart C A-130
4. Subpart D A-130
B. Act Section 41(b) A-130
C. Act Section 41(c) A-130
D. Act Section 42 A-130
E. Act Section 43 A-130
F. Act Section 44 A-130

III. **Detailed Analysis** A-130

A. Original Issue Discount A-130
1. General A-130
2. The Retirement of Debt Instruments (§1271) A-130
3. The OID Rules (§§1271-1275) A-131
a. Instruments Issued for Money and Traded Property (§1273) A-131
(1) Definitions of OID and "Stated Redemption Price at Maturity" A-131
(2) Issue Price of Instruments Issued for Money A-132
(3) Issue Price Where Issued for Traded Property A-132
(4) Investment Units A-132
b. Debt Instruments Issued for Untraded Property (§1274) A-132
(1) General A-132
(2) Computing the Amount of OID A-132
(3) Potentially Abusive Situations A-133
(4) Exceptions A-134
(5) Debt for Debt Exchanges A-135
c. Current Inclusion in Income of OID (§1272) A-136
(1) General — Significant Changes with Effective Dates A-136
(2) Small Personal Loans A-136
(3) De Minimis Exception A-136
(4) Definitions A-136
(5) Computation of OID Currently Includible A-137
(6) Reduction of Currently Includible OID Where Holder Paid Acquisition Premium A-138
(7) Pre-TEFRA Instruments A-139
(8) Special Rules A-139
(9) Conforming Amendments to §163 A-139
4. Market Discount A-139
a. General A-139
b. Disposition Gain A-140
(1) General A-140
(2) Exceptions A-140
(3) Ordinary Income Treatment of Disposition Gain A-140
(4) Elections Available A-140
(5) Nonrecognition Transactions A-141
(a) Special Definitions (§43(a) of the Act A-141
(b) Effective Dates and De Minimis Rule A-142
c. Deferral of Deductions for Interest A-142
d. Technical and Conforming Amendments A-144
5. Short-Term Obligations (§§1281-1283) A-144
a. Background A-144
(1) Governmental Obligations A-144
(2) Nongovernmental Obligations A-144
b. The Statutory Provisions and Analysis A-145
(1) General Rule Requiring Current Inclusion A-145
(2) Deferral of Interest Deductions A-146
(3) Act §44(e) Election A-146
6. Miscellaneous Provisions A-147
a. Stripped Bonds A-147
b. Unregistered Securities A-147
c. Tax-Exempt Obligations Issued at Discount A-147
d. Use of Industrial Development Bonds for Property Acquisitions A-148
7. Section 483 (Act) A-148
a. Background A-148
b. Operation of Amended Section 483 A-149
(1) General A-149
(2) Structure of Statute A-149
(a) Exceptions A-149
(b) Determining and Allocating Total Unstated Interest A-149
(3) Special Rules A-150
(4) Conference Committee "Clarifications of Intent" A-151
(a) Circumvention by Low Interest Loans A-151
(b) Variable Rate A-151
(c) Transfers of Debt Obligations or Rights A-151
8. Effective Dates A-151
a. General A-151
b. Sections 1274 and 483 A-151
c. Amendment of Section 482 Regulations A-151
d. Clarification of Interest Accrual A-152
e. Fair Market Value Rule A-152
f. Obligations Providing for Equal Annual Payments A-152
g. Miscellaneous A-152
9. Observation and Implications A-152
a. The "Fair Market Value" Rule A-152
b. Exchanges of Stock Pursuant to Reorganizations A-153
c. Bond Premium A-153
d. The Rule of 78s A-153
e. Effects on Section 482 A-153

CHAPTER 22 — TIME VALUE OF MONEY: (II) DEFERRED PAYMENTS FOR THE USE OF PROPERTY AND SERVICES: BELOW-MARKET INTEREST LOANS

2. Nuclear Decommissioning Trust Fund A-187
a. Operation of Fund A-187
b. Self-Dealing Prohibition A-187
3. Taxation of Actual Decommissioning Expenses A-187
4. Income Taxation of Nuclear Decommissioning Costs A-188
5. Study on Tax Incentives for Decommissioning Trusts A-188
6. Net Operating Loss Carrybacks A-188

IV. Cash Basis Tax Shelter Deductions Limited Until Economic Performance Occurs — [Act §91(d)] — Code Section 461(i) A-188

A. Background A-188
B. Overview A-189
1. Summary of New Provision A-189
2. Effective Date A-189
C. Detailed Analysis A-189
1. General Rule A-189
2. Definition of "Tax Shelter" A-189
3. Special Rules for Farming Syndicates A-190

CHAPTER 24 — AT RISK RULES LIBERALIZED FOR QUALIFIED CORPORATIONS

I. Introduction A-192

A. Background — §465 A-192
B. Reasons for Change A-192
C. Outline of New Provisions A-192
D. Effective Dates A-193

II. Detailed Analysis A-193

A. General Rule — "Qualified C Corporation" A-193
B. Eligible Activities A-193
1. In General A-193
2. Special Rules A-193
a. Qualified Corporate Partner A-193
b. Income and Deductions of a Qualifying Business A-194
c. Treatment of Affiliated Groups A-194
C. Aggregation of Activities A-194
D. Related Party Indebtedness A-195

CHAPTER 25 — MODIFICATION OF INCOME AVERAGING RULES — CODE §1301

I. Overview A-196

A. Background A-196
B. Reasons For Change A-196

II. Summary of New Provisions A-196

A. In General A-196
B. Effective Date A-196

III. Detailed Analysis A-196

A. Decrease in Amount Subject to Averaging A-196
B. Base Period Decreased To Three Years A-196

CHAPTER 26 — MISCELLANEOUS ACCOUNTING CHANGES

I. LIFO Conformity Requirement Applied To Related Groups [Act §95] Code Section 472(g) A-198

A. Background A-198
B. Overview A-198
1. Summary of New Provision A-198
2. Effective Date A-198
C. Detailed Analysis A-198
1. In General A-198
2. Group of Financially Related Corporations A-199
3. Collateral Effects A-199

II. Waiver of Estimated Tax Underpayments Caused by Completed Contract Rules—[Act §712(m)] A-200

A. Introduction A-200
B. Overview and Detailed Analysis A-200
1. In General A-200
2. Effective Date A-200

III. Depreciation Recapture In Installment Sales [Act §112] — Code Section 453(i) A-200

A. Introduction A-200
B. Overview A-201
1. In General A-201
2. Effective Date A-201
C. Detailed Analysis A-201

CHAPTER 27 — TAX STRADDLES

I. Background A-203

A. Pre-ERTA Law and Problems A-203
1. Straddle Losses A-204
2. Cash and Carry Straddles A-204
3. Foreign Currency Contracts A-204
B. The ERTA Straddle Provisions A-205
1. Loss Deferral Rule A-205
2. Section 1256 (Regulated Futures Contracts) A-206
3. Hedging Transactions A-207
C. Reasons for Additional Tax Straddle Provisions A-207
1. Stock Options A-207
2. Application of §1256(a) to Various Investment Products A-209

VI. New Requirements for Collapsible Corporations A-253
A. Introduction A-253
B. Overview A-254
C. Detailed Analysis A-254
1. General Rule A-254
2. Determination of 2/3 Amount A-255
3. Aggregation of Properties for Purposes of the 70-30 Rule A-255
a. Statute and Legislative History A-255
b. Proposed Regulations A-256
D. Effective Date A-258

VII. Recognition of Gain Upon Distribution of Partnership Trust Interest by Corporations A-258
A. Introduction A-258
1. Background A-258
2. Outline of New Provisions A-259
3. Effective Date A-259
B. Detailed Analysis A-259
1. Distributions A-259
2. Sales Pursuant to §337 A-259
3. Distribution of Partnership Interest Treated as Exchanges A-259

CHAPTER 32 — MODIFICATIONS IN RULES RELATING TO CORPORATE REORGANIZATIONS, ACQUISITIONS, AND REDEMPTIONS

I. Liquidation Requirement in "C" Reorganizations [Act §63] A-262
A. Introduction A-262
B. Overview A-263
C. Detailed Analysis A-263
1. General Rule of Operation A-263
2. Waiving of the Total Distribution Rule A-263
3. Treatment of Earnings and Profits of the Transferor Corporation A-264
4. Planning Considerations A-264
5. Effective Date A-265

II. Revised Control Requirement in "D" Reorganizations [Act §64] A-265
A. Introduction A-265
B. Overview A-266
C. Detailed Analysis A-266
1. In General A-266
2. Liquidation-Reincorporation Problems A-267
a. Characterization of the Transaction as a Recapitalization Under §368(a)(1)(E) A-267
b. The Functionally Unrelated Concept A-267
3. The "No Complete Liquidation" Approach A-267
4. Significant Change of Ownership A-267
D. Effective Date A-268

III. Effective Date Delay for 1976 TRA NOL Rules A-268
A. Introduction A-268
B. Detailed Analysis A-269
1. Legislative History A-269
2. Delay of Effective Date A-269
a. In General A-269
b. Section 382(a) Transactions Straddling Effective Date A-270
c. 1984 Transactions Prior to Enactment A-270
3. 1976 TRA Rules to Apply to (G) Reorganizations A-270

IV. Technical Amendments to Corporate Acquisition and Redemption Rules A-271
A. Distribution of Appreciated Property in Redemption A-271
1. Introduction A-271
2. Detailed Analysis A-271
B. Purchases Treated as Asset Acquisitions A-271
1. Introduction A-271
2. Overview A-272
3. Detailed Analysis A-273
a. Definition of Purchase A-273
(1) Acquisitions in Nonrecognition Transactions A-273
(2) Qualified Stock Purchases Resulting from Section 338 Elections A-273
(a) Deemed Asset Sale as "Purchase" A-274
(b) Acquisitions from 50 Percent Purchased Related Parties A-274
(c) Deemed Asset Sales as Qualified Stock Purchases A-275
(3) Distributions of Stock by Target Corporations A-275
(4) Aggregation of Purchases by Affiliated Groups A-276
b. Section 338(a) Election A-276
c. Deemed Asset Purchase and Sale Price A-277
(1) Deemed Sale Price A-277
(2) Deemed Purchase Price A-277
(a) Gross Up for Minority Shareholdings A-277
(b) Election to Gross Up Basis for Nonrecently Purchased Stock A-278
(c) Aggregation of Prices Paid by Affiliated Purchasers A-278
d. Nonrecapture Income Recognized by the Target Corporation A-279
(1) Post Acquisition Date Acquisitions of Target Corporation Shares A-279
(2) Section 333 Liquidations of Target Corporations A-279
e. Changes in Asset Consistency Rules A-280
(1) Conditional Exception to Asset Consistency Rules A-280
(2) Foreign Assets A-280
(3) Assets Having a Partial Carryover Basis A-280
f. Other Changes to Section 338 A-281
(1) Foreign Corporations and Their Shareholders A-281
(2) Separate Application of Section 337 A-281
(3) Estimated Taxes on Section 338 Deemed Asset Sale A-281
(4) Application of Section 341 as to Dispositions of Minority Shareholder Target Corporation Stock A-282
(5) Combined Deemed Sale Return A-282
g. Liquidations Following Qualified Stock Purchases A-283
C. Amendments Affecting Purchases of Stock Treated as Redemptions A-284

DETAILED ANALYSIS

CHAPTER 1

AMENDMENTS AFFECTING SECTION 72: DISTRIBUTIONS FROM ANNUITY CONTRACTS AND FROM EMPLOYEE-FUNDED PENSION PLANS

Patrick G. Dooher, Esq.
Silverstein and Mullens
Washington, D.C.
and
Gail B. Wilkins, Esq.
Sutherland, Asbill & Brennan
Washington, D.C.

I. Distributions from Annuity Contracts

A. Introduction

In the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA), Congress made a number of changes in the tax treatment of annuity contracts to limit the perceived attractiveness of such products as short-term investment vehicles. First, changes were made in the rules of Code §72(e) to provide that amounts received under an annuity contract before the "annuity starting date" would first be viewed as withdrawals of income credited to the contract to the extent of such investment income (a "LIFO" rule). Also, any loan against the cash value of an annuity contract, or an assignment or pledge of such a contract, was to be treated as an amount "not received as an annuity" and thus subject to the LIFO rule governing withdrawals. These provisions applied with respect to contracts entered into, and amounts allocable to investments made, after August 13, 1982. The pre-TEFRA rules continued to apply to withdrawals of any earnings on investments from contributions made before August 14, 1982, and to contracts purchased in connection with qualified plans.

Second, Congress added Code §72(q), which imposed a penalty tax on certain "premature" distributions from an annuity contract. The penalty, which was effective for distributions after December 31, 1982, is equal to 5 percent of the amount includible in income, to the extent such amounts are allocable to an investment made within 10 years before the receipt of the distribution (the so-called "10 year look-back rule"). This penalty does not apply, however, to a distribution that is (1) made after the policyholder reaches age 59½; (2) made to a beneficiary on or after the death of the annuitant; (3) attributable to the policyholder becoming disabled; (4) one of a series of substantially equal periodic payments for life or at least five years; (5) from a qualified pension plan; or (6) allocable to an investment before August 14, 1982.

B. Analysis of the TRA Changes

Section 222 of the Act amends §72 of the Code by (1) eliminating the 10-year look-back rule under §72(q) and (2) creating a new §72(s) which specifies what provisions a contract must contain in order to be treated as an annuity contract for purpose of §72.

Act §222 amends Code §72(q) to eliminate the 10-year look-back rule.[1] Thus, the 5 percent penalty tax will be applicable to the amount of any distribution to a policyholder before age 59½ that is includible in income, whether or not the amount is allocable to an investment made during the preceding 10 years. The other exceptions to the application of the penalty tax fashioned in TEFRA, however, will continue to apply. For example, distributions made after the policyholder attains age 59½, or made in a series of substantially equal periodic payments for life or at least 5 years, will not be subject to the 5 percent penalty tax.

The new law also makes a "technical" modification to Code §72(q) for purposes of applying the 10-year look-back rule; under this modification, an investment in a multiple premium annuity contract (entered into before January 19, 1985) will be deemed to have been received on January 1 of the year of the investment.[2]

Further, Act §222 adds Code §72(s) which provides that, for an annuity contract to be treated as such under the Code, it must contain language specifying certain methods of distribution in the event of the contractholder's death.[3] Under this new rule, the contract must provide that, if the contractholder dies before the annuity starting date, the entire interest will be distributed within five years after the date of death of the contractholder. However, if any portion of the contractholder's interest is payable to a designated beneficiary and such portion will be distributed (commencing within one year after the date of death) over a period equal to the life of the designated beneficiary (or over a period not exceeding the life expectancy of such beneficiary), such portion will be deemed to have satisfied the post-death required distribution rule.[4] In the event that the contractholder dies after the annuity starting date but before the entire interest in the contract has been distributed, the contract must provide that the remaining portion of such interest will be distributed at least as rapidly as the distribution method in effect as of the time of the contractholder's death. The new distribution requirements of Code §72(s) do not apply, however, in the case of a spousal

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

beneficiary who, in effect, steps into the shoes of the deceased contractholder.[5]

Observation: In a case where the contractholder dies before the annuity starting date and a beneficiary has been designated to receive distributions, the regulations prescribing rules for distributions over the designated beneficiary's life will presumably require that the beneficiary's life expectancy be determined only once — when payments commence. This is the rule that regulations must adopt for purposes of the qualified plan required distribution provisions,[6] and, since the annuity and qualified plan provisions are comparable, the regulations implementing the two should also be comparable. Thus, it will likely not be possible to prolong distribution by recomputing life expectancy after payments have begun.

Comment: The exception in §72(s)(2) for distributions over the life of a designated beneficiary technically applies for purposes of the requirement that distributions be completed at least as rapidly as under the method in effect for a deceased contractholder in payment status as well as for purposes of the rule that distributions be made within five years of death where the contractholder dies before the annuity starting date.[7] Section 72(s)(2) provides that the portion of the contractholder's interest payable to a designated beneficiary in accordance with the §72(s)(2) conditions will be "treated as distributed on the day on which such distributions begin." Thus, if a contractholder dies after the annuity has commenced and he has designated a beneficiary to receive the remaining portion, and if this portion is treated as completely distributed on the commencement date under §72(s)(2), then the requirement that this portion be distributed at least as rapidly as under the method in use prior to death has arguably been satisfied. However, based on language in the Conference Report,[8] and the rules that apply to qualified plan distributions,[9] it is questionable whether this result was intended.

C. *Effective Date*

Code §72(q), as amended, and Code §72(s) apply with respect to an annuity contract issued after the day which is six months after the date of enactment of the new law (*i.e.*, a contract issued after January 18, 1985).[10] In contrast to TEFRA, the new law generally does not permit an annuity contract received in a tax-free exchange under Code §1035 to retain the character of the contract given up in the exchange for purposes of applying the new rules. However, the Conference Report does provide that the grandfather provisions granted in TEFRA for amounts invested in or credited to investments in annuity contracts prior to August 13, 1982, continue in effect for purposes of applying the distribution of income-first rules applicable to annuity contracts.[11]

II. Distributions from Employee Funded Plans

One of the principal exceptions to the TEFRA revision of §72(e) treating withdrawals from annuity contracts as first attributable to income was provided for qualified plans and other qualified retirement arrangements. Since nondeductible employee contributions to such qualified arrangements must be 100-percent vested when made and freely withdrawable, financial institutions began promoting qualified plans funded entirely by employee contributions, under which employees would have free access to their contributions yet enjoy a tax-free accumulation of income for the period the contributions were deposited in the plan.

Perceiving this to be an abuse of the qualified plan exception, Congress amended §72(e) in the TRA to subject a qualified plan (or other qualified arrangement) funded 85-percent or more by employee contributions to the TEFRA rules. For a full analysis of the TRA changes, *see* Chapter 49, III, A, *infra*.

---

[1] Act §222(a), amending §72(q) of the Code.

[2] Act §222(c)(2) creating a transitional rule for contracts issued before the effective date of the 1984 Tax Reform Act. This modification is intended to simplify the accounting requirements of the 10-year-aging rule in TEFRA for the penalty on early distributions from annuity contracts. Conference Report (Conf. Rep.) H.R. Rep. No. 861, 98th Cong., 2d Sess. 1078 (1984).

[3] Code §72(s) thus applies to both qualified and nonqualified contracts. Act §222(b) redesignates subsection (s) as subsection (t) and creates a new subsection (s).

[4] Regulations may provide for the commencement of distributions to a designated beneficiary on a date later than one year after death. These distribution rules generally conform to the rules applicable to qualified pension plans and IRAs. *See* Conf. Rep. at 1077. The Senate amendment, which was not adopted, created specific distribution rules depending upon the beneficiary's relationship to the contractholder in the following categories: (1) nonspousal beneficiary, (2) spousal beneficiary, (3) dependent minor child and (4) dependent handicapped individual. S. Rep. No. 169, Vol. 1, 98th Cong., 2d Sess., 580-581 (1984).

[5] Code §72(s)(3). If a spousal beneficiary exists at the contractholder's death, the contract (including deferral of income tax) may be continued in the name of the spouse as the contractholder. Conf. Rep. at 1077.

[6] *See* discussion in Chapter 49, I, D, 1, b, *infra*.

[7] Section 72(s)(2) states the exception is applicable "for purposes of paragraph (1)," which contains the required distribution rules for post-death distributions both before and after the annuity starting date.

[8] *See, supra*.

[9] *Cf.* §401(a)(9)(B)(ii) and (iii). *See also* Chapter 49, I, D, 1, b, *infra*.

[10] For contracts issued before January 19, 1985, and for investments made after January 18, 1985, on contracts existing as of that date, the 10-year look-back rule (as modified) will continue to apply.

Chapter 2

PROVISIONS RELATING TO THE TIME VALUE OF MONEY

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The present value of an obligation to make payments in the future is measured in the marketplace by discounting such payments at a rate of interest appropriate to the market rate and the debtor's creditworthiness. Interest is computed on a compounded semiannually basis for most corporate and governmental obligations. Thus, applying an interest rate of 12 percent, the present value of an obligation to pay $10,000 in 20 years is $3,118. This fact of commercial life was not reflected in the Code provisions relating to transactions involving debt instruments and deferred payments until the reforms enacted by TEFRA to the original issue discount (OID) provisions (§§1232A and B). While §483, enacted in 1963, did accord partial recognition to the time value of money, its provisions did not, in most cases, provide an accurate measurement of the true economic consequences of deferred payment transactions. The TEFRA reforms partially remedied the Code's deficiencies in this respect. In the 1984 TRA, an effort was made to complete the TEFRA reforms and to make such amendments as were necessary to make the Code provisions in this area consistent with economic reality.

II. Brief Outline of 1984 TRA Provisions

A. OID Rules

Section 41(a) of the TRA added new §§1271 - 1275 to the Code. Sections 1232, 1232A and 1232B, being superseded by the new provisions, are repealed. The most significant of these provisions is §1274 which provides rules for determining the issue price of any debt instrument issued for property. Prior to the TRA, the issue price of a debt instrument issued for property, where neither the instrument nor the property was traded on an exchange, was the redemption price at maturity, *i.e.*, there was no OID. Under §1274, applicable only where the sum of all payments to be made under a debt instrument exceeds $250,000 (this includes both principal and interest), the sum of the present values of such payments is discounted using 110 percent of the average yield of marketed U.S. obligations having a similar maturity (the "applicable Federal rate"(AFR)). If this amount is not at least equal to the instrument's stated principal amount (the purported sales price), the payments are then discounted at 120 percent of the AFR to obtain an "imputed principal amount" which is treated as the instrument's issue price. OID is then computed using such issue price and is currently included in the income of the holder, and deducted by the issuer, under §1272 (similar to former §1232A).

The OID rules, other than §1274, contain a number of important changes:

(i) OID rules apply to instruments issued by individuals after March 1, 1984.

(ii) The computation of OID currently accruable is based on a 6 month "accrual period," rather than a 1 year "bond period."

(iii) OID rules apply to instruments whether or not they are capital assets in the hands of the holder.

(iv) The formula for reducing OID accruals by the purchaser of an OID instrument at an acquisition premium is changed to yield a value no greater than 1.

B. Section 483 Amendments

Section 483, as amended by TRA §41(b), applies to deferred payments for the purchase of property in any case to which §1274, *supra,* is inapplicable. The same 110 and 120 percent of AFR test and interest imputation rates apply. Imputed ("unstated") interest is computed with respect to any payment on a constant interest rate basis (*i.e.*, semiannual compounding). Instruments issued to purchase a personal residence are excepted from §1274 altogether. Section 483 will apply to such instruments, however, where total payments do not exceed $250,000, the test and imputation rates as in effect prior to the TRA (*i.e.*, 9 percent simple interest and 10 percent compounded semiannually) are to be used. Also, these lower rates are to be applied to the sales of farms where the sales price is less than $1,000,000. Sales in excess of this amount are subject to §1274.

C. Effective Dates of Sections 1274 and 483

The provisions of §§1274 and 483 apply to sales or exchanges after December 31, 1984.

D. Market Discount

Where any debt instrument issued after July 18, 1984 is purchased from its holder for a price less than the amount payable at redemption, the market discount must be accrued for each day the instrument is held and, to the extent of any gain realized on the disposition of the instrument, is treated as ordinary income in the year of disposition. These provisions (and provisions deferring interest on indebtedness attributable to the acquisition of market discount bonds) are contained in new §§1276-1278 enacted by TRA §41(a).

E. Short-Term Obligations

No OID is currently includible with respect to short-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

term (maturity date not more than one year from date of issue) obligations. Under §§1281-1283, added by TRA §41(a), accrual basis taxpayers, dealers, banks, and certain other holders, are required to include currently in income any discount on short-term obligations acquired after July 18, 1984. This includes both governmental (*e.g.*, Treasury bills) and non-governmental (*e.g.*, certificates of deposit) obligations.

F. Tax-Exempt Obligations

Holders of tax-exempt obligations issued after September 3, 1982 and acquired after March 1, 1984 must adjust their basis in such obligations by accruing discount on a constant interest basis (rather than ratably). This is required by §1288, added by TRA §41(a).

G. Deferred Payments for the Use of Property and Services

Neither the OID provisions nor amended §483 apply to payments for the use of property or services (leases and compensation arrangements). Under §467, added by TRA §92, payments of rent deferred for more than one year are currently includible in income on a present value basis, as is any interest on such amounts until they are paid.

In the case of a rental agreement providing for increases in the rent payable, where such agreement is a leaseback, or long-term agreement (for more than 75 percent of the property's statutory recovery period), the rents are leveled and currently taken into income based on this amount. Leveling is required, however, only where it is determined that the rental arrangements have as a principal purpose the avoidance of tax. Property subject to such a stepped rental agreement under a leaseback or long-term agreement is subject to recapture in the same manner as §1245 or §1250 property where the rentals have not been leveled.

These provisions are effective, generally, to agreements entered into after June 8, 1984.

H. Below-Market Interest Loans

Under §7872, added to the Code by §172 of the TRA, where certain types of loans are made at a rate of interest which is not at least equal to the AFR, the transaction is treated as if the lender charged such interest and transferred to the borrower the funds with which to pay it. The borrower in the case of a gift or demand loan is treated as having retransferred the funds to the lender as interest. In the case of a loan which is not a gift loan or a demand loan, the lender is considered as having transferred to the borrower of a below-market interest loan an amount equal to the difference between the amount loaned and the present value of the debt instrument (using the AFR), OID. De minimis exceptions and a $100,000 principal amount exception for certain gift loans are provided. In addition to gift loans, this section applies to compensation related loans, corporation-shareholder loans, and tax avoidance loans.

These provisions apply to term loans made after June 6, 1984 and to demand loans outstanding after that date. However, where a demand loan is repaid by September 16, 1984, it is excepted from these rules.

I. Detailed Analysis Cross Reference

TRA §§41-44 (OID, market discount, short-term obligation, tax-exempt obligation, and §483 provisions) are analyzed in detail in Chapter 21, infra. The provisions enacted by §92 (deferred payments for the use of property and services) and 172 (below-market interest loans) of the Act are analyzed in detail in Chapter 22, *infra.*

CHAPTER 3

MISCELLANEOUS ITEMS OF INCLUSION

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Certain Amounts with Respect to Nuclear Decommissioning Costs [Act §91(e)] — Code Section 88

A utility must also include in its income the amount of any nuclear decommissioning costs which are included in its cost of service for ratemaking purposes.

For a more complete discussion of this change, *see* Chapter 23 (III).

II. Interest-Free and Below-Market Loans Give Rise to Gross Income [Act §172]

Effective as to loans made after July 18, 1984, new Code §7872 provides the following rules for interest-free and below-market loans.[1]

In the case of a loan all of which is repayable upon the demand of the lender (a demand loan) made during any calendar year, there will be computed as of December 31 of such year the amount of interest which would have been payable by the borrower had interest been charged at the AFR [2] (the AFR is compounded semiannually) for any period during the year in which the demand loan was outstanding. If the interest charged on such loan (if any) was less than the amount thus computed, it is known as "foregone interest." Where there is foregone interest the amount thereof is treated as if it had been transferred by the lender to the borrower and retransferred by the borrower to the lender on December 31 as interest. Where the demand loan is a gift loan (*i.e.*, the foregoing of interest is treated as a gift under gift tax principles) the deemed transfer to the borrower is includible as a gift for gift tax purposes (subject to the special exemptions explained below). Otherwise, the deemed transfer will have tax consequences depending on the relationship of the parties.

Where the loan is other than a demand loan, it is a "term loan." In this case, where the loan is a gift loan, for income tax purposes (but not for gift tax purposes) the loan is treated in the same manner as a demand loan. That is, interest is computed at the AFR on the principal amount of the loan as if it had been charged (where interest less than the AFR was charged as determined by discounting all payments to be made under the loan terms at the AFR) and such foregone interest is deemed paid by the lender to the borrower on December 31, and retransferred by the borrower to the lender on the same date as interest.

Where the loan is a term loan, and is not a gift loan, the payments to be made are discounted at the AFR. The sum of their present values is the principal amount of the loan. Where the amount actually loaned exceeds this amount (*e.g.*, where the lender has loaned, say, $38,000 to be repaid in installments over a 2 year period without interest or with interest below the AFR, and the sum of the present value of all payments discounted at the AFR is $32,000) there is deemed transferred by the lender to the borrower on the date of the loan an amount equal to the difference between the amount loaned and the principal amount of the loan as computed by discounting the payments at the AFR ($6,000 in the example set forth above). In such a case, the borrower is treated as having issued a debt instrument having original issue discount (OID) in an amount equal to the deemed transfer. The OID rules of §§1272 and 1273 will apply to this deemed debt instrument (*see* Chapter 21 for a discussion of the OID rules as amended by the Act). Where such below-market interest term loan was a gift loan, the amount of the deemed transfer ($4,000 in the example) is treated as a gift. The income tax consequences are as described in the preceding paragraph.

Exceptions to these rules are provided where the outstanding balance of the below-market interest loan (including all loans between the lender and borrower) does not exceed $10,000. Also, for any day on which the outstanding balance of a gift loan made directly between individuals does not exceed $100,000, the amount treated as retransferred from the borrower to the lender as of the last day of the year is not to exceed the borrower's net investment income (a de minimis amount of $1,000 is ignored) for the year. "Net investment income" is defined, generally, in §163(d).

These rules apply to: (1) all gift loans, (2) loans from (by) an employer to (from) an employee, (3) loans from (by) a corporation to (from) a shareholder, (4) any loan a principal purpose of which the interest arrangements of which is tax avoidance, and (5) other types of loan as will be provided by regulations where the interest arrangements have a significant effect on the tax liability of either the lender or borrower.

Below-market interest loans are discussed in detail in Chapter 22 of this portfolio. The OID rules are discussed in Chapter 21.

---

[1] §1274(d).

[2] Beginning after July 18, 1984, the Secretary of the Treasury will announce the average yields of U.S. Government obligations in 3 categories: short-term (not more than 3 years from date of issue to maturity), mid-term (not more than 9 years) and long-term (more than 9 years) on March 31 and September 30 of each year based on the previous 6 months' trading. These will be known as the "applicable Federal rate (AFR)" and such AFR will become effective on July 1 and January 1 respectively.

Chapter 4

EXCLUSION RULES FOR TAX BENEFIT ITEMS REVISED

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

The Act expands the statutory tax benefit rule to exclude from income recoveries of any deduction taken in a prior year to the extent that the deduction did not reduce income subject to tax. This is intended to reverse the result in Revenue Ruling 79-15. Section 111 now will increase income taxes by the amount of income tax credits previously allowed (other than the investment tax credit and the foreign tax credit) when there is a downward price adjustment which would have affected the amount of the credit. A price adjustment which affects a credit which did not reduce income taxes will not increase income taxes, however.

An increase in a carryover which has not expired before the beginning of the taxable year in which a recovery takes place is treated as a reduction of income tax as under prior law. The exceptions to the tax benefit rule as previously applied to the accumulated earnings and personal holding company taxes are preserved in new §111.

For a more complete discussion of this change, *see* Chapter 16.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

CHAPTER 5

MISCELLANEOUS AMENDMENTS AFFECTING EXCLUSIONS FROM GROSS INCOME

Joseph J. Westwater, Jr., Esq.
Javed A. Khokhar, Esq.
Diane J. Fuchs, Esq.
and
William C. Wicker, Esq.
Silverstein and Mullens
Washington, D.C.

I. Net Interest Exclusion Repealed [Act §16]

A. *Introduction*

The Economic Recovery Tax Act of 1981 repealed the $200 ($400 in the case of a joint return) interest and dividend exclusion for taxable years beginning after 1981. For subsequent years, the $100 dividend exclusion previously in effect was reinstated, amended to permit an exclusion of up to $200 to be claimed on a joint return without regard to which spouse actually received the dividend.[1]

Congress also enacted §128, which established a temporary program of tax exemption certificates generally known as "all-saver certificates".[2] These were issuable by qualified savings institutions from September 30, 1981, through December 31, 1982. A lifetime exclusion from gross income of $1,000 ($2,000 in the case of a joint return) of interest earned on qualified tax exempt certificates was provided.

For taxable years beginning after December 31, 1984 (one year after the expiration of the all-saver certificate program), ERTA enacted a new Code §128, which provided for an exclusion of 15 percent of "net interest" received up to $3,000 of net interest ($6,000 in the case of a joint return).[3]

For purposes of §128, net interest is generally defined as eligible interest received by the taxpayer in excess of the amount of interest payments by the taxpayer for which an income tax deduction is allowed. Eligible interest generally includes any interest paid on deposits in banks and thrift institutions, corporate debt in registered form or in a form generally sold to the public, United States, State, or local government debt, certain federally-sponsored participation trusts, and certain amounts held by life insurance companies.[4]

Mortgage interest and trade or business interest are not taken into account to reduce eligible interest income.[5] For this purpose, mortgage interest is interest paid on debt incurred to acquire, construct, reconstruct, or rehabilitate property the taxpayer uses primarily as a dwelling.

B. *Overview*

1. *TRA Amendment*

The Act repeals the net interest exclusion enacted in ERTA.

2. *Effective Date*

The provision applies to taxable years ending after December 31, 1983.[6]

C. *Detailed Analysis*

Section 16 of the TRA of 1984 repeals subsections (a) and (c) of §302 of the Economic Recovery Tax Act of 1981, thereby preventing §128 from becoming effective, as originally enacted, for taxable years beginning after December 31, 1984.

A conforming amendment revises paragraph (1) of §57(a) of the Code, relating to items of tax preference, to provide that excluded interest under the now inoperable §128 is not a tax preference item.[7]

II. Foreign Earned Income Exclusion — Scheduled Increases Postponed

The Economic Recovery and Tax Equity Act of 1981 (ERTA) repealed §913 and enacted an amended version of §911 providing liberal rules for the exclusion of foreign earned income of U.S. citizens and resident aliens.

Under §911(a), a qualified individual may elect to exclude from gross income for any taxable year: (i) the foreign earned income of such individual, and (ii) the housing cost amount of such individual.

Section 911(b)(2), as originally enacted by ERTA, however, provided certain limits on the maximum amount of foreign earned income that a qualified individual could claim as an exclusion for any particular taxable year. This maximum amount of exclusion was $75,000 for the taxable years beginning in 1982; $80,000 for taxable years beginning in 1983; and was further scheduled to increase by $5,000 yearly until it reached $95,000 for taxable years beginning in 1986 and thereafter.

Section 17 of the Tax Reform Act of 1984 (P.L. 98-369) postpones the scheduled increases for 1984 and later years with respect to the maximum amount of foreign earned income exclusion that a qualified U.S. citizen or resident alien may exclude from gross income until 1988. Thus, the maximum amount of foreign earned income exclusion under §911(b)(2) remains at $80,000 for taxable years beginning in 1984, 1985, 1986 and 1987. For taxable years beginning in 1988, the maximum limit will increase to $85,000. This limit will further increase to $90,000 for taxable years beginning in 1989, and to $95,000 for taxable years beginning in 1990 and thereafter.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

III. Amendments to the Exceptions for Cancellation of Indebtedness Income

Effective for transfers of stock after July 18, 1984, §59(a) of the 1984 TRA adds new §108(e)(10)(A) to the Code providing that, where a debtor corporation issues stock in exchange for the extinguishment of any of its debt, the debtor corporation is treated as having satisfied the debt with an amount of cash equal to the fair market value of the stock issued. In other words, the difference between the face amount of the debt so extinguished less the fair market value of the stock issued therefor constitutes gross income realized.

Because any debt so satisfied is by definition debt issued by a corporation, it will be "qualified business indebtedness" within the meaning of Code §108 and thus the debtor corporation may elect to reduce the basis of its depreciable assets, defined to include real property held for sale to customers in the ordinary course of business and interests in partnerships holding depreciable property, rather than take the forgiven debt into income. For a more detailed discussion of this provision, *see* Chapter 33, VIII, *infra.*

IV. Changes in Rules Relating to Fringe Benefits

A. Introduction

Section 61 of the Internal Revenue Code of 1954, as amended (hereinafter referred to as the "Code"),[8] defines gross income as including "all income from whatever source derived" and includes "compensation for services." On several occasions, the United States Supreme Court has held that §61 "is broad enough to include in taxable income any economic or financial benefit conferred on the employee as compensation, whatever the form or mode by which it is effected." [9] In addition, for purposes of Social Security and Unemployment Insurance payroll taxes (FICA and FUTA, respectively) and income tax withholding, the Code defines wages as all remuneration for employment, including the cash value of remuneration not paid in cash.[10] The regulations issued pursuant to these sections indicate that the value of any noncash item is to be determined by the excess of its fair market value over any amount paid by the recipient for the item.[11]

As a practical matter, the economic benefit test set forth by the Supreme Court, generally has not been followed. Rather, the treatment of in-kind compensation has been governed by statutory provisions, regulations, and administrative rulings and practices. Before the Act, for example, many fringe benefits had been statutorily excludable from an employee's gross income. Among these so-called "statutory" fringe benefits were: (1) qualified pension, profit-sharing, and stock bonus plans; (2) group-term life insurance (under $50,000); (3) accident or health benefits; (4) up to $5,000 of death benefits; (5) legal services; (6) dependent care assistance; (7) certain benefits provided to members of the Armed Services; and (8) parsonage allowances.[12]

In recent years, the erosion of the tax base through the expanding use of so-called "nonstatutory" fringe benefits led the Treasury Department in 1975 to issue a discussion draft of proposed regulations containing rules for determining whether various fringe benefits constitute taxable compensation. The proposed rules would have codified many of the then-existing exclusions of nonstatutory fringe benefits that were based on judicial authority or administrative practice. However, the rules would have required the taxation of certain employee fringe benefits that had not been taxed previously. The proposed regulations were withdrawn in 1976 following considerable controversy.

Because of its inability to agree on how to approach the controversy, beginning in 1978, Congress enacted a series of moratoriums prohibiting the Treasury Department from issuing regulations under §61 relating to the tax treatment of fringe benefits.[13] The last moratorium, enacted as part of the Economic Recovery Tax Act of 1981, expired on December 31, 1983. In December, 1983, the Treasury provided assurances to Congress that it would not issue any regulations or rulings altering the tax treatment of nonstatutory fringe benefits before January 1, 1985.[14] This assurance gave Congress an opportunity to enact legislation it had been considering in earnest for over a year.[15]

During the moratorium on the issuance of regulations, the taxation of nonstatutory fringe benefits was determined on a case by case basis and as a result of a lack of guidance to the field, taxation of such benefits was nonuniformly applied depending on the policy of the particular Internal Revenue Service district in which the taxpayer filed.

Dissatisfied with existing practices and mindful of the dangers involved in allowing the tax base to erode, Congress considered several pieces of legislation during the course of a year-and-a-half and then adopted as part of the Act provisions that specifically treat the income tax aspects (as well as the Social Security and unemployment insurance tax and income withholding) of nonstatutory fringe benefits.

B. Overview

1. Provisions

Sections 531 and 532 of the Act provide for the exclusion of certain fringe benefits from a recipient employee's gross income for Federal income tax purposes and from the wage base for purposes of income tax withholding, FICA, FUTA, and the Railroad Retirement Tax Act. The excluded fringe benefits are those that qualify under categories defined in the bill including (1) no-additional-cost services, (2) qualified employee discounts, (3) working condition fringes, (4) de minimis fringes, and (5) qualified tuition reductions. The Act also contains rules for parking or eating facilities provided to employees, athletic facilities, and the demonstration use of an employer-provided automobile to automobile salespeople. Some exclusions apply to benefits provided not only to the employee but also to the spouse and dependent children of a current employee, or to former employees who left employment due to retirement or disability, and to their widows and dependent children. In the case of several of the categories of fringe benefits, a nondiscrimination rule is applied so that if benefits are provided to the owners or highly compensated employees on

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

a discriminatory basis, the exclusion will not be available to such individuals.

The Act clarifies that where a benefit does not qualify for exclusion under the provisions of the Act, the benefit will be considered taxable to the recipient under §61 and §83 (and will be includable in wages for employment tax purposes) at the excess of its fair market value over any amount paid by the employee for the benefits.

2. Effective Date

For the most part, the provisions of the bill take effect on January 1, 1985. The tuition reduction exclusion however, applies with respect to education furnished after June 30, 1985, in taxable years ending after that date.

3. Cross-reference

For a detailed analysis of the fringe benefits provisions *see* Chapter 46, section I, *infra*.

V. Interest on Certain Loans to ESOPs Excluded

Section 133 of the Code, enacted in Act §543, permits banks, insurance companies and other corporate commercial lenders to exclude from gross income 50 percent of the interest received on loans to ESOP companies, provided the loan proceeds are used to finance an ESOP's acquisition of company stock.

Section 133 is analyzed in depth in Chapter 48 of this Portfolio.

CHAPTER 6

CHANGES AFFECTING ACRS, DEPRECIATION, AMORTIZATION, AND EXPENSING *

Patrick G. Dooher, Esq.
Silverstein and Mullens
Washington, D.C.

I. Extension of the ACRS Recovery Period for Real Estate

A. Introduction

The Accelerated Cost Recovery System (ACRS) of §168, enacted by the Economic Recovery Tax Act of 1981,[1] classifies most real property placed in service after 1980 as 15-year real property.[2] As the classification implies, the cost of 15-year real property can generally be recovered over 15 years using tables prescribed by the Treasury.[3] These tables employ the 175-percent declining balance method (200-percent in the case of low-income housing), switching to the straight-line method when that method yields a greater deduction.[4] In general, the ACRS tables for both the accelerated and straight-line methods for 15-year real property round the cost recovery percentages to the nearest whole number.

The amount of cost recovery deductions allowable on 15-year real property for the year such property is placed in service or is disposed of depends on the number of months the property is in service for such year. Provided the taxpayer places 15-year real property in service by the last day of the month, the taxpayer obtains a full month's worth of cost recovery deductions under the tables.[5] On the other hand, when 15-year real property is disposed of, the disposition is deemed to occur as of the last day of the month preceding the month in which it is withdrawn from service.[6]

Section 168(f)(1) generally provides that components of 15-year real property must be depreciated in the same manner. An exception is provided in §168(f)(1)(C) for substantial improvements to real property. Moreover, under a transitional rule in §168(f)(1)(B), a component of a building placed in service after 1980 will qualify as 15-year real property even though the building itself does not so qualify.

For purposes of the alternative minimum tax imposed on noncorporate taxpayers under §55 and the add-on minimum tax imposed on corporate taxpayers under §56, §57(a)(12)(B) treats accelerated cost recovery deduction on 15-year real property, to the extent they exceed the amount of deductions that would have been obtained if the straight-line method had been used over 15-years, as a preference item.

B. Analysis

1. General

The TRA [7] lengthens the recovery period for real property from 15 to 18 years. The recovery period for low-income housing, however remains at 15 years.[8] The accelerated recovery percentages for what is now termed "18-year real property" will continue to be based on the 175-percent declining balance method with a switch, when appropriate, to straight-line percentages.

The TRA [9] also amends §168(b)(2)(A) and (B) to require the use of a mid-month convention for the year 18-year real property is placed in service or is disposed of. Under the mid-month convention, 18-year real property is considered to be placed in service, for purposes of computing the recovery allowance, in the middle of the month it was placed in service, regardless of the precise date such property was placed in service. Thus, one-half month's worth of cost recovery is obtained for the month 18-year real property is placed in service, in contrast to the present rule providing a full month's worth of cost recovery. Further, after the TRA, one-half month's worth of cost recovery deductions will be allowed in the year of disposition, in contrast to the pre-TRA rule allowing no cost recovery deductions for the month of disposition.

Note: Assuming that 18-year real property is in service for 12 months in the year it is first placed in service, the cost recovery deduction will be approximately 9.3 percent if the table to be prescribed using the 175 percent accelerated rate and mid-month convention does not round to whole numbers, and will be 9 percent if rounding is employed. Without the mid-month convention, the cost recovery deduction under these circumstances would be 9.7 percent without rounding and 10 percent with rounding. Under pre-TRA law for 15-year real property in service for 12 months in the first year, the accelerated recovery percentage is 12 percent.

The lengthening of the recovery period for real property to 18 years reflects Congress's concern that the 15-year recovery period, which was one-half the estimated economic life of real property prior to the ACRS, provided "overly generous depreciation." [10] Congress determined that this more rapid depreciation contributed to the growth of real estate tax-shelter partnerships and to the churning of existing real property through sales and leasebacks.[11] When combined with other tax breaks accorded real estate, such as high interest deductions, favorable recapture rules, and the availabilty of the installment sales method, a real estate shelter could achieve a low or even negative effective tax rate, thereby encouraging the growth of uneconomical real estate projects.[12] The lengthening of the recovery period was seen as reducing "the tax revenue cost associated with tax-motivated real estate shelters, depreciation-strips, and churning transactions without harming incentives for cap-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ital formation in the most productive real property investments."

2. Components of Buildings

Under §168(f)(1)(B), as amended by the TRA,[13] building components that are placed in service after March 15, 1984 (generally, the effective date of the 18-year recovery period) with respect to a building in existence on March 15, 1984, are treated as a "separate building." Consequently, such components will be treated as 18-year recovery property even though the building to which they relate is 15-year real property.[14] For example, if a taxpayer places a building in service on March 15, 1984, the building is treated as 15-year real property. If a central air conditioning system is added to the building on June 15, 1984, the air conditioning system is treated as 18-year real property.

Under the §168(f)(1)(B) transitional rule for post-March 15, 1984 building components, cost recovery on all such components is to be computed in the same manner. Thus, if the straight-line method and 18-year recovery period is used with respect to the first component placed in service after March 15, 1984, the straight-line method and 18-year recovery period must be used for any subsequent components added to that same building.

Observation: As previously mentioned, the first post-March 15, 1984, component is treated as a separate building, thereby causing such component to be 18-year real property. Under §168(f)(1)(C), an exception is provided to the rule that a building and all of its components must be depreciated in the same manner under the ACRS. The exception provides that a "substantial improvement" is treated as a separate building, which means that a different ACRS method can be used with respect to the substantial improvement. Improvements qualify as substantial improvements if they are made at least three years after the building is placed in service and the total cost of the improvements (including any improvements during any 24-month period) equals or exceeds 25 percent of the adjusted basis of the building, determined without regard to adjustments for depreciation or cost recovery deductions.

Comment: The interaction between the TRA transitional rule and the substantial improvement rule is unclear. Since the first post-March 15, 1984 component is treated as a separate building, and the substantial improvement exception overrides the general rule that building components should be depreciated in the same manner as the building, the position can conceivably be taken that building components added at least three years after the first post-March 15, 1984 building component may themselves be treated as a separate building if they collectively fall within the substantial improvement exception.

3. Low-Income Housing

Neither the 18-year recovery period nor the mid-month convention applies to low-income housing. Thus, low-income housing continues to have a 15-year recovery period using the 200-percent declining balance percentages. The continued availability of the 15-year recovery period enhances the relative advantage for real property classified as low-income housing. As previously noted, 18-year real property in service for 12 months in the first year will generate a cost recovery deduction of approximately 9 percent. Low-income housing, in contrast, is assigned a 13 percent deduction under the current tables in comparable circumstances.

The definition of low-income housing continues to be made by reference to the definition found in §1250(a)(1)(B).

Comment: The definitions of low-income housing for various Internal Revenue Code purposes may not be uniform. Section 1250(a)(1)(B), for example, lists four categories of low-income housing, the most important of which classifies as low-income housing units held for occupancy by families or individuals eligible to receive housing subsidies under §8 of the United States Housing Act of 1937.[15] This category does not appear to require that dwelling units be held for families actually *receiving* §8 housing subsidies; only that the units be held for families eligible to receive such subsidies. Families are eligible to receive subsidies under §8 if they are "lower-income." Under 42 U.S.C. §1437a(b)(2), a lower-income family is, generally, a family having income of 80 percent or less of the median income within a locality. This 80-percent figure, however, is subject to adjustment for special circumstances, such as the existence of very high or very low income levels within a particular locality. In contrast, a somewhat different definition of low-income housing is provided for purposes of the tax-exempt bond provisions of §103(b)(4)(A). Under §103(b)(12)(C), the determination of low and moderate income for purposes of §103(b)(4)(A) financing is to be made in a manner consistent with determinations of lower-income families under §8 of the 1937 Housing Act. The percentage of median income qualifying as low or moderate income, however, is, in all cases, 80 percent under §103(b)(12)(C). No discretion is provided to adjust the 80-percent figure for special circumstances for purposes of the tax-exempt bond provisions. Consequently, it is conceivable that low-income housing acquired with tax-exempt financing may not qualify as low-income housing for purposes of the ACRS in localities where discretion has been exercised to establish eligibility for §8 housing subsidies at a median income that is less than 80 percent.

4. Minimum Tax Preference

In a conforming change, the TRA[16] amends §57(a)(12)(B) to provide that the preference amount in the case of 18-year real property for minimum tax purposes will be the excess of the ACRS deduction for the taxable year over the amount that would have been allowable if the property had been depreciated using the straight-line method over an 18-year recovery period. The computation of the preference for low-income housing remains the same.

C. Effective Dates

The 18-year recovery period generally applies to property placed in service after March 15, 1984.[17] The mid-month convention applies generally to property placed in service after June 22, 1984.[18]

The TRA changes do not apply to property placed in service by the taxpayer before January 1, 1987, if either the taxpayer or a "qualified person" entered into a binding contract to purchase or construct such property before March 16, 1984, (for purposes of the mid-month convention, the date is June 23, 1984), or construction of such

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

property by or for the taxpayer or a qualified person began before March 16, 1984 (June 23, 1984, for the mid-month convention).[19]

For purposes of this exception, a qualified person is any person who transfers his rights in a qualifying contract or transfers his rights in qualifying property to the taxpayer, provided the person does not place in service the qualifying property before the rights are transferred to the taxpayer.

The Conference Report [20] provides two examples illustrating the application of the transitional rules:

> *Example 1*: Assume taxpayer A signed a binding contract on March 10, 1984, to have a building constructed and, on December 1, 1984, A assigned the contract to B. B assigned the contract to C on March 15, 1985. C placed the building in service on November 1, 1985. Since neither A nor B placed the property in service, C is entitled to use the 15 rather than the 18-year recovery period.
>
> *Example 2*: Assume a partnership commenced construction of, or signed a binding contract to acquire or construct, real property on or before March 15, 1984. Subsequently, but before time the property is placed in service, interests in the partnership are sold or exchanged. If, by reason of such sales or exchanges, the partnership terminates and a new partnership is deemed to be created under §708(b)(1)(B) (relating to sales or exchanges of 50 percent or more of the total interests in the partnership's capital or profits) the partnership is treated as having transferred its rights in its contract or the property to the new partnership (through its partners) for purposes of the transitional rule.

For purposes of the transitional rule, a person will not be treated as having placed property in service and, therefore, fail to be a qualified person, if (i) the person holds the real property primarily for sale to customers (such as a condominium project), (ii) the person disposes of the property before January 1, 1985, and (iii) prior to disposition, the person temporarily rents the property or holds the property for rental.

Note: A person seeking to utilize this rule will not be entitled to depreciation or amortization deductions with respect to the property. The Conference Committee states, however, that no inference is intended to be drawn as to whether property held as §1221(1) property by a taxpayer may be depreciated by that taxpayer.[21]

A contract is to be considered binding under the transitional rules only if it is enforceable under state law and does not limit damages to a specified amount that is relatively minor. A contract limiting damages to an amount equal to at least 5 percent of the total contract price will not be treated as calling for relatively minor damages. A contract subject to a condition not within the control of either party is considered binding. Moreover, a contract will not be treated as ceasing to be binding merely because any term is to be determined by a standard beyond the control of either party or there is a bilateral agreement to reduce the property's purchase price by no more than 20 percent or to change the financing terms.[22]

For purposes of the transitional rules, construction is considered to have commenced when land preparations and improvements, such as clearing, grading, excavation (including any significant required archaeological excavation), or filling, are undertaken.[23] The performance of drilling for determining soil conditions, the preparation of architectural plans, or the obtaining of a building permit, however, do not constitute construction.[24] Demolition to prepare a site for specific construction is considered the commencement of construction, but demolition not undertaken as a part of the plan for the construction of specific buildings or improvements does not commence construction.[25]

In the case of property to be constructed that is an integral part of an integrated facility, construction of such property is deemed to have begun on or before March 15, 1984 if construction of part of the facility began on or before March 15, 1984. An integrated facility is a multiproperty facility constructed as a single project on a single site which is to be operated as a single, unitary facility as described in a written plan (evidenced by the taxpayer's internal documents) existing on March 15, 1984. Property is an integral part of an integrated facility if: (i) the property is described as part of the same project in the taxpayer's written plans; (ii) the property is an integral part of the planned operation of the project when a significant part of the project will first be placed in service; and (iii) the property will be constructed during the same time as the rest of the project.[26]

> *Example:* Three separate apartment buildings are not an integrated facility if it is planned that only one building will be placed in service initially. A hotel and separate convention center, however, constitute an integrated facility. Parking lots, access roads, and utility hook-ups, although they may be part of an integrated facility, are not considered the start of construction of other property in the facility since they can be used in connection with any type of facility.[27]

One last transitional rule for components deserves mention.[28] If property which is placed in service after March 15, 1984 (but before January 1, 1987) is treated as 15-year real property under the foregoing transitional rules, components of such property placed in service after December 31, 1986 will be treated as 18-year real property pursuant to §168(f)(1)(B).

II. Applicability of ACRS to Movies, Films, and Sound Recordings

A. Introduction

The income forecast method has been held to be an appropriate method of depreciation for movies,[29] television films and video tapes,[30] and master sound recordings.[31] In fact, §280 mandates the use of the income forecast method by an individual, personal holding company, or S corporation for certain production costs of films, tapes, and sound recordings. Under the income forecast method, each year's depreciation deduction is computed by multiplying capitalized production costs by the ratio of the income derived from the property for the year to the total income that is reasonably expected to be derived from the property.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

It is not settled whether movies, tapes, and sound recordings qualify as recovery property under the ACRS. To be qualified, property must be tangible, depreciable property placed in service after 1980. The Service has taken the position for investment credit purposes that movies, tapes, and sound recordings are intangible property,[32] although the courts have generally rebuffed this position.[33] If such property qualifies as recovery property, it would be classified as five-year property under the ACRS.[34]

Property depreciated under the income forecast method, or any other method not expressed in terms of years, is excluded from classifcation as recovery property for ACRS purposes.[35]

Under §168(f)(2), personal property which is recovery property used predominantly overseas that was not assigned a present class life is deemed to have a recovery period of 12 years.

B. Analysis

1. Films and Tapes

The TRA [36] enacts §168(e)(5) to exclude any motion picture film or video tape from the definition of "recovery property." Section 168(e) is also amended [37] to provide that property within the exceptions listed in §168(e) to the definition of recovery property, including post-TRA §168(e)(5), will not be treated as recovery property for all purposes of the Internal Revenue Code, and not just for purposes of §168. The principal effect of this change is that taxpayers may no longer take the position that the 10 percent investment credit (6 percent credit in the case of three-year property) [38] provided for recovery property is available for property excluded under the §168(e) exceptions on the theory that those exceptions apply only for §168 purposes.

Comment: The enactment of §168(e)(5) and the clarifying amendment to §168(e) may not completely end the controversy as to the tangibility of films and tapes for depreciation purposes. The specific exclusion of films and tapes in §168(e)(5) does not necessarily relegate such items to the income-forecast method of depreciation. The depreciation methods of §167 remain available with respect to such property. The straight-line method can clearly be used with respect to films and tapes. More significantly, if such films and tapes have a useful life of at least three years and are *tangible* property,[39] the 200-percent declining balance method provided under §167(b)(2) or the sum-of- the-years-digits method provided by §167(b)(3) can be used. Although the Service takes the position that motion picture films do not qualify for the 200-percent declining balance method because such films are intangible,[40] §168(e)(5) does not address the tangibility of films and tapes. Thus, the court decisions holding films to be tangible property may still apply for purposes of using the accelerated §167 methods.[41]

Observation: The Senate Finance Committee Report [42] describes §168(e)(5) as a clarification that movies and video tapes cannot qualify as recovery property for either depreciation or investment credit purposes. If it is merely a "clarification," such property would not have been recovery property for depreciation purposes prior to the TRA only because it did not constitute tangible property. The Conference Committee clearly states, however, that no inference is intended as to the proper treatment under pre-TRA law for depreciation as well as investment credit purposes.[43]

2. Sound Recordings

The TRA [44] enacts in the investment credit provisions special rules that apply for depreciation purposes as well as investment credit purposes. Post-TRA §48(r) provides taxpayers with two alternatives with respect to sound recordings. Under §48(r)(1), if the sound recording is new property, the taxpayer is granted an election to treat such recording as three-year recovery property to the extent the taxpayer has an "ownership interest" in the recording. The election must be made separately with respect to each sound recording.[45] In addition, the election will not be effective unless all taxpayers having an interest in the sound recording make the election.[46]

Under §48(r)(2), if a taxpayer does not make an election with respect to any sound recording, the recording is not allowed an investment credit nor may it be treated as recovery property. Presumably, the same result follows as to a taxpayer who endeavors to elect §48(r)(1) as to a sound recording but where other taxpayers having an interest in that sound recording do not make the election.

Comment: The Conference Report [47] in fact, states that the second option will apply unless all taxpayers with an ownership interest in the recording elect the first option. The report further states [48] that, under the second option, the income-forecast method or similar method can be used to depreciate the sound recording. No mention is made, however, in the legislative history as to whether the accelerated depreciation methods of §167(b) are available with respect to sound recordings. As indicated in the comment above, if such property is tangible property, the accelerated depreciation methods may apply. Clearly, §48(r)(2) does not rule out the classification of sound recordings as tangible property. Note also that both the Conference Report [49] and the Senate Finance Committee Report [50] state that no inference is intended as to whether sound recordings qualify as tangible personal property.

Observation: Although it is not entirely clear in the statute,[51] it appears that a used sound recording will be subject to the second alternative since an election under §48(r)(1) is clearly denied for a used sound recording.

Presumably, a taxpayer's "ownership interest" in a sound recording is determined in accordance with his loss-sharing ratio in the production costs of the sound recording. For investment credit purposes, §48(r)(4) provides that ownership interests are determined according to loss-sharing ratios. The reason for specifically providing this rule for investment credit purposes is that the investment credit is ordinarily determined on the basis of profit-sharing ratios,[52] rather than on the basis of loss-sharing percentages.

Under §168(f)(14), added by the TRA,[53] the adjusted basis of a sound recording for §168 purposes is equal to the production costs as determined under §48(r)(6). Under §48(r)(6), production costs include:

(i) a reasonable allocation of overhead costs;

(ii) compensation to songwriters, artists, production personnel, directors, producers, and similar personnel;

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(iii) costs of "first" distribution of records or tapes; and

(iv) the costs of the material being recorded.

Production costs do not include contingent amounts, such as residuals payable under contracts with labor organizations or participations or royalties payable to songwriters, artists, *etc.*, unless such contingent amounts are "incurred" in the taxable year the recording is placed in service or in the ensuing taxable year.

Production costs, including contingent amounts incurred in the first year the recording is placed in service, are recovered under the rules applicable to three-year recovery property. Contingent amounts incurred in the subsequent taxable year are treated as a separate item of three-year property, the recovery periods of which begins in that second year.[54] Although foreign production costs are not counted for investment credit purposes,[55] foreign production costs are included within the cost recovery base.[56]

Contingent amounts incurred after the first two years are not treated as three-year property for cost recovery purposes, but they may continue to be deducted when paid or accrued to the extent deductible when paid or accrued under pre-TRA law.[57]

Under §48(r)(3)(A), the investment credit is not to be denied a sound recording because of overseas distribution; §48(a)(2) is specifically made inapplicable.

Observation: The Senate Finance Committee Report [58] provides that sound recordings are not to be treated as used overseas for purposes of the 12-year recovery period prescribed by §168(f)(2) by reason of distribution of the recordings outside the U.S. Section 168(f)(2), however, was not specifically amended to provide this result, and this subsection is not mentioned in §48(r)(3) as being rendered inapplicable. The regulatory authority provided in §168(f)(2)(D) for the issuance of rules similar to the rules under §48(a)(2), including the exceptions under §48(a)(2)(D), for determining whether property is used predominantly outside the U.S. may, however, provide a means for effectuating Congress's intent.[59]

Lastly, it should be noted that §168(j)(4)(B)(ii) specifically provides that sound recordings used by foreign persons are not to be treated as used by tax-exempt entities. No comparable exception is provided, however, for use by the U.S. or a state government or by a tax-exempt organization.

C. *Effective Dates*

1. *Films and Tapes*

The TRA provisions excluding films and tapes as recovery property apply to films and tapes placed in service before, on, or after July 18, 1984, (the TRA's enactment date).[60] Any qualified film placed in service by the taxpayer before March 15, 1984, however, will be treated as recovery property if the taxpayer treated such film as recovery property for purposes of §168 on a tax return filed before March 16, 1984. Also, a qualified film placed in service by a taxpayer before January 1, 1985, will be treated as recovery property if 20 percent or more of the production costs of such film were incurred before March 16, 1984, and the taxpayer treats such film as recovery property for purposes of §168. Note, however, in the latter case the investment credit can be claimed only to the extent provided in §48(k).[61]

For purposes of the exceptions, a qualified film is defined in §48(k)(1)(D) as any motion picture film or video tape created primarily for use as public entertainment or educational purposes. It does not include any film or tape the market for which is primarily topical or is otherwise essentially transitory in nature.

The amendment to §168(e) providing that the exceptions listed in §168(e) to the definition of recovery property apply for all Code purposes applies as if included in the Economic Recovery Tax Act of 1981, so that it is effective for property placed in service after 1980.[62]

2. *Sound Recordings*

The TRA amendments for sound recordings apply to sound recordings placed in service after March 15, 1984, in taxable years ending after that date.[63]

III. Election of Depreciable Business Assets — Scheduled Increases Postponed

A. *Introduction*

Under §179 [64] a taxpayer that purchases certain qualifying depreciable property may elect to treat the cost of such property as a current expense not chargeable to capital account. Any cost so treated is allowed as a deduction for the taxable year in which the property is placed in service. No ACRS deductions or investment tax credits are available with respect to property subject to the election.

In general, property qualifying for the §179 election ("§179 property") is any recovery property which is §38 property acquired by purchase for use in a trade or business.[65] Thus, the election is generally not available for real property or property acquired for investment.

A limit is placed on the cost of qualifying property that may be expensed each year. Prior to the TRA, the aggregate cost which could be taken into account under the general §179 election could not exceed $5,000 per year for taxable years beginning in 1983. This limit was scheduled to increases to $7,500 for taxable years beginning in 1984 and 1985, and to $10,000 for taxable years beginning after 1985. The limit applicable to a married individual filing separately would be one-half the dollar amounts described above.[66]

B. *Overview*

1. *Summary of Amendment*

The Tax Reform Act of 1984 postpones for four years the scheduled increases in the maximum amount of property that may be expensed under §179. Thus, the $5,000 limit remains applicable to taxable years beginning before 1988, increases to $7,500 for taxable years beginning in 1988 and 1989, and increases to $10,000 for taxable years beginning after 1989.

2. *Effective Dates*

The provision is effective with respect to taxable years ending after December 31, 1983.[67]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

C. *Detailed Analysis*

Section 179(b)(1) relating to the dollar limit on the cost of qualifying property that may be expensed under §179 each year, is amended to retain the pre-TRA 1983 $5,000 ceiling for taxable years beginning before 1988. The limit becomes $7,500 for taxable years beginning in 1988 and 1989, and increases to $10,000 for taxable years beginning in 1990 and thereafter.[68] The maximum annual amount that a married individual filing a separate return may deduct remains 50 percent of the annual dollar limit that otherwise applies.

Note: As under pre-TRA law, component members of a controlled group of corporations are treated as one taxpayer for purposes of the annual dollar limit.[69] Additionally, in the case of partnerships, the dollar limit applies separately with respect to a partnership and with respect to each partner thereof. This provision also remains unchanged from pre-TRA law.[70]

Observation: Perhaps the primary negative consideration under pre-TRA law in deciding whether to elect §179 expensing was the fact that amounts so expensed were ineligible for the investment tax credit [71] With the additional postponement for four years of the scheduled increases in the maximum amount of property that may be expensed, the election to expense should generally be made only if the tax benefit to be derived from the immediate write-off exceeds the amount of the investment credit that would otherwise be allowed, plus the present value of the tax benefits that would be derived if accelerated cost recovery under §168 were used.[72]

IV. Changes Relating to Cost Recovery of Leased Property

Section 31 of the Act enacted a comprehensive set of rules limiting the ACRS deductions that may be claimed with respect to property leased to "tax exempt entities." The leasing rules vary in a number of critical respects depending upon whether the leased property is real property or personal property. For a detailed discussion of these rules, *see* Chapter 18.

V. ACRS and Depreciation Deductions for Luxury Automobiles, Computers and Other Listed Property Restricted

Section 280F, as added by the 1984 TRA, limits the ACRS and depreciation deductions which may be claimed with respect to a passenger automobile in any one year to $4,000 in the first year of service and $6,000 in any year thereafter until the cost of the automobile is recovered. This limitation precedes any reduction for personal use of the automobile. In addition, certain "listed property" (including passenger automobiles) may not use ACRS if the percentage of use in a trade or business fails to exceed 50 percent in any one year. Where ACRS is not available, the taxpayer must use the straightline method over the earnings and profits life. If the business use percentage initially exceeds 50 percent and thereafter declines to 50 percent or less, the excess of ACRS deductions over the amount which would have been deductible under the straight-line method over earnings and profits life is recaptured in the year of the decline.

The TRAS ACRS and depreciation provisions are discussed in detail in Chapter 40.

VI. Straight-Line ACRS for Property Financed with Tax-Exempt Bonds

A. *Introduction*

Under §168(f)(12), which was added by TEFRA,[73] ACRS deductions are generally limited to those available under the straight-line method to the extent property is financed with the proceeds of tax-exempt industrial development bonds (IDBs). The straight-line deductions are computed on IDB-financed recovery property over the property's regular recovery period unless a longer period has been elected under §168(b)(3).[74]

Section 168(f)(12)(A) requires the use of the straight-line method and regular recovery periods to compute depreciation allowances not only for IDB-financed recovery property but also as to any other IDB-financed property not eligible for ACRS.

The §168(f)(12) restrictions do not apply to any recovery property in the following categories:[75]

(i) Recovery property placed in service in connection with certain low-income multi-family rental projects, provided the projects qualify for IDB-financing under §103(b)(4)(A) or are exempt from restrictions on the use of IDBs for multi-family housing under the Mortgage Subsidy Bond Tax Act of 1980.[76]

(ii) Recovery property placed in service in connection with a facility providing sewage or solid waste disposal services for residents in part or all of one or more governmental units, and with respect to which substantially all of the sewage or solid waste processed is collected from the general public;

(iii) Recovery property placed in service as an air or water pollution facility installed in connection with an existing facility or in connection with a conversion of an existing facility which used oil or natural gas (or any product derived therefrom) as a primary fuel to a facility that uses coal as a primary fuel; or

(iv) Recovery property placed in service in connection with a facility with respect to which an urban development action grant equaling or exceeding 5 percent of the total capital expenditures on the facility is made.

B. *Analysis*

The TRA [77] amends §168(f)(12)(C) to eliminate all of the foregoing exceptions to the application of the straight-line rules for the IDB-financed property, with one exception. The retained exception is for property placed in service in connection with multi-family rental projects financed with the proceeds of obligations described in §103(b)(4)(A).[78] The straight-line requirements also will not apply with respect to multi-family housing projects exempt from the restrictions on the use of the IDBs under the Mortgage Subsidy Bond Tax Act of 1980.[79]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Note: As described in I, above, the TRA lengthened the recovery period for real property from 15 to 18 years and imposed a mid-month convention for purposes of computing the recovery deduction in the year such property is placed in service or disposed of. In what was presumably a technical oversight, the TRA failed to amend §168(f)(12)(B) to conform the computation of straight-line recovery deductions on IDB-financed recovery property to these rules.

C. *Effective Dates*

The changes made by the TRA apply to property placed in service after December 31, 1983, to the extent financed by tax-exempt bonds (including a refunding obligation) issued after October 18, 1983.[80] To the extent the property is not financed with tax-exempt bonds or is financed with such bonds issued before October 18, 1983, the straight-line rules do not apply even though the property is placed in service after 1983.[81] If property is placed in service after 1983 and is financed by the proceeds of an obligation that is issued solely to refund another obligation issued before October 19, 1983, however, the straight-line method applies, but only with respect to an amount equal to the basis of such property that has not been recovered before the date the refunding obligation is issued.[82]

The TRA changes do not apply with respect to facilities the construction, reconstruction, or rehabilitation of which began before October 19, 1983, provided the original use commences with the taxpayer, or with respect to which a binding contract to incur significant expenditures was entered into before October 19, 1983.[83] Also, the straight-line method will not apply with respect to facilities financed with the proceeds of a refunding obligation issued to refund an obligation issued before October 19, 1983, if significant expenditures were made before January 1, 1984, and the original use of the facilities commences with the taxpayer.[84]

The House Ways and Means Committee Report[85] states that no retroactive adjustments to cost recovery deductions previously claimed are required on refunding the pre-October 19, 1983 issue where no significant expenditures are made with respect to the facility after December 31, 1983.

VII. Reinstatement of Expensing Costs of Eliminating Architectural and Transportation Barriers to Handicapped

A. *Introduction*

Under §190, a taxpayer could elect to expense up to $25,000 of qualified architectural and transportation barrier removal costs that were paid or incurred in a taxable year. Architectural and transportation barrier removal costs are defined as expenditures for the purpose of making any facility or public transportation vehicle owned or leased by the taxpayer for use in connection with the taxpayer's trade or business more accessible and usable by handicapped and elderly individuals. These costs could be expensed under §190, however, only if it was established to the satisfaction of the Treasury that the barrier removal met the standards set by the Treasury with the concurrence of the Architectural and Transportation Barriers Compliance Board.

Section 190 terminated effective with respect to taxable years beginning on or after January 1, 1983.[86]

B. *Analysis*

The TRA[87] reinstates §190 and increases the amount that may be expensed from $25,000 to $35,000. Under post-TRA §190(d), §190 applies to taxable years beginning after December 31, 1976, and before January 2, 1983, and to taxable years beginning after December 31, 1983, and before January 1, 1986. Thus, the §190 expensing deduction is extended to taxpayers having a calendar year beginning January 1, 1983, as well as to all other taxpayers for taxable years beginning after December 31, 1983.

Comment: Both the Senate and the Conference Reports[88] state that the maximum deduction allowed to a taxpayer (including an affiliated group of corporations filing a consolidated return) is $35,000. Nothing in §190, however, specifically limits a consolidated return group to a single $35,000 expensing deduction. Under Regs. §1.190-1(b), a consolidated return group was limited to a maximum of $25,000 as was a partnership and each partner. This regulation, however, was promulgated pursuant to the express authority in former §190(d) to issue such regulations as may be necessary to carry out the provisions of §190. The TRA[89] deleted former §190(a), thus arguably eliminating the Treasury's authority to issue legislative regulations that would preclude a consolidated return group from claiming more than one $35,000 amount.

C. *Effective Dates*

The TRA amendments apply to taxable years beginning after December 31, 1983.[90]

VIII. Extension of Rapid Amortization for Rehabilitating Low-Income Housing

A. *Introduction*

Section 167(k) provided an election with respect to rehabilitation expenditures incurred before January 1, 1984, on low-income rental housing to permit amortization of such expenditures on a straight-line basis over 60 months. The aggregate amount of rehabilitation expenditures eligible for this rapid amortization could not exceed $20,000 with respect to any dwelling unit unless certain requirements were met, in which case up to $40,000 of expenditures per dwelling unit were eligible for rapid amortization.

For purposes of §167(k), "low-income rental housing" is defined as any building the dwelling units in which are held for rental to families and individuals of low and moderate income, as determined by the Treasury in a manner consistent with the §8 housing program of the United States Housing Act of 1937.

B. *Analysis*

The TRA[91] extends the rapid amortization of §167(k) for three years.

C. *Effective Dates*

The extension is effective with respect to rehabilitation expenditures incurred after December 31, 1983, and before January 1, 1987. Moreover, under what the Senate Finance

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Report terms the "affirmative commitment rule" of §167(k)(3)(D), the extension also applies: (i) to rehabilitation expenditures incurred after 1986 that are incurred pursuant to a binding contract entered into before 1987, if the contract is binding at all times on or after that date; and (ii) to rehabilitation expenditures incurred with respect to low-income rental housing, the rehabilitation of which begins before 1987.[92]

A binding contract will not be considered to exist before 1987 unless the property to be acquired or the services to be rendered are specifically identified or described before such date. Such a contract exists only with respect to property or services the taxpayer is obligated to pay for under the contract. If the taxpayer has an option to purchase additional items under the contract, the contract is binding only to the extent of those items or services that must be purchased. A contract may be binding even though the contract price is to be determined at a later date, the contract contains conditions the occurrence of which are under the control of a third party, or the taxpayer has the right under the contract to make minor modifications as to the details of the subject matter of the contract. A contract with an option to acquire property is not considered binding under the affirmative commitment rule unless the amount paid for the option is forfeitable and is more than a nominal amount. Moreover, a rehabilitation is considered to have begun before 1987 only if actual physical work on the rehabilitation was begun such date. Physical work begun after 1987 must be significant when viewed in light of the entire rehabilitation project.[93]

CHAPTER 7

MODIFICATIONS TO THE CHARITABLE CONTRIBUTION DEDUCTION RULES

Jerry J. McCoy, Esq.
Silverstein and Mullens
Washington, D.C.

I. Changes Affecting Percentage Limitations and Carryovers [Act §301]

A. Introduction

The principal federal tax incentive for charitable contributions has long been the charitable contribution deduction of §170. That deduction is subject to restrictions, which limit the total amount of contributions an individual can deduct in a single year.

Since the Tax Reform Act of 1969, there have been three separate limitations. The general limitation, applicable to contributions of cash by an individual to public charities, permits deductions up to 50 percent of the donor's contribution base (*i.e.*, adjusted gross income, computed without regard to net operating loss carryback.[1] Contributions of ordinary income property (*i.e.*, property which, if sold, would give rise to ordinary income) are treated in the same fashion as cash contributions for purposes of this rule. In addition to public charities, private operating foundations (as defined in §4942(j)(3)) are also subject to the 50 percent limit. Moreover, the 50 percent limit applies to contributions of cash or ordinary income property made to a private nonoperating foundation, but only if the donee foundation either redistributes all contributions within a specified period after receipt[2] or qualifies as a "pooled fund" foundation.[3]

Contributions of capital gain property to organizations otherwise qualifying for the 50 percent limit are generally deductible to the extent of 30 percent of an individual donor's contribution base.[4] In the case of contributions to private nonoperating foundations other than the two categories described above which qualify for the 50 percent and 30 percent limitation, the limitation is 20 percent of adjusted gross income.[5] The 20 percent limit also applies to contributions made "for the use of" charity rather than "to" charity.

If an individual taxpayer makes contributions which exceed the 50 percent or 30 percent limitations, the excess may be carried forward and deducted over the following five taxable years, subject to the same percentage limitations in those years.[6] Prior to the 1984 Act, no carryover of excess deduction amounts was available for amounts rendered nondeductible by the 20 percent limitation.

For corporations, the limitation for all charitable contributions is 10 percent of taxable income, and a comparable five-year carryover is available.[7]

Private nonoperating foundations as to which the 20 percent limit applies are subject to an additional limitation. Contributions of appreciated capital gain property to such entities are not deductible at the full fair market value of the contributed property, as is permitted for contributions of such property to other organizations. Instead, the amount of the deduction for such a contribution is the fair market value of the contributed property reduced by 40 percent of the unrealized appreciation (*i.e.*, by 40 percent of the amount by which the value of the property exceeds the donor's basis).[8] In the case of a contribution of tangible personal property to virtually any donee, a reduction of the deductible amount occurs if the donee's use of the property is not related to the purpose or function constituting the basis for its exemption under §501(c)(3).[9] Moreover, the deduction in the case of any charitable contribution of property, regardless of the nature of the donee, is reduced by any amount which would not be taxed as long-term capital gain if the property were sold by the donor for its fair market value on the date of the contribution.[10]

B. Overview

1. Carryover of Excess Contributions

The Act extends the five-year carryover for contributions by individuals in excess of the applicable percentage limitations to apply to contributions to private nonoperating foundations and contributions "for the use of" charity.

2. Percentage Limitations

The Act increases from 20 to 30 percent the limit applicable to charitable contributions by individuals to private nonoperating foundations (as well as contributions "for the use of" charity). The expanded limit is available only for contributions of cash and ordinary income property. The pre-TRA 20 percent limit continues to apply for all gifts of capital gain property to the donees now qualifying for the TRA's 30 percent limitation.

Some of the most important changes Congress considered in this area were ultimately rejected. The Senate version of the 1984 Act would have increased the overall limit for contributions of cash and ordinary income property to public charities and comparable organizations as described above from 50 to 60 percent of adjusted gross income.[11] In addition, the Senate bill would have abolished the distinction between public charities and private foundations for purposes of the charitable contribution deduction, raised the 50 percent limit to 60 percent, and extended the carryover period for excess contributions from five to fifteen years.[12] These proposed liberalizations would have been offset by strict rules disallowing charitable contributions of appreciated property for which an excessive valuation was claimed. The Conference Committee considered deleting the proposed disallowance rule and substituting a three-year holding period requirement in its stead. Under

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

such a rule, a donor's deduction for a charitable contribution of appreciated property would have been limited to the donor's basis in the property unless the property had been held for three full years. Eventually, the entire package (including the increased percentage limitation and carryovers) was deleted from the bill by the Conference Committee, largely in response to college and university opposition to the proposed three-year holding period.

3. Certain Contributions of Publicly-Held Stock

The Act permits deductions at full fair market value for contributions to private nonoperating foundations of certain qualified appreciated stock. The general rule whereby gifts of capital gain property to nonoperating foundations are subject to reduction (§170(e)(1)(B)(ii)) will not apply to these contributions. Stock which qualifies for this purpose means any stock of a corporation (1) for which market quotations are readily available on an established securities market on the date of the contribution, and (2) which is capital gain property for purposes of the charitable contribution deduction rules (§170(b)(1)(C)(iv)). The increased deduction is available only to the extent that the cumulative total of donations by a donor to all private nonoperating foundations of stock in a particular corporation amounts to less than 10 percent of the value of all outstanding stock of that corporation. Attribution rules apply for this purpose, treating a donor as making all contributions made by any member of his family as defined in §267(c)(4).

4. Effective Dates

The TRA's provisions concerning carryover of excess contributions and the increase in the percentage limitations apply to contributions made in taxable years ending after the date of enactment of the 1984 Act (*i.e.*, July 18, 1984). The rule providing full fair market value deductions for contributions of certain publicly-held stock applies to such contributions made after the date of enactment of the 1984 Act (July 18, 1984) and before January 1, 1995.

C. *Detailed Analysis*

1. Carryover of Excess Contributions

Section 301(a)(2) of the Act amends Code §170(b)(1)(B) to provide for the first time a five-year carryover of contributions to private nonoperating foundations in excess of the applicable percentage limitation (expanded as described below). This is accomplished by adding the following sentence to §170(b)(1)(B):

> "If the aggregate of such contributions exceeds the limitation of the preceding sentence, such excess shall be treated (in a manner consistent with the rules of subsection (d)(1)) as a charitable contribution (to which subparagraph (A) does not apply) in each of the five succeeding taxable years in order of time."

The "limitation of the preceding sentence" referred to is the newly-increased 30 percent limitation for contributions other than those to public charities. This carryover applies to contributions to private nonoperating foundations and all transfers "for the use of" charity. The latter category refers primarily to charitable lead trusts.

Contributions of capital gain property to private foundations and charitable lead trusts similarly qualify for a five-year carryover under the Act. This follows from post-TRA §170(b)(1)(D)(ii).

2. Percentage Limitations

Section 301(a)(1) of the Act amends Code §170(b)(1)(B)(i) to increase the limitation for contributions by individuals to private nonoperating foundations from 20 percent of adjusted gross income to 30 percent. The expanded limitation applies to contributions of cash and ordinary income property. The prior 20 percent limitation is continued for contributions of appreciated property to private foundations.

Both the post-TRA 30 percent limit for cash contributions and the post-TRA carryovers described above extend to contributions to charitable lead trusts and other transfers "for the use of" charity, as well as contributions to private nonoperating foundations. These changes will enhance the usefulness of the charitable lead trust, for they eliminate some of the major disincentives to creation of such trusts.

The TRA's 30 percent limit for cash contributions to private foundations is, strictly speaking, not a flat 30 percent. In fact, it can be considerably less. Under §170(b)(1)(B), such contributions are allowable only to the extent they do not exceed the *lesser of* (1) 30 percent of the taxpayer's contribution base,[13] or (2) the excess of 50 percent of contribution base over the amount of contributions allowable under §170(b)(1)(A) *determined without regard to §170(b)(1)(C)* (*i.e.*, determined without to the special 30 percent limit for contributions of capital gain property).

> *Example*: Assume a donor has a contribution base of $100,000 for the taxable year, and that his charitable contributions for the year consist of $50,000 of capital gain property given to a qualified university and $30,000 in cash given to a private foundation. The deduction for the contribution to the university is limited to $30,000 by virtue of §170(b)(1)(C), and the remaining $20,000 carries over to the following five taxable years. The $30,000 contribution to the private foundation is not deductible in the current year, but rather carries over to the following five taxable years under the TRA's carryover rule. The reason for disallowing the private foundation contribution is that, under §170(b)(1)(B), the deduction for that contribution is limited to the lower of (1) 30 percent of contribution base (*i.e.*, $30,000) or (2) the excess of 50 percent of contribution base (*i.e.*, $50,000) over the total contributions allowable under §170(b)(1)(A) determined without regard to the 30 percent capital gain limit of §170(b)(1)(C) (*i.e.*, $50,000). Thus, the limitation is the lower of (1) $30,000 or (2) $50,000 less $50,000 or zero. The zero amount is less, so foundation contributions in excess of zero are not deductible in the current year.

Note that, under post-TRA §170(b)(1)(D)(i), a similar effect is realized with respect to contributions of capital gain property to private nonoperating foundations and charitable lead trusts. Thus, contributions of capital gain property to public charities will, to the extent they exceed the 30 percent limitation of §170(b)(1)(C), effect a dollar-for-dollar reduction in the amount deductible for contribu-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tions to private nonoperating foundations and contributions to charitable lead trusts.

The effect described above was realized under the law prior to the 1984 Act. Thus, in this respect, the 1984 Act changes are consistent with the rules of prior law. However, the percentage limitation structure created under the 1984 Act creates one anomaly not experienced under prior law. Under §170(b)(1)(C), both before and after its amendment by the 1984 Act, a 30 percent limit applies to contributions of capital gain property "to which subsection (e)(1)(B) does not apply." Section 170(e)(1)(B), referred to in this connection, is the provision which requires a reduction in the amount of a charitable deduction of capital gain property by 40 percent of the appreciation inherent in the property if (1) if the contribution consists of tangible personal property use of which by the donee is unrelated to the donee's basis for exemption, or (2) the donee is a private nonoperating foundation.[14] If the amount of donor's charitable contribution deduction is reduced pursuant to §170(e)(1)(B), the 30 percent limitation of §170(b)(1)(C) no longer applies, so that the general 50 percent limitation is applicable. The TRA rules with respect to private foundations do not extend this principle to the special 20 percent limit imposed by §170(b)(1)(D) upon contributions of capital gain property to donees other than public charities.

Example: Assume an individual donor with a contribution base of $100,000 contributes to a private foundation $10,000 in cash and closely-held stock with a basis of $10,000 and a fair market value of $20,000. Under §170(e)(1)(B)(ii), the amount of the donor's contribution is reduced by 40 percent of the appreciation of the property (*i.e.*, by $4,000) to $16,000. Despite this reduction, however, the 20 percent limitation of §170(b)(1)(D) continues to apply. The amount deductible by the donor would consist of the $10,000 cash contribution to the private foundation and $10,000 [15] of the $16,000 property contribution, with the remaining $6,000 carrying over to future taxable years. If, however, the donor had sold the property for $20,000, and contributed the $20,000 cash proceeds to his private foundation in addition to the $10,000 contribution already described, the entire $30,000 would have been deductible. Because the donor would have incurred a capital gains tax on the $10,000 gain realized, his net economic position would be the same but, by effecting the sale rather than contributing the property, he would have rendered his contribution subject to the 30 percent limit rather than the 20 percent limit. While the planning potential of this statutory gap is limited, it is something of which practitioners should be aware.

3. Certain Contributions of Publicly-Held Stock

Under §170(e)(1)(B)(ii), a contribution of appreciated property to or for the use of a private foundation is generally subject to reduction. Instead of being deductible at full fair market value, the deduction must be reduced or "scaled down" by 40 percent (28/46 in the case of a corporation) of the amount of capital gain that would have resulted if the property had been sold instead of contributed. This rule is continued under the 1984 Act. However, §301(b) of the Act enacts Code §170(e)(5), which makes the scale-down inapplicable to contributions of publicly-held stock for which market quotations are readily available. The deduction in these circumstances will be allowed at full fair market value for contributions of up to 10 percent of the stock of a given corporation by a single donor and the members of his family. Family members, for this purpose, refers to brothers and sisters, spouse, ancestors and lineal descendants.

Code §170(e)(5) provides an important incentive to the use of private foundations in tax and estate planning, even though it is limited to contributions made between July 18, 1984 and January 1, 1995. In enacting this rule, Congress departed somewhat from the policy of §4943, which limits the amount of stock a private foundation and its disqualified persons can hold (in the aggregate) in any business enterprise. In many cases, §4943 may limit the ability of a donee foundation to hold as much as 10 percent of the stock of even a publicly-held corporation. Thus, even though §170(e)(5) permits a full fair market value deduction, §§4943(c)(2) and 4943(c)(6) may continue to require the donee foundation to dispose of the stock within five years of its receipt, as under prior law.

II. New Substantiation Requirements for Charitable Contributions

A. Introduction

Historically, charitable contributions of property are generally deductible at their full fair market value, provided the donor has held them long enough to qualify for long-term capital gain treatment.[16] If a donor contributes listed securities, the value of the contributed property, and hence the amount of the deduction, can be readily determined by reference to published market quotations. For other items of property, however, value cannot be as readily determined and subjective considerations must be taken into account. There is sufficient room for reasonable individuals, and even knowledgeable appraisers, to disagree as to the precise value of such property as real estate, closely-held stocks, and works of art. Nevertheless, such items are frequently the subject of charitable contributions.

As a result, some donors have been tempted to claim deductions higher than the actual value of such contributed property. This has produced a growing enforcement problem for the Service. The situation is further complicated by the existence of tax shelter programs based upon aggressively-valued charitable contributions. One such plan was described in *Anselmo v. Comr.*,[17] which involved bulk purchases of low-quality gemstones from financial planners and subsequent contribution thereof to the Smithsonian Institution. As a result of these situations, and the attending publicity, the problem of overvalued charitable contributions was a major concern of Congress as it set to work on the Tax Reform Act of 1984.

The 1984 Act attacks overvalued property contributions on several fronts. To discourage overvaluation, the previously existing penalty in §6659 was strengthened and expanded. Contributions of property worth more than $5,000 ($10,000 in the case of closely-held stock) are, after the TRA, subject to detailed new appraisal requirements, and the charity which receives a property contribution and sells or otherwise disposes of it within two years must report the disposition to the Service and send a copy of that report

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

to the donor. The net effect of these rules is to make it more difficult for a donor to justify an overly optimistic valuation for property, and to increase the cost to the donor of claiming a value which turns out to exceed the "correct" value.

B. Overview

1. Overvaluation Penalty

The Act expands and strengthens the existing penalty of §6659 for overvaluation of property producing an overstated charitable deduction. If the value claimed by the donor is more than 150 percent of the true value as ultimately determined, a flat penalty of 30 percent of the tax understatement will apply.

In addition, the application of the penalty is broadened. Under prior law, the §6659 overvaluation penalty did not apply to transfers of property held for more than five years. The 1984 Act repealed this exception. Moreover, the Service is authorized to waive the revised penalty only where the claimed value was based upon an appraisal and the donor made "a good faith investigation of value."

2. Independent Appraisals Required

Beginning with contributions made in 1985, donors claiming deductions for contributions of appreciated property to charity must comply with a new set of appraisal requirements. The rules apply to all forms of property other than publicly-traded securities, where the claimed value of the property (plus all similar items of property contributed during the year) exceeds $5,000. In the case of closely-held stock, these rules apply only if the claimed value of the stock is more than $10,000. Tangible property, such as art work and museum pieces, as well as intangible property and interests in real estate, are affected.

If the TRA requirements apply, the donor must obtain a "qualified appraisal" for the property contributed. This must be prepared by a qualified appraiser and must include specified categories of information. A qualified appraiser, for this purpose, means a person qualified to make appraisals of the type of property donated, and who is independent of both the donor and the donee. The appraisal may not be prepared by any party to the transaction in which the donor obtained the property, nor by any other person whose relationship to the donor would cause a reasonable person to question his or her independence.

The donor must attach a summary of the appraisal, signed by the qualified appraiser and acknowledged by the donee, to the return on which the deduction is claimed for the contribution. In addition, the return itself must include such additional information (including the cost basis and acquisition date of the contributed property) as regulations may require.

The TRA appraisal requirements are not included in the Code itself, but rather are to be set forth in regulations. The Treasury is directed to prescribe those regulations not later than December 31, 1984. Under §170(a)(1), the Service has long been authorized to disallow deductions for charitable contributions if those deductions are not properly substantiated. The TRA's appraisal regulations are to be promulgated under this provision and, as a result, donors who fail to comply will subject their deductions to disallowance.

3. Donee Reporting Requirement

A charitable organization which, after 1984, receives a contribution of property worth more than $5,000 will be required to file a notice with the Service if it sells the property or otherwise disposes of it within two years after its receipt. A copy of this report must be furnished to the donor as well. The report itself will resemble IRS Form 1099, and will include the name, address and tax identification number of the donor, a description of the property, the date of the contribution, the amount received on the disposition, and the date of the disposition.

An organization which fails to file the required report will be subject to a penalty of $10 per incident up to a total penalty of $25,000 per year. In addition, an organization which fails to supply a copy to the donor will be subject to a penalty of $10 per incident, up to a total penalty of $25,000 per year. These penalties may be excused if the donee establishes that its failure was due to reasonable cause and not due to willful neglect.

With this information in hand, the Service will easily be able to check the deduction claimed by the donor pursuant to the appraisal summary described above, and raise appropriate audit challenges if the amount received by the donee is substantially less than the deduction claimed.

4. Effective Dates

The modifications to the overvaluation penalty of §6659 apply to charitable contributions claimed on returns filed after December 31, 1984. Thus, for most individuals, the revised penalty will apply to all 1984 charitable contributions, including those made prior to the date of enactment of the 1984 Act (July 18, 1984). The appraisal requirements and the donee reporting requirement apply to contributions made after December 31, 1984, in taxable years ending after that date.

C. Detailed Analysis

1. Overvaluation Penalty

Prior to the 1984 Act, §6659 applied a penalty on a sliding scale from 10 to 30 percent upon any underpayment of tax attributable to overstatement of the value or adjusted basis of any property claimed on a return, according to the following scale:

If the valuation claimed is the following percent of the correct valuation —	The penalty is:
150% to 200%	10%
Over 200% but less than 250%	20%
Over 250%	30%

Under pre-TRA §6659(c)(2), the penalty did not apply to any property which, as of the close of the taxable year for which there was a valuation overstatement, had been held by the taxpayer for more than five years.

TRA §155(c) changes these provisions in several respects. First, §6659(c) was revised to delete the requirement that property be acquired within the last five years. Thus, a valuation overstatement exists whenever a value or adjusted basis of any property claimed on any return is 150 percent or more of the amount determined to be the correct valuation or basis. This is accomplished by deleting pre-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

TRA §6659(c)(2), and revising pre-TRA §6659(c)(1) to comprise the entire text of §6659(c). Although the legislative history implies that Congress' principal concern in this connection was with overvalued charitable contributions, the deletion of the five-year requirement applies for all purposes of §6659, including basis overstatements and other transactions not involving the charitable contribution deduction.

In addition, TRA §155(c)(2)(A) created a new penalty provision, §6660, imposing a penalty upon undervaluations for estate and gift tax purposes which corresponds to the overvaluation penalty of §6659. This penalty applies whenever the value of property claimed on an estate or gift tax return is 66-2/3 percent or less of the amount determined to be the correct valuation. There is no penalty if the underpayment is less than $1,000, and the Secretary's waiver authority corresponds to the waiver authority for non-charitable contributions. The estate and gift tax penalty is applied on a sliding scale:

If the valuation claimed is the following percent of the correct valuation —	The applicable penalty is:
50% or more, but not more than 66-2/3%	10%
40% or more, but less than 50%	20%
Less than 40%	30%

Like the valuation overstatement penalties described above, the estate and gift tax undervaluation penalty applies to returns filed after 1984.

Section 155(c)(1)(B) of the Act created a new Code §6659(f) prescribing special rules for overstatement of charitable deductions claimed for contributions of property. In the case of an understatement of tax attributable to an overvalued charitable contribution deduction, the penalty applies at a flat 30 percent rate. Thus, the TRA's charitable contribution penalty continues the former 150 percent threshold for application of §6659, but applies the pre-TRA maximum penalty percentage of 30 percent whenever the penalty applies in a charitable contribution context.

The Act also limits the ability of the Secretary to waive the penalty on a showing of good faith and a reasonable basis for the claimed value. In the case of a overstated charitable deduction, the penalty may be waived only if the Secretary determines that: (a) the claimed value of the property was based upon a "qualified appraisal" made by a "qualified appraiser" (both terms having the meaning to be assigned under regulations the IRS is directed to promulgate by December 31, 1984 under §170(a)(1)); and (b) in addition to the appraisal, the taxpayer made a "good faith investigation" of the value of the contributed property.

Comment: The legislative history provides no insight into the intended scope of the good-faith-investigation requirement. Presumably, this is intended to permit application of the penalty to a taxpayer who procures an appraisal showing an inflated value which the taxpayer has reason to know (or should have reason to know) is improper (*e.g.*, where the taxpayer conceals material facts from the appraiser, or fails to notify the appraiser of a misunderstanding of facts concerning the property).

In addition, §158 of the Act amended Code §6601(e)(2) to make the overvaluation penalty of §6659 "time sensitive." Thus, the penalty will bear interest from the due date of the return (including extensions) to the date of eventual payment.

2. Independent Appraisal Requirements

Section 170(a)(1) of the Code has for many years provided that a charitable contribution shall be allowable as a deduction only if it is verified under regulations prescribed by the Secretary. Section 155 of the Act directs the Secretary to prescribe, not later than December 31, 1984, regulations requiring qualified appraisals for verification of most property contributions. In this respect, the Act does not amend the Code, but merely mandates the promulgation of regulations under existing law (§170(a)(1)).

The TRA rules apply to any contribution of property other than publicly-traded securities, where the claimed value of the property (plus the claimed value of all similar items of property donated to one or more donees) exceeds $5,000. In the case of nonpublicly-traded stock, a $10,000 threshhold applies in place of the $5,000 rule that is generally applicable.

The taxpayers who must abide by the TRA's verification requirements are individuals, closely-held corporations (defined in Act §155(a)(6)(A) as any corporation other than an S corporation meeting the stock ownership requirement of §542(a)(2)) and personal service corporations (defined in Act §155(a)(6)(B) as any corporation other than an S corporation which is a service organization within the meaning of Code §414(m)(3)).

Whether a security is publicly-traded or nonpublicly-traded turns upon whether, as of date of the contribution, market quotations are readily available on an established securities market.[18]

Where the substantiation requirements apply, the donor must obtain a qualified appraisal for the contribution, attach an appraisal summary to the return on which the deduction is first claimed for the contribution, and include on the return such additional information (including cost basis and acquisition date of the contributed property) as the regulations may require. The regulations will require the taxpayer to retain any qualified appraisal, presumably to have it available for audit. The term "qualified appraisal" means an appraisal prepared by a qualified appraiser which includes the following items:

(a) A description of the property appraised;

(b) The fair market value of the property on the date of contribution and the specific basis for the valuation;

(c) A statement that such appraisal was prepared for income tax purposes (this requirement is apparently intended to subject the appraiser to liability under §6701 for aiding and abetting the understatement of the donor's tax liability if the valuation is ultimately challenged);

(d) The qualifications of the qualified appraiser;

(e) The signature and tax identification number of the appraiser; and

(f) Such additional information as the Secretary chooses to include in the regulations.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

A critical element of the TRA's appraisal rules is the requirement that a "qualified appraiser" be utilized. The definition given in Act §155(a)(5), however, focuses almost exclusively upon the independence of the appraiser rather than his or her professional qualifications. Under that provision, a qualified appraiser is one qualified to make appraisals of the type of property donated, who is not any of the following:

(a) The taxpayer (*i.e.*, the donor);

(b) A party to the transaction in which the taxpayer acquired the property;

(c) The donee;

(d) Any person employed by any of the foregoing persons or a sibling, spouse, ancestor or lineal descendant of such a person; or

(e) Any person whose relationship to the taxpayer would cause a reasonable person to question the independence of such appraiser.

Implementation of these rules will require careful reexamination of many existing practices. For example, it is not uncommon for a donor to request the assistance of the donee in valuing contributed property. In some instances, such as specialized museum items, the donee may be uniquely suited to estimate the value. Under the qualified appraisal rules, however, it seems likely that any participation by the donee in the valuation process could cause the resultant appraisal to be rejected, and thus create the possible disallowance of the donor's deduction. The apparent justification for this is the inherent conflict of interest created for the donee, for a higher value will make it more likely for the donor to make the contribution. Similarly, a person who originally sells the property to the taxpayer has a stake in finding a high valuation, as this will tend to indicate the reasonableness of the original sale price. Moreover, disqualification of such persons will help discourage tax shelter transactions of the sort involved in *Anselmo v. Comr.*,[19] in which a "investor" purchased a package deal including property to be contributed and an appraisal of its value as of the subsequent contribution date.

A special rule is provided for appraisal fees. An appraisal will not be treated as a qualified appraisal if all or part of the fee paid for it is based upon a percentage of the appraised value of the property. A special exception is provided, however, for fees based on a sliding scale that are paid to a generally recognized association regulating appraisers.

Comment: This exception is apparently tailored to accomodate the practices of the Art Dealers Association of America, a fact that has brought some criticism of the exception as constituting special interest legislation.

A summary of the appraisal, signed by the qualified appraiser and acknowledged by the donee, must be attached to the return on which a deduction is claimed for the contribution.

The Conference Report makes it clear that the 1984 Act may not be the final legislative word in this area. The continuing concern of the Treasury Department over the adequacy of substantiation and penalty provisions to prevent overvaluation of charitable deductions is specifically noted. The Senate version of the bill contained a special disallowance provision for overvalued charitable contributions; in addition to the §6659 penalty described above, a donor would also find part or all of his or her charitable contribution deduction disallowed. Although this rule was not enacted, the Conference Committee acknowledged that some additional legislation might be required to curb abuses in this area. The Conference Report indicates that Treasury and the IRS are expected to monitor the effectiveness of the TRA provisions and to notify the tax-writing committees of Congress if valuation problems continue to be experienced. Existing compliance tools, such as negligence and fraud penalties, are suggested as additional measures to enforce charitable valuations, and the tax authorities are asked to call the attention of Congress to other compliance problems for which legislative solutions may be appropriate. One example cited was the possibility that deductions may be claimed by taxpayers, or their tax return preparers, on the basis of checks made out to qualified charities, where the checks in fact represent payment for merchandise purchased at an auction, bazaar, or otherwise. Thus, additional enforcement appears likely.[20]

3. Donee Reporting Requirement

Section 155(b) of the Act created a new Code §6050L, entitled "Returns Relating to Certain Dispositions of Donated Property." Under this rule, a charitable donee which sells, exchanges, or otherwise transfers donated property within two years of its receipt must furnish an information report to the IRS, with a copy to the donor, describing the circumstances. The report must set forth the donor's name, address, and tax identification number, as well as a description of the property, the date of contribution, the amount received on the disposition, and the date of disposition.

These reporting requirements apply if the amount for which a deduction was claimed by the taxpayer on his or her return for the contribution (other than publicly-traded securities) exceeds $5,000 for any single item of property or, in the aggregate, for similar items of such property. Unlike the appraisal requirements, there is no higher limitation for closely-held securities in this instance. In addition, §6678, which imposes penalties for failure to furnish various statements, is amended to apply to a charity's failure to comply with these information reporting requirements.

A donee's compliance with the information reporting requirement is intended to be facilitated by the donor appraisal requirements. Thus, the $5,000 threshhold for reporting is based upon the amount claimed by the donor on his or her return, and the regulations to be promulgated under §170(a)(1) will require the donor to (1) submit the appraisal summary for the donee's acknowledgment signature, and (2) inform the donee of any donations of similar items made during the same year.

Note: The legislative history makes it clear that the donee's acknowledgment signature on the summary appraisal is intended merely to acknowledge receipt of the items described in the summary appraisal, and not to indicate agreement with, or acceptance of, the amount claimed.[21] The regulations are to provide "appropriate rules" for situations where the donor is unable to obtain the donee's acknowledgment.

III. Increase in Standard Mileage Rate for Charitable Usage of Automobile

A. Introduction

A taxpayer who performs volunteer services for a charitable organization is entitled to a deduction, as a charitable contribution, for unreimbursed, out-of-pocket expenses incurred in the process.[22] This rule includes the cost of fuel used in operating a passenger automobile in the course of providing charitable volunteer services. The amount of the contribution deduction attributable to the operation of the vehicle may be determined on the basis of actual expenses, or the taxpayer may use a standard rate, which presently stands at 9 cents a mile.[23] If the actual expense approach is used, the taxpayer may deduct the expenses of operating the car, including parking fees and tolls, but not general repair or maintenance expenses, depreciation, insurance and the like; the latter amounts are deductible only for an automobile devoted to business usage. For this reason, the standard mileage charge for volunteer charitable services is lower than the comparable rate utilized to determine deductions for automobile use.

Effective for taxable years beginning after 1984, the Act increases the allowance to 12 cents per mile.

B. Overview

Section 1031 created a new §170(j). That section provides that, for purposes of computing the charitable deduction allowable for use of a passenger automobile, the standard mileage rate shall be 12 cents per mile.

Effective Date. This amendment is applicable to taxable years beginning after December 31, 1984.

IV. Allowance of Charitable Deduction for Certain Reformed Split-Interest Transfers

A. Introduction

The Act provides, by adding a new §2055(e)(3), a permanent rule for correction or reformation of charitable remainder trusts and charitable lead trusts which do not meet the detailed requirements of the Tax Reform Act of 1969. In general, reformation will be allowed where either of two situations exist: (1) the instrument evidences an intent to comply with the 1969 Act rules (*i.e.*, the trust utilizes an annuity trust or unitrust format), or (2) reformation proceedings are begun before the IRS has an opportunity to audit the matter (*i.e.*, within 90 days after the filing of the return on which a deduction for the transfer to the trust is claimed or, if no such return is required, within 90 days after the filing of the first income tax return for the trust itself).

The actuarial values and durations of the charitable and non-charitable interests in an affected trust must remain approximately the same both before and after the reformation. Variations of up to 5 percent will be permitted.

Both *inter vivos* and testamentary trusts may be reformed under the legislation. The rule provides a permanent successor to the various temporary transition rules enacted by Congress on several occasions since the expiration of the original 1972 transition rule in the 1969 Act. Qualified reformation may be achieved by any method permissible under local law, provided all relevant parties are bound by the change. The Treasury is directed to issue regulations permitting reformation of charitable interests involving remainder interests in pooled income funds, personal residences and farms.

A special rule is provided for situations in which all of the non-charitable "income" beneficiaries of a charitable remainder trust die before the filing of the estate tax return on which the charitable deduction for funding the trust is claimed. Under these circumstances, the trust will now be deemed to have been reformed. Thus, a deduction will be allowed for the value of the charitable interest in the trust, computed as if it had been a qualified trust as of the date of the decedent's death.

The reformation provisions of the 1984 Act apply retroactively to reformations made after 1978, as well as those accomplished currently. A special rule reopens the statute of limitations for one year after the date of enactment to permit time for donors and estates to seek refunds or credits with respect to completed transactions.

Persons who have had deductions disallowed for contributions to faulty trusts should thus investigate whether the TRA may create a new opportunity for correction of their trust instruments. For some trusts, the deduction may be saved only if reformation proceedings are commenced by October 16, 1984 (*i.e.*, within 90 days of the date of enactment of the 1984 Act).

B. Detailed Analysis

For a detailed analysis of these provisions *see* Chapter 54, Part I, *infra.*

V. Transitional Rule for Certain Contributions of Qualified Conservation Easements

A. Introduction and Overview

A charitable deduction is available for income, estate, and gift tax purposes for contributions of property to charitable organizations or governmental entities. As a general matter, a contribution of less than the donor's entire interest in the contributed property will not give rise to a charitable deduction unless the gift takes the form of an interest in a unitrust, annuity trust, or a pooled income fund. Exceptions are provided for gifts of remainder interests in farms or personal residences, gifts of undivided portions of the donor's entire interest in the property, and gifts of qualified conservation interests.

Qualified conservation interests are real property interests donated in perpetuity for any of the following conservation purposes:

(a) The preservation of land areas for outdoor recreation by, or for the education of, the general public;

(b) The protection of a natural habitat of fish, wildlife, plants, or a similar ecosystem;

(c) The preservation of open space (including farmland and forest land) but only if such preservation (1) is either for the scenic enjoyment of the general public, or pursuant to a clearly delineated federal, state, or

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

local governmental conservation policy, and (2) will yield a significant public benefit; or

(d) The preservation of an historically important land area or a certified historic structure.

The foregoing rules are delineated in §170(h).

Deductible conservation interests take any of three forms. First, a deduction is allowable for the value of a remainder interest. Second, the value of an easement or other similar restriction on the use of the property is deductible provided it is granted in perpetuity. Finally, a contribution of the donor's entire interest is deductible, except that the donor may retain his or her interest in subsurface oil, gas or other minerals, and the right of access to such minerals.

In the 1984 Act, Congress was concerned about a requirement which applies where the donor retains a mineral interest under the rule described in the preceding sentence. Where the donor retains such an interest, no deduction is allowable if at any time there may be extraction or removal of minerals by any surface mining method. Congress acknowledged that this restriction created problems in certain instances.[24] Historical patterns of land ownership in some areas of the United States preclude the utilization of the conservation easement because of a donor's inability to provide firm assurances that surface mining will not occur in any event.

The Act creates an exception to the general rule precluding a deduction for conservation contribution where any possibility exists of surface mining on the land with respect to which the contribution relates. Under the exception, deductions for contributions of conservation easements satisfying all the other requirements of a conservation contribution will nevertheless be deductible if two additional conditions are satisfied. First, the surface estates and mineral estates in the property must have been separated prior to June 13, 1976. Second, the probability of surface mining on the property must be so remote as to be negligible.

B. Detailed Analysis

In some areas of the United States, particularly in the western states, land ownership patterns are such that some rights to subsurface minerals have been separated from the ownership of the other rights in the property. In some instances, this separation occurred pursuant to government land grants, and in some instances it is difficult even to determine who owns all of the subsurface rights. Under these circumstances, it sometimes proved impossible for a prospective donor of a conservation contribution to demonstrate definitively that surface mining on the property could never be permitted.

To remedy this situation, §1035 of the Act amends Code §170(h)(5)(B) to provide a special rule applicable where ownership of the surface estate and mineral interest were separated before June 13, 1976, and remain so separated. Under these circumstances, if the probability of surface mining occurring on the property is so remote as to be negligible, the prohibition on surface mining will be treated as being met.

The legislative history indicates that, where ownership of the surface and mineral estates in a property first become separated *after* June 12, 1976, and surface mining is not completely precluded, a contribution of the restriction in the property will not qualify as a conservation contribution.[25] In addition, under the exception, no deduction will be permitted if the owner of the surface interest at any time transferred, directly or indirectly, the mineral interest to the present owner and that present owner is related to the owner of the surface estate.[26] For this purpose, the determination of whether a party is related is to be made in a manner similar to that provided under §267.

The circumstances under which the probability of surface mining occurring is so remote as to be negligible will be the subject of regulations to be promulgated by the Treasury.

Effective Date: The TRA rules governing qualified conservation contributions are applicable to contributions made after the date of enactment of the 1984 Act (*i.e.*, after July 18, 1984).

Chapter 8

MODIFICATIONS IN THE INTEREST DEDUCTION RULES

Harrison B. McCawley, Esq.
and
A.L. Suwalsky, Jr., Esq.
Silverstein and Mullens
Washington, D.C.

I. Interest Deductions Affected by New and Revised Provisions Related to the Time Value of Money [Act §§41-44, 92 and 172]

A. Overview

Sections 41-44, 92 and 172 of the 1984 TRA were enacted to bring about a more accurate reflection in the Code of the time value of money as measured in the marketplace. In general, the Chapter 2 summary covers the Act's provisions relating both to inclusion in income and deductions of interest. As the Code is structured, the detailed provisions relating to the treatment of original issue discount (OID) are included in Subchapter P relating to inclusion of amounts in gross income. OID is treated for most purposes of the Code as interest. The related deductions allowable to the payor of the interest are provided for in §163(e).

Sections 41-44, 92, and 172 of the Act are discussed in greater detail in Chapter 2.

Provisions relating to the time value of money may be grouped as follows:

Act §§41-44 — New Code §§1271-1278 §§1281-1283 §§1286-1288	Provides amended rules relating to original issue discount; amends §483; disallows interest deductions for leveraged purchases of market discount bonds and short-term obligations; provides rules for determining basis for discounted tax-exempt obligations.
Act §92 — New Code §467	Provides rules relating to deferred payment for the use of property and services.
Act §172 — New Code §7872	Provides rules for the treatment of below-market interest loans.

1. Original Issue Discount (§§1271-1275)

Sections 1271-1275 extend the principles underlying the TEFRA amendments relating to original issue discount (OID) reflected in repealed §§1232, 1232A and 1232B. The most significant of these changes is to provide for OID in debt instruments issued for untraded property, rather than solely for traded property as under prior law. Excepted are transactions involving total payments of $250,000 or less (including principal and interest). Central to these new provisions is the "applicable federal rate" (AFR), meaning the average market yield on U.S. government securities. Instruments not providing for interest of at least 110 percent of the AFR are OID instruments. Such OID is to be included in income by the holder and deducted by the issuer over the life of the instrument on a constant interest basis at an imputed rate of 120 percent of the AFR. Application of these provisions generally affect sales or exchanges occurring after December 31, 1984.

2. Amended §483

Where an obligation to make future payments for untraded property does not fall within the new OID provisions, it is subject to §483, as amended by the Act, unless it is specifically excepted. Like the OID provisions, §483 now tests sales contracts by the "applicable federal rate" compounded semiannually. As under former law, allocation of payments to principal or interest for tax purposes depends on whether an adequate rate of interest was charged. Where the rate charged is less than 110 percent of the applicable federal rate, interest at 120 percent of such rate will be imputed and the characterization of payments adjusted accordingly. Unlike the OID rules, §483 does not require that interest on a debt instrument be currently included in the income of the holder and deducted by the issuer symmetrically notwithstanding their respective methods of accounting. The issuer of a debt instrument not falling within the OID rules may deduct interest only when paid or accrued in accordance with the issuer's method of accounting. It is provided, however, in §44 of the Act containing the effective dates for the OID and §483 changes (generally effective as to sales or exchanges of property after December 31, 1984) that §483 notwithstanding, no interest on pre-1985 instruments issued after March 1, 1984 is deductible before the period to which it is allocable. This rule also applies to instruments unaffected by §483 issued after June 8, 1984.

A detailed analysis of the new OID provisions and the amendments made to §483 is set forth in Chapter 21, *infra*.

3. Market Discount Bonds (§§1276-1278)

New §1277 disallows deductions for interest on indebtedness incurred to purchase or carry market discount bonds. The disallowance extends to the "net direct interest expense," meaning such interest in excess of amounts includible in income during the taxable year as interest with respect to the bond (including OID). Such net direct interest expense is disallowed to the extent it does not exceed the accrued market discount on the bond during the year. Disallowed interest is not lost, however, but carried

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

over and allowed as a deduction in the year the bond is disposed of. Electing holders may also deduct previously disallowed interest in any year in which there is net interest income on the bond. Sections 1276 and 1277 apply to obligations acquired after July 18, 1984, enactment date. These provisions are discussed in detail in Chapter 21, *infra.*

4. Short-Term Obligations (§§1281-1283)

New §1282, similar to §1277, disallows interest deduction on indebtedness incurred to purchase or carry short-term obligations with respect to which discount (either acquisition or original issue discount) is not currently included in the income of the holder. Interest so disallowed is allowed in the year the bond is disposed of. Taxpayer may elect obligation of §1281 for the first taxable year ending after July 18, 1984, enactment date.

The provisions of §1282 are analyzed in Chapter 21, *infra.*

5. Deferred Payments for the Use of Property or for Services (§467)

Where a rental agreement or agreement to pay for services involves future payments is a "§467 rental agreement," the amounts treated as rental income and rental deductions may be adjusted under new §467 enacted by §92 of the 1984 TRA. A §467 rental agreement is one involving more than $250,000, which calls for uneven payments or at least one payment allocable to the use of property during a calendar year which is not due until after the close of the calendar year of use. Affected are long–term leases (extending over 75 percent or more of the property's recovery period) and sale-leasebacks, the terms of which are determined to be motivated, at least in part, by tax avoidance. The §467 provisions apply to agreements entered into after June 8, 1984.

New §467 is discussed in detail in Chapter 22, *infra.*

6. Below-Market Loans

Under new §7872, added by §172 of the Act, the terms of certain loans of money which are determined to provide a below-market rate of interest (the applicable federal rate), are recharacterized with the result that both the lender and borrower are considered, for tax purposes, to have agreed to a market rate of interest, and their tax liabilities are adjusted accordingly. In the case of a gift or demand loan, the foregone interest is treated as having been transferred from the lender to the borrower and retransferred by the borrower to the lender as interest. In the case of a term loan, the borrower is treated as having received in cash on the date of the loan agreement an amount equal to the excess of the amount loaned over the present value (using the applicable federal rate to discount the payments) of all payments to be made under the loan. The borrower's obligation thus becomes an OID debt instrument, subject to the OID rules referred to above. The above provisions apply to loans made after June 6, 1984.

The provisions of new §7872 are discussed in detail in Chapter 22, *infra.*

Note: Section 91 of the Act amending §461 by adding new subsection (h) (denying deductions for payments made for goods or services in any taxable year before the year in which "economic performance" occurs) applies to transactions not within the ambit of the OID rules or the provisions of §483. Deferred payment transactions (loans, installment purchases of property) effected after June 8, 1984 are subject to new §461(h), and, as provided by §44(b)(3)(A)(i)(II) of the Act, which reflects the amendments to §461, accelerated interest payments will, generally, be disallowed. However, Act §44(b)(3)(C) exempts from this rule self-amortizing installment loans providing for substantially equal annual payments.

This is further explained in Chapter 21, *infra.*

II. Expenses Related to Short Sales [Act §56]

A. Summary of New Statutory Provisions

Section 56 of the Act, amending Code §§263, 163 and 265, discussed in detail in Chapter 10, *infra,* eliminates certain tax advantages related to expenses incurred in connection with short-sales.

1. Payments in Lieu of Dividends

The short seller of stock or securities is allowed a deduction for amounts paid to the lender of the stock or securities during the period the short sale is open in lieu of dividends or interest. In a short sale, the seller borrows stock which is immediately sold and undertakes to replace the borrowed stock whenever either he or the lender choses to close the sale. Before that time, any dividends paid on the stock, which are received by the purchaser, must be compensated for by payment of an equivalent amount by the borrower to the lender of the stock. Section 263 is amended by adding new subsection (h) requiring the capitalization of such payments where the short sale remains open more than 45 days (1 year where the dividend in question is an "extraordinary dividend"). These periods are suspended where the borrower of the stock has acquired an offsetting position reducing risk of loss with respect to the short sale. Where collateral is posted by the borrower securing his obligation to replace the borrowed stock, and interest is earned on such collateral, the payment required to be capitalized under the above described rule is allowed as a deduction to the extent of such interest, except where the dividend involved is an "extraordinary dividend." An "extraordinary dividend" has the same meaning as in §1059(c) (added to the Code by Act §53, meaning dividends exceeding 5 percent of the taxpayer's basis in preferred stock or 10 percent of basis in other stock.

2. Investment Interest

Section 163(d) (limiting the interest deduction under the general rule of §163(a) to net investment income plus $10,000) is amended. Paragraph (D) of §163(d)(3) (defining investment interest) is amended to include as investment interest any amount allowable as a deduction in connection with personal property used in a short sale.

3. Denial of Deduction for Short-Sale Connected Expenses

Section 265(2) denying deductions for expenses and interest relating to tax-exempt income is supplemented by new §265(5) which provides that any amount paid or incurred by a person making a short sale in connection with property used in the short sale, or by another person for the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

use of any collateral with respect to a short sale will be treated as interest and denied deduction.

The above additions to the Code apply to short sales made after July 18, 1984.

These provisions will be discussed and analyzed in detail in Chapter 10, *infra.*

III. Elections to Treat Subchapter S Income Under Prior Law for Purposes of Investment Interest Limit [1]

A. Introduction

Pursuant to §163(d) of the Code, the deduction allowed to a taxpayer for investment interest expenses is generally limited to net investment income plus $10,000. "Investment income" includes the gross income from dividends, but only to the extent such income is not derived from the conduct of a trade or business of the taxpayer. Prior to enactment of the Subchapter S Revision Act of 1982 which repealed §163(d)(4)(C), that subsection stated that the investment interest paid or accrued and the other items of income and expense which would be taken into account if §163(d) applied to S corporations shall be attributed to the shareholders *pro rata* pursuant to regulations to be promulgated.

Although regulations were never issued, the Commissioner took the position that S corporation shareholders were entitled to take into account their ratable share of the corporation's investment income and interest and that the dividends paid by an S corporation to its shareholders (including undistributed taxable income treated as dividend income under §1373(b)) are not a "dividend" for purposes of §163(d)(3)(B). In *Crook v. Comr.*,[2] the Tax Court held that Subchapter S distributions (and undistributed taxable income) are clearly dividends under §§316(a) and 1373(b). The court noted that: (i) Congress had not provided that these amounts should not be treated as dividends for purposes of §163(d)(3)(B), although it had stated that such amounts were not to be treated as dividends for certain other purposes,[3] and (ii) the Commissioner has in his regulations and rulings consistently treated such amounts as dividends for numerous other purposes.

B. Detailed Analysis

The Subchapter S Revision Act of 1982 (P.L. 97-354) (The "1982 Act"), effective for taxable years of S corporations beginning after 1982, provides that the character of items of income, deduction, loss, and credits of the corporation will pass through to the shareholders in the same general manner as the character of such items of a partnership passes through to the partners. In addition, of course, each shareholder takes into account his *pro rata* share of the corporation's "nonseparately computed" income which is determined by excluding the pass-thru items. Although the statute is silent on the matter, it was apparently assumed that after the 1982 Act, S Corporations would so resemble partnerships that the investment income issue would be mooted. In fact, the House Committee Report states that "... S corporation business income will *no longer* be treated as investment income." [4] The Report then goes on to say that "[i]n order to lessen the impact of the transition to the new subchapter S rules for certain corporations, the committee wishes to allow shareholders of S corporations an additional two years to treat the S corporation income as investment income." No similar provision was included in the Senate bill.

The statute as enacted is not nearly so unequivocal. Section 1066 of TRA 1984 [5] states that for taxable years of S corporations beginning in 1983 or 1984, a shareholder may elect that any "qualified income" (income other than personal service income) which a shareholder takes into account by reason of being a shareholder "... shall be treated for purposes of §163(d) ... as such income would have been treated but for the enactment of the [1982 Act]." The Conference Report warns that "[n]o inference is intended as to the proper interpretation of prior law." [6] It is not inconceivable that the Commissioner may interpret such language as an invitation to further litigate the issue which he lost in *Crook, supra.*

Effective Date: As if included in 1982 Act.

CHAPTER 9

RELATED PARTY DEDUCTION RULES OF §267 REVISED

Douglas E. Jacobs, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Section 267 disallows deductions for losses on sales and exchanges of property between related persons, and (prior to the 1984 Act) disallowed deductions for unpaid expenses and interest owed by an accrual basis taxpayer to a related cash basis taxpayer. The disallowance provisions apply to defined transactions between persons in any of several defined relationships, without regard to the motives of the parties or the bona fides of the transaction. The evil against which §267(a)(1) is directed is the contrivance of transactions that create tax losses without removing property from friendly hands. The Supreme Court aptly characterized the legislative purpose underlying the predecessor of present §267(a)(1):

> Section 24(b) states an absolute prohibition — not a presumption — against the allowance of losses on any sales between the members of certain designated groups. The one common characteristic of these groups is that their members, although distinct legal entities, generally have a near-identity of economic interests. It is a fair inference that even legally genuine intragroup transfers were not thought to result, usually, in economically genuine realizations of loss, and accordingly that Congress did not deem them to be appropriate occasions for the allowance of deductions.[1]

Congress added what is now §267(a)(2) to the Code in order to thwart attempts to take advantage of the mismatched accounting methods of related entities. In a typical form of such a transaction, an accrual-basis entity would borrow from a cash-basis entity. The accrual-basis entity would deduct interest as it became due, but make no payments, so that the cash-basis creditor would have no income to report. Prior to the 1984 amendments, the legislative response embodied in §267(a)(2) was absolutely to disallow such expenses and interest.

The operation of §267(a)(1) was simple. Any loss on a sale or exchange of property between persons in one of the proscribed relationships, except for a loss on a distribution in the course of a corporate liquidation, was disallowed. If the related purchaser later should sell the property at a gain, he would be required to recognize only the portion of the gain in excess of the amount of the loss previously disallowed by reason of §267(a)(1).[2] If the related purchaser were not so fortunate as to sell the property at a gain, then the loss disallowance would be permanent. As we shall see, the 1984 Act leaves §267(a)(1) substantially unchanged, but creates exceptions to the rather draconian general rule.

Section 267(a)(2) disallowed deductions for expenses or interest where three conditions coincided: the expenses or interest were not paid during the taxable year or within 2½ months thereafter; by reason of the accounting method of the person to whom payment was to be made, such person would not include such amount in gross income unless actually paid; and the relationship between the person claiming the deduction and the person to whom payment was to be made was one of the several relationships described in §267(b). Section 267(f), added by the subchapter S Revision Act of 1982 (P.L. 97-354), provided a different rule for S corporations. An S corporation was prohibited from deducting expenses or interest owed to a related person until such time as the amount of the expenses or interest became includable in the income of the payee.[3] In effect, §267(f) matched the accounting methods of the related persons by deferring the deduction of the accrual-basis payor until payment was made to the cash-basis payee. Solely for purposes of §267(f), any person owning 2 percent or more of the value of the outstanding stock of an S corporation, and any person related to such a shareholder by reason of §267(b) or §707(b)(1)(A), were treated as persons related to the S corporation.

Prior to the 1984 amendments, §267(b) defined the following as related persons, and therefore subject to the disallowance provisions of §267(a) and the deferral provisions of §267(f):

(1) Members of a family, including brothers, sisters, spouse, ancestors, and lineal descendants;

(2) A shareholder and a corporation, if the shareholder owns, directly or indirectly, more than 50 percent in value of the outstanding stock of the corporation;

(3) Two corporations, if the same individual owns, directly or indirectly, more than 50 percent in value of the outstanding stock of each corporation, and if one of the corporations was a personal holding company or a foreign personal holding company for the taxable year preceding the date of the sale or exchange;

(4) A grantor and a fiduciary of a trust;

(5) A fiduciary of a trust and a fiduciary of another trust, if the same person is a grantor of both trusts;

(6) A fiduciary and a beneficiary of a trust;

(7) A fiduciary of a trust and a beneficiary of another trust, if the same person is a grantor of both trusts;

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(8) A fiduciary of a trust and a corporation, if the grantor of the trust owns, directly or indirectly, more than 50 percent in value of the outstanding stock of the corporation;

(9) A person and a controlled tax-exempt organization;

(10) An S corporation and a partnership, if the same persons own more than 50 percent in value of the outstanding stock of the S corporation, and more than 50 percent of the capital or profits interest in the partnership;

(11) Two S corporations, if the same persons own more than 50 percent in value of the outstanding stock of each corporation; or

(12) An S corporation and a C corporation, if the same individual owns more than 50 percent in value of the outstanding stock of each corporation.

For purposes of determining whether persons are related within the meaning of §267(b), constructive ownership as well as actual ownership of stock is taken into account. Section 267(c) contains the following rules for attribution of ownership:[4]

(1) Stock owned, directly or indirectly, by or for a corporation, partnership, estate, or trust is attributed proportionately to its shareholders, partners, or beneficiaries;

(2) Stock owned, directly or indirectly, by or for an individual's family, including his brothers, sisters, spouse, ancestors, and lineal descendants, is attributed to the individual;

(3) Stock owned, directly or indirectly, by or for an individual's partner is attributed to the individual, but only if the individual already owns some stock in the corporation (other than by reason of attribution of ownership from his family members); and

(4) Stock constructively owned by reason of Rule (1) shall be treated as actually owned by the constructive owner for purposes of reattribution under Rules (1), (2), and (3), but stock constructively owned by reason of Rule (2) or Rule (3) shall not be treated as owned by him for the purpose of reattribution of the ownership of such stock to another person. The operation of the constructive ownership rules may be illustrated by the following example:

Example 1: On June 7, 1957, A owned no stock in X Corporation, but his wife, AW, owned 20 percent in value of the outstanding stock of X, and A's partner, AP owned 60 percent in value of the outstanding stock of X. The partnership firm of A and AP owned no stock in X Corporation. The ownership of AW's stock is attributed to A, but not that of AP since A does not own any X Corporation stock either actually, or constructively under §267(c)(1). A's constructive ownership of AW's stock is not the ownership required for the attribution of AP's stock. Therefore, deductions for losses from sales or exchanges of property made on June 7, 1957, between X Corporation and A or AW are allowable since neither person owned more than 50 percent in value of the outstanding stock of X, but deductions for losses from sales or exchanges between X Corporation and AP would not be allowable by §267(a) (except for distributions in liquidation of X Corporation).[5]

In enacting the amendments to §267 in the Tax Reform Act of 1984, Congress appears to have had two major purposes. First, Congress sought a more refined mechanism for matching expense and interest deductions with income. The 2½ month grace period for payment of expenses or interests after the close of the taxable year was thought to be too lenient, since in many cases the grace period allowed a taxpayer to deduct expenses or interest one year before a related entity recognized the corresponding income. On the other hand, the Committee Reports indicate that Congress believed that permanent disallowance of an expense or interest deduction is unduly harsh in cases where payment is actually made, albeit more than 2½ months after the close of the taxable year. Second, Congress wished to broaden the coverage of §267. Thus, the Tax Reform Act of 1984 adds certain related parties, such as a partnership and its partners, and members of a controlled group of corporations, to those which are subject to the related party rules.[6]

II. Overview

A. Amendments to §267

Expense and interest deductions for amounts owing from an accrual-basis entity to a cash-basis entity, which were formerly disallowed, are now merely deferred until the expense or interest is actually paid and the cash-basis entity recognizes income. The former grace period for expenses or interest paid during the 2½ months following the close of the taxable year, during which time payments were not subject to disallowance under §267(a)(2), has been repealed. Now, any delay in payment by an accrual-basis taxpayer to a related cash-basis taxpayer will result in postponement of the deduction for the expense or interest until actual payment.

The rule deferring the deduction of expenses and interests owed by an accrual-basis taxpayer to a related cash-basis taxpayer, applicable only to obligations of an S corporation to its shareholders under prior law, will now be extended to the obligations of a shareholder to an S corporation, obligations of partnerships to partners, and obligations of partners to partnerships. The former exception from the rule for amounts owing from an S corporation to a shareholder with less than a 2 percent interest in the S corporation has been eliminated. This rule will also apply to a partnership or S corporation that owns a partnership interest in a lower-tier partnership and another partner in the lower-tier partnership. Similarly the rule will apply to an S corporation or partnership and any person related (within the meaning of §267(b) or §707(b)(1) to partners in the partnership, shareholders in the S corporation, or partners in a lower-tier partnership in which the upper-tier partnership or S corporation owns an interest. The rule will not apply to guaranteed payments to which §707(c) is applicable. Instead, the prior law requirement continues, that a partner must include such payments as ordinary income for his taxable year during which the partnership's taxable year in which the partnership deducted such payments ends. The Act also contains an exception for certain resyndications of low-income housing (within the meaning of §189(e)(5)) permitting the deduction of specified expenses and interest incurred in connection with the resyndication.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The Act amends §267(b) to broaden the relationship rules. The extension of the relationship rules will apply to both the disallowance of loss on a sale or exchange of property between related parties and to the deferral of deductions for unpaid expenses and interests owed by an accrual-basis taxpayer to a cash-basis taxpayer. Section 267 will now apply to transactions between a partnership and a corporation which are commonly controlled, and to transactions between an S corporation and a C corporation which are commonly controlled (whether by one individual, as under prior law, or by more than one person). The Act also extends §267 to transactions between groups of controlled corporations. Corporations will be treated as members of a controlled group if they satisfy the tests of §1563(a), except that a 50 percent control test will be substituted for the 80 percent control test of §1563(a). In the case of a transaction between members of a controlled group of corporations, the disallowance of a loss on the sale or exchange of property under §267(a)(1) will not apply. Instead, losses will be deferred until the property is disposed of to an unrelated third party in a transaction which results in recognition of gain or loss under consolidated return principles. Loss on a transfer to a DISC or on certain sales of inventory to a foreign member of the same controlled group, and certain foreign currency losses, will not be subject either to disallowance or deferral.

B. Effective Dates

Amendments made by §174(a) of the Act (amending Code §267(a)(2) to provide for deferral of deductions for expenses and interests owing from an accrual-basis taxpayer to a cash-basis taxpayer) and §174(b)(1) of the Act (special rules for deferral of expense and interest deductions of "pass-thru entities" and related parties) shall apply to deductions otherwise allowable for taxable years beginning after December 31, 1983. Amendments by §174(b)(2) of the Act (deferral of loss on a sale or exchange and deferral of expense deductions as to transactions within a controlled group of corporations) shall apply to transactions after December 31, 1983 in taxable years ending after such date, except that such amendments shall not apply to property transferred to a foreign corporation on or before March 1, 1984. The amendments made by Act §174(b)(3) (making a commonly controlled corporation and partnership related parties) and Act §174(b)(4) (making a commonly controlled S corporation and C corporation related parties) and §174(b)(5) (making conforming amendments to sections other than §267) shall also apply to transactions after December 31, 1983 in taxable years ending after such date. None of the amendments to §267 shall apply to amounts paid or incurred on indebtedness that was incurred, or pursuant to a contract that was binding, as of September 29, 1983. This exception for indebtedness and contracts existing as of September 29, 1983 will not apply to any amounts paid or incurred after a subsequent renegotiation, extension, renewal, or revision of the indebtedness or contract.

III. Detailed Analysis

A. Matching of Deduction and Corresponding Income Item

Section 267(a)(2), as amended by the Tax Reform Act of 1984, will defer a deduction of expenses or interest if the following conditions are met:

(1) The expenses or interest are not paid during the taxable year;

(2) By reason of the accounting method of the person to whom payment is to be made, the amount of expenses or interest is not includable in the gross income of the payee until paid; and

(3) At the close of the taxable year of the taxpayer for which the expenses or interest would otherwise be deductible, both the taxpayer and the person to whom the payments should be made are related persons specified in §267(b). Thus, an accrual-basis taxpayer may not deduct expenses or interest owed to a related cash-basis taxpayer until the amount is paid. The 2½ month grace period following a taxable year during which payment was treated as paid during the taxable year and the permanent disallowance of deductions for unpaid expenses and interest owed by an accrual-basis taxpayer to a cash-basis taxpayer have been eliminated.

B. Special Rules for Partnerships and S Corporations

For purposes of applying the expense and interest deduction deferral rules of §267(a)(2) only, the Act amends §267(e)(1) to treat the following entities and individuals as related persons:

(1) A partnership or an S corporation (the generic term in the statute is "pass-thru entity") and a partner in the partnership or a shareholder in the S corporation;

(2) An upper-tier partnership or S corporation that owns an interest in a lower-tier partnership, and any other person who owns an interest in the lower-tier partnership; and

(3) A partnership or S corporation, and any person related (within the meaning of §267(b) or §707(b)(1)) to a partner in the partnership, a shareholder in the S corporation, or a partner in the lower-tier partnership in which the upper-tier partnership or S corporation owns an interest.

A partner in a lower-tier partnership in which the upper-tier partnership or S corporation owns an interest will be treated as related to the upper-tier partnership or S corporation for purposes of §267(a)(2) only if the expense or interest paid or incurred is related either to the operations of the lower-tier partnership or to an interest in the lower-tier partnership.

The rules of §267(e)(1) may be illustrated by the following examples:

Example 2: Corporation Z owns a one percent profits interest in Partnership X and a 51 percent capital and profits interest in Partnership Y. Partnership X uses the accrual method of accounting and Partnership Y uses the cash method. Unpaid interest owed by X to Y cannot be deducted until actually paid, because Y is related to a partner of X by reason of §707(b)(1)(A), and therefore is related to X by reason of §267(e)(1)(D).[7]

Example 3: Assume the same facts as in Example 2, except that Corporation Z has only a 40 percent interest in Partnership Y. The Corporation is not related to Y under §707(b)(1), and §267 does not apply. (However, both the House and Senate Reports contain the following footnote: "It is expected that the Treasury

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

regulations under this provision will provide a rule for cases not specifically covered by the new rules where the same persons are partners in both the payor partnership and payee partnership which will defer deduction accruals (until paid) to the extent of such partners' aggregate interests in the payor partnership." [8] If such regulations are promulgated, one percent of the interest deductions accrued by X must be deferred until the amounts are paid to Y, but 99 percent of the deductions would be allowed currently if otherwise allowable.

Example 4: Partnership A and Individual C each owns a one percent partnership interests in Partnership B. Individual C lends money to partnership A in a transaction unconnected with the operations of, or with an interest in, Partnership B. If Partnership A is an accrual-basis taxpayer, A may deduct interest payable to C as it accrues even though the interest remains unpaid. Although C owns an interest in a partnership in which A owns interest, and therefore is related to A by the terms of §267(e)(1)(C), §267(e)(1) provides that subparagraph (C) shall apply only to transactions related to the operations of, or to an interest in, the lower-tier partnership.

Example 5: Individual C owns a two percent partnership interest in Partnership B. C sells a one percent partnership interest in Partnership B to Partnership A, receiving in payment cash and a promissory note. If C is a cash-basis taxpayer, A may not deduct accrued interest on the promissory note until A actually pays the interest, even if A is an accrual-basis taxpayer. Since the transaction between A and C relates to a partnership interest in a partnership in which both A and C own interests, §267(e)(1)(C) applies to the transaction, and §267(a)(2) requires deferral of the interest deduction. However, if C realized a loss on the sale of the partnership interest, §267(a)(1) would not operate to disallow C's loss deduction. Section 267(e)(1) treats parties as related only for purposes of §267(a)(2).

For purposes of determining ownership of a partnership interest pursuant to §267(e)(1), the constructive ownership rules of §267(c) will apply with two modifications. First, §267(c)(3), which attributes stock ownership from one partner to another partner in the same partnership, shall not apply for purposes of attributing ownership of a partnership interest under §267(e)(1). Second, a partnership interest owned, directly or indirectly, by or for a C corporation shall be attributed to a shareholder only if the shareholder owns, directly or indirectly, five percent or more in value of the stock of the corporation.[9]

Guaranteed payments to which §707(c) applies shall not be subject to deferral by reason of §267(e) and §267(a)(2).[10] As under prior law, a partner must include such payments as ordinary income for his taxable year during which the partnership's taxable year in which the partnership deducted such payments ends.[11]

Certain expenses and interest of low-income housing resyndications are exempted from the application of §267(e)(1) and §267(a)(2). Section 267(e)(5) provides that the deferral rule will not apply to qualified expenses and interest paid or incurred by a partnership owning low-income housing to a "qualified five-percent or less partner" in the partnership. A "qualified five-percent or less partner" is defined as a partner owning a five-percent or less interest, but only if one of the following two conditions is met:

(1) The partner owned the low-income housing at all times during the two-year period ending on the date when the housing was transferred to the partnership, or

(2) The partnership acquired the low-income housing pursuant to a purchase, assignment, or other transfer from the Department of Housing and Urban Development or any State or local housing authority. For purposes of determining whether a partner has a five percent or less interest, the partner shall be treated as constructively owning any partnership interest owned by a related person (within the meaning of §267(b) or §707(b)(1)).[12] The term "qualified expenses and interest" is defined as any expense or interest which satisfies all of the following three conditions:

(a) The interest or expense must be incurred with respect to low-income housing held by the partnership;

(b) The amount of the expense or interest must be unconditionally required to be paid by the partnership not later than 10 years after the date when the amount was incurred; and

(c) In the case of interest, the annual interest rate may not exceed 12 percent.[13] "Low-income housing" is defined as in §189(e)(5), and also includes an interest in a partnership owning low-income housing.[14]

C. Relationship Rules of §267(b) Extended

The Act amends the relationship rules of §267(b), both for purposes of the loss-disallowance provisions of §267(a)(1) and for purposes of the deduction-deferral provisions of §267(a)(2). Section 267 will now apply to a corporation and a partnership, if the same persons own more than 50 percent in value of the outstanding stock of the corporation and more than 50 percent of the capital or profits interest in the partnership.[15] Formerly, §267 applied to a commonly controlled S corporation and partnership, but not to a commonly controlled C corporation and partnership. Section 267 will now also apply to an S corporation and a C corporation, if the same persons own more than 50 percent in value of the outstanding stock of each corporation.[16] Formerly, §267 applied to an S corporation and a C corporation only if a single individual owned more than 50 percent in value of the outstanding stock of each corporation. The Act also extends the application of §267 to corporations which are members of the same controlled group (as defined in §267(f)).[17] The term "controlled group" has the same meaning as in §1563(a), except that a greater than 50 percent control test is substituted for the 80 percent control test of §1563(a), and subsections (a)(4) and (e)(3)(C) of §1563 do not apply.[18] Section 1563(a), as modified by §267(f)(1), defines three different kinds of controlled groups:

(1) *Parent-Subsidiary*, where more than 50 percent of the total voting power or value of the stock of each corporation, except the common parent corporation, is owned by one of the group of corporations, and the common parent corporation owns more than 50 percent of the total voting power or total value of the stock of at

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

least one other corporation in the group, excluding (treating as not outstanding) for this purpose stock owned directly by other corporations in the group;

(2) *Brother-Sister,* where five or fewer individuals, estates, or trusts own more than 50 percent of the total voting power or total value of the stock of each of two or more corporations, and own more than 50 percent of the total voting power or total value of the stock of each corporation, taking into account the stock ownership of each person only to the extent such stock ownership is identical with respect to each corporation (in other words, taking into account the ownership of each person only to the extent of the smallest ownership percentage of that person in any corporation in the group); and

(3) *Combined Group,* where three or more corporations are each a member of a parent-subsidiary controlled group or a brother-sister controlled group, and one corporation is both a common parent in a parent-subsidiary controlled group and a member of a brother-sister controlled group.

In the case of a transaction between members of a controlled group of corporations, the disallowance of a loss on the sale or exchange of property under §267(a)(1) will not apply. Instead, the loss will be deferred until the property is transferred outside the controlled group and there would be recognition of loss under consolidated return principles, or until such other time as may be prescribed in regulations.[19] The loss deferral rules are not intended to overrule the consolidated return regulation rules where the controlled corporations file a consolidated return.[20] The deferral rules will apply, however, to taxpayers who have elected not to apply the deferred intercompany transactions rules.[21]

The language of new §267(f) has created an ambiguity where a commonly controlled S corporation and C corporation, which are treated as related parties under §267(b)(12), are also members of a controlled group as defined in §267(f). This may happen when the S corporation and C corporation constitute a brother-sister controlled group as defined in §1563(a)(2), as modified by §267(f)(1). The overlap between the two definitions raises the issue whether a loss on a sale or exchange between a commonly controlled S corporation and C corporation will be disallowed pursuant to §267(b)(12) and §267(a)(1), or merely deferred pursuant to §267(f)(2). The answer is not obvious. Not all commonly controlled S and C corporations will qualify as a controlled group under §267(f)(1) and §1563(a)(2). Therefore, it is arguable that Congress intended to legislate different treatment for controlled groups of S and C corporations that are owned in different proportions. It is not at all clear, however, what legislative policy might underlie such a distinction. A rational response to the overlap would be that all commonly controlled S and C corporation pairs should be treated alike, and §267(f) should be interpreted as implicitly excluding S corporations from the definition of a controlled group. This interpretation finds some support in Regs. §1.1563-1(b)(2)(ii)(c), which specifically excludes S corporations from the definition of a controlled group. However, the Act would seem to preclude reliance on Regs. §1.1563-1(b)(2)(ii)(c), since §267(f)(1) borrows only subsection (a) from §1563, and the regulation is a gloss on §1563(b) (defining "component" and "excluded" members). The legislative history specifies that: "The component member rules of §1563(b) have no application."[22] The overlap of §267(b)(12) and §267(f) may be illustrated by the following examples:

Example 6: Individual A owns 50 percent of the stock of corporation X and 50 percent of the stock of corporation Y, and individual B owns 50 percent of the stock of corporation X and corporation Y. Corporation X is an S corporation, and corporation Y is a C corporation. X sells property at a loss to Y. Section 267(b)(12) applies to X and Y, so §267(a)(1) would seem to disallow X's loss on the sale. However, §267(f) also applies to X and Y, since they are a brother-sister controlled group as defined by §1563(a)(2), as modified by §267(f)(1). Arguably, §267(f)(2) should operate to defer rather than disallow the loss.

Example 7: Individual A owns 75 percent of the stock of corporation X and 25 percent of the stock of corporation Y. Individual B owns 25 percent of the stock of corporation X and 75 percent of the stock of corporation Y. X is an S corporation and Y is a C corporation. X sells property to Y at a loss. Section 267(b)(12) applies to the sale, and §267(a)(1) operates to disallow X's loss. Section 267(f) does not apply, because X and Y are not a controlled group as defined by §1563(a) and §267(f)(1). Although X and Y meet the test of §1563(a)(2)(A) as modified by §267(f)(1), since five or fewer persons own stock possessing more than 50 percent of the voting power or value of the stock of each corporation, they do not meet the test of §1563(a)(2)(B), since A and B own only 50 percent of the stock of each corporation if only identical ownership is taken into account. (A owns 75 percent of the stock of X, but only 25 percent is taken into account for purposes of §1563(a)(2)(B), since B owns only 25 percent of the stock of X; B owns 75 percent of the stock of Y, but only 25 percent is taken into account, since A owns only 25 percent of the stock of Y.) Hence, the argument that the loss should be deferred rather than disallowed is not available in this situation.

Another curiosity relating to §267(f) is the following statement which appears in the Conference Report:

> The Secretary may prescribe exceptions from these principles [deferral of loss on a sale or exchange until the property is transferred outside the group], for example, where necessary to properly reflect the net amount of income on a transaction. For example, it is intended that where any income is properly taken into account by the controlled group with respect to the face amount of a note receivable (for example, the income is accruable in accordance with the principles set forth in Rev. Rul. 71-365) at any time prior to the transfer of the property outside the group, any loss due to the discount in the note or receivable (to the extent of such income previously recognized) shall be allowed no later than the time that both the income has been taken into account and that loss has been sustained.[23]

This statement is apparently intended to preserve prior law treatment of an accrual-basis credit card company or bank that sells notes or receivables to an affiliated corporation at a discount. As an example of where income is taken into account with respect to the face amount of a note or receivable, the conference report cites Rev. Rul. 71-365,[24] which holds that fees charged by a bank to merchants in

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the form of a discounted purchase price for the indebtedness owed to the merchant for goods or services must be accrued by an accrual-basis bank in the year in which the bank purchases the customer obligation from the merchant. The justification offered for excepting the sale of receivables by an accrual-basis bank to an affiliate appears to be that the bank has already paid tax on such income, and therefore should not be denied a loss deduction to the extent of the income recognized. However, any taxpayer who would be entitled to recognize a loss but for the provisions of §267(a)(1) has, in effect, purchased his basis in the property with after-tax dollars. It is unclear why a taxpayer whose basis in property derives from the payment of taxes (as in the case of a bank that has taken part of a note or receivable into income) should be preferred to a taxpayer whose basis derives from a cash payment (on which taxes were presumably paid at one time or another). The disparity of treatment seemingly required by the language in the Conference Report may be illustrated by the following examples:

Example 8: Corporation A and corporation B are both members of a controlled group, as defined in §267(f). Corporation A purchases receivables (for goods or services charged on a credit card issued by A) at a discount from participating merchants. As A is an accrual-basis taxpayer, it recognizes income to the extent of the discount at the time of its remittance to the merchant (see Rev. Rul. 71-365). A sells the receivable to B at a discount from the face amount, though not at a discount from the amount remitted to the merchant. (The face amount of the receivable equals 100, the payment to the merchant equals 95, and the payment from B to A equals 95.) According to the Conference Report language, A may recognize loss on the sale of the receivable to B to the extent that A recognized income at the time of the purchase from the merchant. On the other hand, if B is a cash-basis taxpayer, it will not recognize income until the receivable is actually collected (see Rev. Rul. 78-40, 1978-1 C.B. 136).

Example 9: Corporation A and corporation B are members of a controlled group. Corporation A purchases receivables from a merchant at a discount. A is a cash-basis taxpayer, and so accrues no income at the time it purchases the receivable. A sells the receivable to B at a deeper discount. (The face amount of the note equals 100, the payment from A to the merchant equals 95, and the payment from B to A equals 90.) Although A had a basis of 95 in the receivable and would otherwise have recognized a loss of 5, §267(f)(2) defers the loss deduction until the receivable is collected (or not collected) or sold to an unrelated third party.

In three situations, the Act provides that neither the deferral provision of §267(f)(2) nor the disallowance provision of §267(a)(1) shall apply to a loss on the sale or exchange of property between members of a controlled group. First, loss deferral or disallowance will not be required in the case of a transfer to a DISC.[25] Also excepted is a sale or exchange of inventory (as defined in §1221(1)) in the ordinary course of business, where the property is inventory both in the hands of the transferor and in the hands of the transferee, and where either the transferor or the transferee is a foreign corporation.[26] Finally, §267 will not defer or disallow a loss sustained by a member of a controlled group at the time of repayment of a loan made to another member of the controlled group, if the loan is payable in a foreign currency or is denominated in a foreign currency, and the loss is attributable to a reduction in value of the foreign currency.[27] This exception may be illustrated by the following example:

Example 10: Corporation X and its foreign subsidiary corporation Y are members of a controlled group as defined in §267(f)(1). Corporation X lent funds to corporation Y, and received a promissory note payable in the currency of the foreign country in which Y is based. Between the time that X lent funds to Y and the time that Y repaid X, the currency of the foreign country suffered a reduction in value relative to the United States dollar, and X realized a loss upon repayment of the loan. Section 267(f)(3)(C) prescribes the issuance of regulations that will permit the present deduction of such foreign currency losses, which would otherwise be subject to deferral by reason of §267(a)(1) as modified by §267(f)(2).

CHAPTER 10

TREATMENT OF EXPENSES RELATED TO SHORT SALES

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Background

A. Mechanics of a Short Sale

While the term "short sale" is not defined in the Code or in any regulations,[1] for purposes of the legislation to be discussed, it refers to the short sale of stock executed through a securities exchange regulated by the SEC and in accordance with the rules of such exchange. A short sale involves, normally, three parties, the person who is the short seller, (the seller) the short seller's broker, and the person whose stock is used in the short sale, referred to as the lender.[2] The seller may also be a broker. In a short sale, the seller borrows stock from the lender. This stock is sold on the exchange. The sale proceeds are retained by the broker executing the sale as security for the seller's obligation to return the stock to the lender. The broker will usually invest these proceeds or use them in his business operations. Unless the seller is a customer who transacts a substantial volume of business through the broker, the latter will, normally, not pay the seller interest on the proceeds while the short sale is open (*i.e.*, prior to the time the sale is closed by delivery of the replacement stock to the lender). Where the broker does pay interest on the proceeds, the payment is referred to as a "rebate fee." As stated, a short sale is "closed" when, upon demand by the lender or at the election of the seller, stock identical to the stock borrowed is returned to the lender. The principal purpose of a short sale is to profit from a downturn in the price of the borrowed stock, since if identical stock can be purchased at a price lower than the price for which the borrowed stock was sold, and this stock is used to close the sale, the seller retains the excess sale proceeds. Sometimes, short sales are made "against the box," that is, where the seller holds stock identical to the stock sold short. The short sale serves to lock in or guarantee the current market price. If the market price subsequently declines, the stock held by the seller can be used to close the sale, at which time the seller becomes entitled to the sale proceeds. The seller is free, of course, to close the sale with stock purchased at any time before closing whether or not the sale is made against the box.

B. Treatment of "In Lieu of Dividend" Payments

While the short sale is open, the seller must pay to the lender an amount equal to any dividends to which the lender would become entitled had he retained the stock. Such payments are payments "in lieu of dividends." Dividends are usually declared periodically and are payable to the shareholders of record as of a specified date. At that time,the stock is referred to as "ex dividend," meaning that a person who acquires the stock after such date is not entitled to the current dividend distribution. The market price of ex dividend stock will normally decline temporarily (all other things being equal) reflecting the dividend payment. It may occur that a corporation will declare an extraordinary dividend for any number of reasons. Such dividend will substantially exceed the usual periodic distribution of current earnings. It may result, for example, from the decision to distribute to the shareholders the proceeds of the sale of corporate assets or some other unusual gain unrelated to the corporation's normal operating profits. The decision to make such a dividend will usually be announced, and the price of the stock will usually reflect anticipation of the distribution. Here, the ex dividend drop in the stock price will be much more dramatic than in the case of the normal periodic dividend.

A short sale executed shortly before a stock goes ex dividend will usually insure the short seller of a profit from the short sale. This will be offset by the in lieu of dividend payment the seller is obligated to make. The IRS has ruled that a payment in lieu of a dividend is fully deductible.[3] Gain or loss from a short sale is, except in unusual circumstances, capital gain.[4] Unless the seller held stock substantially identical to the stock sold short at the time of the short sale,[5] any gain from the short sale will be short-term capital gain.[6] When the seller has capital losses for the taxable year in which the short sale is closed, the gain from the short sale can be offset against such losses. Where the seller has long term gains and short term losses, he is ideally situated for this type of transaction. The seller is also entitled to set off the deductions for in lieu of dividend payments against unrelated ordinary income. These results are, of course, greatly magnified in the case of a short sale made prior to an extraordinary dividend.

As stated above, the seller's broker will normally retain the proceeds of the sale of the borrowed stock without payment to the seller of any rebate fees. However, where such fees are paid to the seller, his position is analagous to the position of a taxpayer who borrows money and invests the proceeds of the loan at present interest rates. Payments in lieu of dividends, in such a case, are analagous to payments of charges for the use or forbearance of the money borrowed and are, therefore, analagous to interest.[7] In the case of the broker who executes a short sale for his own account, the same analogy applies. He will invest the sale proceeds or use them in his business operations. Where the sale is executed for the account of a customer, while the broker will not have to make in lieu of dividend payments, any rebate fees paid are economically indistinguishable from interest paid for the use of borrowed funds. Where the sale is executed on the broker's own behalf, his position is the same as that of a customer; in lieu of dividend payments

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

are analagous to interest charged for the use of the borrowed funds.[8] Under law prior to the 1984 Act, in lieu of dividend payments were not considered "interest" for purposes of §163(d) which limits the deduction of "investment interest" in excess of "net investment income" to $10,000 for any taxable year.

C. *Indebtedness Incurred to Carry Tax-Exempt Securities*

Section 265 of the Code contains a number of provisions disallowing deductions for expenses incurred to purchase or carry tax-exempt securities. Section 265(2) disallows interest on indebtedness incurred or continued to purchase or carry securities the interest from which is tax-exempt. Where a taxpayer holds tax-exempt securities and borrows funds which are used to purchase investment property, the indebtedness generally is considered incurred to carry tax-exempt securities. In the case of a broker,the IRS has adopted the position that where interest expense cannot be traced directly to the purchase of tax-exempt securities, such nontraceable expense is multiplied by a fraction the numerator of which is the average basis in tax-exempt securities owned during the taxable year and the denominator of which is the broker's average basis in all securities owned during the year.[9] There is segregated from this computation amounts paid as interest on funds borrowed solely for customer transactions (*e.g.*, the purchase of stock on margin).[10] Where a broker pays rebate fees for the use of collateral in connection with a short sale, it is unclear whether such fees are subject to the above computation.

II. Overview

A. *Code Sections Amended*

Section 56 of the Act, entitled "Denial of Deductions for Certain Expenses Incurred in Connection with Short Sales," amends Code §263 (relating to the mandatory capitalization of certain expenses), §163(d) (relating to deductions of investment interest), and §265 (relating to the denial of certain expenses incurred in connection with tax-exempt income).

B. *Amendments to Section 263*

Act §56(a) adds new subsection (h) to §263. The subsection is headed "Payments in Lieu of Dividends in Connection with Short Sales." The new subsection provides that where the taxpayer makes an in lieu of dividend payment, and the closing of the short sale occurs on or before the 45th day after the date of the short sale, no deduction is allowed with respect to such payment. The amount of such disallowed payment is to be added to the basis of the stock used to close the short sale.[11] In the case of an "extraordinary dividend," the above provisions will apply substituting "the day one year after the date of such short sale." [12]

The term "extraordinary dividend" has the meaning given to such term by §1059(c) (explained below), except that such section is to be applied by treating the amount realized by the taxpayer in the short sale as his adjusted basis in the stock. Section 1059, added by §53(a) of the Act, requires the reduction of the basis of stock owned by a corporation where the latter receives an extraordinary dividend on such stock and where the dividend is subject to the dividend received deduction provided by §§243-256 inclusive. "Extraordinary dividend" is defined, for purposes of §1059, as any dividend paid with respect to stock which equals or exceeds the threshold percentage of the shareholder's adjusted basis in the stock. The "threshold percentage" means: (1) 5 percent in the case of stock preferred as to dividends,and (2) 10 percent in the case of any other stock.[13] Rules are provided relating to the aggregation of dividends paid within an 85-day period and a one-year period and for substituted basis transactions.

The 45-day and one year periods which must elapse between the short sale and closing the sale specified in the above provisions are suspended during any period in which the taxpayer holds, has an option to buy, or is contractually obligated to buy, substantially identical stock or securities, or, under regulations, the taxpayer has diminished his risk of loss (with respect to the short sale) by holding one or more positions in substantially similar or related property.[14]

The denial of deductions for in lieu of dividend payments is not to apply to the extent such payments do not exceed amounts received by the short seller as compensation for the use of collateral with respect to any stock used in a short sale, provided such compensatory amounts are treated as ordinary income.[15] This exception does not apply, however, with respect to any payment made in lieu of extraordinary dividends (as defined above).[16]

Section 263(g) denies deductions for interest, carrying charges and other expenses relating to any position of a straddle, as that term defined by §1092(c).[17] Act §101(e)(8) amended §263(g), adding paragraph (4) which provides that in the case of any short sale, the provisions of subsection (g) are to be applied after subsection (h).[18] Section 263(h)(6) makes the identical provisions, *i.e.*, the provisions of subsection (h) are to be applied before applying subsection (g).

C. *Amendments to Section 163(d)*

Act §56(b) amends subparagraph (D) of §163(d)(3) (defining "investment interest") to provide that the term "investment interest," meaning interest paid or accrued on indebtedness incurred or continued to purchase or carry property held for investment, includes any amount allowable as a deduction in connection with personal property used in a short sale.[19] This presumably includes amounts paid in lieu of dividends but not rebate fees paid by brokers.

D. *Amendments to Section 265*

Act §56(c) amends §265 by adding new paragraph (5) which provides special rules for the application of paragraph (2) (denying deductions for interest on indebtedness incurred or continued to purchase or carry tax-exempt securities). Paragraph 95(A) provides the general rule that the term "interest" includes any amount paid or incurred:

> (i) by any person making a short sale in connection with personal property used in such short sale, or
>
> (ii) by any other person for the use of any collateral with respect to such short sale.

An exception is provided in clause (i) above. This clause does not apply if the taxpayer provides cash as

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

collateral for a short sale and receives no material earnings on such cash during the period of the sale.

E. Effective Date

The amendments made by Act §56 apply to short sales after July 18, 1984 in taxable years ending after such date.

III. Detailed Analysis

A. General Observations

The amendments outlined above are designed to deal with two unrelated abusive situations. The conversion of ordinary income to capital gain by the short sale of stock shortly before the ex dividend date followed by the closing of the short sale after such date will no longer be possible in view of the amendments made to §263 requiring the capitalization of in lieu of dividend payments where the closing of the short sale takes place less than 45 days (one year in the case of extraordinary dividends) after the date of the short sale. In addition, the treatment of in lieu of dividend payments as interest for certain purposes reflects the perception that in a short sale, the seller is, as a practical matter, borrowing property which is converted into cash, and that payments to the lender of amounts equal to the investment yield on such property should be treated in the same manner as interest. Lastly, where the broker pays rebate fees for the use of the short sale proceeds while the sale remains open, such payments are indistinguishable from the payment of interest for borrowed funds and, where such broker carries tax-exempt securities, these rebate fees should be considered as interest on indebtedness incurred to carry such tax-exempt securities in appropriate cases.

B. The Amendments to Section 263

Under new subsection (h) of §263, as outlined above, an in lieu of dividend payment may be deducted only where there elapses a period of at least 45 days between the short sale giving rise to the payment and the closing of the short sale.[20] Where the payment is in lieu of an extraordinary dividend equal to 10 percent or more of the proceeds of the stock sold in a case involving any stock other than preferred (as to dividends *i.e.*, 5 percent in the case of such preferred stock) the period which must elapse between the short sale and the closing is one year and one day.[21]

The statute provides that the time period described above will be suspended during any period the taxpayer holds what can be loosely termed as a long position with respect to the stock sold short. There are two categories of long position. The first consists of holding, or holding an option to buy, or being contractually obligated to buy, stock or securities "substantially identical" to the stock sold short. The second category is, under regulations, the holding of any position in "substantially similar or related property" which diminishes the risk of loss from the short sale.

The term "substantially similar stock or securities" is a familiar one, appearing in both the wash sale rules of §1091 and the short sale rules of §1233. While there may be some exceptional circumstances in which this may not hold true [22] stock is almost invariably substantially identical only to stock of the same class issued by the same corporation, or, possibly, a debenture convertible into such stock where the prices of the stock and of the debenture move in unison.[23]

The phrase "substantially similar or related," however, is a new addition to the Code. It appears in more than one of the 1984 TRA amendments. Act §53(b) amended §246(c), disallowing a dividend received deduction under §§243-245 where the stock is sold or disposed of after being held for 45 days (15 days under pre-TRA law) or less.[24] Former law also denied the deduction where the taxpayer was under an obligation (whether under a short sale or otherwise) to make corresponding payments with respect to substantially identical stock or securities.[25] Act §53(b) changed "corresponding" to "related," and, further, changed "substantially identical stock or securities," to "substantially similar or related property." Also, paragraph (4) of §246(c) was amended. This paragraph provides for the suspension of the holding period where the taxpayer's risk of loss is diminished. The same two categories of positions (short, however, rather than long positions) are provided for, *i.e.*, short positions with respect to "substantially identical stock or securities," and risk of loss reducing positions in "substantially similar or related property," the latter to be defined in regulations to be issued.[26] The "substantially similar or related" standard is discussed in the Conference Committee Report [27] relating to the §246 amendments. The Committee Report relating to the §263(h) provisions [28] states that "substantially similar or related property" has the same meaning as when used in §246(c).[29]

To be entitled to a deduction for an in lieu of dividend payment, therefore, the taxpayer must at the time of the short sale divest himself of all long positions in the stock and of any other positions which may be considered as "substantially similar or related property." The regulations interpreting this term will, presumably, be effective as of July 18, 1984, the date of the enactment of the 1984 TRA.[30]

> *Example*: Taxpayer A sells short 100 shares of ABC common stock at a time when the stock price is 100. Six days later, a dividend is declared on the stock and the stock price, ex dividend, falls to 97. The dividend is paid 14 days later, and A makes payment in an equal amount to the lender of the stock. If the dividend is less than $10 per share, A may deduct the in lieu of dividend payment if he waits for 26 days before closing the short sale. If the dividend is $10 or more per share, A cannot deduct the in lieu of dividend payment unless he waits for 1 year and a day after the date of the short sale before closing it. If the sale is closed before these respective waiting periods, the in lieu of dividend payment is added to the basis of the stock used by A to close the sale. This will probably result in a short-term capital loss. If at any time after the short sale, A holds a long position in the stock, the 45 day (1 year) period is suspended until A divests himself of such position. The period is also suspended if A holds any position in "substantially similar or related property," as that term will be defined in regulations.

Query: Would the granting by A of a put option on the stock be considered as placing A "under a contractual obligation to buy" the ABC stock? Probably not. In

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

§246(c), the holding period is suspended where the shareholder is "under a contractual obligation to sell" [31] the stock. But the statute also provides for suspension where the taxpayer" is the grantor of an option to buy substantially identical stock or securities.[32] The first described position apparently does not include the second.

As was noted in the Overview, where the seller receives rebate fees, the in lieu of dividend payments are deductible to this extent irrespective of the holding period of the stock used to close the short sale, so long as such rebate fees are treated as ordinary income.[33] There is no requirement that the rebate fees be included in gross income in the same year that the in lieu of dividend payments are made, but the fees and payments must relate to the same short sale. This exception does not apply to payments in lieu of extraordinary dividends.[34] To be able to deduct such payments, regardless of the amounts of any rebate fees payable, the stock used to close the short sale must be held for more than one year (during which time there must be no other holdings suspending the holding period).

C. Investment Interest Includes in Lieu of Dividend Payments

For purposes of §163(d), restricting the amount of investment interest deductible during the taxable year, in lieu of dividend payments allowable as deductions are treated as payments of interest, analogizing the borrowing of stock in connection with a short sale to the borrowing of money, and the payment of in lieu of dividend payments as a charge for the use of money.[35] In the case of the lending broker who retains the sale proceed as collateral, there would appear to be no question that the rebate fees paid the short seller are interest; no statutory provision was needed for this purpose. Where the in lieu of dividend payments are not deductible by reason of §263(h), they are not considered to be "investment interest" for §163(d) purposes.

D. New Section 265(5)

In accordance with the view that payments in lieu of dividends are in economic effect closely similar to interest where the short sale proceeds (even though imprisoned as collateral) are used to generate investment income, new §265(5) provides that such payments are to be taken into account as "interest" in applying the provisions of §265(2) denying deductions for interest on indebtedness incurred or continued to purchase to carry tax-exempt securities. These provisions apply whether or not the in lieu of dividend payments are otherwise deductible, *i.e.*, do not have to be capitalized under the general rule of §263(h) and added to the basis of the stock used to close the short sale. Thus, a taxpayer holding tax exempt bonds who enters into a short sale and who makes any in lieu of dividend payments in connection with such sale may not be allowed to deduct such payments irrespective of the time the short sale was closed. Treatment of in lieu of dividend payments as interest for purposes of §265(2) is unrelated to the tax abuse which §263(h) was enacted to counter. By the same token, payments by a broker of rebate fees in connection with collateral on deposit with him is to be treated the same as interest on loans taken out for purposes of investment, as distinguished from loans made in connection with services rendered to customers. Such fees are to be taken into account in applying the formula noted above for determining the portion of the broker's total interest expenditures during the taxable year attributable to the purchase or carrying of tax-exempt securities.

These amendments to §265(5) will not apply to a taxpayer who has deposited cash collateral with the lending broker and receives no material earnings on such cash while the short sale remains open.[36] The in lieu of dividend payments lose their interest-like character where the taxpayer derives no income from the sale proceeds.[37]

In some instances, the seller may, in lieu of cash, post with the broker securities as collateral. Interest on these securities belongs, of course, to the seller. Such an arrangement releases the short sale proceeds to the seller who may then use them as is seen fit. If these are used to purchase tax-exempt securities, or if tax-exempt securities are used as collateral, the analogy of in lieu of dividend payments to interest on indebtedness incurred or continued to purchase or carry tax-exempt bonds is more clearly perceived. But such direct connection between the short sale and the generation of tax-exempt interest is not necessary for the provisions of §265(2), as supplemented by §265(5) to apply.

---

[1] The term is *used* in the Code, *e.g.*, the provisions of §1233 where it refers to the short sale of stock, securities and commodity futures. §1233(e)(2).

[2] The broker may be, and often is, also the lender's broker.

Chapter 11

AMORTIZATION OF START-UP EXPENDITURES AND CONSTRUCTION PERIOD INTEREST AND TAXES

by
Samuel M. Maruca, Esq.
Silverstein and Mullens
Washington, D.C.

I. Amortization of Start-up Expenditures

A. Introduction and Summary

Under §162(a), a taxpayer is entitled to deduct ordinary and necessary expenses incurred during the taxable year in carrying on a trade or business. Expenses incident to the investigation, creation, or acquisition of a business are not currently deductible, however, since at the time such expenses are incurred, the taxpayer is not yet engaged in the trade or business to which the expenses relate. Section 195 provides that business start-up expenditures may be amortized, at the election of the taxpayer, over a period of not less than 60 months beginning with the month in which the business begins. For this purpose, "start-up expenditures" include amounts (1) paid or incurred in connection with investigating the creation or acquisition of an active trade or business or creating an active trade or business, and (2) which would be allowable as a current deduction if paid or incurred in connection with the expansion of an existing trade or business in the same field as the business being investigated or created. Thus, capital expenditures and other costs that may not be deducted or amortized do not qualify as start-up expenditures.

Start-up expenditures are amortizable beginning with the month in which the newly acquired or created business begins. Thus, the taxpayer must in fact create or acquire a business in order to be able to amortize start-up expenditures. An acquired business is deemed to begin on the date it is acquired by the taxpayer. In general, the determination of when a newly created business begins is to be made with reference to the provisions for amortization of organizational costs in §§248 and 709.[1] Under these provisions, the determination is made based on the facts and circumstances of each case. The regulations and the Service take the position that a business will be considered to have commenced when operating assets have been acquired or completed and placed in service.[2] But the point at which a business begins for purposes of §195 amortization is not clearly delineated under current law.

