TAX MANAGEMENT

The Tax Reform Act of 1986

VOLUME II

Detailed Analysis

This volume is the second part of a comprehensive, two-volume portfolio featuring legislative history and detailed analysis of the Tax Reform Act of 1986, enacted October 22, 1986. Volume I, the series' legislative history component, contains full text of the House, Senate, and Conference Reports plus the final version of the Act. Volume II is a compendium of analysis written by active practitioners. It includes discussion of significant post-Act developments occurring through December 31, 1986.

FOREWORD

The Internal Revenue Code of 1986

"Poundage" alone—more than 1000 pages of fresh and necessarily intricate statutory language—underscores the fact, now a virtual cliche, that the Tax Reform Act of 1986 represents the most profound revision of the Internal Revenue Laws of the United States since the enactment of the income tax.

The sea of changes in tax policy—enacted under banners of equity, neutrality, and simplification—are reflected in the bold alterations of the tax structure. These include the elimination of the capital gain-ordinary income differential, the repeal or modification of a host of socially or economically motivated deductions, as well as a dramatic and welcomed lowering of tax rates. These changes do indeed validate characterization of the new law as "fundamental" tax reform.

Viewed from the standpoint of the active tax professional, however,—the perspective which is the concern of this volume—it is evident that a very demanding agenda emerges. Early in the two-year gestation of the legislative process which actively began with the publication of so-called Treasury I, it became readily apparent that the announced goal of simplification was to be sacrificed, at least with respect to middle- and upper-income taxpayers as well as with respect to corporate and noncorporate businesses. The base broadening objectives of the new Code incorporate mechanisms which make it essential to renew and possibly recast taxation of business structures. In this respect, another of the announced objectives of the new law—tax neutrality—has fallen in response to a frenzy of tax-motivated activity generated by 1986 measures.

Coupled with all of the foregoing is the critical problem of administration of, and compliance with, newly articulated tax policies. In past years, as revenue acts have proliferated almost annually, the process of promulgation of regulations and other official interpretative materials has seriously lagged behind the need for their usage. This year the lag has become greater than ever. In consequence, the federal income tax effects of countless business and personal transactions must be evaluated against a background of ambiguities, which inevitably derive from the legislative process and for which there is all too often no perfect response. To an extent not heretofore encountered, the private sector is needed to assist in the interpretation and application of the statute. In light of the above, Tax Management wishes to assure its audience that it recognizes the magnitude of its responsibility to the increasingly wide audience which depends upon the content of our publications. As the publication of this Volume II, (together with the accompanying legislative materials in Volume I) indicates, Tax Management will spare no effort to mobilize its resources to aid in the great task of comprehension and responsible tax compliance.

In our efforts, we have been materially aided through discussions with colleagues and governmental persons in appropriate situations. In this volume we have endeavored to incorporate these dimensions of understanding and implication to the general outlines of the new law. Because this Volume follows the distribution of our "Precis Reviews" of the 1986 Act (already integrated into the portfolio series), we have also here attempted, where feasible, to enrich our interpretation of the new rules with the benefit of the "in practice" experiences. Your attention is directed particularly to discussions of the alternative minimum tax, employee benefits, rules affecting real estate (including passive losses and REMIC's) as well as the in-depth treatment of business capital expenditures, accounting methods and periods, and the international provisions. As occurs with all Tax Management publications, we welcome and encourage constructive commentary from our ever-growing family of users. These will be incorporated in later materials, as our experience in application of the new law matures.

The publication of this volume would not have been possible without the highest degree of cooperation and commitment from the firm of Silverstein and Mullens and their colleagues with the dedicated staff of Editors at Tax Management. We look forward eagerly to your comments as we continue our efforts to fulfill our responsibility to the tax profession.

LEGISLATIVE HISTORY OF THE TAX REFORM ACT OF 1986

John F. Kelly, Jr., Esq.
Silverstein and Mullens
Washington, D.C.

The Tax Reform Act of 1986, introduced as H.R. 3838 on December 3, 1985, was a product of an extraordinary legislative history that cannot be traced through the usual channels. Unlike the progress of most legislation, the concepts incorporated in the final version of the tax reform bill can be directly credited to a number of sources, from the Administration, to Congress, to lobbyists and, finally, to ordinary citizens.

Early Tax Reform Bills

Major themes found in the final version of TRA 1986 are evident in a number of earlier bills which never made it very far through the legislative process. A few of the most significant reform measures were, in fact, introduced several times in different Congresses to continually address the need for comprehensive tax reform.

Included in the early initiatives introduced in Congress were:

S. 2817 — "Fair Tax Act of 1982," introduced on May 27, 1982, by Sen. Bill Bradley (D-NJ). The same version was introduced in the House of Representatives by Rep. Richard Gephardt (D-MO) as H.R. 6944. Without much success, the pair continually reintroduced their tax bills, again in 1983, and 1985. (*See:* S. 409 and H.R. 800 in the 99th Congress.) Although there was little legislative action on the Bradley-Gephardt bill, its policy of rate reduction and base broadening by elimination of most credits, deductions and exclusions was adopted in future efforts.

H.R. 777 — "Fair and Simple Tax Act of 1985" (FAST) was introduced on January 30, 1985 by Rep. Jack Kemp (R-NY), with an identical bill (S. 325) introduced by Sen. Bob Kasten on January 31, 1985. Similarly, Kemp-Kasten sought fairness through rate reduction and eliminating tax breaks. Slightly revised versions of the bills were introduced on April 25, 1985 as H.R. 2222 and S. 1006, with changes in the earned income credit and the treatment of intangible drilling costs.

H.R. 373 — "Broad Based Enhanced Savings Tax Act of 1985" was introduced by Rep. Henson Moore on January 3, 1985. The same bill was introduced by Sen. William Roth (R-DE) on January 21, 1985.

Interest in tax reform was hardly novel. Differences arose, however, in the proper approach to tax reform and over how the idea of lower rates and fewer deductions was to be achieved. Most agreed that the Internal Revenue Code of 1954 needed a massive overhaul. Ironically, it may have been the prospect of such a task that prompted Sen. Bob Packwood (R-OR), one of the eventual champions of tax reform, to state that he liked the Code the way it was.

Treasury and Administration Proposals

Despite the number of tax reform initiatives offered by Congress, most observers agree that passage of tax reform was ultimately the result of President Ronald Reagan's insistence. In his State of the Union address on January 25, 1984, he called for then Secretary of the Treasury Donald T. Regan to develop a tax plan to promote fairness and simplification. It was not until after the President's successful bid for a second term in office that Treasury would release its *Tax Reform for Fairness, Simplicity and Growth* on November 27, 1984. The three-volume proposal became more popularly known as Treasury I, the predecessor to a later Administration proposal. Although never adopted as Administration policy, Treasury I would serve as the blueprint for future tax reform efforts. It bore a strong resemblance to the Bradley-Gephardt bill, introduced almost two years earlier.

Before the next major push for tax reform, a surprising job swap was made in the Administration. On January 8, 1985 White House Chief of Staff James A. Baker, III, and Treasury Secretary Donald T. Regan announced their intention to switch positions. The move placed James Baker in the position of pointman for the Administration on tax reform.

In his next State of the Union Address on February 6, 1985, President Reagan declared tax reform to be first on his list of domestic priorities. As a result, the House Ways and Means Committee, chaired by Rep. Dan Rostenkowski (D-IL), began a series of hearings on tax reform on February 27, 1985. Later, on May 9, 1985, Sen. Bob Packwood (R-OR) began hearings in the Senate Finance Committee. Hearings at this point, however, were preliminary in anticipation of a revised Administration proposal known to be in the works. Testimony focused on broad tax policy issues and tax reform proposals already introduced.

On May 28, 1985, the Reagan Administration unveiled the *President's Tax Proposals to the Congress for Fairness, Growth, and Simplicity*. The long-awaited plan was offered in an address to the nation and served as the starting point for legislation developed during the next one and one-half years. The new proposal, referred to as Treasury II, was considered a more politically palatable version of Treasury I.

House Bill Emerges

Almost immediately, responsibility shifted to Ways and Means Chairman Rostenkowski, who was eager to make his mark on this major piece of legislation. Hearings in his Committee resumed on May 30, 1985. Treasury Secretary James Baker was first in the long line of witnesses appearing before the Committee. After 28 days and close to 450 witnesses, hearings came to a close in the Ways and Means Committee on July 31, 1985. [Serials 99-41 through 99-49 *Comprehensive Tax Reform*, Hearings Before the Committee of Ways and Means (Parts 1-9)].

Similarly, the Senate Finance Committee began to hold hearings on the President's proposal on June 11, 1985. [S. Hrg. 99-249, Volumes 1-27 *Tax Reform Proposals* (June 11 through October 10, 1985)].

Attention, however, focused on the House side where the Ways and Means Committee began mark-up on its own proposal. Chairman Rostenkowski introduced his own plan to the Committee as the mark-up vehicle. [JCS 44-85, *Tax Reform Proposals in Connection with the Committee on Ways and Means Mark-up*, September 26, 1985.]

The Committee began mark-up in closed executive sessions, which were often attended by Treasury officials. The sessions were off to a shaky start as members refused to give up their favored tax breaks. As the panel started voting to retain costly tax breaks the bill was, at the very least, ailing. It was not until Chairman Rostenkowski began dealing with individual members, exchanging pet provisions for support for the entire proposal, that momentum for tax reform was restored.

On November 23, 1985, the Ways and Means Committee approved a compromise proposal at about 4:00 in the morning with a partisan 28-9 vote. All nine dissenting votes were from Republicans. Nearly a week later, the proposal was introduced on the House floor. [H.R. 3838, *The Tax Reform Act of 1985, as Reported by the Committee on Ways and Means*, December 3, 1985; H.R. Rep. No. 426, 99th Cong., 1st Sess., *Committee on Ways and Means Report on H.R. 3838*, December 7, 1985. The House Report is reproduced in Volume I of this portfolio.]

Also introduced by Rep. John Duncan (R-Tenn.) was a proposal called the "Republican Alternative" co-sponsored by a number of Ways and Means Republicans who opposed the Committee bill. [H.R. 3879, *Tax Fairness and Reform Act*, December 9, 1985.] The bill received only minor consideration on the House floor.

The next threat to the survival of tax reform was a dramatic Republican revolt on the House floor. After the President offered only lukewarm support for the bill, the House voted 223-202 on December 11, 1985, to reject the modified closed rule (H. Res. 336) preventing the legislation from coming to the floor. Only 14 Republicans voted in favor of the rule.

With his political clout on the line, the President made a rare appearance on Capitol Hill to urge House Republicans not to kill tax reform, vowing to insist upon certain changes in the Senate. On December 17, 1985, after some serious head counting and a new rule (H. Res. 343), the House voted 256-171 to allow debate to begin. Strangely enough, final passage of the bill occurred on a voice vote, an unusual procedure for a controversial piece of legislation. Opponents never called for a recorded vote, perhaps because the House floor was in disarray. [H.R. 3838, *Tax Reform Act of 1985*, as Amended by the House of Representatives, December 17, 1985.]

Senate Counters House Measure

In the second session of the 99th Congress, the Finance Committee met on a weekend retreat in West Virginia to consider their next step in the drafting process. As a result of strong Republican opposition to the House bill, the Committee rejected it as a starting point. After several more hearings were held by the Finance Committee [S. Hrg. 99-714, *Tax Reform Act of 1986*, Parts 1-5, January 29 through March 4, 1986], Chairman Packwood unveiled his own proposal for committee markup. [JCS-8-86, *Tax Reform Proposals in Connection With Committee on Finance Mark-up*, March 18, 1986.]

Although the Committee agreed to work from this document, it was not long before tax reform was again in danger. Members voted repeatedly to retain costly tax breaks, some more generous than current law. On April 18, 1986, when Finance was on the verge of another revenue losing vote, Chairman Packwood pulled his proposal from the table and adjourned his committee. At the time, the move was seen as the end of tax reform.

Sen. Packwood, however returned immediately to the drawing board. He and his staff opted to return to a decidedly fundamental approach. At an unusual press conference on April 24, 1986, the Chairman returned with a new package: to drop rates so radically (15%-25%) that members would be willing to forego many of their precious provisions.

Days later, the Committee began its most serious effort on this "new" concept. After days of marathon meetings behind closed doors, a final reform measure acceptable to most committee members began to take shape.

Shortly after midnight on May 7, 1986, the Committee approved the final package, with individual rates set at 15% and 27%, and a top rate of 33% for corporations. The final vote was 20-0 in favor of reporting the bill. [H.R. 3838, *Tax Reform Act of 1986*, as Reported in the Senate, Parts I and II. *Note:* Part I is simply the House bill struck out); S. Rep. No. 313, 99th Cong., 2d Sess., *Senate Finance Committee Report on H.R. 3838*, May 29, 1986. The Senate Report is reproduced in Volume I of this portfolio.] On June 24, 1986, with the Finance bill still intact, the Senate voted 97-3 on final passage after three weeks of fending off major amendments. However, there were close to fifty "minor" amendments adopted on the floor. [H.R. 3838, *Tax Reform Act of 1986* (as Amended by the Senate) June 24, 1986.]

Conference Action

On July 17, 1986, the Conference Committee, consisting of 11 Senators and 11 Representatives, began deliberations to reconcile the differences between their respective versions of tax reform. [JCS-15-86, *Comparison of Tax Reform Provisions of H.R. 3838 as Passed by the House and Senate*, July 15, 1986.] It was soon evident that the Conference Committee, as a whole, could not complete the task. The two sides split up into caucus meetings, exchanging numerous compromise proposals for several weeks. Frustrated by the lack of progress, members agreed to let

© 1987 Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

their respective Chairmen negotiate one-on-one. Meetings between the two often lasted through the night, and after several set backs they emerged with a package presented to the full Conference only hours before a final vote was scheduled. The Conference Committee voted 17-5 on passage on August 16, 1986. [H.R. Rep. No. 841, 99th Cong., 2d Sess. (Vols. I & II), *Tax Reform Act of 1986, Conference Report to Accompany H.R. 3838*, September 18, 1986. The Conference Report is reproduced in Volume 1 of this portfolio.]

Tax Reform Enacted, Enrollment Corrections Fail

On September 25, 1986, the measure passed in the House by a vote of 292-136. The Senate voted 74-23 on September 27, 1986 to clear the bill. Neither side adopted floor amendments.

Before the President was to sign the measure, however, the House and Senate were left to agree on enrolling corrections to the tax bill, which are commonly offered in the form of a house concurrent resolution to correct technical mistakes made in the drafting process. Although the House managed to pass the measure (H. Con. Res. 395), several Senators attempted to use the legislation to restore substantive provisions. Both bodies adjourned *sine die* before a compromise could be agreed upon. As a result, although many corrections were made by the enrolling clerk, some of the more substantive errors will have to be addressed in the 100th Congress.

On October 22, 1986, President Reagan signed the tax bill into law. [P.L. 99-514, *Tax Reform Act of 1986*, October 22, 1986. The public law is reproduced in Volume I of this portfolio.]

CHAPTER 6 — DEDUCTION FOR MEALS, TRAVEL AND ENTERTAINMENT EXPENSES

I. **Overview** 6:1

II. **Pre-TRA Law** 6:1

III. **Changes made by the Tax Reform Act of 1986** 6:2

A. Meal expenses 6:2

B. Business entertainment 6:3

C. Travel Expenses for Business, Education and Charitable Activities 6:4

D. Travel Expenses for Attending Conventions 6:4

IV. **Effective Date** 6:4

CHAPTER 7 — MODIFICATION OF SPECIAL INDUSTRY DEDUCTIONS

I. **Limitation on Expensing of Soil and Water Conservation Expenditures** 7:1

A. Introduction 7:1

B. Detailed Analysis 7:1

1. New Conservation Plan Requirement 7:1

2. Deductions for Expenditures on Wetlands and Center Pivot Irrigation System Repealed 7:1

C. Effective Date 7:1

II. **Repeal of Land Clearing Expense Deduction** 7:1

III. **Limitation on Certain Prepaid Farming Expenses** 7:1

A. Introduction 7:1

B. Detailed Analysis 7:2

C. Effective Date 7:2

IV. **Deduction for Intangible Drilling Costs and Mineral Exploration and Development Costs Modified** 7:2

A. Introduction 7:2

B. Overview and Analysis 7:2

1. Intangible Drilling Costs 7:2

a. General Rule 7:2

b. Integrated Producers 7:2

c. Foreign IDCs 7:3

d. Exception to Foreign IDC Treatment 7:3

2. Mineral Exploration and Development Costs 7:3

a. General Rule 7:3

b. Corporation Rule Modified 7:3

c. Foreign Exploration and Development Costs 7:3

C. Effective Date 7:3

V. **Modification of Percentage Depletion Rules** 7:3

A. Introduction 7:3

B. Detailed Analysis 7:3

1. Limitations of Percentage Depletion for Oil and Gas 7:3

2. Modification of Corporate Preference Items Relating to Hard Minerals 7:4

3. Percentage Depletion Available for Royalty Income From Coal and Domestic Iron Ore 7:4

VI. **Repeal of Amortization of Railroad Grading and Tunnel Bores** 7:4

VII. **Deduction for Bus and Freight Forwarder Operating Authority** 7:4

CHAPTER 8 — MISCELLANEOUS BUSINESS DEDUCTIONS

I. **Modification of Hobby Loss Deduction** 8:1

A. Introduction 8:1

B. Overview 8:1

C. Detailed Analysis 8:1

1. Section 183(d) Presumption 8:1

2. Treatment Under 2% Floor 8:2

II. **Home Office Deductions** 8:2

A. Introduction 8:2

1. Rental Use 8:2

2. Amount of Deductions 8:3

B. Overview 8:3

C. Detailed Analysis 8:3

1. Requirements for Home Office Deductions 8:3

2. Limitations on Amount of Deduction 8:4

a. In General 8:4

b. Carryover of Unused Home Office Deductions 8:4

III. **Five-Year Amortization of Trademark and Trade Name Expenditures Repealed** 8:4

IV. **Expensing of Certain Architectural Barriers Expenditures Made Permanent** 8:4

V. **Deduction for Employee Achievement Awards Clarified [Act §§122(d)]** 8:4

VI. **Bad Debt Reserve (Other Than Financial Institutions)** 8:5

5. Steel Company and Farmer Carryback 11:5
B. Energy Investment Credit 11:6
1. Extension of Credit for Certain Property 11:6
2. Cutback and Basis Reduction for Certain Energy Property 11:6
C. Rehabilitation Credit 11:6
1. Reduced Percentages 11:6
2. Revised §48(g) Requirements 11:6
a. General 11:6
b. Qualified Rehabilitated Building; Substantial Rehabilitation 11:6
c. External, Internal Wall Test 11:6
d. Pre-1936 Requirement 11:7
e. Qualified Rehabilitation Expenditure 11:7
f. Certified Historic Rehabilitations 11:8
3. Effective Dates 11:8

CHAPTER 12 — NEW LOW-INCOME HOUSING CREDIT

I. Introduction 12:1
II. Detailed Analysis 12:1
A. Overview 12:1
B. Meeting the Minimum Set-Aside Requirement 12:1
C. Credit Amount 12:2
D. Qualified Basis 12:3
E. Additions to Qualified Basis 12:5
F. State Low-Income Housing Credit Authority Limitation 12:5
G. Recapture of the Credit and Penalty for Noncompliance 12:5
H. Transferability of the Credit and At-Risk Limitation 12:7
I. Coordination with the Passive Loss Rule 12:7
J. Transitional Relief from the Passive Loss Rule 12:7
K. Effective Date 12:8

CHAPTER 13 — EXTENSION AND MODIFICATION OF RESEARCH CREDIT RULES

I. Introduction 13:1
II. Overview 13:1
III. Detailed Analysis 13:2
A. Qualified Research 13:2
1. Technological Nature 13:2
2. Business Component 13:2
3. Process of Experimentation 13:2
4. Application of Tests 13:2
5. Activities for Which Credit Not Allowed 13:2
B. University Basic Research Credit 13:3
1. Qualifying Expenditures 13:3
2. Qualified Organizations 13:3
3. Rules for Computing the University Basic Research Credit 13:3
C. Interplay of Incremental Research Credit and University Basic Research Credit 13:3
D. Other Limits on the Credit 13:4

CHAPTER 14 — MISCELLANEOUS CREDITS

I. Extension and Modification of Targeted Jobs Credit 14:1
A. Introduction 14:1
B. Analysis 14:1
C. Effective Date 14:1
II. Alternative Minimum Tax Credit 14:1
A. Introduction 14:1
B. Overview of 1986 TRA Minimum Tax Credit 14:2
C. Analysis of Minimum Tax Credit 14:2
1. Computation of Credit 14:2
2. Application of Credit 14:4
3. Corporate Acquisitions 14:4
III. Extension of Orphan Drug Credit 14:4
A. Introduction 14:4
B. Extension of Orphan Drug Credit 14:4
IV. Increase in Earned Income Credit 14:4
A. Introduction 14:4
B. Analysis 14:5
1. Increase Amount of Credit 14:5
2. Inflation Adjustments 14:5
3. Employee Notification 14:5
V. Repeal of Political Contributions Tax Credit 14:5
A. Introduction 14:5
B. Analysis 14:5

CHAPTER 15 — NEW OR REVISED CREDIT LIMITATIONS

I. Introduction 15:1
A. Nonrefundable Personal Credits 15:1
B. Miscellaneous Credits 15:1
C. Business Credits 15:1
D. Alternative Minimum Tax 15:2
II. Outline of 1986 TRA Changes 15:2
III. Detailed Analysis 15:3
A. Consolidation of Credits into General Business Credit 15:3
1. Components of Credit 15:3
2. Tax Liability Limitation for 1986 15:3
3. Credit Carryover 15:3

© Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

B. Nonrecourse Financing Limit 15:4
1. General 15:4
2. Qualified Commercial Financing Exception 15:4
3. Partnerships and S Corporations 15:4
4. Subsequent Years; Lessees 15:4
C. Passive Activity Limit 15:5
1. Overview 15:5
2. Definition of Passive Activity 15:5
3. Taxpayers Subject to Passive Limits 15:5
4. Definition of Passive Loss and Credit 15:5
5. Exceptions 15:6
6. Suspended Passive Losses and Credits 15:6
7. Effective Dates and Phase-In Rules 15:7
D. Post-1986 Tax Liability Limitation: Alternative Minimum Tax 15:7
1. Nonrefundable Personal Credits 15:7
2. Miscellaneous Credits 15:8
3. General Business Credit 15:8

CHAPTER 16 — EXTENSION OF AT-RISK RULES TO REAL ESTATE

I. Introduction 16:1
II. Overview 16:1
III. Detailed Analysis 16:2
A. Qualified Nonrecourse Financing 16:2
B. Special Rule for Partnerships 16:2
C. Activity of Holding Real Property 16:2
IV. Implications 16:3

CHAPTER 17 — LIMITATIONS ON LOSSES AND CREDITS FROM PASSIVE ACTIVITIES

I. Overview 17:1
II. Detailed Analysis 17:2
A. Passive Activity 17:2
1. Definition of Activity 17:2
2. Material Participation 17:3
a. Involvement in Operations on a Regular, Continuous, and Substantial Basis 17:3
b. Closely Held C Corporations and Personal Service Corporations 17:4
c. Limited Partnerships 17:5
d. Treatment of Retired Individuals and Surviving Spouses Participating in Farming Activity 17:5
3. Rental Activity 17:6
a. Defining Rental Activity 17:6

3. Publicly-Traded Property 18:6
4. Effective Dates 18:6
a. Disproportionate Disallowance Rule 18:6
b. Revolving Credit Plans 18:7
c. Publicly-Traded Property 18:7

II. **The Impact of the General Utilities Repeal on Installment Sales Rules** 18:7
A. Introduction 18:7
B. Detailed Analysis 18:7

III. **Recognition of Section 751 Gain in an Installment Sale** 18:8

CHAPTER 19 — NEW CAPITALIZATION RULES FOR DEALERS AND PRODUCERS

I. Introduction 19:1
A. Pre-TRA 86 Law 19:1
1. Purchasers of Goods for Resale 19:1
2. Goods Manufactured for Inventory 19:1
3. Self-constructed Property and Non-Inventory Goods Manufactured for Sale 19:2
4. Construction Period Interest and Taxes 19:2
5. Sales Taxes 19:2
B. Reasons for Change 19:2

II. **Overview** 19:3
A. General Rule 19:3
B. Expenses other than Interest 19:3
C. Interest Capitalization 19:3
D. Sales and Transfer Tax Capitalization 19:3
E. Effective Date 19:3

III. **Detailed Analysis** 19:4
A. Uniform Capitalization Rules 19:4
1. Basic Changes 19:4
2. Exception for Certain Farm Property 19:5
a. General Rule 19:5
b. Preproductive Period 19:5
B. Election out of Uniform Capitalization Rules for Covered Farmers 19:6
1. Exception for Small Retailers and Wholesalers 19:6
2. Simplified Capitalization Method for Retailers and Wholesalers 19:6
3. Interest Capitalization 19:7
4. Property Purchase and Disposition Tax Capitalization 19:8
C. Effective Dates and Transition Rules 19:8

CHAPTER 20 — NEW LIMITATIONS ON COMPLETED CONTRACT METHOD

I. **Pre-1986 TRA Law** 20:1

II. **Overview** 20:2

III. **Detailed Analysis** 20:2
A. Percentage of Completion-Capitalized Cost ("40% PCM") Method 20:2
B. Exceptions to Use of 40% PCM Method 20:3
C. Percentage of Completion Look-Back Method 20:3
D. Interest Allocations 20:4
E. Effective Date 20:4

CHAPTER 21 — SIMPLIFICATION OF DOLLAR-VALUE LIFO METHOD FOR SMALL TAXPAYERS

I. **Introduction** 21:1
A. Background 21:1
B. Reasons for Change 21:1

II. **Overview** 21:2

III. **Detailed Analysis** 21:2
A. General Rule 21:2
1. Eligible Businesses 21:2
2. Making the Election 21:2
3. Computation of Simplified Dollar-Value LIFO Inventories 21:2
a. General Rule 21:3
b. Composition of Inventory Pools 21:3
c. Selection of Index 21:3
d. Rules Applicable to Year of Change 21:3
e. Rules Applicable When Taxpayer No Longer Eligible for Simplified Treatment 21:4
B. Effective Date and Transition Rule 21:5

© Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

CHAPTER 22 — CASH METHOD LIMITED; ACCRUAL METHOD LIBERALIZED

I. **New Limitations on Use of Cash Method** 22:1

A. Introduction 22:1
1. Pre-TRA 1986 Law 22:1
2. Reasons for Change 22:1
B. Overview 22:1
C. Detailed Analysis 22:2
1. General Rule 22:2
2. Tax Shelters 22:2
3. Qualified Personal Service Corporations 22:3
4. Farming Business Exception 22:3
5. Small Business Exception 22:3
6. Effective Date and Transition Rules 22:4

II. **Full Accrual of Income Not Required for Certain Service Providers** 22:4

A. Introduction 22:4
1. Current Law 22:4
2. Reasons for Change 22:4
B. Overview 22:5
C. Detailed Analysis 22:5
1. General Rule 22:5
2. Effective Date 22:6

CHAPTER 23 — RESTRICTIONS ON ADOPTION OF A FISCAL YEAR BY PASS-THROUGH ENTITIES AND PERSONAL SERVICE CORPORATIONS

I. **Introduction** 23:1

A. Pre-1986 TRA Law 23:1
1. General Rules 23:1
2. Partnerships 23:1
3. S Corporations 23:2
4. Personal Service Corporations 23:2
B. Reasons for Change 23:2

II. **Overview** 23:2

III. **Detailed Analysis** 23:3

A. General Rule 23:3
B. Business Purpose Exception 23:3
C. Definition of Personal Service Corporation 23:4
D. Amendment of 52-53 Week Taxable Year Rules 23:4
E. Related Party Rules for Personal Service Corporations 23:4
F. Effective Date 23:4

CHAPTER 24 — MISCELLANEOUS ACCOUNTING METHOD AMENDMENTS

I. **New Income Accrual Requirements for Utilities** 24:1

A. Introduction 24:1
1. Background 24:1
2. Reasons for Change 24:1
B. Overview 24:1

CHAPTER 26 — TAX STRADDLES

I. **Introduction** 26:1

II. **Amendment of the "Year-End Rule"** 26:1

III. **Amendments Relating to Foreign Currency Transactions** 26:2

IV. **Amendments to §108 of the 1984 TRA** 26:2

A. Section 108 of P.L.98-369 and the Miller Decision 26:2

B. 1986 TRA Amendments to §108(a): The London Options Cases 26:3

C. Other Amendments to §108 26:4

V. **Other Technical Corrections of the 1984 TRA Straddle Provisions** 26:5

A. Coordination of S Corporation Election and Election Under 1984 TRA §102(g) and (h) 26:5

B. Amendment to §263(g) 26:5

CHAPTER 27 — REVISED RULES FOR ALLOCATION OF PURCHASE PRICE IN ASSET ACQUISITIONS

I. **Overview** 27:1

II. **Detailed Analysis** 27:1

A. Residual Method 27:1

B. Applicable Asset Acquisitions 27:2

C. Information Reporting 27:2

D. Effective Date 27:2

CHAPTER 28 — MODIFICATIONS TO RECAPTURE PROVISIONS

I. **Changes Affecting Depreciation Recapture** 28:1

A. Background — Pre-1986 TRA Law 28:1

B. 1986 TRA Amendments to Section 1245 28:1

C. Effective Date 28:1

II. **Dispositions of Certain Wetlands and Croplands** 28:1

A. Analysis 28:1

1. Gain From Sale of Disposition 28:2
2. Loss Treated as Long-Term Capital Loss 28:2
3. Effective Date 28:2

III. **Disposition of Certain Oil, Geothermal, and Mineral Properties** 28:2

A. Introduction 28:2

B. Overview and Analysis 28:2

1. Depletion Costs Included 28:2
2. Disposition of Portion of Property 28:2
3. Effective Date 28:2

IV. **Disposition of Certain Plants and Animals for which Preproductive Expenses were Deducted** 28:2

A. Introduction 28:2

B. Overview 28:3

C. Analysis 28:3

1. Recapture of Preproductive Expenses which were Deducted 28:3
2. Effect of Election to Deduct Preproductive Period Expenses on Depreciation 28:3
3. Definitions 28:3
4. Effective Date 28:3