Although the definition of start-up expenditures precluded amortization under §195 of capital expenditures, it is not clear whether a specific pre-opening cost should be expensed, or amortized as provided in §195. A taxpayer not electing §195 amortization could contend that start-up expenditures were currently deductible under §162 or §212.

B. Detailed Analysis

Section 195, as amended by §94 of the Act, provides that no deduction whatever shall be allowed for business start-up expenditures except as provided in §195.[3] Thus, unless the taxpayer elects to amortize such expenses in accordance with §195, the expenses must be capitalized regardless of whether or not they are properly chargeable to capital account. Presumably, the taxpayer will be permitted to amortize these expenditures over the life of the asset, if any, to which they relate.

The Act expands the definition of "start-up expenditures" to include not only costs incurred in creating or investigating the creation or acquisition of an active trade or business, but also those incurred in connection with any activity engaged in for profit and the production of income prior to the day the business begins, incurred in anticipation of such activity becoming an active trade or business.[4] According to the Finance Committee Report, this provision is intended to encompass rental payments under a ground lease covering land on which the taxpayer will construct and operate an office building.[5] The Act provides further that start-up expenditures allowable as deductions under §§163, 164 and 174 (*i.e.*, deductions for interest, taxes and research expenditures, allowable without regard to whether they were incurred in a business context) will not be treated as start-up expenditures for purposes of §195 amortization.[6]

If a taxpayer completely disposes of a trade or business prior to the end of the amortization period, any start-up expenditures that have not been amortized are deductible as losses to the extent permitted under §165.[7] It is not clear whether the option to deduct unamortized expenditures under §165 extends to expenditures as to which the taxpayer did not make an election under §195, *i.e.*, expenditures required to be capitalized. The Senate Report suggests that upon disposition of the business, only amounts remaining to be amortized on the schedule selected by the taxpayer can be deducted as losses under §165.[8]

The Act states that the determination of when a newly-created trade or business begins shall be made in accordance with such regulations as the Treasury may prescribe.[9] The Treasury therefore has been accorded great latitude in determining when the amortization period will be deemed to have commenced. The standard ultimately adopted, however, will probably resemble the test developed for purposes of §§248 and 709.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

C. *Effective Date*

The §195 amendments will apply to taxable years beginning after June 30, 1984.

II. Modification of Rules Governing Construction Period Interest and Taxes

A. *Background*

Section 189 requires the capitalization of interest and taxes paid with respect to real property during the period in which the property is under construction. Under preexisting §189(d), this general capitalization requirement did not apply to residential real property acquired, constructed or carried by a corporation (other than an S corporation, a personal holding company or a foreign personal holding company). The term "residential real property" was defined as property that is residential rental property (§167(j)(2)(B)) or dwelling units (§167(k)(3)(C)) held as inventory assets.

B. *Expansion of §189 Coverage*

The Senate Report on the Act states that an allowance for expensing of construction capital interest and taxes is at odds with the principle that expenses incurred in improving or constructing property with an extended useful life should be capitalized as part of the cost of the property.[10] Accordingly, §93 of the Act eliminates the exemption from amortization requirements for corporations.

By technical correction to the Tax Equity and Fiscal Responsibility Act of 1982, §712(c) of the Act expands the definition of residental real property under §189(e) to include real property held by a cooperative housing corporation and used for dwelling purposes.

C. *Effective Date*

The extension of §189 to corporations applies to taxable years beginning after December 31, 1984 with respect to construction beginning after March 15, 1984. The inclusion of cooperative housing corporation property is effective as of July 18, 1984, the date of enactment.

I. Percentage Depletion for Secondary and Tertiary Production [Act §25(b)]

A. *Introduction*

1. *General*

In the Tax Reduction Act of 1975, Congress severely restricted the availability of the percentage depletion deduction. For crude oil and natural gas, the principal exception to this change is the exemption for independent producers and royalty owners provided by §613A(c), which retains the percentage depletion allowance for limited quantities of oil and gas production. Section 613A(c)(1) allows percentage depletion at a rate, effective January 1, 1984, of 15 percent. Prior to the Tax Reform Act of 1984, §613A(c)(6) continued the percentage depletion allowance for secondary and tertiary oil production at a 22 percent rate, but only through December 31, 1983.

The continued availability of percentage depletion is generally limited to, after 1980, a maximum of 1,000 barrels per day. Prior to the Tax Reform Act of 1984, if a taxpayer had both primary production and secondary and tertiary production, then the 1,000 average daily barrel maximum was first allocated to secondary or tertiary production of crude oil.

Example: Assume that in 1983, taxpayer had daily secondary or tertiary production of 100 barrels per day, and an average primary production of 1,100 barrels per day. The 22 percent rate would apply to the 100 barrels per day of secondary and tertiary production, and the 15 percent rate would apply to 900 barrels per day of the primary production (1,000 barrel per day maximum less 100 barrel secondary or tertiary production).[1]

2. *Transfer of Certain Oil and Gas Properties*

Section 613A(c)(9) denies the exemption for independent producers and royalty owners to a transferee in a transfer of a proven oil or gas property after December 31, 1983. If certain transfer restrictions are met, however, in limited cases cost depletion remains available to the transferee.[2] Proposed Treasury regulations, issued May 13, 1977, stated that the transfer restrictions would not apply to transfers of secondary and tertiary production property, and percentage depletion would be available with respect to such production regardless.[3]

B. *Overview*

1. *Summary of Amendments*

The Tax Reform Act of 1984 eliminates the distinction between primary and secondary or tertiary production after 1983. Thus, independent producers may claim percentage depletion in 1984 at a rate of 15 percent on up to 1,000 barrels of all their production.

In addition, starting in 1984, percentage depletion on secondary and tertiary production will not be available after 1983 for production from crude and properties transferred since 1974 unless one of the exceptions provided for in §613A(c)(9) applies to the transfer.

2. *Effective Date*

The amendments are effective January 1, 1984.

C. *Detailed Analysis*

1. *Availability of 15 Percent Percentage Depletion Deduction for Post-1983 Secondary and Tertiary Production*

Section 613A(c) allows percentage depletion on so much of the taxpayer's average daily production of crude oil and natural gas as does not exceed the taxpayer's "depletable quantity."[4] Generally, the taxpayer's average daily production of domestic natural gas or crude oil for any taxable year is determined by dividing the aggregate production of crude oil or natural gas, as the case may be, during the taxable year, by the number of days in the taxable year.[5] Certain partial interests of the taxpayer are also included according to the taxpayer's percentage participation in revenues.[6] Prior to the Tax Reform Act of 1984, production of crude oil or natural gas from secondary or tertiary processes[7] was excluded from the calculation of average daily production.[8]

The "depletable oil quantity" equals the so-called "tentative quantity", which after 1980, is 1,000 barrels per day, minus the taxpayer's average daily secondary or tertiary production for the taxable year.[9]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

This depletable oil quantity is somewhat of a misnomer, as the exemption effectively applies to 1,000 barrels of average daily production of domestic crude oil, or, at the election of the taxpayer, to 6,000 cubic feet of average daily production of natural gas multiplied by the number of barrels of the maximum 1,000 barrel amount that the taxpayer chooses to apply to natural gas production. The depletable oil quantity for the taxable year is reduced by the number of barrels elected to apply to natural gas production.[10]

Through 1983, §613A(c)(6) provided a 22 percent depletion allowance for secondary and tertiary oil. The production which qualified under this more liberal provision reduced, barrel for barrel, the 1,000 barrel per day quantity for which the normal 15 percent rate was available. Thus, a taxpayer with 1,000 barrels of tertiary or secondary production in 1983 would be entitled to no depletion deduction under §613A(c)(3).

However, §613A(c)(6)(C) terminated the availability of the 22 percent rate for secondary and tertiary production after December 31, 1983. It was argued that, despite the unavailability of the deduction for secondary and tertiary production, such production would nonetheless continue to reduce the average daily primary production through the operation of §613A(c)(3)(A)(ii).

> *Example*: Assume that in 1984, taxpayer again had daily secondary or tertiary production of 100 barrels per day, but an average primary production of only 1,000 barrels per day, rather than 1,100 as in 1983. The 22 percent rate of percentage depletion would no longer apply to the 100 barrels per day of secondary and tertiary production, while the 15 percent rate would apply to only 900 barrels per day of the primary production.

To remedy this apparent oversight, §25(d) of the Tax Reform Act of 1984 amends §613A(c)(2) to provide that, in determining a taxpayer's average daily production, production of crude oil or natural gas resulting from secondary or tertiary processes shall no longer be excluded. In effect, this removes the distinction between primary, and secondary and tertiary production, so that, beginning in 1984, a 15 percent percentage depletion deduction is also available on secondary and tertiary production. Of course, the 1,000 average daily barrel maximum remains in effect.

A conforming amendment to §613A(c)(3)(A) provides that the reduction required in subparagraph (ii) is inoperable after December 31, 1983.[11] A similar amendment is made to subparagraph (E) of §613A(c)(7), which generally provides special rules for the allocation of percentage depletion among properties if the taxpayer's average daily production of crude oil exceeds 1,000 barrels.[12]

2. Applicability of §613A(c)(9) Transfer Restrictions to Transfers of Secondary and Tertiary Production Property

Section 613A(c)(9) generally provides that in the case of a transfer after December 31, 1974 of an interest in a proven oil or gas property, percentage depletion available pursuant to §613A(c)(1) (relating to percentage depletion for primary production) shall not be available with respect to production of crude oil attributable to such interest, and such production shall not be taken into account for any computation by the transferee.

Several transfers are excepted from this rule, including:

(1) transfers of property at death;

(2) certain transfers in an exchange to which §351 applies;

(3) certain changes of beneficiaries of a trust by reason of the death, birth or adoption of any vested beneficiary;

(4) transfers of property between corporations which are members of the same controlled group of corporations;

(5) transfers of property between business entities which are under common control or between related persons in the same family; and

(6) certain transfers of property between a trust and related persons in the same family.[13]

That the general rule denying a transferee percentage depletion was not intended to apply to percentage depletion for secondary or tertiary production, pursuant to §613A(c)(6) is apparent from Prop. Regs. §1.613A-3(h), example 4, which states:

> *"Example (4)*: On January 1, 1975, property which produces oil resulting from secondary processes was transferred to D. The exemption under §613A(c) applies to D because §613A(c)(9) (relating to transfers of oil and gas property) does not apply with respect to secondary production. In addition, even if at the time of transfer the production from the property was primary and D applied secondary processes to the property transferred and obtained secondary production, D would be entitled to percentage depletion with respect to the secondary production."

Because the distinction, for purpose of the availability of percentage depletion deductions, between primary production and secondary or tertiary production has been eliminated, transfers of secondary or tertiary production property are subjected to the restrictions of §613A(c)(9). This is accomplished by amending §613A(c)(9)(A) to render it applicable to §613A(c) in its entirety.[14]

II. Cutback in Corporate Tax Preferences and Technical Changes

The 1984 Act generally increases the 15-percent preference cutback to 20 percent. The benefits of the new FSC legislation in the Act will be reduced by 6¼ percent in the case of a corporate FSC shareholder. The cutback in the depletion allowance for coal and iron ore remains unchanged. The 71.6 percent preference inclusion rule for the add-on minimum tax will be decreased to 59 5/6 percent. In addition, certain technical changes are made in order to clarify TEFRA.

III. Deduction for Golden Parachute Payments Limited

Included among the corporate tax reform provisions of the Tax Reform Act of 1984 (TRA) are rules designed to

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

discourage so-called "golden parachute" arrangements under which excessive severance payments are made to corporate executives to ease their fall from corporate power. These new rules deny the corporation any deduction for excessive golden parachute payments, and subject the payments to a nondeductible 20 percent excise tax, in addition to income and Social Security taxes. Because these rules define an "excess parachute" by totalling payments under all contracts that either: (1) make payments contingent on a takeover; or (2) are entered into within a year prior to takeover, and then subtracting "reasonable" compensation, they will apply to a surprising number of corporate takeover situations, irrespective of whether the acquired company is publicly or privately held. The golden parachute rules thus require careful study not simply because of their effect upon recognizable golden parachute termination pay, but also because of their interaction with traditional compensation and retirement arrangements.

The TRA rules were criticized by the tax bar and opposed by the Treasury Department as an unnecessary incursion by the federal tax laws into an area more effectively addressed by either federal securities laws or state law limitations on corporate waste. Even as these criticisms were being voiced, the golden parachute provisions were being expanded rather than limited. As finally enacted, these provisions will create considerable work for compensation advisors, by requiring proof that many payments swept into a "parachute" are nonetheless reasonable compensation, thereby allowing the deduction to the paying corporation and exempting the payments from the 20 percent excise tax.

For a detailed analysis of the golden parachute provisions, *see* Chapter 32, V, *infra.*

IV. Ten Year NOL Carryback Period for Deferred Statutory or Tort Liability Deductions [Act §91d]

A. Introduction

Section 172 provides a deduction for net operating losses sustained by corporate and individual taxpayers.[15] "Net operating loss" is defined [16] as the excess of deductions allowed by "this chapter" [17] over gross income.

When a net operating loss has been established, it generally may first be carried back as a deduction to the third preceding taxable year, with the excess then carried to the second preceding taxable year and finally to the immediately preceding taxable year. If an unused portion of the deduction still remains after this computation, it can be carried forward to the first succeeding taxable year, and so on, until the 15th succeeding year is reached. Any excess still unused at that point expires unused. Any taxpayer wishing to do so may, pursuant to §172(b)(3)(C), elect to forego the three year carryback and proceed directly with the 15 year carryforward. Such an election is irrevocable for that taxable year.

The carryforward/carryback rules apply in general to net operating losses incurred in taxable years ending after December 31, 1975.[18] Special exceptions to the rules have been enacted by Congress with respect to net operating losses in the case of foreign expropriation losses [19] (10 year carryforward); Cuban expropriation losses [20] (20 year carryforward); a REIT net operating loss [21] (15 year carryforward, but no carryback); certain financial institutions, including commercial banks and savings and loans associations [22] (5 year carryforward and 10 year carryback); banks for cooperatives organized and chartered under the Farm Credit Act of 1933 [23] (5 year carryforward and 10 year carryback); the Federal National Mortgage Association to the extent the net operating loss exceeds the FNMA mortgage disposition loss [24] (5 year carryforward and 10 year carryback); certain product liability losses [25] (10 year carryback, no carryforward); and general stock ownership corporations [26] established under §1391 (10 year carryforward, no carryback).

B. Overview

1. In General

Section 91(d) of the 1984 Act creates yet another special exception to the general three year carryback and 15 year carryforward rules. In the case of deferred statutory or tort liability losses, §172(b)(1)(k) [27] provides for a 10 year net operating loss carryback for losses in taxable years beginning after December 31, 1983.

The term "deferred statutory or tort liability loss" is defined as the *lesser of* (a) the net operating loss for the taxable year reduced by a foreign expropriation loss or a product liability loss; or (b) the sum of the amounts allowable as a deduction [28] which is taken into account in computing the net operating loss for the taxable year and is an amount incurred with respect to a liability arising under federal or state law or out of a taxpayer's tort (and in either case the liability arose because of an act or failure to act which occurred at least three years before the taxable year).[29] As a corollary to this three year requirement, the new section also requires that the taxpayer must have used the accrual method of accounting during the period in which his actions or failures to act caused the liability to arise.[30]

The new law coordinates treatment of the deferred statutory or tort liability loss with the computation of the amount of carrybacks and carryovers under §172(b)(2), by treating such a loss "in a manner similar to the manner in which a foreign expropriation loss is treated." [31]

Finally, the new section prevents carrybacks to any taxable year beginning before January 1, 1984, unless the loss may be carried back to that year regardless of the enactment of §172(b)(1)(k).[32]

2. Special Rule for Nuclear Power Plants

New §172(k)(2) provides a special rule applicable to the decommissioning of nuclear power plants. Where a portion of a deferred statutory or tort liability loss is attributable to amounts incurred in decommissioning a nuclear power plant (or a unit of a nuclear power plant), that decommissioning loss may be carried back to each taxable year in a period beginning with the year the plant or unit was placed in service and ending with the taxable year immediately preceding the loss year. The carryback rule is subject to modification by regulations issued by the Secretary of the Treasury.[33]

C. *Detailed Analysis*

1. *In General*

Section 91(d), which creates the new deferred statutory and tort liability carryback, was enacted as part of the premature accruals section in the Accounting Changes portion of the Act. The accrual basis of accounting utilizes the matching principle. The matching principle requires recognition and matching of expense with the revenue to which it relates or arose regardless of when the cash is actually expended.[34] The accrual method as adapted for tax purposes under the "all events" test may not provide precise matching of expense with income in all cases, particularly when the liability for the expense is not fixed until several years after the commission of the act that eventually results in the liability. A statute or court judgment establishing liability may not arise, for example, until a number of years has elapsed after the act or omission that creates the liability. The Act's provisions enable accrual basis taxpayers to better match the approximate earlier periods when a deferred statutory and tort liability arose with the later period when settlement was made and paid, although exact matching may not be achieved. The new provision allows a carryback of the loss (subject to the limitation that the act or omission creating the liability occurred at least three years prior) for a liberal span of 10 years, so that matching is more likely to occur as a result. The Act enables qualified taxpayers to benefit from the net operating losses for taxable years beginning after December 31, 1983, and, in some cases,[35] to take an immediate carryback.

By definition the deferred statutory or tort liability loss consists of the lower of the net operating loss (reduced by product liability and foreign expropriation losses) or the sum of amounts taken into account in calculating the net operating loss for the year, but only to the extent that such amount is incurred with respect to a federal or state law liability or tort liability, either of which must have been the result of actions or ommissions occurring at least three years before the beginning of the taxable year.

Example: For 1984 Corporation Z has a net operating loss of $100x; a foreign expropriation loss of $20x and a tort liability of $70x for chemical waste injuries suffered by individuals. The "deferred statutory or tort liability loss" would be $70x since that is the lesser amount (the net operating loss $100x reduced by foreign expropriation loss $20x = $80x).

Comment: Had the acts or ommissions causing the chemical waste injuries occurred within the last three years, the $70x figure could not be used in calculating the "deferred statutory or tort liability loss."

Only a taxpayer who utilized the accrual method of accounting during the periods when tort or statutory liability was occurring through that taxpayer's acts or ommissions can take such a liability into account in determining the "deferred statutory or tort liability loss" figure under §172(k)(1)(B).

Comment: It is interesting to note that the special rules of §172(j) which apply to the 10 year carryback for product liability losses allowed by §172(b)(1)(I) do not require that the taxpayer have utilized the accrual method at the time the liability arose in order to qualify for the carryback. It is not clear what definitional distinction there is between a product liability loss and a tort liability or statutory liability and why the latter requires the accrual method during the earlier period while the former does not.

Section 172(k)(3) directs that in applying the carryback and carryforward rules of §172(b)(2), a "deferred statutory or tort liability loss" shall "be treated in a manner similar to the manner in which a foreign expropriation loss is treated." Under §172(b)(2) the taxable income of prior taxable years is calculated by determining the net operating loss deduction without regard to the portion of the loss, if any, attributable to the foreign expropriation loss, if it can not be carried back under §172(b)(1)(D).[36] Moreover, foreign expropriation losses are considered to be separate net operating losses for purposes of §172(b)(2), if §172(b)(1)(D) applies to such loss. Section 172(b)(3) provides special rules[37] for the application of the §172(b)(1)(D) 10 year carryforward provision. Presumably the language "treated in a manner similar to the manner in which a foreign expropriation loss is treated" means that the term "deferred statutory or tort liability loss" should be substituted wherever the term "foreign expropriation loss" appears in §172(b)(3).

Observation: If the above analysis is correct, better phraseology than "in a manner similar" could have been used. The vagueness of this phrase will surely lead to difficulties in construing the provision. Either language substituting one term for the other or precise instructions for applying the deferred losses under §172(b)(2) should have been put in place here.

Section 172(k)(4) prohibits the carryback of a deferred statutory or tort liability loss to a tax year beginning before January 1, 1984, unless it could otherwise be carried back under §172 rules without regard to the newly enacted §172(b)(1)(k) 10 year carryback. This apparently was enacted to give a mostly prospective application to the statute, since a loss which otherwise can be carried back obviously needs no additional provision to do so.

Comment: A limited three year carryback may be implicit in this provision, since, absent the enactment of the special 10 year carryback for deferred statutory and tort liability losses, the general rules of three years back and 15 forward apply to an otherwise qualifying loss.

2. *Nuclear Power Plant Decommissioning Losses*

Under federal and state law, utilities that operate nuclear power plants are obligated to decommission them at the end of their useful lives.[38] The Act sought to clear up uncertainties in the law as to when an accrual basis taxpayer should properly accrue decommissioning expenses.[39] As an ancillary matter, Congress provided for a carryback period beginning in the year a nuclear power plant (or unit thereof) was placed in service and ending in the taxable year preceding the loss year[40] with respect to that portion of deferred statutory or tort liability losses which are attributable to decommissioning expenses. This special rule is also subject to the prohibition contained in §172(k)(4) against carrying a deferred statutory or tort liability loss back to a year beginning before January 1, 1984 unless such loss can otherwise be carried back.[41]

V. At-Risk Limitations for Certain Corporations Liberalized

Section 432 of the 1984 Act exempts certain activities of closely-held C corporations from the "at-risk" limitations of §465. To qualify for immunity from the at-risk rules, the corporation must satisfy a number of minimum activity requirements relating to the number of active employees and the amount of business expenditures attributable to each activity. The Act makes certain modifications in pre-existing at-risk rules relating to aggregation of activities (for purposes of computing income, loss and at-risk amounts) and liberalizes the treatment of funds borrowed by the taxpayer from related persons for use in an activity. The new provisions are discussed in detail in Chapter 24.

VI. Medical Expense Deduction Allowed for Certain Lodging Expenses [Act §482]

A. Introduction

The medical expense deduction [42] was enacted in 1942 to alleviate the extra burden of medical hardships on those taxed under wartime conditions.[43] Medical and dental expenses, as defined in §213(d), which are incurred and actually paid by the taxpayer on his own behalf, for his spouse and his dependents is deductible by him to the extent the amount exceeds a floor amount of 5 percent [44] of adjusted gross income.

The term "medical care" as defined under §213(d)(1) encompasses payments made in three areas: (a) generally for the diagnosis, cure, mitigation, treatment, or prevention of disease, or for the purpose of affecting any structure or function of the body; (b) for transportation "primarily for and essential to" that medical care described above; and (c) for medical care insurance.[45] Attempts by taxpayers to deduct lodging expenses incurred in connection with transportation expenses have met with varying degrees of success.

Regs. §1.213-1(e)(1)(iv) provides that transportation expenses primarily for and essential to medical care does not include the costs of meals and lodging while away from home receiving medical treatment. The cases have tended to adopt a distinction between "in transit" expenses (allowed) and what might be called "on site" out-patient expenses (disallowed).

The Supreme Court in *Comr. v. Bilder* [46] disallowed an attempt by a taxpayer to deduct rental payments as medical expenses. There the taxpayer had suffered four heart attacks over an eight year period and was advised by his physician to spend the winter months in a warm climate. While the Service did allow his transportation costs for trips between Newark, New Jersey and Ft. Lauderdale, Florida,[47] it disallowed all of the rental payments on a Ft. Lauderdale apartment which he, his wife and daughter occupied for three months. The Court distinguished between food and lodging costs incurred while traveling to and from the site where medical treatment would be received and those same costs incurred while at the site,[48] the latter not being deductible according to the 1954 Code legislative history.[49]

"In transit" expenses, however, have been recognized as deductible where incurred while bringing a patient to the place of treatment. For example, in *Montgomery v. Comr.*,[50] the court allowed the taxpayers deductions for food and lodging while traveling from their home in Kentucky to the Mayo Clinic in Minnesota noting that the very liberal provisions of the 1939 Code predecessor [51] to §213 created significant abuses whereby patients would travel to resort areas on doctor's orders and then deduct all the costs of food and lodging while there on "medical vacations." [52] The court agreed with the *Bilder* Court that Congress in 1954 sought to reduce these abuses, but indicated a belief that Congress intended food and lodging expenses incurred while traveling, (which it conceded to be substantially higher than the cost of living at home), to be deductible.[53] The court also felt that Congress' use of the narrow term "transportation" in §213 instead of "travel" was indicative of its intent to exclude food and lodging expenses incurred after arrival at the place of treatment.[54]

The results have also been mixed where more than one person is involved in the transportation, as, for example a patient and parent or patient and spouse. The Service early recognized that if it were necessary for a parent to accompany a sick child on a trip to obtain medical care, the travel costs of both the parent and the child were deductible as medical expenses.[55] In Rev. Rul. 58-110,[56] the costs of transportation of both the taxpayer and his nurse were deductible where he was unable to travel by himself. However, courts have determined that failure to show necessity by the person accompanying the patient [57] or not being directed to take the trip by a physician will preclude deduction of such costs.[58]

The issue of whether food and lodging expenses may be deducted when incurred in on-site out-patient treatment (*i.e.*, if incurred other than as part of the hospital bill) [59] has been uniformerly decided against the taxpayer. In *Foyer v. Comr.*,[60] the trips by the taxpayer and his wife to Arizona and Hawaii were made without the direction or suggestion of the wife's physician and the cost of their food and lodging at each location was held to be a personal expense rather than a medical expenses.[61] However, even where the trip was made at a doctor's direction, the deduction was disallowed where the lodging was at a motel rather than a hospital or similar facility, as the court *in Rose v. Comr.*,[62] determined.

In the *Rose* case, the New Orleans taxpayers' daughter was severely affected by bronchial asthma caused by household dust. When efforts to make her room at home dust-free failed, the daughter, accompanied by her mother and later her physician father, went to a motel in Florida where the family had stayed previously. After a two week's stay the daughter returned to school in New Orleans and lived, with her mother, in a high rise apartment adjacent to a hospital, in order to both cut exposure to dust and to be close to a hospital. At the end of the year the daughter and mother flew to Arizona so that the daughter could attend an outpatient clinic for asthmatics while they lived at a motel.

The taxpayer unsuccessfully argued that the motel rooms in each location as well as the rented apartment in New Orleans were substantially equivalent to hospital or institutions and that the wife's activities in injecting the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

daughter with allergy medicines made her a quasi-nurse whose expenses were also deductible.[63] The Tax Court ruled that the motel rooms were not any more hospital-like than other motel rooms and that the equipment, such as nebulizers, were portable and insufficient to create a hospital-like environment.[64] With regard to the rented apartment, the court noted:

> "It is the nature of the services rendered as medical care, its therapeutic nature to the individual, that determines whether or not it qualifies for deduction under §213, not the location of the facility." [65]

The court also disallowed the transportation and living expenses of the husband for his trip to Florida, since his presence was not shown to be required or directed by the daughter's physician.[66]

Similarly, where the parent of a patient goes to visit that patient in a distant location, as opposed to accompanying him there, the expenses for food and lodging while there are not deductible. In *Hunt v. Comr.*,[67] the taxpayer went from Florida to visit her son who was being treated at the Meninger Clinic in Topeka, Kansas. The Tax Court disallowed her lodging and food costs while on that visit.

B. Overview

1. Certain Lodging Expense Deductible as Medical Care

Section 482 of the Act amends subsection (d) of §213 by adding a new paragraph (2) which provides that amounts paid for lodging while away from home on a trip which is primarily for and essential to medical care (as defined in §213(d)(1)) are deductible as medical care if (a) the medical care is provided by a physician in a licensed hospital (or equivalent facility) and (b) there is no significant element of personal pleasure, recreation or vacation in the travel away from home.

The new law allows this treatment only for lodging expenses which are "not lavish or extravagant under the circumstances" and limits the per diem allowance to "$50 for each night for each individual." It requires that the medical care be provided by a physician in a licensed hospital or in a medical care facility related to a licensed hospital, or in a medical care facility which is the equivalent of a licensed hospital.

Observation: The equivalency requirement set up by the bill may be a reaction to Dr. Rose's attempt to equate a motel room with a hospital room.[68]

2. Effective Date

This amendment applies to taxable years beginning after December 31, 1983.

C. Detailed Analysis

1. Lodging Expenses

This provision narrowly expands the old rule concerning deductibility of expenses incurred on-site as an outpatient by allowing the lodging expenses to be treated as medical care [69] while continuing to disallow food expenses.[70] The Senate, in particular, recognized that either specialized care or the availability of better care in other locations cause patients to travel away from home to receive medical care.[71] Convenience of specialized treatment, (*e.g.*, chemotherapy), which may be given at a hospital-related facility on a less expensive out-patient basis, was one factor leading to the change.[72] The older cases and rulings which recognized the need for a non-patient to accompany the patient were also adopted in the law, which allows lodging expenses for the non-patient.

Comment: It is not clear whether, for example, more than one parent may accompany a sick child, since the section only places a cap on the amount spent per person per night. Dr. Rose, *Rose v. Comr., supra,* attempted to take his own, his wife's and his sick child's food and lodging as deductions, although the court found no reason for Dr. Rose to accompany the other two.[73] As alluded to above, the nature of the facility must be "related to, or the equivalent of" a licensed hospital, so that the result in *Rose* with respect to the motel room would still obtain. The daughter's attendance at the out-patient clinic in Arizona, however, would result in a deduction for her lodging and her mother's.

The section places three limits on the amount which can be deducted. The first is that the lodging itself be "not lavish or extravagant under the circumstances." The second is a specific $50 per night, per person *per-diem* cap. The *per-diem* cap was intended to aid the Service in administering the section in cases where the distinction between travel for medical care and that for vacation was not clear.[74] Finally, the law prohibits the deduction if there is a significant element of personal pleasure, recreation or vacation in the travel. Taken together, the law appears to allow travel to resort areas, with some incidental personal enjoyment by the patient and/or non-patient, if the bill is kept to under $50.00 per day per person. Since resort areas, most typically Florida, Arizona and Hawaii, are also the areas to which patients have traditionally been sent for climatological changes, the law neatly allows those types of states to maintain their specialized medical facilities while not stemming vacation traffic.

2. Application of the Law

In most of the cases described above in A, the lodging deduction would be allowed for "on site" expenditures, as well as for "in transit" expenditures (already allowed along with food expenses). In fact, the Senate Report specifically stated that lodging expenses "on site" should only be deductible if the patient or non-patient could deduct transportation expenses while "in transit." [75]

Medical care facilities, including particularly out-patient facilities, are included under the law. Clearly a visiting parent such as in *U.S. v. Hunt, supra,* still may not deduct lodging expenses, if his or her presence is not necessary for the care of the patient. The multiple month lodging in a warmer climate is less clearly deductible, although if done at a qualifying facility and with the prescribed limits, it arguably is deductible.

Some possibilities for abuse still exist. Apparently, a patient choosing discretionary minor surgery, such as cosmetic surgery, could deduct lodging costs at a resort location as long as the medical facility requirement was met and the vacation or entertainment portion of the trip was minimized.[76]

VII. Changes Affecting the Casualty Loss Deduction [Act §§711(c) and 1051]

A. Introduction

1. The Coordination of §165(h) with §1231

Section 165(a) of the Code provides for a casualty loss deduction for any loss sustained during a taxable year which is not compensated for by insurance or otherwise. Non-trade or business losses are deductible under §165(c)(3) only if arising from fire, storm, shipwreck, or other casualty, or from theft, except as provided in §165(h). Individual casualty losses can only be deducted to the extent that they exceed a $100 base amount under subsection (h).[77]

Due to Congress' concern that the casualty loss deduction offset a higher percentage of losses for higher bracket than for lower bracket taxpayers, plus a realization that the lower bracket taxpayers were less able to purchase insurance coverage for their assets,[78] the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) included a provision which allowed non-business casualty losses to be deducted only to the extent that total casualty losses exceeded 10 percent of adjusted gross income.[79] The effect of this new provision was to require the taxpayer to first subtract $100 from each separate casualty loss, add up those netted losses and then deduct the total to the extent that it exceeded the 10 percent floor.[80]

The gain or loss from non-trade or business (personal) theft and casualties was subject to the netting rules of §1231. Under the post-TEFRA law, all involuntary conversions, whether trade or business, for capital assets held for more than 12 months or a personal casualty, are subject to §1231 treatment. If casualty losses exceed casualty gains they are treated as ordinary gains and ordinary losses. If casualty gains exceed losses, they are treated as §1231 gains and losses and aggregated with other non-casualty and theft §1231 gains and losses. If the aggregated amount constitutes a net gain, the treatment is long-term capital gain.

If the netted amount is a loss, the treatment is ordinary gain and loss. The non-corporate taxpayer then uses these ordinary gains and losses in one of two ways. If he is self-employed, and incurs the loss in his trade or business, is an outside salesman, or if he has rental or royalty income,[81] the loss is deducted above the line in arriving at adjusted gross income. In all other cases, including the personal (non-trade or business) casualty loss, it is taken as an itemized deduction.

In determining adjusted gross income, the capital gains deduction was allowed under §1202. Where the recognized gains from casualty losses exceed recognized losses, the capital gains deduction may depend on the amount of casualty loss allowed as a deduction, thus affecting the adjusted gross income. Due to this circular computation problem, the casualty loss deduction was sometimes not mathematically determinable.[82]

2. Disaster Loss Treatment

Under §165(i), a taxpayer who sustains a disaster loss in an area later determined by the President of the United States to be entitled to assistance under the Disaster Relief Act of 1974 may elect to claim the loss in the immediately prior taxable year. The 10 percent floor rule discussed above also applies to non-business type losses taken under this section. A special transitional rule [83] applies so that the 10 percent floor applies to the taxpayer's last tax year ending before 1983.

Because of the nature of some casualty losses, no loss was allowed for damage inflicted on residences by such disasters, which resulted in state or local government relocation or demolition orders.

B. Overview

1. Coordination of §165(h) to §1231

Section 711(c) of the 1984 Act amended both §§165(h) and 1231 of the Code to provide that for purposes of the 10 percent floor on nontrade or business casualty loss deductions, adjusted gross income will be determined for taxable years beginning after 1983 without application of §1231 to the involuntary conversion gains or losses resulting from casualty or theft.

For taxable years beginning after December 31, 1983, §165(h) has been amended to provide that if recognized gains exceed recognized losses in non-trade or business transactions, the losses will not be subject to the floor amount of 10 percent of adjusted gross income.[84] To the extent that recognized losses exceed recognized gains, however, the general rule of §165(h)(2)(A) is that such losses are only allowed to the extent of the sum of gains for that taxable year, plus the amount by which the excess exceeds the 10 percent floor amount. In those cases, the deduction for personal casualty losses for any taxable year must be treated as a deduction allowable in computing adjusted gross income to the extent such losses do not exceed personal casualty gains for the taxable year.[85]

> *Example*: Taxpayer A has $100,000 of adjusted gross income (without regard to §165(c)(3) casualty gains and losses), $50,000 of such casualty gains and $40,000 of such casualty losses (after applying the $100 floor amount) for that taxable year. All the taxpayer's personal casualty gains and losses will be treated as capital gains and capital losses. The 10 percent adjusted gross income floor does not apply.[86]

> *Example*: Taxpayer B has $100,000 of adjusted gross income as above, $50,000 in casualty gains and $70,000 in casualty losses. The gains and losses are all treated as ordinary; $60,000 of the casualty losses are allowed as a deduction. This is calculated by first taking the losses to the extent of gains ($50,000). Then the floor amount of adjusted gross income is taken (10% of $100,000 = $10,000). This figure is subtracted from the remaining loss not yet taken ($70,000 - 50,000 = $20,000 - $10,000 = $10,000). The result ($10,000) is added to the initial allowed loss ($50,000) to equal $60,000.[87]

The Act also provides a special rule for determining adjusted gross income in the cases of estates and trusts. The rule states that a trust or estate's adjusted gross income is computed in the same manner as an individual's adjusted gross income, except that deductions for costs paid or incurred in connection with the administration of the trust or estate are allowable deductions.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Section 1231(a) is also rewritten for taxable years beginning after December 31, 1983, to coordinate it with the changes made in §165(h).

The definition of "§1231 gain" was changed in new §1231(a)(3)(A)(ii)(II) to include, for involuntary conversion purposes, capital assets held for more than six months if they are used in a trade or business or in a for-profit transaction. Similarly, the rule (in the last sentence of former §1231(a)) that §1231(a) would not be applied to the involuntary conversion of trade or business property or capital assets held more than one year (now six months) if recognized losses exceed recognized gains, has been amended, with respect to capital assets, to apply only to those held in connection with a trade or business or a transaction entered into for profit.[88] Moreover, the same treatment is applied for purposes of former §1231(a)(2) which now treats losses of capital assets from partial or total destruction, theft, seizure or condemnation as losses from compulsory or involuntary conversion only if they are held in connection with trade or business or a for-profit transaction.[89] The net effect of these provisions is that capital assets not held for the requisite holding period and either used in a trade or business or in a transaction entered into for profit, will not be §1231 property. Therefore, property subject to the personal casualty loss, which is by definition not used in a trade or business, will no longer be subject to §1231 treatment, and must be netted separately from §1231 gains and losses.

2. Disaster Loss Deduction for Condemned Residences

Section 1051 of the 1984 Act creates a new subsection (k) in §165.[90] This provision grants relief to taxpayer owners of residences which have been rendered unsafe by a disaster in an area determined by the President to warrant assistance under the Disaster Relief Act of 1974 by treating the demolition or relocation of such residence as a disaster loss under §165(i). In order to qualify for this treatment, (a) the residence must be rendered unsafe for such use by reason of the disaster, (b) the area has to have been declared a disaster area by the President and (c) the taxpayer must have been ordered by his state or local government to relocate or demolish the residence no later than the 120th day after the President's determination.

The law applies to taxable years beginning after December 31, 1981, with respect to residences in areas determined to warrant Federal disaster relief after that date. Because of the treatment of the demolition or relocation as a casualty loss under §165(i), the taxpayer may elect, under that subsection, to deduct the loss in the immediately preceding taxable year from the year in which the demolition or relocation order was made.[91]

The purpose of an earlier version of the law was to grant relief to those taxpayers forced to demolish or relocate residences due to mudslides, earthslides or flooding. In the interests of fairness, it was felt that a deduction should not be allowed for a taxpayer whose home was physically destroyed but not to an adjoining taxpayer whose home was rendered uninhabitable by the same disaster.[92] Although this aspect of the earlier bill was retained, no change was made to remedy the problem posed by collusive condemnations or buildings subject to pre-existing unsafe conditions but unaffected by the disaster, which are condemned or relocated by government order.[93] Presumably, the Service could deal with this problem by regulation.

VIII. Allocation of Expenses to Parsonage Allowance [Act §1052]

A. Introduction

In January 1983 the IRS issued Rev. Rul. 83-3,[94] which held that itemized deductions for mortgage interest and real estate taxes taken by ministers of the gospel for their residences must be reduced to the extent the expenses are allocable to the tax-free rental allowance received from the church. The Ruling was given application from July 1, 1983, except that it was not to apply until the earlier of January 1, 1985, or the date on which the minister no longer occupies a home, in the case of a minister who owned or occupied a home before January 3, 1983, or had a contract to purchase a home before that date and subsequently owned and occupied that home. Other provisions of the Ruling dealt with various educational expense deductions.

B. Overview

Section 1052 of the Act precludes application of the deduction disallowance created by Rev. Rul. 83-3 until January 1, 1986. No other portion of the Ruling is affected by this delay.

C. Detailed Analysis

The Senate Report indicates that Congress felt that the ministers and their church employers should be given an extra year in which to adjust the minister's compensation or the housing allowance to allow for the loss of the previously double tax benefit permitted by the IRS.[95] Earlier versions of the provision added the same delay period as applied to the tax-free housing allowances received by members of the Armed Forces, in response to the IRS's announced intention to study the members' entitlements to deduct interest and real estate taxes.[96] The final version, however, deleted this language.

IX. Disallowance of Deductions for Demolishing Historic Structures

A. Background

Prior to TRA, §280B disallowed otherwise permissible deductions to the owner or lessee of a certified historic structure for amounts expended for, or losses sustained on account of, the demolition of the structure. These amounts were to be treated as properly chargeable to capital account with respect to the underlying land. Under prior law, the provision was to lapse with respect to demolitions commencing after December 31, 1983.

B. TRA Amendment

The Act extends the disallowance of demolition expenses and losses to all structures on a permanent basis, effective with respect to taxable years beginning after December 31, 1983.

It should be noted that the Senate Bill (which the Conference Agreement purports to follow) called for the moratorium to apply to *demolitions* commencing after

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

December 31, 1983. Under the TRA amendment (which is effective for *taxable years* beginning after December 31, 1983), a taxpayer with a taxable year ending after that date should be able to claim deductions for demolition expenses and losses (including those attributable to certified historic structures) incurred prior to the end of its taxable year. This "window" for demolitions occurring after December 31, 1983, but before the end of the taxable year, appears to have been left open inadvertently by the conferees.

Chapter 13

RULES GOVERNING DOMESTIC RELATIONS TRANSACTIONS REFORMED

William C. Wicker, Esq.
Silverstein and Mullens
Washington, D.C.

I. Property Transfers Between Spouses Incident to Divorce — Nonrecognition of Gain or Loss

A. Introduction

1. Prior Law

a. Transfer of Appreciated Property

In *U.S. v. Davis*,[1] the Supreme Court held that a transfer of appreciated property in consideration of the relinquishment of marital rights is a taxable event. The taxpayer in *Davis* transferred to his former spouse, pursuant to a divorce settlement agreement and in discharge of her marital rights, stock which he owned separately. At the time of transfer, the value of the stock exceeded the taxpayer's cost basis in it.

Upholding the Commissioner's determination that this difference represented taxable gain to the taxpayer, the Court stated that, in the absence of contrary evidence, the "amount realized" by the taxpayer on the transfer — *i.e.*, the value of the relinquished marital rights — "must be assumed" to be equal to the value of the property exchanged for the rights. Finding no evidence antithetical to this assumption of equivalence, the Court concluded that the taxpayer's amount realized was equal to the value of the transferred stock and, thus, that he was taxable on the excess of this amount over his cost basis. In dictum, the Court added that the taxpayer's former wife would take a "cost" basis in the stock, *i.e.*, her basis would be equal to its fair market value.[2]

b. Transfer of Loss Property Between Former Spouses

Under prior law (and assuming the conditions of §165(c)(2) were satisfied), a transfer of loss property between *former* spouses gave rise to a deductible loss even if the transfer was incident to divorce.[3]

2. Reasons for Change

Act §421 overrules the *Davis* decision by providing that all transfers between spouses and transfers between former spouses that are "incident to divorce" are to be accorded nonrecognition treatment. This abrogation of *Davis* stems from a Congressional desire to treat husband and wife as a single economic unit. H.R. Rep. No. 432 (Part 2), 98th Cong., 2d Sess. (1984), states at page 1491 that when they are viewed as a unit, "it is inappropriate to tax transfers between spouses."

In addition to its desire to treat husband and wife as a unit, Congress was motivated by other factors in its decision to overrule *Davis*. The *Davis* rule of gain recognition was, in the view of the Committee on Ways and Means at page 1491 of the Supplemental Report, a potential trap for the unwary "as, for example, where the parties view property acquired during marriage (even though held in one spouse's name) as jointly owned, only to find that the equal division of property upon divorce triggers recognition of gain."

Not only was *Davis* detrimental to the taxpayer, the Committee observed, it often "whipsawed" the government. This occurred where the transferor did not report any gain on the transfer and the recipient spouse subsequently sold the property. Under *Davis*, the latter was entitled to report her gain or loss by reference to a basis equal to the fair market value of the property at the time she received it.

B. Overview

Act §421 adds Code §1041, which provides that property transfers between spouses or, between former spouses if incident to divorce, will not result in the recognition of gain or loss. The transferee will hold the property at the transferor's basis. Also, investment tax credits will not be recaptured.

Section 1041 is generally effective for transfers after July 18, 1984. Taxpayers are permitted to elect §1041 treatment for transfers occurring after 1983 and on or before the general effective date.

C. Detailed Analysis

1. Transfers During Marriage

Section 1041 provides that no gain or loss shall be recognized on transfers of property between spouses. Such transfers are to be treated as gifts for all income tax purposes. Thus, the transferor will not be taxed on the transfer and the transferee will take a carryover basis in the property; *i.e.*, her basis will be the same as the transferor's.

The nonrecognition accorded under §1041 is absolute. The transfer of §1245 property, for example, will not result in recapture income, nor will the transfer of §1245 recovery property or §1250 property.

The legislative history emphasizes that §1041 extends to *all* transfers between spouses. The Supplemental Report

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

notes at page 1492 that no gain or loss is to be recognized on any interspousal transfer regardless of whether it is "for the relinquishment of marital rights, for cash or other property, for the assumption of liabilities in excess of basis, or for other consideration." The legislative history also specifies that the discharge of indebtedness constitutes a transfer within the meaning of §1041. Thus, an individual's forgiveness of debt owed to him/her by his/her spouse will not be a taxable event for the debtor spouse.

Qualifying transfers under §1041 include not only direct transfers but transfers in trust for the benefit of the transferor's spouse. For purposes of §1041, an individual who has married another individual is considered that person's spouse until the marriage is dissolved by a divorce decree.

2. Transfers After Marriage That are Incident to Divorce

Section 1041 also applies to certain transfers between former spouses that are "incident to divorce." A transfer is incident to divorce if it occurs within one year after the date on which the marriage ceases or, if later, is "related to the cessation of the marriage."

Thus, all transfers between former spouses that occur within one year of their divorce are governed by §1041 regardless of the motive for the transfer. Even if the transfer is unrelated to the divorce, it will be considered "incident" thereto provided it falls within this period.

If a transfer occurs more than one year after the divorce, it will not be covered by §1041 unless it is "related to the cessation of the marriage." This standard is one of facts and circumstances and receives no elaboration in the legislative history. Because it necessarily involves an *ad hoc* determination, one may anticipate that the standard will be the subject of litigation.

Note: The standard requires that the transfer be related to the *cessation* of the marriage, not merely to the marriage.

All transfers between former spouses that are "incident to divorce" are treated in the same manner as transfers between married spouses. Thus, a transfer incident to divorce is treated as a gift with no gain or loss being recognized by the transferor and with the transferee taking a carryover (*i.e.*, the transferor's) basis in the property.[4]

3. Collateral Effects

Act §421 has certain collateral effects. These are summarized in the legislative history as follows:

> "Where an annuity is transferred, or a beneficial interest in a trust is transferred or created, incident to divorce or separation, the transferee will be entitled to the usual annuity treatment, including recovery of the transferor's investment in the contract (under §72), or the usual treatment as the beneficiary of a trust (by reason of §682), notwithstanding that the annuity payments or payments by the trust qualify as alimony or otherwise discharge a support obligation. The transfer of a life insurance contract to a spouse incident to a divorce or separation generally will no longer result in the proceeds of the policy later being includible in income, since the policy will have a carryover basis and therefore the transfer for value rules (§101(a)(2)) will not apply. Also, the transfer of an installment obligation will not trigger gain and the transfer of investment credit property will not result in recapture if the property continues to be used in the trade or business." [5]

4. Effective Date

Section 1041 is generally effective for transfers after July 18, 1984. If, however, a transfer after this date is required or contemplated under an "instrument" (*e.g.*, a contract of sale or divorce decree) in effect on or before July 18, 1984, §1041 will not apply to the transfer unless both spouses (or former spouses) make an election. Two alternative elections are permitted in these circumstances: The parties can elect to have §1041 apply to all transfers after 1983 or to transfers under the instrument made after the general effective date, *i.e.*, after July 18, 1984. Regardless of which election is chosen (and whether or not it is chosen), §1041 will apply to all transfers *outside* the instrument that occur after the general effective date.

The election to have §1041 apply to all transfers after 1983 is not limited to spouses making transfers pursuant to an instrument. Whether they have entered into an instrument or not, spouses can make this election provided they both agree to it. The Internal Revenue Service is delegated the authority to issue regulations prescribing the manner in which to make such election.

5. Planning Implications

Section 1041 eliminates a common planning technique, which is illustrated in the following example. Suppose H owns all the stock of X Co., which has elected subchapter S status. For several years, X Co. has incurred substantial operating losses. The pass-thru of these losses to H has reduced his stock basis to zero.

X Co. is expected to generate a substantial operating loss for its current year. H would like to offset this loss against income from other sources. To do this, however, he must obtain basis in his stock. Because X Co. is a failing corporation, he does not want to infuse new capital into it or lend it money. He instead devises an arrangement whereby he sells half of his stock to his wife (W) on an installment basis. The purchase price fixed for the stock is one-half the book value of X Co. The price thus fixed is substantial notwithstanding X Co.'s financial woes.

As a result of the sale, W would take, prior to §1041, a cost basis in the purchased stock; *i.e.*, her basis would be equal to its purchase price. This basis would be used to absorb the current losses generated by X Co., which would be passed through to W. Since H and W file a joint return, these losses would be deducted against H's income on the return.

Section 1041 precludes this tax result. Under §1041, W would take a carryover basis in the stock. Since H's basis is zero, her basis would be zero. With a zero basis, she would be unable to absorb the losses passed through and, consequently, no deduction would be allowed for them. H's income would go unsheltered.

II. The Term "Alimony" Redefined [Act §422]

A. *Introduction*

1. *Law Prior to the Tax Reform Act of 1984*

Under §§71 and 215 of the Code, alimony payments are deductible by the payor and includible in the income of the recipient. The deduction for alimony is allowed in computing adjusted gross income. Thus, the deduction is available whether or not the payor itemizes his deductions.

In order to be treated as alimony, a payment must meet several requirements. First, the payment must be in discharge of a legal obligation imposed on or incurred by a spouse because of a family or marital relationship. Second, the payment must be imposed under either (a) a decree of divorce or separate maintenance or under a written instrument incident to such divorce or separation, (b) a written separation agreement; or (c) a decree of support or maintenance. Third, the payment must be "periodic." Installment payments discharging a lump sum obligation are not periodic unless the obligation is payable over a period ending more than ten years after the date of the instrument imposing the obligation. In the event payment of the obligation is permitted over such a period, the annual amount of installment payments that may be treated as alimony is limited to 10 percent of the lump sum obligation.

Payments which are "fixed" as child support by the divorce or separation instrument are not treated as alimony. Such payments are not deductible by the payor or includible in income by the recipient. To qualify as a payment "fixed" for child support, the payment must be expressly identified in the instrument as being allocable to child support. If the payment is not expressly specified as child support, it will not be treated as such. For example, a payment which is designated to be for the support of "wife and children" is treated in its entirety as alimony since the portion of the payment allocable to the children is not specified.

In *Comr. v. Lester*, 366 U.S. 299 (1961), the Supreme Court held that such an undifferentiated payment (*i.e.*, a payment for the support of wife and children) was entirely alimony even though the agreement imposing the payment provided that it would be reduced by a specified percentage each time any of the payor's children died, attained the age of majority or married. These conditions requiring payment reduction were not sufficient, the Court stated, to fix any portion of the payment as being allocable to child support.

2. *Reasons for Change*

Act §422 amends the definition of alimony. The amendment is intended to make the definition more "objective." Congress was concerned that under the prior law's definition, differences in state laws created differences in federal tax consequences. The variation in tax consequences, in turn, gave rise to administrative difficulties for the IRS.

B. *Overview*

Act §422 revises the rules relating to the definition of alimony. Under the revised rules, only cash payments that will terminate on the death of the payee spouse will qualify as alimony. Further, alimony payments, if in excess of $10,000 per year, generally must be payable for at least six years and must not decline by more than $10,000. If the payments decline by more than this amount, the payor is required to recapture as ordinary income the "excess amount" of alimony paid in earlier years. In the event of recapture, the payee is permitted to deduct an amount equal to the recapture.

The prior law requirement that alimony payments be based on a legal support obligation is repealed. Under the revised rules, payors will be required to furnish the IRS with the social security number of the payee spouse. A $50 penalty for failure to do so will be imposed.

The revised rules are generally effective for divorce or separation instruments executed after 1984.

C. *Detailed Analysis*

The Tax Reform Act of 1984 does not change the basic rule that alimony payments are deductible by the payor and includible in income by the payee. The legislation does, however, substantially reshape the class of payments qualifying as alimony. It accomplishes this redefinition of the class by amending in sweeping fashion §71 of the Code.

1. *Revised Definition of Alimony*

Under §71 as amended by Act §422, gross income includes amounts received as "alimony or separate maintenance payments." An "alimony or separate maintenance payment" is defined to be a payment in cash that meets certain criteria. First, the payment must be received by (or on behalf of) a spouse under a "divorce or separation instrument." [6] Second, the instrument must not state that the payment is not to be treated as alimony. Thus, even if a payment qualifies as alimony in all other respects, it will not be treated as such if the instrument specifies that it is not to be accorded that status. Third, after divorce or legal separation has occurred, the payment must not be made to a member of the same household as the payor. Fourth, the obligation to make payments allocable to the future must cease upon the death of the payee spouse, and this must be stated in the divorce or separation instrument.[7]

Section 71(b)(2) defines a "divorce or separation instrument" to mean a decree of divorce or separate maintenance or a written instrument incident to such decree, a written separation agreement, and a decree of support or maintenance.

2. *Child Support Payments*

a. *Introduction*

Under prior law, payments fixed as child support were excluded from alimony treatment. Amended §71 not only retains this exclusion, it expands it significantly. The expansion is accomplished by enlarging the class of child support payments to include payments not specifically earmarked as child support but which are reduced upon the happening of a contingency related to the payor's child.

The amount of reduction to which such payments are subject is henceforth to be treated as child support. This new treatment abrogates the *Lester* holding that such payments are to be considered alimony in their entirety.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

b. Amended §71

As modified by Act §422, §71(c)(1) excludes from alimony treatment "that part of any payment which the terms of the divorce or separation instrument fix (in terms of an amount of money or a part of the payment) as a sum which is payable for the support of children of the payor spouse." This language echoes prior law. Like prior law, the key word is "fix." To qualify as child support, an amount must generally be fixed (*i.e.*, specifically identified) as child support. Thus, a payment for the support of "wife and child," without more, will still qualify as alimony in its entirety since the portion allocable to the child is not specified.

If, however, the amount of an undifferentiated payment is conditional on the status of the child, a new provision, §71(c)(2), comes into play. This provision diverges from prior law. It treats as child support the amount by which any payment is subject to reduction for the happening of a contingency related to the payor's child. As examples of covered contingencies, the provision cites "attaining a specified age, marrying, dying, leaving school, or a similar contingency." Thus, in the case of undifferentiated payments which are required to be reduced in the event a child reaches 18 years of age, marries, dies, or experiences some other specified contingency, the payments will be treated in part as alimony and in part as child support. The portion treated as child support will equal the amount by which the payments are subject to reduction. The remaining portion of the payments will be treated as alimony.[8]

Section 71(c)(2) also applies to any payment which is required to be reduced "at a time which can clearly be associated with a contingency" related to the payor's child. This application of the section is aimed at preventing circumvention of the payment reduction rule by substituting calendar dates for child-related contingencies. A support agreement might, for example, in lieu of providing for payment reduction when a child reaches 18, specify that the reduction is to occur on a certain calendar date, the date being that of the child's eighteenth birthday although this fact is not noted in the agreement. In these circumstances, it is likely that the specified calendar date will be considered "clearly associated" with the contingency of the child reaching 18 years of age. Thus, §71(c)(2) will apply and the reduction amount will be treated as child support.

The "clearly associated" test is a facts and circumstances one. It receives no elaboration in the legislative history. Thus, its contours will have to be determined in administrative rulings and case law.[9]

It should be noted, finally, that the payment reduction rules of §71(c)(2) apply to both undifferentiated payments and payments which on their face are solely for the support of one's spouse (or former spouse). Thus, if a payment allocated exclusively to a spouse is required to be reduced either (a) upon the happening of a child-related contingency or (b) at a time "closely associated" with such a contingency, the reduction amount of the payment will be treated as child support.

c. Planning Implications

Even though amended §71 overrules *Lester*, payment reductions without a concomitant loss of alimony status are still possible. The reductions can no longer, however, be expressly conditioned on a child's status. Instead, they should be tied to calendar dates that permit the parties to accomplish the same general goals they would have achieved had the reductions hinged on child-related contingencies.

Provided the calendar dates chosen for payment reduction are not "clearly associated" with such contingencies, the payments will escape characterization under §71(c)(2) and, thus, will be treated as alimony in their entirety. That is, even the reduction amount will be treated as alimony.

Given the modifier "clearly" in the "clearly associated" test, it appears that §71(c)(2) will not be activated unless there is a close connection between the calendar date and the child's status. The level of closeness required, however, is a matter that cannot be predicted with an acceptable degree of certainty.

3. Special Rules to Prevent Excess Front-Loading of Alimony Payments

a. Six-Year Requirement

If alimony payments exceed $10,000 in any calendar year, §71(f)(1) requires that the payor be obligated to pay alimony in each of the six "post-separation years." A post-separation year is defined in §71(f)(4)(A) to be any calendar year in the six-calendar year period beginning with the first calendar year in which alimony is paid. If alimony is not paid in one or more of these years, but more than $10,000 of alimony is paid in any single calendar year, all payments by the payor (regardless of when made) will lose their qualification as alimony.[10]

For purposes of this six-year rule, payment terminations contingent on the death of either spouse or the remarriage of the payee spouse are not taken into account. Thus, the six-year rule will not be violated if a support agreement provides that alimony payments will cease upon the death or remarriage of the payee. Also, the rule will not be infringed if payments are not made in a post-separation year because of the payor's death.

If alimony payments never exceed $10,000 in any calendar year, the six-year rule will not apply.

b. Alimony Recapture

If during the six "post-separation years" annual alimony payments decline by more than $10,000, the payor is required by new §71(f)(2) to recapture the "excess amount" of alimony paid in earlier years. Such excess amount will consist of the excess of the prior year's alimony over the sum of the current year's alimony plus $10,000. This computation is to be made first with respect to the immediately preceding year and then with respect to all other preceding years in the six-year period. If alimony paid in one of those other preceding years has already been recaptured in an earlier year, the amount of earlier recapture will be subtracted from that preceding year's alimony for purposes of the computation.

The sum of the computation, the alimony required to be recaptured, must be included in the payor's gross income for the current taxable year. The payor's prior taxable year in which the alimony was actually paid is not to be

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

disturbed. Inclusion of the recaptured amount is to be reflected solely on the current year's return.

To avoid double taxation of the alimony recaptured by the payor, the payee is permitted to deduct the recaptured amount in determining her adjusted gross income. The deduction is allowable for her current taxable year, not for the year when she received the alimony.

Alimony recapture is required only during the six post-separation years. Thereafter, reductions in alimony paid, regardless of the degree of reduction, will not trigger recapture. Moreover, if during the post-separation years annual alimony payments decline by less than $10,000, no recapture will ever be required.

The mechanics of alimony recapture may be illustrated by an example. Suppose alimony payments of $25,000 are made in year 1, payments of $12,000 are made in year 2, and a single $1,000 payment is made in year 3. In year 2, $3,000 of alimony will be recaptured from year 1. This will reduce the alimony paid in year 1, for purposes of recapture computations in years after year 2, to $22,000. In year 3, $11,000 will be recaptured from year 1 and $1,000 from year 2. If annual alimony payments after year 3 equal or exceed $1,000 but do not vary by more than $10,000, no further recapture will be required. If, however, prior to the end of year 6, annual payments decline below $1,000, additional recapture will occur.[11]

c. Exceptions to Special Rules

Section 71(f)(2), the provision for alimony recapture, ceases to apply when two events occur: (1) either of the spouses die or the payee spouse remarries, and (2) alimony payments terminate because of the event described in (1).[12] Section 71(f)(2) is not applicable, in this situation, as of the post-separation year in which the spouse dies or remarries. Regardless of the amount of alimony paid that year, no recapture will be required for the year; further, no recapture will be required in subsequent years.

Neither §71(f)(2) nor §71(f)(1) applies to any alimony payment to the extent it is based on "a continuing liability (over a period of not less than 6 years) to pay a fixed portion of the income from a business or property or from compensation for employment or self-employment." [13] For this exception to apply, the alimony payment, though potentially fluctuating in amount, must be equal to a "fixed portion" of the payor's income; further, the liability to make the payment must extend over a period of at least six years. Payments meeting these conditions are not subject to recapture or to disqualification as alimony even if the payor's income in a particular post-separation year is zero and, thus, no alimony is paid in that year. Because the amount of payments calculated as a fixed portion of the payor's income is beyond the control of the payor, Congress presumably believed it would be unfair to subject such payments to §§71(f)(1) and 71(f)(2), and the potential for using such payments as a disguised property settlement was minimal.

4. Amendment of §215

a. In General

Act §422 amends §215 of the Code to conform it to the amendments made in §71. Section 215 allows the payor of alimony to deduct the amount thereof in computing her adjusted gross income.

b. Requirement of Identification Number

Amended §215 authorizes the Treasury to prescribe regulations under which any individual receiving alimony is required to furnish her taxpayer identification number to the payor and the payor is required to include such number on his income tax return for each taxable year in which alimony is paid.

c. Penalty For Failure to Furnish Identification Number

Act §422 amends §6676 by adding a penalty provision dealing with the failure to supply an identification number under §215. The new penalty is codified as §6676(c). It applies to any person who is required under §215 to furnish his taxpayer identification number to another person or to include on his return the taxpayer identification number of another person. If a person subject to either of these obligations fails to comply therewith in timely fashion, he will be liable for a penalty of $50.

The penalty is applicable for each failure to comply with a covered obligation. Thus, if the payor of alimony fails for three successive years to state on his return the taxpayer identification number of the payee, he will be subject to an aggregate penalty of $150.

The penalty does not apply if the failure to comply is due to reasonable cause and not to willful neglect.

6. Effective Date

Amended §§71 and 215 are generally effective for divorce or separation instruments executed after 1984. Although not normally covered by the amendments, pre-1985 instruments become subject to the amendments to the extent the instruments are modified after 1984 and the modification expressly provides that it is to be governed by the amendments. If such a modification is made, however, it is unclear whether the amendments will apply only to the modification or will extend to the entire instrument. It may be that even if the modification states that the amendments are to apply to the entire instrument, they will apply only to the modification. Or, conversely, even if the modification states that the amendments are to apply only to the modification, they may apply to the entire instrument. The statute and legislative history are unclear on this point.

The new §6676 penalty and the related amendments concerning the payee's taxpayer identification number are effective for payments made after 1984.

III. Dependency Exemption Rules Amended [Act §§423 and 426]

A. Introduction

1. Background

Under §§151 and 152, a taxpayer is entitled to a $1,000 deduction for each of his dependent children. The deduction is allowable in computing adjusted gross income and is termed a dependency exemption. Normally, in order to qualify as a dependent, a child must have over half of his

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

support for the year furnished by the taxpayer. In the case of children of divorced or separated parents, a special rule applies in determining which parent provided over half of the support. The special rule is codified in §152(e). Under this provision, the parent who has custody of the child for the greater part of the year (the custodial parent) is entitled to the dependency exemption for the child provided both parents together have custody of the child for more than one half of the year and they furnish more than one half of the child's support.

Prior to TRA 1984, the rule that the custodial parent is entitled to the exemption was subject to two exceptions. The noncustodial parent was entitled to the exemption if either (1) a decree or written agreement allocated the exemption to the noncustodial parent and the noncustodial parent paid at least $600 for the support of the child during the calendar year, or (2) the noncustodial parent provided at least $1,200 for the support of the child during the year and the custodial parent did not clearly establish that she provided more for the support of the child than did the noncustodial parent.

The dependency exemption was not the only tax item impacted by the amount of child support a parent provided. The deduction for medical expenses, the treatment of a parent as qualifying for either single rates or head of household rates, the earned income credit, and the credit for household and dependent care services were determined, prior to TRA 1984, in part by reference to whether the parent furnished over half of the support of a child.

2. Reasons For Change

Congress believed the rules governing the allocation of the dependency exemption between separated or divorced parents were "often subjective" and presented "difficult problems of proof and substantiation." [14] Because of these problems, the IRS became involved in many disputes between parents who both claimed the exemption based on providing support over the applicable threshold. The cost of resolving these disputes, both to the parties and the Government, was high although the Government generally had "little tax revenue at stake in the outcome." To minimize the Government's involvement in such disputes, Act §423 amends §152(e) with the objective of making its application more "certain." Pursuant to the amendment, the custodial parent is allowed the exemption unless that parent waives his or her right to claim the exemption.

B. Overview

Act §423 amends §152(e) to provide that the $1,000 dependency exemption for a child of divorced or separated parents generally will be allocated to the custodial parent unless the custodial parent signs a written declaration that he or she will not claim the exemption for the year. Regardless of which parent is entitled to the dependency exemption, each parent may claim the medical expenses that he or she pays for the child for purposes of computing the medical expense deduction.

Section 152(e) as amended will be effective for taxable years beginning after 1984.

C. Detailed Analysis

Under §152(e) as amended, the parent having custody of a child for the greater portion of the year (the custodial parent) is generally treated as having provided more than one-half of the child's support and, therefore, is entitled to the dependency exemption. In addition to applying to divorced or separated parents, this rule applies to parents who "live apart at all times during the last six months of the calendar year." [15]

The general rule of amended §152(e) is subject to three exceptions. First, the custodial parent can release her claim to the exemption to the noncustodial parent. To accomplish the release, the custodial parent is required to sign a written declaration that she will not claim the child as a dependent for the year; further, the noncustodial parent is required to attach the written declaration to his tax return. The declaration may be made for one or more specified calendar years. The custodial parent may even make a permanent declaration provided a copy of such declaration is attached by the noncustodial parent to his return for each year.

Note: In most cases, execution of a declaration covering more than one year is inadvisable. By limiting the declaration to a single year, the custodial parent is in a position to withhold the declaration in the event the noncustodial parent defaults under the support agreement.

The second exception to the general rule that the custodial parent is entitled to the dependency exemption involves multiple support agreements. As under prior law, the terms of such agreements override the general rule.

Finally, §152(e)(4) specifies that prior law is to continue to apply to divorce or separation instruments which are executed before January 1, 1985 and which allocate the dependency exemption to the noncustodial parent. Because prior law continues to apply with respect to such instruments, the noncustodial parent thereunder is entitled to claim the exemption if he provides at least $600 for the support of the child during the year. The continuing applicability of prior law may, however, be waived by the parties. To effectuate a waiver, the parties must modify the instrument to expressly provide that prior law is not to be applicable to it.[16]

Act §423 amends §213 of the Code to provide that, for purposes of the medical expense deduction, a child is to be treated as a dependent of both his parents. Thus, a parent can deduct medical expenses that he has paid for the child even if he is not entitled to a dependency exemption for the child.

Act §423 amends various provisions of the Code to provide consistent rules among interrelated Code sections concerning family status of individuals living apart. The amendments are summarized in the Supplemental Report of the House Ways and Means Committee:

> "The basic rule adopted is that in the present child and dependent care credit (§44A). An amendment is made to §143(b) to provide that for an otherwise married individual living with a child to be considered not married, his spouse may not be a member of the household for the last six months of the year, rather than the entire year as under present law. The definition of head of household status (§2) is amended to provide that the household must be maintained as the principal place of abode for the child for more than one-half of the year, rather than for the entire year as

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

under present law. Further, definitions of marital and head of household status, the earned income credit (§43), and the child and dependent care credit (§44A) are amended to provide that any custodial parent who releases a claim to a dependency exemption . . . will be treated as entitled to the dependency exemption for the purposes of these sections. Thus, such a custodial parent could be eligible for unmarried status, head of household status, or the credits if the other conditions of those provisions are met." [17]

The amendments made by Act §423 are generally effective for taxable years beginning after December 31, 1984.

Note: Act §423 is not the only provision of TRA 1984 dealing with the dependency exemption. Act §426 adds a new paragraph (5) to Code §151(e). Section 151(e) provides, in general, that to qualify as a dependent an individual must have gross income of less than $1,000 for the year. Under new paragraph (5) of §151(e), gross income is deemed for this purpose not to include any income received by a permanently and totally disabled individual for services performed at a sheltered workshop operated by a government or charity. The exclusion of such income applies, however, only if: (i) the availability of medical care at the workshop is the principal reason for the individual's presence there, and (ii) the income arises solely from activities at the workshop which are incident to the medical care.

New paragraph (5) applies to taxable years beginning after 1984.

IV. Innocent Spouse Relieved of Liability in Certain Cases [Act §424]

A. Introduction

1. Background

a. Tax liability of Spouses Who File Joint Returns

In general, a husband and wife are permitted to file a joint income tax return, even if one spouse has no income or deductions. Spouses who file a joint return have joint and several liability for the tax computed on their aggregate income.

Under limited circumstances, which are specified in §6013(e) of the Code, a spouse may be relieved of liability for tax (including interest and penalties) on a joint return. Prior to TRA 1984, this so-called innocent spouse relief was limited to cases in which the liability for tax resulted from an omission from gross income that exceeded 25 percent of the gross income stated in the return. In the case of such omissions, the spouse seeking relief was required to establish that the unreported income was attributable to the other spouse and that she had no knowledge of (or reason to know of) the omission.

The determination of the spouse to whom the unreported income was attributable was to be made without regard to community property laws. In addition, the innocent spouse was entitled to relief only if it was "inequitable" to hold that spouse liable for the deficiency in tax resulting from the omission. In determining whether it would be inequitable to hold the innocent spouse liable, §6013(e) directed that consideration be given to whether or not the innocent spouse significantly benefited (directly or indirectly) from the items omitted from income. Finally, in determining whether there was an omission exceeding 25 percent of the income disclosed on the return, amounts as to which adequate information was provided on the return were not to be taken into account.

b. Community Income of Spouses Who Live Apart

In a community property jurisdiction, a husband and wife filing separate returns are each generally required to report one-half of their community income. If, however, certain conditions obtain, an innocent spouse is relieved from the tax liability he or she would otherwise incur for failing to include in income his or her share of the community income.

The conditions for relief are specified in §66 of the Code. Prior to TRA 1984, to qualify for relief, an innocent spouse was required to have lived apart from her spouse during the entire calendar year. Additionally, it was required that: (1) the spouses not have filed a joint return for a taxable year beginning or ending in the calendar year; (2) one or both of the spouses received earned income for the calendar year which was community income; and (3) no portion of such earned income was transferred "directly or indirectly" between the spouses before the close of the calendar year. If all of these conditions were satisfied, §66 provided that the applicable community property law with respect to the income was to be disregarded for federal income tax purposes. The income was, instead, to be allocated in accordance with the rules provided in §879(a) of the Code.

Under these rules, earned income for the calendar year (other than income from a trade or business or a partner's distributive share of a partnership's income) was to be treated as the income of the spouse who rendered the personal services. Further, income derived from a trade or business (other than that carried on by a partnership) was to be treated as the income of the spouse who carried on the trade or business, unless the other spouse exercised substantially all of the management or control of the trade or business. Finally, a partner's distributive share of a partnership's income was to be treated as the income of the partner.[18]

2. Reasons for Change

Congress believed that the rules relieving innocent spouses from liability for tax on a joint return were not "sufficiently broad" to encompass certain cases where the innocent spouse deserved relief. As an example of such a case, the Supplemental Report cites the situation where one spouse claims phony business deductions in order to avoid paying tax and the other spouse has no reason to know that the deductions are phony and that the "guilty" spouse has squandered the untaxed profits.

Congress was also concerned that "there may be situations in community property states when it is inequitable to tax a spouse filing a separate return on earnings of the other spouse where the innocent spouse received no benefit from the earnings." [19]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

B. Overview

Act §424 amends §§66 and 6013(e) of the Code. The amendment of §6013(e) expands the availability of innocent spouse relief to cover situations involving claims of grossly erroneous deductions and credits. Additionally, the amendment of §6013(e) replaces the substantial omission of income test with a substantial understatement of tax test.

The amendment of §66 extends innocent spouse relief to situations where a spouse filing a separate return (but not living apart from her spouse) establishes that she was not aware of, and had no reason to know of, an item of community income earned by her spouse. In order for the innocent spouse to be relieved of liability in this circumstance, it must be demonstrated that it would be inequitable to require her to include the item in income.

Amended §66 also contains a provision authorizing the Treasury to disregard community property laws in certain situations where it is equitable to do so.

C. Detailed Analysis

1. Section 6013(e): Joint Return Innocent Spouse Relief

Under §6013(e)(1), as amended by Act §424, an innocent spouse is generally relieved of a joint tax liability if: (1) a joint return was made for the underlying taxable year; (2) on the return there was a "substantial understatement" of tax attributable to "grossly erroneous items" of the other spouse; (3) the innocent spouse establishes that in signing the return she did not know, and had no reason to know, of the substantial understatement; and (4) taking into account all the facts and circumstances, it is inequitable to hold the innocent spouse liable for the deficiency in tax attributable to the understatement. Where these conditions are satisfied, the innocent spouse is generally relieved of liability for the joint tax obligation to the extent the obligation is attributable to the substantial understatement.

For purposes of this rule, the term "grossly erroneous items" encompasses two categories of items: (1) any item of income attributable to the other spouse which is omitted from gross income, and (2) any claim of a deduction, credit, or basis by the other spouse in an amount for which there is no basis in fact or law. The term "substantial understatement" means any understatement of tax (*i.e.*, any tax deficiency) which exceeds $500.

To the extent the substantial understatement is attributable to an erroneous deduction or credit (rather than to an omission of income), the general rule is further qualified. With respect to the portion of the substantial understatement allocable to the deduction or credit, the innocent spouse is entitled to relief therefrom only if the substantial understatement exceeds a specified amount. The specified amount is a percentage of the innocent spouse's adjusted gross income for the "pre-adjustment year." If her adjusted gross income for that year is $20,000 or less, the specified amount is 10 percent of this income figure. If her adjusted gross income is more than $20,000, the specified amount is 25 percent of this figure. Thus, by way of illustration, if the innocent spouse's adjusted gross income for the pre-adjustment year is $15,000 and the substantial understatement is only $1,000, which is less than 10 percent of $15,000, then the innocent spouse will not be entitled to relief with respect to the portion of the understatement which is attributable to the erroneous deduction or credit.

For purposes of applying these income limitations, the term "pre-adjustment year" means the most recent taxable year of the innocent spouse ending before the date the deficiency notice is mailed. In computing the innocent spouse's adjusted gross income, if she is married to another spouse at the close of the pre-adjustment year, her adjusted gross income for that year will include the income of the new spouse.[20]

The limitations tied to the innocent spouse's adjusted gross income are not applicable to the extent the substantial understatement is attributable to an omission of an item of income. Regardless of the amount of the substantial understatement and of the innocent spouse's adjusted gross income, she will be entitled to relief from that portion of the understatement which is attributable to an income omission.

The relief afforded under §6013(e) extends not only to the tax liability itself but also to any interest and penalties assessed with respect to the liability. For purposes of the provision, the determination of the spouse to whom items of gross income (other than gross income from property) are attributable is to be made without regard to community property laws.

The Conference Report states at page 1119 that it is to apply to pending court cases where the decision in the case is not final. The Supplemental Report also states at page 1502 that the determination of whether it would be inequitable to hold the innocent spouse liable should include the consideration of whether that spouse benefited from the substantial understatement. Finally, the legislative history notes that relief is available with respect to an understatement attributable to an omission from income, even if the return contained adequate information disclosing the nature and amount of the omitted item.

2. Section 66: Treatment of Community Income

Under §66, as amended by Act §424, the relief afforded innocent spouses with respect to tax liabilities arising from community income is expanded. The expansion is accomplished by amending §66(b) and adding new §66(c).

Under §66(b), the Treasury is authorized to disallow the benefits of community property laws to a taxpayer if two conditions conjoin: (1) the taxpayer acts as if he is solely entitled to one or more items of community income; and (2) the taxpayer fails to notify his spouse of the nature and amount of such items. The taxpayer is required to notify the spouse before the due date (including extensions) for filing the return for the taxable year in which the items were earned.[21]

Under new §66(c), an item of community income is required to be included in the gross income of the other spouse (and not in the income of the innocent spouse) if four conditions are met: (1) a joint return was not filed for the taxable year in which the item was earned; (2) the innocent spouse did not include the item in her income for the year and, under §879(a), the item would be treated as the income of the other spouse if that provision were

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

applicable; (3) the innocent spouse establishes that she did not know of, and had no reason to know of, the item; and (4) taking into account all the facts and circumstances, it is inequitable to include the item in the innocent spouse's gross income.

The Supplemental Report indicates at page 1502 that the determination of whether it would be inequitable to include the unreported item in the income of the innocent spouse should take into account whether that spouse benefitted from the untaxed income and whether the defense of no knowledge was promptly raised so as to prevent the period of limitations from running on the other spouse. The legislative history also indicates that the determination of the innocent spouse's knowledge of the unreported item is to be made as of the time she filed her return. Finally, the legislative history states that if §66(c) is applicable, the unreported item of income is to be included in the income of the other spouse under the special rules of allocation set forth in §879(a).

Note: Section 66(a), dealing with the treatment of community income of spouses who live apart, is unchanged by TRA 1984.

3. Effective Date

Section 66(b) applies to taxable years beginning after 1984. New §66(c) and amended §6013(e) apply to all taxable years to which the Internal Revenue Code of 1954 applies; moreover, provisions corresponding to these subsections are deemed to be included in the Internal Revenue Code of 1939 and apply to all taxable years to which that Code applies.

Notwithstanding the breadth of the effective date of §§66(c) and 6013(e), the legislative history indicates that their effective date is not intended to open a year that has been closed by the statute of limitations, *res judicata*, or otherwise.

V. Estate and Gift Tax Treatment of Property Settlements Incident to Divorce [Act §425]

A. Introduction

1. Background

By virtue of §§2056 and 2523 of the Code, transfers of property (other than certain terminable interests) between individuals who are married at the time of the transfer are not subject to estate or gift tax.

With several exceptions, transfers of property to a *former* spouse in satisfaction of marital or property rights are taxable gifts. This is because the relinquishment of such rights is deemed not to constitute consideration in money or money's worth. Thus, the transfer to the former spouse is deemed to be a gratuitous transfer.

One exception to this general rule is codified in §2516 of the Code. Prior to TRA 1984, §2516 provided that a transfer of property between former spouses was not subject to gift tax if (1) the transfer was pursuant to a written agreement between the spouses, (2) the agreement was entered into during the two-year period immediately preceding the divorce, and (3) the transfer was in settlement of marital or property rights of the former spouses or was to provide a reasonable allowance for the support of minor children.[22]

Prior to TRA 1984, for estate tax purposes, a claim of a former spouse based on the release of marital or property rights was not deductible in computing the taxable estate unless the claim was based on a court decree where the court had the power to determine the marital or property rights of the spouse.

2. Reasons for Change

Congress believed that the estate tax treatment of transfers made in settlement of marital or property rights should be conformed to the gift tax treatment. "This will allow the parties," according to the legislative history, "to rely on a written agreement even though the payor spouse dies before the agreement is completely executed."

Congress also believed that the parties should have additional time to enter into the written agreement.

B. Overview

Act §425 amends §§2043 and 2516 of the Code. The amendment of §2516 extends the period to enter into a property settlement agreement (for purposes of avoiding gift tax) to one year after the divorce. By virtue of the amendment of §2043, an estate tax deduction is allowed for transfers pursuant to claims arising under a written property settlement agreement if (1) the transfers are in satisfaction of marital or property rights and (2) the agreement would have qualified the transfers as non-taxable for gift tax purposes under §2516.

These amendments are applicable to estates of decedents dying after, and to lifetime transfers after, July 18, 1984.

C. Detailed Analysis

1. Expansion of Coverage of Section 2516

Act §425 amends §2516 to extend its coverage to property settlement agreements which are entered into within one year after the divorce. If former spouses enter into a written property settlement agreement within this period, transfers made pursuant to the agreement will not be subject to gift tax provided (1) the transfer is made to either spouse in settlement of his or her marital or property rights or (2) the transfer is made to provide a reasonable allowance for the support of minor children of the marriage. A transfer meeting these conditions is deemed to be a transfer made for full and adequate consideration in money or money's worth and, thus, is not a gift. As under prior law, §2516 continues to apply to property settlement agreements entered into within two years prior to the divorce.

2. Estate Tax Deduction Allowed for Transfers Meeting the Requirements of §2516

Act §425 amends §2043(b) by prescribing an exception to the general rule that the relinquishment of marital or property rights is not treated as consideration in money or money's worth. The exception is embodied in new paragraph (2) of §2043(b).[23] Paragraph (2) provides that for

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

purposes of §2053, a transfer of property in satisfaction of marital or property rights is to be considered made for an adequate and full consideration in money or money's worth if the transfer satisfies the requirements of §2516. Thus, if the transfer is made pursuant to a written property settlement agreement entered into within the period of time specified in §2516, the value of the property transferred will be deductible from the gross estate of the decedent.

The fact that such transfers are considered made for adequate and full consideration in money or money's worth is significant for the following reason. Section 2053(a) allows a deduction from the gross estate of amounts paid by the estate for claims against the estate. Section 2053(c)(1), however, limits this deduction. Under this provision, amounts paid pursuant to claims against the estate are deductible only "to the extent [the claims] were contracted bona fide and for an adequate and full consideration in money or money's worth." By treating a transfer in satisfaction of a claim based on the relinquishment of marital or property rights as made in exchange for full and adequate consideration in money or money's worth, §2043 permits such transfers to avoid the §2053(c)(1) limitation.

3. Effective Date

The amendments discussed above are applicable to estates of decedents dying after, and to lifetime transfers after, July 18, 1984.

VI. Alimony Treated as Compensation for Purposes of Contributing to IRAs [Act §529]

Effective generally for taxable years beginning after December 31, 1984, the TRA simplifies the rules under which a divorced spouse can make a deductible contribution to an IRA based on alimony. The TRA [24] amends §219(f)(1) to provide that all alimony received by a divorced spouse is treated as compensation for purposes of the IRA deduction limit. Various technical eligibility restrictions in §219(b)(4) have been repealed by the TRA, including the restriction limiting the IRA deduction based on alimony to only $1,125. Thus, for taxable years beginning after 1984, a divorced spouse may generally contribute up to $2,000 of alimony, which is the general IRA maximum for deductible contributions.

For a more complete analysis of the TRA amendments relating to IRAs, see Chapter 50, V.

Chapter 14

SIMPLIFICATION OF TAX CREDITS

Patrick G. Dooher, Esq.
Silverstein and Mullens
Washington, D.C.

I. Background

A. The Credit Maze Prior to the TRA

1. Allowable Credits

Prior to the enactment of the TRA, the Internal Revenue Code listed the following 19 credits as "allowable" credits:

(a) Section 31, providing a refundable credit for the tax withheld on wages, as well as a refundable credit for special refunds of social security tax and for the recently enacted back-up withholding tax of §3406.

(b) Section 32, allowing a refundable credit to nonresident aliens and foreign corporations for taxes withheld at the source and allowing a refundable credit for the withholding tax on tax-free covenant bonds.

(c) Section 33, allowing the foreign tax credit determined under §901 and the possessions of the U.S. tax credit provided by §936.

(d) Section 37, providing a nonrefundable credit for elderly or permanently disabled individuals.

(e) Section 38, authorizing the investment credit as determined under the rules of Subpart B of Part IV. Subpart B §46 through §48.

(f) Section 39, allowing a refundable credit for certain uses of gas and special fuels, such as use on a farm.

(g) Section 40, authorizing a credit for expenses incurred in a Work Incentive Program (WIN) as determined under Subpart C of Part IV. Subpart C, in turn, consisted of §50A and §50B. The WIN credit was terminated for taxable years beginning after 1981 and, therefore, became obsolete for such years except to the extent a WIN credit earned before 1982 survived as a carryover to later years.

(h) Section 41, providing a modest nonrefundable credit to individuals for contributions to political candidates.

(i) Section 43, setting forth the rules for the allowance of the earned income credit to individuals, a refundable credit for which the maximum amount allowable is $500.

(j) Section 44 providing a now obsolete, nonrefundable credit to individuals for the purchase of a new residence.

(k) Section 44A, allowing a nonrefundable credit for expenses incurred by individuals for household and dependent care necessary for gainful employment.

(l) Section 44B, authorizing the targeted jobs credit, a nonrefundable credit determined under the rules of Subpart D of Part IV, consisting of §51 through §53.

(m) Section 44C, providing individuals with a nonrefundable residential energy credit for qualified energy conservation and qualified renewable energy source expenditures.

(n) Section 44D, allowing a nonrefundable credit for producing fuel from nonconventional sources, such as oil produced from shale and tar sands.

(o) Section 44E, providing a nonrefundable credit for the use of alcohol as fuel.

(p) Section 44F, allowing a nonrefundable credit for increasing research activities.

(q) Section §44G, allowing a corporation to elect a nonrefundable credit for the contribution of its stock to a tax credit Employee Stock Ownership Plan (ESOP).

(r) Section 44H, the most recently added credit to the Code,[1] providing a nonrefundable credit for clinical testing expenses for certain drugs for rare diseases or other conditions.

(s) Section 45, providing a cross reference to §6401 relating to the refundable credit for overpayment of tax.

It is obvious upon review of the foregoing credits that little consistency existed in the placement of the credits within the Code under pre-TRA law. For example, the nonrefundable, business-related investment credit followed the nonrefundable personal credit for the elderly and disabled. The investment credit, in turn, was followed by a refundable business related credit for gas and special fuels, and the ensuing credit under §44 for WIN expenditures was largely obsolete. The sequence of credits within the Code was largely attributable to the chronology of enactment.

2. Order of Application

In general, the nonrefundable credits were allowable as an offset against tax liability in the order that they appeared in the Code. Thus, a taxpayer with an investment credit allowable under §38, a targeted jobs credit allowable

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

under §44E, and a nonconventional fuel credit allowable under §44E would first offset tax liability by the investment credit, then by the targeted jobs credit, and lastly by the nonconventional fuel credit. As pointed out in the committee reports accompanying the TRA, this ordering sequence could cause an unintended loss of a tax credit since certain credits, such as the nonconventional fuel credit, could not be carried over, whereas other lower-numbered credits, such as the investment and targeted jobs credits, had carryovers.[2]

3. Tax Liability Limitations

There were also variations in the manner in which business credits were applied in reducing tax liability. With the exception of the investment credit, the credits earned in the current year were used first before any carryforwards or carrybacks. Investment credits were applied on a first-in, first-out (FIFO) basis, whereby an investment credit carryforward was used first against current tax liability, followed by the investment credit earned in the current year, and lastly, by credits earned in later years and carried back to the current year. The investment credit FIFO rule was the more beneficial method of applying credits since it would offset taxes by the credits due to expire first.

Another variation in the utilization of business tax credits was in the amount of tax liability such credits could offset. The investment credit was fully deductible against the first $25,000 of tax and deductible to the extent of 85 percent of tax in excess of $25,000, except that the investment credit for energy property could be used against 100 percent of the tax liability in excess of $25,000.[3] The ESOP credit could offset the first $25,000 of tax liability and 90 percent of the tax liability in excess of $25,000.[4] Under §53, the targeted jobs credit could be used to offset a straight 90 percent of tax liability. The remaining business credits, such as the research credit and alcohol fuels credit, were 100 percent deductible. For purposes of determining the amount of tax a particular credit could offset, tax liability was defined as the income tax imposed reduced by lower numbered credits. Thus, for example, a corporate taxpayer that owed $50,000 in tax before credits and had a $25,000 investment credit (§38 credit) and $25,000 ESOP credit (§44G credit) would apply the two credits in sequence to offset its entire $50,000 tax liability.

4. Credit Carryovers

Significant differences also existed in the carryover provisions applicable to business credits. The credit under §44D for the production of nonconventional fuels and the credit under §44H for the clinical testing of drugs for rare diseases had no carryback or carryforward provisions. The alcohol fuel credit had no carryback feature, but it could be carried forward for fifteen years under §44E(e)(2). The investment credit, targeted jobs credit, research credit, and ESOP credit had a three-year carryback period as well as a fifteen-year carryforward period.[5]

5. Alternative Minimum Tax Effect

It should be noted that, in the case of a noncorporate taxpayer, the alternative minimum tax of §55 set a limit on the amount of total tax liability that nonrefundable credits could offset which was considerably lower than the limitations set forth for each of the credits. Under §55(a), both now and prior to the TRA, the alternative minimum tax is imposed only to the extent that it exceeds the regular tax for the taxable year. The regular tax is generally the tax imposed for the taxable year reduced by the sum of all nonrefundable credits allowable for such taxable year. With the exception of the foreign tax credit, however, nonrefundable credits may not offset the alternative minimum tax pursuant to §55(c)(1). Consequently, nonrefundable credits are effectively treated as a tax preference for alternative minimum tax purposes. The impact of the alternative minimum tax on the utilization of credits prior to the TRA may be illustrated by the following example:

> *Example*: Individuals A and B, husband and wife, have $60,000 of taxable income for 1983 resulting in a regular tax before credits of $16,014 using the joint return schedule. A and B have an investment credit for 1983 of $16,000 and a political contribution credit of $10. Because the regular tax of $16,014 is less than the $25,000 tax liability amount an investment credit can fully offset, the credit may be used in its entirety against the regular tax. The $10 political contribution credit may also be fully used. Consequently, A and B's regular tax liability after credits is $4. Assuming that A and B have no other tax preferences, and adding back for alternative minimum tax purposes the $2,000 in personal exemptions that they took in determining taxable income for regular tax purposes, A and B's alternative minimum taxable income is $62,000. The alternative minimum tax on this amount, after reduction by the $40,000 exemption amount for taxpayers filing joint returns, is 20 percent of $22,000 or $4,400. The investment and political contribution credit cannot be used as an offset against the alternative minimum tax. Thus, A and B's total tax liability for 1983 is $4,400, consisting of the $4 regular tax plus the $4,396 in alternative minimum tax exceeding the $4 regular tax.

Although the credits in the foregoing Example were not fully utilized because of the alternative minimum tax, a compensating adjustment is made in the carryover amount of those credits subject to a carryover.[6] The adjustment, in essence, increases the amount of the carryover by the credit amount not utilized because of the alternative minimum tax. This adjustment is available only for "applicable credits": namely, the investment credit, the WIN credit, the targeted jobs credit, the residential energy credit, the alcohol fuel credit, and the research credit. However, because of the mechanics of the adjustment, which effectively treats nonrefundable credits not having carryovers as being used before any applicable credits, thereby increasing the amount of applicable credits not producing a tax benefit due to the alternative minimum tax. Nonrefundable credits not having carryovers may be preserved where "applicable credits" are also present.

For example, in the foregoing Example, the investment credit carryover is increased by the full amount of the alternative minimum tax of $4,396. Under §55(c)(3), the "applicable credit limitation" (here the investment credit limitation) is deemed to be the amount of the "applicable credit" ($16,000) reduced by the alternative minimum tax ($4,396) or $11,604. The carryover is, therefore, $16,000 - 11,604 or $4,396 under §46(b).

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

B. Reasons for Change

Congress' primary reason for restructuring the credits in the TRA is readily apparent — to arrange the credits in a more rational fashion, and to provide more uniform, simpler rules for the application of the credits. A second reason, set forth in the Committee reports for the TRA,[7] is to preclude taxpayers from eliminating their tax liability entirely by the use of credits providing business incentives. The change to effectuate this intention, along with miscellaneous other changes made in restructuring the credits, converts the simplification provisions into another revenue-raising measure. For the six-year period embracing fiscal years 1984 through 1989, it is estimated that the simplification provisions will raise more than $850 million.[8]

C. Outline of New Provisions

The TRA [9] groups the credits into four categories as follows:

1. Nonrefundable personal credits, consisting of the dependent care credit, the credit for elderly or disabled individuals, the residential energy credit, the new mortgage certificate credit,[10] and the political contribution credit.

2. Miscellaneous credits, consisting of the foreign tax credit, the credit for the clinical testing of certain drugs, the credit for nonconventional fuels, and the research credit.

3. Refundable credits, comprised of the wage withholding credit, the earned income credit, the nonresident alien and foreign corporation withholding credit, the gas and special fuels credit, and the credit for overpayments of tax.

4. Business credits, consisting of the investment credits, targeted jobs credit, alcohol fuels credit, and ESOP credit, all of which are grouped into a single credit called the general business credit. This general business credit can offset the first $25,000 of tax liability and 85 percent of any tax in excess of the first $25,000. The credit will be applied on a FIFO basis with a three-year carryback and fifteen-year carryforward period.

The research credit continues to be allowed against 100 percent of the taxpayer's tax liability because Congress believed that this credit is of "such importance that it should not be restructured at this time." [11] Congress also did not alter the foreign tax credit, recognizing that it has a different purpose and rationale than personal credits and business credits and it should not, therefore, be included in any uniform credit.[12]

Under the TRA, the nonrefundable credits are applied to offset taxes in the following order: (i) personal credits, (ii) miscellaneous credits, and (iii) business related credits.

D. Effective Dates

The credit simplification provisions apply to taxable years beginning after December 31, 1983, and to carrybacks from such years.[13] Credits earned in pre-1984 years, to the extent they can be carried to post-1983 years, will be combined into a business credit carryforward from that year to be carried to post-1983 years, for a period not to exceed 15 years from the year of the original credit. Similarly, credits earned in post-1983 years may be carried back to pre-1984 years, subject to the new tax liability limitation rules imposed by the TRA.

II. Detailed Analysis

A. Rearrangement of Credits

The grouping of credits under the TRA can perhaps best be observed using charts. The first chart sets out the credit designations under the TRA, the groups into which they have been placed, and the designation of a particular credit, if any, under prior law. The second chart shows the old credit designations in numerical order and their redesignations under the TRA.

§52	Special Rules	§52	§51	Amount	§51
§53	Percentage Limitation	—	§52	Special Rules	§52

As can be seen by the foregoing charts, the nonrefundable personal credits have been grouped into Subpart A. This Subpart contains one new credit added by the TRA,[14]/ the §25 credit for interest on mortgages certified in mortgage credit certificates. Subpart B collects the foreign and possessions tax credit and miscellaneous business credits not included in the general business credit. The refundable credits are set forth in Subpart C, and the nonrefundable business credits in Subpart D. Subparts E and F are simply redesignations of old Subparts B and D containing the rules for determining the investment credit and targeted jobs credit, respectively.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The TRA [15] repeals two obsolete credits: (i) the credit for the purchase of a new residence, and (ii) the WIN credit, as well as the rules for computing the latter credit in §50A and §50B. The TRA [16] also repeals former §38 and former §44B providing for the allowance of the investment credit and targeted jobs credit, respectively. Former §38 referred to the rules set forth in former Subpart B, containing §46 through §48 for the determination of the investment credit. Similarly, former §44B referred to the rules of §51 through §53 in former Subpart F for the determination of the targeted jobs credit. The new general business credit of §38 effectively incorporates these cross-references in §38(b)(1) and (2) by referring to §46(a) for the determination of the investment credit and to §51(a) for the determination of the targeted jobs credit.

Comment: In addition to providing the cross references to the appropriate former subparts, former §§38(b) and 44B(b) authorized the Treasury Secretary to "prescribe such regulations as may be necessary to carry out the purposes of this section and subpart . . ." This grant of regulatory authority under §38(b) has been held to make the investment credit regulations "legislative in character and as binding upon a court as a statute . . ." [17] Presumably, a similar view would be taken of former §44B(b) for purposes of the targeted jobs credit. The TRA did not incorporate comparable language providing such regulatory authority in any of the new provisions concerning the general business credit or in any of the conforming changes to the investment credit and targeted jobs credit. No reason is given in the legislative history for this omission. Thus, it may merely be a legislative oversight that will be cured in a future technical corrections bill. On the other hand, Congress may have concluded that the statutory development of the investment credit and targeted jobs credit had progressed to the point that a delegation of authority to issue legislative regulations was no longer necessary. If this is the case, one might speculate as to the effect of the repeal of this broad regulatory authority on previously promulgated regulations. It could be argued that, in view of the repeal, such regulations should no longer be considered legislative in character. However, since such regulations were promulgated at a time that the specific broad grant of authority existed, it is more likely that courts will view such regulations as remaining legislative in nature. Clearly, any investment credit or targeted jobs credit regulations issued subsequent to the July 18, 1984 effective date of the TRA should not be viewed as having legislative effect since they will have been promulgated pursuant to the general authority to issue necessary regulations contained in §7805(a). Of course, while not having legislative effect, regulations issued under §7805(a) are given considerable deference by the courts.

B. Personal Credits

1. In General

Apart from renumbering the personal credits, the TRA made no significant changes in these credits. One amendment that deserves mention, however, was made in the rules governing the order of application of these credits. Under §23(b)(5)(A), the residential energy credit will be applied after the other nonrefundable personal credits except the mortgage certificate credit which will be the last nonrefundable personal credit used to offset tax liability under §25(e)(1). This treatment is beneficial because residential energy and mortgage certificate credits are the only nonrefundable personal credits for which there are carryforwards. It should be noted, however, that the residential energy credit cannot be carried forward to any taxable year beginning after 1987, as was the case under prior law, and the carryforward of the mortgage certificate credit from an unused credit year is limited to three years.

Code §26 sets forth a uniform limitation on the application of nonrefundable personal credits against tax by providing that the sum of the nonrefundable personal credits for a taxable year cannot exceed the taxpayer's tax liability for such year.

2. Definition of Tax Liability

The definition of the term "tax liability" is contained in §26(b). Tax liability is defined as the tax imposed under the income tax provisions for the taxable year, with the exception of eight penalty-type taxes. The excluded penalty taxes, which cannot be offset by nonrefundable credits, are:

(a) The corporate minimum tax of §56,

(b) The penalty taxes under §72(m)(5)(B), (o)(2), or (q) on certain distributions, such as premature distributions out of qualified plans to 5 percent owners,

(c) The penalty tax of §408(f) for certain distributions from individual retirement accounts,

(d) The accumulated earnings tax of §531,

(e) The personal holding company tax of §541,

(f) The tax imposed by §1351(d)(1) on recoveries of foreign expropriation losses,

(g) The §1374 tax on certain capital gains of S corporations, and

(h) The §1375 tax on certain passive investment income of S corporations.

Section 26(c) provides a cross reference to §55(c) for the treatment of nonrefundable credits under the alternative minimum tax.

Although it may appear unusual that a definition of tax liability for purposes of the nonrefundable personal credits makes references to taxes imposed exclusively on corporations, such as the personal holding company and accumulated earnings taxes, the reason for these references is that the same definition is used for purposes of the business related credits.

C. Foreign Tax Credit and Miscellaneous Business Credits

The credit simplification provisions of the TRA make no substantive changes to the foreign tax credit rules except to provide in §904(g) [18] that the nonrefundable personal credits are applied to offset tax liability before the foreign tax credit.

Under the TRA revisions, the foreign tax credit is applied to tax liability before the clinical testing credit of §28,[19] and this credit, in turn, is applied before the nonconventional fuel credit of §29.[20] The research credit of §30 is

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the last of the foregoing miscellaneous credits to be applied against tax liability. This is because the research credit, unlike the §§28 and 29 credits, may be carried back and carried forward.[21]

To summarize the foregoing credit application rules, the nonrefundable personal credits are applied first to offset tax liability, followed by the foreign tax credit, the clinical testing credit, the nonconventional fuel credit, and, lastly, the research credit.

For purposes of the research credit, the TRA[22] makes it clear that §30 shall be treated as a continuation of former §44F, and shall apply only to the extent former §44F would have applied, in determining whether any excess credit under former §44F for a pre-1984 taxable year is allowable as a carryover under new §30, and in determining the period for which new §30 is in effect.

D. Business Related Credits

1. General Business Credit of §38

a. Definition and Order of Application

The principal change wrought by the TRA credit simplification provisions, besides the redesignation and regrouping of the various credits, has been to collect various business credits into a general business credit, designated as §38, and to subject this credit to a uniform tax limitation and unified carryback and carryforward provision.[23]

Code §38(a) provides that the general business credit allowed for a taxable year is equal to the sum of (i) the business credit carryforwards carried to such taxable year, (ii) the amount of the current year business credit, plus (iii) the business credit carrybacks carried to such taxable year. Thus, the general business credit adopts the FIFO ordering principle of applying business credit carryforwards first against tax, followed by the current year business credit, and, lastly, by the business credit carried back.

Under §38(b), the current year business credit is defined as the sum of the (i) investment credit determined under §46(a), (ii) the targeted jobs credit determined under §51(a), (iii) the alcohol fuels credit under §40(a), and (iv) the ESOP credit determined under §41(a).

b. Tax Liability Limitations

Under §38(c), the total business credit determined under §38(a) cannot exceed the sum of (i) the first $25,000 of the taxpayer's "net tax liability" for the taxable year, plus (ii) 85 percent of the taxpayer's "net tax liability" exceeding the first $25,000. The term "net tax liability" is defined by §38(c)(2) as tax liability within the meaning of §26(b) reduced by the sum of the nonrefundable personal credits, foreign tax credit, the clinical testing credit, the nonconventional fuels credit, and the research credit.

Observation: The unified tax liability limitation, providing only a single $25,000 amount which the business credit can fully offset and setting the percentage limitation at 85 percent for tax liability in excess of $25,000, is perhaps the chief means by which the TRA credit simplification provisions raise revenue. As previously described in I, A, 3, *supra*, separate $25,000 amounts existed for some of the business related credits prior to the TRA, each of which could be fully applied by a taxpayer having multiple credits. Also, in some cases, the business related credits, such as the energy investment credit, could offset 100 percent of tax liability without limit and other credits could offset 90 percent of tax liability. Another change that enhances revenues is the placement of the clinical testing credit, nonconventional fuels credit, and research credit, all of which can still offset 100 percent of tax liability, before the general business credit for purposes of the order in which such credits are applied against tax liability. Prior to the TRA, the clinical testing credit, the research credit, and nonconventional fuels credit had higher number designations than the various credits constituting the general business credit and so were applied after such lower numbered credits in offsetting tax liability. Thus, for example, under prior law if a taxpayer had a total tax liability of $125,000 and possessed a $125,000 investment credit and $15,000 research credit, the taxpayer could have offset $110,000 of his tax liability with investment credits ($25,000 + (85 percent x $100,000) = $110,000) and offset the remaining $15,000 balance with the $15,000 research credit. Under the TRA credit ordering rules, the $15,000 research credit would be applied first against tax liability leaving a balance of $110,000 to be offset by the general business credit. The general business credit, in turn, can offset $97,250 ($110,000 - ($25,000 + (85 percent x $85,000)) = $97,250) which leaves the taxpayer with a tax liability for the year of $12,750.

The $25,000 amount that the general business credit can offset 100 percent is subject to special allocation rules in the case of related taxpayers. Under §38(c)(3)(A), married individuals filing separate returns are limited to only $12,500 apiece. However, the full $25,000 can be used by a taxpayer filing separately if the taxpayer's spouse has no business credit carryforward or carryback to, and has no current business credit for, the spouse's taxable year ending within or with the taxpayer's taxable year.

Section 38(c)(3)(B) provides that the component members of a controlled group of corporations within the meaning of §1563(a) (generally an 80-percent parent-subsidiary chain of corporations or an 80-percent commonly owned brother-sister group of corporations) must apportion the $25,000 among the members in such manner as prescribed in regulations. Presumably, such regulations will be modeled under the investment credit rules for apportioning the $25,000 amount among the members of a controlled group.[24] Under the investment credit rules, the component members can allocate the $25,000 amount in any manner that they select so long as any member that is less than 100-percent owned by the other component members of the group consents to an apportionment plan. Absent an apportionment plan, the $25,000 amount is divided equally among the component members of the controlled group. The investment regulations also provide rules for apportioning the $25,000 amount where some component members file a consolidated return and other component members do not.[25]

A thrift institution is limited to 50 percent of that portion of the $25,000 amount allocated to such member.[26] A regulated investment company or real estate investment trust subject to taxation under subchapter M of the Code is entitled to that portion of the $25,000 amount that such a taxpayer's taxable income bears to its total taxable income computed without regard to its dividends paid deduction.[27]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Under §38(c)(3)(D), an estate or trust must reduce its $25,000 amount to an amount bearing the same ratio to $25,000 as the portion of the entity's income not allocated to its beneficiaries bears to the entity's total income.

c. Special Ordering Rules for Public Utilities

Section 38(d) provides a special rule for public utilities subject to the normalization requirements of §46(f). Under this rule, for purposes of §§46(f), 47(a), 197(a), 404(i), and any other provision where it is necessary to ascertain the extent to which the business credits that constitute the general business credit are used, the order in which such credits are used is determined on the basis of the order in which they are listed in §38(b). Thus, the investment credit is deemed to be applied first, followed by the targeted jobs credit, the alcohol fuels credit, and lastly, the ESOP credit.

2. Credit Carryover

a. General

The rules for carrying back and carrying forward an unused general business credit are set forth in §39. Under §39(a)(1), a general business credit, to the extent attributable to the amount of the current year business credit, is carried back to each of the three taxable years preceding the unused credit year and is carried forward to each of the 15 taxable years following the unused credit year. The credit carryover is taken into account for a particular carryover year in the manner provided in §38(a), that is, if it is a carryforward, it is applied to offset tax liability before any current year or carryback from a later year, and if it is a carryback, it is applied after any carryforwards from earlier years or any current year credit.

Section 39(a)(2) provides that a general business credit carryover is carried back from the unused credit year to the first of the eighteen taxable years constituting the credit carryover period and then to the other seventeen years to the extent not used within a particular year. Section 38(b) effectively provides that if there is more than one credit carryback from different unused credit years to a particular taxable year, the credit carrybacks from the unused credit years are applied in sequence, the earliest year's first, against tax liability remaining after the application of any carryforwards and current year credit for that taxable year. Section 39(c) provides a comparable rule for credit carryforwards, requiring that credit carryforwards from two or more separate unused credit years be applied on a FIFO basis.

Example: Corporation A has $500,000 of tax liability for 1986. A also has an unused general business credit for 1984 of $50,000 and an unused general business credit for 1985 of $100,000, both of which, it will be assumed, can only be applied as credit carryforwards to 1986. A also has a $200,000 general business credit in 1988 and a $300,000 general business credit in 1989. A has no current year credit. Thus, A has a total general business credit of $650,000, consisting of $150,000 in carryforwards and $500,000 in carrybacks, available to offset tax liability for 1986. The percentage limitation of §38(c), however, limits the amount of 1986 tax this credit can offset to $428,750 ($25,000 + (85 percent x $475,000) = $428,750). Under §§39(c) and 38(a)(1), the 1984 $50,000 credit carryforward is applied first and is completely used up. The $100,000 carryforward from 1985 is used next pursuant to §38(a)(1). Next, under §38(b), the $200,000 credit carryback from 1988 is applied against the remaining tax liability available for offset and, finally, $78,750 of the $300,000 credit carryback from 1989 is used to offset the balance of the tax liability that may be offset in 1986 under the percentage limitation. A credit carryover of $221,250, entirely attributable to 1989, is available as a carryover to 1987 and the succeeding 17 years in the credit carryover period for 1989.

It should be noted that, although the various credits constituting the general business credit are aggregated for purposes of the carryover provisions, the alcohol fuels credit should be accounted for separately. This is because this credit cannot be carried over to any taxable years beginning after 1994. However, in computing the separate alcohol fuels credit carryover, it is treated as having been applied first to offset tax liability.[28] Thus, if a $200,000 general business credit remains available as a carryforward from 1984, $100,000 of which is attributable to an investment credit and $100,000 to an alcohol fuels credit, and if the taxpayer has $10,000 of tax liability each year for the next 10 years through 1994 and no other credits, the $100,000 of total taxes offset by the carryforward will be allocated entirely to the $100,000 alcohol fuel component of the carryforward. Consequently, the $100,000 carryforward remaining after 1994 can continue to be utilized fully for the remaining five years in the carryover period since none of it will be attributable to an alcohol fuel credit.

b. Transitional Rules

Section 39(d) provides transitional rules for the carryforward of pre-1984 refundable business credits and for the carryback of the general business credit to pre-1984 years. Under §39(d)(1)(A), any carryforward from an unused credit year under the investment credit, the WIN credit, the targeted jobs credit the alcohol fuel credit, or the ESOP credit provisions that has not expired before the beginning of the first taxable year beginning after 1983 is combined with other such credits into a business credit carryforward from that year to be carried to post-1983 years for a period not to exceed 15 years from the year of the original credit. Thus, the TRA subjects these credits to the rules governing the carryforward of post-1983 general business credits, such as the 85 percent percentage limitation, while still requiring a separate accounting of each credit for carryforward purposes.

Comment: It is not entirely clear from the statute in what order the pre-1984 credits comprising the general business credit carryforward to post-1983 years should be applied for purposes of calculating the remaining carryforward. Section 39(d)(1)(B) merely provides that the amount carried forward under the transition rule to another taxable year shall be properly reduced for any amount allowed as a credit with respect to such carryforward for any preceding taxable year. Both the House Ways and Means Report[29] and Senate Finance Report[30] state that pre-1983 credits will continue to be carried to post-1983 years under the substantive rules (apart from the tax liability limitations) under which they were earned. If this is the case, an investment credit carryforward from 1978 will be applied

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

before a targeted jobs credit carryforward from 1982 in determining the amount of each credit that survives as a carryforward to subsequent years since the §38 investment credit, as a lower numbered credit, was applied to offset tax liability before application of the §44B targeted jobs credit.[31] The same ordering principle will apply regardless of the years in which the respective credits were earned. Thus, if the targeted jobs credit was earned in 1978 and the investment credit in 1982, the investment credit will still be applied first even though the targeted jobs credit carryover will expire first.

Under §39(d)(2), if a general business credit is to be carried back to a taxable year beginning before 1984, it is treated as being used to offset tax liability only after the application of the credits under §§38, 40, 44B, 44E, and 44G (as in effect before the enactment of the TRA). When carried back to pre-1984 years, the general business credit carryback continues to be subject to the single $25,000 offset amount and 85 percent limitation on the tax liability in excess of $25,000 enacted by the TRA.[32] Further, for purposes of determining the net tax liability employed in computing the percentage limitation for the carryback year, net tax liability is defined as the tax liability determined under §26(b) reduced by the sum of the credits allowable for such carryback year under §§33, 37, 41, 44A, 44C, 44D, 44F and 44H (as in effect prior to the enactment of the TRA).

E. Conforming Changes to Business Credits

1. Investment Credit

Since the TRA provides a uniform carryover provision for the general business credit, which is generally modeled after the carryover provisions in §46(b), the carryover provisions in §46(b) have become unnecessary. Consequently, the TRA[33] deletes the carryover provisions of §46(b) and splits former §46(a) into §46(a) and (b). Moreover, §48(n) and §48(o)(3), (4), (5), (6) and (7), all of which relate to the now obsolete investment credit provided for contributions to ESOPs, have been deleted. It should be noted, however, that in the effective date provisions for the simplification rules,[34] it is stated that none of the conforming provisions to the investment credit are to be construed as reducing the amount of any credit allowable in taxable years beginning before 1984.

The special provisions in former §46(a)(7) allowing energy investment credits to offset 100 percent, rather than 85 percent, of tax liability in excess of $25,000 have been eliminated in view of the new uniform percentage limitation.

2. Alcohol and Targeted Jobs Credit

Like the investment credit carryover provisions, the carryover provisions for the alcohol fuel credit and the targeted jobs credit have been rendered unnecessary by the uniform carryover provision for the general business credit. Consequently, these carryover provisions have been deleted from both credits.[35] However, as previously mentioned, §39(e)(2) specifically provides that the alcohol fuels credit may not be carried to any taxable year beyond 1994.

The TRA[36] incorporates the election to claim the targeted jobs credit formerly provided in §44B (which was repealed by the TRA) into new §51(j). However, in contrast to the requirement under former §44B that the taxpayer elect to have the targeted jobs credit apply, new §51(j) provides that the taxpayer may elect not to have this section apply for any taxable year. As under prior law, an election may be made or revoked at any time before the expiration of the three-year period beginning on the due date for filing the return for a taxable year (determined without regard to extensions). The election is made in such manner as is prescribed in regulations.

The TRA also provides a comparable provision to elect out of the alcohol fuels credit in §39(f).[37] This is a new election; former §44E had no election provisions relating to the applicability of the alcohol fuel credit.

Comment: Although the legislative history does not assign any reason for the addition of the election-out feature in the alcohol fuel credit, it presumably was added to give a taxpayer a choice between claiming the credit, thereby recognizing income in the amount of the credit under §87, or electing out of the credit, when the credit would not prove beneficial, thereby not recognizing income under §87.

F. Refundable Credits

Apart from grouping the refundable credits in Subpart C and renumbering certain of these credits, the simplification provisions of the TRA did not effect any significant change in such credits. Refundable credits continue to be applied against tax liability after all nonrefundable credits have been utilized and, as the name implies, are refundable to the extent such credits exceed tax liability for the year.[38]

G. Alternative Minimum Tax

The TRA[39] continues the rule of prior law that nonrefundable tax credits, with the exception of the foreign tax credit, may not be used to offset alternative minimum tax liability. This is accomplished by amending §55(c)(1) to provide that, for purposes of determining any credit allowable under Subparts A, B, or D of Part IV (other than the §27 foreign tax credit), the alternative minimum tax shall not be treated as a creditable tax. The foreign tax credit continues to be allowable against the alternative minimum tax in accordance with the provisions of §55(c)(2)(B).

As under prior law, the alternative minimum tax, rather than any of the tax liability limitations set forth for the nonrefundable credits, will limit the amount of credits a noncorporate taxpayer can use each year. For example, if an individual has a $15,168 tax liability on $60,000 of taxable income and has a research credit of $5,000 and an investment credit of $10,000, the individual will have a regular tax liability after reduction by credits of $168 since the §30(g) and §38(c) tax liability limitations permit the full use of the research and investment credits. The individual's alternative minimum tax, on $62,000 of alternative minimum taxable income (adding back two personal exemptions), is $4,400. Since nonrefundable credits such as the research and investment credits cannot reduce alternative minimum tax liability, the individual's tax for the year is $4,400, consisting of the $168 of regular tax plus $4,232 of alternative minimum tax.

The TRA endeavors to preserve the rule of prior law that a credit carryover is increased by the amount of credit rendered unusable for a taxable year because of the alter-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

native minimum tax.[40] However, the TRA has not technically accomplished this result. As revised by the TRA, §55(c)(3) provides that for purposes of determining the amount of any carryforward or carryback of any residential energy credit, mortgage certificate credit, research credit, or general business credit, the amount of the tax liability limitation under §26, which relates to the residential energy credit and mortgage certificate credit, §30(g), which relates to the research credit, or §38(c) relating to the general business credit shall be deemed to be the amount of the respective tax liability limitation for such taxable year determined without regard to §55(c)(3), reduced, but not below zero, by the amount of alternative minimum tax. In computing the foregoing alternative minimum tax reduction, the alternative minimum tax is itself reduced by (i) the amount of the foreign tax credit allowable under §27(a), (ii) in the case of the research credit limitation under §30(g), the amount of alternative minimum tax taken into account with respect to the §26 limitation for nonrefundable personal credits, and (iii) in the case of the general business credit limitation of §38(c), the amount of alternative minimum tax taken into account with respect to the limitations under §§26 and 30(g).

Thus, the TRA version of §55(c)(3) uses the respective tax liability limitations to compute the carryover increase. In contrast, under §55(c)(3) prior to amendment by the TRA, the increase in the amount of a credit carryover on account of the alternative minimum tax was computed by substituting for the tax liability limitation for a particular credit the amount of the credit allowable against a regular tax reduced (but not below zero) by the amount of the alternative minimum tax. Thus, for example, if an allowable investment credit for the year was $1,000, reducing a taxpayer's regular tax to zero, and the taxpayer's alternative minimum tax was $100, his applicable credit limitation under §55(c)(3) for credit carryover purposes would be the $1,000 credit reduced by the $100 alternative minimum tax or $900. Under §46(b), the investment credit carryover amount would become the excess of the $1,000 investment credit over the $900 §55(c)(3) credit limitation or $100.

The use of the tax liability limitation instead of the amount of the allowable credit produces what the author believes is an unintended result, (confirmed in a discussion with a staff member of the Joint Committee on Taxation), as the following example illustrates.

Example 1: *Computation of Alternative Minimum Tax*. Assume that A, an individual filing a joint return with his spouse, has a regular tax before credits of $100,000, and has a residential energy credit of $1,000, a research credit of $24,000, and a general business credit of $60,000. For purposes of applying the residential energy credit, his tax liability limitation, computed under §26, is $100,000. His research credit limitation under §33(g) is $99,000, which is the $100,000 regular tax less the $1,000 residential energy credit. Under §38(c), A's tax liability limitation for purposes of the general business credit is $67,500, consisting of the first $25,000 of net tax liability of $75,000 ($100,000 - $25,000 Subpart A and B credits) plus 85 percent of the $50,000 net tax liability in excess of $25,000 or $42,500. Since none of A's credits exceeds his respective tax liability limitation, each credit is fully utilizable in offsetting the regular tax. Consequently, A's regular tax liability is $15,000 ($100,000 - $85,000). Next, assume that A's gross alternative minimum tax equals $40,000.[41] A's alternative minimum tax will, therefore, equal $25,000, which is the excess of the $40,000 gross alternative minimum tax over the $15,000 regular tax. A's total tax for the year is $40,000 consisting of the $15,000 regular tax plus the $25,000 alternative minimum tax.

Example (2): *Carryover Computation*. Under new §55(c)(3), one begins with the §23 residential energy credit for which the tax liability limitation under §26, as stated above, is $100,000. This $100,000 limitation is reduced by the $25,000 alternative minimum tax imposed by §55, leaving a tax liability limitation for residential energy credit purposes of $75,000. This $75,000 tax liability limitation is more than sufficient to absorb the $1,000 residential energy credit with the result that none of residential energy credit is available as a carryover. The tax liability limitation for purposes of computing the amount of the allowable research credit presumably remains at $99,000, since that was the amount of the limitation for regular tax purposes and the alternative minimum tax has been entirely taken into account in figuring the tax liability limitation for purposes of the residential energy credit. The research credit limitation thus remains sufficient to absorb fully the $24,000 research credit. Similarly, the general business credit limitation of §38(c) remains at $67,500 since this is the amount of the limitation for regular tax purposes and the alternative minimum tax was applied entirely against the residential energy credit limitation of §26. Consequently, there is no general business credit in excess of the $67,500 limitation available for carryback or carryforward. The result under new §55(c)(3) that no credit carryover is created does not seem proper given that the $25,000 alternative minimum tax causes the loss of $25,000 in credits for the year in question.

Comment: The most readily apparent solution to the foregoing problem in §55(c)(3) would be to restore the rule of prior law that the tax liability limitation for the respective nonrefundable credits be deemed to be the amount of each credit, rather than the tax liability limitation itself. After an informal inquiry by the author concerning the problem, a staff member of the Joint Committee on Taxation agreed that this would provide the correct result. However, a technical correction to §55(c)(3) will be required.

H. Miscellaneous Amendments

1. Unused Business Credit Deduction

Section 196, which formerly applied to investment credits only, has been amended [42] to embrace the targeted jobs credit and alcohol fuels credit as well as the investment credit. Under §196, if any portion of these three credits will expire unused at the end of a carryover period, the portion of the credit not so allowed is deductible by the taxpayer for the first taxable year following the last taxable year for which such credit could have been allowed as a credit under §39. However, as under prior §196, to the extent the unused credit is attributable to an investment credit (other

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

than the 15 and 20 percent rehabilitation credits), only 50 percent of the credit is allowable as a deduction.

Similarly, if a taxpayer dies or ceases to exist during the carryover period, §196(b) allows the deduction of the unused credit amount, under prescribed regulations, for the taxable year in which such death or cessation of existence occurs.

The ESOP credit, which is the only other credit includible in a general business credit under §38, has a separate set of rules permitting a deduction for an unused credit.[43]

2. Survival of Business Credit in Corporate Reorganizations

The TRA[44] amends §381, relating to tax attributes that are inherited by the transferee corporation from the transferor corporation in certain tax-free corporate liquidations and reorganizations, to provide that the unused business credit is one of the attributes that can be inherited subject, however, to the limitations applicable to credits in §383.

3. Tentative Carryback Refunds

In another conforming change, the TRA[45] amends §6411(a)(1) to permit the use of the quick refund procedures of §6411 to obtain a refund attributable to the carryback of a general business credit.

4. Repeal of Tax-Free Covenant Bonds

Section 1451(a) provides that where corporate bonds, mortgages, or other similar corporate obligations issued before 1934 contain a contract or provision under which the obligor agrees to pay or reimburse any portion of the tax imposed by the Internal Revenue Code on the holder of the obligation, the obligor is required to withhold as a tax 2 percent of the interest paid on the obligation if such interest is payable to an individual, partnership, or foreign corporation not engaged in a U.S. trade or business. However, under §1451(b), if the obligor's liability does not exceed 2 percent of the interest and the obligee is a nonresident alien individual, partnership not engaged in a U.S. trade or business, or foreign corporation not engaged in a U.S. trade or business, the customary 30 percent withholding tax applies on the interest paid.

The TRA[46] deletes the tax-free covenant bond provisions from the Code. However, these deletions do not apply to obligations issued before 1984. Since §1451 only applies to obligations issued before 1934, the tax-free covenant provisions effectively continue to apply to any such obligations that are still outstanding.

CHAPTER 15

CHANGES IN INVESTMENT TAX CREDIT RULES

Charles E. Taylor, Esq.
and
Patrick G. Dooher, Esq.
Silverstein and Mullens
Washington, D.C.

I. Revision of Investment Tax Credit At-Risk Rules [Act §431] — Code Sections 46(c) and 48(d)

A. Introduction

As part of the Economic Recovery Tax Act of 1981,[1] Congress imposed an at-risk limitation on amounts qualifying for investment tax credit.[2] These rules apply to individuals and closely-held corporations that engage in a trade or business or other income-producing activity other than real estate or certain corporate leasing.[3] The investment tax credit is not allowed for amounts invested in qualifying property to the extent that invested amounts are not at-risk within the meaning of the at-risk loss provision contained in §465(b).

An amount is not considered at-risk if the taxpayer borrowed the amounts for use in an activity and (1) he is not personally liable for repayment of the amount (*i.e.*, the debt is non-recourse and the taxpayer has solely pledged the purchase property as security for the borrowed amount), (2) the taxpayer is protected against loss through guarantees, stop loss agreements, or other similar arrangements, (3) the lender has an interest (other than as a creditor) in the business activity in which the property is used, or (4) the taxpayer is related to the lender within the meaning of §267(b).[4]

There are two exceptions to the tax credit at-risk rule. Amounts borrowed (other than convertible debt) to purchase investment tax credit property are considered at-risk if the taxpayer at all times is at-risk as to an amount equal to at least 20 percent of the basis of the property and the amount is borrowed from or guaranteed by any federal, state or local government or is borrowed from a qualified lender (*i.e.*, a bank, savings and loan, credit union, insurance company, qualified pension trust, or other person actively and regularly engaged in the business of money lending).[5] The qualified lender must not be related to the taxpayer as defined in §168(e)(4), may not be a person who receives a fee with respect to the taxpayer's investment in property (or a person related to that person), and may not be a person from whom the taxpayer acquired the property (or a person related to that person). There is also an exception for certain level payment loans related to qualified energy property.[6] The investment tax credit at-risk rules are applied at the shareholder or partner level for S corporations and partnerships.

The amounts for which a partnership or S corporation are considered at-risk from qualified lenders are allocated among the partners or shareholders according to the rules for allocation of the investment tax credit under §38.[7] This rule, however, does not apply for purposes of determining whether a partner or shareholder has a minimum 20 percent at-risk investment in the property. Thus, to benefit for the qualified lender exception, each partner or shareholder must have an individual 20 percent at-risk investment in the property as determined by the general rules of §465(b). That is, the partner or shareholder will only be considered at-risk for contributed cash and borrowed funds for which he is personally liable.[8] The at-risk limitations for investment tax credit applied to property placed in service on or after February 19, 1981. It did not apply, however, to property placed in service on or after that date if the property was acquired under a binding contract entered into before February 19, 1981.[9]

1. Pass-Through of Investment Tax Credit for Leases

Under existing §48(d), the lessor of new investment tax credit property may elect to transfer (*i.e.*, pass-through) the credit to the lessee, subject to certain conditions. For certain short-term leases, only a portion of the credit may be transferred. Under present law, it is not clear how the at-risk rules apply in the case of a pass-through lease. It appears that some lessees have taken a position that the rules do not apply to them and, have thus rendered the at-risk rules inapplicable to certain lease transactions.

2. Purpose of the At-Risk Rules

The general purpose of the at-risk rules would reduce the incentive for taxpayers to reduce their tax liability by investment in tax shelter activities when they are not subject to a real economic risk. Accordingly, the at-risk rules limit a taxpayer's tax benefits from investment tax credits to funds which the taxpayer has personally used to purchase the property or which the taxpayer has borrowed and is personally liable to repay.

As a corollary, the at-risk rules should prevent investment tax credits from accruing to a purchaser who has no real equity in a property because the value of the property is, or may become, less than the face amount of nonrecourse financing on the property. In this situation, the purchaser may receive the benefit of investment tax credit

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

without bearing the economic burden of any decline in the property's value. Similarly, if property is purchased in a seller-financed transaction, there may be some incentive for the parties to inflate the purchase price in order to give the purchaser additional depreciation or interest deductions or an inflated investment tax credit. In these situations, the buyer may be unconcerned about the higher price since the property may simply be repossessed by the seller after the buyer has benefitted from the inflated deductions or credits. The House Ways and Means Committee expressed a concern that the investment tax credit at-risk rules generated significant confusion among taxpayers and inhibited certain nontax shelter transactions. A significant portion of this confusion arose from the interdependence of the loss, limitation at-risk rules contained in §465(b) and the investment tax credit rules. The former are applied on an activity-wide basis and the latter are applied on a property-by-property basis. The Committee felt that an independent rule for the at-risk limitations on investment tax credits would decrease this confusion.[10]

The House Ways and Means Committee believed that the at-risk rule should still apply to those situations where taxpayers will reduce their income tax liability by investing in tax shelter activities in which they are not subject to a real economic risk. However, in those nonrecourse financing situations where the debtor has a real equity interest in property and is likely to make all payments for the property, tax shelter elements are not present and the at-risk rules are not needed. Accordingly, certain active closely-held corporate businesses will be exempt from the at-risk rules for investment tax credit. The changes contained in the Act are designed to eliminate the competitive disadvantages encountered by those closely-held businesses which have been prevented from using legitimate nonrecourse financing or recourse financing through their active subsidiaries.

B. Overview

1. Outline of New Provision

a. Revision of Investment Tax Credit At-Risk Rules

The investment tax credit at-risk rules have been separated from the at-risk rules in §465 and now reduce the credit basis amount of property which qualifies for investment tax credit by the amount of nonrecourse financing excluding certain commercial financing. As under prior law, the general at-risk rules will apply to determine the taxpayers subject to this limitation and to determine the uses of the property which will subject it to the at-risk limitations.

The taxpayer's basis of property for determining the investment tax credit will be reduced by the amount of nonrecourse financing on the property. Nonrecourse financing includes any amount to which the taxpayer is protected against loss — for example, guarantees or stop-loss agreements. Nonrecourse financing also includes amounts borrowed from a person who has interest in the activity in which the property is used or a person related to such person.

There is, however, an exception for qualified commercial nonrecourse financing similar to that under existing law.[11] Qualified commercial financing includes nonrecourse financing provided or guaranteed by any federal, state or local government, or borrowed from a qualified person. A qualified person includes any person actively or regularly engaged in the business of lending money but not any person who is related to the taxpayer, the person from whom the taxpayer acquired the property (or any person related to that person), or any person who receives a fee with respect to the taxpayer's investment in the property (or a person related to such person). The definition of related person, as set forth in §168(e)(4), generally includes family members, fiduciaries, and corporations or partnerships in which a person has at least a 10 percent interest. This exception will not apply if the amount of nonrecourse financing with respect to the property exceeds 80 percent of the taxpayer's basis in the property. In addition, the exception will not apply where the property was acquired by the taxpayer from a related person.

The present safe-harbor rules for certain energy property are continued under the Act.

For partnerships and S corporations, the determination of nonqualified, nonrecourse financing is determined at the partner or shareholder level. If a qualified person provides recourse financing to an S corporation, an allocable share of such financing is treated as recourse to the S corporation's shareholders. Financing of this nature will not count as nonqualified, nonrecourse financing and will not reduce the amount of investment tax credit on this property even though the shareholder may not be personally liable for repayment. Property which qualifies for this exemption must be used by the S corporation in an active trade or business which has at least three full-time nonowner employees during the entire 12 month period ending on the last day of the taxable year, if the services of such individuals are directly related to the business. One full-time employee must also be active in the management of the business. This exception does not apply to master sound recordings or other tangible or intangible assets associated with literary, artistic or musical properties. The amount of any partner's or shareholder's allocable share of financing will be a determined according to the rules for allocation of the investment tax credit as allowed by §38.

Subsequent increases and decreases in nonqualified, nonrecourse financing may increase or decrease the amount of investment tax credit available to a taxpayer. The rules are generally consistent with the rules for changes in the at-risk amount contained in present law.

2. Pass-Through of Investment Tax Credit to Lessees

The Act provides specific at-risk rules for credit pass-through ("§48(d)") leases. Generally, a lessee will be allowed a full investment tax credit only if it is obliged to make rental payments which equal 30 percent of the present value of the amount for which the lessee is treated as having acquired the property by reason of the lessor's election (18 percent of that present value in the case of three-year property). In addition, the lessee's credit is limited to the amount which would have been allowed to the lessor had the lessor's basis in the property been the lessee's acquisition amount and the lessor had not made the pass-through election. Thus, the lessee will receive full credit only if the lessor (who is subject to the at-risk rules) is at-risk with respect to the property.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The lessee is considered "at-risk" with respect to rental payments which it is required to make under the lease in all events and for which the lessee is not protected against loss through guarantees, stop-loss arrangements or other similar arrangements. The present value of the at-risk rental payments is to be determined by discounting all of the future minimum required rental payments by the interest rate for underpayments of tax in §6621 on the date of the lease.

If the lessee is not entitled to the full investment tax credit under the rules stated above, it may still qualify for a portion of the credit. The amount of the partial credit in any taxable year will equal the full amount of investment tax credit allowable times a fraction, the numerator of which is the aggregate rental payments actually made during the taxable year and the denominator of which is the lessee acquisition amount. Thus, if the lessee makes aggregate rental payments equal to 20 percent of the lessee acquisition amount, 20 percent of the investment tax credit will be allowed in that year.

If investment tax credits are passed through to partnerships and S corporation lessees, the partners or the shareholders must individually be at-risk for their share of the minimum lease payments. Any subsequent reduction in the lessee's at-risk amount through stop-loss or similar arrangements with respect to future rental payments will result in recapture of amounts of the investment tax credit. For purposes of the recapture rule, if the lessee has actually made rental payments, the amount of those payments are considered amounts for which the lessee is at-risk even though they are already paid.

The Treasury has broad authority to prescribe regulations necessary to carry out the purposes of the lessee at-risk rules. The Treasury Department is directed to address the adjustments which may be appropriate where expenses connected with the lease are borne by the lessor and the extent to which contingencies in the lease will be disregarded.

Other sections of the Act revise the activities to which the loss limitation at-risk rules in §465 apply.[12] This provision would exclude certain active businesses conducted by closely-held C corporations from the activities subject to the at-risk rules. Since the investment tax credit at-risk rules are applied to any property which is used in connection with an activity that is subject to a loss limitation under §465, the exclusion of these closely-held C corporations which conduct active businesses from the at-risk activities will also exclude them from the investment tax credit at-risk rules.[13]

3. Effective Date

The revised provisions of the at-risk rules will apply to property placed in service after July 18, 1984 in taxable years ending after that date. The changes will not apply to any property to which §§46(c)(8) and (9) and §47(d) do not apply.[14]

A taxpayer may elect to apply these amendments as if they had been made as part of the Economic Recovery Tax Act of 1981. Such election may only be made as to all property to which the amendments by §211(f) would apply and shall be made in such manner and such time as the Secretary of the Treasury shall prescribe in regulations.[15]

C. Detailed Analysis

1. Revision of At-Risk Rules

a. In General

Section 46(c)(8) is totally revised to incorporate a specific set of at-risk rules applicable solely to the investment tax credit instead of applying the rules contained in §465. As under prior law, the new provision limits the investment tax credit of individuals and any corporation with 50 percent in value of its outstanding stock owned, directly or indirectly, by or for not more than five individuals at any time during the last half of the corporation's taxable year.[16] The limitation applies to qualifying property which is used in connection with a trade or business or for the production of income — the same as under prior law. There is an exclusion for activities which involve the holding of real property, (other than mineral property) and for certain equipment leasing by closely held corporations.[17] The investment tax credit for any property to which the at-risk rules apply will be reduced to account for the nonqualified, nonrecourse financing with respect to such property as of the close of the taxable year in which the property is placed in service. The "credit base" for such property is reduced by the nonqualified, nonrecourse financing on the property, and the appropriate investment tax credit rate is applied to the adjusted credit base.

The credit base for qualified property is defined as the basis of new §38 property or the cost of used §38 property.[18]

b. Nonqualified, Nonrecourse Financing

The new investment tax credit at-risk rules reduce the credit base of property by the amount of nonqualified, nonrecourse financing. Nonrecourse financing for purposes of this section includes typical nonrecourse financing and any amount for which the taxpayer has arranged to protect himself against loss through a guarantee or stop-loss agreement. Nonrecourse financing will also include any amount borrowed from a person who has an interest (other than a creditor) in the activity in which the property is used or if the borrowing is from a person related to the person who has the interest. If a person has an interest in property solely because of his ownership of shares in that corporation, borrowing from that individual, or a person related to that individual, will not be considered nonrecourse financing.[19]

The major exception to the definition of nonqualified nonrecourse financing is for certain "qualified commercial financing." This exception applies to property acquired by taxpayer from a person who is not a related person if the amount of nonrecourse financing on the property does not exceed 80 percent of the property's credit base. A taxpayer may borrow from a "qualified person" or from any federal, state, or local government or instrumentality thereof, or the financing may represent a loan guaranteed by any federal, state or local government. Convertible debt cannot qualify for this exception.[20] Persons who are actively and regularly engaged in the business of lending money are considered qualified persons and may engage in qualified commercial financing as contemplated by this exception. Such qualified persons may not be related to the taxpayer, the person from whom the taxpayer acquired the property (or a person related to such person), or a person who received a fee with

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

respect to the taxpayer's investment in the property (or a person related to such person).[21] An example of a person who received a fee with respect to a taxpayer's investment in property would be a promoter or organizer of an investment.[22]

The term "related person" for purposes of determining if borrowing is nonqualified, nonrecourse financing, is defined with reference to §168(e)(4) determined as of the close of the taxable year in which the property is placed in service. If the two persons are related in the following manner, and one of them is a disqualified person, the other person will also be disqualified:

(1) the brothers, sisters, (whether by whole or half blood), spouse, ancestors, and lineal descendants of a person;

(2) a corporation in which the individual owns more than 50 percent of the value of the outstanding stock of that corporation either directly or indirectly;

(3) two corporations if more than 50 percent of the value of the outstanding stock of each corporation is owned directly, or indirectly, by or for the same individual and if either one of such corporations is a personal holding company at the end of the taxable year;

(4) a grantor and a fiduciary of any trust;

(5) fiduciaries of trusts which have the same person as grantor;

(6) fiduciary of a trust and a beneficiary of that trust;

(7) fiduciary of a trust and beneficiary of another trust if the same person is grantor of both trusts;

(8) fiduciary of a trust and a corporation if more than 50 percent in value of the outstanding stock of the corporation is owned directly or indirectly by or for the trust or by or for the grantor of the trust;

(9) an S corporation and a partnership if the same person owns more than 10 percent in value of the outstanding stock of the S corporation and more than 10 percent of the capital interest or the profits interest in the partnership;

(10) an S corporation and another corporation if the same person owns more than 10 percent in value of the outstanding stock of each corporation;

(11) an S corporation and a C corporation if the same individual owns more than 10 percent in value of the outstanding stock of each corporation;

(12) a partnership and a partner owning directly or indirectly more than 10 percent of a capital or the profit interest in such partnership;

(13) two partnerships in which the same persons own, directly or indirectly, more than 10 percent of the capital interest or profit interest;

(14) both persons are members of a parent-subsidiary controlled group as defined in §1563(a)(1) as modified by §52(a);

(15) both persons are members of a brother-sister controlled group as defined in §1563(a)(2) as modified by §52(a);

(16) both persons are members of a combined group as defined in §1563(a)(3) as modified by §52(a).

The determination of whether a partner's or S corporation shareholder's allocable share of any financing is nonqualified, nonrecourse financing is determined at the partner or shareholder level. Thus, when arranging nonrecourse financing which the purchaser wishes to be qualified commercial financing, the determination of the prohibited relationships is made at a shareholder level. Apparently, depending on the owners of a partnership or S corporation, one owner may have a full credit basis for its investment tax credit property but another owner may have its basis reduced because of a prohibited relationship to the lender.[23] The determination of any partner's or shareholder's allocable share of any financing is made in the same manner as the investment tax credit is allowable under §38.[24] These rules are generally included in §1.46-3(f)(2) of the Treasury Regulations.

If the financing is with recourse at the corporate level of an S corporation, the financing will be considered recourse financing with respect to that shareholder's allocable share of the financing if the property is considered qualified business property even though there is no recourse to the shareholder under state law.[25] "Qualified business property" is any property used by a corporation in the active conduct of a trade or business if the corporation had at least three full-time employees who are not owner-employees [as defined in §465(c)(7)(E)(i)] during the entire twelve month period ending on the last day of the taxable year and if substantially all the services of those three employees are directly related to the active trade or business conducted by the corporation. In addition, during the entire taxable year (consisting of twelve months) the corporation must have at least one full-time employee substantially engaged in the active *management* of the trade or business.[26] This exception will not apply to any master sound recording or other tangible or intangible asset associated with literary, artistic or musical properties.

c. Subsequent Decrease in Nonqualified, Nonrecourse Financing

If a purchaser of property which qualifies for the investment tax credit decreases the amount of nonqualified, nonrecourse financing on that property, the at-risk provisions will allow the taxpayer to take some or all of the additional investment tax credit which was previously disallowed on the property. New §46(c)(9) addresses a subsequent decrease in nonqualified, nonrecourse financing. If, at the close of a taxable year following the taxable year in which the property is placed in service, there is a net decrease in the amount of nonqualified, nonrecourse financing on property, then that decrease will be considered an additional qualified investment by the taxpayer in the year in which the property was first placed in service.[27] However, the credit will be treated as earned only in the year in which the decrease in the amount of nonqualified, nonrecourse financing occurs. Thus, the percentage of credit allowable will be determined on the useful life based on the date the property is placed in service but interest on the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

amount of any refund will run from the year of the decrease in the financing. This is the same rule which is contained in §46(c)(9)(C) prior to the 1984 amendments.

Observation: There is a provision in the statute which provides that nonqualified, nonrecourse financing will not be treated as decreased through the surrender or other use of property financed by nonqualified, nonrecourse financing.[28] There is no clear legislative history on the intent behind this provision. It apparently means that if a taxpayer reduces his nonqualified, nonrecourse financing by surrendering to the borrower, or allowing the borrower to use, property financed by nonqualified, nonrecourse financing, there will be no additional qualified investment allowed with respect to that property.

d. Subsequent Increase in Nonqualified, Nonrecourse Financing

Section 47(d) provides that there is a net increase of nonqualified, nonrecourse financing with respect to any property for which investment tax credit was allowed, the investment tax credit shall be recaptured in an amount equal to the existing investment tax credit allowed with respect to the property less the amount of investment tax credit which would be allowed for the amount of nonqualified, nonrecourse financing outstanding at the end of a current taxable year.[29] The specific language of this section says that the increase in nonqualified, nonrecourse financing will generate a reduction in investment tax credit only if §46(c)(8) applied. That section applies only if there is nonqualified, nonrecourse financing outstanding at the end of the taxable year in which the property is placed in service. Apparently, such financing placed on the property after the close of the taxable in which it is placed in service will not reduce the investment tax credit.

The revision of §47(d)(2) retains the exception that a transfer of any evidence of indebtedness more than one year after the date the indebtedness is incurred will not be considered an increase in the amount of nonqualified, nonrecourse financing. The meaning of this section may be illustrated as follows: if a qualified person transfers qualified commercial financing to a nonqualified person, there would be no increase in nonqualified, nonrecourse financing if the transfer takes place more than one year after the indebtedness was incurred.

2. At-Risk Rules Apply to Pass-Through Leases

a. Lessor Election

The 1984 Act specifies the new at-risk rules which will apply when a lessor makes an election to pass the investment tax credit through to a lessee under §48(d). This paragraph applies the at-risk investment tax credit rules contained in §46(c)(8), discussed above, to the lessor of the property.[30] The at-risk rules do not apply to a lessor who manufactured or produced the property or if the property has a readily ascertainable fair-market value. In addition, the Secretary of the Treasury has discretion to prescribe regulations which outline any other exceptions where this rule is not necessary for the lessor to be subject to the at-risk rules.[31]

b. Limitation on Lessee's Credit

If the at-risk rules apply to a lessor, the lessee's credit will be limited to the amount that the lessee is at-risk as determined in accordance with the rules of §46(c). Specifically, the lessee's credit will be limited to the amount of investment tax credit which would have been allowable to the lessor with respect to the property if the lessor's basis in the property were equal to the lessee's acquisition amount and the lessor had not made an election under this section.[32]

Not only is the lessor subject to the at-risk rules, but the lessee is also subject to the rules. A lessee who is subject to these new rules is now called the "at-risk lessee." An at-risk lessee is any lessee who is a taxpayer subject to the at-risk rules in §465(a)(1).[33] These at-risk rules apply to "at-risk property" which is any property used by an at-risk lessee in connection with an activity which is subject to the at-risk rules of §465.[34] These are the same requirements that were imposed under prior law.

To avoid a reduction in investment tax credit, an at-risk lessee must have a minimum at-risk percentage. The at-risk percentage is determined by dividing the present value (discounted at the §6621 rate in effect at the time the lease is entered into) of the aggregate lease at-risk payments by the lessee acquisition amount.[35] To avoid a reduction of the lessee's investment tax credit, its at-risk percentage must exceed 10 percent plus two times the sum of the percentages of investment tax credit available on the property. If the at-risk property is three year property for purposes of the accelerated cost recovery system (ACRS), the required percentage is only 60 percent of the amount determined in the preceding sentence.[36]

Example: If qualified inter-city buses are placed in service on January 1, 1985, the amount of the credit will equal the sum of the regular percentage, of 10 percent, and the energy percentage of 10 percent for a total of 20 percent. For this type of property, the at-risk percentage of the property must equal or exceed 50 percent (ten percent plus two times 20 percent).

If the property were an automobile which is three year property, the at-risk percentage for that property must exceed 18 percent. That percentage is calculated by doubling the regular percentage of 10 percent, adding 10 percent to that and multiplying that result (30 percent) by 60 percent.

For purposes of determining the at-risk percentage, the lessee acquisition amount is the amount at which the lessee is treated as having acquired the property under the general pass-through rules (*i.e.*, without regard to the amount at-risk).[37] A lessee is determined to be at-risk with respect to any rental payment which the lessee is required to make under the lease in all events and for which the lessee is not protected against loss through nonrecourse financing, guarantees, stop-loss agreements or other similar arrangements.[38]

If the at-risk percentage for a particular piece of lease property is less than the required percentage, only a portion of the investment tax credit will be allowed to the lessee. In any taxable year, the investment tax credit allowed to the taxpayer will be based on the ratio of aggregate rental payments made by the lessee under the lease during the taxable year to the lessee acquisition amount.[39] In the year in which the aggregate rental payments with respect to the property exceed the required percentage, the lessee is al-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

lowed to take the remaining investment tax credit against income.[40]

Example: A lessor and lessee enter into a lease for property which qualifies as five year ACRS property and for which the lease requires equal payments of $20 per year for a five year period. Assuming the present value of the aggregate lease payments is $80, the at-risk percentage in the first year will be 25 percent ($20 divided by $80). Accordingly, the lessee would only receive 25 percent of the investment tax credit available in the first taxable year. In the second taxable year, when the at-risk lease payments ($40) equal 50 percent of the lessee acquisition amount ($80), the remaining amount of investment tax credit will be allowed to the lessee.

If the lessor elects to pass-through the investment tax credit to a lessee, the lessee will only be subject to the at-risk rules contained in §48(d)(6). The lessor, but not the lessee, must comply with the at-risk rules of §§48(c)(8) and (9) and 47(d).[41]

c. Partnerships and S Corporations as Lessees

Lessees which are partnerships and S corporations will be subject to similar rules contained in general investment tax credit at-risk rules. Accordingly, those partners and shareholders must individually be at-risk for their share of the minimum lease payments on investment tax credit that will passed-through to them.[42] This means that the individual shareholders and partners generally must be at-risk for their share of the lease at-risk payment. Presumably, an S corporation shareholder will be considered at-risk for all rental payments which the S corporation is required to make under the lease in all events and which is provided with respect to qualified business property as defined under §46(c)(8)(E)(iii).[43]

If there are subsequent reductions in a lessee's at-risk amount with respect to future lease payment by entering into guarantees or stop-loss arrangements, the Secretary of the Treasury will have the discretion to promulgate regulations which recapture the investment tax credit under principles similar to those in §47(d).[44] For purposes of this rule, any lease payments actually made by the lessee will be considered an at-risk payment in determining the lessee's amount.[45]

d. Treasury Regulations

The Treasury Department is authorized to prescribe regulations necessary to carry out the purposes of the lessee at-risk rules.[46] The Treasury is specifically directed to consider the appropriate adjustments to acquired rental payments where the lessor bears expenses connected with the lease which the lessee typically bears. In addition, the regulations will address which contingencies in a lease will be disregarded for purposes of the at-risk rules. The regulations regarding contingencies are expected to take into account the normal business practices associated with lease transactions. Accordingly, a provision such as forgiveness of rental payments where the property is destroyed or damaged will be disregarded for at-risk purposes. The option of the lessee to unilaterally terminate the lease is not a contingency which should be disregarded for at-risk purposes. However, when the termination of a lease is permitted on payment of a fixed amount, the lessee may be considered at-risk for the lesser of the present value of the termination period or the present value of the future rent payments which would be due after the date on which the lease could be terminated. Also, a lessee's right to substitute other lease property in the future (*e.g.*, a newer model of a leased computer) is a contingency which may be disregarded if the minimum rental payments under the lease are not reduced upon such substitution.[47]

II. Modifications of Rules Governing the Rehabilitation ITC

A. Introduction

Under §46(a)(3) and (b)(4), as revised by the TRA credit simplification provisions,[48] three different investment credit rates are prescribed for qualified rehabilitation expenditures incurred in connection with the rehabilitation of a qualified building. The investment credit rate is 15 percent of qualified rehabilitation expenditures for buildings that are at least 30 years old, the rate increases to 20 percent of qualified expenditures for buildings at least 40 years old, and the credit is equal to 25 percent of qualified rehabilitation expenditures in the case of a certified historic structure.

Section 48(g) sets forth the requirements that must be satisfied to obtain the rehabilitation investment credit. Under §48(g)(1), a qualified rehabilitated building is a building (i) that has been "substantially rehabilitated", (ii) that was placed in service before the beginning of the rehabilitation, and (iii) that has retained 75 percent or more of the existing external walls as external walls in the rehabilitation process. A building has been "substantially rehabilitated" if the qualified rehabilitation expenditures during the 24-month period selected by the taxpayer exceed the greater of (i) the adjusted basis of the building, or (ii) $5,000. A lessee may undertake the rehabilitation of the building and qualify for the rehabilitation investment credit, but only if the remaining term of the lease when rehabilitation is completed, determined without regard to any renewal periods, is less than 15 years.[49] An expenditure is a qualified rehabilitation expenditure, if, among other things, it is incurred for property (or additions or improvements to property) having a recovery period within the meaning of §168 of 15 years, and is incurred in connection with the rehabilitation of a qualified rehabilitated building; a rehabilitation expenditure does not qualify unless the straight-line cost recovery method under §168(b)(3) is elected with respect to the expenditure.[50]

B. Analysis of TRA Changes to Rehabilitation Credit

The TRA amends the requirements for the rehabilitation investment credit in four respects. First, in a change conforming the rehabilitation investment credit rules to the lengthening of the §168 cost recovery period for real property to 18 years, the TRA[51] modifies the definition of a "qualified rehabilitation expenditure" to provide that the expenditure must be incurred for real property (or additions or improvements to real property) having a recovery period of at least 18 years unless the expenditure relates to low-income housing, in which case the recovery period remains at 15 years. In addition, if the expenditure is made

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

by a lessee, the expenditure does not qualify for the credit unless the remaining term of the lease is at least 18 years (15 years in the case of low-income housing).[52]

A second change made by the TRA [53] relating to the definition of a qualified expenditure is to provide that an expenditure does not qualify if it is allocable to the portion of the building which is (or may be reasonably be expected to be) tax-exempt use property within the meaning of §168(j)(3). In general, tax-exempt use property is property leased to a tax-exempt entity, governmental entity, or foreign person or government. It should be noted, however, that even if the expenditure allocable to tax-exempt use property does not qualify for the credit, the expenditure will still be counted for purposes of determining whether a building has been substantially rehabilitated. The new tax-exempt leasing rules are analyzed in detail in Chapter 18.

Note: The tax-exempt entity provisions of the TRA amend §48(a)(5) to extend the denial of investment credit property status (§38 property) to property used by a foreign person or entity as well as to property used by the U.S. or a state government or instrumentality thereof. One exception to the denial of §38 status, carried over from pre-TRA law, is provided for a qualified rehabilitated building leased to a governmental unit (or, as expanded by the TRA, to a foreign person or entity). This exception applies to the portion of the building's basis attributable to qualified rehabilitation expenditures. However, an expenditure will not be a qualified rehabilitation expenditure if it will constitute tax-exempt use property. Hence, even though the rehabilitated building will not be disqualified under §48(a)(5), the expenditures must still pass muster under §168(j)(3).

A clarifying change, also made in the tax-exempt leasing portion of the TRA,[54] is to provide that the straightline method of depreciation under §168(b)(3) need not be elected with respect to any expenditure described in §168(j), the tax-exempt entity rules, or §168(f)(12), the tax-exempt financed property rules, since the straight-line method is already required for such expenditures.

The final modification to the rehabilitation investment credit rules enacted by the TRA [55] is to provide an alternative test to the retention of the 75-percent external wall test for purposes of determining whether a building is a qualified rehabilitated building. Under new §48(g)(1)(E), the 75-percent external wall test of §48(g)(1)(A)(iii) is deemed satisfied if, in the rehabilitation process, the following three requirements are met:

(i) at least 50 percent of the building's external walls are retained in place as external walls;

(ii) at least 75 percent of the building's external walls are retained in place as either external walls or internal walls; and

(iii) at least 75 percent of the building's internal structural framework is retained in place.

The reason for the enactment of this alternative test is to facilitate the qualification for the rehabilitation credit by buildings that are not square or rectangular in shape.[56]

The Senate Finance Report [57] provides that the alternative method will continue to follow the present rules for determining the percentage of a building's external walls that are retained and that it is intended that comparable rules will apply under the alternative test in determining what percentage of internal walls (and external walls converted to internal walls) are retained following rehabilitation. The Report further states the intention that all load-bearing internal walls and any other internal structural supports present in the building before rehabilitation begins, including columns, girders, beams, trusses, spandrels, and all other members that are essential to the stability of the building, will be treated as part of the building's internal structural framework.

C. Effective Dates

The TRA provisions conforming the rehabilitation investment credit rules to the 18-year recovery period under §168 are generally effective with respect to property placed in service after March 15, 1984.[58]

The new provisions added in the tax-exempt entity leasing portion of the TRA are generally effective for property placed in service after May 23, 1983, and taxable years ending after that date.[59]

The alternative test to the 75-percent external wall test is effective for qualified rehabilitation expenditures incurred after December 31, 1983, in taxable years ending after that date.[60]

III. Increase in the Amount of Used Property Eligible for the Investment Credit Postponed

A. Introduction

Under §48(c), only a limited amount of "used §38 property" may be taken into account in calculating the investment credit. "Used §38 property" is §38 property that is not new, that is acquired by purchase, and that does not continue to be used after its acquisition by a person who used the property before acquisition (or a person related to the user).

Section 48(c)(2), as amended by the Economic Recovery Tax Act of 1981 (ERTA),[61] increased the amount of used §38 property that can be taken into account in figuring the credit to $125,000 for taxable years beginning in 1981 through 1984. For years beginning subsequent to 1984, ERTA raised the limit on used §38 property to $150,000. The used §38 property limitation for married individuals filing separately is generally one-half of the dollar limitation applicable to other taxpayers.[62]

B. Analysis of TRA Postponement

The TRA [63] amends §48(c) to retain through 1987 the $125,000 used §38 property limitation ($62,500 for married individuals filing separate returns). Accordingly, the $150,000 used §38 property limitation will not become effective until taxable years beginning after 1987.

As tax-raising measures go, the postponement of the increase in the used §38 property limitation is not overly significant but still may have an effect on small business taxpayers, who are more likely to acquire used property for the cost savings. The postponement results in the potential loss of the credit on $25,000 of used property. Assuming used property were eligible for the full 10 percent credit,

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the maximum potential loss of credit is $2,500 for any year affected by the change.

C. Effective Date

The foregoing TRA amendment is effective for taxable years beginning after December 31, 1983.[64]

IV. Categories of Tax-Exempt and Foreign Entities Subject to Nontaxable Use Restriction Expanded [Act §31]

Section 31 of the Act expanded the categories of leased property which are not eligible for the investment tax credit and the rehabilitation credit. For a detailed discussion of this comprehensive set of rules, *see* Chapter 18.

V. Financial Accounting for the Investment Credit [Act §450]

A. Introduction

When the investment credit was first introduced in 1962, there were two methods of accounting for it which were sanctioned by the two authorities which controlled accounting standards, the Accounting Principles Board ("APB"), and the Securities and Exchange Commission ("SEC"). One of those methods was the "flow-through" method. That method allowed the credit as a reduction of income taxes in the year in which the credit was earned. The credit was viewed as a selective tax rate reduction. This provided an immediate reduction of the tax expense and a resulting increase in the reported net income of the taxpayer.

The other method of accounting for the credit was known as the "deferral" method. This method allocated the credit as a ratable reduction of income taxes over the life of the asset involved. It was viewed by some accounting authorities as a more correct application of accounting principles because it treated the credit as a reduction in the purchase price of the asset instead of a reduction in taxes. In fact, the APB issued a discussion draft in 1971 which, if adopted, would have restricted the accounting method for investment credit to the deferral method.

> *Example*: If a taxpayer purchased an asset which qualified for the investment credit and that asset has an estimated useful life of ten years, one-tenth of the tax credit would reduce income taxes in each of the ten years following the purchase of the asset under the deferral method.

As part of the Revenue Act of 1971, which reenacted the investment tax credit, Congress indicated that it viewed the restoration of the investment tax credit as an incentive for modernization and growth of private industry. Accordingly, it included a provision which precluded any governmental agency from compelling a taxpayer to use any particular method of accounting for the investment tax credit.[65] Congress wanted the APB and the SEC to allow taxpayers to use the flow through method of accounting for the investment tax credit.[66] Section 101(c)(1)(C) of the 1971 Act required a taxpayer to use the same method of accounting for the credit in all reports subject to the jurisdiction of any federal agency unless the Treasury Department approved a change to another method. This provision was added in the Conference agreement on the 1971 Act and was intended to produce consistency in reporting the credit.[67]

The 1971 Act contained no standards for the Treasury Department to use in determining when it should allow taxpayers to change their method of accounting for the credit. There was also no penalty provision included for failure to comply with the provision. The Congress does not appear willing to propose penalties for failure to obtain permission or standards by which the Treasury Department should evaluate these requests.

B. Overview and Detailed Analysis

The Act repeals §101(c)(1)(C) of the 1971 Revenue Act. That section imposed a financial accounting consistency requirement on financial reporting by persons who qualified for the investment tax credit. It also required persons who wanted to change their method of accounting for the investment tax credit to apply to the Treasury Department for permission to change their method. A financial consistency requirement will still be imposed on those taxpayers subject to generally accepted accounting principles. Change of the accounting method for financial reporting of investment tax credits will now be approved by the taxpayer's accountants.

The provision is effective as if it had been included in the Revenue Act of 1971.

VI. Technical Correction to the Investment Credit Rules

A. Introduction

1. Credit for Preference Items

Intangible drilling costs that are expensed under §263(c) instead of capitalized are treated as a tax preference for purposes of the §55 alternative minimum tax on noncorporate taxpayers. Under §58(i)(4), a taxpayer may elect to amortize over a five-year period intangible drilling costs not derived from a "limited business interest" to avoid the treatment of such costs as a tax preference for §55 purposes.[68] Section 58(i)(4) also provides that if the election to amortize is made, the qualifying intangible drilling costs will qualify for a 10 percent investment credit.

Section 291(b) provides that corporate taxpayers must reduce their current deductions under §§616(a) and 617 for mineral exploration and development costs by an amount equal to 15 percent of such costs. Under §291(b)(2), the 15 percent portion of such costs disallowed are to be amortized over a five-year period, using the percentages set forth in §291(b)(3). In addition, §291(b)(2) provides that the disallowed 15 percent portion of such costs qualifies for the 10 percent investment credit. Section 291(b) was enacted by TEFRA,[69] effective with respect to expenditures incurred after 1982 in taxable years ending after 1982.

2. Investment Credit Basis Reduction

TEFRA [70] enacted new §48(q), requiring the reduction of the basis of an asset on which an investment credit is claimed. In general, the basis reduction is equal to 50 percent of the credit, except that in the case of qualified rehabilitated buildings (other than certified historic struc-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tures) the basis reduction is equal to 100 percent of the amount of the credit. The reduced basis applies for all purposes of the income tax provisions. Thus, the reduced basis is used in computing ACRS deductions and in computing gain or loss on the disposition of investment credit property. If property whose basis has been reduced due to an investment credit is disposed of, and all or part of the investment credit is recaptured, §48(q)(2) provides that the basis of such property (immediately before the event resulting in recapture) is increased by 50 percent of the amount of the credit recaptured. The basis reduction is generally effective for property placed in service after 1982.

B. Analysis of Technical Corrections

1. U.S. Location Requirement for Preference Credits

In order to conform the investment credit provided under §§58(i)(4) for intangible drilling costs and 291(b)(2)(B) for disallowed mining exploration and development costs to the general investment credit rule, contained in §48(a)(2), that eligible property be used predominantly in the U.S., the TRA amends §58(i)(4) [71] to allow the credit for intangible drilling costs only with respect to wells located in the U.S., and it amends §291(b)(2)(B) [72] in a similar fashion to require that mineral deposits be located in the U.S. in order for exploration and development costs to be eligible for the credit. It should also be noted that the TRA [73] increases the §291(b) preference cutback from 15 to 20 percent. Thus, the disallowed portion of mineral exploration and development costs for which a credit is provided under §291(b)(2)(B) will be 20 percent, assuming the deposits are located in the U.S.

2. Partnership and Subchapter S Basis Adjustment

Under new §48(q)(6), the adjusted basis of a partner's interest in the partnership, or the adjusted basis of a shareholder's stock in a Subchapter S corporation, must be appropriately adjusted to take into account the basis adjustments made under §48(q) in the basis of property held by the partnership or Subchapter S corporation. Of course, if the partnership or corporation elects a reduced credit (in the case of the regular investment credit) under §48(q)(4) in lieu of the §48(q)(1) basis reduction, a reduction will not be required in the basis of a partner's or Subchapter S shareholder's interest in the partnership or corporation.

C. Effective Dates

Since the foregoing amendments are technical corrections, they are effective as if they had been included in TEFRA.[74] Consequently, the amendment to §58(i)(4) applies to tax years beginning after December 31, 1982. The amendment of §291(b)(2)(B) applies to mining exploration and development expenditures after December 31, 1982, in taxable years ending after such date. Note, however, that the increase in the corporate preference cutback in §291(b) to 20 percent is applicable for expenditures after December 31, 1984, in taxable years ending after that date. Finally, the addition of §48(q)(6), requiring basis adjustments in partnership and Subchapter S corporation interests, is generally effective for property acquired and placed in service after 1982; for property under construction before 1983 but completed after 1982, §48(q)(6) will apply to the extent basis is attributable to post-1982 construction.

VII. New or Modified Investment Credit Rules for Movies, Tapes, and Sound Recordings

A. Introduction

Section 48(a)(1) provides that tangible personal property generally qualifies as "§38 property" if either it is recovery property within the meaning of §168 without regard to useful life, or it is other depreciable property having a useful life of 3 years or more at the time the property is placed in service. However, property will not qualify as "§38 property" if it falls within one of the exceptions to such classification in §48(a)(2) through §48(a)(10), such as for property used predominantly outside the U.S., for property used by tax-exempt organizations, or for property used by governmental units.[75] Under §46(a) and (b), as revised by the TRA credit simplification rules,[76] and §46(c)(7), an investment credit of 6 percent is effectively provided for recovery property qualifying as 3-year property; for all other §38 tangible personal property that is classified as 5-year property under ACRS, the investment credit is equal to 10 percent.

In general, most tangible depreciable property placed in service after 1980 qualifies as recovery property. However, under §168(e), certain property is excluded as recovery property, even though placed in service after 1980, if the taxpayer elects to depreciate the property under the income forecast method or other depreciation method not expressed in terms of years. The income forecast method has been held to be an appropriate method of depreciation for movies, television films and tapes, and master sound recordings.[77] Section 38 property that is not recovery property is provided with an investment credit of 3⅓ percent, if the property's useful life is at least 3 years but less than 5 years, with an investment credit of 6⅔ percent if its useful life is at least 5 years but less than 7 years, and with an investment credit of 10 percent if its useful life is at least 7 years.[78]

As previously mentioned, property that is not recovery property qualifies as §38 property only if it is tangible property. A long-standing controversy has existed between the Service and taxpayers as to whether movies, tapes, and sound recordings constitute tangible property. The Service's position has been that movies, tapes, and master sound recordings do not qualify for the investment credit because they are intangible property.[79] However, the courts have generally sided with taxpayers.[80]

In order to resolve the foregoing controversy in the case of qualified films, Congress in the 1976 Tax Reform Act [81] enacted §48(k) to provide generally a credit equal to 6⅔ percent without regard to the qualified film's useful life. A qualified film is generally any motion picture film or video tape created primarily for use as public entertainment or for educational purposes. It does not include any film or tape the market for which is primarily topical or is otherwise essentially transitory in nature.[82] The §48(k) credit is available only if the film is new §38 property and only to the extent the taxpayer has an ownership interest in the film.[83] In determining the amount of the credit under §48(k), only qualified United States production cost may be taken into account, but the predominant U.S. use test of §48(a)(2) does not apply. Under Regs. §1.48-8(a)(4)(i)

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

implementing the §48(k) credit, a taxpayer's ownership interest in a qualified film must be determined on the basis of the amount of the taxpayer's capital at risk on the film. Thus, an at-risk rule is essentially built into the §48(k) credit.

In lieu of taking the reduced 6⅔ percent credit for a qualified film under §48(k)(2), a taxpayer may elect under §48(k)(3) to apply the rules of §46(c)(2), which look to the property's useful life in determining the credit rates. If this election is made, the useful life of the qualified film is considered to end at the close of the taxable year the aggregate amount of depreciation deductions under §167 would equal or exceed 90 percent of the basis of the film.

No special investment credit rules have been provided under present law for sound recordings.

B. Analysis of TRA Changes

1. Movies and Tapes

According to the Senate Finance Committee Report accompanying the TRA,[84] present law is unclear as to whether movies or tapes qualify for the ACRS or the general investment credit, since both ACRS and the general investment credit are available only for tangible personal property. The Report further notes that some taxpayers have taken the position that although movies and tapes depreciated under the income forecast method are not recovery property for ACRS purposes, they nevertheless are eligible for the general investment credit and are not subject to §48(k). Accordingly, to "clarify" present law, the TRA[85] enacts new §168(e)(5) to exclude any motion picture film or video tape from the definition of "recovery property," and it amends §168(e) to provide that the exceptions listed in §168(e) to the definition of recovery property, including new §168(e)(5), will not be treated as recovery property for all purposes of the Internal Revenue Code, and not just for purposes of §168.

The principal effect of this change is that taxpayers may no longer take the position that the 6 or 10 percent investment credit provided for recovery property is available for property excluded under §168(e) since those exceptions apply only for §168 purposes.

Observation: As noted above, the Senate Finance Committee Report describes the §168(e) amendments as making it clear that movies and video tapes cannot qualify as recovery property for either depreciation or investment credit purposes. If merely a "clarification," it would appear that the only reason such property could not have been recovery property prior to the TRA was that it did not constitute tangible property. However, the Conference Committee clearly states that no inference is intended as to the property treatment under present law, for investment credit as well as depreciation purposes.[86] It should also be noted that none of the statutory amendments directly or indirectly addresses the issue of whether such property is tangible.

The TRA makes two additional significant changes in the investment credit rules for qualified films eligible for the §48(k) investment credit. First, §48(k)(4) is amended to provide that the at-risk rules of §46(c)(8) and (c)(9) do not apply to qualified films.[87] Since, as discussed above, Regs. §1.48-8(a)(4)(i) establishes an independent at-risk rule for qualified films, the general at-risk rules of §46(c)(8) and (9) are unnecessary.

Second, the TRA[88] enacts new §48(q)(6) to coordinate the basis reduction rules of §48(q) with the §48(k) rules for qualified films. The basic rule of §48(q)(6) is that, in lieu of the basis reduction under §48(q)(1), the basis of a taxpayer's ownership interest in a qualified film must generally be reduced by 50 percent of the amount of the credit determined under §48(k).[89] However, contingent amounts described in §48(k)(5)(B)(v) and (vi) for which a credit is allowable and which are currently deductible as well, namely, residuals payable under contracts with labor organizations and participations payable as compensation to actors, production personnel, directors, and producers, are subject to a separate reduction. The amount of the current deduction for such contingent payments must be reduced by 50 percent of the credit determined with respect to such contingent amounts.[90] Since these contingent amounts are not capitalized but are deducted currently, and §46(q)(6) reduces the taxpayer's current deduction by 50 percent of the credit, the taxpayer's ownership interest in the qualified film is not to be reduced by 50 percent of the amount of the credit allowed with respect to such contingent cost.[91]

Lastly, it should be noted that new §168(j)(4)(B)(ii), added by the TRA provisions relating to tax-exempt entity leasing,[92] specifically provides that qualified films used by foreign persons are not to be treated as used by tax-exempt entities. However, no comparable exception is provided for use by the U.S. or a state government or by a tax-exempt organization. Consequently, the income forecast method of depreciation will continue to remain available for the capitalized production costs of qualified films leased by foreign persons; the straight-line write-off over a 12-year recovery period otherwise required under §168(j)(1) for property leased to tax-exempt entities will not apply to qualified films leased to foreign persons.

2. Sound Recordings

The TRA[93] enacts new §48(r) to provide taxpayers with two alternatives with respect to sound recordings for purposes of both depreciation and investment credit. Under §48(r)(1), if the sound recording is new property, the taxpayer is granted an election to treat such recording as recovery property that is 3-year property to the extent the taxpayer has an "ownership interest" in the recording. Accordingly, a 6-percent investment credit will be available with respect to the sound recording under this election.[94] The election must be made separately with respect to each sound recording.[95] In addition, the election will not be effective unless all taxpayers having an interest in the sound recording make the election.[96]

Section 48(r)(2) provides that, if a taxpayer does not make an election with respect to any sound recording under §48(r)(1), the recording does not qualify for the investment credit and is not to be treated as recovery property. Presumably, the same result follows as to a taxpayer who endeavors to elect §48(r)(1) treatment where other taxpayers having an interest in the same sound recording do not make the election.

Observation: The Conference Report,[97] in fact, states that the second option will apply unless all taxpayers

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

having an ownership interest in the recording elect the first option. It should also be noted that both the Conference Report [98] and the Senate Finance Report [99] state that no inference is intended as to whether sound recordings qualify as tangible personal property, including whether they otherwise qualify for the investment credit, under present law.

Comment: Although it is not entirely clear in the statute,[100] it appears that a used sound recording will be subject to the second alternative since an election under §48(r)(1) is clearly denied for a sound recording that constitutes used property.[101]

Under §48(r)(4), ownership interests in a sound recording are determined according to loss-sharing ratios. This is in contrast to the general investment credit rule providing that the investment credit is allocated according to profit-sharing ratios [102] rather than on the basis of loss-sharing percentages.

Neither §48(a)(2), which denies the investment credit for property used predominantly overseas, nor §§46(c)(8) and 46(c)(9), which prescribe at-risk rules for investment credit purposes, apply in the case of a sound recording.[103] However, since the term "ownership interest" is employed in substantially the same manner in §48(r) as it is in §48(k) for purposes of determining the investment credit for qualified films, and the regulations under §48(k) provide an at-risk test, as previously mentioned,[104] it is likely that regulations implementing §48(r) will prescribe a similar at-risk test limiting the credit under §48(r)(1) to the amount of capital the taxpayer has at-risk in the sound recording.

Comment: It should be noted, however, that the legislative history of §48(r) makes no mention of limiting the taxpayer's investment credit under §48(r)(1) to the amount of capital the taxpayer has at-risk in the recording. Moreover, when §48(k) was enacted and the regulations thereunder promulgated, the Treasury had general authority to issue legislative regulations in the investment credit area under former §38. However, as discussed in Chapter 14, former §38 and the legislative authority contained therein was repealed in the TRA credit simplification rules. Accordingly, the issuance of regulations under §48(r) prescribing an at-risk rule might be subject to challenge.

In determining the amount of an investment credit that may be claimed with respect to a sound recording, only production costs allocable to the U.S. (including possessions of the U.S.) may be taken into account.[105] Production costs include:

(i) a reasonable allocation of overhead,

(ii) compensation paid to songwriters, artists, production personnel, directors, producers, and similar personnel,

(iii) costs of "first" distribution of records or tapes, and

(iv) costs of the material being recorded.

Production costs do not include contingent amounts, such as residuals payable under contracts with labor organizations or participations or royalties payable to the song writers, artists, *etc.*, unless such contingent amounts are "incurred" in the taxpayer year the recording is placed in service or in the ensuing taxable year.

Production costs are to be allocated to the U.S. in accordance with rules similar to those under §48(k)(5)(D). Detailed rules prescribing the allocation of production costs for purposes of §48(k)(5) may be found in Regs. §1.48-8(f)(2).

Accordingly, for the first year that a sound recording is placed in service, a 6 percent investment credit may be claimed with respect to production costs allocable to the U.S., including contingent amounts incurred in the first year the recording is placed in service. Contingent amounts allocable to the U.S. and incurred in the subsequent taxable year are also eligible for the 6 percent credit. No investment credit is available for contingent amounts incurred after the first two years, but they may continue to be deducted when paid or accrued to the extent deductible when paid or incurred under present law.[106]

The basis adjustment rules for §48(q) apply to sound recordings.[107]

C. Effective Dates

1. Films and Tapes

The TRA provisions excluding films and tapes as recovery property for investment credit purposes apply to films and tapes placed in service before, on, or after July 18, 1984, which is the date the TRA was signed into law.[108] However, any qualified film placed in service by the taxpayer before March 15, 1984, will be treated as recovery property if the taxpayer treated such film as recovery property for purposes of §168 on a tax return filed before March 16, 1984. The Conference Report [109] states that this provision does not itself operate to disallow investment credits with respect to any such movie. Moreover, a qualified film placed in service by a taxpayer before January 1, 1985, will be treated as recovery property if 20 percent or more of the production costs of such film were incurred before March 16, 1984, and the taxpayer treats such film as recovery property for purposes of §168. However, in the latter case, the investment credit can be claimed only to the extent provided in §48(k).[110]

The amendment to §168(e) providing that the exceptions listed in §168(e) to the definition of recovery property apply for all Code purposes is effective as if included in the Economic Recovery Tax Act of 1981, so that it is effective for property placed in service after 1980.[111]

Comment: This latter provision is, consequently, retroactive in effect and will operate to deny any investment credit of 10 percent claimed by any taxpayer who utilized the income-forecast method of depreciation, or any other method of depreciation not expressed in terms of years such as the unit-of-production method, yet took the position that such property was 5-year property for investment credit purposes.

The clarification that the general investment credit at-risk rules do not apply to qualified films is effective as if included in the provisions of ERTA of 1981 that enacted at-risk rules for investment credit.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The special rule in new §48(q)(6), relating to the special basis adjustments for qualified films, is effective as if enacted in §48(q) by the Tax Equity and Fiscal Responsibility Act of 1982.

2. Sound Recordings

The TRA amendments for sound recording apply to sound recordings placed in service after March 15, 1984, in taxable years ending after that date.[112]

VIII. Treatment of Certain Leased Property as New Investment Credit Property Restricted

A. Introduction

As described above in III, a limit is placed on the dollar amount of new §38 property for which a taxpayer is allowed a credit for the taxable year. Under §48(c)(2)(A), as amended by the TRA,[113] the dollar limit will remain at $125,000 for taxable years beginning before 1988. Section 48(c)(1) defines "used §38 property" as §38 property acquired by purchase that is not "new §38 property." Section 48(b) defines "new §38 property" to be §38 property the construction, reconstruction or erection of which is completed by the taxpayer after 1961, or is acquired after 1961, if the original use of such property commences with the taxpayer and commences after such date. A special rule in §48(b) provides that, for purposes of determining whether §38 property subject to a lease is new §38 property, the leased property is treated as originally placed in service not earlier than the date the property is used under the lease, but only if the property is leased within three months after the property is placed in service.

B. Analysis

The TRA [114] revises §48(b) to eliminate deadwood language and to restrict the special three-month rule for property that is leased. New §48(b)(1) provides that the term "new §38 property" means §38 property the original use of which commences with the taxpayer. Under new §48(b)(2), the three-month rule applies only if the §38 property is originally placed in service by the taxpayer, and the property is sold and leased back by the taxpayer, or is leased to the taxpayer, within three months of the date such property was originally placed in service. According to the Conference Report,[115] the three-month rule, in addition to applying to sales and leasebacks within three months, is intended to apply to a taxpayer who buys property from a manufacturer, takes delivery of it, and places it in service before financing is in place; shortly after the taxpayer places the property in service, the property may be sold (or the purchase order assigned) by such taxpayer to another person who then leases it to the first taxpayer.

Under §48(b)(3), the three-month rule is made applicable for purposes of determining whether property is new for purposes of the energy investment credit.

C. Effective Dates

The revision of §48(b) is effective for property originally placed in service after April 11, 1984 (determined without regard to the TRA revision).[116]

IX. Section 280F Limitations for Luxury Automobiles and Other Listed Property

Section 179 of the TRA of 1984 adds Code §280F, limiting the investment tax credit which may be claimed with respect to a passenger automobile to a maximum of $1,000. This limitation precedes any reduction for personal use of the automobile or any reduction under §48(q)(4). In addition, certain "listed property" (including passenger automobiles) ceases to be §38 property if the percentage of use in a trade or business does not exceed 50 percent in any one year. This will lead to recapture of the credit if the reduction occurs before the end of the normal recovery period. This provision applies to property placed in service after June 18, 1984.

The new investment tax credit limitations are described in detail in Chapter 40.

X. No Investment Credit Recapture for Transfers Between Spouses or Incident to Divorce

A. Introduction

Section 47(a) provides for the recapture of an investment credit if the property with respect to which the credit was claimed is disposed of or ceases to be §38 property during a specified recapture period. In the case of §38 property which is 3-year recovery property, any investment credit claimed with respect to such property is subject to full or partial recapture if it ceases to be §38 property at any time during the first full three years after the property is placed in service. In the case of any other recovery property, the investment credit claimed with respect to such property is subject to recapture for the first five full years after the date the property is placed in service.

Under present law,[117] a transfer by reason of death, a transaction to which §381(a) applies, or a transfer that is part of a transaction representing a "mere change in form" of a business will not be treated as a disposition giving rise to recapture of an investment credit. However, a transfer from one spouse to another, except by reason of death, is a disposition that may cause recapture under §47.

B. Analysis

As part of the divorce simplification provisions of the TRA,[118] new §47(e) has been enacted to provide that, in the case of any transfer described in §1041(a), investment credit with respect to the property transferred will not be subject to recapture under §47(a). Section 1041(a) describes two types of transfers:

> (i) a transfer by an individual directly to (or in trust for the benefit of) a spouse, or
>
> (ii) a transfer by an individual directly to (or in trust for the benefit of) a former spouse, but only if the transfer is incident to the divorce.

Under §47(e)(2), the transferee effectively steps into the shoes of the transferor with respect to the transferred property for purposes of §47. Thus, the transferee-spouse may tack the holding period of the transferor spouse in

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

determining whether there is recapture, or the amount of the recapture if the transferor and transferee spouses did not hold the property for a sufficient period of time to avoid recapture of the investment credit completely.

C. *Effective Dates*

In general, new §47(e) applies to transfers after July 18, 1984, in taxable years ending after such date.[119] For the transitional rules and exceptions that apply to §1041, and thus, to §47(e), *see* Chapter 13, I, *supra.*

CHAPTER 16

INCLUSION OF TAX BENEFIT ITEMS IN INCOME CODE SECTION 111

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

I. Background

A. Statutory and Judicial Background

Generally, a taxpayer who recovers an amount which was deducted in a prior taxable year must include that amount in income in the year of recovery.[1] This is a judicially created doctrine and includes a judicially created exception that allows a person to exclude an amount from income to the extent that the original deduction did not produce a tax benefit.[2] Thus, the tax benefit rule works in two ways — including recovered amounts in income when the taxpayer has had a previous tax benefit from deducting them, and excluding amounts from income when a deduction allowable in a prior period did not produce an income tax benefit. The rationale of this rule is the taxpayer should be in the same economic position after taxes, more or less, as if the correct amount had been initially reported on its income tax return.

Example: In the simplest case, an individual receives a refund of state income taxes which he had paid in a prior taxable year. In that year, the taxpayer did not have enough deductions to exceed his zero bracket amount and thus any reduction in his state income taxes would not have affected his taxable income for that year. Accordingly, the taxpayer would not be required to include that amount in income.

The tax benefit rule was codified to some extent in §111 of the Code. Prior to its amendment, that section provided that income attributable to the recovery during any taxable year of bad debts, prior taxes, and delinquency amounts was excluded from gross income to the extent of the "recovery exclusion" which was defined as the amount equal to the portion of items deducted or credited in the prior year which did not result in an income tax benefit to the taxpayer. For the purpose of determining whether an item produced an income tax benefit in a prior year, the accumulated earnings and personal holding company tax were not considered income tax. Accordingly, an item in a prior year could have reduced the accumulated or personal holding company tax and still be an item entering into the computation of the recovery exclusion.

Existing law included a special provision for tax benefits applicable to the accumulated earnings and the personal holding company taxes. An item which qualified as part of the recovery exclusion also qualified to enter into the determination of the accumulated earnings and personal holding company tax in the year of recovery notwithstanding that the item involved did not reduce the accumulated earnings or personal holding company tax in the prior year. In addition, if a §111 item was deductible from the personal holding company and accumulated earnings taxes in a prior taxable year but did not produce a reduction in those taxes, then the recovery of such items could be excluded for purposes of determining the personal holding company and accumulated earnings taxes in the current year even though the item was not deductible for purposes of the regular income tax in a prior taxable year.[4]

The Internal Revenue Service allows an individual taxpayer to recover, on a tax-free basis, an itemized deduction up to the amount by which the taxpayer's zero bracket amount exceeds his other itemized deductions for the year.[5]

Example: In 1983, a married couple reported itemized deductions of $3,700 (*i.e.*, excess itemized deductions of $300), of which $500 was for state income taxes paid in 1983. In 1984, they received a $200 refund of state income taxes. The entire amount of this refund was excludable from income in 1984. An exclusion results because the couple's zero bracket amount ($3,400) exceeds the amount of their itemized deductions other than state income taxes ($3,200) and because Rev. Rul. 79-15 assumes that the amount which was not subject to tax was recovered first. If they had received a $300 refund, $100 would have been includable in income because the amount of the refund exceeded the amount by which their zero bracket amount exceeds their remaining itemized deductions ($3,400 − $3,200 = $200).

B. Legislative Background

The Congressional committees indicated that the exclusion in the above example failed to reflect the economic reality of the situation. The regulations amplifying the statute assume that the amount which the couple first recovered was that which did not produce any tax benefit. This may not be correct in certain cases and may produce a windfall to the taxpayer.[6]

Example: In the immediately preceding example above, if the couple had not overpaid their income taxes but had paid the correct amount, they would have had $200 less in itemized deductions. Thus their income tax would have increased by the tax on $200.

This interpretation of the tax benefit rule allows certain taxpayers who take a deduction in one year and then recover a portion in a subsequent year to have more

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

favorable tax results than taxpayers who deduct the correct amount initially. Thus the tax benefit rule has not accomplished its objective of putting taxpayers in the same position as if they had taken initially the correct deduction. Congress intended to amend the statute to more clearly reflect the tax benefit rule.

II. Overview

A. In General

The Act rephrases the statutory tax benefit rule so as to exclude from income recoveries of any deduction taken in a prior year to the extent that the deduction did not reduce income subject to tax. One purpose of the legislation was to phrase the tax benefit rule in a more general way and another was to change the result in one of the examples in Rev. Rul. 79-15. Section 111 now provides for an increase in income taxes by the amount of income tax credits previously allowed (other than the investment tax credit and the foreign tax credit) when there is a downward price adjustment which would have affected the amount of the credit. A price adjustment which affects a credit which did not reduce income taxes will not increase income taxes, however.

An increase in a carryover which has not expired before the beginning of the taxable year in which a recovery takes place is treated as a reduction of income tax as under prior law. The exceptions to the tax benefit rule as previously applied to the accumulated earnings and personal holding company taxes are preserved in new §111.

B. Effective Date

Revised §111 will apply to amounts recovered after December 31, 1983 in taxable years ending after that date.[7] Accordingly, the revision currently affects all taxpayers.

III. Detailed Analysis

A. All Deductions Subject to Statutory Tax Benefit Rule

As expanded, §111 excludes from gross income any recovery of a deduction taken in a prior year to the extent such amount did not reduce income subject to tax.[9] The intent of this section was to statutorily recognize a broad tax benefit rule and reverse the conclusion in one example in Rev. Rul. 79-15.[9] Accordingly, in the second example above, the married couple would report income of $200 upon receipt of the state tax refund. If a deduction increases a carryover which has not expired before the beginning of the year of the recovery, the deduction will be considered to have reduced a tax as it did under prior law.[10]

The tax benefit rule has been applied by the courts to such diverse items as insurance recoveries of amounts previously deducted as losses, refund of prepaid interest, and cancellation of previously accrued liabilities.[11] The Conference Committee Report indicates that it does not intend to change present law as to what constitutes the recovery of an item previously deducted. Thus the scope of this rule will remain broad.[12]

B. Tax Credits Now Subject to Tax Benefit Rule

The revision of §111 now imposes the tax benefit rule upon all tax credits other than the investment tax credit which already has a recapture provision and the foreign tax credit.[13] The statute requires an increase in the tax imposed in any taxable year in which there is a downward price adjustment with respect to an amount for which a credit was allowable in a previous year.

Example: Suppose an individual makes a purchase of $100 which qualifies for the 15 percent residential energy credit. Though this amount is paid to the retail seller of the property, the manufacturer will rebate a portion of the purchase price direct to the purchaser. A rebate is received in a future year; the income tax of the purchaser will be increased by 15 percent of the amount refunded.

The revision of §111 retains the same special rules, described above, for applying the tax benefit rule to the accumulated earnings and personal holding company taxes.[14]

Chapter 17

MISCELLANEOUS CHANGES AFFECTING CREDITS

Patricia R. Lesser, Esq.
Patrick G. Dooher, Esq.
and
Joseph J. Westwater, Jr., Esq.
Silverstein and Mullens
Washington, D.C.

I. Targeted Jobs Credit — Extension and Technical Changes [§§1041, 712(n)]

A. Introduction

Under present law, an employer may elect to credit against its tax liability part of the wages paid to certain new employees.[1] The credit generally is equal to 50 percent of the first $6,000 of the employee's wages paid during the first year of employment and 25 percent of such wages for the second year.[2] Thus, the total maximum credit per employee is $4,500 ($3,000 + $1,500). With respect to economically disadvantaged summer youth employees, however, the credit is equal to 85 percent of up to $3,000, or a total maximum credit of $2,550. Eligible employees are individuals who are members of one of the "targeted groups" of individuals including those economically disadvantaged, handicapped, or who receive public assistance.[3] This credit was intended to be available only with respect to wages other than those paid or accrued to an individual who begins work for the employer after December 31, 1984.[4]

In general, an individual must be "certified" as being a member of a targeted group. The employer must receive, or have requested in writing, a certification of the individual's eligibility before the day on which the individual begins work for the employer.[5]

The funds necessary to adequately administer the certification system were to be appropriated for fiscal years 1983 and 1984.[6]

The targeted jobs credit was enacted in the Revenue Act of 1978 [7] as a substitute for the expiring credit for increased employment (the "new jobs credit"). The "new jobs credit" was available in 1977 and 1978. As initially enacted, the targeted jobs credit was intended to be available for qualified wages paid before 1982. The Economic Recovery Tax Act of 1981 extended the availability of the targeted jobs credit to qualified wages paid to individuals beginning work for the employer before 1983. The Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) extended the availability of the credit to qualified wages paid to individuals who begin work for the taxpayer before 1985.

The TRA of 1984 amendments to the targeted jobs credit were originally included in the Senate Bill [8] which proposed to extend the availability of the tax credit and the authorization for administrative funds for three more years. The Senate Finance Committee estimated that the experience with the targeted jobs credit was sufficiently promising to warrant this extension. A three-year extension would have given certainty to employers and employees of the availability of the credit and would have enabled Congress and the Treasury Department to gather more information on the effectiveness of the credit. The Conference agreement [9] follows the Senate amendment with a number of changes. In particular, it extends the credit for only one year.

B. Detailed Analysis

Sections 712(n) and 1041 of TRA 1984 amend Code §51 regarding the targeted jobs tax credit, extending the credit for one more year, and introducing a number of minor provisions. In addition, §1041 TRA 1984 makes a technical correction in Code §51(b)(2) by eliminating an obsolete provision which related to the beginning of the one-year credit eligibility period for vocational rehabilitation referrals, and §712(n) of TRA 1984 effects a technical correction to §233 of TEFRA. Section 474(p)(3) incorporates the election to claim the targeted jobs credit formerly provided in Code §44B (which was repealed by the TRA) into subsection (j) under Code §51. However, the taxpayer must now elect not to have this section apply.[10]

1. Extension of the Credit

The targeted jobs tax credit is available for an additional year. Code §51(c)(3), as amended by §1041 of TRA 1984, provides that qualified wages for purposes of the targeted jobs credit shall not include any amounts paid or incurred with respect to individuals hired after December 31, 1985. Section 261(f)(2) of ERTA is amended to authorize the appropriation of funds to administer the tax credit through fiscal year 1985.

2. Successor Employer

Section 1041 of TRA 1984 adds subsection (j) [11] to Code §51. Paragraph (1) thereof provides that a successor employer will be treated as his predecessor to compute the amount of the credit. A "successor employer" is defined in Code §3306(b)(1) as an employer who acquires substantially all the property used in the trade or business, or a separate unit of the trade or business, of another employer

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

and who immediately after the acquisition hires an employee who was working for the predecessor.

3. Employee Performing Services for Other Persons

Paragraph (2) of Code §51(j) [12] provides that the credit will not be allowed with respect to remuneration paid to an employee who is rendering services to a person other than his employer, if the payment by the other person to the employer is not expected to exceed the amount of the remuneration paid to the employee by his employer. The purported purpose of this provision, as stated in the Conference Report,[13] is to prevent the shifting of the credit from organizations which need the services of employees, but which do not have sufficient tax liability to take advantage of the credit, to employers who could benefit from the tax credit and for this purpose hire the employees and then loan them out or donate them to the organizations which need them.

4. Certification Provisions

a. Preliminary Determination

Section 1041(c)(2) of TRA 1984, grants additional time to employers to request or receive the certification required by Code §51(d)(16) under certain circumstances. Code §51(d)(16), as amended, provides that an employer will be able to request in writing or obtain certification that an individual hired by him is a member of a targeted group until the fifth day after the day on which such individual begins work for the employer, if on or before the individual commences work, the employee obtains from a designated local agency (or other organization designated by the agency), a written preliminary determination that the employee is a member of a targeted group. Prior to TRA 1984, employers had to obtain or request in writing a certification no later than the day the employee commenced work.

b. Qualifying Youth Certification

Section 712(n) of TRA 1984 makes a technical correction to §233 of TEFRA by adding a provision to Code §51(d)(11) which makes it clear that the original determination that a qualified summer youth or cooperative education youth is economically disadvantaged continues to be valid with respect to the eligibility of the individual as a member of another targeted group, if the individual continues to work for the same employer. A new certification will not, therefore, be necessary when the qualified summer youth or cooperative education youth continues to work for the same employer.

5. Age Requirement for Summer Youth Employee

Section 1041(c)(3) of TRA 1984 amends the test for determining the age required to qualify as a summer youth. Code §51(d)(12)(ii) as amended, provides that a summer youth must be certified by a designated local agency as being at least 16 years old but under 18 either on the hiring date or, if the hiring date is after May 1, on May 1 of the calendar year involved. Prior to the TRA 1984 amendment, the individual had to be over 16 but under 18 years old on the date he was hired.

6. Effective Dates

The amendments with respect to treatment of employees performing services for other people and with respect to the age requirement for qualified summer youth employees take effect with respect to individuals who begin work after December 31, 1984. All other amendments are effective after July 18, 1984.

II. Increase in Earned Income Credit [Act §1042]

A. Introduction

Under present law the Code grants a refundable tax credit to eligible low income individuals with families. The credit is equal to 10 percent of the first $5,000 of earned income or a maximum of $500. The credit is refunded to the individual to the extent that it exceeds tax liability. The maximum credit is phased down for income in excess of $6,000 and it is completely phased out for families with income over $10,000. The credit is phased down at the rate of 12.5 percent of the excess of adjusted gross income (or earned income, if greater) over $6,000. The exact amount of the credit allowed is determined under tables prescribed by the Secretary of the Treasury.

Eligible individuals [14] are married individuals filing joint returns who are entitled to an exemption for dependents, surviving spouses who by definition [15] must maintain a household for a dependent child, and heads of household who must also, by definition,[16] maintain a household for a dependent child. The child must reside with the taxpayer in the U.S. Individuals who claim benefits under Code §§911 (relating to U.S. citizens or residents living abroad) or 931 (relating to income from sources within possessions of the U.S.) are not entitled to the credit.[17]

Earned income for purposes of this credit comprises wages, salaries, tips, and other employee compensation plus net earnings from self-employment. Earned income must be computed without regard to any community property laws. In addition, earned income does not include pensions or annuities, nor income not connected with a U.S. trade or business of nonresident aliens.[18]

The credit is only allowed with respect to taxable years which cover a period of at least 12 months, unless the taxable year was closed following the death of the taxpayer.[19]

The TRA 1984 amendments to the earned income provisions of the Code were originally introduced in the Senate bill.[20] The Committee on Finance stated that it believed the earned income credit was an effective way to provide relief from social security and income taxes to low-income families who might otherwise need large welfare payments. It therefore, proposed to increase the amount of the credit to take into account increases in social security taxes since 1978, when the amount of the credit was last increased. The committee also proposed to increase the income level at which the credit is completely phased out to take inflation into account.

The Conference agreement followed the Senate amendment increasing even further the rate of the credit and the level of income at which the credit is completely phased out and it introduced other minor provisions.

B. Detailed Analysis

Section 1042 of TRA 1984 amends Code §32, as redesignated by TRA 1984, relating to the earned income

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

credit.[21] It also makes conforming amendments to another section of the Code which relates to the advance payment of the earned income credit.[22]

1. Increased Credit

Code §32(a) (as redesignated) is amended to provide that an eligible individual is allowed a credit equal to 11 percent of so much of his earned income for the taxable year as does not exceed $5,000. The maximum credit is therefore equal to $550.

2. Increased Limitation

Code §32(b) (as redesignated) is amended to provide that the allowable credit may not exceed the excess of $550 over 12 2/9 percent of the excess of adjusted gross income (or, if greater, the earned income) over $6,500.

For example, a taxpayer who has earned income of $7,500 in 1985 will be entitled to a maximum credit of $427.78 (*i.e.*, 550 - 12 2/9 percent of $1,000 = $550 - 122.22).

The credit will be completely phased out for taxpayers with earned income or adjusted gross income exceeding $11,000.

3. Offset of Minimum Tax

Subsection (h) is added to Code §32(as redesignated) to provide that the credit is reduced by the alternative minimum tax liability of the taxpayer imposed under Code §55.

4. Effective Date

The provisions of §1042, TRA 1984 are effective for taxable years beginning after December 31, 1984.

III. New Credit for Interest on Mortgages Certified Under Mortgage Credit Certificates

Commencing in 1985, taxpayers who are recipients of a mortgage credit certificate issued by a state or local agency are eligible to claim a credit under §25 for interest paid on mortgages certified under the mortgage credit certificate. A mortgage credit certificate can be utilized only for interest paid or accrued after December 31, 1984, on indebtedness incurred after December 31, 1984. The credit may range from 10 to 50 percent of the mortgage interest paid by a taxpayer each year, depending upon the credit rate specified in the mortgage certificate.

The mortgage credit certificate program is a substitute for financing provided by state or local agencies through the issuance of tax-exempt qualified mortgage bonds. In order to issue mortgage credit certificates, a state or locality must surrender all or a portion of its authority to issue qualified mortgage bonds.

For a complete analysis of the new mortgage credit certificate program and the credit provided under such certificates, see Chapter 20, I, C, 5 *infra*.

IV. Employee Stock Ownership Credit (Act §14)

A. Introduction

An employee stock ownership plan (ESOP) is a qualified retirement plan designed to invest primarily in stock of the employer, thereby enabling the participants to acquire an ownership interest in the corporation for which they work.

There are two basic types of ESOPs — an employee stock ownership plan (commonly known as an ESOP) and a tax credit employee stock ownership plan (commonly known as a tax credit ESOP).[23] A tax credit ESOP is defined in §409A as a defined contribution plan that meets the requirements of §401(a) and is designed to invest primarily in employer securities. Additionally, §409A provides rules relating to the allocation of employer securities, employee nonforfeitable rights, distribution of employer securities, time for plan establishment, redetermination or recapture of investment credit, and the provision of put options with regard to employer securities.[24]

The Tax Reduction Act of 1975 provided an additional, elective, 1 percent investment tax credit to employers that transferred to a then-TRASOP (now tax credit ESOP) employer securities having an aggregate value equal to 1 percent of the qualified investment for the taxable year.[25] This provision remained applicable, with minor amendments, until it was repealed by the Economic Recovery Tax Act of 1981 (ERTA) [26] in favor of an ESOP a tax credit that was based on the sponsoring employer's payroll, rather than upon the level of §38 investment during the taxable year. These ESOPs, where the sponsoring employer's tax credit is based on a percentage of covered payroll are commonly known as "PAYSOPs."

The PAYSOP credit is limited, under §44G, to a prescribed percentage of the aggregate compensation of participating employees.[27] For compensation paid or accrued in calendar years 1983 and 1984, the tax credit was limited to one-half of 1 percent of covered payroll. With respect to compensation paid or accrued in 1985-7 the limit would have been three-quarters of 1 percent. No credit would have been provided with respect to compensation paid or accrued after September 31, 1987.

B. Detailed Analysis

1. TRA Amendment

The Act amends §44G(a)(2)(B) (as in effect prior to the amendments made by Title IV of the Act [28]) to freeze the income tax credit for contributions to a PAYSOP at one-half of 1 percent with respect to compensation paid or accrued in 1985-7. No credit is allowed for compensation paid in 1988 or thereafter, unless the provision is specifically extended by Congress.

Note: TRA §471(c)(1) redesignates former Code §44G as §41. TRA §491(e) redesignates Code §409A as §409.

2. Effective Dates

The new schedule of rates for the PAYSOP credit applies to taxable years ending after 1983. The TRA changes do not apply, however, if the PAYSOP was approved by employees on September 23, 1983, and (2) not later than January 11, 1984, the employer of such employees was 100 percent owned by the plan.[29]

Chapter 18

TAX-EXEMPT ENTITY LEASING — NEW RESTRICTIONS

Donald B. Reynolds, Jr., Esq.
and
Samuel M. Maruca, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

In recent years, Congress has become increasingly concerned about the tax policy and revenue implications of leasing arrangements involving nontaxable entities, such as tax exempt organizations and foreign entities. On February 28, 1983, the Subcommittee on Oversight of the House Ways and Means Committee conducted a well-publicized hearing investigating leasing practices of this type.[1] At this hearing, and in subsequent investigations, it became apparent that state and local governments were responding to budgetary problems by leasing facilities, such as convention centers, from investor syndications rather than constructing the facilities. Other types of nontaxable entities were equally active in leasing transactions. One particularly notorious example that was brought to light by the subcommittee hearings involved a college which approved a plan to sell its campus to an investor group and then lease it back from the group. It also became apparent that even the federal government found the leasing market attractive, as evidenced by a series of transactions in which the Navy chartered cargo and personnel transport ships from private parties.

Under the tax laws as they existed before the enactment of the 1984 TRA, a lessor of property leased to a nontaxable entity was, as owner of the property, generally entitled to claim the tax benefits associated with such property, provided the lessor could demonstrate that it owned the property for tax purposes. The criteria for determining tax ownership of property evolved from a series of judicial decisions and IRS pronouncements. Basically, these authorities required a purported owner of property to demonstrate that he possessed a substantial economic ownership interest in the property.[2] This analysis generally required a lessor to demonstrate that he had retained significant "benefits and burdens" of ownership with respect to an item of leased property.

If a lessor could establish that he owned a piece of leased property under the benefits and burdens test and that his leasing activities were conducted with a profit motive, the lessor generally could claim ACRS deductions and the investment tax credit with respect to the leased property. A number of exceptions to this general rule existed, however. For example, property leased to a tax-exempt organization or a federal or state governmental entity did not qualify for the investment tax credit.[3] Further, property used predominantly outside the U.S. was not eligible for the investment tax credit and was subject to reduced ACRS deductions.[4] The Code established, however, a number of exceptions to these limitations applicable to certain types of property used predominantly outside the U.S., such as aircraft and ships.[5]

Congress articulated a number of reasons to support a comprehensive restructuring of the Code as it applies to leases to nontaxable entities. A primary factor cited by the committee reports was the fact that, although tax-exempt entities were generally not eligible to claim the tax benefits arising from the ownership of property because they paid no tax, lessors could indirectly make these benefits available to tax-exempt entities by way of reduced rents. Congress viewed this result as an unintended distortion of the tax system because leases provided a tax-exempt lessee with benefits that were enacted to reduce the tax imposed upon taxable entities.[6] Further, Congress expressed concern over the fact that the Code was encouraging tax-exempt entities to dispose of their property and give up ownership control of their assets. The legislative history also reflects Congress' concern with the public's perception of leasing transactions, the revenue loss resulting from such leasing, and the lack of congressional budgetary control over the resulting indirect rent subsidies made available to tax-exempt entities through leases.[7]

II. Overview

The TRA enacted a comprehensive set of rules governing the tax benefits that may be reported by taxpayers who lease property to "tax-exempt entities." Basically, property leased to tax-exempt entities (referred to in the statute as "tax-exempt use property") is not eligible for the investment credit and must be depreciated under less generous schedules than those established by ACRS.

There are a number of significant exceptions to the rules defining tax-exempt use property. First, real property is not treated as tax-exempt use property unless at least 35 percent of the property is leased under "disqualified leases," as defined by the statute. Further, the TRA creates exceptions from the leasing rules for short-term leases and leases of certain high technology equipment. Finally, the statute codifies the concept of a service contract and provides a number of guidelines for distinguishing a lease of property from a contract to provide services.

The tax-exempt entity leasing rules generally apply to leases entered into after May 23, 1983. Thus, although the statute creates a number of exceptions to the general effective date, the TRA rules apply retroactively to a significant number of transactions.

III. Detailed Analysis

A. Definition of Tax-Exempt Entity

1. General Definition

Post-TRA §168(j)(4) defines Post-TRA "tax-exempt entity" to include governmental entities and tax-exempt organizations, as well as certain foreign persons and entities. The definition of "tax-exempt entity" is the same for both the ACRS and investment credit rules enacted by the TRA. The definitions basically draw upon the rules previously established by §48(a)(4) and §48(a)(5).

Governmental entities that fall within the definition of "tax-exempt entity" are the United States, any state or political subdivision of the U.S., any U.S.A. possession, and any agency or instrumentality of the foregoing.[8] A corporation which would otherwise qualify as an instrumentality of the U.S. or of any state or political subdivision thereof will not be treated as a tax-exempt entity if all the activities of the corporation are subject to income tax and a majority of the corporation's directors are not selected by the U.S. or any state or political subdivision thereof.

Note: It is unclear whether "mixed ownership" corporations, such as Amtrak, the Federal Deposit Insurance Corporation and other entities listed in 31 U.S.C. §9101(2), are governmental instrumentalities for purposes of the leasing rules. The Senate Report clarified that fully taxable corporate instrumentalities of the U.S. or any state are not tax-exempt entities. *See* Senate Report at 127. Thus, under the Senate version of the bill, mixed ownership corporations would not be tax-exempt entities since they are taxable. In contrast, the House bill provided generally that government instrumentalities were tax-exempt entities, but that a corporation would not be treated as an instrumentality if all its activities were taxable and a majority of its board was not selected by the federal or a state government or a political subdivision thereof. The latter provision, which was adopted by the conferees, does not apply to most mixed ownership corporations because the federal government generally appoints a majority of their boards. Thus, the question of whether a mixed ownership corporation is a tax-exempt entity turns upon whether it can be viewed as an instrumentality of the federal government within the meaning of §168(j)(4)(A)(i). Although the Conference Report states that the conferees adopted the House bill with respect to the tax treatment of corporate instrumentalities of the U.S., it can be argued that mixed ownership corporations do not operate as instrumentalities of the federal government and, thus, do not fall within the basic definition of tax-exempt entity established by §168(j)(4)(A)(i). Alternatively, it could be inferred from the action of the conferees (*i.e.*, adopting the House version) that they implicitly included all government corporations within the definition of "tax-exempt entity" other than those that fall within the specific exemption in §168(j)(4)(D).

Organizations which are exempt from income tax (other than cooperatives described in §521) also fall within the definition of "tax-exempt entity." An identical rule previously applied under the investment credit limitation of §48(a)(4).

Notwithstanding the foregoing, property predominantly used by a tax-exempt organization in an activity subject to the tax on unrelated trade or business income is not covered by the leasing rules.[9] The rules delineating the foreign persons and entities that are included in the definition of "tax-exempt entity" are somewhat more complicated. Section 168(j)(4)(A)(ii) provides, generally, that any foreign person or entity is a tax-exempt entity. The statute clarifies that "foreign person or entity" means any foreign government, international organization, or any agency or instrumentality of either of the foregoing, and "any person who is not a United States person."[10] A foreign partnership or other foreign pass-through entity, however, does not fall within the definition of "tax-exempt entity."[11]

The TRA narrowed the potential reach of the definition of "tax-exempt entity" by providing that a foreign person or entity is a tax-exempt entity only as to property where 50 percent or less of the gross income derived by the foreign person or entity from the property is subject to U.S. income tax in the hands of the foreign person or entity.[12] Thus, if more than 50 percent of the gross income realized by the foreign lessee from a piece of property is subject to U.S. income tax, the property does not fall within the leasing rules. For these purposes, income taxed to a U.S. shareholder under §951 (relating to amounts included in the gross income of U.S. shareholders in controlled foreign corporations) for the shareholder's taxable year in which or with which the taxable year of a foreign lessee ends will be treated as being subject to U.S. income tax.[13] Further, to determine whether the 50-percent threshold is satisfied, the portion of the gross income subject to U.S. tax derived by a foreign lessee from property must be determined after taking into account all exclusions and exemptions, whether established by statute, treaty, or otherwise. In contrast, the total gross income from the use of property (*i.e.*, the denominator of the fraction) is to be determined without regard to any of the exclusions or exemptions described above.[14]

Comment: The income threshold described above was the subject of considerable controversy throughout the legislative consideration of the TRA. The House version of the bill included the 50-percent limitation described above. In response to an intense lobbying effort by taxpayers who lease property overseas, the Senate lowered the threshold to 20 percent, thereby increasing the potential class of property eligible for the exclusion from the definition of "tax-exempt entity." In resolving this conflict between the two bills, the Conference Committee adopted the House approach.

Note: Neither the statute nor the legislative history expressly states at what point in time the income threshold is to be applied to property leased to a foreign person or entity. For example, the statute could be interpreted as requiring taxpayers to apply the 50-percent threshold test on an annual basis. Under this interpretation, property leased to a foreign person or entity could be subject to the leasing rules in some years but not in others. Alternatively, the status of property leased to a foreign person or entity could be conclusively determined in the year the property is placed in service based on an application of the 50-percent test at that time. The investment tax credit regulations

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

apply the latter approach in determining whether property is used predominantly outside the U.S. *See* Regs. §1.48-1(g)(1)(ii). This approach is mandated, however, by the fact that the determination of whether the property qualifies for the investment credit is made in the year the property is placed in service and, no doubt, an identical rule will apply for purposes of the investment credit limitations of the TRA leasing rules. In contrast, it seems that the 50-percent threshold of §168(j)(4)(B) could be applied annually to determine the appropriate ACRS deduction for a lessor of tax-exempt use property. The proposed ACRS regulations anticipate that property used predominately outside the U.S. (and therefore eligible only for the less generous ACRS deductions) may be converted, in a later year, to recovery property eligible for the full ACRS deductions. *See* Prop. Regs. §1.168-2(j)(3). Thus, the proposed ACRS regulations suggest that the 50-percent threshold test in the foreign leasing rules should be applied annually. In any event, the legislative history directs the Treasury to promulgate regulations pursuant to its authority under §168(f)(13) which will apply to property the tax ownership of which has not changed but which either becomes, or ceases to be, tax-exempt use property after it is placed in service by the taxpayer. House Report at 1151.

The rules defining "tax-exempt entity" contain a provision applicable to movies and sound recordings used by a foreign person or entity. A foreign person or entity that leases or uses a "qualified film," as defined in §48(k)(1)(B), or a "sound recording," as defined in §48(r), is not a "tax-exempt entity" with respect to the qualified film or sound recording.

2. Five-Year Lookback Rule

The definitional sections also contain a rule applicable to former tax-exempt organizations. If an organization (other than a cooperative described in §521) was tax exempt at any time during the five-year period ending on the date it enters into a lease, the organization shall be treated as a tax-exempt entity with respect to the property which is the subject of the lease.[15] The statute also provides that the five-year lookback rule applies to a successor organization engaged in substantially similar activities as those of its predecessor.[16] For example, if a tax-exempt hospital creates a wholly-owned taxable subsidiary which leases property and provides services to the hospital, any property leased by the subsidiary under leases entered into within five years of the date on which it was organized potentially will be classified as tax-exempt use property.[17] The five-year lookback rule, however, applies only to property leased (as opposed to owned) by the subsidiary. Property leased under a lease that extends beyond the five-year period will continue to be classified as tax-exempt use property because the determination under the lookback rule hinges upon whether the lease was entered into during the lookback period.

The statute also creates several exceptions to the lookback rule. First, the lookback rule does not apply to the Federal Home Loan Mortgage Corporation, a government corporation which loses its federal tax exemption effective January 1, 1985.[18] Rural electric cooperatives and other organizations formerly exempt from tax under §501(c)(12) at any time during the five-year lookback period will not be treated as tax-exempt entities if they elect to be taxed for the period beginning with the taxable year the leased property is placed in service and ending with the close of the fifteenth taxable year following the last taxable year of the recovery period for such property.[19] To qualify for the exception, however, former §501(c)(12) organizations also must elect to pay tax on the exempt arbitrage they earn, or have earned, on that portion of the proceeds of any tax-exempt obligations used by the organization to finance the leased property. The Conference Committee devised this latter requirement, and it is described in some detail in the Conference Report.[20]

3. Pass-Through Entity Leases

In the case of any property that is leased to a partnership (or other pass-through entity) having a tax-exempt entity as a partner (a beneficiary), such entity's proportionate share of the property is treated as being leased to such entity.[21] The method of computing the tax-exempt entity's proportionate share of property is discussed in III, I, *infra*.

The statute establishes a presumption with regard to foreign partnerships. Unless otherwise established to the satisfaction of the Secretary of the Treasury, the partners of a foreign partnership (or, the beneficiaries of any other foreign pass-through entity) are treated as foreign persons.[22]

B. Tax-Exempt Use Property

The statute creates two basic classes of "tax-exempt use property," "15-year tax exempt use property," and tax-exempt use property other than 15-year real property. Throughout this Chapter, the two classes of property are referred to as "tax-exempt real property" and "tax-exempt personal property," respectively. The rules defining the former class of property are somewhat more complex, and there are several exceptions to both classes as well.

1. Personal Property

"Tax-exempt use property" includes that portion of any tangible personal property leased to a tax-exempt entity.[23] In contrast to the definitional rules applicable to tax-exempt real property, the Code creates a blanket rule covering personal property. The definition of tax-exempt use personal property is limited, however, to property "leased to a tax-exempt entity." This language contrasts with the terms of the Senate and House bills, which provided that tax-exempt use personal property included all tangible property "used by a tax-exempt entity."[24] Consequently, under the earlier versions of the bill, if a tax-exempt entity owned a partial interest in personal property, the entire property constituted tax-exempt use property. The statute as enacted, however, treats only that portion of personal property leased to a tax-exempt entity as tax-exempt use property. Notwithstanding the foregoing, property owned by a partnership in which a tax exempt entity is a partner is subject to a different set of rules, which are discussed below in III, G.

2. Fifteen-Year Real Property

"Tax-exempt use property" also includes that portion of real property "leased to a tax exempt entity in a disqualified lease."[25] The statute creates a 35-percent threshold test, however, and real property will constitute tax-exempt use property only where more than 35 percent of the property is leased to tax-exempt entities in disqualified

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

leases.[26] For this purpose, a "disqualified lease" is a lease of real property to a tax-exempt entity where one of the following four conditions is satisfied:

(i) All or part of the property was financed directly or indirectly with tax-exempt obligations and the tax-exempt entity (or a related entity) participated in the financing.

(ii) The lease contains a fixed or determinable purchase price or sale option exercisable by the tax-exempt entity or a related entity.

(iii) The lease term exceeds 20 years.

(iv) The lease occurs after a sale or other transfer of the property by, or a lease of the property from, the tax-exempt entity (or a related entity) and such property was used by the entity (or a related entity) before the sale, transfer, or lease.[27]

To determine whether the 35 percent threshold test has been exceeded in the case of a particular piece of real property, all disqualified use of the property is considered.

Example: Each of two tax-exempt entities leases 20 percent of a building, and the term of each lease exceeds 20 years. Forty percent of the building is tax-exempt use property. This result follows because, although the 35-percent ceiling was exceeded, "tax-exempt use property" includes only that portion of the real property leased under a disqualified lease. In contrast, if only one tax-exempt entity leased 20 percent of the building under a 20-year lease, no portion of the property would be treated as tax-exempt use property, assuming no other disqualified lease existed.

The legislative history specifies that, generally, separate buildings will be treated as separate properties for purposes of applying the definition of tax-exempt use property. Where two or more buildings are part of a single "project," however, the entire project is one property.[28] Further, in calculating the amount of space leased by a tax-exempt entity, the net rentable floor space leased by the entity should be compared to the total net rentable floor space in the building. Net rentable floor space does not include common areas.[29]

a. Participation in Tax-Exempt Financing

The question of whether a tax-exempt entity (or a related party) participates in financing a property with tax-exempt obligations requires a factual determination based on all the circumstances in a particular case. The legislative history provides several examples of cases in which a tax-exempt entity will be deemed to have participated in the financing of a property. For example, a tax-exempt entity participates in the financing if it (or a related entity) issues the tax-exempt obligations used to finance the property and it is reasonable, as of the date of issuance, to expect that the issuer will lease a portion of the property. A tax-exempt entity also will be viewed as having participated in the financing if it makes a commitment to lease space in a building before the owner has obtained its tax-exempt financing.[30] This latter example suggests that a low level of activity by a tax-exempt entity can amount to participation in financing a property.

b. Purchase or Sale Options

A lease is a "disqualified lease" if it contains a fixed or determinable purchase price or sale option exercisable by the tax-exempt lessee or a related entity. A lessor's "put," as well as a lessee's purchase option, is subject to this rule, provided the lessor's put right runs to a tax-exempt entity or a related party.

The legislative history clarifies that a "determinable price" option includes an option fixed at a pre-established price or at a price calculated pursuant to a formula. An option to purchase at fair market value on the date of exercise, however, is not a fixed or determinable price option. Likewise, if the parties adopt, at the time they enter into the lease, a formula that they reasonably expect will calculate the fair market value of the property on the exercise date, the option will not be treated as a determinable price option.

Example: A purchase option providing the lessee the right to purchase the property at some date in the future at a price equal to a percentage of original cost is a determinable price option. An option price based upon a formula which incorporates market rate rents and prevailing interest rates is not a determinable price option.

Arrangements which have the effect of a fixed or determinable price option are treated as such.[31] Examples of arrangements that may be treated as equivalent to fixed price options include options to purchase the stock (or other equity interests) of the lessor, and lease provisions that require the lessee to pay the lessor a specified amount upon the termination of the lease or destruction of the leased property.[32]

c. Use After Transfer

A lease will be considered a "disqualified lease" if the lease occurs after a sale or other transfer of the property by, or a lease of the property from, the tax-exempt lessee (or a related entity), provided the property was used by the tax-exempt lessee (or related entity) before the sale, transfer, or lease. The basic thrust of this provision is to include within the term "disqualified lease" sale-leasebacks by tax-exempt entities. As evidenced by the legislative history, Congress intended to include within this form of disqualified lease a variety of transactions that have the effect of a sale-leaseback.[33] The statute provides, however, that a transaction will not be treated as a disqualified sale-leaseback if the tax-exempt entity leases the property within three months after the date on which the entity (or a related entity) first uses the property.[34]

Note: The Senate Finance Committee added the three-month window to the House version of the TRA. The provision parallels the three-month window established by §48(b). This latter provision allows certain property which is the subject of a sale-leaseback to qualify as "new §38 property."

d. Renewal Options

For a discussion of the rules for determining whether a renewal option counts toward the maximum 20-year lease term allowed under the leasing rules, *see* III, E, below.

e. Improvements

For purposes of determining whether a property constitutes tax-exempt use property, improvements to a property (other than land) shall not be treated as a separate property.[35] For example, the legislative history describes a case in

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

which a taxpayer purchases a building shell from a tax-exempt entity, rehabilitates the building, and leases the renovated property back to the tax-exempt entity.[36] On these facts, the statute will treat the renovated building as a single piece of tax-exempt use property because the building was the subject of a sale-leaseback. Alternatively, if a taxpayer leases unimproved land from a tax-exempt entity, constructs a building on the land, and leases the improved real estate to the tax-exempt entity, the building will not be treated as tax-exempt use property unless it otherwise falls within one of the "disqualified lease" provisions. That is, the building will not be deemed to be the subject of a sale-leaseback under §168(j)(3)(B)(ii)(IV). Similarly, the legislative history confirms that a building constructed on land leased from a tax-exempt entity will not constitute tax-exempt use property solely by reason of the underlying lease.

C. *Operating Rules for ACRS Deductions*

1. *Personal Property*

Prior to the TRA, the Code did not generally limit ACRS deductions with respect to property leased to tax-exempt entities. Section 168(f)(2), however, contains rules which decrease the ACRS deductions for property used predominantly outside the U.S. In the case of personal property used predominantly outside the U.S., §168(f)(2) allows taxpayers to recover their costs over a recovery period equal to the asset's present class life (ADR life). An asset without a present class life is subject to a 12-year recovery period for this purpose. In the case of real property used predominantly outside the U.S., ACRS prescribes a 35-year recovery period. Certain types of property excluded from the foreign use restrictions under the investment credit rules of §48(a)(2)(B) are eligible for standard ACRS deductions, notwithstanding any foreign use.

Under the rules enacted by the TRA, tax-exempt use personal property must be depreciated using the straight-line method over a period equal to the greater of (i) the property's present class life, or (ii) 125 percent of the lease term. The statute treats personal property which has no class life under the ADR system as having a 12-year class life for these purposes. Further, the statute adopts a half-year convention for personal property.

Note: the TRA amended §168(g)(2) to authorize the Treasury to establish class lives for properties that were not covered by the ADR rules. This grant of regulatory authority is significant not only for purposes of the leasing rules, but also for ACRS generally. For example, assets that presently fall within the five-year class because they do not have a class life of four years or less potentially can be included in the three-year class if they are issued a four-year class life under the regulations.

Section 168(j)(2)(E) explicitly provides that, where tax-exempt use property is financed with the proceeds of an industrial development bond, the taxpayer shall compute recovery deductions under §168(j) rather than §168(f)(12). Section 168(f)(12) generally requires that the recovery deductions for property financed with industrial development bonds be calculated under the straight-line method. In contrast to §168(j), however, §168(f)(12) does not increase the period over which the taxpayer may recover its costs.

2. *Real Property*

Prior to the enactment of the TRA, real property leased to tax-exempt entities generally was eligible for the 15-year recovery period (subject to §168(f)(2)). After the TRA, tax-exempt use real property must be depreciated using the straight-line method (without regard to salvage value) over the longer of (i) 40 years or (ii) 125 percent of the lease term. For the year in which tax-exempt real property is placed in service, the deduction shall be calculated on a pro rata basis with reference to the month in which the property is placed in service. Moreover, although §168(j)(1) refers to "15-year real property" in establishing the applicable recovery periods for tax-exempt use property, the statute specifies that "15-year real property" includes the class of 18-year real property (as enacted by the TRA), as well as real property which is not recovery property. Consequently, real estate that might otherwise be ineligible for ACRS because of the anti-churning rules is treated no differently under §168(j) than real estate that falls within ACRS.

D. *Exception for Short-Term Leases*

Prior to the enactment of the TRA, §§48(a)(4) and (5) generally denied an investment credit for property used by a tax-exempt organization or by a governmental unit. The regulations and case law, however, recognized exceptions to this general rule for casual or short-term leases of property.[37] These authorities defined "casual lease" to mean a lease that lacks the formalities typical of a written lease. A casual lease includes the lease of an automobile from a car rental company by a government employee traveling on government business.[38] The exception for short-term leases evolved in order to allow the government to fulfill an unforeseen or extraordinary need to lease property on a short-term basis. In these limited circumstances, the exception allowed a lessor to fulfill this unforeseen need of the tax-exempt or government entity without causing the taxpayer-lessor to lose the investment credit with respect to the leased property.[39]

The ACRS and investment credit provisions in the leasing rules follow the general approach of pre-TRA law by providing an exception from the definition of tax-exempt use property for property leased to a tax-exempt entity under a short-term lease. Specifically, §168(j)(3)(C)(i) provides that property shall not be treated as tax-exempt use property for purposes of the ACRS rules merely by reason of a short-term lease. The statute defines "short-term lease" to mean any lease the term of which is (i) less than three years, and (ii) less than the greater of one year or 30 percent of the property's present class life. In the case of real property and property without a present class life, however, the 30 percent requirement does not apply, and the lease term need only be less than three years to qualify for the exception.

Although the statutory language is somewhat ambiguous, the legislative history expressly states that property which qualifies under the short-term lease exception will not be subject to any of the ACRS provisions of §168(j).[40] Consequently, even if a building is financed with tax-exempt bonds or is the subject of a sale-leaseback, §168(j) will not apply if the lease term is less than three years.[41]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Note: The leasing rules limiting the availability of the investment credit for tax-exempt use property also create a short-term lease exception, which is discussed below.

E. Property Used in an Unrelated Trade or Business

Under §168(j), tax-exempt use property does not include any portion of property used predominantly by a tax-exempt entity in an unrelated trade or business the income of which is subject to tax under Code §511 or §514. This exception also applies to property predominantly used by a tax-exempt entity in a trade or business through a partnership in which the entity is a partner. Although the legislative history does not expressly address the reason for this exception, presumably Congress concluded that, to the extent the property leased by a tax-exempt entity is used in an activity subject to tax, the property should not be distinguished from property leased by a taxable entity.

F. Special Rules for Certain High Technology Equipment

Congress adopted a special set of rules applicable to certain high technology equipment which would otherwise be treated as tax-exempt use property. Congress excluded these types of property from the more stringent rules of §168(j), presumably on the theory that, because of rapid technological advances that can be expected in the near future, this equipment is likely to become obsolete before the expiration of its physical useful life, or perhaps even before the expiration of the five-year ACRS recovery period.[42] Thus, "qualified technological equipment," which meets certain requirements, is eligible for a five-year recovery period even if it is leased to a tax-exempt entity.

1. Definition of Qualified Technical Equipment

Section 168(j)(5) generally defines "qualified technological equipment" to mean (i) any computer or peripheral equipment, (ii) any high technology telephone station equipment installed on the customer's premises, and (iii) any high technology medical equipment. The statute also includes rather specific technical definitions of all three categories of qualified technological equipment, and the legislative history provides numerous examples of specific types of equipment that fall within the definitions.[43]

The statute authorizes the Secretary of the Treasury to issue regulations identifying items of high technology telephone station equipment and high technology medical equipment which are not subject to rapid obsolescence. Any such items ultimately listed in regulations and placed in service after the date on which the final regulations are issued will not be treated as "qualified technological equipment" notwithstanding the fact that the items meet the other statutory requirements.[44]

The definitional provisions relating to telephone station equipment present several interpretive issues. First, the statute requires that, to qualify as "qualified technological equipment," telephone station equipment must be installed on the customer's premises. The legislative history sheds no light on the meaning of "customer's premises." It is not clear whether a customer's premises include any site at which it regularly conducts its activities or whether the term includes only locations which the customer actually owns or leases. Moreover, it is not clear whether a mobile telephone would be viewed as being used on a customer's premises. Further, it is ironic that, in commenting on the definition of high technology telephone station equipment, the legislative history may have excluded from the definition items of equipment which are particularly subject to rapid obsolescence. Specifically, the House Report explicitly states that only equipment included in ADR class 48.13 may qualify as high technology telephone station equipment.[45] The Report also identifies telephones which have features such as an abbreviated dialing program, an automatic callback, or a conference call feature as qualified telephone station equipment. Although a conference call feature does not seem to incorporate a particularly high level of technology and might be considered a candidate for inclusion in the future regulations identifying equipment not subject to rapid obsolescence, it appears that the specific reference in the House Report may be sufficient to insure the qualified status of conference call telephones. In contrast, certain microwave transmitters and relay equipment apparently will not qualify as high technology equipment because those items fall within ADR classes other than 48.13 (for example, ADR class 48.32).

Comment: Rather than identify industry-specific items of equipment that qualify for an exception from the leasing rules, the Senate bill contained a general exception to §168(j) for property having an ADR mid-point life of six years or less (provided the lease term for the equipment did not exceed a specified limit). Inasmuch as the final version of the TRA followed the House approach, it appears that the references in the Ways and Means Committee Report discussed above should be persuasive in resolving uncertainties over the definition of qualified high technology equipment.

2. Other Restrictions

To be eligible for the exception for qualified technological equipment, an item of equipment must not be leased to a tax-exempt entity for a term of more than five years. Notwithstanding the foregoing, even if the lease term exceeds five years, the property is eligible for slightly less generous ACRS deductions, provided the property is predominantly used outside the U.S. For these purposes, property which qualifies for the exceptions in §48(a)(2)(B) cannot be treated as used predominantly outside the U.S.

Section 168(j)(5)(C)(ii) also provides that property leased to a tax-exempt entity will not fall within the definition of "qualified technological equipment" if the property is financed by a tax-exempt obligation or if the lease is part of a sale-leaseback transaction. The statutory language imposing these two restrictions is identical to the language in the sections defining "disqualified lease" for purposes of real property and consequently, the detailed discussion in the legislative history regarding the term "disqualified lease" should be relevant in defining the scope of these two limitations on high technology equipment. As in the case of the disqualified lease rules, the sale-leaseback restriction applicable to qualified technological property will not apply to property which is leased to a tax-exempt entity within three months of first being used by that entity (or a related entity). Finally, §168(j)(5)(C)(ii) establishes a third limit on the definition of qualified technological equipment by providing that such equipment may not be leased to the U.S. or any of its agencies or instrumentalities.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

As noted in the legislative history, the rapid technological obsolescence experienced by qualified technological equipment may create problems for lessors independent of the specific limitations in §168(j). The House Report notes that the standards that have evolved under pre-TRA law apply to leases of high technology equipment and, thus, the purported lessor of such equipment may not be treated as the tax owner of the property if the lease term equals the property's economic useful life.[46] Consequently, even where property falls within the definition of qualified technological equipment in §168(j) and is subject to a lease of five years or less, the tax-exempt lessee may be viewed as the owner of the property if the property is unlikely to have residual value at the end of the lease term because of technological obsolescence.[47]

3. Operating Rules

Property which satisfies the requirements applicable to qualified technological equipment, as described above, may be leased to a tax-exempt entity (other than the U.S. government or its agencies or instrumentalities) without falling subject to the limitations generally imposed by §168(j) upon tax-exempt use property. That is, the tax consequences relating to a lease of qualified technological equipment will be governed by the general ACRS and investment credit rules.

If leased property would qualify as high technology equipment but for the fact that it is leased to a tax-exempt entity pursuant to a lease with a term greater than five years, it is eligible for recovery deductions calculated under the straight-line method (without regard to salvage value) over a recovery period of five years.[48] This rule should not be particularly burdensome inasmuch as qualified high technology equipment presumably would only be eligible for the five-year accelerated recovery period generally available under ACRS. The five-year straight-line rate, however, does not apply to property used predominantly outside of the United States and not eligible for an exception in §48(a)(2)(B). Property used predominantly outside the U.S. and leased to a tax-exempt entity for a term in excess of five years is subject to the full range of limitations imposed upon tax-exempt use property by §168(j).

G. Special Rules for Defining Lease Term

Section 168(j)(6) provides that the term "lease" includes any grant of a right to use property. The statute also provides that, for purposes of the rules in §168(j) the term of a lease is calculated by including all extensions for which the lessee (or a related party) has a legally enforceable option to renew, or for which the lessor has a legally enforceable option to compel the lessee to renew. The lease term of tax-exempt use property includes renewal periods regardless of whether the lease is, in fact, renewed and regardless of the term of the renewal periods. Notwithstanding these general rules, however, the statute does not automatically include a renewal as part of the lease term where the rent during the renewal period is a fair market rent determined as of the renewal date.[49] The Conferees, however, stated that the fair market renewal exception is subject to the principles that have evolved in the case law discussed below which has considered issues regarding the term of a lease.[50] Thus, the exception in §168(j)(6)(C) does not provide absolute protection for a real estate lease with a fair market value renewal option.

The legislative history also states that §168(j)(6) incorporates a facts and circumstances test for purposes of determining whether a subsequent lease (negotiated independent of a renewal option) should be included in the original lease term.[51] Thus, if the parties extend a lease at a rental rate differing materially from market rates at the time of the extension, this fact would suggest that the parties had agreed informally to the extension when they originally entered the lease. Under these circumstances, the second lease term would be added to the original term of the lease. The legislative history indicates that rules such as those which have evolved under §46(e)(3) will be relevant in determining whether subsequent lease terms should be included in the original term.[52]

Finally, the statute and legislative history clarify that if, at substantially the same time or as part of one arrangement, a tax-exempt entity (or a related party) enters into several leases covering the same or substantially similar property and the leases have different terms, each lease will be treated as having a term equal to the term of the longest lease.[53]

H. Related Entities

As noted herein, many of the rules applicable to tax-exempt use property turn upon not only the role of a tax-exempt entity in a transaction, but also on the role of entities related to a tax-exempt entity. For example, real property will generally be treated as tax-exempt use property if a tax-exempt entity or a related party assists the lessor in obtaining tax-exempt financing for the property or sells the property and leases it back from the lessor.[54] Accordingly, §168(j)(7) establishes a series of rules that define the concept of related entities. The definitions vary, moreover, depending upon the identity of the tax-exempt entity in question (*e.g.*, a governmental instrumentality as opposed to a foreign entity).

In the case of governmental units, each agency or instrumentality of a governmental unit is related to all other units, agencies, or instrumentalities which, directly or indirectly, derive their powers, rights, and duties, in whole or in part, from the same sovereign authority.[55] For this purpose, the U.S., each state, and each U.S. possession is considered a separate sovereign authority. Consequently, each member state of a multi-state commission is related to the commission inasmuch as the commission derives its authority from the members.[56] Two cities located in the same state, however, are not related entities, presumably on the theory that each city is a separate sovereign authority and does not derive its powers from the state. The legislative history also states, without explanation, that all cities located in a foreign country are related to each governmental unit, agency, or instrumentality (and presumably all cities) in the foreign country.[57]

With respect to non-governmental tax-exempt entities, the statute provides that tax-exempt entities are related if they have (i) "significant common purposes and substantial common membership," or (ii) "directly or indirectly substantial common direction or control." As examples of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

entities that fall within this rule, the legislative history cites a national fraternity and its local chapters and the Red Cross and its local organizations.[58] The statute establishes another rule applicable to entities that are related through common ownership. Specifically, a tax-exempt entity is related to another entity if either entity owns (directly or through one or more entities) a 50 percent interest in the capital or profits or the other entity. Further, for this purpose, two entities that are treated as related under the "governmental unit" or the "common purposes or control" rules described above, are treated as a single entity for purposes of applying the 50 percent common ownership rule. The result of these rules is that a foreign corporation is deemed to be related to any corporation in which it owns 50 percent or more of the value of the stock, regardless of the jurisdiction in which the subsidiary is organized. Similarly, a charitable organization is related to any corporation in which it owns 50 percent or more of the stock.[59]

Finally, the statute creates a broad anti-abuse section which provides that parties to a transaction will be treated as related entities for purposes of the transaction if it is part of an attempt by the parties to avoid the tax-exempt entity leasing rules.

I. Property Owned by Partnerships and Other Pass-Through Entities

The Act prescribes a set of rules intended to prevent the use of partnerships, other pass-through entities (*e.g.*, S corporations) and tiered arrangements to allocate disproportionately the tax burdens and benefits of property owned by such entities. For example, a partnership that includes a tax-exempt partner may be used to obtain substantially the same results as a pre-Act tax-exempt entity leasing arrangement if the partners are free to allocate a disproportionate share of tax benefits to the taxable partners, while allocating, directly or indirectly, a disproportionate share of tax burdens (*i.e.*, taxable income) to the tax-exempt partner. The Act mandates that all allocations to a tax-exempt entity partner (or other beneficiary, such as an S corporation shareholder) meet certain specific consistency standards. Failure to comply with these standards will result in a proportionate share of the partnership's property being treated as tax-exempt use property, with a commensurate reduction in available depreciation (or investment tax credits).

In general, if any property that is not otherwise treated as tax-exempt use property is owned by a partnership that has both tax-exempt and taxable partners, the tax-exempt partners' "proportionate share" of the property will be treated as tax-exempt use property unless any allocation of partnership items to the tax-exempt partner is a "qualified allocation," or unless the portion is predominantly used by the tax-exempt partners, through the partnership, in an unrelated trade or business the income from which is subject to taxation under §511.[60] An allocation is a qualified allocation for this purpose if it is consistent with the tax-exempt partner being allocated the same share of the partnership's income, gains, loss, deduction, credit and basis during the entire period in which the tax-exempt entity is a partner. Moreover, the allocation must also have "substantial economic effect" as required under §704(b).[61] For this purpose, allocations under §704(c) (relating to the manner in which partners share the tax incidents of property that are attributable to periods before the property is contributed to the partnership) are disregarded.

In the event that an allocation to a tax-exempt partner is not a qualified allocation, such partner's proportionate share of the partnership's property must be computed. This computation must be made based on the partner's share of partnership income or gain, whichever results in the largest proportionate share.[62] The share of gain is to be determined without regard to gain allocated in accordance with §704(c). If, under the partnership agreement, the tax-exempt partner's share of income or gain may vary over time, the highest possible share will be the "proportionate share."[63]

The Conference Report illuminates these rules in several respects. First, and most importantly, the restrictions apply notwithstanding any other provision of the TRA tax-exempt entity leasing rules. Thus, even if only 10 percent of a building is deemed to be tax-exempt use property, that portion will be so treated irrespective of the 35 percent threshold provided in §168(j)(3)(B)(iii). Second, the consequence of an improper allocation will be a reduction in otherwise available depreciation deductions (*i.e.*, the tax-exempt partner's proportionate share of the property will be subject to an extended write-off period under post-TRA §168(j)).

Comment: The statute, by its terms, also applies to §§48(a)(4) and (5). These sections preclude an investment tax credit with respect to property "used" by tax-exempt entities (*see* discussion in III, J below). Since the qualified allocation rules apply to property *owned* by a partnership that includes tax-exempt partners, their application in the context of investment credits is unclear. Presumably, a "proportionate share" of otherwise available credit will be disallowed to the partnership, since current regulations under §48 treat property owned by a tax-exempt entity as used by such entity.

Third, the Conference Report clarifies that property may be tax-exempt use property under both the qualified allocation rules and the general tax-exempt entity leasing provisions.

Example: A §501(c)(3) organization (A) is a 50-percent partner in a partnership that owns an office building. Fifty percent of the rentable space is leased to another §501(c)(3) organization, rendering this portion subject to the depreciation and investment tax credit limitations under §168(j) and §48. A receives a special allocation of 75 percent of the income generated by the remaining rentable space. That space is deemed to be tax-exempt use property, since the allocation to A with respect to the space is not a qualified allocation.

For purposes of the qualified allocation rules, §168(j)(9)(E) requires that the regulations implementing the tax-exempt entity leasing provisions (to be promulgated under §168(j)(10)) set forth the appropriate treatment for guaranteed payments. The statute also states that these regulations may provide for the exclusion or segregation of items. The Conference Report clarifies that priority cash distributions to partners that constitute guaranteed payments under §707(c) should not affect an otherwise quali-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

fied allocation if they are (1) reasonable in amount (*i.e.*, equal to the appropriate federal rate) and (2) made to all partners in proportion to their capital in the partnership. Disproportionately large payments to tax-exempt partners, which would circumvent the qualified allocation requirements, will not be treated as qualified.[65] Such payments would have the effect of shifting taxable income from taxable partners to tax-exempt partners.

With regard to the segregation or exclusion of certain items, the Conference Report sets out two examples of instances in which abatement of the qualified allocation requirements would be appropriate. Thus, in the case of a partnership consisting of a domestic corporation and foreign country, the allocation to the corporation of U.S. tax expenses imposed on the partnership would not constitute a disqualified allocation, since the tax burden is borne solely by the corporation. Similarly, varying allocations to reflect varying capital interests in separate oil or gas wells may satisfy the qualified allocation rules.

All pass-through and tiered entities will be subject to the qualified allocation provisions.[66]

J. Limitations on Investment Tax Credits

1. General

As previously discussed, pre-TRA §48(a) generally denied any investment tax credit with respect to property used by a tax-exempt organization, property used predominantly outside the U.S., and property used by a federal or state political subdivision (or agency or instrumentality thereof).[67] Section 31(b) of the Act expands the list of disqualifying uses to include use by any U.S. possession and by any foreign person or entity.[68] For purposes of the latter exclusion, the definitions provided in post-TRA §168(j) apply. Thus, the term "foreign person or entity" does not encompass a foreign partnership or other foreign pass–through entity.[69] Moreover, property used by a foreign person or entity is eligible for the investment tax credit if more than 50 percent of the gross income for the taxable year derived from use of the property is subject to U.S. income tax or is included in gross income by a U.S. shareholder under §951.[70]

Property otherwise eligible for the investment tax credit ("§38 property") will cease to be §38 property at the time it becomes tax-exempt use property. Under the investment tax credit recapture rules of §47, the conversion to tax-exempt use may trigger recapture of all or part of the investment credit.

The Act provides two exceptions to the general exclusion of property used by governmental units or foreign entities or persons. First, the exclusion does not apply to certain property that is subject to a short-term lease. No property is considered tax-exempt use property merely because it is leased for a term of less than six months.[71] In the case of property leased to a foreign person or entity for use in offshore drilling for oil and gas (including drilling vessels, barges, platforms, drilling equipment and support vessels), or property so leased which is a container, container chassis or trailer having a present class life of six years or less, the exclusion does not apply if the term of the lease is less than three years and less than the greater of one year or 30 percent of the present class life of the property.[72] These special exceptions for drilling equipment, containers and leases of less than six months are also available for property that is used by tax-exempt organizations (*i.e.*, property described in §48(a)(4)). Finally, any new aircraft is eligible for the investment credit if it is leased prior to January 1, 1990 to a foreign person or entity for use outside the U.S., and the lease term is less than three years.[73]

The second exception relates to qualified rehabilitation expenditures, which are defined in §48(g) as capital expenditures incurred in connection with rehabilitation of a "qualified rehabilitated building." A qualified rehabilitated building is any building (and its structural components) that has been substantially rehabilitated, that was placed in service prior to the rehabilitation and 75 percent of the external walls of which have been preserved.[74] Under the Act, as under pre-TRA law, that part of the basis of such a building that is attributable to qualified rehabilitation expenditures qualifies for the investment tax credit, even if the building is leased to a governmental unit or foreign person or entity.[75]

The Conference Report emphasizes that, unless one of the foregoing exceptions applies, no investment credit is allowed even if the property in question would be eligible for the credit under §48(a)(2)(B), which permits the credit for certain property used predominately outside the U.S.

Example: Taxpayer leases a communications satellite to a French corporation that is a controlled foreign corporation. Forty percent of the gross income derived by the corporation from use of the satellite is includible in the gross income of U.S. shareholders of the corporation under §951. Because less than 50 percent of gross income generated by the satellite is included in income by the U.S. shareholders and no other exception applies, no investment credit is available with respect to the satellite.

2. Rehabilitation Tax Credit

Code §46(a) provides a generous tax credit for investment in the rehabilitation of certain buildings. The amount of the credit is a percentage of qualified rehabilitation expenditures incurred with respect to a qualified rehabilitated building.[76] One of the characteristics of a qualified rehabilitated building is that a certain amount of rehabilitation expenditures are incurred during a two-year period in the rehabilitation process.[77]

The definition of "qualified rehabilitation expenditures" appears at §48(g)(2). Section 31(c) of the 1984 Act amends §48(g)(2) to exclude from eligibility for the rehabilitation credit expenditures allocable to any portion of a building that is, or "may reasonably be expected to be," tax-exempt use property.[78] For this purpose, "tax-exempt use property" has the meaning given in §168(j)(3).[79]

Example: Taxpayer incurs $100,000 of qualified rehabilitation expenditures in rehabilitating a row house. One half of these expenditures are allocable to a portion of the row house (approximately 50 percent of the total rentable space) that is expected to be leased to a tax-exempt entity under circumstances that will make the portion tax-exempt use property. Only $50,000 of the expenditures are qualified rehabilitation expenditures. Under §168(j)(3), if 35 percent or less of the rentable space of the building is expected to be leased to tax-exempt entities in disqualified

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

leases (*see* III, B, 2, *supra*), all $100,000 of the expenditures would qualify for the credit.

Comment: The statute fails to specify how rehabilitation expenditures are to be allocated among tax-exempt use and non-tax-exempt use portions of a building. Examples in the legislative history suggest that the expenditures should be allocated on a straight percentage basis, as in the above example. Thus, if 36 percent of a building is subject to a disqualified lease, it matters not if all of the expenditures with respect to a building relate solely to portions that are not tax-exempt use property.

Under the TRA rules, expenditures may be included in determining whether a building is a qualified rehabilitated building even if the expenditures relate to tax-exempt use property and are therefore ineligible for the rehabilitation credit.[80] Thus, the exclusion of expenditures attributable to tax-exempt use property from the credit computation will not jeopardize the status of qualifying expenditures incurred in the rehabilitation.

3. Thrift Institutions

Code §46(e)(1) effectively limits mutual savings banks, and other thrift institutions described in §593, to 50 percent of the investment tax credit otherwise available with respect to property owned by such institutions. The reason for this limitation is that §593 provides thrift institutions with generous deductions for additions to bad debt reserves, which reduce taxable income.[81] Prior to the TRA, property leased to a thrift institution qualified for the entire amount of allowable credit.

To prevent thrift institutions from circumventing the §46(e) limitations through the use of leasing arrangements, the Act provides that the lessor of property leased to a thrift institution will be treated as a thrift institution.[82] Thus, only 50 percent of the credit will be available to the lessor, and there will be no otherwise unavailable benefits to pass on to the thrift institution by means of a rental adjustment or other arrangement.

As in the case of the general rule denying the investment credit for property used by tax-exempt entities, the Act excepts property used under a lease with a term of less than six months (computed under §168(j)(6)).[83] Additionally, a thrift institution may elect to compute its bad debt reserve deduction on the basis of actual experience (rather than in the manner provided in §593(b).[84] In the event of such election, a taxpayer leasing property to the electing institution may claim a full investment credit for the property. An election, once made, is irrevocable and will apply to any successor organization engaged in substantially similar activities.[85]

K. Definition of Service Contracts

1. Background and General Rules

The TRA limitations on depreciation and investment tax credits apply only if the property in question is leased to, or used by, a tax-exempt entity or entities. As noted above, §48(a)(4) and pre-TRA §48(a)(5) have excluded property "used" by a governmental unit or tax-exempt organization from eligibility for the investment tax credit.

In a line of IRS rulings and court decisions, the Service and the courts have developed a significant exception to the general rule that denies investment credits for property "used by" a governmental unit or exempt organization.[86] Under this so-called "services" exception, when a taxpayer provides equipment to a tax-exempt entity as part of an integrated package of services and equipment, the equipment qualifies for the investment credit.

In the leading case of *Xerox Corp. v. U.S.*,[87] the taxpayer entered into agreements with federal, state and local governments and tax-exempt organization (hereafter "customers") by which the customers obtained from the taxpayer various types of photocopying and printing machines. Under the terms of the agreements, the taxpayer retained ownership of the machines (including accessories), bore the risk of machine loss or damage, and was obligated to provide maintenance and repair service for the machines and to train the customers' personnel to operate the machines. It was also the taxpayer's practice to replace undependable machines with an identical model and to upgrade all existing machines by installing newly developed parts and accessories. The customers generally agreed to pay the taxpayer a fixed fee plus a charge based upon the number of copies produced. The customers also purchased from the taxpayer supplies for their machine, performed minor maintenance duties, and provided employees to operate the machines. The customers were prohibited from altering or physically moving their machines without the taxpayer's permission.

On these facts, the Trial Division of the Court of Claims held that the taxpayer was entitled to the credit. The court based its conclusion on the following facts:

(1) under the terms of the agreement, the taxpayer retained ownership of the machines and assumed the risk of loss;

(2) the agreement prohibited the customer from altering or physically moving the machine;

(3) the contract required the taxpayer to provide full maintenance and repair service at no additional cost to its customer;

(4) the taxpayer performed maintenance and repair work on the machines and trained the customers' personnel to use the machines;

(5) the taxpayer replaced defective machines with identical models, often in lieu of repairing the original machine;

(6) the taxpayer upgraded the machines by periodically installing newly developed parts ("retrofits"); and

(7) under the terms of the agreement, a customer generally paid a charge to the taxpayer based upon the number of copies produced.

In summarily affirming this decision, the full Court of Claims adopted *in toto* the analysis undertaken by the Trial Division.

As is often the case with issues resolved by application of a "totality-of-the-circumstances" test, no consistent and workable criteria for distinguishing service contracts from leases and other arrangements has emerged from the rulings and case law. For example, many of the specific facts relied upon in *Xerox* are present in many typical equipment

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

leasing arrangements. A lessor of equipment almost always retains ownership of the leased equipment, and is often responsible for maintenance and repair. Moreover, the equipment in *Xerox* was used by the customers rather than the taxpayer in the production of copies. The same situation probably would exist under a lease.

To provide statutory guidance for distinguishing leases and similar arrangements from service contracts, and to prevent the "economically insubstantial restructuring" [88] of leases as service contracts, the Act codifies a facts and circumstances test and prescribes a number of specific factors applicable to purported service contracts. The characterization of a contract (or other arrangement, including a pass-through entity) depends upon whether or not:

(1) the service recipient is in physical possession of the property;

(2) the service recipient controls the property;

(3) the service recipient has a significant economic or possessory interest in the property;

(4) the service provider does not bear any risk of substantially diminished receipts or substantially increased expenditures if there is nonperformance under the contract;

(5) the service provider does not use the property concurrently to provide significant services to entities unrelated to the service recipient; and

(6) the total contract price does not substantially exceed the rental value of the property for the contract period.[89]

If some or all of these factors are present, the transaction will be regarded as a lease, regardless of the label affixed by the parties.

In addition, the House and Senate Reports provide a number of detailed examples illustrating the proper application of the statutory factors. The following example from the Senate Report was specifically adopted by the conferees:[90]

Example: E, a school district, and T, a privately owned school bus company, enter into a multi-year agreement (up to four years) under which T will provide transportation for all enrolled school children within the district. T was awarded the contract under competitive bid and is paid, so long as it performs under the contract, at a fixed monthly rate. Under the agreement, T has the exclusive authority to designate bus stops and establish pickup and delivery schedules although it does consult with E. E designates the children to be transported and the time they are to be at school.

T has sole title to the buses, which generally have an economic useful life of 9.5 years, and has total discretion regarding the number and types of vehicles to be used. The agreement requires that all vehicles, equipment, and drivers must comply with applicable state and federal safety regulations. Under the terms of the contract, T is responsible, subject to state requirements, for maintaining insurance coverage within specified limits. T is also responsible for the training and employing of drivers, and for the storage, repair, and maintenance, which is significant, of all vehicles. In addition, T decides when a bus should be replaced, determines what models should be purchased and what features they should have, and exercises discretion over substitution. It is unlikely the buses will be used for other purposes during the school year.

Absent other factors to the contrary, the agreement is a service contract under the bill. The following facts provide the basis for that conclusion: (a) T has physical possession of the buses; (b) T has control of the buses; (c) T bears a substantial risk of nonperformance in that, among other things, it will not get paid unless it performs; and (d) the monthly rate substantially exceeds the rental value of the property. The facts that the buses likely will not be used for other purposes during the school year, that the agreement is for up to four years (which is not a substantial portion of their useful lives), and that T must comply with applicable regulations do not, by themselves, support a conclusion that the agreement is a lease.[91]

The TRA service contract provision applies for all purposes of the Code, not just the nontaxable use restrictions on the investment credit and the depreciation provisions of the Act. For example, the definition probably applies in determining whether equipment or services are furnished by one member of a controlled group to another group member for purposes of establishing an arm's-length charge under §482. Similarly, a purported service contract, if recharacterized as a lease under the service contract definition, will give rise to rents constituting personal holding company income under §543(a)(2).

2. Exceptions and Special Rules

The TRA carves out limited exceptions to the service contract provisions for certain specific types of property. Generally, any contract or other arrangement with respect to the operation of a "qualified solid waste disposal facility" or "water treatment works facility," or the sale of electrical or thermal energy produced at a cogeneration or alternative energy facility, which purports to be a service contract, will be treated as such notwithstanding the general service contract provision.[92] In addition, the definition does not apply to low income housing (as defined in §168) if the property is operated by or for a §501(c)(3) or (c)(4) organization and at least 80 percent of the housing units are rented to low income tenants (as defined in §167(k)(3)(B).[93]

Under certain circumstances, the exception for waste disposal, energy and water treatment facilities will not be available. If the service recipient (or a related entity) (1) operates the facility, (2) bears an significant financial burden if there is nonperformance (other than for reasons beyond the control of the service provider), (3) receives any significant financial benefit in the event of reduced operating costs, or (4) may purchase (or be required to purchase) all or a part of the facility at a fixed and determinable price (other than fair market value), the contract or other purported service arrangement will be subject to recharacterization under the service contract definition.[94] Whether entities are related for purposes of this rule will probably be determined under the principles of §168(j)(7). For a discussion of this provision, *see* III, H, *supra*.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Still another set of rules describes certain contractual rights and events that are disregarded in determining whether a facility is eligible for the exception from the general service contract provision. For purposes of ascertaining whether, under (1) above, the recipient of services is operating the facility, any right of the recipient to inspect the facility, exercise its sovereign powers (if any) or act in the event of a breach of the contract, is not taken into account.[95] Similarly, any allocation under the contract of financial benefits or burdens attributable to a change in any law is disregarded.[96] In determining whether the recipient bears a risk of nonperformance, any temporary shutdown for repairs, maintenance or improvement, or any financial burden caused by the financial difficulty of the service provider, is deemed irrelevant.[97] Finally, the mere fact that a recipient's payments decrease as a result of increased production or efficiency is not taken into account for purposes of the reduced operating cost determination ((3) above).[98] The House and Senate Reports provide an example of the operation of these rules on the case of a qualified solid waste disposal facility.[99]

IV. Effective Dates

A. General Rules

The tax-exempt entity leasing provisions generally apply to property placed in service after May 23, 1983, in taxable years ending after that date, and to property placed in service on or before that date if the lease is entered into thereafter.[100] A lease in effect on May 23, 1983 is not treated as entered into after May 23, 1983 merely because it is renewed or extended after that date, provided the renewal or extension is pursuant to a binding option held by the tax-exempt entity on that date.[101] Moreover, property will not become tax-exempt use property if the lessee, under a lease in effect on May 23, 1983, subleases the property after that date.[102] The Senate Report clarifies that the status of property under these rules will not be affected by a transfer of the property by the lessor after May 23, 1983, so long as the party obligated to lease the property remains the same.[103]

Example: On June 1, 1982, T, a corporation, enters into an agreement under which T will lease an office building to W, a tax-exempt organization, for one year. The agreement grants W an option to renew for an additional year at the expiration of the original lease term. On May 24, 1983, T assigns all of its rights and obligations under the agreement to V. On May 25, 1983, W exercises its option to renew. The office building will not be treated as tax-exempt use property.

For purposes of the effective date provisions, an improvement to property is not treated as a separate property unless it is substantial. An improvement is substantial if capital expenditures related thereto, incurred during any two-year period, equal or exceed 20 percent of the adjusted basis of the improved property (computed without regard to deduction for depreciation and the like).[104] An insubstantial improvement will not be subject to the TRA leasing restrictions if the underlying property qualifies under a transitional rule.

B. Transitional Rules

The Act contains a plethora of special effective dates and transitional rules, many of which apply exclusively to specific projects. This discussion will be limited to those rules considered as having widespread applicability.

1. Binding Contracts

Under the TRA, the tax-exempt entity leasing rules do not apply to property subject to a binding written contract or contracts that, on May 23, 1983 and at all times thereafter, required (a) that the taxpayer (or his predecessor in interest) acquire, construct, reconstruct or rehabilitate the property, and that (b) the tax-exempt entity (or its tax-exempt predecessor) lease the property.[105] The rules are also inapplicable to property owned by a partnership if the partnership acquired the property on or before October 21, 1983 or entered into a binding contract that, at all times on or after that date, obligated the partnership to acquire or construct the property.[106] Also excepted is property leased to a tax-exempt entity (other than a foreign person or entity) if (a) the taxpayer (or his predecessor in interest) or the tax-exempt entity (i) entered into a binding contract to acquire, etc., the property and the property was not previously used by the tax-exempt entity, or (ii) acquired the property between June 30, 1982 and May 23, 1983, or completed construction, etc., between January 1 and May 23, 1983, and (b) the lease is pursuant to a binding contract, entered into before the end of 1984, that requires the tax-exempt entity to lease the property.

For purposes of this transitional rule, a contract is binding only if it is enforceable against the taxpayer under applicable state law and does not limit damages (as by a liquidated damages clause) to an amount that is less than five percent of the contract price.[107] A contract, however, is treated as binding despite the presence of one or more of the following circumstances:

(1) performance under the contract is subject to a condition, so long as the condition is beyond the parties' control;

(2) the parties make insignificant changes in the terms of the contract;

(3) any term of the contract is subject to a standard beyond the parties' control; or

(4) some terms of the contract have not been established (provided that the contract imposes significant obligations on the taxpayer).[108]

Comment: The binding contract provisions raise a number of issues, some of which may be resolved by reference to legislative history and judicial and IRS interpretations under the investment tax credit suspension and termination rules.[109] For example, the proper treatment of a contractual condition that the buyer use its best efforts to obtain any necessary financing is unclear. There is also a question at to how complete a contract must be to be considered binding. Presumably, if the absence of certain terms does not vitiate the agreement under state law, it will be deemed binding for purposes of the Act.

The legislative history specifies that a binding contract to purchase part of a piece of property is not a binding

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

contract to purchase the entire property.[110] For instance, a binding contract to purchase an aircraft engine does not constitute a contract to purchase an aircraft.

2. Official Governmental Action

Property leased to a tax-exempt entity (other than a foreign person or entity, or any federal governmental unit) is exempt from the TRA leasing restrictions if (a) on or before November 1, 1983, there was "significant official governmental action" with respect to the property or its design, and (b) the lease is pursuant to a binding contract entered into before January 1, 1985, that requires the tax-exempt entity to lease the property.[111]

The statute defines "significant official government action" only by reference to what it is not. Specifically, the term does not include granting of permits, zoning changes, environmental impact statements, or similar governmental actions.[112] The House and Conference Reports provide fairly explicit guidance, however, as to what types of action will satisfy the "significant official government action" requirement.[113] The action must meet three distinct tests. First, it must be an official action; that is, sanctioned by law, evidenced by a writing and not withdrawn. For example, minutes of a proceeding reflecting the adoption of an ordinance or resolution will suffice. Second, the action must be specific action relating to a particular (*i.e.*, identifiable) project and indicative of an intent to proceed to consummation. Examples of such action include the hiring of bond counsel or underwriters to assist in financing a particular project, filing a grant application and the recommendation by a planning authority to proceed based on an authorized feasibility study of the specific project. Third, the acting body must have the authority to commit the tax-exempt entity to the project, provide funding, or approve the project under government law. Such authority may exist even though a decision may later be rescinded, or completion of the project requires some other, additional governmental action.

The Conference Report supplies the following examples of qualifying governmental actions:

> *Example:* The enactment of a state law authorizing the sale, lease, or construction of the property; the appropriation of funds for the property or authorization of a feasibility study or a development services contract with respect to it; the approval of financing arrangements by a regulatory agency; the enactment of a state law designed to provide funding for a project; or the endorsement of the application for a certification of need with respect of a medical facility by a regulatory agency other than the agency empowered to issue such a certificate.[114]

3. Certain Partnerships

Section 168(j)(9) (relating to the treatment of property held by a partnership having both tax-exempt and taxable partners) will not apply to property acquired prior to January 1, 1985 by certain partnerships, or prior to January 1, 1986[115] in the case of certain other partnerships. A partnership falls within the first category if (a) the partnership, prior to October 21, 1983, (i) was organized, (ii) filed an exemption request with the Department of Labor,[116] and (iii) circulated a private placement memorandum stating the maximum number of units offered; (b) the private placement memorandum described the property to be acquired, and (c) the sale of units is completed not later than July 18, 1986 or two years after the date of Federal Register publication of the Department of Labor exemption (whichever is later), and no units in addition to those offered in the memorandum are sold.[117] A partnership falls into the second category if (a) prior to March 6, 1984, the partnership was organized and publicly announced the maximum amount of interests in the partnership that were offered for sale, and (b) the partnership completed the offering (without additional sales) not later than October 17, 1984.[118]

4. Service Contracts

The TRA rules for distinguishing service contracts from other arrangements do not apply in the case of a contract or arrangement with respect to which no tax-exempt entity is a party, if the contract was entered into before November 5, 1983.[119] This rule applies to any renewal or extension pursuant to an option in such a contract or arrangement.[120]

5. Property Used Abroad

The TRA leasing restrictions do not apply to tax-exempt use property used by a foreign person or entity if the property was placed in service prior to January 1, 1984 and the use is pursuant to a lease entered into before that date.[121] If the property is subject to a sublease under a covered lease, the property is exempt only if it was used under the lease by any foreign person or entity before January 1, 1984.[122]

6. Other Special Transitional Rules

The Act sets forth a number of other special transitional rules pertaining to certain narrowly-defined categories of property and specific projects. These should be reviewed carefully by all taxpayers who own property subject to the TRA tax-exempt entity leasing restrictions. They appear as §31(g) of the Act.

CHAPTER 19

MISCELLANEOUS LEASING PROVISIONS

Joseph J. Westwater, Jr., Esq.
and
Donald B. Reynolds, Jr. Esq.
Silverstein and Mullens
Washington, D.C.

I. Finance Lease Provisions Postponed [Act §12]

A. Introduction

TEFRA (P.L. 97-248) generally repealed the safe harbor equipment leasing rules enacted by ERTA (P.L. 97-34). In their place, TEFRA substituted a modified form of safe harbor leasing called "finance leasing."[1] Under the finance leasing rules, the IRS is effectively prohibited from denying lease status to certain arrangements even though: (1) the lessee has the right to purchase the leased property at a fixed price, which is not less than 10 percent of the original cost of the property to the lessor; and/or (2) the agreement provides for the lease of limited use property, *i.e.*, property the use of which is commercially feasible only for the lessee.[2] Thus, in a finance lease transaction, the parties are still, to some extent, able to "sell" tax benefits with respect to property while retaining economic benefits and burdens of ownership, as they were able to do under ERTA's safe harbor rules.

As originally enacted by TEFRA, the finance lease rules generally were applicable to agreements entered into after December 31, 1983, with the following restrictions operative for finance leases entered into before January 1, 1986:

(1) A 40 percent "lessee cap" was imposed on the amount of the lessee's property that may qualify for finance lease treatment in any calendar year.[3]

(2) A 50 percent "lessor cap" was imposed on the amount by which a lessor may reduce its tax liability by means of finance leases.[4]

(3) TEFRA provided a requirement that the lessor's investment tax credits attributable to finance lease property be taken ratably over a five-year period.[5]

(4) The taxable income of a finance lease lessee had to be computed as if the lessee owned the property for purposes of percentage depletion deductions under §§613 or 613(a).[6]

Prior to the Tax Reform Act of 1984, the 50 percent tax benefit cap and the five-year investment tax credit spread requirement would not have applied to property placed in service after September 30, 1985, and the 40 percent lessee cap on eligible lease property would have expired on January 1, 1986. The percentage depletion restriction is permanent.

TEFRA provided an exception to the general effective date and restrictions for agreements relating to certain farm property. Under this exception, the finance lease rules are available for up to $150,000 of a lessee's foreign property, for agreements entered into after July 1, 1982 and before 1984. Further, the 40 percent lessee cap, the 50 percent lessor cap, and the five-year spread requirement for the investment tax credit are inapplicable to this farm property.[7]

Regulations have yet to be issued under the finance lease provisions.

B. Overview

1. Summary of Amendment

The Tax Reform Act of 1984 generally postpones for four years the availability of finance leasing. Thus, these rules will generally apply only to agreements entered into after December 31, 1987, and the three restrictions that were scheduled to apply in 1984-5 will apply in 1988-9. The pre-TRA rules relating to the availability of finance leasing for up to $150,000 of a lessee's farm property are extended to cover agreements entered into before 1988.

Transitional rules which exempt certain automotive and cogeneration property from the four-year postponement apply.

2. Effective Date

The amendments postponing the effective dates are generally effective March 7, 1984. The postponement of the finance lease provisions, however does not apply to agreements concerning property with respect to which the lessee had entered into a binding contract to acquire or construct prior to March 7, 1984. Similarly, the postponment does not apply to agreements covering property if the property was acquired by, or if construction of the property was begun by or for, the lessee before March 7, 1984. Special rules are also provided for certain automotive property and certain cogeneration facilities.

C. Detailed Analysis

1. General

The Act postpones for four years the effective dates of the finance lease rules.[8] These rules generally apply, therefore, only to agreements entered into after December 31, 1987, and the three restrictions that, before the Act, were scheduled to apply in 1984-5 apply insted in 1988-9.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

First, the 40 percent lessee cap is extended to cover property placed in service by a lessee during any calendar year beginning before 1990.[9] Second, the 50 percent lessor cap is extended through September 30, 1989.[10] Third, the five-year spread of investment credit for property subject to a finance lease is extended to cover property placed in service on or before September 30, 1989.[11]

2. Farm Property

Pre-TRA law rules relating to the availability of finance leasing for up to $150,000 of a lessee's farm property are extended to cover agreements entered into before 1988.[12]

3. Transitional Rules

The Act provides transitional rules which exempt certain property from the four-year postponement. Under these rules, finance leasing remains available for otherwise qualified property if, before March 7, 1984: (1) a binding contract to acquire or to construct the property was entered into by or for the lessee; (2) the property was acquired by the lessee; or (3) construction of the property was begun by or for the lessee.[13]

4. Certain Automotive Property

In addition to the general transitional rules, the Act exempts from the four-year postponement of the finance leasing rules up to $150,000,000 of a "qualified lessee's" automotive manufacturing property.[14]

The TRA invokes TEFRA §208(d)(6) to define a "qualified lessee." A lessee with respect to a finance lease agreement under §168(f)(8)(A) is "qualified" if it:

(a) had net operating losses in each of the three most recent taxable years ending before July 1, 1982, and had an aggregate net operating loss for the five most recent taxable years ending before July 1, 1982, and

(b) uses the property subject to the agreement to manufacture and produce within the United States a class of products in an industry with respect to which —

(1) the taxpayer produced less than 5 percent of the total number of units (or value) of such products during the period covering the three most recent taxable years of the taxpayer ending before July 1, 1982, and

(2) four or fewer United States persons (including as one person an affiliated group under §1504(a)) other than the taxpayer manufactured 85 percent or more of the total number of all units (or value) within such class of products manufactured and produced within the United States during such period.[15]

The $150,000,000 ceiling applies to the aggregate cost basis of all property with respect to which the taxpayer, or any related person within the meaning of §168(e)(4)(D), is the lessee.[16]

Note: If the aggregate cost basis of property with respect to which the taxpayer (or a related person) is a lessee were to exceed the ceiling, the finance lease provisions would be unavailable for the entire disqualifying agreement, and not just for that amount of property with basis in excess of the ceiling.

Automotive manufacturing property [17] is:

(a) property used principally by the taxpayer directly in connection with the manufacture of cars or trucks (other than truck tractors) with a gross weight of 13,000 pounds or less;

(b) machinery, equipment, and special tools of the type included in CLADR asset guideline classes 37.11 and 37.12;[18] and

(c) any special tools owned by the taxpayer which are used by a vendor solely for the production of component parts for sale to the taxpayer.

5. Certain Cogeneration Facilities

The Act also exempts from the general four-year postponement of the finance leasing rules property that is part of a coal-fired cogeneration facility placed in service before January 1, 1988 for which an application for certification was filed with the Federal Energy Regulatory Commission on December 30, 1983, and for which an application for a construction permit was filed with a state environmental protection agency on February 20, 1984.[19]

II. Motor Vehicle Operating Leases

A. Introduction

In *Swift Dodge v. Comr.*,[20] the Ninth Circuit reversed the Tax Court and held that a motor vehicle lease which contained a terminal rental adjustment clause ("TRAC") was, for tax purposes, a conditional sale rather than a lease. The TRAC at issue required the lessee to reimburse the lessor, at the termination of the lease, for any difference between the actual value of the vehicle and a projected value calculated at the outset of the lease.

When Congress enacted TEFRA (P.L. 97-248) the Tax Court's decision in *Swift Dodge* was on appeal to the Ninth Circuit. Section 210 of TEFRA provided that, until regulations were promulgated addressing the issue, the Service was precluded from recharacterizing a motor vehicle lease as a conditional sale by reason of the fact that the lease contained a TRAC. TEFRA §210 applied only to operating leases in which the lessee used the vehicle for business, as opposed to personal, purposes. Further, the Service was not prohibited from recharacterizing a lease as a conditional sale where the lessor acquired the vehicle with nonrecourse debt. In November, 1982, the Treasury proposed regulations restating the Service's historical position that a motor vehicle lease which includes a TRAC will be recharacterized as a conditional sale.

In contrast to the temporary moratorium enacted by TEFRA, Congress acted more decisively in the 1984 TRA and adopted rules providing that a "qualified motor vehicle operating agreement" that otherwise qualifies as a lease will not be treated as a conditional sale because it contains a TRAC. The legislative history indicates that Congress adopted the favorable treatment for TRACs because such clauses have been widely used in the motor vehicle leasing industry for more than 30 years and serve a significant, nontax, business purpose.[21] Specifically, Congress determined that a TRAC provides a financial incentive for the lessee to maintain the leased vehicle properly since the lessee bears the cost of any reduction in the vehicle's value

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

resulting from improper maintenance during the lease term.

B. Overview

TRA §32 amends §168(f) of the Code by adding a new paragraph specifying the tax treatment of motor vehicle operating leases that contain a TRAC. Basically, post-TRA §168(f)(13) provides that, if a motor vehicle lease otherwise would be treated as a lease for tax purposes, it will not be recharacterized as a conditional sale by reason of a TRAC. Only "qualified motor vehicle operating agreements" qualify for the safe harbor under §168(f)(13). Under a qualified agreement, the lessor must be personally liable for repayment of all amounts borrowed to finance the acquisition of the leased vehicle or must pledge unrelated property as security for the debt. Further, the lessee must certify in writing, under penalty of perjury, that it intends that more than 50 percent of the use of the motor vehicle will be in a trade or business of the lessee and that the lessee has been advised that it will not be treated as the tax owner of the vehicle.

The provisions enacted by TRA §32 apply to leases entered into more than 90 days after the date of enactment of the TRA (July 18, 1984).

C. Detailed Analysis

1. Background

Automobile dealers that also operate leasing businesses often lease motor vehicles under an agreement that contains a TRAC. A TRAC generally provides that, upon termination of the lease, the lessee is obligated to pay the lessor the difference between the actual wholesale value of the automobile on the termination date and a "depreciated value" established by the agreement for the vehicle as of the same date.[22] The "depreciated value" schedule reflects the lessor's estimate, as of the date of the lease, of the vehicle's value at the future dates specified in the schedule. Thus, because the lessee is required to reimburse the lessor for any shortfall in the actual wholesale value of the vehicle at the termination date, the economic effect of a TRAC is to shift to the lessee the risk that the vehicle will depreciate in value more quickly than the parties originally believed.

In *Swift Dodge*, the Ninth Circuit held that an automobile dealer's lease agreement which contained a TRAC was a conditional sales contract rather than a lease. That is, the court viewed the purported lease as a means of financing the nominal lessee's purchase of the vehicle, which purchase occurred at the time the parties entered into their initial agreement. The Court of Appeals based its decision on its conclusion that the terms of the lease, including the TRAC, shifted all risks of ownership and loss to the lessee. Because the nominal lessor did not qualify as the tax owner of the automobile in the court's view, the lessor could not claim the investment tax credit and depreciation with respect to the vehicle.[23]

As noted above, the issue regarding the effect of a TRAC on an automobile lease also was the subject of Congressional review during the enactment of TEFRA. TEFRA §210 prohibited the Service, until regulations were issued, from recharacterizing a motor vehicle lease as a conditional sale solely because the lease contained a TRAC. Accepting the implicit invitation presented by TEFRA,the Treasury proposed regulations in November, 1982 which adopted the position that a motor vehicle lease which included a TRAC is a conditional sale.

2. Definition of TRAC

Post-TRA §168(f)(13)(C)(i) defines a TRAC as a "provision of an agreement which permits or requires the rental price to be adjusted upward or downward by reference to the amount realized by the lessor under the agreement upon sale or other disposition of such property." The definition in the statute is clearly broad enough to cover provisions such as the one at issue in *Swift Dodge*, which required the lessee to pay the lessor, upon termination of the lease, the difference between the vehicle's actual wholesale value and a value projected at the outset of the lease. The statute also creates a special rule applicable to dealer-lessees which provides that the term "TRAC" includes a provision in an agreement requiring a dealer-lessee to purchase the leased motor vehicle for a predetermined price and then resell it under circumstances in which the provision achieves substantially the same results as a TRAC.

3. Qualified Motor Vehicle Operating Agreement

A "qualified motor vehicle operating agreement" is potentially eligible for the favorable tax treatment established by §168(f)(13). The Code defines "qualified motor vehicle operating agreement" as any agreement regarding a motor vehicle (including a trailer) which meets three basic requirements.

First, in the case of a qualified agreement, amounts borrowed by the lessor to finance the leased motor vehicle must not exceed the sum of the lessor's recourse debt and the fair market value of the lessor's property pledged as security for the debt.[24] For purposes of the latter standard, however, property will not count as qualified security if it is subject to the lease agreement or is property directly or indirectly financed by indebtedness secured by the leased motor vehicle. Thus, if the lessor finances the acquisition of the leased motor vehicle, the lessor's debt must be recourse debt or secured by property unrelated to the lease agreement.

The second requirement is that the agreement must contain a separate written statement signed by the lessee certifying, under penalty of perjury, that (i) the lessee intends that more than 50 percent of the use of the motor vehicle shall be in the lessee's trade or business and (ii) that the lessee has been advised that it will not be treated as the owner of the motor vehicle for federal income tax purposes.[25]

The final requirement is that the lessor must not be aware of any inaccuracies in the certificate provided by the lessee.[26] The statute imposes no duty upon the lessor to verify that the lessee, in fact, meets the 50-percent business use test. If, however, the lessor later becomes aware that the lessee does not satisfy the test, the lessor apparently will lose the protection of §168(f)(13).

4. Tax Treatment of Qualified Agreements

If a motor vehicle lease is a qualified motor vehicle operating agreement, the agreement shall be respected as a lease for tax purposes if, absent the TRAC, the agreement would be characterized as a lease under general tax principles. That is, if an analysis of all of the facts and circumstances (ignoring the TRAC) indicates that the lessor has retained sufficient benefits and burdens of ownership with respect to the leased property, the lessor will be treated as the tax owner of the motor vehicle.[27] As tax owner of the leased property, the lessor will be entitled to take the investment tax credit and ACRS deductions.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Although the effect of §168(f)(13) is to neutralize the impact of a TRAC on the characterization of a qualified motor vehicle operating agreement, it is not absolutely clear that a typical dealer lease will, after the TRA, automatically be respected as a lease for tax purposes. In this regard, the Ninth Circuit, in *Swift Dodge*, appeared to draw negative inferences from a number of facts including the fact that the lessee was required to insure the automobile and perform all maintenance. In the court's view, these factors indicated that the lessee, rather than the lessor, bore the risks of ownership. Indeed, inasmuch as the Ninth Circuit concluded that the only risk borne by the lessor was the risk that the lessee might default under the lease, it may be questioned whether the Ninth Circuit would treat the lease at issue in *Swift Dodge* as a true lease even if it were to ignore the TRAC. As a practical matter, however, it seems that a court faced with a case identical to *Swift Dodge* after the TRA might interpret post-TRA §168(f)(13) as providing some positive Congressional confirmation of the efficacy of a lease containing a TRAC.

Section 168(f)(13) also clarifies the tax treatment of a lessee under a qualified motor vehicle operating agreement. Once a qualified agreement satisfies the applicable standards (*e.g.*, the lessee certification requirement), the statute provides that under no circumstances will the lessee be treated as the tax owner of the motor vehicle during the term of the agreement.[28] This result follows even if the qualified agreement is later found to be a conditional sale because the agreement's terms (other than the TRAC) preclude lease treatment. In these circumstances, the investment credit and ACRS deductions allocable to the motor vehicle will not be available to either party.[29] Congress, presumably, believed that this result was warranted because, by signing the necessary certification, the lessee gives up any claim to the tax benefits allocable to the leased motor vehicle.

The legislative history also states that the lessee's right to deduct rent paid under the qualified agreement is determined under general Code provisions, including provisions added by the TRA such as the accounting changes included in post-TRA §467. If the terms of a qualified agreement (other than a TRAC) dictate that the agreement be recharacterized as a conditional sale, the lessee would be entitled to no rent deductions, but presumably could treat a portion of the "rent" as interest on deferred purchase payments. The determination of the amount of the lessee's interest deduction generally should be governed by post-TRA §§1271-75.[30]

5. Amendments to TEFRA Section 210

As noted previously, TEFRA §210 precluded the Service, until regulations were issued, from recharacterizing a motor vehicle lease as a conditional sale solely by reason of the fact that the lease contained a TRAC. TRA §712(d) added two amendments to TEFRA §210. The first expands the definition of "qualified motor vehicle agreement" to include leases which require dealer-lessees to purchase and resell leased motor vehicles under circumstances in which the lease term achieves substantially the same result as a TRAC. This provision is identical to the special rule applicable to dealer-lessees in §168(f)(13)(C)(ii). TRA §712(d) also clarifies that the rules of TEFRA §210 shall not operate to deny an interest deduction claimed by a lessee with respect to a qualified motor vehicle agreement on a tax return filed before July 18, 1984. Further, TEFRA §210 will not deny a credit for investment in depreciable property claimed by a lessee on such a tax return in accordance with an agreement with the lessor that the lessor would not claim the credit.

TRA §32(b) effectively terminates the application of TEFRA §210 for leases entered into more than 90 days after July 18, 1984. This termination date corresponds to the effective date of the post-TRA §168(f)(13). Thus, the amendments to TEFRA §210 described above will be of limited practical significance.

III. Special Leasing Rules for Certain Coal Gasification Facilities [Act §1067]

A. Introduction

As previously indicated, TEFRA repealed ERTA's safe harbor leasing for transactions entered into after December 31, 1983 and substantially modified the tax treatment of safe harbor leases entered into between July 1, 1982 and January 1, 1984. Most of the modifications adopted by TEFRA, however, do not apply to leases of property placed in service before January 1, 1983, provided that one of the following events occurred after December 31, 1980 and before July 2, 1982: (i) the property was acquired by the lessee or construction of the property was commenced by or for the lessee, or (ii) a binding contract to acquire or construct the property was entered into by the lessee.

Note: For a detailed discussion of the effective dates and transition rules applicable to the TEFRA amendments to safe harbor leasing, *see* 12 T.M., *Equipment Leasing*.

Because the construction period for coal gasification facilities is particularly lengthy, Congress determined that a special safe harbor leasing transition rule was appropriate for these facilities. Basically, a coal gasification facility will qualify as transitional safe harbor lease property provided the property is placed in service before July 1, 1984 and the other conditions described above are satisfied. This modification to the safe harbor leasing transition rules is effective as if it had been enacted in the original transition rule of TEFRA §208(d)(3).

B. Detailed Analysis

Section §1067 of the 1984 Tax Reform Act amended the safe harbor leasing transition rules enacted by TEFRA and added a special rule applicable to coal gasification facilities. A coal gasification facility is a facility used "directly in connection with the manufacture or production of low sulfur gaseous fuel from coal." [31] In the case of a coal gasification facility, most of the safe harbor leasing amendments enacted by TEFRA will not apply to a lease of property placed in service before July 1, 1984, provided one of the following conditions is satisfied between December 31, 1980 and July 2, 1982: (i) the property was acquired by the lessee or construction of the property was commenced by or for the lessee, or (ii) a binding contract to acquire or construct the property was entered into by the lessee.

Act §1067(a) and the legislative history contain several elaborations on the transition rule described above. First, a coal gasification facility will be treated as having been placed in service when the taxpayer received an operating permit for the facility from a state environmental protection agency. Further, the Conference Report states that a coal gasification facility placed in service prior to July 1, 1984 may be leased in a safe harbor lease within three

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

months after it is placed in service by the lessee without losing its status as transitional safe harbor lease property.[32] Finally, the Act clarifies that, in the case of a coal gasification facility, the facility will be treated as having been acquired between December 31, 1980 and July 2, 1982 (as required in the rule cited in the previous paragraph) if at least 20 percent of the cost is paid during that period.

The special transition rule enacted by the TRA for coal gasification facilities applies only to a lease of an undivided interest in the facility in an amount which does not exceed the lesser of 50 percent of the cost basis of the facility or $67,500,000. The special transition rule also provides that the term of a lease which qualifies for the transition rule shall be treated as being five years.[33] Congress apparently added this provision to enable certain coal gasification facilities to satisfy the safe harbor lease rule regarding minimum lease terms even where the facilities are subject to leases of less than five years. The temporary safe harbor lease regulations provide that the term of a safe harbor lease must equal, at a minimum, the ACRS recovery period of the leased property.[34] Unless a coal gasification facility constituted public utility property, it presumably would have an ACRS recovery period of five years.

Act §1067 also establishes a special investment tax credit recapture provision for coal gasification facilities that qualify as transitional safe harbor lease property. Specifically, §1067(b) provides that the recapture rules for progress expenditures shall apply only to the percentage of the cost basis of a coal gasification facility which qualifies for the safe harbor leasing transition rule. This rule ensures that investment credit recapture for progress expenditures will occur only with respect to the interest in a coal gasification facility which is the subject of a safe harbor lease and not with respect to the portion which is retained by the lessee.

IV. Section 280F: Limitations on Tax Benefits for Luxury Automobiles and Other Listed Property

Section 179 of the 1984 Tax Reform Act, enacted Code §280F which limits the ACRS and depreciation deductions which may be claimed with respect to a passenger automobile in any one year to $4,000 in the first year of service and $6,000 in any year thereafter until the cost of the automobile is recovered. The section also limits the investment tax credit that may be taken on any passenger automobile to $1,000. These limitations are applied before any reduction to the ITC or ACRS or depreciation deductions for nonbusiness use of the automobile. In addition, a taxpayer may not use ACRS or take the investment tax credit if the percentage of use in a trade or business fails to exceed 50 percent in any taxable year. Where ACRS is not available, the taxpayer must use the straight-line method over the automobile's earnings and profits life determined under the principles of §312(k)(3). *See* §280F(b)(4)(B). If the business use percentage initially exceeds 50 percent and thereafter declines to 50 percent or less, the investment tax credit and the excess of ACRS deductions over the amount which would have been deductible under the straight-line method over the automobile's earnings and profits life is recaptured in the year of the decline.

If the automobile's basis is not completely recovered at the end of the recovery period, §280F(a)(2)(B)(i) allows the taxpayer to treat the unrecovered amount as an expense in the first taxable year after the expiration of the recovery period to the extent of $6,000. Any further unrecovered basis may be treated as an expense in the next succeeding taxable year.

Under §280F(a)(4), if the taxpayer elects to take a reduced investment tax credit under §48(q)(4), the investment credit limit of §280F(a)(1) is reduced to two-thirds of the otherwise allowable amount.

Section 280F(c) provides special rules for the treatment of leased automobiles. Section 280F(d) provides rules for the coordination of §280F with §179.

The new limitation provisions are discussed in detail in Chapter 40.

CHAPTER 20

CHANGES AFFECTING TAX EXEMPT BONDS

Patrick G. Dooher, Esq.
Silverstein and Mullens
Washington, D.C.

I. Mortgage Subsidy Bonds

A. Introduction

The Mortgage Subsidy Bond Tax Act of 1980 [1] enacted §103A to set forth rules restricting the issuance of tax-exempt bonds to finance mortgages on owner-occupied residences. Under §103A, a mortgage subsidy bond does not qualify for the tax exemption unless it is a "qualified mortgage bond" or a "qualified veterans' mortgage bond."

1. Qualified Mortgage Bonds

A qualified mortgage bond must meet various requirements. It must be issued to provide owner-financing with respect to single-family residences that can reasonably be expected to become the principal residences of their owners.[2] Under §103A(l)(10), dwelling units within a cooperative can also qualify for mortgages financed with the proceeds of a mortgage subsidy bond. In general, at least 90 percent of the lendable proceeds of a qualified mortgage bond must be used to finance the residences of individuals who had no present ownership interest in a principal residence within the preceding three years.[3] The proceeds of a qualified mortgage bond cannot be used to finance the acquisition of a residence whose cost exceeds 110 percent (120 percent in certain targeted areas) of the average purchase price within the area.[4] Further, at least 20 percent of the bond's lendable proceeds must be made available for financing in targeted areas for at least one year.[5]

Section 103A(g) places an annual cap on the amount of qualified mortgage bonds that can be issued within a state. The cap is equal to the greater of (i) nine percent of the average annual aggregate principal amount of mortgages executed during the preceding three calendar years for single-family, owner-occupied residences in the state, or (ii) $20,000,000.00. This cap is allocated 50 percent to the state housing agency and 50 percent to local issuers. Alternatively, the state may provide a different means of allocating the cap among local governmental units.

In general, a mortgage bond does not qualify unless the effective rate of interest on mortgages provided under the issue does not exceed the yield on the bonds by more than 1.125 percentage points.[6] Also, a mortgage subsidy bond does not qualify unless its proceeds are used to provide new mortgages, rather than to replace existing mortgages.[7]

Although the Tax Equity and Fiscal Responsibility Act of 1982 [8] imposed reporting requirements for certain private activity, tax-exempt bonds, no reporting requirements exist for qualified mortgage subsidy bonds.

The authority to issue qualified mortgage bonds terminated on December 31, 1983.

2. Qualified Veterans' Mortgage Bonds

Qualified veterans' mortgage bonds are subject to far fewer restrictions than qualified mortgage bonds. A qualified veterans' mortgage bond is a general obligation bond (*i.e.*, payment of principal and interest guaranteed by a state) that is issued as part of an issue substantially all of the proceeds of which are to be used to provide residences for veterans. The proceeds of such bonds must be used to provide new mortgages. In contrast to qualified mortgage bonds, no ceiling is placed on the amount of qualified veterans mortgage bonds that can be issued. Moreover, the authority to issue such bonds did not expire on December 31, 1983.

B. Outline of New Provisions

The TRA 1984 extends the authority to issue qualified mortgage bonds for four years to December 31, 1987. It also imposes information reporting requirements on issuers of qualified mortgage bonds and qualified veterans' mortgage bonds. Under the TRA 1984, a state official must certify that the ceiling requirement on qualified mortgage bonds has not been exceeded. In addition, an annual policy statement must be supplied setting forth the housing, development, and income distribution policies that each governmental issuer will follow in issuing qualified mortgage bonds.

New requirements are placed on qualified veterans' mortgage bonds. These new requirements include placing a limitation on the annual volume of qualified veterans' mortgage bonds equal to the average annual volume of such bonds issued for the period 1979 through 1983. The TRA 1984 further restricts the authority to issue qualified veterans' mortgage bonds to programs that issued such bonds before June 22, 1984. The TRA 1984 also restricts the categories of veterans who can qualify for mortgages issued with the proceeds of such bonds to veterans who served on active duty before 1977 and who apply for such mortgages no later than (i) January 31, 1985, or (ii) 30 years after the date of discharge from service.

The TRA 1984 provides a new form of subsidy, mortgage credit certificates, that states may issue in lieu of issuing qualified mortgage bonds. A recipient of a mortgage credit certificate issued by a state or locality is entitled to a nonrefundable income tax credit equal to a percentage (specified by the state or local issuer) of the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

interest the recipient will pay during the taxable year on the mortgage used to acquire a principal residence. The percentage specified by the state must be at least 10 percent but no more than 50 percent of the interest on the qualifying indebtedness. The credit reduces the recipient's deduction for mortgage interest on a dollar-for-dollar basis, and excess unused credits may be carried forward by the recipient for three taxable years. In general, for each dollar of credit that can be issued under a mortgage credit certificate, a state must reduce its volume cap for the issuance of qualified mortgage subsidy bonds by five dollars.

C. *Effective Dates*

The extension of the authority to issue qualified mortgage bonds applies with respect to obligations issued after December 31, 1983, and the new reporting, certification, and policy statement requirements apply with respect to obligations issued after December 31, 1984. The new restrictions on qualified veterans' mortgage bonds generally apply to such bonds issued after July 18, 1984.

The election to exchange authority to issue qualified mortgage bonds for authority to issue mortgage credit certificates applies to elections made for calendar years after 1983. However, the credit is available only for interest paid or accrued after December 31, 1984, on indebtedness accrued after December 31, 1984.

D. *Detailed Analysis*

1. *Qualified Mortgage Bond Extension*

The TRA of 1984 [9] extends the authority to issue qualified mortgage bonds, set forth in §103A(c)(1)(B), to December 31, 1987. The reason for this extension is Congress's recognition that first-time home buyers continue to have problems purchasing a home because of high interest rates, and that mortgage subsidy bonds can make an important contribution to making housing more affordable to low and middle-income individuals.[10] The rationale for extending the program for only four years is to permit Congress to reevaluate the qualified mortgage bond program as conditions change.[11]

2. *New Reporting and Certification Requirements*

In order to obtain information which Congress will use to evaluate the mortgage subsidy bond program in the future, the TRA 1984 [12] institutes new reporting, certification, and policy statement requirements with respect to mortgage bonds. Act §611(b)(1) amended §103A(j) by adding new paragraphs (3) to (5). Section 103A(j)(3) sets forth the new information reporting requirements that must be met for all mortgage subsidy bonds—qualified veterans' mortgage bonds as well as qualified mortgage bonds.[13] Under §103A(j)(3)(A), an issuer must submit to the Treasury Secretary a statement containing:

(i) The name and the address of the issuer;

(ii) The issue date, the amount of lendable proceeds, and the stated interest rate, term, and face amount of each obligation that is part of the issue;

(iii) Such information as may be required in order to determine whether the issue meets the requirements of §103A and the extent to which the issue proceeds have been made available to low-income individuals; and

(iv) Such other information as may be required.

The statement must be supplied to the Secretary no later than the 15th day of the second calendar month after the close of the calendar quarter in which the bonds are issued. For example, if a municipality issues mortgage subsidy bonds in February of 1985, the report on the issue is due no later than May 15, 1985. Under §103A(j)(3)(B), the Secretary may grant an extension of time for filing the information statement for reasonable cause.

Section 103A(j)(4) requires, in the case of qualified mortgage bonds, that a designated state official (or the governor if no state official is designated by law) to certify that the requirements of §103A(g) (relating to the annual cap on the aggregate amount of qualified mortgage bonds) have been met by a particular issue before the issuance of that issue.[14] This certification must be submitted to the Secretary at the same time that the information report with respect to the issue is submitted.

In addition to the information and certification requirements described above, new §103A(j)(5) requires the publication of an annual policy statement by issuers of qualified mortgage bonds. This statement must set forth:

(i) The housing, development, and income distribution policies that the issuer will follow in issuing mortgage subsidy bonds and the new mortgage credit certificates (discussed below), and

(ii) An assessment of the issuer's compliance during the one-year period preceding the date of the statement with the prior year's policy statement (if one was published) and with Congress's intent that such bonds and credits be made available, to the greatest extent feasible, to lower-income families.

The annual policy statement must be published only after a public hearing has been held for which reasonable public notice has been given and must be issued by the end of the calendar year, with a copy furnished to the Treasury. An elected official must sign the report. According to the Conference Report,[15] in the case of multiple jurisdiction issuers, the annual report requirement will be met if the issuer files a single report with the Treasury that is signed by either an elected official of each governmental unit on whose behalf bonds have been issued or the state governor.

Note: The reporting, certification, and annual policy statement requirements are effective with respect to obligations issued after December 31, 1984. However, under §103A(j)(5), a mortgage subsidy bond will not be qualified unless the policy statement has been published in the year preceding the year the bonds are issued. Thus, an issuer desiring to issue qualified mortgage bonds in 1985 must publish a policy statement no later than December 31, 1984.

3. *New Requirement for Qualified Veterans' Mortgage Bonds*

The TRA 1984 [16] institutes several new limitations on the issuance of qualified veterans' mortgage bonds, effective generally for obligations issued after July 18, 1984. In order to qualify, a veterans bond must now meet the requirement of §103A(d), which requires that a residence financed through the proceeds of a mortgage bond be a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

single family residence [17] that can reasonably be expected to become the veteran's principal residence.

Three additional new requirements are set forth in §103A(o). First, a veterans' bond will qualify only if each veteran to whom financing is provided under the issue is a "qualified veteran." A "qualified veteran" is defined as a veteran who (i) served on active duty at some time before January 1, 1977, and (ii) applies for a mortgage before the later of the date 30 years after the last date on which such veteran left active service or January 1, 1985.[18] Second, a state may not issue qualified veterans' mortgage bonds unless the state issued such bonds before June 22, 1984.[19] Lastly, §103A(o)(3) places a volume cap on the issuance of qualified veterans' mortgage bonds. This cap is equal to the average annual aggregate amount of qualified veterans' bonds issued by the state during the period from January 1, 1979, through June 22, 1984. However, in calculating this average, the lowest amount of any qualified veterans' bonds issued by a state for one of those calendar years (or portion thereof) during this 1979 through 1984 period is excluded.

Observation: If a state has issued veterans' bonds for only one year during this period, the state's volume cap is zero because that year is technically excluded from the average since it is the year in which the lowest amount of qualified veterans' bonds was issued. This result is presumably not intended because the rule excluding the lowest year in the average would appear to be designed to bolster that average. Here, the exclusion of the only year obviously does not produce such a result.

The volume cap applies to obligations issued after June 22, 1984, and in applying the volume cap after such date, obligations issued on or before that date are not to be taken into account.[20] Also, the volume cap will not apply to any qualified veterans' mortgage funds whose issuance was authorized by state referendum before November 18, 1983, or whose issuance is authorized pursuant to a state referendum before December 1, 1983, where such referendum was authorized by the state legislature before October 18, 1983.[21] It should also be noted that, in the case of any short-term obligation having a term of one year or less and issued to provide financing for property taxes, the amount taken into account in computing the volume cap with respect to such obligations shall be 1/15th of its principal amount.[22]

4. Miscellaneous Changes to Qualified Mortgage Bonds

The TRA 1984 [23] provides certain state governors with the interim authority to continue allocating the state volume cap set by §103A(g) in accordance with the state allocation formula even though the state law authorizing the allocation formula expired as of the close of calendar year 1983. The TRA 1984 [24] also deletes most of the special exceptions to the requirements of §103A that were set out in the Mortgage Subsidy Bond Tax Act of 1980, Act §1104.

5. Mortgage Credit Certificates

a. General

Apart from the extension of qualified mortgage bonds, the most significant TRA 1984 change affecting qualified mortgage bonds is the enactment of the mortgage credit certificate program.[25] In order to institute a mortgage credit certificate program, a state or local issuer must agree to relinquish all or a portion of the annual amount of qualified mortgage bonds that it is entitled to issue under its §103A(g) volume ceiling. In general, for each dollar of credit issued under a mortgage credit certificate, an issuer must reduce its §103A(g) volume cap by five dollars.[26]

The rationale for the institution of mortgage credit certificates stems from Congress's recognition of the relative inefficiency of qualified mortgage bonds as a means of providing a subsidy to first-time home buyers. Under a qualified mortgage bond, the subsidy is split between the first-time home buyer, on the one hand, and tax-exempt investors and middlemen, on the other. Further, Congress noted the difficulty of targeting the subsidy provided by mortgage bonds to those most in need of housing assistance. Accordingly, Congress reasoned that a mortgage certificate credit program would permit all of the subsidy in the form of credits to flow directly to first-time home buyers, thereby providing the same or a larger subsidy at a lower revenue cost. In addition, Congress believed that issuers could achieve greater flexibility in targeting the subsidy to eligible individuals due to the ability to vary the amount of individual credits.[27]

Although Congress in §103A(j)(5) expressed an intent that mortgage credit certificates, as well as qualified mortgage bonds, be targeted first to lower income individuals, there is no binding requirement that such targeting occur. This represents a change from the Senate bill under which an annual income limitation would have been imposed on the utilization of the credit. In addition, the Senate bill would have limited the purchase price of residences eligible for mortgage credit certificates to 90 percent of the average area purchase price. The bill as finally adopted contains no income limitation for recipients of mortgage credit certificates, although the Conference Committee, in limiting the maximum credit a taxpayer may receive to the greater of (i) 20 percent of a qualifying indebtedness on the taxpayer's principal residence, or (ii) $2,000, stated that this limitation is intended to encourage issuers to issue higher percentage credits to individuals who purchase lower-priced residences and who can therefore benefit from a higher percentage credit despite the $2,000 limitation.[28] Also, the final bill eliminated the 90 percent of average purchase price requirement, adopting the general 110 percent of average area purchase price limitation applicable to qualified mortgage bonds.

b. Definition of Mortgage Credit Certificate

Section 25(c)(1) provides that a "mortgage credit certificate" is any certificate that is:

> (i) Issued under a qualified mortgage credit certificate program by a state or local issuer having the authority to issue a qualified mortgage bond, and
>
> (ii) Issued to the taxpayer in connection with the acquisition, qualified rehabilitation, or qualified home improvement of the taxpayer's principle residence.[29]

In addition, a mortgage credit certificate must be in the form that the Secretary prescribes and must specify: (i) the credit certificate rate, which is a percentage ranging from

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

no less than 10 percent to no more than 50 percent,[30] and (ii) the certified indebtedness amount.[31]

Under §25(e)(3), a mortgage credit certificate is treated as in effect with respect to interest attributable to the period beginning on the date the certificate is issued, and ending on the earlier of the date on which (i) the certificate is revoked by the issuer or (ii) the residence to which such certificate relates ceases to be the principal residence of the individual to whom the certificate relates. If an issuer revokes a certificate, it must notify the Secretary of the revocation at such time and in such manner as prescribed in regulations.

Under §25(e)(3)(B), a mortgage credit certificate becomes invalid unless the indebtedness to which the certificate relates is incurred no later than the close of the second calendar year following the calendar year for which the issuer elects to reduce its volume cap on qualified mortgage bonds. For example, if an issuer elects to forego a portion of the qualified mortgage bonds it is otherwise entitled to issue for 1984 in exchange for the right to issue mortgage credit certificates, those mortgage credit certificates and the indebtedness to which they relate must be in effect no later than the end of 1986.

Under §25(e)(4), regulations may be prescribed allowing an administrator of a mortgage credit certificate program to reissue a mortgage credit certificate to replace a mortgage credit certificate previously issued to a taxpayer. Any certificate reissued pursuant to such regulations cannot provide a credit that would be greater than the credit allowable with respect to the original certificate for any taxable year ending after the reissuance of the certificate.

A mortgage credit certificate cannot be issued unless the issuer provides reasonable public notice of the eligibility requirements for such certificate, the methods by which such certificates are to be issued, and such other information as may be required.[32] Such public notice must be provided at least 90 days before issuance of the certificate.

c. Qualified Mortgage Credit Certificate Program

A qualified mortgage credit certificate program is any program established by a state or locality for any calendar year for which it is authorized to issue qualified mortgage bonds.[33] Under this program, the issuer must elect to forego issuance of an amount of qualified mortgage bonds that it is otherwise entitled to issue during the calendar year under §103A. Moreover, under the program, indebtedness certified by mortgage credit certificates must meet certain of the requirements applied to mortgage subsidy bonds under §103A, and the mortgage certificate credit program must meet certain additional requirements specified in §25(c)(2)(A).

(1) Election To Surrender Qualified Mortgage Bond Amounts

In order for a mortgage credit certificate program to be qualified, the issuer must elect not to issue an amount of qualified mortgage bonds that it is otherwise entitled to issue during the calendar year for which the program is to be in effect.[34] Although there is no restriction on the amount of qualified mortgage bonds an issuer can elect to surrender—the issuer can elect to forego issuance of all or a portion of the amount it is otherwise entitled to issue pursuant to the volume cap set forth in §103A(g)—this election will effectively set a limit on the amount of credits the issuer can offer under a qualified mortgage credit certificate program. Under §25(d)(2), the general mortgage credit limit is equal to 20 percent of the non-issued bond amount; *i.e.*, the amount of qualified mortgage bonds the issuer elects not to issue. For example, if the total volume of qualified mortgage bonds allocated to an issuer under §103A(g) is $100,000,000, and the issuer elects to forego issuance of this entire amount, the issuer can issue mortgage credit certificates providing total credits in the amount of $20,000,000. This credit amount can be allocated among the certificates issued by the issuer in any manner the issuer selects, so long as the certificate credit rates specified in any mortgage credit certificate is not less than 10 percent or more than 50 percent.

Example: Assume that an issuer elects to forego issuance of $100,000,000 in qualified mortgage bonds so that the total credits that can be offered through mortgage credit certificates is $20,000,000. The issuer may elect to issue mortgage credit certificates covering a total of $100,000,000 in indebtedness and specifying a credit rate of 20 percent. Alternatively, the issuer may issue mortgage credit certificates in the amount of $50,000,000 specifying a 10 percent rate, mortgage credit certificates covering $50,000,000 of mortgage indebtedness specifying a 20 percent rate, and mortgage credit certificates in the amount of $10,000,000 specifying a 50 percent rate.[35] Under either of these alternatives, the total credits offered equal $20,000,000. Of course, other combinations of mortgage credit certificates can be offered under the set of assumptions in this example so long as the total credits provided do not exceed $20,000,000.

Note: If a taxpayer is issued a mortgage credit certificate specifying a credit rate in excess of 20 percent, that taxpayer is limited under §25(a)(2)(A) to a maximum credit of $2,000 for any taxable year. This $2,000 limitation should be kept in mind by an issuer in issuing mortgage credit certificates in excess of 20 percent.

Section 25(d)(3) imposes an additional limit on the credit rate provided by certain issuers who have not fully utilized their qualified mortgage bond ceilings under §103A(g)(4) in prior years. Issuers subject to this additional limit may not issue any mortgage credit certificates with a certificate credit rate in excess of 20 percent unless the issuer submits a plan to the Secretary that insures the weighted average of the certificate credit rates in such mortgage credit certificate program does not exceed 20 percent and the Secretary approves this plan. An issuer is subject to this 20 percent credit rate limit if:

(i) The §103A(g)(4) volume cap for the year the election is made exceeds 20 percent of the average annual aggregate principal amount of mortgages executed during the immediately preceding three calendar years for single family owner-occupied residences located within that state, or

(ii) The qualified mortgage bonds issued within the state for calendar year 1983 was less then $150,000,000.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

If the total credits offered under mortgage credit certificates exceeds the 20 percent of the non-issued bond amount limit set forth in §25(d)(2), none of the mortgage credit certificates issued that year are disqualified. However, the §103A(g)(4) volume cap for the calendar year following the calendar year in which the Secretary determines the "correction amount" with respect to such excess shall be reduced by 1.25 times that correction amount.[36] The "correction amount" is simply the amount of credits in excess of the amount permitted under §25(d)(2) multiplied by five. Thus, if an issuer within a state issued $5,000,000 of excess credits under its mortgage credit certificate program, the correction amount is equal to $25,000,000 which is applied to reduce the state's ceiling for the calendar year following the calendar year in which that correction amount was determined.

Query: Presumably, the correction amount cannot be determined until the year subsequent to the year for which the excess credits were issued. If the excess credits arise in 1986, and the correction amount is determined in year 1987, the state's ceiling is reduced for 1988. However, as discussed above, the qualified mortgage bond program will terminate at the end of 1987 unless Congress approves another extension. What compensating adjustment or penalty, if any, would be imposed in such circumstances if qualified mortgage bonds were not extended is open to question.

Although the reduction in the qualified mortgage bond amount is generally allocated to the overall state ceiling, §25(f)(3) provides a special rule for states having constitutional home rule cities. If a state has one or more "constitutional home rule cities" within the meaning of §103A(g)(5)(C), the reduction in the state ceiling must be entirely allocated to the constitutional home rule city if it is the cause of the reduction; the reduction should be entirely allocated to the rest of the state if the state, and not the city, was at fault.

Section 25(f)(4) provides an exception to the reduction requirement if there is a certification program in effect designed to ensure that the requirements of §25 are satisfied and the program meets such other requirements as may be prescribed in regulations. Also, the Secretary may waive the reduction if it is determined that the issuance of the excess credits is due to reasonable cause.[37]

(2) Section 103A Requirements

Under a qualified mortgage credit certificate program, the indebtedness certified by mortgage credit certificates must meet the following requirements in §103A:

(i) The principal residence requirements of §103A(d);

(ii) The §103A(e) requirement that a recipient of a certificate not have had a present ownership interest in a principal residence at any time during the preceding three years;

(iii) The 110 percent (120 percent in targeted areas) purchase price limitation of §103A(f);

(iv) The §103A(h) requirement providing that at least 20 percent of the loans issued under the program be made available for at least one year to targeted areas; and

(v) The §103A(j)(1) requirement that mortgages provided under the program generally be new mortgages.

In applying the three-year requirement of §103A(e) to mortgage credit certificates, each qualified mortgage certificate program is treated as a separate issue and the proceeds of the issue are determined by multiplying the certified indebtedness amount of each mortgage credit certificate by the credit certificate rate specified in the certificate. Further, 100 percent of the proceeds of the issue, as determined under the preceding sentence, must be used to provide financing to individuals who have not owned a principal residence within the preceding three years, unless the issuer submits a plan to the Secretary for administering the customary 90 percent requirement of §103A(e)(1) that satisfies the Secretary that the 90 percent requirement will in fact be met.[38]

In applying the requirement of §103A(h), relating to the 20 percent portion of loans that must be placed in targeted areas for at least a year, each qualified mortgage certificate credit program is treated as a separate issue and the proceeds of each issue is determined by multiplying the certified indebtedness amount of each mortgage credit certificate by the credit certificate rate.[39]

(3) Additional Requirements

Four additional requirements apply to a qualified mortgage credit certificate program under §25(c)(2). First, the program must provide that no mortgage credit certificate may be issued with respect to any residence financed with the proceeds of a qualified mortgage bond or a qualified veteran's mortgage bond. Second, except to the extent provided in regulations, the program may not limit mortgage credit certificates to indebtedness incurred from particular lenders. Third, the program must provide that mortgage credit certificates are not transferable except to the extent permitted in regulations. Finally, if an issuer allocates a block of mortgage credit certificates to be used in connection with a particular development, the developer must be required to furnish the issuer and the home buyer with a certificate that the residence's price is no higher than the price would be without the use of a mortgage credit certificate.

Comment: The Conference Report [40] states that mortgage credit certificates are not assumable and provides no guidance or illustrations as to circumstances in which regulations may permit the transfer of such certificates. Presumably the regulations will authorize transfer, if at all, only in limited situations. Perhaps the regulations will permit transfer in connection with the transfer of a residence upon divorce or separation; another possibility is to permit transfer when one joint owner of a residence acquires the interest of another joint owner. Presumably the regulations will not allow any transfer upon a sale of the residence to a third party.

(4) Denial of Certification Where Certain Requirements Are Not Met

The credit is not available under a mortgage credit certificate if any of the following requirements are not met

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

with respect to the indebtedness certified under the certificate:

(i) The §103A(d)(1) principal residence requirement;

(ii) The §103A(e) three-year requirement;

(iii) The 110 percent (120 percent in targeted areas) purchase price requirement of §103A(f);

(iv) The new mortgage requirement of §103A(j) as well as the other requirements set forth in that subsection;

(v) The requirement that a mortgage credit certificate not be issued for any residence that is also financed through a qualified mortgage bond or qualified veteran's mortgage bond;

(vi) The requirement that a mortgage credit certificate not be limited to indebtedness incurred from particular lenders; and

(vii) The requirement that a developer allocated a block of mortgage credit certificates furnish a certificate with respect to purchase price.

However, except to the extent provided in regulations, the foregoing requirements will be treated as met if there is a certification, under penalty of perjury, that such requirements are met.[41]

d. Computation and Carryover of Credit

The taxpayer, who receives a mortgage credit certificate, is allowed a credit in the amount of the certificate credit rate multiplied by the interest paid or incurred by the taxpayer during the taxable year on the remaining principal of the indebtedness certified under the mortgage credit certificate. Thus, for example, if the credit rate is 20 percent and the remaining certified principal balance is equal to $50,000, the taxpayer's credit for the year is equal to $10,000.[42] However, if the certificate credit rate exceeds 20 percent, the credit allowed to a taxpayer may not exceed $2,000 for any taxable year.[43] If two or more persons hold interests in any residence, the $2,000 limit will be allocated among such persons in proportion with their respective interests in the residence.[44]

The mortgage credit under §25 is a nonrefundable credit that is grouped with the other nonrefundable personal credits under the new credit ordering rules enacted by the TRA 1984.[45] However, if a mortgage credit under §25 exceeds the "applicable tax limit," the excess is available for carryover to each of the three succeeding taxable years.[46] The "applicable tax limit" is defined by §25(e)(1)(C) as the tax liability limitation imposed by §26(a) for the taxable year reduced by all other nonrefundable personal credits set forth in Subpart A. Thus, the §25 credit is taken into account against tax liability only after the following Subpart A credits: the household and dependent care credit, the credit for elderly and permanently disabled individuals, the political contribution credit, and the residential energy credit. The excess of any §25 mortgage credit over tax liability as reduced by these other nonrefundable personal credits is, as previously mentioned, available as a carryover for three years. Any unused credit that is carried over is added to any credit allowable for the succeeding year under §25(a) and is subject to the tax liability limit for such succeeding taxable year.

Section 25(e)(1)(B) effectively provides that if mortgage credits are carried over from two or more unused credit years, the credits from the earlier years are taken into account first under the tax liability limit. It is not clear, however, whether a credit attributable to the current year is taken into account before or after any credits that have been carried forward from prior unused credit years.[47]

Under new §163(g),[48] a taxpayer's mortgage interest deduction must be reduced by the full amount of any credit allowable under §25. A full reduction must take place even though all or a portion of the credit cannot be used because of the tax liability limit of §26.

Comment: One consideration that issuers should keep in mind when structuring a mortgage credit certificate program is that mortgage credit certificates may provide a subsidy that cannot be fully utilized, particularly by lower-income taxpayers. For example, assume that the median income for a family of four within the particular jurisdiction is $32,000 and "lower-income" is defined as 80 percent of this median amount [49] or $25,600. If such a family is issued a mortgage credit certificate on a $90,000 mortgage at a time when mortgage interest rates are at 14 percent, that family's first-year interest payment will be approximately $12,600 and provide a mortgage credit of approximately $2,520 (assuming a 20 percent certificate rate). Reducing the family's mortgage interest deduction by the amount of the credit will leave the family with an approximate $10,000 mortgage interest deduction. Assuming the family claims four personal exemptions, providing an additional $4,000 in deductions, and has approximately $1,000 in additional itemized deductions, the family's taxable income will be approximately $14,000 ($25,600 − $4,000 personal exemptions − $7,600 excess itemized deductions). The tax on $14,000 of taxable income, using the joint return schedule for 1984, is $1,421. The $2,500 of credits provided under the mortgage credit certificate far exceeds this sum. Assuming this family's income does not rise dramatically in the next few years, it is entirely likely that the credit carryover amount of almost $1,600 will never be utilized since significant credits should be generated in the succeeding three taxable years.

Observation: If a flat tax or modified flat tax is ever enacted which significantly reduces the top marginal rates, the relative value of the mortgage credit compared to the mortgage interest deduction will increase materially due to the diminished worth of the deduction. Of course, the enactment of a flat tax may lead to the repeal of the mortgage credit in order to make up revenues lost because of the marginal rate reduction.

e. Reporting and Administration Requirements

Section 25(g) requires any lender making a loan with respect to a certified indebtedness amount under a mortgage credit certificate to file a report containing the name, address, and social security number of the certificate recipient, the issuer of the certificate, the date of issue, certified indebtedness amount, and certificate credit rate; and any other information as may be required in the regulations. In addition, §25(g) requires any issuer of a mortgage credit

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

certificate to file a report showing such information as may be required in regulations. Any report required under §25(g) shall be filed at such time and in such manner as the regulations may require.

Section 25(i) provides that the Secretary shall issue such regulations as may be necessary to carry out the purposes of §25. These regulations may require recipients of certificates to pay a reasonable processing fee to defray the administration expenses of the mortgage certificate credit program. Section 25(i)(2) further authorizes the Secretary to enter into contracts with any person to provide services in connection with the administration of the mortgage credit certificate program.

New §6708 [50] provides for the imposition of civil penalties for providing false statements where a verified written statement must be made under penalty of perjury with respect to the issuance of the mortgage credit certificate. If such a false statement is due to negligence, the penalty is $1,000 for each mortgage credit certificate with respect to which such a false statement was made. If the false statement is due to fraud, the civil penalty is $10,000 for each mortgage credit certificate in addition to any criminal penalty that may be imposed. The failure of a lender or an issuer to provide the report required by §25(g) will result in a $200 penalty unless it is shown that such failure is due to reasonable cause and not to willful neglect.

Note: The Conference Report [51] states that if a recipient of mortgage credit certificate provides fraudulent information to a lender, it is intended that the recipient's tax return will be treated as a false return and the mortgage credit certificate revoked. However, the government will have the burden of proving the fraud.

f. Termination and Effective Dates

The §25 credit is available with respect to interest paid or accrued after December 31, 1984, on indebtedness incurred after December 31, 1984. However, an election to relinquish authority to issue qualified mortgage bonds in order to issue mortgage credit certificates may be made for calendar years after 1983.

Under §25(h), the election to issue mortgage credit certificates in lieu of qualified mortgage bonds terminates for calendar years after 1987. This is when the qualified mortgage bond program is due to expire.

II. New Limitations on Private Activity Bonds and Federally Guaranteed Bonds

A. Introduction

1. In General

Under §103(a), interest on an obligation of a state, local government, U.S. possession, or the District of Columbia, or interest on qualified scholarship funding bonds,[52] is exempt from Federal income tax. Student or local governmental bonds do not qualify for a tax-exemption, however, if they are either (i) industrial development bonds, or (ii) arbitrage bonds. State and local governmental bonds are tax exempt even though a direct or indirect Federal guarantee may exist with respect to the bonds.[53]

No ceiling generally exists on the issuance of bonds by state or local governments. However, as previously described in I, *supra,* an annual volume cap is placed on the issuance of qualified mortgage bonds.

Under existing law, tax-exempt bonds may be issued to finance loans for non-business purposes, such as student loans, and will not be subject to the restrictions on industrial development bonds because of the non-business nature of the loans. The arbitrage rules will apply to such bonds, however.

2. Industrial Development Bonds (IDBs)

a. Definition

Section 103(b)(2) defines an IDB as any obligation meeting the following two criteria:

> (i) the obligation is part of an issue all or a major portion of the proceeds of which will be used directly or indirectly in any trade or business carried on by any person other than an exempt person, that is, a governmental unit or a tax-exempt organization described in §501(c)(3);[54]

(ii) the payment of principal or interest on the obligation is secured by an interest in, or will be derived from payments with respect to, property or borrowed money used or to be used in a trade or business.

b. Exceptions

Even though an obligation is an IDB, interest on the IDB will be tax exempt if it meets any of the exceptions provided in §103(b)(4), (5), or (6).

Section 103(b)(4) lists ten categories of bonds that are tax exempt as follows:

> (i) projects for low-income residential rental property;
>
> (ii) sports facilities;
>
> (iii) convention or trade show facilities;
>
> (iv) airports, docks, wharves, mass commuting facilities, and parking facilities;
>
> (v) sewage and solid waste disposal facilities, and facilities for local furnishing of electricity or gas;
>
> (vi) air or water pollution control facilities;
>
> (vii) certain facilities for the furnishing of water;
>
> (viii) qualified hydroelectric generator facilities;
>
> (ix) qualified mass commuting vehicles, or
>
> (x) local district heating or cooling facilities.

Section 103(b)(5) provides an exemption for IDBs that are part of an issue substantially all of the proceeds of which are to be used for the acquisition or development of land as a site for an industrial park. For purposes of this provision, land development includes the furnishing of water, sewage, drainage, or similar facilities, or the furnishing of transportation, power, or communication facilities incidental to the use of the site as an industrial park. Land development does not include, except with respect to incidental facilities, the furnishing of structures or buildings.

Section 103(b)(6) is referred to as the "small issue exemption" (or "exception"). It applies to an obligation issued as part of an issue the aggregate face amount of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

which is $1,000,000 or less and substantially all of the proceeds of which will be used (i) for the acquisition, construction, reconstruction, or improvement of land or depreciable property, or (ii) to redeem part or all of a prior small issue. Certain prior issues must be taken into account in determining the "aggregate authorized face amount."[55] Under §103(b)(6)(D), the $1,000,000 maximum permissible amount is raised to $10,000,000, at the election of the issuer. If this election is made, however, the aggregate face amount includes certain related capital expenditures incurred by the principal user of the facility to be financed with the proceeds of the exempt small issue incurred by the principal user during the six-year period beginning three years before the date of issue and ending three years after the date of issue.

The $10,000,000 amount in §103(b)(6)(D) may be increased by up to $10,000,000 of additional capital expenditures if substantially all of the proceeds of the issue are to be used to provide facilities with respect to which an urban development action grant (UDAG) has been made under section 119 of the Housing and Community Development Act of 1974.[56]

Neither the Code nor the regulations define what is meant by a "principal user" for purposes of the §103(b)(6)(D) small issue exemption. However, for letter ruling purposes, the Service has adopted the position that a more than 10-percent user of the facility is a principal user.[57] However, the Service has also ruled that if state law recognizes separate property interests in the same building or same project, such as a condominium or shopping center, the $1,000,000 (or $10,000,000) small issue exemption may be applied with respect to each separate interest.[58] Also, under present law there is no overall limitation on the total amount of small issue obligations that may be used to finance facilities for the benefit of a particular nonexempt person.

A small issue is not exempt if (i) more than 25 percent of the proceeds of the issue are used to provide a facility whose primary purpose is retail food and beverage services, automobile sales or service, or the provision of recreation or entertainment, or (ii) any portion of the proceeds of the issue is used to provide any private or commercial golf course, country club, massage parlor, tennis club, skating facility, racquet sports facility, hot tub facility, suntan facility, or race track.[59]

As a result of amendments made by the Tax Equity Fiscal Responsibility Act of 1982 (TEFRA), the small issue exemption will terminate after December 31, 1986.[60]

Although advance refunding obligations generally are not eligible for tax-exemption, §103(b)(7) provides that advance refundings of IDBs to finance convention or trade show facilities, or airports, docks, wharves, mass commuting facilities, or parking facilities qualify for tax-exemption if the facilities financed are generally available to the general public.[61]

c. Substantial Users

An IDB described in §103(b)(4), (5), (6), or (7) will not be exempt for any period during which it is held by a substantial user of the facilities financed with the proceeds of the obligation or by a person related to the substantial user.[62] Related person status is determined under the rules of §267 or §707(b), or §1563(a), although "more than 50 percent" is substituted for "at least 80 percent" each place it appears within §1563(a).[63]

3. Arbitrage Bonds

Section 103(c), as implemented by Regs. §§1.103-13, 14, and 15, treats as taxable the interest on any state or local obligation or qualified scholarship funding bond if the obligation constitutes an arbitrage bond. An arbitrage bond is any obligation issued as part of an issue all or a major portion of the proceeds of which are reasonablly expected to be used directly or indirectly to acquire taxable obligations that produce a materially higher yield than the yield on the tax-exempt obligations, or to replace funds that were used directly or indirectly to acquire taxable obligations producing a materially higher yield.[64] Under the regulations, the maximum income permitted to be earned generally cannot exceed the interest rate paid on the obligations by more than 0.125 percentage point. However, investments for a temporary period until the bond proceeds are needed for the purposes for which they were issued are not subject to this restriction. Nor are investments on funds constituting reasonably required reserves.[65] If the issuer elects not to have unlimited earnings during the temporary period, the yield limit is raised from 0.125 percentage point to 0.5 percent point over the interest rate paid on the bonds.

In general, in determining whether an obligation is an arbitrage bond, reasonable administrative costs, such as issuance costs and the underwriter's discount, are excluded.

Additional arbitrage rules are applied to qualified mortgage bonds.[66] Under these rules, only 1.125 percentage points of arbitrage may be earned on the mortgages acquired with bond proceeds. This 1.125 percentage point arbitrage profit must, however, include administrative costs and underwriter's discount. In addition, subject to temporary period exceptions, all qualified mortgage bond proceeds other than proceeds invested in debt service reserves not exceeding 150 percent of the bonds' debt service must be invested in mortgages. Any arbitrage profit earned on nonmortgage investments must be paid either to the mortgagers or the Federal government.

4. Tax-Exemptions Outside the Internal Revenue Code

In addition to the exemption provided by §103 and §103A, certain other provisions of Federal law allow for the issuance of specified types of tax-exempt obligations. The chief of these is perhaps the special tax-exemption provided for obligations issued by state or local housing agencies in connection with low-income housing projects, authorized by section 11(b) of the Housing Act of 1937.[67] Special exemptions are also provided for certain District of Columbia bonds and possessions bonds (Puerto Rico, Virgin Islands, and Guam).[68] In general, these special categories of tax-exempt bonds are not subject to the restrictions set forth in §§103 or 103A.[69]

B. Outline of New Restrictions

In TEFRA,[70] Congress enacted various new restrictions on private activity bonds, including new information reporting requirements, public notice and approval requirements,

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

cutbacks on ACRS benefits for IDB-financed property, limitations on the maturity of IDBs, and limitations affecting the small issue exemption, all designed to eliminate abuse of the tax-exempt bond provisions and to cut revenue losses.[71] However, despite the TEFRA limitations, Congress continued to be "extremely concerned" by the increasing volume of private activity tax-exempt bonds, observing that the volume of such bonds had increased from $6.2 billion in 1976 to $34.0 billion in 1982.[72] The continued revenue loss, projected at $8.5 billion for 1985, and the upward pressure generated by private activity bonds on tax-exempt rates which would make it more costly to finance traditional public works, such as schools, roads, and public projects, were matters of concern.[73] In addition, the availability of tax-exempt financing for certain types of facilities was believed to affect investment decisions independent of the economic value of the facilities.[74] Finally, Congress was concerned about the existence of Federal guarantees for tax-exempt financing which was viewed as effectively providing a double subsidy for certain activities since the federal guarantees made such bonds more attractive.[75]

Accordingly, in the TRA, Congress has enacted various new restrictions in response to these perceived problems. First, provisions have been enacted to deny a tax-exemption for interest on bonds that are Federally guaranteed, but with exceptions provided for certain housing agency and small business association guarantees. A bond is considered to be Federally guaranteed if (i) payment of principal or interest is guaranteed directly or indirectly by the U.S. or instrumentality or agency thereof, (ii) a significant portion of the bond proceeds is to be used to make Federally guaranteed loans, or (iii) a significant portion of the proceeds is to be invested in Federally insured deposits.

Second, an annual statewide volume cap is enacted limiting private activity bonds (including IDBs and student loan bonds) issued by state and local issuers to the greater of (i) $150 per capita, or (ii) $200,000,000. This cap is to be allocated 50 percent to the state and 50 percent to local jurisdictions unless the state provides a different allocation. The annual cap is phased in over two years for states that issued private activity bonds in excess of the $150 per capita in 1983. Unused portions of the cap may be carried over for up to three years for specified projects. The principal category of bonds excepted from the volume cap are housing bonds issued under §103(b)(4)(A) and under section 11(b) of the 1937 Housing Act.

Third, the TRA imposes a special arbitrage limitation on IDBs comparable to the limitation presently existing for qualified mortgage bonds under §103A(i).

Fourth, the use of IDBs to acquire land or existing facilities is sharply curtailed. IDBs may not be used to finance the acquisition of farmland (and facilities located on such land) except for acquisitions by first-time farmers in an amount not exceeding $250,000. No more than 25 percent of the proceeds of an IDB issue may be used to acquire any nonagricultural land. Existing facilities may no longer be financed with IDB proceeds unless an amount equal to at least 50 percent of the cost of the building and building equipment will be spent for rehabilitating the building and the equipment. In addition, IDBs may no longer be used to finance acquisition of any airplane, skybox, gambling facility, liquor store, or health facility.

Fifth, the TRA repeals the §103(b)(7) exception for the issuance of IDBs for the advance refunding of qualified public facilities.

Sixth, the determination of whether a person is related to a substantial user of a facility financed by IDBs is broadened to include all partners of a partnership and shareholders of Subchapter S corporation and all spouses and dependent children of such partners and shareholders.

Seventh, the TRA makes three changes in the small-issue exception, as follows:

(i) the small issue exception is extended through 1988 for manufacturing facilities;

(ii) an aggregate $40 million limitation per beneficiary for a small issue IDBs is imposed. If the face amount of the small issue IDB allocated to the beneficiary (when increased by the outstanding exempt IDBs of such beneficiary) exceeds the $40 million limitation, the interest on the small issue IDB will not be exempt; and

(iii) separate small issues will be aggregated with respect to a single project, which is defined as a single building, an enclosed shopping mall, or a strip of offices, stores, etc.

Eighth, a tax exemption is denied for all consumer loan bonds, which are obligations a significant portion of the proceeds of which will be used to make or finance loans to persons who are not exempt persons. Qualified student loan bonds, IDBs, and qualified mortgage bond or qualified veterans' mortgage bonds are excluded from the definition of a consumer bond.

Ninth, the TRA clarifies that an IDB exempt under the §103(b)(4)(A) exception for low and moderate-income residential rental property will not be disqualified if part of the building is used for nonresidential purposes.

Finally, the TRA extends most of the §103 requirements to exempt bonds issued by the District of Columbia, by U.S. possessions, and under section 11(b) of the 1937 Housing Act.

Note: The TRA also eliminates most of the exceptions to the rule enacted by TEFRA in §168(f)(12) requiring straight-line cost recovery on property financed by the proceeds of tax-exempt bonds. For a discussion of this amendment, *see* Chapter 6, VII. It should also be noted that various special interest provisions and exceptions are contained within the tax-exempt bond portion of the TRA, such as allowing Pennsylvania State University to be treated as a governmental unit for purposes of issuing tax-exempt bonds.[76] These special rules will not be analyzed here.

C. *Effective Dates*

In general, the TRA provisions affecting IDBs and private activity bonds apply to obligations issued after December 31, 1983.[77]

However, the denial of a tax exemption for obligations invested in federally insured deposits applies to obligations issued after April 14, 1983, unless the obligation was issued pursuant to a binding contract in effect on March 4, 1983.[78] Also, none of the TRA amendments apply to obligations with respect to facilities the original use of which com-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

mences with the taxpayer and the construction, reconstruction, or rehabilitation of which began before October 19, 1983, or with respect to which a binding contract to incur significant expenditures was entered into before October 19, 1983.[79]

The annual volume cap on private activity bonds does not apply to any issue of obligations if there was an inducement resolution (or other comparable preliminary approval) for the issue before June 19, 1984, if the issue is issued before January 1, 1985.[80] The repeal of the advanced refunding exception for qualified public facilities applies to obligations issued after July 18, 1984, except that if substantially all of the proceeds of the refunded issue were used to provide airports or docks, the repeal applies only to refunding obligations issued after 1984.[81]

The new special arbitrage limit for IDBs applies with respect to bonds issued after December 31, 1984.[82]

The denial of the tax exemption for consumer loan bonds applies to obligations after July 18, 1984, subject to specified exceptions for state programs.[83]

Various other effective date exceptions applicable to certain issuers, certain issues, or certain facilities are also provided.[84]

D. *Detailed Analysis*

1. Federal Guarantees

a. General

Section 103(h), as amended by the TRA,[85] provides that a state or local obligation shall not be treated as tax exempt if it is federally guaranteed. The denial of an exemption is not limited just to IDBs; all state and local obligations are encompassed by §103(h) except as provided in §103(h)(3), discussed below.

An obligation is treated as federally guaranteed if one of the following three criteria is met:

> (i) the payment of principal or interest with respect to such obligation is guaranteed, in whole or in part, directly or indirectly, by the U.S., or by any agency or instrumentality thereof;
>
> (ii) the obligation is issued as part of an issue and a "significant portion" of the issue proceeds will be used in making loans the payment of principal or interest with respect to which will be guaranteed in whole or in part by the U.S., or an agency or instrumentality thereof; or
>
> (iii) such obligation is issued as part of an issue a significant portion of the proceeds of which will be invested, directly or indirectly, in federally insured deposits or accounts.

Observation: Neither the statute nor the legislative history of the TRA describes what is meant by "significant portion." Nor is the term defined in any existing Code sections. However, the term "significant portion" is also used in §103(n), which denies a tax exemption for consumer loan bonds. Although the Senate Finance Committee Report does not specifically mention this term in describing §103(n), and the term is not defined in §103(n), the Report does state that consumer loan bonds are defined as obligations "five-percent or more of which" will be used for loans to nonexempt persons.[86] Moreover, "significant portion" also appears in §103A in connection with the denial of an exemption for mortgage subsidy bonds that are not qualified. The temporary regulations under §103A define "significant portion" as 5 percent of the proceeds.[87] Presumably, 5-percent will also be the criterion for purposes of §103(h)(2).

Section 103(h)(4) provides that to the extent provided in regulations to be prescribed, any entity with statutory authority to borrow from the U.S. will be treated as an instrumentality of the U.S. for purposes of the foregoing provisions. However, except in the case of an IDB or student loan bond, the District of Columbia or any U.S. possession will not be treated as a U.S. instrumentality by reason of having statutory authority to borrow from the U.S.

A "federally insured deposit or account" for purposes of the foregoing provisions is defined as any deposit or account in a financial institution to the extent the deposit or account is insured by the Federal Deposit Insurance Corporation, the Federal Savings and Loan Insurance Corporation, the National Credit Union Administration, or any similar federally chartered corporation.[88]

b. Exceptions

Under §103(h)(3), the following guarantees are not to be treated as federal guarantees for purposes of denying the tax exemption:

> (i) any guarantee by the Federal Housing Administration, the Veterans Administration, the Federal National Mortgage Association, the Federal Home Loan Mortgage Corporation, or the Government National Mortgage Association;
>
> (ii) any guarantee of student loans and any guarantee by the Student Loan Marketing Association to finance student loans,
>
> (iii) any Small Business Administration guarantee with respect to a qualified contract for pollution control facilities if a fee is charged for the making of such guarantee in an amount at least equal to 1 percent of the amount guaranteed, or
>
> (iv) any guarantee by the Bonneville Power Authority pursuant to the Northwest Power Act (16 U.S.C. §839d).[89]

In addition, exceptions are provided for the investment of bond proceeds for a temporary period, for investments of a bona fide debt service fund or reasonably required reserve, for investments in U.S. Treasury obligations, or for investments permitted under regulations.[90]

Exceptions are also provided for obligations to finance low or moderate-income rental properties as described in §103(b)(4)(A) or housing program obligations issued under section 11(b) of the 1937 Housing Act, qualified mortgage bonds, and qualified veteran's mortgage bonds.[91] However, this exception does not apply if the bond proceeds are invested in federally insured deposits or accounts.[92]

Lastly, an exception is provided for bond proceeds loaned to federally insured financial institutions under a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

loans-to-lenders program, unless the proceeds are invested in federally insured deposits or accounts.[93]

c. Energy Subsidy Programs

Section 103(h)(5) continues the rule of pre-TRA law that an obligation will not be exempt if the payment of principal or interest will be made (in whole or in part) under a U.S., state, or local program for encouraging the production or conservation of energy, if the obligation has been used to finance qualified hydroelectric generating facilities or to finance qualified steam-generating or alcohol-producing facilities.

2. Private Activity Bond Volume Cap

a. General

New §103(n), added by the TRA,[94] provides that an issue of private activity bonds will not be tax exempt if the aggregate amount of private activity bonds issued pursuant to such issue, when added to the aggregate amount of private activity bonds previously issued by the issuing authority during the calendar year, exceeds such authority's private activity bond limit for the calendar year. Under this rule, it should be noted that the entire issue is disqualified if even one bond in the issue of private activity bonds exceeds the limit. Also, it is clear that only the issuing authority's separate volume cap is considered in determining whether an issue is disqualified.

b. Definition of Private Activity Bond

Under §103(n)(7), a private activity bond is defined as any tax-exempt obligation that is an IDB or a student loan bond. A student loan bond, in turn, is an obligation which is issued as part of an issue all or a major portion of the proceeds of which will be used directly or indirectly to finance educational loans for individuals.[95]

Excluded from the definition of a private activity bond is a §103(b)(4)(A) obligation to finance low or moderate income multi-family rental projects and housing program obligations issued under §11(b) of the Housing Act of 1937. Also excluded are IDBs used to finance convention, trade show facilities, airports, docks, wharves, mass commuting facilities, parking, storage, or training facilities directly related to any of the foregoing facilities. However, such facilities must be owned by or on behalf of a governmental unit for the exception to apply. In addition, the exception does not apply if the facilities are leased under a lease having significant front-end loading of rental accruals or payments, under regulations to be prescribed. Lastly, a private activity bond does not include any refunding obligation to the extent of the amount of the refunding obligation does not exceed the amount of the obligation refinanced with the proceeds of the refunding obligation. The refunding obligation exception applies to a student loan bond only if the maturity date of the refunding obligation is not later than the maturity date of the student loan bond to be refunded, or, if later, the date 17 years after the date upon which the student loan bond was issued (or in the case of a series of refundings, the date on which the original obligation was issued).

c. Amount of Volume Cap

The annual volume cap for a state for a calendar year is the greater of (i) an amount equal to $150 multiplied by the state's population, or (ii) $200,000,000.[96] For this purpose, the state population with respect to any calendar year is made on the basis of the most recent census estimate of the resident population of the state published by the Bureau of the Census before the beginning of that calendar year.[97]

If the aggregate private activity bonds issued in a state during 1983 exceeds the volume cap computed for the state for 1984, then that state's cap for 1984 shall be the 1984 cap plus 50 percent of the excess of the 1983 private activity bond amount over the 1984 ceiling.[98]

In calendar years after 1986, the $150 per capita amount used in computing the annual volume cap must be reduced to $100 per capita in order to reflect the termination of the small issue exception of §103(b)(6).[99]

d. Allocation of Volume Cap

Section 103(n)(2) provides that the private activity bond limit for any state agency authorized to issue private activity bonds for the calendar year is equal to 50 percent of the state cap for the calendar year. If more than one agency of the state is authorized to issue such bonds, all agencies are treated as a single agency.

Under §103(n)(3), the private activity bond limit for any other issuing authority for the calendar year is an amount equal to the 50 percent balance of the state ceiling multiplied by a fraction. The numerator of this fraction is the population of the jurisdiction of such issuing authority, and the denominator is the entire state population. If jurisdictions overlap, the rules of §103A(g)(3)(B) must be applied.

A state may by law provide a different formula for allocating the annual state volume cap among the governmental units in such state and, for a temporary period, a state governor may proclaim a different formula for allocating the state ceiling.[100] However, the allocation of the annual state volume cap to a constitutional home rule city cannot be altered.[101]

Comment: No statutory prohibition exists that would bar a state from reallocating the volume cap during or towards the end of a calendar year from an issuer within the state that has not fully utilized its cap to an issuer that has done so to facilitate maximum use of the cap within the state. This reallocation should be permissible regardless of whether the original allocation was set by §103(h)(2) and (3) or by a prior state statute. However, it is less clear whether a reallocation can be made to qualify an issue retroactively where it was inadvertently issued after an issuer had fully utilized its cap for the year.

e. Elective Carryforward of Unused Cap

If an issuing authority's private activity bond limit for any calendar year after 1983 exceeds the total amount of private activity bonds issued by the authority during such year, the authority may elect to treat all (or any portion) of the excess as a carryforward for one or more carryforward projects or as a carryforward for the purpose of issuing student loan bonds.[102] A carryforward project is any project described in §103(b)(4) or (5). The election is irrevocable, must be made at such time and in such manner as prescribed by regulations, must specify the project or projects for which the carryforward is elected, and must specify the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

portion of the carryforward amount to be used for each such carryforward project.[103] The carryforward period extends for three calendar years, except that in the case of an air or water pollution control facility, the carryforward period is six calendar years. If more than one carryforward is elected from different taxable years with respect to a particular project, the carryforwards shall be applied in the order of the calendar years in which they arose.[104]

f. Certification of Allocation

If a public official is responsible for an allocation of any portion of the annual volume cap to any private activity bond, the official must certify under penalty of perjury that the allocation was not made in return for a bribe, gift, gratuity, or direct or indirect campaign contribution. Failure to make the certification will result in disqualification of the bond from exemption. Moreover, if any person willfully makes an allocation of the volume cap to a private activity bond in return for a bribe, gift, gratuity, or direct or indirect campaign contribution, that person shall be subject to criminal penalty to the same extent as if the allocation were a willful attempt to evade tax.[105]

3. New Arbitrage Limit for IDBs

a. General

New §103(c)(6) [106] prescribes new arbitrage rules for IDBs comparable to those now provided for qualified mortgage bonds under §103A(i). Under §103(b)(6)(C), the tax exemption for an issue of IDBs will be lost unless (i) at no time during any bond year the amount invested in nonpurpose obligations with a yield higher than the yield on the issue exceeds 150 percent of the debt service on that issue for the bond year, and (ii) the amount permitted to be invested with respect to debt service is promptly and appropriately reduced as the amount of outstanding obligations of the issue is reduced.