CHAPTER 29 — PROVISIONS RELATING TO MERCHANT MARINE CAPITAL CONSTRUCTION FUNDS

I. **Introduction** 29:1

II. **Overview** 29:1

III. **Detailed Analysis** 29:2

A. Coordination of Merchant Marine Act and Internal Revenue Code 29:2

B. Definition of "Qualified Withdrawals" 29:2

C. Tax Treatment of Nonqualified Withdrawals 29:2

D. Twenty Five Year Limit on Fund Deposits 29:2

E. Other Amendments 29:3

1. Exception to Definition of Tax Liability under §26(b) 29:3
2. Conformity with Merchant Marine Act of 1936 29:3

CHAPTER 30 — REVISION AND EXTENSION OF LIMITATIONS ON TAX-EXEMPT BONDS

I. **Overview** 30:1

II. **Detailed Analysis** 30:1

A. Section 103 30:1

B. Private Activity Bonds 30:2

1. Introduction 30:2
2. Trade or Business and Security Interest Tests 30:2
3. Management Contracts 30:2
4. Output Contracts 30:2
5. Unrelated Uses 30:3
6. Private Loan Bonds 30:3
7. Effective Date 30:3

C. Exempt Facility Bonds 30:4

1. Introduction 30:4
2. Use of Proceeds 30:4
3. Low and Moderate Income Housing 30:4
4. Additional Restrictions 30:6
5. Hazardous Waste 30:7
6. Effective Dates 30:7

D. Single Family Housing 30:7

1. Introduction 30:7
2. Use of Proceeds 30:7
3. Purchase Price Limit 30:8
4. Income Limitation 30:8
5. Qualified Veterans Mortgage Bonds 30:8

CHAPTER 36 — NEW RULES GOVERNING CORPORATE LIQUIDATIONS: REPEAL OF GENERAL UTILITIES DOCTRINE

I. **Overview** 36:1

II. **Discussion** 36:1

A. Section 331 Liquidations 36:1
1. In General 36:1
2. Limits on Loss Recognition 36:1
3. Regulatory Authority 36:2
B. Section 337 Liquidations 36:2
C. Section 333 Liquidations 36:3
D. Section 332 Liquidations 36:3
1. In General 36:3
2. Section 336(e) Election 36:3
3. Mirror Subsidiary Transactions 36:3
E. Section 338 Transactions 36:4
F. Effective Dates and Transition Rules 36:5
1. In General 36:5
2. Pre-1989 Liquidations of Qualified Corporations 36:5

CHAPTER 37 — MODIFICATIONS TO CORPORATE DISTRIBUTION RULES

I. **Distributions of Appreciated Property by C Corporations** 37:1

A. Overview 37:1
B. Removal of Exceptions to Gain Recognition 37:1
C. Effective Date 37:2

II. **Reduction in Stock Basis for Nontaxed Portion of Extraordinary Dividends** 37:2

A. Background 37:2
B. Overview of Amendments 37:2
C. Detailed Analysis 37:2
1. Determination of Extraordinary Dividend 37:2
2. Holding Period 37:3
3. Qualifying Preferred Stock 37:3
4. Partial Liquidations and Non-Pro Rata Redemptions 37:4
a. Partial Liquidations 37:4
b. Non-Pro Rata Redemptions 37:4
5. Specific Exceptions and Additional Rules 37:4
6. Effective Dates 37:4

III. **Effect on Earnings and Profits of Appreciated Property Distributions** 37:5

A. Background 37:5
B. TRA 1986 Amendments 37:5
C. Effective Dates 37:5

IV. **Distribution of Partnership and Trust Interests** 37:6

A. Background 37:6
B. Limitation on Recognition of Gain 37:6
C. Effective Date 37:6

CHAPTER 38 — SPECIAL CORPORATE PROBLEMS

I. **Certain Built-in Gains of S Corporations Subject to C Corporation Tax** 38:1

A. Background 38:1
B. Tax on Built-In Gain of S Corporations 38:1
1. Recognized Built-in Gain 38:1
a. Dispositions 38:1
b. Treatment of Inventory 38:2
c. Property Acquired in Nonrecognition Transactions after Conversion 38:2
2. Net Unrealized Built-in Gain Limitation 38:2
3. Offsets Against Recognized Built-in Gain 38:3
4. Effect of Built-in Gain Tax 38:3
5. Comparison with Former Section 1374 38:3
C. Effective Date and Transition Rules 38:4
1. In General 38:4
2. Relief for Qualified Corporations 38:4
a. Qualified Corporations 38:4
b. Relief Available to Qualified C Corporations: The Analogue 38:4
c. Relief from Built-in Gain Tax 38:4
d. Relief from Recognition on Liquidation 38:6

II. **Amendments to Personal Holding Company Rules** 38:6

A. Background 38:6
B. Rate Reduction 38:7
C. New Exception For Computer Software Royalties 38:7
1. General Exclusion 38:7
2. Special Rules 38:7
D. Effective Dates 38:8

III. **Technical Amendments Relating to Affiliated Group Definition** 38:8

A. Background 38:8
1. Affiliated Group Definition 38:8
2. Includible Corporations - DISCs 38:8
B. Analysis of Technical Corrections Affecting Affiliated Groups 38:8
1. Overview 38:8
2. Excludable Stock Amendment 38:9
3. Grandfather Rule Clarifications 38:9

H. Effective Date 41:5

CHAPTER 42 — MORTGAGE BACKED SECURITIES: THE "REMIC"

I. **Background** 42:1
II. **Overview** 42:2
A. The REMIC 42:2
B. Regular Interests 42:3
1. In General 42:3
2. Taxation of Regular Interest Holders 42:3
C. Residual Interests 42:4
1. In General 42:4
2. REMIC Taxable Income (Loss) 42:4
a. Taxable Income of a REMIC 42:4
b. Net Loss of a REMIC 42:4
3. Taxation of Holders of Residual Interests 42:4
a. Special Rules for "Excess Accruals" 42:4
b. Treatment of Nonrecognized Gain/Loss 42:5
c. Application of the Wash Sale Rule 42:5
d. Procedural Rules 42:5
D. Prohibited Transactions; Liquidations 42:5
E. Miscellaneous Technical Amendments 42:6
1. Treatment for REIT Purposes 42:6
2. Treatment for Section 593 Purposes 42:6
3. Other Technical Amendments 42:6
F. Taxable Mortgage Pools 42:6
G. Effective Dates 42:6
III. **Detailed Analysis** 42:6
A. Basic REMIC Qualifications and Operating Rules 42:6
B. REMIC Interests 42:7
1. Regular Interests 42:8
a. In General 42:8
2. Residual Interests 42:10
a. In General 42:10
b. Pass-Through Rules 42:10
c. Other Rules Relating to Residual Interests 42:12
C. Prohibited Transactions 42:12
D. Terminations 42:13
E. Technical Amendments 42:14
F. Effective Dates: Taxable Mortgage Pools 42:14

CHAPTER 43 — TECHNICAL AMENDMENTS RELATING TO PARTNERSHIPS AND S CORPORATIONS

I. Retroactive Partnership Allocations 43:1

A. Background 43:1
B. TRA 1986 Amendment 43:1
C. Effective Date 43:1

II. Disguised Sales to Partnerships or Partners 43:1

A. Background 43:1
B. Extension to Property Exchanges 43:1
C. Effective Date 43:1

III. Distribution of Partnership and Trust Interests 43:1

IV. Like-Kind Exchanges 43:2

A. Background 43:2
B. TRA 1986 Amendment 43:2
C. Effective Date 43:2

V. Amendments to S Corporation Rules 43:2

A. Background 43:2
1. Qualified Subchapter S Trusts 43:2
2. Accumulated Adjustments Account 43:2
B. 1986 TRA Amendments 43:2
1. Qualified Subchapter S Trusts 43:2
2. Accumulated Adjustments Account 43:2
C. Effective Dates 43:2

CHAPTER 44 — AMENDMENTS RELATING TO COMPLIANCE REVISIONS

I. Tax Shelter Registration 44:1

A. Introduction 44:1
1. Tax Shelter Ratio Test 44:1
2. Tax Shelter Penalties 44:1
a. Penalty for Failure to Register a Tax Shelter 44:1
b. Failure to Furnish Tax Shelter Identification Number 44:2
c. Penalty for Failure to Maintain Lists of Tax Shelter Investors 44:2
B. Overview of 1986 TRA Changes 44:2
C. Detailed Analysis 44:2
1. Tax Shelter Registration Ratio 44:2
2. Tax Shelter Penalties 44:2
a. Failure to Register a Tax Shelter 44:2
b. Failure to Report Tax Shelter Identification Number 44:3
c. Failure to Maintain List of Tax Shelter Investors 44:3

II. Revised Penalty Provisions 44:3

A. Introduction 44:3
1. Penalties for Failure to File Information Returns or Statements and Furnish Copies 44:3
a. Failure to File Information Returns or Statements 44:3
b. Failure to Furnish Copies to Persons Entitled to Them 44:3
2. Penalty for Failure to Pay Tax 44:4
a. Failure to Pay Tax 44:4
b. Coordination of Failure to File Penalty and Failure to Pay Assessed Deficiency Penalty 44:4
3. Negligence and Fraud Penalties 44:4
a. Fraud Penalty 44:4
b. Negligence Penalty 44:4
c. Special Negligence Penalty 44:4
4. Penalty for Substantial Understatement of Income Tax Liability 44:5
B. Overview 44:5
C. Detailed Analysis 44:5
1. Penalties for Failure to File Information Returns or Statements 44:5
2. Increase in Penalty for Failure To Pay Tax 44:6
a. In General 44:6
b. Coordination of Penalty for Failure to File and Failure to Pay Assessed Deficiency 44:7
3. Negligence and Fraud Penalties 44:7
a. Fraud 44:7
b. Negligence Penalty 44:8
c. Special Negligence Penalty 44:8
d. Interaction of Fraud and Negligence Penalties 44:9
4. Penalty for Substantial Understatement of Liability 44:9
a. The Tax Reform Act of 1986 44:9
b. Interaction with the Omnibus Budget Reconciliation Act of 1986 44:9
5. Period of Limitations for Penalties 44:9

III. Information Reporting Requirements 44:9

A. Introduction — Pre-1986 TRA Law 44:9
1. Reporting by Brokers 44:10
2. Supplying Taxpayer Identification Numbers on Tax Returns 44:10
3. Information Reporting on Royalties 44:10
4. Information Reporting on the Receipt of Mortgage Interest 44:10
5. Information Reporting Requirements for Passthrough Entities 44:10
6. Mailing Requirements for Certain Payee Statements 44:10
7. Tax-Exempt Interest Reporting Requirements 44:10
B. Overview 44:10
C. Detailed Analysis 44:11
1. Information Reporting on Real Estate Transactions 44:11
2. Information Reporting on Federal Agency Contracts 44:11
3. Information Reporting on Royalties 44:12
4. Taxpayer Identification Numbers for Dependents 44:12
5. Tax-Exempt Interest Required to be Reported on All Returns 44:13
6. Mailing Requirements for Payee Statements 44:13
7. Reporting to Nominees of Passthrough Entities 44:13
8. Information Reporting by Cooperative Housing Corporation 44:14

IV. Modifications to the Interest Rules 44:14

A. Introduction — Pre-1986 TRA Law 44:14
1. Interest Rates on Underpayments and Overpayments of Tax 44:14
2. Interest on Accumulated Earnings Tax 44:14

A. Introduction — Pre-1986 TRA Law 44:17
B. Detailed Analysis 44:17

CHAPTER 45 — REVISED ESTIMATED TAX REQUIREMENTS

I. Introduction 45:1

II. Overview 45:1

III. Detailed Analysis 45:1

A. Current Liability Test 45:1
B. Estates and Trusts 45:2
C. Corporate Minimum Tax 45:2
D. Tax-Exempt Organizations 45:2
E. Waiver of Penalties for TRA 1984 and TRA 1986 Changes 45:2
F. Nonresident Aliens—TRA 1984 Correction 45:3

CHAPTER 46 — CHANGES AFFECTING ADMINISTRATIVE AND JUDICIAL PROCEDURES

I. Introduction 46:1

II. Analysis of Provisions 46:1

A. Suspension of Limitations if Third Party Records Not Produced 46:1
B. Authority to Rescind Notice of Deficiency 46:1
C. Penalty for Failure to Pursue Administrative Remedies 46:2
D. Jurisdiction Over Failure to File Penalty 46:3
E. Appeals from Tax Court Interlocutory Orders 46:3
F. Limits on Award of Court Costs and Fees 46:3
G. Tax Court Practice Fee 46:4
H. Modified Levy in Forfeiture Rules 46:4

CHAPTER 47 — INCOME TAXATION OF TRUSTS AND ESTATES

I. Introduction 47:1

II. Overview 47:1

III. Rate Schedules for Trusts and Estates 47:1

IV. Grantor Trust Rules 47:2

V. Taxable Years of Trusts 47:3

VI. Tax Payments 47:3

VII. Multiple Trusts 47:3

VIII. Distributions in Kind 47:3

IX. Deductibility of Trustee Fees and Other Administration Expenses 47:4

X. Alternative Minimum Tax 47:4

CHAPTER 48 — THE NEW GENERATION-SKIPPING TRANSFER TAX CONTAINED IN THE TAX REFORM ACT OF 1986, H.R. 3838

I. Pre-TRA Law 48:1

II. Legislative History of the TRA 1986 GSTT 48:2

III. The Department of the Treasury and the House Ways and Means Committee Cite Problems with the Pre-TRA GSTT 48:3

A. Sophisticated Mechanisms for Minimizing the Old GSTT 48:3

IV. Overview of the GSTT Contained in the Tax Reform Act of 1986 48:4

V. Detailed Explanation of the GSTT Contained in the Tax Reform Act of 1986 48:5

A. Definitions 48:5
1. Generation-Skipping Transfer 48:5
2. Trust/Trustee 48:5
3. Transferor 48:5
4. Interest 48:5
5. Skip Person/Non-Skip Person 48:6
6. Taxable Events 48:6
B. Taxation of Multiple Skips 48:7
C. Tax Amount Before Exemptions and Before Inclusion Ratio 48:7
D. Liability for GSTT 48:8
E. Exemptions 48:8
1. Predeceased Child Exclusion 48:8
2. Gift Tax Exclusions 48:8
3. $1,000,000 Exemption 48:9
a. Allocation of $1,000,000 Exemption 48:9
4. Direct Skip Exemptions 48:10
F. Determination of Amount of Tax at Flat Tax Rate 48:11
G. Inclusion Ratio 48:11

VI. Practical Issues Involved in Planning for the Use of Exemptions and Exclusions 48:12

A. Value of Total Assets and Necessity to Plan to be Able to Utilize the Exemptions 48:12

3. Trade Show Income 50:4
C. Effective Date 50:4

III. Estimated Tax Requirements 50:4

IV. Definition of a Government Official for Private Foundation Purposes 50:5

CHAPTER 51 — EXECUTIVE COMPENSATION ISSUES

I. New Provisions Affecting Fringe Benefits 51:1
A. Introduction 51:1
B. Overview 51:1
C. Detailed Analysis 51:2
1. Changes in Statutory Fringe Benefits 51:2
a. Deductibility of Health Insurance Costs of Self-Employed Individuals 51:2
b. Educational Assistance Programs, Group Legal Plans, and Dependent Care Assistance Programs 51:2
2. Changes Affecting Campus Lodging 51:3
a. Pre- 1986 TRA Law 51:3
b. 1986 TRA Provisions 51:3
c. Effective Dates 51:3
4. Changes Affecting Military Fringe Benefits 51:3
a. Pre-1986 TRA Law 51:3
b. 1986 TRA Provisions 51:3
c. Effective Date 51:4
5. Changes Affecting the Employer's Deduction for Accrued Vacation Pay 51:4
a. Pre-1986 TRA Law 51:4
b. 1986 TRA Provision 51:4
c. Effective Date 51:4

© Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

6. Changes Affecting Full-Time Life Insurance Salespersons 51:4
a. Pre-1986 TRA Law 51:4
b. 1986 TRA Provision 51:4
c. Effective Date 51:4
7. Due Date for the Study of Welfare Benefit Plans 51:4
8. Technical Corrections 51:4
a. The Line-of-Business Requirement 51:4
b. Working-Condition Fringe Benefits 51:4
c. De Minimis Fringe Benefits 51:5
d. Definition of Dependent Children 51:5
e. Definition of Customer 51:5
f. Clarification of Employee Discounts 51:5
g. Excise Tax on Fringe Benefits 51:5
h. Cafeteria Plans 51:5
i. Telephone Service for Pre-Divestiture Retirees 51:5
j. Qualified Tuition Reduction 51:5

II. Stock Options (Section 321), Including Technical Corrections (Section 1855) 51:6

A. Introduction 51:6
B. Overview 51:6
C. Detailed Analysis 51:6
1. Amendments to Section 422A 51:6
a. Sequential Exercise Rule 51:6
b. Annual Limitation on Amount of ISOs 51:7
c. Effective Dates and Plan Amendments 51:7
2. Technical Corrections 51:8
3. Tax Rate Changes 51:8

III. Nonqualified Deferred Compensation and Section 457 51:9

A. Introduction 51:9
1. Section 457 51:9
2. Constructive Receipt 51:9
B. Overview 51:9
C. Detailed Analysis 51:9
1. Application to Tax-Exempt Employers 51:9
2. Distribution Requirements 51:10
3. Effective Date 51:10

IV. Golden Parachutes (Technical Corrections) 51:11

A. Introduction 51:11
B. Overview 51:12
C. Detailed Analysis 51:12
1. Exemption for Small Business Corporations 51:12
2. Reasonable Compensation 51:13
3. Exemption For Payments Under Qualified Plans 51:13
4. Treatment of Affiliated Groups 51:13
5. Limitation on Number of Individuals Treated As Highly Compensated 51:14
6. Excluded Amounts Not Taken Into Account In Determining Whether Threshold Amount Is Met 51:14
7. Limitation on Treatment of Payment Pursuant to Securities Law Violation as Parachute Payment 51:14
8. Clarification Concerning Independent Contractors 51:14
9. Clarification of Effective Date Provisions 51:14

V. Group Term Insurance Technical Corrections 51:14

A. Introduction 51:14
B. Overview 51:15

VI. Detailed Analysis 51:15

A. Determination of Includible Cost 51:15
B. Former Employees 51:15
C. Definition of Key Employee 51:15
D. Separate Treatment of Former Employees 51:15

F. Effective Date 51:15

CHAPTER 52 — NEW PROVISIONS FOR ESOPS

I. Introduction 52:1

II. Overview 52:2

III. Detailed Analysis 52:2

A. Estate Tax Exclusion 52:2
B. Deductibility of Dividends 52:3
C. Partial Interest Exclusion 52:3
D. Asset Reversions 52:4
E. Tax Credit ESOPs 52:4
F. Distributions 52:4
G. Put Options 52:5
H. Diversification Requirements 52:5
I. Independent Appraisal 52:6
J. Prohibited Allocations 52:6
K. Special Rules 52:6
L. Miscellaneous Technical Corrections 52:6
1. Section 1042 Nonrecognition Rules 52:7
2. Section 2210 Estate Tax Liability Changes 52:7

CHAPTER 53 — WELFARE PLANS

I. Introduction 53:1

A. Pre-1986 TRA Law 53:1
1. Health Plans 53:1
2. Group-Term Life Insurance Plans 53:1
3. Group Legal Services Plans 53:1
4. Educational Assistance Programs 53:2
5. Dependent Care Assistance Programs 53:2
6. Welfare Benefit Funds 53:2
7. Cafeteria Plans 53:2
B. Reasons for Change 53:2

II. Overview 53:2

© Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

III. **Detailed Analysis** 53:3

A. Plan Formality, Permanence and Exclusivity Requirements 53:3
B. Reporting Requirements 53:4
C. Nondiscrimination Rules 53:4
1. Mandatory Versus Elective Application of Section 89 53:4
2. Eligibility Tests 53:4
a. 50 Percent Test 53:4
b. 90/50 Percent Test 53:5
c. General Nondiscrimination 53:5
3. Benefits Test 53:5
a. In General 53:5
b. Plan Safe Harbor 53:6
c. Special Dependent Care Assistance Test 53:6
4. Alternative Test 53:6
5. Amount Includible in Income 53:6
D. Special Health Plan Rules 53:7
1. Separate Testing 53:7
2. Sworn Statements 53:7
3. Part-Time Employees 53:8
4. Coordination of Benefits 53:8
E. Special Group-Term Life Insurance Rule 53:8
F. Highly Compensated Employees 53:8
G. Excludable Employees 53:9
H. Separate Lines of Business 53:10
I. Definitions and Special Rules 53:11
1. Time for Testing 53:11
2. Special Rules for Dispositions and Acquisitions 53:12
3. Separate Plans 53:12
4. Valuation 53:12
5. Former Employees 53:12
6. Self-employed Persons 53:12
7. Cafeteria Plans 53:13
8. Welfare Benefit Funds 53:13
J. Effective Dates 53:13

IV. **Technical Corrections to Welfare Benefit Plan Provisions** 53:14

A. Reserves for Discriminatory Post-Retirement Benefits 53:14
B. Actuarial Certification 53:14
C. Aggregation of Funds 53:14
D. Definition of Fund 53:14
E. Tax on Unrelated Business Income 53:14
F. Tax on Disqualified Benefits 53:15
G. Effective Dates 53:15
H. Fully Vested Vacation Pay Plans 53:15

V. **Continuation Health Coverage Under the Consolidated Omnibus Budget Reconciliation Act (Technical Corrections) of 1985** 53:15

A. Introduction 53:15
1. Scope of Continued Coverage 53:15
2. Length of Continued Coverage 53:15
3. Type of Coverage 53:16
4. Premium Requirements 53:16
5. Notice of and Election for Continued Coverage 53:16
6. Exceptions 53:16
7. Consequences of Failure to Comply With the COBRA Requirements 53:16
8. Effective Date 53:16
B. Overview 53:17
C. Detailed Analysis 53:17
1. Modifications of Plan Coverage 53:17
2. Maximum Required Period of Continuation Coverage 53:17
3. Grace Period for Payment of Premiums 53:17
4. Termination of Continuation Coverage Upon Coverage By Another Group Health Plan Rather Than Upon Reemployment Or Remarriage 53:17
5. Clarification Relating To Election By Beneficiaries 53:17
6. Notice Requirements 53:17
7. Nonresident Aliens 53:18
8. ERISA Definition of "Group Health Plan" 53:18
9. Aggregation Rules for Employers Under ERISA 53:18
10. Effective Date 53:18

CHAPTER 54 — NEW OR REVISED QUALIFICATION REQUIREMENTS FOR QUALIFIED PLANS

I. **Qualified Plan Coverage Rules and Related Provisions** 54:1

A. Introduction 54:1
B. Overview 54:1
C. Detailed Analysis 54:1
1. Highly Compensated Employees 54:1
a. Definition 54:1
b. Effective Date 54:2
2. Includible Compensation 54:2
3. Coverage Tests 54:3
a. Percentage Test 54:3
b. Ratio Test 54:3
c. Average Benefits Test 54:3
d. Aggregation and Comparability 54:4
e. Excludable Employees 54:4
f. Special Rules for Dispositions or Acquisitions 54:5
g. Former Employees 54:5
h. Line of Business Exception 54:5
i. Special ESOP Rule 54:6
j. Sanctions 54:6
k. Effective Dates 54:6
4. Minimum Participation Requirement 54:7
a. Separate Benefit Structures 54:7
b. Excludable Employees 54:7
c. Exemptions from the Minimum Participation Rules 54:8
d. Exemption from Reversion Tax 54:8
e. Effective Date 54:8
5. Minimum Vesting Requirements 54:8
a. Vesting Schedules 54:8
b. Effective Date 54:9
6. Integrated Plans 54:9
a. Defined Contribution Plans 54:9
b. Defined Benefit Excess Plans 54:9
c. Defined Benefit Offset Plans 54:10
d. Multiple Integrated Plans 54:11
e. Effective Dates 54:11

© Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

7. Nondiscrimination Rules 54:11
a. General 54:11
b. Integrated Defined Benefit Plans 54:11
c. Single Plan Treatment 54:11
d. Effective Dates 54:11

II. Contribution and Benefit Limitations 54:11

A. Introduction 54:11
B. Overview 54:12
C. Detailed Analysis 54:13
1. Defined Contribution Plans 54:13
a. Dollar Limitations 54:13
b. After-Tax Contributions 54:13
c. Technical Correction to Tax Reform Act of 1984 54:14
2. Defined Benefit Plans 54:14
a. Dollar Limitations 54:14
b. Actuarial Adjustments for Retirement Before Social Security Retirement Age 54:14
c. Reduction for Service Less Than Ten Years 54:14
d. Specialized Dollar Limit Rules 54:15
3. Qualified Cost-of-Living Arrangements 54:16
4. Limit on Annual Compensation 54:17
5. Code Section 415 Limits May Be Incorporated in Plans by Reference 54:17
6. Special Catch-Up Election for Tax-Sheltered Annuity Plans 54:17
7. Planning Tip 54:17
8. General Effective Dates 54:18
a. In General 54:18
b. Transition Rules 54:18

III. 401(k) and Thrift Plans 54:18

A. Introduction 54:18
1. Cash or Deferred Arrangements 54:18
2. After-Tax Employee Contributions 54:19
B. Overview 54:19
1. Limitations on Elective Contributions 54:19
2. Antidiscrimination Rules Under Section 401(k) 54:19
3. Antidiscrimination Rules for Thrift Plans 54:20
4. Excess Contributions 54:20
5. Other Rules 54:20
6. Effective Date 54:21
C. Detailed Analysis 54:21
1. Limits on Elective Deferrals 54:21
a. Dollar Limits 54:21
b. Treatment of Excess Contributions 54:21
c. Effective Dates 54:22
2. Antidiscrimination Requirements for Section 401(k) Plans 54:23
a. Definition of Highly-Compensated 54:23
b. Compensation Definition 54:23
c. ADP Limits 54:23
d. Treatment of Excess Contributions 54:24
3. Antidiscrimination Rules for Employer Matching Contributions and Employee Contributions 54:25
a. Nondiscrimination Tests 54:25
b. Treatment of Excess Aggregate Contributions 54:25
c. Relationship to Section 401(k) Plan 54:26
d. Effective Date 54:26
4. Other Changes 54:27
a. Withdrawal Restrictions 54:27
b. Service 54:27
c. Exempt Organizations 54:27
d. Benefits Not Contingent on Election to Defer 54:28
5. Effective Date 54:28

IV. Other Qualification Rules 54:28

A. Introduction 54:28

4. Deductibility of Interest 57:17
5. Effective Date 57:17

V. Penalty Tax on Excess Distributions 57:17

A. Introduction 57:17
B. Overview 57:17
C. Detailed Analysis 57:18
1. Income Tax on Excess Distributions 57:18
a. General Limits 57:18
b. "Grandfather" Limits 57:19
2. Additional Estate Tax on Excess Distributions 57:19
3. Effective Dates 57:20
D. Technical Corrections 57:20
1. Retirement Equity Act 57:20
a. Qualified Domestic Relations Orders 57:20
2. Tax Act of 1984 57:20
a. Rollovers by Surviving Spouses 57:20

VI. Excise Tax on Reversion of Qualified Plan Assets to Employer 57:20

A. Introduction 57:20
B. Overview 57:21
C. Detailed Analysis 57:21
1. In General 57:21
2. Exception for ESOPS 57:21
3. Effective Date 57:22

VII. Deferred Annuities Available Only to Natural Persons 57:22

A. Introduction 57:22
B. Overview 57:23
C. Detailed Analysis 57:23

CHAPTER 58 — AMENDMENTS TO EMPLOYMENT TAX RULES

I. Introduction 58:1

A. Employment Taxes - General Rules 58:1
1. Federal Insurance Contributions Act (FICA) 58:1
2. Federal Unemployment Tax Act (FUTA) 58:1
3. Withholding Taxes 58:1
4. Self-Employment Contributions Act (SECA) 58:1
5. Classifying Workers 58:1
B. Treatment of Certain Technical Personnel 58:2
C. Exemption for Certain Clergy 58:2
D. Exception for Churches and Church Organizations 58:2