A nonpurpose obligation for purposes of this rule is a taxable obligation or security that is acquired with the gross proceeds of an issue and that is not acquired in order to carry out the issue's governmental purpose.[107] Gross proceeds include amounts received (including principal repayments) as a result of investing the original proceeds of the issue, and the amounts used to pay debt service on the issue.[108] The debt service on an issue for any bond year is the scheduled amount of interest and principal amortization payable for such year with respect to such year.[109]

b. Exceptions

An issue will not be disqualified from exemption under this arbitrage restriction for investments in nonpurpose obligations during an initial temporary period until the proceeds are needed for the issue's governmental purpose, nor will the issue be disqualified by reason of temporary investment periods related to debt service.[110] Also, an investment need not be sold or disposed of if the sale or disposition would result in a loss that would exceed the arbitrage profit that must be paid to the U.S., as described below.

The new arbitrage limit on IDBs does not apply to obligations used to finance low or moderate-income multifamily rental property as described in §103(b)(4)(A) or to any housing program obligation under section 11(b) of the Housing Act of 1937.[111]

c. Arbitrage Profit Rebate

In addition to the restriction on investments in nonpurpose obligations in excess of 150 percent of debt service, §103(c)(6)(D) requires the payment of arbitrage profits earned on all nonpurpose obligations to the U.S. This arbitrage profit consists of (i) the excess of total earnings on all nonpurpose obligations (other than investments attributable to an excess described in clause (i)) over the amount that would have been earned if all nonpurpose obligations were invested at the issue's yield rate, and (ii) the earnings on the excess described in the preceding clause (i).

Note: Yield on the issue, for purposes of both this rebate requirement and the §103(c)(6)(C) limitation on investments in nonpurpose obligations, is determined without regard to issuance costs and underwriter's discount.[112]

However, the arbitrage profit earned during the first six months after issue need not be paid over provided the gross proceeds of the issue are expended for the governmental purpose within that six-month period. For purposes of the temporary investment rule, gross proceeds held in a bona fide debt service fund are not taken into account.[113]

In determining the arbitrage profit on nonpurpose obligations in order to determine the amount that must be rebated to the U.S., any gain or loss on the disposition of a nonpurpose obligation is taken into account, and unless the issuer otherwise elects, gross earnings of less than $100,000 on a bona fide debt service fund on the bond year can be disregarded.[114]

Arbitrage profits must be paid by the issuer to the U.S. in installments that are made at least once every five years. Each installment must be in an amount that ensures that 90 percent of the amount of the arbitrage profit due the U.S. with respect to the issue at the time payment of the installment is required will have been paid to the U.S. The last installment must be made no later than 30 days after the day on which the last obligation of the issue is redeemed and must be an amount sufficient to pay the remaining balance of the arbitrage profit due the U.S.[115]

Note: In addition to the §103(c)(6) arbitrage limit for IDBs, the Treasury is authorized to prescribe regulations specifying the circumstances under which qualified and nonqualified student loan bonds are to be treated as arbitrage bonds for purposes of §103.[116]

4. New Restrictions on Acquisitions of Land or Existing Facilities

a. Nonfarm Land

Under §103(b)(16), added by the TRA,[117] the exemption for IDBs described in §103(b)(4), (5), and (6), will not apply with respect to any obligation issued as part of an issue if more than 25 percent of the proceeds of the issue will be used (directly or indirectly) for the acquisition of land that is not farmland. In the case of an issue described in §103(b)(5), relating to the acquisition or development of land as a site for an industrial park, the 25 percent limit is raised to 50 percent. Except as described below under the first-time farmer exception, none of the proceeds of an IDB may be used to acquire farmland.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The Ways and Means Committee Report [118] states that the terms of the bond indenture generally will govern in determining the amount of proceeds allocable to the purchase of land. If no allocation is made in the indenture, the proceeds will be deemed to have been used for the purchase of land and for other facilities in accordance with their relative fair market values. The Report further states the intention that, in applying this restriction, expenditures nominally related to land but eligible for ACRS deductions, such as irrigation ditches, are to be treated as made for property other than land.

Section 103(b)(16)(C) provides an exception for land acquired by a public agency in connection with an airport, mass transit, or port development project if the land is acquired for noise abatement, wetland preservation, future use, or other public purpose, and there is no other significant use of the land.

b. Existing Facilities and Rehabilitation Expenditures

Section §103(b)(17) [119] provides that the IDB exemptions described in §103(b)(4), (5), and (6) [120] will not be available for any obligation issued as part of an issue if any of the proceeds of the issue will be used for the acquisition of existing property (or an interest therein); that is, property whose first use will not be pursuant to the IDB-financed acquisition. This provision will not apply, however, to the acquisition of an existing building and equipment related to the building if rehabilitation expenditures with respect to the building are at least equal to 15 percent of the cost of the building and related equipment. For any facility other than a building, the restriction will not apply only if rehabilitation expenditures equal to 100 percent of the cost of the facility are incurred.[121]

Note: The Ways and Means Committee Report [122] states that the rehabilitation expenditures need not be financed by the proceeds of the tax-exempt bond. The Report further states that expenditures for building fixtures (such as stoves, refrigerators, carpeting) are treated as expenditures for the rehabilitation of the building. Note that the property listed as fixtures in the Report generally constitutes personal property for income tax purposes, treated as 5-year property under the ACRS; an investment credit may also be available.

Section 103(b)(17)(C) defines a rehabilitation expenditure as any capital expenditure which is incurred "by the person acquiring the building" for property, or additions and improvements to property, in connection with a building rehabilitation. In the case of an integrated operation contained in a building before its acquisition, rehabilitation expenditures include the rehabilitation of the existing equipment in the building or the replacement of such equipment with equipment having substantially the same function. Any expenditure incurred by a successor to the person acquiring the building or by the seller under a sales contract with the person acquiring the building will be treated as incurred by the person acquiring the building for purposes of determining whether the 15 percent test has been met.

Observation: Neither the statute nor the legislative history defines who will constitute a "successor" to the original purchaser of the building. Presumably a transferee by reason of the death of the original purchaser will qualify as a successor. Also, it is likely that a corporation that is a transferee of another corporation's assets in a tax-free reorganization will be included under the term. However, it is unclear whether a successor will include a partnership that is a transferee of an individual's interest in the building or a corporation that is a transferee of such interest. Unless the General Explanation of the TRA provides clarification, caution should be exercised in relying on the "successor" provision to aggregate rehabilitation expenditures.

Rehabilitation expenditures do not include expenditures described in §48(g)(2)(B), which deals with rehabilitation expenditures that do not qualify for the rehabilitation tax credit for investment credit purposes. Under §48(g)(2)(B), rehabilitation expenditures do not include expenditures for the enlargement of the building, expenditures to rehabilitate a certified historic structure unless the rehabilitation is certified, expenditures by a lessee of the building if the remaining term of the lease is less than 18 years (15 years in the case of low-income housing) at the date rehabilitation is completed, and any expenditures in connection with the rehabilitation of a building allocable to the portion of the building that is (or may reasonably be expected to be) tax-exempt use property under the new tax-exempt entity leasing rules added by the TRA in §168(j)(3).[123]

Comment: In contrast to the requirement that rehabilitation expenditures be depreciated using the straight-line cost recovery method in order to qualify for the rehabilitation credit, no requirement exists that the straight-line method be used in depreciating rehabilitation expenditures incurred to meet the 15-percent IDB rule. However, §168(f)(12), as amended by the TRA, requires the use of the straight-line cost recovery method for all facilities financed with the proceeds of a tax-exempt bond with an exception for low or moderate-income multi-family rental projects described in §103(b)(4)(A). It should also be observed that, although the rehabilitation credit provisions permit a lessee of a building to claim the rehabilitation credit for expenditures incurred by the lessee, it does not appear that this rule will apply for purposes of the 15-percent IDB test. Section 103(b)(17)(C)(i) clearly requires that the rehabilitation expenditures be incurred by the "person acquiring the building," by the successor of such person, or by the seller to such person under a sales contract with such person. Unless a lessee can be treated as a "successor" to the person acquiring the building, a result that is nowhere indicated in the legislative history, rehabilitation expenditures incurred by a lessee in all likelihood cannot be counted in determining whether the 15-percent test is met. Lastly, it should be noted that, although rehabilitation expenditures allocable to the portion of the building that will be "tax-exempt use property" do not qualify for the rehabilitation credit, such rehabilitation expenditures may still be taken into account for purposes of determining whether the rehabilitation credit requirement that a building be "substantially rehabilitated" is satisfied. Whether a comparable rule will apply for purposes of the 15-percent IDB test is unclear; however, no apparent reason exists why it should not apply since the 15-percent IDB

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

test is comparable in theory to the "substantially rehabilitated" test.

The 15-percent test will not be satisfied unless the rehabilitation expenditures are incurred no later than two years after the date on which the building was acquired, or, if later, the date on which the obligation was issued. The Ways and Means Committee Report [124] provides the following example:

Example: If an existing building costs $500,000, and existing equipment in the building costs $250,000, at least $112,500 must be expended for rehabilitation of the building and equipment within the two-year period in order for IDB financing to be available.

Section 103(b)(17)(D) provides that the determination of whether the 15-percent test is met is made on a project basis in the case of a project involving two or more buildings acquired with the proceeds of an IDB.

c. Farmland and the First-Time Farmer Exception

Section 103(b)(16)(A)(i) provides that an IDB will not be tax-exempt if any portion of the proceeds of the issue will be used (directly or indirectly) for the acquisition of land (or interest therein) to be used for farming purposes. However, §103(b)(16)(B) provides an exception for first-time farmers to this restriction and to the restriction that IDBs cannot be used to finance the acquisition of an existing facility as provided by §103(b)(17). The maximum amount that can be financed under the first-time farmer exception is $250,000.

For the exception to apply, the land and facilities located thereon must be used in farming within one year of acquisition.[125] The land must be acquired by an individual who is a first-time farmer, who will be the principal user of such land, and who will "materially and substantially participate *on the farm*" in the farming operation of which the property is to be a part. The Ways and Means Committee Report [126] states that the "on the farm" requirement is intended to restrict the availability of the exception to individuals who will generally perform substantial physical work in the farming operation.

A first-time farmer is any individual who has not at any time had any direct or indirect ownership interest in "substantial farmland" in the operation of which such individual (or the individual's spouse or minor children) materially participated. According to the Ways and Means Committee Report,[127] this definition permits individuals to qualify as first-time farmers who previously owned farm equipment and such real property improvements as equipment sheds and used those facilities as part of a farming operation involving only leased land.

The term "substantial farmland" is any parcel of land whose size equals or exceeds 15 percent of the median size of a farm in the county in which the parcel is located, or whose fair market value has at any time while held by the individual equaled or exceeded $125,000.[128]

Note: In IR-84-92, the Service explains how median farm size should be determined until the Census Bureau develops exact numbers for median farm size by county.

The Ways and Means Committee Report [129] states that the first-time farmer exception applies to facilities other than land only to the extent that the other facilities constitute existing real property improvements located on the land. Moreover, when applying the $250,000 limit, expenditures made by an individual's spouse and minor children will be treated as the individual's expenditures.[130]

d. Prohibition on Acquiring Skyboxes, Airplanes, Gambling Establishments, Etc.

Section 103(b)(18) [131] provides that an IDB will not be exempt under §103(b)(4), (5), or (6), if it is part of an issue any portion of the proceeds of which will be used to provide any airplane, skybox, or other private luxury box, any health club facility, any facility primarily used for gambling, or any store the principal business of which is to sell alcoholic beverages for off-premises consumption. No exception to the foregoing provision is provided by statute; however, a transitional rule excepts certain race tracks with respect to which an inducement resolution was approved before June 1, 1984, by any issuing authority, if the issue is issued before January 1, 1985.[132]

5. New Small-Issue Provisions

a. Aggregate Small-Issue Limit

Section 103(b)(15) [133] provides for the denial of tax-exempt status to any small-issue that would otherwise be exempt under §103(b)(6) if the aggregate authorized face amount of the small issue allocated to a beneficiary of the issue, together with all tax-exempt IDBs allocated to that beneficiary, exceeds $40,000,000. The outstanding tax-exempt IDBs of such beneficiary, referred to as a "test-period beneficiary" for purposes of the limitation is the aggregate face amount of all exempt (not just exempt small issues) IDBs (1) allocated to such beneficiary and (2) outstanding at the time of the later small-issue being tested. This does not include as outstanding any obligation that is to be redeemed from the proceeds of the later small issue.

A "test-period beneficiary" is, except as provided in regulations, any person who is an owner or principal user of facilities being financed by an IDB at any time during the three-year period beginning on the later of (i) the date such facilities are placed in service, or (ii) the date of the issue.[134] A test-period beneficiary includes all persons who are related within the meaning of §103(b)(6)(C) to each other.[135]

Comment: Under the House and Senate versions of this overall $40,000,000 limit, IDBs would have been allocated to any user of the facility except a person using less than 5 percent of the facilities. Also, no three-year testing period was provided in either version of the bill. The exclusion of beneficiaries who are not "principal users" of the facilities being financed by the small issue is obviously a more beneficial rule than the House and Senate version that would have excluded only 5-percent users. However, still left unanswered after the many years since the original enactment of the increased small-issue exemption, which now is $10,000,000 but was originally $5,000,000,[136] is the meaning of the term "principal user." Neither the statute nor the regulations have yet to define this term, but as previously mentioned, for letter ruling purposes the Service takes the position that a principal user is any user of more than 10-percent of the facilities being financed with the proceeds of an exempt small issue. However, unless a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

10-percent use test is ever adopted by statute, one might question whether the use of as little as 10.01 percent of a facility constitutes a "principal use." [137]

Observation: The $40,000,000 limitation will probably rule out the use of the small-issue exemption by a locality to attract subsidiaries or divisions of large public corporations that have financed facilities with IDBs in the past. Counsel for issuers or bondholders should also now exercise greater caution in permitting the lease or sublease of facilities financed with small-issues during the three-year testing period. Broad related party rules apply for purposes of the $40,000,000 limit; the lease or sublease to a person who has never utilized IDB-financing could still result in disqualification of a small-issue by reason of related party use of IDBs.

Allocations to a test-period beneficiary are made as follows. If the test-period beneficiary is the owner of any facilities being financed by IDBs, the issue is allocated on the basis of ownership. If the test-period beneficiary is a principal user of the facility, the issue is allocated on the basis of use. For example, if a principal user leases 60 percent of the facilities that have been financed with a $1,000,000 small issue, $600,000 of the issue is allocated to the principal user.

Observation: It is the "aggregate face amount" of IDBs that are the subject of this allocation process. It should be noted that under §103(b)(6)(D)(ii), the aggregate face amount for purposes of the $10,000,000 exempt small issue includes the aggregate amount of capital expenditures with respect to certain facilities having the same principal user that are paid or incurred during the six-year period beginning three years before the date of issuance of the small issue and ending three years after such date. The Service thus could take the position that all capital expenditures that must be counted in determining the aggregate face amount of a $10,000,000 issue must also be taken into account for purposes of the allocation under §103(b)(15). It should be noted, however, that the legislative history does not address this issue. The $10,000,000 of capital expenditures permitted by §103(b)(6)(I) for facilities the subject of a UDAG need not be considered since §103(b)(6)(I) excludes such expenditures from the aggregate face amount computation.

b. Single Projects

Section 103(b)(6)(P) requires that two or more issues part or all of which will be used for a single building, an enclosed shopping mall, or strip of offices, stores, or warehouses using substantial common facilities be considered as a single issue. Moreover, any person who is principal user with respect to any such issue shall be treated as a principal user with respect to the aggregated issue. The purpose of the rule is to prevent an avoidance of the small issue limits through division of ownership of a project.[138] The Senate Finance Committee Report[139] states that under the rules if a project's ownership is divided among several unrelated users, qualification under the small issue exception is to be determined by measuring the capital expenditures and outstanding obligations of all the principal users of that project.

Observation: However, for the previous rule to apply, at least two issues must be issued for the same project. For example, if the penthouse suite of a condominium office building is financed by the proceeds of an exempt small issue, but the rest of the building is financed through conventional sources and is owned by parties unrelated to the owner of the penthouse suite, the only person who would be a principal user (assuming none of the building is leased) for purposes of the small issue would be the owner of the penthouse suite being financed with the small issue proceeds.

The Senate Finance Committee Report [140] provides as illustrations of common facilities: (i) common heating, cooling, and other facilities, or (ii) common entrances, plazas, malls, lobbies, parking, elevators, and stairways for use by employees or patrons of the facilities. The Report further states that, for there to be common facilities, the two facilities used by the different users must generally be contiguous, such as, all units in a strip shopping center using a common parking lot. On the other hand, two or more stores located in a downtown redevelopment project which are not contiguous to each other generally would not be treated as a single project, but structures separated by inconsequential barriers, such as rights of way, would be treated as contiguous.[141] Finally, the Finance Committee Report [142] states that it is expected regulations will be issued defining circumstances where, because use of common facilities is *de minimis,* otherwise separate facilities will not be treated as a single project, such as ordinarily separate department stores that each lease less than 25 percent of an independently owned parking garage adjoining the two stores. Similarly, the use of utilities, such as the same local district heating and cooling system, by otherwise separate businesses may not suffice to treat the buildings used by the businesses as a single project.

c. Extension of Small Issue Exception for Manufacturing Facilities

The TRA [143] amends §103(b)(6)(N) to provide that the December 31, 1986, termination date of the small issue exemption is extended to December 31, 1988, in the case of a small issue substantially all of the proceeds of which will be used to provide a manufacturing facility. A manufacturing facility is a facility that is used in the manufacturing of tangible personal property, including the processing resulting in a change in the condition of such property.

6. Extension of Substantial User Related Party Rules

The TRA [144] amends the substantial user limitation in §103(b)(13) to provide that all partners of a partnership (including both general and limited partners) [145] and spouses and dependent children of partners are treated as related persons to the partnership. Moreover, all shareholders of a Subchapter S corporation and spouses and dependent children of shareholders are treated as related persons to the corporation. Consequently, interest on any IDB held by any partner of a partnership or shareholder of a Subchapter S corporation that is a substantial user of the facilities financed by the IDBs would be taxable.

7. Mixed Use Structure Clarification

The TRA [146] amends §103(b)(4), relating to the exemption for IDBs used to finance low or moderate-income multi-family residential rental property to clarify that prop-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

erty can qualify for IDB financing under this provision even though the building that contains qualifying residential units is also used for nonresidential purposes. However, tax-exempt financing is limited to the portion of the building used for qualifying purposes.[147]

8. Consumer Loan Bonds

Section 103(o) [148] provides that any consumer loan bond may not be treated as exempt under §103(a). A consumer loan bond is defined as any obligation issued as part of an issue all or a significant portion [149] of the proceeds of which are reasonably expected to be used directly or indirectly to make or finance loans [150] to persons who are neither governmental units nor §501(c)(3) organizations. However, a consumer loan bond does not include (i) qualified student loan bonds, (ii) industrial development bonds, or (iii) qualified mortgage bonds or qualified veteran's mortgage bonds.[151]

9. Repeal of Advance Refunding Exception

The TRA [152] repeals the §103(b)(7) exception permitting tax-exempt treatment of an issue used for the advance refunding of certain IDBs issued to finance convention and trade show facilities, airports, docks, wharves, and mass commuting facilities.

10. Extension of §103 Restrictions to Other Exempt Obligations

The TRA [153] amends §103(m)(1) to provide that in the case of an obligation issued after December 31, 1983, which is exempt by reason of provisions outside the Internal Revenue Code, the obligation will not be treated as exempt unless the "appropriate requirements" of §103(b), (c), (h), (k), (l), and (n) and §103A are met with respect to the obligation. For purposes of these requirements, a possession is generally treated as a state.

11. Clarification of Public Approval for Certain Airports

For purposes of the public approval requirements added in §103(k) by TEFRA, if an airport is located in more than one jurisdiction but owned and operated only by the jurisdiction issuing the tax-exempt bonds, only the issuing jurisdiction is required to satisfy the §103(k) public approval requirements.

Chapter 21

TIME VALUE OF MONEY (I): ORIGINAL ISSUE AND MARKET DISCOUNT; SECTION 483

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Background

In any transaction in which a person undertakes to make payment of money at some date in the future in exchange for present consideration, whether such consideration consists of money, property, the use of property, or services, where the parties to the transaction are dealing at arm's length, the question of interest will arise. This is especially true in an era with double digit interest rates prevailing in the marketplace. Not only will the parties consider the rate of interest, but they will also consider the manner in which the interest is computed and treated for tax purposes. For many years, even after interest rates had moved to double digit rates, the Code failed to reflect the realities of the marketplace in its provisions relating to the computation of interest. There also existed disparities in the rules relating to the timing of its deduction by the obligor and its inclusion in the income of the obligee. These lapses were especially significant in the provisions relating to original issue discount (OID) and to contracts for the sale of property. Prior to the enactment of P.L. 97-248 (TEFRA), the corporate issuer of a bond at discount was entitled to deduct the amount of such discount ratably, that is, on a straight-line basis, over the term of the bond. Thus, where a bond, typically carrying a below-market rate of interest, redeemable at maturity in 10 years for, say, $1 million was issued for a price of $800,000, the $200,000 discount was divided by the number of months until maturity, and the issuer was allowed to deduct as interest each year the ratable monthly portion (200,000/120) times the number of complete months the instrument was outstanding.[1] The result was an overstatement of interest expense during the early years of the bond's life and an understatement during the later years, a net gain for the issuer because of the time value of the taxes deferred. This particular type of income distortion was explained and analyzed in the committee reports relating to the amendments to the Code effected by TEFRA.[2] These amendments to §1232 and the addition of §§1232A and 1232B (relating to stripped bonds) provided only a partial remedy to the Code's failure to adequately take into account what one recent article has termed "the miracle of compound interest."[3] Requiring both the issuer and the holder of an OID instrument to compute the interest resulting from discount by applying to the issue price the instrument's annual yield to maturity compounded annually (although semiannual compounding is applied to most marketed debt instruments) were long overdue reforms. However, TEFRA left open numerous areas in which significant tax advantages could be obtained.

B. Areas Requiring Further Reform and Revision

1. Debt Instruments Issued for Property

Prior to 1969, there was some question as to whether OID could arise from a transaction in which a bond or other debt instrument was issued for property. To put an end to this source of uncertainty, §1232 was amended to provide that unless (1) the debt instrument itself was actively traded on an exchange, or (2) the property consisted of exchange traded stock or securities, the issue price of any instrument issued for property was its stated redemption price at maturity and, hence, there was no OID.[4] But, generally, bonds (also meaning debentures, notes, certificates or other evidences of indebtedness) issued for property, for the use of property, or for services were not covered by the OID rules. Where a bond was issued for property, the transaction was covered, if at all, by §483 under which all payments denominated by the instrument as interest were tested against a 9 percent simple annual interest rate to determine whether there was included in the nominal purchase price any amount of "unstated interest." While the test rate was periodically changed to reflect market rates, generally the changes lagged far behind such rates. Also, the use of a simple, rather than a compound, rate yielded a generous computation of present values (from the standpoint of the fisc). As is stated in the committee reports,[5] a 9 percent simple rate applied to a payment due in 30 years (*e.g.*, a single payment to be made in 30 years of $3,700 for the use of $1,000 during the term of the loan) yields an effective compound rate of 4½ percent. These §483 rules, which apply only to payments made more than 6 months from the date of sale and only if some or all payments are due more than 1 year after the sale, allocate unstated interest to each payment according to the payment's percentage of the total purchase price, left open numerous avenues for income distortion.[6] Section 483, with its complex regulations containing present value tables, rules relating to late payments, treatment of accrual basis taxpayers, and dispositions of the debt instrument before maturity was not effective in compensating for the Code's deficiencies in the rational and economically sound treatment of interest.[7]

The legislation required to make the Code reflect economic reality included: (1) The extension of the OID rules,

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

to debt instruments issued for property in transactions involving significant amounts, and amended to provide semiannual compounding, and (2) To retain §483 for sales transactions involving lesser amounts with rules consistent with the OID rules regarding the computation of interest. The OID rules had not been applied to instruments issued for untraded property due, at least in part, to the difficulty of valuing the property. However, this difficulty had been overcome in §483 by applying to the debt obligation a conservative test rate of interest to determine whether the purported purchase price reflected a charge for interest. This same technique, using a test rate of 110 percent of the average yield of marketed U.S. government obligations ("applicable federal rate" (AFR)), could be adopted in determining the issue price of debt instruments. Where the instrument failed to meet this test, interest would be imputed at a higher rate (120 percent of the AFR). Exceptions and exemptions for transactions involving relatively small amounts and certain routine, non-tax motivated transactions could be provided. Finally, there was no reason to continue to exempt from the OID rules holders in whose hands instruments were not capital assets, or debt instruments issued by natural persons.[8]

2. Market Discount

The acquisition of a bond after its issue will often involve either acquisition discount (where the market interest rate has risen) or the payment of acquisition premium (where the interest rate has fallen). Where a bond has been issued at par and, because of rising interest rates, is sold by its holder at a discount, the new holder is in essentially the same position economically as is a holder of an OID instrument.[9] Assuming no fluctuations in the interest rate, the instrument increases in value as the maturity date approaches. Under the tax laws in effect after the TEFRA amendments (which made no changes in this regard), any gain realized by the holder of an instrument purchased at discount was capital gain, despite the fact that such gain, aside from that portion (if any) attributable to a decrease in interest rates, constituted a return on investment indistinguishable from interest. This called for remedial legislation providing for recognition of the true nature of the gain in question as interest income. Because of the complexities involved in computing discount on a constant interest basis, which might unduly interfere with the operation of the bond market, a rule calling for the treatment as ordinary interest income of any gain realized on disposition of a market discount bond, to the extent of such discount accrued while held by the taxpayer, was deemed adequate to remedy this defect. Holders could, however, elect to accrue discount on a constant interest basis. There was also a need to address income distortion caused by the leveraged purchase of market discount instruments, a device availed of by numerous tax shelters. Since market discount is not included in income currently, but is taken into account only upon the disposition of the bond, through deductions taken against ordinary unrelated income for interest paid or accrued on loans taken out to purchase or carry these bonds in years prior to the year of disposition, taxpayers were able to convert ordinary income into capital gain. Even if gain attributable to market discount is taxed as interest income, and the conversion of ordinary income to capital gain is no longer possible, leveraged purchases could provide a means for tax deferral. What was called for, then, was a deferral of any net interest deduction to the extent it does not exceed the market discount accrued while the bond is held. The denied deductions could then be allowed at the time of disposition of the bond, when the discount, to the extent of any gain realized, was taken into income as interest. Special rules were required to deal with situations where a market discount bond was exchanged for another bond or other property in a nonrecognition transaction. Recognition of accrued market discount when an appreciated bond was disposed of in transactions other than sales or exchanges was necessary. To avoid interest deduction deferral, a holder could elect to include market discount in income currently.

3. Short-Term Instruments

The TEFRA changes did not apply the OID rules to short-term (maturity not more than 1 year from the date of issue) instruments. Short-term zero coupon government obligations (Treasury bills were by far the most common of these) were subject to special rules calling for a ratable inclusion of the acquisition discount upon sale, exchange, or redemption.[10] Regulations exempted from the OID rules nongovernment short-term discount obligations (*e.g.*, certificates of deposit), since interest payable at maturity was not considered OID.[11] It was decided that accrual basis taxpayers (dealers and banks), and certain other cash basis taxpayers would include in income currently acquisition discount (excess of amount payable at maturity over cost) on short-term government obligations and certain other short-term obligations (either OID or acquisition discount as may be elected). Current accrual was also required for certain partnerships and S corporations.

As in the case of market discount bonds, leveraged purchases of short-term instruments could lead to unjustified deferral of tax, where the instruments are held by persons not required to accrue discount interest currently. To prevent income distortion, deductions for interest on funds used to purchase or carry short-term instruments would be allowed only to the extent it exceeds the discount attributable to the instruments during the year and, as in the case of market discount, allowed in the year the instruments are disposed. To avoid this deferral of interest deduction, a holder could elect to accrue the discount as if such accrual were mandatory.

As in the case of market discount obligations, the holder should be allowed to elect to accrue interest on a constant basis. However, compounding must be daily in view of the short-term of the instrument.

4. Tax Exempt Obligations

A tax-exempt obligation, for purposes of the OID rules, is any obligation the interest on which is exempt under the provisions of §103 or which is exempt from tax (without regard to the identity of the holder) under any other provision of law.[12]

Such instruments when issued at discount are exempt from the OID rules. Under the law, as interpreted by the IRS, while OID was not accruable by the holder, the basis of such instruments must be increased while they are outstanding to reflect their increase in value attributable to approaching maturity. Since the rule requiring economic accrual of interest did not apply to such instruments, the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

basis increase was computed by accruing interest on a straight-line basis which, as has been stated, overstates the true amount of interest in the early years of the instrument. Holders of tax-exempt OID instruments (typically, zero coupon bonds) were thus entitled to adjust their basis upward substantially in excess of the bonds' appreciation attributable solely to the OID [13] and, as a result, could realize capital losses in excess of any true economic loss sustained. Curbing this source of income distortion is relatively simple. It requires only that the basis adjustment conform to the OID rules, based on the economic or constant accrual of interest compounded semi-annually (daily for short-term instruments).

5. Section 483

With the expansion of the scope of the OID rules to instruments issued for property, the operation of §483 is to be relegated to those transactions to which the OID rules do not apply, that is, sales involving total payments below the OID threshold ($250,000).

To bring the §483 rules into harmony with the OID rules relating to instruments issued for property, it was necessary only to use the same testing technique to ascertain whether in fact the purported purchase price included unstated interest. Present valuing all payments at a rate equal to the current market interest rate for good credit risks (110 percent of the applicable federal rate) would immediately display the true purchase price, and any unstated interest could be accrued on a constant basis over the life of the obligation. But, since the OID rules were not to apply, the timing of interest deductions and the inclusion of interest in income would depend on the method of accounting used by the taxpayer.[14] As under old §483, transactions under $3,000 and sales of patents, where the sales price was based on the exploitation of the patent rights, are exempted from the OID rules. The old §483 interest rates also apply to sales of principal residences for $250,000 or less and certain sales of farmland. A special low testing rate for inter-family sales of land was also retained from the former provisions.

6. Section 461(h)

All of the above reforms are, essentially, accounting reforms reflecting financial accounting principles. The OID, market discount, short-term obligations, and tax-exempt obligations provisions are contained, however, in part V of subchapter P, a section of the Code dealing primarily with capital gains and losses. This is due to the fact that the predecessor statute, as originally enacted, set forth the rule that the retirement of a bond was to be treated as a sale or exchange. Rules dealing with the treatment of OID were added later. As treatment of OID evolved, more sophisticated rules were added to the basic statute. Section 483, on the other hand, is located in subchapter E, Accounting Periods and Methods of Accounting. Subpart C of part II of the same subchapter deals with the taxable year for which deductions are taken, the general rules for which are contained in §461. Section 91 of the 1984 TRA adds new subsections (h) and (i) to §461. While these accounting changes are discussed in other sections of this portfolio, a very significant provision relating to the time value of money appears in §461(h) providing that in determining whether an amount has been incurred with respect to any item during any taxable year, the all events test shall not be treated as having been met any earlier than when economic performance with respect to such item occurs. In regard to interest, "economic performance" occurs with the passage of time. This means that no interest is deductible, irrespective of the payor's method of accounting, prior to the close of the period to which it is allocable. Ths rule (and the related comment of the conference committee) will be discussed in the detailed analysis below. It is noted here that the rule must be kept in mind when considering the impact of §483 or transactions which neither §§1272 nor 483 apply.

As interpreted by the conference committee, the accrual of interest, for all purposes of the Code (unless specfically provided otherwise) will be based on economic or constant rate accrual. In effect, it outlaws the use of the Rule of 78's, linear, or other methods of computing interest deductions, whether or not interest is imputed under the provisions discussed above. As will be explained below, the effective date of this rule, appearing in Act §44(b)(3), along with effective dates relating to §483, is "after June 8, 1984."

II. Overview-Structural Outline of Statutory Provisions

This chapter discusses the provisions enacted by §§41-44 of the Act. The Act repeals §§1232, 1232A and 1232B. In their place are substituted a thoroughly revised set of rules dealing with most transactions involving deferred payments.

Subtitle C of the Act contains Act §§41 through 44. It is entitled "Treatment of Bonds and Other Debt Instruments."

A. Act Section 41(a)

Act §41(a) enacts part V of subchapter P (§§1232, 1232A and 1232B are repealed by Act §42(a)(1)). Part V contains 4 subparts as follows:

(i) Original Issue Discount (§§1271-1275)

(ii) Market Discount (§§1276-1278)

(iii) Discount on Short-Term Obligations (§§1281-1283)

(iv) Miscellaneous Provisions (§§1286-1288)

1. Subpart A

§1271 provides rules for the treatment of amounts received on the retirement, sale, or exchange of debt instruments, and the tax treatment of gain realized from short-term governmental obligations (identical to §1232(a)(3)).

§1272 provides rules relating to the amount of OID includible currently in the income of the holder of an OID instrument. This section becomes operative only after the total OID amount is determined under §§1273 or 1274.

§1273 provides the definition of OID and "stated redemption price at maturity" and the rules for determining the amount of OID on debt instruments issued for money and for (1) publicly traded instruments issued for property and (2) instruments issued for publicly traded property.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

§1274 provides the rules for determining the amount of OID with respect to instruments issued for untraded property (to which §1273 does not apply).

§1275 provides definitions and special rules pertaining to the application of §§1271-1274.

2. Subpart B

§1276 provides the rules treating as ordinary income any gain attributable to accrued market discount at the time of disposition of a market discount bond and tax-free exchanges involving such bonds.

§1277 provides rules for the deferral of deductions for interest on debt incurred or continued to purchase or carry market discount bonds.

§1278 provides definitions and special rules pertaining to §§1276 and 1277.

3. Subpart C

§1281 provides for the current inclusion in income of discount on short-term instruments held by certain taxpayers.

§1282 provides rules for the deferral of deductions for interest on debt incurred or continued to purchase or carry short-term obligations (other than those to which §1281 applies).

§1283 provides definitions and special rules pertaining to §§1281-1282.

4. Subpart D

§1286 provides rules relating to stripped bonds (substantially identical to those of former §1232B).

§1287 provides rules denying capital gain treatment to un-registered obligations (substantially identical to former §1232(c)).

§1288 provides rules requiring the adjusted basis of short-term tax-exempt OID obligations be computed on a constant interest basis.

B. Act Section 41(b)

Act §41(b) amends §483 which provides rules consistent with the treatment of OID to contracts for the sale or exchange of property that are not within the OID rules.

C. Act Section 41(c)

Section 41(c) of the Act enacts a penalty provision, §6706, imposing a penalty for each failure to comply with the information reporting requirement of §1275, providing that when a debt instrument is publicly issued, the issuer is to provide the IRS with: (i) the amount of OID, (ii) the issue date, and (iii) such other information as may be required by regulation.

D. Act Section 42

Section 42 of the Act provides technical and conforming amendments relating to the OID provisions. As stated above, it repeals §§1232, 1232A and 1232B, and amends the various sections of the Code referring to the repealed sections and replaces them with references to the new provisions.

E. Act Section 43

Section 43 of the Act contains technical and conforming amendments to the Code provisions dealing with market discount and discount on short-term instruments. It adds paragraphs (42) through (45) to §7701(a), defining substituted basis property, transferred basis property, exchanged basis property, and nonrecognition transaction. The last sentence of §1016(b) is deleted. Subsection (d) (manner of making elections prescribed by the Commissioner) is added to §7805.

F. Act Section 44

The last section of subtitle C of the Act, §44, provides the effective dates for all of the foregoing enactments. It clarifies that prior effective date rules are not to be affected by any of the changes made by the 1984 TRA.

III. Detailed Analysis

Part V of subchapter P is subdivided into 4 subparts, as follows:

A. Original Issue Discount (§§1271-1275)

B. Market Discount (§1276-1278)

C. Discount on Short-Term Obligations (§1281-1283)

D. Miscellaneous Provisions (§1286-1288)

A. Original Issue Discount (OID)

1. General

This subpart contains §§1271 through 1275. Much of it simply recodifies prior law. The most significant change from prior law is the extension of the OID rules, requiring current inclusion in the income of the holder of a debt instrument and, (by operation of §163(e), which incorporates the OID rules to provide a matching interest deduction) the deduction by the issuer of the instrument of OID on a constant interest basis over the life of the instrument. Application of these rules is irrespective of accounting methods, type of debt instruments issued, and whether or not the debt instrument or the property is actively traded.

2. The Retirement of Debt Instruments (§1271)

Post-TRA §1271(a) now contains the basic rule that any amounts received by the holder on retirement of any "debt instrument" are considered amounts received in exchange for such instrument.[15]

The rule was formerly stated in terms of "bonds or other evidences of indebtedness" but, the term "debt instrument," having the same denotation, has been substituted as more appropriate. "Debt instrument," as used throughout the OID rule provisions, means any bond, debenture, note, certificate or other evidence of indebtedness.[16] It does not include, however, any annuity contract to which §72 applies and depends in substantial part on the life expectancy of 1 or more individuals, or annuity contract issued by an insurance company (within the meaning of subchapter L): (i) in cash only (or annuity contract exchange) transactions, (ii) under the election of a beneficiary upon the death of the insured, or (iii) in any transaction involving a qualified pension or employee benefit plan.[17]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The requirement that the debt instrument be a capital asset in the hands of the holder as prerequisite for application of the OID rules is repealed.[18]

Section 1271(a)(2) restates the rule that where there is an intention to call the debt instrument before maturity, any gain realized from the sale or exchange of such instrument, to the extent of any unamortized OID, is ordinary income. Unamortized OID is the amount of OID, determined under §§1273 or 1274, reduced by the amount of such OID previously includible under §1272 in the income of the holder.

As under prior law, the rule relating to retirement does not apply to a tax-exempt obligation or to any holder who has purchased the debt instrument at a premium [19] (*i.e.*, an amount in excess of the redemption price payable at maturity). The term "tax-exempt" means any obligation, the interest on which is exempt from tax under §103 or is exempt from tax (without regard to the identity of the holder) under any other provision of law.[20] It does not mean a debt instrument held by a tax-exempt entity, the interest on which is exempt solely because of the holder's tax-exempt status.

Section 1271(a)(3) reenacts almost verbatim the provisions of §1232(a)(3) which provides for the ordinary income treatment of any gain from the sale or exchange of any "short-term Government obligation," the definition of which restricts its application to Treasury bills and other instruments issued by the U.S. or state governments having similar terms (maturing in one year or less, paying no interest, and issued at a discount), to the extent such gain does not exceed the holder's ratable share of acquisition discount.[21]

Section 1271 does not apply to instruments issued by natural persons [22] (§1272 applies to these instruments) [23] or to instruments issued before July 2, 1982 (the effective date of TEFRA) by an issuer which is not a corporation and is not a government or political subdivision thereof.[24]

Transition rules, identical to those provided under prior law, apply to instruments issued prior to the effective dates of the various amendments to §1232 after its enactment in the 1954 Code.[25]

Finally, §1271(d) provides that §1271, §1272 (relating to the inclusion in income of OID), and §1286 (relating to the treatment of stripped bonds) shall not require the inclusion of any amount previously includible in gross income. This same provision formerly appeared in §1232(a)(2)(D).

3. *The OID Rules (§§1271-1275)*

Section 1272 provides rules for the computation of the amount of such OID to be *included currently* in the income of the holder. Section 1273 defines OID as the excess of the "stated redemption price at maturity" (hereinafter "SRPM") and the instrument's "issue price." This section provides the rules for determining the *issue price* for debt instruments issued for money or for property where either the instrument or the property is actively traded. Section 1274 provides the rules for determining the *issue price* for instruments issued for untraded property. Section 1275 provides definitions and special rules relating to §§1271-1274. These rules replace former §§1232 and 1232A.

a. Instruments Issued for Money or Traded Property (§1273)

(1) Definitions of OID and Stated Redemption Price at Maturity

OID is the excess of the "stated redemption price payable at maturity" of any debt instrument over the "issue price." [26]

The "stated redemption price payable at maturity" is defined (codifying principles contained in Regs. §1.1232-3(b)(1)(iii)) as the amount fixed by the latest modification of the purchase agreement and includes interest and other amounts payable at that time (however characterized) other than interest based on a fixed rate, and payable unconditionally at fixed periodic intervals of 1 year or less during the entire term of the debt instrument.[27]

The purpose of this definition is to prevent the mismatching of deductions for interest and the inclusion of interest in income. Under this definition, any payment made during the term of a debt instrument which exceeds interest payable at a fixed rate annually is SRPM, requiring computation of OID. This is true whether or not the payment is applied in whole or in part to reduce the principal balance due.

> *Example:* Assume a debt instrument issued for $1,000, maturing in three years, and calling for payments of: (1) $25 at the end of each of the first three six-month periods, (2) payment of $95 at the end of the fourth six-month period, and $25 at the end of each of the last two six-month periods, making the final payment $1,025. The redemption price at maturity is $1,000. The $25 payment reflects interest payable at a fixed rate (five percent) and is excluded from the redemption price. The same would be true if the instrument provided for payment of $50 at the end of the first year, $120 at the end of the second year, and a final payment of $1,050. If the rule under discussion were not applicable, mismatching could occur as follows: If $1,000 is considered the redemption price at maturity, there is no OID and, hence, the issuer and holder treat the interest in accordance with their respective methods of accounting. It can be seen that the annual yield to maturity of this instrument is approximately 7.3 percent. An accrual basis issuer could accrue interest at this rate over the life of the instrument. If the holder is a cash basis taxpayer, he need report only the amount of interest actually received. This mismatching is avoided by treating the instrument as two serial obligations, the first maturing at the end of the second year and having a SRPM of $70, and the second maturing at the end of the third year and having a SRPM of $1,000. There is, therefore, a total of $70 in OID (excess of SRPM ($1,070) over the $1,000 issue price).

The regulations call for the allocation of this OID to each of the series. This technique involves the determination of the issue price for each series. The method for making this determination is set forth in Regs. §1.1232-3(b)(2)(iv)(f), to determine the issue price, the SRPM, and the OID for each series.[28] If the debt instru-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ment is issued for property, OID (if any) for the entire issue would first be computed under §1274 (as will be explained below), and this amount allocated to each series using the method set forth in the regulations. The definition also requires the serial obligation technique to be applied to debt instruments calling for payments reducing principal, a common example of which is the self-amortizing installment obligation as is commonly issued to purchase a house and consumer items. Under this method, providing for level payments over the life of the obligation, each payment is apportioned between principal and interest. Where the OID rules apply to such an obligation, it is broken down into a series of one month OID debt instruments each having an annual yield equal to the yield of the entire series.[29]

(2) Issue Price of Instruments Issued for Money

As to debt instruments not issued for property, (*i.e.*, for money) the issue price is defined in terms similar to those of §1232.[30] The §1232(b)(2) definition relating to instruments offered to the public was prefaced by the phrase "registered with the Securities and Exchange Commission," such registration is no longer a condition to the determination of the issue price, initial offering price, of publicly offered instruments issued for money.[31]

Where the debt instrument is issued for property (which includes the use of property and services, but excludes money) the issue price of the instrument for purposes of §1273 is its stated redemption price at maturity and hence, there is no OID.[32] This general rule is subject, however, to the special rule for instruments issued for traded property. This rule does not apply for purposes of §1274 providing specifically for the determination of the issue price of debt instruments issued for property (but "property" for §1274 purposes is not defined and thus *excludes* the *use* of property and services).

Observation: "Money" apparently refers only to U.S. dollars.[33] These rules thus do not apply to debt instruments issued by foreign entities denominated in foreign currencies.[34]

The "issue price" of instruments not issued for property and not offered to the public is, as under previous law, the price paid by the first buyer.[35]

(3) Issue Price Where Issued For Traded Property

Section 1273(b)(3) sets forth the rule formerly contained in §1232(b) that the issue price of a debt instrument is publicly traded and is issued for property, or issued for stock or securities traded on an established exchange, is the fair market value of either the debt instrument, or the traded stock or securities. Exchange quotations will usually determine fair market value.[36]

In all other cases, debt instruments issued for property, except those to which §1274 applies, have an issue price equal to their stated redemption price at maturity.[37] Section 483 may be applicable to transactions exempted by §§1271-1275.[38]

(4) Investment Units

Section 1273(c)(2) contains provisions similar to those of §1232(b)(2), relating to investment units (the issuance of debt instruments, usually privately placed debentures or notes, together with other securities, usually stock warrants as a package at a price which is usually not allocated by the parties to the elements of the unit). As under prior law, where an investment unit is issued, the issue price of the unit is to be determined under the principles set forth above, and such issue price is to be allocated to each element of the unit on the basis of the relationship of the fair market value of such element to the fair market value of all elements in the unit.[39]

b. Debt Instruments Issued for Untraded Property (§1274)

(1) General

Section 1274 sets forth provisions determining the issue price of any debt instrument issued for property where neither the instrument nor the property is publicly traded.[40] Such issue price is then compared with the redemption price payable at maturity, to determine whether or not there is OID. If there is OID, the rules of §1272 determine how much must be currently included in the income of the holder of the instrument (and, by operation of §163(e), how much may be deducted by the issuer).

(2) Computing the Amount of OID

Where a debt instrument is issued for property, the issue price is the "stated principal amount," *i.e.*, the stated sales price, *if* there is "adequate stated interest."[41] To determine whether there is adequate stated interest, the stated principal amount is compared with the "testing amount."[42] The "testing amount" is the sum of the present values of all payments to be made under the instrument determined by applying a discount rate of 110 percent of the "applicable federal rate" (AFR) compounded semiannually.[43] If the stated principal amount is *less than or equal to* the testing amount, there is adequate stated interest and, consequently, the stated principal amount is the instrument's issue price.[44] If the stated principal amount is *greater than* the testing amount, there must be computed the "imputed principal amount" by determining the sum of the present values of all payments to be made under the instrument, discounting at 120 percent of the AFR compounded semiannually.[45] This imputed principal amount is the instrument's issue price.[46]

The AFR is a rate to be determined by the Secretary within 15 days after the close of the six-month period ending on September 30 or the six-month period ending on March 31 of each year[47] (*cf.*, the determination of the rates applicable to interest on under and overpayments of tax under §6621(b)). There are to be three such rates; short-term (not more than three years), mid-term (not over nine years), and long-term (over nine years) applicable to debt instrument within such terms.[48] The AFR, based on the average market yield of marketed U.S. obligations, for the six-month period ending September 30 is to apply for the six-month period beginning on the succeeding January 1; such rate, based on the yield for the six-month period ending March 31, goes into effect the succeeding July 1.[49]

In the case of any sale or exchange, the determination of the AFR is made as of the first day on which there is a *binding contract in writing* for the sale or exchange.[50] Also, in determining the term of a debt instrument, there is to be taken into account any options to renew or extend.[51]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The committee reports contain a number of guidelines to be taken into account by the Secretary in determining the AFR and points out that AFR manipulation may not be effected by renegotiating written contracts.[52]

Example: The ABC partnership issues a debt instrument for the purchase of a tract of land for development purposes. The stated principal amount is $1,500,000. The note provides for the payment semiannually of interest of 12.5 percent and matures in 20 years. The AFR (long-term) is 12 percent, as of the date there was a binding written contract for the sale of the land. Since 110 percent of the AFR is 13.2 percent, the instrument has OID. The sum of the present values of all payments due under the instrument, discounted at 13.2 percent compounded semiannually, will obviously be less than $1.5 million. To determine the *amount* of OID, all payments due under the instrument must be discounted at 120 percent of the AFR, *i.e.*, 14.4 percent. The sum of the present values of these payments so discounted is the imputed principal amount and issue price.

The Conference Committee modified the statute as proposed in the House and Senate bills to make it clear that so long as the sum of the present values of all payments to be made under a debt instrument at 110 percent of the AFR equal or exceed the stated principal amount, the latter amount is the issue price irrespective of whether the instrument calls for annual payments of interest. Thus, for example, in the case of an instrument calling for a balloon payment at maturity, and otherwise meeting the testing amount, an imputed principal amount will not be imposed based on 120 percent of the AFR. In the example discussed in footnote [27] *supra*, if 7.3 percent was equal to 110 percent of the AFR, the testing amount would be $1,000. Conf. Rep at 888.

It is possible for a debt instrument having a stated principal amount equal to the amount payable at maturity (but not the "stated amount payable at maturity" as defined by §1273(a)(2)) and bearing interest at 110 percent of the AFR to be an OID instrument.

Example: Assume a debt instrument issued in payment of a sales price of $1000x bearing interest at 110 percent of AFR (which will be assumed, for the sake of simplicity, to be 10 percent) payable at maturity in two years in the amount of $1000x. Applying the testing amount, the instrument does not appear to have OID. But, assume further that no interest was payable until the close of the 18th month after issue and at maturity in the amount of $105x each payment. The instrument bears 10 percent interest since the sum of the present values of all payments equals $1000x. The instrument has OID, however. It is a serial obligation composed of two series.

The first has a term of 18 months and has a SRPM of $105x. The second series has a term of 24 months and has a SRPM of $1105x. Applying the rules of Regs. §1.1232-3(b)(2)(iv)(f), the first series has an issue price of $91.04 and the second an issue price of $908.88.

Each of these series has a yield to maturity of ten percent. Therefore, while there is no adjustment to the stated principal amount, there is includible in the income of the holder during the first year $102.50.

Note: The imputed principal amount is the purchaser's *basis in the property* for all tax purposes, and is the amount received by the seller as the sales price for purposes of determining gain or loss.[53]

There are two clusters of special rules which must now be outlined. The first pertains to "potentially abusive situations," and the second relates to those transactions to which §1274 does not apply.

(3) Potentially Abusive Situations

Section 1274(a) lays down the general rule that the issue price of any debt instrument issued for property is (1) where there is adquate stated interest (*i.e.*, where the testing amount is satisfied), the stated principal amount, and (2) in all other cases, the imputed principal amount. There are two imputed principal amounts. The first, already discussed, is, where an instrument does not provide for adequate interest, the sum of the present values of all payments discounted at 120 percent of the AFR. The second imputed principal amount is determined under §1274(b)(3)(A) which provides that "[i]n the case of any potentially abusive situation, the imputed principal amount of any debt instrument received in exchange for property shall be the fair market value of such property, adjusted to take into account other considerations involved in the transaction." Subparagraph (B) defines "potentially abusive situation" as: (i) a tax shelter (as defined in §6661(b)(2)(C)(ii) and (ii) any other situation which, by reason of — (I) recent sales transactions, (II) nonrecourse financing, (III) financing with a term in excess of the economic life of the property, or (IV) other circumstances, is of a type which the Secretary specifies by regulations as having a potential for tax avoidance.

A typical abusive situation will involve the sale of depreciable property for a price in excess of its fair market value in order to provide the purchaser an inflated investment credit and cost recovery allowances. Such a transaction may involve a debt instrument providing for an adequate rate of interest, but is nonrecourse. In some circumstances, the instrument may provide for full recourse but will in practical effect be nonrecourse, because of the holder's inability to make collection (a note issued by a thinly capitalized corporation, for example). Also, where there is full recourse against a solvent issuer, the note may disguise interest as purported payments of principal — but this situation seems adequately taken care of by the interest imputation rules discussed above.

The committee report's commentary on the potentially abusive situation effects are confusing. In fact, the statute is unclear in this regard.

Example: Assume property worth $600,000. The purchaser wants as high a basis as possible. The seller wants to maximize long-term capital gain and minimize interest income. The parties agree on a ten-year note for $900,000 principal amount bearing interest at a rate which is below the AFR. Assume that applying 120 percent of the AFR, the imputed principal amount of the note is $700,000 (it will not be uncommon that 120 percent of the AFR is below the rate of interest

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

which a commercial lender would demand on a privately issued note of this kind). However, an appraisal of the property results in an imputed principal amount of $600,000. There is, therefore, $300,000 of OID. Is this to be taken into account by both buyer and seller currently under §1272? It would seem that this is the result. Assume that after $150,000 of the OID has been so taken into account, the property's value has increased to $800,000. Is the OID to be recomputed at this time? Assume further that there is no interim appraisal and that the note is paid in full. What is the result?

The Committee report states:

"In case where the principal amount of an obligation is limited pursuant to the fair market value rule described above [referring to §1274(b)(3)(A)], the committee expects that *principal amounts in excess of the fair market value* of the property generally will be treated as contingent purchase price amounts with respect to the property, and will give rise to additional tax basis to the purchaser at the time such amounts actually are paid to the seller." (emphasis added). S. Rep. at 256.

The Committee Report, further, notes that if a nonrecourse obligation is given in exchange for property having a value less than the principal amount of the purported debt obligation, "the obligation will be disregarded in whole or in part under general principles of tax law. Moreover, the original issue discount which is nonrecourse will be subject to a periodic deduction only to the extent that, at the time such periodic deduction would otherwise be taken into account by the issuer, the value of the property exceeds the principal balance of the obligation plus any previously amortized original issue discount." [54] This, also, presents problems.

In the example given above, assume that the full amount of the purchase price has been paid. However, based on the $600,000 appraisal, $300,000 of the payments have been characterized as interest. How, in these circumstances, could there by payment of principal amounts in excess of the fair market value? Perhaps the committee had in mind nonrecourse indebtedness. But even here, the picture is unclear.

Example: Assume the same note as in the foregoing example, except that the note is nonrecourse. There is no need to determine an imputed principal amount since the $300,000 principal amount in excess of the appraised value is disregarded, *i.e.*, not taken into consideration as indebtedness for any purpose. Not only is the purchaser's basis in the property determined to be only $600,000, but interest payments attributable to the $300,000 excess are not allowed as deductions. There is no OID since the principal amount or issue price is equal to the stated redemption price at maturity (disregarding the $300,000 as aforesaid).

The only context in which these committee report comments might appear to make sense is where the note calls for periodic payments to be applied to principal. In the situation set forth in the examples above, assume that the note called for 10 semiannual payments of $95,024. At the end of the first year, $119,410 would have been applied to principal and the balance of the payments to interest. If the imputed principal amount is reduced to $600,000 creating $300,000 of OID, additional interest income is included in gross income of the seller and allowed as interest expense to the purchaser. Assume that at the end of the fifth year, more than $600,000 of principal has been paid under the terms of the note. Is OID then to be adjusted?

Note: The Conference Committee Report states that the conferees agreed that where the fair market value of the property exceeds the stated principal amount, a ***higher*** principal amount may be imputed.

Example: Assume property with a fair market value of $500,000 is purchased by a person in whose hands it is not depreciable. The seller would agree to exchange the property for a debt instrument having a present value of $500,000. This could take the form of a note having a stated principal amount of $400,000, bearing interest at 110 percent of the AFR, and having a stated redemption price at maturity sufficiently high to bring its present value up to the true sales price. In such a case, imputing a principal amount of $500,000 will result in reducing the purchaser's interest deductions.[55]

Undoubtedly regulations will be issued clarifying the problems described above.

(4) Exceptions

Section 1274 does not apply to any debt instrument unless some or all of the payments under the instrument are to be made more than 6 months after the date of the sale or exchange.[56]

(i) Sales for less than $1,000,000 of a farm (as defined by §6420(c)(2)) by an individual, estate or testamentary trust, or by a small business corporation (as defined by §1244(c)(3)) or by a partnership which meets the requirements of §1244(c)(3) — whether the corporation or partnership so qualifies is determined as of the date of the sale.[57] In applying the $1 million limitation, it must be determined at the time of sale that the sales price cannot exceed that amount.[58] Thus, additional contingent payments or provisions calling for a revision or adjustment of the sales price will be taken into consideration to this extent. Also, the limitation cannot be avoided by breaking what is essentially one sales transaction into a number of smaller sales and the like; all sales or exchanges which are part of the same transaction (or a series of related transactions) are treated as one sale or exchange,[59]

(ii) The sale by an individual of his principal residence (within the meaning of §1034),[60]

(iii) Any debt instrument providing for total payments (whether principal or interest) aggregating no more than $250,000, taking into account any consideration other than the debt instrument.[61] Consideration (other than debt instruments) is to be valued at fair market value.[62] An anti-fragmentation rule like that applied to the $1 million farm sale price is provided to prevent avoidance.[63]

Note: A note with $100,000 principal amount bearing 13 percent interest and payable in 240 equal monthly installments is subject to §1274.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(iv) Transactions to which §1273(b)(3) applies (instruments which are publicly traded or are issued for publicly traded property),[64]

(v) In the case of the sale of a patent coming within §1235(a), any amounts contingent on the productivity, use or disposition of the patent,[65]

(vi) The issuer (obligor) of a debt instrument issued for what is termed "personal use property," and defined as any property substantially all of the use of which is not in connection with a trade or business or the production or collection of income (determined as of the date the instrument is issued).[66] This exception applies *only to the issuer, not to the holder/seller* whose capital gain (if any) is converted into interest income to the extent of any OID (or unstated interest under §483).

Where a debt instrument is issued in *connection with* the acquisition or carrying of personal use property (as distinguished from in consideration for the sale or exchange of such property, *e.g.*, where the instrument is issued for money which is then used to purchase personal use property) and has OID, if the issuer is a cash basis taxpayer, then notwithstanding §163(e) he may deduct OID only when paid.[67]

Example: Cash basis taxpayer A desires to purchase a small airplane for $30,000 for his personal use. The seller cannot finance the purchase. A has $5,000 to apply to the purchase price. His business associate L is willing to lend A $25,000 in exchange for A's note (secured by a lien on the aircraft) maturing in two years and providing for payment of 8 percent simple interest annually and a final payment at maturity of $30,000. The $5,000 of OID must be included by L in income currently under the provisions of §§1273 and 1272. A, however, may not claim any deductions for interest other than the currently payable eight percent until the note matures, at which time he is entitled to deduct the $5,000 of OID.

Note: It is assumed that the interest rate provided (taking the OID into account) is not a below-market rate. If the owner of the airplane were willing to finance the sale on these same terms, while §1274 would not apply (because the amount is under $250,000) §483 might apply to the seller. If the sales price financed were $300,000, then the personal use property exception to §1274 would apply. If the debt instrument issued by A had OID as determined under §1274, the OID rules would apply only to the seller, not to A.

(5) Debt for Debt Exchanges

Where traded debt instruments are exchanged for untraded property or where untraded instruments are exchanged for traded property, or where both are traded, the fair market value of the property will determine the issue price for purposes of determining OID. After TEFRA, but before the Technical Corrections Act of 1982 (P.L. 97-448) (TCA 1982), these provisions did not apply to instruments issued pursuant to a reorganization. Certain potentially abusive transactions were thereby rendered feasible. The TCA 1982 eliminated the exception relating to reorganizations, and added §1232(b)(4). These amendments were intended to put a stop to the potentially abusive transactions. However, under the provisions of §1274, there appeared a possibility that similar abusive transactions could arise involving the exchange, pursuant to a reorganization of a closely held corporation. The special rule relating to debt instruments issued pursuant to a reorganization, formerly §1232(b)(4), appears in the provisions as §1275(a)(4) rephrased to deal not only with the problem confronted in the TCA 1982, but also to similar transactions coming within the provisions of §1274.

Under pre-TCA 1982 law, a corporate taxpayer could issue an OID instrument and then, after deducting a portion of the OID under §1232 or §1232A, in a recapitalization, qualifying under §368(a)(1) as a reorganization, issue a new instrument (new bond) in exchange for the old bond. In such a transaction, the issue price of the new bond was its stated redemption price at maturity. One transaction which came to the attention of the IRS [68] involved the following exchange.

Example: Corporation retires a $1,000 bond having a fair market value of $650 in exchange for 21 bonds maturing in 30 years with a stated principal amount of $270 each and bearing nine percent simple interest payable at maturity. Each of these bonds is redeemable for $1,000 ($270 in principal plus $730 in accumulated interest). The holder of the old $1,000 bond thus receives bonds with a total stated principal amount of $5,670 on which interest computed on a straight line basis (nine percent per year) will accrue at the rate of $510 per year. At maturity, the new bonds will pay $21,000. Under pre-TCA of 1982 law, there was no OID. The issue price of each new bond was equal to its $1,000 redemption price. Section 483 did not apply since the nine percent simple interest test was met. The issuer in this case could claim (as an accrual basis taxpayer) interest on the set of 21 new bonds of $510 per year throughout the 30 year period. While there are grounds for disputing this claim, the tax consequences prior to the 1982 TCA were, at best, unclear. After the TCA of 1982 amendments, where the old bond was traded property, the issue price of the new bond would be the fair market value of the old bond. Further, under §1232(b)(4), the fair market value of the old bond is considered to be the greater of its adjusted issue price (*i.e.*, issue price plus any OID includible in the income of any holder) or its fair market value. If in the case described, the old $1,000 bond's adjusted issue price was $800 (the original issue price plus all OID includible in the income of the holder) the issue price of the new bond would be that amount rather than the actual $650 fair market value of the old bond. Thus, for the set of 21 new bonds, there would be for each new bond OID of only $100 deductible on a constant interest basis by the issuer over the life of the new bond.

Under the 1984 Act, the above transaction could give rise to OID even if neither side is traded property (provided it does not fall within any of the exceptions to §1274). If it does not fall within §1274, then it would be subject to §483. The special rule of §1232(b)(4) is amended to insure that it covers exchanges of a debt instrument for untraded property in a reorganization such as that described. Under §1275(a)(4), where in a debt instrument for debt instru-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ment exchange pursuant to a reorganization, the amount which (but for §1275(a)(4)) would be the issue price of the new instrument, is less than the adjusted issue price of the old instrument, then the adjusted issue price of the old instrument is treated as the issue price of the new instrument.

Example: Corporation C, a closely held corporation, has outstanding an untraded bond, whose fair market value is $750,000, issued for $800,000 with a redemption price at maturity of $1,000,000. Of the $200,000 OID, $100,000 has been includible in the income of the holder. The adjusted issue price of the bond is therefore $900,000. The bond is exchanged, pursuant to a recapitalization, for a new bond issued by C with the same $1,000,000 redemption price at maturity. The issue price of the new bond is $900,000.

Note: It makes no difference what interest is paid on the new bond. Its issue price is fixed by the higher of the adjusted issue price or the fair market value of the old bond, and applying the definition of OID, stated redemption price at maturity less issue price, the OID is $100,000.

c. Current Inclusion in Income of OID (§1272)

(1) General — Significant Changes with Effective Dates

Once it has been determined under either §§1273 or 1274 that there is OID and the amount thereof, §1272 provides the rules for its inclusion in income. The rules relating to the current inclusion of OID in income are basically the same as those of repealed §1232A. There are, however, several significant changes summarized below:

(i) OID is currently includible in the income of the holder of an instrument issued by a natural person. This change is not effective as to instruments issued before March 2, 1984.[69]

(ii) OID is currently includible in the income of the holder of an instrument which is not a capital asset in his hands. This change is not effective as to instruments issued before December 31, 1984.[70]

(iii) The computation of the daily portions of OID currently includible in income is based on an "accrual period" rather than a "bond period."[71] The accrual period is the six month period (or shorter period from the date or original issue) ending with the date in the calendar year which corresponds with the *maturity date* of the instrument or the date 6 months before such date.[72] Computation of currently includible OID, as under the rules of §1232A, based on a bond period is retained for instruments issued after July 1, 1982 and before January 1, 1985.[73] The bond period is the 1-year period (or shorter period to the maturity date of the instrument) which begins on the date in the calendar year corresponding with the *date of original issue.*[74]

(iv) Where an OID instrument is acquired by purchase after original issue, the OID currently includible in the income of the new holder may be subject to reduction under §1272(a)(6). The formula for computing the amount of reduction is different from that applied under the TEFRA rules. This change is not to apply to any instrument purchased on or before July 18, 1984, and the rules of §1232A(a)(6) are to continue to apply to the holder of such instrument.[75]

(v) Current inclusion of OID in income is not applicable to: (i) tax-exempt obligations, (ii) U.S. savings bonds, or, (iii) short-term obligations (maturing not more than one year from the date of issue).[76] Only (iii) has changed from the previous statutory provisions.[77]

(2) Small Personal Loans

Specifically exempted from current OID accrual are also debt instruments (or any obligations) arising from non-business connected loans between individuals, whether or not related, not exceeding $10,000 (total amount of all loans outstanding) unless the IRS determines that such loan had as a principal purpose the avoidance of tax.[78] For purposes of this exception, a husband and wife are treated as one person (unless they lived apart at all times during the taxable year in which the loan was made).[79]

(3) De Minimis Exception

As under prior law, there is a so-called "de minimis" provision relating to the determination of the amount of OID by the holder of a debt instrument. In any case where the amount of OID determined as explained above is less than 1/4 of one percent of the stated redemption price at maturity multiplied by the number of complete years to maturity the OID is treated as zero.[80] This rule applies only to the holder of the instrument; it does not prohibit the deduction of "de minimis" OID by the issuer.[81]

(4) Definitions

The "date of original issue"[82] is defined in §1275(a)(2). Under prior law, where the instrument was registered with the SEC, the date of original issue was the date on which it was first sold to the public at the issue price. As was seen above, an instrument need not be registered with the SEC (as under the prior law) to be considered as publicly offered. For publicly offered OID instruments, the date of original issue is the date on which the issue was first issued to the public.[83]

Note: It is not clear whether this changed definition applies to instruments issued prior to the effective date of the new OID rules. Section 44(a) of the Act provides the general rule that the amendments made by subtitle C of the Act "shall apply to taxable years ending after the date of this Act." From this, it would seem that the "date of original issue" definitions contained in §1275 apply only to instruments issued after enactment of the 1984 TRA.

The date of original issue of privately placed instruments is, as under prior law, the date on which the instrument was first sold by the issuer.[84] This rule applies only to instruments not issued for property. For instruments issued for property, the date of original issue is the date on which the instrument was issued in a sale or exchange.[85]

Note: The "applicable federal rate" to be applied to determine OID in the case of an instrument issued for property is determined not on the date of original issue, but on the date on which there was a binding written contract for the sale or exchange,[86] an event that may well precede the date of original issue.

(5) Computation of OID Currently Includible

Once it is determined that OID is currently includible in the income of the holder of a debt instrument, it is necessary to compute the amount accruable as interest income to such holder and, by operation of §163(e) (which incorporates the OID rules in determining the amount of interest allowable as a deduction for a taxable period), the issuer's interest deduction. Section 1272 adopts the same principle as did former §1232A, requiring the holder of an OID instrument to compute and include in gross income the "daily portions" of the OID for each day during the taxable year the holder held the instrument.[87]

Under §1232A enacted by TEFRA, the "daily portion" of OID includible in income for a taxable year was determined by allocating to each day in any "bond period" (one-year period (or shorter period to maturity) beginning on the day in the calendar year corresponding to the date of original issue) such day's ratable portion of the increase during such bond period in the adjusted issue price of the bond.[88] The increase in the adjusted issue price is an amount equal to the excess (if any) of:

> "the adjusted issue price at the beginning of the bond period multiplied by the instrument's annual yield to maturity (determined by compounding at the close of each bond period), over the sum of amounts payable over interest during the bond period." [89]

> *Example:* Under TEFRA rules, if the instrument's annual yield to maturity is ten percent and its issue price is $1,000, the increase in the adjusted issue price for the first bond period is $100. If interest of, say, $50 is paid during this period the increase in the adjusted issue price is limited to the excess of $100 over the $50 payable interest, or $50. Compounding the interest (*i.e.*, adding unpaid accrued interest to principal) the adjusted issue price as of the beginning of the next bond period would be $1,050. Allocated to each day in the bond period is $50/365. If the bond were held during the taxable year for 100 days of the bond period, the holder would accrue $13.70 of OID in income.

Effective as to instruments issued after December 31, 1984,[90] the "bond period" is changed to the "accrual period." [91] "Accrual period" is defined as (except as otherwise provided by regulations) a six-month period (or shorter period from the date of original issue) ending on the day in the calendar year corresponding to the maturity date of the instrument or the date six months before such maturity date.[92]

> *Example:* A bond issued on February 1, 1984 and maturing on January 31, 1994 will have two accrual periods: (i) August 1 - January 31, and (ii) February 1 - July 31.

To compute the amount of OID includible in a taxable year, it is first necessary to determine the instrument's accrual periods falling within the year, and then to determine the number of days in each accrual period the instrument was held. Next, determine the adjusted issue price of the instrument at the beginning of each accrual period (if more than one are included). This is the issue price plus any amounts of OID includible in the income of any holder since the date of issue. This adjusted issue price is then multiplied by the yield to maturity computed to take into account the length of the accrual period (*i.e.*, the annual yield times the fraction of one year covered by the accrual period, usually 1/2). The product is then reduced by any interest payable during the accrual period. This is the amount of OID includible in income. This amount is added to the adjusted issue price to determine the adjusted issue price at the beginning of the next accrual period, and so forth.

> *Example (1):* On March 31, A acquires a bond on the date of issue for $80,000. Its redemption price at maturity is $100,000. The yield to maturity is 13 percent. Interest payments are made semiannually in the amount of $5,000. Assume that the first accrual period is three months (a shorter than 6 month first accrual period will be somewhat unusual, but may occur). For the accrual period ending June 30, there is computed $2,600 of OID. Assume that interest of $2,500 is paid for this three month period. This must be deducted from the $2,600. Total OID includible is, therefore, $100. This is added to the $80,000 issue price to obtain the adjusted issue price for the next accrual period. The next accrual period ends on December 31, on which date A still holds the bond. Interest of $5,000 is paid. The yield times the adjusted issue price is $5,206.50. Subtracting the $5,000 interest payment leaves $206.50 to be included for this period. Total OID for the year is $306.50. Assume that A sells the bond to B the following year on February 29. A will compute the OID for the accrual period ending June 30 and include 60/182 of this amount in income (assuming that no interest is paid on the instrument until June 30). The yield times the adjusted issue price as of January 1 (the beginning of the accrual period) is ($80,306.50 x 6.5 percent) or $5,219.92. From this amount must be deducted the $5,000 in interest payable on June 30, the last day of the accrual period. This deduction is required even though A will not receive the interest. B's right to receive this interest is reflected in the price paid for the instrument. There is included in A's income for the year of sale 60/182 x $219.12 or $72.24. This is added to his basis in the instrument for purposes of determining gain or loss on the sale. B, on June 30, will compute the OID using the $80,306.50 adjusted issue price as of January 1 times the period yield of 6.5 percent to obtain the OID for the accrual period ending June 30. This will be reduced by interest paid of $5,000. The result will then be multiplied by 122/182 to obtain the sum of the daily portions of OID attributable to the accrual period ending June 30. Applying these computations, $147.42 is included in B's income for the period. The adjusted issue price is raised to $80,526.15 at the beginning of the accrual period ending December 31, and so forth. Note that if B had paid more than $80,378.74 for the instrument, the OID includible by him in income would be subject to reduction under §1272(a)(6), explained below. This is not taken into account in this example.

> *Example (2):* A debt instrument is issued in 1985 for the issue price of $827,893.65 maturing in three years. Interest of $25,000 is payable semiannually. The redemption price at maturity is $1,000,000. The yield to

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

maturity is 12 percent. The $172,106.39 of OID is taken into income of the holder as follows:

Accrual Periods:

1) $24,673.62

2) $26,154.03. . .and so forth.

The rules relating to the current inclusion of OID in income apply generally to obligations issued after *July 1, 1982.*[93] However, as the switch from the bond period to the accrual period would cause considerable problems, for purposes of computing currently includible OID under §1272 with respect to debt instruments issued after July 1, 1982 and before January 1, 1985, the accrual period is a one year period (or shorter period to maturity) beginning on the day in the calendar year which corresponds to the date of original issue (*i.e.*, the same as the bond period provided by §1232A).[94]

Example: An OID instrument was issued on March 1, 1983. The bond period for purposes of determining the daily portions of OID for the holder's calendar year is March 1, 1983 — February 29, 1984. Without the effective date provision set forth above, for 1984, for periods after July 18, 1984, the daily portions of OID would have to be based on accrual periods March 1 - August 31 and September 1 — February 29. But there is no adjusted issue price for March 1, 1984 based on the increase for the preceding 6-month period. With respect to such instrument, computation of OID currently includible in income is exactly the same as under repealed §1232A.

Note: Where the issue price of an instrument is based on the imputed principal amount, the yield to maturity of the instrument is 120 percent of the AFR in effect as of the date there was a binding contract in writing for the sale or exchange.

Where the debt instrument provides for only one payment of interest per year, the method described above to determine the OID allocable to each day in an accrual period applies. The adjusted issue price at the beginning of an accrual period multiplied by the annual yield of the instrument can never be less than the amount of interest payable during that period, *unless* the interest payable during such period exceeds interest payable at a fixed rate during the life of the instrument at least annually, in which case the interest payment is considered a maturity of a serial obligation as explained above.

Example: Assume a debt instrument like that described in the Example (2) above with the difference that a $50,000 interest payment is made on December 31 of each year. The date of issue is January 1. If the market calls for a 12 percent interest rate, the instrument will be worth $824,313.07 (the present values of all payments to be made discounted at 12 percent compounded semiannually). The OID is therefore $175,687 (as compared to OID of $172,106 where interest is paid semiannually). The increase in the adjusted issue price for the first accrual period is $49,458.78, and for the second accrual period is $2,426.31. Total interest includible for the year (including the $50,000 payment on December 31) is $101,885.01 as compared with $100,827.65 on the bond with semiannual payments of interest.

(6) Reduction of Currently Includible OID Where Holder Paid Acquisition Premium

Where after the date of original issue, the holder sells the interest, some adjustment may have to be made in computing the OID included in the buyer's income. If interest rates have risen since the instrument was issued, the sales price will usually be less than the holder's basis, in which case there arises acquisition or "market" discount. If rates have decreased, the holder can usually sell the bond at a gain, in which case the purchaser pays "acquisition premium." In this case, the original issue price and adjusted issue price remain unchanged, as does the stated redemption price at maturity. The new holder must still compute OID in the same manner as the former holder, but the OID is reduced. The daily portion of OID includible in the holder's income is multiplied by a fraction:

$$\frac{\text{(cost)} - \text{(issue price + portion of OID previously includible in gross income of any holder)}}{\text{sum of daily portions for all days from purchase date to stated maturity date}}$$ [95]

Note: (1) The reduction formula is not to be applied in computing the values of either the numerator or denominator. (2) OID not includible in the gross income of any holder is not taken into consideration in determining the value of the numerator. (3) The "stated" maturity date may be different from the maturity date if the instrument is amended by the parties.

Example: P purchases from the holder a bond whose yield to maturity is 14 percent (computed by the holder as outlined above) and whose basis (issue price plus OID included in holder's income) on the date it was sold was $10.7x. P pays $13x for the bond. The total of the daily portions of OID from the date of purchase to maturity of the bond is $5x. The value of the fraction set forth above is thus .46. P computes the sum of the daily portions of OID for each accrual period and multiplies the result by .46 to arrive at the amount includible in income for that period. Note that the initial computation before application of the reduction fraction is to be completed as if the purchaser were the original holder. The adjusted issue price is therefore increased each accrual period on the basis of the OID as originally computed without regard to the reduction fraction. P's basis in the instrument, however, is increased only by the amount of OID includible in income.

In the case of debt instruments issued by corporations after May 27, 1969 and before July 2, 1982 (TEFRA effective date) for which OID is currently includible on a straight-line basis, the reduction formula is the same as that set forth above, except that the denominator is the number of complete months (plus any fractional part of a month) from the purchase date to maturity.

For debt instruments subject to the OID rules of TEFRA instruments issued by an issuer other than a natural person after July 1, 1982), the reduction formula under §1232A(a)(6) is:

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

$$\frac{\text{(cost) − (issue price + sum of daily portions of OID for all days before the date of purchase)}}{\text{Number of days from purchase date to maturity}}$$ [96]

Under Act §44(i)(2), the §1232A(a)(6) formula applies to OID instruments purchased on or before July 18, 1984 (date of enactment of the 1984 TRA).

(7) Pre-TEFRA Instruments

Accrual of OID on a straight-line or ratable basis, as under §1232 prior to TEFRA, applies to all corporate debt instruments issued after May 27, 1969 (when current accrual of OID was first required but restricted to corporate debt instruments) and before July 2, 1982 (TEFRA effective date). These OID accrual rules, including the rules applicable to the treatment of acquisition discount with respect to such instruments, remain unchanged. Also, after the enactment of TEFRA, constant rate interest accrual of OID was required for both corporate and governmental obligations (but not instruments issued by individuals). While §1272 applies to instruments issued by natural persons, under §1272(a)(2) this is effective only as to instruments issued on or after March 2, 1984. Holders of instruments issued by natural persons before that date are not required to include OID in income currently.

(8) Special Rules

The OID rules, both before and after the Act, do not apply to any holder who has purchased the instrument at a premium or to any life insurance company holder to which §811(b) applies.[97]

The term "purchase" does not apply to any acquisition of an instrument in circumstances where its basis in the hands of the acquiring person is determined *to any extent* by reference to the adjusted basis in the hands of the person from whom acquired.[98] Under §1232A(c)(2), the term "purchase" excluded acquisitions where the basis of the bond was determined under §1014(a) (relating to property acquired from a decedent). This does not apply to instruments acquired after July 18, 1984.

Finally, §1272(d)(2) provides, as did prior law, that the basis of any debt instrument in the hands of the holder shall be increased by the amount includible in gross income by §1272.[99]

If at the time the instrument was issued, there was an intention to call it before maturity, some portion of what would otherwise be capital gain may be characterized as ordinary income.[100]

Example: Assume a three-year note issued for $8,000 cash with a redemption price of $10,000, with no interest payable during the life of the note (a so-called zero coupon instrument). The annual yield to maturity is approximately 7.56 percent. Assume an issue date of January 1. On June 30, the holder accrues $302.40 of OID, and on the following December 31, he accrues $313.83. At that time, the adjusted issue price is $8,648.63. The instrument is sold for $9,000. The new holder accrues OID for the first accrual period ending June 30 (as reduced under §1272(a)(6)) of $83.04. His basis in the instrument is thus $9,083.04. On July 1, he sells the instrument for $9,200. If at the time the instrument was issued, there was an intention to call it before maturity, the $116.96 gain is ordinary income to the extent of the OID ($2,000) reduced by the amount of such OID includible in the income of any holder without regard to §1272(a)(6),[101] *i.e.*, the OID which would have been includible in the income of the first holder through the third accrual period, or $975.55. Thus any gain on the sale of the instrument, where there was an intention to call it before maturity, $1,024.45 is ordinary income. If there was no such intention, the holder's gain, in this case, would be all capital gain. If the sale takes place at some date other than the day after the end of an accrual period, the daily portion of OID is computed to the day before the date of sale and included as interest income for that year. The holder's basis is adjusted to include this gain, and the gain is all capital gain. Of course, where the instrument is not a capital asset in the hands of the holder, all gain is ordinary income in any event. The rule set forth does not apply to tax-exempt obligations or to any holder who has purchased the debt instrument at a premium.

Where a debt instrument having OID is publicly offered, §1275(c) requires that certain information appear on the debt instrument.

The Secretary is granted very broad regulatory authority to modify the OID rules in the specific areas applicable to instruments having varying rates of interest, situations involving put and call options, indefinite maturities, contingent payments, assumptions of debt instruments, "*or other circumstances" where the statute does not carry out the purposes of subpart A* (the OID rules) of part V of subchapter P. These regulations will therefore be legislative in effect.[102]

(9) Conforming Amendments to §163

In connection with the above OID rules, the Act amends §163(e) (which, as under prior law, makes the interest deduction allowable to the issuer under §163 consistent with the inclusion of OID in the holder's income) to provide that:

In the case of any debt instrument issued after July 1, 1982, the portion of the OID allowable as a deduction to the issuer for any taxable year shall be equal to the aggregate daily portions of the OID during such taxable year.[103] "Debt instrument" has the same meaning as under §1274(a)(1).[104] The daily portion is to be computed under §1272(a), without regard to §§1272(a)(6) and 1273(a)(3).[105]

4. Market Discount

a. General

Where a debt instrument is purchased at a price less than the stated redemption price, the difference is termed "market discount," as defined by §1278.[106]

Prior to TRA 1984, there were no provisions applicable to market discount. When the instrument was sold or exchanged, the holder's gain (where the instrument was held as a capital asset) was capital gain despite the fact that such gain, aside from any amount attributable to a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

decrease of interest rates, had all of the characteristics of interest.[107]

Example: The purchaser of a corporate bond bearing 12 percent interest, having a redemption price at maturity of $10,000, and a ten-year term, half of which has expired; in a market where the interest rate on bonds of similar quality is 15 percent, may pay, say, $8,500 [108] for the instrument. His position is indistinguishable from the purchaser at the time of its original issue of a five-year bond bearing 12 percent interest maturing in five years with a redemption price of $10,000. Carrying through the time value of money reforms commencing with TEFRA, Congress decided to require that taxpayers take into account as ordinary income, gain attributable to market discount at the time of disposition of the debt instrument.

Another problem addressed by Congress in the 1984 TRA is the practice of leveraged purchases of market discount bonds. Even if market discount must be taken into account as ordinary income on the disposition of a market discount bond, where such bond has been purchased with borrowed funds and the interest on such funds is currently deducted, the holder obtains a tax advantage. The interest deductions offset current unrelated income, effectively deferring payment of tax on the market discount gain to be recognized in a later taxable period. Rules providing for the deferral of such interest until the year in which the market discount is included in income are dealt with in subpart B of part V of subchapter P, containing §§1276 through 1278. Section 1276 relates to the treatment of "disposition gain"; §1277 provides rules for the deferral of deductions for interest on money borrowed to purchase or carry market discount bonds; §1278 provides definitions and special rules.

b. Disposition Gain

(1) General

In drafting the market discount provisions, Congress referred throughout to "market discount bonds," using the term "bond" (as under prior law), rather than the term "debt instrument." The heading of subpart B as originally enacted "Market Discount on Bonds" was amended by (H. Con. Res.) 328 (June 29, 1984) to strike out the words "on Bonds." But the provisions of §§1276-1278 use the terms "bond" and "bonds," referring to debt instruments of all descriptions. It is to be understood that *all* debt instruments except those specifically excluded are included in the meaning of this term.

(2) Exceptions

The market discount rules (§§1276-1278) do not apply to: (i) *short-term obligations* (having a fixed maturity date not more than one year from the date of issue),[109] (ii) *tax exempt obligations* (as defined by §1275(a)(3)),[110] (iii) *U.S. savings bonds*,[111] or (iv) *installment obligations* to which §453B applies.[112]

(3) Ordinary Income Treatment of Disposition Gain

As stated above, market discount is defined as the excess of the stated redemption price at maturity of a bond over its basis immediately after its acquisition by the taxpayer. In the case of a bond having OID, the stated redemption price at maturity is treated as equal to its "revised issue price." [113] For this purpose, "revised issue price" is defined as the sum of the issue price of the bond plus the total amount of OID includible in the income of all the holders up to the date of purchase without reduction by acquisition discount under §1272(a)(6) or (b)(4).[114] These terms (stated redemption price at maturity, issue price, original issue discount) have the same meanings as in the OID rules of §§1271-1275.[115]

The general rule of §1276 is that any gain on the disposition of a market discount bond shall be treated as ordinary income to the extent it does not exceed the accrued market discount on such bond. This gain must be recognized notwithstanding any other provisions of subtitle A of the Code (income taxes).[117]

The term "disposition" is not limited to a sale or exchange. It means any transaction qualifying as a disposition, *i.e.*, transfer of ownership or retirement. The accrued market discount is to be computed using a ratable inclusion of such discount.[118] This ratable accrual is based on the number of days the bond has been held, divided by the number of days after the date of acquisition through the maturity date.[119] This fraction is multiplied by the amount of market discount. Thus, if market discount is $1,000, the bond matures in 1000 days and has been held for 500 days at the time it is disposed of, gain to the extent of $500 is ordinary income.

The amount required to be included as ordinary income is to be treated as interest for all purposes of the Code except; §871(a) and §881 (imposing a tax on U.S. source income of foreign individuals and corporations not connected with a U.S. business), §§1441 and 1442 (requiring withholding on certain periodic income from U.S. sources of foreign individuals and corporations), §6049 (requiring an information return to be filed by the payor of interest to certain persons).[120]

(4) Elections Available

The holder of a market discount bond may elect to accrue such discount on a constant interest rate basis (as if the market discount were OID) for the entire period during which he holds the bond.[121] Such election is irrevocable, but may be made with respect to each bond held.[122] That is, if made with respect to one bond, it does not apply to other market discount bonds held by the electing taxpayer.

If the election is taken:

"the accrued market discount on such bond shall be the aggregate amount which would have been includible in the gross income of the taxpayer under section 1272(a) with respect to such bond for all periods during which the bond was held by the taxpayer if such bound had been—

"(i) originally issued on the date on which such bond was acquired by the taxpayer, and

"(ii) for an issue price equal to the basis of the taxpayer in such bond immediately after its acquisition." [123]

It is important to note that when the statute refers to the "accrual" of market discount, it does not mean the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

current inclusion of such a discount in income, as is the case with OID. The discount is accrued for purposes of determining the amount of gain to be treated as ordinary income upon disposition of the bond. If market discount is accrued on a constant interest rate basis, and the bond is sold before maturity at a gain, there will be less market discount to be taken into account than under ratable accrual since under a constant rate accrual, less interest accrues during the early years than under a ratable method.

Example: Thus, under the foregoing election, if the bond has a stated redemption price at maturity of $10,000 and is purchased for $8,000, the $2,000 of market discount is accrued as if it were OID on an OID bond issued originally for $8,000 and having a stated redemption price of $10,000; *i.e.*, the $10,000 will be discounted from the maturity date to the date at which accruals are being measured based on the bond's effective rate of interest.

Where a bond having OID is purchased, and the new holder elects to accrue market discount on a constant interest basis, there exists a situation illustrated in the following example:

Example: Assume a zero coupon bond maturing in 5 years and having a redemption price at maturity of $10,000. The issue price of the bond is $5,000. The yield on this bond is 14.36 percent. The original holder holds the bond for two years, including in income $1,598 of OID (four accrual periods). At this time, he sells the bond to purchaser P. Since under §1278(a)(2)(B), for purposes of determining market discount, the stated redemption price at maturity of the bond is treated as equal to its revised issue price (issue price of $5,000 plus $1,598 of OID includible in the income of all holders), if the bond is sold for exactly $6,598, there is no market discount. This same rule applies where the purchaser elects to accrue market discount on a constant interest basis. Assume that P purchases the bond for $6,000. A nonelecting purchaser would continue to include OID in income as did the former holder and would, in addition, accrue the acquisition discount of $598 (excess of $6,598 over P's basis of $6,000) ratably over the three years remaining to maturity.

A holder electing to accrue market discount on a constant interest basis would, instead, compute the yield to maturity of a bond issued for $6,000 and maturing in three years at a price of $6,598. The yield is 3.19 percent, and this, presumably, will be applied to compute the daily portions of accrued market discount.

However, §1276(b)(2)(B)(ii) provides that in a case such as this, "the portion of the original issue discount which would have been includible in the gross income of the taxpayer under §1272(a) shall be made under regulations prescribed by the Secretary."

While the situation discussed in the example involves a zero coupon bond, the computation will be more complex where the bond pays coupon interest. In computing the OID includible in income, interest paid during the accrual period is deducted in determining the increase in the adjusted issue price for the period. Where acquisition discount on the bond is to be accrued in the same manner as OID, what portion of the current interest payments are to be applied, if any? The regulations would appear to have this situation in mind.

The taxpayer may also elect to include market discount currently,[124] that is, to include such market discount in income using *either* a straight-line or constant interest rate method. If such an election is made, it applies to all market discount bonds acquired by the taxpayer on or after the first day of the taxable year to which the election applies.[125] Once made, this election also applies to all future years unless the Commissioner consents to its revocation.[126] If this election is made, then the accrual of market discount under the rules set forth immediately above does not apply, nor do the rules relating to the deferral of interest deductions to be discussed below.[127]

(5) Nonrecognition Transactions

It was stated above, that where a market discount bond is disposed of at a gain, such gain must be recognized for purposes of treating accrued market discount as ordinary income notwithstanding any other provisions of subtitle A of the Code,[128] and that a disposition occurs whenever there is a transfer of ownership, however effected. Further, for purposes of this rule, a person disposing of a market discount bond other than by a sale, exchange or involuntary conversion is treated as realizing the fair market value of the bond.[129] This rule is similar to the rule relating to the disposition of §1245 property (requiring depreciation recapture). The statute provides that rules similar to those of §1245(b), except §1245(b)(1), shall be prescribed by regulations applicable to dispositions of market discount bonds.[130] Section 1245(b)(1) excludes from the provisions of §1245(a) transfers by gift.

Section 1245(b)(3) provides that if the basis of property transferred in certain tax-free transactions is determined by reference to its basis in the hands of the transferor by reason of the application of §§332, 351, 361, 371(a), 374(a), 721 or 731, then the amount of gain taken into account by the transferor under §1245(a)(1) is not to exceed the gain to be recognized by the transferor (without regard to §1245). The regulations to be prescribed under §1276 are to follow §1245(b)(3) and to include in the transactions to which tax-free treatment is accorded exchanges qualifying under §§354(a), 355(a) and 356(a).[131] The latter three sections relate to exchanges either effected pursuant to corporate reorganizations or certain distributions of property by a controlled corporation. Under their provisions, the property received in such an exchange, generally, has a basis equal to the basis of the property given up.

These regulations are also to provide for an adjustment to the basis of property reflecting gain recognized under the general rule of §1276(a).[132] Thus, if a market discount bond is transferred as a gift resulting in recognition of gain by the transferor on its disposition, the transferee's basis will be adjusted (increased) to reflect such gain.

(a) Special Definitions (§43(a) of the Act)

The Code contains what are commonly referred to as "nonrecognition provisions." A "nonrecognition transaction" is defined by §7701(a)(45) (added by §43(a)(1) of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the Act) as: "any disposition of property in a transaction in which gain or loss is not recognized in whole or in part for purposes of subtitle A." Further, with respect to some of these transactions, it is provided that the basis of the property transferred in the hands of the transferee is to be determined in whole or in part by reference to its basis in the hands of the transferor. Such property is, under §7701(a)(43) termed "transferred basis property." In other nonrecognition transactions, the Code provides that the basis of property received by the transferor in an exchange is to be determined in whole or in part by reference to the property given up in the exchange. Section 7701(a)(44) terms such property "exchanged basis property." Section 7701(a)(42) terms both kinds of property (transferred and exchanged basis property) "substituted basis property." The former definition, contained in the last sentence of §1016, is deleted (Act §43(a)(2)).

Under the general rule of §1276(a) (like that of §1245(a)) gain is recognized from the disposition of appreciated market discount bonds notwithstanding the nonrecognition provisions. But, exeptions similar to those of §1245(b) are made as has been explained above. Section 1276(c) provides the treatment to be accorded market discount bonds disposed of in nonrecognition transactions.

(i) Where the bond is transferred basis property in the hands of the transferee, accrued discount in the hands of the transferee is determined as if the transferee had acquired the bond on the same date as the transferor and for an amount equal to transferor's basis at the time of transfer.[133] Adjustments are to be made reflecting (A) any gain recognized by the transferor, and (B) for any OID or market discount included in the income of the transferor.[134]

Example: Individual taxpayer A transfers a market discount bond to a controlled corporation in a transaction qualifying under §351. As part of the transaction, A receives from the corporation property other than stock or securities and, as a consequence, recognizes gain. This bond was issued at discount and acquired by A from its holder by purchase. At the time of the transfer to the corporation, A's basis in the bond, including OID includible in his income to the date of transfer, was $6,300. Since its purchase, A had accrued to the date of transfer $500 in market discount. In the hands of the corporation, the bond has a basis of: $6,000 (A's cost) + $500 (gain recognized by A on the transfer) + $300 (OID included in A's income during the period he held the bond) = $6,800. If, after accruing another $500 of market discount, the bond is distributed to A in a complete liquidation, the corporation will be treated as having sold the bond for its fair market value. At that time, the accrued market discount of $1,000 is treated as ordinary income to the extent of any gain realized by it on the disposition of the bond.

(ii) Where the bond is exchanged for other property in a nonrecognition transaction and such other property is exchanged basis property in the hands of the taxpayer:

(A) Where such other property is a market discount bond, the accrued market discount on the bond exchanged (to the extent not treated as ordinary income under §1276(a)) is attributed to the bond received,[135]

(B) Where such other property is not a market discount bond, the accrued market discount on the bond exchanged is to be treated as ordinary income on the disposition of such other property (*i.e.*, the property received).[136]

Example: Taxpayer A pursuant to a recapitalization qualifying under §368(a)(1) receives in exchange for a market discount bond (old bond), with respect to which there has accrued $500 in market discount, a corporate bond (new bond). Whether or not the old bond had OID or whether the bond received has OID is irrelevant as is whether any gain was recognized in the transaction. The $500 in market discount is attributed to the new bond, and to the extent of any gain realized upon the disposition of such new bond, the $500 is treated as ordinary income. Of course, any OID included in A's income with respect to the old bond as well as any gain recognized in the transaction are reflected in A's basis in the new bond and, accordingly, in the determination of gain realized upon its disposition.

If the basis of any market discount bond in the hands of a transferee is determined under §334(c) (property received in a §333 liquidation), §732(a) or §732(b) (distributions by a partnership to a partner other than in liquidation and liquidating distributions of a partnership, respectively) it is to be treated as transferred basis property in the hands of such transferee.[137]

Note: The definitions added by Act §43 apply to the entire Code. "Transfered basis property" is also used in the provisions of §467.

(b) Effective Date and De Minimis Rule

The provisions of §1276 outlined above are not to apply to any market discount bond *issued* on or before, July 18, 1984, the date of enactment of the 1984 TRA.[138]

A *de minimis* exception identical to that applicable to §1272 applies to market discount, namely, if the market discount is less than 1/4 of one percent of the stated redemption price at maturity, multiplied by the number of complete years to maturity after acquisition of the bond, market discount is deemed to be zero.

c. Deferral of Deductions for Interest

Section 1277(a) sets forth the general rule that the "net direct interest expense" with respect to any market discount bond, (meaning the excess of (if any) of interest paid or accrued during the taxable year on indebtedness incurred or continued to purchase or carry a market discount bond, over the aggregate amount of interest (including OID) includible in gross income with respect to such bond, is allowable as a deduction only to the extent it exceeds the market discount accrued on the bond while held by the taxpayer during the taxable year.

The general rule is that any interest so deferred, termed "disallowed interest expense,"[139] is treated as interest paid or accrued in the year in which the bond is disposed of. It is then deductible, subject to any other Code limitations (*e.g.*, §163(d)) whether or not gain is recognized from the disposition.[140]

An election is provided by §1277(b)(1) under which disallowed interest may in some cases be treated as paid or

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

accrued in a year prior to the year in which the bond is disposed of. If the election is made, and there is "net interest income" from the bond, meaning the excess of any interest (including OID) includible in gross income with respect to the bond over interest paid or accrued during the year on indebtedness incurred to purchase or carry the bond,[141] then to the extent of such net interest income, any disallowed interest with respect to the bond is treated as paid or accrued for that year.[142]

The statute provides that the disallowed interest expense, for purposes of making the election, is determined at the close of the preceding taxable year, and that it shall not take into account any amount as to which an election to treat it as paid under §1277(b)(1) has been made.[143]

Example: A purchases a market discount bond in Year 1 from which he receives during the year $12,000 in coupon interest. The bond also has OID of which A is required to include $10,000 in income for the year. A elects to accrue market discount on a constant interest basis. Such discount accrued for Year 1 is $6,000. A pays during Year 1 $28,000 in interest on funds borrowed to purchase or carry the bond. A's net direct interest expense is $6,000. Since this does not exceed the accrued market discount, it is disallowed interest for Year one. In Year two, coupon interest is still $12,000, but OID income has increased to $12,500. Also, accrued market discount for Year two has increased to $6,800. In this year, A pays interest of only $18,000 on in debtedness incurred to carry the bond (having paid off a portion of the principal). In Year two, there is net interest income of $6,500. To this extent, the interest disallowed for Year one ($6,000) is treated, at the election of the taxpayer, as paid or accrued in Year two and may, therefore, be deducted (subject to any other Code restrictions). As a result of this election, interest expense incurred with respect to the bond is $24,000 (the $6,000 treated as paid in Year two plus the $18,000 paid during the year). There was also, as has been seen, $24,500 of interest on the bond included in A's income. Thus, there was no net direct interest expense for the year, and all of the $18,000 paid is currently treated as paid or incurred in Year two. If the bond is disposed of at the end of Year two, for a gain of $7,500, all of this gain is treated as ordinary interest income (since it does not exceed the $12,800 in accrued market discount).

Where a market discount bond is disposed of in a nonrecognition transaction (as explained above), and there is disallowed interest expense with respect to the bond, such expense is treated as paid or incurred only to the extent gain is recognized from the transaction.[144] Where there is no gain, or the gain is less than the disallowed interest expense, it is carried over to the transferee where the bond is transferred basis property.[145] The disallowed interest expense is then allowed to the transferee upon his disposition of the bond. Where property received in the transaction in exchange for a market discount bond is exchanged basis property, then the disallowed interest is allowed in the year such exchanged basis property is disposed of.[146]

Example: A holds a market discount bond with respect to which there is $500 of disallowed interest. He disposes of the bond by transferring it to a partnership in a transaction qualifying under §721(a). No gain is recognized on the transfer. The partnership, upon its disposition of the bond, is entitled to treat the $500 as interest paid or accrued in the year of disposition. A holds another such bond which is exchanged for other property in a corporate reorganization. The exchange qualifies under §354(a), A taking a basis in the property received determined by reference to his basis in the market discount bond transferred. The $500 in disallowed interest is treated as paid or accrued by A upon his disposition of the property received.

Query: In this latter case, if the property received is an interest bearing debt instrument, may A make an election under §1277(b)(1)?

It is important to understand that the interest deferral provisions explained above apply to all market discount bonds regardless of the date on which they were issued. Market discount accrues on such bonds acquired after July 18, 1984 (date of enactment of 1984 TRA), just as it does in the case of bonds issued after the date of enactment,[147] but there is no requirement that accrued discount on such pre-enactment bonds be treated as ordinary income upon their disposition.[148]

Where interest is disallowed with respect to a pre-enactment bond, and gain is recognized by the holder upon the disposition of the bond (*i.e.*, sale, exchange, retirement, but not gift or other nontaxable transfer) [149] then to the extent of such gain, any disallowed interest expense is treated as ordinary income.[150] In many cases, the disallowed interest expense treated as paid in the year the bond is disposed of and the ordinary income recognized under the preceding rule will exactly offset each other.

Example: Calendar year individual taxpayer A purchases a market discount bond on November 16, 1984. The bond was issued in 1983. If A has paid or accrued any interest on debt to purchase or carry the bond, he must compute and accrue market discount on the bond for the days during 1984 and subsequent years during which he holds the bond. The interest deduction deferral rules of §1277 will apply to restrict the deduction of such interest. When the bond is disposed of, all disallowed interest expense will be treated as paid or accrued in the year of disposition. If the bond is disposed of at a gain, then to the extent of the disallowed interest treated as paid or accrued by reason of §1277(b)(2), such gain is treated as ordinary income.

Assume that the disallowed interest at the time the bond was disposed of in 1986 was $1,800, and that gain was recognized on such disposition (without regard to §1276(a)(1)) in the amount of $2,500, the gain will be treated as ordinary interest income to the extent of $1,800. This will offset by $1,800 the interest deduction allowable.

If a bond is disposed of in a nonrecognition transaction, the same rules apply as those explained above relating to post-enactment bonds. The disallowed interest will be carried over to transferred basis property and will attach to exchanged basis property and will be allowed only when such property is disposed of.

If the bond in the above example is disposed of by way of gift, while no gain is recognized, the disallowed interest

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

is allowed in the year of disposition. If it is disposed of by transfer to a controlled corporation in a transaction to which §351 applies, the disallowed interest is not allowed at the time of transfer, but will be allowed to the transferee in the year the bond is disposed of. If the transferee disposes of the bond at a gain, then such gain, to the extent of the disallowed interest allowed is treated as ordinary interest income.[151]

One problem to be anticipated in applying the rules of §1277 is determining whether indebtedness of the holder of a bond was incurred to purchase or carry the bond. This problem is often encountered in applying §265(2), disallowing deductions for interest on indebtedness incurred to purchase or carry a tax-exempt obligation. Presumably, the IRS will look to Rev. Proc. 72-18, 1972 C.B. 740, as clarified by Rev. Proc. 74-8, 1974-1 C.B. 419 for guidance. In the case of banks and other financial institutions, within the meaning of §§585 or 593, §1277(c) provides that principles similar to those of §291(e)(1)(B)(ii) are to be applied. Thus, unless the taxpayer bank establishes otherwise, interest paid on indebtedness incurred to purchase or carry market discount bonds is determined by multiplying total interest paid or accrued during the taxable year by the fraction: average adjusted basis of all market discount bonds over average adjusted basis of all assets.[152]

The amount derived from this computation would be reduced by the amount of all interest included in the taxpayer's income from market discount bonds to obtain the net direct interest expense for the year.

Also, §1277(c) provides that rules similar to those of §265(5) are to apply to characterize short sales expenses as interest for purposes of determining the net direct interest expense with respect to market discount bonds. Section 265(5) was added to the Code by §56(c) of the Act.

Accrued market discount, whether treated as ordinary income upon the disposition of the market discount bond under the rules of §1276 or included in income currently under the election afforded by §1278(b), and whether such discount is computed on a ratable or constant interest basis, is treated as interest for all purposes of the Code except §§871(a) and 881 (relating to the 30 percent tax on nonresident alien individuals and foreign corporations on U.S. source income not connected with a U.S. business) and §§1441 and 1442 (relating to the withholding of such 30 percent tax). Such interest need not be reported under the provisions of §6049 by the payor. Regulations may extend these exceptions.[153]

d. Technical and Conforming Amendments

Carrying through the basic similarity of the recapture rules of §1245 and the provisions of §1276(a), amendments are made to:

(i) Section 341(e) (relating to exceptions to the application of the collapsible corporation rules) to add §1276 to §341(e)(12)'s list of Code sections not to be taken into account in determining whether gain from the sale or exchange of property would give rise to ordinary income.[154]

(ii) Paragraph (2) of §453B(d) (relating to the treatment of installment obligations in §337 liquidations) is also amended to add §1276 to the Code sections there listed. If in a §337 liquidation an installment obligation is distributed and there is accrued market discount with respect to the obligation, then the corporation must recognize such discount to the extent of the gain which would have been realized if the obligation had been sold for its fair market value.[155]

(iii) The definition of "unrealized receivables" set forth in §751(c) is amended to include market discount bonds and short-term obligations as defined in §1283 (discussed in *infra*), to the extent that gain from the sale of the bond would be treated as ordinary income.[156]

5. Short-Term Obligations (§§1281-1283)

a. Background

(1) Governmental Obligations

Under §1232(a)(3), gain from the sale or exchange of a short term government obligation was treated as ordinary income to the extent of the holder's ratable share of acquisition discount. This rule has been carried over and appears in §1271(a)(3). A short term governmental obligation is an obligation issued by the U.S. or any state at discount, without interest, and payable at a fixed maturity date not more than one year from the date of maturity issue,[157] *e.g.*, a Treasury bill. Acquisition discount is defined as the excess of the obligation's redemption price at maturity over the holder's basis.[158] The holder's ratable share of discount was multiplied by the number of days held over the number of days from the date of acquisition to (and including) the date of maturity [159] (*i.e.*, discount was computed on a linear basis). This provision was made necessary by the repeal of §1221(5) which excluded from the definition of "capital asset" short-term governmental obligations.[160] This rule applied to cash and accrual basis taxpayers alike, since, under §454(b) neither had to include discount in income currently with respect to such obligations.[161]

(2) Nongovernmental Obligations

The inclusion of interest in the income of the holder of a nongovernmental short-term obligation was governed, as a general rule, by the holder's method of accounting. Accrual basis taxpayers were required to accrue and include currently in income the interest on such obligation. While the method to be used was somewhat unclear,[162] inclusion of any interest earned during the taxable year was clearly called for. Cash basis taxpayers were not required to include any interest with respect to such obligations in income until received.

Under Regs. §1.1232-3(b)(1)(iii), in determining whether a debt instrument had OID, there was excluded from the stated redemption price at maturity not only interest unconditionally payable at a fixed rate periodically at intervals not exceeding one year (the rule adopted by §1273(a)(2)), but also, in the case of a short-term obligation, interest payable at maturity. Thus, a nongovernmental short-term obligation issued at discount without interest and payable at maturity had no OID with the result that the cash basis holder was not obligated to include the discount in income currently.

Note: The regulations cited above appear to distinguish between: (i) A note given for a $1,000 loan providing for

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

payment at maturity of principal plus interest of (assuming a 12 percent simple rate) $1,120, and (ii) an obligation issued for $892 and payable at maturity in the amount of $1,000.[163]

Both of these instruments would appear to satisfy the requirement that interest be payable at a fixed rate at intervals of not more than one year. The note described in (i) would not appear to be considered issued at discount, however, whereas the note in (ii), absent the provisions of the regulations, would be considered to have OID of $108. The distinction is somewhat artificial and difficult to define in general terms. The redemption price of both includes a charge for the use of the money loaned at 12 percent. Presumably, this distinction carries over to the provisions of §§1281-1283.[164]

Under pre-1984 TRA law, a cash basis taxpayer could obtain tax advantages by purchasing a short-term obligation, with principal and interest paid at redemption (a so-called discount obligation) and maturing the following year, using funds borrowed at currently payable interest. Interest deductions taken for the year of purchase were not offset by interest income on the note, resulting in a net deferral of tax. Accrual basis taxpayers could obtain a similar advantage by purchasing Treasury bills maturing the following year, due to §454(b).

The post-TRA 1984 provisions relating to short-term obligations originated in efforts to counteract these tax advantages which Congress deemed unjustifiable.[165] Attention was directed primarily to the deferral of interest deductions related to indebtedness incurred to purchase or acquire short-term obligations, the holders of which were not required currently to include in income any accrued discount. This would include virtually all holders of Treasury bills and all cash basis holders of other short-term instruments issued at discount. The problem of tracing indebtedness to the holding of specific types of securities poses numerous administrative problems. Congress concluded, therefore, that a solution to the problem would be to require current inclusion of discount by most holders, leaving deferral of interest deductions to apply to those cash basis taxpayers whose dealings in securities would not be significant.

b. The Statutory Provisions and Analysis

(1) General Rule Requiring Current Inclusion

Section 1281 requires the current inclusion of acquisition discount relating to short-term obligations in income by all accrual basis taxpayers.[166] This is also required of certain cash basis taxpayers who might be expected to deal in large volumes of such obligations, namely:

(i) persons holding such obligations for sale to customers in their trade or business,

(ii) banks, as defined by §581,

(iii) regulated investment companies (RICs)[167] and common trust funds,

(iv) persons holding such obligations as part of a hedging transaction and who have identified them as such under §1256(e)(2).[168]

Current inclusion in income under §1281 is also required of a pass-thru entity (a partnership or S corporation) formed or availed of to avoid §1281[169] and any obligation acquired by a pass-thru entity (not formed or availed of to avoid §1281) during the "required accrual period,"[170] as defined by §1281(b)(2)(B). A key term in this definition is "ownership test," a test met for a taxable year, if for at least 90 days, 20 percent or more of the value of the interests of the pass-thru entity are held by persons who must accrue acquisition discount (enumerated above) or by other pass-thru entities formed or availed of to avoid §1281.[171] The "required accrual period" is, then, the period which begins with the first taxable year for which the ownership test is met by the entity (or predecessor) and ends with the first taxable year after such taxable year in which the ownership test is not met, *and* with respect to which the Secretary consents to the termination of the ownership period.[172]

Example: Calendar year partnership A: does not meet the ownership test at any time during 1985, meets the test for at least 90-days during 1986, and meets the test for only 20 days of 1987. The year 1986 is a required accrual period. It terminates on January 1, 1987, but only if the Commissioner consents to the termination. Such consent will probably be promptly given unless there is some question as to whether the partnership (or any of the pass-thru entity partners) was formed or availed of to avoid §1281. Consent will probably be withheld pending this determination and, if given, will be retroactive.

Included in income is *acquisition discount* rather than OID,[173] the basis on which the treatment of gain is provided under §1271(a)(3). In a short-term instrument, acquisition and original issue discount overlap.

Example: Assume a note issued for $890 without interest is redeemable at the end of one year for $1,000. The note is sold six months before maturity for $965. If the holder is required to include in income ratably the $110 of OID, and to increase his basis in the note in a like amount,[174] he would report for the year $55 of interest and $20 of capital gain. If the purchaser were subject to the same requirements, applying a reduction of the currently includible OID to take into account the acquisition premium (relative to the first holder's basis) as under §1272(b)(4), $35 would be reported as interest and his basis at maturity would be $1,000.

If the purchaser were to accrue and include in income acquisition discount, there would be the same result.[175] Acquisition discount equals OID as reduced by the acquisition premium paid to the seller of the note (capital gain realized by the seller). It thus should make no difference in the above case to the purchaser of the obligation whether he is to include in income OID or acquisition discount, except that the computation under the latter is less complex.

On the other hand, if interest rates had gone up, and the purchaser paid only $935 for the obligation, the original holder could claim a $10 capital loss and acquisition discount in the hands of the purchaser would be $65. In this situation, it would be distinctly advantageous for the purchaser to include in income only the remaining unamortized OID, $55, over the life of the obligation. Upon redemption at maturity, he would have a basis of $990 and a $10 capital gain. The

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

market discount rules do not apply to short-term obligations.

Section 1283, provides definitions and special rules for §§1281-1282. "Short-term obligation" is defined as any debt instrument maturing in one year or less from its issue date, and, as do the OID and market discount rules, excepting from such definition tax-exempt obligations. "Acquisition discount" is defined as the excess of the obligation's stated redemption price at maturity (as defined by §1273) over the taxpayer's basis for the obligation. Section 1281(a) requires current inclusion in income of an amount equal to the daily portions of the acquisition discount for each day during the taxable year on which the obligation was held. Section 1283(b)(1) provides that such daily portion is to be determined on the basis of ratable accrual of the discount.[176] But the holder is allowed to elect to accrue acquisition discount on a constant interest basis, compounding daily. This election may be made with respect to any obligation and is irrevocable.[177]

In the case of nongovernmental obligations, §1283(c)(1) provides that §§1283 and 1284 (relating to the deferral of interest) are to be applied "by taking into account [OID] in lieu of acquisition discount," and that appropriate adjustments are to be made in the application of §1283(b).[178] The latter provision presumably means that the OID may be accrued either ratably or on a constant interest basis as is acquisition discount. It is further provided, however, that the taxpayer may elect not to have §1283(c)(1) apply provided the election is made to all obligations held by the taxpayer during the year to which the election applies and to all future years. This election may not be revoked without the Commissioner's consent.[179]

(2) Deferral of Interest Deductions

Section 1282, applicable to those persons not required to include currently in income discount on short-term obligations, provides rules substantially identical in all respects to those of §1277 regarding the disallowances (deferral) of interest expense allocable to accrued discount. It is provided that a taxpayer not required to include discount in income currently may elect to do so[180] and that such election applies to all short-term obligations acquired on or after the first day of the first taxable year to which it applies and is irrevocable without consent. Taxpayers making this election will not be subject to deferral of interest deductions.[181]

Note: The interest deduction deferral rules relating to market discount are apparently to apply in full, including the various definitions therein. Section 1282(a) provides that the "net direct interest expense" with respect to any short-term obligation shall be allowed as a deduction only to the extent it exceeds the sum of the daily portions of acquisition discount (OID in the case of nongovernmental obligations unless the §1283(c)(2) election is made) for each day during the taxable year for which the taxpayer held such obligation. The rules regarding the method of accrual (or constant interest) apply.[182]

As under §1277, disallowed interest deduction is allowed in the year the obligation is disposed of.

Note: The committee reports state that stripped coupons or stripped bonds payable not more than one year from the date of purchase (irrespective of the date of issue of the bond) are to be considered short-term obligations subject to the rules of §§1281-1283.[183]

Observations: A cash basis holder of a short-term obligation issued at discount, who is not required to include discount in income currently, will, upon the sale or exchange of the obligation, be required under general principles of tax law apportion any gain realized between capital gain and interest income.[184] The statute makes no specific provision for this case. The market discount rules do not apply, nor do the OID rules since both §§1271 and 1272 exclude from their provisions short-term obligations. Yet, some portion of the gain is attributable to the use or forebearance of money. The conflict between the concept of OID and the treatment of short-term obligations is encountered here again. If the obligation provides for the payment of interest at a fixed rate at maturity, and it is held until maturity, there is no question that the interest is to be treated as such by the holder (*e.g.*, a loan of $1,000 repayable in one year with interest at x percent). Where the obligation does not on its face provide for a fixed rate of interest, but is issued at discount (*e.g.*, a certificate of deposit) the same result follows. If the instrument is sold before maturity, how is the gain (if any) to be apportioned? In all probability, the taxpayer will not be required to treat as interest any amount greater than the portion of the OID allocable on a constant interest basis.

Example: A 1 year certificate of deposit paying $10,000 at maturity is issued for $8,870. Three months after the date of issue, it is sold for $9,200. Of the $330 gain, $268 is interest and $62 is capital gain (the instrument bears an interest rate of 12 percent compounded daily). In the hands of the purchaser, there is $800 of acquisition discount and $962 of unamortized OID. If the purchaser is an accrual basis taxpayer, it makes no difference whether the discount currently includible in income is acquisition discount or OID (as reduced by the acquisition premium of $62).

If, the original holder were to compute OID on a linear basis, $282 of the $330 gain would be characterized as interest and only $48 as capital gain. But, it is improbable that the IRS would require the OID to be computed in this manner.

The provisions of subpart C (§§1281-1283) as stated above apply to obligations acquired after July 18, 1984.[185]

(3) Act Section 44(e) Election

An election is provided under Act §44(e) to have §1281 apply to all obligations held during the first taxable year that includes July 18, 1984 (date of enactment). This can be made only by taxpayers as to whom the current inclusion of discount is mandatory under §1281 with respect to such obligations.[186] It would thus appear to be unavailable to a taxpayer electing under §1282(b)(2)(A) to have §1281 apply to all obligations acquired on or after the first day of the year to which the election applies and all subsequent years, but this is not entirely clear.

A taxpayer making the Act §44(e) election is treated as having changed his method of accounting with the Commissioner's consent. Consequently, §481(a) is applicable to require adjustments necessary to prevent the double inclu-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

sion or omission of income or deductions. Section 44(e)(2) of the Act provides a five-year "spread period" for the taking of the net adjustments required by §481 into account. As explained by the conference committee,[187] the net adjustments to which §481 will apply consist of the excess of the amounts of discount included in income under "cash basis accounting" over the amounts includible under "accrual basis accounting." The former is the amount includible if §1281 were not enacted, and the latter is the amount which would be included if §1281 applied to the year of election and previous taxable years.

Thus, in the case of calendar year taxpayer A, who acquired a $1,000 6 month certificate of deposit for $937 on November 1, 1983 and held it to maturity, income for 1984 using cash basis accounting is $63. Under accrual basis accounting, there is included only $43. The net adjustment under §481 is $20. The rules set forth in Act §44(e)(2) for taking the net §481 adjustments into income over a five-year spread period are somewhat complex and designed to insure that there is no omission of any amount from income. The conference committee report states the intent that in determining the net adjustments under §481 to prevent the omission of amounts, the cash basis income is computed as if such income had accrued in the preceding taxable year and, thereby, resulted in an increase in the basis of the related short-term obligations. Absent this treatment, there would be no omission from income to which §481 could apply.[188]

6. Miscellaneous Provisions

Subpart D of new part V of subchapter P contains the following miscellaneous provisions:

Tax Treatment of Stripped Bonds (§1286)

Denial of Capital Gain Treatment for Gains on Certain Obligations Not in Registered Form (§1287)

Treatment of OID on Tax Exempt Obligations (§1288)

a. Stripped Bonds

The provisions of §1286 are substantially identical to those of repealed §1232B.[189] Where the coupons are removed from a bond and either the stripped bond or the coupons are disposed of separately, the transaction is treated in all respects as if the separated elements were OID instruments, issued on the purchase date, at a price equal to the bond's or the coupon's ratable share of the purchase price. One minor change made to these provisions is that the words "by a corporation" are eliminated from the phrase "issued by a corporation on the purchase date." This was made necessary by the change to the OID rules making them applicable to instruments issued by natural persons. A detailed analysis of the stripped bond provisions is not provided here since there is no change from prior law except that noted. A stripped bond or coupon, regardless of when the bond was issued, is to be treated as a short-term obligation for purposes of §§1281-1283 where 1 year or less remains to maturity.

b. Unregistered Securities

Section 310(b)(6) of P.L. 97-248 (TEFRA) reenacted the provisions of §1232(c) as in effect prior to the repeal of §1232 by §42(a)(1) of the 1984 TRA. These provisions were reenacted as §1287 without change. Since the provisions of prior law are unaffected by this enactment, no detailed analysis of these provisions are called for in this chapter.

c. Tax-Exempt Obligations Issued at Discount

Under the law in effect prior to the 1984 TRA, the holder of a tax-exempt obligation issued at discount was entitled to accrue such discount ratably over the life of the obligation and to adjust the basis of the obligation to reflect such accrual. Since the ratable accrual of discount will always exceed accrual based on a constant interest rate (economic accrual), the basis such of a tax-exempt obligation usually exceeded its fair market value.

Example: State authority S issues a zero coupon $10,000 bond maturing in five years for $6,139, reflecting a 10 percent interest rate. At the end of the third year from the date of issue, the basis of the bond in the hands of the original holder would be $8,456 reflecting the ratable accrual of the $3,861 of discount. The fair market value of the bond, assuming that a 10 percent interest rate were applied to discount the amount payable at maturity, would be $8,227. A sale of the bond at this time would result in a capital loss of $228.97, even though there is no true economic loss from the sale. The purchaser, in turn, would continue to increase his basis in the bond by accruing the unamortized OID ratably. At maturity, his basis would be $9,771 generating a capital gain of $228, even though all of this gain is attributable to interest.

Also, where a tax-exempt bond was issued to finance the acquisition of property to be used by a private person, the latter assuming the issuer's obligation to make payments, and where the tax-exempt bond had OID, the person obligated to make the payments and treated, for purposes of interest deductions under §163, as the issuer of the bond, the amount of OID accruable in a given taxable year was based on ratable accrual rather than economic accrual on a constant interest basis. This resulted in substantially higher interest deductions during the early years of the bond's life than would have been allowable under the rules of §1232A (or post-1984 TRA §1272).

To correct this anomalous situation, it is provided in §1288 that for purposes of §163 and for purposes of the adjusted basis of the holder of a tax-exempt bond, OID on any tax-exempt obligations is to be treated as accruing in the manner provided by §1272(a) (on a constant interest basis), without regard to paragraph (6) thereof (providing for a reduction of OID accruals where the bond was acquired at an acquisition premium.

Example: In the case of the bond described in the preceding example, the basis of the original holder at the time of sale would be $8,227 resulting in neither gain or loss. The purchaser would continue to accrue the OID in the same manner and in the same amount as if he were the original holder, resulting in his basis in the bond exactly matching the increase in its fair market value due to the passage of time (assuming no fluctuations in the interest rates). If the purchaser held the bond to maturity, there would be no gain or loss. If interest rates had fallen at the time of the sale of the bond, and its fair market value had been $8.500. the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

amount paid by the purchaser, the purchaser's basis in the bond $10,273 (his basis, $8,500 plus the OID accrued from the date of purchase to maturity without reduction). He would have a capital loss of $273, the amount of the acquisition premium.

Section 1288(b)(3) provides that for short-term tax-exempt obligations, "rules similar to the rules of §1283(b) shall apply." The latter rules permit the accrual of discount on either a ratable (days held divided by days from acquisition through maturity) or constant interest basis (compounding daily).

The provisions of §1288 apply to obligations *issued* after September 3, 1982, and *acquired* after March 1, 1984.[190]

d. Use of Industrial Development Bonds for Property Acquisitions

Many acquisitions of property are financed by tax exempt bonds. In a typical transaction, the seller of the property receives a bond in exchange for the property [191] and the purchaser assumes liability to make payments on the bond as they come due. The seller retains a security interest in the property. Under this arrangement, while the governmental authority is the issuer of the tax-exempt bond (required for tax-exemption under §103), its liability is limited to the purchaser's obligation, assumed in exchange for the property, to make payments in accordance with the terms of the bond. The purchaser's obligation is considered a debt instrument and is subject to the rules of §§1272 and 1274. If, under these circumstances, the debt instrument failed to provide adequate interest, measured by 110 percent of the applicable federal rate (AFR), interest would be imputed under §1274 at 120 percent of the AFR. If the purchaser's debt instrument, because of the arrangement described, is considered a tax-exempt bond, the result would be to distort income. Because of the lower than market interest rates paid on tax-exempt issues, making such financing attractive, most such bonds would not meet the adequate interest test. Imputing interest at 120 percent of the AFR would reduce the purchaser's basis in the property (usually depreciable) and correspondingly reduce the seller's gain (or increase the loss). Also, the purchaser/issuer would be entitled to larger interest deductions over the life of the bond than if the interest rate provided in the bond were honored for tax purposes. These results would largely defeat the purpose of such financing. Recognizing this problem, it is provided in §1288(b)(1) that:

(A) OID in the case of a tax-exempt bond is determined without regard to the *de minimis* exception of §1273(a)(3), and

(B) In determining the AFR to be applied under §1274, the Secretary will provide regulations for adjustments to take into account the fact that the interest is tax-exempt. This means that something resembling an AFR for tax-exempt bonds will be prescribed. If the bond fails to meet this test, then OID will arise (with the effects described above), even though such OID is relatively small (1/4 percent or less of the redemption price at maturity times the number of complete years of the term of the bond). The same adjustments to the AFR are to be used in applying §483 (discussed immediately below).

7. Section 483

a. Background

When property is sold and the parties to the transaction agree to payment of part or all of the purchase price in installments, some or all of which are to be made more than a year from the date of sale, the IRS has been permitted (since 1963) to determine whether and the extent to which purported payments of the purchase price are, in reality, payment for the use of money, which must be treated as such for tax purposes. It makes no difference whether the payments are made under the terms of a contractual obligation or a debt instrument issued by the purchaser.

As under §1274, where the payment terms fail to provide for an adequate charge for interest, the appropriate adjustment is to impute an adequate charge. This has the effect of reducing the seller's gain and the purchaser's basis in the property, and increasing the amount of interest includible in the income of the seller and the amount of deductions allowable to the purchaser for interest expenses. Where both parties are taxable and similarly situated, there will normally be sufficient commercial and tax considerations to guarantee an adequate interest charge. While the seller will want as much of the total payments as possible to be taxed as long-term capital gain, he will also want compensation for the time value of money. The purchaser of the property to be depreciated, will want as high a basis as possible, but will also want to be able to deduct any payments made for the use of money. In many, if not most cases, however, investment credits and ACRS deductions give greater tax benefits than interest deductions. On the other hand, the seller will gain a distinct advantage in having what are in reality charges for the use of money taxed as capital gain. The tax advantages of investment credits and ACRS deductions will usually be greater than the benefits derived from interest deductions over the life of the debt instrument issued for the property.

Where the seller or the buyer is tax exempt, the tax considerations change. The tax exempt seller is unconcerned with the amount of gain realized, but is concerned with charging adequate interest on any deferred payments. Where it is the buyer, investment credits and ACRS deductions are of not importance, but it will want to negotiate low interest charges on its payments.

In all of these situations, there are advantages to be gained by providing for an inflated sales price and low interest charges. In some cases, the party with superior bargaining power may be able to impose such terms even though the other party will be unable to gain tax advantages sufficient to offset non-tax detriments. That tax considerations often dictate terms to which the parties would not have agreed, if only commercial considerations were involved, has long been recognized and underlies the statutory provisions of §483.

Prior to the 1984 TRA, §483 required the testing of the terms of sales having deferred payments. The sum of the present values of all payments (including interest payments, but excluding any payments of principal made

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

within six months from the date of sale) was obtained using a "test rate" of interest. If this amount was less than the sum of all payments of the purchase price there was "unstated interest." In such a case, interest was imputed at a higher rate than the test rate. Both the test rate and the rate used for interest imputation were prescribed by regulations and changed from time to time to reflect market rates. These rates, however, generally lagged far behind market rates.

Another feature of pre-Act §483 was that the total amount of imputed interest was allocated to payments in proportion to the percentage such payment was of the total purchase price. For example, if a contract called for the purchase price to be paid in two installments, the first six months and one day after the date of sale and the second ten years after the date of sale, one-half of the total amount of imputed interest was allocated to the first payment. This led to a distortion. If interest were charged at an adequate rate, most of the interest would be allocated to the second payment. Thus, pre-Act §483 failed to satisfy the legislative intent behind its enactment. Congress decided, therefore, to amend §483 to make its application consistent with the provisions of §1274 and §1272, but retained the principle that inclusions in gross income and the allowance of deductions are determined by the affected taxpayer's method of accounting.

b. Operation of Amended Section 483

(1) General

Amended §483 retains the "total unstated interest" test. If the sum of the present values of all payments (other than payments of principal made within six months of the sale) to be made under the contract (or debt instrument) discounted at the test rate is less than the sum of all payments (other than payments made within six months of the date of sale) of the purchase price, interest is imputed at a higher rate. The test rate is 110 percent of the AFR as determined under §1274(d),[191] and the rate used for imputing interest is 120 percent of the AFR.

(2) Structure of Statute

Section 483(a) provides that in the case of any payment under a contract for the sale or exchange of property where §483 applies to such payment, there is treated as interest that portion of unstated interest determined in a manner consistent with §1272(a).

It must first be determined whether §483 applies to a payment.

(a) Exceptions

(i) Payments of principal made within six months of the date of sale or exchange, or any payments under a contract or debt instrument if all of the payments are due within one year from the date of sale. §483(c)(1).

(ii) Any payments made under a contract where at the time of the sale or exchange it can be determined that the sales price cannot exceed $3,000. §483(d)(2).

(iii) Any payments made under the terms of a debt instrument to which §1272 applies. Thus, if total payments to be made under the debt instrument exceed $250,000, §483 will not apply. §483(d)(1).

(iv) Any payments made by a purchaser of property as carrying charges if such amounts are treated by §163(b) as if they included interest. §483(d)(3).

(v) Any payments made under a contract or debt instrument issued for the sale or exchange of a patent where such payments are contingent on the productivity, use or disposition of the property transferred. §483(d)(4).

Special rules apply to sales of principal residences, farmlands, and land. These will be discussed below.

(b) Determining and Allocating Total Unstated Interest

If the payments under a contract of sale or the terms of a debt instrument issued for property are not excepted under the foregoing provisions, it must be determined whether and the extent to which the payments to be made include unstated interest. If so, the total unstated interest attributable to all payments is allocated to the payments in a manner consistent with the method prescribed by §1272(a). Thus, such total unstated interest is treated as if it were OID in the case of an accrual basis taxpayer, and for each accrual period the total of the daily portions of such total unstated interest for the number of days the contractual obligation or instrument was held or outstanding is treated as currently includible/deductible interest for all purposes of the Code. As to a cash basis taxpayer, a similar computation is made, but amounts are not included in income or allowed as deductions until actually or constructively received or paid. If the sum of payments of principal exceeds the sum of the present values of all payments to be made, there is unstated interest. The present values are determined by discounting the payments at an interest rate of 110 percent of the AFR.

To determine the *amount* of total unstated interest, the sum of the present values of all payments (excepting payments of principal within six months from the date of sale) is determined, discounting such payments at an interest rate equal to 120 percent of the AFR. The excess of the sum of all payments of principal to which §483 applies over the sum of present values represents total unstated interest. This is to be allocated to payments made under the contract or debt instrument in a manner consistent with §1272(a). To do this, the yield to maturity of the obligation or instrument is determined. This, by definition, is 120 percent of the AFR (the rate used to determine unstated interest). This yield is then applied as in determining the OID attributable to each six-month accrual period.[192]

An accrual period is the six-month period ending with the date in the calendar year corresponding with the maturity date of the obligation or instrument, or a date six-months earlier. If the last payment due under the contract or the maturity date of the instrument is, say, May 1, the accrual periods are November 2 through May 1 and May 2 through November 1. The portion of total unstated interest allocable to each day in each accrual period is computed by multiplying the yield to maturity by the principal amount outstanding at the beginning of each accrual period, including any unpaid interest (including unstated interest), and dividing the result by the number of days in the period. An accrual basis holder of the obligation then computes interest income includible for the number of days the obligation was held during the taxable year just as if the unstated

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

interest were OID. An accrual basis obligor deducts interest on the same basis, *i.e.*, number of days the obligation was outstanding. A cash basis obligee uses the same method for determining the portion of each payment received (or constructively received) constituting interest, and a cash basis obligor uses this method to determine the portion of each payment made which is interest expense.

Example: Assume a $100x sales price, to be paid in two installments, the first, six months after the date of sale and the second two years after the date of sale. No interest is provided for. The first payment is $5x and the second is $95x. The AFR is 12 percent. The first $5x payment is treated, for purposes of §483, as if it had been made on the date of sale.

Discounting $95x at 120 percent of the AFR (= 14.4 percent) yields $71.94x. There is thus total unstated interest of $23.06x and an adjusted purchase price of $76.94x ($71.94 + $5.00). The first period accrues interest of $5.18x. This is added to the $71.94x unpaid principal amount to compute accrued unstated interest for the second accrual period of $5.55x. To the third accrual period is allocated $5.95x of the unstated interest, and to the final $95x payment there is allocated $6.38x. An accrual basis obligee must take into income these amounts of unstated interest, and an accrual basis obligor is entitled to take interest deductions in these amounts for the respective accrual periods. A cash basis obligee includes all of the $23.06x of interest in income at the time the final $95x payment is made, and a cash basis obligor deducts the same amount of interest when the final payment is made.

If, in the example above, the parties had provided for interest to be paid in the amount of $24.80x at the time of the first $5x payment, the payments would then include interest at a rate equal to 120 percent of the AFR. No §483 adjustments would be necessary, since the payments would not be payments to which §483 applies. No deduction of this amount would be allowed the obligor, however, whether a cash or accrual basis taxpayer. Deductions would be allowed to such obligor only in the amount of interest allocable to each taxable year on the basis of a constant interest rate of 14.4 percent (or any higher rate if it had been agreed to by the parties). Thus for the first taxable year, interest would be allowable only to the extent of $14.04x (7.2 percent times $100x plus 7.2 percent times $95x). This results from the application of §461(h) of the Code added by Act §91.

Example: The same rules are applied to the following more complex transaction. Taxpayer A contracts to purchase an item of property from seller B. The agreed on sales price is $50,000. The date of sale is January 1, 1985. The purchase price is to be paid in installments and interest is provided at a rate of 10 percent. The schedule of payments is as follows:

	Payment	Interest	Principal	Balance Due
June 30, 1985	$5,000	$2,500	$2,500	$47,500
December 31, 1985	$15,000	$2,375	$12,625	$34,875
June 30, 1986	$15,000	$1,744	$13,256	$21,619
January 1, 1987	$10,00	$1,080	$8,919	$12,700
June 30, 1987	$13,334	$635	$12,700	0

The AFR (short-term) is 12 percent. The first payment is composed of $2,500 in principal and $2,500 in interest (5 percent of $50,00). For purposes of §483, the $2,500 of principal paid within six months from the date of sale is treated as if it were paid on the date of sale. The total of payments to which §483(a) applies is thus $47,500.

That there is unstated interest is evident since the rate of interest provided in the contract is below 110 percent of the AFR. Some agreements may provide for irregular payments of interest at varying rates. For example, in the agreement described above, the parties could have provided that of the fourth payment, due January 1, 1987, $2,000 is to be treated as interest and the $8,000 balance applied to reduce the principal balance due, and provided for a final payment of $14,000.

Steps to determine unstated interest:

(i) Testing the schedule of payments, the sum of the present values of all payments (except the first $2,500 payment) is $45,359 using 110 percent of the AFR. There is, therefore, unstated interest since this is less than $47,500.

(ii) The amount of total unstated interest is determined to be $2,948 ($47,500 total of deferred payments less $44,552 = sum of present values of all deferred payments and interest discounted at 120 percent of the AFR).

(iii) Total unstated interest is allocated to each payment as follows:

1st Payment - $708

2d Payment - $884

3rd Payment - $669

4th Payment - $427

5th Payment - $261

If the obligor (purchaser) is a cash basis taxpayer, $1,592 of the unstated interest is deductible in 1985, $669 is deductible in 1986, $688 is deductible in 1987. If he is an accrual basis taxpayer, $1,592 is deductible in 1985, $2,824 is deductible in 1986 (the accrual for one day is negligible), and $635 is deductible in 1987.

The purchase price of the property is adjusted to $47,052 for all purposes of the Code.

(3) Special Rules

It was noted in the discussion of §1274 that its provisions do not apply to sales or personal residences or farms by individuals or small businesses for less than $1,000,000. If §483 were to apply to such transactions, little would be gained by exempting them from §1274 (except that cash basis taxpayers would be treated differently. It was decided, therefore, in a concurrent resolution adopted by the House and amended by the Senate (H. Con. Res.) 328) [19] after enactment of the Act and before enrollment, to add subsection (e) to §483 (redesignating former (e) as (f) and down the line through (g) to (h)) which provides that in the case of any *debt instrument* arising from the sale or exchange by an individual of his principal residence (within

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the meaning of §1034) or any sale or exchange by a person of land used by such person as a farm (within the meaning of §6420(C) [should read (c)](2)), §483 is to be applied using the discount rates as in effect prior to its amendment, *i.e.*, a test rate of nine percent simple interest as modified from time to time by regulations, and a rate of ten percent compounded semiannually for purposes of determining total unstated interest. Note that Congress did not make any change to the method of apportioning the unstated interest. Thus, the former method of apportionment in accordance with the proportion each payment was to the total principal amount is *not* retained. All that is effected by this change is to replace the words "110 percent of the applicable Federal rate" and "110 percent of the applicable Federal rate" in §483(b) and (c)(1), respectively, with (as currently provided by regulations) "9 percent simple interest" and "10 percent interest compounded semiannually."

In the case of a sale of a personal residence, §483(e) applies only to the extent the purchase price of the residence does not exceed $250,000. Thus, where a personal residence is sold for $300,000, the nine percent test rate and ten percent imputation rate apply to 83.3 percent of the payments, and the TRA 1984 rates apply to the balance in any adjustment under §483.

Retained as subsection (f) of §483 are the provisions of former subsection (g) providing for a lower (seven percent compounded semiannually) rate to determine the total unstated interest rate in the case of a sale of land between related persons (a "qualified sale"). The provisions are identical under the amended section with the exception that in the phrase "under the regulations under subsection (b)" in §483(g)(1), as in effect prior to the Act, post-TRA 1984 §483(f)(1) omits the words "under the regulations." It would thus appear that the 7 percent rate is permanent (unless changed legislatively).

It should be noted that under pre-1984 TRA §483, §483(f), providing exceptions and limitations, provided that in the case of the seller, §483 was not to apply to any payments received from a sale or exchange if all of the gain from such transaction would be treated as ordinary income. This exception was not retained in the amended provisions.

It is also noted that, like the OID rules, §483 does not apply to any amount which constitutes an annuity to which §72 applies and the liability for which depends in whole or in substantial part on the life expectancy of any individual. The Committee Report states that this exception is not intended to apply if the possibility that the life contingency will determine the amount of the payments is remote; that is, the contingency must be real and significant.[194]

(4) Conference Committee "Clarification of Intent"

Included in the report of the Conference Committee[195] are three significant "clarifications of intent" which apply both to §1274 and §483:

(a) Circumvention by Low Interest Loans

The committee stated that where a seller agrees to lend money to the buyer at a rate equal to 100 percent of the AFR (thus escaping any adjustments under post-TRA 1984 §7872) and the buyer used the loan proceeds to purchase untraded property from the seller, the loan will be treated as a purchase money loan subject to the 110 percent of AFR test and 120 percent of AFR interest imputation under §1274 or 483.

(b) Variable Rate

Where a debt instrument or contract of sale provides for a variable interest rate, no interest will be imputed under §§1274 or 483 where the rate is tied to an index or otherwise allowed to float, so long as it is adjusted no more frequently than at six-month intervals and can never drop below 110 percent of the short-term AFR.

Observation: Assume that the rate provided is 2 percentage points above the rate provided by §6621(b) (rate applicable to overpayments and underpayments of tax). This rate will always be more than the short-term AFR. It is possible, however, that, especially where the obligation is long-term, such rate may drop below the appropriate AFR. Apparently this is acceptable for purposes of determining whether a debt instrument or contractual obligation provides for adequate interest.

(c) Transfers of Debt Obligations or Rights

Current regulations under §483 provide the tax consequences of transfers of debt obligations subject to the rules of §483. These rules apply where (1) the holder of a debt instrument or obligation transfers it to another, or (2) where the obligor transfers his obligation to another person who assumes it. Similar regulations are expected by the conferees to be issued under the post-TRA 1984 OID and §483 provisions. Since §§1274 and 483 apply only to transactions occurring after December 31, 1984, the regulations in question are to deal with transfers of obligations to make or the rights to receive deferred payments effected after that date regardless of when these obligations were issued.

8. Effective Dates

a. General

Act §44(a) states the general rule that, except as otherwise provided in the section, the amendments made by subtitle C shall apply to taxable years ending after July 18, 1984 (date of enactment).

b. Sections 1274 and 483

In Act §44(b)(1) it is provided that §1274 and the amendments made to §483 by Act §41(a) apply to sales or exchanges after December 31, 1984, further, these provisions are not to apply to any sale or exchange pursuant to a written contract which was binding on March 1, 1984 and at all times thereafter before the sale or exchange.

c. Amendment of Section 482 Regulations

Act §44(b)(2) directs the Secretary to amend the regulations under §482 (namely, Regs. §1.482-2(a) relating to loans and advances) no later than 180 days after July 18, 1984 to modify the safe harbor interest rates so that such rates are consistent with those applicable under §483 as amended by Act §41(a).

Note: Henceforth, under the amended regulations, loans or advances made by one commonly controlled organization, trade or business not engaged in the business of lending money to another which bear interest at a rate equal to 110 percent of the AFR will be considered having been made at an arm's length rate. If this rate is not

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

charged, and the taxpayer cannot establish that the rate charged was at arm's length, then gross income of the lender will be increased to reflect what it would be if a rate of 120 percent of the AFR had been charged. These rules apply only to loans and advances denominated in U.S. dollars.

d. Clarification of Interest Accrual

The pre-Act provisions of §483 as interpreted by the regulations, permitted income distortion by allocating unstated interest to payments of principal made under a contract for the sale of property on the basis of the proportion the payment bore to the total purchase price. The unstated interest so allocated was deductible by the obligor for the taxable year in which the payment was made. This is no longer true of the allocation of unstated interest. However, since the amendments to §483 do not go into effect until after December 31, 1984, Congress decided to put an end to this source of distortion by providing in Act §44(b)(3)(A) that after March 1, 1984 and before January 1, 1985, nothing in §483 shall permit any interest to be deductible before the period to which it is properly allocable.[196]

In addition, there has been considerable controversy concerning the proper method for the accrual of interest in transactions to which §483 may not apply. The IRS ruled in Rev. Rul. 83-84, 1983-1 C.B. 97 that the only proper method for accruing interest is the economic (constant interest) accrual. The ruling applied specifically to the use of the so-called Rule of 78s under which interest deductions are accelerated by reason of what constitutes a prepayment penalty built into the method of computing the rate at which the lender earns interest. Excepted were small ($5,000 or under) consumer loans. The ruling was generally viewed as an expression of the position that irrespective of the method used, no deduction for interest will be allowed for any year in excess of the amount of the economic accrual of interest. Statutory underpinning for this position is provided by §461(h) added by Act §91(a), providing, generally, that in determining whether an amount has been incurred with respect to any item during a taxable year, the all events test is not to be treated as met any earlier than when economic performance with respect to the item occurs. The conference committee report makes it clear that "in the case of interest, economic performance occurs with the passage of time (that is, as the borrower uses and the lender foregoes the use of, the lender's money) rather than as payments are made." [197] Section 44(b)(3)(A)(i)(II), relating to §461(h), provides that after June 8, 1984 and before January 1, 1985, notwithstanding §483 *or any other provision of law*, no interest shall be deductible before the period to which such interest is properly allocable. The conference committee states that no inference is intended as to the propriety of interest accruals prior to June 8, 1984, inconsistent with the provisions of Rev. Rul. 83-84.[198]

e. Fair Market Value Rule

Act §44(b)(3)(A)(ii) provides that in the case of any sale or exchange after March 1, 1984 and before January 1, 1985, §483 shall be treated as including provisions similar to the provisions of §1274(b)(3) which permits the Commissioner to determine an imputed principal amount of a debt instrument based on the fair market value of the property for which it was issued. There is no similar provision included in amended §483. Prior to the Act, §483 was the only Code provision relating to deferred payments for property, and the fair market value rule was deemed necessary to deal with potential tax abuse in such a transaction not subject to §1274 entered into before January 1, 1985.

None of these interest accrual rules apply in the case of contracts that were binding on March 1, 1984 and at all times after that date to the date of sale or exchange.

f. Obligation Providing for Equal Annual Payments

Finally, Congress, Rev. Rul. 83-84 notwithstanding, provided in §44(b)(3)(C) that none of these interest accrual rules (except the fair market value rule) is to apply to any debt instrument with substantially equal annual payments, *i.e.*, self amortizing installment payments of the type used in most mortgages and consumer loans to which the Rule of 78s is often applied.

Rev. Rul. 83-84 thus appears to be overruled to the extent that Congress expressly refused to extend to it the interest accrual principles described above in cases involving such self amortizing loans.

g. Miscellaneous

The reporting requirements relating to issuers of publicly issued OID instruments are to take effect on August 17, 1984.[199]

Section 44(j) provides that nothing in the amendment made by Act §44(a) (part V of subchapter P) is to effect the effective date provision (including any transition rules) for a provision which was a predecessor of any provision contained in such part V.

9. Observation and Implications

a. The "Fair Market Value" Rule

The provisions of §1274(b)(3), Fair Market Value Rule in Potentially Abusive Situations" will be applied in determining total unstated interest under §483 as in effect prior to the effective date of the §483 amendments, *i.e.*, sales after December 31, 1984. This rule appears to inject into the statute provisions totally unrelated to the time value of money and to the purposes of §1274. In effect, it converts payments of the sales price of property into interest payments irrespective of whether the debt instrument issued for the property bears interest at 110 percent of the AFR. The purpose of §1274 (and of §483) is to insure that the purported sales price does not contain disguised interest, and that such price reflects an adequate interest charge.

The fair market value rule allows the imputation of interest above 120 percent of the AFR. Its purpose is not to insure that the purchase price does not contain disguised interest, but rather that the purchaser of the property will not be entitled to excessive investment credit and ACRS deductions. If a full recourse note is issued by a solvent purchaser for a purchase price in excess of the fair market value of property, and bears adequate interest, the purchaser can gain no advantage since the present value of any investment credit and ACRS deductions cannot equal the overpayment.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

These provisions would make sense only where the debt instrument is nonrecourse or is issued by a purchaser with limited liability whose eventual payment of the purchase price is speculative. If the instrument is nonrecourse, the Commissioner already has the authority to disregard the purported indebtedness to the extent it exceeds the fair market value of the property under pre-Act law, as stated in the committee reports.[200] If this is so, then interest deductions, to the extent they are attributable to the disregarded indebtedness are disallowed as are investment credits and ACRS deductions.

Where the purchaser is a corporation whose ability to pay the full amount of the purchase price is speculative, it would appear that the transaction could be treated in the same manner as nonrecourse indebtedness where there is a substantial discrepancy between the value of the property and its purchase price. If the seller is a taxable entity, it is hardly likely that it will agree to pay tax on phantom gain. In any event, the Commissioner has ample authority to deal with sham transactions.

The commentary in the committee reports regarding these provisions is unclear at best. The fair market value rule would seem to be little more than an anti-tax shelter measure thrown into unrelated provisions. It will be interesting to see how the IRS exercises its authority under these provisions which have implications far beyond the scope of §1274 and the OID rules.

b. Exchanges of Stock Pursuant to Reorganizations

Where the parties to a corporate merger agree to an exchange of stock, typically where the shareholders of the merged corporation are to receive shares of the surviving corporation in exchange for their stock, the number of shares to be issued may be made to depend on certain contingencies which will result in the issuance of additional shares more than one year after the merger. Such transactions have been held to be subject to §483.[201] While this application of §483 has been criticized,[202] Congress did not see fit to change the law in this respect. Such exchanges will not, of course, be subject to §1274 since they do not involve the issue of debt instruments.

c. Bond Premium

Somewhat surprisingly, no provisions were enacted regarding the amortization of bond premium, even though this involves the time value of money as much as OID. Under pre-Act law, where a taxpayer purchased a debt instrument for an amount greater than its redemption price at maturity, he was entitled to deduct the premium paid under §171(a)(1) ratably over the period for which the instrument was held by him or under any "reasonable method."[203] The issuer must include premium in income ratably over the life of the debt instrument.[204] There was no requirement that premium be amortized on a constant interest basis. The only provision enacted in the 1984 TRA which might have a bearing on this is §461(h), the very broad language of which may be applicable to prohibit the deduction of bond premium on a ratable or straight line basis on the ground that the holder's expense is not deductible prior to the taxable year in which "economic performance" occurs. The committee report[205] interprets the language of §461 (applicable to debts incurred in transactions occurring after June 8, 1984)[206] to mean that interest incurred by an accrual method taxpayer will be deductible only on a constant interest basis. The same principle could be applied to the deduction of premium.

d. The Rule of 78s

The committee reports make it clear that no inference is to be drawn from the changes effected by §461(h) as to the validity of Rev. Rul. 83-84, 1983-1 C.B. 97.[207] This ruling held that the computation of interest, for purposes of deduction by the borrower/purchaser must be based on the economic accrual of interest. Excepted were certain small consumer loans with terms of five years or less. Specifically targeted by the ruling (although not confined to such transactions) were loans of money or purchase money loans providing for level payments, each of which reflects a payment of interest and a payment of principal. Sections 1274 and 483 will apply to such loans as well as to any other deferred payment transactions involving the sale or exchange of property. But, aside from whatever effect these sections may have on the imputation of interest, §461(h) adopts the position of Rev. Rul. 83-84 without restrictions as to the amount of the loan or sales price or term of the deferred payment agreement. This will affect virtually all consumer loans on which taxpayers have reported interest deductions based on the Rule of 78s computation, usually provided by the lender. This may be softened somewhat by regulations authorized by §461(h)(2)(D).

e. Effects on Section 482

Act §44(b)(2) provides that within 180 days after enactment, the Secretary is to issue regulations modifying the safe harbor interest rates so that such rates are consistent with the rates applicable under §483 as amended. What this means is not entirely clear. Where one commonly controlled entity makes a loan or advance to another such entity, including deferred payments for goods or services[208] and interest is not charged by the creditor entity at a rate equal to an arm's length rate *determined consistently with the rates provided* by §1274(d), the Commissioner is authorized to make adjustments to gross income to reflect an arm's length rate. The regulations provide a safe harbor. Where the rate charged (as of the latest amendments to the regulations effective as to loans or advances made after August, 1980) is at least 11 but not more than 13 percent per annum, simple interest, this will be deemed to be an arm's length charge, unless the taxpayer can establish that some other rate was arm's-length. Where no interest was charged or was less than 11 or more than 13 percent per annum, simple interest, the Commissioner is authorized to adjust gross income to reflect the 12 percent per annum, simple interest.[209]

To make this safe harbor rule consistent with the rates provided under §483, a lower bracket rate of 110 percent of the AFR compounded semiannually would seem appropriate, as would an imputation rate (where the charge was less than the lower bracket amount) of 120 percent of the AFR compounded semiannually. This leaves the upper bracket rate to be set. Perhaps this will be 130 percent of the AFR. These rates apply not only to loans of money, but to "[i]ndebtedness arising in the ordinary course of business out of sales, leases, or the rendition of services by or between members of the group.[210]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Where a U.S. corporation sells goods to a controlled foreign subsidiary on credit and fails to provide for interest at the safe harbor rate, the U.S. entity's income is increased to reflect the imputed rate (under pre-Act regulations, 12 percent). If this adjustment is made, it would then appear that §483 will not apply to make any additional adjustment, since the U.S. taxpayer is treated as if adequate interest had been charged. Likewise, if the rate charged by the foreign controlled entity were greater than the safe harbor rate, interest in excess of 12 percent (under pre-Act regulations) would not be allowable as a deduction. Applying a 110 percent - 130 percent of AFR bracket in lieu of the present 11 - 13 percent simple interest bracket, will expose many more transactions to §482 adjustments.

---

[1] §1232A(b) and §1272(b) retain this method termed "ratable inclusion," for debt instruments issued prior to July 2, 1982 (TEFRA effective date). The method is also often referred to as "linear" or "straight-line" accrual of interest.

[2] *See* General Explanation of P.L. 97-248 (TEFRA), Joint Committee on Taxation, December 31, 1982, at pp. 158-160. Table I on p. 160 illustrates the distortion occasioned by ratable inclusion. For a 30 year bond issued in 1982, interest is overstated through the year 2000. From that point to maturity, it is overstated in a like amount.

[3] Canellos and Klienbard, "The Miracle of Compound Interest: Interest Deferral and Discount After 1982," 38 Tax L. Rev. 565 (1983).

[4] *I.e.* since the issue price was equal to the stated redemption price at maturity. *See* definition of OID in §1232(b)(1), restated in §1273(a)(1).

[5] S. Rep. No. 98-169, 98th Cong., 2d Sess. (hereinafter S. Rep.) at 253, fn. 11. S. Rep. may be found in Worksheet 21.

[6] *See* Canellos and Klienbard, op. cit. at 597-598, and S. Rep. at p. 253.

[7] It also, unlike the OID rules, permitted the timing of interest deductions and inclusion of interest income to depend on the taxpayer's accounting period.

[8] The TEFRA rules applied only to instruments issued by persons other than natural persons, *i.e.*, governmental obligations and debt instruments issued by corporations (including S corporations), partnerships, estates, and trusts.

[9] When the acquired debt instrument is an OID instrument, acquisition discount arises when the price paid by the purchaser is less than the issue price of the debt instrument plus amortized OID (*i.e.*, OID includible in the income of any holder). When the price paid exceeds such issue price plus amortized OID, the excess is acquisition premium. The new holder continues to include OID in income as did the previous holder, reduced by an allocable portion of the premium paid. But, acquisition discount is not added to OID.

[10] §1232(a)(3).

[11] Regs. §1.1232-3(b)(1)(iii). Of course, accrual basis holders were required to include OID in income currently.

[12] §1275(a)(3).

[13] *See* Rev. Rul. 73-112, 1973-1 C.B. 47. Under this ruling, ratable accrual was based on total OID, multiplied by the number of days the bond was held, and divided by total number of days from date of issue to maturity.

[14] §467(h) added by TRA 1984 §92(a), discussed in the detailed analysis below, limits the deduction for interest, irrespective of the taxpayer's accounting method, to the amount properly allocable to the taxable year computed on an economic accrual basis. Thus, the purchaser of property is not entitled to any greater interest deduction than if he were the issuer of an OID instrument subject to the OID rules.

[15] This rule, which originated in the Revenue Act of 1934 and carried into §1232(a) of 1954 Code from §117(f) of the 1939 Code, was originally limited to registered or coupon bonds. These requirements were dropped as to bonds issued after December 31, 1954. The purpose of the rule was to overrule holding that the payment of a bond by a corporation was the fulfillment of a contractual obligation to repay money and not a sale or exchange. *Fairbanks v. U.S.*, 306 U.S. 436 (1939). *U.S. v. Midland Ross Corp.*, 381 U.S. 54 (1965), clarified the Service's authority to tax gain from the sale, exchange, or retirement of a bond issued at discount as ordinary income to the extent such gain represents "compensation for the use or forbearance of money." This definition of interest was set forth in *Deputy v. DuPont*, 308 U.S. 488, 498 (1940). Thus, a cash basis holder of a short-term nongovernment obligation issued at discount must apportion any gain realized at disposition between capital and interest elements. Accrual basis taxpayers, under former law, were required to include such discount in income as it accrued, adjusting the basis of the debt instrument accordingly. This is now required by §1281. Statutory rules also apply to short-term government obligations. §1271(a)(3), (carried over from §1232(a)(3)), and §1281(a). The apportionment to be made by a cash basis taxpayer may presumably be made either on the basis of ratable or economic accrual of the discount. *See* §1281, discussed below, permitting either method for those taxpayers required to include in income currently OID on nongovernment short-term obligations.

[16] §1275(a)(1)(A).

[17] §1275(a)(1)(B).

[18] *See* S. Rep. at 253.

[19] §1271(a)(2)(B).

[20] §1275(a)(3).

[21] This provision is explained in 1 below.

[22] §1271(b)(1).

[23] As to instruments issued prior to March 1, 1984, *see* §1272(a)(2)(D).

[24] §1271(b)(2).

[25] §1271(c).

[26] §1273(a)(1).

[27] §1273(a)(2).

[28] Under the regulations cited, which have not been amended to reflect the TEFRA changes, the total OID of an instrument made up of serial obligations is apportioned among each series. Where the total of payments during a year exceeds interest payable at an annual fixed rate, the excess is treated as the SRPM for the series. If the instrument skips a year's interest, making this up the following year, there is a two-year serial obligation. Applying the regulations to the $1,000 note described in the text above, the total OID of $70 is apportioned to the two series (1) the two year series maturing at $95 and (2) the 3 year series maturing at $1,000. To determine the OID allocable to each series, multiply total OID by:

$$\frac{\text{SRPM for the series x years (or months, days) to maturity}}{\text{the sum of the products of the above factors for each series}}$$

$$\text{First Series: } \$70 \times \frac{\$70 \times 2 \text{ (Years)}}{\$3{,}140}$$

$$\text{Second Series: } \$1{,}000 \times \frac{\$1{,}000 \times 3 \text{ (Years)}}{\$3{,}140}$$

Discount for first series = $3.12; for second series = $66.88; issue price for first series = $66.88, issue price for second series = $933.12. It can be seen that each of the series has an approximate yield of 7.3 percent, allocating $1.67 of each of the fixed $25 interest payments to the first series and $23.33 to the second.

[29] Of course, irregular payments could cause some components of the series to have greater yields than others. *See* S. Rep. at 255.

[30] *See* §1232(b)(2); compared with §1273(b).

[31] §1273(b)(1).

[32] §1273(b)(4) and (5). As will be explained below, an untraded debt instrument, issued for the use of property or for services, will not have OID within the meaning of §1273 or §1274. However, under §467, it may be subject to rules similar to the OID rules. *See* Chapter 22, *infra*.

[33] *See* S. Rep. at 253: " 'Property' for [the purpose of applying §1274] includes all tangible and intangible assets of any sort except money (U.S. currency and checks)." This could raise some interesting problems. A controlled Belgian subsidiary issues a debenture denominated in Euromarks or in Belgian francs. Is the applicable federal rate (based on marketed obligations of the U.S.) appropriate in determining whether the instrument has OID? §964 requires that U.S. tax laws be applied in determining the foreign entity's earnings and profits. This will probably be dealt with in regulations.

[34] *Cf.* Regs. §1.482-2(a)(2)(iii)(D).

[35] §1273(b)(2).

[36] The property traded will determine the issue price. If both sides are traded, market forces will usually make the prices coincide.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

[37] §1273(b)(4). Section 1274, as a general rule, will apply to a debt instrument issued for untraded property where total payments under the instrument exceed $250,000, but §1274 nowhere defines "property." Presumably, absent a definition like that provided by §1273(b)(5), *supra*, "property" does not include the use of property or services. "Property" as used in §483 does not, by inference, include the use of property or services, otherwise it would conflict with §467.

[38] That is, if the total payments do not exceed $250,000, as a general rule. See discussion of §§1274 and 483 in this Chapter, *infra*.

[39] The method set forth in Regs. §1.1232-3(b)(2)(ii) to apportion the issue price of an investment unit between the debt instrument and the other property is somewhat unsatisfactory. Where the other property consists of stock warrants, having no "readily ascertainable value" (as is generally the case with untraded stock options), the interest rate which the debt instrument would have to bear to be marketed at face value or par must be determined. The sum of the present values of all payments due under the instrument is determined using this hypothetical rate. The value of the instrument so determined is subtracted from the unit's issue price to determine the amount allocable to the warrants. This amount is the OID. The hypothetical market interest rate varies from expert to expert; a variance of .25 percent can translate into hundreds of thousands of dollars of OID.

Query: Could these difficulties be skirted by adopting rules similar to those of §1274, *i.e.*, valuation of the debt instrument by applying 120 percent of the applicable federal rate? The problem is that, to be marketable, many issues would have to provide for interest greater than this rate. If an instrument bearing interest at 120 percent of the AFR is sold with warrants to induce the lender to purchase it, it would seem that some OID must be involved. Note that a convertible bond sold at par is not considered to have been issued at a discount solely because of the conversion privilege. Regs. §1.1232-3(b)(2)(i). The issue price includes any amount paid in respect of the conversion privilege.

[40] While "property" is not defined, it excludes traded property to which §1273(b)(3) applies.

[41] §1274(a)(1). The "stated principal amount" is usually the sales price set by the parties. If no price is set, and the instrument simply provides for a stream of payments to be made in the future, the principal amount will be the "imputed principal amount" based on 120 percent of the applicable federal rate.

[42] §1274(c)(2).

[43] §1274(c)(3).

[44] §1274(a)(1).

[45] §1274(b)(1) and (2).

[46] §1274(a)(2). Where the instrument provides for varying interest rates, such as a rate to be adjusted annually, but not more often than semiannually, to reflect some objective index, such as the prime rate, the testing amount will be satisfied so long as, under the rate formula, it cannot fall below 110 percent of the AFR, and is payable unconditionally at least annually. *See* H.R. Rep. No. 98-861, 98th Cong., 2d Sess. (hereinafter referred to as the Conference Report or C. Rep.) at p. 889. Acceptable indices will probably be furnished by regulations.

[47] §1274(d)(1)(B).

[48] §1274(d)(1)(A).

[49] §1274(d)(1)(C). According to the Joint Committee on Taxation, preliminary estimates indicate that the short-, mid- and long-term safe harbor rates (*i.e.*, equal to 110 percent of the AFR) for the period July 1 through December 31, would be approximately 11.25 percent, 12.65 percent and 13.25 percent, respectively, if the new provision were currently in effect. *See* J. C. Staff description of the 1984 TRA provisions affecting deferred payment sales of property (for purposes of a hearing held on August 3, 1984) *reprinted* in BNA Daily Tax Report No. 151 (August 6, 1984) at J-1, J-3 footnote 10.

[50] §1274(d)(2).

[51] §1274(d)(3).

[52] In S. Rep. at 254, it is stated that the committee expects that federal obligations with characteristics that result in yields substantially below or above a market rate of interest (*e.g.*, "flower bonds") will be disregarded. Further, once a binding contract in writing fixes the AFR appropriate to the instrument, this cannot be changed by renegotiating the contract.

[53] S. Rep. at 256. Also, it is pointed out by the committee that the "total contract price" for purposes of applying §453 (relating to installment obligations) will include debt of the purchaser only to the extent of the principal amount of the debt instrument as determined under the rules of §1274 (where §1274 is applicable). Presumably, where §483 applies, there is the same result.

[54] S. Rep. at 256.

[55] S. Rep. at 255.

[56] §1274(c)(1)(B).

[57] C. Rep. at 888.

[58] §1274(c)(2)(A)(i). Note that there appears to be a clerical error in numbering the paragraphs under §1274(c). Paragraph (1) provides the general rule regarding debt instruments to which §1274 applies; paragraph (2) defines "adequate stated interest"; paragraph (3) defines the "testing amount." Next is another paragraph (2) listing exceptions. This latter paragraph is the one referred to in this footnote. It obviously should be numbered (4). Hereinafter, this paragraph is referred to as "§1274(c)(2)."

[59] §1274(c)(2)(A)(i)(III).

[60] *Id.*

[61] §1274(c)(2)(B).

[62] §1274(c)(2)(C). All debt instruments issued for property are to be aggregated together with any consideration other than debt instruments.

[63] §1274(c)(2)(C)(i) and (ii).

[64] All sales or exchanges which are part of the same transaction (or a series of related transactions) are to be treated as one sale or exchange. §1274(c)(2)(C)(iii).

[65] §1274(c)(2)(O). As to such instruments, OID is determined under §1273. Note the special rule provided by §1275(a)(4), discussed below, relating to debt for debt exchanges pursuant to reorganizations.

[66] §1275(b)(1). As an example of personal use property, the committee report posits a house, one room of which is used for business purposes. This rule applies both to §1274 and §483.

[67] §1275(b)(2). There is no requirement of current inclusion in income for OID with respect to a loan between natural persons not exceeding $10,000. §1272(a)(2)(E) discussed below.

[68] *See* Canellos and Klienbard, op. cit (fn. 3) at 600-602.

[69] §1272(a)(2)(D).

[70] Act §44(d).

[71] §1272(a)(3).

[72] §1272(a)(5).

[73] Act §44(i)(1).

[74] *Id.*

[75] Act §44(i)(2).

[76] §1272(a)(2)(A) through (C).

[77] Under 1232 and 1232A, there was no provision specifically excepting short-term obligations. However, Regs. 1.1232-3(b)(1)(iii) effectively exempted short-term instruments held by cash basis taxpayers since there was excluded from the redemption price, payable at maturity, any interest payable at maturity. Accrual basis taxpayers have always been required to accrue OID, but under the new provisions of §§1281-1283, they may now elect to accrue OID on nongovernmental short-term obligations on either a ratable or constant interest basis. Certain cash basis taxpayers must also currently include OID on such obligations under these same provisions.

[78] §1272(a)(2)(E)(i) and (ii).

[79] §1272(a)(2)(E)(iii).

[80] §1273(a)(3).

[81] §163(e)(2)(B) as amended by Act §42(A)(3). This is a change from prior law.

[82] This term is used in the definition of "accrual period" in §1272(a)(5). Section 1275(c)(1) (relating to information reporting) refers to "the issue date." This probably has the same meaning.

[83] §1275(a)(2)(A).

[84] §1275(a)(2)(B).

[85] §1274(d)(2).

[86] §1272(a)(1).

[87] The former rule is now contained in Act §44(i)(1) as explained above.

[88] §1272(a)(3)(A), substituting bond period for accrual period.

[89] Act §44(i)(1).

[90] §1272(a)(1).

[91] §1272(a)(5).

[92] §1272(a).

[93] Act §44(i)(1).

[94] §1272(a)(6). Note that under this formula, the value of the fraction can never be greater than 1. A value of 1 would result only if the purchaser paid an amount equal to the redemption price at maturity. Under the former method of 1232A(a)(6), the value of the reduction fraction could exceed 1 resulting in negative reduction, clearly an undesirable result.

[95] As stated above, and also as noted by the Conference Committee, C. Rep. at 804, the revised formula of 1272(a)(6) "is intended to prevent situations in which the amortization of the acquisition premium exceeds accrual of OID and to provide better matching between the two."

[96] §1272(c).

[97] §1272(d)(1).

[98] It should be emphasized that an instrument's adjusted issue price is not necessarily the same as its adjusted basis in the hands of the holder as adjusted for amounts includible in income under §1272.

Chapter 22

TIME VALUE OF MONEY (II): DEFERRED PAYMENTS FOR THE USE OF PROPERTY AND SERVICES: BELOW-MARKET INTEREST LOANS

Note: See October 1984 legislative change at p. B-414, infra.

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Deferred Payments for the Use of Property and Services

A. Background

Section 92 of the 1984 TRA enacts Code §467. Section 467 prescribes rules for certain situations involving deferred payments (and prepayments) for the use of property and services which reflect charges for the use or forbearance of money but which, the IRS generally treats as involving only items of rent or compensation. Congress' principal targets were leases covering terms of more than one year and involving total payments of more than $250,000 under the terms of which: (1) rent allocable to one calendar year is not payable until after the close of the succeeding calendar year; or (2) rent charged for one year or period of use differs from rent charged for some other year or period.[1] This is a difficult legislative task because, while most deferred payments for a present benefit can be viewed as including a charge for the use or forbearance of money, this is not always true with rent payments. A lease may provide for gradually increasing rents for numerous reasons having nothing to do with the usual considerations underlying interest charges. Payment for the use of property in one year at some time after the close of that year should, generally, include some interest element. The mere fact that the rent charged for the first year of a lease is less than that charged for the second or some later year, however, does not necessarily mean that some portion of the first year's rent was deferred. Where an accrual basis lessee enters into a stepped rent agreement [2] with a cash basis lessor, the lessee deducting rent on a level payment basis and the lessor reporting the rent as income only in the year received, however, there is basis for suspecting tax abuse. This is especially so where no discernible reason exists for the arrangement other than to gain tax advantages. At the very least, where any portion of rent is deferred, both parties should be placed on the accrual basis with respect to the rent so that a mismatching of income and deductions does not occur. Where a lease is deliberately structured to minimize taxes by disguising what is, in reality, interest as a charge for the use of property, some adjustments are called for. There are also sound policy reasons to restrict stepped rental arrangements bearing the earmarks of tax avoidance to provide level payments. Section 467, added by TRA §92, provides rules applying time value of money concepts to deferred payments for the use of property. While some of these problems may arise in arrangements involving deferred payments for services, the Code already contains a number of special rules in that area.[3] Regulations to be issued under §467 will apply rules, similar to those applicable to payments for the use of property, to payments for services, only where the latter are not covered by some other specific Code provisions.[4]

B. Overview

1. Transactions to Which the Statute Applies

Section 467 applies only to those payments for the use of property which are made under a "§467 rental agreement." A "§467 rental agreement" is defined as any rental agreement for the use of tangible property under which,

> (i) There is at least one amount allocable to the use of property during a calendar year which is to be paid after the close of the calendar year following the calendar year in which such use occurs; or
>
> (ii) There are increases in the amount to be paid as rent under the agreement.[5]

If a rental agreement does not fit either of these definitions, §467 does not apply.