E. Application of the FUTA Tax to Indian Tribal Governments 58:2

II. Overview 58:2

III. Effective Dates 58:2

IV. Detailed Analysis 58:3

A. Treatment of Certain Technical Personnel 58:3
B. Exemption for Certain Clergy 58:3
C. Exception for Churches and Church Organizations 58:3
D. Application of the Federal Unemployment Compensation Tax to Indian Tribal Governments 58:4

CHAPTER 59 — FOREIGN TAX CREDIT: CHANGES AND REFINEMENTS

I. Introduction 59:1

II. The Extension of Separate Limitations Categories 59:3

A. Background and Legislative History 59:3
B. Overview 59:4
1. The New Separate Limitation Categories 59:4
2. Passive Income 59:4
a. Export Financing Income 59:5
b. High-Taxed Income 59:5
c. Foreign Oil and Gas Extraction Income 59:5
3. High Withholding Tax Interest 59:5
4. Financial Services Income 59:6
5. Shipping Income 59:6
6. Dividends From Noncontrolled §902 Corporations 59:6
7. Related Person 59:7
8. Transitional Rule 59:7
9. The Look-Through Rules 59:7
a. Introduction 59:7
b. Dividends, Interest, Rents and Royalties; Subpart F Inclusions 59:7
10. Definitions; Regulations Authorized 59:10
11. The "Source Rule" 59:10
12. Effective Dates 59:11
C. Detailed Analysis 59:11
1. The Expansion of the Separate Limitations Categories 59:11
a. Passive Income: Exceptions 59:11
b. High Withholding Tax Interest 59:12
c. Financial Services Income 59:14
2. The Look-Through Rules 59:14
a. Conformity With Subpart F Rules 59:14
b. Dividends 59:15
c. Interest, Rents and Royalties 59:15
d. The Source or "Netting" Rule 59:16
e. Miscellaneous Amendments 59:16

III. Amendments to the Deemed Paid Credit 59:16

A. Background and Legislative History 59:16
B. Overview 59:17
1. Pooling of Post-1986 Earnings and Profits and Foreign Taxes 59:17
2. Special Rule for Post-1986 Acquisitions 59:18
3. Accounting Periods 59:18
4. Distributions From Pre-1987 Earnings 59:18
5. Conforming the §960 Credit 59:18
6. Regulatory Authority 59:18
7. Effective Date 59:18
C. Detailed Analysis 59:18
1. General Observations 59:18
2. Regulations: The Separate Limitations Problem 59:19
3. Repeal of the Subpart F "Chain Deficit Rule" 59:19

IV. Clarification of the Treatment of Foreign Losses 59:20

A. Background and Legislative History 59:20
B. Overview 59:20
1. Foreign Loss Allocation and Recharacterization Rules 59:20
2. U.S. Loss Allocation Rule 59:20
3. Definitions 59:20
4. Effective Date 59:20
C. Detailed Analysis 59:20

V. Other Foreign Tax Credit Related Provisions 59:22

A. Codification of Regs. §901-2(e)(3): Taxes Used as Subsidies 59:22
1. Statutory Provisions 59:22
2. Committee Report Comments 59:22
B. Limitations on Carrybacks to Pre-1987 Years 59:22

Addendum — Notice 87-6 59:23

CHAPTER 60 — TAX TREATMENT OF FOREIGN CURRENCY — §§985-989

I. Overview 60:1

A. Introduction 60:1
B. Summary 60:1
1. Functional Currency 60:1
2. Foreign Currency Transactions 60:2
3. Foreign Currency Translation 60:2
4. Miscellaneous Provisions 60:3
C. Effective Date 60:3

II. Detailed Analysis 60:3

A. Functional Currency 60:3
1. Background 60:3
2. General Rules 60:4
3. Definition of a QBU 60:4

© Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

4. Economic Environment of a QBU 60:5
a. U.S. Dollar Economic Environment 60:5
b. Facts and Circumstances Test 60:6
c. Volume of Local Currency Activities 60:7
5. Books and Records Requirement 60:7
6. Election to Use U.S. Dollar 60:8
7. Exception to General Rule that Transactions be Accounted for in Functional Currency Terms 60:9
8. Functional Currency Treated as an Accounting Method 60:9
B. Foreign Currency Transactions 60:9
1. Background 60:9
2. Transactions Covered Under the Act 60:10
3. General Consequences Associated with Section 988 Transactions 60:10
a. Timing and Amount of Exchange Gain or Loss 60:10
b. Character of Section 988 Transaction Exchange Gain or Loss 60:12
c. Interest Income or Interest Expense Characterization 60:13
d. Source of Section 988 Transactions Exchange Gain or Loss 60:14
4. Consequences of Selected 988 Transactions 60:15
a. Currency Transactions 60:15
b. Accounts Payable and Accounts Receivable 60:16
c. Foreign Currency Debt Instruments 60:16
d. Foreign Currency Loans 60:19
e. Forward, Futures and Options Contracts 60:22
f. Currency Swaps 60:22
g. Hedging Transactions 60:25
5. Effective Date 60:26
C. Foreign Currency Translation 60:26
1. Background 60:26
a. Determination of U.S. Dollar Taxable Income or Loss 60:26
b. Determination of Allowable Foreign Tax Credits 60:27
2. Profit or Loss of Foreign Branch 60:27
a. Prior Law 60:27
b. Overview of Changes 60:28
c. Reasons for Changes 60:28
d. Detailed Analysis 60:19
3. Translation of Earnings and Profits and Distributions of a Foreign Corporation 60:30
a. Prior Law 60:30
b. Overview of Changes 60:32
c. Reasons for Changes 60:32
d. Detailed Analysis 60:32
4. Foreign Tax Credit 60:33
a. Prior Law 60:33
b. Overview of Changes 60:33
c. Reasons for Changes 60:34
d. Detailed Analysis 60:34
Addendum — Notice 87-11 60:36

CHAPTER 61 — MODIFICATIONS TO THE SOURCE OF INCOME AND DEDUCTIONS RULES

I. Introduction 61:1

II. Treasury Department Recommendations 61:1

A. Introduction 61:1
B. Source Rules Relating to Sales Income 61:2
C. Income Derived from Sales of Intangible Property 61:2
D. 80-20 Corporation Rules Relating to Interest and Dividends 61:2
E. Allocation of Interest Expense 61:3

III. The President's Tax Proposals 61:3

A. Introduction 61:3
B. Source Rules Relating to Sales Income 61:4
C. Income Derived from Sales of Intangible Property 61:5
D. 80-20 Corporation Rules Relating to Interest and Dividends 61:5
E. Transportation Income 61:5
F. Allocation of Interest Expense 61:6
G. Basis for Proposals 61:6

IV. Tax Reform Act of 1985: Proposals by the House to Modify the Source Rules 61:6

A. Introduction 61:6
B. Determination of Source of Income Derived from Sales of Personal Property 61:6
1. Income from the Sale of Personal Property: In General 61:6
2. Income from the Sale of Inventory Property 61:7
3. Income from the Sale of Depreciable Personal Property 61:7
4. Income from the Sale of Intangible Property 61:8
C. Limitations, Dividends and Interest Paid by 80-20 Companies 61:8
D. Source Rule for Transportation Income 61:9
E. Source of Income Rule for Space and Ocean Activities 61:9
F. Allocation and Apportionment of Expenses to Foreign Source Income 61:9
G. Modification to Rules on Allocation of Research and Experimental Expenditures 61:11

V. The Senate Amendment to H.R. 3838: Modifications to the Source Rules 61:11

A. Source of Income from Sales of Personal Property 61:11
1. In General 61:11
2. Special Rules for United States Persons 61:11
3. Income Derived from the Sale of Depreciable Personal Property 61:12
4. Income Derived from the Sale of Intangible Property 61:12
5. Income Derived from the Sale of Personal Property by Foreign Persons 61:12

© Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

B. 80-20 Dividend and Interest Rules 61:12
C. Income from Transportation Activities 61:13
1. Source of Transportation Income 61:13
2. Gross-Basis Tax 61:13
3. Reciprocal Exemption 61:14
D. Source of Income from Space and Certain Ocean Activities 61:14
E. Allocation and Apportionment of Expenses to Foreign Source Income 61:15
1. Interest Expenses 61:15
2. Expenses Other Than Interest 61:16

VI. Tax Reform Act of 1986: Modifications to the Source of Income and Deduction Rules 61:16

A. Introduction 61:16

B. Determination of Source of Income Relating to Sales of Personal Property 61:17
1. Introduction 61:17
2. General Rules 61:17
3. Sales of Inventory 61:17
4. Depreciable Personal Property Exception 61:17
a. In General 61:17
b. Special Rule for Gain in Excess of Depreciation 61:18
c. United States Depreciation Adjustments 61:18
5. Special Rules for Intangible Property 61:18
6. Sales of Personal Property Through Offices or Fixed Places of Business 61:18
a. Sales by United States Residents 61:18
b. Sales of Personal Property by Nonresidents 61:18
7. Sales of Stock in Foreign Affiliated Companies 61:19
8. Losses from Sales of Personal Property 61:19
9. Effective Dates 61:19
10. Treasury Department Study on Sales of Inventory Property 61:19
C. Special Rules for Transportation Income 61:19
1. Introduction 61:19
2. Source of Transportation Income 61:19
3. Four Percent Gross Basis Tax 61:19
4. Reciprocal Tax Exemption 61:20
5. Effective Dates 61:20
D. Special Source Rules for Space and Certain Ocean Activities and International Communications Income 61:20
1. Space and Certain Ocean Activities 61:20
2. International Communications Income 61:21
3. Effective Dates 61:21
E. Limitations on the Special Treatment of 80-20 Corporations 61:21
1. Introduction 61:21
2. Modifications to the 80-20 Rules 61:21
F. Allocation and Apportionment of Interest and Other Expenses to Foreign Source Income 61:23
1. Introduction 61:23
2. New Rules for Allocating Interest and Other Expenses 61:23
3. Treasury Regulations 61:23
4. Effective Dates and Transitional Rules 61:24
a. General Three Year Rule 61:24
b. Special 4 and 5-Year Transition Rules for Consolidated Pool Calculations 61:24
G. Allocation and Apportionment of Research and Experimental Expenditures 61:24

CHAPTER 62 — NEW BRANCH PROFITS TAX

I. Introduction 62:1

II. Present Law 62:1

III. Detailed Analysis 62:1

A. Tax Base — The Dividend Equivalent Amount 62:1
B. Branch Tax — The Branch Level Interest Tax 62:3
C. Relationship with Tax Treaties 62:3
D. Coordination with the Second Level Withholding Tax 62:4
E. Regulations 62:5
F. Effective Date 62:5

IV. Consequences of the Branch Profits Tax 62:5

A. Interaction and Conflict with Treaties 62:5
B. Technical Problems with the Branch Profits Tax 62:6

CHAPTER 63 — THE SCOPE OF SUBPART F RULES BROADENED

I. Pre-TRA 1986 Law 63:1

II. Overview 63:1

A. Gain From the Sale of Property That Does Not Generate Income 63:1
B. Gains From Commodity Transactions 63:2
C. Foreign Currency Gains 63:2
D. Income Equivalent to Interest 63:2
E. Dividends, Interest and Gains of Banks and Insurance Companies 63:2
F. Related Person Exceptions 63:3
G. Insurance Income 63:3
H. Captive Insurance Company Income 63:3
I. Foreign Base Company Shipping Income 63:5
J. Foreign Corporation Not Used to Reduce Taxes 63:5
K. Definition of Related Person 63:5
L. Repeal of the Chain Deficit Rule and Modification of the Accumulated Deficit Rule 63:5

© Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

M. Effective Date - TRA 1986 §1221 63:8
N. New Definition of Controlled Foreign Corporations [TRA 1986 §1222(a)] 63:8
O. Definition of Foreign Personal Holding Company [TRA §1222(b)] 63:8
P. Effective Dates — TRA §1222(c) 63:8
Q. Subpart F De Minimis Rule [TRA §1223] 63:8
R. Effective Date — TRA §1223(c) 63:8
S. Repeal of Special Treatment for Possessions Corporations [TRA §1224] 63:9
T. Effective Dates — TRA §1224(b) 63:9

CHAPTER 64 — NEW RULES GOVERNING THE TREATMENT OF CERTAIN PASSIVE FOREIGN INVESTMENT COMPANIES [ACT §1235]

I. Introduction 64:1
A. Foreign Personal Holding Companies 64:1
B. Controlled Foreign Corporations 64:1
1. Current Inclusion of E&P in Income of U.S. Shareholders 64:1
2. Ordinary Income Treatment of Gain on Sale or Exchange of CFC Stock 64:2
C. Foreign Investment Companies 64:2
II. Overview 64:3
III. Detailed Analysis 64:3
A. Definition of PFIC 64:3
1. Passive Income Defined 64:3
2. Look-Through Rule 64:4
3. Start-Up Year Corporations and Corporations Changing Businesses 64:4
B. Taxation of Shareholders of PFICs 64:4
1. General 64:4
a. Excess Distributions 64:5
b. Dispositions 64:6
C. Taxation of Qualified Electing Funds 64:7
1. Previously Taxed Amounts 64:7
2. Manner of Making Election 64:7
3. Shareholder Level Election to Extend Time for Payment of Tax on Undistributed Earnings 64:7
D. Attribution Rules 64:8
1. Attribution From Corporations 64:8
a. Attribution From 50% Owned Corporations 64:8
b. Attribution From Less Than 50% Owned Corporations 64:8
2. Attribution From Partnerships, Trusts and Estates 64:8
3. Reattribution 64:8
4. Separate Interests Treated as Separate Corporations 64:9
E. Coordination With Other Code Sections 64:9
F. Miscellaneous 64:9
G. Regulations Needed 64:9
H. Effective Date 64:10

CHAPTER 65 — NEW RULES GOVERNING THE TREATMENT OF DUAL RESIDENT COMPANIES [ACT §1249]

I. Introduction 65:1
II. Overview 65:1
III. Detailed Analysis 65:2
A. General 65:2
B. Exception 65:2
C. Treaty Considerations 65:2
D. Effective Date 65:3

CHAPTER 66 — MODIFICATIONS TO §936 [ACT §1231]

I. Introduction 66:1
A. Background 66:1
B. Section 936 66:1
1. Election 66:1
2. Eligibility for §936 Credit 66:1
3. Amount of the Credit 66:2
4. Definition of "Possession of the United States" 66:2
C. Intercompany Transfer Pricing and Treatment of Intangibles 66:2
1. Section 482 66:2
2. Code §367(d) 66:3
3. Code §936(h) 66:4
a. Significant Business Presence Test 66:4
b. Election Out 66:4
c. Cost Sharing Method 66:4
d. Profit Split Method 66:5
II. Overview 66:6
A. Modifications to Cost Sharing Payment 66:6
B. Profit Split Method Modifications 66:6
C. Receipt of Income Within the United States 66:6
D. QPSII Redefined 66:6
E. Modification to Gross Income Test 66:6
III. Detailed Analysis 66:7
A. Modifications to Cost Sharing Payments 66:7
B. Profit Split Method Modifications 66:8
C. Receipt of Income Within the United States 66:8
D. QPSII Redefined 66:8
E. Modification to Gross Income Test 66:9
IV. Effective Dates 66:9

CHAPTER 67 — DEDUCTIONS FOR DIVIDENDS RECEIVED FROM FOREIGN CORPORATIONS

I. Introduction 67:1
II. Analysis of Revised Section 245(a) 67:2
A. Qualified 10% Owned Foreign Corporation 67:2
B. U.S. Source Portion 67:2
C. Coordination with Foreign Tax Credit Rules 67:3
D. Effective Date 67:3

© Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

CHAPTER 68 — INTERCOMPANY TRANSFER PRICING: INTANGIBLES; IMPORTS

I. **Background and Legislative History** 68:1
A. Background - Transfer Pricing Theories under §482 68:1
1. The Unitary Approach 68:1
2. The Separate Entity Approach 68:2
3. IRS Practice 68:2
B. Transfers of Intangible Property: Prior Law 68:2
1. Section 482 68:2
2. Sections 367 and 936 68:3
C. The House Bill 68:4

II. **Overview** 68:4

III. **Detailed Analysis of Provisions Concerning Transfers of Intangibles** 68:5
A. General Observations 68:5
B. What Does "Commensurate With the Income Attributable to the Intangible" Mean? 68:6
C. Cost Sharing 68:6
D. Double Taxation Problems 68:7
E. Conclusions 68:7

IV. **Detailed Analysis of Valuation of Imports Provisions** 68:8

CHAPTER 69 — FOREIGN COMPLIANCE PROVISIONS

I. **Information Returns With Respect to Certain Foreign-Owned Corporations** 69:1
A. Introduction 69:1
B. Overview 69:1
C. Detailed Analysis 69:2

II. **Information Returns Required of U.S. Citizens and Residents Abroad** 69:2
A. Introduction 69:2
B. Overview 69:2
C. Detailed Analysis 69:2

III. **Withholding on Certain Deferred Payments Outside the United States** 69:3
A. Introduction 69:3
B. Overview 69:3
C. Detailed Analysis 69:3

IV. **Withholding Tax on Amounts Paid by Partnerships to Foreign Partners** 69:3
A. Introduction 69:3
B. Overview 69:4
C. Detailed Analysis 69:4
1. In General 69:4
2. Limitation 69:4

CHAPTER 70 — CHANGES AFFECTING U.S. POSSESSIONS

I. **Treatment of Interest on Obligations of the United States Received by Banks in Guam** 70:1
A. Introduction 70:1
B. Overview 70:1
C. Detailed Analysis 70:1

II. **Authority of Guam, American Samoa and Northern Mariana Islands to Enact Revenue Laws** 70:1
A. Introduction 70:1
B. Overview 70:2
C. Detailed Analysis 70:2
D. Effective Date 70:3

III. **Exclusion of Possessions Source Income From the Gross Income of Certain Individuals** 70:3
A. Introduction 70:3
B. Overview 70:3
C. Detailed Analysis 70:3
D. Effective Date 70:4

IV. **Treatment of Corporations Organized in Guam, American Samoa, or the Northern Mariana Islands**
A. Introduction 70:4
1. Definition of "U.S. Person" for Subpart F Purposes 70:4
2. Exemption from Withholding Tax 70:4
B. Overview 70:4
C. Detailed Analysis 70:5

V. **Coordination of U.S. and Virgin Islands Income Taxes** 70:5
A. Introduction 70:5
B. Overview 70:5
C. Detailed Analysis 70:5
1. Treatment of U.S. Citizens or Residents with Virgin Islands-Source Income 70:6
2. Treatment of Virgin Islands Residents 70:6
3. Authority to Impose Local Income Taxes 70:6

VI. **Virgin Islands Corporations Allowed Possessions Tax Credit** 70:6
A. Introduction 70:6
B. Overview 70:6
C. Detailed Analysis 70:7
1. Repeal of the Inhabitants Rule 70:7
2. Possession Tax Credit 70:7
3. Reduction of Virgin Islands Tax Liability 70:7
D. Conforming Amendments 70:7
E. Effective Dates 70:7

VII. **Amendments to Section 7654** 70:8
A. Introduction 70:8
B. Overview 70:8
C. Detailed Analysis 70:8

CHAPTER 71 MISCELLANEOUS FOREIGN PROVISIONS

I. **Foreign Personal Holding Stock Ownership Test Modified [Act §1222(b)]** 71:1
A. Background—Pre-1986 TRA Law 71:1
B. Detailed Analysis of 1986 TRA Provisions 71:1
C. Effective Date 71:2

II. **Foreign Personal Holding Company Taxable Income Includes Effectively Connected Gain or Loss Only [Act §1225(b)]** 71:2
A. Introduction 71:2
B. Detailed Analysis 71:2
C. Effective Date 71:2

III. **Accumulated Taxable Income of Foreign Corporations Effectively Connected Gain Only Taken Into Account [Act §1225(a)]** 71:2
A. Background—Pre-TRA Law 71:2
B. Detailed Analysis of 1986 TRA Provisions 71:3
C. Effective Date 71:3

IV. **Section 911 Exclusion Modified** 71:3
A. Introduction 71:3
B. Overview 71:3
C. Detailed Analysis 71:3
1. Foreign Earned Income Exclusion Amount 71:3
2. Disallowance for Violation of Foreign Travel Restrictions 71:3

V. **Income of Foreign Governments** 71:4
A. Introduction 71:4
B. Overview 71:4
C. Detailed Analysis 71:5
1. Investment Income 71:5
2. Commercial Income 71:5
3. Controlled Commercial Entity 71:5
4. International Organizations 71:5

VI. **Effectively Connected Income Will Retain Its Character in Subsequent Years** 71:5
A. Pre-1986 TRA Law 71:5
B. Overview 71:6
C. Detailed Analysis 71:6

VII. **Tax Free Exchanges of Tax Avoidance Expatriates** 71:6
A. Introduction 71:6
B. Overview 71:6
C. Detailed Analysis 71:7

VIII. **Transfer Prices for Imports** 71:7

IX. **Treatment of Certain Persons in Panama [Act §1232]** 71:7
A. Background 71:7
B. Detailed Analysis 71:8
C. Effective Dates 71:8

X. **Study of U.S. Reinsurance Industry** 71:8
A. Introduction 71:8
B. Overview 71:9
C. Detailed Analysis 71:9

CHAPTER 72 TECHNICAL CORRECTIONS TO THE FOREIGN PROVISIONS

I. **Maintaining the Source of Income [Act §1810(a)]** 72:1
A. Introduction 72:1
B. The Tax Reform Act of 1984 72:1
C. Technical Corrections 72:1

II. **Maintaining the Character of Income [Act §1810(b)]** 72:2
A. Introduction 72:2
B. Tax Reform Act of 1984 72:2
C. Technical Corrections 72:3
D. Effective Dates 72:3

III. **Related Party Factoring Income [Act §1810(c)]** 72:3
A. Introduction 72:3
B. Tax Reform Act of 1984 72:4
C. Technical Corrections 72:4
1. Investment in U.S. Property 72:4
2. Current Inclusion of Factoring Income 72:4
3. Separate Limitation Treatment 72:4

IV. **Repeal of Withholding Tax on Portfolio Interest [Act §1810(d)]** 72:4
A. Introduction 72:4
B. Tax Reform Act of 1984 72:4
C. Technical Corrections 72:5

V. **OID Income and Deduction for Foreign Persons [Act §1810(e)]** 72:5
A. Introduction 72:5
B. Tax Reform Act of 1984 72:5
C. Technical Corrections 72:6

VI. **Amendments to FIRPTA [Act §1810(f)]** 72:6
A. Introduction 72:6
B. Tax Reform Act of 1984 72:6
C. Technical Corrections 72:7
1. Election To Be Treated As A Domestic Corporation 72:7
2. Withholding Exemptions for Transfers of Stock in Certain Domestic Corporations 72:7
3. Foreign Corporate Transferors — Notice Giving and Withholding Responsibilities of Agents 72:7
4. Treatment of Certain Domestic Partnerships, Trusts and Estates 72:7
5. Distributions by U.S. RPHCs to Foreign Shareholders 72:8
6. Taxable Distributions by Partnerships, Trustees and Executors 72:8
7. Miscellaneous 72:8

VII. **Outbound Transfers Under §367 [Act §1810(g)]** 72:8
A. Introduction 72:8
B. Tax Reform Act of 1984 72:8
C. Technical Corrections 72:8

© Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

VIII. Amendments to FPHC Rules [Act §1810(h)] 72:9

A. Introduction 72:9
B. Tax Reform Act of 1984 72:9
1. Same Country Dividend and Interest Rule 72:9
2. Stock Held Through a Foreign Entity 72:9
C. Technical Corrections 72:9
1. Same Country Dividend and Interest Exception 72:9

Chapter 1

INCLUSIONS IN GROSS INCOME

John Freeman Blake, Esq.
Silverstein and Mullens
Washington, D.C.

I. Unemployment Compensation Benefits Included in Gross Income [Act §121]

A. Overview

In an effort to equalize the tax treatment of unemployment compensation with earned income, Act §121 repeals the limited exclusion allowed under present law for unemployment compensation benefits.

B. Detailed Analysis

Pre-TRA law provides a limited exclusion from gross income for unemployment compensation benefits received under a federal or state program (Code §85). If the sum of the taxpayer's unemployment compensation benefits and AGI does not exceed a base amount, then the entire benefit is excluded from income. The base amount is $12,000 in the case of an unmarried individual; $18,000, in the case of married individuals filing a joint return; and zero, in the case of married individuals filing separate returns. If the base amount is exceeded, then the amount of unemployment compensation benefits includible in gross income equals the lesser of (1) one-half of the excess of the taxpayer's combined income (modified AGI plus benefits) over the base amount, or (2) the amount of the unemployment compensation benefits.

Act §121 repeals the exclusion for unemployment compensation benefits. As a result, all unemployment compensation benefits are fully includible in gross income.

C. Effective Date

The change made by the Act is effective for amounts received after December 31, 1986, in taxable years ending after that date.[1]

II. Contributions in Aid of Construction Received by Utilities Includible in Gross Income [Act §824]

A. Overview

A corporation does not include in its income contributions to its capital. However, a contribution to the corporation made by a customer or potential customer to assist in the construction of a facility is taxable income to the corporation. Under pre-TRA 1986 law, certain regulated public utilities are allowed to treat contributions in aid of construction as a contribution to capital, thus not including the contribution in gross income. Act §824 eliminates this special treatment for regulated public utilities with the result that all contributions in aid of construction will be includible in the gross income of a utility. Three special exceptions apply to certain unidentified utilities for projects in process when the Act was passed.

B. Detailed Analysis

Under pre-TRA 1986 law, Code §118(b) allows certain regulated public utilities to exclude from gross income as contributions to the capital of the corporation certain contributions made by a customer or potential customer in aid of construction. The types of public utilities which are allowed to treat these payments as excludible are ones that provide electric energy, gas (through a local distribution system or transportation by pipeline), water, or sewage disposal services. The exclusion from income is only available for amounts received in kind as facilities for the utility service to be provided or (if not in kind) for amounts which are actually expended within two years of receipt to build such facilities. In addition, the exclusion is only available if the contribution is not includible in the utility's rate base for the purpose of setting utility rates. In compensation for this special exclusion, however, Code §118(b)(4) provides that property received as a contribution in aid of construction and property purchased with the proceeds of property received in aid of construction have no depreciable basis for federal income tax purposes and are not eligible for the investment tax credit.

Act §824 repeals this special exclusion. As a result, all contributions in aid of construction, even those received by a regulated public utility, are includible in the gross income of the receiving corporation. The House Ways and Means Committee Report explains that property is to be treated as a contribution in aid of construction (rather than as a capital contribution) if it is contributed to provide or encourage the provision of services to or for the benefit of the person making the contribution. A utility is considered as having received property to encourage the provision of services if any one of the following conditions are met: (1) the receipt of the property is a prerequisite to the provision of the services, (2) the receipt of the property results in the provision of services earlier than would have been the case had the property not been received, or (3) the receipt of the property otherwise causes the transferor to be favored in any way.[2]

[1] Act §151(b).

[2] *See* House Ways and Means Committee Report on H.R. 3838, "Tax Reform Act of 1985," Part I, 99th Cong., 1st Sess. 644 (1985).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Also according to the Committee Report, the person making the contribution is treated as having benefited from the contribution whether or not the benefit is directly or indirectly received. It states that the person making the contribution is treated as having benefited if any one of the following occurs: (1) the contributor is the person who will receive the services, (2) the contributor is the owner of the property that will receive the services, (3) the contributor is a former owner of the property that will receive the services, or (4) if the contributor will receive any benefit from the property that will receive the services. As an example of item (4), the Committee Report describes the situation of a builder who transfers property to a utility in order to obtain services for a house that he was paid to build even though the builder never owned the property involved.[3]

Finally, the Committee Report states that a contribution is to be treated as a taxable contribution in aid of construction whether or not the utility had previously had a general policy, stated or implied, that required or encouraged certain types of potential customers to transfer property. Rather than looking to the policies of the utility to determine whether a contribution is in aid of construction, the Committee Report states that a contribution will be treated as such if, in fact, the contributor is favored over others not making contributions. On the other hand, if the utility does require one type of customer to make contributions when other customers are not required to make contributions, the contribution will be treated as being made in aid of construction whether or not the contributor then receives preferential treatment from the utility. For example, if developers of multiple tracts of residential housing are required to made contributions but individual homeowners are not, the fact that the developers do not, in fact, receive preferential treatment does not prevent the contribution from being a taxable contribution in aid of construction.

C. *Effective Date*

The changes made by the Act are effective for all contributions made to a utility after December 31, 1986, in taxable years ending after that date.[4] The Act makes three exceptions for certain utility projects underway when the act was passed. These are explained below.

D. *Exceptions*

There are three exceptions made for certain utilities. First, up to an aggregate limit of $4,631,000, the changes made by the Act do not apply to amounts paid by the New Jersey Department of Environmental Protection for construction of alternative water supply projects. Amounts paid by the department in excess of the limit are subject to the changes made by the Act.[5] Second, an unidentified transportation authority was granted an exemption from the changes made by the Act. The transportation authority is identified as one that was created on February 20, 1967, and which was established by an interstate compact and consented to by Congress in P.L. 89-774. The exemption for this transportation authority applies to amounts paid by it pursuant to a master plan in existence on September 13, 1984, and which are designated by the authority. This special exception applies to amounts not in excess of $68,000,000.[6] Third, an unidentified partnership was given a special election to treat gain realized on the sale of assets under an indemnity agreement dated May 6, 1986, in a special manner.[7]

III. Technical Corrections to Annuity Distribution Rules [Act §1826]

A. *Overview*

TRA 1984 amended Code §72 by adding subsection (s). The purpose of the change was to standardize the type of contract that could be called an annuity. The revisions made by TRA 1984 required that if a contract was to be treated as an annuity it had to contain language specifying certain methods of distribution in the event of the death of the contract holder. The 1984 changes left open two questions: First, if an annuity is held in a qualified plan, individual retirement account or Code §403(b) plan, do the provisions of Code §72(s) have any application to the taxation of the distribution? Second, if the contract holder is a taxpayer other than an individual, how are the rules relating to required distributions in the event of the death of the contract holder to be applied?

TRA 1986 addresses these questions in a technical amendment to Code §72(s). First, the Act specifies that the provisions of Code §72(s) do not apply to annuities that are provided under a qualified plan (Code §401(a) plan), a so-called "teacher's annuity" (Code §403(b) plan), or an individual retirement account or annuity. Second, the Act specifies that if the contract holder is a taxpayer other than an individual, the rules relating to distribution in the event the contract holder dies before the entire interest is distributed will be applied with reference to the actual individual who is receiving the annuity payments, the "primary annuitant."

B. *Detailed Analysis*

Under Code §72(s), if a contract is to be treated as an annuity under Code §72, the contract must contain certain specified methods of distribution in the event of the death of the contract holder. The section requires an annuity contract to contain language that, if the contract holder dies before the annuity starting date, the entire contract amount will be distributed within five years of the death of the contract holder. However, if any portion of the contract is payable to a designated beneficiary and the distributions will commence within one year after the contract holder's death, the portion of the contract which was payable under the beneficiary designation may be paid over a period equal to the lifetime of the designated beneficiary or over a period not exceeding the beneficiary's life expectancy.[8] If payments under an annuity contract are to continue after the death of the contract holder and the contract holder dies after the annuity starting date, Code §72(s) requires that

[5] Act §824(c)(2).
[6] Act §824(c)(3).
[7] Act §824(c)(4).
[8] Code §72(s)(1)(A) and (2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the payments must be made at least as rapidly as they would have been made had the contract holder lived.[9]

The Act makes two technical amendments to Code §72(s). First, the Act specifies that if the annuity is provided under a qualified plan described in Code §401(a), a plan described in Code §403(b) or an individual retirement account or annuity, the required distribution rules of Code §72(s) do not apply to the annuity.[10] The annuities provided under each of these types of plans are subject to a different set of required distribution rules.

Second, the Act specifies that if the contract holder is not an individual, the individual actually receiving the annuity payments under the contract is the measuring life used to determine whether the distribution requirements of §72(s) have been met. The individual actually receiving the annuity payments is referred to under the Act as the "primary annuitant." The primary annuitant is defined as the individual, the events in the life of whom are of primary importance in affecting the timing or amount of the payout under the contract. For example, if a corporation purchases an annuity for a key employee, the key employee is the primary annuitant and his life serves as the measuring life for determining whether or not the required distribution rules of Code §72(s) have been met.[11]

C. *Effective Date*

The changes made by TRA 1986 are effective retroactively to the enactment of the 1984 act.[12] The 1984 act provisions applicable to Code §72(s) became effective six months after the date of enactment of the 1984 act. The date which was six months after the date of enactment of the 1984 act was January 18, 1985.[13] Therefore, the changes made by Act §1826 are effective for contracts issued after January 18, 1985.

IV. Technical Corrections to the Alimony Rules [Act §1843]

A. *Overview*

Prior to the 1984 tax act, the determination of whether or not payments between spouses incident to a divorce were alimony, child support, or property settlements was determined by state law. The issue was important because, under Code §215, alimony payments are deductible by the payor (and, under Code §71, includible in the income of the payee), but child support and property settlement payments are not deductible. The 1984 act made sweeping changes to this statutory scheme in an effort to standardize the types of payments that would be treated as alimony for tax purposes. The 1984 act did not disturb the basic principle that alimony is deductible by the payor and includible in the payee's gross income, but it did alter the class of payments that qualified for alimony treatment by adding several new requirements for deductibility. Two significant changes were made by TRA 1984: First, it added subsection (f) to prevent so-called "front-loading" of alimony to create disproportionately large deductions in the early years of the alimony payment period. Second, it changed subsection (b)(1)(D) of §71 to require that, for a payment to be deductible as alimony, the divorce or separation instrument must state that the payor's obligation to make payments does not extend to any period beyond the payee's death. These changes were made in an effort to prevent alimony deductions for amounts which are truly in the nature of property settlements, unrelated to the payee's support needs.[14]

Act §1843 amends the computation for determining to what an extent a payment is inappropriately front-loaded and eliminates the requirement that the divorce or separation instrument must specifically state that the payor's obligation to make payments does not extend to any period beyond the payee's death.

B. *Detailed Analysis*

TRA 1984 added Code §71(f) to provide that certain payments that were "front-loaded" would lose their status as deductible alimony payments.[15] The front-loading rules provide that any payment in excess of $10,000 per year is deductible only if the divorce or separation agreement (or court order) requires the payor to make alimony payments in at least six consecutive calendar years beginning with the year of the first payment, so long as neither spouse dies during that period and the payee does not remarry. A deduction for the first $10,000 of payments made within a calendar year is not disallowed by this rule. However, if payments are deductible in one year but in a later year (during the six-year period) the payments decrease by more than $10,000 from that prior year, then the prior year's excess payments (*i.e.*, the payments made in the earlier year that exceed the sum of the later year's payments plus $10,000) must be "recaptured" in the payor's income in the later year. To prevent double taxation, the payee is allowed a corresponding deduction equal to the "recapture" amount.

TRA 1986 §1843(c)(1) changes the tax treatment of alimony and separate maintenance payments by revising the front-loading rules of Code §71(f) to allow a greater amount of fluctuation in the amount of payments made each year. The Act reduces the recapture period for excess alimony payments from six to three years. If the total alimony paid in year one exceeds the average annual alimony paid in years two and three by more than $15,000, the excess amounts are recaptured in year three. This is achieved by requiring the payor to include the excess in income and allowing the payee who previously included the alimony in income a corresponding deduction in computing adjusted gross income. Similar recapture occurs to the extent payments in year two exceed payments in year three by more than $15,000. This recapture rule is intended to prevent payors whose divorces occur near the end of the

[9] Code §72(s)(1)(B).
[10] Act §1826(a), adding Code §72(s)(5).
[11] Act §1826(b), adding Code §72(s)(6) and (7).
[12] Act §1881.
[13] *Cf.* Tax Reform Act of 1984, P.L. 98-369, 98th Cong., 2d Sess. (1984), Act §222(c)(1).
[14] *Cf.* Tax Reform Act of 1984, P.L. 98-369, §422; and *General Explanation of the Tax Reform Act of 1984*, Staff of the Joint Committee on Taxation, p. 715.
[15] *Cf.* Tax Reform Act of 1984, P.L. 98-369, §422, adding Code §71(f).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

year from making deductible property settlements at the beginning of the next year.

Recapture of excess payments does not apply in the following situations: (1) if either party dies; (2) if the payee remarries by the end of the calendar year which is two years after the payments began (*i.e.*, the third post-separation year); (3) to temporary support payments described in Code §71(b)(2)(C); and (4) to payments which fluctuate as a result of a continuing liability to pay, for at least three years, a fixed part(s) of the earnings from a business, property or services.

Example: If the payor makes alimony payments of $50,000 in year one and no payments in years two and three, $35,000 will be recaptured, assuming that none of the exceptions to recapture apply. If, however, the payments are $50,000 in year one, $20,000 in year two, and $0 in year three, $5,000 is recaptured from year two (the excess over $15,000) and $27,500 from year one (the excess of $50,000 over the sum of $15,000 plus $7,500), the latter figure being the average payments for years two and three after reduction by the $5,000 recaptured from year two.

In addition, Act §1843(b) amends Code §71(b)(1)(D) by deleting the requirement that the divorce instrument specifically state that there is no liability to make payments after the payee's death in order to qualify the payments as alimony.

C. Effective Dates

The revised front-loading alimony rules apply to divorce or separation instruments executed after December 31, 1986. However, the parties to any divorce or separation instrument executed before 1987 may elect to have the revised front-loading rules apply by modifying the instrument after 1986 to expressly provide that the amended rules apply.[16]

For instruments to which the revised front-loading rules do not apply (*i.e.*, instruments executed before 1987 which have not been amended to make the revised rules applicable), the amount of recapture is still computed under the Code as in effect before its amendment by the Tax Reform Act of 1986, *i.e.*, there is recapture to the extent the decrease in payments in any post-separation calendar year exceeds $10,000. However, under a special transitional rule, the recapture period for making this determination has been shortened from six to three years.[17]

The amendment to Code §71(b)(1)(D) deleting the requirement that the divorce or separation instrument specifically provide that the payor has no liability to make payments for any period after the payee's death is effective retroactively for divorce or separation instruments executed after 1984.[18]

EXCLUSIONS FROM GROSS INCOME

John Freeman Blake, Esq.
Silverstein and Mullens
Washington, D.C.

I. Exclusion for Scholarships and Fellowships Restricted [Act §123]

A. Overview

Internal Revenue Code §117 provides an exclusion from gross income for scholarships, fellowships, and amounts received to pay the incidental expenses incurred in connection with a scholarship or fellowship. To be eligible for the exclusion, a scholarship must be paid for attendance at a qualified educational institution. Incidental expenses include amounts received and paid for travel, research, clerical help or equipment.

Act §123 limits the exclusion for scholarships or fellowship grants to "qualified scholarships." A qualified scholarship is one granted to an individual who is a candidate for a degree at a qualified educational institution, and is excludible to the extent that it is actually used for tuition and course-required fees, books, supplies, and equipment ("course-related expenses").

B. Pre-TRA 1986 Law

The exclusion under Code §117 is available to persons who are candidates for a degree and to persons who are not candidates for a degree. For both degree and nondegree students, scholarships must be granted for study at an educational institution described in Code §170(b)(1)(A)(ii) (a "qualified educational institution").[1] A fellowship grant, whether or not granted for the purpose of assisting a person in obtaining a degree, need not be used for study at a qualified educational institution.

A candidate for a degree is a person who is an undergraduate or graduate student at a college or university who is pursuing studies or conducting research to meet the requirements for an academic or professional degree, and a student who receives a scholarship for study at a secondary school or other educational institution.[2] In the case of an individual who is a candidate for a degree, the dollar amount of the scholarship or fellowship grant that may be excluded from gross income is unlimited. However, to the extent that a grant represents payment for teaching, research or other services, the grant is treated as income from part-time employment and not as an excludible scholarship or fellowship. But if teaching, research or other services are required of all candidates for a particular degree as a condition to receiving the degree, the services rendered will not be regarded as part-time employment and the scholarship or fellowship grant will continue to be excludible from gross income.[3] Much litigation has occurred over the characterization of amounts purported to have been received as a scholarship or fellowship. Amounts paid to an individual to enable pursuit of studies or research are not excludible from income if they represent compensation for past, present, or future services, or if the studies or research are primarily for the benefit of the grant payor or are under the direction or supervision of the grant payor.

In the case of an individual who is not a candidate for a degree, the exclusion applies only if the grantor of the scholarship or fellowship is a tax-exempt organization, a foreign government, international organization, or government agency, and the amount of the exclusion is limited to the aggregate of the following amounts: (1) $300 per month, up to a maximum lifetime exclusion of $10,800, plus (2) the amount of incidental expenses for travel, research, clerical help, or equipment.[4]

Grants received under a federal program requiring the recipient to perform future services as a federal employee are excludible to the extent used for tuition and required fees, books, supplies, and equipment.[5] In addition, if a qualified educational institution offers tuition reduction programs to its employees on a nondiscriminatory basis, the amount of the tuition reduction is excluded from gross income.[6]

C. Changes Made by the Tax Reform Act of 1986

Act §123 limits the exclusion for scholarships or fellowship grants to "qualified scholarships." A qualified scholarship is one granted to an individual who is a candidate for a degree at a qualified educational institution, and is excludible only to the extent that it is actually used for tuition and

[1] Code §170(b)(1)(A)(ii) describes the type of educational institution to which contributions are deductible as a charitable contribution as follows: "an educational organization which normally maintains a regular faculty and curriculum and normally has a regularly enrolled body of pupils or students in attendance at the place where its educational activities are regularly carried on." This definition encompasses primary and secondary schools, colleges and universities, and technical schools, mechanical schools, and similar institutions, but not noneducational institutions, on-the-job training, correspondence schools, night schools, and other similar institutions. Regs. §§1.117-3(b), 1.151-3(c).

[2] Regs. §1.117-3(e).

[3] Code §117(b)(1).

[5] Code §117(c).

[6] Code §117(d).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

course-required fees, books, supplies, and equipment ("course-related expenses"). Any other amount of a scholarship or fellowship grant received by a degree candidate (for example, amounts for room, board, or incidental expenses) is includible in gross income, as is the full amount of any scholarship or fellowship grant received by an individual who is not a degree candidate.

The Act repeals the exception under pre-TRA law permitting scholarship or fellowship grants received by degree candidates representing payment for services to be excludible under §117 if all candidates for the particular degree are required to perform such services. Thus, amounts received that represent payment for services, whether or not the rendering of services is required as a condition of receiving the grant or as a condition of receiving a degree, are included in income. By reason of post-TRA §117(c), this inclusion rule applies both to grants received in cash and to amounts (representing payment for services) by which the tuition of the person who performs services is reduced, whether or not pursuant to a tuition reduction plan described in post-TRA §117(d).[7]

Except to the extent that a tuition reduction represents payment for services rendered, the Act leaves intact the pre-TRA exclusion for tuition reduction programs by qualified educational institutions for its employees.[8]

The repeal of the exclusion in the case of nondegree candidates does not affect whether the exclusion under Code §127 may apply to employer-provided educational assistance to nondegree candidates, or whether unreimbursed educational expenses of some nondegree candidates may be deductible as trade or business expenses if the requirements of Code §162 are met.[9]

The conference agreement accompanying the Act states that, except for students attending a primary or secondary school or pursuing a degree at a college or university, the term "candidate for a degree" means a student who receives a scholarship for study at an educational institution that (1) provides an educational program that is acceptable for full credit toward a bachelor's or higher degree, or offers a program of training to prepare students for gainful employment in a recognized occupation, and (2) is authorized under federal or state law to provide such a program, and is accredited by a nationally recognized accreditation agency.[10]

The conference agreement also states that for purposes of the rule that a child eligible to be claimed as a dependent on the return of his or her parents may use the standard deduction only to offset the greater of $500 or earned income, any amount of a scholarship or fellowship grant that is includible in gross income as a result of these amendments to §117 (including the repeal of any §117 exclusion for nondegree candidates) constitutes earned income.[11] As a result, to the extent that a scholarship is includible in the income of a child who is under age 14, the income will be taxed at the child's marginal tax rate and not at the parent's marginal tax rate. Amounts received as payment for teaching or other services also constitute earned income.

Finally, the Act repeals the pre-TRA exception permitting the exclusion of certain federal grants under §117 even though the recipient is required to perform future service as a federal employee. Thus, to the extent the amount received represents payments for past, present, or future services required to be performed as a condition of the grant, then the amount received is includible in the recipient's gross income.

D. Effective Date

The changes made to §117 are effective for taxable years beginning after December 31, 1986, for scholarships and fellowships granted after August 16, 1986.

II. Exclusion for Prizes and Awards Restricted [Act §122]

A. Pre-TRA 1986 Law

Section 74 provides that prizes and awards other than scholarships and fellowship grants excludible under §117 are includible in gross income. However, §74 also provides a limited exclusion for prizes and awards received for achievements in fields such as the sciences, charity, or the arts. The exclusion applies only if the recipient has not applied specifically for the prize or award, for example by entering a contest, and is not required to render services as a condition of receiving the prize.

A prize or award that is includible under §74, may be excludible from gross income if it qualifies as a gift under §102. If an award to an employee constitutes a gift excludible from income under §102, the employer's deduction is limited to the amounts referred to in §274(b). Section 274(b) generally disallows business deductions for gifts to the extent that the total cost of all gifts of cash, tangible personal property, and other items to the same individual from the taxpayer during the taxable year exceeds $25. An exception to the $25 limitation provides that the ceiling on the deduction is $400 in the case of an excludible gift of an item of tangible personal property awarded to an employee for length of service, safety achievement, or productivity. In addition, the ceiling on the employer's business gift deduction is $1,600 for an excludible employee award for such purposes when provided under a qualified award plan, if the average cost of all plan awards in the year does not exceed $400.

Section 132(e) excludes from income certain *de minimis* fringe benefits, such as property or services the value of which are so small (taking into account the frequency with which similar fringes are provided by an employer to its employees) as to make accounting for them unreasonable or administratively impracticable.

B. Changes Made by the Tax Reform Act of 1986

Act §122(a) repeals the limited exclusion under Code §74 for prizes or awards for achievement in the sciences, charity and the arts, except when the recipient assigns the prize or award to a governmental unit or tax-exempt chari-

table organization. Post-TRA Code §74 provides that three conditions must be met in order for a prize or award to be excludible from gross income:

(1) the recipient must have been selected without any action on his or her part;

(2) the recipient must not be required to render services as a condition of receiving the prize or award; and

(3) the prize or award must be transferred *by the grantor* at the instruction of the recipient to a charitable organization described in §170(c)(2) of the Code, or to a governmental unit described in §170(c)(1) of the Code.

To the extent a qualifying assignment is made, the prize or award is not included in the winner's gross income, and no charitable deduction is allowed to the winner or to the payor. To the extent that a qualifying assignment is not made, the prize or award is includible in the recipient's gross income. If the recipient later makes a transfer to an exempt organization, a deduction is allowed under §170, subject to the limitations that normally apply to charitable contribution deductions.

Act §122(a) also adds subsection (c) to Code §74 to exclude employee achievement awards from the recipient's gross income. An employee achievement award is an award described in post-TRA §274(j), which is discussed *infra*.

As under pre-TRA law, if a prize is excludible under Code §132(e) as a *de minimis* fringe benefit, it will also be excludible under §74.

Act §122(b) adds subsection (c) to Code §102 which excludes from income amounts received as gifts or inheritances. Under post-TRA §102(c), no amount received by an employee from an employer is excludible from gross income.

Note: Looking at Code §§74, 102 and 132 together, it appears that an employee may exclude only those gifts from employers that are *de minimis* (as defined in §132) or that qualify as employee achievement awards (as described in Code §274(j)).

Act §§122(c) and (d) reorganize Code §274 by removing from Code §274(b) references to employee achievement awards, which in turn are dealt with in revised Code §274(j). Post-TRA §274(b) allows an employer to deduct the following three types of gifts:

(1) any gift which an employee may exclude from gross income, up to a maximum of $25 per employee, per year;

(2) any gift having a cost to the employer of $4.00 or less which has the employer's name permanently imprinted on it and which is one of a number of identical items distributed generally by the taxpayer; and

(3) any gift in the nature of a sign or display rack or other similar promotional item.

Post-TRA §274(j) deals with the definition of an employee achievement award. This change to the Code does not change the substance of the deduction previously allowed under pre-TRA §274(b), and appears to have been made for the purpose of clarifying the cross referencing from other sections (notably post-TRA §74(c)). Under the Act, as under pre-TRA law, an employee achievement award is a prize excludible from the employee's gross income (under post-TRA §74(c)), and deductible by the employer (under post-TRA §274(j)) to the extent that the cost to the employer does not exceed the amount allowable as a deduction under post-TRA §274(j). If the cost to the employer exceeds the deduction under post-TRA §274(j), then the excess amount is included in the recipient's gross income. Under post-TRA §274(j), an employee achievement award is an award given to an employee in recognition of the employee's length of service, productivity or safety achievement, the cost of which does not exceed $400, or if made under a qualified award plan does not exceed $1,600. A qualified award plan is defined as a written plan that does not discriminate in favor of highly compensated employees (as defined in post-TRA §414(q)) and which provides awards the average cost of which do not exceed $400.

Act §122(e) provides that if an employee award is excludible from wages for income tax purposes, it is also excludible for employment tax purposes and from the social security benefit base.

C. *Effective Date*

This provision is effective for taxable years beginning after December 31, 1986.[12]

III. Repeal of Exclusion for Interest on Installment Payments of Life Insurance Proceeds [Act §1001]

Under pre-TRA law, the proceeds of a life insurance policy received by a beneficiary after the death of the insured are excludible under §101. If the insurer agrees to hold the proceeds and pay them at a later date, or in installments, then the interest on the proceeds paid by the insurer are includible in the beneficiary's gross income. Each payment received by the beneficiary represents a prorata payment of both policy proceeds and interest income. However, under pre-TRA §101(d)(1)(B), if the beneficiary is the surviving spouse of the insured, the spouse receives a special exclusion for the first $1,000 received as interest in each taxable year.

Act §1001 repeals the $1,000 annual exclusion for interest on life insurance proceeds received by a surviving spouse of the insured. Under the Act, all amounts received as interest are includible in the gross income of the beneficiary. Each payment received by the beneficiary represents a prorata payment of policy proceeds and interest. In addition, if payments are to be received in installments over the lifetime of the beneficiary, the proration must be made on the basis of mortality tables prescribed by the Service which, in turn, must not distinguish among individuals on the basis of sex.

The changes made by the Act are effective for interest on insurance proceeds payable on the lives of insured individuals who die after the date of enactment of the Act (October 22, 1986), and are received in taxable years of a beneficiary which begin after the date of enactment.

[12] *Cf.* Act §151.

IV. Exclusion for Structured Settlements Income Limited [Act §1002]

Code §104(a)(2) excludes from income damages received from personal injuries. The exclusion applies whether or not they result from an adjudication of a law suit or from a settlement with an alleged wrongdoer. The exclusion applies whether the damages are paid in a lump sum or in installments. Code §130 provides that if a defendant assigns the obligation to pay periodic payments to a structured settlements company, the defendant may deduct the lump sum payment made to the structured settlement company even though the structured settlement company will pay the damages to the injured party in installments. In turn, the structured settlement company may exclude from its income the earnings on amounts used to fund its liability to make the periodic payments to the injured party.

Act §1002(a) limits the exclusion provided under Code §130 to damages payable by reason of *physical* injury or *physical* sickness. This would include damages for wrongful death arising from physical injury and sickness, but would not include damages for such wrongs as defamation of character, or invasion of privacy.

According to the conference agreement accompanying the Act, when various causes of action are alleged, some involving physical injury or sickness and others not, there need be no proration of the damages award to determine what portion of the award is excludible under post-TRA §130. Rather, the conference agreement states that if the claim has its origin in a physical injury or sickness, all damages arising from the claim are excludible.[13]

The changes made to §130 are effective for liabilities assigned after December 31, 1986, in taxable years ending after that date.[14]

V. Capital Gains Exclusion Repealed [Act §§301, 406]

A. Pre-TRA Law

Pre-TRA §1202 provides that an individual may deduct 60% of net long-term capital gains before including the remaining 40% in gross income for the year. As a result, the highest tax payable on long-term capital gains by a 50% tax bracket taxpayer is 20% (50% of the 40% includible portion of the gain). In addition, Code §1211 provides that an individual may deduct capital losses in full to offset capital gains, and may take capital losses to offset ordinary income to the extent of $3,000 each year. However, only one-half of the excess of net long-term capital losses over net short-term capital gain is allowed to offset ordinary income. As a result, it takes $2 of long-term losses to offset $1 of ordinary income.

B. Changes Made By the Tax Reform Act of 1986

Act §301 repeals the exclusion of 60% of net long-term capital gains. As a result, all net capital gains are includible in income and taxed at the taxpayer's top marginal bracket. In 1987, net capital gains will be added to the taxpayer's other income and taxed at the lesser of the applicable tax bracket, or 28%. In 1988 and later years, however, if the taxpayer is in the "hidden" 33% tax bracket by reason of the phase out of the benefit of the 15% tax rate or personal exemption, the tax applicable to some or all of the taxpayer's net capital gains will be the higher, 33% rate. Act §302(a).

As under pre-1986 TRA law, taxpayers can offset capital losses in full against capital gains. However, for taxable years beginning after 1986, capital losses can offset up to $3,000 of ordinary income on a dollar for dollar basis. Act §301(b).

C. Implications of Repeal of Long-Term Capital Gains Exclusion

The repeal of the long-term capital gains exclusion has many implications for individual taxpayers. The removal of preferential treatment for capital gains income means that there is little incentive to convert income from ordinary income to capital gain income. Conversion of income from ordinary to capital has been a primary goal of many tax shelter transactions. For example, a taxpayer would acquire a building primarily with borrowed funds. The combination of interest and depreciation deductions, as well as operating expenses, could be structured to exceed rental income from the building. The net loss was used to offset the taxpayer's ordinary income from other sources (for example, salary, interest and dividends). Later, when the building was sold, the proceeds from the sale would produce capital gain income. The difference in tax rates applicable to the capital gain represented a significant tax savings to the taxpayer. This type of effort to convert ordinary income to capital gain income is unnecessary under the Act because the Code no longer provides preferential treatment to long-term capital gains.

The Code contains several provisions designed to limit the taxpayer's ability to convert income from ordinary income to capital gain income. These provisions, referred to as "recapture" provisions, require the taxpayer to treat a certain portion of a gain as ordinary income instead of as a capital gain. For example, under Code §1250(a), when a taxpayer depreciates property on an accelerated basis, the amount by which the depreciation taken exceeds straight line depreciation could be recaptured as ordinary income when the property was sold if the taxpayer did not hold the property for a designated period of time. The elimination of the exclusion for net capital gains ends the taxpayer's concern about recapture at ordinary income tax rates.

There are several other areas in which the elimination of the net capital gains exclusion does away with or substantially reduces the significance of issues that have been of concern to taxpayers. For example, the liquidation of a corporation ordinarily results in capital gains income to the shareholder under Code §331. However, if the corporation is a collapsible corporation, as defined in Code §341, the gain from the liquidation is treated as ordinary income to the extent of the corporation's earnings and profits. One purpose of Code §341 was to prevent the taxpayer from converting ordinary income from construction activities into capital gains income by forming a corporation to carry on the construction activities, selling the building and liquidating the corporation.

[13] *Cf.* Conference Report, p. II-340.
[14] Act §1002(b).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The elimination of the net capital gains exclusion is seen as a mechanism for simplifying the tax system because it removes the complexities dealing with conversion, recapture and characterization of income. However, along with simplification, the changes to capital gains taxation also result in significantly higher taxes on capital gains income. For taxpayers in the highest marginal tax brackets, the change results in a 40% increase in the tax on capital gains income. For taxpayers in the 30% tax bracket, the change represents a 133% increase in the tax on long-term capital gains. As a result, there is now a significantly greater premium attached to qualifying for certain of the provisions of the Code that permit the taxpayer to defer gain on the sale or exchange of property. The deferral provisions for like kind exchanges of property under Code §1031 or involuntary conversions under Code §1033 become increasingly attractive in light of the higher tax on capital gains. In addition, the deferral provisions for sales of a taxpayer's principal residence under Code §1034 must receive greater taxpayer attention to avoid the higher tax on capital gains that results from the Act.

It is not only the federal income tax that increases because of the elimination of the 60% exclusion for net capital gains. Many states measure taxable income by reference to federal adjusted gross income. The elimination of the capital gains exclusion increases adjusted gross income for purposes of computing state income tax as well as federal income tax. In some states, the cost of the increased state tax associated with this change is nearly as great as the additional cost of the federal tax.

It should being noted that, while the Act eliminated the 60% exclusion for net capital gains, the Code retains the statutory structure that distinguishes between ordinary income and capital gain income. The purpose of keeping the statutory structure intact is to facilitate the reinstatement of a tax rate differential between long-term capital gains and ordinary income in the future. This might occur if higher ordinary income tax rates are imposed by some later tax bill.

Even without an increase in ordinary income tax rates, the distinction between ordinary and capital gain income can still be important for certain types of income. For example, the redemption of stock in a closely held corporation under Code §§303 or 302(b) after the death of the stockholder is normally accomplished at little or no tax cost. This is because the transaction is treated as a sale or exchange, rather than a dividend distribution. The estate of the stockholder holds the stock at a basis that was stepped up to its fair market value for federal estate tax purposes. Therefore, unless there has been significant appreciation in the value of the stock after the death of the stockholder, there is little or no gain realized on the redemption. The benefit of reduced taxation that results from this characterization of the transaction continues to apply after the Act.

Finally, note that the limitation on the deductibility of capital losses gives taxpayers an incentive for characterizing gain transactions as capital in nature, since capital gains may be used to offset capital losses.

VI. Exclusion for Dividends Received by Individuals Repealed [Act §612]

Code §116 allows an individual taxpayer to exclude from income the first $100 of dividends received from a domestic corporation in a taxable year. For married taxpayers filing a joint return, the exclusion may be as high as $200—$100 excluded for the dividends received by each spouse.

Act §612 repeals the exclusion for dividends received by individuals.

The change is effective for the computation of taxable income in tax years ending after December 31, 1986.