The legislation contemplates that a rental agreement will either provide for even rent payable for, and allocable to, each period of use covered by a lease or it will not. If it does not, it is a §467 rental agreement.[6]

Irrespective of whether an agreement is a §467 rental agreement, §467 will not apply to any amount paid for the use of property if the sum of the following amounts does not exceed $250,000:

> (i) the aggregate amount of payments received as consideration for the use of the property; and
>
> (ii) the value of other consideration for such use.[7]

2. Rent "Taken into Account," and Interest

The general rule of §467(a) is that the lessor or lessee under any §467 rental agreement shall *take into account* (*i.e.* include in income or treat as an expense incurred, irrespective of the taxpayer's accounting method), for any taxable year, the sum of:

> (i) the rent *accrued* under §467(b);[8] and
>
> (ii) interest for the year on amounts taken into account in a prior year which are unpaid.[9]

The significance of this language is best understood after considering §467(b). Under §467(b), where the parties to a §467 rental agreement allocate the rents to be paid to the periods covered by the agreement, this allocation will

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

be given effect in accruing rental income and expenses for the taxable year. Where rent *allocated to one period*, however, is not payable until *after the close of such period*, such rent is to be taken into account "in an amount determined under regulations which shall be based on present value concepts." [10] Section 467(e)(4) provides that, for purposes of computing present value and interest under §467(a)(2), the rate used is to be 110 percent of the "applicable federal rate" (AFR) as defined by §1274(d).

The operation of these provisions is illustrated by the following example:

Example: A rental agreement entered into on January 1 having a term of three calendar years provides for rent payable at the close of each year in the respective amounts of $50,000, $75,000, and $100,000. This is clearly a §467 rental agreement. The parties to the agreement allocate $75,000 of the total rent paid to each of the three years. This means, in effect, that $25,000 of the rent allocable to Year 1 is not payable until the close of Year 3.

The $25,000 allocated to Year 1 and payable at the close of Year 3 is taken into account for any taxable year in which this one year lease period, or any portion of it, falls to the extent of its present value. Assuming that 110 percent of the AFR is 12 percent, the $25,000 allocable to Year 1 is taken into account to the extent of $19,802.[11] Rent taken into account for Year 1 is, therefore, $69,802 ($50,000 + $19,802). No adjustments are made to Year 2 rent. Interest on the rent taken into account for Year 1, but which remains unpaid, *i.e.*, $19,802, is taken into account by the lessor and lessee for Year 2. Such interest is $2,448. In the third year, the rent taken into account is $75,000. In addition, $2,750 in interest on the deferred rent for Year 1 must also be taken into account.[12]

The following amounts must be reported by the lessor and the lessee in their respective returns for each of the three years covered by the lease:

Year 1:	Rent	$69,802
Year 2:	Rent	$75,000
	Interest	$ 2,448
Year 3:	Rent	$75,000
	Interest	$ 2,750

3. Rent Leveling: Leasebacks and Long-Term Agreements

The rules discussed above apply, generally, to all §467 rental agreements as to which the parties have allocated the rents payable to the periods covered. Where they have not made such an allocation, or where the agreement is a "disqualified leaseback or long-term agreement," another rule applies. Under this rule, there is accrued (and taken into account under the general rule of §467(a)) for each taxable year that portion of the "constant rental amount" allocable to each period.[13] The constant rental amount is determined by "leveling" the rents. To do this, one determines the amount of rent which, if paid in equal amounts at the close of each period, would have an aggregate present value equal to the aggregate present values of the rents called for in the agreement.[14] This constant rental amount is the amount accruable as rental for each period.[15] In addition, interest on unpaid rentals taken into account must also be accrued.[16]

Rent leveling, as stated above, applies to §467 rental agreements where the parties have failed to allocate the rents to the period covered.[17] It also applies to "disqualified leaseback transactions and long-term agreements." [18] A leaseback transaction is a §467 rental agreement which involves a leaseback to any person who had an interest in the property (other than a de minimis ownership interest) [19] at any time within two years before the leaseback to that person (or to a related person).[20] "Related person," for this purpose, has the meaning supplied by §467(d)(4)(D).[21] A long-term agreement is a §467 rental agreement for a term in excess of 75 percent of the property's statutory (ACRS) [22] recovery period.[23] If the property is not recovery property, it is treated as such for purposes of determining whether the lease is long-term.[24] Options to extend the lease exercisable solely by the lessee are not taken into account in determining the lease term.[25] If the agreement is a leaseback transaction or a long-term agreement, it is disqualified only if the Commissioner determines that a principal purpose for providing increasing rents is tax avoidance.[26] For this purpose, the statute mandates the promulgation of regulations providing specific exceptions to disqualification, *i.e.*, circumstances under which an agreement will not be treated as having a principal tax avoidance purpose.[27] Among such safe harbor circumstances will be included:

(i) changes in amounts paid that are determined by reference to price indices;

(ii) rents based on a fixed percentage of lessor receipts or similar amounts; or

(iii) changes in amounts paid to unrelated parties.[28]

4. Recapture

In a §467 rental agreement, where the rents have not been leveled, and the agreement calls for stepped up rents for the later periods of the lease, the property, if sold subject to the unexpired lease, may have a value enhanced by the unpaid rents. That is, if the property is disposed of, a portion of its value will be attributable to future unrealized rental income. To prevent the conversion of such income to capital gain, the statute provides recapture rules, similar to those of §1245.[29]

If property subject to a §467 rental agreement is disposed of, and subject to a leaseback or long-term agreement (as defined above) which was determined not to be disqualified, the "recapture amount" is treated as ordinary income.[30]

The "recapture amount" is the *lesser* of: (1) "prior understated inclusions;" or (2) the excess of the amount realized over the lessor's adjusted basis in the property.[31] If the disposition was other than a sale, exchange, or involuntary conversion, the fair market value of the property is substituted for the amount realized, following the §1245 pattern.[32]

A "prior understated inclusion" is the excess (if any) of the amount which would have been taken into account had

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the rent been leveled over the amount actually taken into account under the general rule of §467(a).[33]

Regulations are to apply exceptions similar to those applicable to §1245 or §1250 (whichever is appropriate, depending on whether the property is §1245 or §1250 property) for recapture purposes.[34]

5. Other Provisions

"Comparable rules" are to apply to §467 rental agreements providing for decreasing rents.[35] Also, as will be provided in regulations, rules comparable to those of §467(a)(2) (relating to the imputation of interest with respect to unpaid amounts taken into account) are to apply to payments for services which meet the requirements of §467(d). (Section 467(d) defines a §467 rental agreement and restricts the application of §467 to contracts calling for total payments in excess of $250,000).[36]

C. Detailed Analysis

1. General

a. Legislative History

In interpreting the statute, it is helpful to consider its development. In the House bill,[37] the OID rules were extended to the interest element of rental (or service) transactions involving deferred payments. The OID rules applied where payment for the use of property in one calendar year was deferred until after the close of the succeeding calendar year. Thus, the lessee was considered, in such a case, to have issued a debt instrument having OID on the last day of the first calendar year. The amount of the OID was determined by computing the present value of the deferred payment using an interest rate of 120 percent of the AFR. If a three-year lease beginning January 1, 1985 provided for one $300,000 payment at the close of the third year (and the parties allocated $100,000 to each year of use) the lessee was considered to have issued, on December 31, 1985, a debt instrument with a stated redemption price at maturity on December 31, 1987 of $100,000 for an issue price (assuming an AFR of 10 percent) of $79,209. (This figure represents the present value of $100,000 payable in two years discounted at 12 percent compounded semiannually).[38] Similarly, the lessee was considered to have issued a debt instrument on December 31, 1986 maturing on December 31, 1987 with a stated redemption price of $100,000 and an issue price of $89,000.[39] The OID would be currently included income by the lessor and deducted by the lessee under the TRA's OID rules.

Note: The OID rules were applied to the deferred rent for 1986 even though the rent for that year was payable at the end of the succeeding calendar year. The House bill contained no rent leveling provisions.

The Senate bill took a somewhat different approach. Under the Senate version of §467,[40] the statute applied to any "deferred rental payment agreement." For this purpose, a deferred rental payment was defined as any agreement under which: (i) there is at least one amount allocable to the use of property during a calendar year which is to be paid after the close of the succeeding calendar year; or (ii) there is at least one amount allocable to the use of property for any lease period which is not "commercially reasonable." [41]

Note: "Commercially reasonable" was vaguely defined as being dependent on the facts and circumstances. Strict rules limiting the permissible scope of commercial reasonableness were to apply to leasebacks. These rules did not apply where an exchange-traded debt instrument was issued for the use of the property (or services). Stepped rents under a leaseback were allowed to the extent of the applicable federal short-term rate. Rents under any of the above deferred rental agreements were leveled. Interest thereon was imputed at 120 percent of the AFR with respect to the lease period. The interest was imposed on the excess of the constant rental amount over the payments made under the agreement for the period and on any unpaid interest attributable to any previous lease period.[42]

The conferees objected to two features of the Senate version.[43] First, the "commercially reasonable" standard was considered too vague for practical application. Second, the allowance of stepped rentals based on the AFR was considered unjustified. The statute as redrafted by the Conference Committee incorporates features of both the House and Senate versions, but is also quite different in many respects.

b. The $250,000 Limitation

Section 467 has a relatively narrow scope. It applies only to rental agreements under which total rents exceed $250,000, taking into account all forms of consideration paid for the use of the property leased but excluding any amounts paid as consideration other than for the use of the property.[44]

Query: Will expenses incurred by the lessee under an agreement to make improvements to the property or, as is common, to maintain the property in the condition it was in when leased, be deemed consideration "received by the lessor for the use of the property?" Probably not. The statute, in setting the $250,000 limit, refers to the "aggregate amount of payments *received* as consideration for the use of the property, and the aggregate *value* of other consideration to be *received* for such use. This, arguably, includes payments of property taxes and insurance by the lessee. The $250,000 probably includes only amounts payable under the agreement which will be required to be reported by the lessor as income.

2. Qualification as a Section 467 Rental Agreement: Tax Consequences

To qualify as a §467 rental agreement, the agreement must provide either:

(1) That an amount of rent allocable to use of the property in one calendar year is not payable until after the close of the year following such calendar year; or

(2) For "increase in the amount to be paid as rent."

a. When is Deferred Rent Subject to Present Value Accrual?

If an agreement for a three-year rental period provides for payment of $200,000 at the close of the second year and $100,000 at the close of the third, and if the lease further provides that $100,000 of the $200,000 payment is allocable to the first year of use, the agreement does not qualify. If the rent for the last year were $150,000, however, the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

agreement would be a §467 rental agreement. Assuming the agreement is not a disqualified leaseback or long-term agreement, and, therefore, not subject to rent leveling, it is not entirely clear how the rents should be reported. The $100,000 in rent payable for the first year of use is clearly "rent to be paid after the close of the period," and, therefore, under §467(b)(1), it is to be accrued by taking into account such rent "in an amount determined under regulations which shall be based on present value concepts." Is this what Congress intended? The legislative history implies that this treatment of deferred rental is not to apply unless the deferral qualifies under one of the two conditions for qualification as a §467 agreement, *i.e.*, rent allocable to one calendar year is not paid until after the close of the succeeding calendar year. If the deferral, taken alone, would not qualify the agreement as a §467 agreement, should it nevertheless be subject to the §467 rules? The statute seems clearly to provide an affirmative answer.

Assume there is accrued for the one year in the future $89,000 (based on a discount rate of 12 percent compounded semiannually, assuming this is 110 percent of the AFR). Must interest be accrued under §467(a)(2)? The statute provides there must be taken into account for any taxable year "interest for the year on the amounts which were taken into account under this subsection (which incorporates subsection (b)) for prior taxable years and which remains unpaid." As of the close of the second year, however, the rent has been paid. If the lease runs from January 1 to December 31, and the lessor is a calendar year taxpayer, no rent remains unpaid at the end of the second year. On the other hand, if the lease term began on July 1, at the end of the lessor's calendar year in which the second year of the lease begins, there would remain unpaid the amount taken into account for the first year of the lease.

Under the House bill, where rent was deferred, the lessee was to be treated as if he had issued a debt instrument with OID. In the committee report's example, in a three-year lease providing for payment of $300,000 at the close of the last year, which provides that $100,000 was allocable to each year of the lease, the lessee is treated as if he had issued to the lessor a debt instrument at the close of the first year. That instrument would have an issue price equal to the present value of $100,000 due in two years (discounted at 120 percent of the AFR) with a stated redemption price at maturity of $100,000. The lessee would also be treated as if he had issued a debt instrument at the close of the second year with an issue price equal to the present value of $100,000 payable in one year and a stated redemption price at maturity of $100,000. The OID rules were to apply to require inclusion of the OID in the lessor's income and to allow the lessee to deduct this amount. This statutory scheme survived, to some extent, in the provisions adopted by the Conference Committee, but without any references to the OID rules or debt instruments. The requirement of rent leveling in situations involving stepped rents not justified by non-tax related factors was added to the House provisions by Senate amendments. The coupling of these two independent approaches to deferred payments for the use of property makes for a somewhat confusing statutory pattern.

In the case of the three-year lease with a single $300,000 lump-sum payment at the close of the third year, if the parties to the lease specify that it provides a rent holiday for the first two years and the $300,000 is allocated to the third year, and if the lease is neither a leaseback nor a long-term agreement, it would appear that neither party is required to take any portion of the rent into account for the first two years. It is unlikely, however, that persons dealing at arm's length would agree to such terms.

b. The Wide Net of Section 467

Section 467 can be seen as embodying the following two concepts: (1) where rent allocable to one period is not payable until more than a year after the close of the period, some portion of the deferred payment should be attributed to interest; and (2) where a rental agreement calls for uneven rents (increasing or decreasing - "stepped" or "frontloaded") *and*, in addition to being the kind of transaction commonly used to avoid taxes (a leaseback or long-term agreement), there do not appear to be any commercially reasonable grounds for the uneven payments, the rents should be leveled. A third principle is that, in any of these cases, the lessor's inclusion of rent in income, and the lessee's deduction therefor, should be governed by accrual principles, regardless of the parties' respective methods of accounting for other items of income and expense.[45] Thus, the lessor and lessee in any §467 agreement are placed on the accrual basis with respect to any rentals allocable to their taxable years.

Finally, where a stepped rental agreement is not subject to leveling, the appreciation of the property attributable to future rents receivable in excess of the property's fair rental value are too subject to recapture rules similar to those applicable to §1245 or §1250 property to prevent ordinary income from being converted into capital gain.

c. Analyzing a Lease for Section 467 Purposes

In determining whether an agreement is a §467 rental agreement, the agreement's terms should be analyzed in light of the statute's language and purposes.

Every lease must have a lease period or periods. Lease periods are normally uniform (days, months, years, etc.). Some leases, however, may have irregular periods. Also, every lease will specify the amounts to be paid as rent and the time such payments are due. The rent payments usually coincide with the lease periods. Where regular, even payments are to be made at the beginning or end of each lease period of the same duration, it may be inferred that such payments are allocable to the lease periods. Where such payments increase over the life of the lease, while this may be inferrable, it is not necessarily the case. Where the payments to be made for lease periods are not regular and in even amounts, and where the agreement does not specifically allocate the payments to the lease periods covered, the Commissioner, under §467(b)(3)(B), is to compute the constant rental amount for each period. The parties must accrue and take into account such constant rental amounts for tax purposes.

Assuming the rent payments have been allocated in the agreement, it is then necessary to ascertain whether any portion of any payment allocated to a lease period falling in one calendar year is not payable until after the close of the following calendar year. Any such deferred rental payment is subject to §467(a)(1) and (2).

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Next, whether or not there is such deferral of rent, it must be ascertained whether the rent allocable to any lease period is greater than the rent allocable to any other lease period of the same duration.

Example: A lease calls for a rent payment allocable to January, 1985 to be made at the close of December, 1986. The rent deferral is not sufficient to require classification of the agreement as a §467 agreement.

Assume that a lease calls for equal payments to be made at the beginning of each month over a two-year period, but the lessee is given a "rent holiday" for the first month, *i.e.*, no payment at the beginning of January, 1985, but equal payments at the beginning of each month through December, 1986. While there is not sufficient deferral here to classify the agreement as a §467 agreement, it is so classifiable because there is an increase in the amount to be paid as rent. If, in such a case, the parties fail to allocate the rent payments to the monthly lease periods involved, the rent is automatically subject to leveling without regard to whether there was a tax avoidance purpose in granting the one-month holiday.

If a lease calls for increasing rent payments to be made over the lease's life, but these payments are allocated to the lease periods in equal amounts (*e.g.*, payments of $10x, $15x, $20x, $25x and $30x are allocated $20x each to each of the five lease periods) there is no increase in the amount to be paid as rent, but there may be rent deferral sufficient to classify the agreement as a §467 agreement. This will depend on the length of the periods and their timing with respect to the calendar years involved. If the payments to be made of the $ 10x and $ 5x deferred rentals for the first two periods (the last two payments) are not to be made after the close of the calendar year following the calendar year in which either of the first two lease periods fall, the agreement is not a §467 rental agreement.

The statute poses a number of interpretative problems. Consider a lease entered into January 1 for a term of three years providing rents payable at the end of each year in the respective amounts of $10x, $20x and $30x. The parties allocate $20x to each year. There would not appear to be "increases in the amount to be paid as rent" here. There is, however, definitely a deferral of rent for the first year. When is the $10x of deferred rent considered as paid? May $10x of the $20x payable at the close of the second year be taken as payment of the deferred amount, with a second deferral of $10x from the second to the third year? Assume the agreement provided for $60x to be paid at the end of the third year with no payments for the first and second years and with the same $20x per year allocation. Does this involve increases in the amount to be paid as rent? There is, in effect, one lease period of three years with a single payment. As to the first year, there is definitely one amount allocable to the use of property during a calendar year which is to be paid after the close of the succeeding calendar year, and the statute provides for the present value of the deferred amount to be taken into account for such first year.

d. Acounting for Deferred Rentals and Leveled Rentals

There are three time periods involved in applying the statute: (1) the calendar year; (2) the taxable year of the lessor or lessee; and (3) the lease period to which rent is allocable. A lease will provide either for periodic payments, in even or uneven amounts, or for a single payment covering the entire lease term. The parties to the lease are free to determine the lease periods and to allocate to each period some portion of the payment or payments to be made. What Congress seems to have intended was that, regardless of the length of the lease periods and of the allocation made of rents to such periods, the interest element must be taken into consideration in any case where payment for the use of the property during any portion of a calendar year is deferred beyond the close of the following calendar year.[46] Thus, rent allocable to January, 1985 may be deferred until December 31, 1986 without taking interest into consideration.

The second principle Congress adopted was that, regardless of whether the parties specifically acknowledge rent deferral, the IRS may impute deferral where the parties' allocate rent to one period in an amount that is greater than that allocable to another and there exists no non-tax purpose for the difference. This imputed deferral will have the same consequences as acknowledged deferral.[47] In the $10x, $20x and $30x example, if the parties allocate the amount payable at the close of each one-year lease period to that period, there is no deferral. In certain circumstances, however, the Commissioner may determine that $10x of the first year's rent has been deferred until the close of the third year.[48] In that case, the parties must take into account for the first year $10x in rent currently payable plus the present value of the deferred $10x. They must also take into account interest on the deferred $10x until it is paid on a compound basis.

To recap the above discussion, to determine whether an agreement is a §467 rental agreement because of rent deferral, the following steps are necessary.

First, determine whether the agreement provides for an allocation of rents. The amounts payable as rent must be allocated to some definite lease period or periods.

Comment: This is probably unnecessary where the lease calls for regular periodic payments at intervals of no less than one year in even amounts, but even here, the agreement should provide allocations to insure there is no question of deferral.

Second, if there is deferral, but there are no differences in the amounts allocated to each lease period, ascertain whether any deferral is for more than one year. The rent allocation schedule should be compared with the payment schedule to determine this. If the rent allocable to any lease period falling within a calendar year is payable later than the close of the following calendar year, the agreement is a §467 agreement because of rent deferral.

If the agreement is not a §467 agreement because of rent deferral, it must then be analyzed to ascertain whether the amount allocable to any lease period is greater or less than the amount allocable to any other period of the same duration. This appears to be the meaning of "increase in

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the amount to be paid as rent under the agreement." If there are such variances, the agreement must then be further analyzed to determine whether accrual by the parties of a constant rental amount will be required.

3. Operation of §467(a) and (b): Examples and Commentary

There are a number of interpretative problems relating to rent deferrals.

Assume that, in a five-year lease, commencing January 1 with yearly lease periods, rent payable for the first year is deferred until after the close of the second. Assume, also, that rent for the second year is not payable until the close of the third. The first deferral qualifies the agreement as a §467 agreement. The second deferral, alone, does not. The question then arises, as to whether §467(a) and (b) apply to the second deferral. Similarly, assume that, in a second five-year lease, rent for the first year is deferred until the close of the second, but this is the only rent deferral provided. The lease, however, provides for increasing rents and this feature qualifies it as a §467 agreement. Do §467(a) and (b) then apply to the rent deferral?

The statute seems to be clear that, while rent deferral for a period falling in one calendar year to a date no later than the close of the following calendar year will not, standing alone, qualify the lease as a §467 agreement, once the agreement so qualifies due to other provisions, §467 applies to the deferred rent.

Assume a lease for a term of calendar years commencing January 1, 1985. Rent allocated to January 1985 is not payable until December 31, 1986. This deferral does not, alone, trigger §467. Assume §467 does apply, however, because the rent allocated to the final year is greater than that allocated to the next-to-last year. Section 467(b)(1)(B) provides that there must be taken into account "any rent to be paid after the close of the period in an amount determined under regulations which shall be based on present value concepts." The meaning of "period" is somewhat ambiguous. Does it mean "taxable year," lease period, or the calendar year period? In the above case, if the lessor is a calendar year taxpayer, the rent for the first year is payable after the close of all three periods. Based on the legislative history, it would appear that this deferred rent is subject to §467(a) and (b) and must, therefore, be taken into account for taxable 1985 in an amount equal to its present value (unless regulations otherwise provide).

Next, there is the question of whether interest on the amount deferred is includible in the lessor's income for 1986. Section 467(a)(2) provides that there is to be taken into account (for 1986 in the example) interest for the year "on the amounts which were taken into account under this subsection for prior taxable years and *which are unpaid.*" (emphasis added). Here, the rent is paid as of the close of 1986. How is §467(a)(2) to be interpreted here? Again, based on the legislative history, by analogy to the OID rules, interest on the deferred rent taken into account in a prior year is taken into account for the period prior to its payment. In the above case, this is 11 months and 30 days.

The following example illustrates some of the above principles.

Example: A lease for a three-year term commencing July 1, 1985 provides for a payment of $200,000 on June 30, 1987 and another of $100,000 on June 30, 1988. The parties allocate $100,000 to each one-year lease period. This is a §467 agreement since an amount allocable to the use of the property during calendar 1985 is not payable until after the close of the following calendar year. If the payment schedule provided for a $200,000 payment on December 31, 1986 and another payment of $100,000 on December 31, 1987, it would not be a §467 agreement.

Assume that the above lease commenced on July 1, 1985, and that lessor was a calendar year basis taxpayer for the taxable year ending December 31, 1985. Here, the lessor would have to take into income (regardless of his accounting method) the amount of rent accruing under §467(b). Section 467(b) provides that the amount of rent which accrues during any taxable year is determined by allocating rents in accordance with the agreement. The agreement allocated $100,000 to the period ending June 30, 1986. Thus, $50,000 of this amount would appear to be accruable for the lessor's 1985 taxable year. Section 467(b) also provides, however, that there must be taken into acount any rent to be paid "after the close of the period in an amount determined under regulations which shall be based on present value concepts." There are three "periods" involved here: (1) the lessor's taxable year, (2) the calendar year in which the use of property occurred, and (3) the one-year lease period. The rent allocable to the period July 1 — December 31, 1985 is to be paid after the close of all three periods. The statute would appear to require that the lessor take into account for his taxable year ending December 31, 1985 the present value of $50,000 payable on June 30, 1987 discounted at 110 percent of the AFR. Assuming this is 12 percent, the rent includible would be $41,980. Similar problems are encountered in determining the rent to be included in the return for calendar 1986. Consistent with the above analysis, there is accrued for the first six months of 1986 the present value of $50,000 payable in one year ($44,500). Then, there is a present value to be paid after the close of all three periods. The statute would appear to require that the lessor take into account for his taxable year ending December 31, 1985 the present value of $50,000 payable on June 30, 1987 discounted at 110 percent of the AFR. Again, assuming this to be 12 percent, the rent income includible would be $41,980. Similar problems are encountered in determining the rent to be included in the return for calendar 1986. Consistent with the analysis above, there is accrued for the first six months of 1986 the present value of $50,000 payable in one year ($44,500). The question then arises: is a present value computation to be made with respect to the rent accruable for July 1 — December 31, 1986? The rent allocated to July 1, 1986 — June 30, 1987 is payable at the end of that lease period. Arguably, then, no present value computation need be made, and $50,000 is accruable for the period July 1 — December 31, 1986. Also includible for 1986 is interest on the deferred payment for July 1 — December 31, 1985 ($5,189). No interest on the deferred payment for January 1 — June 30, 1986 would appear to be includible since, on this amount, there is no "interest for the year on the amounts which were taken into account under [subsection (a)] for prior taxable years and which

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

are unpaid." [49] For the taxable year ending December 31, 1987, under this analysis, $50,000 is includible for the period January 1 — June 30, 1987, and another $50,000 for the period July 1 — December 31, 1987. Is additional interest includible with respect to the rental deferred for 1985? It would seem that there is, even though the deferred rent was paid during 1987; it was unpaid for the first six months of the year. This interest is $2,830. In addition, interest is accruable on the rent deferral with respect to the period January 1 — June 30, 1986. This interest is $5,500. For calendar 1988, the lessor takes into account $50,000 for the final six-month period of the one-year lease period ending June 30.

To summarize, the lessor would include in income the following amounts:

Taxable year ending:	Rent	Interest
December 31, 1985	$ 41,980	0
December 31, 1986	$ 94,500	$ 5,189
December 31, 1987	$100,000	$ 8,330*
December 31, 1988	$ 50,000	0
	$286,480	$13,519

* ($5,500 + $2,830 from the foregoing fact situation

Computations become much more complex where a §467 rental agreement involves monthly lease periods or lease periods of irregular length. More complex calculations are also necessary where the lessor's fiscal year, the lease term, and the lease periods are all other than calendar year periods.

Comment: Regulations may clarify some of the above problems. For instance, the computation of the present value amount to be included with respect to deferred payments is to be provided by regulations. The Conference Report states that the rent allocable to a taxable year will be determined from the lease terms. The Conference Report further provides that, if the lease specifies amounts that are allocable to particular periods but these amounts are not paid until more than one year after the year to which they relate, the rent to be accrued for each period will be an amount determined under Treasury regulations based on present value concepts. The Report adds that it is anticipated that these regulations could provide different methods for determining the appropriate amount, depending on the type of lease involved.[50] It is unclear precisely what the conferees envisioned in making this latter statement.

4. Constant Rental Accruals

a. Why Rent Leveling?

As stated above, where different amounts are allocated to lease periods of the same duration, the lease is a §467 rental agreement regardless of whether there is rent deferral. Also, where rents are deferred, the agreement is a §467 agreement regardless of whether different amounts are allocated to lease periods of the same duration (where the deferral is for more than one year, as explained above). Where a lease calls for uneven rent allocations, there is a potential for abuse, since uneven allocations may disguise deferral.

Example: A five-year lease provides for payments at the end of each year in the respective amounts of $10x, $15x, $20x, $25x and $30x. If the property's fair rental value is about $20x per year, there is a possibility that, despite the parties' allocation, rent has actually been deferred from the early to the later years. If, in this situation, an accrual basis lessee were entitled to deduct the rent on a level basis of $20x per year, while a cash basis lessor was only obligated to take rent into account when received, a mismatching to the Treasury's detriment would result. Under §467(a) and (b)(1), this would not be possible where the parties must make and adhere to a rent allocation. The lessee, regardless of his accounting method, could deduct no more than the rent allocable to each period. Even in this situation, however, where the lessor is subject to a higher tax rate than the lessee, such an agreement would produce revenue loss since the lessor is deferring the realization of income taxable at a higher rate than the lessee. Similar results would occur if the lessee were, by reason of loss carryover, credits or even tax-exempt status, in a position where he would suffer very little tax disadvantage by not being able to deduct the deferred rents and interest thereon. Also, if the parties made no allocation of rents, without §467, the lessor, if a cash basis taxpayer, would report rental income only when it was received. The lessee, however, if an accrual basis taxpayer, could claim rent deductions of $20x per year when the liability arose.

Congress, after considering one version of remedial legislation proposed in the Senate bill,[51] decided to require rent leveling in situations like the one above where either: (1) the circumstances indicate a principal tax-avoidance purpose; or (2) the parties fail to allocate rents in the rental agreement.

Drafting legislation to deal with the tax-avoidance situation was difficult in view of the fact that, often, non-tax considerations will call for varying amounts to be charged for rental periods of the same duration. Rent leveling was therefore confined in tax-avoidance purpose cases (*i.e.*, where the parties allocate rent in the agreement) to two types of leases. These are the "leaseback transaction," and the "long-term agreement." A transaction is a leaseback transaction "if it involves a leaseback to any person who had an interest in such property within two years before such leaseback (or to a related person).[52]

b. Leasebacks: What is a "Related Person?"

The statute reads: "if [the leaseback transaction] involves a leaseback to any person who had an interest in such property at any time within two years before such leaseback (or to a related person)." Which party to the lease is modified by "related" is unclear. Does it modify "person," or does it mean "related to the lessor?" The Conference Report is not too helpful here. It states, "(or to a person related person to such person) [sic]." [53] Probably

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

what is meant is "(or to a person related to such person)," *i.e.*, the lessee. Congress could also have intended, however, that a leaseback transaction will exist where the property is leased to a person related to the *lessor*.[54] Either view is probably within the meaning of the statute in view of its purposes.

c. Long-Term Leases

Long-term leases often have tax-avoidance facets. Many such leases are on the borderline separating a lease from a conditional sale, and rental payments have many of the characteristics of purchase payments. Such a transaction, if it is determined to be a lease, will escape §483 relating to deemed interest on certain deferred payments. Payments made thereunder may well reflect an interest element. The drafters of §467 decided to draw a somewhat arbitrary line in defining as long-term a lease with a term in excess of 75 percent of the property's "statutory recovery period" [55] under §168.[56] For §467 purposes, the property involved does not have to be property with respect to which §168 ACRS deductions are allowable. To determine the recovery period, the property is treated as if it were "recovery property." [57]

Note: Section 467 applies only to rental agreements involving tangible property. The Conference Report also makes it clear that it is not intended in any way to affect the IRS' ability to challenge purported leases on the ground that they are, in substance, sales.[58]

d. The Tax Avoidance Factor - Safe Haven Rules

Given a §467 rental agreement that qualifies as a leaseback or long-term agreement, rental payments are accruable in accordance with the allocations agreed to by the parties in the lease unless the Commissioner determines that a principal purpose for providing increasing rents is tax avoidance.[59] Regulations are to be issued providing safe harbors, *i.e.*, setting forth circumstances which will not be viewed as reflecting a tax-avoidance purpose.[60] The non-tax avoidance purposes enumerated in the statute are:[61]

(i) Changes determined by reference to price indices. The conferees comment that they intend that the regulations will provide that rents increasing at a variable rate equal to the rate of increase in the CPI (or some other formula coming within such parameters) will not be considered to have a tax avoidance purpose. Such increases may be aggregated and made in intervals of five years or less.

(ii) Rents based on a fixed percentage of the lessee's gross receipts.

(iii) Rent changes based on costs incurred by the lessee and paid to third parties. It is cautioned, however, that no inference is intended as to the effect of a pass-through to the lessee of increases in the lessor's debt service obligations upon the IRS' determination of whether the lease is, in fact, a sale.

(iv) Rent holidays. The conference committee indicates that reasonable rent holidays of up to 12 months, but in no event longer than 24 months, may be acceptable where this is shown to be prevalent in the particular market.

The regulations may also allow reasonable rent fluctuations where it appears that this is commercially reasonable under the circumstances. Fluctuations within 10 percent of average rent have been determined by the IRS to be reasonable (for purposes of determining whether a purported lease is a lease for tax purposes) in transactions involving personal property.[62] Leases involving real estate, however, may be subject to more lenient standards.

The conference committee emphasized that a major factor in determining the existence of tax avoidance as a principal purpose of a stepped rental lease is the extent to which the tax brackets of the lessor and lessee differ at the time of the lease or may be expected to differ over its life.[63] Such leases, and so-called "sandwich" leases which interpose a cash basis entity between an accrual basis lessor and the lessee or use a tax-exempt lessee-sublessor, will be subject to special scrutiny. It was also pointed out that the involvement of tax-exempt entities or taxpayers with low marginal tax brackets or NOL carryovers will not automatically lead to a determination of tax avoidance. Each case will be judged on all the facts and circumstances. Note, however, that, where a deficiency has been determined on the basis of rent leveling in a leaseback or long-term lease situation, the taxpayer has the burden of proving that the lease terms did not have a principal tax-avoidance purpose. Since the Commissioner's determination, aside from the safe harbor factors enumerated in the statute, appears to be completely discretionary, taxpayers seeking to contest such a determination must prove an abuse of discretion - always a difficult task. The Conference Report may furnish the only solid ground for contesting rent leveling adjustments under §467. Significant departures from those guidelines could be open to challenge.

Finally, the conferees viewed as indicating tax avoidance motives renewal options in a stepped rent lease providing for payments during the renewed term of amounts approximating the constant rental amount.

The statute provides that rent leveling may be appropriate in "front-loaded" leases as well.[64]

e. The "Constant Rental Amount"

Once a leaseback or long-term lease has been determined to be "disqualified" by reason of a tax avoidance purpose, the rent leveling is effected by allocating to each lease period equal rentals in amounts such that the sum of the present values of such rentals will equal the sum of the present values of the payments called for in the lease. No particular interest rate is provided by the statute for determining constant rental amounts. The statute provides only that the constant rental amount is the "amount which, if paid as of the close of each lease period under the agreement, would result in an aggregate present value equal to the present value of the aggregate payments required under the agreement."

5. Recapture

Assume a leaseback or a long-term agreement as defined above which is a §467 rental agreement but which is not "disqualified" (*i.e.*, has not been determined to have a principal tax-avoidance purpose). The agreement may be characterized as a §467 agreement for either of two reasons: (1) rent deferral; or (2) uneven rent allocations. In the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

case of rent deferral, the deferred amount is taken into account for the taxable year in which falls the lease period (or portion thereof) to which the deferred amount is allocable, in an amount equal to its present value. Where property subject to a §467 agreement is sold, the tax consequences must be considered.

Example: A lessor (L) enters into a five-year lease on July 1, 1985. Under its terms, $100,000 in rent allocated to the period July 1 - December 31, 1985 is not payable until January 1, 1987. This is a §467 agreement. L must, therefore, take into account for his taxable year ending on December 31, 1985 the present value of $100,000 payable in one year and a day. Assume this is to be $89,000 (using a 12 percent rate). Assume next that L sells the property to P on June 30, 1986. The purchase price will reflect the fact that the purchaser (P) will be entitled to receive the deferred rental payment in 1987 and should evaluate this payment at its present value. For tax purposes, the new lessor (P) steps into the shoes of the previous lessor (L). L must include in his return for calendar 1986 interest on the deferred payment through June 30, 1986 ($5,340).[65] P, for his calendar year ending December 31, 1985, must include $5,660 in interest.[66] Since the rent allocated to the period July 1 to December 31, 1985 has been included in L's income, P will not include the $100,000 payment made on January 1, 1987 in income for his calendar year 1987.

In the above situation, it can be seen that L derives no tax advantage. To the contrary, he is taxed twice on the same amount: once when it was included in 1985 income and again when it was included in the capital gain (if any) realized from the sale of the property.

Consider now the following examples.

Example (1): Assume that the fair market value of the property is about $190,000 year, and that the rental agreement provides for rent payments, allocated by the parties to the one-year lease periods preceding such payments, of $100,000 at the end of the first year (*i.e.*, payable on June 30, 1986), $150,000 at the close of the second year, and $200,000, $250,000 and $300,000, respectively, at the close of the three remaining years. Level rent, using a discount rate of 12 percent, is approximately $188,500. While this is a §467 agreement, assume the Commissioner determined it not to be disqualified. On June 30, 1986, Lessor (L) sells the property to P. The sales price will reflect the fact that, during the lease's remaining life, P will receive rents having a present value that is greater than the present value of rents for such remaining term if no more than the property's fair rental value were payable. If one computes the present value of the remaining payments to be made under the lease and the present value of four equal payments of $188,500 on the above facts, the difference is $88,500. This, presumably, is the premium the purchaser would pay. Under §467(c), this $88,500, defined as "prior understated inclusions," would be subject to recapture. It would, thus, be treated as ordinary income to the extent of any gain realized from the disposition of the property.[67]

Gain realized from the disposition of the property means, in cases other than a sale, exchange, or involuntary conversion, the excess of the property's fair market value over the Lessor-transferor's basis therein.[68] Thus, recapture rules similar to §§1245 or 1250 are to apply as if the prior understated inclusions were allowable depreciation. The exceptions applicable under §1245 and §1250 are to apply in determining the recapture amount.[69] If any gain is treated as ordinary income under either of these sections (or any other Code section) the §467 recapture amount is reduced by the amount of such gain.[70] Under §§1245 and 1250, certain dispositions (nonrecognition transactions and gifts, for example) are excepted from the general rule. Any transferee in a disposition of property subject to a §467 agreement which is excepted by the §§1245 or 1250 rules who has a transferred basis in the property is to be treated in the same manner as the transferor.[71]

Example (2): In the case in Example (1), above, involving a recapture amount of $88,500, if the property had been transferred to a controlled corporation in a §351 transaction, and no gain was recognized by the transferor in such transaction, the corporate transferee would step into the transferor's shoes for all tax purposes. That is, any disposition of the property by the corporation would be subject to the same recapture rules as would be the transferor if the property had not been transferred. If gain had been recognized by the transferor, the amount of such gain allocable to the property subject to the §467 agreement would increase its basis in the transferee's hands and, hence, would reduce the amount of any gain upon disposition by the transferee.

Sections 163(d), 170(e), 341(e)(12), 453B(d)(2), and 751(c) contain provisions relating specifically to §1245 and §1250 property. For purposes of these provisions, §467 recapture property is to be treated as §1245 or §1250 property.[72]

Note: The recapture provisions apply only to property subject to a leaseback transaction or a long-term agreement as those terms are defined in §467(e)(2) and §467(b)(4), respectively,[73] which are §467 rental agreements. Note that the statute prescribes no interest rate to be used in computing the constant rental amount (the Senate bill specified 120 percent of the AFR). In the agreement used in the example (annual rents of $100,000, $150,000, $200,000, $250,000, and $300,000) the constant rental amount using a rate of 12 percent is about $188,500. Using 20 percent, it is about $181,500.

Observation: Assume a lease called for stated dollar amounts of rents for the first two years, allocable to such years without deferral, and then provided that rents for the third and succeeding years were to be based on a percentage of gross receipts (or some similar quantum reflecting the income from use of the property). This would clearly be a §467 rental agreement, but, in the event it was a disqualified leaseback or long-term agreement, how could a constant rental amount be determined? The question seems academic since such a provision would probably come within the safe harbor rules. Yet, if gross receipts were sufficiently large, the rents would be increased from the first two to the third and later years. Would recapture be required in this case? Apparently, recapture is not possible where the constant rental amount cannot be determined with any degree of accuracy. This situation would probably not call for leveling in any event, since the purchaser is not assured of receiving any definite amount of rent. On the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

other hand, if the lessor were a merchant with a proven volume of sales in his former location, the effect of such an agreement might be the same as a stepped rental agreement. The first two years' rent might be artificially low to permit the lessee to recoup moving expenses and to build up clientele in the new location. Then, a high percentage of gross receipts could be required for the next two years to make up for the partial rent holiday, followed by a lower percentage in the succeeding years. Such a situation would post difficult problems in administering §467.

6. Additional Observations

a. Possible Conflict with Section 482

Assume the lessor and lessee of a §467 lease are organizations, trades or businesses controlled by the same interests. Assume, further, that the rent charged by the lessor is deemed not to be an arm's length rental within the meaning of Regs. §1.482-2(c). An allocation is therefore made requiring recognition by the lessor of additional rent (if inadequate rent was charged) or reducing the lessee's rent deduction (if there was an overcharge). Is §482 to be applied first and then §467, or the other way around? Of course, under §482, no indebtedness arises by reason of an allocation. If the lessor has not charged adequate rent, its gross income is increased to reflect what the rent would be had an arm's length charge been made. The lessee, however, does not thereby become obligated to pay the additional rent. The lessee is entitled to a correlative adjustment increasing its rent expense deduction, as if it had paid the additional rent. Is §467 to be applied by deeming the parties to have agreed to pay an arm's length rent as determined under §482? Or are appropriate adjustments to be made? The answer is unclear.

b. Bad Debt Deduction; Discharge of Indebtedness Income

The Conference Report states in a footnote [74] that Congress intended that any rent or interest accrued by the lessor under §467(a) and (b), as well as under the rent leveling provision, will be treated in the same manner as a receivable or other debt owed to an accrual basis taxpayer. The lessor will, thus, be entitled to claim a bad debt deduction if the lessee, for any reason, fails to pay the rent accrued under §467 when due, subject to the general bad debt deduction principles. Simlarly, where rent or interest so accrued is forgiven or otherwise goes unpaid, the lessee will have discharge-of-indebtedness or tax benefit income to the extent of such forgiven or unpaid accruals.

c. Lessee's Assumption of Liabilities

It is common for a lessee under a long-term lease to agree to assume the burden of any increases in the lessor's debt service on the property. Rent increases due to such a lease provision will not generally be considered to have a tax-avoidance purpose. The Conference Report cautions, however, that this should raise no inference as to the effect of such a provision in the determination of whether the arrangement is a true lease.[75]

d. Interest Surcharge Under Section 6621(d)

Section 6621(d), added by Act §144, imposes an interest rate of 120 percent of the rate otherwise payable on substantial underpayments (*i.e.*, in excess of $1,000) attributable to "tax motivated transactions." In addition to some transactions enumerated in the statute, regulations are to provide a list of accounting methods the use of which may result in a substantial distortion of income. Underpayments attributable to such methods will be deemed attributable to tax-motivated transactions. The Conference Report [76] anticipates that, among the deductions and claimed tax benefits which might be considered to arise from accounting methods that may result in a substantial distortion of income, should be included "(f)ailure to take into account deferred rental payments in accordance with the principles of §467 as added by this Act. . ." [77]

e. Accrual Method Required for All Lessors and Lessees?

Almost all commercial leases will be §467 rental agreements, since virtually every commercial lease provides for some increase or decrease in rent, usually based on commercially reasonable provisions unrelated to tax. Under §467(a), if a lease is a §467 agreement, the parties, irrespective of their accounting methods, must take into account for their respective taxable years "the amount of rent which accrues during such taxable year under subsection (b)." Section 467(b), in turn, provides that the determination of the amount which accrues during any taxable year is made by allocating rents in accordance with the agreement. Assume that rent for the month of December, for example, is payable on January 15 of the following year. The December rent, under §467(b), must be accrued and taken into gross income of a cash basis lessor as of the close of December. Likewise, a cash basis lessee may deduct such rent on the same basis, *i.e.*, accrue it as of the close of December. This, in effect, places virtually all lessors and lessees on the accrual basis with respect to rent payments except in the relatively rare instance where a lease does not provide for any "increases in the amount to be paid as rent under the agreement."

7. Effective Date, Etc.

Section 467 is generally effective with respect to agreements entered into after June 8, 1984. *See* TRA §92(c).

There are two exceptions to the general effective date. First, §467 does not apply to any agreement entered into pursuant to a written agreement which was binding on June 8, 1984 and at all times thereafter.[78] Second, §467 does not apply, subject to a schedule of deemed rental payments set forth in Act §92(c)(3), to any agreement to lease property if:

> (i) There was in effect a firm plan, evidenced by a board of directors' resolution, memorandum of agreement, or letter of intent on March 15, 1984, to enter into such agreement, and construction of the property was commenced (but such property was not placed in service) on or before March 15, 1984,[79] *and*
>
> (ii) To any agreement to lease property if certain circumstances obtained.

Note: The description of these circumstances is so detailed that this exception seems obviously drafted to apply to a transaction which had been carefully planned prior to the completion of the conference committee action on Act §92 and which the committee believed persuaded

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

merited special relief. This exception is clearly not of general application.

The schedule of deemed rental payments mentioned above and contained in Act §92(c)(3) is supplemented by certain operating rules. Further, §92(c)(3) does not apply where the sum of the present values of all payments to be made under the agreement is greater than the sum of present values of all the payments to be made or received under the schedule. Such present values are to be determined using a discount rate of 12 percent compounded semiannually. The Conference Report is silent as to the reasons for the exceptions provided by Act §92(c)(2)(B) and (C).

II. Loans with Below-Market Interest Rates

A. Background

The tax consequences of interest-free loans, especially loans made by a corporation to its controlling shareholder, have remained a matter of concern over the years to the IRS. In 1961, the Tax Court held in *Dean v. Comr.*,[80] that the Commissioner improperly included in the gross income of a shareholder the economic benefit received by him as the result of an interest-free loan made by the corporation, such benefit being measured by the interest foregone by the lender. The court reasoned that, had interest been charged, or were it imputed, the shareholder would be entitled to a deduction under §163 in an equal amount (unless it were shown that the proceeds were invested in tax-exempt securities) creating a wash for tax purposes. The IRS appeared to accept this decision. In 1972, a refund was reported to the Joint Committee on Taxation under §6405 involving taxable years in which the taxpayer was indebted to his controlled corporation. Bowing to the authority of Dean, the IRS, after having proposed inclusion of interest in the taxpayer's income based on the economic benefit theory, conceded the issue. The Chief of Staff of the Committee disagreed with the Tax Court's conclusion in *Dean*, however, and recommended that the IRS reconsider its position. As a result, the IRS in 1973 issued a belated nonacquiesence [81] and began litigating the issue in appropriate cases. In this effort, it was unsuccessful, since the courts declined to overturn *Dean*, a case of long standing.[82] Legislation appeared to be the only solution.[83]

On another front, the government was more successful. In 1973, a ruling was issued [84] taking the position that, in the case of an interest-free loan by a father to a corporation owned by his son, there is a taxable gift equal to the value of the right to use the funds loaned. This position was upheld by the Supreme Court in *Dickman v. Comr.*, decided in 1984,[85] which held that an interfamily interest-free loan gives rise to a gift in the amount of the foregone interest for gift tax purposes. Whether such a loan may also have income tax consequences has not been ruled on or presented to a court for decision.

Exactly how the income tax treatment of interest-free or below-market interest loans should be handled is not clear. While there has always been some sentiment supporting the view that gross income should include all economic benefits received by a taxpayer, this has never been fully recognized by U.S. tax laws, and would probably be unworkable in practice. An economic benefit analysis of what should be included in income, however, has gradually made its way into the law in a number of areas (*e.g.*, employee fringe benefits, officer/shareholder use of corporate property without adequate consideration, etc.). Foregone interest inclusion has at least the virtue of permitting a readily ascertainable determination of the quantum of income. The more difficult problem is posed by the fact that the benefit received (foregone interest) would, in most cases, be fully deductible by the recipient. On the other hand, any interest paid would be fully includible in gross income of the lender. It is interesting to compare the interest-free, non-gift loan situation with the treatment required under §482. Under §482, where inadequate interest is charged on a loan from one commonly controlled entity to another, the lender's income is increased to reflect what it would be had interest been charged at an arm's length rate.[86] The borrower is allowed a "correlative" interest deduction in the same amount. Thus, the bestower of the benefit, the lender, is the one penalized, whereas the recipient is given an additional deduction. The TRA provisions follow this same pattern, except that they take into consideration the fact that the borrower is receiving a benefit measurable in money which should, in some fashion, be recognized. The rules devised by Congress not only give legislative effect to *Dickman* for gift tax purposes, but create a set of rules governing the income tax consequences of such transactions.

B. Overview

Section 7872 (Treatment of Loans with Below-Market Interest Rates) was added to the Code by TRA §172. Section 7872 provides both the gift and income tax consequences of below-market rate interest loans.

1. Basic Rules

Section 7872 posits two basic categories of below-market interest (BMI) loans: (1) gift and demand loans, and (2) other loans. Category (1) includes term and demand loans which are gift loans and all demand loans. Category (2) includes term loans which are other than gift loans. A BMI loan is, in the case of a demand loan, one providing for interest at a rate below the applicable federal rate (AFR). A BMI term loan is one where the principal amount is greater than the present value of all payments to be made thereunder discounted at the AFR compounded semiannually. A demand loan is a loan all of which is payable upon demand of the lender. A term loan is any other kind of loan.

2. Gift and Demand Loans

In any gift loan (whether a term or a demand loan) and any demand loan (gift or non-gift), the lender is treated as having transferred to the borrower any foregone interest.[87] "Foregone interest" is, with respect to any period for which the loan is outstanding, the excess of the interest which would have been payable for such period if interest accrued at the AFR and was payable annually on the last day of the calendar year over any interest payable on the loan properly allocable to such period.[88] Except as provided by regulations, any foregone interest attributable to periods during a calendar year is treated as transferred by the lender to the borrower on the last day of such calendar year.[89] The amount considered transferred by the lender to the borrower is also treated as having been retransferred on the same

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

date by the borrower to the lender *as interest.*[90] As to any demand loan, these provisions apply for both income and gift tax purposes. As to term loans, they apply only for income tax purposes. The gift tax consequences of a gift loan which is a term loan are governed by §7872(b).[91]

Example: On February 1, 1985, L makes a $50,000 non-gift loan to B, payable on demand. On the day the loan is made, the AFR is 10 percent. The loan provides for the payment of 5 percent simple interest at the end of each year the loan is outstanding. This is a BMI demand loan to which §7872(a)(1) applies. L also loans $50,000 to B2. This loan is repayable in two $25,000 installments to be paid at the end of the first and second years of the loan, respectively. Interest is provided at a rate of 5 percent simple interest payable at the time of each $25,000 installment. The recipient of the loan is L's son, and it qualifies as a gift loan. This, too, is subject to §7872(a)(1).

In the case of the first loan, as in the case of any demand loan, for purposes of determining the foregone interest, the AFR is the federal short-term rate (as defined in §1274(d)) for the period for which the amount of interest is to be determined.[92] While the statute does not so specifically provide, it may be inferred from the committee reports[93] that, for purposes of determining foregone interest, a demand loan is treated as a series of one-day term loans. Consequently, the foregone interest must be computed on a daily basis. Thus, should the AFR change while the loan is outstanding, such changed rate must be applied in determining foregone interest. Assuming no change in the AFR occurred and that B had made no repayments as of December 31, 1985, the amount of the foregone interest is computed to that date. In keeping with the basic principles underlying the TRA's time value of money amendments, when applying the AFR semiannual compounding would appear to be called for.[94] Thus, in the example above, the amount of foregone interest is $2,500 (for the first six-month period the loan was outstanding) plus $2,187.50 (5/6ths of the $2,625 in interest accrued for the second six-month period) making a total of $4,687.50, less the interest payable on the loan properly allocable to the period February 1 - December 31. The latter amount is $2,500 x 11/12 = $2,291.66. The lender must therefore include in gross income as interest for the year $2,395.84. The borrower is entitled to an interest deduction in the same amount. The parties' respective accounting methods are irrelevant since the transfer and retransfer are deemed to have occurred on December 31.[95] L is treated as having received this same amount as interest income. B is entitled to treat this amount as an interest expense, deductible as such subject to any other applicable Code provisions (*e.g.*, §163(d), §267).

In the case of the gift term loan, the foregone interest is determined by reference to the AFR (short, mid, or long-term depending on the loan term) in effect on the date the loan was made. Discounting the payments to be made under the loan to B2 in the example above at 10 percent compounded semiannually, the present value of the two $25,000 payments, plus the interest provided, is $46,539. Since this is less than the $50,000 principal amount, the loan is a BMI loan. The foregone interest on this loan is the same amount as that computed for the demand loan. L is therefore treated as having transferred to B2 $2,396 on December 31, 1985. B2 is treated as having retransferred this same amount to L as interest. It is therefore treated as an interest expense to B2 and as interest income to L. The gift tax consequences of such a loan are discussed below.

The statute treats as a demand loan any term loan which is not transferable where the benefits of the interest arrangements are conditioned on future performance of services by an individual. *See* §7872(e)(5) and discussion, *infra.* The AFR to be used in determining foregone interest in this type of loan, however, is not necessarily the short-term rate. If the loan is, in fact, for a term longer than that to which the federal short-term rate applies (not more than three years), the loan term will determine the proper AFR to be used.

3. Other Loans (Non-Gift Term Loans)

For a term non-gift loan, the income tax consequences are somewhat different from those described above. The first step is to determine, as of the date the loan is made, the excess of the principal amount over the present value of all payments to be made (both principal and interest (if any)) using the appropriate AFR. This amount is considered as having been transferred by the lender to the borrower, in cash *on that date.* As in the case of the loans described above, the tax consequences of such deemed transfer will depend on the parties' relationship. The borrower is treated as having issued a debt instrument having original issue discount (OID) equal to the amount deemed to have been received in cash.[96] This OID will be in addition to any OID determined independently of §7872.

Example: On June 30, 1985, L makes a loan to B of $50,000. The loan calls for repayment on December 31, 1986 of the $50,000 with interest at 6 percent compounded semiannually. The short-term AFR in effect on June 30, 1985 is 12 percent. This is clearly a BMI term loan. The present value of all payments due under the loan (one payment of $54,636 on December 31, 1986) discounted at 12 percent compounded semiannually is $45,873. B is, therefore, treated as having received $4,127 from L in cash on June 30, 1985. Also, B and L are treated as if B had issued a debt instrument with $4,127 of OID. This amount is currently includible in L's income (and deductible by B as interest) under §1272 (and §163(e)). If L were a corporation and B were a shareholder (irrespective of the amount of stock held), the $4,127 would be treated as a distribution to B taxable as a dividend to the extent of L's earnings and profits. If the positions were reversed, L would be treated as having contributed $4,127 to B's capital. If B were an employee of L, the transfer of cash would be treated as compensation. If the loan were a gift loan, while the income tax consequences would be determined under §7872(a), the amount of the gift would be the $4,127 determined as described above.

4. Loans to Which Statute Applies

Section 7872 applies to the following types of loans:

(i) any BMI *gift* loan,

(ii) any *compensation-related* loan.

(iii) a BMI loan directly or indirectly between an employer and employee, or an independent contractor and the person for whom services are rendered.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(iv) any BMI loan directly or indirectly between a corporation and any shareholder,

(v) any BMI loan if one of the principal purposes of the interest arrangements is tax *avoidance*,

(vi) to the extent provided by regulations, any BMI loan not described above if its interest arrangements have a significant effect on the tax liability of the lender or the borrower.[97]

5. De Minimis Exceptions

There are two "de minimis" exceptions. The first relates to gift loans between individuals. The second relates to compensation-related and corporation-shareholder loans.

In the case of a gift loan between individuals, §7872 does not apply to any day on which the aggregate outstanding amount of loans between such individuals does not exceed $10,000.[98] This exception does not apply, however, to any gift loan directly attributable to the purchase or carrying of income producing property.[99] Further, if the gift loan is a term loan, and if on any day the aggregate amount of loans between the individuals exceeds the $10,000 exception amount, §7872 will apply to such loan for the remainder of the period during which it is outstanding even though the balance drops below $10,000. This last rule applies, however, only for gift tax purposes.[100]

The same $10,000 de minimis exception is extended to compensation-related and corporation-shareholder loans, except where the loan had a principal tax-avoidance purpose.[101] The exception to the de minimis exception described above, *i.e.* where the balance of a term loan exceeds $10,000, also applies to these types of loans, and *is* effective for income tax purposes.[102]

6. Special Rules for Gift Loans

In the case of a gift loan directly between individuals [103] the amount considered as retransferred by the borrower to the lender as interest at the close of any year is not to exceed the borrower's net investment income for the year. This rule does not apply when the interest arrangements have a principal tax-avoidance purpose.[104]

Note: Recall that foregone interest in the case of a gift loan is accrued on the last day of the calendar year. That is the day on which the transfer and retransfer are deemed to have taken place with respect to any loan made or outstanding during such calendar year. The year referred to in the provisions discussed above is, therefore, the calendar year.

Where more than one gift loan is outstanding during a calendar year, the borrower's net investment income is to be allocated among such loans in proportion to the amounts which would be considered as retransferred (without regard to the above provision).

The above limits do not apply to any loan for any day on which the outstanding balance of loans between the borrower and lender exceeds $100,000.[105]

Note: This limit applies to a loan or loans between each individual lender and individual borrower. Thus, where a borrower has two or more loans outstanding, each from a different lender, the limit applies on a lender-by-lender basis. Also, where a lender has outstanding two or more loans to different borrowers, the same principle applies.

Example: Individual B borrows $75,000 from his brother, L, in an interest-free gift loan. During the same calendar year, B also borrows $75,000 from his father, F, under similar terms. During the year, B has no net investment income. Under the exception provided by §7872(d), the amount treated as transferred by B to L and to F is zero, *i.e.*, while the foregone interest is taxable as a gift, neither L nor F is treated as having received interest on the loan.

For all purposes of §7872, a husband and wife are considered one person.[106]

Section 7872(d)(1)(E) defines "net investment income" for purposes of the above rules. That term is to have, in general, the same meaning as it has in §163(d), to wit, the excess of investment income over investment expenses.[107] Further, if the net investment income of any borrower for any year does not exceed $1,000, it is considered to be zero.[108] Investment income includes any amounts includible in the borrower's income under §1272 (relating to the current inclusion in income of original issue discount) as if that section applied to all deferred payment obligations.[109] "Deferred payment obligations" include any market discount bond, short-term obligation, U.S. savings bond, annuity or similar obligation.[110]

7. Miscellaneous Provisions

Section 7872 does not apply to any loan to which §483 or §1274 applies (these sections relate to obligations arising from the sale or exchange of property).[111]

No amounts are to be withheld under Chapter 24 with respect to amounts treated as transferred or retransferred under §7872(a).[112] (Chapter 24 contains rules governing the withholding of employment taxes on wages and backup withholding on certain reportable payments including compensation for the rendition of services, dividends and interest).

Note: Amounts deemed transferred under §7872(b) by the lender to the borrower as the result of a BMI term loan, however, would seem to be subject to withholding where such amounts are considered compensation or a dividend. Further, amounts considered interest under §7872 may be subject to information returns under §6049.

8. Regulatory Authority

The Secretary is given broad authority to issue regulations "necessary or appropriate" to carry out the purposes of §7872.[113] This includes the issuance of rules "adjusting the provisions" of §7872 where, by reason of varying interest rates, conditional interest payments, waivers of interest, disposition of the lender's or borrower's interest in the loan, or other circumstances the statutory provisions do not carry out the purposes of §7872.[114]

Such regulations are to insure that the positions of the lender and borrower are consistent as to the application (or nonapplication) of §7872.[115] The regulations may also exempt from §7872 any class of transaction the interest arrangements of which have no significant effect on the tax liability of either party.[116]

Regulations are also to provide that any BMI term loan made with donative intent is to be taken into consideration

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

for purposes of Chapter 11 (Estate Tax) in a manner consistent with §7872(b).

9. Effective Dates

Except as provided by paragraph (2) thereof, Act §172(c) provides that §7872 applies to (a) terms loans made after June 6, 1984 and (b) demand loans outstanding after that date.

Section 172(c)(2) provides that §7872 does not apply to any demand loan which was outstanding on June 6, 1984 and was repaid before September 16, 1984 (60 days after the enactment of the 1984 TRA).

Section 7872 also does not apply to loans made before June 6, 1984 to a continuing care facility by a resident which is contingent on continued residence at the facility.

The AFR for periods before January 1, 1985 (the first determination of the AFR to be made within 15 days after September 30, 1984 becomes effective on January 1, 1985),[117] to be applied for purposes of §7872 is 10 percent, compounded semiannually.[118]

Any loan renegotiated, extended, or revised after June 6, 1984 is to be treated as a loan made after that date.[119]

For purposes of the effective date provisions, "demand loan," and "term loan" have the meanings they have in §7872, except that the special rule for an employee term loan (benefits conditional on performance of substantial services, etc. See §7872(e)(5)) which is to be treated as a demand loan under certain circumstances does not apply.[120]

C. Detailed Analysis

1. Examples of the Statute's Operation with Commentary

As previously indicated, where an interest-free or below-market interest loan is made, the transaction is treated as if the lender had advanced to the borrower the funds with which to pay an arm's length rate of interest at the AFR and the borrower is considered to have paid such interest with the funds advanced. This results in three distinct tax consequences:

(1) If the loan is a gift loan, the transfer is taxed as a gift. If the loan is not a gift loan, the tax consequences depend on the parties' relationship. If the borrower is an employee of the lender, the transfer is treated as compensation. It is thus deductible by the lender unless the compensation is unreasonable. If the borrower is a shareholder of the lender, the transfer is treated as a distribution to which §301 applies. If the borrower is a corporation and the lender a shareholder, the transfer is treated as a contribution to capital.

(2) The deemed payment of the amount deemed transferred in (1) to the borrower back to the lender as interest, applicable to gift and demand loan transactions, is treated as interest expense, deductible by the borrower subject to any applicable restrictions on deductibility (*e.g.*, §163(d)- investment interest, and §267- deductibility of payments between related persons). Where transfer described in (1), above, is treated as an item of gross income to the borrower, this will be offset by the deduction provided by (2) in many, if not most, cases. These deemed transfers, however, must be reported in parties' returns as if they actually took place.[121]

(3) The deemed payment of interest is includible in the lender's gross income.

The above analysis applies to all gift loans for income tax purposes, and to all demand loans both for income and gift tax purposes. A different treatment is afforded non-gift term loans, although the same basic analysis applies. That is, the lender is deemed to have transferred to the borrower the funds with which to pay the difference between the interest charged (if any) and interest at the AFR. This amount is the excess of the amount of the loan over the sum of the present values of all payments to be made thereunder.

Note: The "foregone interest" in a gift or demand loan will always be greater than the excess of the principal amount of the loan over the present value of all payments to be made by the borrower. Consider the simplest case, a loan of $100 for a one-year accrual period (for compounding purposes). Assuming an AFR of 10 percent, the foregone interest, ignoring compounding, is $10. On the other hand, if the $100 is payable at the end of the year, the difference between $100 and the present value of $100 payable in one year is $9.09 ($100 — $90.91 —). This deemed transfer, in the case of a term gift loan, is the amount of the gift for gift tax purposes. In the case of a non-gift loan, its treatment, like the treatment of the deemed lender-to-borrower transfer in the case of a non-gift demand loan, depends on the parties' relationship. In addition, since the borrower must pay the lender, over the loan term, an amount in excess of the amount deemed borrowed, the term loan is treated as an OID debt instrument.

Example: If L lends B $100, without interest repayable at the close of one accrual period, and the AFR is 10 percent, B is treated as having received from L (as wages, dividend, contribution to capital, etc.) $9.10 plus a loan of $90.90. B must repay L $100. Therefore, the deemed issue price of B's obligation is $90.90 and its stated redemption price at maturity is $100. There is, therefore, $9.10 of OID. This amount is deductible by B over the life of the obligation and is includible in L's income as interest.[122] Again, assuming the AFR is 10 percent (and ignoring semiannual compounding), if L wants to allow B to use $100 of L's money for one year, a term loan is more advantageous. If, on January 1, L advances $100 to B, and B repays the $100 on December 31, the tax consequences are as follows:

(1) If the loan is a demand loan, L is deemed to have transferred $10 to B on December 31. B is allowed a $10 interest expense and L must take $10 into income as interest.

(2) If the loan is a one-year term loan, the deemed transfer to B is only $9.10, and this same amount is the interest expense allowed to B and the amount includible in L's income as interest. The deemed transfer to B is considered to have occurred on January 1. Interest on the $90.90 of principal runs from January 1 to December 31 and is currently taken into account by L and B regardless of their respective accounting methods.[123]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

According to the Conference Report, term gift loans are treated for income tax purposes like demand loans because, in light of the relationship likely to obtain between the parties, they may not consider the loans as binding. Also, in the case of a non-gift term loan, OID must be determined and each party must compute the applicable amount of current income or deduction by applying the complex rules of §§1271 - 75. In the case of a gift term loan, this is avoided.[124] As previously indicated, in the case of a gift term loan, the spread between the amount loaned and the sum of the present values of all payments to be made thereunder, using the appropriate AFR, must be determined for purposes of measuring the amount of the deemed gift from the lender to the borrower.

Example (1): Individual A lends $50,000 to individual B. B gives A his personal note under which the $50,000 is to be repaid without interest in four equal semiannual installments. This is a gift loan. If the short-term AFR is 12 percent for gift tax purposes, A is deemed to have transferred to B $6,686 on the date of the loan. For income tax purposes, however, the parties must compute the interest on the unpaid principal balance each year the loan is outstanding through December 31, using a 12 percent rate with semiannual compounding. A is considered to have transferred this amount to B on December 31. B is considered to have retransferred the same amount on the same date to A as interest. Since this is a gift loan, there are no income tax consequences.

Example (2): Assume that the loan in example (1), *supra*, was made on March 31, 1985. Interest at 12 percent, compounded semiannually, is computed on the $50,000 principal amount through September 30, at which time B makes the first $12,500 payment reducing principal to $37,500. Interest on this amount, and on the unpaid interest previously computed, is then computed through December 31. The total is $4,215, reportable by A as interest income received during calendar 1985. An equal amount is allowed to B as interest expense. For 1986, the amount computed would be $3,632, and for 1987, $592.

Note: If the above loan had not been a gift loan, but simply a below-market interest term loan, the deemed transfer to B of $6,686 on March 31, 1985 would have income tax consequences depending on B's relationship to A. The OID rules would require inclusion in A's income of the $6,686 of OID. This would require computation on the basis of four serial maturities, with the OID allocated to each series. If A had loaned B $49,000 and taken back a note providing for four equal $12,500 semiannual payments, the debt instrument would have $1,000 of OID without the §7872 computation. To this, there would be added another $5,686 in OID, as explained above. How OID is computed for obligations having serial maturities is explained in Chapter 21, *supra*.

2. What is a "Gift Loan"?

Where a loan is made bearing a rate of interest below the market rate (measured by the applicable federal rate for purposes of §7872), it is a gift loan unless it is a sale, exchange, or other transfer made in the ordinary course of business (*i.e.*, a transaction which is bona fide, at arm's length and free from any donative intent).[125] The question of donative intent is relevant only where the taxpayer seeks to establish that the loan was made for full and adequate consideration. Thus, a below-market interest loan made without any ostensible quid pro quo is automatically a gift. While the committee reports often refer to gift loans as "family loans," it is made clear that the lender and borrower do not have to be related for there to be a gift loan.[126]

3. Revocable Trusts

The Conference Report, at pages 1018-19, notes that, if a taxpayer makes a below-market demand loan to a trust, and the loan is treated as a revocable transfer of property for purposes of subpart E[127] the provisions of subpart E govern since it would be anomalous to give effect for tax purposes to a loan made by the taxpayer to himself.

4. Certain Employee Loans Treated as Demand Loans

As previously indicated, §7872(e)(5)[128] provides that a "demand loan" is a loan all of which is payable in full at any time on the demand of the lender. Also treated as a demand loan is any loan which is not transferable where the benefits of its interest arrangements are conditioned on the future performance of substantial services by an individual. The Conference Report points out that a benefit is treated as nontransferable and conditioned on future performance of substantial services under §7872 if it would be treated as nontransferable and conditioned on such future performance under §83, if that section applied.

Example: A loan provides that the interest rate will automatically increase for the remainder of its term to the market rate (applicable federal or higher) in the event of the borrower-employee's employment with the employer terminates for any reason.[129]

5. Types of Loans To Which The Statute Applies

The Senate, in amending the House version of §7872, enumerated the types of loans covered by the provisions. This was adopted by the conference committee. The statute's drafters probably foresaw numerous instances in which the question would arise as to whether a loan, while clearly not made with donative intent, nevertheless was within the intended scope of the provisions. A business person, for example, may make a below-market loan to a customer or prospective customer to generate goodwill, or to obtain a favorable contract. Section 7872(c)(1) provides that §7872 applies to the following types of loan: (a) gifts, (b) compensation-related loans, (c) corporation-shareholder loans, (d) "tax avoidance" loans, and (e) such other loans as may be provided by regulations where the interest arrangements "have a significant effect on any Federal tax liability" of either party (an "E type" loan).

a. Compensation-Related Loans

The Conference report states that, to qualify as a compensation-related loan, there must be a debtor-creditor relationship between an employee and an employer (or, presumably, an independent contractor and the person for whom the contractor renders services). The report provides as an example a payment made by an employer to a third-party lender to induce the lender to make a mortgage loan to an employee.[130] If the facts and circumstances

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

indicate the payment was to secure a valuable benefit for the employee it will be treated as compensation, not as a loan. Where the employer, in substance, lends the money to the employee, and the putative third-party lender merely acts as the employer's agent, however, the §7872 rules apply.

A compensation-related loan can result where an employee receiving payment (sale proceeds, for example) on behalf of his employer is permitted to retain the proceeds for a meaningful period of time without paying interest. In some instances, allowing the employee to retain moneys received on behalf of the employer may be regarded as being in lieu of a part or all of a fee which would otherwise have been charged. Where this is not clearly established, however, such a transaction could be considered an E type loan, (one covered under regulations to be issued) where the arrangement has a significant impact on the tax liability of either party.[131]

The report clarifies that, in a compensation-related loan, the deemed payment by the lender to the borrower is treated as wages for purposes of Chapters 21 -23 and that, unless regulations otherwise provide, such deemed payment must be included in the recipient's gross income even though he may be entitled to an offsetting interest deduction.[132] Lastly, even though the payment is not subject to wage withholding under Chapter 24, it may be subject to information reporting.[133]

It is conceivable that an employee could make a below-market interest loan to his financially troubled employer (other than a corporation-shareholder loan). This would clearly not be "compensation-related." Such a loan would not seem to be covered by §7872 unless provided for in the regulations to be issued under §7872(c)(1)(E) (*i.e.*, having a significant impact on tax liability).

b. Other Loans

The corporation-shareholder loan is more or less self-explanatory. Where the lender is the corporation, the deemed payment to the borrower will normally be considered a distribution to which §301 applies. This will be true regardless of whether the shareholder controls the corporation. Where a family-owned corporation makes a below market rate loan to a family member who is not a shareholder or who is a minority shareholder, will the deemed payment to the borrower be considered a constructive dividend to the controlling shareholder(s)? This would appear to be the result where the loan is made to someone other than a family member and where its purpose is to secure some benefit for the controlling shareholders. The deemed payment to the family member may also be regarded as a gift, however. The controlling shareholder(s) would then be subject both to income tax on the constructive dividend and to gift tax, as if the funds had first been withdrawn from corporate solution by way of a dividend and then given to the beneficiary.

What constitutes a tax avoidance loan is not discussed in the Conference Report. How does one distinguish a tax avoidance loan from an E-type loan? The report gives as an example of an E-type loan the making of a refundable deposit by a club member in lieu of payment of dues.[134] Had the money been invested at interest to generate the funds needed for payment of nondeductible dues, income tax would have been payable on such interest.

6. Coordination With The OID Rules

Section 7872(e)(8) provides that §7872 does not apply to any loan to which §483 or §1274 applies. Section 7872 applies principally to loans of money. It would not, therefore, ordinarily apply to a purchase money loan transaction where the seller receives the purchaser's debt obligation in payment for all or part of the sales price. What if the seller lends the money to the purchaser who then pays the amount borrowed to the seller in satisfaction of the purchase price, however? The section of the Conference Report relating to the OID and §483 rules seems to deal with this situation. The report states that the conferees do not intend that taxpayers be able to circumvent the 120 percent of AFR rule (the rate for imputing interest where interest of at least 110 percent of the AFR is not provided for) simply by coupling a low interest loan with a sale of property. If the seller agrees to lend the buyer the money with which to pay the sales price, charging interest at 100 percent of the AFR to avoid any adjustments under §7872, the loan will be treated as a purchase money loan subject to the 110 percent of AFR test and the 120 percent of AFR imputed interest rate of the OID and §483 rules rather than the 100 percent of AFR rule that applies to below-market interest loans.[135]

Comment: This raises an interesting problem. Assume the loan is a gift loan to the borrower, and that the property in question is "personal use property." Under the principle above, the loan is treated as a purchase money loan to which either §1274 or §483 applies. But, under the special rule of §1275(b), these sections will not apply to the obligor (the borrower); they apply only to the lender-obligee. Does §7872 then apply to the borrower?

Example (1): Husband and wife own a house which is not used by them as a principal residence. The house has a fair market value of $250,000. They plan to sell the house to their son for $250,000. They are willing to take in payment for the house Son's note for $250,000, payable in 120 equal monthly installments without interest. The house is personal use property. Assume that the long-term AFR is 10 percent. The note has OID of $104,791. (Present value of 120 monthly payments of $2,083 discounted at 12 percent compounded semiannually is $145,209; $250,000 - $145,209 = $104,791). Applying §1274 to the Son's debt instrument, the purchase price (imputed principal amount) paid for the house is $145,209. The difference between this and the fair market value of the Son's note is a gift.[136] The OID computed must be currently included in the obligee's income over the life of the debt instrument under §1272.[137] The Son, however, is not entitled to any interest deductions, since, as to him, §1274 does not apply and, as a result, §1273(b)(4) (relating to debt instruments issued for untraded property to which §1274 does not apply) provides that the note's issue price is the stated redemption price at maturity, *i.e.*, it has no OID. But may the provision of §7872 be applied here? It was suggested above that §7872 applies only to loans of money, but this is not specified in the statute. A purchase money loan is a "loan," in common parlance. While §7872 does specify that the section does

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

not apply to any loan to which either §1274 or §483 applies [138] (which would not seem to be necessary if §7872 applied only to loans of money), since §1274 and §483 do not apply to Son in the above example, the way seems open to treating the transaction, as to Son, as a term gift loan. In this case, using 100 percent of the AFR to discount the note, a small gift amount is computed. In addition, Son will be entitled to deduct interest each year under §7872(a)(1) at the 100 percent of AFR rate.

Example (2): Assume that Father lends Son $250,000, repayable in 120 equal installments without interest to be used to purchase a house (other than the Father's house). This is clearly a term gift loan to which §7872 applies. Since the "issue price" of the instrument is equal to its stated redemption price at maturity, there is no OID under §1273. But suppose Father and Son agreed to make provision for some interest — say 5 percent, raising the monthly payment from $2,083 to $2,652. The note would have OID of $68,240. This would be currently includible in Father's income and currently deductible by Son.[139] Applying §7872, to determine the amount of the gift from Father to Son, it is necessary to determine the difference between $250,000 and the sum of the present values of 120 monthly payments of $2,652 each using 100 percent of the AFR compounded semiannually. This is, roughly, $200,680.[140] The gift amount is, therefore, $49,320. Annual interest amounts to be included in Father's income (in addition to the OID computed above) are then computed under §7872(a)(1) and a like amount is allowed to Son as interest expense.

7. Exceptions

a. "De Minimis" Exceptions

The first "de minimis" exception applies to gift loans between individuals. Section 7872 does not apply to any day on which the "aggregate outstanding amount of loans between such individuals does not exceed $10,000." [141] The Conference Report clarifies that this "includes all loans between the lender and the borrower regardless of the rate of interest." [142] Thus, if Lender lends to Borrower $7,500 at interest above the AFR and makes a second interest-free loan of $5,000, the two loans are combined for purposes of applying this exception. Note also that the statute is phrased in terms of "loans between such individuals," not just from one to another. Thus, if Lender lends $7,500 to Borrower and, subsequently, Borrower makes a loan to Lender, the loans are combined for purposes of computing the $10,000 limit. This exception does not apply to any gift loan "directly attributable to the purchase or carrying of income producing assets." [143] If the recipient of a gift loan owns stock or securities, the question will arise as to whether the loan is "directly attributable" to the carrying of these assets. As to this, the Conference Report provides no enlightenment. It seems fairly clear, however, that the mere possession of income producing assets by the borrower will not automatically make the exception inapplicable. Something more, perhaps tracing, is required. If a father makes a gift loan to his daughter, who uses the entire proceeds to purchase an item of jewelry or a car, her ownership of interest producing assets will presumably not disqualify the loan as coming within the exception. Note, however, that the exception applies only where the outstanding balance of the indebtedness does not exceed $10,000. If, on any day, the balance exceeds this amount, §7872 applies with respect to the *entire amount* of the indebtedness (not just the amount in excess of $10,000). If the gift loan is a term loan, and on any day the outstanding indebtedness of the borrower exceeds $10,000, the exception no longer applies as to all subsequent days during the life of such term loan. This rule applies, however, in the case of a gift loan, only for purposes of determining the amount of the gift for gift tax purposes.

Example: On January 1, F makes a $5,000 interest-free gift demand loan to D. On September 1 of the same year, he lends D $7,000 to purchase a car. This loan is repayable in 36 monthly installments of $210 (reflecting interest of 5 percent). On the day after the monthly installment that reduces the principal amount of the term loan to $5,000, the loan meets the de minimis exception amount. Section 7872 no longer applies to any day thereafter (unless F makes some additional loans to D) for income tax purposes. For gift tax purposes, however, §7872 still applies to D's indebtedness to F. Assume these loans were made in 1985. As to the term loan, the gift tax consequences are determined in 1985. That is, this is gift in that year of the excess of $7,000 over the present value of the payments to be made under the term loan. The gift tax consequences of the $5,000 demand loan are based on the foregone interest accrued through December 31. This continues during the next year. Assume that D has paid off $2,000 of the principal amount of the term loan with the September installment. Section 7872 still applies to determine the gift tax amount with respect to the outstanding $5,000 demand loan. This will continue to be the case until the last installment of the term loan has been paid. On that date, the exception comes back into effect as to each day thereafter. On the other hand, on the day after the principal of the $7,000 loan has been reduced to $5,000, §7872 no longer applies to either loan for income tax purposes.

The second *de minimis* exception is for compensation-related loans and corporation-shareholder loans. Section 7872 does not apply (*i.e.*, no amounts are considered as transferred from the lender to the borrower and retransferred from the borrower to the lender as interest for any day during which the aggregate outstanding amount of loans between the borrower and lender does not exceed $10,000 *unless* a principal purpose of the interest arrangement is tax avoidance.

For purposes of this exception, again, all loans between the parties are aggregated. The Conference Report makes it clear that in the case of non-gift term loans, the deemed transfers from the lender to the borrower are treated as occurring on the later of the date on which the loan was made or the date on which the exception does not apply by reason of exceeding the $10,000 limit. For example, if an employer makes a compensation-related loan to an employee on April 1 (with no other indebtedness outstanding) of $9,000, and a $2,000 compensation related loan to the same employee on April 20, the parties are treated as if an $11,000 compensation-related loan had been made on April 20. In the event of a reduction of a non-gift compensation

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

or corporation-shareholder term loan below $10,000, the exception does not apply to the days after the reduction until the term loan has been paid in full. The lender is treated as receiving from the borrower, and the borrower is treated as retransferring to the lender, the foregone interest on the remaining outstanding balance.

b. Special $100,000 Gift Loan Exception

The third exception is provided by §7872(d), (Special Rule for Gift Loans). In the case of a gift loan *directly between individuals, the amount treated as retransferred by the borrower to the lender* as of the close of any year shall not exceed the borrower's "*net investment income*" for such year. This limitation does not apply, however, to any loan for any day on which the aggregate outstanding amounts of loans between the borrower and lender exceeds $100,000. "Loans," for this purpose, means the principal amount.

"Net investment income" is defined in §7872(d)(1)(E) in elaborate detail. Generally it appears that, where the borrower is engaged in any investment activities, the determination of net investment income will involve numerous technical problems.

The first such problem comes from the general rules that "net investment income" has the meaning given the term by §163(d)(3).[144] This rule, in itself, will require a detailed analysis of the borrower's income other than that derived from the conduct of a trade or business.

The net investment income limit is somewhat softened by the provision that, where such income does not exceed $1,000, it shall be considered to be zero.[145]

Considerable complications may arise, however, from the additional provisions that, in determining net investment income, there is to be treated as interest received for the taxable year "any amount which would be included in the income of such person [the borrower] for such year by reason of §1272 *if such section applied to all deferred payment obligations* (emphasis supplied)." If the borrower is the holder of any debt instruments or has loaned money or sold property, a computation of "quasi-OID" will have to be made.[146] The committee report "anticipates" that regulations will prevent the abuse of these rules through deferral or other distortion of the borrower's investment income, and will deal with situations wherein the borrower can control the timing of the receipt of income (*e.g.*, payment of dividends where purpose is to defer the receipt of investment income). The regulations will also deal with the situation where either the borrower or the lender reports income on a fiscal year basis.[147]

This special exemption for $100,000 of gift loans directly between individuals does not apply where the principal purpose of the interest arrangement is tax avoidance. Where parents (as noted above, husband and wife are treated as one person) make a gift loan to their children to ease their financial burdens, the funds can be used for almost any purpose except investment.

Comment: Congress did not intend to except investment. Nor did they intend to except from §7872 gift loans made as an alternative to revocable or short-term trusts for the benefit of the lender's family members, effectively shifting income and defeating assignment-of-income principles.

The conference committee, foreseeing one possible avoidance technique, specifically referred to the making of a loan bearing adequate (AFR) interest coupled with a gift of funds with which to defray the interest charges. In such a case, it is anticipated that regulations will provide that the amounts to defray interest will be added to loan principal for §7872 purposes, and that the transaction will be treated "in accordance with its substance."[148]

8. Coordination with §482

The situation may arise where §7872 conflicts with §482. Under §482, where one commonly controlled equity makes a loan or advance to another at an interest rate which is not equal to an arm's length rate (deemed, under Regs. §1.482-2(a)(2)(iii), unless established otherwise, to be 120 percent of the AFR) the lender's gross income is increased (and the borrower is allowed a deduction) equal to the excess of the arm's length rate over the amount of interest charged (if any). Section 7872 applies to all taxpayers: individuals, corporations, and other entities (unless specifically excepted. Where, in a typical §482 case, a U.S. corporation lends money to (or sells goods on credit to) its controlled foreign subsidiary without interest or at an interest rate that is less than an arm's length rate, how are §§7872 and 482 to be applied? If §7872 is applied first, how is §482 then to be applied, if at all?

Example: Corporation A, a U.S. corporation, on January 1, 1985 lends to its wholly owned foreign subsidiary $1,000,000 repayable without interest in two $500,000 installments on December 31, 1985 and December 31, 1986. Presumably, this cannot be a gift loan. Assume a short-term AFR of 10 percent. Under §7872(b), A is treated as if it transferred $135,135 to its subsidiary on January 1, 1985. In addition, the foreign corporation is treated as if it had issued a debt instrument with OID of $135,135. This amount is taken into account by A under §1272 over the two-year life of the loan. A similar deduction is allowed to the foreign entity. But 100 percent of the AFR still does not equal an arm's length interest charge. Is §482 then to be applied to increase A's income to reflect additional 2 percent in interest? Suppose §482 is first applied, increasing A's income to reflect a 12 percent interest charge on the outstanding balance of the indebtedness ($1,000,000 the first year and $500,000 the second year). Does this effectively take §7872 out of the picture entirely? If §7872 is applied first, there is a deemed contribution by A to the subsidiary's capital, (increasing A's basis in its stock, of $135,135. This does not occur when §482 is applied. Regulations may provide some answers here.

[144] *See* §467(d) defining a "§467 rental agreement." While §467 also applies to agreements for the rendition of services, the statutory provisions all relate to the use of property. Section 467(g) provides that regulations are to be issued containing rules "comparable to the rules of §467(a)(2)" to be applied in the case of payments for services which meet the requirements of §467(d). Section 467(a)(2) requires that the interest element of any unpaid deferred payment be taken into account currently (*i.e.*, as in the case of OID) by both parties to an agreement.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

[2] "Stepped rent," increases from one lease period to another.

[3] While the statute does not specifically so provide, as did the Senate bill the regulations will undoubtedly provide that §467 does not apply to any payments which are subject to §§83, 267, 404, 404A, or 706(a).

[4] *See* footnote 1 and 3, *supra.*

[5] §467(d)(1).

[6] Thus, if the agreement calls for rent of $X per month (or other lease period) payable at the beginning (or close) of each month (or other lease period) throughout the agreement's life, it is presumably not a §467 rental agreement provided that payment for the use of property in one calendar year is not deferred until after the close of the following calendar year. A lease covering more than two calendar years which provides for a single payment at the termination of the lease term is, therefore, a §467 agreement. If the parties specify that no rent is allocable to the first year (a reasonable rent holiday), while the agreement may not be a §467 agreement by reason of rent deferral, it would be a stepped rent agreement and, therefore, a §467 agreement.

[7] §467(d)(2).

[8] §467(a)(1).

[9] §467(a)(2). This provision, as indicated in the examples below, is somewhat ambiguous. If rent allocated to Year 1 is not payable until Year 3, for example, while no amount of the Year 1 rent deferred remains unpaid at the close of Year 3, the statute seems to require that interest on such deferred rent be computed and included in income in Year 3 for any period during such year that the rent remains unpaid.

[10] §467(b)(1)(A) and (B).

[11] The present value of $25,000 payable in two years discounted at 12 percent compounded semiannually. Semiannual compounding would appear to be required even where the lease period is one month, *i.e.*, where rental for the first three months of Year 1 is deferred until some time after the close of Year 2. The present value of each month's deferred rent is computed on this same basis (12 percent compounded semiannually).

[12] This interprets §467(a)(2) to require the accrual of interest on any deferred rent taken into account in a prior year which remains unpaid for any length of time during the year. This interpretation carries out the purpose of the statute. Regulations will undoubtedly make this clear.

[13] §467(b)(2). Rent leveling applies to (1) §467 agreements where the parties have failed to allocate the rent payments to the lease period(s), irrespective of any tax avoidance purpose, and (2) "disqualified" leasebacks and long-term agreements, *i.e.*, leasebacks and long-term agreements found by the Commissioner to have a tax avoidance as a principal purpose.

[14] §467(e)(1). Section 467(e)(4) provides for an interest rate of 110 percent of the AFR to be used in "determining present value and interest under subsection (a)(2)." This rate, however, is not specified as the rate to be used in determining the constant rental amount under §467(e)(1). In a stepped rental agreement, the higher the rate used to determine the constant rental amount, the lower the constant rental amount. Since interest on unpaid leveled rents is accruable under §467(a)(2), it would be surprising if some rate other than 110 percent of the AFR were used to determine the constant rental amount. Under both the House and Senate versions of provisions relating to deferred payments for the use of property, interest imputation was computed at 120 percent of the AFR.

[15] *I.e.*, taken into account by both parties to the lease under §467(a)(1) regardless of their respective methods of accounting for tax purposes.

[16] §467(a)(2).

[17] §467(b)(3)(B).

[18] §467(b)(3)(A).

[19] Conference Report, H.R. Rep. No.98-861, 98th Cong., 2d Sess. 892 (1984). (Hereinafter referred to as C. Rep.).

[20] §467(e)(2).

[21] §467(e)(5).

[22] Section 467(e)(3)(A) provides a schedule of the statutory recovery periods identical to those applicable for purposes of §168.

[23] §467(b)(4)(A).

[24] §467(e)(3)(B).

[25] §467(e)(6), except as may be provided by regulations. The length of the lease term is necessary not only to determine whether the lease is a long-term agreement, but also to apply the proper AFR. Section 467(e)(4), providing the discount and interest rate to be applied for purposes of §467(a)(2), provides that the AFR to be used is that "in effect at the time of the agreement is entered into with respect to debt instruments having a maturity equal to the term of the agreement." Thus, if the lease has a 15-year term, present values of any deferred rental payments are computed using the long-term (more than nine years) AFR, even though the deferral in question is only for two years. The long-term rate is invariably higher than the short and mid-term rates.

[26] §467(b)(4)(B).

[27] §467(b)(5).

[28] §467(b)(5)(A)-(D). What circumstances may be relevant is discussed in C. Rep. at 893-894.

[29] §467(c).

[30] §467(c)(1)(A) and (B).

[31] §467(c)(2).

[32] §467(c)(2)(B).

[33] §467(c)(3).

[34] §467(c)(5). Paragraph (5) specifies that the transferee in any transaction excepted under §467(c)(5)(A), (*e.g.*, a nonrecognition transaction — *see* §1245(b)), who has a transferred basis in the property (as defined in §7701(a)(43), added by Act §43(a)(1)) shall be treated in the same manner as the transferor.

[35] §467(f). These are to be supplied by regulations.

[36] §467(g). See footnotes 1 and 3, *supra.*

[37] H.R. 4170. *See* H.R. Rep. No. 98-432, 98th Cong., 2d Sess. at 1249—1250. These provisions appear in §1275(b) as enacted by §41 of the bill.

[38] H.R. Rep. No. 98-432, *supra*, at 1250. The report computes the present value of $100,000 as $76,745 when discounted at 12 percent compounded semiannually. The correct amount would appear, unaccountably, to be 13.68 although the AFR is stated to be 10 percent and 120 percent of this rate is to be used in determining the OID. A similar error is made in the second computation deriving the OID of the instrument deemed to have been issued on December 31, 1986.

[39] This the correct present value of $100,000 discounted at 12 percent compounded semiannually. (89 x .06 = 5.34; 94.34 x .06 = 5.66; 94.34 + 5.66 = 100).

[40] Under the Senate amendments, provisions relating to deferred payments for the use of property and services were removed from §1275 and enacted in a separate section of the Act as Code §467. In both the House and Senate versions, a number of specific provisions were made relating to payments for services. These were all removed, and the application of §467 to payments for services is effected solely by §467(g). Section 467(a) is a brief, one sentence paragraph stating that rules comparable to those of §467 are to be set forth in regulations dealing with payments for services. The Senate version of §467 is explained in S. Rep. No. 98-169, 98th Cong., 2d Sess. at 260-3 (hereinafter S. Rep.).

[41] §467(d) enacted by §74 of title I of the Deficit Reduction Tax Act of 1984.

[42] §467(a) as enacted by the Senate before amendment by the Conference Committee.

[43] *See* C. Rep. at 890.

[44] Is "consideration received for the use of property" different from "the amount to be paid as rent under the agreement" as the latter language is used in §467(d)? Suppose the lessee allows the lessor to continue to occupy a portion of the premises rent-free. Is this consideration "*received by the lessor*?" It clearly is not "an amount to be paid as rent."

[45] Section 467(a) provides that, in the case of the lessor and lessee in a §467 rental agreement, "there shall be *taken into account*. . . for any taxable year" the amount of rent which accrues under §467(b) plus interest for the year on any amount *taken into account* for prior taxable years which are unpaid.

[46] *Id.* "The Senate amendment requires that both the rent and interest elements of a deferred rent transaction be included in the lessor's income and deducted by the lessee anually, unless rent is paid before the end of the year following the calendar year in which the property is used." The Conference Committee voiced no objection to this portion of the Senate amendments.

[47] This is effected by requiring accrual of the constant rental amount.

[48] That is, if the agreement is a "disqualified leaseback or long-term agreement," or if the parties fail to allocate the rentals to the lease periods covered by the lease.

[49] §467(a)(2). While the $50,000 allocated to January 1 — June 30, 1986 is not payable until June 30, 1987, and is, consequently, accruable only to the extent of its present value under §467(b)(1)(B) since it is not to be paid until after the close of the period (*i.e.*, taxable 1986 or the lease period ending June 30, 1986, whichever is the proper meaning of "period" as used in the statute) no interest on the deferred amount is accruable under §467(a)(2) since it was not "taken into account. . . for prior taxable years."

[50] C. Rep. at 892.

[51] *See Legislative History, supra.*

[52] §467(e)(2).

[53] C. Rep. at 892. This passage of the report also points out that "The conferees do not intend that a de minimis ownership interest be deemed an interest for this purpose."

[54] For this purpose related person has the meaning given by §168(d)(4)(D).

[55] §467(b)(4)(A).

[56] *See* §467(e)(3)(A).

CHAPTER 23

PREMATURE ACCRUALS

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

I. Economic Performance Limitation on Accrual of Deductions [Act §91(a)] — Code Section 461(h)

A. Introduction

1. Statutory and Judicial Background

Under §446(a), there are two accounting methods which are generally applicable for federal income tax purposes — the cash receipts and disbursements method, and the accrual method. The cash method allows a taxpayer to recognize income when it is actually or constructively received and deduct expenses when they are paid.[1] Under the accrual method, income becomes taxable when all events have occurred which fix the right to receive income and the amount can be determined with reasonable accuracy.[2] Expenses are deductible in the taxable year in which all events have occurred which determine the fact of liability and the amount can be determined with reasonable accuracy. The deduction of expenses of an accrual basis taxpayer equals the face amount of the accrued expense.

A number of cases have disallowed deductions for estimated future expenditures, when the taxpayer has an obligation to incur costs to perform certain activities in the future, but those expenditures may not be estimated with reasonable accuracy. For example, in *Spencer, White & Prentis, Inc. v. Comr.*,[3] a subway construction contractor was not allowed to deduct the estimated cost to restore damaged property when the work had not been performed. Recent court cases have allowed taxpayers to deduct expenses which they have an obligation to perform in some later year if the taxpayer can reasonably estimate the cost to perform that obligation. One taxpayer has been allowed a deduction for reasonably estimated surface mining reclamation costs which the taxpayer was obliged to perform even though it would not actually perform those activities until a later year.[4] In addition, when an employer does not contest its responsibility to an employee under a workmen's compensation law, the employer has been allowed a deduction for the reasonably estimated amount of liability even though the medical expenses may not be paid until a future time.[5] Generally, courts have allowed an estimate based on industry-wide experience or on the experience of a taxpayer as reasonable. The Ninth Circuit Court held the amount of a reserve for anticipated liabilities may be estimated by aggregating the amount of liability anticipated rather than estimating each individual claim.[6]

Taxpayers cannot generally deduct a contingent liability because all events necessary to establish the fact of liability have not occurred. Nevertheless, a taxpayer was allowed to accrue its "contingent liability" to fund benefits under a negotiated supplemental unemployment benefit plan.[7] Under the terms of the agreement, the taxpayer was required to pay the amounts at some future time as required to either a supplemental unemployment benefit plan or to a vacation benefit plan. All amounts of the "contingent liability" were required to be paid and no amount would revert to the taxpayer. The fact that the liability was payable to a group of employees rather than a specific individual and that the time for the future payment was indefinite did not bar accrual of the expense under the all events test. Generally, the length of time between accrual of an expense and the taxpayer's performance does not affect its accrual.

There have been several instances where a court held that the interval between the accrual of an expense and its payment was too long. In *Mooney Aicraft, Inc. v. U.S.*,[8] the court noted that the likelihood of payment decreases as the time between accrual and payment increases.

The IRS takes the position that there must be a current liability to allow deduction under the all events test.[9] In addition, if there is any contingency as to payment of the obligation (other than the obligor's ability to pay), deduction would not be allowed until that contingency is removed. The Service believes that the amount of a liability is determinable with reasonable accuracy only when the exact amount of liability can be calculated based on presently known or knowable factors. For example, the Service has held that a strip miner could not deduct estimated reclamation expenses because it did not know, and it was not possible to know, the amount of the expenditure since the work was to be rendered by the taxpayer and the taxpayer did not have a contract with the third party to perform these services.[10]

The 1954 Code as originally enacted contained a provision which would allow accrual method taxpayers to establish a reserve for estimated business expenses and deduct reasonable additions to that reserve.[11] Congress repealed this version in 1955, primarily to prevent sizable losses of revenue.[12]

2. Legislative Background

Congress decided to defer to the time at which taxpayers may take deductions. Congress felt that the accrual of the amount of a deduction in a year prior to the time it would be paid should reflect time value of money.[13] Both Congressional tax committees noted that allowing a current deduction for an amount to be paid in the future overstates the true cost of the expense. The deduction is overstated by the amount which the estimated value of the expense exceeds the present value of that estimate. Congress was

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

concerned about the potential revenue lost from these "overstated" deductions. In addition, the failure of pre-TRA 1984 law to take into account the time value of money had become a cornerstone for a variety of tax shelters. For example, a tax shelter partnership could legally obligate itself to a person who would perform research and development at a future time. In this situation, the partnerships claimed a current deduction for the undiscounted amount of the cost to be incurred.

Congress recognized that it could allow a taxpayer a deduction either for the full amount of the liability when there was economic performance or a deduction for the discounted value of the liability at some earlier time. Congress felt that determining discounted values for different types of future expenses could be extraordinarily complex and extremely difficult to administer. An example of such complexity would occur when liabilities previously deducted were overstated or understated because they were eventually satisfied at an amount different from that originally projected. To avoid the complexity of another system of discount valuation, Congress decided to allow the accrual of expenses only when economic performance occurs.

B. Overview

1. Summary of New Provision

For taxpayers who use the accrual method of accounting, the all events test which establishes liability for such amount will not be satisfied until economic performance of the liability has occurred. The general principles determining economic occurance are discussed *infra*.

The economic performance requirement will not apply to items to which other sections of the Code already apply. §461(h)(5). For example, the deductions for additions to a reserve for bad debts (§166), accrual of vacation pay (§463), and qualified discount coupons (§466). Though economic performance to employees occurs as the employer renders services, liability created by a qualified pension, profit-sharing or stock bonus plan or other deferred compensation arrangement under §§404 or 404A are deductible under those sections. The economic performance requirement will not apply to contributions to deferred compensation, deferred benefit, and funded welfare benefit plans so that the changes included in other portions of the Act will control the deduction of those contributions.

2. Effective Date

Code §461(h) will apply to amounts for which a deduction would have been allowable under prior law after July 18, 1984.[14] Thus, in general, amounts incurred on or before July 18, 1984, are subject to the pre-TRA 1984 all events test unmodified by the economic performance requirement. Those amounts incurred on July 19, 1984, and thereafter, may be deferred for accrual basis taxpayer's if economic performance has not occurred.

Note: The effective date provisions as drafted in the original Act did not conform with the intention of the conferees as expressed in the Conference Committee Report.[15] Section 32 of House Concurrent Resolution 328 altered the effective date provisions to conform to the conference committee agreement.

A taxpayer may elect to have the amendments made by §461(h) apply to amounts incurred on or before July 18, 1984.[16] An election under this paragraph will be considered a change of accounting method for purposes of §481 of the Code. The change in method of accounting shall be treated as initiated by the taxpayer with the consent of the Secretary of the Treasury.[17] The period over which any §481 adjustment shall be spread is reduced from ten years to three years.[18] The effect of this election is to defer a deduction to a later period.

The Conference Committee Report indicates that this election will apply to each type of deductible item and not to all items in the taxpayer's income.[19] With substantial amounts, an election may provide significant savings to taxpayers.

This amendment shall be treated as in effect to the extent necessary to carry out any amendments made by §91 which take effect prior to §461(h).[20]

C. Detailed Analysis

1. General Rule

Section 91(a) of the Act adds subsection (h) to §461 of the Code. This subsection provides that in determining whether an amount accrues during a taxable year, the all events test shall not be treated as met any earlier than when economic performance occurs with respect to such amount.[21] For purposes of this section the all events test is satisfied for an item if all events have occurred which determine the fact of liability and the amount of such liability can be determined with reasonable accuracy.[22] The general principles which determine when economic performance occurs are as follows:

(1) If a taxpayer's liability arises from services which another person provides to him, economic performance occurs as that person provides the services, §461(h)(2)(A)(i);

(2) If the taxpayer's liability arises when another person provides property to him, economic performance occurs when that person provides[23] the property, §461(h)(2)(A)(ii);

(3) If the taxpayer's liability arises from his use of property, economic performance occurs as the taxpayer uses the property, §461(h)(2)(A)(iii);

(4) If the taxpayer's liability requires him to provide property to another person, economic performance occurs as the taxpayer provides such property, §461(h)(2)(B);

(5) If the taxpayer's liability arises from his duty to provide services to another person, economic performance occurs as the taxpayer performs such services, §461(h)(2)(B);

(6) If the taxpayer has a liability to a person which arises from a workers compensation act or from any tort, economic performance occurs as the payments are made to such person, §461(h)(2)(C); and

(7) If the taxpayer's liability arises from any other cause, the Treasury Department has the authority to prescribe regulations to determine when economic performance occurs, §461(h)(2)(D).

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Comment: The statute does not address the situation where both the taxpayer and the service or property provider are both exchanging non-cash items (*i.e.*, bartering property for services). If performance by the parties is not simultaneous, the taxpayer would prefer that economic performance by one party would be sufficient to allow accrual of a deduction.

Comment: It is not clear from the statute when economic performance occurs with respect to an individual if the responsible party pays a third party (typically an insurance company) a lump sum with the third party agreeing to cover the responsible party's liability. The person to whom payment is made in §461(h)(2)(C) could be the injured party or the party who will make payment to the injured party. If the Treasury regulations allow deductions only as payments are made to the injured party, there may be a disincentive to have the liability for structured long-term settlements assumed by third parties.

The economic performance requirement will only affect taxpayers who use the accrual method of accounting, not those on the cash receipts and disbursements method. It does not put accrual method taxpayers on the cash method for expenses for which economic performance is delayed. As is currently permitted, expenses may be deducted on the accrual method before they are paid as long as the requirements for accrual are met. The addition of this requirement to the all events test, economic performance, increases the complexity of determining when an amount is properly accruable. There are, however, several exceptions to this rule which should help decrease its applicability.

2. Exception for Existing Statutory Treatment

Section 461(h) contains specific exceptions to the economic performance rule for the deduction of certain expenses which are governed by specific provisions of the Code. Those sections of the Code which deal with a deduction for a reserve for bad debts,[24] vacation pay,[25] and discount coupons [26] are not covered by the economic performance requirements. In addition, any provision of the Code which specifically provides a deduction for a reserve for estimated expenses is still effective.[27]

3. Exception for Recurring Items

The conferees added an exception to the economic performance rules to avoid disrupting normal business and accounting practices and imposing undue burdens on taxpayers.[28] That provision waives application of the economic performance test if an item meets the following four requirements:

> (1) The item meets the all events test (as defined above), without regard to economic performance, during the year;
>
> (2) Economic performance of the item occurs within a reasonable period after the close of the taxable year, but no more than 8½ months after the close of the taxable year of deduction;
>
> (3) The item is recurring in nature and the taxpayer consistently treats items of this type as deductible in the year in which the all events test is met; and
>
> (4) Either (1) the item is not a material item or (2) accrual of the item in the taxable year will result in a more proper match of the deduction against income than deducting such amount in the year that economic performance occurs.[29]

The exception does not apply to workers' compensation or tort liabilities.[30]

a. Recurring and Consistent Treatment Exception

In determining whether an item recurs, a taxpayer should consider the frequency with which the item and similar items occur. If the taxpayer is starting up a new trade or business, it may consider the frequency with which new items are expected to be incurred. The conferees indicated that a new type of expense or expense that does not recur every year is not necessarily excluded from this exception.[31]

The consistency of reporting of an item should consider the Federal income tax reporting. The fact that this is a new type of expense should not necessarily preclude a taxpayer from using this exception.

b. Material Item Exception

There are two major considerations in determining if an item is material for purposes of the recurring item exception. The first consideration is the size of the item. A taxpayer should compare the size of an item to its income and expenses and the size of the item in absolute terms.[32] Secondly, the financial statement treatment of an item must be considered in determining if an item qualifies for the exception.[33] An item may be immaterial for financial statement purposes, but still be material for purposes of this exception.

The materiality of an item that is directly related to an activity will be compared with that activity and not all the activities of a taxpayer. Often, for financial statement purposes, materiality will only be addressed from the view of the entire enterprise. However, the materiality of an item of overhead expense that relates to several activities of a taxpayer will be compared with the aggregate amount of those activities.[34]

> *Example*: An item of expense may be immaterial for purposes of financial statements which combine the results of affiliated corporations (*i.e.*, consolidated financial statements). The taxpayer must still consider the materiality of the item when compared with the separate financial statements.

Regulations interpreting the materiality exception will consider materiality at both the entity and owner level for pass-through entities (*i.e.*, partnerships, trusts, estates, and S corporations). Thus, an item may be immaterial at the partnership level, but may be material at the partner level. If an item is material, then the recurring item exception will not be available unless the item qualifies under the proper matching alternative.

> *Example*: An individual may invest in an accrual method partnership which makes a special allocation to the partner. The item which is specially allocated may not be material as to the partnership but may be material as to the partner.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The conferees indicated that they did not want the Service to apply this rule in a manner which would impose a significant additional reporting burden on partnerships and other flow-through entities in nonabusive situations.[35]

The materiality standard set forth for this section is not to be used for other sections of the Code. Specifically, this standard should not be used in determining material items for purposes of false and fraud statement provisions of the Code in §7206(1). In addition, an item which is not material for purposes of this section may still be material for purposes of an accounting method change under §446(c).

c. Proper Matching of Income and Deductions

The basic principle of the matching alternative is for a better pairing of income and expense by use of the recurring item exception than use of the economic performance rules. In determining whether there is a proper matching of income with expenses, generally accepted accounting principles are an important, but not a dispositive, factor.[36] Costs that are directly associated with the revenue of a period are properly allocable to that period.[37]

Example: A taxpayer may have entered into a contract which requires it to perform certain services after it has received the revenue from the contract. For example, an automobile dealer may sell a new car with an obligation on his part to perform certain maintenance services on the car after it has been driven 1,500 miles without charge to the purchaser. If the services are not performed prior to the end of the taxable year and the amount of the dealer's liability can be reasonably estimated, the amount of that liability may have met the all events test. Proper matching of revenue and expense would indicate that the expense should be deducted in the year in which the automobile is sold. Thus, even though economic performance will not occur until the following taxable year, accrual of the expense in the current taxable year may be appropriate.

Example: If a commission agent has an agreement which may require collection activities in a year after the sales commission are collected, economic performance as to that expense may not occur until the collection activity is performed. Nonetheless, there is a better matching of revenue and expense if the amount of the collection activity is deducted in the year in which the income is collected.

Example: If income from the sale of goods is recognized in one year, but the goods are not shipped until the next year, the costs of shipping those goods are more properly matched against the revenue in the year the goods are sold.[38]

The conferees indicated that advertising expenses and other such costs which cannot practically be associated with the income of a particular period may be assigned under generally accepted accounting principles to the period in which they are incurred. They intend that the matching requirement will be met with respect to advertising expenses if the period to which the expenses are assigned for income tax and financial statement purposes are identical.[39]

Since the matching test is an alternative to the materiality test, a taxpayer may use the recurring item exception if an item is determined to be immaterial, regardless of whether there is proper matching against income. Likewise, if an item is more properly matched against income in a period prior to economic performance, it is insignificant whether the item is material.

4. Economic Performance In Special Cases

a. Interest

The economic performance of interest occurs with the passage of time rather than as payments are made. Interest incurred by accrual method taxpayers will be deductible on a constant interest basis with respect to debts incurred in transactions occurring after June 8, 1984. Interest on obligations issued on or prior to that date are not subject to the statutory prohibition on noneconomic accruals of interest and the conferees intended no inference about interest accruals which are inconsistent with the principles of Rev. Rul. 83-84.[40]

b. Nuclear Waste Disposal Payments

The conferees instructed the Treasury Department to issue regulations which provide that economic performance of required payments under the Nuclear Waste Disposal Act of 1982 will occur as the payments are made to the federal government.[41]

c. Natural Gas Refunds

Recently some regulated natural gas utilities have received refunds for overcharges by their suppliers. Generally, the utility commissions which regulate the utility will condition the refund on the utility passing the refund through to its customers within 8 to 12 months after receipt. Under Rev. Rul. 63-182,[42] the utility can deduct the amount to be refunded to customers in the year in which the refund is received even though the amount is not refunded to customers until the following taxable year. The conferees intend that the Treasury will have the authority to allow utilities to deduct refunds from suppliers in the year in which they are received if the refunds to its customers meet the following qualifications. The refunds must be passed through to customers within a reasonable time in the following taxable year and that an adequate interest is paid to the consumers and is includable in their income.[43]

Comment: The language in the Conference Committee Report is somewhat obscure as to what should be the definition of a "reasonable time." It is not clear whether this language is intended to delete the 8½ month requirement for economic performance of these obligations. The report indicates that it sometimes takes 12 months for a utility to refund amounts to its customers and a refund near the end of a taxable year might not be refunded to customers within 8½ months. Presumably this issue will be clarified by Treasury Regulations.

d. Compensation for Services Rendered

Economic performance of liabilities to employees generally occurs as the employee renders service to the employer. If, however, compensation is paid in a year after there is economic performance, the existing provisions of the Code, as amended by the Act, which apply to deferred compensation, deferred benefits and funded welfare benefits will govern.[44]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Vacation pay may be deducted by a taxpayer either under §162 or under §463 if an election has been made. If a taxpayer was deducting expenses under §162, the provisions of §461(h) may delay the deduction until the employee renders the sevices to which the vested vacation pay relates. If such a taxpayer elects application of §463 of the Code for its first taxable year ending after July 18, 1984, the opening balance of the account containing the taxpayer's liability for vacation pay must be determined as if the taxpayer had maintained a vested vacation pay account in his prior taxable year.[45] Otherwise the balance in this account would have been the largest closing balance the taxpayer would have had in the three taxable years immediately preceding the year of election. Depending on a taxpayer's liability for vested vacation pay in the prior three years, it may be advantageous to make a §463 election under the transition rules.

5. Reliance on Existing Rulings and Regulations

There are rulings which may be inconsistent with the post-TRA 1984 economic performance standard. The conferees expect that the Treasury Department will review these materials to determine if they are consistent with the economic performance doctrine. Until new regulations or rulings are issued, taxpayers may only rely on them to the extent that they are not inconsistent with the economic performance doctrine and the recurring item exception. In addition, taxpayers may rely on present law for agreements with the IRS (for example, under §§446 or 7121 or under Rev. Proc. 80-51 [46]) until new regulations are issued.[47]

6. Contested Liabilities

The economic performance rules will apply to contested liabilities and to payments to trusts under §461(f). If the payment to such a trust relates to a worker's compensation or tort liability, economic performance occurs only as required payments are made to a person. Payment to the trust will no longer accelerate the deduction since payment to the trust does not discharge the taxpayer's liability to the claimant.[48] However, for other types of liability, a §461(f) trust arrangement may be effective.

Example: A taxpayer is contesting the amount which must be paid upon the delivery of a manufactured item, the event upon which economic performance depends, delivery of the merchandise, has already occurred. The all events test with respect to that liability is also satisfied since the fact of liability is not disputed (merely the amount) and the amount placed beyond the control of the taxpayer is readily determinable. Thus the accrual basis taxpayer should still have a deduction for the amount placed beyond his control.

7. Burden of Proof

The conferees indicate that compliance with this provision should not impose substantial new reporting burdens on taxpayers. Unless there are unusual circumstances, the existence of a valid contract requiring a person to provide property or services by the end of the taxable year (or within 8½ months of the end of the taxable year for recurring items) will establish compliance with the economic performance standard for that expense.[49] Thus the burden of proof on this issue will shift fairly quickly to the Service to prove that there is no economic performance. In addition, in the case of items incurred by foreign corporations,[50] a more lenient standard may be appropriate. The ability of a taxpayer to obtain information from its affiliate, especially if it owns only a small portion of the affiliate, may be limited. The conferees expect that Treasury regulations will determine that economic performance has occurred if the best available evidence indicates that it has occurred.[51]

II. Estimated Mining and Solid Waste Deductions [Act §91(b)] — Code Section 468

A. Background

1. Present Law

The Surface Mining Control and Reclamation Act of 1977 [52] and similar state laws impose specific reclamation requirements on surface mine operators. These mine operators must guarantee their compliance with the statutory requirements by posting a bond or otherwise proving their financial responsibility. In addition, federal and state laws now require reclamation of land used for the disposal of solid, liquid or hazardous waste.[53]

Prior to 1978, several courts allowed surface mine operators to accrue and deduct the estimated expenses of reclamation as mining operations progressed.[54] In 1978 the IRS issued a private letter ruling which stated that reclamation expenses were not incurred until the year in which the taxpayer renders the work or enters into a binding contract for someone to perform the work.[55] Notwithstanding the Service's position, the Tax Court later held that surface mining reclamation costs that could be estimated with reasonable accuracy and properly accrued.[56]

2. Legislative Background

In 1982 legislation was introduced in the House which would have allowed taxpayers to deduct the estimated cost of surface mining reclamation over the life of the mine as minerals were extracted.[57] Similar bills had been introduced in the Senate in the 97th and 98th Congresses.[58] In hearings on those bills, the Treasury Department testified that *Ohio River Collieries* was incorrectly decided and that the all events test does not permit the accrual of estimated reclamation costs.[59] The Treasury Department advised that a current deduction for future estimated expenses did not consider the time value of money. Accordingly, these proposals would allow taxpayers too large a deduction for these expenditures. Code §461(h) enacted in the TRA of 1984 would have required that the deduction for reclamation expenses would only be allowed as reclamation activities were performed.[60] The Senate Finance Committee believed that more liberal rules were appropriate for the deduction of statutorily mandated reclamation and closing costs associated with mining and the disposal of solid, liquid or hazardous waste.[61]

B. Overview

1. Explanation of New Provision

A taxpayer may now elect to deduct an estimate of mine and waste disposal site reclamation and closing costs associated with a particular site ("the reserve property") as required by certain federal and state statutes prior to

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

economic performance of the reclamation activities. The amount of the deduction allowed in any taxable year equals the current reclamation or closing cost allocable to the portion of the property disturbed during the year or the amount of production from a property or the amount of a property's capacity which was used. There are certain limitations on annual deductions to make sure that the cumulative deductions do not exceed the actual cost to reclaim or close a property. Hazardous waste disposal sites to which the Comprehensive Environmental Compensation and Liability Act of 1980 apply are excluded from this provision.

The amounts expended for qualified reclamation and site closing activities, allocable to land disturbed or units of production or capacity, subsequent to the date of election, are deemed withdrawn from the applicable sinking fund in the year paid. The amount paid for reclamation or closing activities for a reserve property which exceeds the sinking fund balance for that property is deductible in the year paid. The balance of each reserve property fund is recaptured (*i.e.*, included in taxable income) when reclamation of the parcel to which deductions were claimed is substantially completed. If the balance in a site reclamation or closing sinking fund is in excess of the amount reasonably necessary to reclaim or close all portions of any property to which the fund applies, that excess will be included in the taxpayer's income.

A taxpayer may revoke his election to deduct these expenditures in advance payment of the cost, but the balance of the site reclamation or closing fund must be included in income in that tax year and there may be no new election as to that property. The sale or other disposition of a mining or waste disposal site prior to the completion of site reclamation or closing costs will be treated as substantial completion of the reclamation or closing. A partial disposition of a site will result in partial inclusion of the fund balance in the operator's income.

2. Effective Date

This provision applies to reclamation and closing costs which under prior law would have been deductible after July 18, 1984.[62] The Senate Finance Committee indicated that the election should only apply to production or capacity used after July 18, 1984.[63] The election will apply only to the incremental reclamation and closing costs for production or use after July 18, 1984 which have not been deducted previously.

If, on March 1, 1984, a taxpayer was regularly computing his deduction for mining reclamation activities under a current cost method of accounting as allowed by *Ohio Collieries* and other cases, the liability for land disturbed before July 18, 1984 shall be treated as having been incurred on the date the land was disturbed.[64] Accordingly, the operator will not be able to obtain the benefits of this provision for portions of property disturbed before enactment of the Act.

If a taxpayer has a fixed price supply contract entered into before March 1, 1984, which has not been extended or renegotiated, the provisions of this section will not apply to minerals extracted from the property which are sold pursuant to the contract.[65] However, if the operator was using the current cost method of accounting for reclamation and closing costs, deduction for those costs will be allowed as the land is disturbed. Minerals are sold on a fixed price agreement if the price is determined strictly in accordance with a formula which was fixed as of March 1, 1984. The agreement may not directly or indirectly allow an adjustment in the formula price to account for the tax liability of the operator.[66] However, operators may make the election allowed by §468 for any extension of a fixed price supply contract or upon the renegotiation or other change in the terms and conditions of a contract in effect on March 1, 1984.[67]

The Conference Committee Report indicates that to determine the annual deduction allowed for reclamation and the closing costs, the fixed price agreement exception should apply on a pro-rata basis for mining production.

> *Example*: If an operator supplies 40 tons of minerals under a fixed price agreement and produced a total of 100 tons of minerals from that property, 60 percent of the estimated site closing and reclamation costs for that year would be deductible under the new reserve provision if an election has been made. The remaining 40 percent of the estimated reclamation and closing costs will be deductible under the method of accounting which the taxpayer used on July 18, 1984. If it did not accrue an estimate of reclamation and closing costs, then no deduction may be made as to those costs. If the operator used a current cost method to accrue an estimate of such costs, it may continue to currently deduct the estimated costs. The Service is still capable of challenging the reasonable accuracy of a taxpayer's estimate of reclamation and closing costs under the current cost method.[68]

Comment: Operators who have not used the current cost method of deducting reclamation and closing costs but have fixed price supply agreements might want to renegotiate or terminate these contracts so that they can make an election for the reclamation costs allocated to the fixed price supply agreement. Changes of this nature may tend to subvert the intent in these provisions and the Treasury might prescribe regulations which aggregate certain fixed supply contracts if they feel there is an abuse in this situation.

If a taxpayer uses the transition rule for fixed supply mineral contracts, withdrawals from the reserve fund are based on the aggregate units of production.[69]

> *Example*: Assume that since it made an election for a site, an operator has mined 500 tons of minerals from a site at the end of a taxable year and sold 300 tons of that production pursuant to fixed price supply contracts and deductions have been claimed in accordance with the transition rule. If the taxpayer pays $1000 for qualified closing costs, then only 40 percent (200/500), or $400, of the costs are deductible from the reserve for that property.

If a mine operator using the transitional rule disposes of a mining property without paying for those costs, the tax benefit rule would effect a recapture of the previously deducted amount.[70]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

C. *Detailed Analysis*

1. Election and Current Deduction

a. Election and Amount of Deduction

A taxpayer may elect under §468 to establish a reserve for reclamation or closing costs for each of its mining and solid waste disposal properties. The Congressional Conferees intend that an election must be made for an entire site (which may include several parcels), and not just a portion of it.[71] If several taxpayers are liable for a reclamation or closing cost, on a particular site, each taxpayer may claim a deduction for his share of the liability.[72]

Section 468(d)(3) defines the term "property" for the purposes of mining sites according to the definition contained in §614. That section defines property, in the case of mines, wells, and other natural deposits, as each separate interest owned by a taxpayer in each mineral deposit in each separate tract or parcel of land. This section, however, allows taxpayers to aggregate certain operating mineral interests and treat them as a single property for purposes of this section.[73]

In each taxable year, the taxpayer may deduct from its income the portion of the current reclamation costs allocable to the portion of the property which was disturbed during the taxable year.[74] Similarly, a taxpayer is allowed a deduction for that portion of the qualified closing costs allocable to the production from the property during the taxable year.[75]

b. Deductible Costs

The current reclamation or current closing costs which are used in calculating the portion allocable to a tax year are the amounts which the taxpayer would be required to pay for qualified reclamation or qualified closing costs if the reclamation or closing activities were performed currently.[76] Qualified mining reclamation costs include any expenses incurred or any land reclamation or closing activity which is conducted in accordance with a reclamation plan (including an amendment or modification thereof) which meets the following requirements:

> (1) It must be submitted pursuant to the provisions of §§511 or 528 of the Surface Mining Control and Reclamation Act of 1977 (as in effect on January 1, 1984) and is part of a surface mining and reclamation permit granted under the provisions of Title V of such Act (as so in effect); or
>
> (2) Which is submitted pursuant to any other federal or state law which imposes surface mining reclamation and permit requirements substantially similar to the requirements imposed by Title V of such Act.[77]

In addition, any expenses incurred for any land reclamation or closing activity in connection with any solid waste disposal site which is conducted in accordance with any permit issued pursuant to any provision of the Solid Waste Disposal Act (as in effect on January 1, 1984) requiring such activity, or any other federal, state, or local law which imposes requirements substantially similar to the requirements imposed by the Solid Waste Disposal Act.[78] Qualified reclamations or closing costs do not include any expenses incurred for land reclamation or closing activities on solid waste disposal sites which are disturbed after such sites are listed in the national contingency plan established under Section 105 of the Comprehensive Environmental Compensation and Liability Act of 1980.[79]

2. Rules Governing Reserves

a. Additions to Reserve

In establishing reserves, a taxpayer must maintain separate reserves for each property and for qualified reclamation costs and qualified closing costs for each property for which there is an election.[80] The opening balance of a reserve in the first taxable year shall be zero.[81] The balance of the reserve is increased in each taxable year by the amount of interest computed at the applicable federal short-term rate (AFR) determined under §1274 (compounded semiannually) on the opening balance of the reserve for the taxable year.[82] In taxable years ending before 1987, there is a phase in of this imputed interest rate. For taxable years ending in 1984 or 1985, the amount of interest added to the reserve is 70 percent of the AFR. For taxable years ending in 1986, the imputed interest rate is 85 percent of the AFR.[83]

Observation: The reserve should also be increased for the amount of any qualified reclamation or closing costs allowed as a deduction in the taxable year. The statute, however, does not require such increase. Discussions with staff of the Joint Committee on Taxation have indicated that they definitely intended that the amount of a reserve would be increased by the estimated deductions allowed under §468(a) for the property. They add that there may be a technical correction to this section to assure that result.

b. Deductions from Reserve

When a taxpayer pays an amount during a taxable year for qualified reclamation or closing costs for which there is an election in effect, it shall reduce the reserve by the amount of that payment.[84] If an election is in effect only for a portion of the property, then only a pro-rata portion of the reclamation or closing costs will be deductible in that taxable year under regulations to be promulgated by the Treasury Department.[85] If the amounts paid by the taxpayer in a taxable year exceed the closing balance of the reserve for the taxable year prior to charges for qualified reclamation or closing costs, then all excess amounts will be allowed as a deduction against taxable income for that year.[86] Thus, if a taxpayer underestimates the cost to reclaim or close a site, he will not lose his full deduction of that amount.

c. Limitation on Reserve Balance

To ensure that the balance in a reserve account will not be unreasonable, §468 provides a limitation on a closing balance in a reserve at the end of any taxable year. If the closing balance of a reserve for qualified reclamation costs exceeds the current reclamation costs for the portions of the reserve property which have been disturbed in any taxable year, then the amount of that excess shall be included in the gross income of the taxpayer.[87] There is a similar provision which requires the taxpayer to include in gross income the amount by which the closing balance of a reserve for qualified closing costs exceed the current closing

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

costs with respect to that property determined as if all production on the property had occurred in that taxable year.[88] In effect, these provisions limit the deduction for qualified reclamation of closing costs to the amount which will increase the reserve to cover the current estimated cost of closing or reclaiming the site. The limitation provision is applied after all other adjustments are made to the reserve for the taxable year.[89]

Example: If 20 acres of a site for which an election has been made had been disturbed and the current cost of reclamation is $10 per acre, then $200 may be deducted in that taxable year and the sinking fund balance is limited to that amount. In the next taxable year an additional 20 acres are disturbed, the current cost of reclamation has risen to $11 per acre and no reclamation work has been performed on any portion of the site. The deduction for that year is limited to $220 (20 acres x $11/acre). The balance in the sinking fund is limited to $440 (40 acres x $11/acre).

Example: The limitation on the balance in a site closing sinking fund may be illustrated as follows: Assume the capacity of a site is 500 units, that 100 units are produced (or utilized) during the first taxable year of the taxpayer and the current cost of closing the entire site is $1,000. Since 20% of the estimated units of production or capacity have been utilized, then 20% of the estimated current closing costs of the site, or $200, may be deducted in the first taxable year and the balance of the reserve is limited to that amount. Assume that at the end of the second tax year an additional 100 units are produced and the current cost of closing the site has risen to $1,100. The deduction allowed in the current year is $225 [$900 ($1,100 - $200) x 100/400]. One hundred is the current year production from the site and 400 is the remaining units of production or capacity (500 minus 100). The balance of the closing cost reserve will be limited to $440. That is calculated by multiplying the current cost of closing the entire site ($1,100) by a fraction the numerator of which is the number of units produced or capacity utilized by the end of the taxable year (200) and the denominator of which is the total number or units or production or capacity (500 units).[90]

3. *Recapture of Reclamation and Closing Cost Deductions*

If a taxpayer revokes an election to apply §468 to a mining or solid waste disposal property, the balance in the site reclamation and closing fund must be included in the taxpayer's income in that tax year[91] and that election may not be reinstated with respect such property.[92] The Treasury Department will prescribe the time and the manner in which a taxpayer may revoke its §468 election.[93]

Furthermore, when the closing or reclamation of a property is completed, or when any portion of a property to which a §468(a)(1) election is made is disposed of by a taxpayer, the balance of the reserve fund will be included in the income of the taxpayer.[94] If a portion of a §468 property is disposed of, then that portion of the site's reclamation and closing funds are also subject to recapture.[95] If a waste disposal site is listed on the national contingency plan under §105 of the Comprehensive Environmental Compensation and Liability Act of 1980 at any time after an election is made for the site, the balance of the reserve fund is also subject to recapture.[96]

III. Nuclear Power Plant Decommissioning Deduction and Income [Act §§91(c) and (f)] — Code Sections 88 and 468A

A. *Background*

1. *Statutory Background*

Under federal and state law, utility companies that operate nuclear power plants are obligated to close and dismantle these plants at the end of their useful lives. This process, known as decommissioning, is a very expensive process which attempts to render the plants safe by eliminating the high levels of residual radiation at the site. This process takes place many years after the plant is placed in service, but often a portion of the estimated cost of decommissioning is collected from the utility's current customers as cost of service for ratemaking purposes. Such amounts may be placed in an unsegregated reserve on the utility's books, in a segregated internal reserve, or in an independently administered trust fund. Under Code §461(h), enacted in the 1984 TRA, a deduction for these expenses would be allowed as the actual decommissioning activities took place. There is also litigation pending on how a utility should treat the amounts collected from customers and paid into a decommissioning fund for income tax purposes.

2. *Legislative Background*

In 1983, several congressmen introduced legislation that would have allowed a deduction for additions to a reserve for decommissioning costs incurred by a regulated public utility in connection with a nuclear power plant.[97] The House of Representatives and the administration took note of the special problems of nuclear decommissioning costs and proposed to allow utilities to deduct nuclear decommissioning costs in the year in which their economic performance rule would allow them, and to also allow a carryback of any net operating loss arising from that deduction to any year in which the utility had a liability for the decommissioning costs (*i.e.*, beginning with the year in which the plant was placed in service).[98]

The Senate Finance Committee, which originated this provision in its current form, noted that it was of national importance that utilities establish a segregated reserve fund for paying future nuclear decommissioning costs. It decided to encourage this activity by providing a tax deduction subject to certain limitations, for amounts contributed to a qualified fund. This appears to be a departure from general industry practice which is to deduct decommissioning expenditures at the end of a plant's life when the decommissioning is performed. The Finance Committee intended to allow utilities to spread the deduction of decommissioning expenses over the life of the plant as contributions are made into a segregated decommissioning reserve fund. Consistent with one of the major policy themes of this tax bill, the Committee did not intend that the deduction would lower the tax paid by owners of a nuclear power plant in present value terms.[99]

B. Overview

1. Summary of New Provisions

Utilities which operate nuclear power plants will now be able to deduct contributions to a reserve fund dedicated to paying future nuclear decommissioning expenses. This method is elective, but is the exclusive method for obtaining a deduction for nuclear decommissioning expenses prior to economic performance of the decommissioning. Contributions to a qualified decommissioning reserve are deductible only to the extent the amount is currently included in the cost of service charged to customers and is included in the taxpayer's taxable income in that year. Contributions must be made to a separate reserve fund, funded exclusively with contributions eligible for deductions under this provision and the earnings on those contributions. Taxpayers must obtain a ruling from the Treasury which establishes the maximum annual deduction in order that the contributions to decommissioning reserve will qualify for deduction. Generally, deductions will be allowed for the amount necessary to fund the future cost of decommissioning over the remaining plant life through an annuity.

The nuclear decommissioning reserve must be a segregated fund whose proceeds are solely used to pay decommissioning costs, taxes on fund income, and management costs of the fund. The reserve is treated as a separate taxable entity and taxed at the maximum corporate tax rate under §11(b). Contributions to the fund are not considered taxable income to it. Its assets may only be invested in the same assets which may be owned by black lung disability trust funds. There are rules which would prohibit the purchase of assets of related parties and prohibit self-dealing.

If the nuclear decommissioning reserve fund fails to comply with the qualification requirements, it may be disqualified by the Treasury. In the event of disqualification, the Treasury may require that some or all of the income and principle accumulated in the reserve fund be included in the taxpayer's taxable income. No deduction will be allowed for contributions to a disqualified reserve fund. Withdrawals from a qualified decommissioning reserve fund are included in the taxpayer's taxable income unless used in payment of taxes imposed on the fund or the cost of managing the fund. A taxpayer who makes withdrawals from the funds will also be allowed an income tax deduction for the reasonable decommissioning expenditures paid in a year. Theoretically, the utility should have no income consequence from payment of decommission expenses from the reserve since the increase in its taxable year occasioned by the withdrawal should be offset by a decrease in its taxable income for the amount of the expenditure paid. When the plant decommissioning is completed, any funds remaining in the qualified nuclear decommissioning reserve must be included in the taxpayer's taxable income.

A utility must also include in its income the amount of any nuclear decommissioning costs which are included in its cost of service for ratemaking purposes.

2. Effective Date

This amendment is effective for decommissioning fund contributions made after July 18, 1984.[100]

Comment: Since the Treasury Department must provide taxpayers with a ruling as to the amount of contributions allowable, the speed with which the Treasury Department issues those rulings may practically determine when deductions will begin.

C. Detailed Analysis

1. Deduction for Nuclear Decommissioning Costs and Contribution to Reserve Fund

Section 468A gives operators of nuclear powerplants an election to deduct payments made to a Nuclear Decommissioning Reserve Fund during a taxable year. The purpose of the fund, described more fully below, is to insure payment of future nuclear decommissioning expenses. The Treasury Department will presumably promulgate regulations which describe the manner in which the election is made.

The amount which a utility may pay into the fund in any taxable year can not exceed the lesser of (i) the nuclear decommissioning costs allocable to the fund which are included in the taxpayer's cost of service for ratemaking purposes in the taxable year, or (ii) the ruling amount applicable to such taxable year.[101] The limitation which relates to inclusion in a utility's cost of service for ratemaking purposes was included to make sure that this amount was charged to customers of the operator and included in the operator's taxable income in that year.[102]

Nuclear utilities will also be required to obtain a ruling from the Service as to the maximum amount of payments which will be allowed to the fund. If the taxpayer does not request, or the Treasury Department does not approve a request, then a utility may not make any payment to a fund.[103] In the ruling, the Treasury Department is to determine the amount which is necessary to fund the estimated decommissioning attributable to the period in which the fund exists when considering the entire estimated life of the nuclear power plant. To determine which costs may be paid to the fund, the utility must determine the total nuclear decommissioning costs estimated for the nuclear powerplant, the period for which the fund is to operate, and the estimated useful life of the nuclear powerplant.[104]

> *Example*: If two-thirds of a plant's useful life remains when a fund is established, then a utility's deduction would be limited to contributions necessary to fund two-thirds of estimated future decommissioning cost on a level funding basis.

The Treasury Department has the discretion to preclude excessive funding of the costs or funding of the costs at a rate more rapid than level funding. The Treasury Department is directed to issue regulations which set forth the criteria for determining the maximum annual contributions.[105] In determining the maximum annual deduction, the Department must consider inflation and prevailing interest rates as well as the factors stated above.[106]

At least once during the useful life of the nuclear powerplant, the Service is required to review, and revise if necessary, the amount which the Secretary previously determined as necessary to fund the decommissioning cost. A utility may request that this review be done more frequently.[107]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

2. Nuclear Decommissioning Trust Fund

a. Operation of Fund

A utility must establish a nuclear decommissioning trust fund for each nuclear powerplant to which a §468A election has been made. The fund is a separate taxable entity and not just a segregation of assets on the books of the utility. The conferees indicated that where the responsibility for decommissioning a nuclear powerplant is divided between taxpayers, each taxpayer may establish a fund for its share of the liability.[108]

The fund may only accept contributions for which a deduction has been allowed under §468A. The fund shall be used exclusively to satisfy, in whole or in part, the liability of the utility contributing to the fund for decommissioning of a nuclear powerplant and to pay administrative costs (including taxes) and other incidental expenses in connection with operation of the fund. Incidental expenses may include legal, accounting, actuarial, and trustee fees.[109] Federal income tax is imposed on the gross income of the fund less any administrative costs (including taxes), and other incidental expenses of the fund which it pays. The gross income of the fund does not include any payment to it with respect to which deduction is allowed under §468A. Basically, the net investment income of the fund will be subject to tax. The tax rate will equal the maximum rate applicable to corporations under §11(b).[110]

The Senate Finance Committee indicated that the fund could only hold those investments allowed under §501(c)(21)(B)(ii).[111] Those investments include federal, state and local debt obligations, or time or demand deposits in domestic federally insured banks or credit unions.

b. Self-Dealing Prohibition

The Treasury Department is to prescribe regulations which will impose a tax on acts of self-dealing as described in §4951 as if this fund were a black lung disability trust. For purposes of that section, self-dealing is defined as any one of the following activities which is directly or indirectly carried on between a disqualified person and the fund:

(1) Sale, exchange, or leasing of real or personal property between the fund and a disqualified person;

(2) Lending of money or other extension of credit between the fund and a disqualified person;

(3) Furnishing of goods, services or facilities between such a trust and a disqualified person;

(4) Payment of compensation (or payment for reimbursement of expenses) by a fund to a disqualified person; and

(5) Transfer to or use by or for the benefit of a disqualified person of the income or assets of the fund.

A transfer of personal property by a disqualified person to a fund shall be treated as a sale or exchange if the property is subject to a mortgage or similar lien. If a disqualified person furnishes goods, services, or facilities to a fund, there is no self-dealing if such activity is furnished without charge and the goods, services, or facilities are used exclusively for the fund. In addition, the payment of compensation (and the payment or reimbursement of expenses) by a fund to a disqualified person for personal services which are reasonable and necessary to carrying out the exempt purpose of the fund shall not be an act of self-dealing if the compensation (or payment or reimbursement) is not excessive.[112]

Comment: It appears that the Treasury regulations will revise Item 5 above to prohibit transfer to or use by or for the benefit of the utility other than for its nuclear decommissioning costs. For example, the fund could not pledge its assets to guarantee an obligation of the utility.

A "disqualified person" is generally defined as a contributor to the fund, a trustee of the fund, and a person who owns more than ten percent of the: (a) total combined voting power of a corporation, (b) profits interest of a partnership, or (c) beneficial interest of a trust or unincorporated enterprise, which is a contributor to the trust. In addition, an officer, director, or an employer of a person who is a contributor to the fund, or a person who is a spouse, ancestor, lineal descendant or spouse of a lineal descendant of one of the foregoing persons is also a disqualified person. Finally, a person described in the prior sentences who owns more than 35 percent of: (a) the total combined voting power of a corporation, (b) the profits interest in a partnership, or (c) the beneficial in a trust or estate is also a disqualified person.[113] Indirect stockholding is to be taken into account under §267(c) except that the members of a family described in §267(c)(4) shall only include the individual spouse, ancestor, lineal descendant, or spouse of a lineal descendant.

The regulations will probably impose on the disqualified person a tax at the rate of ten percent of the amount involved in the act of self-dealing. In addition, any trustee who participates in an act of self-dealing, knowing that it is such an act, will pay a tax equal to two and one-half percent of the amount involved, unless his participation was not willful and is due to reasonable cause.[114] If the act of self-dealing is not corrected by the time a notice of deficiency is mailed with respect to an act of self-dealing or the date on which the tax on the self-dealer is assessed, an additional tax of 100 percent of the amount involved will be imposed on the disqualified person. In addition, the trustee will be liable for a tax equal to 50 percent of the amount involved if the trustee refuses to agree to part or all of the correction. Furthermore, the Treasury Department has the discretion to disqualify the fund if it violates the self-dealing rules of §4951. If the fund is disqualified, it is treated as having distributed all of its funds on the date such determination takes effect.[115]

3. Taxation of Actual Decommissioning Expenses

When an amount is distributed from the fund during a taxable year, other than to pay administrative costs and other incidental expenses, that amount will be included in the gross income of the utility. Unless otherwise provided by regulations, the amount (i) of any deemed distribution upon disqualification of the fund, (ii) of any termination of the fund upon substantial completion of the nuclear decommissioning of a nuclear powerplant, or (iii) from any disposition of any interest in the nuclear powerplant will be included in the gross income of the utility.[116] If an interest in a nuclear powerplant is sold, the Treasury Department may allow the purchaser of the nuclear powerplant to make a one-time deductible deposit, in excess of the annual ruling

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

amount into a new decommissioning fund. The amount of the buyer's start-up deposit is limited to the balance of the seller's qualified decommissioning fund.[117]

The utility will also be allowed a deduction in any taxable year for the amount of nuclear decommissioning cost with respect to which there has been economic performance as defined in §461(h)(2).[118] Accordingly, if a taxpayer withdraws an amount and makes a payment for nuclear decommissioning costs for which there has been economic performance, there should be no effect on its taxable income. The amount which is withdrawn from the fund is taxable, but would be completely offset by a payment for nuclear decommissioning costs for which there has been economic performance.

4. Income Taxation of Nuclear Decommissioning Costs

Section 91(f) of the Act also adds §88 to the Code dealing with the income tax consequences to utilities for recovery of nuclear decommissioning costs. If nuclear decommissioning costs are included in a utility's cost of service for ratemaking purposes, its gross income includes those costs in the taxable year in which they are included for ratemaking purposes. It does not matter whether or not these amounts are contributed to a qualified nuclear decommissioning reserve fund.[119] This provision applies to amounts included for ratemaking purposes after July 18, 1984.

5. Study on Tax Incentives for Decommissioning Trusts

The conferees indicated that it may be appropriate for the tax writing committees to continue studying the tax treatment of decommissioning costs and consider the merits of providing tax incentives for establishing decommissioning funds.[120]

6. Net Operating Loss Carrybacks

Code §172(k)(2), enacted by §91(c)(2) of the 1984 TRA, extends the period by which losses, which arise from deferred statutory or tort liability losses incurred in the decommissioning of a nuclear powerplant, may be carried back. Those losses may be carried back to the taxable year in which the plant was placed in service instead of the regular three-year carryback period. There may, however, be no carryback to a taxable year beginning before January 1, 1984.[121]

IV. Cash Basis Tax Shelter Deductions Limited Until Economic Performance Occurs [Act §91(d)] — Code Section 461(i)

A. Background

The accounting method which a taxpayer selects to calculate his taxable income for federal income tax purposes will control the year in which it may deduct an expense.[122] Generally, taxpayers select either the cash receipts and disbursements method of accounting or the accrual method. The taxpayer's selection of a method of accounting is restricted to one which clearly reflects income.[123] In addition, if an expenditure of a taxpayer results in the creation of an asset which has a useful life which extends substantially beyond the close of a taxable year, the expenditure may be nondeductible or partially deductible.[124]

Except for restrictions on prepaid interest deductions and prepayments by farm syndicates, a cash basis taxpayer is allowed to currently deduct prepaid expenses which do not create an asset. A prepaid expense is deductible when paid only if (1) the expenditure is a payment and not merely a deposit; (2) there is a business purpose for the prepayment; and (3) the deduction of the expense in the year of prepayment does not result in a material distortion of the taxpayer's income. Interest deductions are allowed only for the year to which the interest relates.[125] For example, if a cash basis taxpayer were to prepay interest on a loan for five years, only the interest accruing in the taxable year of payment will be deductible in that year. The nondeductible portions of interest will be deductible in the year to which they apply. Thus the cash basis taxpayer is put on the accrual basis for deduction of interest.

Cash basis farming syndicates are only allowed to deduct amounts paid for feed, seed, fertilizer, or other similar farm supplies in the taxable year in which such supplies are actually used or consumed.[126] A farming syndicate is a partnership or other pass-through enterprise which engages in the trade or business of farming if interests in such enterprise have been offered for sale in any offering required to be registered with any federal or state agency regulating sales of securities or if more than 35 percent of the losses during any period are allocable to limited partners or limited entrepreneurs, (*i.e.*, individuals who do not actively participate in the management of an enterprise). §464(c).

In determining whether an expenditure results in creating an asset having a useful life extending substantially beyond the taxable year, the Ninth Circuit Court has adopted a "one-year" rule.[127] Under this doctrine, the prepayment of expenses by a cash basis taxpayer will be permitted if the prepayment does not provide benefits that extend beyond one year. Thus, for example, a calendar year, cash-basis taxpayer may deduct the amount of an annual lease payment made in December. Unless this payment substantially distorts the taxpayer's income, it does not matter that a substantial portion of that expense relates to services which will be provided in a subsequent tax year.

The deductibility of prepaid expenditures has become the basis for many tax shelters. Many cash-basis taxpayers shelter income by prepaying expenses (other than interest). This is especially useful for taxpayers who make prepayments in years in which their income is high, and anticipate that income will be lower in future years when the benefit of a deduction would not be as significant. The House Ways and Means Committee believes that taxpayers should not be allowed to deduct expenses until there is economic performance of the activity to which the expenditure relates.[128] The Committee recognized that there were many normal business transactions in which expenses are prepaid. It did not wish to impede normal business transactions and therefore decided to limit the application of the new rules to tax shelters, where it perceives the abuse is most serious. The Committee did not intend any negative inference as to prepaid expenses when incurred outside the tax shelter context.

B. Overview

1. Summary of New Provision

A tax shelter which uses the cash receipts and disbursements method of accounting for federal income tax purposes may not deduct an expenditure until the activity to which that expenditure relates has been economically performed as contemplated by §461(h). The exception for certain recurring items provided in §461(h)(1) will not apply in this situation. However, if economic performance of an activity is performed within 90 days after the close of the taxable year, the deduction will still be allowed in the year in which the amount is paid, but only to the amount of cash contributed to the tax shelter without regard to its borrowing. For purposes of this 90 day rule, the economic performance of drilling an oil or gas well is treated as occurring when drilling of the well is commenced.

A "tax shelter" is any enterprise, other than a C corporation, if any interest in the enterprise is required to register an offering for sale of interests with any federal or state agency which regulates the sale of securities. In addition, a tax shelter will include (i) any partnership or other entity (other than a C corporation) if more than 35 percent of the losses of such entity during a taxable year are allocable to limited partners or limited entrepreneurs, and (ii) any partnership, other entity, investment plan or arrangement, the principle purpose of which is the avoidance or evasion of federal income tax.

A tax shelter which engages in the trade or business of farming shall first be subject to the limitations contained in §464 and then shall be subject to the limitations contained in this new section.

Economic performance for purposes of this section is the same as that contained in §461(h) as added by the 1984 Act.

2. Effective Date

According to the statute, this section applies to prepaid expenses which would have been deductible after March 31, 1984 under prior law.[129] It is interesting to note that the conferees stated their intention for this provision to apply to prepayments of expenses made after March 15, 1984.[130]

C. Detailed Analysis

1. General Rule

Code §461(i) requires cash basis tax shelters to delay their deduction of prepaid expenses until there has been economic performance (as defined in §461(h)) of the activity to which the expenditure relates.[131]

Example: Management fees will be treated as incurred when management services are rendered. Prepaid supplies will be expensed as used. Mine development expenditures will be deducted as incurred when mine development activity is performed.[132]

Tax shelters will not have the benefit of the exception allowed for consistently recurring items for which economic performance occurs within 8½ months after the close of the taxable year. Instead of the recurring item exception contained in §461(h)(3), tax shelters will be allowed to deduct prepaid expenses if the economic performance of such an expenditure occurs within 90 days after the close of the taxable year in which the deduction is taken.[133] The amount which may be deducted under this section, however, is limited to the investor's cash basis in the investment. Thus, for purposes of determining the amount of prepaid expenses included in this exception and deductible by a partner in a tax shelter partnership, the limitation on deductions contained in §704(d) is changed from the partner's adjusted basis to the partner's cash basis.[134]

A partner's cash basis in a partnership equals his adjusted basis in the partnership determined without regard to any liability of the partnership and any amount borrowed by the partner which was arranged by the partnership or by any person who participated in the organization, sale, or management of the partnership (or a person related to such person as defined below), or secured by any assets of the partnership.[135] In the case of tax shelters other than a partnership, the Secretary of the Treasury has the authority to prescribe regulations which limit the amount of deductions allowed for expenses which qualify for the 90 day exception, in a manner similar to those for partnerships.[136]

These amendments do not affect existing law concerning the deductibility of prepaid expenses. Deductibility of a payment made by a cash basis taxpayer requires that: (1) The expenditure be a payment rather than a deposit; (2) There must be a business purpose for the prepayment; and (3) There must be no material distortion of the taxpayer's income.[137]

Solely for the purposes of this exception, the economic performance with respect to intangible drilling costs ("IDC") of an oil or gas well are treated as occurring when the drilling commences (*i.e.*, upon "spudding" the well).[138] The limitations of present law still apply so that the prepaid expenses must not be a deposit, must be made for a business purpose and must not result in a material distortion of income.

Example: If a taxpayer contributes cash (which was not borrowed) to an oil drilling tax shelter late in the last month of his taxable year and the spudding of a well commences within 90 days after the close of the taxable year, the entire amount of the IDC would be deductible to the extent paid from the taxpayer's cash. If the taxpayer did not qualify for the 90-day exception, the economic performance principles of §461(h) will apply. Only that portion of the IDC attributed to drilling before the end of the taxable year would be deductible.

Any person who is related within the meaning of §168(e)(4) to such a participant in the organization, sale or management of the tax shelter is also prohibited from arranging financing for a partner. Presumably such determination will be made as of the time the participant arranges the borrowing.[139]

2. Definition of "Tax Shelter"

Section 461(i)(3) defines the term "tax shelter" as an enterprise (other than a C corporation) if at any time interest in such enterprise has been offered for sale in an offering required to be registered with any federal or state agency which regulates the sale of securities. A tax shelter also includes any partnership or other entity (including

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

those corporations which are S corporations) if more than 35 percent of the losses of such entity during the taxable year are allocable to limited partners or persons who have an interest in an entity but do not actively participate in its management.[140] The third and final definition for a tax shelter is a partnership, other entity, plan or arrangement (including investment plans and arrangements) if the principle purpose of such partnership, entity, plan or arrangement is the avoidance or evasion of federal income tax.[141] The Committee intends that any offering filed with, or with respect to which notice is given to, a federal or state agency has met the requirement that it be registered with such agency.[142]

In determining whether an investment constitutes a tax shelter, the Treasury regulations will probably consider whether there is a reasonable and signficant expectation that either (1) deductions in excess of income from the investment will be available in a year to reduce income from other sources; or (2) tax credits in excess of the tax attributable to income from the investment will be available to offset federal income taxes on income from other sources in that year. The expectations of these benefits will depend on the objective facts and circumstances in each case. Significance will be given to the expectations described in the investment's offering materials. In addition, the determination of tax shelter expectations will focus on the percentage of total expenses of the plan or arrangement which are prepaid expenses.[143]

3. *Special Rules for Farming Syndicates*

If any farming syndicate (as defined in §464(c)) is in the trade or business of farming whose principal purpose is to avoid or evade federal income tax (*i.e.*, one defined in §6661(b)(2)(C)(ii)), then the rules of §464 will be applied to limit deductions of the farming syndicate (whether cash basis or accrual basis). After application of the rules in §464 to such tax shelters, then the economic performance rules of this section will be applied to limit deductions.[144] This change will equalize the treatment of cash and accrual farming tax shelters.[145]

The only individuals to whom the prepaid expense provisions will apply are those individuals who engage in farming activities with the principal purpose of tax avoidance. The Conference Committee report indicates that arrangements in which individuals carry on farming activities utilizing the assistance of a common managerial or administrative service may be presumed to have the principal purpose of tax avoidance. If the taxpayers prepay a substantial portion of their farming expenses with borrowed funds, they should generally be presumed to have a principal purpose of tax avoidance.[146]

Chapter 24

At Risk Rules Liberalized for Qualified Corporations

Samuel M. Maruca, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. *Background - §465*

The Code generally disallows losses from trade or business or income-producing activities to the extent that such losses are financed from sources other than the assets or personal credit of the taxpayer. Under the "at risk" rules, added as Code §465 by the Tax Reform Act of 1976, the amount of taxable losses incurred in business or investment ventures (with the notable exceptions of real estate and certain equipment leasing activities) cannot exceed the amount of the taxpayer's economic commitment to the business, *i.e.*, the amount exposed to the risk of loss. Losses disallowed by operation of the at risk limitation are carried forward indefinitely and are deductible to the extent the taxpayer increases his investment or has income from the activity in future years.[1] The at risk rules are intended to discourage the use of nonrecourse indebtedness and similar risk-limiting financing devices in tax-sheltered transactions that generate losses in excess of the taxpayer's actual cash outlay (*e.g.*, leveraged leasing arrangements).

Section 465, as in effect prior to TRA 1984, applies to individuals, (including partners in a partnership) and corporations (more than 50 percent in value of the outstanding stock of which is owned, at any time during the last half of the taxable year, by five or fewer individuals).[2] Thus, publicly-held corporations are not subject to §465 loss limitations.

As noted above, §465 applies to all business or income-producing activities, apart from holding real estate and certain equipment leasing businesses.[3] A taxpayer's activity with respect to each of a number of specified properties, including a film or video tape, leased §1245 property, a farm, or an oil, gas or geothermal property, is considered a separate activity for purposes of computing the taxpayer's income, loss, and at risk amount with respect to the activity.[4] Other activities are aggregated and treated as one activity if the taxpayer actively participates in their management as a trade or business or, in the case of a pass-through entity, 65 percent or more of the losses is allocable to active participants in the business.[5]

In keeping with the underlying objectives of the at risk rules, only amounts actually placed at the risk of the business by the taxpayer increase his at risk amount. A taxpayer is considered at risk for an activity to the extent of (1) the amount of cash and the adjusted basis of other property contributed by him to the activity, plus (2) amounts borrowed for use in the activity, to the extent that the taxpayer is personally liable for repayment of the debt or has pledged property (other than property used in the activity) as security for repayment.[6] Consequently, nonrecourse borrowing has no effect on the taxpayer's at risk amount unless repayment is secured by property of the taxpayer. Also excluded are amounts borrowed from any person who has an interest in the activity (other than as a creditor) or who bears a relationship to the taxpayer that is described in §267(b),[7] and any other amounts as to which the taxpayer is protected against the risk of loss.[8]

B. *Reasons for Change*

According to the House Report,[9] Congress generally believes that the at risk provisions should apply in the case of tax-sheltered activities in which the taxpayer's equity investment is small in comparison to available losses. However, the Report reflects a concern that the at risk rules have disadvantaged certain closely-held corporations engaged in non-tax shelter activities. The rules have foreclosed the use of nonrecourse financing by these corporations, even where the taxpayer is actively engaged in an operating business and has a genuine equity interest in business property that is not likely to be abandoned.[10] The 1984 TRA amendments to §465 represent an attempt to mitigate the effects of the at risk rules on active businesses by limiting application of the rules to situations in which tax shelter potential is present.

C. *Outline of New Provisions*

TRA §432 adds paragraph §465(c)(7) to the Code and makes minor adjustments to the rules governing aggregation of separate activities and the effect of certain borrowings on a taxpayer's at risk amount. Section 465(c)(7), added by Act §432(a), altogether excludes "qualifying businesses" of "qualified C corporations" from the reach of the at risk rules. To be eligible for at risk immunity, a business must meet certain minimum activity requirements, some of which are modified with respect to corporate general partners, banks and life insurance companies. With some exceptions, equipment leasing and any business involving the use or disposition of sound recordings, films, video tapes or similar tangible or intangible property does not qualify for treatment under the rules. Nevertheless, the exemption for qualified C corporations represents a significant liberalization of the at risk rules.

Section 432(b) of the Act modifies the provisions relating to aggregation of activities in computing income, losses, and at risk amounts. In the case of a partnership or S corporation, all activities relating to §1245 properties leased or held for lease and placed in service during the entity's taxable year will be treated as one activity. In addition, activities deemed to be separate activities under prior rules (*e.g.*, films, video tapes and geothermal proper-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ties) may be aggregated, in accordance with regulations to be promulgated, if the taxpayer actively participates in each activity.

Section 432(c) of the Act amends Code §465(b)(3) to provide that certain indebtedness previously excluded from the at risk amount will now qualify as at risk. In particular, funds borrowed by a corporation from its shareholders may now qualify as at risk.

D. Effective Dates

The §465 amendments apply to taxable years beginning after December 31, 1983. Any loss from an activity described in new §465(c)(7) that would have been allowed as a carryover, under §465(a)(2), to the taxpayer's first taxable year beginning after that date, will be allowed despite the TRA amendments (which render §465(a)(2) inapplicable to losses from activities of a qualified C corporation).

II. Detailed Analysis

A. General Rule - "Qualified C Corporation"

Section 465(c)(7) provides that in the case of any taxpayer that is a "qualified C corporation," each "qualifying business" of the taxpayer will be treated as a separate activity, and losses attributable to the business will not be subject to the general at risk limitation of §465(a). This provision effectively eliminates any prerequisite that a qualifying taxpayer commit its personal financial resources before deducting losses generated by qualifying business activities.

The term "qualified C corporation" is defined as any corporation described in §465(a)(1)(B), other than (1) a personal holding company as defined in §542(a), (2) a foreign personal holding company as defined in §552(a), or (3) a personal service corporation as defined in §269A(b).[11] A corporation described in §465(a)(1)(B) (which was not affected by TRA) is any corporation which at any time during the last half of the taxable year more than 50 percent in value of its outstanding stock is owned by five or fewer shareholders. The stock ownership attribution rules of §544 continue to apply for purposes of this definition.[12]

B. Eligible Activities

1. In General

Section 465(c)(7) applies only to losses derived from a "qualifying business." Section 465(c)(7)(C) defines this term as "any active business" that meets specific tests relating to the number of active employees and the amount of out-of-pocket expenses incurred during the taxable year.

Note: The statute does not indicate whether a business satisfying the foregoing tests will be regarded *ipso facto* as an "active business," or whether the phrase "active business" imposes an additional precondition, *e.g.*, some particular level of operating activity. The Conference Report notes that the House language was specifically amended to include the word "active" in the definition of a qualifying business. However, the Conference Report also reflects a legislative intention that the creation of an active business be treated as the conduct of an active business.[13]

The specific activity requirements for treatment as a qualifying business are as follows:

(a) The corporation must have had at least one full-time employee, substantially all of the services of whom were in the active management of the business at all times during the taxable year; and

(b) The corporation must have had at least three full-time, "non-owner employees," substantially all of the services of whom were directly related to the business, at all times during the taxable year; and

(c) The amount of deductions generated by the business that are permitted solely by reason of §162 (trade or business expenses) and §404 (employer contributions to qualified plans) exceeds 15 percent of the gross income from the business.[14]

A "non-owner employee" is any employee who does not own, at any time during the taxable year, more than five percent in value of the outstanding stock of the taxpayer (determined by application of the §318 attribution rules, with "5 percent" substituted for "50 percent" in §318(a)(2)(C)).[15]

Comment: It would appear that the use of three non-owner employees in an activity, one of whom is responsible for management, will satisfy the first two minimum activity requirements. Note, however, that since under the general rule of §465(c)(7) each qualifying business is treated as a separate activity, each individual business presumably must satisfy the minimum activity requirements. Unfortunately, the statute does not define the term "business."

The purpose of these minimum activity requirements is to ensure that corporations with little or no operating expenses or personnel requirements (*i.e.*, passive, investment-type companies) continue to be subject to at risk restrictions. For similar reasons, the statute excludes certain types of activity from the definition of qualified business. These include equipment leasing [16] and any business involving the use, exploitation, sale, lease, or other disposition of master sound recordings, motion picture films, video tapes, or tangible or intangible assets associated with literary, artistic, musical, or similar properties.[17] Presumably, these activities are excluded because of their potential as tax shelter vehicles. However, activities involving master sound recordings and the like are treated as qualified businesses if the taxpayer is at risk "with respect to all amounts paid or incurred (or chargeable to capital account)" in connection with the acquisition or creation of the properties used in the business.[18] The provision of services, such as cable television, pursuant to a license or franchise conferred by the Federal Communications Commission (or any other domestic governmental authority) may also qualify for exemption from the at risk rules if the minimum activity requirements of §465(c)(7)(C) are satisfied.[19]

2. Special Rules

a. Qualified Corporate Partner

A qualified C corporation that owns an interest in a partnership conducting an active business may be permitted to take into account, for purposes of the minimum activity tests, its proportionate share of the activities of the partnership. If the taxpayer is a "qualified corporate partner," and

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

during the entirety of the partnership's taxable year there was at least one full-time employee of the partnership (or of the qualified corporate partner) substantially all of whose services were in the active management of the business, then the corporate partner's proportionate share (based on its interest in the profits) of the partnership's nonowner employee's income and deductions will be attributed to the corporate partner in determining whether the corporation is engaged in a qualifying business.[20] The Act provides no guidance as to the proper treatment of a corporate partner whose interest in profits fluctuates during the partnership's taxable year.

Note: The Conference Report states that a qualified corporate partner may aggregate its share of the partnership's business (determined in accordance with the above rules) with any portion of the business that the corporation conducts directly. Presumably, the business in question, whether conducted by the corporation directly or through a partnership, must constitute a "single business" before aggregation will apply.

Section 465(c)(7)(D)(ii) defines the term "qualified corporate partner" as any corporation[21] that: (1) Is a general partner in the partnership, (2) Has a 20 percent or greater interest in the profits and losses of the partnership, and (3) Has contributed property to the partnership in an amount not less than the lesser of $500,000 or ten percent of its net worth. For purposes of this last criterion, non-cash contributions will be taken into account based on fair market value.[22]

b. Income and Deductions of a Qualifying Business

As previously discussed, one of the characteristics of a qualifying business is that the amount of deductions attributable to the business and allowable solely by reason of §§162 and 404, exceeds 15 percent of gross income from the business. The Act specifies that compensation for personal services rendered by any employee (other than a non-owner employee) of the taxpayer, or by any member of such employee's family,[23] does not count towards the required 15 percent of gross income.[24] Thus, the taxpayer must satisfy the 15 percent test through compensation of non-owner employees and other costs deductible under §§162 and 404.

In the case of a bank (as defined in §581) or a financial institution (to which §591 applies), gross income for purposes of the 15 percent test must be determined by including interest otherwise excluded from gross income under §103 (relating to certain governmental obligations).[25] However, in addition to the deductions allowable under §§162 and 404, a bank or financial institution may also take into account deductions allowable under §§163 or 591 for amounts paid or credited to depositors or account holders as dividends or interest.[26]

The 15 percent test does not apply at all to any "insurance business" of a "qualified life insurance company." The term "insurance business" means any business that is not a noninsurance business under §806.[27] A "qualified life insurance company" is any company that would be considered a life insurance company under §816 if unearned premiums were disregarded under §§816(a)(2) and (c)(2).[28]

c. Treatment of Affiliated Groups

For purposes of the exemption from at risk limitations for qualified C corporations, the component members of a §1504(a) affiliated group that files, or is required to file, consolidated returns will be treated as a single corporation.[29] This rule presumably applies for all purposes under §465(c)(7), including the definitions of qualified C corporation and qualifying business. Losses attributed to a qualifying business of a component member will offset affiliate group income. The Act provides, however, that the losses of one member of an affiliated group may not be used to offset the income of any other member that is a personal holding company or personal service corporation.[30]

C. Aggregation of Activities

Under pre-existing §465(c)(2), a taxpayer's activities with respect to certain properties, such as films, video tapes, leased §1245 property and farms (hereinafter "§465(c)(2) properties"), were required to be treated as separate activities. Thus, for example, amounts at risk with respect to one video tape could not be used to offset losses attributable to another video tape (as to which the taxpayer had no at risk investment). The Act retains the general rule against aggregation of §465(c)(2) properties, but provides for certain exceptions. First, in the case of any partnership or S corporation, all activities with respect to §1245 properties that are leased or held for lease, and that are placed in service in any taxable year, will be treated as one activity.[31] Second, the exception for active participation by the taxpayer, previously applicable to other activities, will now apply to all §465(c)(2) properties,[32] subject to regulations to be promulgated by the Secretary of the Treasury.[33] As previously explained, a taxpayer may treat activities that constitute a trade or business as one activity for at risk purposes, provided that the taxpayer actively participates *in the business* (in the case of a partnership or S corporation, if 65 percent or more of the losses are allocable to active participants). The House Report on TRA emphasizes that with respect to §465(c)(2) properties, a taxpayer may aggregate activities only if he actively participates in the management of *each separate activity* (*i.e.*, property).

> *Example:* A owns two oil-producing properties (X and Y) and actively participates in the management of each. With respect to X, which has produced losses of $20,000 for the taxable year, A is at risk in the amount of $10,000. A is at risk for an initial investment of $5,000 with respect to Y, which also has retained earnings of $5,000 for the taxable year. A will be entitled to deduct the entire $20,000 loss on property X, since A's amount at risk, on an aggregate basis, is $20,000.

The House Report on TRA defines "active participation" as follows:

> "The determination of whether a person actively participates in the management of an activity depends upon the facts and circumstances. Factors which tend to indicate active participation include participating in the decisions involving the operation or management of the activity, actually performing services for the activity, or hiring and discharging employees. Factors which tend to indicate a lack of active participation include lack of involvement in management and operation of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the activity, having authority only to discharge the manager of the activity, or having a manager of the activity who is an independent contractor rather than an employee." [34]

Presumably, the forthcoming regulations will incorporate these factors and allow aggregation of activities with respect to which the taxpayer personally plays an active role in ongoing management and/or operation.

D. Related Party Indebtedness

In a significant relaxation of the rules relating to the effect of borrowings on the taxpayer's at risk amount, TRA §432(c) amends §465(b)(3) to permit funds borrowed from certain related parties to be included in computing this amount. Former §465(b)(3) excluded amounts borrowed from any person related to the taxpayer under §267(b), regardless of whether the related person had any interest in the activity financed by the borrowed funds. Section 465(b)(3) provides that a taxpayer will not be considered at risk for amounts borrowed from any person having an interest in the relevant activity, or from a person related to a person (other than the taxpayer) having such an interest. Under this formulation, includibility of indebtedness for at risk purposes hinges on whether the lender has an interest in the financed activity (thereby decreasing the borrower's economic risk), rather than whether the lender is related to the taxpayer. Of course, the financing must still be full-recourse as against the taxpayer in order to be includible in the at risk amount. Nonetheless, these rules should facilitate financing for activities covered by the at risk rules.

Section 465(b)(3) also provides that the lender's interest as a creditor will not require exclusion of the loan proceeds from the taxpayer's at risk amount.[35] In addition, shareholders lending to a corporate borrower will not be considered as having an interest in the corporation's activity by virtue of their ownership in the corporation.[36] If the shareholder-lender has an interest in the activity other than in his capacity as a shareholder of the borrowing corporation, however, the loan would probably be excluded under this rule.

The definition of the term "related person" provided in §168(e)(4)(D) will apply for purposes of the rules on inclusion of indebtedness.[37] The specified relationships include those described in §§267(b) and 707(b)(1) (applied by substituting "10 percent" for "50 percent") and the relationship between persons engaged in trades or business under common control (as defined in §§52(a) and (b)).

---

[1] §465(a)(2).
[2] §465(a)(1). The stock ownership attribution rules of §544, with minor adjustments, apply for purposes of this provision.
[3] §465(c).
[4] §465(c)(2); Prop. Regs. §1.465-42(c). The proposed regulations provide that in the case of, *e.g.*, a partnership or S corporation owning interests in several films or video tapes, the films and tapes will constitute one activity of each partner or shareholder.
[5] §465(c)(3)(B). The statute directs the Secretary to prescribe regulations for aggregating activities not treated as separate by statute. These regulations have yet to be issued.
[6] §465(b). Net income of the taxpayer that is retained in the business will also increase the at risk amount. Conversely, withdrawals decrease the at risk amount. *See* S. Rep. No. 938, 94th Cong., 2d Sess. 50 (1976); Prop. Regs. §1.465-22(b) and (c).
[7] §465(c)(3). The specified relationships include, *inter alia*, members of a family, an individual and his 50 percent-owned corporation, two corporations 50 percent-owned by the same individual (where one is a personal holding company), and a grantor and fiduciary of any trust.

CHAPTER 25

MODIFICATION OF INCOME AVERAGING RULES — Code §1301

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

I. Overview

A. Background

A United States citizen or resident is able to reduce his income tax by electing to average his taxable income.[1] The purpose of this procedure is to allow individuals with widely fluctuating incomes to have their income taxed, to a large extent, as if it were earned in equal installments over a five year period.

An eligible individual must first determine that his current taxable income exceeds 120 percent of his average taxable income for the prior four taxable years ("average base period income").[2] If that excess ("averagable income") is greater than $3,000, then the individual will qualify for income averaging.[3]

The income tax is imposed on averagable income at reduced rates. The individual first determines the tax on base period income (*i.e.*, 120 percent of average taxable income for the preceeding four taxable years). He then determines the income tax on average base period income plus 20 percent of averagable income. The individual then multiplies the difference between these two taxes by five (5). The result of this calculation is then added to the income tax imposed on average base period income. In effect, the averaging procedure widens the income tax brackets for this "excess" income by a factor of five.

B. Reasons For Change

Congress felt that the income averaging procedure was currently available to many persons who had no "real" increase in their income, but whose income increased solely in response to inflationary pressures in the economy. The committee reports note that the number of tax returns electing income averaging had increased from 1.35 percent in 1970 to 6.87 percent in 1981.[4]

In addition, the problem of wide spread availability of income averaging would be exacerbated by the imminent introduction of indexation of income tax rates. It is possible that a person who has an increase in taxable income equal to the increase in the cost of living will qualify for income averaging and obtain a reduction in his income tax rate. Beginning in 1985, that individual would also have a reduction in income tax rates in response to indexation of the rates.[5] Congress intended that the introduction of indexation should serve to eliminate an increase in income tax due solely to inflation. Allowing individuals with income increased by inflation to income average would be an unintended double benefit. In addition, the reduction of income tax rates mandated by the 1981 Tax Act justified, in the mind of Congress, less generous terms for income averaging.

II. Summary of New Provisions

A. In General

An individual's current taxable income must now exceed his average base period income by 140 percent (instead of 120 percent) to qualify for income averaging. Further, the base period over which income is "spread" is decreased from 4 years to 3 years.

B. Effective Date

This provision will apply to taxable years beginning after December 31, 1983. Thus, it is currently effective for calendar year individuals.