VII. Exclusion for Certain Foster Care Payments Expanded [Act §1707]

Code §131 allows foster parents to exclude from gross income reimbursements for expenses of caring for a foster child who is under age 19. To be eligible for the exclusion, the foster child must have been placed in the home by a governmental agency or state-licensed, tax-exempt child placement agency. The exclusion applies to "difficulty of care payments" which are made for handicapped foster children. To receive the benefit of the exclusion, the foster parent/taxpayer must keep detailed records of the expenses incurred in keeping the child in order to document that the payments were, in fact, reimbursements for expenses.

In an effort to provide some relief for foster parents, Act §1707(a) extends the exclusion for foster care payments in a number of ways. First, detailed record keeping is no longer a condition of receiving the exclusion. Second, the exclusion may apply to payments made for keeping foster individuals over age 18, so long as the total number of foster individuals over the age of 18 does not exceed five individuals. For so-called "difficulty of care payments," the exclusion applies for payments made on behalf of not more than 10 persons under age 19 and not more than five persons who are over age 18.

As a relief provision, the effective date of this change in the Code is one year earlier than most of the provisions of the Act, and may affect the 1986 taxable income of a given taxpayer. The changes made by Act §1707 are effective for payments received by the foster parent after December 31, 1985.[15]

VIII. Technical Corrections to the Tax Benefit Rule [Act §1812(a)]

Code §111 contains the so-called "tax benefit rule." The tax benefit rule is designed to require taxpayers to include in income amounts received in a subsequent year if the same amount was deducted from income in a prior year. The most prevalent example of the impact of the tax

[15] Act §1707(b).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

benefit rule is the receipt of a state or local tax refund in a year following the year in which the taxpayer deducted the amount from federal adjusted gross income. If the deduction is based upon the amounts withheld during the taxable year, and if the ultimate state or local tax liability later turns out to be less than the amount withheld, the deduction is taken in year one and the amount of the refund is included in income in year two. In this situation, §111 requires the taxpayer to include the refund (or other tax benefit item) in income in the year received to the extent the amount exceeds the excess of itemized deductions over the zero bracket amount (standard deduction).

Inequities occur if the taxpayer had no taxable income in the year in which the deduction was available, or paid an alternative minimum tax, or who had credits which reduced tax to zero. Under pre-TRA 1986 law, such taxpayers had to include the tax benefit item in the subsequent year even though there was, in fact, no tax benefit received in the prior year.

Act §1812(a) changes the tax benefit rule so that a taxpayer is required to include a tax benefit item in income only if the taxpayer's tax was reduced in the prior year by reason of the tax benefit item. Therefore, for taxpayers who had no taxable income in the prior year, or who paid an alternative minimum tax in the prior year, or whose tax credits in the prior year reduced tax to zero, the taxpayer need not include the tax benefit item in income in the subsequent year.

This is a technical amendment to the Tax Reform Act of 1984 and is made retroactive to the effective date of the 1984 Act for this provision. Therefore, the changes made by Act §1812(a) are effective for amounts received after December 31, 1983 in taxable years beginning after that date. *See* Act §172 of TRA 1984 (P.L. 98-369).

Chapter 3

CHANGES TO THE CANCELLATION OF INDEBTEDNESS RULES

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

I. Background

Pre-TRA 1986 Code §61(a)(12) provides that gross income includes all or a portion of the indebtedness which a creditor forgives. The amount of the forgiven indebtedness, also known as the amount discharged, equals the outstanding amount of the debt, adjusted for any unamortized premium or discount, as reduced by any consideration which the debtor gives. Under pre-TRA §108(a)(1)(C),[1] solvent taxpayers may elect to avoid recognition of income upon discharge of indebtedness incurred or assumed by a corporation, or by an individual (including partner in a partnership) in connection with property used in his trade or business. An electing solvent taxpayer must reduce its basis in depreciable assets, or, if it so elects, inventory,[2] by the amount of the debt which is forgiven. To the extent that the amount of discharged indebtedness exceeds available basis, the taxpayer must recognize that excess as income.

Insolvent taxpayers or taxpayers in Title 11 cases which do not recognize income upon discharge of indebtedness must reduce their tax credits (*i.e.*, research and general business tax credits and carryovers, and foreign tax credit carryovers) by fifty cents for each dollar of indebtedness discharged; and their net operating loss deductions, capital loss carryovers, and bases in assets by one dollar for each dollar of indebtedness discharged.[3] The reduction in aggregate bases of assets of an insolvent taxpayer may not be reduced below the amount of the taxpayers' undischarged liabilities.[4] The amount of any excess forgiven liabilities is not included in income to the extent of the taxpayer's insolvency.[5] Conversely, if an insolvent taxpayer becomes solvent (*i.e.*, liabilities no longer exceed assets) as a result of a discharge of indebtedness, the taxpayer may recognize income to the extent that it is solvent.[6]

II. Overview

The 1986 TRA makes two major changes in the rules governing discharge of indebtedness. First, solvent taxpayers no longer have the election to reduce their bases in assets instead of recognizing income upon the discharge of qualified business indebtedness. Second, certain solvent farmers are treated as insolvent taxpayers upon the discharge of indebtedness that is secured by farm property or farmland used in the trade or business of farming.

III. Detailed Analysis

A. Qualified Business Indebtedness Alternative Repealed

The 1986 TRA repeals Code §108(a)(1)(C) so that solvent taxpayers (other than certain farmers defined in new §108(g)) no longer have the election to reduce the bases of their depreciable assets or inventory instead of recognizing income upon the discharge of indebtedness.[7] The Senate Finance Committee indicated that this benefit was too generous because many taxpayers who took advantage of this provision had the capacity to pay income taxes.[8] In addition, the Senate Report states that the section could produce disparate results among similarly situated taxpayers based upon their depreciable assets on hand. If a taxpayer did not have substantial basis in depreciable assets or inventory, it could not avail itself of this tax deferral technique.

The pre-TRA rules of §108 will continue to apply to insolvent taxpayers and taxpayers in Title 11 proceedings. Section 108(e)(5) will continue to apply to solvent taxpayers and allow them to treat any reduction in purchase money indebtedness as an adjustment of the purchase price rather than a discharge of indebtedness.

This amendment is applicable to discharges of indebtedness occurring after December 31, 1986.[9]

B. Discharge of Trade or Business Debts of Solvent Farmers

Congress has enacted a program to make payments to lending institutions holding federally guaranteed farm

[8] S. Rep. 313, 99th Cong., 2d Sess. 161 (May 29, 1986) (hereinafter referred to in this Chapter as the "Senate Report"). The House of Representatives bill, H.R. 3838, did not contain a provision similar to that in the Senate Amendment.

[9] Act §822(c).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

loans if the lender will reduce the interest charged to the farmer (presumably below a market rate of interest).[10] The Senate Finance Committee was concerned that farmers who were marginally solvent might be forced to recognize substantial amounts of income from participating in programs of a similar nature which would reduce a portion of their debt.[11] Such a result would discourage use of federal programs designed to assist hard-pressed farmers.

Code §108(g) defines certain solvent farmers as insolvent taxpayers when there is a discharge of qualified farm indebtedness by an unrelated creditor.[12] New Code §108(g)(2) provides that qualified farm indebtedness must be incurred directly in connection with the taxpayer's operation of a trade or business of farming. The Senate Report, p. 272, states that this includes the production of agricultural products (including timber) or livestock in the United States. Merely using farmland or farm equipment as security for the indebtedness may not be sufficient if the loan proceeds are not used in the operation of the farming business.[13] In the three taxable years preceding the discharge, the farmer must have derived one-half or more of his average annual gross receipts from farming.[14] The creditor may not be related to the taxpayer within the meaning of §465(b)(3)(C), may not have sold the property to the farmer (or be related to the seller), or receive a fee as a result of the farmer's purchase of the property.[15]

Solvent farmers will use a different ordering sequence for reduction of tax attributes and basis of assets than that applied to insolvent taxpayers or taxpayers in Title 11 proceedings. First, under §1017(b)(4) the farmer will reduce the value of his net operating losses and carryovers, general business credits and carryovers, capital losses and carryovers and foreign tax credit carryovers by the amount of indebtedness forgiven. To the extent that forgiven indebtedness has completely absorbed the tax attributes, the taxpayer will then reduce his basis of his property in the trade or business other than his farmland. Finally, the farmer will reduce his basis in his land used, or held for use, in the farming business.[16] As under pre-TRA law, there is the limitation that the reduction in the taxpayer's basis should not exceed that amount necessary to cover the taxpayer's undischarged liabilities.[17] The amount of any excess discharged indebtedness that has not been applied to reduce tax attributes or bases will not be included in income.[18]

This provision is effective for discharges of indebtedness occurring after April 9, 1986, in taxable years ending after such date.[19]

Chapter 4

REVISION OF THE ACCELERATED COST RECOVERY SYSTEM AND EXPENSING

Patrick G. Dooher, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. *Pre-ACRS Depreciation*

The enactment of the Accelerated Cost Recovery System (ACRS) in 1981 [1] substantially altered and simplified the depreciation system for tangible property. Under the law in effect before the ACRS, a taxpayer was required to recover the cost of the depreciable asset over the period it was used to produce income in the taxpayer's business or investment activity. Because of the difficulty in accurately determining this period of usefulness, *i.e.*, the asset's useful life, taxpayers and the Service were often at odds.[2] Attempts to eliminate the uncertainty concerning useful life were made by promulgating depreciation systems with somewhat arbitrary, but audit-proof, useful lives for large groups of assets. The Class Life Asset Depreciation Range System, known as the ADR System and established as a result of the enactment of Code §167(m) in 1971, was one such system. However, comparatively few taxpayers elected to use these systems because of their complexity.

Note: An overview and detailed analysis of the useful life depreciation system is provided in 62 T.M., *Depreciation — Basis, Useful Life, Salvage,* and 412 T.M., *Depreciation Methods; Item and Group Accounts.* The ADR System is completely analyzed is 255 T.M., *Depreciation: ADR System for Post-1970 Property.*

Another problem with the prior depreciation systems was the requirement that a salvage value be estimated. Generally, total depreciation was limited to the cost or other basis of the property less a reasonable estimate for salvage value. Although a minimum salvage value could be disregarded in computing the depreciation allowance for personal property,[3] the salvage value requirement was an additional source of uncertainty and controversy.[4]

Finally, there was a concern that the prior depreciation systems diminished the incentive to make capital investments because the cost of the investments was recoverable for tax purposes through depreciation deductions computed over lengthy recovery periods.

B. *Accelerated Cost Recovery System (ACRS)*

1. *Economic Recovery Tax Act of 1981 (ERTA)*

In response to the foregoing concerns, the ACRS was enacted to replace the useful life and ADR systems of depreciating tangible property.[5] Under the ACRS, which will continue to apply to property placed in service through 1986, the cost of most §1245 property (generally personal property) is recovered over a 3-year, 5-year, 10-year or 15-year period, depending on the type of asset. As initially enacted, eligible real property was placed in a separate 15-year class, except limited types of real property might be classified as 5- or 10-year property.

Provided the property is classified correctly, the recovery period is not subject to challenge. Taxpayers, however, are afforded some flexibility through an election to use longer recovery periods. Moreover, the entire cost of eligible property may be recovered under the ACRS; the salvage value concept is eliminated.

Property eligible for the ACRS, termed "recovery property," generally includes all tangible depreciable property placed in service after 1980. Property depreciated under a method not expressed in terms of years (*e.g.*, unit-of-production) is excluded as "recovery property." More importantly, broad "anti-churning" rules applied to exclude as recovery property much property that was owned or used by a taxpayer, or person related to the taxpayer, before 1981. These anti-churning rules are found in §168(e)(4). Finally, property that the taxpayer properly elects to amortize (*e.g.*, leasehold improvements or low-income housing rehabilitation expenditures), although not excluded as "recovery property," is not taken into account in computing the ACRS deduction to the extent the basis of the property was subject to amortization.

The annual ACRS deduction for §1245 property is calculated by applying a statutory percentage, based on the 150% declining balance method with a change to the straight-line method to maximize the deduction, to the unadjusted basis of the property. For eligible real property, the recovery percentages for determining the ACRS deduction are prescribed by the Service in tables based on the 175% declining balance method with a change to the straight-line method to maximize deductions.

In lieu of using the accelerated recovery percentages for eligible §1245 or real property, taxpayers are provided

an election to use the straight-line method over the regular recovery period or over optional longer periods.

The ACRS also provided taxpayers with an election to expense a limited amount of new business property commencing in 1982 under §179. The election could only be made with respect to property qualifying for an investment credit and resulted in a forfeiture of the investment credit to the extent of the amount expensed.[6]

2. Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) Changes

Incorporated in the initial provisions of the ACRS, in Code §168(f)(8), was a readily utilizable method of transferring tax benefits, including ACRS deductions and investment credits, called "safe harbor leasing." Because of the ease and the certainty of transferring otherwise unusable tax benefits under the safe harbor leasing rules, safe harbor leasing transactions proliferated and generated considerable controversy. As a result of the controversy, Congress in 1982 made the rules substantially more stringent for most safe harbor leases entered into after July 1982.[7] Moreover, the safe harbor provisions were repealed for transactions entered into after 1983, although new finance lease rules were to come into effect in ensuing years.

Also in 1982, Congress required the use of the straight-line method to the extent property is financed with the proceeds of tax-exempt industrial development bonds, effective generally for property placed in service after 1982.[8]

3. 1984 Tax Reform Act Amendments

In the 1984 Tax Reform Act,[9] Congress returned to the provisions of the ACRS, this time to focus on real estate and tax-exempt entity transactions. The assignment (in 1981) of an audit-proof 15-year recovery period for real estate, which was estimated to be one-half the economic life of real property[10] and the assignment of rapid declining-balance recovery rates, 175% for most building and structures (200% for low-income housing), was a prime factor in the explosive growth of the real estate tax shelter industry in the early 1980's. Congress also found that this more rapid depreciation led to the churning of existing property through sale and leaseback transactions as well as prompting the growth of the real estate tax shelter industry.[11] When combined with other real estate tax advantages, such as interest deductions, favorable recapture rules, and the availability of the installment method on the sale of real property, a real estate shelter was found to achieve a low or even negative effective tax rate, thereby encouraging the growth of uneconomical real estate projects.[12] Consequently, Congress lengthened the recovery period of real property to 18 years in the 1984 Act, effective generally for property placed in service after March 15, 1984. P.L. 98-369, §111(a) and (g).

An additional change made by the 1984 Tax Reform Act affecting real property was the institution of a half-month convention for all real property except low-income housing. The pre-1984 rules provided for a full month's worth of cost recovery on 15-year real property regardless of the day during the month that the property was placed in service. The mid-month convention provides only a half-month's worth of cost recovery; however, it also allows a half-month's cost recovery deduction for the month in which the real property is disposed of. The mid-month convention was generally effective for property placed in service after June 22, 1984.[13]

A second significant revision in ACRS rules by the 1984 Tax Reform Act was made with respect to tax-exempt entities.[14] The tax-exempt entity rules were prompted by a concern that, although tax-exempt entities were generally ineligible to claim the tax benefits arising from property ownership because they paid no tax, lessors could indirectly make these benefits available to tax-exempt entities by way of reduced rents. Congress was also concerned about the fact that favorable tax benefits were encouraging tax-exempt entities to dispose of their property and give up ownership control of their assets.[15] Under the rules enacted in §168(j), property leased to tax-exempt entities was subject to much less generous cost recovery schedules than those generally provided under the ACRS.

Finally, the 1984 Act added §280F of the Code to restrict the amount of ACRS deductions for so-called "luxury automobiles" and other "listed property" (generally, property susceptible of personal use). The initial maximum limitations under §280F(a)(2), for luxury automobiles was $4,000 for the first year and $6,000 for each succeeding year. However, in 1985 the cap was reduced to $3,200 for the first recovery year and $4,800 for each succeeding recovery year.[16]

4. 1985 Legislation

In 1985, Congress further lengthened the real property recovery period to 19 years, effective generally for property placed in service after May 8, 1985.[17] The purpose of this change was to pay for the liberalized imputed interest rules enacted by Congress in the same bill.[18]

Even after the foregoing changes, real property continued to be favorably treated under the ACRS. The 175% declining balance continued to apply to 19-year property; where employed, approximately 50% of the cost of the real property would be recovered within a 7-year period.[19] Moreover, the recovery period for low-income housing remained at 15-years, using 200% declining balance rates, which allows the deduction of one-half the cost of low-income housing within five years.[20] Moreover, §167(k) permitted low-income housing rehabilitation expenditures up to a certain amount to be written off over a 60-month period.

C. Overview of Revised ACRS

Although denominated a "modification" of the ACRS,

the 1986 TRA version of the ACRS represents a complete revision of §168 and the ACRS.[21] Under the House passed bill,[22] revised §168 was identified as a completely new depreciation system called the "Incentive Depreciation System." Under the Senate passed version,[23] revised §168 was simply called a "modification" of the ACRS. Notwithstanding the difference in terminology, the House and Senate versions bore a stronger resemblance to each other than they did to the existing ACRS. The final version adopted by the Conference Committee generally represents a blending of the House and Senate versions, and, consequently can be regarded as a completely new depreciation system for tangible property to which the system applies.

Both the House Ways and Means Committee and the Senate Finance Committee Reports indicate that one of the purposes of their proposed depreciation systems was to lengthen depreciation periods in order to reflect more accurately the actual useful life of property.[24] The revised ACRS is consistent with this purpose. In particular, the revised ACRS lengthens the recovery period for residential rental property to 27.5 years and for most other real property, called nonresidential real property, to 31.5 years. Section 1245 property (generally personal property) is treated less harshly, as the 3, 5, 10, and 15-year categories are retained in the revised ACRS. However, two new categories, a 7-year category and a 20-year category, are added. The revised ACRS modifies the classification criteria used in determining the ACRS category into which a particular item of §1245 property will fall. Unless the statute specifically assigns a particular asset to an ACRS class, the classification will be based primarily upon the ADR class life assigned to the asset. The requirement under the existing ACRS that property be classified as either "§1245 class property" or as "§1250 class property" is generally eliminated. However, a determination of whether a particular item constitutes §1250 property (generally real property) may be necessary in determining the ADR class life of the item and whether the item constitutes nonresidential real property. The net effect of the changes in the classification rules under the revised ACRS is to place much §1245 property in ACRS classes having a longer recovery period. The most notable example, perhaps, is that property without a class life will be treated as 7-year property under the revised ACRS; the pre-1986 TRA ACRS treats such property as 5-year property.

The revised ACRS eliminates both the statutory accelerated percentages for §1245 property and the Service's authority under which accelerated percentages are prescribed for real property and optional straight-line percentages prescribed for all ACRS property. The revised ACRS provides that taxpayers must determine the ACRS deduction by using (i) the applicable depreciation method, (ii) the applicable recovery period, and (iii) the applicable convention.

The applicable recovery period for property other than real property under the revised ACRS conforms to the class into which the item of property is assigned; *i.e.*, 3-year property is recovered over 3 years. The applicable rate for 3 through 10-year property is the 200% declining balance method. Use of this rate is one change under the revised ACRS more favorable than the pre-1986 TRA system, which incorporates in the statutory percentages the 150% declining balance method for 3 through 10-year property. The rate for 15-year and 20-year property under the revised ACRS is the 150% declining balance method. Under both the 200 and 150% declining balance methods used in the revised ACRS, a switch is made to the straight-line method at the point where the straight-line method yields a greater recovery deduction.

For nonresidential property and for residential rental property, the revised ACRS requires the use straight-line method. Thus, accelerated recovery of real property is eliminated.

The revised ACRS generally retains as the applicable convention the half-year convention for §1245 property and the mid-month convention for residential rental and nonresidential real property. For the 3 though 20-year classes, however, the revised ACRS institutes a mid-quarter convention which must be applied when more than 40% of the assets placed in service during a taxable year are placed in service in the fourth quarter of that year. Under the mid-quarter convention, property placed in service during any quarter of a taxable year (or disposed of during any quarter of a taxable year) is considered placed in service (or disposed of) on the mid-point of such quarter.

Under the revised ACRS, salvage value continues to be disregarded completely in computing the recovery deduction. However, in a change from the pre-1986 TRA ACRS, the short-taxable year rule requiring pro-ration of the ACRS deduction based upon the number of months in the short year is eliminated.

The revised ACRS provides for an "alternative depreciation system" for various types of property that under the pre-1986 TRA ACRS are subject to special limitations. The types of property for which the "alternative depreciation system" must be used include:

(i) Tangible property used predominantly outside the U.S. during the taxable year;

(ii) Any tax-exempt use property; and

(iii) Any tax-exempt bond financed property.

In addition, a category of property, Executive order import property, is added. This is property that an Executive order specifies is imported from a country that discriminates in its U.S. trade.

The recovery period for property subject to the alternative depreciation system is generally the ADR class life. Personal property with no assigned class life is provided a recovery period 12 years and real property is generally assigned a recovery period of 40 years. The applicable depreciation method in all cases is the straight-line method. The applicable convention is the convention that would ordinarily be used under the revised ACRS — the half-year convention, the mid-month convention, or the mid-quarter convention as the case may be.

[21] P.L. 99-514, §201-203. P.L. 99-514 is hereinafter referred to as "1986 TRA."
[22] H.R. 3838, §201.
[23] H.R. 3838, §201.
[24] H. Rep. No. 426, 99th Cong., 1st Sess. 59 (1985); S. Rep. No. 313, 99th Cong., 2d Sess. 7 (1986).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The alternative depreciation system is used in determining a corporate taxpayer's earnings and profits under revised §312(k)(3). This system is also used in determining the depreciation adjustment for minimum tax purposes under revised §56(a)(1), but with the modification that the preference for §1245 real property is determined using the 150% declining balance rate in lieu of the straight-line rate.

Two elections are provided to taxpayers under the revised ACRS. First, as to property placed within one of the 3 through 20-year classes, the taxpayer may elect the straight-line method (using the regular "applicable recovery period, *i.e.*, 3 through 20 years) for all property within that class for that year rather than the 200 or 150% declining balance method, as the case might be. Second, the taxpayer may elect to use the alternative depreciation system with respect to all property placed in service in one of 3 through 20-year classes and, in the case of nonresidential real property or residential rental property, the taxpayer may elect the alternative depreciation system with respect to each property.

In a departure from pre-1986 TRA law, the revised ACRS requires that leasehold improvements, whether owned by the lessor or lessee, be depreciated in accordance with the rules of the system. The option available to lessees under the pre-1986 TRA ACRS of amortizing leasehold improvements over the lease term is eliminated.

The expensing provisions of §179 were also modified by the 1986 TRA[25] to increase the amount of qualifying investment that may be expensed from $5,000 to $10,000. However, an amount expensed under revised §179 may only offset active business income. In addition, for every dollar of qualifying investment exceeding $200,000, the $10,000 limit is reduced by one dollar.

To conform the luxury automobile rules of §280F to reclassification of automobiles from the 3-year to the 5-year class under the revised ACRS, the luxury auto cap is reduced to $2,560 for the first taxable year of the recovery period, $4,100 for the second taxable year, $2,450 for the third taxable year, and $1,475 for each succeeding taxable year in the recovery period. 1986 TRA, §201(d)(4)(A).

Finally, the 1986 TRA completely repeals the finance lease rules, which were to be the successor to the old safe-harbor rules but which never became effective generally.

D. Statutory Outline of Revised §168

Because the 1986 TRA completely revises the ACRS, it may be helpful to review in brief the structure of revised §168.

Revised §168(a) provides that except as otherwise provided in §168, the §167(a) depreciation deduction for any tangible property is determined by using the applicable depreciation method, the applicable recovery period, and the applicable convention.

Revised §168(b) sets forth the applicable depreciation method. As previously mentioned, this is the 200% declining balance method for the 3 through 10-year categories, the 150% declining balance method for the 15 and 20-year categories, and the straight-line method for real property. It also provides that the straight-line method may be elected for the 3 through 20-year classes and that salvage value is to be treated as zero in determining the recovery deduction.

Revised §168(c) sets forth the applicable recovery periods ranging from 3 through 31.5 years for 3-year property through nonresidential real property.

The applicable convention is set forth in revised §168(d). It is either the half-year or mid-quarter convention for the 3 though 20-year classes and the mid-month convention for real property.

Revised §168(e) contains the classification rules, which for the 3 through 20-year classes are generally based upon the ADR life. It also specifically assigns certain property to the 3-year, 5-year, 7-year, 15-year and 20-year classes.

Revised §168(f) sets forth the types of property which are excluded from the revised ACRS. Excluded is property for which a proper election is made to depreciate the property under a method not expressed in a term of years. Public utility property for which the taxpayer does not use a normalization accounting method, motion picture films, video tapes, and sound recordings are also included. Additionally, somewhat complex anti-churning rules are incorporated by reference from old §168(e)(4) to exclude certain property from the benefits of the revised ACRS.

The alternative depreciation system is found in revised §168(g). This section also sets forth the definition of tax-exempt bond financed property, property used predominantly outside the U.S., and Executive order imported property. It also specifies that the election of the alternative depreciation system may be made as to any class of 3-20 year property for a particular taxable year and may be made property-by-property for items of real property.

Revised §168(h) sets forth a detailed definition of "tax-exempt use" property. The definition is substantially the same as that found in old §168(j).

Revised §168(i) contains definitions and special rules to be used in applying the revised ACRS. It sets forth the definition of the ADR class life and generally authorizes the Treasury Department to modify or prescribe new class lives. It allows mass asset accounting principles to be used for most property to which revised §168 applies. It grants regulatory authority to determine the depreciation deduction for any taxable year where the status of such property changes in the taxpayer's hands. It requires that additions and improvements to property be depreciated under the revised ACRS in the same manner as if the property had been placed in service at the same time as the addition or improvement. It requires transferees in certain nontaxable transactions to continue using the same revised ACRS method as the transferor to the extent of carryover basis. It also sets forth the rule eliminating the amortization of leasehold improvements by lessees and describes what constitutes a normalization method with respect to public utility property.

E. Effective Dates

1. General

The revised ACRS generally applies to property placed in service after December 31, 1986, in taxable years ending

[25] P.L. 99-514, §202.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

after that date.[26] Broad transition rules are provided, however, for certain property under contract or under construction as of March 1, 1986, or that was to be provided under a lease or services agreement in effect on March 1, 1986.[27] Additionally, any rehabilitation property subject to the rehabilitation credit transition rules is exempted from the revised ACRS.[28] The transition rules of general application are described in detail below. Other transition rules are provided that generally apply only to specific taxpayers or specific property,[29] and accordingly are not described here.

For purposes of the treatment of tax-exempt bond financed property under the alternative depreciation system, special transition rules are provided. These transition rules are reviewed in the Detailed Analysis of the alternative depreciation system, below.

Finally, the 1986 TRA provides taxpayers with an election to apply the revised ACRS to any item or items of property placed in service during August through December 1986. This election, and the planning opportunities it presents, are described in detail below.

2. Transition Rules

a. Categories of Property

(i) General

Provided an ADR class life and placement in service requirement is satisfied, the following categories of property are not subject to the revised ACRS:[30]

(a) Any property constructed, reconstructed, or acquired by the taxpayer pursuant to a written contract that was binding on March 1, 1986;

(b) Property that is constructed or reconstructed by the taxpayer, if (a) the lesser or $1 million or 5% of the cost of such property has been incurred or committed by March 1, 1986, and (b) the construction or reconstruction of the property began by March 1, 1986; or

(c) An equipped building or plant facility if (a) construction commenced as of March 1, 1986, pursuant to a written specific plan, and (b) more than one-half of the cost of the equipped building or facility was incurred or committed by March 1, 1986.

(ii) Binding Contracts

The Conference Report [31] elaborates at length upon the binding contract rule. The Report provides that, if a taxpayer transfers his rights in any property subject to the binding contract that is under construction or transfers his rights in the contract to another taxpayer, the revised ACRS will not apply to the property in the hands of the transferee taxpayer provided the property was not placed in service by the transferor before the transfer period.[32] Moreover, if a partnership terminates under §708(b)(1)(B) by reason of sales or exchanges of partnership interests, the partnership is to be treated as having transferred its rights in the transition rule property to the new partnership. (Conference Report, at II-55.)

> *Example:* Assume a partnership signed a binding contract to construct real property on or before March 1, 1986. Subsequently, but before the time the property is placed in service, interests in the partnership are sold or exchanged. If, by reason of such sales or exchanges, the partnership terminates and a new partnership is deemed formed under §708(b)(1)(B) (relating to sales or exchanges of 50% or more of the total interests in the partnership's capital or profits) the partnership is treated as having transferred its rights in its contract or the property to the new partnership for purposes of binding contract transition rule.