III. Detailed Analysis

A. Decrease in Amount Subject to Averaging

The Act decreases the amount of taxable income which is subject to income averaging by increasing to 140 percent the amount by which current year taxable income must exceed average base period income.[6] Under prior law, current taxable income only needed to exceed average base period income by 120 percent. The difference between current taxable income and average base period income must still exceed $3,000 as well as the 140 percent limit. Thus, individuals will need a more dramatic increase in their income to take advantage of the income averaging provisions.

In addition, this change pushes the averagable income into substantially higher income tax brackets than before. Under prior law, averagable income was added to 120 percent of average base period income. After the amendment, averagable income is added to 140 percent of average base period income. Thus, a smaller portion of an individual's taxable income will be subject to averaging and that portion which does qualify will be subject to higher income tax rates.

B. Base Period Decreased To Three Years

The period over which income may be averaged, known as the base period, is reduced to three years from four years.[7] This change has two main effects. First, in an inflationary economy, this change will generally eliminate the earliest year, which generally has the lowest amount of income. Thus, average base period income will increase in many instances and the amount of income subject to averaging will decrease.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Example: If an individual has current year taxable income of $100,000 and taxable income in the preceeding four years of $25,000, $30,000, $35,000, and $40,000, his average base period income would be $32,500 under prior law and will now be $35,000. Thus the amount of income which will be subject to reduced tax rates is decreased by $2,500.

Secondly, this change will also increase the width of tax brackets for averagable income to a factor of four instead of a factor of five.[8] The decrease in the width of tax brackets for averagable income occurs because 25 percent of averagable income is now subject to tax in the income tax brackets above base period income, whereas only 20 percent was subject to those brackets prior to the revision of this section. The averagable income is now taxed as if received in approximately equal annual installments over four years instead of over five years. This tends to increase the amount of income taxable each year which increases the amount of income tax.

Example: Using the example above, under prior law, the maximum income tax rate for an individual using income averaging is that applicable to $51,200, calculated as follows:

Average Base Period Income (ABPI)	$32,500
120 % of ABPI	$39,000
Averagable Income (AI) ($100,000 - $39,000)	$61,000
Average Taxable Income (120% of ABPI + 1/5 of AI)	$51,200

Under revised §1301 the maximum income tax rate applicable to the individual is that applicable to $61,750, calculated as follows:

Average Base Period Income (ABPI)	$35,000
140% of ABPI	$49,000
Averagable Income (AI) ($100,000 - $49,000)	$51,000
Average Taxable Income (140% of ABPI + 1/4 of AI)	$61,750

CHAPTER 26

MISCELLANEOUS ACCOUNTING CHANGES

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

I. LIFO Conformity Requirement Applied To Related Groups [Act §95] — Code Section 472(g)

A. Background

In computing taxable income, a taxpayer engaged in the production, purchase, or sale of merchandise must take into account inventories at the beginning and end of each taxable year.[1] There are three generally accepted methods of accounting for the flow of costs through an inventory — specific identification; first-in, first-out (FIFO); and last-in, first-out (LIFO). If a taxpayer elects to use the LIFO inventory method, it must use that method in all reports to all owners of the business or entity (shareholders, partners, beneficiaries, etc.) and for credit purposes.[2] This restriction is commonly known as the "LIFO conformity requirement."

To prevent minor discrepancies from precluding the use of the LIFO method, the Service has allowed several exceptions to its strict application. For example, a problem arises if the foreign parent of a U.S. corporation publishes its financial statements in a country which does not recognize LIFO as a proper method of accounting. The Service has ruled that if the parent corporation meets certain requirements which indicate that it has substantial foreign operations, then it may publish the results of its U.S. subsidiary on a non-LIFO basis in the parent's consolidated financial statements.[3] There is another exception to the conformity requirement when discrepancies in the valuation of a LIFO inventory occurs because the taxpayer adopted the LIFO method at differing times for financial and tax reporting purposes.[4]

The Tax Court recently held that a domestic subsidiary of a domestic corporation had satisfied the LIFO conformity requirement where it issued its financial statements to its parent on the LIFO basis but the parent published consolidated financial statements which did not reflect the operation of the subsidiary with a LIFO basis inventory.[5] The parent probably received the information that it needed to compute the subsidiary's income on a non-LIFO basis as an internal management document which was not released to owners or to creditors.[6] Thus by creating a holding company structure, a domestic corporation could effectively evade the LIFO conformity requirement.

The original purpose of the LIFO conformity requirement was to ensure that taxpayers would only use it where it conformed to the best practice in the taxpayer's trade or business.[7] If owners or creditors would accept financial statements prepared on the basis of LIFO inventories, then it was considered the best available accounting practice in that industry and acceptable for federal income tax purposes.

In an inflationary environment, LIFO tends to reduce reported income and the FIFO method tends to increase reported income. By relying on the *Insilco* decision, taxpayers could arrange their corporate structure so that their subsidiaries reported income on the LIFO basis for federal income tax purposes, but on the FIFO basis in consolidated statements to owners and creditors. Accordingly, Congress decided to change the LIFO conformity requirement so that it applied to all financial statements in which a subsidiary's financial statements appeared.

B. Overview

1. Summary of New Provision

Code §472(g) enacted by the 1984 TRA treats all members of the same group of financially related corporations as a single taxpayer for purposes of the LIFO conformity requirement. The term "group of financially related corporations" means (1) any affiliated group as defined in §1504 (without regard to the exceptions in §1504(b) and by substituting a 50 percent stock ownership test for the 80 percent ownership test in that section), and (2) any other group which issues consolidated financial statements or reports to owners or creditors. The provision applies whether the LIFO subsidiary's financial results are consolidated with those of the parent and other subsidiaries or whether the parent corporation reports its investment in the subsidiary on the equity method.

LIFO taxpayers whose parents relied on the decision in *Insilco* will have to change their inventory method or have their parent corporation report their income based on a LIFO inventory.

2. Effective Date

Section 472(g) will be effective for all taxable years beginning after July 18, 1984 (the date of enactment). Thus, the financial statements of calendar year taxpayers will not be affected by the provision until their financial statements issued for the period beginning on January 1, 1985.

C. Detailed Analysis

1. In General

Section 95 of the Act adds subsection (g) to the LIFO rules contained in §472 of the Code. This subsection provides that all members of the same group of financially related corporations shall be treated as one taxpayer for purposes of the LIFO conformity requirement. The effect

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

of this change is to require that financial reports of all members of a group of financially related corporations to report on the LIFO basis, if any member of the group has elected the LIFO method for federal income tax purposes. This provision does not require that the inventory of all members of a financially related group be on the LIFO basis, but that if the financial results of that group are published to investors or creditors, the LIFO method must be used in calculating income for all members of the group.

2. Group of Financially Related Corporations

There are two groups of corporations which qualify as groups of financially related corporations. The first group is an affiliated group as defined in §1504 without regard to the provisions of §1504(b). The 80 percent rule used in §1504(a) is reduced to 50 percent. Thus a group of financially related corporations will be a chain of corporations connected through stock ownership with a common parent if corporations in the chain directly own 50 percent of the voting power of all classes of stock of an includable corporation and at least 50 percent of each class of non-voting stock. The common parent must also own directly at least 50 percent of the voting power of all classes of stock and at least 50 percent of each class of the nonvoting stock of at least one of the other corporations in the chain.

By disregarding the exceptions contained in §1504(b), §472(g) does not provide any limitation as to the corporations in a chain of ownership whose financial statements are exempt from the LIFO conformity requirement.

To make this provision as broad as possible, the definition of financially related group includes as its second category any other group of corporations which consolidate or combine for purposes of financial statements.[8] It appears that this language is intended to cover all corporations in a group which consolidates its financial statements and any corporations that are included in financial statements on the equity method.

On its face, this LIFO conformity requirement would apply to foreign parents of domestic corporations. However, the Conference Report provides that any existing exception to the LIFO conformity requirement would continue in force. Thus, a foreign parent corporation in a country which does not allow reporting of financial results on the LIFO basis would still be able to report its consolidated financial results with its domestic subsidiary on a non-LIFO basis.[9]

If a corporation owns more than 50 percent of another corporation, it will generally consolidate its financial statements with those of its subsidiary. Under certain circumstances, generally accepted accounting principles will allow the subsidiary to be carried on the "equity" method. In this method, the financial results of a subsidiary are not consolidated with the parent, but the parent's investment in the subsidiary is increased or decreased by the amount of the subsidiary's income or loss. The amendment to §472 is intended to require a parent corporation to use the LIFO method in reporting the financial results of its subsidiary regardless of whether it consolidates the results of its subsidiary or uses the equity method to report its results. In all events, only subsidiaries in which the parent owns a 50 percent interest will be subject to this conformity requirement.[10]

3. Collateral Effects

The Conference Committee Report indicates that the amendment contained in the Act does not affect any interpretation of the LIFO conformity requirement under current law. Accordingly, the Service is still free to challenge the LIFO election of any taxpayer in an *Insilco* situation.

A taxpayer who relied on the *Insilco* case may elect to continue to use the LIFO method for a 50 percent owned subsidiary if it conforms its financial statements to the requirements of this section. In such a situation, the LIFO cost for financial statement purposes may be different than that for federal income tax purposes. The Conference Committee Report confirms that this will not be a violation of the LIFO conformity requirement.[11]

To prevent unwarranted exposure to an adverse decision if the Service successfully challenges a taxpayer's LIFO election because of a conformity violation, the Conference Committee directs the Service to provide a protective LIFO election for taxpayers who wish to continue their current LIFO election. This election should protect the LIFO election in taxable years after the enactment of this Act. Taxpayers could not vary this protective election from the terms of their existing LIFO election. The Committee Report indicates that this provision should not determine the availability of conditional LIFO elections in any other circumstance.

Comment: A protective election might be a "red flag" which will insure a challenge by the IRS of a taxpayer's LIFO election.

If a taxpayer's LIFO election is disallowed by the Service and it has filed a protective LIFO election to continue to use the LIFO method, the change from the method selected by the Service for prior years to the LIFO method in the current year will be governed by Rev. Proc. 80-51.[12] The non-qualifying use of the LIFO method prior to the protective election would not be considered a Category A accounting method (*i.e.*, non-permitted method). Therefore, the taxpayer would not be required to take any adjustment required by the change into income in a single year. The Conference Report does require that the taxpayer take the change into income over a period not exceeding four years.[13] Under the normal rules of Rev. Proc. 80-51, the taxpayer could spread the adjustment over a maximum period of 10 years.

Taxpayers who have adopted the LIFO method in reliance on the *Insilco* decision may wish to revoke their LIFO elections. In that case, the taxpayer will need to apply to the Service for permission to change accounting methods.[14] The House Ways and Means Committee requests the Treasury Department to provide rules which would allow automatic permission to change to a non-LIFO method during an appropriate transition period.[15] The Ways and Means Committee Report indicates that where a taxpayer wished to change from the LIFO method to a non-LIFO method, the adjustment required under §481 will be spread over a maximum period of four years if the taxpayer changes its method in accordance with the prescribed procedures.

If it is determined that a taxpayer has improperly used the LIFO method, the taxpayer will not be allowed to

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

spread the §481 adjustment if it wants to change to a non-LIFO method, but will take the adjustment into income in the year of the change.[16]

II. Waiver of Estimated Tax Underpayments Caused by Completed Contract Rules [Act §712(m)]

A. Introduction

As part of the Tax Equity and Fiscal Responsibility Act of 1982,[17] Congress directed the Treasury Department to promulgate regulations regarding timing for contract completion, severing and aggregating contracts and allocating costs to long-term contracts. In response to this direction the Treasury Department proposed new completed contract regulations on March 14, 1983.[18] Section 1.451-3(g)(5) of those regulations allows taxpayers to defer a portion of estimated income tax payments for their first taxable year ending after December 31, 1982, if their taxable incomes include income from contracts completed as a result of the application of the new regulations regarding the time for completion of contracts.[19] The deferral applies only to estimated income tax installments required before April 13, 1983. This seems to be an equitable relief provision for taxpayers who could not be certain as to the content of the new regulations and have sufficient time to consider their effect on estimated income tax payments due shortly thereafter. Generally, there is a general provision in a major tax bill to allow the Treasury Department to waive estimated tax payments required by changes in the law caused by enactment of new legislation. TEFRA did not include such a provision and therefore section-by-section relief was required.

B. Overview and Detailed Analysis

1. In General

Act Section 712(m) amends section 229 of TEFRA to allow the Treasury Department to amend the completed contract regulations in §451 to waive the penalty applied to underpayments of estimated income taxes for a taxpayer's first taxable year ending after December 31, 1982. The waiver only applies to payments which were required to be paid before April 13, 1983. Thus, §1.451-3(g)(5) of the proposed regulations will be valid as originally published.

Example: A corporation with a January 31, 1983 fiscal year might have a contract which is severed into a number of contracts and some of them are considered completed on January 1, 1983.[20] Its final estimated tax payment was due on January 15, 1983. Since these regulations were not published until March 16, 1983, the taxpayer would not have had the regulations available for purposes of determining any of its estimated tax payments. Accordingly, it might not have made estimated tax payments equal to 90 percent of its tax liability.[21] Thus it may make its estimated tax payments as if the new regulations were not effective.

The first estimated tax payment after April 13, 1983 of taxpayers with fiscal taxable years ending after March 30, 1983 will include income from long-term contracts in accordance with these regulations.

Comment: This provision will not affect any taxpayer, either corporation or individual, with a calendar taxable year, since the first estimated payment for both types of taxpayers is due on April 15 — two days after the exception expires.

2. Effective Date

This provision is effective as if it were originally included in TEFRA.[22]

III. Depreciation Recapture In Installment Sales [Act §112] — Code Section 453(i)

A. Introduction

An installment sale occurs when property is sold or exchanged and at least one payment is to be received after the close of the taxable year of disposition. Unless the taxpayer elects otherwise, the gain from an installment sale is taxed as the taxpayer receives payment for the property, not when the property is sold. The amount of gain recognized in any year is a portion of the principal payments received in a year, equal to the gross profit from the sale divided by the total sales price.[23] Thus, if a taxpayer receives only interest on the deferred portion of the sales price, he does not recognize any taxable gain on the deferred portion.

When depreciable property or property subject to the Accelerated Cost Recovery System ("ACRS") is the subject of an installment sale, a portion of the gain recognized may be characterized as ordinary income even though the asset sold is a capital asset.[24] This ordinary income treatment represents a recapture of depreciation previously deducted by the taxpayer. All gain recognized under the installment sale method is first treated as ordinary income until the entire amount of ACRS deduction is recaptured.[25]

Section 179 allows a full deduction against income upon the purchase of certain property which normally is depreciated. If the cost of property sold or exchanged under the installment method was fully deductible under §179, the amount previously deducted is deemed received in the year of the sale, even though there may be no cash payments.[26]

The Senate Finance Committee Report discloses a concern that there can be a mismatch between the depreciation deductions which the new purchaser of the property receives and the recognition of recapture income by the seller.[27] The purchaser will immediately begin to take depreciation deductions while the seller may not report recapture of a previously claimed depreciation deduction until principal payments are made on the deferred purchase price. This appears to be a new concern of Congress that, even among unrelated taxpayers, there should be matching tax consequences to each party involved in a transaction.

The purpose of the installment sale provision was to defer the payment of tax on gain on property from either appreciation or prior depreciation deductions until the seller received cash payments. This allowed the seller the opportunity to obtain cash prior to payment of his income tax liability. The Finance Committee Report now argues that the seller has already obtained cash from the depreciable property because the depreciation deductions reduced taxable income in the year in which they were allowed. Thus a provision which requires the taxpayer to recognize

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

all his depreciation recapture in the year of sale, is not unreasonable since the taxpayer received cash for the recaptured deductions as they were taken.[28]

The depreciation recapture provisions of §§1245 and 1250 provide a disincentive for taxpayers to rapidly depreciate a property and then sell or exchange it to acquire another piece of property which they could depreciate. It appears that some persons have used the installment sale provisions to avoid the disincentives for "churning" property contained in the recapture provisions. The deferral of the recapture provisions and capital gains tax accomplished through an installment sale can reduce the disincentive for selling depreciable property. The revision of the installment sales provision contained in the 1984 Act will reduce the incentive for persons to replace property as soon as the tax benefits are exhausted. This change will also make it more difficult for investors to achieve negative tax rates through use of ACRS deductions and rapid sales of property.[29]

B. Overview

1. In General

Section 112 of the Act repeals and replaces §453(i) of the Code providing that in any disposition of real or personal property, all depreciation recapture required by §§1245 and 1250 of the Code will be recognized in the year of the disposition. A taxpayer's basis in depreciable property sold on the installment method will be increased by the amount of the recapture gain recognized in the year of sale. The remainder of the gain from an installment sale will be recognized under the regular installment sale rules.

2. Effective Date

The amendments made by the Act are applicable to dispositions made after June 6, 1984.[30] If a disposition is made pursuant to a contract which was binding on March 22, 1984 and at all times thereafter, prior law should be applied.[31]

C. Detailed Analysis

The Act totally revises §453(i) of the Code. The revised section requires that "recapture income" arising in an installment sale of real or personal property will be recognized in the year of disposition of the property regardless of the amount of payments made in that year. Any gain which is recognized in excess of the recapture income will be recognized on the installment method as currently set forth in §453.[32]

"Recapture income" is defined as the amount which would be treated as ordinary income under §§1245 or 1250 for the taxable year of the disposition if all payments to be received under the terms of the sale were received in that year.[33] Recapture income includes any amounts deducted under §179 since §1245 recaptures deductions taken under §179.[34] Thus the repeal of existing §453(i) will not change the application of recapture when a taxpayer disposes of §179 items.

Although there is no amendment to the provisions of the Code dealing with taxpayer's basis in property, the Senate Finance Committee indicated that this provision would require an adjustment to basis to reflect the amount of recapture income included in gross income. The adjusted basis of property sold should be increased by the amount of recapture income included in gross income in the year of sale. The effect of this adjustment will be to decrease the amount of gain which is subject to installment sale treatment and decrease the portion of each payment which is considered gain from the sale of property.[35]

> *Example*: A taxpayer sold property for $100 in an adjusted basis of $20. The taxpayer had taken $30 of depreciation and all of that amount was subject to recapture. On the sale of the property, the $30 of depreciation subject to recapture would be recognized as ordinary income in the year of sale regardless of the amount of payments received in that year. In addition, the basis of the taxpayer would be increased by the amount of recapture income realized and would accordingly equal $50 (*i.e.*, the original cost of property). The gross profit from the sale is $50 and the gross profit percentage would be 50 percent ($50/$100). Accordingly, 50 percent of each payment the taxpayer receives will be taxable as gain from the sale of property. If the taxpayer receives $50 of principal payments in the year of sale, then it will have $25 of capital gain income as well as $30 of ordinary recapture income.

Comment: This provision not only accelerates the recognition of ordinary income as compared with prior law, but also accelerates the recognition of a capital gain from a sale of property. In the example above, under prior law, the gross profit percentage would be 80 percent. Thus 80 percent of the initial principal payment for such property would be taxable as gain. That gain would be characterized initially as ordinary income to the extent of any depreciation recaptured. Accordingly, the first $37.50 of principal payments would produce ordinary recapture income of $30. In the prior Example, the taxpayer will recognize the $30 relating to recapture income in the year of the sale and the initial $50 of principal payments will include $25 of capital gain under this revision. Under prior law, the taxpayer would have only recognized $30 of ordinary income and $10 of capital gain income in the year of the sale.

CHAPTER 27

TAX STRADDLES

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Background

A. Pre-ERTA [1] Law and Problems

The term "tax straddles" embraces a wide variety of transactions, many of which do not qualify as "straddles" as that term is usually understood. The term includes, for example, wash sales, *i.e.*, the sale of property at a loss accompanied by the acquisition of substantially identical property to replace the property sold either shortly before or shortly after the loss sale.

A short sale probably does qualify as a straddle, loosely defined. Primarily to prevent holding period manipulation, the predecessor of §1233 was enacted by the Revenue Act of 1950. Section 1233 contains two basic sets of rules, referred to herein as the (b) rules (§1233(b)) and the (d) rules (§1233(d)).

Under the (b) rules, where a taxpayer enters into a short sale, and where he has not, at such time, held property substantially identical to the property sold short for a period exceeding the short-term capital gain holding period, any gain realized from closing the short sale is short-term capital gain. While the short sale is open, the holding period of the substantially identical property is suspended. For purposes of the (b) rules, a put option is a short sale. Such deemed short sale is closed either by the exercise, or the expiration unexercised, of the put.

Under the (d) rules, where, at the time of entering into a short sale, the taxpayer has held property substantially identical to the property sold short for a period that exceeds the short-term capital gain holding period, any loss realized from closing the short sale is a long-term capital loss. These rules apply only where the property is held as a capital asset. Where a dealer sells short stock held as inventory, any gain is ordinary income. Finally, there are the Code provisions affecting transactions in options. Under §1234, the character of an option in the holder's hands depends on what character the property to which the option relates would have if held by the taxpayer. Neither the payment of a premium for an option nor the receipt of a premium by the option's grantor is a taxable event.

The treatment of premiums depends on the eventual outcome of the option transaction. If the option is a capital asset, its holding period commences upon acquisition. If it expires unexercised, it is treated as sold on the day it expires. At that time, the premium paid by the holder is short or long-term capital loss depending on the period for which the option was held. If a call option is exercised by the holder, the premium is added to the cost of the stock to determine the holder's basis. The stock's holding period commences on the exercise date. Where a put option is exercised, the premium is deducted from the amount received by the holder in determining gain or loss. Where an option is sold by the holder, (this includes a closing transactions effected through an option exchange) capital gain or loss will result. Where the option is a stock option, it is almost invariably a capital asset, except where the underlying stock, if held by the taxpayer, would not be a capital asset, or where the option is held by a dealer as a hedge against fluctuations in the value of its inventory.

The tax treatment of option grantors has always presented a problem. Before §1234(b), where a call or put option granted by a taxpayer expired unexercised, the gain was ordinary income. Likewise, where the grantor realized gain or loss from a closing transaction terminating his obligations under an option, the gain or loss was ordinary. This was because the grantor was not considered to hold any property which could be classified as a capital asset. *A fortiori*, the termination of the grantor's obligations under an option did not constitute the sale or exchange of a capital asset. The transaction's tax consequences were, therefore, governed by principles similar to those applicable to the termination of rights and obligations under a contract. Prior to the 1976 TRA, however, it had come to be generally agreed that gains and losses of a grantor were ordinary. Where the grantor of a call option had stock or securities called from him upon the exercise of the option, the premium received was added to the price paid by the optionee in determining gain or loss from the stock or securities. Likewise, where the grantor purchased stock or securities upon the exercise of a put, the premium was deducted from the price paid in establishing his basis in such property.

The 1976 TRA added §1232(b), providing that, in the case of the grantor of the option, any gain or loss from any closing transaction with respect to, and any gain or loss from the lapse of, an option in property, is treated as short-term capital gain or loss. "Closing transaction" refers to any termination of the grantor's obligation under an option other than through the exercise or lapse of the option. "Property," for this purpose, is restricted to stocks and securities (including stocks and securities dealt with on a "when issued" basis), commodities and commodity futures. Section 1234(b) was made inapplicable to any option

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

granted in the ordinary course of the taxpayer's trade or business of granting options by §1234(b)(3).

Note: There are no "dealers" in options in the sense of a person holding inventory for sale to customers (as is the case of a dealer in stocks or securities). Also, it is doubtful whether a person who grants options can be considered to be engaged in the trade or business of granting options merely because of the volume of such business or because it provides substantial income, etc., as might be the case for a person who trades in stocks or securities or commodity futures or other similar investment products. This is because the grantor of an option does not purchase or sell property.[2] The committee report explaining §1234(b) appears to assume that, to be considered in the trade or business of granting options, the taxpayer must be a broker-dealer in stocks and securities, and that the options granted by such person, to qualify under §1234(b)(3), must be written in connection with the activities involved as a broker-dealer. Section 1234(b)(3) would apply only to options of the latter sort, as distinguished from options granted in connection with the broker-dealer's investment activities. The report concludes, "(g)enerally, it is anticipated that persons who are treated as writers of options in the ordinary course of their trade or business will be those who "make a market" with respect to particular option."[3] A "market maker" in options is a person who is registered with an options exchange as such and who assumes the responsibility for assuring the smooth operation of the exchange in options on a given stock or stock index by making available to brokers with buy orders options in the stock or index. Such "market makers" will also buy options offered for sale, keeping their own trades in balance insofar as possible. They will also grant (or "write") options for their own account. To be entitled to §1234(b)(1) treatment, the latter investment grants of options must be identified as such under a system similar to that applicable to broker-dealers who purchase stocks and securities for investment.[4] Since the grantor of an option acquires no property, compliance with this rule presents certain conceptual problems.

Under the above provisions in place before ERTA, taxpayers discovered and exploited a variety of strategems to obtain what were perceived to be unjustifiable tax advantages.

1. Straddle Losses

Under §1233 (which applies to short sales of stocks and securities and to commodity futures) a futures contract specifying delivery in one calendar month was not treated as property substantially identical to another futures contract, even though it related to the same commodity if it called for delivery in another calendar month.[5] Taxpayers could in Year 1 acquire both a long futures position[6] calling for delivery in, for example, April of Year 2 and a short futures position[7] calling for delivery in, for instance, September of Year 2. In the case of a relatively volatile commodity, such as a precious metal, price fluctuations would result in unrecognized gain with respect to one position and an almost (but not always precisely) equal unrecognized loss with respect to the other. The loss position could be closed out in Year 1 and simultaneously replaced. For example, if the commodity price moved upward, the short position would be closed out and a new short position calling for delivery in, for example, October of Year 2 could be acquired, effectively locking in the unrecognized gain from the long position. That is, any downward movement in the long price would automatically be balanced by an increase in the value of the short position. In the following year, Year 2 in the case postulated above, both contracts could be closed out, and the resulting net gain would almost exactly (but not always precisely) equal the loss realized the previous year. The result was a deferral of tax on unrelated Year 1 income offset by the loss from the closed out short position. At the time of ERTA, the IRS was attacking such strategems on various grounds *e.g.*, Rev. Rul. 77-185, 1977-1 C.B. 48. The basic premises of this ruling have, so far, been rejected by the Tax Court. See Smith v. Comr., 78 T.C. 350 (1982) which disallowed the Year 1 loss on the ground that it was not allowable under §165(c)(2) since the transaction was not entered into for profit. Rev. Rul. 77-185 was premised on the position that the closing out of one leg of a straddle is not a closed or completed transaction. This appeared to remain the IRS' position, *Smith* notwithstanding.[8]

2. Cash and Carry Straddles

The futures price of a commodity increases the farther the delivery date is in the future. In the case of precious metal futures contract, this increase reflects numerous factors such as interest, storage costs, insurance, etc. The purchaser of a commodity who simultaneously enters into a short futures position will, with few exceptions, therefore be assured of a capital gain if the commodity is held for delivery under the contract. If the commodity is purchased with borrowed funds at interest, such interest could be deducted during the period for which the commodity was held, together with storage, insurance, and other costs of ownership. These deductions offset ordinary income, as a general rule. When they were recouped as long-term capital gain, the taxpayer benefitted both from deferral of tax and the conversion of ordinary income to capital gain. This strategem was known as a "cash and carry" straddle. The taxpayer assumed no real risk since at all times, his position was balanced.

3. Foreign Currency Contracts

While foreign currency futures contracts are offered on several exchanges, they are available from most large banks and financial institutions. Similar contracts under which someone undertakes either to purchase a given amount of a foreign currency at a set price in dollars on a specified date, or to purchase an amount of the foreign currency at a set dollar rate at a future date, are sometimes referred to as "forward sales" of the currency. They are often engaged in by business concerns to hedge against fluctuations in the exchange rate or to protect the balance sheet values of foreign assets, which must be converted into current dollars for financial reporting purposes. The proper tax treatment of such contracts was long a matter of dispute. Where the exchange rate moved favorably, the holder of the contract (which was usually a capital asset) could sell it. Any gain was reported as capital gain, long or short-term depending on the holding period of the contract rights. Where the taxpayer's position was a short one, the IRS argued that §1233(b) characterized any gain as short-term capital gain. Where, in the case of a forward sale, the currency itself or a long position was used to close out the holder's obligation, any gain or loss was clearly short-term (unless, as rarely

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

occurred, the currency had been held long-term prior to entering the contract). Where the exchange rate moved unfavorably, the holder could negotiate a settlement under which the bank would relinquish its contract rights in consideration of payment measured by the holder's unrealized loss. Here, the loss could be claimed as an ordinary loss since there was no sale or exchange of property, merely the extinguishment of the holder's contractual rights and obligations. Of course, some of these contracts were bona fide hedges protecting against the diminution in value of ordinary income assets or the receipt of future ordinary income. This, too, however, entailed some dispute, since it was not always clear whether a given foreign currency contract qualified as a hedging transaction.

Most of these stratagems assumed intricate patterns. While other tax planning "straddles" evolved, those mentioned above were the most prominently publicized.

B. The ERTA Straddle Provisions

ERTA enacted a comprehensive set of anti-straddle abuse provisions which effectively put an end to the stratagems outlined above, as well as some others. In addition, amendments were enacted by the Technical Corrections Act of 1982 (P.L. 97-448) filling in gaps, perfecting, and making technical corrections to the ERTA provisions. ERTA and TCA 1982 provisions are summarized below.

1. Loss Deferral Rule

This rule was placed immediately after the wash sale rule, in §1092. Section 1092 states that any loss with respect to one or more "positions" shall be taken into account for a taxable year only to the extent such loss exceeds the "unrecognized gain" with respect to one or more positions which are "offsetting positions" with respect to the positions from which the loss arose.[9] A "position," for this purpose, is defined as "an interest (including a futures or forward contract or option) in personal property.[10] "Personal property" was defined as any personal property (other than stock) which is actively traded.[11] "Position" did not include any exchange-traded stock option.[12]

"Unrecognized gain" was defined as, in the case of any position held by the taxpayer at the end of the taxable year, the amount of gain which would be taken into account with respect to such position if it were sold on the last business day of the taxable year for its fair market value.[13]

The loss deferral rule did not apply to any "hedging transaction" as defined in §1256(e).[14]

Where a loss was disallowed, it was deferred until the next taxable year. It was treated as a loss from a position disposed of in that year and again was subject to the same deferral rule if there were any unrecognized gains from offsetting positions at year's end.[15]

The key term in §1092 is "offsetting position" as defined in §1092(c)(2). A taxpayer holds offsetting positions when "there is a substantial diminution of loss" from holding one position with respect to personal property by reason of holding another position with respect to personal property (whether or not of the same kind). The statute enumerated a number of circumstances that raise a (rebuttable) presumption that two or more positions are offsetting.[16]

As indicated above, the price differential between two legs of a straddle should, theoretically, remain constant. For example, if the price of July corn is $6 per bushel, the price of September corn might be $6.45 per bushel (reflecting carrying charges, etc.). If the July price moved to $6.30, the September price could be expected to move to $6.75. Similarly, the price differential between the cost of a spot commodity, such as cash silver, and the silver futures price for a given delivery date will reflect current interest, insurance, storage, etc. costs. An upward (or downward) move in the price for the delivery date (or cash position) will usually be reflected in a similar increase or decrease in the futures price for a later date. These price movements, however, are not always exactly parallel for numerous reasons. A knowledgeable professional may enter into a straddle, or a number of straddles, in the hope of profiting from a divergence or convergence of the price differentials described. If, in the example of the corn futures, the July price rises by $.30, the September price may only rise by $.29. If the July position is long and the September position short, closing out both positions will yield a profit; small, but satisfactory in view of the limited risk involved. Also, in the case of a silver straddle, for instance, price divergences might result where the cash metal is quoted on one exchange and the futures price on another, perhaps, foreign, exchange. Congress excluded such non-tax motivated, profit-seeking straddles (which posed real risk of loss) from the §1092(a)(1) (loss deferral) rule. This was done under §1092(a)(2). That paragraph provides that in the case of an "identified straddle," the loss deferral rule does not apply. Any loss with respect to an identified straddle is to be treated as sustained no earlier than the day on which all of the positions making up the straddle are disposed of.[17] An "identified straddle" means any straddle:

> (1) that is clearly identified in the taxpayer's records before the close of the day on which the straddle is acquired, as an identified straddle,
>
> (2) all of the original positions of which (as identified) were acquired on the same day, and with respect to which:
>
> (a) all of the [original] positions are disposed of on the same day during the taxable year, *or*
>
> (b) none of such [original] positions have been disposed of as of the close of the taxable year, *and*
>
> (c) which is not part of a larger straddle.[18]

Note: A position which is not part of an identified straddle, cannot offset any position which is part of an identified straddle.[19]

Section 1092 also provided a special rule for regulated futures contracts (RFCs). Under this rule, where at least one, but not all, of the positions of a straddle is an RFC, §1092 applies to any RFC and any other position making up the straddle.[20] Further, §1092(b) provides that, under regulations to be issued, in the case of gain or loss with respect to any position of a straddle, rules similar to the rules of §1091(a) and (d) (the wash sale rule) and to §1233(b) and (d) (the short sale rules), which are consistent with the purposes of §1092, shall apply. ERTA also amended §1233(e)(2) defining "property" for the purposes of §1233(b) and (d), to exclude "any position to which

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

§1092(b) applies." Since §1092(b) provides for regulations to be issued relating to positions of straddles as defined by §1092(c)(1), and since a straddle includes offsetting commodity futures, §1233 will not apply to a straddle such as that described above consisting of the ownership of a commodity or a long RFC, coupled with a short future position in the same commodity. Instead, substitute wash sale and short sale rules are to be supplied by regulations. As of the date of enactment of the 1984 TRA, no such regulations had been issued.

2. Section 1256 (Regulated Futures Contracts)

Section 1256, as enacted by ERTA and as amended by TCA of 1982, defines a "regulated futures contract" (RFC) as a contract:

(1) with respect to which the amount required to be deposited and the amount which may be withdrawn depend on a system of marking to market, and

(2) which is traded or subject to the rules of a domestic board of trade designated as a contract market by the Commodity Futures Trading Commission (CFTC) or of any board of trade or exchange which the Secretary determines has rules adequate to carry out the purposes of §1256.[21]

An RFC also included any "foreign currency contract," [22] meaning a contract which requires the delivery of a foreign currency in which positions are also traded through RFCs. A foreign currency contract, for this purpose, must be traded on the interbank market, and must be entered into at arm's length at a price determined by reference to the price in the interbank market.[23] Regulations are authorized excluding any such contracts if their treatment as RFCs would be inconsistent with the purposes of §1256.

Where an investor acquires an RFC, he is required to post with the broker margin (as determined by the CFTC) to insure performance on the contract. At the close of each day's trading, there is either unrealized gain or loss on the contract. The contract holder must post additional margin in the event of a loss (maintenance margin) but is permitted to withdraw (from funds transferred by holders of loss contracts) the amount of any unrealized gain. Thus, in the case of any RFC, the holder is maintained current and, in the event the contract is closed out at a loss, most of the loss will already have been paid in through daily maintenance margin payments. This system is termed "marking to market." It is not required as to purchasers of options who, once the premium has been paid, are not subject to any further payments. On the other hand, grantors of options must maintain margin where the option is not covered. Holders of RFC straddles are required to post only a fraction of the margin which would have been required had each contract been entered into separately since the balanced position guarantees performance. Also, where the price fluctuates, additional deposits on the loss leg are offset by withdrawal rights on the gain leg. These RFCs, as are all RFCs sold on CFTC designated contract markets (trading in futures in the U.S. other than in such markets is illegal) are subject to the marking to market system referred to in §1256(b).

The basic rules of §1256(a)(1), (2) and (3) are:

(1) Each RFC on hand at the year's end is treated as if it had been sold (closed out through the exchange) for its fair market value. Any gain or loss is taken into account for the taxable year (regardless of the taxpayer's method of accounting).

(2) Appropriate adjustments are to be made to any gain or loss subsequently realized from an RFC treated as sold under (1) to take into account gain or loss recognized under that rule.

(3) Any gain or loss with respect to an RFC is treated as:

(a) 40 percent short-term capital gain or loss;

(b) 60 percent long-term capital gain or loss.

Rule (3), above, is referred to as the "60/40 rule."

A straddle (as defined by §1092(c)) may be made up of one or more positions which are not RFCs and one or more positions which are. In the case of any straddle, at least one (but not all) of the positions of which is an RFC, (a "mixed straddle") §1256(d) governs. Section 1256(d) provides that, where each position of the straddle is identified in the taxpayer's records before the close of the day on which the first RFC position was acquired, the taxpayer may elect to have §1256 *not* apply to all RFCs which were part of the mixed straddle.

If a mixed straddle is identified for §1256(d) purposes and is also identified for §1092(a)(2) purposes, the taxpayer may elect whether to have the §1256 rules apply to the RFCs involved.

If a mixed straddle does not qualify for identification under either §1256(d) or §1092(a)(2) (because all of the positions were not acquired on the same day, or one or more of the positions was not identified before the close of such day) then: (a) §1092 applies to all the positions in the straddle, including the RFCs; and (b) §1256 applies to all of the RFCs in the straddle.

Rules (1), (2) and (3) applied to the termination (or transfer) during the taxable year of the taxpayer's rights or obligations under any RFC by offsetting, taking or making delivery, or otherwise.[24]

Where a holder took delivery on an RFC which is part of a straddle containing two or more RFCs, all other RFCs in the straddle were treated as terminated on the delivery date.[25]

Under these provisions, the following straddle situations may exist:

(1) A mixed straddle (whether or not identified under §1256(d)(4), *i.e.*, at least one, but not all, of the positions of which is an RFC). If the straddle is an identified (under §1092(a)(2)) straddle, the loss deferral rule will not apply, but the RFCs are marked to market and subject to the 60/40 rule. If an RFC marked to market is a loss position, the loss is not treated as sustained until all the straddle positions have been disposed of. None of the positions in the straddle are considered as offsetting positions outside the straddle. If any position of the straddle is disposed of before all positions are disposed of, the straddle is disqualified as an identified straddle and its positions are subject to the loss deferral rule.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(2) Where the straddle is both a mixed straddle, identified under §1256(d)(4), and an identified straddle under §1092(a)(2), the taxpayer may choose whether to have §1256 apply to the RFCs. Where the taxpayer elects not to have §1256 apply, the straddle is treated for all purposes as a straddle made up entirely of positions other than RFCs. If no such election is made, the straddle is treated as a mixed straddle discussed in (1), above.

(3) Where all the straddle positions are RFCs, §1092 and §263(g) do not apply to any of the positions. All are subject to the mark-to-market and the 60/40 rules.[26]

Comment: Section 1256(a)(4) contains the following language (retained in the 1984 amendments except to replace the term "RFC" by "§1256 contract"): "If all the *offsetting* positions making up any straddle consist of RFCs to which this section applies (and such straddle is not part of a larger straddle), §§1092 and 263(g) shall not apply with respect to such straddle." (emphasis added). What is meant by the term "offsetting?" Why does the statute not read simply "If all of the positions...etc."? A straddle must, by definition, contain offsetting positions. If one position is a non-RFC and the other is an RFC, which is the "offsetting" position? Surely such a straddle is not exempt from §§1092 and 263(g). If it were, then §263(g) would not apply to cash and carry straddles, discussed above. In such a case, if §1092 did not apply, and the RFC was marked to market at a loss, the loss deferral rule would be defeated.

The "anti-straddle" rules take on special significance in view of the shortening of the long-term capital gain holding period to more than six months.[27]

To deal with the cash and carry straddle, ERTA added §263(g) requiring the capitalization of interest and carrying charges allocable to personal property which is part of a straddle (as defined by §1092(c)), where such amounts exceed the interest includible in gross income with respect to such property.

To deal with the characterization of payments made to be relieved from obligations under a forward sale or purchase contract (usually involving foreign currency), ERTA enacted §1234A, treating as capital gain or loss any gain or loss attributable to the cancellation, lapse, expiration, or other termination of a right or obligation with respect to personal property (as defined by §1092(d)(1)) which is, or on acquisition would be, a capital asset in the hands of a taxpayer, or an RFC which is a capital asset.

3. Hedging Transactions

None of the above rules (loss deferral under §1092, treatment of RFCs, capitalization of interest and carrying charges, etc.) applied to positions which were part of a hedging transaction.[28] A hedging transaction is a transaction: (a) entered into in the normal course of the taxpayer's business, and (b) the principal purpose of which is to reduce the risk of loss with respect to property or items of ordinary income where such property is to be used to generate ordinary income, or, is of a kind where the gain or loss from its sale or exchange would be ordinary gain or loss.[29] Short futures contracts entered into by commodity producers, for example, to protect against price drops, are hedges, as are foreign currency forward purchases and sales (or foreign currency RFCs) entered into in connection with the purchase of equipment or inventory or the sale of goods to foreign purchasers. Also qualifying are long positions entered into by a manufacturer using the commodity in its operations. Dealers in commodities, grain merchants, oil refiners, and the like and persons buying and selling such commodities may hedge risks entailed in their business operations.

The hedging exception presented one problem which was also dealt with in §1256. It was foreseeable that limited partnerships or S corporations would be formed to act as dealers in property, and that straddle positions qualifying as hedging transactions could generate ordinary losses which could be passed through to the investors. To prevent manipulation of the hedging exemption by tax shelter syndicators, the exemption was made inapplicable to syndicates. For this purpose a syndicate is defined as an entity (other than a corporation that is not an S corporation) if more than 35 percent of the entity's losses during any period are allocable to limited partners or limited entrepreneurs.[30]

C. Reasons for Additional Tax Straddle Provisions

The above provisions effectively ended most straddle-based tax avoidance. There continued to exist areas, however, in which straddles, loosely defined, could still achieve what Congress perceived as unjustifiable tax advantages. Some of these involved new investment products which either did not exist at the time of ERTA or had existed only briefly and posed no perceived pressing tax avoidance problems. Especially troublesome among these were commodity options, options and futures contracts providing for cash settlement,[31] and options and futures contracts based on stock indexes, interest yields of various marketed securities, and the like. Of concern, also, was the effect of the proposed shortening of the long-term gain holding period.

1. Stock Options

Stock options have always been a source of problems from the standpoint of taxation. The treatment of grantors and holders of options was, to a considerable degree, unsettled as late as the early 1970s. The wash sale and short sale rules applied to options only to an extremely limited extent. When ERTA was enacted, trading in options through organized exchanges had been authorized for a relatively short time (since 1975), and straddle stratagems employing options were not perceived to be a serious tax avoidance problem. Stock options differ from futures contracts in significant respects. First, the holder of an option has a property *right* but no *obligation* with respect to property. The holder's exposure to loss is limited to the premium paid whereas the possibility of gain is, at least theoretically, limitless (in the case of a call option). Second, the option privilege diminishes in value each day it is held where there is no change in the value of the property to which the option relates. The combination of a call option and a put option, while representing a long and short position respectively, does not, generally, present an opportunity for straddle manipulation as do offsetting positions in futures contracts.

Example: A purchases a nine-month option to acquire 100 shares of ABC at $100 per share for a premium of $1,000 when ABC is traded at $100. ABC will have to rise in value at least $10 for A to make a profit. A also

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

purchases a put option with the same $100 strike price for a premium of $900. Now, ABC must either rise or decline in value by more than $19 for A to realize any profit from his position. If ABC rises in value to $112, A will have unrealized gain from the call option of about $200. If the put option is closed out, the amount of the loss will depend on the time remaining until the option expires. The put option is well out of the money. This, plus the fact that there is less time until the expiration date than when the option was acquired may result in the option having a value of, say, $300. The $600 loss sustained from closing out the put is three times the unrealized gain from the call. Replacing the closed out put with another will require another $300 investment. If the stock price remains stable, the value of the call option will gradually diminish to about $2 per share. The locked-in gain is eroded by the loss in value of the option right against which there is no effective protection. A may wind up losing another $1100 ($800 from the call and $300 from the put).

The position of the grantor of an option is somewhat anomalous. While, for some time, there was a question as to the proper tax treatment of gain or loss from the granting of an option, it was well settled at the time of enactment of §1234(b) that the writer or grantor (sometimes confusingly referred to as the "seller") of an option acquired no right or interest in property and, hence, when either (a) he became unconditionally entitled to retain the premium upon lapse of the option, or (b) he realized gain upon payment of an amount less than the premium received to terminate his obligation under the option or, had to pay a greater amount than the premium to effect a termination, the gain or loss was ordinary income or ordinary loss. These transactions, as explained above, were viewed as not involving the sale or exchange of a capital asset.[32] Legislation changed this result, but §1234(b) did not create in the grantor a property right. It merely decreed that, for tax purposes, the grantor's gain or loss would be treated as short-term capital in nature. The grantor of an option has no rights with respect to property. He has only an obligation to make delivery or purchase at a stated price upon demand by the optionee.

As can be seen, options differ from futures contracts in that rights only are acquired by one party to the option contract. The other party only assumes obligations. In a futures contract, each party acquires rights and assumes obligations.

Notwithstanding these differences, which make options unsuitable for straddle manipulation, it came to Congress' attention that straddle manipulation could be accomplished through options under certain circumstances.

Example: When ABC Corp. stock is selling for $100 per share, A purchases, in August, a call option expiring the following April with a strike price of $70. (It is a feature of stock options that the value of the option privilege, the "time value," ceases to be reflected in the option's price as the spread between the option's strike price and the price of the underlying stock increases. To cite an exaggerated example, a call option with a $1 strike price on stock selling for $200 is probably worth about $199 irrespective of the option's remaining life.) The premium paid by A for the option with the $70 strike price will, therefore, be close to $30. At the same time, A purchases a put option on the same stock with a strike price of $130. For the same reasons, the premium for this option will also be close to $30. Both options are "deep in the money," as that term is usually used (and without regard to the meaning given the term in the legislation to be discussed below). A now awaits a change in the ABC stock price. Assume the price declines to $60. The call option, depending on the time to expiration, is now worth, say, $2. A sells the option[33] and recognizes a capital loss of $28. He immediately replaces the option sold with another call option with approximately the same $70 strike price for a $3 premium. Meanwhile, the put option has increased in value to $70 ($130 − $60). If the stock price should then rise, there will be a roughly inverse change in the values of the two options. For each dollar the put declines, the call will increase, but not in exactly the same amount since the $3 price for the $70 call reflected the option's time value. For instance, if the ABC stock had declined to $90, and the call were sold for a $10 loss and then replaced, still being sufficiently in the money so that the time value was largely eclipsed by the strike price-stock price spread or intrinsic value, the situation would be more like an RFC spread. If these events occurred late in the year and the replacement call and original put are held until the following January, both can be closed out at a net gain more or less equal to the loss realized from the original call disposed of. The same straddle-like series of transactions can be effected by purchasing and granting in the money calls on the same stock.

This stratagem closely follows the old RFC straddle stratagem. In view of the post-TRA six-month long-term holding period, it may have the added advantages of deferral and of converting short-term to long-term gain (which was not possible under the pre-1984 TRA holding periods, since exchange-traded options have lives limited to nine months).

The grantor of a call assumes a short position with respect to the stock, and the writer of a put assumes a long position. Both, however, can profit only to the extent of the premium received. Granting options is, therefore, not usually an effective straddle device. The owner of stock who writes a call only partially protects his long position. Nevertheless, to the extent of the premium received, the grantor of a covered call holds offsetting positions with respect to property.[34] If the covered call is deep in the money, it may be used to effect a risk-free prolongation of the holding period for the stock. If stock having a basis of $70 has appreciated to $100 with another two months of holding period before it goes long-term, a call option with a $70 strike price can be written for a $30 premium. The optionee, while hoping that the stock will rise above $100 to yield a profit on the option, can nevertheless be counted on to exercise the option and recoup some portion of the premium if the stock does not fall below $70. If the stock does rise above $100, the grantor has forfeited the additional gain to the extent of the loss he will sustain in terminating his obligation under the option. The straddle, however, if it may be so termed, will usually be effective to lock in

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the unrealized appreciation on the stock for the time necessary to qualify for long-term capital gain treatment. Also, if the option is terminated in a closing transaction at a loss at the year's end and the stock is sold the following year, a deferral of tax can be effected. This may entail the writing of a new call to re-establish a balanced position when the old call is terminated. While this kind of straddle seems close enough to manipulation to justify a loss deferral rule and either a wash sale or short sale type of rule, Congress saw fit to distinguish a legitimate investment yield enhancement covered call where the strike price of the call granted is at or near the price of the stock. In this case, there is only slight appreciation lock-in, since the premium will reflect only the time value of the option privilege and will, therefore, not protect the grantor against any substantial decline in the price of the stock. If the option is terminated with a short-term loss at year's end and the stock is soon thereafter sold at a long-term gain during the next taxable year, however, the tax advantage is viewed by Congress to be unjustified.

2. Application of §1256(a) to Various Investment Products

Section 1256 applied only to RFCs, which were restricted to commodity futures contracts traded on regulated exchanges and to foreign currency contracts. In the 1980s, commodity options were introduced. A commodity option entitles the optionee, upon demand, to acquire from the grantor either (1) a long futures contract with a specified striking price (*i.e.*, futures price) or (2) a short futures contract. The first option is termed a long call, and the second a long put. The grantor of a long call must, upon exercise of the option, enter into a short futures position with the same specified striking price. This is termed a short call. Upon exercise of a long put, the grantor must enter into a long futures contract with the same striking price. This is termed a short put. It was unclear whether long option positions (long calls and puts) were subject to mark to market and the 60/40 rule. It was also unclear whether gains and losses of grantors of short options (short calls and puts) were subject to the rules of §1234(b). While long options appeared to be positions in actively-traded personal property where the futures contracts related to commodities, this was not clear where stock indexes were concerned. An option on a stock index, or a stock index futures contract, or an option on a stock index futures contract all involve interests in stock, and the definition of "personal property" set forth in §1092(d)(1) excludes interests in stock from the definition of personal property (with the exception of non-exchange traded stock options with a life of more than one year). These were all matters which had to be clarified by legislation.

3. Application of the Wash and Short Sale Rules to Straddles

Section 1092(b) authorized the Commissioner to prescribe regulations applicable to straddle positions similar to the rules of §1091(a) and (d) and §1233(b) and (d). The committee reports indicated that such regulations were to supersede the statute where applicable. They were, therefore, viewed as an integral part of the anti-straddle legislation. Yet, no such regulations had, at this writing, been issued. Further, if the statute was to be broadened to include exchange-traded stock options, future regulations would have to deal with these arrangements as well as with the new investment products described above. The wash sale and short sale rules alone cannot adequately deal with some transactions. Notable among these are the positions of option grantors whose gains and losses do not arise from the sale of property. The Commissioner would have to devise regulations embodying not only the wash and short sale rules, but other rules consistent with the purposes of the new straddle provisions to fill in any areas overlooked or bypassed by the statute, and to effectuate the functions envisioned by Congress when it enacted §1092(b) in ERTA. Further, it was decided to require such regulations to be issued within a reasonable time after enactment of the Act.

4. Options Dealers

Numerous tax shelters have been established in the form of limited partnerships purportedly engaged in the business of dealing in options. As explained above, an options dealer is not a merchant buying and selling property, but rather engages in market making, the purchasing and granting of options as registered specialist on an options exchange. Under §1234(b)(3), as interpreted by such dealers, gains and loss from such activities were treated as ordinary income and loss. By forming what, in effect, were straddle positions, and closing out loss positions, such dealers were able to pass through to limited partners or entrepreneurs ordinary losses. Not only did Congress view this as objectionable, it was seen as being inconsistent with the treatment accorded commodity dealers. Commodity dealers are usually brokers who trade in commodity futures on the floor of the exchange for customers and also for their own account. Such persons were not exempted from the §1256 rules (except insofar as they actually dealt in commodities and purchased or wrote futures contracts as bona fide hedging transactions). There seemed to be no reason to treat differently for tax purposes persons engaged in such options dealing and persons engaged in trading in commodity futures.

5. Mixed Straddles

The treatment of mixed straddles [35] presented some difficulties, especially in view of the changed long-term capital gain holding period. Losses on non-RFC positions were 100 percent allowable as short or long-term capital losses. Gains from the RFC positions, however, were entitled to 60/40 treatment. The reverse was also true, where a non-RFC had been held for the requisite time, all gain realized from its disposition qualified as long-term capital gain, but a loss from an RFC, regardless of the holding period, was accorded 60/40 treatment. This invited manipulation. Statutory rules could provide some remedy in this area. Congress, however, decided that a more effective approach would be to authorize regulations.

II. Overview

A. Introduction

The tax straddle provisions of the 1984 TRA (subtitle H of the Act) are contained in Act §§101 through 106. The following is an outline of these provisions.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

B. *Section 101: Repeal of Exception from Straddle Rules of Stock Options and Certain Stock*

1. *General*

Act §101 amends §1092. Act §101 gives effect to Congress' decision to extend the straddle rules to cases where the taxpayer holds stock or a stock option and has either granted or acquired an offsetting option with respect to the same stock (except for the grant of a covered call option with a strike price at or near the stock price). The straddle rules were also extended to certain cases where one of the positions is direct stock ownership, but the holding of other stock could not be considered a position offsetting such direct ownership. Certain special rules are also included in the amendments to §1092. One of these rules poses considerable interpretative difficulties, as will be explained.

2. *Repeal of Exception for Stock Options*

Section 1092(d)(2), defining "position" is amended to strike out the subparagraphs which made the definition inapplicable to exchange-traded stock options. In addition, §1092(d)(1), defining "personal property," is amended to strike out the parenthetical "(other than stock)." Thus, a "straddle," defined by §1092(c)(1) as "offsetting positions with respect to personal property" may, after the TRA, have as a position stock or an option on or with respect to stock. This provision is limited, however, by post-TRA §1092(d)(3), which excludes from the meaning of "personal property" any stock except stock described in §1092(d)(3)(A) and (B).

3. *Qualified Covered Call Options*

In connection with the inclusion of stock options in the meaning of "position" for purposes of the §1092(a) loss deferral rule, §1092(c), defining "straddle," is amended by adding a new §1092(c)(4). That paragraph excepts from the loss deferral rule straddles consisting of stock and a "qualified covered call option" granted with respect to such stock. *See* §1092(c)(4)(A).

"Qualified covered call option" (QCC) is defined in §1092(c)(4)(B) through (H). These rules are highly detailed and are intended to insure that only those options granted for non-tax motivated purposes (*i.e.*, protection of the grantor's investment gains and/or enhancement of investment yield) come within the exception. The covered call must have a strike price not lower than the stock price or the next highest "bench mark" at which options are available on the exchange (a QCC must be an exchange-traded option). Where the stock price is 67, for example, and options are traded at strike prices of 55, 60, 65, and 70, the QCC must have a strike price no lower than 65 (the highest available strike price which is less than the "applicable stock price." [36]

Where a QCC is closed during a taxable year and gain from the disposition of the covered stock is includible in income for a later year, and such stock was not held for at least 30 days after the QCC was granted, the QCC exception does not apply. *See* §1092(c)(4)(B).

4. *Straddle Positions Consisting of Directly Owned Stock*

The amendments made to §1092(d) redesignate paragraphs (3) through (5) as (4) through (6), and add a new (3)(A). Post-TRA §1092(d)(3)(A) states that, except as provided in §1092(D)(3)(B), "personal property" does not include stock. Subparagraph (B) provides that "personal property" includes stock which is part of a straddle, if at least one of its offsetting positions is:

> (i) an option with respect to the stock or substantially identical stock or securities, or
>
> (ii) under regulations, a position with respect to substantially similar or related property (other than stock).[37]
>
> (iii) "Personal property," under subparagraph (B) also includes any stock of a corporation formed or availed of to take positions in personal property which offset positions taken by any shareholder.[38]

Note: Stock is not personal property and, therefore, cannot constitute a position of a straddle unless it is offset by an option or certain kinds of property other than stock, or the stock is stock of a corporation formed or availed of to avoid the straddle rules. Stock offset by a short sale of the same or substantially identical stock is not personal property, nor is stock offset by the stock of another corporation.

What is "substantially identical stock," and what is "substantially similar or related property"? "Substantially identical stock" is a term which has been interpreted most often in connection with the wash sale rules of §1091. It will almost never mean stock in another corporation unless the price of the two stocks is closely related by reason of a forthcoming stock-for-stock exchange pursuant to a reorganization.[39] For all practical purposes, then, the only stock "substantially identical" to given stock is stock issued by the same corporation. Common stock may be substantially identical to convertible preferred stock of the same corporation where their prices are related and move in unison, and where the holders have similar rights.[40]

"Substantially similar or related" property is not subject to such severe limitations. Nonetheless, such property must have characteristics in addition to those which would be sufficient to classify it as "offsetting," under §1092(c)(2). Only property described in regulations to be issued will qualify. The Conference Report sets forth some examples.[41]

Under what circumstances will a corporation be considered "formed or availed of" to take offsetting positions? This language has given rise to much litigation in the collapsible corporation area. Congress apparently decided not to attempt to lay down any objective criteria in this respect, leaving the matter to regulations and a case-by-case determination.

5. *Short Sale Principles Applied to QCCs*

Act §101(c) redesignates §1092(f) as (g), and adds new (f). Post-TRA §1092(f) provides that, where a QCC is granted with a strike price below the applicable stock price, if the stock was held long-term at the time the QCC was granted, any loss from the closing of the QCC is long-term (similar to the rule of §1233(d)). The holding period of the covered stock is suspended at the time a QCC is granted and does not commence to run again until the QCC is closed out.

6. Special Rules for Identified Straddles

Act §101(d) provides rules relating to identified straddles containing "§1256 contracts." This term, introduced by Act §102, replaces the term "RFC" in §1256 and other Code sections which referred to RFCs. It has a broader meaning than RFC, and will be explained below. Section 1256 contracts include "non-equity options" purchased or granted by investors or dealers and, in the case of option dealers, includes "equity options" (*i.e.*, options purchased or granted, in the course of such dealers' activities as dealers, with respect to stock and stock indexes).

Section 1092(d)(5) (as redesignated) is entitled "Special Rule for Section 1256 Contracts." The general rule is set forth in paragraph (A): in case of straddle at least one (but not all) of the positions of which are §1256 contracts, §1092 applies to all §1256 contracts and any other position making up the straddle. This is identical to former §1092(d)(4) with "§1256 contracts" inserted in lieu of RFCs. Subparagraph (B), however, is new. It provides that "(f)or purposes of subsection (a)(2) (relating to identified straddles) subparagraph (A) and section 1256(a)(4) shall not apply to a straddle all of the offsetting positions of which consist of §1256 contracts."

7. Effective Dates

The effective dates for these provisions are set forth in Act §101(e).

Generally, they apply to positions established *after December 31, 1983* in taxable years ending after such date.

The rules set forth above including the definitions of personal property (for straddle purposes) and stock of a corporation formed or availed of to take positions offsetting those of its shareholders, apply to positions established on or after *May 23, 1983,* in taxable years ending after that date.

The amendments made to subsection (c) (defining "straddle" and containing the QCC exception) apply to positions established after *June 30, 1984* in taxable years ending after that date.

The special rule for §1256 contracts (§1092(d)(5)) provided by Act §101(d) applies to positions established after *July 18, 1984* in taxable years ending after that date.

C. Act §102: Amendments to §1256

1. "§1256 Contracts"

Under §1256, as in effect prior to the 1984 TRA, special rules were extended to RFC's. RFCs were defined as futures contracts traded on exchanges subject to CTFC regulations which require, *inter alia,* that the holder deposit a minimum amount of margin to secure performance and that, where this margin drops below a specific amount due to withdrawals by holders of offsetting positions in the futures, the deposit of additional maintenance margin.[42] The system of marking RFCs to market each day, permitting withdrawals of excess margin, and requiring additional margin deposits in the case of adverse price movements furnished the basis for taxation of RFCs.[43] Gain or loss from capital asset RFCs was to be treated as 60 percent long-term capital gain or loss and 40 percent short-term capital gain or loss.[44] The 1982 Technical Corrections Act added to the definition of "RFC," a foreign currency contract meeting certain requirements.[45]

Section 102(a) of the 1984 TRA amends §1256 by striking out the term "RFC" and inserting in lieu thereof "§1256 contract." Post-TRA §1256(b), defining §1256 contract, provides that "§1256 contract" means: (1) Any regulated futures contract; (2) Any foreign currency contract; (3) Any nonequity option; and (4) Any dealer equity option.

The above-listed terms are defined in post-TRA §1256(g). The definitions of regulated futures contract and foreign currency contract are essentially the same as in pre-TRA §1256. The definition of "foreign currency contract" contains a technical addition. There is added after "delivery of" the words "or the settlement of which depends on the value of." This clarifies that a foreign currency contract which must, or can, be settled in cash is included. While the definition of RFC was amended by the 1982 TCA to make it applicable to cash settlement RFCs (eliminating all reference to the delivery of property), it was apparently unclear whether this also applied to cash settlement foreign currency contracts which are not RFCs (because they are not subject to the rules of a futures exchange).

2. "Nonequity" and "Equity" Options; "Dealer Equity Options"

"Nonequity options" are any options which are not an "equity option." §1256(g)(3).

A "dealer equity option" is any exchange-traded option which is an equity option, and is purchased or granted by an "options dealer" in the normal course of his activity in dealing in options, and is listed on the national securities exchange on which the dealer is registered.[46] "Options dealer" is defined as a person registered with an appropriate national securities exchange as a market maker or specialist in listed options. A listed option is any option (other than a right to acquire stock from the issuer) trade on (or subject to the rules of) a "qualified board of exchange."[47]

"Equity option," as defined in §1256(g)(6), means any option to (i) buy or sell stock, or (ii) the value of which is directly or indirectly determined by reference to any stock (or group of stocks) or stock index. It *excludes,* however, any option with respect to any group of stocks or stock index, if:

(1) There is in effect a designation by the CTFC of a contract market for a contract based on such group of stocks or index, or

(2) The Secretary determines that such option meets the requirements of law for such designation.[48]

Observation: An investor may purchase (or grant) a call or put option on a stock, on a stock index, or on a stock index futures contract. The SEC has regulatory jurisdiction over stock options and stock index options. The CTFC has such jurisdiction over index futures and options on such futures. Contracts subject to CFTC regulation are not considered "equity options."

Observation: The House bill included in the definition of "equity options" options on narrowly-based stock indexes or subindexes (giving as an example an index based on the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

stocks of nine corporations operating casinos) as to which trading is regulated by the SEC on exchanges, but which do not meet the CFTC requirements for futures trading on designated contract markets. The Act provides that all options on indexes are equity options until futures on such indexes are admitted to trading on a CFTC designated contract market or until the Secretary determines that such indexes would qualify for futures trading under CFTC rules. Such determination, the Conference Report makes clear, will have prospective effect only. Thus, some options will be considered §1256 contracts even though there is no futures trading in the underlying property. Other stock index options are §1256 contracts where there is futures trading in the index but such options need not be options on such futures. They need only to be based on a CFTC-qualified index.

Note: The term "dealer," while sometimes used to refer to persons purchasing, selling, or granting options and acquiring and closing out futures contracts, is inapposite. A "dealer" in stock and securities, usually a broker-dealer, is one who purchases stock and securities for resale to customers at a mark-up, like any dealer in personal property. His gains and losses from inventory are ordinary, as are gains and losses of a dealer in any other property. In the case of options, an individual (or entity) cannot act as a "dealer" in this sense. Options are not held for sale to customers. Some individuals, however, where registered as such on the exchange, do purchase, sell, and write options as market makers or specialists. They insure that options are available for purchase by other brokers or that options offered for sale can be sold at a reasonable price. They permit the market to operate smoothly and insure the liquidity of option positions. Section 1234(b)(1) contains the general rule that gains and losses of the grantor of an option from a closing transaction or lapse are short-term capital gains or losses. Section 1234(b)(3) exempts from this general rule gains and losses from options granted in the ordinary course of the taxpayer's trade or business of granting options. Market makers and specialists, therefore, claimed ordinary income or loss treatment of their gains and losses from such activity. Brokers trading in futures contracts for their own account, however, were held to realize capital gains and losses from such activity. Congress viewed as undesirable the disparity of treatment between options dealers and professional commodity broker-traders, both of whom were essentially trading for their own account. Under §1256, as amended, all options on *commodities* or *commodity futures* are §1256 contracts. Consequently, they are marked to market and are subject to the 60/40 capital gain/loss rule. This applies to casual investors, traders, and brokers. Options related to stock (stock options, and options on stock on non-CFTC-qualified indexes (so-called "equity options")) are also §1256 contracts where purchased, sold or granted by options dealers in the course of their activities as dealer (market making, etc.) As to all other persons, and as to dealers where the options are not purchased, sold or granted in the course of their activities as dealers, equity options are *not* §1256 contracts and are, therefore, not subject to marking to market or 60/40 treatment. Nonequity options are §1256 contracts as to both options dealers and other persons.

Where the Secretary determines that a board of trade, exchange, or other market has rules adequate to carry out the purposes of §1256, that section will apply to §1256 contracts entered into through such marketplace. The rules will also apply to persons performing functions on such qualified board or exchange similar to those performed by a registered market maker or specialist in options on an SEC or CFTC-regulated exchange. These persons will be considered options dealers where appropriate to carry out the intent of the statute.[49]

TRA §102(b) amends §1256(f) (special rules) by adding new paragraphs (4) and (5). Paragraph (4)(A) provides that gains and losses from trading in §1256 contracts are capital in nature. Subparagraph (B) excepts from this rule §1256 contracts held for hedging purposes if any loss from the property in the hands of the taxpayer would be ordinary loss. For purposes of this determination, the fact that the person is actively engaged in dealing in, or trading, §1256 contracts is not to be taken into account.

Post-TRA §1256(f)(5) sets forth special rules for dealer equity option gains or losses allocable to limited partners or limited entrepreneurs within the meaning of §1256(e)(3). As to such gains and losses, the 60/40 rule does not apply. They will all be treated as short-term capital gains or losses.

Query: Where does this leave §1234(b)(3)? As noted above, this paragraph excepts from the general rule that an option grantor's gains and losses are short-term capital gains and losses, the gains and losses of grantors with respect to options granted in the course of their business of granting options. Such options must be either non-equity options or dealer equity options. (There are no other kind of listed options). If so, they are §1256 contracts and subject to marking to market and the 60/40 rule. Section 1234(b)(3) would, therefore, appear to apply only to dealer options when the dealer has made an election under §1256(d)(1) to have §1256 not apply.

3. Self-Employment and Social Security Tax Provisions

Act §102(c) adds §1402(i). Section 1402 contains definitions of terms relating to self-employment tax. Post-TRA §1402(i) is entitled "Special rules for options and commodities dealers." Section 1402(i) includes in income subject to the self-employment tax gains and losses of options and commodities dealers in the normal course of the taxpayer's activity of dealing in or trading §1256 contracts. "Options dealer" has the meaning given by §1256(g)(8). A "commodities dealer" is defined as a person who is actively engaged in trading §1256 contracts and is registered with a domestic board of trade designated as a contract market by the CFTC.

Section 211 of the Social Security Act is also amended to include in net earnings from self-employment, gain or loss of any "options dealer or commodities dealer," in the normal course of the taxpayer's dealing in, or trading, §1256 contracts, from §1256 contracts and property related to such contracts without offset by the deduction allowed by §1202.

4. S Corporation Provisions

A tax is imposed by §1374 on S corporations' net capital gain exceeding $25,000 if it also exceeds 50 percent of its taxable income for the year, where the taxable income

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

of the corporation exceeds $25,000. Act §102(d) amends §1374 to provide a new subsection (c)(4). Section 1374(c)(4) excludes from the net capital gain of any options or commodities dealer gain or loss from any §1256 contract (or related property) in the normal course of such dealer's activities as a dealer.

Options and commodities "dealers" are defined in the same manner as for purposes of the amendments to §1402 and the Social Security Act.

This same exclusion of dealers' gains and losses applies to §1362(d)(3) (defining "passive investment income" for S corporation taxation purposes).

Lastly, among the provisions relating to S corporations, Act §102(d)(3) provides that, notwithstanding §1362(b), a Subchapter S election may be validly made by an options or commodities dealer within 75 days of the Act's enactment date (July 18, 1984) effective for the taxable year including such enactment date.

5. Terminations of §1256 Contracts

Section 1256(c)(1) provided that §1256(a)(1)–(3) (mark to market and the 60/40 rule) apply to the termination or transfer of the taxpayer's obligation (or rights) with respect to a §1256 contract by offsetting, by taking or making delivery, or otherwise. Act §102(e), providing various "technical and conforming amendments" adds the words "by exercise or being exercised, by assignment or being assigned, by lapse.." Thus, if an option is a §1256 contract, its exercise or lapse triggers mark to market and 60/40 treatment. The same rule applies if a §1256 contract is assigned.[50] Where a nonequity option is exercised, the optionee will usually acquire an RFC, as will the grantor of the option. The above cited amendments will operate as follows.

Example: A purchases an option on February 1, 1985 on a long futures contract for commodity X. The option has a striking price of $3 per unit and calls for delivery in June 1986. B is the grantor. The exchange assumes the rights and obligations of both parties; there is no direct contractual relationship between them. In October 1985, the commodity price moves to $4 per unit. A exercises the option. B receives an exercise notice from the exchange. As to A, the option qualifies as a §1256 contract since it is a nonequity option. Upon its exercise, it is treated as if it had been sold for its fair market value (§1256(a)(1)). Assume that the fair market value of the option is $1 (not necessarily $1 per unit times the number of units since this does not take into account the option's time value). To the extent this exceeds A's basis in the option, it is subject to recognition under the 60/40 rule. A now has an RFC which also is subject to §1256. If the commodity price moves downward to $2 per unit, A will recognize a loss, if the RFC is held on the last business day of 1985. Section 1256(a)(2) provides that "proper adjustment shall be made in the amount of any gain or loss subsequently realized [*i.e.*, after marking to market] for gain or loss taken into account by reason of paragraph (1)." Presumably, then, the gain recognized upon the exercise of the option on the futures contract will be taken into account in determining the loss from marking the RFC to market at the end of 1985. As to B, the grantor, the termination of his obligation will result in the recognition of gain or loss subject to the 60/40 rule. Upon exercise of the option, B, who has written a short call, is obligated to enter into a short futures contract with a striking price of $3. His loss on the exercise of the option is, presumably, $1 per unit times the number of units covered by the contract, offset by the amount of the premium he received for granting the option. When the option is exercised, B will be required to post maintenance margin upon assuming the obligation under the futures contract. This will measure his loss before offset by the premium. If B liquidates the contract on the same day he acquires it, the loss will be the amount payable by him to the exchange in closing out the contract minus the premium received. If he does not liquidate the contract, but holds it to the end of the year, the loss previously recognized will, presumably, be taken into account in determining any gain or loss from marking the RFC to market at year's end.

Note that these provisions apply whether or not the §1256 contract is part of a straddle.

6. Termination of a Straddle Position

The special rule of §1256(c)(2) is amended to provide that all §1256 contract positions of a straddle are considered terminated where a straddle contains two or more §1256 contract positions and the taxpayer takes delivery under such contracts or (as added by the amendment) *exercises* any such contracts. Thus, for example, where a straddle consists of an RFC and an option on an RFC, and the option is exercised, gain or loss must be recognized with respect to *both* positions of the straddle.

Query: Suppose the straddle is made up of a long RFC and a short call granted by the taxpayer. The short call is exercised. Does this trigger §1256(c)(2)? In such a case, it is not the taxpayer who exercises the option, but the optionee.

7. Other Technical and Conforming Amendments

(1) The term "§1256 contracts" is inserted into §1212(c) (relating to the carryback of losses from RFCs) to replace references to RFCs. After the TRA, these carryback rules apply to net §1256 contract losses.[51]

(2) Section 263(g) (requiring the capitalization of interest and carrying charges with respect to straddle positions) is amended. Under the amendment, the amounts disallowed are those charges in excess of the sum, as under prior law, of the interest (including OID) includible in gross income with respect to personal property which is part of a straddle, *and* (added by the TRA):

(a) Amounts treated as ordinary income under §1271(a)(3)(A) (ratable share of acquisition discount where a T-bill is sold or exchanged), §1278 (the current inclusion in income of market discount where the holder so elects), and §1281(a) (current inclusion in income of discount with respect to short-term obligations by accrual basis and certain other holders), plus

(b) The excess of any dividends included with respect to such property (straddle positions) over the deductions allowable under §§243-245 (dividends received deduction).

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(3) The TRA added to §263(g)(2) a sentence providing that "interest" includes any amount incurred or paid in connection with a short sale.[52]

(4) The TRA further amended §263 by adding a new §263(g)(4). Section 263(g)(4) provides that, in the case of a short sale, §263(g) is to be applied after §263(h) (requiring the capitalization of certain short sale expenses). Section 263(g)(4) also provides that, in the case of any obligation to which §§1277 or 1282 applies, §263(g) is to be applied after those sections.[53]

(5) Section 1234A is amended to clarify that, where a debt instrument is considered personal property for purposes of §1092, or is a §1256 contract, gain or loss from the termination of the taxpayer's right or obligation with respect thereto is not capital in nature where the termination results from the retirement of the debt instrument (whether or not through a trust or other participating arrangement).

8. *Effective Dates*

(1) The provisions of Act §102 are, generally, effective as to positions established after *July 18, 1984,* but these provisions will apply to options on RFCs established after *October 31, 1983.* Except as provided in Act §102(g)(2), the amendments relating to self employment tax apply to taxable years beginning after *July 18, 1984.*

(2) The amendments made to §1256(c) (relating to terminations) apply as if included in the relevant ERTA provisions as amended by the Technical Corrections Act of 1982.

(3) A taxpayer may elect under §102(g) to have the amendments made by Act §102 apply to all §1256 contracts held on July 18, 1984, effective after such date in taxable years ending after such date. Or, in lieu of such election, an election can be made to have Act §102 apply to all §1256 contracts held at any time during the taxable year which includes July 18, 1984. In the event this latter option is elected, §102(h) of the Act provides for the payment of any additional tax in installments over a period of two or more (but not exceeding five) years. A number of rules are provided for taxpayers making this election and electing to pay the tax in installments.

Note: The provisions of Act §101(a) repealing the exemption from the §1092 straddle rules for stock options and certain stock, apply to positions established after December 31, 1983. Options dealers holding stock and option positions in such stock will, therefore, not be subject to loss deferral on positions established before that date. Also, the October 31 effective date for the application of §1256 to options applies only to options on RFCs, not to dealer equity options. Options dealers with mixed straddle positions composed of stock and options will, thus, not be subject to either loss deferral under §1092 or mark to market and 60/40 with respect to any positions on hand on December 31, 1983, as a general rule. If an election is made under Act §102(g)(2), however, mark to market and 60/40 will apply to options dealers' equity options held during 1983 where the dealer's fiscal year includes both a period prior to 1984, and July 18, 1984.

D. Regulations Under §1092(b)

Section 1092(b), as enacted by ERTA, authorized the Secretary to prescribe by regulations, rules with respect to any gain or loss from any position of a straddle. These rules were to be similar to the rules of §1091(a) and (d) (the wash sale rules) and to §1233(b) and (d) (the short sale rules), and consistent with the purposes of §1092. These regulations have not, at this writing, been issued. It is not altogether clear what rules Congress had in mind. The committee reports mentioned a rule disallowing any loss from the disposition of one leg of a straddle where, within 30 days, the leg disposed of was replaced (or acquired prior to disposition of the loss leg) by a position effectively locking in the unrealized gain from the leg retained. It was intended that such wash sale rule be applied before the loss deferral rule. The wash sale rules of §1091, applicable only to stock and securities, did not apply to RFCs, options (excepting options to acquire stock or securities when acquired in connection with the sale of stock or securities) or other positions in personal property subject to the straddle rules. Section 1233 principles would, presumably, prevent holding period manipulation. Here, Congress seems clearly to have had in mind the broadening of the meaning of "substantially identical property" where an offsetting position effects a significant diminution of risk of loss from a position held short-term. It was thus intended that §1233(b) principles be extended to suspend the holding period of an RFC held short-term where an offsetting RFC was acquired, even though the latter called for delivery in a month different from that of the first position and, therefore, was not considered substantially identical property for purposes of §1233(b). Similarly, the loss from the disposition of an offsetting position would be long-term where it was acquired at a time when the taxpayer had held a position in substantially identical property long-term. The Joint Committee Report to ERTA states that the rules to be developed in these regulations "will supplement and have broader application than the original statutory rules in the two sections." The report further provides that the concept of offsetting positions is to replace that of "substantially identical property." The regulatory rules were intended to suspersede the statute where both apply.[54]

Act §103 amends §1092(b). The subsection, after amendment, has two paragraphs. Under paragraph (1) the Secretary is directed to prescribe regulations with respect to gain or loss on straddle positions appropriate to carry out the provisions of §§1092 and 263(g). Section 1233 and §1091 principles are to be applied, as under the former §1092(b) regulatory authority, consistent with the purposes of §§1092 and 263(g).

Post-TRA §1092(b) is somewhat differently worded than the former §1092(b). Section 103(b) of the Act directs the Secretary to prescribe initial §1092(b) regulations (including regulations relating to mixed straddles) not later than six months after the Act's date of enactment (July 18, 1984). The intent that such regulations supersede the statute where both are applicable may be presumed to continue. Also, amended §1092(b) does not limit the Secretary to wash and short sale principles. The regulations are to be adopted *in addition to* whatever rules are formulated to carry out the purposes of §§1092 and 263(g), consistent with such purposes.

Section 1092(b)(2) adds to the scope of the regulations to be issued under (b)(1). These regulations are to provide that the taxpayer may offset gains and losses from mixed

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

straddle positions either by (1) straddle-by-straddle identification, or (2) the formation of a mixed straddle account with respect to a class of activities. Gains and losses from the positions in this account are to be recognized and offset periodically. Offsetting under alternative (2) is to occur before application of §1256, and §1256(a)(3) (the 60/40 rule) will only apply to net gain or net loss attributable to §1256 contracts. Further, the principles of §1233(d) are not to apply with respect to any straddle identified under the first election (straddle-by-straddle), or to any straddle that is part of an account established under the second election. In no event is more than 50 percent of the gain from a mixed straddle account to be treated as long-term, nor may more than 40 percent of the net loss be treated as short-term.

The regulations under §1092(b) may treat as a mixed straddle positions not described in §1256(d)(4).

Observation: The provisions mandating regulations permitting taxpayers to set up mixed straddle accounts nowhere refer to the definition of "mixed straddle" in §1256(d)(4). This definition is for purposes of §1256(d) only. Nor do these provisions mention what a "mixed straddle" is. Presumably, it is a straddle having at least one position (but not all) which is a §1256 contract. The regulations may treat as a mixed straddle "positions not described in §1256(d)(4)."

These so-called mixed straddle regulations are not to apply to mixed straddles all of the positions of which were established prior to January 1, 1984.

E. Limitation of Hedging Position Losses

Section 1256(e) provides that subsection (1) (mark to market, 60/40) does not apply to hedging transactions. Similarly, §1092(e) exempts such transactions from the §1092 rules. The definition of "hedging transaction" provided by 1256(e)(2) was not amended by the Act. Paragraph (3) of §1256(e) provides special rules limiting the pass-through of hedging losses by "syndicates" to limited partners or limited entrepreneurs. To these provisions, Act §104(a) adds a new paragraph (5), "Limitation of losses from hedging transactions." Under this paragraph, any hedging loss allocable to a limited participant of a syndicate is allowable only to the extent of the taxable income of such limited partner or entrepreneur for the taxable year attributable to the trade or business in which the hedging transactions were entered into. Taxable income, for this purpose, is to be determined without taking into account the hedging items.

Note: This limit applies in addition to the limitations provided by paragraph (3). It applies, in the case of hedges relating to property other than stock or securities, only to a taxpayer described in §465(a)(1) (*i.e.*, one to whom the at-risk rules apply).[55]

Comment: These provisions should not be confused with those of §1256(f)(5) relating to gain or loss with respect to dealer equity options allocable to limited partners or limited entrepreneurs (within the meaning of §1256(e)(3)). Such gain or loss is not subject to the 60/40 rule of §1256(a)(3) (but the mark to market rule continues to apply to such options), and all such gains or losses are treated as short-term capital gains or losses.

The paragraph (5) limit does not apply to any hedging loss exceeding the unrecognized gains from hedging transactions as of the end of the year attributable to the trade or business in which the hedging transactions were entered into.

Any loss disallowed under §1256(e)(5) is carried over and treated as a deduction attributable to hedging loss in the next taxable year. A "hedging loss" is defined by §1256(e)(5)(D) as the excess of the deductions allowable with respect to hedging transactions (without regard to the above limitations) over income received or accrued during the taxable year from such transactions.

Section 1256(e)(5) applies to taxable years beginning after December 31, 1984.[56]

F. Wash Sale Rule Amended to Apply to Losses from Certain Short Sales; Traders No Longer Exempt

This provision was a Senate amendment to the House bill. It was perceived as being necessary to prevent undesirable tax consequences in certain circumstances. Where a short sale was closed at a loss, the pre-TRA wash sale rules did not disallow the loss, even though it occurred within 30 days of closing the short sale, if the taxpayer acquired stock or securities substantially identical to the property sold short, or, within this 30 day period (before and after the closing of the short sale at a loss) another short sale of substantially identical property was entered into. Act §106(a) adds a new §1091(e) to extend the wash sale rule to the situations described.[57]

Act §106(b) further amends 1091(a) to eliminate the provision which limited the disallowance of a wash sale loss in the case of an individual to losses which would otherwise be allowable under §165(c)(2). Under pre-TRA law, the wash sale rules did not apply to noncorporate taxpayers in the trade or business of trading in stocks or securities. Under the amendment, the wash sale rule applies to noncorporate taxpayers unless the taxpayer is a dealer in stock or securities and the loss is sustained in a transaction made in the ordinary course of such business. The same rule applies to corporations, as it did under former law.

The amendments made by Act §106(a) apply to short sales after July 18, 1984. Those made by Act §106(b) apply to sales after December 31, 1984 in taxable years ending after such date.

G. More Stringent Identification Rules

ERTA tightened the requirements for the identification of stock and securities under §1236 by a dealer for purposes of having such property considered as held for investment or for sale to customers. Identification was required before the close of the day on which the stock was acquired. Similarly, identification of the positions of an "identified straddle" for purposes of §1092(a)(2) had to be made before the close of the day on which such positions were acquired. Before-the-close-of-the-day identification was also required for the positions of a "mixed straddle" under §1256(d)(4) and the positions of a hedging transaction for purposes of 1256(e)(2). Act §107(a) amends all of these identification rules to allow the Secretary to require more prompt identification if appropriate. The amendments apply to positions entered into after July 18, 1984 in taxable years ending after that date.

H. Pre-ERTA Straddles

The Commissioner successfully challenged straddle losses claimed for years to which §§1092 and 1256 do not apply. The decisions [58] have based the disallowance on the taxpayer's failure to bring the straddle transactions within the provisions of §165(c)(2). Section 165(c)(2) requires, as a condition for the allowance of any loss to an individual not incurred in a trade or business, (which, admittedly, is not the case with abusive straddles), that the transaction giving rise to the loss have been entered into for profit. While the Commissioner prevailed in these cases on this ground, the Service's primary ground, that the loss from the closing out of a leg of a straddle which is immediately replaced by another position locking in unrealized gain from the retained leg is not a closed transaction,[59] has been rejected by the Tax Court.[60] This position was not, however, abandoned by the IRS. While the position may be of little significance in determining deficiencies against taxpayers utilizing straddles to defer taxes in years not subject to the ERTA changes (since §165(c)(2) would appear to be adequate) it might be crucial in cases involving dealers and traders.

The Conference Committee decided to put an end to litigation based on the closed transaction theory. Act §108(a) provides that losses from the disposition of straddle positions sustained in taxable years to which the ERTA amendments do not apply are to be allowed where "such disposition is part of a transaction entered into for profit." Thus, any disallowance must be based on §165(c)(2) if it is to prevail.

Act §108(b) provides, further, that for purposes of Act §108(a), any position held by a commodities dealer or any person regularly engaged in investing in RFCs shall be rebuttably presumed to be part of a position entered into for profit. This presumption does not apply, however, to a "syndicate" as defined by §1256(e)(3)(B).

Where a straddle loss occurring in a year not subject to ERTA is disallowed under §165(c)(2), it is unclear whether, and to what extent, any adjustment is required to the year in which the straddle is closed out, *i.e.*, where all straddle positions including the locked in gain leg and the replacement leg are closed out at a net gain approximating the loss on the replaced position closed out. If the closed transaction theory is held to be invalid, but the loss is disallowed under §165(c)(2), the taxpayer is left with what, in effect, amounts to a double inclusion of an item of gross income. To afford relief in such a situation (and, one must assume, to induce the settlement of the substantial backlog of pending pre-ERTA straddle cases) Act §108(c) provides that the disallowed loss will be allowed as an offset to the net gain resulting from the closing out of the straddle positions in the following year.

Except as otherwise provided by Act §108(a) and (c), and in §§1233 and 1234, the determination with respect to a position of whether gain or loss is recognized, the amount and timing of such gain or loss, and whether it is short or long-term in nature is to be made without regard to whether the position is part of a straddle.

Note: In other words, the closed transaction theory is not to be applied to disallow losses from straddle positions.

For purposes of Act §108, "straddle" has the same meaning as under §1092(c) as in effect on the day after ERTA's enactment date, and is to include a straddle made up entirely of RFCs.[61] Also, "commodities dealer" has the meaning given that term by §1402(i)(2)(B) (relating to the self employment tax).[62]

Finally, an "RFC" has the meaning given such term by §1256(b), as in effect prior to the enactment of the 1984 TRA.[63]

III. Detailed Analysis

A. Summary of Basic Changes and Their Implications

The tax straddle provisions of the 1984 TRA (subtitle H; Act §§101-108) were viewed as necessary to close the loopholes in the comprehensive straddle rules enacted by ERTA and the Technical Amendments Act of 1982. Although Treasury and the Congress may have overreacted to some of the perceived tax abuses based on straddle techniques and related transactions, the introduction of many new investment products coupled with the ingenuity of tax advisors made a tightening and refinement of the straddle provisions necessary.

1. Stock and Interests in Stock

The loss deferral rule of §1092(a)(1) applies only to losses sustained from a position in personal property. A position in personal property means any interest in actively traded property. This means that, if the interest is not publicly traded on an exchange (or of a type publicly traded on an exchange), §1092 does not apply.

Any exchange traded option is always a §1092 position, whether it relates to stock, a stock index, financial instruments, a commodity, or to a commodity futures contract. Such a position may also be a §1256 contract, but, with one exception, this has no bearing on the applicability of the loss deferral rule. The exception is that the loss deferral rule does not apply to a straddle made up entirely of §1256 contracts.[64]

For the loss deferral rule to apply, there must be a straddle. A straddle is two or more offsetting positions.[65] One position offsets another where holding one diminishes the risk of loss from holding the other.[66] "Offsetting" is a broad term. A position in one kind of property can offset a position in another type of property.[67]

The direct ownership of stock is not a position in personal property unless [68] it is part of a straddle the other offsetting position of which is an option on the same stock.[69] For this purpose, the grantor of a call option with respect to stock is considered to hold a position offsetting the direct ownership of the same stock. Whether the grantor of a put option will be considered to hold a position offsetting a short sale of the stock seems debatable, but the IRS may so hold since the short position is offset by the long position (granting a put option).

Direct ownership of stock may also be considered a position in personal property where it is part of a straddle the other position of which is a position in "substantially similar or related property (other than stock)." [70] What constitutes "substantially similar or related property" is to

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

be prescribed by regulations. These regulations will be effective as to positions established on or after March 1, 1984 as to examples contained in the Conference Report.[71] Such examples are:

(i) stock offset by a debenture convertible into shares of the same stock where the price movements of the two positions are related;

Note: Of course, for the debenture to offset the ownership of stock, one of the two positions must be a short position — a factor seemingly overlooked in the report.

(ii) stock offset by a short position in a stock index RFC (or, alternatively an option on such RFC or an option on the stock index) where the directly-held stock is stock of an investment company the price changes of which mimic the price changes of the index, index option, or index futures contract (or alternatively, a portfolio of stocks included in the stock index).

Apart from these examples, the regulations are to have prospective effect only.[72]

Finally, aimed principally at offshore commodity funds, is the provision that direct ownership of stock is a position in personal property, without qualification as to the type of offsetting position, where such stock is of a corporation "formed or availed of" to take positions in property offsetting those of a shareholder.

2. Effective Dates

The extension of the §1092 rules to exchange-traded stock options and direct positions in stock is effective as to positions established after December 31, 1983 in taxable years ending after that date.[73] An effective date for positions established on or after May 23, 1983, however, is set for stock in a corporation formed or availed of to take positions offsetting those of a shareholder.[74]

B. Grantors of Options

As previously indicated, direct stock ownership coupled with the granting of an option on the stock is a straddle; both interests are positions under §1092(d)(3)(B)(i)(I). A special rule is provided, however, for a "qualified covered call option." [75] Generally, a qualified covered call must not be "deep-in-the-money" and must have a life of at least 30 days and a strike price no lower than the highest "bench mark" which is lower than the stock's applicable price.[76] A call not meeting these qualifications is, for purposes of §1092, "deep-in-the-money." [77]

In interpreting these provisions, the statute provides a cluster of special rules. A strike price one bench mark lower is allowed for options having a life of at least 90 days where the strike price is more than $50.[78] Where the stock sells for $25 or less, the strike price must be at least 85 percent of the stock price, irrespective of the next lowest bench mark.[79] Where the stock price is $150 or less, the option's strike price may not be more than $10 lower than such stock price.[80] Where a qualified covered call option is closed at year end, and the stock is disposed of the next year without having been held at least 30 days after the option was closed out, the qualified covered call rules do not apply.[81]

Where the owner of stock grants a call option with a strike price less than the applicable stock price, a rule similar to the rule of §1233(d) is applied. If the stock was held long-term at the time the option was granted, then any loss from closing out the option is long-term loss. Also, the writing of such an option suspends the holding period of the stock.[82] This rule applies only to qualified covered call options with a strike price lower than the applicable stock price. The Conference Report states that it is anticipated that rules relating to stock option loss characterization and the holding period of stock will also be provided by regulations applying short sale principles (*see* §1092(b)(1)) to straddles consisting of stock and stock options. Since qualified covered calls are not subject to the straddle rules, however, they will be subject only to the statutory rules, *i.e.*, §1092(c)(4)(E) (special year end rule) and §1092(f) (the §1233(d) principles discussed above). The §1092(f) rule was adopted for this purpose in lieu of rules proposed in the House bill and Senate amendments which would have converted long-term gain from the sale of the stock to short-term gain to the extent of short-term losses on the option position. The §1092(f) rule is easier to administer and involves less record keeping. It is effective as to positions established after June 30, 1984.[83]

Observation: To avoid running afoul of this rule, attention must be paid to the applicable stock price and option strike price. If the strike price is even $1 less than the stock price, the stock's holding period is suspended; not a trivial matter in view of the TRA's six-month capital gain holding period rules.

As already pointed out, the grantor of a stock option holds a "position" for §1092 purposes but, unless the option is a "dealer equity option," he is not considered as holding a §1256 contract. The grantor of an option on any type of futures contract, however, does hold a §1256 contract (provided, of course, the option is listed). While the grantor of a stock index option holds a position for §1092 purposes, it is possible that he may hold what is considered an offsetting position, *i.e.*, one where the price moves inversely to that of the index. This will presumably occur, however, only where he holds stock in an investment company and where the option is so deep in the money that its price changes mimic those of the investment company stock.

Note: The qualified covered call provisions do not apply to options granted by an options dealer (as defined by §1256(g)(8)) in connection with his activities of dealing in options.[84]

Where a limited partnership or S corporation is an options dealer, the 60/40 rule does not apply to gains and losses passed through to the limited participants if they are attributable to dealer equity options. Such gains and losses are treated as short term capital gains and losses.[85]

Note: Section 1256(e) was also amended to restrict hedging losses passed through to such limited participants even though such losses may qualify for pass-through under the syndicate provisions of pre-TRA law.

C. Regulations Under §1092(b)

1. General

Perhaps one of the most difficult to interpret passages of the 1984 amendments are the amendments to §1092(b) made by Act §103. As indicated above, under prior law, the Secretary was authorized to prescribe by regulations rules

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

similar to the wash sale and short sale rules to straddle positions. These rules were largely to supersede the statutory rules. No regulations were published, however, as of the TRA's enactment date. Under amended §1092(b)(1), regulations are mandated, to be issued within six months from the enactment of the Act (July 18, 1984), prescribing the tax treatment of gain or loss from positions which are part of a straddle appropriate to carry out the provisions of §1092 and §263(g). Rules similar to the wash and short sale rule are to be prescribed "to the extent consistent with such purposes."

In addition, §1092(b)(2) provides for regulations "relating to mixed straddles." The regulations to be issued under paragraph (1) are to provide "elective provisions in lieu of §1233(d) principles." Specifically, the statute provides:

> "(i) the taxpayer may offset gains and losses from positions which are mixed straddles —
>
> (I) by straddle-by-straddle identification, or
>
> (II) by the establishment (with respect to any class of activities) of a mixed straddle account for which gains and losses would be recognized (and offset) on a periodic basis.
>
> (ii) such offsetting will occur before the application of §1256, and §1256(a)(3) will apply to net gain or net loss attributable to §1256 contracts, and
>
> (iii) the principles of §1233(d) shall not apply with respect to any straddle identified under clause (i)(I) or part of a straddle account established under clause (i)(II)" [86]

Under the regulations to be prescribed under §1092(b)(1), the authority is extended to mixed straddles, including positions which are not described as such under §1256(d)(4)[87] (*i.e.*, where all positions of the straddle are not identified before close of the day on which the first §1256 contract was acquired). Thus, mixed straddles of all kinds are covered, including straddles consisting of a §1256 contract entered into on one date and a position not qualifying as a §1256 contract acquired on some later date.

In addition, where a mixed straddle account is established under (i)(II), *supra:*

> (i) in no event shall more than 50 percent of the net gain from the account in any taxable year be treated as long-term capital gains, and
>
> (ii) in no event shall more than 40 percent of the net loss from such account be treated as short-term capital loss.[88]

2. The §1092(b)(2) Mixed Straddle Accounts

a. In General

The intent and purposes of §1092(b)(2), providing taxpayers an election to set up mixed straddle accounts, are not evident from a reading of the statute. This election, the statute states, is offered to taxpayers who wish to avoid the application of "§1233(d) principles" to mixed straddles. Section 1233(d) was enacted to prevent the consequences similar to those illustrated in the following example.

Example: Taxpayer A holds 100 shares of ABC with a basis of $80 a share and a value of $100 a share. A has held the stock for more than the short-term capital gain holding period. A executes a short sale against the box, (*i.e.*, where the seller holds stock identical to the stock which is held short) at the $100 price. If the stock price declines, A can close the short sale with the stock held for a long-term capital gain of $20 a share. Should the stock price advance, to, say, $120, without 1233(d), A could close the short sale with stock purchased for this purpose, realizing a $20 short-term loss on each share. This loss could be applied to offset unrelated short-term gain. At the same time, A could sell his stock, recouping the short-term loss, and the gain would be long-term. Section 1233(d) provides that, in this situation, any loss from the closing of the short sale is long-term loss.

Thus, under §1233(d) where a taxpayer holds a position in property where the gain or loss from its disposition is characterized in a certain manner and also holds a position offsetting the first position, gain or loss from the disposition of the offsetting position will have the same character as that which arose from the disposition of the first. Under §1233(d), once long-term capital gain has been locked in by a short sale, the character of that gain is carried over to this short position. Applying this principle to a mixed straddle, where stock is held and a covered call option is granted with respect to that same stock (the §1256 contract position where it is a dealer option) gain or loss from the two offsetting positions are viewed as a unit. At the time one of the positions is disposed of, whatever gain or loss is realized from such disposition will be reflected in an offsetting unrealized gain or loss from the offsetting position. This latter gain or loss if netted against the gain or loss from the position disposed of will yield a net gain or loss. In applying this principle to mixed straddles remember that this discussion involves two types of mixed straddles. These are: (1) an identified straddle (per §1256(d)(4)): and (2) other mixed straddles. For the straddle to be an identified straddle, all of its positions must be identified no later than the day on which the first §1256 contract position was acquired. Thus, where a non-§1256 contract is first acquired, a mixed straddle including a §1256 contract entered into on a subsequent day must be identified as such before the close of that day. Where the §1256 contract position of the straddle is first acquired and the offsetting non-§1256 contract is acquired on a subsequent day, this can never be an identified mixed straddle. Only in the case of a type (1) identified mixed straddle can an election under §1256(d) be made, exempting the §1256 contract positions from §1256. This can be referred to as a type (1)(d) straddle, signifying that the election has been made.

The Conference Report contemplates that the application of §1233(d) principles "will result in recharacterizing short-term losses realized from mixed straddle positions not subject to §1256 as 60/40 losses" in type (2) straddles as to which no election under §1092(B)(2) have been made. Thus if any position of a type (2) straddle is disposed of at a loss, it will be characterized as 60 percent long-term and 40 percent short-term loss. If an options dealer writes a covered call option (as a dealer), loss from the sale of the stock will be treated as a 60/40 loss, irrespective of the holding period.

Comment: This is a decided disadvantage. Where the stock position of such a straddle is sold at a gain, it may (depending on the holding period when the straddle was

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

established) be characterized under pre-1984 TRA law as short-term capital gain. The loss from disposing of the §1256 contract, however, will receive 60/40 treatment (where the straddle is not a type (1)(d) straddle). In such a situation, where the taxpayer has unrelated long-term capital gain, this must be offset by the 60 percent of long-term loss from the §1256 contract position. This effectively converts such unrelated long-term gain to short-term gain. This result can be avoided by making a §1256(d) election with respect to the straddle.

The Conference Report states that the §1092(b)(2) regulations "will permit taxpayers to avoid the loss recharacterization rule that results from applying §1233(d) principles while retaining favorable treatment for mixed straddle net gains derived from §1256 contracts." This avoids characterizing the loss from the non-§1256 type (2) contract position as 60/40 loss, while retaining the advantage of 60/40 treatment of net gain from a type (2) mixed straddle where the gain is attributable to the §1256 contract position.

Example: Dealer D holds ABC stock with a basis of $95 and a value of $100. He grants a covered call option. This is a type (2) mixed straddle. The stock price declines to $85. It is sold. The $10 loss will be treated under the §1092(b)(1) regulations as 60/40 loss. The gain from the option (or loss, if the option is not closed out and the stock price subsequently rises) is also treated as 60/40 gain (or loss). If the stock price had, instead, risen to $110, and the stock was sold at a gain, it would (unless the stock has been held long-term at the time the call was granted) be treated as 100 percent short-term gain. The loss on the option, presuming it is closed out at the same time, is 60/40 loss. If stock is acquired and a covered call granted on the same day, however, and the mixed straddle was identified under §1256(d)(4), the taxpayer could make a §1256(d) election. In this event, all of the loss from closing out the option would be short-term.

The mixed straddle accounts provided by §1092(b)(2) are intended to relieve taxpayers (primarily, if not solely options dealers), from the adverse effects of the application of §1233(d) principles, as described above, to mixed straddles.

Comment: The complexity added by the §1092(b)(2) regulations is evident from the Conference Report. The first cause of complexity is, of course, the extension of the straddle rules to stock/stock option positions. The second arises from considering the grantor of an option as holding an "interest in property." The third is the treatment of the obligation assumed by the grantor of an option as a §1256 contract where the option is granted by a dealer. To this are added the rules for identified straddles under §1092(a)(2), identified mixed straddles under §1256(d)(4) and the §1256(d) election. To these involved rules there is further added the regulatory authority under §1092(b)(1) to apply to straddle positions principles similar to those of §§1091 and 1233. (The Commissioner apparently found the task of drafting these regulations either too difficult to manage or not worth the trouble to exert his authority in the three years which elapsed since ERTA). Capping this byzantine pattern of legislation and regulations is the mixed straddle election under §1092(b)(2) regulations. The Conference Report contains a statement as to what the conferees intend these regulations to provide. The rules involved would appear to have been too complex for legislative formulation in the limited time the Conference Committee had to agree on tax legislation. All of these various provisions would seem to have been targeted on the options dealer who figured in numerous, ingeniously-structured tax shelter schemes devised to avoid the ERTA tax straddle provisions. It is unlikely that the matters discussed above will have any significance to investors generally. Legislative rules drafted by representatives of special interests, further amended in committee, are often extremely complex. This piece of work would, perhaps, have been better accomplished by a separate Options Dealers Relief Bill with committee reports spelling out in detail the tax benefits granted and the justification therefor.

b. Single Straddle Account

Where the taxpayer (options market maker in the examples given) establishes, at his election, a single straddle account, the following rules apply. Where the covered stock in a covered call is sold at a gain or loss, the regulations will provide for the offsetting of such gain or loss by unrealized gain or loss from the option. The net gain or loss will be characterized as short-term. Such net loss will not be subject to §1092 deferral. This offset will be taken into account in determining gain or loss from closing out the option. An example given in the committee report is as follows: The option in a covered call is closed out at a $12 gain (the option lapses or is repurchased at a gain). There is unrealized loss on the covered stock of $10. Of the $12 gain from closing out the option, $10 is characterized as short-term (under short sale principles) and the remaining $2 is subject to 60/40 treatment. If the stock were sold for a $12 gain, and there was an unrealized $10 loss from the option position (marked to market) the gain would be short-term to the extent of $2 (netting the gain and the unrealized loss). Any gain or loss from the option position (if marked to market at year end, for example) will be adjusted to reflect the $10 offset. Thus, assume an options dealer received a $1,000 premium for writing a call on ABC stock with a $100 strike price, and the call is covered (whether at the time the option was granted or after the purchase of stock). If the stock price rises to $125 and 1,000 shares are sold at a gain of, say, $3,000, this gain is first offset by any unrealized loss from the call. Assume that it will cost $2,500 to repurchase the call (in a closing purchase transaction) and there is unrealized loss of $1,600. This is set off against the $3,000 gain on the stock for a net gain of $1,400. This gain is short-term gain.[89] If the option is still open at year end, and the stock price has fallen to $95, and could be closed out for a net gain (taking the $1,000 premium into account) of, say, $990, no gain is recognized at that time. The option is marked to market at the $2,600 closing purchase transaction price. Assume that the option lapses the next year. The taxpayer will recognize a gain of $3,600 subject to 60/40.

The holding period of positions other than §1256 contracts included in a mixed straddle will not commence until the straddle is terminated, according to the Conference Report. This application of §1233(b) principles would apparently apply only to non-§1256 positions acquired at the time of or subsequent to the acquiring of the §1256 posi-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tions, *i.e.*, the holding period is *suspended*. Thus, if stock was held long-term at the time a covered call is granted by the options dealer (as a dealer) gain from the sale of the stock, as offset by any unrealized loss from the open option, would be long-term, or so it is hazarded. Regulations may call for a different result. Further, since, upon the termination of any straddle position (or all of them) a net gain or loss computation is made at that time, the amount of gain or loss from, and the holding period for, any positions of a straddle disposed of after the straddle is terminated (all offsetting positions disposed of) is determined without regard to any gain or loss attributable to the straddle period.

If all the positions of a mixed straddle remain open at year end, the §1256 positions are marked to market. Losses from such positions will be deferred to the extent of unrealized gains from non-§1256 positions. Such losses will be treated as all short-term under the §1091(b)(2) regulations. Any excess will be subject to 60/40 treatment. If marking the §1256 positions to market results in gain, to the extent of unrealized losses from non-§1256 positions, the gain will be all short-term under the §1091(b)(1) regulations.

c. Multi-Straddle Accounts

To escape from this complex web of rules, the options market maker (and those relatively few other taxpayers who may acquire mixed straddle positions in sufficient volume to make it worth while) is afforded relief under the §1092(b)(2) regulations. These regulations will allow the setting up of multi-straddle accounts. In the case of non-market makers, each multi-straddle account will relate to the same stock. The market maker holding long and short positions in ABC stock who grants and purchases options in the same stock will set up a multi-straddle account for these positions, and another account for similar positions in XYZ stock. Regulations will govern the details. Each account will have a period, (*e.g.*, one day, one week, one month, etc.) appropriate to record keeping and other factors. At the end of each period, gains and losses from non-§1256 positions are netted, and gains and losses from §1256 positions are netted separately. The two nets are then offset. If the result is net non-§1256 gain or loss, it is afforded 60/40 treatment. The total of the net gains or losses for each period is made for the taxable year. If the aggregate net gain for all periods so totaled is more than 50 percent long-term, the excess over such 50 percent is converted to short-term gain. If the aggregate loss for all periods is more than 40 percent short-term, the excess of 40 percent will be converted to long-term loss.

D. Options on §1256 Contracts

As stated above, §1256(c) requires that gain or loss is recognized upon the exercise of an option on a §1256 contract. If such option is excluded from mark to market and 60/40 treatment due to a §1256(d) election, any gain or loss will be governed by §1234(a) or (b).[90] The Conference Report makes it clear that, in such a case, gain or loss will not be accorded 60/40 treatment to either holders or grantors of the options. Thus, if the optionee, who has excluded an option on an RFC from §1256 by a §1256(d) election, exercises the option, or permits it to lapse, the grantor's gain or loss on the option will not be accorded 60/40 treatment. This is so even though the option is a §1256 contract as to the grantor and the grantor has made no §1256(d) election with respect to such contract.[91] The conferees thus rejected the notion that the "character" of the property underlying an option which is a §1256 contract includes the 60/40 rule.

E. The "Special Rule" for §1256 Contracts

One feature of the TRA's straddle provisions that is difficult to understand is the amendment to the special rule relating to mixed (not necessarily in the §1256(d) sense) straddles. Pre-TRA §1092(d)(4) provided that, in the case of a mixed straddle, §1092 applied to all RFCs and all other positions therein. This same rule, with "§1256 contracts" inserted in lieu of "RFCs" is contained in post-TRA §1092(d)(5)(A). A second special rule is provided here, however. Section 1092(d)(5)(B) provides that, "for purposes of subsection (a)(2) (relating to identified straddles), subparagraph (A) [the rule just cited] and §1256(a)(4) shall not apply to a straddle all of the offsetting positions of which consist of §1256 contracts."

Section 1256(a)(4) carries over from prior law the rule that, if all the "offsetting positions" of a straddle consist of §1256 contracts, §§1092 and 263(g) shall not apply to such straddle.

If this latter rule means that neither §1092 nor §263(g) applies to any straddle made up *in part* of §1256 positions, *i.e.*, the "offsetting positions," it seems incomprehensible. Does "offsetting positions" mean "short positions," or positions offsetting non-§1256 contract positions? If it means *all* positions, (which it seems unquestionably to do) then the rule makes sense. Note, however, that the statute could have, but did not, use this language. The Joint Committee report on ERTA states flatly that "If a straddle is composed partially of [RFCs] and partially of other positions . . . losses from positions that are part of the straddle will be subject to the loss deferral rule or to the rule relating to identified straddles." In other words, such losses will be subject to §1092(a), without qualification as to whether the RFC positions are or are not "offsetting."[92]

Returning to the rule provided by new §1092 (d)(5)(B), the provision states that the following do not apply to a straddle composed entirely of §1256 contracts: (i) the identified straddle rule; (ii) the rule making §1092 applicable to all the positions of a mixed straddle; and (iii) the rule making §1092 *inapplicable* to (it is submitted) a straddle composed completely of §1256 contracts, are not to apply to a straddle composed entirely of §1256 contracts. In other words, where all the offsetting positions of a straddle are §1256 contracts, §1092(a)(2) both applies and does not apply. In an apparent reference to §1092(d)(5)(B), this somewhat cryptic statement appears in the Conference Report:

> "The conference agreement extends the identified straddle rules of §1092(a)(2) to straddles consisting entirely of §1256 contracts. Thus, such a straddle which satisfies the definition of an identified straddle under §1092 as amended by the bill will not cause §263(g) or §1092 to apply to any position by treatment of part or all of such straddle as also including positions not part of the identified straddle."

What the conferees may have had in mind is a straddle which is part of a larger straddle, but which is made up entirely of RFC positions. For example, consider the follow-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ing positions straddle: (1): (A) cash silver — (B) short silver RFC; Straddle (2): (C) long silver RFC — (D) short silver RFC. The (C) — (D) straddle is an all-RFC straddle. The holder identifies position (A) and position (D) as an identified straddle. Perhaps Congress intended that the loss deferral rule of §1092(a)(1) and §263(g) will not apply to either position. Since the (A) — (D) straddle is part of a larger straddle, however, it would not qualify for identification. *See* §1092(a)(2)(B)(iii). The purposes of this rule are, to say the least, unclear. The Conference Report, further, does little to enlighten.

F. Amendments to §1256

1. General

The replacement of "regulated futures contract" by "§1256 contract" is described in the Overview. The statute makes it clear that any option with respect to a commodity which is an exchange-traded option, and any listed option on a commodity futures contract, is a §1256 contract and subject to the mark to market and 60/40 rules. This applies to the grantors of options as well as option holders, and to dealers as well as other persons.

2. Terminations of Rights and Obligations with Respect to Options

In the case of an option holder, where the option is held at the end of the year, marking to market will entail, presumably, reference to the price of such option if sold on the last business day. Options are not subject to deposit and withdrawal as are RFCs. Once the premium is paid, the option holder has no further obligations and his rights are limited to the exercise or non-exercise of the option. He can sell the option in a closing sale transaction, terminating his rights. Until the option is actually exercised, however, he has no direct interest in the underlying property.

Post-TRA §1256(c)(1) provides that the rules of paragraphs (1) through (3) of subsection (a) (mark to market, 60/40) apply to the termination during the taxable year of the taxpayer's "obligation (or rights) with respect to a §1256 contract, by offsetting, by taking or making delivery [up to this point, the statute follows prior law] *by exercise or being exercised, by assignment or being assigned, by lapse,* or otherwise." The italicized words are new.

"Assignment or being assigned" refers, probably, to foreign currency contracts which are often closed out in this manner.

"Exercise or being exercised" and "lapse" all refer to options. The following examples illustrate the application of these rules.

Example: On November 1, 1985, when the October 1986 futures price of commodity is $5 per unit, A grants a short call option to B at the $5 striking price for a premium of $1,000. On December 27, when the October futures price has risen to $7 per unit, B exercises the option. He acquires a long futures contract with a $5 per unit price. A enters into a short futures contract with the same price, posting maintenance margin of $2 per unit. The exercise of the option is treated as the termination of a §1256 contract both as to A and B. B must mark the option to market, recognizing gain, subject to 60/40 treatment, equal to the option's fair market value less the $1,000 premium paid. This would be $2 times the number of units covered by the futures contract plus the time value of the option, if any. A, apparently, must recognize a loss of $2 per unit less the premium received. These gains and losses are taken into account under §1256(a)(2) in determining any future gains and losses with respect to these futures contracts. If the price of the commodity remains relatively steady, and B allows the option to expire, each party must recognize gain or loss from this termination. B's loss is the amount of the premium paid. A's gain is the same amount.

Note: While equity options are not generally subject to the §1256 rules, they do constitute §1256 contracts when purchased or granted by an options dealer.[93] A "dealer equity option" is: (i) any listed option to buy or sell stock; or (ii) the value of which is determined directly or indirectly by reference to any stock (or group of stocks) or stock index.[94] An option on a stock index future which is authorized (or is determined by the Commissioner to qualify) for trading on a CFTC-designated contract market is not considered an "equity option."[95] It is, therefore, a non-equity option and a §1256 contract without regard to whether the option is held or granted by a dealer or other person.[96]

Section §1256(c) overlays §1234A, which treats as gain or loss any gain or loss attributable to the cancellation, lapse, expiration, or termination of a right or obligation with respect to personal property (as defined in §1092(d)(1)) including any §1256 contract which is a capital asset in the hands of the taxpayer. This rule was amended by Act §102(e)(4) to provide that it will not apply to the retirement of any debt instrument (whether or not through a trust or other participation agreement). The Conference Report cites as an example a mortgage pass-through certificate.[97]

3. Options Dealers

A broker-dealer in stocks and securities may also purchase, sell, and grant options. Some of these transactions may constitute hedging transactions with respect to stock or securities held as inventory. Some may be for investment (speculation on the market) only. Such a dealer may, for example, grant a call option covered by inventory stock or covered by stock held for investment. In either case, the dealer will hold positions of a straddle (long stock position offset by short option position). If the option transaction is a bona fide §1256(e) hedge, and is properly identified as required by §1256(e)(2)(C), §1092 does not apply,[98] and gain or loss will be ordinary. In no event will such an option be a §1256 contract where these transactions do not constitute "dealer equity options." Dealer equity options are options purchased or granted by an options dealer in the course of his activities of making a market. The broker-dealer may also be registered with an options exchange as a market maker or specialist. In that case, in addition to the options described above, the broker-dealer may grant or acquire "dealer equity options" qualifying as §1256 contracts. These will undoubtedly have to be identified in some manner. Regs. §1.1234-3(c) provides that, for purposes of §1234(b)(3), options granted by a broker-dealer in the course of his business of granting options (which would seem to refer to "dealer equity options" under the statute) must be identified as such under rules similar to those of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

§1236. Under the regulations authorized under Act §107(b), identification of such options may have to be made almost immediately upon their being granted. Failure to identify such options as dealer options will not, however, prevent the IRS from so characterizing them.

G. Observations and Suggestions

1. Stock — Stock Option Straddles

a. Ownership of Stock/Stock Option Positions

Investors holding stock in various corporations should be aware that, if they intend to grant and purchase options in the same stock, they may run afoul of the TRA straddle rules. This will occur only where the options granted or purchased are "offsetting positions," however. Where a person holds stock, there are only two offsetting option positions: the purchase of a put and the writing of a call. Investors have long been aware that, where stock is held short-term, the purchase of a put suspends the holding period, and that use of the stock to exercise the put will result in short-term gain.[99] While the statute is not clear on this point, it is probable that any gain from the sale of such a put will also be characterized as short-term no matter how long the option has been held. Under the TRA rules, in addition to these more familiar tax consequences, where a taxpayer during the year holds a stock — put option straddle, and either position is disposed of at a loss (this includes the expiration of the option unexercised), the loss is deductible only to the extent it does not exceed the unrealized gain from the stock at the end of the year.

Example: On October 15, 1984 (the amendments to §1092 are generally applicable to positions established after December 31, 1983) A, holding 100 shares of ABC stock, purchases a put option with a strike price of $100 for a premium of $8 per share. The stock, which has been held long-term, has a basis of $75 and a price, at the time of the put, of $100. A believes the stock may decline in value. A's purpose in purchasing the put is to protect himself against any loss so that he may take his profit on the stock in 1985. On December 15, the price of the ABC stock is still $100. A now believes that the expected decline in the stock will not take place and that it may safely be held until January 1, 1985 without a hedge. The put option, which has declined in value due to the loss of its time value, is sold (a closing sale transaction) for a loss of $2 per share. This loss is not deductible since it does not exceed the unrecognized $2,500 gain on the stock. It can be deducted only in 1985 when the ABC stock has been sold. Since §1233(d) does not affect put options, the loss on the option is short-term. While there seems to be no good reason why §1233(d) principles should be applied to characterize the loss from the put as long-term, the regulations to be issued under §1092(b)(1) may possibly take this position.

Where the offsetting position is the granting of a call option, the investor should be aware of the special rules relating to qualified covered calls. These will override the §1092(b)(1) regulations. If the call option does not qualify under the QCC provisions, and the taxpayer realizes gain by reason of the option's lapse, the gain is short-term by reason of §1234(b)(1) regardless of how long the option was held open. On the other hand, the granting of the option does not, as does acquisition of a put option, affect the stock's holding period under §1233(b). This is so even though it constitutes a "short" position. This, too, however, may be changed by the §1092(b)(1) regulations.

Example: In November 1984, A acquires 100 shares of ABC stock for $100. The price rises to $110. A grants, for a premium of $24 per share, an April $90 option on December 20. This is not a qualified covered call. If this option is terminated on the last business day of 1984, any loss will be deferred under §1092(a)(1) until the following year. Under pre-1984 TRA law, the granting of the call act to suspend the holding period for the ABC stock. Whether this will continue to be true is unclear.

Where the call is a qualified covered call, the §1092(b)(1) regulations will not apply since, under §1092(c)(4)(A), it is not regarded as a position of a straddle for purposes of §1092 (or for purposes of §263(g)). The two special rules of §1092(c)(4)(E) and §1092(f) will apply, however. Under §1092(c)(4)(E), if the call option is closed out and the covered stock is sold for a gain less than 30 days after the option was closed out, and if such gain is includible in a taxable year after the taxable year in which the option was closed, the option is disqualified and §§1092 and 263(g) will apply to both positions of the straddle (the covered stock and the call option). In measuring the 30-day period: (1) the day the stock is disposed of, but not the day it was acquired, is counted;[100] (2) §1223 does not apply (relating to the holding period of property received in an exchange); and (3) there is not counted any day on which the taxpayer held a short position diminishing any risk of loss on the stock — this includes the period during which the call option was open.[101]

Note: Due to §263(g), interest with respect to stock purchased on margin is not allowed as a deduction where the stock is part of a straddle (*i.e.*, any period during which the stock position is offset by an option other than a qualified covered call); it must be added to the basis of the stock. This would apply both to a non-qualified call and a put option.

The second special rule relating to qualified covered calls is similar to §1233(d). Where the option strike price is less than the applicable stock price (generally, the closing price on the day prior to the day the option was granted), any loss with respect to the option is long-term capital loss where, at the time the loss is sustained, any gain from the covered stock would be long-term. In addition, the stock's holding period is suspended while the option is open.

Query: May it be inferred from this special rule that this is not ordinarily the case where a covered call option is granted?

b. Other Straddle Involving Direct Ownership of Stock

As indicated *supra*, "substantially similar or related" is a technical concept new to the Code. It is used in §246(c) (and is incorporated by reference in §1059) to refer not only to property other than stock (as in §1092(d)(3)(B)(i)(II)) but to all kinds of property. It also appears in §263(h). Its meaning, in all cases, is to be supplied by regulations. This term falls midway between

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

"substantially identical" and "offsetting."[102] It is incorporated into the special year-end rule of §1092(c)(4)(E) with reference to the holding period of the stock offset by a qualified covered call. As restricted to property other than stock, it is used in describing property which will be considered to offset direct ownership of stock in one of the three exceptions to the rule that stock is not considered "personal property" for §1092 purposes.

The third exception to the last-stated rule is stock in a corporation formed or availed of to take positions offsetting positions of any shareholder. This exception was enacted principally to deal with foreign commodity trading corporations. Interpretation of this provisions will almost certainly lead to disputes.[103]

2. Section 1256 Amendments

Effective as to positions established after October 31, 1983, options on regulated futures contracts are to be treated as RFCs for purposes of §1256.

Commodity options play an important non-tax motivated role in commodity trading. An investor may be convinced that the price of a certain commodity is due to rise due to various factors. There is often a considerable time lag between the perception of these factors and their impact on the commodity prices. Taking a long futures position may entail risks the trader is unwilling to take, since the price may fluctuate considerably during the lag period, compelling the investor to post thousands of dollars in margin maintenance during market downswings. A long call fixes the amount at risk. Downside market fluctuations will not require the risking of additional funds. Also, where a futures contract held by an investor has generated unrealized gain, options may be played against such contract. For example, where the futures contract is a short position and the price has moved downward, a long call can be acquired to lock in the unrealized gain. If the price falls further, additional gain from the short position is forfeited to the extent of the premium paid for the option. If the price moves upward, however, for every dollar of unrealized gain wiped out, the long call will gain one dollar in value. In some situations, where the price moves upward dramatically, the gain ultimately realized from the long call will exceed the unrealized gain from the short futures contract wiped out. There are, of course, many intermediate positions. In the short RFC-long call case, where the commodity price moves upward sufficiently, additional margin on the short position may be called for. The holder might decide to close the position out and protect the unrealized gain from the long call by acquiring another short contract. Similar stratagems may involve the granting of options. Instead of purchasing a long call, the holder of the appreciated short futures position could grant a short put. Here, gain from the short position is locked in only to the extent of the premium received. If the price moves further downward, margin will have to be posted to secure the grantor's obligation under the short put, or the option may be closed out at a loss.

The amendments to §1256(d) ("Terminations, etc.") provide that the rules of §1256(a)(1) through (3) are to apply to the termination of the taxpayer's rights or obligations with respect to a §1256 contract "by exercise or being exercised" or by "lapse." Where a commodity option is acquired, it is (a) exercised, (b) closed out in a closing sale transaction, or (c) allowed to expire unexercised. Upon the happening of any one of these events, the option must be marked to market and any gain or loss is afforded 60/40 treatment. Thus, if a long call is exercised, and the taxpayer thereby acquires a long RFC position, the excess of the option's fair market value at the time it was exercised over the amount of the premium paid is gain which must be recognized. It is treated as 60/40 gain. Then, under §1256(a)(2), such recognized gain is to be taken into account in determining the amount of any gain or loss from the RFC.

Note: While it seems unlikely that such an option would be part of a mixed straddle, this is possible. For instance, a straddle could be made up of stock in a diversified investment company and an option on a stock index futures contract, or of direct ownership of a commodity and an option on a futures contract relating to the same or similar property. If §1256(d)(4) is satisfied, an election may be made under §1256(d) not to have §1256 apply to the option position. In such a case, although the taxpayer avoids §1256(c)(1), 60/40 treatment of any gain or loss is also forfeited.

The above comments also apply to the grantor of an option on an RFC. The holder of a long option position on an RFC where a §1256(d) election has been made, may, if the position is held for more than six months, realize long-term capital gain. The grantor of an option elected out of §1256, however, will realize short-term gain due to §1234(b)(1) no matter how long the position has been held open.

Section 1234(c), added by Act §105, provides that gain or loss shall, be recognized on the exercise of an option on a §1256 contract.[104] This, presumably, applies to all §1256 contracts, including those as to which a §1256(d) election has been made. A cash settlement option is to be treated as an option to buy or sell property.[105] An option on a Treasury bill futures contract is a cash settlement option since it is one which, on exercise, settles in (or could be settled in) cash or property other than the underlying property.[106] Where such an option is granted, whether by an investor or an options dealer, it would seem clearly to be subject to the §1256(c)(1) termination provisions unless a §1256(d) election has been made. If a §1256(d) election is made, §1234(c) and, by reason of the latter subsection, §1234(b) will characterize any gain or loss as short-term. The latter provisions would also seem to apply where the granting of the option is a hedging transaction (by a dealer in Treasury obligations, for example) and hence, by reason of §1256(e), is not subject to §1256.

The amendments made to §1234 apply to options purchased or granted after October 31, 1983 in taxable years ending after that date.

3. Effective Dates of Act §102

Act §102(f)(1) sets the effective dates for the amendments to §1256 and to §263(g) (Act §102(e)(7) and (8)). The general effective date is that Act §102 is to apply to positions established after the TRA's enactiment date (July 18, 1984) in taxable years ending after such date.

The amended §1256 rules apply to options on RFCs, however, acquired or granted after October 31, 1983.[107]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The self-employment tax amendments (which apply to options dealers and commodities dealers (as defined in §1402(I)(2)(B)) apply to taxable years beginning after July 18, 1984.

Act §102(f)(4), entitled "Gains or Losses from Certain Terminations," provides that the "(t)he amendment made by subsection (d)(9) shall apply as if included in the amendment made by §505(a) of (ERTA) as amended by §105(e) of the Technical Corrections Act of 1982."

Comment: This seems to be a technical error. The reference seems clearly to be to Act §102(e)(9) amending §1234A (which was amended by ERTA §507(a) and TCA of 1982 §105(e)) relating to certain terminations by providing that it is not to apply to the retirement of debt instruments.

Two elections are provided under Act §102(g). Under the first, the amendments made by Act §102 apply to all §1256 contracts held on the TRA's enactment date. Under the second, the amendments apply to all §1256 contracts held at any time during the taxable year which includes July 18, 1984 (date of enactment).[108]

If the second (§102(g)(2)) election is made, the taxpayer may also elect to pay all or part of the tax for the taxable year including the date of enactment in two or more (but not more than five) equal installments. The maximum amount of tax which can be thus paid is the excess of the tax liability resulting from taking the §102(g)(2) election into account and treating all stock option §1256 contracts (*i.e.*, dealer equity options), and any stock which such options offset, as having been acquired for a price equal to their fair market value as of the end of the preceding year.

Observation: A stock option which offsets a direct ownership of stock position must be a granted call. The grantor of such an option could not "acquire" such an option. What is probably intended is the fair market value of a call option which, if acquired in a closing purchase transaction, would offset the option granted.

The §102(g)(2) installment payment election must be made no later than the due date for the return for the taxable year including July 18, 1984 in accordance with regulations to be issued.

4. Hedging Loss Limitation

Act §104 adds §1256(e)(5). That paragraph restricts the amount of any losses from hedging transactions which can be passed through to limited partners or entrepreneurs. This amendment appears to be aimed primarily at option market maker tax shelter schemes, but will have a somewhat broader application. It is limited, as to hedging transactions involving other than stock and securities, to the persons described in §465(a)(1), the at-risk rules, *i.e.*, individuals and personal holding company qualified corporations. The loss pass-through is limited to the taxable income of the limited participant for the taxable year attributable to the trade or business to which the hedging transactions relate (such taxable income to be computed not taking into account the hedging transaction items).[109] The disallowed loss is carried over and treated as a hedging transaction loss in the following year.[110] Where the hedging losses exceed the aggregate of unrecognized gains from the hedging transactions as of the close of the year attributable to the business to which the hedging transactions relate, such excess may be passed through.[111] This limit is added to the already existing restrictions of §1256(e) relating to syndicates. This amendment may have an impact on farming operations operated as limited partnerships or S corporations, and to certain similar business entities dealing in commodities as producers or processors.

The amendments to §1256(e) apply to taxable years ending after December 31, 1984.

CHAPTER 28

PROVISIONS AFFECTING CAPITAL GAINS AND LOSSES

Deborah M. Beers,Esq
Silverstein and Mullens
Washington, D.C.

I. Introduction

Under subchapter P of the Code [1] gain or loss from the sale of "capital assets" is taxed specially, generally resulting in the imposition of a lower rate of tax than that imposed on ordinary income.[2] The term "capital asset" generally includes all property other than (1) stock in trade or inventory of the taxpayer or property held for sale by the taxpayer primarily to customers in the ordinary course of a trade or business; (2) depreciable property used in the trade or business; (3) certain literary, musical or artistic property held by its creator or a donee of such property; (4) accounts receivable arising out of a trade or business or from the sale of inventory; and (5) certain U.S. government publications.[3] The special capital gains rate is applied to the "net capital gain" which is the excess of the net long-term capital gain for the taxable year over the net short-term capital loss for such year.[4] The holding period for determining whether a capital gain or loss is "long-term" or "short-term" has varied over the years since 1921, and, immediately prior to the Act was one year.[5]

Section 1211 provides limits the extent to which capital losses may be deducted. Corporate taxpayers thus are allowed to deduct capital losses only to the extent of capital gains. Other taxpayers may offset capital losses against ordinary income to the extent of $3,000 per year. Long-term capital losses of individuals, however, are reduced by 50 percent when offset against ordinary income, except that any such losses incurred prior to 1970 and carried over to later years are deductible dollar per dollar under a special transition rule in §1212(b)(3).

Certain types of property excluded from the definition of "capital asset" in §1221 have been accorded capital gains treatment under other sections of the Code. In §1231, for example, gains from property used in the trade or business and gains from the compulsory or involuntary conversion of property used in the trade or business and capital assets held for more than one year (whether business or personal) are considered to be capital gains, although the losses from such property are ordinary losses. Similarly, royalties received on the disposition of coal and iron ore will, under certain circumstances, receive capital gains treatment under §631(c). In the case of iron ore, however, (but not coal) capital gain treatment will be denied where there is a disposal of iron ore to a related person or to a person owned or controlled directly or indirectly by the same interests which own or control the taxpayer.

The Code also limits the availability of capital gains treatment in certain cases. Thus, under §1239, the direct or indirect sale or exchange of depreciable property between specified related persons (including husband and wife and certain 80 percent controlled entities of the taxpayer) is denied capital gains treatment. Under §1251 (enacted in 1969) taxpayers are prevented from using foreign losses to shelter non-farm income while later obtaining capital gains on the disposition of farm property. Under §1251 the excess losses from the farming activities would be recaptured as ordinary income at the time of sale. The Tax Reform Act of 1976 limited the application of this recapture provision to those farm losses incurred prior to 1976.

II. Overview

The Tax Reform Act of 1984 makes numerous changes in the capital gains and losses provisions. First, the holding period for long-term capital gain treatment is reduced from one year to six months.[6] The Act also repeals the transitional rule for pre-1970 capital losses, which may no longer be offset in full against ordinary income.[7] Capital gains treatment accorded under §1231 to property used in the trade or business and capital assets involuntarily converted is limited by the Act, which taxes as gain from ordinary income the "non-recaptured net §1231 losses" of the previous five years. The Act also limits the application of §1231 to gains or losses from involuntary conversions of business property arising from fire, storm, shipwreck or other casualty or from theft. Personal casualty losses and gains will be taken into account under §165. The Act also eliminates the availability of capital gain treatment for any disposal of coal to a related person or to a person owned or controlled directly or indirectly by the same interests as the taxpayer.

The Act also amends those sections of the Code discussed above which limit the availability of capital gains treatment in certain circumstances. First, the Act amends §1239 to provide that patent applications shall be treated as depreciable property and thus subject to the limitations of that section on sales to related persons.[8] Next, the Act redefines the term "related persons" to include a taxpayer and any trust of which he is a beneficiary (unless his interest therein is remote and contingent),[9] and to include an employer and a related welfare benefit fund controlled directly or indirectly by the employer or a related person.[10] The term "related person" no longer will include, however, a husband and wife, in accordance with new rules governing the transfer of property incident to a divorce.[11] The limitation on capital gains treatment required by §1251 provisions on recapture of farm losses have been repealed as deadwood.[12]

III. Detailed Analysis

A. Holding Period For Long-Term Capital Gain Treatment Reduced to Six Months [Act §1001]

1. Statutory Change

The Act amends §1222 (which defines the terms relating to capital gains and losses) to decrease the holding period for long-term capital gains and losses from one year to six months. This amendment restores the holding period that was in effect prior to the Tax Reform Act of 1976. The reduction in the holding period was justified by the Treasury, which testified in its support, as an incentive to save and to hold corporate stock and improve the efficiency of capital markets by removing artificial barriers to stock transactions.[13] The tax reduction from converting short-term gains to long-term gains is expected to outweigh the tax increase on individuals from converting short-term losses to long-term losses on assets held between six and 12 months.[14]

2. Effective Date

This amendment is effective with respect to property acquired after June 22, 1984 and before January 1, 1988, and thus may be said to be experimental in nature.

B. Section 1239 Exception To Capital Gain Treatment Expanded [Act §§175, 557, 421(b)(6)]

1. Statutory Changes

Section 1239 was enacted to deny capital gains treatment to sales and exchanges of depreciable property between husband and wife or between an individual and a corporation controlled by him. In the case of such sales between related parties the immediate capital gains tax paid by the related purchaser was in most cases more than offset by the opportunity to write off against future ordinary income the depreciation resulting from the increase in the adjusted basis arising from the sale.[15] The Act amends and strengthens provisions of current §1239 in several ways. First, it provides that patent applications are to be treated as depreciable property for purposes of §1239.[16] The Act also changes the definition of "related person" contained in Code §1239(b) which, prior to the Act, included (1) a husband and wife, and (2) a person and all entities which were 80 percent controlled (directly or indirectly) by that person. The constructive ownership principles of §318 are applied to determine the extent of control of a related entity under §1239(c).[17] Under the Act, husband and wife no longer are considered to be related persons.[18] The reason given for this change by the House Ways and Means Committee was its belief that, in general, it is "inappropriate" to tax transfers between spouses whether during marriage or incident to a divorce.[19] In addition to removing husband and wife from the categories of related persons, the Act adds to that category a person and a trust in which the person has a beneficial interest (other than a remote or contingent interest).[20] Also included within the definition of "related person" are an employer (and any person related to the employer) and a welfare benefit fund to which the employer contributes, whether or not the fund is exempt from tax.[21] This amendment was intended to prevent employers from assigning inappropriate values to property contributed to such funds.[22]

2. Effective Dates

The amendment with respect to patent applications is effective with respect to sales and exchanges made after March 1, 1984 in taxable years ending after that date.

The amendments to the definition of "related person" are effective as follows:

(a) The amendment which eliminates husband and wife from the category of related persons is effective with respect to transfers after the date of enactment (July 18, 1984). Both spouses may, however, elect to have the amendment apply to all transfers made after December 31, 1983. In the absence of this election the amendment shall not apply to any transfer made under any instrument (such as a divorce decree) in effect on or before the date of enactment. The manner of making these elections is to be prescribed by the Secretary[23];

(b) The amendment which adds employers and the employee benefit funds to which they contribute to the category of "related person" is effective with respect to all sales or exchanges after the date of enactment (July 18, 1984) in taxable years ending after such date;[24] and

(c) The amendment which adds to the category of related persons beneficiaries of trusts in which they have a noncontingent interest is effective with respect to sales or exchanges after March 1, 1984 in taxable years ending after such date.[25]

C. New Rules Recapturing §1231 Gain As Ordinary Income And Coordinating Casualty Losses With §1231 [Act §§176 and 711(c)]

1. Statutory Changes

a. Recapture of §1231 Gain [Act §176]

As noted above, §1231 provides an exception which accords capital asset treatment to gains on sales or exchanges of property used in the trade or business and gains from the compulsory or involuntary conversion of long-term capital assets into other property or money. Net losses from sales or exchanges of such property are, however, not considered to be losses from sales or exchanges of capital assets. The Act[26] amends §1231 to provide that the net §1231 gain for any taxable year shall be treated as ordinary income, rather than capital gain, to the extent of the "non-recaptured net §1231 losses" for the five most recent preceding taxable years beginning after December 31, 1981. Thus, taxpayers who have deducted net §1231 losses against ordinary income in taxable years beginning after December 31, 1981 will have to recapture as ordinary income a portion of any net §1231 gains for taxable years beginning after December 31, 1984.

b. Casualty Losses

Prior to the Act, §1231 applied to gains and losses from the compulsory or involuntary conversion of all capital assets held for more than one year whether or not such assets were personal or business assets. The Act has amended §165(h) (Treatment of Casualty Gains and Losses), however, to remove gains and losses from personal casual-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ties from the scope of Code §1231. Gains from personal casualties are those arising from the involuntary conversion of property which is not used in a trade or business or in a transaction entered into for profit and which arise from fire, storm, shipwreck, theft, or other casualty. Gains and losses from the compulsory or involuntary conversion of property used in the trade or business and long-term capital assets held in connection with a trade or business or in connection with a transaction entered into for profit will continue to be netted under §1231. The excess of recognized gains over recognized losses on such property will continue to be taxed as capital gain, while the excess of recognized losses over recognized gains will continue to be deductible against ordinary income.

The Act also provides an amendment to coordinate the ten percent of adjusted gross income limitation in §165 with §1231. Under the formula prescribed by §165 for determining the amount of the 10 percent limitation, the taxpayer's net recognized gains from involuntary conversions and casualty losses must be taken into account before the deduction for capital gain (and thus adjusted gross income) can be computed. This interrelationship of §1231 with the adjusted gross income computation makes the computation of the casualty loss deduction indeterminable. The Ways and Means Committee explains that the 10 percent limitation thus is to be determined without regard to the application of §1231 to gain or loss from involuntary conversions arising from casualty or theft.[27]

2. Effective Dates

The amendment adding the recapture provisions to §1231 is applicable to net §1231 gains for taxable years beginning after December 31, 1984.

The amendments which coordinate §1231 with §165 (casualty gains and losses) are effective with respect to taxable years beginning after December 31, 1983. The rule with respect to the computation of adjusted gross income under §165(h) (which shall be determined without regard to the application of §1231 of the Code) is a transitional rule, applicable to those years beginning before January 1, 1984.

D. Repeal Of Farm Loss Recapture Rules [Act §492]

Section 1251 (relating to recapture of gain from disposition of property used in farming where farm losses offset non-farm income) is repealed by TRA §492 of the Act, effective for taxable years beginning after December 31, 1983. Technical and conforming amendments are made to other sections of the Code.[28] Since the Tax Reform Act of 1976 had made the farm loss recapture rules inapplicable to losses incurred after 1975, the need for this provision had been eliminated and its repeal was enacted as part of the "deadwood" provisions.[29]

E. Denial Of §631(c) Capital Gain Treatment For Certain Dispositions Of Coal [Act §178]

1. Statutory Changes

The Act amends §631(c) to provide that capital gain treatment for certain royalties on coal will be denied where there is a disposal of coal to a related person or to a person owned or controlled directly or indirectly by the same interest which own or control the taxpayer. The amendment is intended to conform the treatment of royalties on coal to that of royalties on iron ore, and to reduce the avoidance of the overall tax on coal mining operations which arises when a separate land holding company acquires and leases coal reserves to a related company which actually conducts the mining operation. Under this arrangement the royalties are deductible by the operating company and are taxable as capital gains to the leasing company, thus reducing the overall tax burden on the related group.[30]

2. Effective Date

The amendment is generally effective with respect to dispositions of coal after September 30, 1985. The Conference added a special rule, however, for certain "qualified fixed contracts." Under this exception, dispositions of coal to related persons will not be denied capital gains treatment where the coal is sold under a fixed contract in effect on June 15, 1984 and at all times thereafter where the price for such coal cannot be adjusted to reflect the changed income tax liabilities of the seller. This exception for fixed contracts terminates on January 1, 1990. If during any taxable year there is a disposition which is not specifically allocable to a qualified fixed contract or to a contract which is not a qualified fixed contract, then the disposition is treated as first allocable to the qualified fixed contract.[31]

F. Repeal of Transitional Rules For Pre-1970 Capital Losses [Act §1002]

The Act repeals the rule of §1212(b)(3) that pre-1969 long-term capital losses need not be reduced by 50 percent when offset against ordinary income. The repeal was enacted in the interest of tax simplification, since taxpayers now have had 14 years to use the pre-1970 losses, and the special rules applicable to them have added considerable complexity to individual tax forms.[32] The repeal is effective for taxable years beginning after December 31, 1986.[33]

CHAPTER 29

NEW RECHARACTERIZATION ON LIKE-KIND EXCHANGES

Robert E. Liles, II, Esq.
and
James F. Miller, Esq.
Silverstein and Mullens
Washington, D.C.

I. Exchange of Partnership Interests Disqualified from §1031 Treatment

A. Background

Section 1031(a) provides that no gain or loss is recognized if property held for productive use in trade or business or for investment is exchanged solely for property of a like kind to be similarly held. Specifically excluded from like-kind treatment are stocks, bonds, notes, choses in action, certificates or trust or beneficial interest, or other securities or evidences of indebtedness, or interest.

The Internal Revenue Service has contended that partnership interests, although not expressly excluded in the Code, do not qualify for like-kind treatment. In Rev. Rul. 78-135, 1978-1 C.B. 256, the Service justified its position by arguing that the parenthetical exclusion in §1031 "in part encompasses all types of equity interests in financial enterprises other than by direct ownership of the underlying property. Because a partnership interest represents such an equity interest, it comes within the ambit of the [exclusion]." [1] The Service has regularly lost in litigation on this issue where the underlying assets are of like kind and where the partnership interests are of similar type (*i.e.*, general for general, limited for limited, but not general for limited).[2]

The Conference Report expresses the concern that the partnership interest exchanges are being used to avoid gain with respect to "burned out" partnerships (*i.e.*, partnerships where loss deductions have substantially diminished the basis in partnership interests which were largely attributable to unpaid, nonrecourse liabilities).[3] The solution adopted by TRA of 1984 is to eliminate all partnership like-kind exchanges.

B. Detailed Analysis

Section 1031 is amended to provide that interests in a partnership do not qualify for like-kind exchange treatment. Accordingly, any such exchange will give rise to recognition of gain.

C. Effective Date

The disqualification provision applies to exchanges after July 18, 1984, except where the transfer is pursuant to a binding contract in effect on March 1, 1984, and at all times thereafter.[4]

II. Period for Completing Deferred Like-Kind Exchange Restricted [Act §77]

A. Background

Code §1031 provides an exception from the general rule requiring the current recognition of gain or loss realized upon the sale or exchange of property. Under §1031(a), no gain or loss is recognized if property held for productive use in a trade or business or for investment is exchanged for property of a like kind which will also be so held. As with most other nonrecognition provisions of the Code, §1031(d) provides that the basis of property transferred carries over to the property received, and is increased by any gain recognized (or decreased by any loss recognized or boot surrendered), and reduced by the amount of money or the fair market value of other property received. The realized gain is deferred until the "exchange property" is disposed of in a subsequent taxable transaction.

The legislative history underlying §1031 suggests that the original justification for nonrecognition of gain or loss on such exchanges was two-fold: (i) Congress' desire not to impose a tax on a theoretical gain where a taxpayer continued his investment in like-kind property; and (ii) a recognition of the administrative burden required to detect and evaluate thousands of barters and horse trades consummated each year.

Prior to 1921, exchanges of property for other property generally were taxable. The Revenue Act of 1921 expressly exempted all exchanges of property for other property, whether of a like-kind, or not, if the property received did not have a "definite and readily realizable market value." [5] This nonrecognition rule was intended to eliminate the then-common administrative problem of determining values. The 1921 Act went even further for exchanges of like-kind property, which became exempt from taxation even if the property received did have a "definite and readily realizable value."

Nonrecognition of gain or loss on exchanges of non – like-kind property lasted for only three years. In the Revenue Act of 1924, such exchanges were again made taxable because it was felt that the "readily realizable market value" concept of the 1921 Act was so indefinite that it could not, and, in fact, was not being applied consistently.[6] However, the nonrecognition rule for like-kind exchanges

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

was retained. The Revenue Act of 1924 represents the last major revision in language of current §1031.

In 19[illegible] like-kind exchange provisions were reconsidered and [illegible]ained. Congress reiterated that difficulties of evaluation and protection of the revenues remained primary reasons for rejecting elimination of the provision, but also acknowledged that in a like-kind exchange, the taxpayer continues his investment in the same kind of property, and, therefore, only realizes a "theoretical" profit or loss which should not equitably be recognized.[7] Since 1934, this continuity of investment rationale has become accepted as the primary purpose underlying §1031.[8]

In recent years, the principle of continuity of investment has been at the heart of determinations as to whether so-called "delayed" or "nonsimultaneous" exchanges qualify for nonrecognition under §1031. The characteristics of such transactions are fairly straightforward. Suppose, for example, that B wants to acquire A's property immediately for cash, but is willing to cooperate in an exchange. However, either because of financing considerations or other business exigencies, B cannot wait until A finds suitable property which he is willing to accept in exchange. A refuses to sell for cash, but does not want to lose the price which B has offered to pay. To solve the problem, A and B enter into an agreement pursuant to which A agrees to transfer his property to B immediately and B agrees to create a credit balance on its books equal to the value of A's property. The balance is to be used to acquire and convey like-kind property designated by A within the next 5 years. The credit balance will be reduced by the amount of B's purchases and increased by an annual percentage growth factor applied to the outstanding credit balance at the end of each month. If, at the end of the five years, the balance is not reduced to zero, B will have the option to pay the remaining amount in cash.

This example parallels the facts in *Starker v. U.S.*,[9] the first Court of Appeals decision which directly considered the question of delayed exchanges in the context of §1031. The Government argued that the transaction outlined above did not qualify under §1031 because the transfers were not simultaneous and, alternatively, that A had received a contract right which was not like-kind to the real property which he had transferred. The Ninth Circuit held that simultaneity is not required in a §1031 exchange and, in response to the Government's "like-kind" argument, stated:

> A contractual right to assume the rights of ownership should not, we believe, be treated as any different than the ownership rights themselves. Even if the contract right includes the possibility of a taxpayer receiving something other than ownership of like-kind property, we hold that it is still of a like kind with ownership for tax purposes when the taxpayer prefers property to cash before and through the executory period, and only like-kind property is ultimately received.[10]

The *Starker* decision has resulted in widespread speculation and comment on the use of delayed exchanges. Without any clear expression as to the necessity of the simultaneous exchange in §1031 itself, the underlying regulations, or the legislative history, questions have focused upon whether the accepted purpose of the statute — to defer taxation if the taxpayer continues his investment in like-kind property — implies a need for simultaneity. If the exchange property to be received is identified at the time the taxpayer delivers his property, and delay is caused because the property is not yet in existence, or because of practical difficulties in accomplishing transfer, it is easier to conclude that the taxpayer has continued his investment in like-kind property. In this regard, a taxpayer may be considered for tax purposes to have made an investment in property, since he bears the risk of loss and opportunity for gain associated with such property.[11]

Acceptance of nonsimultaneity under such circumstances finds some support in the Tax Court's decision in *Rutherford v. Comr.*,[12] where the court held that §1031 applied to a taxpayer who received twelve half-blood heifers in exchange for his agreement to have such heifers artificially inseminated by the sperm of a registered bull and deliver the first twelve three-quarter-blood heifers born to the heifers received. With respect to the delayed nature of the exchange, the Court simply stated:

> "At least under the circumstances of this case, we do not consider the fact that the three-quarter blood heifers to be delivered by ... [taxpayer] were not in existence at the time of the transfer of the half blood heifers ... precludes the applicability of Section 1031(a)."

Each of the parties bore the risks of ownership of the particular heifers received or to be received.[13]

The *Starker* case, however, involved a very different situation. Upon the transfer of A's property to B, A's investment risks were totally unrelated to real estate. Prior to his receipt of his exchange properties, A not only did not bear the benefits and burdens of investment in any particular piece of real estate, he was out of the real estate market altogether. The significance of this aspect of the transaction is demonstrated by the fact that since A had a right to receive real estate of a fixed value, if real estate values went up in the interim, A was worse off, and if they went down, he profited. This is the exact opposite of the effect which market swings would have on an investor in real estate. The only risk A bore during this period was the credit risk of his purchaser, B.

Under this analysis, therefore, *Starker* is contrary to the purpose of §1031 since it permits a taxpayer to "get out of the market" (*i.e.*, discontinue his investment) for a period of time, without paying tax. The Ninth Circuit, in ignoring the accepted purpose of the statute, never asked these questions. It simply concluded, without reason, that §1031 applied as long as a property was ultimately received.

It bears noting, however, that the taxpayer in *Starker* did not have a contractual right to demand cash at the end of the five year period; the cash option was solely in the hands of the purchaser. In that sense, *Starker* was a strong case for the taxpayer and thus can be distinguished from cases in which a taxpayer actually has such a right. In such cases, a taxpayer may combine the installment sale rules and the like-kind exchange provisions to defer taxation on dispositions of property for indefinite periods of time.[14]

For example, if a taxpayer transfers property to B in

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

exchange for a promise by B to either transfer suitable property to the taxpayer within the next five years, or, at the end of such period, to pay a certain cash consideration, and if, at the end of the five year period, the full cash consideration is paid, the installment sale provisions would apply to defer the gain until the year of receipt of the cash.[15]

In addition to such problems, the *Starker* case also presents many other difficult administrative and substantive issues:

(a) If, in a nonsimultaneous exchange transaction, a taxpayer has the right to demand cash at any time, should the fact that he does not exercise the right make a difference?

(b) If the transferee puts cash or an irrevocable letter of credit into escrow as security, will such a security device be regarded as the equivalent of constructive payment? [16]

(c) Is the assumption of a seller's mortgage by the buyer taxable to the seller immediately, or must the transaction remain open to see what, if any, mortgage is assumed by the seller when the exchange property is received? [17]

(d) Section 1031(d) provides that the property acquired takes the basis of the property transferred increased by gain recognized and decreased by the amount of cash and fair value of other boot received. If multiple properties are to be received, presumably the basis should be allocated based on the relative fair market values of the properties received to the total value to be received. However, if cash is received for the remaining balance, unallocated basis will remain. Should it be allocated to properties previously received? What if some or all of the properties received have since been disposed of? Such problems become even more complex under the Ninth Circuit's holding in *Starker* that boot received in later years is to be treated and received in the year that the taxpayer transferred his property so as to cause gain recognized to the extent of the boot to be reported in the first year. This holding violates the annual accounting concept and in the case of cash-basis taxpayers, the concept of cash-basis accounting.[18]

The answers to all of these questions remain unclear, since the Ninth Circuit in *Starker* either ignored them or did not give them adequate attention.

B. Overview

1. Requirement that Property be Identified and that Exchange Be Completed Not More Than 180 Days After Transfer of Exchanged Property

Section 77 of the Act amends Code §1031(a) and, *inter alia*, permits nonsimultaneous exchanges under certain circumstances. New §1031(a)(3) provides that any property received by a taxpayer will not be treated as like-kind property for purposes of deferral if (1) such property is not "identified" as property to be received in the exchange "before the day which is 45 days after the date on which the taxpayer transfers the property relinquished in the exchange," or (2) such property is received after the earlier of (i) "the day which is 180 days after the date on which the taxpayer transfers the property relinquished in the exchange," or (ii) "the due date (determined with regard to extension) for the transferor's return ... for the taxable year in which the transfer in the relinquished property occurred."

2. Effective Dates

Section 77(b)(3)(A) provides that the nonsimultaneous exchange requirement of new §1031(a)(3) will apply to transfers after July 18, 1984 (the date of enactment). With regard to transfers on or before such date, §77(b)(3)(B) provides that the exchange property will be considered to be like-kind property for purposes of deferral only if it is received before January 1, 1987. In such cases, the period for assessing any deficiency of tax resulting from the property not being considered like-kind will not expire before January 1, 1988. However, §77(b)(4) provides that if the exchange property is identified in a binding contract in effect on June 13, 1984, and at all times thereafter before the transfer, it will be considered like-kind property if received before January 1, 1989. With respect to such transfers, the period for assessing any deficiency of tax will not expire before January 1, 1990.

C. Detailed Analysis

1. Requirement that Property be Identified

The requirement in new §1031(a)(3)(A), that the exchange property be identified "before the day which is 45 days after the date on which the taxpayer transfers the property relinquished in the exchange," underscores that the continuity of investment rationale underlies §1031. As noted above, for tax purposes, a taxpayer is considered to have made an investment in property if he bears the risk of loss and opportunity for gain associated with such property. New §1031(a)(3)(A) ensures that taxpayers will bear the benefits and burdens of property investment by means of the identification requirement.

To be sure, the identification requirement, as enacted, permits a taxpayer to "get out of the market" altogether for 45 days, without paying tax.[19] However, the length of the designation period appears to have been designed purely to give parties sufficient time to locate suitable exchange property and, in any event, is a far cry from the *Starker* case where the taxpayer was not required to designate any property over a 5-year period.[20]

The identification requirement gives rise to several questions, not the least of which concerns the length of the identification period. New §1031(a)(3)(A) provides that exchange property is not like-kind property if such property is not identified as "property to be received in the exchange before the day which is 45 days after the date on which the taxpayer transfers the property relinquished in the exchange." Since such day is the 44th day, the identification period would appear to be 44 days. The Joint Explanatory Statement of the Committee of Conference (the "Joint Explanatory Statement") provides, however, that "transferors are permitted 45 days after the transfer to designate the property to be received." [21] It appears, therefore, that it was the intent of the Conferees to establish a 45 day identification period, and that a technical amendment to new §1031(a)(3)(A) will be necessary to carry out their intent.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Until such time, taxpayers should proceed on the basis that the [illegible]e permitted only 44 days after the initial transfer in a nonsimultaneous exchange transaction to designate the prop[illegible]:o be received.

Another question raised by the identification requirement is how the designation must be made. Although the Senate Finance Committee Print is silent on that point, the Joint Explanatory Statement states that "the designation requirement in the conference agreement may be met by designating the property to be received in the contract between the parties." [22] While designation within a contract clearly is not mandatory, it certainly appears the most convenient way in which to comply with the statute. A more cumbersome means of identification would be to complete and file an as-yet-to-be-devised Internal Revenue Service form.

The identification requirement also raises the question whether multiple designations of property may be made so as to give taxpayers a choice as to the property that ultimately may be received. Allowing such multiple designations, however, would appear to contradict the continuity of investment rationale underlying §1031, because it would leave taxpayers less exposed to the fluctuations in property values. The greater and more diverse the number of designations, the lower would be the investment risk to the taxpayer.

The Senate Finance Committee and Ways and Means Committee Conferees may well have been guided by such reasoning, because they limited the circumstances under which multiple designations may be made. The Joint Explanatory Statement provides that "[i]t is anticipated that the designation requirement will be satisfied if the contract between the parties specifies a limited number of properties that may be transferred and the particular property to be transferred will be determined by contingencies beyond the control of both parties. For example, if A transferred real estate in exchange for a promise by B to transfer Property 1 to A if zoning changes are approved and Property 2 if they are not, the exchange would qualify for like-kind treatment." [23]

Thus, multiple designations will be permitted only if stated as alternatives "determined by contingencies beyond the control of both parties." However, except for the requirement that such contingencies be "beyond the control of both parties," the Joint Explanatory Statement does not attempt to define their scope. Thus, if A transferred real estate in exchange for a promise by B to transfer Property 1 to A if the fair market value of Property 1 was of a specified dollar amount and Property 2 if Property 1 was below such amount, it is possible that the exchange would qualify for like-kind exchange treatment, because, presumably, fluctuations in the fair market value of the property would be beyond the control of both parties. On the other hand, multiple designations employing such contingencies would appear contrary to the continuity of investment rationale because they would greatly reduce the taxpayer's investment risks. It is arguable, therefore, that multiple designations employing contingencies based on property value fluctuations may not qualify under the statute.

A further question raised by the identification requirement is whether cash may be listed as one alternative in a multiple designation of alternative properties. For example, if A transferred real estate in exchange for a promise by B to transfer Property 1 to A if zoning changes are approved, or Property 2 if such zoning changes are not approved and if improvements to Property 2 are made, or cash if zoning changes are not approved and such improvements to Property 2 are not made, would the exchange qualify for like-kind treatment? Since designations of exchange property — albeit in the alternative—would have been made, the identification requirement in new §1031(a)(3)(A) presumably would have been met, regardless of the cash alternative. On the other hand, the identification requirement arguably contemplates that *all* property identified, regardless whether designated in the alternative, must otherwise qualify as like-kind property. Accordingly, if it is conceivable that cash may be received, instead of like-kind property, then the nonsimultaneous exchange might not qualify for nonrecognition.

A related question is whether property identified in a contract will be considered like-kind property when under the terms of the contract a taxpayer retains the right to elect cash (in lieu of such property) at any time during the exchange period. In other words, if exchange property is identified in a contract, but the taxpayer has the right to demand cash at any time, should the fact that the taxpayer does not exercise the right make a difference? New §1031(a)(3)(A) requires the identification of property "to be received in the exchange." It does not require the identification of property that "might be received." The statutory language clearly contemplates that property so identified will, in fact, be exchanged. Accordingly, if there is any possibility that designated property might not be exchanged (*i.e.*, if the taxpayer exercises his right to demand cash), then even if such property ultimately is exchanged, it may not qualify as like-kind property, even though the right to demand cash remained unexercised.[24]

2. *The Requirement that the Exchange Be Completed Not More Than 180 Days After the Transfer of the Exchanged Property*

In addition to the identification requirement set forth in new §1031(a)(3)(A), new §1031(a)(3)(B) requires that the exchange property be received after the earlier of (i) the day which is 180 days after the date on which the taxpayer transfers the property relinquished in the exchange, or (ii) the due date (including extensions) for the transferor's return for the taxable year in which the transfer of the relinquished property occurs. This requirement forecloses taxpayers from combining the installment sale rules and the like-kind exchange provisions to defer taxation on dispositions of property for an indefinite period of time. In other words, taxpayers will no longer be able to wait for several years after the initial transfer to decide whether to receive cash instead of property and, nevertheless, achieve deferral under the installment sale provisions if they ultimately elect to receive cash. In tandem with the identification requirement, the exchange completion requirements force taxpayers to determine shortly after (and within the taxable year of) the initial transfer whether to receive property (and rely on the like-kind exchange provisions) or to receive cash (and rely on the installment sale rules).

The exchange completion requirements also rid the Internal Revenue Service of the above-noted administrative

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

problems regarding the allocation of liabilities and basis among different properties by ensuring that the tax consequences of deferred exchanges will be determined in the year of the initial transfer. For example, the tax consequences of the assumption of a seller's mortgage by a buyer with respect to the initial transfer of the relinquished property in a nonsimultaneous exchange will now be reflected on the transferor's return for the taxable year of such transaction, because it will be apparent prior to the due date of such return what, if any, mortgages were assumed by the seller when the exchange property is received.

Moreover, basis allocation problems which formerly arose when multiple properties were received at various times over an exchange period lasting several years will no longer arise because exchanges of such properties will have to take place prior to the date of the taxpayer's return for the year of the initial transfer. For example, under old §1031, where cash (representing the difference between the value of the property initially transferred and the value of the multiple exchange properties) ultimately was received, unallocated basis remained and questions arose as to whether such unallocated basis should be allocated to properties previously received. Such basis allocation problems became even more complex when some or all of the properties received had been disposed of. The new identification and exchange completion requirements, however, will force parties at a very early stage of a nonsimultaneous exchange transaction to indicate whether or not cash, in addition to multiple properties, will be received for the relinquished property. Accordingly, basis allocation should be a relatively simple matter.

3. Additional Observations

It is a common practice in nonsimultaneous exchange transactions for the transferee to put cash or an irrevocable letter of credit into escrow as security for the purchase of the exchange property. Cash is not transferred directly to the transferor of the initially relinquished property out of concern that the transaction might be treated as a sale of property for cash followed by a purchase of the transferee's property.[25]

When during the course of the legislative process it became apparent that the new nonsimultaneous exchange provisions would include both an identification requirement and a requirement that the exchange be completed within a particular period of time, the question arose whether the satisfaction of such requirements would enable parties to a nonsimultaneous exchange transaction to forego using the cash or irrevocable letter of credit escrow and permit the transferor to receive the cash and purchase the identified property while still claiming like-kind exchange treatment. The question was posed to the staff of the Joint Committee on Taxation, and a sentence was added to the Joint Explanatory Statement which provides that the new nonsimultaneous exchange provisions "would not permit a taxpayer who receives cash and later purchases the designated property to claim like-kind exchange treatment." [26] Thus, prudent practitioners should still use the escrow mechanism.

[9] 602 F.2d 1341 (9th Cir. 1979).

[10] *Query*: If the Court reasoned that the contract right which A acquired was property of like-kind, why did it conclude (or even raise the issue) that the transfers do not have to be simultaneous?

[11] The risk of loss is generally viewed as the touchtone of an investment for depreciation purposes. *See, e.g., Mayerson, v. Comr.*, 47 T.C. 340, 350 (1966).

[12] 37 T.C.M. 1851–77 (1977).

[13] Although the case deals with the applicability of §1031 to the transferor of the property to be delivered in the future rather than the transferee, it supports the notion that §1031 can apply to a delayed exchange involving designated property.

[14] An installment sale is defined as a disposition of property in which at least one payment is received after the close of the taxable year in which the disposition occurs. For this purpose, payment includes property permitted to be received without the recognition of gain (§453(f)(6)).

[15] It is unclear, however, whether a taxpayer, who initially claims the benefit of §1031, will be deemed to have "elected-out" of §453 so that IRS permission would be required to utilize the installment sale method.

[16] The Installment Sales Revision Act of 1980 added §453(f)(3) to provide that a third party guarantee, including a standby letter of credit, is not to be taken into account in determining whether payment has been received by the seller. The reasoning of the statute could be applied to §1031 by analogy.

[17] Treas. Regs. §§1031(b)-1(c) and 1.1031(d)-2 provide that if the liabilities assumed by the buyer exceed any liabilities assumed by the seller, the net difference constitutes taxable boot to the seller.

[18] Generally, tax consequences are determined on an annual basis under the annual accounting convention.

[19] The original House passed version contained no designation requirement and, therefore, would have permitted a taxpayer to "get out of the market" up to the time the exchange property would have to be transferred (*i.e.*, the earlier of the day which is 180 days after the date on which the taxpayer transfers the property relinquished in the exchange, or the due date (determined with regard to extensions) for the transferor's return for the taxable year in which the transfer of the relinquished property occurs). See H. Rep. No. 98-432 (Part 2), 98th Cong., 2d Sess., 165-168 (1984). The Senate version, on the other hand, required the exchange property to be designated on the date the transferred property was relinquished. S. Rep. No. 169 (Vol 2), 98th Cong., 2d Sess., 198-201 (1984).

[20] That new §1031(a)(3)(A) gives taxpayers a statutory time period during which designations of exchange property may be made is particularly significant because it undercuts the rationale that like-kind exchanges merit special treatment because of the administrative difficulty of valuing property which is exchanged solely or primarily for similar property. Both the Senate Finance Committee Print and the Ways and

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Means Committee Report accompanying earlier versions of the nonsimultaneous exchange provisions stated that "[t]his rationale may also be less applicable to deferred like-kind exchanges, in particular exchanges which are 'left open' until the taxpayer has selected a suitable exchange property." S. Rep. No. 169 (Part 1), 98th Cong., 2d Sess., 242 (1984); H. Rep. No. 432 (Part 2), 98th Cong., 2d Sess., p. 1232 (1984). The Senate Finance Committee Print and the House Ways and Means Committee Report explained further that "[i]n such cases, the transfer of property must be valued at a specific or near-specific dollar amount in order to determine the aggregate value of the properties that the taxpayer may receive in the future. Thus, the taxpayer's gain may be measured with reasonable accuracy in the year of the original transfer." S. Rep. No. 169 (Vol 1), 98th Cong., 2d Sess., p. 243 (1984); H. Rep. No. 432 (Part 2), 98th Cong., 2d Sess., p. 1233 (1984).

New §1031(a)(3)(A), however, leaves nonsimultaneous exchanges open for a defined statutory period (*i.e.*, the period between the date of the initial transfer and "the day which is 45 days after" the transfer). Accordingly, a taxpayer's gain can be measured "with reasonable accuracy" at the time of the original transfer, because the transferred property must be valued at a specific or near-specific dollar amount at the end of the statutory designation period in order to determine the aggregate value of the properties that the taxpayer may receive. By making provision for such a designation period and, therefore, by undercutting the "administrative difficulty of valuing property" rationale for the special treatment of like-kind exchanges, Congress clarified as never before that the continuity of investment rationale is the only valid rationale for §1031.

CHAPTER 30

MISCELLANEOUS CHANGES AFFECTING NONRECOGNITION PROVISIONS

William C. Wicker, Esq.
Joseph J. Westwater, Esq.
and
Lynn K. Pearle, Esq.
Silverstein and Mullens
Washington, D.C.

I. Nonrecognition of Gain or Loss on Transfers Between Spouses or Incident to Divorce

Act §421 adds a new §1041 to the Code. The new section provides that property transfers between spouses or, if incident to divorce, between former spouses, will not result in the recognition of gain or loss. The transferee will hold the property at the transferor's basis. Also, investment tax credits will not be recaptured.

Section 1041 is generally effective for transfers after July 18, 1984. Taxpayers are permitted to elect §1041 treatment for transfers occurring after 1983 and on or before the general effective date.

Section 1041 is analyzed in depth in Chapter 13 of this portfolio.

II. Nonrecognition of Gain on Certain Stock Sales to ESOPs

Section 1042 of the Code, added by Act §541, permits a tax-free rollover of the proceeds from a sale of qualified securities to an ESOP or to certain worker-owned cooperatives, provided (1) the proceeds are reinvested in the securities of another business and (2) immediately after the sale, the ESOP or cooperative owns at least 30 percent of the value of employer securities.

Section 1042 is analyzed in depth in Chapter 48 of this Portfolio.

III. Nonrecognition of Gain Resulting From Net Gifts Made Before March 4, 1981 [Act §1026]

A. Introduction

A "net gift" arises when a donor makes a gift on the condition that the donee pay the gift tax imposed on the transfer. In *Diedrich v. Comr.*,[1] the U.S. Supreme Court affirmed an Eighth Circuit case which held that net gifts result in gain to the donor to the extent that the gift tax exceeds the donor's adjusted basis in the transferred property. The Eighth Circuit case was decided on March 4, 1981.

Section 1026 of the Act provides that no income will be recognied to donors who made net gifts before March 4, 1981. This is a non-Code provision. For a more complete discussion of this change, see Chapter 58.

IV. Liberalization of Residence Replacement Rules for Armed Forces Members Stationed Overseas [Act §1053]

A. Introduction

Section 1034 of the Code defers the recognition of gain realized on the sale of a personal residence. Gain on such sale is recognized only to the extent that the amount of the "adjusted sales price"[2] of the old residence exceeds the amount reinvested by the taxpayer in a new residence within a certain time, generally beginning two years before the date of the sale and ending two years after the date of sale.[3]

Section 1034(h) of the Code provides an exception, suspending the running of the two-year period following the sale of the old residence set forth in §1034(a) during any time the taxpayer (or spouse if both old and new residences are used by both as the principal residence) serves on "extended active duty"[4] with the United States Armed Forces. Prior to the Deficit Reduction Act of 1984, the additional period allotted under this rule was limited to four years after the date of the sale of the old residence. The suspension occurs only when the military service began prior to the termination of the normal two-year replacement period as set forth in §1034(a).

B. Overview

1. Summary of Amendment

Section 1053 of the Tax Reform Act of 1984 provides that, in the case of a member of the Armed Forces who is stationed outside the United States or who is required to reside in government quarters at a remote site, the normal replacement period will not expire until the end of four years after the sale of the old principal residence, or until the taxpayer is no longer stationed outside the United States or no longer required to reside in such government quarters, whichever is later. This additional extension is not to exceed eight years.

2. Effective Date

The provision applies to sales of principal residences made after July 18, 1984.

C. Detailed Analysis

Subsection (h) of Code §1034 is amended to provide to certain members of the Armed Forces a liberalized period

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

after the sale of the principal residence within which time the acquisition of a new residence may result in the nonrecognition of gain.

New §1034(h)(1) restates prior law verbatim, continuing the suspension of the running of the general, two-year replacement period provided in subsection (a), for members of the Armed Forces serving on extended active duty. As under prior law, replacement of the old residence must occur, in any event, within four years after the date of sale of the old residence.

New §1034(h)(2) provides that for members of the Armed Forces that qualify for the suspension of the running of the two-year period, such suspension will not terminate during the period that such taxpayers (1) are stationed outside the United States,[5] or (2) upon return from outside the United States are required to reside in government quarters.[6] In any event, for the nonrecognition provisions to apply, a new residence must be obtained no later than eight years after the date of sale of the old residence.