The Conference Report further states that the binding contract rule applies only to contracts in which the construction, reconstruction, or acquisition of property is itself the contract subject matter. Moreover, a contract is to be considered binding only if it is enforceable under state law and does not limit damages to a specified amount, such as in a liquidated damages provision. But a contract limiting damages to an amount equal to at least 5% of the total contract price will not be treated as limiting damages. A contract granting the taxpayer an option to acquire property is not to be treated as a binding contract to acquire the property, but a contract under which the taxpayer grants an irrevocable put (an option to sell) to another taxpayer is considered a binding contract since the grantor of the put option does not have the ability to rescind unilaterally the commitment to sell. A contract subject to a condition not within the control or either party or a predecessor (except in limited circumstances described below) is considered binding. A contract binding as of March 1, 1986, will not be considered binding at all times thereafter if substantially modified after that date. However, design changes to a binding construction contract that are made for reasons of technical or economic efficiencies of operation and that cause an insignificant increase in the original contract price will not constitute substantial modification of the contract. Additionally, a supplementary contract that stands on its own and does not govern by the binding contract rule will not adversely affect the status of the portion of the property subject to the binding contract transition rule.[33]

The Report further states that a binding contract to acquire a component of a larger property will not be treated as a binding contract to acquire the larger property for purposes of the transition rule. For example, a binding written contract entered into before March 2, 1986, to acquire an aircraft engine would not be treated as a binding contract to acquire the entire aircraft.[34]

(iii) Self-Construction

For purposes of the transition rules concerning self-constructed property — *i.e.*, the property under construction or reconstruction by the taxpayer if (i) lesser of $1 million or 5% of the property's cost was incurred or committed pursu-

[34] *Id.*

ant to a binding written contract in effect as of March 1, 1986, and (ii) construction or reconstruction of which began by that date — the construction or property is considered to begin when physical work of a significant nature starts. Construction has not begun if work has started on only minor parts or components. Moreover, physical work does not include preliminary activities such as planning or designing, financing, exploring, researching, or developing.[35]

For purposes of the self-constructed property transition rule, a building is to be treated as including all the normal and customary components that are purchased from others and installed without significant modification, such as light fixtures.[36]

(iv) Equipped Buildings and Plant Facilities

An equipped building or plant facility may qualify for transition relief if it was under construction as of March 1, 1986, pursuant to a written specific plan and more than 50% of the building or facility cost was incurred or committed by March 1, 1986. Act §203(b)(1)(C).

The Conference Report provides that if an equipped building fails the more-than-50% test, each item of machinery and equipment to be installed in the building is treated separately for purposes of determining whether that item qualifies for transition relief. If, however, the more-than-50% test is satisfied, "incidental appurtenances," as well as equipment and machinery installed in the building, is excluded from the revised ACRS. The Report describes incidental appurtenances as appurtenances which are incidental to the operations carried on in the building but that are not themselves located in the building. For example, an adjacent railroad siding, a dynamo or water tower used in connection with a manufacturing process, or other incidental structures or machinery and equipment necessary to the planned use of the building, may qualify as incidental appurtenances. However, the term "appurtenances" does not include a plant needed to supply materials to be processed or used in the building under construction. Significantly, the Conference Report makes it clear that the incidental appurtenances which will be subject to the transition rule are not to be counted in determining whether the equipped building satisfies the more-than-50% test.[37]

The written plan for the equipped building must be, according to the Conference Report, a definite, specific, written plan of the taxpayer that is available as evidence of the taxpayer's intentions. The written plan may be modified, but only to a minor extent, after March 1, 1986. If substantial modifications in the plan are made, the equipped building transition rule will not apply.[38]

The plant facility rule is designed to be comparable to the equipped building rule and to apply to facilities not housed in a building.[39] The transition rules [40] define a "plant facility" as a facility not including any building (or with respect to which buildings are an insignificant portion) and which is (i) a self-contained single operating unit or processing operation, (ii) located on a single site, and (iii) identified as a single unitary project as of March 1, 1986.

The Conference Report states that construction of a plant facility (which is required to have begun by March 1, 1986, to qualify under the rule) is not considered to have begun until it has commenced at the site of the plant facility, unless the facility is not to be located on land and, consequently, the initial work on the facility must begin elsewhere. Construction of the plant facility is deemed to begin only when actual work at the site commences. For example, when work begins on the excavation for footings, or pouring the pads for the facility, or driving the foundation pilings into the ground, then construction is deemed to begin. Preliminary work, such as clearing, test drilling, or excavation to change a land contour, is not treated as the commencement of construction.[41]

(v) Supply and Service Contracts; Leases

Another transition rule of general effect provides that the revised ACRS does not apply to any property that is "readily identifiable with and necessary to carry out a written supply or service contract, or agreement to lease," that was binding on March 1, 1986.[42] The Conference Report explains that this transition rule is provided for those situations where pre-March 2, 1986, written binding contract requires the construction or acquisition of property but the contract is not between the person who will own the property and the person who will construct or supply the property. The Report further states that the rule applies only where the specifications and amount of the property are readily ascertainable from the contract terms or related documents. A supply or service contract or lease agreement must satisfy the various, previously-described requirements for a binding contract, such as that no substantial modifications be made to the contract after March 1, 1986. A change in the method or amount of compensation for services under the contract will not be considered a substantial modification if, taken as a whole, the change does not affect the scope or function of the project. If additional property is included under a supply or services contract or lease agreement after March 1, 1986, the transition rule will not apply to the additional property.[43]

The Conference Report gives as an example of a lease agreement to which the transition rule could apply a finance lease (to the extent the transition rules continue to permit finance leases) under which a grantor trust is obligated to provide property. The Report also clarifies that the transition relief will apply to cable television franchise agreements embodied in whole or in part in municipal ordinances or similar enactments before March 2, 1986.[44]

b. Class Life and Placement in Service Requirements

The foregoing transition relief is not available unless two additional requirements are satisfied.[45] The first requirement is that the property have an ADR class life of at

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

least 7 years. The second requirement is that the property be placed in service by an applicable date based upon the property's ADR class life. For property with an ADR life of at least 7 years but less than 20 years, the applicable date is January 1, 1989. For example, a bus, which has a 9 year ADR class life [46] or a tugboat, which has an 18 year ADR class life,[47] which was under a binding purchase contract on or before March 1, 1986, must be placed in service by December 31, 1988, to qualify. The applicable placement in service date for property with a class life of at least 20 years is January 1, 1991. Thus, an item such as a billboard, which has a 20-year ADR class life,[48] must be placed in service by December 31, 1990. Finally, the applicable date for residential rental property and nonresidential real property is January 1, 1991.

Property with no class life is treated as having a class life of 12 years.[49] Moreover, any property to be provided under a supply or services contract or lease agreement is treated as having a class life of 20 years.[50]

The ADR class life to be used in determining the property's qualification under the transition rule and its applicable placement in service date is, with one exception, the ADR class life prescribed in Rev. Proc. 83-35. The sole exception is that computer-based telephone central office switching equipment described in revised §168(e)(3)(B)(iii) is treated as having 6-year ADR class life. Act §203(b)(2)(C)(i). Thus, such equipment does not qualify for transition rule relief for purposes of the revised ACRS.

Note: The modifications made to the class lives of certain property for purposes of the alternative depreciation system in revised §168(g)(3)(B) do not apply for transition rule purposes. The transition rules [51] state that it is the class life of such property on January 1, 1986, that must be used.

The Conference Report provides that taxpayers who have difficulty identifying what property is placed in service under their accounting system because they regularly enter into contracts for large stocks of identical or similar items of property to be placed in service as needed may assume that the first items placed in service after December 31, 1986, are those under a binding pre-March 2, 1986, contract. A similar rule is to apply to self-constructed property.[52]

The Report further states that property incorporated into an equipped building or plant facility need not independently satisfy the placed-in-service requirement. Such incorporated property qualifies for transition relief as part of the equipped building or plant facility provided the building or facility is placed in service by the prescribed placement in service date.[53]

Observation: The equipped building, plant facility rule will also exempt incorporated property from the 7-year class life requirement. For example, assume the written plan for the equipped building includes a computer room and the computer equipment to be located in the room. Further assume that the building will satisfy the equipped building transition rule. The computer would appear to be part of the equipment that may be considered under the equipped building rule. However, a computer is assigned a 6-year ADR class life.[54] The Conference Report indicates that the computer will be considered placed in service along with the equipped building for purposes of the transition rule, and it further indicates, at page II-56 n. 1, that the 6-year class life is disregarded for purposes of the threshold 7-year class life requirement. Thus, the computer will be ineligible for transition relief.

c. Rehabilitation Credit Transition Rule

The 1986 TRA [55] makes a number of substantial modifications to the rehabilitation credit rules. Generally, the modifications are effective for rehabilitated property placed in service after 1986. Act §251(d)(1). However, the modified rules do not apply to property rehabilitated pursuant to a pre-March 2, 1986, binding written contract or to other rehabilitated property if certain other pre-March 2, 1986, developments occurred. Also, the rehabilitated property will not qualify for transition relief under the rehabilitation credit rules unless placed in service before January 1, 1994.[56]

Any property that qualifies under the rehabilitation credit transition rules is excluded from the revised ACRS.[57] Consequently, the 19-year recovery period (but limited to the straight-line rates under the rehabilitation credit rules) remains available for such property.

d. Sales and Leasebacks

Transition rules provide that, if a taxpayer acquires property from a person either in whose hands such property met one of the transition rules or who placed the property in service before 1987, and if the taxpayer leases back the property to that person not later than the earlier of (i) the applicable placement in service date (*i.e.*, December 31, 1988, or December 31, 1990) or (ii) the day that is 3 months after the property was placed in service, the property will be deemed to continue to qualify under the transition rule in the taxpayer's hands.[58]

The Conference Report provides that the rule applies where the taxpayer acquires property from a manufacturer, places the property in service by leasing it to the ultimate user, and subsequently engages in a sale-leaseback within 3 months after the property was originally placed in service under the initial lease. The Report further states that, if the facility otherwise qualifies as an equipped building and if a portion of the facility is sold and leased back in accordance with the sale and the leaseback requirements, both the leased and retained portion will continue to qualify under the equipped building transition rule.[59]

3. Pre-1987 Revised ACRS Election

a. General

A taxpayer may elect the earlier application of the revised ACRS as to any property placed in service after July 31, 1986 and before January 1, 1987.[60] The election must be made at the time and in the manner prescribed by the Service.[61] The Conference Report [62] instructs that the election is irrevocable and must be made on the first tax return for the taxable year in which the property is placed in service. The Report [63] further clarifies that the election may be made by the taxpayer on an asset-by-asset basis.

b. Planning Considerations

(i) Acceleration Benefit

Since the election can be made asset-by-asset, it should be considered for any post-July 31, 1986, 3, 5, or 10-year property under the pre-1986 TRA ACRS that will remain in the 3, 5 or 10-year category under the revised ACRS. As previously mentioned, the 200% declining balance method is used in depreciating such property under the revised ACRS; in contrast to the 150% declining balance method in the statutory accelerated percentages of the pre-1986 TRA ACRS. Thus, in such situations, the revised ACRS will yield greater depreciation deductions in the earlier years of the recovery period. If, however, such property would be reassigned to a longer revised ACRS period, the use of the revised ACRS would be detrimental from the standpoint of maximizing cost recovery deductions on a present value basis.

(ii) Alternative Minimum Tax Benefit

A second reason for considering the early election of the revised ACRS is that the alternative minimum tax treatment of property subject to the revised ACRS in the hands of non-corporate taxpayers may be more favorable. The 1986 TRA completely revised the alternative minimum tax for taxable years beginning after 1986.[64] For purposes of the post-1986 alternative minimum tax, depreciation on all property, including property subject to the revised ACRS early election, will be treated as an adjustment rather than a preference. *See* revised §56(a)(1). Because the minimum tax depreciation is computed using a less generous depreciation schedule, the adjustment may increase the alternative minimum tax in the years immediately after the property is placed in service. The adjustment in later years may, however, reduce the alternative minimum tax since the depreciation deduction computed for alternative minimum tax purposes will then exceed the deduction computed for regular tax purposes. In contrast, the pre-1986 TRA alternative minimum tax simply treats accelerated depreciation or cost recovery as a preference that is added to the alternative minimum tax income; no compensating adjustments are provided in later years that take into account the preference treatment of the accelerated deductions in the earlier years. *See* fomer §57(a)(2), (3), and (12). Moreover, a minimum tax credit may be provided by new §53 to the extent the accelerated depreciation adjustment under the revised alternative minimum tax results in the imposition of the alternative minimum tax. This credit is carried forward to ensuing years and applied to offset the regular tax when that tax exceeds alternative minimum tax liability.

The election is not advisable for alternative minimum tax purposes if the property is not leased property or if the property is owned by a corporate taxpayer. Under the pre-1986 TRA minimum tax rules,[65] accelerated depreciation on recovery property is treated as a tax preference only if leased by a noncorporate lessor. Under the post-1986 alternative minimum tax, depreciation on all property, whether or not leased and whether or not owned by a corporate taxpayer, is subject to the alternative minimum tax rules.

Although property subject to the election is governed by the revised alternative minimum tax rules taking effect after 1986, the interaction of the election with the minimum tax rules that remain effective through 1986 is less clear. As previously observed, the pre-1987 minimum tax system treats accelerated depreciation on "recovery property" leased by noncorporate lessors as a preference item. Since revised §168 completely eliminates the term "recovery property," the pre-1987 rules concerning the recovery property preference would not appear to reach property subject to the election in 1986. However, another preference provision in the pre-1987 system treats accelerated depreciation on §1245 property leased by a noncorporate lessor as a preference.[66] This provision presumably would extend to any §1245 property leased by a noncorporate lessor and subject to the election in 1986.

Comment: Noncorporate lessors who would have the right to appeal their cases to the Seventh Circuit would have "substantial authority"[67] for the position that leased property subject to the early election but not leased under a net lease is excluded as a preference for purposes of the pre-1987 alternative minimum tax. This is because in *Freesen v. Comr.*[68] the Seventh Circuit ruled that the §57(a)(3) preference is restricted to net lease property. Taxpayers residing outside the Seventh Circuit should exercise caution in relying on this decision since it appears to overlook statutory changes to §57(a)(3) made by the Tax Reform Act of 1976.[69]

(iii) Short-Year Effect

The effect of the revised ACRS early election for property placed in service during a short taxable year is unclear since the revised ACRS does not include a specific short taxable year proration rule. In contrast, pre-1986 TRA §168(f)(5) requires that the ACRS deduction for a short year be prorated based upon the number of months in the short year. For example, if a partnership is formed on December 1, 1986, and purchases and leases a computer costing $10,000 on that date, the $1,500 cost recovery

[60] 1986 TRA, §203(a)(1)(B).

[68] 86-2 USTC ¶9617 (7th Cir. 1986).
[69] P.L. 94-455, §301(c)(1)(C). The 1976 change eliminated the net lease reference although it retained for no apparent reason the definition of a net lease set forth in §57(c), which the Seventh Circuit relied on in reaching its decision in *Freesen.*

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

deduction (15% of $10,000 under the pre-1986 TRA §168(b)(1) table) must be reduced to $125 (1/12 of $1,500) since the partnership has only one month in its taxable year.

Under the revised ACRS, there is no statutory rule requiring this proration. In fact, since the computer in the foregoing example would be placed in service during the last three months of the taxable year — the inescapable consequence of a one-month taxable year — the mid-quarter convention technically applies unless regulations provide otherwise. Assuming that, under the revised ACRS, (i) a recovery period of "five years" means five taxable years, rather than a sixty-month period, (ii) the mid-quarter convention applies, and (iii) consequently, the one-month taxable year is split into four quarters, then the computer is considered placed in service in the first quarter of the one-month year of the partnership and the recovery deduction amounts to $3,500 ($10,000 × .40 × 7/8).

Comment: The Senate-passed version of the revised ACRS [70] contained a short-taxable year proration rule. The House bill, however, omitted any short-taxable year rule, and the Conference Report is silent on its omission of a short-year rule. The author understands that the omission was not inadvertent but was made in the belief that the Treasury Department could issue regulations to prescribe the computation of the depreciation deduction for a short year. As to property subject to the mid-quarter convention under the revised ACRS, regulatory authority clearly exists that would allow the mid-quarter convention to be overridden in a situation such as the short-taxable year.[71] Presumably, the regulations could require the use of the mid-month convention for a short-year. In the foregoing computer example, the depreciation deduction would be reduced to $166.66 using a mid-month convention ($10,000 × .40 × 1/24). However, if the mid-quarter convention does not apply to a short year because, for example, the short year consists of four months and at least 60 percent of the asset value is placed in service in the first month, there is no specific regulatory authority that would permit the use of a different convention. The use of a half-year convention would be required by statute in such case.[72]

Note: Another approach that might be taken in regulations is to provide that the reference to "years" in a recovery period as meaning full years, *i.e.*, twelve-month years. This approach would effectively require proration of the depreciation deduction based upon the total number of days in the year to 365 days or total number of months to twelve months. Assuming proration based upon the number of months in the short year to twelve months, then the $3,500 depreciation deduction for the computer computed using the mid-quarter convention would be reduced to $291.67.

II. Detailed Analysis of the Revised ACRS

A. Property Included

In general, all tangible, depreciable property, whether new or used, is subject to the revised ACRS if placed in service after 1986, unless a transition rule applies.[73] Intangible property, such as a patent, copyright, or contract right, is thus excluded. Moreover, leasehold improvements, whether owned by the lessor or lessee, are subject to the revised ACRS regardless of the length of the lease term.[74]

Foreign-use property, tax-exempt use property, and tax-exempt bond financed property are accounted for under the alternative depreciation system of revised §168(g).

B. Excluded Property

1. Certain Depreciation Methods

Revised §168(f)(1) excludes tangible property if (i) the taxpayer elects to exclude the property from the application of the system, and (ii) for the first taxable year for which a depreciation deduction would be allowable for such property in the hands of the taxpayer, the property is properly depreciated under the unit-of-production method or any other method of depreciation not expressed in a term of years (other than the retirement-replacement-betterment method or similar method). Under the unit-of-production method, an estimate is made of the total units which the asset is expected to produce. The cost of the asset, less estimated salvage value, is then divided by the total expected production to determine the depreciation per unit of output. This particular method has been most widely employed in the natural resources and transportation industries where units of production can readily be measured in, for example, tons of ore, barrels of oil, or miles logged. Another depreciation method not expressed in years is the machine hours or operating days method. This method can be applied to machinery that is expected to be useful for only a limited number of hours or days of operation.[75]

The income forecast method, under which the depreciation is computed based on the ratio of annual revenue generated by the property to total anticipated revenue, is another method that potentially could be used for tangible property, although its use has been more commonly associated with intangible property.

Observation: Prop. Regs. §1.168-4(b)(1)(i) takes the position that the election of a method not expressed in a term of years cannot be made unless the particular method was a recognized method within the industry for the type of property in question as of January 1, 1981. This provision was probably proposed in response to efforts by some taxpayers to elect a depreciation method not expressed a term of years to avoid the inflexible statutory ACRS recovery periods. Although the ACRS was generally beneficial, some industries found that the ACRS effectively lengthened their depreciation period. For example, video arcade games must be depreciated under the pre-1986 TRA ACRS over five years whereas, under prior law, the useful life and depreciation period for such assets might be only 24 months or less. Many taxpayers in that position sought to use an income forecast method although such method was not commonly used in the industry prior to January 1, 1981. The legislative history of the revised ACRS provides no indication of whether the position taken by the proposed

[70] §168(i)(11), H.R. 3838, §201, as passed by the Senate.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

regulations is correct or not. Nor does legislative history describe when property will be considered "properly depreciated" under a depreciation method not expressed in a term of years. Given the statutory "properly depreciated" language, it would not be surprising if regulations adopted under the revised ACRS set forth a position similar to the position of the existing proposed regulations.

2. Public Utility Property

Revised §168(f)(2) (cross-referencing §167(l)(3)(A)) excludes property used by a public utility in connection with the furnishing of (i) electricity, (ii) gas or steam through pipeline, (iii) water, (iv) sewage disposal services, or (v) telephone services unless the utility accounts for depreciation for rate-making purposes under the normalization method. The normalization method is described in revised §168(i)(9). It requires the utility to calculate its tax expense for rate-making purposes using the same depreciation method and at least as long a depreciation period as used to compute its depreciation expense for rate-making purposes. Also, the taxes deferred by reason of revised §168 must be credited to a reserve account maintained by the utility. The effect of the normalization method is that the benefits of using the revised ACRS cannot be passed through to the utility's customers through reduced rates but must be accrued for the utility's benefit.

Note: Additional normalization rules are contained in the revised ACRS transition rules.[76] The effect of these additional rules is to preclude a utility from flowing through to customers the reduction that may be made in the utility's deferred tax reserves for depreciation to reflect the reduced corporate tax rates taking effect after 1986.

If the public utility property is excluded by reason of revised §168(f)(2), such property is depreciated for tax purposes in the same manner as it is depreciated for rate-making purposes.[77]

3. Films, Video, Tapes, Sound Recordings

Under revised §168(f)(3) and (4), any motion picture film or video tape and any sound recording described in §48(r)(5) is excluded property. Moreover, in the technical correction provisions of the 1986 TRA relating to depreciation,[78] §167(c) is amended to exclude motion films, video tapes, and sound recordings from eligibility for accelerated depreciation methods under §167(b). This latter legislation forecloses any additional debate that such films, tapes, and recordings qualify as tangible property for purposes of qualifying for accelerated depreciation under §167(b).[79]

4. Anti-Churning Rules

a. Introduction

The pre-1986 TRA ACRS sets forth detailed "anti-churning" rules in §168(e)(4) that are designed to prevent the conversion of property owned or used by a taxpayer or related person before 1981 into property that qualifies for the ACRS. The revised ACRS [80] retains these rules, incorporating them by reference.

Section 168(e)(4) sets forth three general categories of transactions that will cause pre-1981 property to be excluded from the pre-1986 TRA ACRS.

The first set of rules applies to "§1245-class property," which is generally tangible personal property or other tangible property used in a productive process (*see* former §§168(g)(3) and 1245(a)(3). Such property is excluded where acquired by the taxpayer after 1980 if:

(i) the property was owned or used at any time during 1980 by the taxpayer or related person;

(ii) the property is acquired from a person who owned that property at any time during 1980 and, as part of the transaction, the user of the property did not change;

(iii) the taxpayer leases the property to a person (or related party) who owned or used the property at any time during 1980; or

(iv) the property is acquired in a transaction as part of which the user of the property does change and the property is not recovery property in the hands of the person from which the property was so acquired by reason of (ii) or (iii), above.

The second set of rules applies to "§1250-class property", which is generally real property. Under these rules, property acquired by the taxpayer after 1980 is ineligible if:

(i) the taxpayer or a related person owned the property at any time during 1980;

(ii) the taxpayer leases the property to a person (or related party) who owned the property at any time in 1980; or

(iii) the taxpayer acquires the property in a non-recognition transaction described in §1031 (like-kind exchange), §1033 (involuntary conversion replacement property), §1038 (certain repossessed property), or §1039 (certain low-income housing replacement property) to the extent that the basis of the property is determined in whole or part by reference to the adjusted basis of other property owned by the taxpayer or a related person in 1980. The property acquired in such a transaction is excluded as recovery property only to the extent that its basis incorporates the adjusted basis of the 1980 property.

The third set of anti-churning rules in former §168(e)(4) applies to various corporate and partnership nonrecognition transactions. Excluded is any property received by the taxpayer after 1980 in a transfer under §332 (relating to subsidiary liquidations), §351 (transfers to controlled corporations), §361 (corporate reorganizations), §371(a) and §374(a) (certain bankruptcy reorganizations), §721 (transfers to partnerships), and §731 (partnership distributions) where the property had been placed in service by the transferor or distributor before 1981. Such property is excluded, however, only to the extent its basis is carried over to the taxpayer from the transferor.

[76] Act §203(e).
[77] Revised §168(i)(9)(C).
[78] 1986 TRA, §1809(d).
[79] For example, the Ninth Circuit in *Walt Disney Productions v. U.S.*, 549 F.2d 576 (9th Cir. 1977), ruled that motion picture films should be treated as tangible property for tax purposes. The Service took a decidedly contrary view; *see, e.g.*, TAM 7802004.

[80] Revised §168(F)(5)(A)(i).

Note: The related party rules for determining whether the transaction is a churning transaction involving §1245 or §1250 class-property are extremely broad. The rules of §267(b) and §707(b)(1) generally apply but substituting a 10% ownership requirement, for the higher ownership requirements in those provisions. In addition, commonly controlled businesses within the meaning of §52(a) and (b) are treated as related persons.[81] However, certain property obtained in complete liquidations or as to which a §338 election has been made may be excluded from the anti-churning provisions if the stock of the corporation involved was purchased after 1980. *See* former §168(e)(4)(E).

Finally, acquisitions by reason of death are excluded from the anti-churning rules.[82] Moreover, under regulations, §1245 class property which is acquired incidental to the acquisition of §1250 class property is to be governed by the anti-churning rules for §1250 class property.[83]

b. Application under Revised ACRS

As previously mentioned, the revised ACRS retains the foregoing rules.[84] Thus, for example, if a taxpayer transfers equipment that the taxpayer owned in 1980 to a partnership formed in 1987 of which he is a 25% partner, and the transfer was nontaxable under §721, the equipment will not be treated as recovery property subject to the pre-1986 TRA ACRS even if it is not treated as property subject to revised ACRS under the additional anti-churning provisions adopted for purposes of the revised ACRS.

The revised ACRS sets forth additional anti-churning rules, which are based upon the pre-1986 TRA ACRS anti-churning rules of §168(e)(4), to prevent the conversion of property owned before 1987 into property that would qualify for more favorable treatment under the revised ACRS. The revised ACRS provides for the use of all of the anti-churning rules described above but with a modification that the rules should be applied by substituting "1987" for "1981" and "1986" for "1980" each place those dates appear in former §168(e)(4). Thus, for example, a computer owned by a taxpayer in 1986 that is transferred to a partnership formed in 1987 of which the taxpayer is a 25% partner in a §721 transaction will generally not be subject to the revised ACRS. Depending upon whether the property was originally acquired by the taxpayer before 1981 or after 1980, the property will generally continue to be subject either to the useful life depreciation system, if acquired before 1981, or to the existing ACRS, if acquired by the taxpayer after 1980.

In applying the foregoing the anti-churning rules for purposes of the revised ACRS, two special rules apply. The first special rule provides that the pre-1987 anti-churning rules do not apply to any residential rental property or nonresidential real property.[85] Thus, for example, an office building acquired by a taxpayer after 1986 in one of the described churning transaction will be treated as nonresidential real property and thus subject to the extended recovery period and straight-line method prescribed in the revised ACRS for such property.

The second special rule, contained in revised §168(f)(5)(B)(ii), provides that the anti-churning exclusions do not apply to any property if, for the first full taxable year in which the property is placed in service (i) the amount allowable as a deduction under former §168 with respect to the property is greater than (ii) the amount allowable as a deduction under the revised ACRS for the full taxable year. In other words, if the revised ACRS would allow less favorable depreciation on the churned property than the pre-1986 TRA ACRS, the revised system applies.

Observation: Since residential rental property and nonresidential real property is excluded from the pre-1987 anti-churning provisions of the revised ACRS under the first special rule, the §1250 class property anti-churning rules will have diminished significance. However, they should not be disregarded entirely because, as previously mentioned, §1245 class property that is acquired incidental to acquisition of §1250 class property is governed by the §1250 class anti-churning provisions. Moreover, certain real property that would be treated as 19-year real property under the pre-1986 TRA ACRS may be treated as 15-year property under the revised ACRS. For example, a car wash building and related land improvements are treated as 15-year property under the revised ACRS[86] whereas the pre-1986 TRA ACRS treats such property as 19-year real property. For the first full year that the property would be in service under the revised ACRS—which would be the second year after acquisition since for the year of acquisition a convention would apply—the revised ACRS deduction would equal 9.5% of the original acquisition cost of the property. The maximum deduction under the pre-1986 TRA ACRS for 19-year real property for the first full year of service is 9.2% assuming that the property was placed in service in the last month of the taxable year within which acquired.[87] Thus, the pre-1986 TRA ACRS would continue to apply to the car wash building and related improvements assuming such property is placed in service after 1986 in a §1250 class property churning transaction.

C. Classification of Property

1. General

The revised ACRS sets forth six categories of property into which personal property and some real property will be classified, with a recovery period assigned to each category ranging from 3 through 20 years.[88] In addition, the revised ACRS sets forth two categories into which most real property will be classified — residential rental property and nonresidential real property.

The revised ACRS generally classifies personal and some real property according to its ADR class life.[89] The revised statute[90] further assigns certain types of personal

[81] Former §168(e)(4)(D).
[82] Former §168(e)(4)(H).
[83] Former §168(e)(4)(I).
[84] Revised §168(f)(5)(A)(i).
[85] Revised §168(f)(5)(B)(i).
[86] Rev. Proc. 83-35, *supra*, Asset Guideline Class 57.1, assigns a 20-year ADR class life to such property, which means that under revised §168(e)(1), such property is classified as 15-year property.
[87] *See* Rev. Proc. 86-6, 1986-1 C.B. 503, Table 1.
[88] *See* revised §168(c).
[89] *See* revised §168(e)(1).
[90] Revised §168(e)(3).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

and real property to specific classes, assigns residential rental property (as defined in §167(j)(2)(B)) to the residential rental property class,[91] and assigns all other real property with an ADR class life of at least 27.5 years to the nonresidential real property class.[92]

Accordingly, the following steps might be used in classifying a particular item of property under the revised ACRS. First, examine the statute to determine whether the item is specifically assigned to a revised ACRS class. *See* §168(e)(3). For example, a race horse which is more than two years old at the time placed in service is treated as 3-year property under the statute.[93] Second, determine the ADR class life of the property. The mechanics of determining ADR class life is discussed in the next section.

Observation: Regardless of whether the statute specifically assigns an item to a particular revised ACRS class, the ADR class life should be ascertained. This is because the alternative depreciation system, which is used for such as purposes as determining the alternative minimum tax adjustment for depreciation for both corporate and noncorporate taxpayers after 1986 and for determining a corporate taxpayer's earnings and profits after 1986, generally employs the ADR class life in determining the amount of the depreciation deduction under that system.