Note: The Conference report is in conflict with the statute, indicating that the normal nonrecognition period will not expire until the end of four years after the sale of the principal residence *or one year after* the member is no longer stationed outside the United States or no longer required to reside in government quarters.[7]

This explanation is consistent with the language of the provision as added to the Senate version of H.R. 4170, pursuant to a floor amendment offered by Senator Tower (R-Tex.) on April 12, 1984.[8] As agreed to, the Tower amendment would have altered section 1034(h). New section 1034(h)(2) read as follows:

> "(2) MEMBERS STATIONED OUTSIDE THE UNITED STATES OR REQUIRED TO RESIDE IN GOVERNMENT QUARTERS. In the case of any taxpayer who, during any period of time the running of which is suspended by paragraph (1) —
>
> (A) is stationed outside of the United States, or
>
> (B) after returning from a tour of duty outside of the United States and pursuant to a determination of the Department of Defense that adequate off-base housing is not available at a remote base site, is required to reside in on-base Government quarters
>
> any such period of time as so suspended shall not expire before the later of the date provided for in paragraph (1) *or the date 1 year after the date on which the taxpayer is no longer stationed outside the United States or is no longer required to reside in such on-base quarters*, described in subparagraph (B) as the case may be in either case (which period of time, as so suspended, shall not exceed 8 years).

It would apppear reasonable to allow the one year period in view of the practicalities of purchasing a residence, and no logic for altering the Tower amendment language in conference can be adduced from the legislative history. Despite this, taxpayers are advised to rely on the statutory language until the discrepancy, if unintended, can be addressed by technical corrections legislation.

Example: Sergeant York is overseas on extended active duty from January 1, 1984 until June 1, 1988. He sells his residence on January 15, 1985. Under prior law, and also under the Deficit Reduction Act, the latest date on which he can replace his old residence is January 15, 1989, four years after the sale of the old residence. However, suppose York, on his return to the United States, is required to reside in on-base barracks at a remote facilitiy in Alaska for a period of one-year. In this case, the latest date on which he can replace his old residence is June 1, 1989, the last day of the period during which he was required to live in on-base, government quarters.

Applicability of the liberalized replacement period on the basis of active duty overseas apparently requires mere documentation of such fact by the individual taxpayer. However, for members of the Armed Forces returning from overseas active duty, the Secretary of Defense must determine that adequate, off-base housing is unavailable at the "remote base site" to which they have been stationed for the more liberal replacement period to apply.

Chapter 31

NEW OR MODIFIED RULES APPLICABLE TO CORPORATE DISTRIBUTIONS

Leonard L. Silverstein, Esq.
John P. Warner, Esq.
William C. Wicker, Esq.
John F. Lefevre, Esq.
and
Robert C. Liles, Esq.
Silverstein and Mullens
Washington, D.C.

I. Nonliquidating Distributions of Appreciated Property

A. Introduction

1. Prior Rules Concerning Distributing Corporation Gain

Since the Supreme Court in 1935 tacitly accepted the rule that a corporation distributing appreciated property to its shareholders did not recognize gain on the distribution,[1] there has been a steady erosion of that rule. The rule never applied to corporate distributions of appreciated property in satisfaction of a previously declared obligation to pay cash dividends.[2]

In 1954, the rule was codified by §311 of the Code, relating to dividend and redemption distributions, and by §336 of the Code, relating to liquidation distributions. However, the 1954 Code also added exceptions to the general nonrecognition rule of §311(a). These exceptions occurred where the distributing corporation distributed LIFO inventory assets to the extent that those assets would have been carried at a greater amount under FIFO rules[3] and where the distributing corporation distributed assets subject to liabilities (or where the distributee shareholder assumed liabilities in connection with a distribution) in excess of the basis of the properties distributed.[4] Since the enactment of the depreciation recapture rules, distributions of property that are subject to recapture have generated gain to the distributing corporation.[5] Distributions of installment obligations[6] and distributions of the stock of certain 10 percent-or-more owned foreign corporations[7] have also been established as exceptions to the rule of nonrecognition.

In 1969, §311(d)(1) was added providing that a corporation distributing in redemption property having a fair market value greater than its adjusted basis recognizes gain to the extent of the excess. This rule, when originally enacted, had several exceptions to it codified in §311(d)(2). For example, distributions pursuant to redemptions terminating the interests of more-than-10 percent shareholders and certain distributions of the stock of more-than-50 percent owned subsidiaries did not trigger recognition of gain under §311(d). In 1982, the Tax Equity and Fiscal Responsibility Act eliminated the first, and significantly narrowed the second, of the two exceptions to §311(d)(1) described in the preceding sentence. TEFRA, however, added, among other new exceptions, a provision that distributions of appreciated property in redemption of the shares of U.S. corporate shareholders did not cause the distributing corporation to recognize gain if the distribution was treated under §302(d) as a §301 distribution.

Until the TRA 1984, actual distributions under §301 — those in which no stock is surrendered in exchange for the property distributed, as opposed to distributions in redemption treated as §301 distributions — have not been subject to the general rule that distributions of appreciated property generate gain to the distributing corporation. Such distributions have been, however, fully subject to the rules relating to LIFO reserves, liabilities in excess of basis and the other exceptions to §311(a) nonrecognition treatment.

2. Prior Rules Concerning Distributees' Holding Period

Prior to the enactment of the TRA 1984, an individual shareholder to whom property was distributed as a dividend or in redemption of stock generally began his holding period in such property on the date of distribution. On the other hand, the holding period that a corporate shareholder took in property that was distributed to it as a dividend or in redemption of stock depended upon whether the fair market value of the property was greater than or less than the distributing corporation's adjusted basis in the property (plus gain recognized by the distributing corporation on the distribution).

If the property so distributed had a fair market value less than its adjusted basis (plus any gain recognized by the distributing corporation), the corporate shareholder took the lower fair market value basis and thus began its holding period with respect to the property distributed on the date of distribution.[8] However, if the property so distributed at a fair market value greater than its adjusted basis (plus gain recognized by the distributing corporation) — in general, had appreciated in value, or if depreciation deductions had been taken, the corporate shareholder took the distributing corporation's adjusted basis in the property (plus any gain recognized by the distributing corporation on the distribu-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tion) and could tack on the distributing corporation's holding period.[9]

Thus, where a corporation purchased the stock of a second corporation which caused the second corporation to distribute to the first corporation property that had appreciated in value and that the acquired corporation had held for more than one year, the purchasing corporation could resell the property and take long term capital gain on the built-in gain. This would be true even if the sale occurred less than one year after the corporation had received the property or had made the stock acquisition. This permitted U.S. corporations to purchase stock in corporations about to declare dividends of appreciated property, such as oil royalty trusts, receive the property as a dividend subject to the maximum 6.9 percent effective rate of tax on intercorporate dividends, sell the stock at a short term capital loss and either sell the property dividend for a long term capital gain or contribute such property to charity and take a charitable deduction equal to the fair market value of the property.[10]

B. Overview

TRA 1984 modified the rules relating to the taxation of gain to corporations making nonliquidating distributions of appreciated property. Corporations distributing appreciated property in §301(a) distributions are now generally taxed on such gain unless these distributions are to certain 10 percent individual shareholders and consist of either "qualified dividends" or more than 50 percent of the value of certain corporations engaged in active trades or business. Corporations distributing appreciated property to corporate shareholders in redemptions treated as §301(a) distributions are now subject to tax on the gain realized. Gain recognized under §311(b) or (c) now takes priority over gain recognized under §311(d).

TRA 1984 also limited the holding period of corporate shareholders in appreciated property distributed in distributions governed by §301(a). Where a distributing corporation recognizes gain on such a distribution under §311(d)(1), a corporate distributeee now begins its holding period on the date of the distribution. Where a distributing corporation does not recognize such gain under §311(d)(1), a corporate distributee now begins its holding period on the date it acquired the stock on which the distribution was made.

C. Detailed Analysis

1. Gain of Distributing Corporation

a. Legislative History

The House and Senate bills [11] expanding the recognition of gain to distributing corporations on non-liquidating distributions of appreciated property were substantially identical. The committee reports accompanying the bills explain that, in a system in which corporate earnings are taxed twice, a corporation that distributes appreciated property should be treated the same as one that sells the property and distributes the proceeds to its shareholders.[12]

(i) Dividend Distributions

Both bills would have required corporations distributing as a dividend property having a fair market value in excess of its adjusted basis in general to recognize the excess as gain from the sale or exchange of the distributed property. One exception to this rule in both bills would have been for dividend distributions to U.S. corporate shareholders who owned at least 80 percent of the voting stock and of the non-voting stock of the distributing corporation.

A second exception contained in the bills to the rule of income recognition would have been for "qualified dividends," *i.e.*, (i) dividend distributions (ii) to noncorporate shareholders holding at least 10 percent of the corporation's stock for at least five years (or throughout a less-than five year old corporation's existence) (iii) of property used by the distributing corporation in the conduct of a business carried on for last five years prior to the distribution. Under this exception, inventory (property held for sale in the ordinary course of the distributing corporation's business) and accounts receivable with respect to the performance of services or the sale of inventory or property held for sale to customers would be excluded from the type of property that could be distributed without tax to the distributing corporation even if such property were used in that corporation's business.

A third exception contained in both bills would have been for distributions of appreciated stock in a corporation more-than-50 percent owned by the distributing corporation before the distribution if the corporation whose stock was distributed had been engaged in the active conduct of a trade or business for the last five years prior to the distribution.

(ii) Redemption Distributions

Both the House and Senate bills would have retained most of the pre-TRA 1984 rules in §311(d) respecting distributions of appreciated property in redemptions. Those rules exempted distributing corporations from gain recognition on §302(d) redemption distributions of appreciated property to any corporate shareholder.[13] However, both bills would have substantially limited this exception and taxed the distributing corporation on any gain realized on a redemption distribution to a corporate shareholder unless such shareholder owned at least 80 percent of the voting shares and 80 percent of the non-voting shares of the distributing corporation.

(iii) Priority of Section 311(d)

Where §311(d) applied, under both the House and Senate bills, it would have applied only after the application of §311(b), which imposes a tax on a corporation distributing inventory which had been accounted for on a LIFO basis to the extent of the LIFO reserve amount on such property, and §311(c), which imposes a tax on a corporation distributing property subject to a liability to the extent that the liability assumed or to which the property was subject exceeded the adjusted basis of the property. The committee reports accompanying the House and Senate bills provide an example of the application of this new priority rule indicating that its effect would be to impose a tax on the maximum amount of gain recognized under subsections 311(b) through (d).[14] Under pre-TRA 1984 law, application of §311(d) was to the exclusion of §311(b) and (c).

(iv) Effective Dates and Transition Rules

The House and Senate bills differed on effective dates and transition rules. Section 54(d) of H.R. 4170, which

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

passed the House, would have made the new rules effective for distributions declared after the date of enactment. The House bill contained one exception, for pre-February 1986 distributions of interests in a royalty trust by a corporation whose stock was owned on February 1, 1984 at least 10 percent by a group of shareholders that acquired between February 1983 and February 1984 at least 10 percent of the stock of a corporation control of which the distributing corporation acquired during the same period.

Section 36(b) of the Senate amendment to H.R. 4170 would have made its new rules expanding the taxation of gain on distributions of appreciated property effective for distributions declared after March 15, 1984. The Senate amendment would have expanded the House exceptions for royalty trust distributions to include distributions of any property following a proposal to distribute royalty trust interests. The Senate amendment would also have exempted pre-February 1986 distributions of interests in certain publicly traded partnerships and certain distributions declared prior to enactment of the bill of no more than 51 percent of the stock of corporations controlled by the distributing corporation where the distribution was considered before February 15, 1982.[15]

b. Enacted Provision

(i) Conference Committee Changes

Section 54 of the TRA 1984 adopts the substance of the House and Senate bills expanding the scope of §311(d)(1) of the Code, with one major exception. Unlike the bills passed by the two chambers, the TRA 1984 does not exempt distributing corporations from tax on dividends or redemptions of appreciated property to corporate shareholders owning at least 80 percent of the voting and nonvoting stock of the distributing corporation. The conference report explained that such an exception would have continued to permit the shifting from subsidiary to parent corporations of the gain on such distributed property and the transformation of that gain from ordinary to capital. Moreover, the report noted that, under the House and Senate exception, corporations that acquired at least 80 percent of the stock of another corporation could continue to defer income recognition by having the acquired corporation distribute to it appreciated assets while recognizing losses — either directly by selling the stock of the acquired corporation (the value of which would be reduced by the value of the distributed assets),[16] or indirectly, by having the acquired corporation sell the assets which had adjusted bases greater than their fair market value.[17] The report also noted that the conferees anticipated that the IRS would consider what, if any, amendments to the consolidated return regulations would be necessary to take into account the rule that dividend distributions of appreciated property from 80 percent controlled subsidiaries were generally taxable to such subsidiaries.[18]

Thus, in the aftermath of TRA 1984, the "general rule" is that nonliquidating distributions, whether or not in exchange for the surrender of stock, of appreciated property are taxable to distributing corporations as if those corporations had sold or exchanged the property prior to the distribution.

(ii) Dividend Distributions

Under the new rules, distributions of appreciated property as dividends will now subject the distributing corporation to tax with two exceptions. First, "qualified dividends" — distributions of property used by the distributing corporation in the active conduct of a trade or business carried on for more than five years by it (or by one from whom it acquired the business other than by purchase) to a noncorporate shareholder who has held at least 10 percent of the distributing corporation's stock for at least five years, (or throughout the existence of a less-than five-year old corporation) — do not subject the distributing corporation to tax under §311(d)(1).[19] However, they could subject it to tax under §311(b) or (c). Distributions of inventory, property held for sale to customers in the ordinary course of business and accounts receivable for such property or for services rendered — even if used in the distributing corporation's trade or business — do not qualify for this exception.

> *Example:* Corp. D has been engaged in the real estate rental business continuously since 1978. In 1985, it distributes as a dividend a rental building not held for sale to customers that has a fair market value of $2 million, an adjusted basis of $1 million and is subject to $1.5 million of debt. The recipient is R, an individual shareholder who has held 50 percent of the stock of Corp. D since 1978. Even though the fair market value of the building exceeds Corp. D's adjusted basis in it by $1 million, Corp. D is not subject to tax under §311(d), because the distribution is a "qualified dividend." However, Corp. D would be subject to tax under §311(c) on the $500,000 by which the amount of debt to which the building is subject exceeds Corp. D's adjusted basis in the building. Moreover, had R not been an individual but an S corporation (or a C corporation), Corp. D would have been subject to tax under §311(d) as well as under §311(c).

The second exception to the general rule of recognition of gain applies to distributions to noncorporate shareholders who have owned at least 10 percent of the value of the distributing corporation's stock for at least five years (or throughout the existence of less-than five-year old corporations) of stock or obligations of corporations that, prior to the distribution, were owned more than 50 percent by the distributing corporation. This exception does not apply, however, unless (1) substantially all of the controlled corporation's assets are used in an active trade or business and (2) no substantial part of such controlled corporation's assets were acquired from the distributing corporation in a §351 exchange or as a capital contribution within five years.[20] This exception is simply an adaptation to dividend distributions of a pre-TRA 1984 exception to recognition of gain on redemption distributions.

Note: If the distributee shareholder sells or exchanges the distributed property shortly after the distribution, the IRS could assert that the sale or exchange should be attributed to the distributing corporation under the *Court Holding* doctrine,[21] in which case the above exception would not apply.

Because §311(d)(1) does not apply to distributions of appreciated property in liquidation, it may create additional incentives for liquidation-reincorporation transactions in

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

which appreciated property not wanted or needed in a corporation's business is distributed to its shareholders along with assets needed in the business, where these latter assets are subsequently transferred to one or more new corporations. Needless to say, the Service would be quick to recharacterize such transactions as reorganizations under §368(a)(1)(D) or (F), with the property not transferred to a new corporation taxable to the distributee shareholder under §356.[22]

However, it is at least arguable that §356 distributions do not come within the purview of §311(d), which by its terms applies only to distributions under sections 301-307. Indeed, the Service has taken the position that, based on the legislative history of §311(d) when originally enacted in 1969, the provision does not apply to distributions under §§354-56.[23] On the other hand, Regs. §1.311-2(a)(2) — while providing that generally §311(d) does not apply to distributions under sections 355 and 356 — states "if the distribution is in substance a redemption, §311(d) will apply." Moreover, the Service has also taken the position that §301 — not §356 — applies in liquidation-reincorporation situations.[24] If §301 were the operative provision, §311(d) would by its terms apply.

Finally, section 356 distributions may subject the distributing corporation to gain recognition under section 1001, as the Service held in Rev. Rul. 72-327, 1972-2 C.B. 197.

The interaction of the §311(d)(1) rules and TRA 1984 amendments to §338 result in a deemed §338 election where a purchase of at least 80 percent of the stock of a target corporation in a "qualified stock purchase" is followed less than one year later by a dividend distribution of appreciated property from the target corporation. Prior law permitted such a distribution without triggering a deemed election but the acquiring corporation took as its basis in the distributed property the distributing corporation's adjusted basis.

Revised §311(d)(1), by imposing a tax on corporations distributing as dividends appreciated property, causes corporate distributees of such property to take as their basis therein the distributing corporation's adjusted basis plus gain recognized on the distribution.[25] Section 338(e)(2)(B), as revised by TRA 1984 §712(k)(3)(A), provides in effect that a distribution to an acquiring corporation or its affiliate from a target corporation that was the subject of a "qualified stock purchase" triggers a deemed §338 election, unless the distributee's basis in the distributed property is the same as the distributing corporation's adjusted basis. However, there is language in the conference report concerning the changes to §338(e)(2). This language suggests that regulations could provide that a dividend distribution from a target corporation within the one-year post-acquisition date consistency period would not trigger a deemed election if the acquiring corporation agreed to take the target corporation's adjusted basis in the distributed property.[26] However, the distributing corporation would presumably still have to recognize gain under §311(d)(1) on such a distribution.

It would appear that the §311(d) rules, along with the new rules enacted by TRA 1984 §54(b) governing the holding period for appreciated property received in nonliquidating distributions by corporate shareholders, narrow the scope of the nonrecognition rule of §1248(f)(2) with respect to §311 distributions by U.S. corporations of at least 10 percent of the stock in foreign corporations to U.S. corporate shareholders. The new rules may also cause gain recognition to such distributing corporations in the absence of earnings and profits.

Section 1248(f)(1) states the general rule that, notwithstanding any other provision in the income tax laws, the excess of the fair market value over the adjusted basis of stock in a foreign corporation owned at least 10 percent by a U.S. corporation distributed in a §311 distribution is taxed as a dividend to the U.S. distributing corporation to the extent of the foreign corporation's earnings and profits while owned by the distributing corporation. Section 1248(f)(2) provides that §1248(f)(1) "does not apply" to distributions to U.S. corporate shareholders which take a tacked on holding period in such stock and which, after the distribution, own at least 10 percent of the stock of the foreign corporation.

Although where §311(d)(1) gain is not recognized on a dividend distribution (or a distribution treated as a dividend by virtue of §302(d)) of appreciated stock in a 10 percent-or-more foreign subsidiary, the U.S. corporate distributee tacks on the distributing corporation's holding period, new §301(e)(1) requires a holding period where §311(d)(1) applies to the distribution. It should be noted, however, that in many cases §311(d)(1) will not apply because the exception in §311(d)(2)(B) for distributions of stock of 50 percent owned subsidiaries engaged in 5-year businesses will take precedence.

(iii) Redemption Distributions

In the aftermath of the TRA 1984, distributions of appreciated property in redemption of stock subject the distributing corporation to tax, with six exceptions — five of which were part of pre-TRA 1984 law.[27]

Thus, one major change wrought by the TRA 1984 in this area is the elimination of the prior law exception to gain recognition for distributions in redemption of corporate shareholders if such redemptions are taxed to the corporate shareholders under sections 302(d) and 301. Application of the new rule that such distributions subject the distributing corporation to tax apparently affect not only direct redemptions but also §304 acquisitions of stock of commonly controlled corporations in exchange for appreciated property. Although one could argue that a §304 acquisition is not an actual redemption and thus that §311 does not apply, the Service in regulations has stated otherwise.[28] Of course, if §311(a) did not apply, the acquiring corporation's gain would be recognized under §1001 in any event.

A second change was introduced by §54(a)(2)(A) of TRA 1984. That section adds as §311(d)(2)(A)(ii) a new exception to gain recognition for "qualified dividends" distributed to noncorporate shareholders. This exception applies not only to actual dividends but also to certain redemption distributions treated as dividends by §302(d).[29] For a redemption distribution to a noncorporate shareholder that is taxed to the shareholder as a dividend to be considered a "qualified dividend": (1) the distributee shareholder must have held at least 10 percent of the value of the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

distributing corporation's stock for the lesser of five years or the existence of the corporation and (2) the property must be property — other than inventory, property held for sale to customers in the ordinary course of business or certain receivables the collection of which would yield ordinary income — used by the distributing corporation in the active conduct of a trade or business that has been carried on for at least five years and was not acquired by purchase within five years before the distribution.

Example: Corp. D has been engaged in the active conduct of a business since 1978 and has current and accumulated earnings and profits totalling $200. Corp. D has 100 shares of common stock outstanding, which have been held since 1978 by the following unrelated shareholders: 50 shares have been held by individual T and 10 shares each have been held by individuals V, W, X, Y, and Corp. Z. On July 1, 1985, Corp. D redeems 10 shares of stock from each of T and V, distributing to each property that is not inventory, held for sale to customers or receivables having a $100 fair market value and a $70 adjusted basis in Corp. D's hands, and redeems three shares of Corp. Z's stock, distributing to it similar property having a $30 fair market value and a $21 basis. Corp. D does not qualify for the "qualified dividend" exception to gain recognition with respect to the distribution to V because the distribution to V is not a dividend to him but a §302(b)(3) redemption. The distribution might qualify for the exception to gain recognition for distributions in partial liquidation, however, depending on whether the distribution is attributable to Corp. D's ceasing to conduct a trade or business it had conducted for the previous five years. Corp. D does not qualify for the "qualified dividend" exception with respect to the distribution to Corp. Z, even though the distribution is probably treated as a dividend under §302(d), because Corp. Z is not a noncorporate shareholder. Corp. D would qualify for the "qualified dividend" exception with respect to the distribution to T because such distribution would be taxed to T under §§302(d) and 301 and T is an individual.

Note: In order for the "qualified dividend" exception to apply, not only must the distribution be taxable to the distributee shareholder under §302(d), but the distributing corporation must have current or accumulated earnings and profits so that the distribution is taxed as a dividend. Absent the TRA 1984 amendment adding §312(n)(4), it would have been impossible in certain cases to determine whether a distribution was a "qualified dividend" because that determination can be dependent on whether the distributing corporation will generate earnings and profits as a result of the distribution. Section 312(n)(4) provides that a distributing corporation's earnings and profits are increased by the amount of gain that would have been recognized under §311(d) but for the application of §311(d)(2). Where an otherwise "qualified dividend" is taxed to the distributee shareholder in part as dividend and in part as a return of capital or a capital gain distribution, it would appear that the portion of the gain realized on the distribution that would not be recognized under the exception would be the same portion of the distribution that would be treated as a dividend.

Example: Assume the same facts as in the previous example, except that Corp. D has $100 in earnings and profits and distributes pro rata to each of its shareholders property that is not §1221(1) or §1221(4) property having an aggregate fair market value of $200 and an aggregate adjusted basis of $140. As a result of the distributions, Corp. D's earnings and profits are increased by $60 to $160 under §312(n)(4). Because 80 percent of the distributions to T, V, W, X and Y are "qualified dividends," it would appear that 80 percent of the gain realized by Corp. D on such distributions would escape tax.

(iv) Priority of Section 311(d)

The conference committee retained the rule in the House and Senate bills that §311(d) is applied after the application of §311(b) and (c). Thus, if the amount of LIFO reserves or the excess of liabilities over basis of properties distributed as a dividend or in redemption exceeds the gain on those properties, the amount of such reserves or excess will be taxed to the distributing corporation.

(v) Effective Date and Transition Rules

The conference committee made the new rules expanding the types of nonliquidating distributions of appreciated property that are subject to tax under §311(d)(1) effective for distributions declared on or after June 14, 1984, with four exceptions.[30] Two of those exceptions were the two exceptions contained in the Senate amendments for certain pre-February 1986 distributions following a proposal to distribute interests in a royalty trust [31] or of partnership interests that were publicly traded on a national securities exchange.[32] A third exception, added in the conference, would exempt from §311(d)(1) treatment pre-September 1986 distributions of stock of a corporation that, on June 15, 1984, was affiliated with the distributing corporation if a tender offer for the stock of the distributing corporation was begun on May 23, 1984 and amended the next day.[33]

A more general exception to the effective date for the new §311(d)(1) rules was enacted for pre-1985 distributions of appreciated property to a U.S. corporate shareholder that owns at least 80 percent of the voting shares and at least 80 percent of all nonvoting shares of the distributing corporation if the distribution is, or is a redemption treated as, a §301(a) distribution.[34] This exception somewhat eases the burden of the deletion from the final bill of the exception from §311(d)(1) treatment for distributions to 80 percent corporate shareholders.

2. Distributees' Holding Period

a. Legislative History

Section 54(b) of H.R. 4170, passed by the House of Representatives, and §35(c) of the Senate amendment thereto both would have added a new §301(e) to provide that U.S. corporate shareholders whose basis in distributed property is measured by the distributing corporation's adjusted basis in such property (plus gain recognized to the distributing corporation on the distribution) would not be treated as holding that property prior to the date that they held the stock on which the dividend was paid. The committee reports accompanying the bills cited the anomaly of a corporation purchasing stock in another corporation that owned appreciated property, having the acquired corporation distribute the appreciated property — which could

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

then be sold for a long-term capital gain or be contributed to charity — and selling the stock for a short term capital loss. The reports thus concluded that such transactions should be treated as two transactions: (1) the purchase of the stock and (2) the purchase of the property that was distributed as a dividend.[35]

b. Enacted Provision

(i) Substantive Changes

The formulation used in the House bill and the Senate amendment arguably would not have operated to restrict the holding period of corporate distributees in appreciated property on which the distributing corporation recognized gain. The basis of a corporate distributee in distributed property received in a §301(a) distribution is the lesser of the fair market value of the property or the distributing corporation's adjusted basis in such property plus any gain recognized to the distributing corporation on the distribution.[36] Where the distributing corporation recognized gain on a distribution under §311(d)(1), as modified by the TRA 1984, the fair market value of the property and the sum of the distributing corporation's adjusted basis plus gain recognized on the distribution would be the same.

As a result of this possible ambiguity, the conference committee modified the House and Senate versions of §301(e) to provide that, where property on which a distributing corporation recognizes gain under §311(d)(1) is distributed to a corporate shareholder, the distributee corporation's holding period begins on the date of the distribution. Where gain is not recognized under §311(d)(1) and the corporate shareholder takes as its basis in the property the distributing corporation's adjusted basis, then — except for purposes of §1248 — the distributee corporation's holding period in the property cannot begin before the date it acquired the stock on which the distribution was made.[37]

Example: Corp. X purchases the stock of Corp. D on January 1, 1985. On February 1, 1985, Corp. D distributes to Corp. X as a dividend property that is not stock or an obligation of a subsidiary and that has a fair market value of $100 and an adjusted basis in Corp. X's hands of $50. Because Corp. D recognizes gain under §311(d)(1) on the distribution, Corp. X's holding period with respect to the distributed property would begin February 1, 1985. If Corp. D had made a distribution that, under §311(d)(2)(B) avoided tax, Corp. X's holding period would have begun January 1, 1985.

Note: The impact of the new rules relating to a corporate distributee's holding period in appreciated property distributed to it is somewhat lessened by the TRA 1984 rule reducing the minimum holding period for long-term capital gain treatment from one year to six months.

One possible ambiguity in the new §301(e) rules concerns their application when a distributing corporation realizes gain that is potentially taxable under §311(d) as well as either §311(b) or (c). As §311(d)(1) is worded, where the amount realized under §311(d)(1) is the same as the amount realized under §311(b) or (c), §311(b) or (c) — whichever is applicable — would be the provision governing recognition. It would thus appear that §301(e)(2), which provides for a holding period in distributed property no greater than the holding period in the stock on which the distribution was made, and not §301(e)(1), the property acquisition date holding period rule, would govern.

However, it is arguable that neither §301(e)(1) nor §301(e)(2) applies where the result of the application of §311(b) or (c) is to give the corporate distributee a basis in the distributed property equal to its fair market value; *i.e.*, where the FIFO value of the distributed property or the liability to which such property is subject is the fair market value of that property. If §301(e) did not apply in such a case, the distributee corporation could tack on the distributing corporation's holding period. Although a similar possibility that corporate distributees of §311(d)(1) distributions would argue that the holding period limitations would not have applied led the conference committee to provide explicit holding period rules where §311(d) applies, that argument may not have much weight. To argue that §301(e)(2) does not apply, a corporate distributee of a §311(b) or (c) distribution would have to take the position that its basis was not in part a carryover basis but was instead a §301(d)(2)(A) fair market value basis. But, if so, the corporate distributee would not get the protection of the §1223(2) tacked-on holding period and would fall under the general rule that its holding period began on the date of the distribution.

(ii) Effective Date

The changes limiting a corporate distributee's holding period in appreciated property received in a §301(a) distribution apply to property distributed after July 18, 1984, the date that the TRA 1984 was enacted.[38]

II. New Rules for Computing Earnings and Profits

A. Introduction

1. Background

Under §§301 and 316 of the Code, a distribution by a corporation to its shareholders is treated as a dividend — and, thus, is taxable to the shareholders at ordinary income rates — only to the extent the distribution is out of current or accumulated earnings and profits. Distributions in excess of earnings and profits are treated as a return of capital and reduce the shareholder's basis in his or her share of stock.[39] Distributions in excess of basis are treated as gain from the sale or exchange of the stock.[40]

In general, a corporation's earnings and profits are intended to be a measure of the economic income of the corporation available for distribution to its shareholders. In calculating earnings and profits, the corporation's taxable income is the usual starting point. To derive earnings and profits from taxable income, the latter is adjusted to eliminate items of income and deduction which are based solely upon decisions of tax policy rather than upon their actual economic or financial impact. In addition to eliminating taxable income items of this nature, certain other items are added to the computation of earnings and profits even though they are excluded from or are not involved in the computation of taxable income.

Because many of the rules applicable in determining taxable income are applicable to some extent in determin-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ing earnings and profits, a corporation's earnings and profits may be less than its "true," or economic, income. Prior to TRA 1984, the disparity between earnings and profits and economic income could be substantial. For example, under prior law, an oil and gas corporation could reduce its earnings and profits each year by the amount of intangible drilling costs it deducted from taxable income even if such costs led to the creation of an asset that would last several years. Because the corporation was not required to capitalize the costs of the asset, it was possible that it would have economic earnings available for distribution to the shareholders but no earnings and profits for tax purposes.

Another example of the possible disparity between earnings and profits and economic income under prior law involved corporate sales of appreciated assets. If the selling corporation reported the gain on the installment method, it was required to increase its earnings and profits in the year of sale and in subsequent years only by an amount equal to the portion of the realized gain that was recognized in each year. In this situation, a distribution by the corporation to its shareholders could be treated as a dividend under state law although, for federal income tax purposes, it might be treated as a return of capital.

The Code does not contain a comprehensive definition of earnings and profits. Section 312 of the Code, however, prescribes certain adjustments to the earnings and profits determination. One adjustment is set forth in §312(e), which deals with the effect on earnings and profits of a distribution in redemption of stock. Section 312(e) provides that the part of the distribution that is "properly chargeable" to the capital account of the distributing corporation does not reduce earnings and profits. Some cases have held, and the IRS has ruled, that a corporation's capital account is an amount equal to the par value of its stock plus the amount, if any, of paid-in surplus, and that this amount is reduced in proportion to the amount of the corporation's stock that is redeemed. Under this approach (which is changed by TRA 1984), earnings and profits are reduced by an amount equal to the amount of the distribution over the amount charged against capital account.[41]

This approach may result in an excessive reduction of earnings and profits. Assume, for example, that X corporation has 1,000 shares of $10 par value stock outstanding, and that A and B each acquired 500 of the shares upon their issuance at a price of $20 per share. Assume further that X corporation, which has operated a profitable services business since its inception, holds net assets worth $100,000 consisting of cash ($50,000) and appreciated improved real property ($50,000), and has current and accumulated earnings and profits of $50,000. If X corporation distributes $50,000 in cash to A in complete redemption of A's shares in X corporation, the distribution, under the approach in question, would be charged first against X corporation's capital account, reducing it by $10,000. The remaining $40,000 would reduce earnings and profits. After the transaction, X corporation would have $10,000 of earnings and profits. A would generally have no dividend income from the redemption. Thus, although A has no dividend income and although he received only half of the corporation's net assets, its earnings and profits are reduced by 80 percent.

2. Reasons for Change

Congress believed that a disparity between a corporation's earnings and profits and its economic income resulted in an "unintended tax benefit" being passed through to the shareholders of the corporation. Additionally, Congress was concerned that a distribution in redemption of stock "can offset more than a proportionate share of the earnings and profits of the distributing corporation." This lack of proportionality was especially disturbing to Congress since redemptions can be taxable to the shareholder as capital gain.

The general goals of Congress in enacting the legislation discussed below were "to ensure that a corporation's earnings and profits more closely conform to its economic income" and to provide that, in the case of a redemption of stock, the distributing corporation's earnings and profits are generally reduced in proportion to the outstanding stock redeemed.

B. Overview

Act §61 amends §312 of the Code by adding a new subsection (n) thereto. The new subsection prescribes a number of adjustments to the earnings and profits determination. As stated above, the purpose of the adjustments is to make earnings and profits conform more closely to true or economic income of the corporation. The adjustments required under new §312(n) change the effect on earnings and profits of the following items and transactions: construction period carrying charges; intangible drilling costs and mineral exploration and development costs; the amortization provisions of §§173, 177 and 248; certain untaxed appreciation of distributed property; LIFO inventory adjustments; installment sales; completed contract method of accounting; and redemptions.

Act §61 amends §312(k)(3)(A) to adjust the effect on earnings and profits of ACRS deductions for real property. Act §61 also amends §312(a)(2) to adjust the effect on earnings and profits of distributions of obligations having original issue discount. In connection with this latter adjustment, Act §61 modifies new §1275 (added to the Code in Act §41) to provide that discount obligations issued and distributed by a corporation with respect to its stock are to be subject to the original issue discount rules.

Finally, Act §61 adds a new subsection (f) to §301. The new subsection prescribes special rules for determining stock basis and taxable income in the case of certain distributions received by 20-percent corporate shareholders with respect to their stock. With exceptions, the new provisions are effective after September 30, 1984.

C. Detailed Analysis

1. Section 312(n): Adjustments to Earnings and Profits to More Accurately Reflect Economic Gain and Loss

Section 312(n), added to the Code in Act §61, prescribes eight adjustments to the earnings and profits determination. The adjustments are designed to make earnings and profits a more accurate reflection of the economic gains and losses of the corporation. Each of the adjustments is discussed below.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

a. Construction Period Carrying Charges

Section 312(n)(1) provides that for purposes of computing earnings and profits, no deduction is allowed for any amount paid or incurred as a "construction period carrying charge." Such charges must be capitalized as a part of the asset to which they relate and written off as is the asset itself. A construction period carrying charge includes property taxes (real and personal), interest paid or accrued on debt incurred or continued to acquire, construct, or carry property, and other carrying charges, but only to the extent such taxes, interest, and other carrying charges are attributable to the "construction period" for the property. The term "construction period" generally means the period beginning on the date on which construction or acquisition begins and ending on the date on which the item of property is ready to be placed in service or held for sale by the taxpayer. In the case of real property, the construction period commences with the date on which the construction or acquisition of a building or other improvement begins and ends on the date that the building or improvement is ready to be placed in service or is ready to be held for sale.

Section 312(n)(1) applies to all corporations. Further, it applies with respect to both residential and nonresidential real property, and to personal property.

The discussion of the provision in the Senate Report contains instructions for the Treasury on how to issue regulations allocating expenditures to the construction period and among different properties:

> "The committee expects that these regulations generally will adopt rules similar to those contained in Financial Accounting Standards Board Statement Number 34, as amended. For example, under those rules, the amount of interest to be capitalized is the portion of the total interest expense incurred during the construction period that could have been avoided if funds had not been expended for construction. Interest expense that could have been avoided includes interest costs incurred by reason of additional borrowings to finance construction and interest costs incurred by reason of borrowings that otherwise could have been repaid with funds expended for construction."

Section 312(n)(1) is effective for amounts paid or incurred in taxable years beginning after September 30, 1984.

b. Intangible Drilling Costs and Mineral Exploration and Development Costs

Section 312(n)(2)(A) provides that for purposes of computing earnings and profits, intangible drilling costs incurred in connection with a productive well are to be capitalized and allowed as a deduction ratably over the 60-month period beginning with the month in which production from the well begins. Section 312(n)(2)(B) provides that mineral exploration and development costs allowable as a deduction under §616(a) or 617 are to be capitalized for purposes of computing earnings and profits and deducted ratably over a 120-month period beginning with the later of (1) the month in which production from the deposit begins or (2) the month in which the amount is paid or accrued.

The legislative history of the provision indicates that, in the case of a dry well, intangible drilling costs are to be deducted in computing earnings and profits when it has been determined that the well is dry. The legislative history also indicates that in the case of unproductive mineral property, exploration and development expenses incurred in connection with the property are to be deducted in computing earnings and profits when the property is abandoned.

Section 312(n)(2) is effective for amounts paid or incurred in taxable years beginning after September 30, 1984.

c. Certain Trademark, Trade Name and Other Expenditures

Section 312(n)(3) provides that for purposes of computing earnings and profits, certain amortization provisions are not to apply. Specifically, amounts amortized in computing taxable income under §§173 (relating to circulation expenditures), 177 (relating to trademark and trade name expenditures), and 248 (relating to organizational expenditures) are, for purposes of computing earnings and profits, to be capitalized and treated as part of the basis of the asset to which they relate. Thus, expenditures made in connection with an asset having a reasonably determinable useful life are to be recovered for earnings and profits purposes over such useful life. Conversely, there will be no amortization for expenditures made in connection with an asset which does not have a reasonably determinable limited useful life.

Section 312(n)(3) is effective for amounts paid or incurred in taxable years beginning after September 30, 1984.

d. Certain Distributions of Appreciated Property

Under §312(n)(4), in the case of a distribution of appreciated property by a corporation to a shareholder, earnings and profits of the corporation are to be increased by the amount of gain on the distributed property that is realized by the corporation on the distribution even if such gain qualifies for nonrecognition, for taxable income purposes, under §311(d)(2). This rule does not apply, however, to a distribution in complete liquidation of the distributing corporation. It also does not apply to any distribution to which §§301 through 307 are not applicable or to a distribution to corporate shareholders described in §311(d)(2)(A) (as amended by Act §54).

Section 312(n)(4) is generally effective for distributions after September 30, 1984. The provision does not apply, however, to any distribution to which the amendments made by Act §54(a) do not apply.

e. LIFO Inventory Adjustments

Under §312(n)(5), a corporation's earnings and profits are to be increased by the amount of any increase in the corporation's LIFO reserve for a taxable year. Conversely, any decrease in the amount of a corporation's LIFO reserve will generally decrease earnings and profits. Decreases in reserve amounts below the LIFO reserve as of the beginning of the first taxable year of the taxpayer to which this provision applies, however, will not, except as provided by regulations, reduce earnings and profits. The rationale for this exception is explained in the legislative history:

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

"An exception is to be provided, under regulations, for decreases below the amount of the reserve as of the close of the taxable year of the taxpayer preceding the first taxable year to which the provision applies. Since the cumulative effect of the LIFO reserve has been to keep earnings and profits lower than they otherwise would have been, it is contemplated that the regulations will provide that in the event of a reduction in the LIFO reserve below its level as of the close of such taxable year (the pre-enactment reserve), earnings and profits will be increased as under present law *without any offsetting reduction under the new rules.*" (emphasis added)

Section 312(n)(5) applies to taxable years beginning after September 30, 1984. The mechanics of its application are illustrated in the following example. Assume that a calendar year taxpayer has a LIFO reserve of $100 at the end of 1984. Assume further that the reserve decreases to $95 at the end of 1985 and increases to $105 at the end of 1986. Finally, assume that the reserve decreases to $90 at the end of 1987. Pursuant to the exception for decreases in the reserve below the pre-enactment level, the change in the reserve for 1985 results in no adjustment under §312(n)(5). The increase in the reserve for 1986 results in a $10 increase in earnings and profits under the provision. The $15 reduction in the reserve for 1987 results in a $10 reduction in earnings and profits under the provision.

Note: The adjustment for 1987 is $10 and not $15 because §312(n)(5) does not require an adjustment to offset the inclusion in earnings and profits of reserve amounts not previously included in earnings and profits. Five dollars of the $15 decrease in the LIFO reserve for 1987 reflects an amount of the pre-enactment reserve which, prior to 1987, had not been included in earnings and profits.

f. Installment Sales

Section 312(n)(6) provides that in the case of any installment sale, earnings and profits are to be computed as if the corporation did not use the installment method. Thus, all principal payments, as determined under general Code principles, are to be treated as received in the year of sale.

The legislative history of this provision states that it applies to all installment sales, including installment sales of inventory. The provision is effective for sales after September 30, 1984.

g. Completed Contract Method of Accounting

A corporation that accounts for income and expenses attributable to a long-term contract on the completed contract method of accounting generally recognizes income and expense in the year in which the contract is completed. Under §312(n)(7), a corporation that accounts for income and expense on this method is required to compute earnings and profits as if it were accounting for income and expense attributable to long-term contracts on a percentage of completion basis. Under this latter method, income is generally recognized according to the percentage of the contract that is completed during each taxable year.

Section 312(n)(7) applies to contracts entered into after September 30, 1984 in taxable years ending after that date.

h. Redemptions

Section 312(n)(8) provides that if a corporation distributes amounts in a redemption which qualifies for sale or exchange treatment under §302 or §303, the corporation's earnings and profits are to be reduced by an amount "which is not in excess of the ratable share of the earnings and profits of such corporation . . . attributable to the stock so redeemed." Under this provision, earnings and profits are to be reduced in proportion to the amount of the corporation's outstanding stock that is redeemed. The reduction in earnings and profits so determined, however, is limited to the amount distributed in redemption. That is, the reduction is not to exceed this amount.

The application of §312(n)(8) is illustrated in the following example. Assume that X corporation has 1,000 shares of $10 par value stock outstanding, and that A and B each acquired 500 of original issue shares at a price of $20 per share. Assume further that X corporation, which has operated a profitable services business since its inception, holds net assets worth $100,000 consisting of cash ($50,000) and appreciated improved real property ($50,000), and has current and accumulated earnings and profits of $50,000. If X corporation distributes $50,000 in cash to A in redemption of A's shares in X corporation, earnings and profits and capital account would each be reduced by $25,000. After the transaction, X corporation would have $25,000 of earnings and profits.

The legislative history of §312(n)(8) indicates that when a corporation has more than one class of stock, its earnings and profits generally should be allocated among the different classes in determining the amount by which redemption of all or a part of one class reduces the earnings and profits account. This general rule, however, is subject to an exception: no earnings and profits generally should be allocated to preferred stock which is not convertible or participating to any significant extent in corporate growth. In the case of a redemption of such preferred stock, the distribution should be charged to capital account only, unless the distribution includes dividend arrearages. If dividend arrearages are included, earnings and profits should be reduced by the amount of the arrearages.

The legislative history also indicates that priorities "legally required" as between different classes of stock may be taken into account in allocating earnings and profits between classes. As an illustration of this principle, the legislative history offers the following example. Assume that corporation X has 1,000 shares of class A common stock and 1,000 shares of class B common stock. Both classes are $10 par value stock and were issued at the same time at a price of $20. The class A common has a preference as to dividend and liquidating distributions in a 2:1 ratio to the class B common, and only the class B common has voting rights. Assume further that corporation X holds net assets worth $210,000 and has current and accumulated earnings and profits of $120,000. If X distributes $140,000 in cash in redemption of all of the class A common, earnings and profits should be reduced by $80,000 and capital account by $60,000.

i. Special Rule for Certain Foreign Corporations

Section 312(n) applies to foreign corporations as well as domestic corporations. However, under §312(n)(9), the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

application of paragraphs (5), (6) and (7) of §312(n) (pertaining to LIFO inventory adjustments, installment sales and the use of the completed contract method of accounting) is delayed for certain foreign corporations until taxable years beginning after December 31, 1985. The corporations to which this delayed effective date is applicable are foreign corporations deriving less than 20 percent of their gross income from sources within the United States.

2. ACRS Deductions for Real Property

Act §61 amends the table contained in §312(k)(3)(A) by striking out "35 years" in the item relating to 15-year real property and 20-year real property and inserting in lieu thereof "40 years." Thus, under §312(k)(3)(A) as amended, the amount by which a corporation's earnings and profits are reduced for ACRS deductions with respect to 15-year and 20-year real property is the amount of the deduction that would be allowable if the straight-line method of depreciation had been used and the property had a 40-year recovery period.

Section 312(k)(3)(A), as amended, applies to property placed in service in taxable years beginning after September 30, 1984.

3. Distributions of Obligations Having Original Issue Discount

a. Background

Under §301(b)(1)(A) of the Code, the fair market value of property distributed as a dividend is includible in the gross income of an individual shareholder.

A corporation can distribute as a dividend its own debt obligations. The obligations may have a fair market value less than their face amount. That is, they may carry a stated interest rate which is below the prevailing market rate. In such a case, an individual shareholder would have dividend income in an amount equal to the value of the obligations distributed to him. Prior to TRA 1984, however, the distributing corporation could contend that under §312(a)(2) (providing that a corporation's earnings and profits were to be reduced by the principal amount of the obligations of the corporation that were distributed by it with respect to stock), it was entitled to reduce its earnings and profits by the principal amount of the obligations it distributed. The end result of this position was to eliminate earnings and profits at the cost of a relatively small dividend tax.

Additionally, prior to TRA 1984, taxpayers could argue that a discount obligation issued and distributed by a corporation to its shareholders with respect to its stock, was not subject to the original issue discount rules. A cash basis shareholder taking this position would report no income with respect to the discount until it was paid and the income could qualify as capital gain. On the other hand, an accrual basis obligor could claim interest deductions currently on a straight-line or ratably rather than on a constant rate basis, thereby accelerating deduction of the discount.

b. Reasons for Change

Congress did not believe that a dividend distribution should reduce earnings and profits by more than the amount includible as a dividend in the gross income of an individual recipient of such a distribution. Further, Congress believed that obligations distributed by a corporation that bear economic discount should be subject to the general original issue discount rules.

c. Explanation of Provision

Act §61 amends §312(a)(2) to provide that a corporation's distribution of its own discount obligations as a dividend reduces earnings and profits by the aggregate issue price of the obligations, not by their face amount. Under new subsection (o) of §312, the issue price is to be determined under the original issue discount rules.

Act §61 amends new §1275 (added to the Code in Act §41) to provide that any debt obligation of a corporation distributed by the corporation with respect to its stock is to be treated as if it had been issued by the corporation for property. Thus, under this provision, the original issue discount rules are made applicable to the holder and the issuer of a discount obligation distributed as a dividend.

These amendments are effective for distributions declared after March 15, 1984 in taxable years ending after that date.

4. Section 301(f): Distributions to 20-Percent Corporate Shareholders

a. Introduction

Under the new earnings and profits rules of §312(n), a corporation's earnings and profits can exceed its taxable income if its income is deferred for purposes of determining gross income but not for purposes of computing earnings and profits. Aware of this, Congress was concerned that, if a corporation with earnings and profits in excess of taxable income made a distribution to a corporate shareholder and the distribution was treated as a dividend qualifying for a dividends received deduction, it was possible for earnings to be distributed to the corporate shareholder without ever being subject to tax in the hands of the corporate shareholder.

As an example of this possibility, Congress referred to the following hypothetical. Assume that P corporation owns 100 percent of the stock of X corporation, that P's basis in the stock is $200, that P and X file separate income tax returns, and that X has no current or accumulated earnings and profits. Assume further that X sells an asset for a $1,000 installment note, realizing an $800 gain. Finally, assume that X borrows $500 secured by the installment note and distributes the $500 to P. In such event, under the new rules of §312(n), absent a special provision, P would include the $500 distribution in income but would likely qualify for a 100-percent dividends received deduction. If P later sells its X stock for $200 (the value of that stock if it is assumed that X will ultimately have a $300 tax liability, in present value terms, on account of the installment sale), it would not recognize gain or loss on the sale. As a result, P would have realized an overall profit of $500.

b. Explanation of Provision

Because of its concern over the scenario described above, Congress added, in Act §61, a new subsection (f) to §301. Under this subsection, except as regulations may otherwise provide, the taxable income of a corporate shareholder with a 20-percent or greater interest in the distributing corporation, and such shareholder's basis in the stock of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the distributing corporation, are determined as if §312(n) does not apply to the distributing corporation. As a result, in the above example, $200 of the distribution by X to P would be a return of capital, and $300 would be taxed to P under §301(c)(3). P's basis in the X stock would be reduced to 0, and P would recognize a $200 gain on the subsequent sale of the stock.

The nonapplication of §312(n) required by §301(f) is limited to two purposes: the determination of the taxable income of a 20-percent corporate shareholder and the determination of such shareholder's basis in the stock of the distributing corporation. For purposes of computing earnings and profits of the distributing corporation, §312(n) *does* apply. Thus, §301(f) does not affect the computation of earnings and profits of either the distributing corporation or the corporate shareholder. Since §312(n) is not disregarded for purposes of computing earnings and profits, in the above example, $500 of earnings and profits would be treated as having been transferred from X to P. After the $500 distribution to P, X would have remaining earnings and profits of $300. Because of the distribution, P's earnings and profits would be increased by $500.

Section 301(f) applies only if the corporate shareholder would, but for the subsection, be entitled to a dividends received deduction with respect to the distribution. For purposes of the subsection, a 20-percent corporate shareholder is any corporation owning, directly or through the application of the attribution rules of §318, stock possessing either (a) at least 20 percent of the total combined voting power of all classes of stock entitled to vote or (b) at least 20 percent of the total value of all classes of stock (excluding certain preferred stock) of the distributing corporation. The preferred stock excluded for this purpose is nonvoting stock which is limited and preferred as to dividends.

Section 301(f)(3) expressly authorizes the Treasury to prescribe regulations to carry out the purposes of the provision. The provision is applicable to distributions after July 18, 1984, in taxable years ending after that date.

III. New Limits on the Dividends-Received Deduction [§51]

A. Introduction

A corporation holding stock in another corporation can generally deduct 85 percent of the dividends it receives from the other corporation.[42] Based upon a maximum corporate tax rate of 46 percent on ordinary income,[43] the maximum effective rate on such dividends is therefore 6.9 percent.[44]

Generally, where the corporation investing in the dividend-paying stock borrows funds to make the purchase, the interest on the indebtedness is deductible against ordinary income.[45] Thus, the investing corporations often make investments which would not be possible or economic otherwise.[46]

B. Overview

The 1984 Tax Reform Act created §246A to remove the attractiveness of the combined dividends-received deduction and interest deduction in debt-financed portfolio stock.[47] This is accomplished through a reduced dividends-allowed deduction and, where the debt obligor is a person other than the person receiving the dividend, through empowering the Treasury to issue regulations disallowing the interest deduction in lieu of reducing the dividends-received deduction.

The provision applies to "portfolio stock" which is defined as all corporate stock unless specifically exempted. If the stock constitutes portfolio stock and indebtedness was incurred to either acquire or carry such stock, the 85 percent deduction is reduced by a percentage related to the amount of indebtedness incurred. The section applies to stock with respect to which the holding period commences after the date of enactment.

C. Detailed Analysis

1. Statutory Scheme

Section 51(a) of the Act adds §246A to the Code. The statutory scheme creates a substitute percentage for determining the dividend-received deduction when applied to debt financed portfolio stock.[48] Exemption from the reduced deduction is provided in §246A(b) which specifically exempts (1) dividends qualifying under §243(b) for the 100 percent dividends-received deduction as dividends from a member of an affiliated group which includes the taxpayer corporation[49] and (2) dividends received by a small business investment company operating under the Small Business Investment Act of 1958.[50]

a. Calculation of Reduced Dividend Deduction

When corporate stock held by another corporation has been determined to be "debt-financed portfolio stock" (see D. below) the reduced dividends-received deduction is calculated under §246A(a). That subsection provides that the percentage which is substituted for the 85 percent deduction normally used is equal to the product of 85 percent plus 100 percent minus the average indebtedness percentage. The effect of this calculation is to require the corporate taxpayer to determine the percentage of the cost of the investment in the stock which is financed with borrowed money and then reduce the dividends received deduction by that percentage.[51] The determination of the average indebtedness percentage is discussed below.

To provide a limit on the corollary treatment of interest deductions, §246A(e) provides that, under regulations prescribed by the Secretary of the Treasury, any reduction in the dividends received deduction shall not exceed the amount of any interest deduction (including any deductible short sale expense) allowable to such dividend.

b. Average Indebtedness Percentage

The "average indebtedness percentage" is calculated under §246A(d). The percentage is obtained by dividing the average amount of portfolio indebtedness of portfolio stock during the base period by the average amount of the adjusted basis of the stock during the base period.[52] For this purpose, the term "portfolio indebtedness" is defined as any indebtedness directly attributable to investment in the portfolio stock.[53] "Base period" is defined as the shorter of (1) the period beginning on the ex-dividend date for the most recent dividend on the stock and ending on the day before the ex-dividend date for the dividend involved, or (2) the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

one-year period ending on the day before the ex-dividend date for the dividend involved.[54]

A special rule applies where the dividend-paying stock is not held for the entire base period. Under §246A(d)(2), the calculation of average indebtedness percentage is applied as if the base period consisted only of that portion of the base period during which the stock was held by the taxpayer. The House bill added to this a second calculation which adjusted the average indebtedness percentage by multiplying the figure obtained under the general rule (of §246A(a)) by a fraction. The numerator of the fraction would have been the number of days during the base period on which the taxpayer held the stock and the denominator would have been the number of days during the base period.[55] This provision, however, was dropped from the final version of the law.

Another special rule applies to amounts received from the short sale of portfolio stock. Under §246A(d)(3)(B), any amount received from such a sale is treated as indebtedness for the period beginning on the day on which such amount is received and ending on the day the short sale is closed. The Senate amendment had provided that the rule would not apply if no deduction was allowed to a short seller under proposed §263(h) for payment in lieu of dividend [56] but the conferees, in adopting the House version, viewed this rule as no different from the House bill provisions.[57]

D. Operation of the Statute

1. Determining the Section's Application

The term "portfolio stock" is defined as any stock of a corporation, unless a statutory exception applies.[58] The three statutory exceptions in §246A are:

a. Closely-Held Business

If, at the beginning of the ex-dividend date, the corporate taxpayer owning the corporate stock possesses at least 50 percent of the total voting power of the stock and the stock has a value equal to at least 50 percent of the total value of such stock, the stock is not portfolio stock.[59]

b. Corporate Joint Ventures

Where the corporate stock, as of the beginning of the ex-dividend date, possesses at least 20 percent of the voting power and value of all of the corporate stock and five or fewer corporate stockholders hold such stock, that stock does not constitute "portfolio stock." [60] According to the Conference Report, this provision was specifically intended to exempt certain corporate joint ventures from the dividend-received reduction rule.[61]

c. Bank or Bank Holding Company

The stock of a bank [62] or bank holding company [63] is not "portfolio stock" if, as of the beginning of the ex-dividend date the taxpayer (1) owns such stock having a value of at least 80 percent of the total value of the bank or bank holding company stock for purposes of the 50 percent total voting power test under §246A(c)(2)(A)(i) and (2) holds options to acquire stock possessing at least 50 percent of the voting power of all classes of stock of such corporation.[64]

Comment: The statute itself reads that if the taxpayer owns the requisite 80 percent of the total value of "such bank or bank holding company, for purposes of paragraph (2)(A)(i), the taxpayer shall be treated as owning any stock of such bank or bank holding company which the taxpayer has an option to acquire." This language is not clear on its face; however, its meaning and intent have been drawn from the Conference Report language at page 813.

Note: For purposes of the calculations of stock ownership under §246A(c)(2)(A) or (c)(2)(B) or (c)(3)(A), stock described in §1504(a)(4) (relating to preferred stock) is not taken into account.[65]

2. Determination of Portfolio Indebtedness

Once it has been determined that the corporate stock is portfolio stock, the amount of portfolio indebtedness must be determined in order to apply the dividends-received deduction reduction. The term "portfolio indebtedness" is defined as any indebtedness directly attributable to investment in the portfolio stock.[66] The phrase "directly attributable" is clarified at several places in the Conference Report, as well as the House and Senate Reports, and will be discussed below.

a. Portfolio Indebtedness

As noted above, portfolio indebtedness is defined as any indebtedness directly attributable to investment in portfolio stock. The touchstone appears to be whether the indebtedness is clearly incurred for the purposes of acquiring dividend-paying stock or is otherwise directly traceable to such an acquisition.[67] The House Report made it clear that neither the use of an allocation or apportionment formula nor a fungibility concept were contemplated.[68]

The law would not apply to commercial paper issued by a corporation as part of an ongoing cash management program or to deposits received by a depository institution in the ordinary course of its business.[69] However, the underlying debt obligation issued by the corporate purchaser of stock to the seller is corporate indebtedness, since the Conference Committee made it clear that purchase money indebtedness is to be treated as portfolio indebtedness.[70] The following are examples of portfolio indebtedness:

Example 1: Where stock is held in a margin account with a securities broker, the margin borrowing constitutes portfolio indebtedness.[71]

Example 2: Where a nonrecourse loan is secured, in whole or in part, by dividend-paying stock, the indebtedness is portfolio indebtedness.[72]

Example 3: Where a corporation purchases stock and issues its own debt obligation to the seller, the underlying obligation is portfolio indebtedness.[73]

b. "Directly Attributable"

Section 246A(d)(3)(A) defines "portfolio indebtedness" as any indebtedness directly attributable to investment in portfolio stock. It is clear that the phrase "directly attributable" applies in cases where the corporate entity which incurred the portfolio indebtedness is different than the corporate holder of the dividend-paying stock. Thus, the phrase applies where one member of an affiliated group of corporations incurs the portfolio indebtedness and another member of the group acquires the dividend-paying stock.[74]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

It is also important to note that the law applies where the indebtedness is attributable to *carrying* the portfolio stock.[75]

Example: Where the acquisition of stock is entirely equity-financed and the purchaser at a later date obtains funds through a loan secured by portfolio stock in a situation in which the purchaser could reasonably have been expected to sell the portfolio stock instead of incurring indebtedness, the law applies.[76]

However, if all or substantially all of the stock which is acquired by the taxpayer is portfolio stock held by the acquired company in the active conduct of a trade or business, then the indebtedness is not directly attributable to portfolio stock.[77] However, if a taxpayer makes a debt-financed acquisition of 100 percent of the stock of a mere investment company, the law applies.[78]

3. Example of Section's Operation

The Conference Report contains a lengthy example of the operation of the law:

> *Example:* Assume that Corporation A pays a dividend of $1 per share each quarter. The ex-dividend dates are January 15, April 15, July 15 and October 15. On January 16, 1985, Corporation B buys 1,000 shares of Corporation A for a total cost of $100,000. Assume further that Corporation B borrows 60 percent, or $60,000, of the purchase price, that the interest rate on the loan is 14 percent per year, and that the stock is portfolio stock. In April 15, 1985, when the $60,000 debt is still outstanding, Corporation B receives dividends on the stock totalling $1,000. Corporation B then sells the stock on April 16, 1985 for $100,000. Prior to TRA 1984, Corporation B would be generally entitled to a dividends received deduction of 85 percent of $1,000, or $850. Under §246A, since 60 percent of the cost of the stock was debt-financed, 60 percent of the dividends received deduction is disallowed. As a result, Corporation B is entitled to a dividends received deduction of only 40 percent of $850, or $340. Since interest expense allocable to the dividend is $2,100 ($60,000 times 14 percent times 1/4), the special rule limiting the reduction to the amount of interest expense allocable to the dividend is not applicable.[79]

4. Regulatory Authority

Two sections of §246A grant regulatory authority to the Secretary of the Treasury with respect to the interest deduction as it relates to the dividends-received deduction. Section 246A(f) provides that where the obligor of the indebtedness is a person other than the person receiving the dividends, the regulations pertaining to the reduced dividends-received deduction shall include regulations providing for the disallowances of interest deductions or other appropriate treatment, in lieu of reducing the dividends-received deduction. The Conference Committee gives the following as an example of the application of such regulations:

Example: Two corporations, A and B, acquire all of the stock of a third corporation, C, with A using debt to acquire 30 percent of the C stock and B using equity funds to acquire the remaining 70 percent. If the money borrowed by A is directly attributable to investment in dividend-paying portfolio stock by C, under such regulations, there would be no reduction in C's dividends received deduction. Rather, interest expense paid or accrued by A on the debt incurred to acquire the C stock would be disallowed, or other appropriate treatment (*e.g.*, the equivalent of a recapture of interest deductions) provided. This result is more appropriate than a reduction in C's dividends received deduction because such a reduction would, in effect, penalize both A and B even though B's investment was not debt-financed.[80]

Section 246A also provides that under regulations prescribed by the Secretary, any reduction in the dividends received deduction shall not exceed the amount of any interest deduction (including any deductible short sale expense) allocable to such dividend.[81]

IV. Basis Reduction for Extraordinary Dividends [Act §53]

A. Introduction

Prior to the 1984 TRA, corporations having short-term capital gain, otherwise taxable at a maximum 28 percent rate, could in effect convert that gain into income taxable at a maximum rate of 6.9 percent by acquiring stock in another corporation about to pay a dividend, receiving the dividend and selling the stock for a short-term capital loss. The price paid for the stock would include the full value of the dividend if the purchase occurred after the dividend was declared but before the ex-dividend date. Provided that the purchasing corporation held the stock for at least 16 days (at least 91 days in the case of preferred stock), the dividend would qualify for the 85 percent dividends received deduction.[82] A subsequent sale of the stock could generate a loss since it would be at a price that did not include the dividend and, if the sale occurred no more than one year after the purchase, that loss could be a short term capital loss.

B. Overview

Section 53 of the 1984 TRA adds to the Code two alternate provisions designed to prevent the conversion of short-term capital gain into intercorporate dividends taxable at the maximum 6.9 percent rate. Section 53(a) adds Code §1059, reducing a corporate shareholder's basis in stock upon its receipt of an "extraordinary dividend." This is generally net §301 distributions within an 85-day period having a total fair market value of at least 10 percent (five percent in the case of preferred stock) of the basis of its stock or aggregate net §301 distributions totalling more than 20 percent of the basis of its stock over a one-year period — if the shareholder disposes of such stock after holding it for no more than one year. In such a case, the basis of such stock is reduced by the amount of the dividends received deduction obtained with respect to such distributions. Thus, the effect of this provision is to deny a short-term captial loss on the sale of the stock unless there has been a reduction in the value of the stock unconnected with the dividend. This provision is generally effective for distributions after March 1, 1984.

The second of the alternative provisions involves §53(b) of the Act. Section 53(b) amends Code 246(c) to increase from 16 to 46 days the minimum holding period that a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

corporate taxpayer must retain common stock in order to qualify for the dividends received deduction with respect to dividends paid on such stock. This amendment also provides that the holding period of an offsetting position, requiring the taxpayer to make related payments, in property substantially similar or related to the stock at the time of receipt of the dividend will disqualify the dividend from the dividends received deduction. In addition, any period during which a corporate taxpayer holds offsetting positions in substantially identical stock or securities or with respect to property substantially similar or related to the dividend paying stock will not count toward the minimum holding period either under §246(c) or under §1059. The increase in the minimum holding period for the dividends received deduction with respect to common stock applies generally to stock acquired after July 18, 1984, the date of enactment of the 1984 TRA.

C. *Detailed Analysis*

1. *Basis Reduction for Extraordinary Dividends*

Section 53 of the 1984 TRA adds §1059 to the Code in an attempt to reduce the ability of corporate taxpayers to convert short term capital gain, taxable at 28 percent,[83] into intercorporate dividends taxable at a maximum rate of 6.9 percent[84] by purchasing stock on which large dividend payments were imminent and reselling such stock shortly after the dividends were paid. Under §1059(a), a corporate taxpayer receiving an "extraordinary dividend" on stock that it holds for no more than one year must reduce its basis in such stock by the "nontaxed portion" of such extraordinary dividend. If the nontaxed portion of such dividend exceeds the corporation's adjusted basis in the stock on which the dividend was paid, the excess is treated as gain from the sale or exchange of the stock. This provision is based upon §53 of H.R. 4170 and §35 of the Senate amendment thereto. The conference added language clarifying that gain would be recognized on the excess of the nontaxed portion of the extraordinary dividend over the adjusted basis of the stock on which the dividend was paid.[85]

a. *Distributions Potentially Treated as Extraordinary Dividends*

Section 1059(a) defines an extraordinary dividend as the aggregate amount of §301 distributions to corporate shareholders payable with respect to all ex-dividend dates within the same 85-day period either (1) having a net fair market value of at least 10 percent (5 percent in the case of preferred stock) of the shareholder's basis in the stock on which the dividends are made, or (2) payable with respect to all ex-dividend dates within the same 365-day period having a fair market value greater than 20 percent of such stock. Section 1059(d)(5)(A) makes clear that a distribution need not be out of earnings and profits to be an extraordinary dividend. Not only actual dividends, but also redemptions treated as §301 distributions, are potentially treated as extraordinary dividends. Where appreciated property is distributed, §1059(d)(2) provides that the full fair market value — not merely the distributing corporation's adjusted basis — of the property distributed is included in determining the amount of the extraordinary dividend.

Note: The statutory rules call for an aggregation, not only of the amount of dividends payable as to ex-dividend dates that fall within the same 85-day or 365-day period, but also with respect to distributions to all those who receive or transfer stock in substituted basis transactions.[86]

Example: On January 30, 1985, Corp. A purchases for $100 common stock in Corp. D, which declares a dividend having a February 1, 1985 ex-dividend date. Corp. A receives a $5 dividend on such shares. On March 1, 1985, Corp. A contributes the Corp. D stock to a wholly-owned subsidiary, Corp. B. Subsequently, Corp. D declares an additional $5 dividend on those shares, which dividend has an ex-dividend date of May 15, 1985. Corp. B sells the Corp. D shares to a third party on January 30, 1986. Because Corp. A and Corp. B took the same basis in the stock, distributions payable to both are counted in determining whether an extraordinary dividend has been paid. Because the ex-dividend dates are only 74 days apart, the two $5 distributions are aggregated and considered as one $10 distribution.

In determining whether redemption distributions taxable to the recipient under §301 are extraordinary dividends, the conference committee report provides that such distributions are deemed to be made with respect to stock that is not redeemed.[87] Otherwise, since no basis is allocated to stock redeemed in transactions treated as dividends, all §302(d)–§301 redemptions would be extraordinary dividends assuming that such stock was redeemed no more than one year after its acquisition.

b. *Holding Period*

In order for the basis reduction or gain recognition rule of §1059 to come into play, the stock on which the extraordinary dividend is received must be disposed of after being held no more than one year. Presumably, the reason for the more than one year rule was to require a corporate shareholder to take a long term capital loss on the sale of such stock. However, even though the minimum holding period for long term capital gain or loss treatment was reduced to six months and one day under §1001 of the 1984 TRA, the minimum holding period to avoid §1059 treatment was not reduced.

For purposes of determining whether stock has been held for more than one year, §1059(d)(3) provides that the rules of §§246(c)(3) and (4) which exclude from a shareholders' holding period in stock any time during which such shareholders have offsetting positions in substantially identical or related stock or have substantially reduced their risk of loss by holding offsetting positions in "substantially similar or related property." In turn, the rules of §§246(c)(3) and (4) were either substantially modified, or introduced, by §53(b) of the 1984 TRA, discussed in greater detail in C, 2, *infra*.

Note: The rules of §1059 do not apply to substantial dividends on stock disposed after being held more than one year. Thus, where a corporate shareholder has or anticipates short-term capital gain but no long-term capital gain, it can take advantage of the 6.9 percent maximum intercorporate dividend rate and offset such short-term capital gain with a long-term capital loss on a sale of the dividend paying stock more than one year after acquiring such stock.[88]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

c. Nontaxed Portion of Extraordinary Dividend

The amount by which a corporate shareholder's basis in stock is reduced is the "nontaxed portion" of the extraordinary dividend received. Section 1059(b) defines that term as the excess of the net fair market value of a §301 distribution over the taxable portion of that distribution. The taxable portion of such a distribution is the portion includible in gross income less the dividend received deduction available under §243, 244 or 245 with respect to the distribution. In most cases, then, the basis reduction will be equal to the 85 percent or 100 percent dividend received deduction with respect to the distribution.[89]

d. Regulations and Effective Date

Section 1059(e) provides that the Treasury will issue regulations applying the rules of §1059 in the case of stock splits, stock dividends and reorganizations.

Section 1059 is effective for distributions made on and after March 2, 1984.[90]

2. Increased Holding Period Requirement for Certain Stock

A corporate shareholder does not qualify for the dividends received deduction under §243, 244 or 245 unless it holds stock on which a dividend is paid for the minimum period of time. Prior to the 1984 TRA, that minimum period was 16 days for common stock and 91 days for preferred stock. Section 53(b) of the 1984 TRA amends §246(c)(1)(A) to provide that the minimum holding period to qualify for the dividends received deduction with respect to dividends paid on common stock is 46 days. The 91-day minimum holding period for the dividends received deduction with respect to dividends paid on preferred stock is unchanged by the Act.

Even under pre-1984 TRA law, the mere holding of stock for the requisite amount of time was not sufficient to qualify for the dividend received deduction. Section 246(c)(3) provided that, with respect to common stock, the holding period did not include any day more than 15 days after stock became ex-dividend or any period in which the shareholder had an option or contractural obligation to sell, or made a short sale of, "substantially identical stock or securities." Section 246(c)(1)(B) denied a dividend received deduction with respect to any stock to the extent the shareholder was obliged to make a corresponding payment with respect to "substantially identical stock or securities."

Section 53(b) of the 1984 TRA amends §246(c) to conform the period after the ex-dividend date not included in the holding period to the new 46-day minimum holding period requirement of §246(c)(1)(A). In addition, §246(c)(1)(B) was modified to deny a dividends received deduction with respect to stock on which the taxpayer is required to make "related payments" with respect to "substantially similar or related property." Section 246(c)(4) now reduces a corporate shareholder's holding period not only for short sales of, or options or contracts to sell, "substantially identical stock or securities," but also for periods in which the shareholder is the grantor of an option to buy such stock or securities.

Section 246(c)(4)(C) provides that a corporate shareholder's holding period will also be reduced, in accordance with regulations, where the shareholder has "diminished his risk of loss" by holding offsetting positions in "substantially similar or related property." The scope of this provision is quite broad, as indicated by the following language from the Conference Committee Report:

> The following transactions are examples of the types of transactions that are within the scope of the rule for substantially similar or related property: (1) A short sale of common stock when the taxpayer holds convertible preferred stock of the same issuer and the price changes of the convertible preferred stock and the common stock are related. The same result would obtain in the case of a short sale of a convertible debenture while holding convertible preferred stock into which the debenture is convertible or common stock, or a short sale of convertible preferred stock while holding common stock. (2) The acquisition of a short position in a regulated futures contract ("RFC") on a stock index (or the acquisition of an option to sell the RFC or the stock index itself, or the grant of a deep-in-the-money option to buy the RFC or the stock index) while holding the stock of an investment company whose principal holdings mimic the performance of the stocks included in the stock index. An alternative would include holding a portfolio composed of stocks that mimic the performance of the stocks included in the stock index.[91]

Section 264(c)(4) does not apply to "qualified covered calls" within the meaning of §1092(c)(4). However, an exception in the Senate bill to the reduction in holding periods for offsetting positions in "substantially similar or related property" for broker-dealers was deleted in the conference.[92]

Note: In connection with the rules reducing a corporate shareholder's holding period as a result of offsetting positions in "substantially identical stock or securities" or "similar or related property," 1984 TRA §53(c) adds §7701(f), giving the Treasury broad power to issue regulations preventing the "avoidance," through the use of related parties, of pass-through entities or "other intermediaries," of all provisions relating to the "linking of borrowing to investment" or risk diminution. Presumably, such authority could extend to the denial of interest deductions under §§264 and 265 and the at-risk rules of §465.

The rules increasing the minimum holding period for purposes of qualifying for the dividends received deduction and associated provisions are effective for stock acquired after July 18, 1984, the date the 1984 TRA was enacted.

V. Holding Period for Losses Attributable to RIC and REIT Capital Gain Dividends

A. Background — Prior Law

As a general rule, regulated investment companies ("RICs") and real estate investment trusts ("REITs") that distribute their income are treated as conduits for Federal income tax purposes. RIC and REIT income, including capital gains, is passed through and taxed directly to the shareholders. Capital gain at the entity level is generally so treated at the shareholder level as well.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

In order to prevent abuse of the pass through for capital gains, losses incurred on the sale or exchange of RIC or REIT shares held for less than 31 days is treated as long-term capital losses to the extent of corresponding capital gain dividends.[93] According to the Senate Report on TRA, the 31-day holding period requirement has not succeeded in deterring taxpayers from abusing the capital gain pass-through rule. Specifically, a taxpayer can purchase an interest in an RIC or REIT immediately before a capital gain distribution, hold the stock for 32 days but not more than one year, and then sell the stock and realize a short-term capital loss. Such loss would be netted against short-term gains, while the long-term capital gain received on the distribution would be retained in its entirety. In effect, the taxpayer is able to convert short-term capital gain into long-term capital gain.

B. TRA Amendments

The Act provides that losses attributable to capital gain dividends on RIC or REIT interests that are held for less than six months will be considered as long-term capital losses to the extent of such gain.[94] The Act also makes conforming amendments to the holding period computation rules for RIC and REIT interests.[95]

With respect to both RIC and REIT shareholders, the Act provides an exception for losses incurred on the sale or exchange of shares pursuant to a plan providing for a periodic liquidation of those shares.[96] The exception will apply to the extent provided in regulations.

C. Effective Date

The amendments will apply to losses attributable to stock and beneficial interests for which the holding period begins after July 18, 1984, the day of enactment.

VI. New Requirements for Collapsible Corporations

A. Introduction

Section 65 of the Tax Reform Act of 1984 marks the passage of 34 years since Congress enacted §117(m) of the Internal Revenue Code of 1939 (now §341),[97] to address a device first utilized in the movie and real estate industries to convert ordinary income into long-term capital gains.[98] Congress initially reacted to this problem by taxing a shareholder's gain from the disposition of his shares in a collapsible corporation[99] at ordinary rather than capital gains rates.[100] Although §341 has been complicated further by a series of later amendments,[101] the operation of the collapsible statute has always turned upon a central concept: whether, before the collapsible event (sale, liquidation or distribution), the corporation had, or had not, "[realized] a substantial part of the taxable [ordinary] income to be derived from such property."[102]

Since a corporation which first realizes "a substantial part" of its income before liquidating avoids collapsible corporation status,[103] it is not surprising that the Service and the courts have grappled with the meaning of the above-quoted phrase. Prior to the enactment of §65, neither the statute nor the regulations have defined the term "a substantial part" with precision, and not surprisingly, judicial treatment of the issue has not been uniform. The Fifth Circuit, in *Comr. v. Kelley*,[104] addressed the issue from two perspectives. It first held that the "noncollapsible" substantial part refers to the amount realized, as opposed to the Commissioner's contention,[105] that a firm is collapsible if a substantial amount of income yet remains to be realized following the taxpayer's sale of stock. Secondly, the court held that the realization of approximately one-third of total income constitutes "a substantial part." In contrast, the Third circuit in *Abbott v. Comr.*,[106] in considering the first of the described issues, took the position that a corporation is "collapsible" if a substantial amount of income yet remains to be realized.

Although not noted in the Senate or House committee report,[107] it is also to be observed that the *Kelley* interpretation has been applied by the Tenth Circuit in *Comr. v. Zongker*[108] as well as in several district courts.[109] Indeed, the Internal Revenue Service in Rev. Rul. 72-48[110] had, some years before it changed its position by enactment of §63, announcing its acquiescence essentially in the *Kelley* rationale.[111]

Section 65 effectively changes the focus of the income realization issue by substituting a realization test of "2/3" for the "a substantial part" of taxable income rule of prior law.[112]

The genesis of §65 may be traced to Treasury's concern (doubtless initially developed from field experience at the Service) with the following tax avoidance pattern:

> "The most publicized use of these [1/3 "Kelley type"] arrangements involves the conversion of existing or newly developed improved real property into condominiums that are intended to be sold separately to customers. Under one variation of this technique, the property to be converted is sold to the taxpayer's wholly owned corporation, which undertakes the conversion and improvement of the property and commences sale of the individual units. After the corporation has sold approximately one-third of the units (assuming all units are of equal value), but more than one year after the taxpayer acquired his stock in the corporation, the corporation is liquidated. The taxpayer/shareholder claims long-term capital gain treatment on the gain recognized on the liquidation. That gain derives in part from the fair market value of units received in liquidation that appreciated due to the corporation's conversion, development, and promotional activities. The collapsible corporation rules, which were enacted to deal with situations of this type, would not prohibit the planning technique described above. Since the corporation has realized a "substantial" part (*i.e.*, one-third) of the taxable income to be derived from the sale of the condominiums, it is not a collapsible corporation."[113]

Treasury statistics accompanying the foregoing statement indicate that the revenue gains resulting from enactment of a 2/3 rule would equal $57,000,000 in 1985, $196,000,000 in 1986, and $305,000,000 in 1987.[114]

Section 65 also adds a new provision which severely limits the application of the so-called 70-30 rule of §341(d)(2). This rule assures shareholder level capital gains, notwithstanding that the corporation is, in fact, a collapsible corporation (as defined in §341(b)). Under the 70-30 rule, a taxpayer must establish that at least 30

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

percent of his realized gain is attributable to so-called "noncollapsible" assets of the corporation. To identify such gain, the 70-30 rule requires for this purpose a factual determination respecting both the amount of each shareholder's basis and gain and the identity and valuation of all corporate assets, noncollapsible and collapsible. Prior to §65, in situations in which a corporation owned several "collapsible" assets (respecting which the collapsible "view" was held), collapsibility could be neutralized and shareholder capital gains treatment accorded under the 70-30 rule by ensuring that other sufficient noncollapsible corporate assets (*i.e.*, to the extent of the 30 percent of a shareholder's gain) were held to which gain would be attributable. If insufficient gain were attributable to noncollapsible assets, one or more collapsible assets could be "cleansed" of such status though realization at the corporate level of "a substantial part," i.e., one-third, of the assets' potential taxable income, thus causing the total value (including the value attributable to the uncompleted part), of those assets to be taken into account at the shareholder level on the 30 percent "good" side of the 70-30 fraction. Section 65 addresses the use of this "cleansing" technique by providing the Treasury with the authority to issue regulations under which certain formerly collapsible assets are aggregated with existing collapsible assets and treated as one property for purposes of the 70-30 rule. As will be discussed hereafter, the utility of the 70-30 exception is severely restricted by this amendment, particularly as it has been implemented in recently proposed regulations.

It may also be observed that while the Conference Report makes no reference to the implications of §65 respecting transactions occurring prior to its effective date of July 18, 1984, the Senate Committee Report includes this not unusual comment: [115]

> "The committee intends that no inference should be drawn from this amendment with respect to the meaning of the 'substantial part' requirement of present law."

The quoted paragraph, while never completely conclusive should nevertheless serve to insulate pre-effective date transactions from the constraints of the described amendments.

B. Overview

Section 65 of TRA 1984 is comprised of two components. The first changes the degree of corporate level realization which must occur before a "collapsible" corporation (as defined in §341(b) is formed or availed for liquidation, sale of its shares, or distribution of its assets.[116]

The second component of §65, amends the so-called 70-30 percent rule exception authorized by §341(d)(2). Under the new provision, all inventory or other property held for sale to customers as described in §1221(1) is treated as "one item of property" for purposes of the 70-30 rule. In consequence of such aggregation of all §1221(1) properties with respect to which a "collapsible" view was held at any time during the corporate history, two-thirds corporate level realization of all the income to be realized from all the corporation's collapsible assets (in lieu of a test which would qualify as "noncollapsible" all of the value of each separate property for which one third of income realization had occurred) is now required as the "price" of qualification under the 70-30 exception.

C. Detailed Analysis

1. General Rule

Under the mechanism of §341, gain from (i) a sale or exchange of stock of a "collapsible" corporation, (ii) a distribution of its assets in complete or partial liquidation, or (iii) a capital distribution from it [117] is taxed at ordinary income rather than capital gains rates. In turn, whether or not a corporation may be characterized as a "collapsible corporation" depends upon whether such entity was "formed or availed of principally for the manufacture or construction or production of property, or for the purchase" [118] of so-called "§341" assets, including inventory (in the hands of the corporation) and other assets defined in §341(b)(3). The collapsible corporation characterization is made with a view to the corporation's liquidation, distribution to its shareholders, or sale of its shares before the realization by such corporation of "a substantial part," of the total taxable income ultimately to be derived from the property.

The approximate net dollar effect of the 2/3 rule (in contrast to the "substantial part" rule) may be illustrated as follows:

> *Example:* Corporation X, whose shareholder individual A owns all the shares at a zero basis, constructs a condominium with 100 units all of which are assumed to remain at equal value. The condominium is the sole property of the corporation. Before enactment of §65 of TRA 1984, A could have avoided ordinary income treatment if he first caused 34 units to be sold to any person (including apparently [119] an entity owned or controlled by himself) after enactment of §65, more than 67 units must be sold before a "noncollapsible" liquidation, sale, or distribution can occur (*i.e.*, before gain recognized by A can be taxed to him at capital gains rates.)

Notwithstanding enactment of §65, a liquidation, etc. nevertheless may still prove advantageous. Assume in the above example a 50 percent (federal, state and local) overall ordinary tax rate at the corporate level and a 25 percent overall capital gains rate at the individual level and that the before-tax gain on the sale of each unit is $1. In such a case, the tax at the corporate level resulting from the sale of 67 units totals $33.50. A subsequent distribution to the shareholder of $66.50, subject to a capital gains tax of 25 percent,[120] results in a net shareholder level after-tax profit of approximately $50. In contrast, prior to enactment of §65 of TRA 1984, the total required corporate level sales before liquidation of 34 units would have resulted in a corporate level tax of $17, a distribution to the shareholders of $83, and a net shareholder after-tax profit of approximately $62.00.

It may be observed that the total shareholder-corporate tax burden under the new 2/3 test approximates the individual ordinary income tax rate of 50 percent. Thus, a shareholder of a collapsible "C" corporation, (otherwise subject to an overall tax rate of 62.5 percent (50 + 12.5 percent), if all income is realized at the corporate level) may, through affirmative application of the 2/3 rule of §65,

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

generate a net after-tax profit approximately equivalent to that which would be realized if the corporation conducting the activity elected Subchapter S status.

2. Determination of 2/3 Amount

Although substitution of the "2/3" fixed fraction for the generalized "a substantial part" phrase establishes mathematical parameters for collapsible corporation status, the circumstances which enter into the determination of the amount of "taxable income to be derived from" the collapsible property remain as questions of fact, unaffected directly by the new legislation. This requires a distinction to be drawn between two very different situations. In the first situation, a corporation is engaged, on the one hand, in the business of selling a product (*i.e.*, land or inventory) where, to determine total taxable income, estimates must be made by reference to past as well as anticipated corporate experience.[121] The second situation occurs where a corporation's business involves the leasing of property (*i.e.*, an apartment house or machinery) in which an estimation is made by reference to the useful life of the corporate assets.[122] To the extent that the determination of total income requires marketplace assumptions respecting future expenses and revenues, (upon which reasonable minds may differ), the task of determining the precise date when a permissible liquidation, sale, or distribution should occur remains elusive. Indeed, since the statutory "bright line" demarcation is now a numerical threshold, the Service may be tempted to assert that the corporation has failed to achieve sufficient corporate level realization of taxable income. Thus, in any situation in which a planned "collapse" is to be effected, it appears more essential than ever that consideration be given to the elements which enter into the generation of future income and expense, in order that it may be made certain that corporate level realization in excess of the two-thirds amount has been achieved.

Note: In estimating future income in the case of a real estate project in which, for example, single family lots are sold, attention should be directed to the likelihood that the earliest lots may sell at a price per unit which is less than the prices of later lots (where sales will take place after the community has been partially populated or local improvements are provided [123] and its attractiveness established.) Inflation and "tax considerations" also may influence the value of net income to be realized in the future.[124] On occasion, a contrary problem may be presented, *i.e.*, a project may not be successful and the undeveloped lots may for the foreseeable future become property of questionable marketability, underscoring the need for carefully verified market estimations before assuming a noncollapsible event can occur.

3. Aggregation of Properties for Purposes of the 70-30 Rule

a. Statute and Legislative History

Of the three statutory exceptions [125] to the general rule of §341, whereby the shareholders (of a concededly collapsible corporation may avoid ordinary income treatment), the so-called 70-30 rule has frequently been availed of under prior law, particularly in the case of a closely-held corporation in which some, but not all, of its holdings constituted constructed property. In such a case, existing regulations under the 70-30 rule [126] establish several rather stringent tests: (i) in the case of land development, gain on an undeveloped tract of land arising from development of an adjoining tract owned by the same corporation may be attributed to the developed tract [127] and (ii) in the case of a corporation developing two realty projects, gain attributable to a previously fully constructed "collapsible" project equals the decrease in total gain on liquidation that would occur if the project had never been developed.[128] Under the second of these two tests, as pointed out in 29 T.M., *CollapsibleCorporation — General Coverage*,[129] gain attributable to collapsible assets includes gain attributable to accumulated income produced by such assets, and may even include gain attributable to accumulated income derived from formerly collapsible assets.

Despite the stringency of these tests (and one must keep in mind that these tests apply primarily to constructed property), the Service apparently found them inadequate to deal with all potentially abusive uses of the 70-30 rule. In particular, the housing industry in recent years has focused upon existing multifamily residential rental units which are purchased and then converted into condominiums. This conversion process has been well-suited to the technique of avoiding collapsibility through substantial realization at an assumed one third *"Kelley* type" level and, where more than one conversion is conducted in the same corporation, a potential "parlay" of this rule into mechanisms to permit collapsible corporation clearance under the 70-30 rule. This could have occurred through one-third substantial realization with respect to a separate project, and the subsequent attribution of such gain plus the remaining two-thirds gain on the 30 percent "good" side of the 70-30 rule fraction.

To cope with this asserted distortion of the policy underlying §341, §65 of TRA 1984 provides that in applying the 70-30 rule all property described in §1221(1) (*i.e.*, inventory, stock in trade and property held primarily for sale to customers) will be treated as a "single asset." To assure reversal of the so-called "separate project" rule, the Senate Finance Committee Report adds the following:

> "[T]he Secretary of the Treasury would be authorized to prescribe regulations describing the extent to which [1221(1) property] would be treated as a single asset in applying the 70/30 rule. The committee intends that these regulations will insure that the two-thirds realization requirement cannot be avoided where the corporation's collapsible section 1221(1) properties are less than two-thirds realized in the aggregate but where some of its collapsible properties have been two-thirds or more realized." [130]

The Senate Finance Committee then adds:

> "Thus, if the aggregate of the corporation's collapsible §1221(1) properties is less than two-thirds realized, all of the corporation's collapsible §1221(1) properties, including any collapsible section 1221(1) property that has been two-thirds or more realized, will be treated as collapsible property for purposes of the 70/30 rule. The committee intends that, for purposes of applying this aggregation under the '70/30' rule, *all property with respect to which the taxpayer has, or at any time had, a collapsible view will be treated as collapsible property. . .*" (emphasis supplied.)[131]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

In light of the unusually broad sweep of the Senate Finance Committee language, question may be raised as to whether any category of §1221(1) property can fall beyond the scope of the aggregation rule. Such a situation may be envisaged in the case of an ongoing corporation that was not created with the "collapsible view" and has engaged for 30 years in the manufacture and sale of inventory items. The corporation commences a new, collapsible, activity, such as the construction of an apartment building, with respect to which the requisite view (intention to liquidate) was held. Although gain attributable to the apartment house would be regarded as collapsible gain, the gain attributable to the ongoing business (including that referable to the ongoing items) should be exonerated if any meaning at all is to be attributed to the Senate Finance Committee Report.[132] Accordingly, if such "ongoing" gain constitutes 30 percent or more of the total gain, qualification under the 70-30 rule should occur.

In interpreting the new "one item" rule, difficulty may also be anticipated in determining the total value of disparate projects for purposes of the 70-30 computation.

Observation: In the case of, for example, a proposed liquidation "in midstream" of a realty development of one or more of several projects, an appraisal methodology will presumably adapt to the uncertainties of the sale of the uncompleted projects. It should also be considered that the valuation will be based upon disposition of all projects, completed and uncompleted to one person in one transaction (as distinguished from a piecemeal disposition). Where the corporation in question owns publicly traded stock (which generally will constitute other than collapsible property), the valuation methodology may take into account the "one sale to one person" rule but also give effect to a premium for control or, in appropriate cases, a reduction in value attributable to blockage.[133]

On the other hand, the Senate Finance Committee adds that, "Section 1221(1) property which is not collapsible property, and which never was collapsible property, need not be aggregated under this rule." [134]

With a mandate as stern as the quoted paragraph (and notwithstanding that it is unlikely that any member of the tax writing committees, much less any of the conferees, knew in detail, if at all, the full implication of the change), the Treasury Department is certain to establish widely encompassing rules.

b. *Proposed Regulations*

In proposed regulations published in the Federal Register [135] within a remarkably rapid six weeks of the date of enactment of the TRA, the Treasury Department has, in fact, proposed broad rules implementing the new aggregation requirement for purposes of the 70-30 test. Under Prop. Regs. §1.341-4(c)(4), all property, with one exception which will be described below, must be aggregated and treated as one item of collapsible property if the following two requirements are met:

(i) It must be stock in trade of the corporation or other property of a kind that would be properly included in the corporation's inventory if on hand at the close of the taxable year, or property held by the corporation primarily for sale to customers in the ordinary course of the corporation's trade or business (§1221(1) property), and

(ii) It must be described in §341(b)(1) without regard to whether the corporation has realized two-thirds or more of the taxable income to be derived from the property.

The same proposed regulation makes it clear that all property meeting the foregoing two requirements must be aggregated and treated as a single item of property even though they are separate projects. Thus, under this proposed regulation, if after aggregation the corporation has realized less than two-thirds of the taxable income to be derived from the aggregated property, the aggregated property is treated as collapsible property for purposes of the 70-30 test.

Prop. Regs. §1.341-4(c)(8), Example (1), sets forth the following illustration of the aggregation rules:

Facts: Individual A forms corporation X on January 2, 1985, and contributes $2,000,000 in cash in exchange for all the X stock. Corporation X immediately purchases for $400,000 property that is not described in §341(b)(2) or §341(b)(3) and is not stock of another collapsible corporation. By December 31, 1985, X has sold the property and has realized all the taxable income to be derived from the property, resulting in a $100,000 after-tax profit. During the same year, 1985, X also acquires for $300,000 apiece two separate tracts of land in neighboring cities, for purposes of developing each tract into lots suitable for sale as homesites and holding them primarily for sale to customers. Each tract is expected to produce $1.25 million of taxable income. A, however, intends to sell all the X stock before 2/3 of the taxable income is derived from either tract. As of December 31, 1985, X has realized $900,000 of taxable income from tract I (72 percent), but only $250,000 (20 percent) from tract II. On January 1, 1986, A sells all the X stock.

Result: Both tracts must be aggregated and treated as one item of property to determine the amount of gain on the sale of the X stock attributable to the aggregated property. Although two-thirds of the taxable income (72 percent) to be derived from tract I has been realized by X, which would have been sufficient to place it on the 30 percent good side of the 70-30 test under prior law, less than two-thirds has been realized from the two tracts in the aggregate as follows: ($900,000 + $250,000)/($1,250,000 + $1,250,000) or 46 percent. Thus, under the proposed regulations, the two tracts constitute an item of property that is placed on the 70 percent side of the 70-30 equation. Assuming that A recognizes $750,000 of gain upon the sale of the X stock, but A would have only recognized $100,000 of gain had the two tracts of land not been acquired for subdivision and sale, the gain attributable to the aggregated property would be $650,000. Because such gain is more than 70 percent of total gain recognized by A, the entire gain on the sale of the X stock is ordinary income under §341(a).

The proposed regulations, Prop. Regs. §1.341-4(c)(6), provide one exception to these aggregation rules. If the effect of aggregating §1221(1) property with other §1221(1) property is to reduce the amount of gain recognized during the taxable year with respect to stock of a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

collapsible corporation that is attributable to collapsible assets, any §1221(1) property having this effect is excluded from aggregation. The proposed regulation further provides that such §1221(1) property is not aggregated even if that same property was previously aggregated with other §1221(1) property for purposes of a prior application of the 70-30 test. The potentially harsh application of the exclusionary rule is illustrated in the following example from Prop. Regs. §1.341-4(c)(8), Example (3):

> *Example:* Individual A forms corporation X on January 2, 1985, contributing $600,000 cash in exchange for all the X stock. Corporation X immediately acquires three tracts of land in separate cities for the purpose of developing each tract into lots suitable for sale as homesites to customers in the ordinary course of business. Tract I is expected to produce $250,000 of taxable income, tract II, $50,000 and tract III, $700,000. A, however, intends to liquidate the corporation before two-thirds of the taxable income is derived from any of the projects. Thus, A has a collapsible view with respect to each of the three separate projects. By December 31, 1985, X has realized 100 percent of the taxable income from tracts I and II, but only $400,000 (57.1 percent) from tract III. On January 2, 1986, A liquidates the corporation, thereby recognizing gain. According to the proposed regulation, only tracts II and III are aggregated in determining whether they constitute a single item of collapsible property for purposes of the 70-30 test; tract I is excluded from aggregation. Because less than two-thirds of the taxable income has been realized from those tracts in the aggregate (($50,000 + $400,000)/($50,000 + $700,000) or 60 percent), tracts II and III constitute an item of property that is collapsible. If more than 70 percent of A's gain is attributable to that aggregated item, all of A's gain is subject to §341(a).

Comment: The proposed regulation's exclusionary rule, as interpreted in the foregoing Example, has no basis in the legislative history; in fact, it may be considered contrary to specific language in the Senate Finance Committee Report. In the passages previously quoted from the Report, the Finance Committee indicated that aggregation should be required only "where a corporation's collapsible §1221(1) assets are less than two-thirds realized in the aggregate. . ." Here, 70 percent of the income from the aggregated properties (($250,000 + $50,000 + $400,000)/($250,000 + $50,000 + $700,000)) was realized, a percentage that clearly satisfies the two-thirds test, yet the proposed regulation and the Example provide for aggregation. Moreover, even assuming aggregation should be required in these circumstances, the selective aggregation performed in the Example is at odds with legislative intent. As previously mentioned, the Finance Committee stated an intention that all property with respect to which the taxpayer has, or at any time had, a collapsible view should be treated as collapsible property for purposes of the 70-30 aggregation requirement. In the Example, the shareholder had an intention to liquidate the corporation prior to the realization of two-thirds of the taxable income to be derived from *any* of the projects. Thus, until two-thirds of the taxable income from tract I was realized, that tract was a collapsible asset in the corporation's hands, even though by the time of liquidation that tract (as well as tract II) ceased to be collapsible by reason of the two-thirds test. Accordingly, under the Finance Committee language, tract I should be aggregated with tracts II and III for purposes of the 70-30 test. If this were done, then 70 percent would be realized from the aggregated properties, thereby satisfying the two-thirds test. The aggregated properties would then be placed on the 30 percent good side of the 70-30 fraction. However, notwithstanding the realization of two-thirds of the taxable income on an aggregate basis and the Finance Committee's pronouncements concerning aggregation, the proposed regulation requires aggregation even though the two-thirds test is met in the aggregate as well as selective exclusion of a formerly collapsible asset under the aggregation test when that aggregation would be beneficial to a taxpayer.

To preclude taxpayers from using separate corporations to avoid the impact of the aggregation rule, Prop. Regs. §1.341-4(c)(5) provides for the aggregation of §1221(1) assets held by separate but related corporations, where one of the purposes of forming or availing of the related corporation was to avoid the application of the aggregation rules. The proposed regulation leaves unanswered what degree of "relatedness" must exist before such aggregation will occur. In the two examples in Prop. Regs. §1.341-4(c)(8) illustrating this related corporation rule, the related corporations formed to avoid aggregation are wholly-owned subsidiaries of a parent corporation. Presumably, however, less than 100 percent control will also suffice in the appropriate circumstances for the aggregation of assets held in separate corporations, but no indication is given respecting any threshold amount of control that must exist. Also left open to question is the applicability of this rule in the case of brother-sister corporations.

One further issue that merits attention in the final regulations but is not addressed in the proposed regulations is the relationship of the three-year exemption for purchased property in §341(b)(3) to the aggregation rule. Under §341(b)(3), §1221(1) property that is purchased by a corporation is not treated as collapsible property under §341(b)(1) once such property has been held for at least three years, even if a collapsible view existed with respect to such property. In view of the Senate Finance Committee statement concerning the aggregation of all §1221(1) property with respect to which the taxpayer at any time had a collapsible view, §1221(1) assets held for at least three years are arguably subject to aggregation for purposes of the 70-30 rule notwithstanding that they would not be treated as collapsible assets for any other purpose of §341.

Clarification of the new rules enacted in §65 on the Service's existing ruling policy should also be expected. Under this ruling policy,[136] rulings are not ordinarily issued on the collapsible status of a corporation unless the following three conditions are satisfied: (i) the corporation has been in existence for at least 20 years or it has clearly demonstrated that it has realized a substantial part of the taxable income to be derived from manufacturing, producing, or purchasing property as defined by §341(b)(1)(A) and as described in Rev. Rul. 72-48, 1972-1 C.B. 102, (ii) the corporation has had an aggregate change in the shareholders' interest of not more than 10 percent (excluding transfers among family members or §303 redemptions) during the period of 20 years or period of realization of a

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

substantial part, and (iii) has conducted substantially the same trade or business during the applicable period. Presumably, the Service will continue this ruling policy after making the obvious modification of substituting the two-thirds test for the substantial part test that presently is provided as an alternative to the 20-year requirement.

While it may be anticipated that some taxpayers will seek to circumvent the new two-thirds test of substantial realization by forming separate corporations for limited areas of real estate, for example, and thereafter sell the shares of each corporation so incorporated, attention should be directed to the decision in *Herman Katz*.[137] In that case, successive sales of shares caused the selling shareholder to be treated as a person holding shares for sale to customers, notwithstanding the fact that he was not a security dealer.

D. Effective Date

Act §65(d) provides that the amendments made by §65 are effective for sales and exchanges, and distributions made after the date of enactment, July 18, 1984. In light of the use of the word "made" a question can be raised in the following situation:

Example: Assume a real estate construction corporation, otherwise collapsible, sells one-third of its properties (sufficient to meet the *Kelley* test of substantial realization) on June 17, 1984. On June 18th, the sole shareholder of the corporation sells all of his stock, receiving 10 percent cash and 90 percent in the form of a note payable January 1, 1985. Such a person may contend, notwithstanding certain opposition from the Commissioner,[138] that because the "sale" occurred before the effective date of TRA §65, the note part of the proceeds (including the installment payments due after the effective date) are not subject to the new law. While there is no doubt that realization of 90 percent of proceeds occurred after the effective date, the position may be taken the effective date of the sale (*i.e.*, when title passed and benefits and burdens of ownership were transferred) occurred after the effective date.

VII. Recognition of Gain Upon Distribution of Partnership Interest by Corporations

A. Introduction

1. Background

Section 311(a) provides that a corporation does not recognize gain upon distribution of property with respect to its stock except where the distribution includes certain defined property. The property with respect to which gain is recognized under §311 is LIFO inventory, property subject to liabilities which exceed the adjusted basis of the property, and appreciated property distributed in redemption of stock.[139] In addition, the nonrecognition provision of §311 is specifically inapplicable to distributions of installment obligations which trigger recognition of gain under §453B(a).[140]

Section 336 provides that corporations do not recognize gain upon distribution of property in complete liquidations with the exception of LIFO inventory and installment obligations subject to §453B(a).[141]

Section 337(a) provides that a corporation does not recognize gain upon the sale of property if the sale occurs within a twelve-month period following the adoption of a plan of complete liquidation and if the assets of the corporation are distributed in complete liquidation within the twelve-month period. Specifically excluded from the nonrecognition treatment are sales of inventory (other than bulk sales),[142] installment obligations arising from non-bulk sales of inventory,[143] and installment obligations arising from sales of non-inventory property where the sale occurred prior to adoption of the plan of complete liquidation.[144] Section 453B contains similar provisions with respect to transfer of installment obligations arising from §337 liquidations.[145]

Section 751 provides that the amount of money or the fair market value of property received in exchange for a partnership interest which is attributable to unrealized receivables or substantially appreciated inventory is treated as an amount realized upon sale or exchange of property which is not a capital asset. Unrealized receivables are defined to include amounts subject to recapture under §§1245 and 1250.

Under these sections, it is clear that corporate distributions of the defined property will trigger recognition gain and that sales or exchanges of partnership interests attributable to §751 property will trigger recognition of gain as ordinary income. However, it has not been clear that gain is recognized upon a distribution by a corporation of a partnership interest (where the partnership holds property defined in §§311, 336 or 751) or the sale of a partnership interest in a §337 liquidation (where the partnership holds assets which would not qualify for §337 treatment if directly disposed of). The Claims Court recently held that distribution of a partnership interest by a corporation is a disposition of the partnership property for purposes of recapture under §1245.[145]

In an analogous situation, the Internal Revenue Service has taken a negative position on the issue. In Revenue Ruling 60-352, 1960-2 C.B. 208, the Service ruled that a taxpayer recognized gain on the donation of his limited partnership interest to an exempt organization where the partnership held installment obligations arising from the sale of subdivided land. The Service stated:

> Thus, while the partnership interest generally may be regarded as constituting a partner's interest in the profits and surplus of the partnership, the fundamental principles of Federal income taxation require that an interest in income earned by the partnership which has not been realized, or has not yet been subjected to taxation, be treated as distinct from any "partnership interest" which is recognized as a capital asset for income tax purposes. Therefore, unrealized or untaxed rights to partnership income may be transferred with, but not as a part of, the partnership interest which constitutes a capital asset.
>
> * * *
>
> Based on the foregoing, it is held that a transfer of a limited partner's interest in a partnership appurtenant to which is a right to share in unrealized partnership income reflected in installment obligations receivable by the partnership constitutes a transfer of a capital asset coupled with a disposition of such installment obligations subject to the provisions of section 453(d) of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the Code. To the extent that the transaction constitutes a disposition of installment obligations receivable, the gain is taxable to the transferor as ordinary income.[147]

2. Outline of New Provisions

TRA §75 adds Code §386 which provides that upon distribution of a partnership interest or sale of an interest in a §337 liquidation, the corporation will recognize gain attributable to the corporation's share of the partnership's "recognition property." Recognition property is the property which is specifically excluded from nonrecognition treatment under §§311, 336 or 337. Where tiered partnerships are involved, §386 provides that each partnership is treated as owning the recognition property of the partnerships in which it owns interests.

3. Effective Date

New §386 is effective with respect to distributions, sales and exchanges made after March 31, 1984, in taxable years ending after that date.

B. Detailed Analysis

1. Distributions

Section 386(a) provides that for the purpose of determining gain to a distributing corporation the distribution by a corporation of a partnership interest shall be deemed a distribution of the corporation's proportionate share of any recovery property held by the partnership. Where the distribution is made other than in complete liquidation, recognition property is the property excluded from nonrecognition under §311: LIFO inventory, property subject to liabilities in excess of basis, appreciated property distributed in redemption of stock, and installment obligations subject to recognition of gain upon disposition under §453B. The proportionate share is determined in accordance with the principles of §751. Additionally, §7701(g) provides that in determining gain or loss with respect to property, fair market value is deemed to be not less than the amount of any outstanding indebtedness on the property.

Example: Corporation A owns a 25 percent limited partnership interest in Partnership X. X owns an office building with outstanding nonrecourse indebtedness of $1,000,000 and a basis (after adjustments for depreciation) of $500,000. A distributes its interest in X to its shareholders as a dividend. Since the nonrecourse indebtedness exceeds the adjusted basis of the building, the building is recognition property under §§311(c) and 386(c)(1). Under §311(c), A would recognize 25 percent of the $500,000 difference between liability and basis (or $125,000 of gain) upon the distribution.

Example: Rather than holding an office building, X holds stocks and bonds with a cost basis of $100,000 and a fair market value of $150,000. In complete redemption of one stockholder's shares, A transfers a 15 percent interest in X. A will recognize $7,500 in gain upon the redemption.

Where the distribution is in complete liquidation, only LIFO inventory and installment obligations qualify as recognition property.[148] Thus, if each of the two distributions above had occurred pursuant to the complete liquidation of A, A would not recognize any gain.

In both distribution situations, if the partnership holds an interest in another partnership which holds recognition property, the recognition property is attributed through the intermediate partnerships to the corporation.[149] Thus, similar to the changes discussed in Chapter 37 (III), tiered partnerships may not be used to avoid the operation of §386.

Similar rules are to apply by regulation to interests in trusts.[150]

2. Sales Pursuant to §337

Section 386(b) provides that for purposes of determining the amount and character of gain recognized on a sale of a partnership interest in a §337 liquidation, the corporation is deemed to have sold its proportionate share of partnership recognition property. In the case of a §337 liquidation, recognition property consists of property described in §337(b): inventory, installment obligations arising from inventory, and installment obligations (from whatever source) attributable to sales occurring prior to adoption of the plan of complete liquidation.[151]

Similar rules are to apply to interests in trusts.[152]

3. Distribution of Partnership Interest Treated as Exchanges

Section 761(e) treats partnership or corporate distributions of partnership interests as exchanges for purposes of §§708, 743 and any other section of subchapter K specified by regulation. Thus, if a corporation holds a 50 percent interest in a partnership and distributes the partnership interest to its shareholders, the partnership terminates. A similar problem will occur where tiered partnerships are disassembled.

Observation: Termination can obviously have an unfortunate impact on the nondistributing partners. Members of partnerships with corporations or partnerships holding significant percentages of interest will want to be sure that restrictions against distribution are present in the partnership agreement.

Note: The main focus of this change was with respect to the §743 basis adjustment. Neither the House nor Senate bills contained the §708 provision or the discretionary provision for the Treasury Department. Both provisions were added by the Conference Committee.

[47] In 1983, several deduction problems and proposals involving dividends received were set forth by the "staff of the Senate Committee on Finance in *The Reform and Simplification of the Income Taxation of Corporations*, S. Print 98-95, 98th Cong., 1st Sen. (Sept. 22, 1983). These problems included corporations making leveraged investments in preferred stocks; offsetting common and preferred stock; making stock purchases immediately prior to a dividend record date; and the investment bias created against noncorporate forms of investment, including partnerships. *Id.* at 47-48. The proposals would have extended the holding period for dividend paying stock to the then applicable one year long term capital gain treatment holding period; disallowed 85 percent of the interest on the debt incurred to finance the purchase or to carry the stock; and increased the basis in stock sold short in lieu of receiving dividends. *Id.* at 78-79. None of these provisions were enacted in these forms in the 1984 Act.

Comr.*, 55 T.C. 257 (1970), acq. 1972-2 C.B.-1, the Commissioner argued that a corporation was collapsible where it was developing three projects from which the firm had realized over 90 percent of the income to be realized from the first two projects and had realized 56 percent from the third. Frederic Nicholson, in 29 T.M., *Collapsible Corporations — General Coverage*, raises the possibility that the Commissioner viewed the corporation as collapsible because the income from the first two projects was applied to the construction of the third project, which the Commissioner argued to be collapsible property. Conceivably, the Commissioner considered gain on the first two projects to be on the 70 percent bad side of the 70-30 equation since its income was applied to a collapsible project. The 70-30 issue, however, was not addressed in the case, since the Tax Court held that the third project was *ab initio* "noncollapsible."

[130] S. Rep. No. 169, *supra* note 107, at 211.

[131] *Id.* at 211-212.

[132] *See, e.g.*, Rev. Rul. 56-244, 1956-1 C.B. 176, and Rev. Proc. 84-39, I.R.B. 1984-18, 7.

[133] *See, e.g., Champion v. Comr.*, 303 F.2d 887 (1962), rev'g 19 T.C. 253 (1960) which holds that the depressing impact of a sale of a large block of stock on the value of the stock must be applied in measuring the value of the stock; that is, the impact of "blockage" must be taken into account. This concept which is especially important in estate and gift taxation is examined in detail in the following Tax Management Estate, Gift and Trust portfolios: 248 T.M., *Blockage;* 176 T.M., *Gifts — Determination of Tax* A-6; and 132 T.M., *Valuation of Assets* A-7.

I. Liquidation Requirement in "C" Reorganizations [Act §63]

A. Introduction

Section 63 of TRA 1984 continues the piecemeal revision of the politically noncontroversial but intricate corporate reorganization provisions of the Code which was first commenced in the 1982 revision of corporate liquidation rules through enactment of §338.[1] Although an effort at technical refinement doubtless underlay the introduction of §338 of the Code, it has become increasingly clear to the Congress in recent years that the acquisition fever of the 1980's, propelled by a combination of low capital gains rates, ACRS allowances, global availability of capital, and deduction of interest costs, have placed unanticipated stress upon the operation and interplay of the various reorganization and related provisions of the Code. In response to the foregoing, together with growing public awareness of "aggressive" interpretations of Subchapter C, Congressman Fortney H. Stark,[2] introduced H.R. 6295 [3] in 1982, *"The Corporate Takeover Act of 1982."* Public hearings followed in the House.[4] The Senate Finance Committee considered similar issues as part of its "comprehensive look at the fundamental rules of corporate taxation." [5] Although the House Ways and Means Committee did not act directly on the Stark Subcommittee recommendations in its 1982 legislative action,[6] the Senate Finance Committee considered several Subchapter C issues, including §63, which now appear in the TRA of 1984.[7]

The perceived anomaly at which §63 is principally directed is the asserted opportunity to convert dividends into returns of capital. The circumstance in which this could have occurred was described by the Senate Finance Committee staff as follows:

> "The complexity under the statute concerning qualifying consideration [in a corporation acquisition] is rivalled by the rules concerning the disposition of unwanted assets and the survival of the acquired corporation. Under a statutory merger the acquired corporation terminates by operation of law. In the case of an asset acquisition — a so-called C reorganization — the acquired corporation may be continued, so that the corporate shell may survive.
>
> *Example III-2:* T has a capital loss carryforward of $2. T's assets have a basis of $6 and a fair market value of $12. P acquires all of the assets of T in exchange for common stock of P with a fair market value of $10 and cash of $2. T distributes all of the stock of P to its shareholders, and invests the cash in common stock of unrelated corporations. In year 2, T adopts a plan of complete liquidation and distributes the portfolio common stock to the T shareholder. The gain recognized by T in year 1 is offset by the loss carryforward." [8]

The Senate Finance Committee staff also felt the relatively narrow statutory objective of §368(a)(1)(C) (to facilitate nontaxable acquisitions in states in which uniform merger or consolidation rules were not enacted) was capable of being thwarted through the use of C reorganizations to accomplish "divisive" reorganizations without the constraints intended to be applicable to such provisions.[9] As described by the Senate Finance Committee:

> "Different provisions [other than §368(a)(1)(C)] are intended to apply to divisive transactions. The committee is concerned that since a distribution by the transferor corporation of all its assets is not required in connection with a C reorganization, and after such a reorganization the transferor may be able to engage in an active trade or business and not merely serve as a holding company for its shareholders' interests in the acquiring corporation, transactions that are somewhat divisive in nature can qualify as reorganizations without qualifying under the provisions generally applicable to divisive transactions.
>
> ". . . the C reorganization provisions were intended to apply to transactions that resemble, in substance, statutory mergers or consolidations. In the case of a statutory merger or consolidation, the transferor is liquidated by operation of law. The committee is concerned

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

that substantially similar transactions should be treated consistently for Federal income tax purposes." [10]

Section 63 achieves the Congressional (and Congressional staff) objective noted above.[11]

B. Overview

Section 63 of TRA 1984 contains three components: under the first, characterization of a corporate acquisition as a C reorganization is denied unless the transferor corporation, in pursuance of the plan of reorganization, distributes the consideration which it receives (in stock, securities and other properties) received from the acquiring entity, together with the transferor corporation's "other properties."

The second component permits a waiver of the "total distribution" requirement of the first rule, in situations not elaborated in the statute, which are to be authorized by the Secretary by regulation,[12] and which can occur subject to "any condition" which the Secretary may prescribe. The Conference Report emphasizes, however, that such waivers will be granted only "if a distribution would result in substantial hardship, [and that] as a general rule a waiver is to be granted only on the condition that the transferor corporation and its shareholders be treated as if the retained assets are distributed and then contributed to the capital of a new corporation." [13]

Under the third component (which adds §312(h)(2) to the Code), the Secretary, in a reorganization under §368(a)(1)(C) or (D) is directed to make a "proper allocation" of the acquired corporation's earnings and profits between the acquiring corporation and the acquired corporation (or to any corporation in control of the acquired corporation immediately before the reorganization.) According to the Conference Report, the conferees "anticipate" that the regulations will also provide consistent rules for A, C and nondivisive D reorganizations. The conferees also suggest that the earnings and profits allocation regulations under §355 [14] (relative to corporate separation) will be reconsidered.

C. Detailed Analysis

1. General Rule of Operation

In adding yet another subparagraph to the various "special rules" of §368(a)(2), (which elaborate upon the basic reorganization description provisions of §368(a)(1)(C)), §63 of TRA 1984 further circumscribes the circumstances in which a C reorganization can occur.[15] Under such new provision, §368(a)(2)(G), a transaction otherwise qualifying as a nontaxable C reorganization will "fail" (and thereby become taxable to the corporate transferor and its shareholders who receive transferor corporate shares) unless the transferor corporation (*i.e.*, the target) distributes to its shareholders: (i) the stocks, securities and "other properties" which it receives under the plan of reorganization, and (ii) all of its other properties.

The total distribution rule of new §368(a)(2)(G) seems intended to parallel in substance (although not in precise language) the required distribution rules of §368(a)(1)(D).[16] Under this latter provision, a transaction can qualify as a D reorganization only if "... in pursuance of the plan [of reorganization], stock or securities of the corporation to which the assets are transferred are distributed in a transaction which qualifies under §§354, 355, or 356." [17] The language of §368(a)(2)(G) may tolerate, however (as indeed the courts and the Service have indicated with respect to the less specific circumstances of §368(a)(1)(D)) [18] retention by the transferor of limited assets in an amount not sufficient to frustrate the general objective of both sections — which will permit satisfaction of all liabilities of the transferor.[19]

Although the Senate provision would have required that the transferor satisfy the assets distribution "within a twelve-month period beginning on the date of the acquisition," [20] the rule as finally enacted simply mandates that the distribution occur "... in pursuance of the plan of reorganization." [21] Thus, the law as finally enacted is not only less explicit than the Senate language; but may in fact, allow more time in absolute terms within which to effect a qualifying distribution.

Observation: Assume a C reorganization in which, under the plan, final distribution of items required to be distributed can take place only after state regulatory clearances have been obtained. For reasons beyond the control of the distributor, final distribution does not occur for a period of eighteen months. The transaction would appear to qualify as a C reorganization notwithstanding the rules of §368(a)(2)(G) in the light of the unavoidable delay in effecting final distribution. On the other hand, if the regulatory clearances were delayed — even if for reasons beyond the transferor corporation's control — for an inordinately long time (such as four years or more), it would appear that a question could be raised as to whether the transaction was in fact finally implemented pursuant to the initial plan of reorganization or pursuant to a subsequent arrangement.

2. Waiving of the Total Distribution Rule

Section 368(a)(2)(G)(ii) authorizes (but does not require) the Secretary to "waive" the required distribution rule "... subject to any conditions the Secretary may prescribe." [22] In elaborating upon this provision, the Conference Report states that the conferees "endorse" the Senate Committee report language which indicates that under regulations exceptions to the required distribution rule may include circumstances in which "substantial hardship" will occur as a result of a forced distribution "... such as the loss of a valuable nontransferable charter ..." [23]

Note: An example of substantial hardship may include a situation in which a corporate franchise to operate in a certain jurisdiction would be permanently forfeited unless retained by the transferor corporation. In such a case, the parties to the reorganization could agree that the transferor corporation will remain in existence solely for the purpose of protecting the viability of the charter. Under those conditions (and assuming that the corporation has no other activities or assets), the transaction would appear to qualify as a C reorganization.

Notwithstanding the situation in which certain assets may be retained for an extended period (or even permanently, as indicated above), the Conference Report adds (without, however, statutory cognizance) that in any situation in which a waiver of the total distribution rule occurs, the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

availability of the waiver will be "conditioned" upon treating the transferor and its shareholders as if the assets to be retained have been distributed to the transferor's shareholders and thereafter contributed to the capital of the firm or (as the Conference Report states) to "a new corporation." [24] In such event, the legally retained assets would, for tax purposes, be owned by a party other than the legal owner with a presumed carryover basis to the new corporation. Although it is likely, in such a case, that the shares of the transferor corporation would also have been transferred to the transferee, the difference between the legal and tax ownership of the retained properties may require reconsideration of tax and local law. There is, for example, no exoneration from the requirement of filing an income tax return, modified or otherwise specially identified, presumably for the transferor during the subsequent years in which it operates solely as a title holding company. Hopefully, the regulations will treat this issue.

Doubtless other situations beyond those referred to in the Conference Report will be described as possible exceptions to the required distribution rule. Some of those which may be envisaged in addition to a delay attributable to regulatory rules, include other unavoidable external circumstances such as a cloud on title which precludes transfer of assets; the assertion of third party claims for contract (respecting which the transferor remains beyond the party's control) which precludes completion of the transaction within the time frame contemplated under the plan.

3. Treatment of Earnings and Profits of the Transferor Corporation

Section 63(b) of TRA 1984 adds paragraph (2) to §312(h), the purpose of which is to establish the authority of the Secretary to allocate earnings and profits in a "proper" manner among constituent corporations in both C and D reorganizations. Although the statute as finally enacted limits itself to a delegation of authority to promulgate regulations, the Conference Report makes clear that the transferor corporation's earnings may be allocated "between and among" the (i) transferor and (ii) a corporation which, immediately before the transaction, controls the transferor and (iii) the acquiring corporation in a C reorganization.[25] The Senate Finance Committee Report also states that "among other things" regulations will prescribe rules for allocation in situations in which ". . . one corporation owns 80 percent or more" of the transferor before the transaction.[26]

In referring to a corporation "in control" [27] of the transferor before the transaction, as one of the persons to which earnings and profits may be ascribed, consideration was apparently given by the conferees to a situation in which boot received by a "controlled" transferor would become subject inappropriately to the dividends received deduction. Alternatively, the converse situation may obtain, in that where appropriate, capital gains treatment to the controlling corporate shareholder may be required. Presumably, the earnings and profits allocation rules will take these factors into account.

The effect of the foregoing is to grant the Treasury virtually unlimited authority to ascribe earnings and profits to any of the constituent corporations in such a manner as will implement the Senate Committee and Conference Report objectives. This precludes situations in which the transferor corporation can thereby effect after a transfer in a C reorganization capital, in lieu of dividend, distribution on the grounds that all of the earnings, on hand before the transaction, have been transferred to the transferee. Regulations may accordingly be anticipated which, in general, will assure that earnings and profits will "follow" the assets to which they were related. On the other hand, notwithstanding that the earnings and profits are deemed to be transferred as of the closing date of the transfer of the assets to the acquiring corporation in a C reorganization,[28] a subsequent distribution of boot, pursuant to the plan of reorganization should be taxed to the transferor's shareholders as if such distribution had been made prior to the asset transfer, subject to the constraints of §356, and to the extent of the earnings and profits of the transferor.[29] Of course, in determining the amount of earnings and profits which are "inherited" by the transferee any amount first "treated as a dividend" will reduce such inherited amount. While such a rule eliminates double counting in dividend situations, neither the statute nor the Committee Reports treat the case in which in a C reorganization with boot, all or part of which is taxed as a capital gain.[30] In that case, presumably, an allocation can, and will be, made under authority of the regulations with a portion but not all of the earnings and profits of the transferor allocated to the transferee.

4. Planning Considerations

The direct consequences resulting from the enactment of §368(a)(2)(G) to C reorganizations are of course, evident. For the first time since the enactment of the 1954 Code, transferor shareholders in both acquisitive and divisive reorganizations will be required, as a condition to nontaxable treatment, to receive all of the assets of the transferor (less, of course, assets used to satisfy claims). Thus, if the transferor or its shareholders desire to retain assets of the transferor in corporate solution, a taxable transaction may prove to be the "tax price" resulting from the retention of assets.

Note: Circumstances sometimes are presented when the "tax cost" of corporate level recapture of investment tax credit and depreciation, together with gain from the sale of assets, may be of a minimum amount (or the corporate transferor may have an inherent net corporate level loss.) If a taxable transaction is in fact effected in a situation such as this, the earnings and profits of the transferor would not appear to be inherited by the purchasing transferee.

On the other hand, while the Senate version of §63 specifically allowed the retention of assets to meet claims [31] no such provision is contained in the law as finally enacted. Presently, the regulation will make reasonable allowance for this form of asset retention. If in such a case the transferor makes a "conservative" provision for such an event, which proves ultimately to constitute a greater amount than has been actually needed, the existence of such excess and its later distribution could: (a) destroy the "C" reorganization, or (b) be treated, by definition as part of the transaction and therefore "boot."

Notwithstanding the constraints of §368(a)(2)(G), certain other limited opportunities may exist to preserve corporate level cohesiveness. For example, assume that a closely

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

held corporation intends a transfer of its assets to a transferee in a transaction otherwise qualifying as a C reorganization desires in addition to retain the consideration received from the transferee (or its parent corporation) at the corporate level. In such a case it may be possible for the corporate and individual shareholders of the transferor, immediately prior to the transaction, to transfer their shares to a newly formed holding company which then becomes the corporate transferor's shareholder. Although, in such case, it seems clear that the earnings and profits of the transferor corporation will be inherited by the transferee, if the shareholders of the newly formed holding company are identical with those of the transferor, no question can be raised as to whether a distribution for tax purposes has in fact, occurred. Such result may differ, however, if a substantial number of shareholders of the transferor corporation differ (for example, if new persons purchase shares in the holding company).

Finally, reference should be made to the interaction of §311(d)(1) as amended by §54 of TRA 1984 and the new C reorganization provisions. Henceforth, to the extent that a transferor corporation retains or receives from a transferee appreciated property subject to the rules of §311(d)(1), corporate level gain will be recognized to the transferor on the distribution of the property. Although the recognition of such gain would not appear to impinge upon the otherwise generally nontaxable treatment of the reorganization, transferor shareholders will be required to take the cost of the new corporate level gain rules into account, or otherwise to avoid retention or receipt of appreciated property.

5. *Effective Date*

The "trigger points" on application of §63 are the dates of adoption of a plan of reorganization and the date of enactment of TRA 1984. Thus, C reorganization transactions effected pursuant to plans adopted after July 18, 1984 fall within the provisions of the new law. By the same token, transactions concluded after July 18, 1984 pursuant to a plan of reorganization adopted on or before such date also avoid the newly enacted constraints. Of course, the determination of the date upon which a plan of reorganization has been adopted is a question of fact, and while the new law does not require that such a plan be adopted in writing, taxpayers desiring to establish a plan adoption date on or before July 18, 1984, (particularly if the plan is an unwritten one), will bear the usual burden of proof with respect to the facts concerning the date of such adoption.

II. Revised Control Requirement in "D" Reorganizations [Act §64] [32]

A. Introduction

The problem of dividend "bail-outs" and stepped-up basis effected through the technique of liquidation of a corporation by its reincorporation has plagued the courts, the Treasury Department and the Internal Revenue Service since the early days of the income tax.[33] This is a result of the limitless patterns whereby a majority or a significant portion of prior shareholders of a corporation may emerge as continuing owners of the legally new, but economically the same, enterprise, notwithstanding the liquidation event. The enactment of §64 of TRA 1984 signals Congress's apparent belief that the existing legislative and judicial arsenal to be inadequate to cope with this capital gains-dividend arbitrage and asset basis step-up. Additionally, recent Code rate and structural changes (such as truncation of income tax rates at 50 percent and reduction of corporate double tax effect through expansion of the scope of Subchapter S provisions) have been insufficient to deter motivation for many liquidation-reincorporation transactions.

Indeed, the TEFRA legislation of 1982 circumscribed F reorganization parameters so that a transaction can qualify under §368(a)(1)(F) [34] only if a single corporation (*i.e.*, "one corporation" [35]) is redomesticated. This served merely to complicate the liquidation and reincorporation issue, since it effectively removed the F reorganization from the Commissioner's attack devices.

Section 64 of TRA 1984 engages the problem by defining "control" [36] for purposes of §368(a)(1)(D) by reference to §304, and thus on the basis of a 50 percent test (with attribution under §318), rather than in terms of the 80 percent test of prior law. Such an approach was envisioned and suggested over 25 years ago by the Subchapter C Advisory Group.[37]

In its monograph *The Reform and Simplification of the Income Taxation of Corporations* [38] prepared in the fall of 1983, the staff of the Senate Finance Committee set forth these illustrations of the problem:

> *Example III-9:* X corporation has a basis of $100 in its depreciable assets, cash of $100, potential recapture liability of $100; the fair market value of its assets is $300. X corporation has earnings and profits of $100.
>
> X liquidates. Six months after the liquidation (not pursuant to a plan), an unrelated co-venturer, B, is found. All of the business assets are contributed to new Y corporation, in exchange for 75 percent of the stock. B contributes $100 in exchange for a 25 percent stock interest.
>
> Because the stock ownership requirements for a D reorganization are not satisfied and because of the absence of a plan, the transaction may well survive challenge as a liquidation-reincorporation, and it will have bailed out the $100 of earnings and profits at capital gains rates.
>
> *Example III-10:* Same facts except B is A's spouse.

Because no attribution rules apply for determining whether the D reorganization stock ownership tests are satisfied, the preceding example will also likely escape being held to be a liquidation-reincorporation.[39]

The staff response to the foregoing problem is reflected in a paragraph in a later portion of the report:

> "Taxpayers' ability to engage in liquidation-reincorporation transactions would be restricted in transactions involving corporations with overlapping share ownership of 50 percent or more, because no step-up in the basis of acquired assets would be permitted. In determining whether such common stock ownership exists, the attribution rules under section 318 would apply." [40]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Similarly, in testimony before the Senate Finance Committee regarding revisions of Subchapter C, Deputy Assistant Secretary Ronald A. Pearlman stated:

> "We are supportive of the acquisition proposals primarily because they will bring consistency and symmetry to corporate transactions, which we do not believe is present in current law, and will minimize the significance of form rather than maximize that significance as is present under current law." [41]

Finally, whether or not the statutory lowering of the reincorporation threshold from 80 to 50 percent coupled with attribution will in fact suffice to preclude so-called abusive situations in the future can be determined only after the significance of the following paragraph concerning §64 changes contained in the Conference Report becomes fully apparent:

> Under the conference agreement, control means the ownership, directly or indirectly, of stock possessing at least 50 percent of the total combined voting power of all classes of stock entitled to vote, or at least 50 percent of the total value of all shares of all classes of stock. The conferees believe that by taking value into account this definition increases the utility to the Internal Revenue Service of the D reorganization provisions as a means of preventing taxpayers from bailing out earnings and profits at capital gains rates in liquidation-reincorporation transactions.

In addition, the conferees wish to clarify that they do not intend that recharacterization as a D reorganization under this provision be the exclusive means for the Service to challenge liquidation-reincorporation and similar transactions. For example, it is not intended that this provision supercede or otherwise replace the various doctrines that have been developed by the Service and the courts to deal with such transactions. *See, e.g.*, Rev. Rul. 61-156, 1961-2 C.B. 62; *Telephone Answering Service Co. v. Comr.*, 62 T.C. 423 (1974), aff'd, 546 F.2d 423 (4th Cir. 1976), cert. denied, 431 U.S. 914 (1977); and *J.E. Smothers v. U.S.*, 642 F.2d 894 (5th Cir. 1981)." [42]

B. Overview

Section 64, not itself an operational provision, changes the definition of "control" for the purposes of nondivisive reorganizations described in §368(a)(1)(D) by reducing the required share ownership from 80 percent to 50 percent. This is accomplished by incorporating (by reference) the standards for "control" set forth in §304(c). Under §304(c), control is defined to mean ". . . the ownership of stock possessing at least 50 percent of the total combined voting power of all classes of stock entitled to vote, or at least 50 percent of the total value of shares of all classes of stock." [43]

In determining ownership percentages the constructive ownership rules of §318 are fully applied, and broadened (as occurs under §304(c)), so that the 50 threshold ownership percentages in attributing ownership to and from a corporation are eliminated.[44] Thus, the threshold ownership test may not be avoided, as described in the staff example III-10, *supra*, by causing shares of the transferee corporation to be owned by a spouse or any other individual within the attribution rules of §318.

Example: Individual A, who owns one hundred percent of the stock of corporation X, transfers such shares to a new corporation, Y, whose shares are owned as follows: A — 40 percent, B (an individual unrelated in all respects to A) — 40 percent, and C (a partnership of which A is a 50 percent partner) — 20 percent. Under the above factual circumstances, A is treated as in "control" of corporation X because the threshold control requirement of §368(i)(1) is reduced from 80 percent to 50 percent and the constructive ownership rules of §318 are applied. Thus, although A in the described example holds direct ownership of only 40 percent, his 50 percent ownership in partnership C causes half of the shares of such partnership (*i.e.*, 10 percent) to be attributed to him, causing his actual and constructive share ownership to reach the 50 percent threshold level.

In addition to §64, §63 of TRA 1984 adds a new provision (§312(h)(2)) to the Code, directing the Treasury to prescribe by regulation the "proper allocation with respect to the earnings and profits" of the constituent properties in a D, as well as a C, reorganization. Thus, in a typical "liquidation-reincorporation" D reorganization, to the extent that assets are retained by the transferor in such a transaction, an appropriate percentage of the transferor's earnings and profits attributable to the transferor's assets will remain with the transferor to assure dividend treatment if and when a corporate distribution from the transferor is made.[45]

C. Detailed Analysis

1. In General

Apart from its use in corporate separations (*i.e.*, a corporate spin-off, split-off or split-up [46]), the D reorganization mechanism was also designed to enable a corporation to effect a "practical" redomestication of substantially all of its business whether or not in a qualifying reorganization under §368(1)(F) without income tax effect at either the shareholder or corporate level. The possibility of overlap between §368(a)(1)(D) and other Code provisions was taken into account, to a limited extent, in 1954. Thus, §368(a)(2)(A) prescribes that if a transaction could have been described as both a C and a D reorganization, such a transaction is classified as a D reorganization. This factor (coupled with a requirement, under §368(a)(1)(D), that a D reorganization must also meet the requirements of §354, §355, or §356), was intended to assure that in the case of a nondivisive D reorganization the transferee corporation would acquire "substantially all" of the transferor's assets and that stock, securities or other property received by the transferor from the transferee, as well as properties retained by the transferor, would be distributed in pursuance of the plan of reorganization to the transferor's shareholders.[47] Other areas of overlap, not taken into account in 1954, have been the subject of more recent legislation. Thus, a nondivisive D reorganization involving more than one corporation often alleged by the Service to constitute an F reorganization was eliminated by TEFRA.[48] And, in the case of a reorganization under §368(a)(1)(G) (which involves the transfer of all or part of the assets of an insolvent corporation to another corporation in specified types of bankruptcy reorganizations), the possibility of

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

overlap was statutorily characterized as a G reorganization.[49]

Notwithstanding these somewhat ineffective statutory changes, the problem of defining a D reorganization in many situations has continued as a thorny issue for government and taxpayers alike.[50]

2. Liquidation-Reincoporation Problems

The principal area of controversy has revolved around taxpayer desire to accumulate earnings at capital gains rates on the grounds that the required liquidation of the transferor under §354(b)(a) constituted a capital gain to the transferor's shareholders.[51] In situations in which the transferor shareholders held stock at a potential loss, classification of a liquidation-reincorporation as a reorganization would also have eliminated the loss allowance, whereas treatment as a liquidation would provide a capital loss to the shareholders.

To cope with taxpayer ingenuity, the Commissioner had developed several theories to characterize the transaction in question as a D reorganization (despite the 80 percent "control" test) by utilizing other Code provisions or judicial rules to find dividend treatment without the benefit of basis step-up.[52]

The theories advanced by the government in liquidation and reincorporation situations in which the shareholders of the selling transferor corporation or their families continue to hold significant share ownership include the following:

a Characterization of the Transaction as a Recapitalization Under §368(a)(1)(E)

In a ruling issued in 1961,[53] the Service treated the sale of "substantially all" of one corporation's assets to a new corporation, formed by management of the seller, in which shareholders of the "selling" corporation held 45 percent of the new entity after the transaction as an F reorganization. Because the shareholders of the transferor owned much less than 80 percent of the transferee, no possibility of characterization of the transaction as a D reorganization was possible. Indeed, absolute, (although perhaps not working) control shifted to unrelated parties (in this case, public shareholders) who then held 55 percent of the shares.

Since issuance of Rev. Rul. 61-156 the Service has adopted a "no ruling" policy in Rev. Proc. 62-32.[54] This policy, which appears to be unaffected by the enactment of §64, indicates that no rulings will be issued where shareholders of a liquidating corporation own more than a "nominal amount," (*i.e.*, more than 20 percent) in value of the transferee corporation. No reference is made in Rev. Proc. 62-32 to the Service's no ruling position respecting the application or nonapplication of the attribution rules (under §318 or otherwise), to determine whether the 20 percent threshold has been reached. One would believe, however, that since the issuance of rulings is a matter of discretion, that the Service will in fact apply the principles of §318 in such a case (although, perhaps not literally in every instance). For example, in a nonfamily situation, involving corporations or ties of partnerships where the economic relationship of the parties may be rather remote, the Service will probably not feel it necessary to apply principles of constructive ownership.

b. The Functionally Unrelated Concept

In any situation in which substantial continuity of ownership continues between the shareholders of the transferor and the transferee, the Service has taken the position that the distribution of cash or other property to shareholders of the transferor constitutes a dividend and that the sale of assets by the transferor to the transferee corporation, is an independent event, "functionally unrelated" to the sales transaction.[55]

Furthermore, in Rev. Rul. 61-156, the Service took the position that, notwithstanding a significant change of ownership, one component of the transaction was a recapitalization of essentially one corporation. Thus, one may also view that Ruling as a further application of the functionally unrelated test.[56]

3. The "No Complete Liquidation" Approach

Allied to the functionally unrelated concept is the theory of "no complete liquidation" best ennunciated in *Telephone Answering Service Co., Inc. v. Comr.*, (hereinafter cited as TASCO).[57] In that case, a corporation was purportedly completely liquidated after a directly operated business was transferred to a new wholly owned subsidiary and another subsidiary was sold to unrelated third parties. Apparently experiencing difficulty in characterizing the transaction (which effectively could be described as a corporate split-up) as a D reorganization,[58] the court held that since the company's business continued without change in share ownership, no complete liquidation occurred (and thus that §337 did not apply).

4. Significant Change of Ownership

It is to be emphasized that despite the holding of Rev. Rul. 61-156, a constant difficulty for the government has been presented in situations in which a significant (*i.e.*, more than 20 percent) change in ownership has occurred. For example, in *Gallagher v. Comr.*,[59] the transferee shareholders after the transaction held 73 percent of the stock of the transferor corporation. And in *Berghash v. Comr.*,[60] a corporation wholly owned by the taxpayer sold its operating assets to a newly formed corporation for cash and notes which were distributed as part of the liquidation. The new shareholders of the transferee (who, as was the case in *Gallagher*, were employees of the transferor) obtained a 50 percent interest in the firm. In each of these instances, capital gains treatment was accorded the shareholders of the transferor on the grounds that §368(a)(1)(D) did not apply (since such shareholders were not 80 percent owners of the transferee) and that none of the other judicial or administrative theories were applicable under the circumstances.

The objective of §64 — to establish a more effective statutory basis for a finding of reorganization treatment in transfers between commonly controlled corporations — is readily evident. Not only has the control test been reduced from 80 percent to 50 percent, but the addition of the attribution rules of §318 to the control definition precludes treatment of family members, or other persons within the attribution circle, from characterization as third parties in computing the amount of share ownership of the transferee held by the shareholders of the transferor.[61] By the same token, the Conference Report's continuing emphasis upon

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Rev. Rul. 61-156, *TASCO*, and *Smothers* suggests that the principles underlying these cases, all favorable to the government, will have ongoing importance. In fact, the Conferees stated that in enacting §64 their intention was not to "supersede or otherwise replace the various doctrines" [62] developed by the Service and the courts. Consequently, one may anticipate that the Commissioner will continue to apply the doctrines with renewed vigor.

Also to be noted is §63 of TRA 1984 which directs the Treasury to make "proper allocation" of earnings and profits between the transferor and transferee in a consistent manner with respect to C and D reorganizations. Pursuant to a suggestion of the Conference Committee, this may involve reconsideration of the regulations relating to allocations of earnings and profits in transactions under §355.[63]

Reference should also be made to §304. Changes made in 1982 to §304(b) were intended to eliminate the overlap between §351 and §304. Consequently, in a transaction in which both provisions could apply the earnings and profits of both the transferee and transferor are taken into account by reason of §304(b)(2). In light of the coordination of the definition of control between §304 and §368(a)(1)(D), the concept of combination of earnings and profits to ascertain dividend characterization is further fortified.

The degree to which a corporate distribution to shareholders is appropriately treated as a dividend in a situation in which the amount of the distribution exceeds the earnings of the transferor, but not the combined earnings of the transferor and the transferee, was not totally clear under prior law.[64] Under §§63 and 64 of TRA 1984 the Treasury now has the authority to establish that the combined earnings of both the transferor and transferee will be taken into account in characterizing the cash distribution from the transferor.[65]

In light of the enactment of §64, the practical operational consequences of situations in which less than a 50 percent change of ownership occurs but "substantially all" of the assets of the transferor have been transferred remains uncertain. Similar questions may arise in situations in which substantially all of the transferor's assets are sold to the transferee, and less than 50 percent of ownership changes hands (determined on the basis of the new provision including §318), but persons "close" to the transferor such as employees represent the new shares (*i.e.*, a typical leverage buy-out).

Finally, it is important to observe that, notwithstanding the evident intention of the draftsman to add important weapons to the government's arsenal in liquidation and reincorporation situations, taxpayers may find the new reduced control definition to be affirmatively useful. For example, if a nontaxable amalgamation of two related enterprises is desired, §64 will permit this result without the necessity of a statutory merger by enabling the introduction of new parties to the extent of 50 percent control as part of the transaction. Similarly, the use of a D reorganization may prove desirable in situations in which unrelated corporations desire to unite in a practical merger in which each party retains equal (*i.e.*, 50 percent) control of the resultant corporation.

D. Effective Date

The principal rule respecting the effective date of §64 has been set forth in the Conference Report as follows:

> "The conferees wish to clarify that the provision applies to transactions pursuant to a plan adopted after the date of enactment by any corporation which would be a party to the reorganization if the transaction qualifies as a reorganization." [66]

Under the foregoing rule, it seems clear that little problem will be presented respecting the effective date in the normal situation in which no question arises as to the date of the adoption of a plan — whether written or oral — of reorganization. It is entirely possible, however, that situations will arise in which an allocation may be made and circumstances surrounding a transaction may indicate that a plan of reorganization *de facto* was adopted before date of enactment notwithstanding that the more formal arrangements occurred after the date of enactment. The resolution of issues such as this one will ultimately depend upon all the facts and circumstances.

It also may be theoretically possible to envisage a situation in which the plan of reorganization has been adopted before the date of enactment but a corporation becomes a party to the reorganization only after such date. For example, if a transferor corporation plans a nondivisive D reorganization before date of enactment, but forms the transferee corporation after such date, it would appear that the transaction would be governed by prior law rather than the new rule of §64.

It also seems clear that a transaction not fully physically implemented until after July 18, 1984 will avoid the lower percentage strictures of §64. In a situation in which, for example, shareholders of the transferor corporation hold 75 percent of the shares of the transferee in a transaction carried out pursuant to a pre-July 18, 1984 plan of reorganization, the Commissioner will be required to assert dividend taxation (assuming in his view that such a result is appropriate and in accordance with judicial principles).[67]

The absence of a customary "no inference" clause in the Committee reports is also not surprising, since §64 is simply a reduced percentage amount. Any focus on prior law would simply reinforce the inapplicability of §368(a)(1)(D) to ownership situations which fail the 80 percent test.

III. Effective Date Delay for 1976 TRA NOL Rules

A. Introduction

As part of the Tax Reform Act of 1976, P.L. 94-455, Congress revised the rules introduced by the Internal Revenue Code of 1954 governing the carryover of net operating losses (NOLs) following certain stock purchases and reorganizations. Section 382(a), as amended by the 1976 rules, provides that where, as a result of certain stock purchases, §351 exchanges, redemptions, and other transactions, those holding at the end of a corporation's taxable year the fifteen largest shareholdings have increased their shareholdings by more than sixty percentage points within the preceding three taxable year period, the corporation's available NOLs are reduced. These NOLs are reduced regard-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

less of whether the loss corporation continued any of the businesses it carried on prior to the stock acquisition transactions. That reduction would be 3.5 percent for each percentage point above sixty but below eighty, and 1.5 percent for each percentage point above eighty, that the percentage ownership (in terms of the fair market value of all stock or of all participating stock) of the now largest shareholders increased.

Under the original 1954 Code provision, the available NOLs are reduced only if (1) by purchases or by redemptions, shareholders holding the ten largest shareholdings of a loss corporation as of the end of a taxable year have increased their holdings by more than fifty percentage points within the preceding two taxable year period and, (2) the loss corporation does not continue to carry on any business substantially similar to one it carried on prior to the beginning of the two year period. Where those two conditions are met, none of the corporation's NOLs are available.

With respect to reorganizations, §382(b) would provide that where a corporation with NOL carryovers is a party to an (A), (B), (C), (F) reorganization, or, if it qualifies under section 354, a (D) reorganization and the shareholders of the loss corporation, as a result of their ownership of such stock, end up after the reorganization owning less than forty percent of the fair market value of all stock (or of all participating stock) of the *de facto* acquiring corporation,[68] the available NOLs are reduced. The NOLs are reduced 3.5 percent for each percentage point below forty but above twenty, and 1.5 percent for each percentage point below twenty, that the former loss corporation shareholders own in the acquiring corporation. Where the reorganization is a triangular reorganization, these rules treat the shareholders of the loss corporation as receiving in the reorganization the percentage of stock in the acquiring corporation equal to the percentage of the controlling corporation's stock they receive multiplied by the percentage of acquiring corporation stock held by the controlling corporation.

Under the original 1954 version of §382(b), where a corporation with NOL carryovers is a party to an (A), (C), (F) reorganization, or if §354(b)(1) is satisfied, then a (D) or (G) [69] reorganization and the shareholders of such corporation receive in the reorganization less than twenty percent of the fair market value of the outstanding stock (other than nonvoting stock that is limited and preferred as to dividends),[70] the available NOLs are reduced. These NOLs are reduced by the percentage equal to five times the number of percentage points below twenty represented by the fair market value of acquiring corporation stock received by shareholders of the loss corporation in the reorganization. For purposes of determining how much stock in the acquiring corporation that shareholders of the loss corporation receive in a triangular reorganization, the 1954 rules treat stock received in a corporation controlling the acquired corporation as stock in the acquiring corporation itself. Thus, if the acquiring corporation's only assets are those of the loss corporation, the shareholders of the loss corporation would be deemed to own 100 percent of the acquiring corporation's stock.

The rules enacted in the 1976 Tax Reform Act were originally scheduled to apply with respect to (1) all reorganizations pursuant to plans adopted on or after January 1, 1978 for taxable years beginning on or after January 1, 1978, and, (2) to all acquisitions described in §382(a) occurring on or after January 1, 1978 (the earliest "lookback" date) for taxable years beginning on or after July 1, 1978. Prior to the 1984 TRA, the January 1, 1978 effective date for both reorganizations and earliest lookback date for other acquisitions as well as the July 1, 1984 taxable year effective date for applying the rules to transactions other than reorganizations had been extended three times; first, to January 1, 1980 and July 1, 1980, respectively,[71] second, to January 1, 1982 and July 1, 1982, respectively,[72] and then to January 1, 1984 and July 1, 1984, respectively.[73] The extension to January 1, 1980 of both the effective date for reorganizations and the earliest lookback date for other acquisitions, which did not occur until November 6, 1978 — ten months after the original effective date of the new law — was accompanied by another provision. This provision gave taxpayers the option of applying the new rules with respect to acquisitions occurring, or reorganizations pursuant to binding written contracts or options entered into, before September 27, 1978 if such acquisitions or reorganizations occurred before the end of the taxpayer's first taxable year ending after June 30, 1978.[74]

B. Detailed Analysis

1. Legislative History

Section 805 of H.R. 4170 would have changed the effective date of the changes in the NOL carryover rules so that they would apply to acquisitions occurring, and reorganizations pursuant to plans adopted, on or after November 1, 1984 with respect to taxable years beginning on or after November 1, 1984. The House Ways and Means Committee Report accompanying H.R. 4170 stated that the reason for this delay was "to allow time for further study and analysis" of unspecified problems with the 1976 changes.[75] Section 48 of S. 2130 would have changed the effective date for the changes in the NOL carryover rules so that they applied to acquisitions occurring, and reorganizations pursuant to plans adopted on or after, January 1, 1986. The Senate bill would have applied those changes to all taxable years beginning after December 31, 1985. The Senate Finance Committee Report accompanying the bill mimicked the House committee report as to the reasons for change.[76]

2. Delay of Effective Date

a. In General

The Conference Committee agreed with the Senate to delay the effective date of the 1976 rules so that they apply only with respect to acquisitions occurring, and reorganizations pursuant to plans adopted, on or after January 1, 1986. The changes are to apply for determining the availability of NOL carryovers for taxable years beginning on or after January 1, 1986.

Example: Corp. L, whose sole class of stock has a fair market value equal to $1,000, has NOL carryovers of $100. On December 1, 1985, Corp. L and Corp. A, a corporation whose stock is worth $2,000, both adopt a plan of reorganization pursuant to which Corp. L and Corp. A will be merged, with the shareholders of Corp. L receiving in exchange for all their stock $1,000 worth of stock in Corp. C. Corp. C owns 100 percent of the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

stock of Corp. A and certain other subsidiaries. The stock of Corp. C prior to the reorganization is worth $6,000. On March 1, 1986, the reorganization takes place according to plan. Because the plan of reorganization was adopted before January 1, 1986, the 1954 rules, rather than the 1976 rules, of §382(b) apply.

Under §382(b) as it appears under the 1954 Code, the shareholders of Corp. L would be deemed to receive in the merger 1,000/3,000 or 33.3 percent, of the stock of Corp. A. Thus, §382(b) will not apply to reduce the Corp. L carryovers available to Corp. A.

On the other hand, if the plan of reorganization had been adopted on January 15, 1984, the 1976 rules would have applied. Thus, the shareholders of Corp. L would have been deemed to have received only (1,000/7,000) x (3,000/3,000) x $3,000 = $429, or 14.3 percent, of the stock in Corp. A. Thus, only approximately 22.4 percent, or $22.40 of Corp. L's NOL carryovers would be available to Corp. A.

b. Section 382(a) Transactions Straddling Effective Date

By having the earliest lookback date for the 1976 version of §382(a) the same as the taxable year effective date, the legislation may have inadvertently expanded a loophole. Certain stock ownership changes would have been subject to either the 1954 rules or the 1976 rules but, due to the apparent inapplicability of the 1954 rules for taxable years beginning on or after January 1, 1986, may escape both such rules.

A combination of stock purchases or other transactions described in §382(a) beginning in the last taxable year beginning before 1986 and ending in 1986 in the first taxable year beginning on or after January 1, 1986 in which a total of more than 60 percent of a loss corporation's stock changes hands may not be subject to either the 1954 or the 1976 rules. Neither rule is applicable where less than fifty percent of a loss corporation's stock is acquired in the pre-1986 transactions and less than sixty percent of such stock is acquired in the post-1985 transactions. In this case, even if the corporation's business is discontinued in 1985, the 1954 version of §382(a) would not apply (assuming no other stock purchases or redemptions within the two taxable year period before 1986) because, as of the end of the last taxable year beginning before January 1, 1986 — the last taxable year to which the 1954 rules would apply — there would have been less than a fifty percent change in stock ownership. The 1976 version of §382(a) would not apply because there would be less than a sixty percent stock ownership change (assuming no other §382(a) stock acquisitions occurred within the three year period beginning January 1, 1986) beginning January 1, 1986 — the first date that stock acquisitions can be counted in determining whether the 1976 version of 382(a) applies.

Under all previous effective date schemes for the 1976 rules, this could have happened but only with respect to transactions separated by periods ranging from six months and one day, where the acquired corporation had a taxable year beginning July 1, to 17 months and one day, where the acquired corporation had a taxable year beginning June 1.[77]

Example: Corp. L, a calendar year taxpayer whose stock has been owned equally by the same twenty shareholders since 1982 and is in the X business, has NOL carryovers of $100. On December 31, 1985, A, who is not a shareholder of Corp. L, purchases 45 percent of the stock of Corp. L for cash and immediately thereafter Corp. L discontinues the X business and enters the unrelated Y business. In an unrelated transaction, B, who is also not a shareholder of Corp. L, on March 1, 1986, acquires by purchase another 45 percent of the stock of Corp. L. No other changes in stock ownership occur between January 1, 1984 and the end of 1988. It would appear that neither the 1976 rules or the 1954 rules would apply to these transactions. Even though more than fifty percent of the stock in Corp. L was acquired by purchase within two taxable years and Corp. L's historic business was discontinued, the 1954 rules would not apply because ownership of less than fifty percent of the stock in the corporation changed hands during the two taxable years prior to the expiration of the 1954 rules. Even though ownership of more than sixty percent of the stock of Corp. L changed by purchase during the three taxable year period ending December 31, 1986, the 1976 rules would not apply because only 45 percent of the Corp. L's stock changed hands on or after January 1, 1986, when the new rules are to become effective.

This apparently expanded "window of opportunity" may be of only limited value for planning purposes. First, if two acquisitions described in §382(a) that straddled the January 1, 1986 effective date for the 1976 rules could be considered part of the same transaction, presumably the Service could treate the second acquisition as occurring at the same time as the first and thus take the position that both acquisitions occurred prior to January 1, 1986. If so, the 1954 version of §382(a) would apply to reduce the available NOL carryovers to the last taxable year beginning before January 1, 1986. Moreover, given the propensity of Congress to postpone the effective date of the 1976 rules and its stated intention to reconsider those rules before they become effective, whether or when this prospective gap in effective dates will arise in reality is uncertain.

c. 1984 Transactions Prior to Enactment

Unlike the 1976 rules which were postponed after they were to be effective, the 1984 TRA provides no election to apply the new rules with respect to acquisitions occurring, or reorganizations pursuant to plans adopted, on or after January 1, 1984 but before enactment of the 1984 TRA. Presumably, the reason for this is that the House of Representatives passed H.R. 4170, which contained a provision to delay the 1976 Tax Reform Act rules on October 21, 1983, more than two months before transactions that would have come under the 1976 rules could have occurred.

3. 1976 TRA Rules to Apply to (G) Reorganizations

Section 62 of the 1984 TRA applies §382(b) to §368(a)(1)(G). Because shareholders of an insolvent or bankrupt corporation rarely receive any stock in a corporation that acquires it (or in any corporation controlling such acquiring corporation), this amendment will in many cases effectively eliminate the availability of NOLs of acquired bankrupt or insolvent corporations — which would be the result under the 1954 rules in the case of a merger or asset acquisition involving an insolvent corporation in which the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

shareholders of the insolvent corporation did not receive stock.

IV. Technical Amendments to Corporate Acquisition and Redemption Rules

A. Distribution of Appreciated Property in Redemption

1. Introduction

Section 311(b)(2) provides three exceptions applicable only to distributions with respect to "qualified stock," as defined in §311(e), to the now general rule of §311(d)(1) that distributions of appreciated property by a corporation triggers gain recognition to the distributing corporation. Distributions in redemption of stock held by noncorporate shareholders in partial liquidation are exempt from the general rule if the stock redeemed is "qualified stock." [78] Dividend distributions to noncorporate shareholders of property (other than inventory, receivable and similar property) used in the active conduct of a trade or business do not subject the distributing corporation to gain recognition under §311(d)(1).[79] Finally, distributions by corporations of stock or obligations in certain more-than 50 percent controlled subsidiaries are exempt from the general rule if those distributions are with respect to "qualified stock." [80]

The term "qualified stock" is defined in §311(e)(1) as stock held by a "person (other than a corporation)" who, at all times in the five years prior to the distribution (or throughout the existence of a less-than five year old corporation) owned actually or constructively at least 10 percent of the value of the distributing corporation's stock. Where an S corporation, a partnership, an estate or a trust held stock, it was not clear prior to the 1984 TRA whether such a shareholder or its owner or beneficiary was considered the relevant shareholder.[81]

2. Detailed Analysis

Section 712(j) of the 1984 TRA adds new §311(e)(1)(C) to the Code, providing explicit rules for determining whether stock actually owned by "pass through" entities — S corporations, partnerships, trusts and estates — is "qualified stock" and whether distributions made with respect to stock so owned are made with respect to stock owned by a "person other than a corporation."

Under new §311(e)(1)(C)(i), the determination of whether stock that is actually owned by a pass through entity is and has been owned by a person other than a corporation is made at the owner or beneficiary, and not at the entity, level. Thus, where a partnership holds stock, the determination of whether that stock has been held by a noncorporate shareholder depends on whether the partners are corporations or individuals. The legislative history of this provision suggests that, for this purpose, each owner or beneficiary will be treated as owning an amount of stock in the distributing corporation that is actaully owned by the entity in proportion to his "interest in the entity." [82] For purposes of the five-year rule, an owner of an entity that receives a §311(d) distribution will not be treated under §311(e)(1)(C) as owning an interest in the distributing corporation before that person actually acquires an interest in the entity.

Note: Even if an individual does not own an interest in an entity that owns stock in the distributing corporation, for purposes of the five-year and 10 percent tests of §311(e)(1), that individual may by virtue of §311(e)(1)(B) nonetheless be treated as owning stock owned by the entity.

Under new §311(e)(1)(C)(ii), the determination of the amount of a §311(d) distribution that is considered distributed to noncorporate shareholders is determined as if the distribution was made directly to the owners or beneficiaries of the pass through entity receiving the distribution "in proportion to their respective interests." [83] Neither the statute nor the legislative history gives any guidance as to how an owner's or beneficiary's interest in a pass through entity is determined in complex cases. Moreover, the language of the provision suggests that a special allocation of a §311(d) distribution received by a pass through entity among its owners or beneficiaries will not be taken into account in determining whether the distribution is to a noncorporate shareholder.

> *Example:* On January 1, 1985, Corp. D makes a distribution meeting the requirements of §311(e)(2)(A)(ii) through (iv) to Partnership P of stock in a subsidiary having a value of $100 but in which Corp. D has a $50 adjusted basis. Partnership P has been owned 50 percent by Corp. X, a C corporation, and 50 percent by individual A ever since A contributed his 20 percent interest in Corp. D stock to the partnership on January 1, 1978. The Partnership P agreement provides that all distributions received with respect to its Corp. D stock are to be allocated to A. Under new §311(e)(1)(C)(ii), it appears that this allocation would not be given effect for §311(d)(2)(A) purposes. Thus, 50 percent of the distribution would be treated as received by Corp. X and thus would be ineligible for §311(d)(2)(A) treatment. Corp. D would recognize $25 of the $50 gain realized on the distribution.

The amendments made by §712(j) of the 1984 TRA are effective for distributions made on or after September 1, 1982.[84]

B. Purchases Treated as Asset Acquisitions

1. Introduction

Under §§334(b)(2) and 332 of the 1954 Code as originally enacted, a corporation that purchased at least 80 percent of the voting shares, and at least 80 percent of all other stock (other than nonvoting preferred stock) of a target corporation within a 12-month period took a basis in the assets of the target corporation based upon the price paid for the stock if the purchasing corporation liquidated the target corporation pursuant to a plan adopted within two years after the date the purchase was completed. In 1982, Congress repealed §334(b)(2) and enacted §338 of the Code as part of the Tax Equity and Fiscal Responsibility Act (TEFRA).

The major purpose behind the enactment of §338 was to permit corporate purchasers of controlling stock interests in other corporations to take a basis in the assets of the acquired corporations corresponding to the amount paid for the stock without having to liquidate the acquired corporations and to liquidate such corporations without having to

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

take such a basis in the assets distributed in the liquidation. A subsidiary purpose was to end the perceived abuse occurring where a purchasing corporation could obtain a stepped-up basis in the appreciated assets of the target corporation acquired in the liquidation but could retain the historic basis in assets of the target corporation having a basis greater than fair market value by acquiring, or having an affiliate require, those assets separately from the liquidation in carryover basis transactions.

Thus, §338 as originally enacted permitted all corporations making "qualified stock purchases" — non-carryover basis acquisitions other than §351 exchanges, acquisitions from decedents and acquisitions from related parties of at least 80 percent of the voting shares and at least 80 percent of the number of nonvoting shares (other than nonvoting stock limited and preferred as to dividends) of a target corporation — to elect to treat each such transaction as a §337 sale of all of the target corporation's assets to a new target corporation.[85] The target corporation did not need to be liquidated; the purchasing corporation needed merely to elect within 75 days after the "acquisition date" — the date on which the purchasing corporation first satisfied the qualified stock purchase rules with respect to the target corporation — such treatment.

In order to ensure that all assets acquired from the target corporation and its affiliates are treated consistently, the original §338 rules provided that, with certain exceptions, any assets acquired by the purchasing corporation or its affiliates from the target corporation or its affiliates within the "consistency period" — the two-to-three year period beginning 12 months before the date of the first acquisition of stock included in the qualified stock purchase and ending 12 months after the after the acquisition date — triggered a deemed §338 election with respect to the qualified stock purchase.[86] Similarly, all qualified stock purchases made within the consistency period by the purchasing corporation or any affiliate of the stock of a corporation and its affiliates must be treated consistently; *i.e.*, if a §338 election was made with respect to the first such qualified stock purchase, a §338 election must be made with respect to all subsequent qualified stock purchases and if a §338 election was not made with respect to the first such qualified stock purchase, such an election may not be made with respect to any subsequent qualified stock purchase within the consistency period.[87]

As is true of any major change in tax law, the enactment of §338 gave rise to numerous ambiguities and problems as to its interpretation and operation. Some of those problems were addressed in the Technical Corrections Act of 1982.[88] However, many problems remain. Those that came to the attention of Congress and were deemed soluble became the subject of §712(k) of the 1984 TRA.

2. Overview

In response to numerous problems raised by practioners and commentators,[89] §712(k) of the 1984 TRA makes numerous changes in the operation of §338 of the Code. Most of these changes were based upon provisions included in §612(k) of H.R. 4170, although several changes were added by the conference committee. No provision comparable to §612(k) of H.R. 4170 was contained in the Senate bill.

Although the changes to §338 made by the 1984 TRA are denominated as "technical corrections", and are in fact quite technical, these changes make more than an insubstantial impact on the operation of that Code section. A familiarity with the workings of §338 is essential to understanding the changes. The Ways and Means Committee Report and the Conference Report — and in some cases the language of the 1984 TRA — give minimum guidance.

The changes to §338 contained in the 1984 TRA refine the definition of "purchase" by excluding all acquisitions of stock in reorganizations (and potentially in all partial nonrecognition transactions), by treating as a purchase the deemed transfer of stock of target corporation subsidiaries in a §338(a) deemed asset sale and by treating as a purchase the distribution by a target corporation of stock in a subsidiary if the target corporation was itself the subject of a §338 election. The time for making a §338 election was extended until the 15th day of the ninth month beginning after a qualified stock purchase.

For purposes of computing a target corporation's recapture tax liability, the deemed asset sale triggered by a §338 election is treated as being made at the fair market value of the target corporation's assets. The deemed purchase price in such sales for purposes of determining the "new" target corporation's adjusted basis in its assets is to be grossed up for stock held by minority shareholders and can be grossed up for stock held by the purchasing corporation that was not acquired in a qualified stock purchase if the purchasing corporation elects to treat such nonrecently purchased stock as having been sold for a price based on the price paid for stock acquired in the qualified stock purchase. In the case of §338 elections following qualified stock purchases of less than all of the stock of a target corporation, the amount of gain recognition from which the target corporation is shielded on its deemed §338 (a) sale is limited to the percentage of stock purchased (up to one year after the acquisition date) by the target corporation in the absence of post-acquisition date liquidations in which miniority shareholders recognize gain.

The asset consistency rules under §338(e) are now absent regulations to the contrary, triggered by asset acquisitions within the consistency period involving partial gain recognition or foreign assets. The Treasury is now authorized to issue regulations coordinating with the general rules respecting the treatment of foreign corporations and their shareholders the treatment of qualified stock purchases of or by foreign corporations. Specific provisions attempt to deal with sales by target corporations pursuant to §337 liquidation plans pre-exempted by qualified stock purchases, estimated taxes on §338(a) deemed asset sales, application of the collapsible corporation rules to dispositions of target corporation stock by minority shareholders, and the availability of consolidated return reporting of interrelated §338(a) deemed asset sales by affiliated target corporations.

Finally, the 1984 TRA amends §269 of the Code to provide that the liquidation, within two years following a qualified stock purchase as to which no §338 election was made, of a target corporation with net operating loss carryovers could result in the elimination of such carryovers

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

if the principal purpose of the liquidation was the avoidance of federal income taxes.

The amendments made by §712(k) are generally effective for qualified stock purchases completed on or after September 1, 1982. However, taxpayers can elect not to have the amendments relating to the definition of qualified stock purchases effective for pre-October 20, 1983 transactions if the operation of those amendments would disqualify otherwise qualified stock purchases. The application of §269 to liquidations following qualified stock purchases as to which no §338 election is made is effective for liquidations after October 20, 1983.

3. Detailed Analysis

a. Definition of Purchase

In order to have a qualified stock purchase, there must be an acquisition by "purchase" of at least 80 percent of the voting stock and at least 80 percent of the nonvoting stock (other than nonvoting stock that is limited and preferred as to dividends) within a 12 month period.[90] Under §338 as originally enacted, a "purchase" was defined as any acquisition of stock other than (i) one in which the acquiring corporation took a basis in whole or in part carried over from the transferor of such stock; (ii) by inheritance; (iii) in a §351 exchange; or (iv) from a party the stock owned by which would be attributed under §318(a) (other than §318(a)(4)) to the acquiring corporation. For this purpose, certain indirect acquisitions were considered purchases. Under §338(h)(3)(B) as originally enacted, where a corporation made an actual purchase of the stock of a second corporation which caused the first corporation, by operation of §318(a), to be treated as owning stock in some third corporation, the purchasing corporation was deemed to have purchased the amount of stock in the third corporation that it was thereby deemed to own by operation of §318(a).

These rules created several problems that §712(k) of the 1984 TRA seeks to address.

(1) Acquisitions in Nonrecognition Transactions

Operation of the definition of purchase in the original §338 would have resulted in certain stock acquisitions occurring in tax free reorganizations or other nonrecognition transactions being treated as qualified stock purchases. For example, a corporation acquiring stock of the target corporation in a merger qualifying under §368(a)(2)(E) could be deemed to make a qualified stock purchase. Under proposed regulations under §358, in such a merger, the acquiring corporation would not take a carryover basis in the target corporation's stock. Instead, it would take a basis in the target corporation stock equal to the acquiring corporation's basis in the subsidiary which merged into the target corporation plus the net basis of property transferred by the acquiring corporation to the subsidiary that was not distributed to the target corporation shareholders plus the target corporation's net basis in its assets.[91] To permit a step-up in the basis of the target corporation's assets where the target corporation's shareholders (and possibly the target corporation) do not recognize gain would confer an unintended benefit.

To remedy this problem, §712(k)(5) of the 1984 TRA amends §338(h)(3)(A)(ii) to provide that acquisitions of stock in exchanges governed by §§354, 355 or 356 of the Code and, to the extent described in regulations, any other transactions in which gain or loss is not fully recognized by the target corporation shareholders transferring the stock are not considered "purchases" for purposes of §338. By eliminating from purchase status §356 distributions, the amendment appears to go beyond correcting the oversight in the statute and precludes from purchase treatment distributions of stock in reorganizations on which gain would be recognized — to both the transferor of the target corporation stock[92] and to the transferee.

Example: Corp. P owns 25 percent of the stock of Corp. S, which stock has a fair market value of $100 and in which stock Corp. P has an adjusted basis of $50. On January 1, 1985, Corp. A, unrelated to Corp. P, acquires Corp. S in a merger qualifying as tax free under §368(a)(1)(A). In consideration for its Corp. S stock, Corp. P receives $50 worth of Corp. A stock and 25 percent of the stock of Corp. T, which has a value of $50 and in which Corp. A has a $25 adjusted basis. All other Corp. S shareholders receive solely Corp. A stock. On July 1, 1985, Corp. A purchases the remaining 75 percent of the stock in Corp. T. Because Corp. A received 25 percent of the Corp. T stock in a §356 distribution, its acquisition of the Corp. T stock cannot be a qualified stock purchase, even though both Corp. T and Corp. A would recognize gain on the distribution. However, if Corp. P received no Corp. A stock in the merger but only the Corp. T stock along with $50 in cash, the distribution to it would be taxed under §302 and not §356.[93] Because, under the 1984 TRA amendments to §311,[94] Corp. S would be taxed on the distribution, it would seem that Corp. P's receipt of Corp. T shares in connection with the merger would be part of a qualified stock purchase.

(2) Qualified Stock Purchases Resulting from Section 338 Elections

Under pre-1984 TRA §338(h)(3)(C), where a corporation acquired in a purchase transaction stock in a second corporation, it was deemed to have purchased the amount of stock in a third corporation owned by the second corporation to the extent that the purchasing corporation was thereby deemed under §318(a) as owning such stock. Thus, where a corporation made a qualified stock purchase with respect to a corporation that in turn owned at least 80 percent of the value of the voting and nonvoting shares of a third corporation, the purchasing corporation could be deemed to have made a qualified stock purchase with respect to the third corporation.

However, if the purchasing corporation made a timely election to apply §338 with respect to its actual purchase of its stock in the second corporation, the second corporation could arguably be deemed to have made a qualified stock purchase with respect to the third corporation by virtue of the deemed sale of all of the second corporation's assets. One argument against such treatment was that the deemed asset purchase was from the "old" target corporation, which was arguably related to the "new" target corporation, thus precluding a purchase.[95]

The ambiguity as to the status of target corporation subsidiaries could lead to conflicting results where a corporation made a qualified stock purchase of less than all the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

stock of a corporation that owned at least 80 percent of the voting and nonvoting stock of a third corporation if the purchasing corporation was not thereby deemed to own at least 80 percent of the voting and nonvoting stock of the third corporation. Moreover, even where a qualified stock purchase of a third corporation would be made under both provisions, it was not clear whether the actual purchasing corporation or the target corporation was the purchasing corporation having responsibility to make the §338 election. Finally, if the second corporation was deemed as a result of a §338 deemed sale of its assets to have made a qualified stock purchase with respect to the third corporation, the acquisition date for such purchase would probably not be the same date as the acquisition date for the qualified stock purchase of the second corporation's stock since §338(a)(2) treats a "new" target corporation as acquiring the assets of the "old" target corporation on the day after the acquisition date with respect to the qualified stock purchase of the target corporation. This would seem to preclude target corporations and their subsidiaries that were all the subject of §338 elections from filing consolidated returns with respect to the deemed §338 sales.

Section 712(k)(5) of the 1984 TRA contains several amendments to the definition of purchase in §338(h)(3) that are intended to set forth the rule that a corporation that makes a qualified stock purchase with respect to a second corporation does not thereby purchase the stock of any subsidiaries of that second corporation. Instead, the "new" target corporation is deemed to have purchased in the deemed asset sale triggered by a §338 election all of the stock owned by the "old" target corporation and the "new" target corporation has the exclusive right to make a §338 election with respect its subsidiaries.[96]

The rule in former §338(h)(3)(B), that a purchase of stock in a second corporation caused the purchasing corporation to be treated as purchasing stock owned by the second corporation treated under §318(a) as owned by the purchasing corporation, was repealed. Thus, a corporation directly making a qualified stock purchase will not thereby be deemed to make indirectly any other purchase of stock.

(a) Deemed Asset Sale as "Purchase"

New §338(h)(3)(B) provides that the term "purchase" includes a §338(a)(2) purchase deemed to have occurred as a result of a §338 election. Unfortunately, the statute does not specifically state whether such deemed purchases must satisify the criteria in §338(h)(3)(A) or whether deemed purchases are automatically considered purchases. The structure of the 1984 TRA amendments suggests that deemed purchases will not be considered §338(h)(3) purchases unless they also satisfy the conditions set forth in §338(h)(3)(A), but the House Ways and Means Committee Report [97] suggests that the general restrictions on the definition of "purchase" do not apply to such deemed asset purchases.

If §338(a) deemed purchases are subject to §338(h)(3)(A), then such deemed purchases would be subject to §338(h)(3)(A)(ii), which now provides that acquisitions of stock in which gain or loss is not fully recognized may, under regulations, be denied purchase status. Of course, gain or loss is not fully recognized in a §338(a)(2) deemed asset sale. Given the legislative intent behind §338(h)(3)(B), regulations could not be issued under §338(h)(3)(A)(ii) denying purchase status to all §338(a) deemed asset sales. However, it is possible — assuming that new §338(h)(3)(B) is subject to §338(h)(3)(A) — that regulations could limit the types of deemed asset sales that could qualify as purchases.

Section 338(h)(3)(A)(iii) provides that acquisitions of stock from transferors, the stock owned by whom is considered owned, by virtue of §338(a), by the acquiring corporation, are not purchases. It was apparently not clear prior to the 1984 TRA, and it is certainly no clearer after its enactment, whether the deemed sale of assets by an "old" target corporation and the deemed purchase of those assets by a "new" target corporation would be an acquisition from a related party. Taking a formalistic approach, one could argue that the old and the new target corporations are not related at any time because the old target corporation goes out of existence (at least for most purposes) at the end of the acquisition date while the new target corporation does not come into existence until the following day.[98] If, on the other hand, the old target corporation were deemed to exist on the day after the acquisition date — the date on which the new target corporation is deemed to acquire all its assets — the old target corporation and the new target corporation would be related provided that, after the qualified stock purchase, the purchasing corporation owned at least 50 percent of the *value* of all of the target corporation's stock.[99]

(b) Acquisitions from 50 Percent-Purchased Related Parties

If the old and the new target corporations are considered related parties, new §338(h)(3)(C)(i) provides an exception to the unrelated transferor requirement for purchase status where at least 50 percent of the value of the stock of the related transferor was acquired by purchase within the meaning of §338(h)(3)(A) or (B). This would appear to apply to deemed transfers of stock in §338(a)(2) sales following qualified stock purchases, assuming that such sales are otherwise subject to §338(h)(3)(A). If that assumption is true, only qualified stock purchases in which the purchasing corporation acquires by purchase at least 50 percent of the total value of all target corporation stock could be assured of generating qualified stock purchases of at least 80 percent controlled subsidiaries of the target corporation.

The language of new §338(h)(3)(C)(i) appears to apply to situations other than §338(a)(2) deemed asset sales. For example, the statute puts no limit on the time of the stock purchase or the identity of the purchaser.[100] However, the operation of those rules in practice may be circumscribed. Although an actual acquisition of stock from a 50 percent commonly controlled sister corporation more than 50 percent of the value of whose stock was purchased by someone at sometime may pass the unrelated transferor test, it would in most cases fail the §338(h)(3)(A)(i) fair market value basis test because it would be treated under §304(a) as a contribution to the purchasing corporation's capital by the common shareholder following a dividend from the transferor corporation.[101]

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(c) Deemed Asset Sales as Qualified Stock Purchases

Where a §338(a)(2) deemed sale pursuant to a §338 election is itself considered a stock purchase under new §338(h)(3)(B) and (C), the draftsmen of §338 presumably intended that the target corporation treated as making such sale is automatically deemed to make a §338 election. The process by which such a result is reached is as follows. Under §338(h)(5), a "new" target corporation is a member of its purchasing corporation's affiliated group. Under §338(h)(8), a stock purchase by any affiliate of a purchasing corporation is treated as a stock purchase by the purchasing corporation itself. Under §338(f)(1), a §338 election is deemed made with respect to any qualified stock purchase by the purchasing corporation of any corporation that was affiliated with the target corporation at any time during the consistency period.

Literally read, §338 following the 1984 TRA changes reaches that result with some difficulty. The amendment to what is now §338(h)(8) deleted — for other, valid, reasons — the language that stock or asset acquisitions made by an affiliate of the purchasing corporation are considered made bythe purchasing corporation — the only corporation whose stock acquisitions matter under the consistency rules.[102] New §338(h)(8) somewhat cryptically states that "stock and asset acquisitions made by members of the same affiliated group shall be treated as made by 1 corporation." That rule could, although under a strained reading, be read as limited to requiring the aggregation of all stock acquisitions by members of an affiliated group solely for purposes of determining whether a qualified stock purchase of a target corporation has been made. That strained reading would be bolstered by the following language in the Ways and Means Committee report describing the status of a qualified stock purchase deemed made by a "new" target corporation as a result of a §338(a) deemed asset sale: "if a qualified stock purchase and election are made with respect to the second [*i.e.*, the target] corporation, the deemed purchase of the third corporation's [*i.e.*, the target corporation's subsidiary] stock will . . . be treated as a qualified stock purchase permitting an election by the second corporation, or deeming an election to be made under consistency of treatment requirements, with respect to the third corporation".[103] This language seems somewhat at odds with a statutory scheme that would mandate an election.

Technically, under pre-1984 TRA law, if a §338(a)(2) deemed asset sale also constituted a qualified stock purchase by the target corporation, the acquisition date for such qualified stock purchase would be the day after the acquisition date for the qualified stock purchase of the target corporation's stock. Where numerous tiers of target corporations were involved, theoretically numerous consecutive acquistion dates would be involved. Section 612(k)(1) of H.R. 4170 would have modified that rule so that all qualified stock purchases resulting from §338(a) deemed sales which resulted from actual qualified stock purchases would take as their acquisition date the acquisition date for the actual qualified stock purchase. The conference committee modified that rule so that the acquisition date for qualified stock purchases resulting from §338(a) deemed sales will be determined under regulations. The Conference Report states that this provision is intended to give the Treasury Department authority to determine a single acquisition date for all interrelated qualified stock purchases.[104] Presumably, this authority could also be used to establish differing acquisition dates for different purposes.

The provisions related to §338(a)(2) deemed asset purchases that involve stock are effective for transactions occurring on or after September 1, 1982.[105] However, where, by application of the new rules to a pre-October 20, 1983 transaction that would otherwise be a qualified stock purchase, such transaction no longer qualifies as a qualified stock purchase, the purchasing corporation may elect not to have new provisions apply.[106]

(3) Distributions of Stock by Target Corporations

Section 338(h)(3)(B), as initially enacted, provided that an acquiring corporation that purchased stock in one corporation was held to have purchased all stock owned by the purchased corporation that was thereby constructively owned by the purchasing corporation. However, §338(h)(3)(A)(iii), as it was initially enacted, excluded from the definition of purchase all acquisitions of stock from any person where the acquiring corporation took a carryover basis in such stock or from a transferor the stock owned by which would be attributed to the acquiring corporation under §318(a) (other than paragraph (4) thereof). As a result, where a corporation made a qualified stock purchase with respect to a second corporation that owned stock in a third corporation and, received in a liquidation or as a dividend stock in the third corporation, the purchasing corporation was not considered as purchasing stock in the third corporation. Such a transaction would have qualified as a "purchase" under former §334(b)(3).[107]

The amendments contained in §712(k)(5) of the 1984 TRA provide that an acquisition of stock from a target corporation that was the subject of a qualified stock purchase and a §338 election may qualify as a purchase even though the acquiring corporation takes a carryover basis in such stock, provided that at least 50 percent of the value of the transferor corporation was the subject of a purchase.[108] Thus, where a purchasing corporation makes a qualified stock purchase involving at least 50 percent of the value of the stock of the target corporation and the target corporation distributes to the purchasing corporation as a dividend (or in a redemption treated as a dividend) or in liquidation stock in a third corporation, the purchasing corporation is treated as purchasing the third corporation stock so acquired.

In many cases, this rule will not be of significant help because, where a target corporation that is the subject of a §338 election owns at least 80 percent of the voting and nonvoting shares of a subsidiary, under new §§338(h)(3)(C)(i) and 338(h)(3)(B) the deemed asset sale by the target corporation will be a qualified stock purchase of the subsidiary as to which the target is probably deemed to make a §338 election to step-up the basis of the subsidiary's assets.[109] However, where less than 80 percent of the voting and nonvoting shares of a subsidiary are held by the target corporation, this provision will give the purchasing corporation after its qualified stock purchase of the target corporation discretion as to whether to make a §338 election with respect to such subsidiary if it acquires by

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

purchase the requisite additional shares in the subsidiary to make a qualified stock purchase.

Example: On January 1, 1985, Corp. P acquires by purchase from Corp. A all of the shares of Corp. T., which owns 50 percent of the only class of stock in Corp. TS, and makes a §338 election with respect to Corp. T. On October 1, 1985, Corp. T is liquidated, with Corp P receiving Corp. T's 50 percent interest in Corp. TS. On September 1, 1986, Corp. P acquires by purchase from a party unrelated to it or former Corp. T the remaining stock in Corp. TS. Even though Corp. P obtains 50 percent of the Corp. TS stock from "new" Corp. T, a related party, and receives a carryover basis in the Corp. TS stock so acquired, such stock is acquired by purchase because of §338(h)(3)(C)(i) and (ii). Corp. P is not bound by its election with respect to Corp. T as to its treatment of the qualified stock purchase of Corp. TS because Corp. TS was not an affiliate of Corp. T during the portion of the consistency period ending on January 1, 1985. The same result would occur even if Corp. P acquired the remaining 50 percent stock interest in Corp. TS. Even though, in such a case, Corp. TS would have been affiliated with Corp. T until January 1, 1985, the stock consistency rules would not apply because the qualified stock purchase of Corp. TS would not have occurred until September 1, 1986, after the consistency period had expired.

As is true of the provisions relating to qualified stock purchases resulting from §338 elections, the new rules treating as purchases distributions from target corporations are effective for transactions occurring on or after September 1, 1982. However, if the application of these new rules would cause a pre-October 20, 1983 transaction that would otherwise be a qualified stock purchase to lose its qualified stock purchase status, the purchasing corporation may elect not to have the rules apply.[110] Note that no such election is provided where application of these rules would cause a pre-October 20, 1983 transaction to become a qualified stock purchase and thereby trigger a deemed §338 election.

(4) Aggregation of Purchases by Affiliated Groups

Under the prior version of §338(h)(7), an "acquisition of stock or assets by any member of an affiliated group which includes a purchasing corporation" was "treated as made by the purchasing corporation." Where a single corporation had purchased at least 80 percent of the voting and nonvoting stock of a target corporation within a 12-month period, it was clear under that provision that acquisitions of certain assets from the target corporation or an affiliate, and acquisitions of at least 80 percent of the stock of affiliates of the target corporation by affiliates of the purchasing corporation within the consistency period would trigger the consistency rules of §338(e) or (f). However, it was not clear whether stock purchases by affiliates would be aggregated to determine whether or not a qualified stock purchase had been made in the first instance.

Under Section 612(k)(2) of H.R. 4170, §338(h)(7) would have been renumbered §338(h)(8) and would have been amended to provide that, solely for purposes of applying the §338(e) and (f) consistency rules, acquisitions of stock or assets by members of the same affiliated group were treated as having been made by a single corporation.[111]

However, the conferees modified the House decision and provided in new §338(h)(8) (former §338(h)(7)) that acquisitions of stock or assets by members of the same affiliated group are aggregated for all purposes of §338, including the determination of whether a qualified stock purchase has occurred and the determination of the purchase and sale price for the §338(a) deemed asset sale in the event a §338 election is made.[112] Thus, if two affiliated corporations each acquire by purchase within a 12-month period 40 percent of the voting and nonvoting stock of a third corporation, the affiliated group can make a §338 election with respect to the purchase corporation, barring the operation of §338(f)(2). The amendment does not specify which corporation or corporations must make the election in the case of such a combined purchase. Nor does the amendment specify when the pertinent corporations must be affiliated — throughout the 12-month acquisition period, merely on the acquisition date, or some other time period.

The new rules treating certain acquisitions of stock from related parties as purchases are effective with respect to all post-August 1982 stock purchases.[113] However, the 1984 TRA provides that, if a pre-October 20, 1983 purchase would have been a qualified stock purchase but for the operation of the new rules, then the new rules will not apply unless the purchasing corporation so elects in accordance with regulations.[114]

b. Section 338(a) Election

Barring the operation of the §338(e) and (f) consistency rules, §338 has no impact in the absence of a timely election by the purchasing corporation to have its provisions apply.[115] Under §338 as it was originally enacted, a purchasing corporation had 75 days after the acquisition date to file a §338 election.[116] Under the Technical Corrections Act of 1982, which amended the TEFRA provisions enacting §338, elections for certain qualified stock purchases which were completed between September 1980 and August 1982, inclusive, could be made at any time before March 1, 1983.[117]

The 1984 TRA changes the time deadline for making §338 elections with respect to both future qualified stock purchases and to qualified stock purchases between September 1980 and August 1982, inclusive. For qualified stock purchases with acquisition dates after August 31, 1982, 1984 TRA §712(k)(4) amends §338(g)(1) to permit a §338 election not later than the 15th day of the ninth calendar month beginning after the acquisition date. Thus, for any qualified stock purchase having a January acquisition date, the §338 election must be made no later than the following October 15. Although the amendment by its terms is applicable to all qualified stock purchases having post-August 1982 acquisition dates, the practical effect of the amendment was to give retroactive extensions of time to make §338 elections as to qualified stock purchases completed between November 1, 1983 and May 4, 1984, inclusive.

With respect to qualified stock purchases completed between September 1980 and August 1982, inclusive, the

1984 TRA extends the time for making §338 elections to September 16, 1984, 60 days after the date of enactment of the act.[118]

c. Deemed Asset Purchase and Sale Price

Under §338(a), where a qualified stock purchase is followed by an actual or deemed §338 election, the target corporation is treated as selling its assets to a "new" target corporation in a single transaction that qualifies as a sale under §337. Thus, the "old" target corporation recognizes gain only to the extent that there is depreciation and investment tax credit recapture[119] and certain other gain that would override the nonrecognition rule of §337. The "new" target corporation takes a basis in its assets based upon the stock purchase price, "grossed up" to take into account purchases of less than 100 percent of its stock.[120]

Prior to the 1984 TRA, §338 raised numerous issues concerning the proper amount realized by the "old" target corporation on a deemed sale where there was potential recapture tax liablility, the proper method of grossing up the new target corporation's basis in its assets where less than all of its stock was purchased as part of a qualified stock purchase, and other matters. Section 712(k) of the act tried to deal with those issues through numerous amendments to §338. Those amendments changed the structure of §338 so that the sale price for purposes of computing the "old" target corporation's recapture gain is not necessarily based upon the actual price paid for its stock. To that extent, the deemed sale price may be unrelated to the deemed purchase price used for computing the "new" target corporation's basis in its assets.

(1) Deemed Sale Price

Pursuant to a stock purchase and liquidation under former §334(b)(2), the recapture tax liability of a target corporation was based upon the fair market value of the property distributed on its liquidation. Prior to the 1984 TRA, §338 provided that, where a §338 election was made, the target corporation was treated as selling all of its assets, even if less than all of its stock was purchased in the qualified stock purchase. Where less than all of the stock of the target corporation was purchased, the deemed purchase price equaled the amount the purchasing corporation paid for the target corporation stock acquired in the qualified stock purchase, along with the adjusted basis of other stock in the target corporation held by the purchasing corporation, grossed up to reflect 100 percent ownership and adjusted by any target corporation liabilities assumed by the target corporation in the qualified stock purchase. This grossed up figure was in turn used to determine the amount of recapture tax liability of the "old" target corporation.

Pre-1984 TRA law was not clear as to whether the target corporation's recapture tax liability, which would reduce the price that a purchasing corporation would be willing to pay for the target corporation's stock, was one of those liabilities added to the amount of cash and other property paid for the stock. Moreover, where substantially less than 100 percent of the value of the stock of the target corporation was purchased in the qualified stock purchase, the price, possibly discounted to reflect a continuing minority faction, paid for that stock might understate the value of the target corporation's underlying assets. Thus, the grossed up basis might not reflect the fair market value of the target corporation's assets and might reduce the amount of recapture tax liability on the deemed sale.[121]

To alleviate this problem, §712(k)(1)(A) amended §338(a)(1) to provide that the price at which the "old" target corporation is deemed to sell its assets is the fair market value of those assets. Section 712(k)(6)(C) added §338(h)(11) to provide that the taxpayer may elect to determine such fair market value in accordance with a formula to be provided in regulations "taking into account liabilities and other relevant items." In the absence of such an election, the purchasing corporation would have to establish the fair market value of the target corporation's assets, by a "proper appraisal" or otherwise.[122]

This new fair market value rule applies even where the purchasing corporation acquires all of the target corporation's stock in the qualified stock purchase and thus, at least theoretically, will operate not only to adjust for distortions caused by partial purchases but also to negate the effect of bargain purchases and bad bargains. Thus, in theory, where a purchasing corporation can establish that the fair market value of the target corporation's assets are greater than the stock purchase price, it could get a windfall in terms of a basis in excess of consideration paid. On the other hand, where the Service can establish that the fair market value of the target corporation's assets is less than the consideration paid for the stock (including liabilities assumed), the consideration in excess of fair market value will yield no tax benefit.[123]

(2) Deemed Purchase Price

Where a purchasing corporation acquires less than 100 percent of a target corporation's stock in a qualified stock purchase, under §338(b) prior to the 1984 TRA, the "new" target corporation took as its basis in its assets the purchasing corporation's basis in its target corporation stock (*i.e.*, the amount paid as part of the qualified stock purchase plus the purchasing corporation's basis in target corporation shares held for more than year or acquired other than by purchase), adjusted for liabilities of the target corporation assumed in the qualified stock purchase and multiplied by a fraction, the numerator of which was 100 and the denominator of which was the percentage by value of the target corporation's stock held by the purchasing corporation on the acquisition date. The asset basis obtained by application of this formula diverged in several respects in the asset basis obtained under former §334(b)(2).

(a) Gross Up for Minority Shareholdings

One situation in which the basis consequences under §338 prior to the 1984 TRA differed from those under former §334(b)(2) was where the purchasing corporation acquired stock in the target corporation before the 12-month acquisition period began and minority shareholders continued to own shares of the target corporation after the acquisition date. In a §334(b)(2) liquidation, the minority shareholders would generally be taxed under §331 and would take a fair market value basis under §334(a) in target corporation assets distributed to them. The purchasing corporation would take a basis in the assets distributed to it equal to its basis in its stock; *i.e.*, the amount it paid in the 12-month purchase plus the amount it paid for stock

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

acquired prior to the 12-month purchase or the basis of stock acquired other than by purchase. Under §338 prior to the 1984 TRA, the gross up formula in effect did not step up the basis of the assets attributable to the minority shareholders' stock interest to the full fair market value of those assets. Although such minority shareholders were not taxed directly, as they were in a §334(b)(2) liquidation, §338(c) imposed a surrogate tax on the target corporation in lieu of the tax that would have been imposed on the minority shareholders under §331.[124]

Section 712(k)(1)(B) of the 1984 TRA amends §338(b) in several respects in an attempt to end the discrepancy between basis computations under former §334(b)(2) and under §338 where the purchasing corporation acquires target corporation stock other than by purchase or prior to the beginning of the 12-month acquisition period but owns less than all of such stock at the end of that period. Under the amendments, the price at which the "new" target corporation is deemed to acquire its assets once a §338 election is (or is deemed to be) made is the grossed up basis of "recently purchased stock" — target corporation stock purchased by the purchasing corporation [125] within the 12-month acquisition period — plus the basis of the purchasing corporation's "nonrecently purchased stock" — target corporation stock owned by the purchasing corporation on the acquisition date that is not recently purchased stock — all as adjusted for liabilities of the target corporation assumed in the qualified stock purchase.[126]

The formula used to gross up the recently purchased stock is a fraction, the numerator of which is 100 less the percentage by the value of the target corporation's stock that is nonrecently purchased stock, and the denominator of which is the percentage by value of target corporation stock that is recently purchased stock. In this way, the assets attributable to the minority shareholders' stock interest are stepped up to the same extent as are the assets attributable to the recently purchased stock.

Example: On January 1, 1976, Corp. P acquired eight percent of the value of the only class of Corp. T stock for $200,000. On January 1, 1986, when all of the assets of Corp. T are worth $10 million and there is no potential recapture tax liability, Corp. P acquires by purchase an additional 80 percent of the stock of Corp. T for $8 million leaving unrelated shareholder X with 12 percent of the Corp. T stock in which he has a $250,000 basis. Had former §334(b)(2) been in effect, upon liquidation of Corp. T under a plan adopted before January 1, 1988, Corp. P would have taken an $8.2 million basis in the Corp. assets distributed to it while X would have taken a $1.2 million basis in the assets distributed to him, assuming that the liquidation was not a §333 liquidation as to him. Under §338 prior to the 1984 TRA, Corp. T would have taken a basis in all of its assets equal to ($8.2 million x 100/88) = $9.32 million, $80,000 less than the combined $9.4 million basis that would have resulted under former §334(b)(2). Under new §338(b), Corp. T will take as its basis ($8 million x 92/80) + $200,000 = $9.4 million.

(b) Election to Gross Up Basis for Nonrecently Purchased Stock

Section 712(k)(1)(B) also adds §338(b)(3), which provides that the basis of nonrecently purchased stock may be grossed up if the purchasing corporation elects to treat the nonrecently purchased stock as having been sold for the grossed up amount. The amount to which the purchasing corporation's nonrecently purchased stock is grossed up under this election is the grossed up basis of the corporation's recently purchased stock multiplied by a fraction, the numerator of which is the percentage of target corporation stock by value represented by the purchasing corporation's nonrecently purchased stock and the denominator of which is the percentage by value of the target corporation that is not nonrecently purchased stock.[127] In other words, the purchasing corporation's nonrecently purchased stock is treated as having been sold and purchased by the purchasing corporation for an amount equal to the average per share price it paid for the recently purchased stock.

Using the above example, if Corp. P elected to step up the basis of its nonrecently purchased stock and thus of Corp. T's basis in its assets, it would be treated as having sold such stock for ($9.2 million x 8/92) = $800,000. It would thus recognize a $600,000 gain and Corp. T would increase the basis in its assets to $10 million.[128]

If a purchasing corporation elects to step up the basis of target corporation assets to their full fair market value where the purchasing corporation holds nonrecently purchased stock on the acquisition date, the target corporation is placed in the same position with respect to its assets as it would have been had minority shareholders held all target corporation stock not purchased during the 12-month acquisition period. However, the price paid to get such a basis result is different. Where nonrecently purchased stock is involved, the cost of the step up is a tax to the purchasing corporation on gain in its nonrecently purchased stock. Where minority shareholders own target corporation stock not acquired in the qualified stock purchase, the cost of the step up attributable to such stock is a tax to the target corporation.[129]

Note: It would appear that a purchasing corporation that elects to have the target corporation's asset basis fully stepped up under §338(b)(3) would be subject to ordinary income treatment on its deemed sale of nonrecently purchased shares if and to the extent that the target corporation is a collapsible corporation.[130]

(c) Aggregation of Prices Paid by Affiliated Purchasers

Section 712(k)(6)(A) of the 1984 TRA, by amending §338(h)(8) (formerly §338(h)(7)) to provide that the acquisition of stock by any member of an affiliated group is treated as an acquisition by a single corporation, is intended to affect not only whether a qualified stock purchase has been made,[131] but also the deemed purchase price paid by the "new" target corporation where a §338 election is (or is deemed to be) made.[132] The language of this statutory change does not, however, completely mesh with the rules respecting recently purchased stock and nonrecently purchased stock in §338(b). Section 338(h)(8) applies to "acquisition(s) of stock" whereas §338(b)(6) defines both

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

recently purchased stock and nonrecently purchased stock in terms of "stock in the target corporation which is held by the purchasing corporation on the acquisition date." Logically, it would appear that any target corporation stock held by the purchasing corporation or any affiliate on the acquisition date would be recently purchased stock or nonrecently purchased stock; if such stock was acquired by the purchasing corporation or any affiliate during the 12-month acquisition period, it would be recently purchased stock.

d. Nonrecapture Income Recognized by the Target Corporation

Under pre-1984 TRA law, §338(c) provided that, under a §338 election, "old" target corporation may be shielded by §337 from gain recognition on the deemed sale of its assets only to the extent of the maximum percentage by value of the target corporation's stock held by the purchasing corporation during the one-year period beginning on the acquisition date. However, if the corporation was liquidated within one year after the acquisition date, §337 applied in full to the deemed sale even if the purchasing corporation never owned all of the target corporation's shares. Thus, liquidation of the target corporation no more than one-year after the acquisition date shielded the target corporation from all but recapture and certain other gain on the deemed sale.

(1) Post Acquisition Date Acquisitions of Target Corporation Shares

Under §338 prior to the 1984 TRA, post-acquisition date acquisitions of target corporation stock by a purchasing corporation permitted full asset basis step up and increased the applicability of §337 nonrecognition to the target corporation, even if those acquisitions were not taxable to the disposing minority shareholders. This was in contrast to the result under former §334(b)(2). There, if a purchasing corporation acquired in a nontaxable exchange target corporation stock from minority shareholders, either before or after completion of its 80 percent stock purchase, the basis of the assets distributed in the §334(b)(2) liquidation was limited to the purchasing corporation's adjusted basis in its target corporation stock. To the extent such stock was acquired in nontaxable exchanges, such basis was limited to the exchanging minority shareholders' adjusted basis.

To eliminate this apparent windfall, §712(k)(6) of the 1984 TRA added new Code §338(h)(7).[133] Under this provision, only purchases, presumably as defined in §338(h)(3), §302(a) redemptions and §302(d)-301 redemptions of corporate shareholders that increase the purchasing corporation's percentage ownership of target corporation stock, will increase the percentage of gain on the target corporation's deemed sale that will be protected from recognition by §337.

Thus, where a purchasing corporation makes a qualified stock purchase of less than 100 percent of the value of the target corporation's stock, elects §338 treatment and acquires the rest of the target corporation's stock in the one-year period after the acquisition date in tax-free transactions, the target corporation obtains a fully stepped-up basis in its assets at the cost of recognizing the portion of the gain realized on the deemed sale of its assets. On the other hand, where the purchasing corporation acquires less than twenty percent of the target corporation's stock in nontaxable transactions before the acquisition date, makes a qualified stock purchase of less than all of the target corporation's remaining stock, and elects §338 treatment, the target corporation will either take a reduced basis in its assets attributable to the stock acquired in the nontaxable transactions or take a fully stepped up basis in its assets but at the cost of recognizing gain on a deemed sale of the shares so acquired.[134]

Example: Corp. T owns assets in which it has an aggregate basis of $700 that are worth $1,000 and have no depreciation or investment credit recapture potential. On July 1, 1985, Corp. P purchases for $800 cash 80 percent of the only class of Corp. T stock and elects §338 treatment. On December 1, 1985 Corp. X, which owns the remaining 20 percent of Corp. T stock in which it has an adjusted basis of $20, is merged with and into Corp. P in a tax-free §368(a)(1)(A) transaction. Because Corp. X did not recognize gain or loss on the transfer of its 20 percent stock interest in Corp. T to Corp. P, only 80 percent of the gain realized by Corp. T on the deemed sale of its assets is shielded from gain recognition by §337. Thus, Corp. T recognizes .20 ($1,000 - $700) = $60 of gain on the transaction and takes a $1,000 basis in its assets. Corp. P takes a total basis in its Corp. T stock equal to $820. On the other hand, if Corp. X merged with Corp. P on June 1, 1985, it would not recognize gain on the deemed sale of its assets but would either take an $820 basis in its assets or take a $1,000 basis in its assets with Corp. P having to recognize gain on a deemed sale of its 20 percent interest in Corp. T acquired from Corp. X.

(2) Section 333 Liquidations of Target Corporations

Under §338(c)(1) prior to the 1984 TRA, a target corporation took a fully stepped up asset basis without having to pay a "surrogate tax" even though the corporation making the qualified stock purchase did not own all of the target corporation stock on the acquisition date, provided that the target corporation was liquidated under either §331 or §333 within one year after the acquisition date. Although application of that rule (where a post-acquisition date liquidation was a §331 liquidation as to the minority shareholders) resembled the result under pre-TEFRA law, the automatic basis step up under former §338(c)(1) was more favorable than the carryover basis normally accorded to minority shareholders the treatment of whom was governed by §333 prior to TEFRA.

Section 712(k)(2) of the 1984 TRA amended §338(c)(1) to provide that a post-acquisition date liquidation of a target corporation will eliminate the surrogate tax on the target corporation only if "section 333 does not apply" to the liquidation. The language of this provision seems somewhat overbroad in that it seems to require gain recognition to the full extent that target corporation stock is held by those other than the purchasing corporation where any portion of the liquidation is taxed under §333, rather than just to the extent that the liquidation is treated as a §333 liquidation. Under pre-§338 law, minority shareholders who did not elect or were not eligible for §333 treatment obtained a fair market value basis for property distributed

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

to them even though §333 treatment applied to other minority shareholders.

e. Changes in Asset Consistency Rules

As previously noted, one of the purposes behind §338 was to prevent purchasing corporations from stepping up the basis in appreciated assets acquired from one or more affiliated target corporations while retaining a cost basis in other assets having a fair market value less than adjusted basis from the same or affiliated corporations. Thus, under §338(e), many acquisitions by the purchasing corporation or affiliates of assets from the target corporation or affiliates would force a §338 election with respect to the qualified stock purchase of the target corporation. Changes made by the 1984 TRA do not change this emphasis but do give the Treasury more flexibility in meeting the goal of consistency. These changes also coordinate the consistency rules with other changes made by the 1984 TRA.

(1) Conditional Exception to Asset Consistency Rules

Perhaps the potentially most important modification of the asset consistency rules is contained in §712(k)(3) of the 1984 TRA, which expanded the Service's authority to permit exceptions to the asset consistency rules subject to conditions. Prior to the 1984 TRA, §338(e)(2)(E) permitted the Service to provide exceptions to the asset consistency rules with respect to "acquisitions described in regulations." This language did not make clear whether the Service could require taxpayers to take certain actions as a condition for avoiding the asset consistency rules with respect to acquisitions of assets from the target corporation or its affiliates within the consistency period.

New §338(e)(2)(D) gives the Service explicit authority to impose conditions in this regard. This provision was not contained in H.R. 4170. The Conference Report gives as an example of the type of condition that the Service may impose a requirement that the purchasing corporation (or its affiliate) take a carryover basis in any appreciated asset acquired during the consistency period from a target corporation that was subject to a qualified stock purchase (or an affiliate thereof).[135] Thus, the intention appears to be to permit consistency period asset acquisitions from target corporations or their affiliates provided that the Service can be assured that none of the purported tax avoidance that the asset consistency rules were intended to eliminate is present. Given the extensive consequences that would result from a deemed §338 election, it would not be difficult to envision an extensive set of guidelines or an elaborate advance ruling procedure in connection with this new provision.

(2) Foreign Assets

Under §338(e)(2)(D) prior to the 1984 TRA, a purchasing corporation or its affiliates would have been permitted to acquire within the consistency period from target corporations that were the subject of qualified stock purchases, or their affiliates, assets located outside the United States without triggering a deemed §338 election to the extent provided in regulations. Presumably, the premise behind this exception was the notion that assets located outside the United States are not eligible for full ACRS or investment tax credit benefits[136] and thus that the tax avoidance that the consistency rules are designed to prevent is not present upon the acquisition of foreign assets. However, once a purchasing corporation or its affiliate acquires a foreign asset, the acquirer can get the full tax benefit from a fair market value basis without tax by transferring the asset to the United States.

Presumably as a result of this, §712(k)(3) of the 1984 TRA repealed the exception to the asset consistency rules for acquisitions of foreign assets. Given the authority of the Service to provide by regulations exceptions to the asset consistency rules for certain acquisitions, it would not be surprising to see an exception for assets, such as real property, that could be used only outside the United States. However, there is nothing in the legislative history of the repeal of the foreign asset exception, which was not in H.R. 4170, that illuminates Congressional intent in this regard.

The repeal of the exception to the asset consistency rules for acquisitions of foreign assets is effective for qualified stock purchases completed on or after September 1, 1982.[137] Although this would appear to be a retroactive change, it is not. The Service never promulgated the regulations necessary to implement this exception.

(3) Assets Having a Partial Carryover Basis

Under §338(e)(2)(B) prior to the 1984 TRA, acquisitions of assets during the consistency period from a target corporation that was the subject of a qualified stock purchase (or any affiliate thereof) did not trigger the asset consistency rules if the acquiring corporation's basis in those assets was determined "in whole or in part" by the adjusted basis of the transferor corporation therein. Because of changes to §311(d) of the Code made by §54 of the 1984 TRA,[138] under which a corporation distributing as a dividend appreciated property recognizes all gain realized on such a distribution, a corporate distributee of appreciated property received as a dividend takes a basis in that property technically computed in part based on the distributing corporation's adjusted basis even though such basis is in fact equal to the fair market value of that property.[139] Moreover, any acquisition of assets from a target corporation or an affiliate in which the acquiring corporation takes a basis in excess of the transferor corporation's adjusted basis gives the acquiring corporation a potential tax benefit inconsistent with the carryover basis retained by the target corporation in its assets in the event no §338 election is made.

Presumably because of these concerns, §712(k)(3) of the 1984 TRA amends §338(e)(2)(A) to provide that only assets acquired from the target corporation or its affiliates during the consistency period which have a basis determined wholly by reference to the transferor corporation's adjusted basis are not subject to the asset consistency rules. This narrowing of the exception disqualifies not only acquisitions resulting from dividend distributions but also acquisitions in nonrecognition transactions in which the transferor corporation recognizes some gain.[140]

Note: This new provision should not apply to liquidations of target corporations within one year following the acquisition date because the purchasing corporation would take a carryover basis in the target corporation's assets under §334(b)(1). One factor complicating this statement could be the new rules relating to §332 liquidations of U.S.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

corporations into foreign corporations where assets other than those used in the active conduct of a foreign trade or business are distributed. New §§367(a) and (e) would subject the liquidating U.S. corporation to tax on gain realized with respect to such assets in the distribution. Although the new rules under §367 do not appear to modify the §334(b)(1) carryover basis rule for assets distributed in such liquidations, to give the distributee shareholder no basis credit for gain recognized on the distribution could lead to double taxation of the gain inherent at the time of liquidation in the assets distributed. If §334(b)(1) were amended to take into account gain recognized on §332 liquidations of U.S. subsidiaries into foreign parent corporations, then — barring regulatory or statutory relief — such liquidations would trigger a deemed §338 election where recently purchased U.S. subsidiaries were liquidated. This may be an issue which can be addressed in regulations authorized by §338(i)(2), giving the Commissioner authority to coordinate the §338 rules with the rules governing taxation of foreign corporations and their shareholders.[141]

f. Other Changes to Section 338

(1) Foreign Corporations and Their Shareholders

Prior to the 1984 TRA, §338 in general applied to qualified stock purchases by and of foreign corporations in the same manner (to the extent of U.S. taxing jurisdiction over such corporations) as it applied to qualified stock purchases by and of U.S. corporations. Under amendments made to §367 by §131(a) of the 1984 TRA, U.S. corporations controlled more than 80 percent by foreign corporations are fully taxable on gain realized on liquidation except to the extent that the assets distributed in liquidation consist of assets (other than inventory, receivables, intangibles and certain other property) to be used in the active conduct of a foreign trade or business.[142] Thus, were §338 to apply to qualified stock purchases of U.S. corporations by foreign corporations, the U.S. target corporations would be able to receive a stepped up basis in their assets without payment of tax on a §338 election. A subsequent liquidation of such target corporations would in theory be subject to gain recognition under §367 but most if not all of such gain would be eliminated by the basis step up resulting from the deemed §338(a) sale. As a result, application of §338 in such cases would lead to more favorable results than a §332 liquidation would have had §334(b)(2) in effect.

Section 712(k)(7) adds §338(i)(2) providing that the Treasury is authorized to issue regulations coordinating §338 with rules governing the treatment of foreign corporations and their shareholders. Presumably those rules will not only attempt to provide rules coordinated with the rules of §367 but also rules relating to the treatment of controlled foreign corporations involved in qualified stock purchases. Because this provision is effective for transactions on or after September 1, 1982,[143] these regulations could dramatically affect transactions occuring prior to the date in 1984 TRA was enacted, although one would assume that the regulations would have to be coordinated with the rules governing foreign corporations and their shareholders as those rules were in effect on the date the transaction took place.

Note: Although the most obvious change in §338(i) was the addition of specific Treasury authority to issue regulations relating to foreign corporations and their shareholders, §712(k)(7) also modifies §338(i) to give the Treasury authority to issue any regulations necessary or "appropriate to carry out §338." Under §338(i) prior to the 1984 TRA, the Treasury had authority only to issue those regulations necessary to carry out the purpose behind the consistency rules. The above quoted language could be interpreted as representing a major expansion of the Treasury's regulatory authority under §338, but the legislative history is silent on this point. This modification was not contained in H.R. 4170 but was added by the Conference Committee, whose report did not address this language change.

(2) Separate Application of Section 337

Section 338(a) provides that a deemed asset sale from the "old" target corporation to the "new" target corporation pursuant to a §338 election is treated as a sale that qualifies for §337 treatment. However, prior to the 1984 TRA, it was unclear whether §337 applied to an actual sale of assets made by a target corporation pursuant to a plan of liquidation if the target corporation was not in fact liquidated but is the subject of a qualified stock purchase as to which the purchasing corporation makes a §338 election. On the one hand, §337 on its face applies only if there is a distribution in complete liquidation. On the other hand, the purpose of §338 is to permit treatment of qualified stock purchases as liquidations without requiring an actual liquidation.

Section 712(k)(6)(C) of the 1984 TRA adds new §338(h)(12) providing that, if any target corporation as to which the purchasing corporation has elected or been deemed to elect §338 treatment adopted a plan of liquidation no more than twelve months before the acquisition date and has not rescinded that plan as of the acquisition date, the target corporation will, for §337 and related purposes (presumably including §453(h)(2)), be treated as having distributed all of its assets as of the close of the acquisition date. Thus, §338(h)(12) can be used by a target corporation to sell, prior to a qualified stock purchase, to a party unrelated to the purchasing corporation stock in a subsidiary having recapture tax potential. Such sale will be tax-free to the target corporation and will not trigger the consistency rules. Where the purchasing corporation never owns all of the target corporation's stock at any time during the one-year period after the acquisition date, rules similar to those in §338(c)(1) are to be devised to limit the extent to which the target corporation will be shielded from gain recognition on the actual sale of assets.

This provision is effective for all qualified stock purchases completed on or after September 1, 1982.[144]

(3) Estimated Taxes on Section 338 Deemed Asset Sale

Under §6154 of the Code, most corporations whose estimated tax for a taxable year is expected to exceed $40 must pay equal quarterly installments of such tax to the IRS. Estimated taxes include all regular income tax liability less certain tax credits. Where the estimated tax due is not paid or not paid in a timely manner, §6655 imposes a penalty on the amount of underpayment.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Where a §338 election is made or deemed to be made, the target corporation is potentially liable for income tax, and thus estimated tax, on depreciation and investment tax credit recapture and certain other items which are deemed to arise on the acquisition date, as well as on a certain portion of gain on its assets where the purchasing corporation owns less than all of the target corporation's stock. Moreover, under new §338(b)(3)(B), a purchasing corporation which owns "nonrecently purchased stock" may elect to "gross up" the basis of the target corporation's assets by treating its nonrecently purchased stock as having been sold at fair market value on the acquisition date. Because these tax liabilities are deemed to relate back to the acquisition date even though the purchasing corporation has more than nine months after the acquisition date to elect §338 treatment and even though a deemed §338 election can be based upon transactions occurring as much as one year after the acquisition date, in many cases it will be impossible for a target corporation to make timely estimated tax payments based upon the consequences of a §338 election.

Section 712(k)(6)(C) of the 1984 TRA adds §338(h)(13) to provide that the tax arising on a §338(a)(1) deemed asset sale will not be taken into account in determining whether the target corporation is liable for the penalty for underpayment of estimated tax liability. The legislative history of this provision states that, if a target corporation fails timely to file any other tax return, or pay any other tax, as to the deemed asset sale, that failure will be considered as resulting from reasonable cause provided that such return is filed and such tax is paid by the date for making the §338 election. It should be noted that this language does not take into account a §338 election deemed to arise by operation of the consistency rules more than 9½ months after the acquisition date. Neither the statute nor the legislative history provide for any forgiveness of interest payable for late payment of tax due on the §338(a) deemed asset sale.

Note: The forgiveness of penalties in §338(h)(13) apparently does not extend to the purchasing corporation's liability for any §338(b)(3)(A) deemed sale of its nonrecently purchased stock of the target corporation, even though liability for that tax relates back to the acquisition date but does not arise unless a §338 election is made or deemed to be made.

This provision applies retroactively to all qualified stock purchases completed on or after September 1, 1982.[145] It is not clear why the provision was not made applicable to prior qualified stock purchases.

(4) Application of Section 341 as to Dispositions of Minority Shareholder Target Corporation Stock

Under §341 of the Code, gain on any sale or exchange (including surrender in complete or partial liquidation) of stock in a collapsible corporation is considered ordinary income. One of the requirements for treating a corporation as collapsible is that the corporation must be formed or availed of for certain purposes with a view to the sale or exchange of its stock "before the realization by the corporation" of a substantial part of the taxable income to be derived from its property.[146] Where a target corporation is the subject of a §338 election, it is deemed to sell all of its assets in a §337 sale on the acquisition date. Thus, the target corporation would arguably be deemed to realize all of the gain inherent in its assets, even though the recognition of such gain would be limited to recapture tax liability and certain other items.

Thus, where a corporation that meets the criteria for collapsible corporation status is the subject of a qualified stock purchase of less than all of its stock as to which a §338 election is made, an argument could be made under pre-1984 TRA law that sales or surrenders in liquidation of target corporation stock by minority shareholders after the acquisition date were not subject to §341 because the target corporation had *realized* all of the gain in its assets on the acquisition date. In contrast, target corporation shareholders who sold their stock as part of the qualified stock purchased would be subject to §341.

To ameliorate this situation, §712(k)(6)(C) of the 1984 TRA adds §338(h)(14), which provides that, for purposes of determining whether §341 applies to a disposition of target corporation stock within one year after the acquisition date "by a shareholder (other than the acquiring corporation) who held stock in the target corporation on the acquisition date," §338 shall not be taken into account. Thus, if a target corporation is otherwise collapsible and shareholders who did not sell their shares on or before the acquisition date sell or exchange their shares, or receive distributions in complete or partial liquidation of the target corporation, within one year after the acquisition date, the resulting gain will be treated as ordinary income in accordance with §341. The one-year post-acquisition date limitation is designed to mesh with the rules of §338(c), under which a target corporation will recognize gain on a deemed asset sale to the extent that the purchasing corporation owns a maximum of less than 100 percent of the target corporation stock during the one-year period beginning on the acquisition date. Thus, the effect of this provision may be to permit a choice between ordinary gain recognition at the target corporation level or ordinary gain recognition at the minority shareholder level.

Note: The language of §338(h)(14) would seem to apply only to sales, exchanges or liquidation transactions involving the person or entity that owned the target corporation stock on the acquisition date. Thus, as drafted, the provision would not seem to apply to dispositions by those who received their shares as gifts or in §351 transactions less than one year after the acquisition date. Since gifts and §351 exchanges are not subject to §341, the ordinary character of gain on such shares may be transmitted into capital gain by such transfers.

(5) Combined Deemed Sale Return

In general, the consequences of a §338(a) deemed sale by a target corporation must be reported on a return separate from the return of any selling shareholder's consolidated group and from any return of any purchasing corporation's consolidated group. Under pre-1984 TRA law, where the target corporation and one or more of its subsidiaries were the subject of a qualified stock purchase, they could not file a consolidated return with respect to the §338(a) deemed sale except as provided in regulations.[147] Although the seller's inability to control a decision to make a §338 election justified keeping the deemed sale out of the seller's consolidated return and although the interest in precluding use of the purchasing corporation's losses to

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

shelter the target corporation's recapture income justified keeping the deemed sale out of the purchasing corporation's consolidated return, there was no reason to prohibit a consolidated return with respect to the §338(a) deemed sales by the target corporation and all subsidiaries.

Thus, §712(k)(6)(C) of the 1984 TRA adds new §338(h)(15), providing that, under regulations, all target corporations that were members of the same consoliated group immediately prior to the acquisition date and that are the subject of a qualified stock purchase and §338 election by the purchasing corporation may report all resulting §338(a) deemed sales on a "combined deemed sale return." In order for this provision to have an impact, regulations under §338(b)(3)(B) will have to provide that a target corporation's acquisition date with respect to the qualified stock purchase of the stock of its 80 percent or more controlled subsidiaries deemed to arise by virtue of the §338(a) deemed sale is the same as the acquisition date for the qualified stock purchase of such target corporation's stock. Otherwise, the target corporation would not be a member of the purchasing corporation's affiliated group — and thus would not be acquired by the same purchasing corporation on the same acquisition date, as is required by §338(h)(15).

This provision is effective for qualified stock purchases completed on or after September 1, 1982.[148]

g. Liquidations Following Qualified Stock Purchases

Under §338 prior to the 1984 TRA, a purchasing corporation that made a qualified stock purchase of a target corporation having substantial net operating loss (NOL) carryovers or other desirable tax attributes could decide not to make a §338 election. It could then liquidate the target corporation under §332 and succeed to the target corporation's NOL carryovers under §381(a)(1) as long as one of the target corporation's businesses was continued.[149] It was possible to argue that §269(a), which permits the Service to deny tax benefits otherwise made available by the acquisition of 50 percent control over a corporation, applied to prevent the purchasing corporation's use of the target corporation's NOL carryovers. However, where the qualified stock purchase was primarily motivated by business purposes, it would not be subject to §269. The liquidation would probably not be subject to §269, even if motivated by tax avoidance, because it would be an acquisition of assets from a controlled corporation.[150]

A purchasing corporation's ability to succeed to a target corporation's NOL carryovers resulted in more favorable treatment than the available treatment under former §334(b)(2) because §381(a) provided that tax attributes of a subsidiary liquidated under §332 did not carry over where §334(b)(2) applied to the liquidation.

Thus, §712(k)(8)(A) of the 1984 TRA adds new §269(b) to the Code, relating to liquidations pursuant to plans adopted within two years after the acquisition date of target corporations that were the subject of qualified stock purchases as to which no §338 election was made. In such cases, §269(b) provides that, if the principal purpose of the liquidation is the avoidance of tax by obtaining an otherwise unavailable deduction, credit or allowance, the IRS is empowered to disallow any such deduction, credit or allowance. In fact, the legislative history states that regulations should provide that such a liquidation gives rise to a presumption of tax avoidance similar to the presumption now in Regs. 1.269-3(b)(1) with respect to certain §269(a) transactions.[151]

New §269(b) by its terms does not restrict the availability to a purchasing corporation of target corporation tax attributes following a liquidation of the target corporation pursuant to a plan adopted more than two years after the acquisition date. Thus, given the 15-year period in which NOL's may be carried over, the effect of this provision may be merely to postpone liquidations rather than to restrict purchasing corporations' use of target corporations' NOL carryovers. Moreover, the legislation does not apply to downstream mergers of purchasing corporations into target corporations under §368(a)(1)(A).[152] Where a downstream merger is involved, presumably no waiting period between the purchase and the merger is necessary. In such a merger, the NOL carryovers of the target-surviving corporation would be affected by §382(b) to the extent that such corporation had a fair market value less than 25 percent of that of the purchasing-acquired corporation.[153]

The Conference Report concerning new §269(b) stated that it was not to apply where a purchasing corporation made a qualified stock purchase of a profitable corporation, did not make a §338 election and liquidated the target corporation within two years after the acquisition date, provided that ownership of the purchasing corporation did not change as the result of the transaction.[154] This language is apparently designed to apply to §269(b) the rule contained in Rev. Rul. 63-40 [155] with respect to section 269(a) in similar circumstances under former §334(b)(2). Thus, a qualified stock purchase of a profitable target corporation by a purchasing corporation with NOL carryovers followed within two years by a liquidation of the target corporation without a §338 election would ordinarily permit the post-liquidation income generated by the target corporation's former assets to be sheltered by the purchasing corporation's NOL carryovers.

The new provision may be more restrictive than intended in one respect because the prohibited tax avoidance motivation is tested at the time of liquidation and need not be related to a desire to use the target corporation's pre-acquisition tax attributes. Thus, in theory, at least, a target corporation the stock of which is acquired solely for business reasons but which generates post-liquidation losses reported on a separate return and is liquidated by the purchasing corporation within two years after the stock acquisition could be subject to new §269(b). However, it could be argued that, because those losses would have offset the purchasing corporation's income had the two corporations filed a consolidated return after the stock acquisition, the purchasing corporation's use of target corporation losses would have been available irrespective of the liquidation.[156] Moreover, it appears that the language in the Conference Report cited above immunizes from §269(b) a liquidation following a qualified stock purchase without a §338 election where the target corporation is profitable at the time of the stock purchase.

Section 269(b) is effective for liquidations occurring on or after October 21, 1983 following qualified stock purchases completed on or after September 1, 1982.[157]

C. *Amendments Affecting Purchases of Stock Treated as Redemptions*

1. Introduction

Under §304 of the Code, acquisitions of stock from shareholders who are deemed to own at least 50 percent of the stock of the acquiring corporation and the transferred, or issuing, corporation in exchange for property, including money or any other consideration other than stock of the acquiring corporation, are treated not as sales or exchanges but as redemptions usually taxed as §301 distributions. Thus, the receipt of such consideration is generally taxable as a dividend to the extent of available earnings and profits. Somewhat simplified, §304(a)(1) applies to acquisitions of stock of sister corporations by brother corporations ("brother-sister transactions") and treats such transactions as if the acquiring brother corporation had distributed property to the transferor shareholder in redemption. Equally simplified, §304(a)(2) applies to acquisitions of the stock of parent companies by their subsidiaries from the ultimate shareholder ("parent-subsidiary transactions") and treats the property distributed in such transactions as redemption distributions by the parent issuing corporation.

Section 226 of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) made substantial changes in §304. Section 304(b)(3)(A) after TEFRA provided that a transaction described in both part III of subchapter C and in §304 would be governed by §304, except for certain transactions involving the assumption of (or stock taken subject to) acquisition indebtedness and the formation of certain bank holding companies. Section 304(b)(2)(A), as amended by TEFRA, provided that, in determining the extent to which a §304 distribution is to be treated as a dividend, the earnings and profits of both the acquiring corporation and the issuing corporation are to be taken into account. Section 304(c)(2)(A), as amended by TEFRA, expanded the criteria for determining when a shareholder or group of shareholders was deemed to have at least 50 percent control of the issuing corporation and the acquiring corporation. TEFRA also made parallel changes in §306, which treats as ordinary income gain on certain preferred stock issued in situations where, had cash or other property been issued, dividend treatment would have resulted.

2. Overview

The far-reaching revisions of §304 made by TEFRA were perhaps were more far-reaching than Congress had intended.[158] As a result, the 1984 TRA amendments significantly modified several of those TEFRA revisions.

Following enactment of the 1984 TRA, §304 treats all deemed §304 distributions as having been made first, to the transferor from the acquiring corporation to the extent of its earnings and profits and thereafter, to the transferor from the issuing corporation. This treatment is designed to apply not only in determining whether the §304 distribution is a dividend, but also in determining the source of the §304 distribution and the amount of post-distribution earnings and profits of the acquiring and issuing corporations. Parallel changes are made in the determination of whether stock is §306 stock and whether a redemption of such stock is a dividend.

The 1984 TRA amendments clarify that §304 has priority over §351 transactions, and not over all reorganizations, and make inapplicable the acquisition indebtedness exception when such acquisition indebtedness was incurred with respect to purchases from related parties or is assumed in non-§351 transactions. The 1984 TRA amendments to §304(c) exempt from the constructive ownership rules applicable in determining common control certain portfolio holdings. Technical changes are made with respect to the distribution of property in connection with bank holding company formations.

The changes to §§304 and 306 made by the 1984 TRA are generally effective for distributions occurring on or after September 1, 1982.

3. Detailed Analysis

a. Computation of Available Earnings and Profits

Pre-TEFRA law provided that, in a "brother-sister" §304 transaction, the amount of earnings and profits to be taken into account in determining whether the §304(a) deemed distribution from the acquiring corporation was solely the earnings and profits of the acquiring corporation. Where a newly formed holding company or other corporation without earnings and profits was the acquiring corporation, the deemed distribution could not be treated as a dividend, but only as a return of capital or capital gain. Thus, TEFRA modified §304(b)(2)(A) to provide that, for purposes of determining the extent to which a §304 deemed distribution was a dividend, the property received by the transferor was deemed to be distributed first from the issuing corporation to the acquiring corporation and then from the acquiring corporation to the transferor. In the case of "parent-subsidiary" §304 deemed distributions, even before TEFRA, the amount of any dividend was determined as if the property received by the transferor was first distributed by the acquiring corporation to the issuing corporation and then from the issuing corporation to the transferor corporation.

However, these formulations did not necessarily ensure that the amount of a §304 deemed distribution treated as a dividend took into account the combined earnings and profits of the acquiring and issuing corporations. In the case of "brother-sister" §304 transactions in which the property received was appreciated property, the deemed distribution from the issuing to the acquiring corporation would arguably be limited to the issuing corporation's adjusted basis in the property.[159] Thus, even where the transferor was an individual, as to whom the amount of the §304 deemed distribution was the full fair market value of the property,[160] the amount of earnings and profits deemed distributed by the issuing corporation to the acquired corporation would be limited to the adjusted basis in the property.

In the case of "parent-subsidiary" §304 transactions, the constructive distribution from the acquiring corporation to the issuing corporation arguably provided opportunities to shift earnings and profits from acquiring corporations that had individual shareholders to issuing corporations that had only corporate shareholders, which in many cases would prefer dividend treatment. Those constructive distri-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

butions could also convert what, in a third-party sale, would be U.S. source income to foreign source income and vis versa.[161]

Section 612(k)(1) of H.R. 4170 would have amended §304(a)(2)(A) to provide that, as to "brother-sister" §304 transactions, in determining the amount of a §304 deemed distribution that could be taxed as a dividend, the amount of available earnings and profits would be determined as if the property received by the transferor was distributed to it first by the acquiring corporation to the extent of its earnings and profits and then by the issuing corporation. The conference committee did not object to this formulation with respect to "brother-sister" transactions but thought that, because of the potential problems outlined above, the rule should apply to "parent-subsidiary" transactions as well. Section 712(l)(1) of the 1984 TRA did just that, numbering the provision §304(b)(2)(A) and (B).[162]

The conference report accompanying 1984 TRA §712(l)(1) states that, for all purposes of characterizing the nature of a §304 deemed distribution (in either a "brother-sister" or "parent-subsidiary" transaction), the property received is deemed to have been transferred directly to the transferor from the acquiring corporation to the extent of the lesser of the amount distributed or the acquiring corporation's earnings and profits and then to the transferor from the issuing corporation.[163] Thus, if the amount distributed — determined solely by whether the transferor is a corporate or a noncorporate shareholder — exceeds the acquiring corporation's earnings and profits and the acquiring corporation is a foreign corporation more than 50 percent of whose gross income is from foreign sources and the issuing corporation is a U.S. corporation having at least 20 percent of its gross income from U.S. sources, the distribution will be foreign source income to the extent of the acquiring corporation's earnings and profits. It will be U.S. source income otherwise. Similarly, if the transferor is an individual, and the acquiring corporation has no earnings and profits, the amount of available earnings and profits will be the lesser of the issuing corporation's earnings and profits or the full fair market value of the property distributed.

The conference report also notes that the earnings and profits of each corporation deemed to have made a distribution will be reduced by the amount of such distribution deemed made by it.[164]

Note: Because §311 applies to the acquiring corporation's transfer of property received in exchange for issuing corporation stock,[165] the 1984 TRA amendments to §311(d),[166] setting forth the general rule that gain realized by a distributing corporation on its distribution of appreciated property in redemption is recognized, will cause an increase in the acquiring corporation's earnings and profits on the distribution.[167] Moreover, even where, by virtue of §311(d)(2), no gain is recognized, 1984 TRA amendments to §312 will increase the amount of the distributing corporation's earnings and profits by the amount realized on the distribution.[168]

Section 712(1)(6) of the 1984 TRA amends §306(c)(3) to provide that, in determining whether preferred stock issued in §351 transactions is §306 stock and whether a redemption of §306 stock in a transaction described in both §§304 and 351 gives rise to dividend treatment, the determination of available earnings and profits shall be made as if the issuance or distribution of property in redemption, as the case may be, were made by the acquiring corporation to the extent of its earnings and profits and then by the issuing corporation.

The provisions modifying the rules respecting the amount of a §304(a) distribution that may be a dividend are effective for stock acquired after June 18, 1984, although the taxpayer may elect to have those rules apply to stock acquired on or after September 1, 1982.[169] The rules modifying §306(c)(3), however, are fully effective for transactions occurring on or after September 1, 1982. No reason was given for the earlier effective date for the §306(c)(3) amendments and it may, at least with respect to redemptions of §306 stock, be unintended.

b. Priority of Reorganization Treatment

TEFRA amended §304 to give it priority over all provisions contained in part III of subchapter C. Where a transaction was described in §351-§368 as well as in §304(a), former §304(b)(3) provided that §304 applied to the extent that property was received by one or more transferors from one corporation in which such transferors had at least 50 percent control in exchange for stock in another such controlled corporation.

However, the focus of the TEFRA changes in this regard was to give §304 priority over §351. Little thought was given to the interaction of the reorganization rules with §304. Thus, where a controlling shareholder of one corporation transferred stock in that corporation to another corporation and received at least 50 percent of the voting stock but less than 80 percent control of that corporation plus property, what would otherwise be a fully taxable exchange[170] can be bifurcated into a §304 redemption to the extent of the property received and a tax-free §368(a)(1)(B) reorganization to the extent that stock was received.

Section 712(l)(2) of the 1984 TRA amends §304(b)(2) to provide that §304 takes priority over §351 and those portions of §§357 and 358 relating to §351 with respect to transactions described in both §§304 and 351. Although the statute does not specifically state that the reorganization provisions apply to transactions that are also described in §304, the legislative history states that such priority is intended.[171]

Note: Because §304 does not take priority over the operation of part III of subchapter C other than §351 and parts of §§357 and 358, an argument could be made that §367(a) would override §304 where a U.S. shareholder transfers stock (appreciated or otherwise) of a 50 percent controlled corporation to a more than 80 percent controlled foreign corporation and receives not only stock but also other property. Section 367(a)(1), as amended by §131 of the 1984 TRA, provides that, in the case of a transaction "described in §351," the foreign acquiring corporation is not to be considered a corporation for purposes of determining the extent to which gain is recognized. Regardless of whether §351 is the operative Code provision, such a transaction would seem to be "described in" that section. If §357(a)(1) governed and the acquiring corporation were not considered a corporation in determining the amount of gain recognized on a transfer, then arguably §304(a),

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

which applies only to transfers to controlled corporations, could not apply in this respect. Thus, §1001, which would limit gain to the excess of the fair market value of the stock transferred over its adjusted basis, rather than §304(a), which would ordinarily treat as a dividend the full fair market value (in the case of an individual transferor) of property received, or the adjusted basis (in the case of a corporate transferor) of such property, would govern. On the other hand, it could be argued that §304 — at least where a deemed §304 distribution is treated as a dividend — does not seek to tax "gain" and thus that §367(a)(1) is inapplicable.

The provision limiting the priority of §304 to transactions also described in §351 is effective for transfers on or after September 1, 1982.[172]

c. Limitations on Acquisition Indebtedness Exception

While expanding the scope of §304 to apply, to the extent of property received, to transfers (described in both §§304 and 351) of stock of one 50 percent commonly controlled corporation to another, TEFRA made an exception for the acquiring corporation's assumption of (or receipt of stock subject to) indebtedness incurred by the transferor to acquire the stock so transferred.
The theory behind this exception was that, had the acquiring corporation purchased the transferred shares directly using borrowed funds, the transferor (*i.e.*, the controlling shareholder of the acquiring corporation) would not have been subject to tax.[173]

However, despite the heading to §304(b)(3) — "Coordination With §351," §304(b)(3)(B) prior to the 1984 TRA literally applied to preclude the application of §304(a) with respect to all assumptions of such acquisition indebtedness, whether incurred in connection with a transaction described in §351 or not. Thus, where a shareholder that controlled actually or constructively at least 50 percent (but actually owned less than 80 percent) of the stock of a corporation, transferred to that corporation solely for property (including the assumption of the shareholder's indebtedness incurred in acquiring the issuing corporation shares transferred) stock more than 50 percent of which the transferor actually or constructively owned, §304 would not apply to the assumption of indebtedness.

Moreover, whether or not the transfer was described in §351, the acquisition indebtedness exception applied even where the transferor acquired the stock being transferred from a related person. This permitted a transferor to purchase appreciated stock from a relative, who would be taxed at capital gain rates on the sale, and have the acquiring corporation pay for such stock with no tax to the transferor. Even if §351 did not apply and the transfer was treated as a taxable sale, there would be little if any gain realization so long as the stock was purchased from the relative at fair market value and the transfer to the acquiring corporation occurred shortly after such purchase. Although the acquisition indebtedness exception to §304 contemplated the tax-free use of corporate funds to finance a purchase originally made by a shareholder, it did not do so in a situation where both the transferor and a related seller of the issuing corporation shares would thereby avoid dividend tax.

Section 712(1)(3)(A) of the 1984 TRA provides that the exception to §304(a) treatment for the assumption of acquisition indebtedness by corporations receiving stock from 50 percent controlling shareholders applies only to transactions described in §351. Thus, the assumption of (or the receipt of stock subject to) acquisition indebtedness by a 50 percent controlled corporation qualified for the exception only where the transferring shareholder or shareholders actually own at least 80 percent of the stock of the acquiring corporation immediately after the transfer and receive some stock in exchange for the stock so transferred.[174]

One potential problem with this requirement may arise on the transfer of stock that is subject to acquisition indebtedness to the full extent of its value. In this case, even if the transferor receives stock from the acquiring corporation, it would be possible for the Service to argue that, because the acquisition indebtedness assumed equaled the full fair market value of the issuing corporation stock transferred, the acquiring corporation stock received by the transferor could be ignored, with the result that the transaction was not described in §351.[175] Satisfying §304(b)(3) in this case is important because, even if there is no gain realized, the full amount of acquisition indebtedness would be taxed as a dividend if the transaction were subject to §304(a).

Section 712(1)(3)(B) of the 1984 TRA amends §304(b)(3)(B) to provide that the acquisition indebtedness exception to §304(a) treatment applies only if the seller of the issuing corporation stock is not related to the transferor,[176] or, if such a relationship exists, the seller satisfies rules similar to §302(c)(2) with respect to the issuing and acquiring corporations. Thus, where the transferor has purchased from one (the stock owned by which is constructively owned by the transferor) the issuing corporation's stock that is transferred, the exception will apply only where the seller has no interest in either the issuing or acquiring corporation (even as an employee), does not acquire an interest in either corporation for at least 10 years after the sale, did not acquire the stock sold from a related party within 10 years prior to the sale, did not transfer within 10 years before the sale stock in either corporation to a related person who owns it at the time of the sale, and files with the IRS an agreement similar to that described in §302(c)(2)(A)(iii).[177] Thus, acquisition indebtedness incurred to purchase stock from a sibling is generally subject to the acquisition indebtedness exception while acquisition indebtedness incurred to purchase stock from a spouse, parent, child or related corporation is not, absent satisfaction of the §302(c)(2) rules.[178]

Unlike most of the 1984 TRA changes to the §304 rules, the limitations on the acquisition indebtedness exception for stock purchased from related parties are generally effective only for stock "acquired" after June 18, 1984, unless the taxpayer elects to have those limitations applied to acquisitions occurring on or after September 1, 1982.[179] Presumably, this effective date provision refers to stock acquired by the acquiring corporation, and not stock acquired by the transferor, after June 18, 1984. The limitation of the acquisition indebtedness exception to transfers described in §351 is effective for acquisition indebtedness incurred after October 20, 1983,[180] although a taxpayer may elect to have that limitation apply to any stock ac-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

quired by the acquiring corporation on or after September 1, 1982.

d. Distributions Pursuant to Formation of Bank Holding Companies

When §226 of TEFRA modified §304 to give that section priority over §351 with respect to the receipt of property by transferors, it contained an exception for certain distributions of securities to minority shareholders incident to the formation of bank holding companies.[181] One of the requirements for this exception to apply was that no controlling shareholders of the bank holding company receive "distributions of . . . property" described in §304(a).

The rule exempting from §304 treatment acquiring corporations' assumptions of acquisition indebtedness is separate from the bank holding company exception and does not exclude from property distribution status an acquiring corporation's assumption of acquisition indebtedness. Therefore, where controlling bank holding company shareholders had the bank holding company assume their indebtedness incurred in acquiring the bank stock that was contributed to the bank holding company, those shareholders would have received a distribution of property, which would have prevented application of the bank holding company exception to the minority shareholders who received securities.

Section 712(1)(4) amends §304(b)(3)(C) to provide that an assumption of (or acquisition of stock subject to) acquisition indebtedness is not a distribution of property for purposes of the bank holding company exception. The amendment is effective for bank holding company formations on or after September 1, 1982.[182]

e. Constructive Ownership Rules for Determining 50 Percent Control

Section 226 of TEFRA provided that the determination of whether the issuing and acquiring corporations were at least 50 percent commonly controlled by one or more shareholders was based upon an expanded application of the §318(a) constructive stock ownership rules. Application of §318(a)(2)(C) to the §304(c) common control test was expanded so that, even if less than 50 percent of the value of stock of a corporation was owned by a person (including a corporation), that person was deemed to own a proportionate amount of the stock owned by the corporation. Application of §318(a)(3)(C) was expanded so that, even if less than 50 percent of the stock of a corporation was owned by a person, that corporation was deemed to *all* of the stock in any other corporation owned by such person.

The operation of these expanded constructive stock ownership rules created the common control requisite for §304 treatment in situations where *de facto* common control was absent. Thus, if a shareholder owned 50 percent of the value of the stock of one corporation and owned a single share of stock in a second corporation, a sale by either corporation to the other of stock in a subsidiary would be subject to §304. Not only did this present a possible trap for unwary individual shareholders and make it relatively simple for corporate shareholders to obtain §304 dividend treatment in lieu of capital gain treatment, it might also have precluded application of the §338 rules to many stock purchases, since §304 treats an acquisition of stock as a contribution to capital, which is excluded from the definition of purchase in §338.[183]

Section 712(1)(5)(A) amends §304(c)(3) in three respects for purposes of determining whether a shareholder constructively owns at least 50 percent of a corporation's stock. First, a person is deemed to own a proportionate amount of stock actually owned by a corporation only if that person owns at least 5 percent of the value of the shares of that corporation. Second, a corporation, less than 5 percent of the stock of which is owned by a person, is not deemed to own stock in a second corporation in which that person owns shares. Third, where at least 5 percent but less than 50 percent of the value of the stock of a corporation is owned by a person, that corporation is deemed to own only a proportionate amount of the stock in a second corporation owned by that person.

Section 712(1)(5)(B) of the 1984 TRA amends §306(c)(4) to provide parallel rules for determining whether preferred stock will be treated as §306 stock when issued under circumstances in which the distribution of property instead of the preferred stock would be a dividend under §304(a).

The amendments to the constructive ownership rules operative for purposes of both §304(c) and §306(c)(4) are effective for distributions on or after September 1, 1984.[184]

V. Restrictions on Golden Parachute Payments

A. Introduction

Included among the corporate tax reform provisions of the Tax Reform Act of 1984 [185] (TRA) are rules designed to discourage so-called "golden parachute" arrangements under which excessive severance payments are made to corporate executives to ease their fall from corporate power. These new rules deny the corporation any deduction for excessive golden parachute payments, and subject the payments to a nondeductible 20 percent excise tax, in addition to income and Social Security taxes. Because these rules define an "excess parachute" by totalling payments under all contracts that either: (1) make payments contingent on a takeover; or (2) are entered into within a year prior to takeover. Subtracting "reasonable" compensation, these rules will apply to a surprising number of corporate takeover situations, irrespective of whether the acquired company is publicly or privately held. The golden parachute rules thus require careful study not simply because of their effect upon recognizable golden parachute termination pay, but also because of their interaction with traditional compensation and retirement arrangements.

The TRA rules were criticized by the tax bar and opposed by the Treasury Department as an unnecessary incursion by the federal tax laws into an area more effectively addressed by either federal securities laws or state law limitations on corporate waste. Even as these criticisms were being voiced, the golden parachute provisions were being expanded rather than limited. As finally enacted, these provisions will create considerable work for compensation advisors, by requiring proof that many payments swept into a "parachute" are nonetheless reasonable compensation, thereby allowing the deduction to the paying

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

corporation and exempting the payments from the 20 percent excise tax.

B. Overview

In general, the TRA rules state that any "excess parachute payment" (1) cannot be deducted by the corporation (Code §280G), (2) is subject to a nondeductible 20 percent excise tax imposed on the recipient (Code §4999), and (3) must be included in the FICA tax base (Code §3121(v)(2)). "Excess parachute payment" means the excess of any parachute payment over whatever portion of the base amount (defined below) is allocated to that payment, and again reduced by whatever amount is clearly proven to be reasonable compensation.[186]

1. Payments Contingent on Takeover and Eleventh Hour Payments

The term "parachute payment" is defined to include any payment of cash or property in the nature of compensation to (or for the benefit of) any officer, shareholder, or highly compensated individual[187] who performs (or has performed) services for any corporation (*i.e.*, a "disqualified individual") provided that such payment:

> "(i) either (a) is, in fact, contingent (either in amount or in timing) on a change in the ownership or effective control of the corporation, or in the ownership of a substantial portion of its assets;[188] or (b) is made pursuant to an agreement (or amendment of a previous agreement) that is entered into within one year before such change in ownership or control occurs (unless it can be proven that the payments were not contingent on a change in ownership or control); *and*
>
> (ii) when aggregated with all other payments described in item (i) above, has an aggregate present value of 300 percent or more of the individual's base amount."

Although it might appear that this 300 percent computation will always allow the payment of severance pay contingent on takeover of up to three times historic compensation, in fact, the Act's broad definition of payments contingent on takeover combined with the presumptive inclusion of any "eleventh hour" contract will cause inclusion in the total parachute of many normal compensation and retirement arrangements that happen either to include contingency clauses or to have been amended during the year prior to takeover. Many, if not most, of these payments can be classified as "reasonable compensation," and therefore ultimately can be subtracted from the total parachute amount in computing the excess parachute payment.[189] However, the 300 percent calculation applies to the total parachute amount. Therefore, to the extent that payments of reasonable compensation under contingency contracts or eleventh hour agreements automatically inflate the size of the total parachute, they eliminate whatever protection the 300 percent safe harbor might have provided to classic golden parachute termination agreements.

The Conference Report's definition of "payments contingent on a change in ownership or control" states, in general, that a payment would be so treated *either*:

> (i) "if such payment would not *in fact* have been made to the disqualified individual had no change in ownership or control occurred, [*or*]
>
> (ii) if the change determines the time such payment in fact is to be made."[190]

These rules would certainly apply to any contract containing a contingency clause, and would include in the total parachute amount all payment under such contracts that are either made or accelerated as a result of the change in control. Specific examples of such contingent payments that are listed in the Conference Report include:

> (i) "payments made under a contract contingent simply on termination of employment, that are made to an individual whose employment was terminated after a change in control and "as a result of the change;"[191]
>
> (ii) payments resulting from a contract that accelerates the payment of deferred incentive compensation, or that makes payments in cancellation of stock options, contingent on a change in control; and
>
> (iii) payments resulting from a contract that accelerates the vesting of deferred incentive compensation, or that accelerates the time for exercise of stock options, contingent on a change in control."[192]

Even contracts that make no express reference to change in control or to termination may still be classified as golden parachute contracts under two separate theories. First, if, under all the facts and circumstances, it appears that the payments would not, in fact, have been made had the change in ownership not occurred, the contract may be classified as a parachute contract, even if it was entered into more than one year before the change in control. Assume, for example, that a company faced with a takeover threat agrees to pay each of its top executives $200,000 per year in each of the five ensuing years, irrespective of whether the executives continue to perform services for the company. Even if the takeover occurs more than one year after such contracts are signed, it is nevertheless possible that the Service might claim that such "pay-in-any-event" contracts were entered into solely in consideration of the threatened change in control and, therefore, that any post-takeover payments must be included in the total parachute amount.

Admittedly, proving that payments are contingent on takeover will be difficult where a contract makes no express reference to takeover, termination of services, or some other triggering event that might result from a change in control. Proof of such contingency is simplified considerably, however, under the statute's "eleventh hour" rule, which provides that contracts made (or amended in significant relevant respect) within one year prior to takeover are automatically (albeit rebuttably) presumed to be contingent on the change in control.[193]

Neither the statute nor the Conference Report offers any guidance as to how this presumptive inclusion in the total parachute amount of all payments under such contracts can be rebutted. Possible arguments that might be made would require a demonstration (using "clear and convincing evidence") that this so-called "eleventh hour" contract was entered into without knowledge of the impending takeover, or would have been entered into without regard to the takeover.[194] The taxpayer might demonstrate, for example, either that the takeover offer came as a complete surprise, or that the contract in question was one

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

routinely entered into, such as an annual renewal of an employment contract, a standard employment contract for a new executive or a routine adjustment of a nondiscriminatory retirement plan.

Comment: It is unlikely that this presumption that an eleventh hour contract is contingent on takeover will be rebuttable merely by a showing that the amount to be paid under the contract is reasonable. Such proof of reasonableness can be used instead only to reduce the excess parachute amount, after the total parachute amount has been established.

Neither the statute nor the Conference Report makes clear whether it may be possible to make only a partial rebuttal of the presumption that an eleventh hour contract is contingent on takeover. For example, assume a company has an established practice of renewing its contracts with its officers every four years. Assume also that these contracts provide for the payment of compensation for the entire 4-year period, irrespective of whether the executive's services are terminated. If this company increases each officer's compensation by 75 percent when renewing these contracts in the year prior to takeover, will the parachute include only the 75 percent increase, or will all payments under the contract be included in the total parachute? In general, it would seem much more logical to include in the parachute only the increase in compensation, since the company and its directors can establish that certainly the routine renewal of the employment contracts was not contingent upon the change of ownership.

There are two additional, notable features of both the contingent payment and eleventh hour contract rules. First, these rules can apply even to individuals whose employment is not terminated as a result of the change in control, so long as the individuals receive payments described in §280G(b)(2). Second, these rules apply to "any payment in the nature of compensation" [195] made to a disqualified individual, irrespective of the identity of the payor of these presumptive parachute amounts. These features ensure the expansive application of the golden parachute rules, potentially to cover, for example, payments under consulting contracts or noncompetition agreements entered into prior to takeover. Technically, these rules could be construed to apply even to payments in the nature of hidden compensation between different shareholders that might be made in reallocation of the purchase price paid for majority and minority interests in an acquired corporation. However, in view of the fact that the purpose and structure of these golden parachute rules is to impose joint penalties on the payor (employer) and recipient (employee) of any parachute payment, it would seem both illogical and unlikely for these rules to be extended outside the employment contract to cover payments between shareholders of the target company.

Even if the golden parachute rules are restricted to cover only compensation paid by the target or acquiring company to its employer, they still will apply to a wide variety of compensation payments. In light of the broad sweep of these parachute rules, it seems likely that, in a majority of takeover situations, the key executives' total parachutes will exceed 300 percent of their historic average compensation.

2. Payments Violating Securities Laws

In addition, the 300 percent safe harbor has no application whatsoever to the alternative definition of parachute payments, which covers any compensatory payments to or for the benefit of a disqualified individual made under an agreement that violates any securities laws or regulations.[196] This alternative definition was added in recognition both of certain pending court cases challenging golden parachute payments under existing law,[197] and of pending legislation proposed by the Securities and Exchange Commission (at the recommendation of the SEC Advisory Committee on Tender Offers) that would impose an absolute ban on golden parachute severance pay contracts.[198] Unlike the Senate bill provision, the statute's application is not limited to payments violating federal securities laws and regulations, but potentially would cover payments violating state securities laws as well.

As proposed, this pending securities legislation would overlap with the "eleventh hour" contract presumption of §280G(b)(2)(C). Both provisions apply to agreements made or amended during certain tender offers that would increase the current or future compensation of a company's officers or directors.[199] Since both provisions are timing rules, both apply irrespective of whether the agreed-upon increase in compensation is dependent upon the occurrence of takeover, merger, or any other contingency.[200] However, the pending securities provision is considerably narrower than the Code rule, in that the Code provision applies to any agreements made during the year prior to a change in control, whereas the securities provision applies only to publicly held corporations, and even then only to agreements made during a tender offer for any class of securities where the offer is both (1) unconditional with respect to 10 percent or more of the securities and (2) is made at a price 25 percent higher than the average market price for the securities during the 10 trading days prior to commencement of the offer.[201]

Except in rare cases (arising with tender offers lasting more than one year) it appears that a payment violating the securities provision would also violate the "eleventh hour" presumption of unreasonability. Technically, such a payment could be double-counted for tax purposes, since it is as an agreement violating securities laws (under §280G(b)(2)(B)), and an agreement made within a year before a change of ownership (under §280G(b)(2)(C)). Treasury regulations implementing this provision are certain to include rules preventing the imposition of double penalties as such a payment. However, it is doubtful that the regulations will provide simply that §280G(b)(2)(C) would not be deemed to include any payment violating securities laws. The regulations (when issued) are more likely to permit payments described in §280G(b)(2)(B) to be subtracted from other payments entered into within one year prior to change in control only after both types of payments are subjected to the 300 percent test of §280G(b)(2)(A)(ii).

3. The "Base Amount"

The "base amount," which is used both in identifying a golden parachute payment (under the "300 percent test") and in computing the excess parachute amount (under the "100 percent test") is defined as the average annual includ-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ible compensation of the individual for the five years immediately preceding the takeover (or such portion of that period during which the individual worked for the corporation experiencing the change in ownership or control).[202] This term includes, of course, not only all cash compensation or other §61 compensation income, but also any Code §83 income, such as from the exercise of nonqualified stock options.[203]

In recognition of the fact that an executive's income may vary significantly from year to year as a result of extraordinary bonuses or option exercise, the base amount was defined as an average over a five-year period, rather than the highest compensation in any of the five years preceding takeover.[204] In part because this averaging technique automatically reduces the base amount, the multiple of compensation used in defining safe harbor golden parachute payments was increased from 200 percent (in the Senate bill) to 300 percent (in §280G(b)(2)(A)(ii)). However, because the base amount is likely to be lower than the employee's final year's salary, in any instance where the employee continues to work for one acquiring corporation, the base amount presumably will be less than "reasonable compensation." This or any other case in which the base amount is *less* than reasonable compensation will result in surprising allocations of the taxable portion of any installment parachute payments, because (as is explained *infra*) although the base amount must be allocated (using present value computations) across any stream of parachute payments, any reasonable compensation in excess of the base amount must be allocated to the first parachute payments made.[205]

4. Reasonable Compensation

After the total parachute payment and average historic compensation have been determined, the difference between these two amounts (*i.e.*, the "excess parachute" amount) can be reduced still further by whatever amount the taxpayer establishes by clear and convincing evidence is reasonable compensation for personal services actually rendered.[206] Three basic rules govern the determination of the "reasonable compensation" portion of any parachute payment:

(a) *Services adequately compensated for by nonparachute payments (such as prior years' services) cannot be taken into account.*[207] This rule is designed to prevent (except in rate cases) any justification of a parachute payment on grounds that "the executive was undercompensated in earlier years." [208]

(b) *Previously earned compensation, which was included in the parachute because its payment or vesting schedule was accelerated by virtue of the change in control, generally can be taken into account.*[209] The Conference report gives the following examples of previously earned compensation which would have been paid in the future in any event:

> "(1) payments in cancellation of a normal stock option or normal stock appreciation right, granted more than one year before the change; (2) exercises after termination of stock options or stock appreciation rights issued as part of a normal compensation package granted more than one year before the change; (3) compensation previously earned and deferred pursuant to a plan of the employer, such as a staggered bonus plan, or at the election of the employee; and (4) amounts paid under a retirement plan that supplements a tax-qualified plan to the extent such amounts are designed to compensate a newly-hired lay employee for the loss of retirement benefits attributable to services performed for a prior employer." [210]

(c) *The amount of reasonable compensation, once determined, must be reduced by the base amount.*[211] Consider, for example, the case of Executive A, who joins a company for a salary of $100,000, and whose salary is increased thereafter by 50 percent a year. In year 4, in anticipation of a hostile takeover, the board of directors votes to pay all of its executives severance pay equal to 1½ times each executive's annual salary, contingent on takeover. The company is acquired in year 4, and Executive A receives severance pay of $498,750. Unfortunately, this amount slightly exceeds three times Executive A's average compensation over Years 1 through 3, which was only $158,333. The excess parachute amount is $340,417. Assume that Executive A can demonstrate that $200,000 of this amount was reasonable compensation. However, because total reasonable compensation must be offset first against the base amount, the residual excess parachute amount is $298,750.[212]

C. Detailed Analysis

1. Legislative History

a. H.R. 4357

The first indication of Congress's intent to examine the tax aspects of golden parachutes was the introduction on November 10, 1983 of H.R. 4357, a colorful bill focusing on "green mail" as well as "golden parachutes." In his remarks introducing H.R. 4357, Rep. Stark (D., Cal.) explained his concern about the millions of dollars being paid to corporate executives under:

> "a phenomena known as the Golden Parachute. Corporate officials have devised another way to get a better deal for themselves at the expense of the other shareholders — the golden parachutes. Management groups who see a corporate change on the horizon have established the practice of creating golden parachutes to ease their fall from corporate power. Before the rest of the shareholders can anticipate the corporate change, these officials use their power to get one last piece of the rock before they are ejected from the seat of corporate power.
>
> The components of these management protection agreements are limited only by the imagination of the players involved." [213]

H.R. 4357 sought to limit these imaginative takeover compensation arrangements by denying the corporation any deduction for payments of cash or property under any "management protection agreement" that discriminates in favor of officers, shareholders, or highly compensated employees. In addition, an employee who enters into such an agreement would include in gross income in the year of termination of services the present value of all amounts to be paid under the agreement. The term "management protection agreement" was defined by the bill as:

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

"... any agreement to make one or more payments (or transfers of property) to an employee of a corporation if such employee's employment with the corporation is terminated within a specified period after a change (of a kind specified in the agreement) in the ownership or control of the corporation." [214]

This broad definition, of course, covered far more than so-called "eleventh hour" golden parachute agreements, entered into within 12 months prior to a takeover offer. The bill also would have affected any amounts paid under any takeover contingency agreement, without regard to the reasonableness or the size of the payments in relation to the executive's historic compensation.

b. S. 2323

Prior to any further House action on H.R. 4357,[215] on February 23, 1984 Senator Chafee (R., R.I.) introduced S. 2323, a bill that not only would have denied any business deduction for golden parachute payments, but also would have imposed a 90 percent federal excise tax (in lieu of federal income taxes) upon any such payment received by an individual from his employer corporation (or its parent or subsidiary corporations). The bill defined "golden parachute payment" as any payment:

"(1) in lump sum or installments;

(2) in cash, stock, or other property;

(3) pursuant to a contingent, unfunded compensation agreement;

(4) resulting from an actual or threatened change in the operating control of such corporation;

(5) after termination of such individual's employment by the corporation; and

(6) without any corresponding substantive increase in job duties, responsibilities, or title if the individual were employed by any successor corporation, or by its parent or subsidiary corporations." [216]

In introducing this bill, Sen. Chafee, like Rep. Stark, explained his concern that these "lucrative contracts allowing key business executives to bail out if a company is taken over by another firm ... 'can even exceed the market value of the company or its annual earnings ... As such, they are open to widespread abuse which should be curtailed.'" [217]

However, despite Sen. Chafee's stated focus on excessive payments, the penalties of S. 2323 were not limited to payments of large size, in relation to historic or reasonable compensation. Other points of comparison between the two bills' definitions of golden parachute contracts include:

- Like H.R. 4357, S. 2323 was not limited to "eleventh hour" parachute contracts;
- S. 2323 narrowed the H.R. 4357 definition of golden parachute payments by focusing only on unfunded agreements,[218] and by exempting payments linked to "a substantive increase" in job duties, responsibilities, or title;[219] and
- S. 2323 was broader than H.R. 4357 in that it would have penalized payments to an executive who terminated employment following even a *threatened* change in corporate control, and, further, in that it applied technically to all employees of a corporation receiving parachute payments irrespective of whether the payments could be shown to be nondiscriminatory. H.R. 4357 also applied to all employees receiving parachute payments, but its application was limited to agreements that discriminated in favor of officers, executives and highly compensated employees.

Treasury's response to S. 2323 was also significant to the evolution of the golden parachute provision. In a letter to Sen. Chafee dated March 8, 1984, John E. Chapoton, Treasury's Assistant Secretary for Tax Policy, specifically criticized the bill's "confiscatory excise tax approach," [220] and suggested in general that excessive payments under management protection agreements would be better addressed by federal securities laws than by the Internal Revenue Code. However, Mr. Chapoton went on to state that the Treasury Department "could support an alternative approach, which would deny a deduction for any excessive amounts paid under one of these agreements." [221] Under this approach, Mr. Chapoton explained:

"[i]n order to ensure that the amount of any golden parachute payment is subject to special scrutiny under §162(a)(1), a statutory presumption of unreasonableness [could] be created in the case of any payment significantly in excess of historic compensation that is paid under a certain type of management protection agreement. Such a presumption would shift from the Internal Revenue Service to the employer corporation the burden of proving the reasonableness of any golden parachute payment. In addition, we recommend that the taxability of these termination payments for social security tax purposes be clarified to establish that any payments scheduled to be made in installments would be taxable when paid." [222]

c. Senate Version of The Deficit Reduction Act of 1984

The Senate Finance Committee acted promptly upon Treasury's suggestions. On March 14, 1984, during its mark-up of the Deficit Reduction Act of 1984, the Committee approved restrictions on golden parachute agreements, structured as a rebuttable presumption that all golden parachute payments under contracts entered into after March 15, 1984 would be in excess of reasonable compensation. If this presumption could not be rebutted, no part of the payments could be deducted, and a nondeductible 20 percent excise tax was to be imposed upon the recipient in addition to regular income and FICA taxes. A golden parachute agreement was defined by the Senate bill as any agreement with officers, shareholders, or highly compensated individuals providing for contingent payments of cash or property, the present value of which exceeds 200 percent of the highest compensation in any of the five years preceding execution of the contract, which amounts are to be paid in the event of a change or threatened change in the ownership or control of either the corporation or a significant portion of its assets.[223] Any contracts that the Securities and Exchange Commission classified as golden parachute agreements also would automatically be subject to these deduction-denial and excise tax penalties.[224] Unlike the prior bills, this provision, which applied only to officers, shareholders and highly compensated individuals, would

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

have applied not only if these individuals were employees, but also if they were independent contractors or any other persons (to be specified in Treasury regulations) performing personal services for the corporation.[225] In addition, the Senate bill's provisions would have applied whether or not an individual terminated employment with the corporation.[226] This provision was not expected to raise significant revenues,[227] but instead was designed simply to prevent the tax laws from being used to subsidize the payment of corporate funds to "entrenched management teams." [228]

d. Hearing on H.R. 4357

On April 12, 1984, the House Subcommittee on Select Revenue Measures held a hearing on H.R. 4357.[229] The Treasury Department opposed the bill, in a brief statement recommending that these arrangements be addressed instead by the Securities and Exchange Commission or by state law limitations on corporate waste.[230] Like Treasury, all the other persons presenting written or oral testimony for this hearing strongly objected to using the tax system to limit the use of golden parachutes. Several witnesses warned that such restrictions would only force corporations to use "front-loaded" arrangements with key executives (similar to "signing bonuses" with sports stars) or arrangements that pay compensation over a fixed period of years, without regard to continued performance of services.[231] If, despite these recommendations, the Subcommittee nevertheless decided to use the tax system to limit golden parachute arrangements, the witnesses urged the Subcommittee to make the following changes in the provisions of both the House and Senate bills:

(i) Apply the bill only to "eleventh hour" abusive management protection contracts — *i.e.*, ones entered into as a tactical device once a takeover is threatened that provide for payments contingent on a change in control. This provision should not apply to employment arrangements adopted in the ordinary course of business, such as retirement agreements providing for early vesting of benefits, deferred bonuses payable in a variety of circumstances, including takeover, severance pay guarantees triggered by events ranging from disability to a change of ownership, or transfers of restricted property under vesting schedules set to accelerate in the event of an ownership change.[232]

(ii) Except any contract approved at an annual shareholders' meeting after fair disclosure.[233]

(iii) Eliminate any excise tax on payout.[234]

(iv) Disallow a deduction under a golden parachute contract only for the unreasonable portion of the contract. (Both House and Senate bills disallowed a deduction for the entire parachute payment.) [235]

(v) Either state the factors that will be considered in determining the "reasonableness" of any contracts, or define "unreasonable" payments under a golden parachute contract as payments over any period that exceed some multiple (such as 200 or 300 percent) of historic compensation over a period of identical length, or some multiple of future compensation that would have been received had employment not been interrupted by takeover.[236]

(vi) Clarify the application of the golden parachute rules to noncash compensation, both in the parachute and in whatever base is used for comparison. For example, how do the rules apply to stock option rights that are timed to vest immediately in the event of termination of services? [237]

(vii) Delete any references to agreements specified as abusive golden parachutes by the Securities and Exchange Commission.[238]

(viii) Tax the excessive portion of the golden parachute contract as paid out. (H.R. 4357 as introduced would have taxed the present value of any golden parachute contract in the year of termination of services. The Senate bill would have taxed the entire amount of any parachute as paid out.) [239]

(ix) Subject the excessive portion of any parachute to alternative minimum tax, instead of income tax, simply to assure that an individual does not shelter his parachute payments.[240]

(x) Add transition rules to ensure that payments under preexisting golden parachute contracts (or amendments thereof) would not be taxed by this bill.[241]

e. Conference Action on The Tax Reform Act of 1984

The above-outlined criticisms and suggestions of the golden parachute proposals were considered at length by various staff members of the House Ways and Means Committee, the Senate Finance Committee, the Joint Committee on Taxation and Treasury's Office of Tax Policy. Several drafts of possible variations on the House and Senate proposals were discussed at the staff level. However, there was no House Committee action on H.R. 4357 or these variations before the commencement of conference on the Tax Reform Act of 1984. On June 15, 1984, when this issue was raised for Conference Committee consideration, the conferees were faced with a choice between the Senate golden parachute provision, or whatever alternative to that provision that might be proposed by the House Conferees.

At the conference, Senator Chafee proposed an amendment to his golden parachute proposal, that, as he outlined it, would deny a deduction, and impose a nondeductible 20 percent excise tax, on any payment found to be an excess parachute payment. The term "excess parachute payment" would be defined to include:

(i) Any payments under contracts violating securities laws or regulations; or

(ii) Any payments which (a) are contingent on a change of ownership or effective control of a corporation or a significant portion of its assets and (b) have a present value in excess of 300 percent of historic compensation, to the extent that these payments cannot, by clear and convincing evidence, be proven reasonable (*i.e.*, in rebuttal of the new statutory presumption of unreasonability).

Any payments clarified as parachute payments under the foregoing tests would be subject to the excise tax, and ineligible for a deduction, to the extent they exceeded 100 percent of historic compensation. This proposal was to apply to all contracts entered into or renewed after June 14,

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

1984, and to contracts entered into before June 15, 1984 that were amended on or after that date in significant relevant respect.[242]

The Conferees adopted the golden parachute provision, as modified by Senator Chafee's explanation, on June 15, 1984.

2. Identification and Computation of Parachute Amount

a. New Issues Addressed by the Conference Report

The golden parachute rules included in the Tax Reform Act of 1984 are necessarily considerably more complicated than Senator Chafee's explanation, outlined above. The statute as drafted adds rules concerning:

(i) the presumptive inclusion of eleventh hour agreements in parachute calculations;

(ii) the exclusion of reasonable compensation from excess parachute payments;

(iii) the application of these rules only to those employees or independent contractors who are officers, shareholders, or highly compensated individuals (or their personal service corporations);

(iv) the calculation of historic compensation;

(v) the allocation of the historic compensation base amount to any stream of future parachute payments; and

(vi) the application of withholding and FICA taxes to parachute payments.

The process of identifying the components of a golden parachute is outlined in the overview section above. The computation of the excess parachute amount, after the components are identified is explained below.

b. Computation of the Excess Parachute Amount

In any case where parachute payments are to be made in installments, relatively complicated rules govern the computation of the excess parachute amount. These complications arise for two reasons.

(1) Present Value Allocation of Base Amount

First, the base amount must be allocated on a present value basis across the stream of parachute payments. Specifically, §280G(b)(3)(B) provides that:

> "[t]he portion of the base amount allocated to any parachute payment shall be an amount which bears the same ratio to the base amount as —
>
> (i) the present value of such payment, bears to
>
> (ii) the aggregate present value of all such payments."

Present values must be determined in accordance with the rules of post-Act §1274(b)(2).[243] These rules (which will be expanded under regulations to be prescribed by the Treasury Department) require the use of a discount rate equal to 120 percent of the applicable federal short-term, mid-term or long-term rate, which must be published periodically, based on the average market yield of marketable U.S. obligations of comparable maturity periods.[244]

This present value allocation rule mathematically favors payors and recipients of parachute payments since, in the years immediately following the change in control, the base amount will be a larger proportion of each parachute payment than in the later years. For example, if base compensation is $100, and total parachute payments of $500 are to be paid in five equal annual installments beginning on the date of takeover (assuming a 10 percent annual yield, based on a 9.76 percent discount rate, compounded semi-annually) the base amounts would be allocated as follows:

Year	1	2	3	4	5	Total
1. Installment Payments	$100.00	$100.00	$100.00	$100.00	$100.00	$500.00
2. Present Value of Payments	100.00	90.91	82.64	75.13	68.30	416.98
3. Base Amount Allocation	23.98	21.80	19.82	18.02	16.38	100.00
4. Excess Parachute Amount ((1) Minus (3))	76.02	78.12	80.18	81.98	83.62	400.00

Golden parachute calculations would have been attractively simplified, however, if Congress merely had allocated the base amounts on a straight line basis, thus causing a fixed (rather than an increasing) percentage of each payment to be nondeductible to the corporation and subject to the excise tax on the individual. This rule, in the example above, would have caused four-fifths of every parachute payment to be subject to the parachute penalties.

(2) Initial Year Allocation of Reasonable Compensation

The second complication of the excess parachute computations arises from an instruction in the Conference Report that "the conferees intend that any reasonable compensation in excess of the base amount be allocated to the first parachute payments made.[245] Again, this rule favors the payors and recipients of parachute payments, by postponing the inevitable penalties on these payments.

To expand upon the example above, if it can be demonstrated that $300 is reasonable annual compensation for the individual in question, then $200 (*i.e.*, reasonable compensation in excess of the base amount) must be allocated to the first parachute payments made. This rule will reduce the excess parachute amount to zero in Years 1 and 2, and to $34.22 in Year 3. Here again, it would seem more sensible to have allocated reasonable compensation under the same rules used for allocating the base amount. A present value allocation would have caused the excess parachute amount to be $28.05 in Year 1, $34.59 in Year 2, $40.54 in Year 3, $45.95 in Year 4 and $50.86 in Year 5. Better yet, a straight line allocation approach would have subjected two-fifths of every parachute payment to the penalties — the same result that would apply if the $500 were paid in a lump sum.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

This "initial year allocation" rule yields very odd results in any case where the parachute is in part comprised of reasonable payments of previously earned compensation, which were swept into the parachute by virtue of being either contingent on takeover, or amended in significant respect during the eleventh hour. These types of payments are recognized specifically in the Conference Report as reasonable compensation, and therefore not subject to penalty.[246] However, the amount of reasonable compensation in any given combination of parachute payments must be totalled, and allocated according to time of payment, not type of payment. As a result, if these reasonable deferred compensation payments were paid later in time than a classic golden parachute settlement, the deferred compensation payments, *not* the golden parachute, would be subject to the penalties of §§280G, 3121(v)(2) and 4999.[247]

(3) Parachute Penalties

(a) Denial of Deduction

Post-TRA §280G denies any deduction under Chapter 1 of the Code for any excess parachute payment. The Conference Committee Report adds that no inference is intended that golden parachutes paid under prior law were deductible, by virtue of the fact that legislation was passed to correct this perceived abuse.[248] The Committee Report also adds that no inference should be drawn as to the increased likelihood of deductibility of "payments which are not excess parachute payments," [249] such as the base amount or any additional reasonable compensation that is included in, but subtracted from, the total parachute amount.

Because the rules governing the allocation of the base amount and of reasonable compensation generally skew the parachute penalties towards payments in the out years, it is likely that the penalties will be imposed on reasonable payments of deferred compensation that are simply paid later in time than the classic golden parachute termination pay. Where these payments of reasonable compensation have been deducted long prior to their payment, in years on which the statute of limitations has run, the application of §280G will have no effect. This would occur, for example, if payments under a qualified pension plan are ever included for some extraordinary reason in the total parachute amount. To illustrate, consider the case of an executive who is covered by a qualified plan that provides for accelerated vesting in the event of corporate takeover. If the executive also receives lump-sum severance pay under a traditional golden parachute contract, the allocation rules require the pension payments, not the severance pay, to be treated as the excess parachute amounts. However, §280G could not be effectively applied to these payments, since the company would have claimed its deduction long prior to payment of the qualified pension.

This particular problem is likely to be eliminated under Treasury's broad authority to "prescribe such regulations as may be necessary or appropriate to carry out the purposes of §280G.[250] Presumably, these regulations simply will prohibit the allocation of any penalty amounts to payments under a qualified pension plan. It will be difficult, however, to design regulations to ensure meaningful application of the §280G deduction-denial penalty in every situation. For example, complications arise with incentive stock options, which are never deductible to the issuing corporation (except in the event of a disqualifying disposition). Here again, in any case where all, or nearly all, of a parachute is comprised of incentive stock options, application of the §280G penalty is meaningless.

Finally, note that, although §280G denies any "deduction" under §§1 through 1399, it nevertheless may be possible, in a case where an acquiring corporation has assumed the liabilities of an acquired company to make golden parachute payments for the acquiring company to add the parachute payments to the basis of the acquired property. The Conference Report does not address this issue.

(b) Excise Tax

Post-TRA §4999 imposes a nondeductible excise tax on any recipient of an excess parachute payment equal to 20 percent of the amount of such payment. This tax is in addition to the income taxes imposed upon the disqualified individual to whom (or for whose benefit) the parachute payments are made. Where the excess parachute payments are paid not to the disqualified individual, but to their designees or beneficiaries, the excise tax apparently will be imposed on the recipient of the payments, although the executive, of course, would continue to be liable for income taxes (and presumably also for gift taxes) on these assigned amounts.

To improve compliance with the 20 percent nondeductible excise tax on parachute payments, the statute requires that the excise tax imposed on any such payments which are wages be added to the amount otherwise deducted and withheld under §3402.[251] This withholding rule does not apply, however, where an excess parachute payment is exempt from the definition of wages under §3401.[252] Thus, no excise tax withholding apparently would apply to excess parachute payments made to a beneficiary of a deceased key executive, since unpaid compensation for services rendered by the decedent are not wages subject to withholding.[253] Similarly, if payments under a qualified pension plan ever are treated as excess parachute amounts under the allocation rules (barring Treasury regulations preventing such a result) these payments are exempt from wage withholding by virtue of §3401(a)(12) and, therefore, would be exempt from excise tax withholding as well.

(c) FICA Taxes

The Social Security tax provisions applicable since 1983 to nonqualified deferred compensation were also amended by the golden parachute rules, to clarify that the FICA tax exemption otherwise applicable to payouts of deferred compensation will not apply to excess parachute amounts.[254] This provision will result in the application of employer and employee FICA taxes upon excess parachute payments of less than the base amount ($37,500 in 1984) unless the payments to which the penalties have been allocated qualify for some other FICA tax exemption.[255]

In view of the relatively small size of the FICA tax base, the application of FICA taxes will have no noticeable effect upon golden parachute payments, as traditionally defined. However, the Code's post-TRA definition of an excess parachute effectively penalizes parachutes of lesser metals than gold. This FICA rule thus may have significant

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

effect upon small (*e.g.*, $50,000) annual installments of termination pay which are designated as excess parachute amounts.

3. Effective Date

As should by now be obvious, there are few (if any) kinds of severance payments made following a takeover that will not be caught and penalized by the 1984 Tax Reform Act's rules. The only reliable protection against these penalties is that the rules are effective solely for payments under contracts entered into, renewed or significantly amended after June 14, 1984.[256] However, this rule also provides that even a contract entered into before June 15, 1984 may lose its grandfathered status if:

(a) it is either amended or supplemented in any significant relevant aspect on or after that date;[257] or

(b) it is "a contract cancellable at will by either party." [258]

The concept of "amendment in significant relevant aspect" is explained in some detail in the Conference Report to include any amendment to, or supplement of a previous contract:

> "either to add or modify a change in ownership or control trigger (or similar trigger), to increase amounts payable (or, where payment is under a formula, to modify the formula) in the event of such a trigger, or to accelerate the payment of amounts otherwise payable at a later date in the event of such a trigger. Where a golden parachute agreement in effect on June 14, 1984 is so amended or supplemented after that date, all amounts payable under the contract (and supplement) are subject to the provision." [259]

Given the frequency with which most compensation and retirement agreements are renewed, amended, or at least supplemented, this rule should reduce with impressive speed the number of parachute contracts entitled to grandfather protection.

Unfortunately, the Conference Report does not address the effect upon grandfathered contracts of agreements made after June 14, 1984 that do not modify pre-existing golden parachute contracts, but that nevertheless operate to increase the size of a particular executive's post-takeover compensation. For example, assume that a contract adopted in 1983 provided a company's president with termination pay, in the event of a take-over, equal to three times his salary in the year before the takeover. It is clear under the Conference Report that if this contract were amended to increase the size of the golden parachute to four times final pay, the 1983 contract would lose its grandfathered status.

The issue unaddressed by the Conference Report is the treatment of indirect amendments to earlier contracts. Any such indirect amendments that operate solely to increase the size of an executive's parachute almost certainly would be deemed to be implicit modifications of the earlier contract. Using the previous example, if a new contract were entered into in 1984 offering the company president post-takeover termination pay of one times salary, the 1984 contract is likely to cause the 1983 contract to be subject to the new golden parachute penalties. The same result probably would apply if the company in 1984 were to double the executive's current salary, at a time when other company executives were receiving bonuses in line with normal cost of living increases. By contrast, if the president in 1984 received a cost of living increase equal in size to that received by other company employees, this salary increase probably would not be deemed to be a modification of the 1983 golden parachute contract. Similarly, if in 1984 a new stock option plan were introduced for all company employees that contained a clause accelerating option vesting schedules in the event of a takeover, this new 1984 golden parachute contract should *not* cause the 1983 contract to lose its grandfathered status. However, until this issue is clarified either by regulations or by the Joint Committee's Blue Book explanation of the Deficit Reduction Act, practitioners and executives will continue to be concerned about the effect on earlier contracts of any new termination pay agreements.

Even more ambiguous is the Conference Report statement that "a contract cancellable at will by either party is to be treated as a new contract entered into on the date any such cancellation, if made, would be effective.[260] This remark is sensible and true as a matter of contract law, if it is construed merely to mean that no contract exists if each party, acting independently, has the right to cancel the agreement. However, a broader construction of this sentence extends its application to a contract that is cancellable at will by only one of the two parties, *i.e.*, either the corporation or the individual. Some concern has arisen among practitioners that this second reading would disqualify from grandfather protection every stock option contract in existence, since the optionee always has the right not to exercise the option. However, the mere failure to exercise an option is not "cancellation" of an option contract. Moreover, since no such intent to treat all historic option agreements as parachute contracts was ever expressed during the Conference Committee's consideration of the effective date, it seems more likely that any regulations to be issued under this provision will limit this "cancellable contract" sentence, so that it would not apply to option contracts in effect on June 14, 1984.

4. Conclusion

The major effect of the Tax Reform Act's golden parachute provisions is not upon the notorious multi-million dollar golden parachutes paid to executives of publicly held companies as part of some hostile acquisition. Admittedly, those agreements, which were infrequent prior to the 1984 Act, will become virtually impossible to design following the Act. More important, however, is the application of the §§280G and 4999 rules to traditional compensation and retirement contracts between publicly or privately held corporations and their key employees that are made, renewed or supplemented after June 14, 1984 and that either contain acceleration clauses triggered by takeover, or are entered into within a year prior to takeover. Payments under these contracts are deemed to be parachute payments, and are then subject to penalty to the extent the total parachute exceeds "reasonable compensation." Because the burden of proof rests on the taxpayer to rebut the presumption that all parachute payments are unreasonable compensation, the nondeductibility and excise tax penalties are likely to be imposed in surprising numbers of cases upon some portion of the post-acquisition pay of officers,

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

shareholders and highly paid individuals. Only through careful tax planning (to reduce the size of the parachute) and persuasive argument (to justify the reasonability of parachute payments) can the penalties on excess parachutes be avoided.

---

[1] In TEFRA, six important changes were made to Subchapter C, all of which were intended to circumscribe corporate transactional manipulations: narrowing the partial liquidation rules (§§346, 302), increasing gain on liquidating distributions of appreciated properties (improving the dividend characterization of transactions with commonly controlled corporations),(§§304,306), narrowing the scope of the "F" incorporation rules (§368(a)(1)(F)), broadening the application of the constructive ownership rules under §318 (§§302, 306, 356) and "simplifying" circumstances in which an acquiring corporation may obtain assets after a stock purchase of a target corporation (§338).

It may be noted in the "Preliminary Report" of the staff of the Senate Finance Committee *"The Reform and Simplification of the Income Taxation of Corporations,* Sen. Print 95, 98th Cong., 1st Sess. 3 (1983), this statement is made: "Since enactment of the 1954 Code there have been recurring recommendations from the organized tax bar to restructure substantially the corporate income tax. [*See, e.g.*, Revised Report of Advisory Group on Subchapter C of the Internal Revenue Code of 1954 (1959) (report of group commissioned by the Select Revenue Subcommittee of the House Ways and Means Committee).] When the committee heard testimony last year on proposed changes to the treatment of certain taxable acquisitions, several witnesses suggested a more comprehensive study and revision of corporate taxation. The committee's recent success with a fundamental reexamination of the rules governing small business corporations (S corporations) and the revision of the installment sales rules has demonstrated the benefits of such an approach." The report also contains references to the various other efforts of the American Law Institute and the Bar Association's review of Subchapter C provisions. In light of the complexities already occasioned through enactment of §338 (and again amended in §712(k) of TRA 1984), one may query the validity of wholesale revision of Subchapter C. Under another approach, new amendments to Subchapter C would be limited to those targeted to specific abuses, permitting to the degree possible, the remainder of the Subchapter to remain so that the Treasury and the public can continue to derive the benefits of established precedents and predictability. In fact, studies by the American Law Institute and Bar Association, and other groups have been underway for many years and have formed the basis for the staff review, which usefully notes such sources. Finally, it may be observed that the staff report is itself a very useful review of present law, and problems yet not dealt with legislatively which have aroused governmental concerns. *See also*, Liles, "Subchapter C Simplification Recent Proposals," 83-25 TMM 3 (December 12, 1983), and American Law Institute, Federal Income Tax Project: Subchapter C (1982).

[27] The definition of control, as provided in §368(c)(1) would appear to govern with respect to C reorganization transactions. This is true notwithstanding that, in the case of a non-divisive D reorganization the newly developed definition of which is found in §368(c)(2) applies. This definition, in turn, incorporates the 50 percent definition of "control" provided in §304(c).

[28] §381(c)(2)(A)

[29] *See* Regs. 1.381(C)(2)-1(c)(1), where it is stated that: transferor's earnings and profits are adjusted by the amount "properly applicable to the distribution regardless of whether such distribution occurs before or after the close of the date of transfer." Although the expression "properly applicable" is not defined and no examples are provided the expression appears to mean that all of the transferor's earnings and profits (which are otherwise deemed to be transferred) may be applied to a distribution, even if the distribution occurs after the transfer of other assets to the acquiring corporation. *See Also* Rev. Rul. 71-364, 1971-2 C.B. 182.

[30] *See* §356(a)(2). *See also* 79 T.M. *Corporate Acquisitions — (C) Reorganizations, p.* 45-48.

[31] H.R. 4170 (as passed by the Senate), 98th Cong., 2d Sess., §49(a) (1984).

[32] Section 64 is not the first Congressional use of ownership percentages to treat this problem. *See* H.R. 8300, 83rd Cong., 2d. Sess. §357 (1954).

[33] *See* H.R. Rep. No. 1337, 83rd Cong., 2d Sess. 40, A129-A131 (1954). The House Ways and Means Committee apparently believed that §357 of H.R. 8300 would solve the problem as shown by the following statement in the Committee report: "Your committee's bill contains additional safeguards against tax avoidance not found in existing law . . . It also contains a specific provision designed to make impossible the withdrawal of corporate earnings at capital-gains rates through the device of liquidating the corporation and reincorporating the business assets, a device which has been sanctioned by certain courts under existing law." *Id.* at 40.

In the "Detailed Discussion of the Technical Provisions of the Bill" the following is noted:

> The general rule of subsection (a) provides that in any case in which one or more individuals receive assets in a complete or partial liquidation as defined in section 336 [of the House bill], from a corporation controlled by such individual or individuals, and within 5 years from the final distribution in such liquidation, such individual or individuals transferred more than 50 percent of the assets (other than money and stock or securities except stock or securities of the distributing corporation) to one or more corporations controlled by one or more of such individuals in a transaction in which, under section 351 [of the House bill], no gain or loss is recognized, the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

consequences set forth in paragraphs (1) and (2) of subsection (a) shall occur.

Paragraph (1) provides that under the circumstances above set forth, the corporation to which the assets have been transferred shall be deemed to have received such assets from the liquidating corporation pursuant to a corporate acquisition of property within the meaning of section 359(c) [of the House bill] . . .

Paragraph (2) of subsection (a) provides that an amount equal to the fair market value of the assets received in the complete or partial liquidation which are not so transferred to the corporation shall be deemed to have been received by individuals in control of such corporation or corporations as a distribution under section 353 [of the House bill] made pursuant to corporate acquisition of property." *Id.* at A130.

[34] Thereby preserving loss carryover attributes under §381(a). *See* H.R. Rep. No. 760, 97th Cong., 2d. Sess. 540-541 (1982).

[35] *See* §368(a)(1)(F) as amended by §225 of TEFRA, P.L. No. 97-248, 96 Stat. 324 (1982). In a typical "D" reorganization, of course, a transfer of assets from one corporation to another corporation (presumably without transfer of all assets and with some differences in shareholdings) occurs, thereby causing the transfer to fail as an F reorganization.

[36] *See* §368(c)(1) which continues to apply for purposes of Subchapter C, Part I (other than §304) and Part III (except for the new special rule pertaining to §368(a)(1)(D)).

[37] Advisory Group on Subchapter C of the Internal Revenue Code of 1954, *Revised Report on Corporate Distribution and Adjustments*, 85 Cong., 2d. Sess. 66 (December 11, 1958). Under existing law a number of cases have arisen in which shareholders have sought to withdraw corporate funds in a transaction which would be treated as a dividend if the distribution occurred apart from a plan of its complete liquidation. This occurs by first completely liquidating the corporation and then transferring the assets which are to remain in corporate form to a new corporation controlled by the same shareholders. The assets which are to continue in corporate ownership may be transferred by the shareholders to a new corporation in exchange for its stock or may be transferred by them to an existing controlled corporation as a contribution to capital. While, in the main, the courts have managed to deal adequately with these cases in order to prevent tax avoidance, the advisory group recommends that certain changes be made in the statute to give the Internal Revenue Service and the courts full opportunity to deal with these transactions as reorganizations and, in appropriate cases, to treat as dividends the assets which are withdrawn from corporate ownership and retained by the stockholders.

The first of the recommended changes is the deletion of the requirement in the introductory words of §368(a)(1)(D) that the transfer of assets be made "by a corporation." Thus a transfer, after the distribution in complete liquidation, made by the shareholders of the liquidating corporation to the other corporation pursuant to the plan, would be made to qualify as a reorganization to the same extent as if the transfer were made directly by the liquidating corporation to the other corporation. Secondly, in the new provision in §368(a)(1)(D)(ii) requiring that the transferor corporation be completely liquidated, it would be specifically stated that the liquidation may precede, accompany, or follow the transfer of the corporate assets to another corporation. Thirdly, as mentioned in the comments with respect to §356 (under §21), a recommended amendment to §356(a) would make the boot provisions applicable even if no stock of the transferee corporation is acquired by the shareholders in the transaction. This would occur, for example, where, after the complete liquidation, part of the assets are transferred by the shareholders as a contribution to capital of another corporation controlled by them. Finally, in the proposed §368 as revised, the control requirement in the case of clause (D) reorganizations is reduced from 80 to 50 percent. This reduction is not made for purposes of §§368(a)(1)(B), 355, 332, 334(b)(2), 351, and other provisions where an 80 percent control requirement is present in existing law.

The proposed reduction of the control test from 80 to 50 percent, coupled with the provisions making §368(a)(1)(D) applicable in appropriate cases even though no stock or securities are received from the transferee, is not intended to convert all transfers literally coming within the statutory language into clause (D) reorganizations. On the contrary, it is intended that the general doctrine requiring that the transaction be in substance a reorganization will continue to be applied. For example, to take a very clear case, a transfer of all the assets of the X corporation to the Y corporation for cash, followed by X corporation's liquidation, should not be treated as a reorganization simply because a 1 percent shareholder of X corporation controls Y corporation. Similarly, a transfer of only a small portion of the assets of X corporation to Y corporation for cash followed by X corporation's liquidation should not be treated as a reorganization even though the shareholders of X corporation control Y corporation. This problem is present under existing law and may be accentuated by the proposed reduction in the control requirement from 80 to 50 percent. It is believed that this general doctrine should be adequate to take care of those transfers which are essentially unlike reorganizations. For this reason and for the reason that an arbitrary statutory dividing line appropriate to all cases would be difficult to draw, no specific statutory provision on this point has been included in the proposed §368(a)(1)(D). However, a specific provision could be devised for (D) reorganizations and included in the statute if desired.

[43] §304(c)(1). It may be observed that under the §304(c) definition the 50 percent test is also applied with respect to a subsidiary. Therefore, shareholders of a subsidiary who may also be shareholders of the parent fall within the scope of the new control test.

[44] *See* §318(a)(2)(C) (attribution from a corporation) and §318(a)(3)(C) (attribution to a corporation).

[45] *See* §355 and 417 T.M., *Corporate Acquisitions — (D) Reorganizations*, B-201, B-301, and B-401. In a spin-off, shares of a subsidiary are distributed (generally pro-rata) to the transferor's shareholders. In a split-up, all of the shares of the transferor shareholders are surrendered in exchange for the shares of two or more transferee corporations. In a split-off, the shareholders of the transferor will retain some of their shares in the transferor and surrender only a part of such shares for shares in one or more transferees.

[46] A similar result would seem to follow even if the transferor shareholder is a corporation which can avail itself in such a case of the dividends received deduction under §243.

[47] Section 354(b)(1).

[48] P.L. No. 97-248, 96 Stat. 324 (1982).

[49] This was accomplished by adding §368(a)(1)(G) to the Code in 1981. *See* §368(a)(3)(C) which provides that in the case of a reorganization described in §368(a)(1)(G) and any other provision, the transaction will be treated as a G reorganization.

[50] Much of the liquidation-reincorporation litigation stems from the interplay of the various Code provisions and judicial doctrines (*i.e.*, step transactions); *see* 335 T.M., *Liquidation — Reincorporation. See also Davant v. Comr.*, 366 F.2d 874 (5th Cir. 1966), aff'g in part *South Texas Rice Warehouse Co. v. Comr.*, 43 T.C. 540 (1965). The 1982 changes to the F reorganization limit taxpayers' abilities to carry back subsequent net operating losses. Less certain is the effect on the liquidation and reincorporation problem with the transfer to pre-transfer years pursuant to the statutory exception for F reorganizations provided in §381(b). It appears the government's use of this approach is hampered in any situation in which more than one corporation is involved (*i.e.*, where two operating companies are merged with continuing share ownership).

[51] This is true not only with respect to the liquid assets whose direct distribution would have constituted a dividend, but also with respect to the operating assets transferred to the transferee, thereby conferring upon it a stepped-up basis for later depreciation.

[52] For a detailed analysis of these theories *see* 335 T.M., *Liquidation — Reincorporation* at A-9 to A-32.

[53] Rev. Rul. 61-156, 1961-2 C.B. 62. It should be noted that in Rev. Proc. 60-6, 1960-1 C.B. 880, the Service announced a "no ruling" policy in liquidation-reincorporation transactions where transferor shareholders continue to own 50 percent or more of the voting stock of the transferee.

[54] 1962-2 C.B. 527; *see also* Rev. Proc. 80-22, 1980-1 C.B. 654 and Rev. Proc. 69-6, 1969-1 C.B. 396.

[55] *See* 335 T.M., *Liquidation — Reincorporation* at A-17 to A-20.

[78] §311(d)(2)(A)(i).

[79] §311(d)(2)(A)(ii)

[80] §311(d)(2)(B).

[81] §302(e)(5) provides that, in determining wheter a partial liquidation distribution is in redemption of stock of a shareholder "who is not a corporation" for purposes of §302(b)(4), stock held by pass through entities is treated as held "proportionately" by their owners or beneficiaries. Although this affects the determination of whether §311(b)(2)(A)(i) applies, it does not settle the question of whether the stock on which the distribution is made is "qualified stock."

[82] H.R. Rep. No. 432 (Part 2), 98th Cong., 2d Sess. 1616 (1984). Unfortunately, it is not clear how an owner's or beneficiary's "interest" in an entity is calculated where the entity's ownership structure involves more than a single class of equity interests.

[137] Act §§715 and 712(k)(9)(A).

[138] *See* Chapter 31, I, *supra.*

[139] §301(d)(2)(B.)

[140] §362(a).

[141] *See* discussion in f, (1), *infra.*

[142] §367(a).

[143] Act §§715 and 712(k)(9)(A).

[144] Act §§715 and 712(k)(9)(A).

[145] Act §§715 and 712(k)(9)(A).

[146] Act §341(b)(1)(A).

[147] Former §338(h)(8).

[148] Act §§715 and 712(k)(9)(A).

[149] *See* §382(a). The revision of §382(a) enacted as part of the 1976 Tax Reform Act would require the target corporation to reduce its NOL carryovers to the extent that a qualified stock purchase, along with certain other stock transfers within a three-year period, exceeded 60 percent of the value of the target corporation's stock. However, §59 of the 1984 TRA delayed until January 1, 1986 the effective date for the modified version of §382(a).

[150] §269(a)(2). *But see* H.R. Rep. No. 432 (Part 2) 98th Cong., 2d Sess. 1623 (1984), which implies that the issue is not settled.

[151] H.R. Rep. No. 432 (Part 2), 98th Cong., 2d Sess. 1623 (1984).

[152] Rev. Rul. 70-223, 1970-1 C.B. 79, treats the merger of a purchasing

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

corporation into a target corporation, more than 80 percent of the stock of which was acquired by the purchasing corporation within two years prior to the merger, as a §368(a)(1)(A) transaction, rather than as a liquidation.

[153] Under §382(b) as it was amended by the 1976 Tax Reform Act, such NOL carryovers would be reduced if the target-surviving corporation had a fair market value less than two-thirds of the fair market value of the purchasing-acquired corporation. The amended version of §382(b) went into effect January 1, 1984.

[200] *Id.*

[201] *Id.*

[202] §280G(b)(3)(A) and (d)(1) and (2). Code §280G(d)(2) refers only to that portion of the five-year period during which the disqualified individual was an *employee* of the corporation. A technical correction probably is needed here since, by its terms, the statute does not cover an officer or shareholder who was never an employee, but worked as an independent contractor during part of the five years preceding takeover. The Treasury may be able to solve this technical problem by regulations. However, as an extension of the related directive that Treasury issue regulations covering the case where no base amount can be calculated. This is because the individual did not commence work for the corporation until the year in which the change in control occurred. H.R. Rep. No. 861 at 853.

[203] H.R. Rep. No. 861 at 850.

[204] *Cf.* the Senate bill, which did reference the highest compensation in any of the five years preceding takeover (Code §280F(b)(1)(B), §46, S. Rep. No. 169, 98th Cong., 2d Sess., Vol. II 166-67) (1984) (hereinafter S. Rep.).

[205] H.R. Rep. No. 861 at 853.

[206] §280G(b)(4). If payments under a covenant not to compete are deemed to be "payments in the nature of compensation" and thus are included in the total parachute amount, the taxpayer might need to demonstrate that these payments were reasonable compensation for nonperformance of activities in competition with the business of the acquiring corporation.

[207] H.R. Rep. No. 861 at 852.

[208] *Id.*

[209] *Id.*

[210] H.R. Rep. No. 861 at 852-53.

[211] §280G(b)(4) and H.R. Rep. No. 861 at 852.

[212] If A's severance pay had been 1⅓ times annual salary, the golden parachute rules would not have applied. *See also* the example of H.R. Rep. No. 861 at 852.

[213] Cong. Rec. E5469 (November 10, 1983).

[214] H.R. 4357, adding §1257(c)(2)(A).

[215] The Staff of the House Ways and Means Committee briefly considered adding golden parachutes to the list of items considered during its February, 1984 mark-up of the Tax Reform Act of 1984. However, this provision was dropped from consideration because no hearing had yet been held on H.R. 4357.

[216] S. 2323, adding §4999(b).

[217] Announcement of Senator Chafee in introducing S. 2323, as cited in 36 *Daily Executive Report* G-5 (February 23, 1984).

[218] This limitation was later abandoned, after it was pointed out that even partial funding of a golden parachute agreement would protect it from any of the proposed tax penalties.

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

[219] This distinction also was later abandoned, in favor of a test focusing on payments significantly in excess of historic compensation.

I. New Rules for Determining Affiliated Group Status

A. *Background*

1. *Definition of Affiliated Group Under Present Law*

In order to be eligible to file consolidated returns or to take advantage of the 100 percent dividend-received deduction of §243(b), a group of related corporations must constitute an "affiliated group". Under the present version of §1504(a), an affiliated group is defined as one or more chains of includible corporations connected through stock ownership with a common parent corporation, which is itself an includible corporation, if (i) the common parent corporation owns directly stock possessing at least 80 percent of the voting power of all classes of stock and at least 80 percent of each class of the nonvoting stock of at least one of the other includible corporations, and (ii) any other includible corporations are connected to each other or to the common parent under the same basic stock ownership test. For example, assuming that a group of related corporations has only one class of stock outstanding, if Corporation A owns 80 percent of the stock of Corporation B and Corporation B, in turn, owns 80 percent of stock of Corporation C, and Corporations A, B, and C are all includible corporations, these corporations constitute an affiliated group.

Includible corporations, under §1504(b), are any corporations except (i) organizations exempt under §501, (ii) certain insurance companies,[1] (iii) foreign corporations,[2] (iv) §936 possessions corporations, (v) regulated investment companies and REITs, and (vi) a DISC or former DISC. However, insurance companies and possessions corporations are includible corporations for purposes of the 100-percent dividends received deduction.[3]

In determining whether includible corporations are affiliated, certain stock is not counted under §1504(a). Stock excluded from the computation includes nonvoting stock that is limited and preferred as to dividends, employer securities (within the meaning of §409A(1))[4] held in a tax credit employee stock ownership plan, or qualifying securities (within the meaning of §4975(e)(8)) that are held in a ESOP meeting the requirements §4975(e)(7). The Service has ruled that nonvoting preferred stock, which participates in earnings with common stock after payment of the preferred dividends, will not be considered limited and preferred as to dividends.[5] However, nonvoting preferred stock, although convertible into common stock on a one-for-one basis, is not counted for purposes of §1504(a).[6] Similarly, stock having contingent voting rights is ignored unless and until the contingency occurs.[7] Unexercised stock warrants are also disregarded.[8]

If an affiliated group that files consolidated returns acquires the requisite 80 percent stock ownership in another corporation, that corporation must be included in the consolidated return of the affiliated group commencing generally with the day sufficient stock is acquired.[9] Likewise, if the stock ownership requirements cease to be met with respect to a member, it can no longer be included in the consolidated return of the affiliated group as of the date the ownership requirements cease to be met.[10] There are, however, generally no restrictions on a former member rejoining the affiliated group or joining any other affiliated group.[11]

2. *Use of Consolidated Returns to Traffic in Tax Benefits*

One of the chief benefits of filing consolidated returns is that a profitable corporation can take advantage of tax losses and tax credits generated by another corporation that cannot presently use such benefits. Under existing §1504, it is possible for a profitable corporation to join in filing a consolidated return with a loss corporation even though the profitable corporation owns substantially less than 50 percent, in terms of value, of the stock of the loss corporation. The House Ways and Means Committee Report accompanying the TRA describes what it terms a "common situation" in which this has occurred.[12]

> *Example*: A corporation such as a foreign corporation that cannot itself use tax benefits will engage in a new venture that is expected to generate tax losses or credits. That corporation will find another corporation able to use the tax benefits, and the two corporations will form a new corporation to conduct the venture. The new corporation will have two classes of common stock,

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Class A, which will be normal common stock, and Class B, which will also be common stock except that it will have only minimal voting rights compared to the Class A stock but will be convertible into Class A stock at any time in a ratio permitting it to obtain control. The corporation able to utilize the tax benefits acquires all the Class A stock for $400, and the other corporation acquires all the Class B stock for $1,600. Because of the voting right differences, the Class A stock has 80 percent of the voting power of all classes of stock of the newly-incorporated venture. Since no nonvoting stock is outstanding, the second test under existing law relating to 80 percent ownership of all other classes of stock is not relevant. Since, as described above, only currently existing voting power is considered in determining whether corporations constitute an affiliated group—conversion rights are disregarded—the newly incorporated venture and the profitable corporation satisfy the first test for affiliation relating to 80 percent voting control and are likely to file consolidated returns. An affiliated group exists even though the profitable corporation owns only 20 percent in value of the venture and even though the Class B stock will likely be converted into Class A stock by the other corporate partner after a period of time. The Ways and Means Committee states that the applicability of §269, concerning acquisitions made to avoid tax, is uncertain in such a case.[13]

The Ways and Means Report further observed that the foregoing result can be accomplished by using convertible debentures, convertible preferred stock, or warrants in lieu of issuing Class B stock.

After reviewing the foregoing techniques, the Ways and Means Committee Report concluded that they are little more than a means of transferring tax benefits whereby the corporation unable to utilize the new venture's tax benefits is largely selling those benefits to the profitable corporate partner.[14] The Report further concluded that two corporations should not be permitted to file consolidated returns unless one owns a significant percentage of the value of the second, as well as 80 percent of the voting power of the second.[15]

Although not mentioned in any of the committee reports accompanying the TRA, the formation of a consolidated return group between a profitable and a loss corporation is not without unfavorable tax consequences. Any tax losses flowed through by the subsidiary to the profitable parent company must reduce the parent's basis in the stock of the subsidiary, except stock that is "limited and preferred" as to dividends, under the rules of Regs. §1.1502-32(b). When losses exceed basis, as commonly occurs in these consolidated return joint ventures, the parent company must establish a "excess loss count" with respect to the loss subsidiary.[16] This excess loss account must be taken into income by the parent when it ceases to file consolidated returns with the loss subsidiary under Regs. §1.1502-19. However, under Regs. §1.1502-19(a)(2), the income included is treated as gain from the sale of stock and, consequently, that income will generally be treated as capital gain. The excess loss account rules thus allow for the conversion of the parent company's ordinary income into capital gain, assuming the subsidiary's losses passed through to the parent corporation are ordinary losses. However, after disaffiliation, the subsidiary loss company still remains liable for any recapture taxes on property owned by the subsidiary that may have contributed to the subsidiary's losses during the period of consolidation.

Note: Based on the fact that the investment adjustment rules in Regs. §1.1502 require negative adjustments for losses only in the basis of subsidiary stock that is not "limited and preferred" as to dividends, some taxpayers have sought to avoid the adjustment rules through ownership solely of voting preferred stock in the subsidiary. The Service's response to this technique has been to deny permission to include subsidiaries whose stock is owned in such a manner from joining in the parent's consolidated return unless the parent makes proper adjustments to prevent the possibility of a double deduction.[17]

B. Outline of New Provisions

Congress's response to the perceived abuse of the consolidated return rules has been to enact in the TRA [18] a more stringent definition of the term affiliated group, effective generally for taxable years beginning after 1984. Under the new definition, corporations must be linked together through ownership of at least 80 percent of the fair market value of all outstanding stock, as well as 80 percent of the voting power of all classes of stock, in order to constitute an affiliated group. In determining stock ownership for this purpose, only nonvoting, nonparticipating stock that is limited and preferred as to dividends, redemption rights, and liquidation rights and that is not convertible into any other class of stock may be disregarded.

Once a corporation ceases to be a member of an affiliated group, that corporation (or any successor) may not be included in any consolidated return filed by that group for a 60-month period. However, under certain conditions to be prescribed in regulations, inadvertent changes in relative value that are not significant will be disregarded in determining if affiliated group status continues.

The new provisions also give the Treasury the authority to issue regulations to treat warrants or convertible obligations as stock and options as having been exercised in determining whether corporations are affiliated and to disregard certain decreases in voting power. In addition, the regulations may provide that certain stock will not be treated as stock for purposes of the affiliated group rules.

As stated above, these rules are generally applicable to taxable years beginning after 1984. However, various transitional rules are provided, the principal one being that for corporations filing consolidated returns under present law for a taxable year that includes April 11, 1984, the provisions generally do not apply until 1988.

C. Detailed Analysis

1. In General

The more restrictive definition of an affiliated group enacted by the TRA will apply for all purposes of the Internal Revenue Code.[19] This represents a change from the House and Senate versions of the revision of the affiliated group definition, which would have applied only for purposes of filing consolidated returns. Thus, not only will the eligibility to file consolidated returns be affected, but also eligibility to elect the 100 percent dividends-received deduc-

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tion of §243(b) will be governed by the new, more restrictive rules.

The new definition will have an impact for other purposes of the Code as well since the status of corporations as an affiliated group is important in other areas besides consolidated returns and the dividends-received deduction.[20] For example, under §337, relating to nonrecognition of gain or loss on sales or exchanges in connection with 12-month liquidations, the subsidiaries in a "chain of includible corporations" for purposes of §1504(a) (but determined without regard to the exclusions of §1504(b)) may be liquidated under the provisions of §337, provided the common parent is also liquidated under §337. In addition, under §404(a)(3), members of an affiliated group may make deductible contributions to a profit-sharing or stock bonus plan on behalf of another member of the group precluded from making a contribution because it does not have a sufficient amount of current or accumulated earnings and profits, taking into account the combined earnings and profits of the group.

Comment: By restricting the definition of an affiliated group, the TRA generally has an adverse effect on the ability to use the special tax benefits conferred on members of an affiliated group. However, in one area, Subchapter S, the new definition indirectly effects a liberalization of the qualification requirements. Under §1361(b)(2), a corporation that is a member of an affiliated group is excluded from the definition of a "small business corporation", and only a "small business corporation" is eligible to elect or to continue Subchapter S status. Since the TRA limits the definition of an affiliated group by raising the requisite stock ownership, an otherwise qualifying small business corporation can potentially own more stock of another corporation without losing its Subchapter S eligibility. Of course, under §1361(b)(1)(D), a corporation that has another corporation as a shareholder cannot qualify as a small business corporation, which means that the subsidiary of a small business corporation must be treated as a regular corporation. Therefore, the practical effect of this indirect liberalization of the Subchapter S rules is probably limited.

Two other variances between the House and Senate versions and the definition of an affiliated group adopted in the final bill deserve mention. Under the House and Senate definitions, a corporation would not have been eligible to file consolidated returns as a member of an affiliated group unless it met the new, more restrictive stock ownership requirements at the beginning of the taxable year for which the return would have been filed. Under this approach, a corporation that became an affiliated group member in the middle of the year would not be included in the consolidated return for that year. Similarly, a corporation ceasing to be a member in the middle of the year would be excluded from the consolidated return for that year. By deleting the requirement that a corporation be affiliated at the beginning of the year, the version adopted in Conference continues the present law treatment of including a corporation within an affiliated group of consolidated return purposes from the date it joins the group to the date it ceases to be a member.[21]

A second change made in Conference was to eliminate the authority granted to the Treasury Department under the House and Senate versions to nullify status as an affiliated group if a plan existed at the time of consolidation to reduce ownership of the value of all outstanding stock of another corporation below 80 percent. The Conference Report gives no reason for the deletion of this rule.

Comment: The Conference Committee's action may stem from the recognition that the other restrictive measures provided under the new definition should be more than adequate to prevent an unwarranted affiliation. However, it is conceivable this rule could reappear in regulations adopted to implement the revised definition. Section 1504(a)(5) authorizes the issuance of regulations "as may be necessary or appropriate to carry out the purposes of this subsection . . ." This provision then sets forth a nonexclusive list of areas in which regulations should be prescribed. It was from this list that the rule concerning planned disaffiliations was stricken. However, the list is not exclusive, and the grant of regulatory authority is broad. Hence, it would not be entirely surprising if regulations came out with this rule, or some variation thereof, under a Treasury Department interpretation of the deletion as making the issuance of the rule discretionary rather than mandatory.

2. New Definition of Affiliated Group

a. New 80 Percent Test

As enacted by the TRA, §1504(a)(1) provides that an "affiliated group" is one or more chains of includible corporations connected through stock ownership to a common parent corporation that is an includible corporation if (i) the common parent owns directly stock meeting the requirements of §1504(a)(2) in at least one of the other includible corporations, and (ii) stock meeting the §1504(a)(2) requirements in each of the includible corporations (excluding the common parent) is owned directly by one or more of the other includible corporations.

Note: Section 1504(a)(1) continues the requirement of current law that the stock owned in members of the group be owned "directly." Direct ownership under current law has been interpreted to mean beneficial ownership.[22] Thus, in Rev. Rul. 84-79, *see* footnote 22, although a parent corporation did not hold legal title to a subsidiary's stock which the parent had placed in a revocable voting trust, it was held that the parent possessed beneficial, and therefore "direct", ownership of the stock because dividends would be paid the parent. As a result, the trustee could not sell the stock without the parent's consent, and the parent could regain legal title by revoking the trust. Presumably, rulings such as Rev. Rul. 84-79 and Rev. Rul. 70-649, 1970-2 C.B. 179, holding that stock held by a nominee was "directly" owned, will be followed under the new law.

Section 1504(a)(2), in turn, provides the following two stock ownership requirements. First, there must be ownership of stock possessing at least 80 percent of the total voting power of the stock of the includible corporation. Second, there must be ownership of stock of the includible corporation having a value at least equal to 80 percent of the total value of the stock of such corporation.

Recognizing that the determination of stock value as required by §1504(a)(2)(B) is not completely objective and can be subject to forces out of the control of the affiliated group, ameliorative provisions are included by the TRA in

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

§1504(a)(5). One provision, §1504(a)(5)(C), requires the Treasury to issue regulations providing that the value requirement should be treated as met if the affiliated group, in reliance on a good faith determination of value, has treated such requirements as met.

Observation: The Ways and Means Committee Report [23] notes that the Service will not ordinarily issue rulings as to the value of a stock interest but that the Service has issued rulings describing various valuation methodologies. The Report further states that the Committee contemplates that the Service will continue to issue such rulings. At present, the principal valuation ruling, covering situations where stock of a corporation is closely-held or where market quotations for the stock are otherwise unavailable or of such scarcity that they do not reflect fair market value, is Rev. Rul. 59-60, 1959-1 C.B. 237. Although Rev. Rul. 59-60 was initially to be used only in connection with valuations for estate and gift tax purposes, Rev. Rul. 68-609, 1968-2 C.B. 327, extended it to valuation for income tax and other tax matters. Revenue Ruling 59-60 has been modified or amplified on several occasions.[24] For example, Rev. Rul. 80-123 deals with the valuation of stapled entities. As will be discussed in Part III, *infra*, stapled entities have been dealt with legislatively by the TRA. Revenue Ruling 59-60, and all subsequent modifications and amplifications of the ruling, are reproduced in the Worksheets of 221 T.M., *Valuation of Shares of Closely-Held Corporations*.

The second relief measure, §1504(a)(5)(D), provides for the issuance of regulations under which an inadvertent ceasing to meet the 80-percent value requirements of §1504(a)(2)(B) because of changes in relative values of different classes of stock will be disregarded in determining whether a corporation remains a member of a affiliated group. According to the Conference Report,[25] the regulations will apply to changes in relative value that are "not intentionally generated" and "are not large" since, in such circumstances, it is believed that disaffiliation is inappropriate.

Comment: The condition that the swing in relative values not be "large" is contained only in the Conference Report; it is not set out in the statute. Presumably, the Regulations will reflect the Conference Committee's condition that the changes not be "large". The Conference Report provides no guidance as to what is meant by large changes, and unless the General Explanation of the TRA, when issued, provides some guidelines, the meaning of "large" will be uncertain until the Regulations are issued. It is unforunate that the Conference Report imposed this further qualification that the change not be large in view of the wide fluctuations in value to which different classes of stock in the same corporation can be subject. For example, preferred stock receiving a fixed dividend rate that is convertible into common stock but only at a conversion price well in excess of the current price of the common stock will likely be far more susceptible to interest rate fluctuations than the common stock. This is because, until the common stock appreciates to a point where it is near the conversion price, an investor will value the preferred stock primarily on a comparison of the dividend rate of the stock with prevailing interest rates. Although interest rates may also affect common stock value, they will not have as significant an impact if the earnings on the common can be maintained at a rate comparable to prevailing interest rates. In view of the volatile swings in interest rates in recent years, it would not be surprising in the foregoing circumstances for the preferred stock to show a "large" fluctuation in value relative to the fluctuation in the common stock. In such an event, it would seem unfair to penalize a corporation through loss of affiliation by reason of external market forces, but this result could obtain unless some flexibility is built into the definition of "large" by the Regulations.

b. Stock Considered in Testing for Affiliated Status

As noted in the description of present law, stock that is "limited and preferred as to dividends," and employer stock held in a tax credit ESOP or qualified stock in a leveraged ESOP is not counted in determining whether corporations are affiliated. Under the TRA, stock held in the foregoing types of ESOPs will no longer be disregarded as testing for stock ownership. The exclusion of stock held in ESOPs for testing purposes was a Senate-initiated change for which no reason was stated. However, it may reflect a perception that ESOPs can be utilized by a corporation as a means of reestablishing affiliation that had previously been severed. For example, if ESOP-held stock were disregarded, a corporation that was previously affiliated with a second corporation through ownership of more than 80 percent of that second corporation's stock, that had broken the affiliation chain by selling 30 percent of the stock in a public offering but still retained effective control of that second corporation, and that sought to reaffiliate with the second corporation, could direct the second corporation to establish an ESOP, which would publicly tender for sufficient shares of the second corporation to increase the first corporation's stock ownership in the second to the requisite 80 percent by reducing the total stock considered.

Under §1504(a)(4), as added by the TRA, the type of preferred stock that will not be considered in testing for affiliated group status has been greatly restricted. Only if the stock (i) is not entitled to vote, (ii) is limited and preferred as to dividends and does not participate in corporate growth to any significant extent, (iii) has redemption and liquidation rights not exceeding the paid-in capital or par value represented by such stock (except for a reasonable redemption premium in excess of such paid-in capital or par value), and (iv) is not convertible, will the stock be disregarded. The Conference Report [26] gives as an example of stock that fails to meet these requirements preferred stock carrying a dividend rate materially in excess of a market rate when issued. No legislative history exists, however, as to what constitutes a "reasonable redemption premium". Presumably, the right to satisfaction of dividend arrearages on cumulative preferred stock (assuming the dividends are at market rates) at redemption or liquidation will not disqualify the stock under §1504(a)(4) or be considered a redemption premium since the shareholder of such stock would only be receiving payment to which the shareholder was otherwise entitled.

In order to prevent abuse of the consolidated return provisions through the use of convertible securities or options, §1504(a)(5)(A)(B) provides for the issuance of regulations under which warrants, obligations convertible to stock, and similar interest will be treated as stock and

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

options to acquire or sell stock as having been exercised. In addition, certain stock, such as putable stock,[27] will not be treated as stock. The Conference Report illustrates these rules with the following example:[28]

> *Example*: Corporation A has common stock worth $40 a share. Corporation B, the owner of all of A's common stock, grants Corporation C an option to acquire A's stock for $20 a share that is exercisable three years from the date of the grant. A and C are likely to be loss corporations but B is expected to be profitable. If it can be reasonably expected that C will exercise the option, the regulations may treat the option as having been exercised and, if so treated, A will not be affiliated with B and will therefore be ineligible to file a consolidated return with B.

Query: In the foregoing example, C will be deemed to own all the stock of A actually owned by B by reason of the deemed exercise of the option. A question left unanswered by the committee reports is whether C and A, although loss corporations, will be regarded as affiliated by reason of the deemed ownership and therefore eligible to file a consolidated return.

Comment: Although warrants and options are similar instruments—warrants are also generally options to acquire stock but remain outstanding for a considerablly longer period of time and therefore have a greater intrinsic value—§1504(a)(5)(A) provides for the treatment of warrants, as well as obligations convertible into stock, "as stock", whereas §1504(a)(5)(B) provides for the treatment of options "as having been exercised." It is unclear whether any significance should be attached to this difference in language. In the Ways and Means Report,[29] no distinction is made; the Report states that options, warrants, and convertible securities of a corporation are all to be treated as having been exercised or converted. The statutory language relating to options, warrants, and convertible securities in the House bill was the same as that finally enacted in the TRA. However, the Conference Report[30] does not reiterate the Ways and Means Report language but rather tracks the distinction made in the statutory language. If the distinction is to be observed, it is entirely possible that convertible securities such as convertible debentures will be directly treated as stock rather than as stock into which it can be converted. For example, assume that a convertible debenture worth $200 is convertible into two shares of common stock at a conversion price of $50 per share when the common stock is selling at a price of $80 per share. If the debenture is treated as having been converted into the two shares of common stock, it will presumably be valued at $160 (2 shares X $80) for purposes of the 80 percent value test of §1504(a)(2)(B). On the other hand, if the convertible debenture is itself treated as stock, then presumably under the value test it will be taken into account at its present fair market value of $200. This latter approach is obviously less favorable from a value standpoint than treating the debenture as having been converted.

The treatment of voting power under this approach for purposes of the voting stock test is less certain. The debenture itself has no voting power, but presumably the regulations could require the attribution of any voting power that would be held by the common stock shares into which the debenture is convertible.

c. Deconsolidation and Reconsolidation

Under the House and Senate versions of the new provisions, a member that was part of an affiliated group filing consolidated returns would not have ceased to be a member unless the group's stock ownership in that member fell below 80 percent of the voting power of all classes of voting stock or became 50 percent or less of the fair market value of all outstanding stock in that member. However, this provision was dropped in the Conference Committee because the Committee believed that such a rule would permit the common parent to dispose of too much of the value of stock of a member without requiring deconsolidation. Consequently, a corporation's status as a member of an affiliated group will continue only so long as the 80 percent voting power and fair market value tests of §1504(a)(2) continue to be met.

Note: After describing the foregoing rule, the Conference Report states that nothing in the bill is intended to overturn Rev. Rul. 78-119, 1978-1 C.B. 277. That ruling holds that a parent's temporary loss of the right to vote a subsidiary's stock because the stock has been placed in a court's custody during the pendency of litigation does not cause deconsolidation.

As previously discussed, under §1504(a)(5)(D), an inadvertent ceasing to meet the fair market value test by reason of changes in relative values of different classes of stock will not terminate a corporation's status as a member of an affiliated group under regulations to be issued. Section 1504(a)(5)(E) and (F) sets forth two additional situations under which regulations are to be issued that will prevent a disaffiliation. In one case, regulations are to be issued providing that transfers of stock within the group shall not be taken into account in determining whether a corporation ceases to be a member of an affiliated group. The Conference Report illustrates the anticipated operation of this rule as follows:[31]

> *Example*: Corporation A owns 100 percent of Corporation B's only class of stock, and B owns 100 percent of the only class of stock of Corporation C. The Report states that it is contemplated that the transfer by A of 30 percent of the stock of B to C will not break the status of A, B, and C as an affiliated group.

The second situation to be addressed by Regulations is where changes in voting power occur that are disproportionate to related changes in value. In such case, Regulations can disregard changes in voting power to the extent that such changes are disproportionate to the related changes in value.

> *Example*: Assume that Corporation A owns all the Class A common stock of Corporation C, and that such Class A stock represents 95 percent of the voting power and 90 percent of the value of all the common stock of C. Assume further that Corporation B owns 100 percent of the Class B common stock of Corporation C and that this Class B stock represents the remaining 5 percent of the voting power and 10 percent of the value of all of C's stock. If C's corporate charter is amended to reduce the voting power of the Class A stock from 95 percent of total voting power to 75 percent of total voting power, and such change has the effect of reducing the value of the Class A stock to 80 percent of the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

value of all outstanding stock, the regulations can presumably provide that the Class A stock continues to have at least 80 percent of the voting power and that A and C have not become disaffiliated.[32]

Under a new provision enacted by the TRA in §1504(a)(3), if a corporation is included in a consolidated return for a taxable year that includes any period after December 31, 1984, and if a corporation ceases to be a member of that consolidated return group in a taxable year beginning after December 31, 1984, then that corporation (and any successor of such corporation) may not be included in any consolidated return filed by that group or by another affiliated group with the same common parent or a successor of such common parent before the 61st month beginning after its first taxable year in which it ceased to be a member of such group.

Example: Assume that Corporation A is a member of an affiliated group that files consolidated returns on a calendar year, assume that A was included in the consolidated return filed by the group for the year ending December 31, 1985, and assume that A ceases to be a member of this group on November 30, 1986. As a result of the deconsolidation, the income or loss of A through November 30, 1985 must be reflected in the group's 1986 consolidated return, and A must file a separate return (assuming it does not become a member of an unrelated affiliated group) that will reflect the results of its December 1986 operations.[33] Hence, the taxable year in which A ceases to be a member of this affiliated group is its year ending November 30, 1985, and assuming it subsequently reaffiliates with this group, it cannot be included in a consolidated return with this group until December 1, 1991, which is the 61st month after the year in which disaffiliation occurred. Presumably, the Regulations that will implement this reconsolidation rule will permit A's income and loss for the December 1991 period to be included in the group's 1991 consolidated return although this is not entirely clear from the statute.

Under §1504(a)(3)(B), the Treasury is authorized to waive the application of the 60-month waiting period for any corporation that disaffiliates subject to such conditions as the Treasury may prescribe. The Conference Report notes that the rule prohibiting consolidation after deconsolidation is an anti-abuse rule and that the Treasury is expected to so apply it. The Conference Report [34] provides the following example of a situation in which the rule should not be applied:[35]

Example: Assume that Corporation A owns all the stock of Corporation X and that the two file a consolidated return. On July 1, 1986, A merges into unrelated Corporation B in a statutory merger qualifying under §368(a)(1)(A). It is assumed that all the corporations are operating corporations and that the merger is not a reverse acquisition.[36] According to the Conference Report, absent other factors, X should be able to join in filing a consolidated return with the group of which B is the common parent for the period beginning July 1, 1986.

Note: As previously mentioned, a successor to a corporation that deconsolidates, as well as the corporation itself, is generally precluded from joining in a consolidated return with that same affiliated group (or with another affiliated group with the same common parent or a successor of such common parent) for a 60-month period. However, neither the statute nor the legislative history provides any indication of what is meant by a "successor". The definition of a "successor" for these purposes presumably will be addressed in Regulations. Under the present consolidated return Regulations, no references exist to successor corporations. However, for purposes of defining a "separate return limitation year" of an affiliated group member in Regs. §1.1502-1(f)(1), reference is made to the "predecessor" of that member, and a predecessor is described as "transferor or distributor of assets to a member in a transaction to which section 381(a) applies." Section 381(a) applies to §332 liquidations of subsidiaries and certain nontaxable reorganizations. In view of this definition of "predecessor" in the current regulations, it would not be surprising if a "successor" were similarly defined as the transferee of a transferor corporation in a §381(a) transaction.[37]

3. Implications of More Stringent Definition

Many of the major consequences of the new definition of an affiliated group have already been described. As pointed out, it will become more difficult for related corporations to be treated as an affiliated group and to take advantage, therefore, of the consolidated return election and the §243(b) 100 percent dividends-received election. On the other hand, as previously described, the more stringent definition indirectly liberalizes the requirements that a corporation must satisfy in order to be considered a small business corporation for purposes of Subchapter S.

One change left unanswered by the statute and legislative history is whether the new provisions might be applied for the benefit of a taxpayer. For example, in PLR 8035031 (May 30, 1980) a Technical Advice Memorandum, a parent corporation held the 95 shares of nonvoting convertible stock in each of two subsidiaries. A tax-exempt organization held the only other shares of stock outstanding, 5 shares of voting common stock. Moreover, the by-laws of the two subsidiaries provided that only officers and directors of the parent could be elected as officers of the subsidiaries. Applying the rule under existing law that only presently outstanding voting power is considered for purposes of the affiliated group provisions,[38] thus disregarding the convertibility feature, the Service ruled that the two subsidiaries could not be included in an affiliated group with the parent. Under the new rules, as previously described, stock that is limited and preferred as dividends is no longer excluded for purposes of determining affiliated status under 1504(a), if the stock is convertible into voting stock.[39] It is less clear whether such convertible preferred stock should be treated as voting stock for purposes of 1504(a) test, but under the authority in 1504(a)(5) to issue all necessary and appropriate regulations, the Treasury could presumably permit convertible preferred stock to be treated as voting stock. In such case, a favorable result might be reached in circumstances such as PLR 8035031, where an adverse result had previously obtained.

Comment: Since the new provisions are more stringent and are designed to prevent abuses that were preceived to arise under present law, the likelihood that they will be

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

applied in a manner that will ever benefit a taxpayer is not great. Certainly, a taxpayer should not arrange a corporate structure in the expectation that any favorable rules will be issued in the Regulations.

In the consolidated return area, it is likely that the separate return limitation year rules (SRLY) will be amended to provide that if a former member of an affiliated group filing a consolidated return again becomes an affiliate of that group within the 60-month period during which it is prohibited from joining in the consolidated return of the group, any years falling within that 60-month period will be treated as separate return years subject to the SRLY limitations. Otherwise, if not subject to the SRLY rules, the former member's losses and credits arising in the period commencing with reaffiliation and ending with the time it becomes eligible to rejoin in the group's consolidated returns may be available to the group under the consolidated return loss and credit carryover provisions.[40]

Also in the consolidated return area, it is possible that the investment adjustment rules of Regs. §1.1502-32 will be clarified to provide that negative adjustments must be made to the basis of all stock in the subsidiary to reflect the losses generated by that subsidiary except stock described in §1504(a)(4), relating to stock excluded from affiliated group computations where it is nonvoting, nonconvertible, nonparticipating, and limited and preferred as to dividends. Such a clarification will prevent taxpayers in the future from taking the position that a negative adjustment need not be made to voting preferred stock.[41]

Finally, it can be anticipated in view of the more stringent affiliated group requirements that corporations entering into a new venture that will generate tax benefits they will be unable to utilize will enter into partnership arrangements with corporations that can utilize such benefits. Under §704(b)(2) and Prop. Regs. §1.704-1(b), it is possible to make special allocations of tax benefits to a profitable corporate partner in the partnership agreement provided that the special allocations have "substantial economic effect."

Comment: Although partnership allocations furnish one possible avenue for avoiding the impact of the more stringent affiliated group rules, it should be noted that new §168(j)(9) may significantly affect the use of special allocations where the corporate partner is unable to use the tax benefits because it is a "tax-exempt entity" (and for this purpose, a foreign entity is considered "tax-exempt entity"). Under this provision, allocations of tax items to a tax-exempt partner must be consistent with the partner's interest in the partnership and must remain the same during the entire period that the tax-exempt partner remains in the partnership. These requirements are in addition to the rule that the allocation have "substantial economic affect" within the meaning of §704(b)(2). If the allocations to the tax-exempt partner do not meet these standards, then a portion of the partnership's property will be characterized as "tax-exempt use property". Property so reclassified is generally ineligible for the investment credit, and ACRS deductions must be taken over an extended period under the straight-line method. For a complete analysis of the new tax-exempt entity leasing rules, *see* Chapter 18 of this Portfolio.

4. Effective Dates

In general, the new amendments to the affiliated group definition are effective for taxable years beginning after December 31, 1984.[42] However, the revised definition does not apply to a corporation that on June 22, 1984, is a member of an affiliated group filing a consolidated return for such corporation's taxable year that includes June 22, 1984, until the taxable year beginning after December 31, 1987.[43] However, if (i) at any time after June 22, 1984, more than a *de minimis* amount of stock of any corporation affiliated on June 22, 1984, is sold or exchanged (including by redemption) or is issued other than in the ordinary course of business), and (ii) the requirements of new §1504(a) are no longer satisified after such sale, exchange, or issuance, then the provision will apply to such corporation for its taxable year beginning after December 31, 1984, or if later, the date such stock is sold, exchanged, or issued, as the case may be. The Conference Report states that for purposes of this rule, stock issued to ESOPs, stock issued upon the exercise of employee stock options, and similar issuances of stock are generally to be treated as issuance in the ordinary course of the corporation's business.[44] The Conference Report further provides an illustration of the foregoing effective date rules:[45]

> *Example*: Corporation B has 300 shares of Class A common stock and 100 share of Class B common stock outstanding. The shares of each class are identical except that each share of Class A common stock has three votes for every one vote of the Class B common stock. Corporation A owns all the Class A common stock, representing 90 percent of the voting stock and 75 percent of the value of all the stock of B at all times during 1984. A and B file a consolidated return for calendar year 1984. On June 30, 1985, A sells 20 shares of the Class A common stock of B to an unrelated party. After the sale, A owns 84 percent of B's voting stock and 70 percent of the value of all B's stock. B would be disaffiliated under the new provisions as a result of the sale. Under a special exception of the foregoing "sell-down" rule,[46] a corporation that issues or sells stock after June 22, 1984, pursuant to a registration statement filed with the Securities and Exchange Commission on or before June 22, 1984, will not be precluded from using the January 1, 1988, effective date but only if the requirements of §1504(a) are satisfied immediately after issuance or sale (but substituting a "more than 50 percent" test for the "at least 80 percent" test in §1504(a)(2)(B), relating to 80 percent ownership of the value of all outstanding stock and at all times thereafter until the first day of the first taxable year beginning after December 31, 1987.

Lastly, a special exception is provided for Native Corporations established under the Alaska Native Claims Settlement Act during any taxable year beginning before 1992.[47]

II. Graduated Rate Phaseout for Large Corporations

A. Background

Under §11(b), the first $100,000 of a corporation's taxable income is subject to taxation at graduated rates. A 15 percent rate is applied to the first $25,000 of taxable

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

income. The second $25,000 of income is subject to tax at a rate of 18 percent. Taxable income in excess of $50,000 up to $75,000 is taxed at a rate 30 percent, and taxable exceeding $75,000 up to $100,000 is taxed at a 40 percent rate. The maximum corporate tax rate, imposed on income in excess of $100,000, is 46 percent. The tax savings yielded by having the first $100,000 of corporate taxable income taxed under these graduated rates, rather than at the 46 percent maximum rate, is $20,250.

The graduated rates are generally available to any corporation subject to the §11 corporate tax, unless the corporation is a "component member of a controlled group of corporations" within the meaning of §1563. Under §1561(a), component members of a controlled group are limited to a single application of the graduated rates. Section 1561(a) provides that the $25,000 amount in each rate bracket is to be divided equally among the component members of the group unless the component members agree to allocate each $25,000 amount unequally pursuant to an apportionment plan.[48] In general, a controlled group of corporations is either (i) a parent-subsidiary group of corporations connected to each other through stock ownership possessing at least 80 percent of total voting power or at least 80 percent of the total value of all stock or (ii) a brother-sister group consisting of two or more corporations in which 5 or fewer individuals, estates, or trusts own at least 80 percent of the voting power or at least 80 percent of the total value of the stock of each corporation, and more than 50 percent of such ownership is identical with respect to each corporation in the brother-sister group. A controlled group can also consist of a combination of parent-subsidiary groups and brother-sister groups. Under §1563(b), a component member of the group is generally any member of the group as of a particular December 31 except one excluded under §1563(b)(2), such as an exempt organization or foreign corporation.

B. Analysis of New Provisions

1. In General

The TRA amends §11(b) to recapture the tax savings yielded by the graduated rate structure for large corporations earning in excess of $1,000,000 of taxable income. This is accomplished by imposing a surtax on corporate taxable income in excess of $1,000,000 equal to the lesser (i) 5 percent of such excess, or (ii) $20,250. Thus, corporate taxable income in excess of $1,000,000 up to $1,405,000 (5% X $400,000 = $20,250) will be subject to the 5 percent surtax.

The reason for this change is succinctly stated in the Senate Finance Report accompanying the TRA:[49]

> "The graduated corporate tax rates were added in 1978 to ease the tax burden on small business. However, large corporations, as well as small corporations, are entitled to these benefits. The Committee believes that large corporations should not be able to take advantage of the small business provision."

2. Controlled Groups

In a conforming change,[50] §1561(a) has been amended to treat a controlled group of corporations as one corporation for purposes of this 5 percent surtax. As amended, §1561(a) in essence provides that in applying the 5 percent surtax on income in excess of $1,000,000 to component members of a controlled group, the taxable income of all such members is taken into account and any tax increase due to the surtax shall be divided among the component members in the same manner as the $25,000 rate bracket amounts are allocated among the members. As noted above, each $25,000 rate bracket amount is divided equally among the component members unless they have an apportionment plan in effect specifying an unequal allocation.

> *Example*: Assume that four corporations constituting component members of a controlled group of corporations collectively report taxable income of $2,000,000 for their taxable years ending in 1986. Assume further that the controlled group did not have an apportionment plan in effect so that the $25,000 rate bracket amounts were divided equally among the four component members. The $20,250 surtax computed on the controlled group's collective taxable income falling between $1,000,000 and $1,405,000 will be divided equally among the members. Thus, each member must pick up $5,062.50 ($20,250/4) of the surtax for their taxable years ending in 1986.

The allocation of the 5 percent surtax is not quite as clear if the graduated rate bracket amounts have been allocated unequally among the component members rather than equally as in the previous example. If the bracket amounts have been allocated entirely to one member, then logically the entire 5 percent surtax amount should be allocated to that member. If, however, the bracket amounts are allocated in some other disproportionate manner among the members, two alternatives exist for allocating the 5 percent surtax, one based on the percentage of benefit each member obtained from the graduated rates and the second based on a first-in first-out (FIFO) ordering principle, as illustrated below.

> *Example*: Assume that Corporations A and B, component members of a controlled group, pursuant to an apportionment plan, allocated the first two $25,000 bracket amounts (the 15 percent and 18 percent brackets) to Corporation A and the remaining two $25,000 bracket amounts to Corporation B (the 30 percent and 40 percent brackets).[51] The tax benefit derived by allocating the first two bracket amounts to Corporation A is $14,750 (the difference between having $50,000 taxed at the maximum 46 percent and having that $50,000 taxed at the 15 and 18 percent rates); the savings derived by B is $5,500 (the difference between having $50,000 taxed at the maximum 46 percent rate and having that $50,000 taxed at the 30 and 40 percent rates under the graduated rates schedule). Further assume that the aggregate taxable income of A and B is $1,200,000 so that the 5 percent surtax on the $200,000 in excess of $1,000,000 of taxable income is $10,000. Under a FIFO ordering rule, it would be assumed that the first dollars recaptured by the surtax would be allocated to the first bracket amount until the savings produced by that bracket amount had been recaptured. Since A was entirely allocated the first two $25,000 bracket amounts and derived a tax savings in excess of the $10,000 recaptured by the surtax, that $10,000 would be entirely allocated to A. Alternatively, if the 5 percent recapture tax is allocated according to the

© 1984 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

percentage benefit each component member has derived from the graduated rates, A would be allocated 72.84 percent ($14,750 tax savings/$20,250 total tax benefit from graduated rates) or $7,284 of the $10,000 surtax, and B would be allocated the remaining $2,716 of the surtax based on its percentage benefit from the graduated rates.

Of course, if the full $20,250 tax benefit yielded by the graduated rates is recaptured by the surtax, the allocation of that amount among the component members should be the same regardless of whether a FIFO or percentage method is employed.

C. *Effective Dates*

The 5 percent surtax is effective for taxable years beginning after December 31, 1983.[52] It is not treated as a change in rates under §15[53] and, consequently, a fiscal year corporation will not be affected until its first taxable year beginning in 1984.

Observation: The impact of the surtax on a large corporation's estimated taxes should not be overlooked. Any corporation or controlled group of corporations that is subject to the surtax will be treated as a "large corporation" for purposes of the estimated tax penalty under §6655.[54] Since the §6655(d)(1) and (2) exceptions to the penalty (based on prior year's tax liability or income) are unavailable to a large corporation, such a corporation is generally required to pay at least 90 percent of its prospective tax liability for the year in estimated tax installments. To avoid any penalty, a large corporation should review whether the surtax requires any augmentation in its estimated payments for its first taxable year beginning after 1983.

Comment: The determination of whether corporations constitute a controlled group of corporations is made as of a particular December 31, as mentioned above, regardless of whether their taxable years correspond. If a controlled group consists of, for example, both calendar and fiscal year corporations, it is not entirely clear how their incomes should be aggregated to determine whether they are subject to the surtax for the first year the surtax is effective. Presumably, a controlled group of corporations should wait until all fiscal years have closed in 1985 before making a final determination as to whether the controlled group, including the calendar year component members, is subject to the surtax.

III. Treatment of Stapled Entities [Act §136]

A. *Introduction*

The ownership and control of one entity by another has in many cases a significant impact on the tax liability of one or both such entities. For example, a corporation may be a "foreign personal holding company" if, assuming certain gross income requirements are met, more than 50 percent in value of the outstanding stock of the foreign corporation is owned directly or indirectly by or for not more than five persons who are citizens or residents of the United States (the "United States Group").[55] A United States shareholder of a foreign personal holding company is required to include in income his proportionate share of the corporation's "undistributed foreign personal holding company income".[56]

Similarly, a corporation may be a "controlled foreign corporation" if more than 50 percent of the total combined voting power of all classes of stock entitled to vote is owned, actually or constructively, by United States shareholders on any day during the taxable year of the foreign corporation.[57] A "United States shareholder" is a United States person, including a corporation, which owns, directly or indirectly, ten percent or more of the total combined voting power of all classes of stock entitled to vote of the foreign corporation.[58] Every United States shareholder of a controlled foreign corporation must include in his gross income his proportionate share of the corporation's "subpart F" income for the year, as well as his proportionate share of certain other types of income designated in §951(a). Although §957 speaks only of voting power, the regulations promulgated under that section[59] provide that, in determining whether the U.S. shareholders own the requisite percentage of voting power, consideration must be given to all the "facts and circumstances" of each case. The regulations also provide that any arrangement to shift formal voting power away from the United States shareholders will not be given effect if "in reality" those shareholders retain control.[60] The courts have, in general, interpreted this provision to prohibit attempts to dilute U.S. share ownership through the nominal transfer of 50 percent of the voting power of a foreign corporation to non-U.S. shareholders in those cases where the new foreign shareholders were in fact, if not formally, under the control of the U.S. owners.[61]