One additional classification step that should be made is to determine whether an item of property constitutes tax-exempt use property, tax-exempt bond financed property, foreign use property, or Executive order import property. *See* §168(g)(1). If the item falls into any one of the foregoing categories, that item must be depreciated using the alternative depreciation system of revised §168(g).

2. ADR Classification Rules

For purposes of the ADR system, the Treasury Department grouped assets into more than 100 classes and assigned an "asset guideline period" to each class. For purposes of revised ACRS, this "asset guideline period" is the same as the ADR class life of the property. Generally, the grouping of assets into classes under the ADR was based on the business and industry within which the assets were used, and the assignment of class life to a class was based on the actual industry experience, treating the assets in a particular industry as having a composite life. For example, assets used to provide professional services (such as those offered by doctors, lawyers, and accountants) were grouped into a single class and given a class life of nine years.[94] Certain assets under the ADR, because of widespread usage, were grouped into general purpose classes and also assigned a class life. If a particular asset was described in one of the general purpose classes, the class life of that general purpose class was generally to be used in lieu of life applicable to the other assets used in that business. For example, typewriters, calculators, adding and accounting machines, copiers, and duplicating equipment were placed in one general purpose class with an asset guideline period of six years.[95]

The regulations under the ADR system provide the following additional classification rules. Regs. §167(a)-11(b)(4)(iii)(b) requires the placement of property into the ADR class for the activity in which the property is primarily used. Property must be classified according to its primary use even though the activity in which the property is primarily used is insubstantial in relation to all the taxpayer's activities. For example, if a large newspaper publisher owns the forest and pulp mill from which its paper is made, its logging equipment would be placed in one class with an ADR life of six years,[96] its pulp making equipment would be placed in a second category for pulp manufacturing assets with an ADR life of 13 years,[97] and its printing presses would be placed in a third category for printing assets with a class life of 11 years.[98] Although newspaper publishing may be the publisher's principal activity, the primary use of logging equipment is cutting timber and the primary use of the pulp manufacturing equipment is the manufacture of paper, each of which has a separate ADR class and class life.

Special ADR classification rules apply to leased property. Regs. §167(a)-11(e)(3)(iii) provides that a lessor of leased property should determine the ADR class of such property as if the property were owned by the lessee unless there was a specific ADR class in effect for lessors of such property. However, if the ADR class is based upon the type of property, such as buses or trucks, as distinguished from the activity in which used, the property must be classified without regard to the activity of the lessee. The fact that a lessee or contract is conditioned upon the inclusion of the leased property in an ADR class based upon the lessee's activity will not be binding upon the lessor for purposes of classifying the leased property under the foregoing provisions.

The regulations also provide [99] that property may not be reclassified for ADR purposes because of a change in primary use after the end of the taxable year in which the property is first placed in service. This includes a change in use that results in §1250 property becoming §1245 property. However, this classification rule may be overridden for purposes of the revised ACRS by regulations. Specifically, revised §168(i)(5) authorizes the issuance of regulations under which depreciation deductions will be recomputed for the year in which, and for succeeding years, the status of property changes in the taxpayer's hands.

A complete list of the ADR class lives may be found in Rev. Proc. 83-35.[100] The ADR class lives set forth therein are the lives to be used in determining whether property qualifies under the revised ACRS transition rules, except that computer-based telephone central office switching equipment is treated as having as a class life of six years.[101] These lives also are generally used in classifying property within a revised ACRS class and in determining the recovery period to be used under the alternative depreciation system. However, for purposes of the alternative depreci-

ation system, certain property, such as a single purpose agricultural structure, which is assigned by statute to a revised ACRS class is also by statute assigned a specific class life for alternative depreciation system purposes. Thus, a single purpose agricultural structure is assigned to 7-year property class for purposes of the standard ACRS [102] and is assigned a 15-year class life for purposes of the alternative depreciation system.[103] Under Rev. Proc. 83-35, such a structure would have an ADR class life of 25 years.[104]

For purposes of the revised ACRS, the Treasury Department is authorized to establish an office to monitor and analyze actual experience with respect to all depreciable assets.[105] Except in the case of residential property or nonresidential real property, this office may prescribe a new class life for any property, may modify the life of any property assigned to a specific class, or may prescribe a class life for any property not having a class life under ADR. Any class life or assigned item prescribed or modified must reasonably reflect the anticipated useful life, and the anticipated declined in value over time, of the property to the industry or other group.[106] Any new or modified class life will be used in determining classification of such property under the revised ACRS and in applying the alternative depreciation system.[107]

The Conference Report provides the following guidelines to be used by the Treasury Department in classifying and reclassifying assets. First, the Report clarifies that the useful life means the economic life span of the property over all the users combined and not, as under prior law, the typical period over which a taxpayer holds the property. Second, the depreciation practices followed by taxpayers for book purposes with respect to the property is to be considered and the useful lives experienced by taxpayers based on their reports. Also to be considered is independent evidence of minimal useful life, such as the term for which new property is leased or financed, and independent evidence of decline in value of an asset over time, such as shown by resale price data. If resale price data is used to prescribe class lives, it should be adjusted to eliminate the effect of historical inflation.[108]

The Report further states that Treasury Department initial studies are expected to concentrate on property not having an ADR life. Additionally, rental clothing and scientific instruments (especially those used in connection with a computer) are to be studied to determine whether a change in class life is appropriate.[109]

Finally, the statute [110] prohibits the Treasury Department from reassigning property specifically assigned a recovery period into a longer class life if placed in service before January 1, 1992. Such property placed in service after December 31, 1991, and before July 1, 1992, may be prescribed a different class life if the Secretary notifies the Ways and Means Committee and Finance Committee of the proposed change at least six months before the date on which the change takes effect.[111] No prohibition exists on reassigning specifically assigned property to a shorter class life than the assigned life.[112]

3. Revised ACRS Categories

a. General

The revised ACRS sets forth the following categories of property and their recovery periods:[113]

Category	*Recovery Period*
3-year property	3 years
5-year property	5 years
7-year property	7 years
10-year property	10 years
15-year property	15 years
20-year property	20 years
Residential rental property	27.5 years
Non-residential real property	31.5 years

b. Classification Based on ADR Life

As previously mentioned, property is generally assigned to one of the 3 through 20-year classes based upon its ADR class life. The following table sets forth the general classification scheme:[114]

Revised ACRS Category	*ADR Class Life*
3-year property	4 years or less
5-year property	More than 4 years but less than 10
7-year property	10 or more years but less than 16
10-year property	16 or more years but less than 20
15-year property	20 or more years but less than 25
20-year property	25 or more years

In contrast to the pre-1986 TRA ACRS, the assignment of property to a particular revised ACRS recovery category does not depend upon whether the property is §1245 or §1250 property. However, under Rev. Proc. 83-35, whether property is §1245 or §1250 property may be relevant in determining which ADR life is assigned to that property. For example, §1245 assets used in marketing petroleum are assigned a 9-year ADR class life and, consequently, are 5-year property under the revised ACRS.[115] Section 1250 assets, including service station buildings, used in the marketing of petroleum and petroleum products are, in contrast, assigned a 20-year ADR class life and are, consequently, 15-year property under the revised ACRS.[116]

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Set forth below is a representative sampling of assets included in the 3 through 20-year revised ACRS categories based upon Rev. Proc. 83-35; the list excludes any properties specifically assigned to a revised ACRS category by statute:

3-year Property: Truck tractors for over-the-road use (4-year ADR life); breeding hogs (3-year ADR life); special handling devices for food and beverage manufacture (4-year ADR life); special tools and devices for rubber product manufacture (4-year ADR life); special tools for fabricated metal product manufacture (3-year ADR life); and special tools for motor vehicle manufacture (3-year ADR life).

5-year Property: Data handling equipment, such as typewriters, calculators, adding and accounting machines, copiers and duplicating equipment (6-year ADR life); airplanes, except those used in commercial or contract carrying of passengers or freight, and all helicopters (6-year ADR life); buses (9-year ADR life); heavy general purpose trucks (6-year ADR life); trailers and trailer-mounted containers (6-year ADR life); breeding or dairy cattle (7-year ADR life); breeding sheep and goats (5-year ADR life); oil and gas well drilling assets (6-year ADR life); assets used in the manufacture of chemicals and allied products (9.5-year ADR life); and assets used in distributive trades and services, including wholesale and retail trade and personal and professional services (9-year ADR life).

7-year Property: Office furniture, fixtures, and equipment, such as desks, files, and safes (10-year ADR life); rail cars and locomotives, except those owned by railroad transportation companies (15-year ADR life); agriculture machinery and equipment (10-year ADR life); cotton ginning assets (12-year ADR life); mining assets (10-year ADR life); oil and natural gas exploration assets (14-year ADR life); assets used in the printing, publishing, and allied industries (11-year ADR life); assets used for the manufacture of rubber products, other than special tools (14-year ADR life); assets used to manufacture aerospace products (10-year ADR life); assets used to provide entertainment services, such as bowling, billiard and pool, theater, concert halls, and miniature golf courses (10-year ADR life); and assets used in theme and amusement parks (12.5-year ADR life).

10-year Property: Vessels, barges, tugs, and similar water transportation equipment except those used in marine construction (18-year ADR life); petroleum refining assets (16-year ADR life); and assets used to produce sugar and sugar products and vegetable oil and vegetable oil products (18-year ADR life).

15-year Property: Land improvements, except those explicitly included in any other class and except buildings and structural components (20-year ADR life); cement manufacture assets (20-year ADR life); and liquefied natural gas plants (22-year ADR life).

20-year Property: Farm buildings, but excluding special purpose structures specifically assigned by the revised ACRS (25-year ADR life); and water utility assets used in the gathering, treatment, and commercial distribution of water (50-year ADR life).

c. Statutory Assignments

Revised §168(e)(3) assigns the following property to the specific revised ACRS categories:

3-year Property: Any race horse that is more than two years old at the time it is placed in service and any other horse that is more than 12 years old at the time it is placed in service.

Note: The pre-1986 TRA ACRS proposed regulations, Prop. Regs. §1.168-3(c)(1)(iii), require that a horse's age be determined based upon its actual birth date. The practice in the racing industry of aging a horse by one year each January 1 is thus not followed. Since race horses are not assigned an ADR class life, any race horse less than two-years old when placed in service will be treated as 7-year property under §168(e)(3)(C)(iii), in contrast to the 5-year classification under the pre-1986 TRA ACRS, unless the Treasury Department assigns race horses a class life of less than 10 years as it is authorized to do by revised §168(i)(1). A breeding or a work horse that is 12 years old or less at the time it is placed in service will in any event be treated as 7-year property because of the existing ADR class life of 10 years for breeding and work horses.

5-year Property: (i) Any automobile or light general purpose truck, (ii) any semi-conductor manufacturing equipment, (iii) any computer-based telephone central office switching equipment, (iv) any qualified technological equipment, (v) any property used in connection with research and experimentation,[117] or (vi) any property described in §48(l)(3)(A)(viii), (3)(A)(ix), or (4) (generally certain types of alternative energy equipment) or, any property which is described in §48(l)(15) (biomass property) if it is a qualifying small power production facility under a specified provision of Federal Power Act.[118]

Note: The revised ACRS thus reclassifies as 5-year property cars and light trucks and research and experimentation property that under the pre-1986 TRA ACRS is treated as 3-year property. To reflect the reclassification of cars and light trucks, the maximum cost recovery caps in §280F(a), dealing with luxury automobiles, are reduced.

Comment: Technically, any building or structural components used in connection with research and experimentation qualifies as 5-year under the revised ACRS since revised §168(e)(3)(B) refers to "any property" in assigning research and experimentation property to the 5-year category; no exclusion is made for §1250 property. It should also be noted that Prop. Regs. §1.168-3(c)(1)(ii) adopts a "predominate use" (more than 50% use) test in determining whether property used in connection with research and experimentation qualifies as 3-year property for purposes of the pre-1986 TRA ACRS. The application of a "predominate use" test for ACRS purposes is open to question because case law exists under the investment credit provisions that holds property is used "in connection with" if used for a substantial amount of time in the described activity.[119]

---

[117] "Research and experimentation" has the same meaning as "research and experimental" in §174. Revised §168(i)(11).

[118] 16 U.S.C. 796(17)(C), as in effect on September 1, 1986.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Observation: Qualified technological equipment is defined as (i) any computer or peripheral equipment, (ii) any high technology telephone station equipment installed on the customer's premises, and (iii) any high technology medical equipment.[120] A computer is defined as a programmable electronically activated device that (i) is capable of accepting information, applying prescribed processes to the information, and supplying the results of these processes with or without human intervention, and (ii) consists of a central processing unit containing extensive storage logic, arithmetic, and control capabilities. Related peripheral equipment means any auxiliary machine (whether on-line or off-line) that is designed to be placed under the control of the central processing unit of a computer. Excluded from the term "computer or peripheral equipment" is (i) any equipment that is integral part of other property that is not a computer, (ii) typewriters, calculators, adding and accounting machines, copiers, duplicating equipment and similar equipment, and (iii) equipment of a kind used primarily for the amusement or entertainment of the user.[121] The statute [122] defines "high technology medical equipment" as any electronic, electromechanical, or computer-based high technology equipment used in screening, monitoring, observation, diagnosis, or treatment of patients in a laboratory, medical, or hospital environment.

Comment: Neither the statute nor legislative history defines what is meant by high technology telephone station equipment installed on the customer's premises. However, the same terminology is incorporated in the tax-exempt entity leasing rules of the pre-1986 TRA ACRS.[123] The temporary regulations under those provisions [124] defines such equipment as including only tangible personal property described in Rev. Proc. 83-35, Asset Guideline Class 48.13. This class includes station apparatus and connections such as teletypewriters, telephones, booths, private exchanges, and comparable equipment. However, to be treated as "high technology" equipment, it must have high technology content which, because of such content, can reasonably be expected to become obsolete before the expiration of its physical useful life. The temporary regulations state, as an example, that telephone booths and telephones including only a standard dialing feature are not high technology equipment. However, telephones with features such as abbreviated dialing programs, automatic callbacks, or conference call features may qualify as high technology equipment. It is not entirely clear whether the high technology telephone equipment definition applies only to such equipment that is owned by a taxpayer providing commercial and contract telephonic services. On the one hand, the statutes (both pre-1986 TRA §168(j)(5)(C)(i)(II) and revised §168(i)(2)(A)(ii)), speak in terms of installation on the customer's premises, which implies that a customer must be involved. Moreover, Asset Guideline Class 48.13 in Rev. Proc. 83-35 is a category specifically applicable to providers of commercial and contract telephonic services. On the other hand, the high technology telephone equipment definition originated in the tax-exempt entity leasing rules, and these rules would generally apply only where the property was leased or provided under a services contract. Since the high technology telephone equipment definition applies for all classification purposes under the revised ACRS, the definition might conceivably be extended to include such equipment owned by a taxpayer for its own business use. If not so extended, however, taxpayer-owned and used high-tech phone equipment will be treated as 7-year property because of the ADR life of 10 years assigned to such property.[125]

7-year Property: (i) any railroad track, (ii) any single-purpose agricultural or horticultural structure, as defined in §48(p), and (iii) any property not having a class life and that is not otherwise classified.

15-year Property: (i) any municipal wastewater treatment plant, and (ii) any telephone distribution plant and comparable equipment used for 2-way exchange of voice and data communications.

20-year Property: Any municipal sewers.

4. Real Property

Revised §168(e)(2) defines the terms "residential rental property" and "nonresidential real property." "Residential rental property" is effectively defined, by reference to §167(j)(2)(B), as a building or structure with respect to which at least 80% of the gross rental income is rental income from dwelling units.[126] For purposes of the §167(j)(2)(B) definition, if the taxpayer occupies any portion of a building or structure, the gross rental income from the building or structure includes the rental value of the portion so occupied. A "dwelling unit" is generally a house or apartment used to provide living accommodations but excludes a unit in a hotel, motel, or other establishment where more than one-half of the units are used on a transient basis.[127]

"Nonresidential real property" is defined as §1250 property that is not (i) residential property or (ii) property with a class life of less than 27.5 years. For example, since a hotel is excluded from the definition of "residential rental property" and has no ADR class life, it is nonresidential real property and, thus, must be depreciated over a 31.5-year recovery period. In contrast, since amusement park structures are assigned a 12.5-year ADR class life, such structures are excluded as nonresidential real property since the ADR class life is less than 27.5 years; such structures are properly assigned to the 7-year property class under the revised ACRS. The treatment accorded theme and amusement park structures under the revised ACRS is more favorable than the pre-1986 TRA ACRS, which assigns such property to the 10-year recovery period. *See* former §168(c)(2)(C)(ii).

Note: A special rule in the pre-1986 TRA ACRS [128] effectively provides that a building and structural components will not be treated as 10-year property if the building

[122] Revised §168(i)(2)(C).
[123] Former §168(j)(5)(C)(i)(I).
[124] Temp. Regs. §1.168(j)-1T, Q&A-15.

[125] Rev. Proc. 83-35, *supra*, Asset Guideline Class 00.11, listing communications equipment under the office, furniture, fixtures, and equipment heading.
[126] Revised §168(e)(2)(A), incorporating by reference §167(j)(2)(B).
[127] *Id.*, incorporating by reference §167(k)(3)(C).
[128] Former §168(c)(2)(G).

is converted to a theme or amusement park structure after it was originally placed in service. The effect of this rule is to clarify that the building will be treated as 19-year real property eligible for the rehabilitation investment credit. This special rule is not retained in the revised ACRS. Moreover, the rehabilitation credit, which was also extensively modified by the 1986 TRA,[129] specifically provides that real property having a class life of more than 12.5 years may qualify for a rehabilitation credit,[130] in addition to specifying that nonresidential real property and residential rental property may qualify for the credit.[131] The legislative history is silent as to whether the omission of the special rule from revised §168 and the specification of a more than 12.5 year ADR class life for real property in revised §48(g) was intended to eliminate the rehabilitation credit for a building converted into an amusement park structure.

Observation: The pre-1986 TRA ACRS rules[132] that treated a manufactured home that is §1250 class property and used as a dwelling unit as 10-year property are deleted from the revised ACRS. Thus, manufactured homes are treated as residential rental property under the revised system.

Note: In contrast to the pre-1986 TRA ACRS treatment of low-income housing, which assigns such property to the 15-year class using 200% declining balance rates, the revised ACRS classifies low-income housing as residential rental property. Thus, the cost of such property is recovered over a 27.5 year life. Moreover, the low-income housing rehabilitation expenditure rules of §167(k), which permit 60-month amortization of low-income housing rehabilitation expenditures up to certain limits, are allowed to expire as scheduled on January 1, 1987. A low-income housing credit in new §42 of the Code may be available for low-income housing after 1986. For an analysis of this credit, *see* Chapter 12.

D. Computation of Depreciation Allowance

1. General

Section 168(a) provides that the depreciation deduction for tangible property under the revised ACRS must be determined by using (i) the applicable depreciation method, (ii) the applicable recovery period, and (iii) the applicable convention. In contrast to the pre-1986 TRA ACRS, which either prescribes statutory percentages or requires the Service to prescribe accelerated and straight-line percentages, the computation of the deduction is left to the taxpayer.

The applicable recovery period was described in the preceding section concerning the classification of property under the revised ACRS. The applicable depreciation method and the applicable convention, both of which may vary depending upon the applicable recovery period, are described below.

2. Applicable Depreciation Method

For property in the revised ACRS 3, 5, 7, and 10-year categories, the applicable depreciation method is the 200% declining balance method with a switch to the straight-line method for the first taxable year for which use of the straight-line method with respect to the adjusted basis as of the beginning of such year will yield a larger allowance. *See* revised §168(b)(1), (2), (3), and (e)(1) and (2).

For 15-year and 20-year property, the 150% declining balance method is used in lieu of the 200% declining balance method but the same switch to the straight-line method is made when the straight-line method will yield a larger deduction. *See* revised §168(b)(2).

Under the declining balance method, the rate remains the same each year, but it is applied only to the basis remaining each year after subtracting all depreciation allowances for previous years. As the remaining basis decreases, so do the annual depreciation allowances. For example, assuming (i) property is placed in service on the first day of a full taxable year, (ii) the recovery period is five years, and (iii) no convention applies, the 200% declining balance method translates into a 40% rate ($1/5 \times 200\% = .40$). If an asset costs $100, the 40% declining balance rate yields a $40 deduction for the first year ($\$100 \times 40\% = \$40$), and a $24 deduction for the second year (($\$100 - 40) \times 40\% = \$24$). For the third year, the 40% rate yields a $14.40 depreciation deduction. For the fourth and fifth years, when the adjusted basis has now been reduced to $21.60, a switch to the straight-line method for the remaining two-year period should be made because the $10.80 depreciation deduction ($\$21.60/2 = \$10.80$) exceeds the $8.64 deduction that would be applied by applying the 40% declining balance rate to the $21.80 adjusted basis remaining at the beginning of the fourth year.

The taxpayer may elect the use of the straight-line method in lieu of the use of the 200% declining balance or 150% declining balance method, as the case may be.[133] This straight-line election may be made with respect to one or more classes of property for any taxable year and, once made with respect to a class, applies to all property in that class placed in service during that taxable year. The election is irrevocable once made.[134]

For nonresidential real property and residential rental property, the straight-line method is required.[135]

As under the pre-1986 TRA ACRS, salvage value is treated as zero in determining the amount of depreciation deduction under any of the foregoing methods. Revised §168(b)(4).

3. Applicable Convention

In general, the applicable convention is the half-year convention.[136] The applicable convention for nonresidential real property and residential rental property is the mid-month convention.[137]

The half-year convention is a convention that treats all property placed in service during any taxable year (or disposed of during any taxable year) as placed in service (or

[137] Revised §168(d)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

disposed of) on the mid-point of such taxable year.[138] The mid-month convention is a convention that treats all property placed in service during any month (or disposed of during any month) as placed in service (or disposed of) on the mid point of such month.[139]

The half-year convention under the revised ACRS is generally the same as the half-year convention used under the pre-1986 TRA ACRS to compute straight-line deductions when the straight-line method is employed for 3, 5, 10 or 15-year recovery property. (*Cf.*, former §168(b)(3)(B)(iii) and Prop. Regs. §1.168-2(c)(4)(i), which sets forth optional straight-line percentages employing the half-year convention.) However, in a change from the pre-1986 TRA ACRS, a half-year's worth of depreciation is allowed under the revised ACRS if property is disposed of during its recovery period; under the pre-1986 TRA ACRS, a recovery deduction in the year of disposition is generally not allowed.[140]

The mid-month convention under the revised ACRS is identical to the mid-month convention employed under the pre-1986 TRA ACRS for 19-year real property.[141]

The revised ACRS provides for a new mid-quarter convention where substantial property is placed in service during the last three months of a taxable year.[142] The mid-quarter convention applies to all property placed in service during the taxable year, but excluding nonresidential real property and residential rental property, if during the taxable year (i) the aggregate bases to which the revised ACRS applies and which are placed in service during the last three months of the taxable year exceed (ii) 40% of the aggregate bases of property to which the revised ACRS applies.[143] For purposes of applying the foregoing 40% test, residential rental property and nonresidential real property are not taken into account.[144] However, for taxable years in which property is placed in service subject to both the pre-1986 TRA ACRS and to the revised ACRS, the 40% test is made taking into account all property except nonresidential real property and residential rental property. The mid-quarter convention, however, applies only to the property subject to the revised ACRS.[145] The Conference Report instructs that if a taxpayer is a member of an affiliated group, as defined under §1504 but without regard to the corporations excluded by §1504(b), all members are treated as one taxpayer for purposes of the 40% test.[146]

Note: The statute provides for the application of the mid-quarter convention if the 40% test is met "except as provided in regulations."[147] The legislative history gives no indication of when the mid-quarter convention would not apply. As suggested in the discussion of the early election of the revised ACRS, one situation where regulations might require use of a different convention, such as the mid-month convention, is in a short-taxable year. *See* I, E, b, (3), *supra.*

The mid-quarter convention is defined in revised §168(d)(4)(C) as a convention that treats all property placed in service during any quarter of a taxable year (or disposed of during any quarter of a taxable year) as placed in service (or disposed of) on the mid-point of such quarter. For example, if property is placed in service during the first quarter of a full taxable year, 10.5 months' worth of depreciation is allowed with respect to such property. If placed in service during the second quarter of such year, 7.5 months' worth of depreciation would be allowed. If placed in service in the third quarter, 4.5 months' worth of depreciation would be allowed. Finally, if placed in service during the last quarter, 1.5 months' worth of depreciation would be allowed.

Observation: As a rule of thumb, the application of the mid-quarter convention will be avoided if the taxpayer limits fourth quarter acquisitions to 66.66% of the aggregate bases of assets acquired during the first three quarters of the taxable year, disregarding residential rental property and nonresidential real property acquisitions during that year. For example, if assets acquired during the first three quarters have an aggregate basis of $100, an additional $66.66 of assets may be placed in service during the fourth quarter. The $66.66 of fourth quarter assets constitutes 40% of the $166.66 assets acquired for the full taxable year (66.66/166.66 = .39999). On the other hand, where first quarter acquisitions have been heavy, a taxpayer may find it advantageous to place in service sufficient assets during the fourth quarter to require the application of the mid-quarter convention. In such case, the placement in service during the fourth quarter of 67% of the aggregate basis of assets placed in service during the first three quarters will cause the mid-quarter convention to apply.

4. Examples

The following examples illustrate the computation of the depreciation deduction for a particular asset in the 3-year, 5-year, and 7-year revised ACRS categories using, alternatively, the half-year convention and the mid-quarter convention.

a. 3-Year Property Examples

A $100 asset in the 3-year class and subject to the half-year convention will yield the following recovery deductions over a 4-year period:

Year One:	$ 33.33
Year Two:	$ 44.44
Year Three:	$ 14.82
Year Four:	$ 7.41
Total:	$100.00

Note: A switch to the straight-line method is made in Year Three. In Year Three the remaining adjusted basis is $22.23. Since there are still three half-years left in the depreciation period, consisting of the two halfs of Year Three and the first half of Year Four, the straight-line deduction is determined by dividing $22.23 by 3 and multiplying by 2 to obtain the deduction for Year Four.

[138] Revised §168(d)(4)(A).
[139] Revised §168(d)(4)(B).
[140] Compare former §168(d)(2)(B) with revised §168(d)(4)(A).
[141] Compare former §168(b)(2) with revised §168(d)(4)(B)..
[142] Revised §168(d)(3).
[143] *Id.*
[144] Revised §168(d)(3)(B); Senate Report at 102.
[145] Conference Report at II-47.
[146] *Id.*
[147] Revised §168(d)(3)(A).

If, instead, the mid-quarter convention is used and the $100 asset is placed in service during the first quarter of the taxable year, the depreciation deductions are as follows:

Year One:	$ 58.33
Year Two:	$ 27.78
Year Three:	$ 12.35
Year Four:	$ 1.54
Total:	$100.00

b. 5-Year Property Examples

Assuming the use of the half-year convention for a $100 item of property in the 5-year class, the revised ACRS deductions for years one through six are as follows:

Year One:	$ 20.00
Year Two:	$ 32.00
Year Three:	$ 19.20
Year Four:	$ 11.52
Year Five:	$ 11.52
Year Six:	$ 5.76
Total:	$100.00

Note: The foregoing example is taken from the Senate Finance Committee Report.[148] The Report further provides that if the asset were disposed of in Year Two, the ACRS deduction for that year would be $16.[149]

Assuming the use of the mid-quarter convention for the $100 item and the placement in service of the property during the first quarter of the taxable year, the depreciation deductions for years one through six are be as follows:

Year One:	$ 35.00
Year Two:	$ 26.00
Year Three:	$ 15.60
Year Four:	$ 11.01
Year Five:	$ 11.01
Year Six:	$ 1.38
Total:	$100.00

Note: The foregoing example appears in the Conference Report.[150]

c. 7-Year Examples

Assuming the use of the half-year convention for a $100 item of 7-year property, the depreciation deductions for years one through eight are as follows:

Year One:	$ 14.29
Year Two:	$ 24.49
Year Three:	$ 17.49
Year Four:	$ 12.49
Year Five:	$ 8.93
Year Six:	$ 8.93
Year Seven:	$ 8.93
Year Eight:	$ 4.45
Total:	$100.00

Assuming the use of the mid-quarter convention and the placement in service of the $100 item of 7-year property in the fourth quarter of a taxable year, the depreciation deductions for years one through eight are as follows:

Year One:	$ 3.57
Year Two:	$ 27.55
Year Three:	$ 19.68
Year Four:	$ 14.06
Year Five:	$ 11.24
Year Six:	$ 11.24
Year Seven:	$ 11.25
Year Eight:	$ 1.41
Total:	$100.00

d. Real Property Examples

Assuming that residential rental property is placed in service in the first month of a full taxable year and that its adjusted basis is $10,000, the straight-line deduction for year one applying the mid-month convention will be $348.48 ([$10,000 ÷ 27.5] × 23/24). For years two through 27, the depreciation deduction will equal $363.64 ($10,000 ÷ 27.5). The deduction for the 28th year will equal $196.88.

If nonresidential real property with an adjusted basis of $10,000 is placed in service in the first month of a full taxable year, the recovery deduction for the first year applying the mid-month convention will be $304.23. For years two through 31, the straight-line recovery deduction will equal $317.46 in each year. The depreciation deduction for year 32 will equal $171.97.

5. Use of Adjusted Basis

The adjusted basis of property is used in determining depreciation deductions under the revised ACRS. The pre-1986 TRA ACRS, in contrast, uses the "unadjusted" basis to determine cost recovery deductions.[151] Consequently, the Service is authorized under former §168(d)(1)(B)(ii) to issue regulations providing for a variation in the computation of depreciation deductions for any taxable year, and succeeding taxable years, where basis must be redetermined, such as where basis increases in a subsequent year because a contingent payment is made on the original purchase price. Prop. Regs. §1.168-2(d)(3) effectively provides that where basis is redetermined in a subsequent year, the basis increase or decrease is taken into account over the remaining recovery period through increased or decreased recovery deductions, as the case may be. Since the revised ACRS employs the adjusted basis, the same principles should apply without the need for regulatory authorization.

6. Short Taxable Years

As previously discussed in the analysis of the transition rules, the requirement that a depreciation deduction be prorated based upon the ratio of the number of months in the short year to twelve months is omitted from revised §168. As discussed, the omission apparently was not inadvertent but was made in the belief that the Treasury Department could issue regulations to prescribe the compu-

[148] Senate Report at 101.

[150] Conference Report at II-47.
[151] *See* former §168(b)(1).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tation of the depreciation deduction for a short year. Precisely how regulations will deal with the short year depreciation computation is unclear. The regulations might take the position that "years" in the recovery period for purposes of the revised ACRS means full years rather than taxable years. Thus, for example, a recovery period of five years means five 12-month years or five 365-day years, and not five taxable years. Thus, in any short taxable year, a proration of the depreciation deduction would be required based upon the number of days or months in the taxpayer's short year to 365 days (or twelve months, depending upon whether the regulations define the recovery period "year" in terms of days or months).

Example: Assume that the regulations define a recovery period "year" to consist of twelve months and to require a proration of a depreciation deduction where the taxpayer has a short taxable year during the recovery period based upon the number of months in the short year to 12 months. Further assume that a corporate taxpayer who places in service a $100 item in the 5-year class in Year One and properly applies the half-year convention to compute the depreciation deduction in Year One. If, in Year Two, the taxpayer has a short taxable year of three months because, for example, it joins in filing a consolidated return, its recovery deduction for Year Two would be prorated based upon the ratio of three months to twelve months. The taxpayer's revised ACRS deductions for Years One and Two would therefore be as follows:

Year One:	$20.00
Year Two:	$ 8.00

Since, because of the application of the half-year convention in year One and the short-taxable year of three months in Year Two, only 9 months of the 60-month recovery period has been taken into account, the remaining recovery period would consist of 51 months or 4 years and 3 months. Continuing to apply the 200% declining balance method with a switch to the straight-line when appropriate to maximize the depreciation deduction, the remaining cost of the asset would be recovered as follows:

Year Three:	$ 28.80
Year Four:	$ 17.28
Year Five:	$ 11.52
Year Six:	$ 11.52
Year Seven:	$ 2.88

E. Commencement and Termination of Depreciation

1. Placement in Service

As implied in the definitions of the half-year, mid-quarter, and mid-month conventions,[152] depreciation under the revised ACRS commences in the year that the property is placed in service. The concept of placement in service is important not only because it establishes when depreciation begins, but because it also applies in determining whether property is subject to the revised ACRS under the transition rules, as previously discussed. The concept is also important under the anti-churning provisions of the revised ACRS.

The statute does not provide a definition of placement in service. However, Prop. Regs. §1.168-2(l)(2) defines placement in service for purposes of the pre-1986 TRA ACRS in a manner substantially similar to the definition used for the prior depreciation systems and the investment credit. The proposed regulations state that "placed in service" means the time that property is first placed by the taxpayer in a condition or state of readiness and availability for a specifically assigned function, whether for use in a trade or business, for production of income, in a tax-exempt activity, or in a personal activity.

Comment: The Senate Finance Committee Report [153] indicates that the placement in service concept should be changed for purposes of the revised ACRS insofar as personal use is concerned. The Report states that it is intended that property placed in service prior to 1987 for personal purposes and converted to business or income-producing use after 1986 should be treated as originally placed in service when first placed in service for business or income-producing use. The report further states that such converted property will not be subject to the anti-churning rules of the revised ACRS. Initially, it should be noted that the anti-churning rules do not technically apply in any event since those rules require an acquisition by the taxpayer after 1980, or 1986, as the case may be, of property owned (or used, if personal property) in 1980 or 1986, as the case may be — the implication of this being that the taxpayer regains possession of property previously relinquished. The rules do not directly address the situation where a taxpayer continues to own into 1981 (or 1987) property held in 1980 (or 1986) and the use of that property changes. More significantly, the statute does not make any mention of a special placement in service rule for revised ACRS purposes involving the conversion of personal use property, nor does the revised ACRS generally authorize the issuance of legislative regulations. Whether interpretative regulations can change the longstanding definition of placement in service based solely on the Senate Finance Committee Report [154] is uncertain. Assuming that such a change in the definition is adopted and upheld, a pre-1987 owned personal residence that is converted to rental use after 1986 would be treated as 27.5 year residential rental property under the revised ACRS even though, absent such change, the residence would be treated under either the pre-1981 useful life system or as recovery property, depending upon whether the residence was acquired before 1981 or after 1980.

2. Retirements; Dispositions

a. General

As previously mentioned, the half-year and mid-quarter conventions set forth in revised §168(d)(4) allow a depreciation deduction to be claimed in the year that property in the 3 through 20-year categories is disposed of. This is in contrast to the pre-1986 TRA ACRS, which does not allow

[152] *See* revised §168(d)(4).

[153] Senate Report at 108.

[154] The Conference Report, at II-54, simply states that converted personal use property is exempt from the anti-churning provisions.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

a recovery deduction in the year of disposition for personal property. As under the pre-1986 TRA ACRS, residential rental property and non-residential real property are provided a depreciation deduction under the mid-month convention in the year of disposition based upon the number of months, plus a half month for the month of disposition, in the year such property is disposed of.

In another change from the pre-1986 TRA ACRS, the rule mandating the treatment of a retirement as a disposition is stricken from the revised ACRS.[155] Thus, the rule of the useful life and ADR systems of depreciation that defers recognition of gain if a retirement is "normal" or "ordinary" (*i.e.*, due to routine causes) is apparently restored. *See generally, e.g.*, Regs. §1.167(a)-11(d)(3). Thus, only if an asset subject to the revised ACRS is sold, abandoned, or otherwise disposed of in a taxable transaction will gain or loss be required to be recognized.

The character of any gain on the disposition of property subject to the revised ACRS depends upon whether it is §1245 or §1250 property. In general, property in the 3 through 20-year classes will be §1245 property, and gain will be recaptured as ordinary income to the extent depreciation was previously allowed or allowable. However, some items in these categories may constitute §1250 property, in which case only accelerated depreciation in excess of what would be allowed using the straight line method is subject to recapture as ordinary income. Assuming, however, that the elimination of the capital gains/ordinary income differential, which will be fully effective in 1988, remains in the Code indefinitely, the treatment of gain as ordinary rather than as capital under the recapture rules will have reduced significance.

Residential rental property and non-residential real property are not subject to the recapture rules since such property is §1250 property and the straight-line method is employed in computing the depreciation allowances for such property. Thus, there is no accelerated element that would be subject to recapture under §1250.

b. General Asset Accounts

Section 168(i)(4) provides that, under regulations, a taxpayer may maintain one or more general asset accounts for purposes of the revised ACRS. Except as provided in the regulations, all proceeds realized on any disposition of property in a general asset account must be included in income as ordinary income. The foregoing rule is essentially the same as the mass asset accounting rule of the pre-1986 TRA ACRS.[156]

The Senate Finance Committee Report indicates that, because of the repeal of the investment credit, the types of assets that can be included in general asset accounts should be greatly expanded. The Report observes that proposed regulations limit the ability to establish mass asset accounts under prior law in part from a concern about the mechanics of recapturing investment credits on the disposition of property from a mass asset account. The Report states that the mortality dispersion tables set forth in the proposed regulations to facilitate the application of recapture rules without requiring the identification of individual assets cannot be applied easily to diverse assets. The Report concludes by stating that, in view of the repeal of the investment credit, the primary reason for restricting a taxpayer's ability to establish mass asset vintage accounts is removed.[157]

F. Alternative Depreciation System

1. General

Revised §168(g)(1) requires the use of the "alternative depreciation system" to compute the depreciation deduction for the following categories of property:

(i) Any tangible property which during the taxable year is used predominantly outside the U.S.;

(ii) Any tax-exempt use property;

(iii) Any tax-exempt bond financed property;

(iv) Any imported property covered by an Executive Order.

The alternative depreciation system must also be used for any property subject to the revised ACRS in determining corporate earnings and profits.[158] The alternative depreciation system, with modifications for §1245 property, is also used for purposes of the revised alternative minimum tax that applies to corporate and non-corporate taxpayers for taxable years beginning after 1986.[159]

Finally, taxpayers may elect the application of the alternative depreciation system with respect to property that otherwise would be depreciated in accordance with the general rules of the revised ACRS.[160]

Under the alternative depreciation system, the depreciation deduction must be computed by using (i) the straight-line method (disregarding salvage value), (ii) the applicable convention as determined under revised §168(d) for the particular type of property involved, and (iii) a recovery period that is generally based upon ADR class life. *See* revised §168(g)(2).

2. Categories of Property Included

a. Foreign Property

Property used predominantly outside the U.S. must be depreciated using the alternative depreciation system.[161] In determining whether property is used predominantly outside the U.S., rules similar to those contained in §48(a)(2), including the exceptions set forth in §48(a)(2) (B),[162] apply. The pre-1986 TRA ACRS [163] incorporates the same §48(a)(2) rules for determining whether property constitutes foreign-use property. In addition, the revised ACRS [164] adds an exception for any satellite or other spacecraft (or interest therein) held by a U.S. person if the satellite or spacecraft was launched from within the U.S.

Under the proposed regulations [165] for the pre-1986

TRA ACRS, the foreign use determination is made by comparing the period in the taxable year during which the property is physically located outside the U.S. with the period during which the property is physically located within the U.S., and if the property is physically located outside the U.S. for more than 50% of the taxable year, the property is considered used predominantly outside the U.S. during that year. These principles apply regardless of whether the property is used outside the U.S. by the owner or by the lessee of the property. For leased property, the taxable year of the lessor is used to determine whether the property for the taxable year is used predominantly outside the U.S.[166]

The §48(a)(2)(B) exceptions to the foreign use rules generally include U.S. registered property used in transportation between the U.S. and foreign countries, equipment used by a U.S. owner in communications, and property used by a U.S. owner in offshore drilling or mineral exploration.

b. Tax-Exempt Use Property

(1) General

Revised §168(h) incorporates rules substantially identical to the rules of the former §168(j) to determine whether property constitutes "tax-exempt use" property. These rules were first enacted by the Tax Reform Act of 1984.[167] In addition to incorporating the prior rules into revised §168(h), the 1986 TRA made various technical corrections to the 1984-enacted provisions, and these technical corrections are also incorporated for purposes of the revised §168(h) rules.[168] Since the tax-exempt use property rules are quite detailed, they will be briefly reviewed below. However, any 1986 TRA technical correction of major importance is discussed.

For nonresidential real property and residential rental property, tax-exempt use property is that portion of the property leased to a tax-exempt entity in a "disqualified lease." *See* revised §168(h)(1)(B) and (E). A "disqualified lease" is defined in revised §168(h)(1)(B)(ii) as any lease of such real property to a tax-exempt entity if one of the four following criteria are met:

(i) Tax-exempt financing was used to finance all or part of the property and the tax-exempt entity (or related entity) participated in the financing;

(ii) There is a fixed or determinable purchase price or sale option, or equivalent of such option, involving the entity (or related entity);

(iii) The lease term exceeds twenty years;

(iv) The property was the subject of a sale and leaseback, or a lease and leaseback, more than three months after the property was first used by the tax-exempt entity (or a related entity).

Non-residential real property or residential rental property is not treated, however, as tax-exempt use property unless the portion leased to tax-exempt entities in disqualified leases is more than 35% of the property. Moreover leases of less than three years are disregarded.[169]

For property other than residential rental or non-residential real property, tax-exempt use property is that portion of any tangible property leased to a tax-exempt entity.[170] However, property subject to a short-term lease, the term of which is (i) less than three years, and (ii) less than the greater of one year or 30% of the property's ADR class life, is not treated as tax-exempt use property.[171]

If property leased to a tax-exempt entity is predominantly used by the tax-exempt entity (either directly or through a partnership of which the entity is a partner) in an unrelated trade or business subject to tax under §511, the property is not treated as tax-exempt use property to the extent of the portion so predominately used.[172]

Note: A technical correction[173] incorporated into the revised ACRS clarifies that any portion predominantly used in an unrelated trade or business will also not be counted in determining if the 35% threshold test for real property has been exceeded.

With certain exceptions, qualified technological equipment, such as computers or high technology telephone equipment,[174] are not treated as tax-exempt use property if the lease with tax-exempt entity has a term of five years or less. *See* revised §168(h)(3)(A).

In determining the lease term for purposes of the foregoing rules, options to renew are generally taken into account, except that options to renew at fair market value (determined at the time of renewal) on nonresidential real property or residential rental property are disregarded. Moreover, two or more successive leases that are part of the same transaction (or series of related transactions) with respect to the same or substantially similar property are treated as one lease.[175]

(2) Definition of Tax-Exempt Entity

The term "tax-exempt entity" is defined in revised §168(h)(2) and generally includes:

(i) the U.S., any U.S. possession, any state or local government, or any agency or instrumentality of any of the foregoing;

(ii) any organization exempt from income tax (other than a §521 agricultural cooperative); and

(iii) any foreign person or entity (excluding any foreign partnership or other foreign pass-through entity — *see* revised §168(h)(2)(C), last sentence).

Certain previously tax-exempt organizations may also be treated as tax-exempt entities under revised §168(h)(2)(E). However, property used by a foreign person or entity is not treated as tax-exempt use property if more than 50% of the gross income for the taxable year derived

[166] Prop. Regs. §1.168-2(g)(5)(ii).
[167] P.L. 98-369, §31.
[168] 1986 TRA, §1802, sets forth the tax-exempt entity technical corrections.

by the foreign person or entity from the property's use is subject to U.S. income tax or included in the income of a U.S. shareholder for the taxable year under §951.[176]

(3) Partnership Special Rules for Partnerships and Other Pass-through Entities

Special rules apply to partnerships and other pass-through entities. If property is leased to a partnership or other pass-through entity having a tax-exempt entity as a member, the tax-exempt entity lease rules are applied by treating each tax-exempt entity partner's proportionate share of the leased property as being leased to such partner.[177]

An additional special rule may apply to convert partnership property that is not otherwise tax-exempt use property into tax-exempt use property to the extent that the partnership disproportionately allocates losses and credits away from the tax-exempt entity partners to taxable partners.[178]

For purposes of the foregoing two special partnership rules, the technical correction provisions of the 1986 TRA [179] institute a new rule that will treat any "tax-exempt controlled entity" as a tax-exempt entity. A "tax-exempt controlled entity" is any corporation that is not otherwise a tax-exempt entity if 50% or more (by value) of the corporation's stock is held by one or more tax-exempt entities, applying the constructive ownership rules of §318 (but without regard to the the 50% limitation in §318(a)(2)(C)). For purposes of the pre-1986 TRA ACRS, this rule applies generally to property placed in service after September 27, 1985.[180]

Perhaps in recognition of the potential sweeping application of this definition—many public corporations could conceivably be treated as tax-exempt controlled entities because of the widespread ownership of their stock by tax-exempt organizations such as pension trusts — the revised ACRS [181] modifies the 50% test to exclude stock that is publicly traded on an established securities market unless the tax-exempt entity (combined with related entities) holds at least 5% (in value) of the stock of the corporation.

An election is provided under which a tax-exempt controlled entity can elect not to be treated as a tax-exempt entity for purposes of the partnership rules. The election, which is irrevocable and is binding on all tax-exempt entities holding interests in the tax-exempt controlled entity, requires that any gain recognized by the tax-exempt owner on any disposition of an interest in the entity, and any dividends or interest received or accrued by a tax-exempt entity from the controlled entity, be treated as unrelated business taxable income for purposes of the §511 tax.[182]

c. Tax-Exempt Bond Financed Property

The term "tax-exempt bond financed property" is defined as any property to the extent the property is financed directly or indirectly by an obligation the interest on which is exempt under §103(a).[183]

This definition is broader than definition used for purposes of the pre-1986 TRA ACRS.[184] Under the pre-1986 TRA ACRS, only property financed with the proceeds of an industrial development bond that carries tax-exempt interest is subject to a cost recovery limitation — namely the use of the straight-line method.[185]

Excluded from "tax-exempt bond financed property" is a qualified residential rental project as defined in §142(a)(7) (generally, low-income housing financed by a tax-exempt bond).[186] If only a portion of a facility is financed with a tax-exempt bond, revised §168(g)(5)(B) allocates the bond proceeds to the property first placed in service.

Because the 1986 TRA expands the definition of tax-exempt bond financed property to encompass all tax-exempt financing, special effective dates apply.[187] In general, the expanded definition applies only to the extent property placed in service after December 31, 1986, is financed by the proceeds of an obligation (including a refunding obligation) issued after March 1, 1986. Moreover, the expanded definition does not apply to a facility described in an inducement resolution or other comparable preliminary approval adopted by the issuing authority (or by vote or referendum) before March 2, 1986, if one of the following conditions is met:

(i) The original use of the facility commences with the taxpayer, and the construction, reconstruction, or rehabilitation of the facility began before March 2, 1986, and was completed on or after the March 2nd date;

(ii) With respect to the facility a binding contract to incur "significant expenditures" (more than 10% of the reasonably anticipated costs) for construction, reconstruction, or rehabilitation was entered into before March 2, 1986, and some of the expenditures are incurred on or after that date, or

(iii) The facility is acquired on or after March 2, 1986, pursuant to a binding contract entered into before that date.

Refunding obligations are subject to special transition rules that may further diminish the application of the expanded definition.[188]

d. Executive Order Imported Property

Revised §168(g)(6) authorizes the President to issue an Executive Order to require the application of the alternative depreciation system to certain property imported from a foreign country that maintains nontariff trade restrictions substantially affecting U.S. commerce or that engages in

[176] Revised §168(h)(2)(B).
[177] Revised §168(h)(5). It is presumed that the members of a foreign partnership or other foreign pass-through entity are tax-exempt entities for purposes of the tax-exempt use property rules unless otherwise established to the Service's satisfaction. Revised §168(h)(5)(C).

discriminatory actions or policies restricting U.S. commerce.

3. Computation of Alternative Depreciation Deduction

Revised §168(g)(2) provides that the depreciation deduction under the alternative depreciation system is determined by using (i) the straight-line method, without regard to salvage value, (ii) the applicable convention determined under revised §168(d), and (iii) a recovery period that is generally based upon the ADR class life.

The rules for determining the ADR class life are analyzed in II, C, 2, *supra*. However, for purposes of the alternative depreciation system,[189] a new class life is assigned to certain property, as follows:

Property	*Class Life*
Semi-Conductor Manufacturing Equipment	5
Computer-based Telephone Central Office Switching Equipment	9.5
Railroad Track	10
Single-Purpose Agricultural or Horticultural Structure	15
Municipal Waste Water Treatment Plant	24
Telephone Distribution Plant and Comparable Equipment Used for Two-Way Exchange of Voice and Data Communication	24
Municipal Sewers	50

In addition, the statute [190] provides that the recovery period for qualified technological equipment, such as computers, and for automobiles and light general purpose trucks is five years. Moreover, for any §1245 property which is real property with no class life, the recovery period is forty years, [191] and for personal property with no class life the recovery period is twelve years.[192]

The recovery period under the alternative depreciation system for nonresidential real and residential rental property is 40 years.[193] Moreover, for any tax-exempt use property subject to a lease, the recovery period may in no event be less than 125% of the lease term.[194]

As previously mentioned, the straight-line method is used under the alternative depreciation system. However, for purposes of the revised alternative minimum tax,[195] which applies the alternative depreciation system to determine the minimum tax depreciation adjustment, the 150% declining balance method with a switch to the straight-line method is used for all property subject to the revised ACRS except §1250 property and any other property for which straight-line is required or elected for revised ACRS purposes.

4. Election of Alternative Depreciation System

Revised §168(g)(7) provides a taxpayer with an irrevocable election to use the alternative depreciation system as to all property in a particular revised ACRS category placed in service during a taxable year. For example, if a taxpayer places in service during 1987 an automobile, a computer, and a copying machine, all of which are in the 5-year class, and a race horse, which is in the 3-year class, and the taxpayer makes the election with respect to 5-year property, the auto, computer, and copying machine will be subject to the straight-line deduction computed under the alternative depreciation. The race horse, however, will not.

As to residential rental property and nonresidential real property, the election of the alternative depreciation system may be made separately with respect to each property.[196]

G. *Miscellaneous Rules*

1. Improvements and Additions

The revised ACRS [197] prohibits component depreciation for all property subject to the revised ACRS in much the same manner as component depreciation of real property is prohibited under the pre-1986 TRA ACRS.[198] Under the revised ACRS, the depreciation deduction for an addition or an improvement must be computed in the same manner as the deduction would be computed if the property to which the addition or improvement is made was placed in service at the same time as the addition or improvement. Moreover, the applicable recovery period for the addition or improvement must begin on the later of (i) the date when the addition or improvement is placed in service, or (ii) the date on which the property to which the addition or improvement is made is placed in service.

Note: In contrast to the pre-1986 TRA ACRS, there is no exception to this rule if a "substantial improvement" is made at least three years after the property to which the addition or improvement relates is placed in service.

2. Nontaxable Transfers

Revised §168(i)(7) provides that if property is transferred under §332 (subsidiary liquidations), §351 (transfers to controlled corporations), §361 (corporate reorganizations), §371(a) or §374(a) (certain bankruptcy reorganizations), §721 (transfers to partnerships), or §731 (partnership distributions), then the transferee's depreciation deduction is determined in the same manner as the transferor's deduction would be determined with respect to so much of the basis in the hands of the transferee as does not exceed the adjusted basis in the hands of the transferor. This rule does not apply, however, if a partnership is terminated under §708(b)(1)(B) by reason of the sale or exchange of at least 50% of the capital or profits interest in the partnership within a 12-month period. Moreover, the foregoing rule does not apply to any transaction to which the anti-churning rules of revised §168(f)(5) apply.

Note: In contrast to the pre-1986 TRA ACRS,[199] no special rule is provided for transfers in which gain is not

recognized in whole or in part, such as on a like-kind exchange under §1031 or on a gift. Presumably, since the revised ACRS allows a depreciation deduction using the applicable convention with respect to any property in the year of disposition, special rules were not believed to be necessary. Under the pre-1986 TRA ACRS, in contrast, a deduction would not be allowed upon the nontaxable disposition of personal property but for the existence of the special rules. *See* former §168(d)(2)(B).

3. Reacquisitions

The revised ACRS [200] provides that if property is disposed of and then reacquired by the taxpayer, the taxpayer will be required under regulations to compute the depreciation deduction as if the property had not been disposed of. This rule does not apply, however, if the anti-churning rules apply to the reacquisition. Revised §168(i)(7)(D).

4. Leasehold Improvements

Revised §168(i)(8) provides that if a building is erected, or an improvement made, on leased property, and if the building or improvement is property to which the revised ACRS applies, the depreciation deduction must be determined under the revised ACRS. This rule is designed to foreclose the option provided under the pre-1986 TRA ACRS rules [201] that allows lessees to amortize leasehold improvements over the term of the lease if the remaining lease term is shorter than the recovery period for the leasehold improvement.

In a conforming change, §178 is amended to narrow its application. As amended, §178 applies only in determining the length of a lease term for purposes of amortizing lease acquisition costs.[202] However, in a change from pre-1986 TRA law, §178 is applied for purposes of lease acquisition costs by treating the term of the lease as including all renewal options as well as any period for which the parties reasonably expect the lease to renewed.

H. Changes in Expensing Provisions

Under pre-1986 TRA law, §179 permitted a taxpayer to expense up to $5,000 of property that would otherwise qualify for the investment credit if acquired by purchase for use in a trade or business. If the expensed property ceased to be used predominantly for business within two taxable years after the taxable year in which the property was placed in service, the difference between the amount expensed and the ACRS deductions that would have been allowed for the period of business use was recaptured as ordinary income. *See* Prop. Regs. §1.179-1(e)(1). If a husband and wife filed separate returns, the $5,000 expensing limit was reduced to $2,500 apiece. *See* former §179(b)(2).

The 1986 TRA makes the following changes to §179.[203] The 1986 TRA raises the dollar ceiling on the amount that may be expensed to $10,000 if the taxpayer's total investment in qualifying property for the year is $200,000 or less. If the qualifying property placed in service during the year exceeds $200,000, the $10,000 ceiling is reduced by one dollar for every dollar of investment exceeding $200,000. Moreover, the aggregate amount expensed under §179 for any taxable year may not exceed the taxpayer's taxable income for that year derived from the active conduct by the taxpayer of any trade or business during such year. Taxable income is determined without regard to the amount to be expensed under §179. To the extent a deduction is not allowed because of the lack of taxable income, the unused cost is carried to the succeeding taxable year and added to the amount allowable as a deduction for such succeeding taxable year. *See* §179(b).

Married individuals filing separate returns are treated as one taxpayer for purposes of determining the amount that may be expensed and the total amount of investment in qualifying property.[204]

Finally, the expensing recapture rule is modified. Instead of limiting recapture to cases in which the business use percentage drops to 50% or less within two taxable years after the year the property is placed in service, the revised rule, contained in §179(d)(10), states that regulations are to provide for recapture when expensed property is not used predominatly in a trade or business "at any time." Thus, regulations may require the recapture of the difference between the expensed amount and ACRS deductions if the property is converted for nonbusiness use at any time before the end of the property's recovery period.[205]

I. Technical Corrections to pre-1986 TRA ACRS

The 1986 TRA [206] makes the following changes to the pre-1986 TRA ACRS in the technical corrections provisions:

1. Section 168(b) is clarified to provide the taxpayers may elect to recover the cost of low-income housing using the straight-line method over 15 years. 1986 TRA, §1809(a)(1).

2. The minimum tax preference rule of pre-1986 TRA §57(a)(12), the corporate earnings and profits depreciation computation rule of pre-1986 TRA §312(k), and various other provisions dealing with the computation of cost recovery with respect to 18 or 19-year real property are clarified to provide that the mid-month convention is to be employed. 1986 TRA, §1809(a)(2) and (5).

3. Section 168(f)(12) is amended to clarify that the cost of 18-year or 19-year real property financed by the proceeds of an industrial development bond, except for low-income housing, cannot be recovered more rapidly than on a straight-line basis over 18 or 19 years, using the mid-month convention. This rule does not apply if the property is either (i) low-income housing, or (ii) property that is placed in service in connection with a project for tax-exempt bond financed residential rental property but does not fit the definition of low-income housing for ACRS purposes. 1986 TRA, §1809(a)(4) and (5).

4. In a change having substantive impact, §168(f)(10) is amended by 1986 TRA, §1809(b), to eliminate the "step

[200] Revised §168(i)(7)(C).

into the shoes" rule for sale and leaseback transactions and for acquisitions from a related person. Under the "step into the shoes" rule, the transferee's cost recovery deduction with respect to so much of the transferee's basis as is not in excess of the transferor's adjusted basis in the property is the same amount as would have been allowed the transferor if no transfer had occurred. As amended, the transferee will start depreciating the property as would any other new owner of the property. However, to the extent of the adjusted basis of the property in the transferor's hands, the transferee is treated as having made any election, such as the straight-line election, made by the transferor with respect to the property. For example, if the transferor had elected the straight-line rates for 5-year property, the transferee in a sale and leaseback or related party transfer would be treated as having made the same straight-line election to the extent that the transferee's basis was the same as the transferor's. The Senate Report [207] notes that the foregoing amendment is not intended to affect the treatment of transfers between members of an affiliated group filing a consolidated return.

The "step into the shoes" rule is not changed for tax-free asset transfers described in §§332, 351, 361, 371(a), 374(a), 721, or 731, with one exception. In the case of a partnership termination under §708(b)(1)(B), the "step into the shoes" rule is eliminated.

The foregoing amendment generally applies to property placed in service by the transferee after December 31, 1985, in taxable years ending after that date. 1986 TRA, §1809(b)(3). The first three amendments discussed above generally apply with respect to property placed in service by the taxpayer after March 15, 1984. *See* 1986 TRA, §1881, and 1984 TRA, §111(g)(1).

Chapter 5

NEW RESTRICTIONS ON INTEREST DEDUCTION [ACT §511]

Deborah M. Beers, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. General Rule

The limitation on deductibility of investment interest was enacted as part of the Tax Reform Act of 1969.[1] For investment interest incurred before 1972, so-called "excess investment interest" was treated as a tax preference item subject to a minimum tax under §56.[2] For taxable years beginning after 1971, excess investment interest ceased to be an item of tax preference and became an item subject to limited deductibility.[3]

The Tax Reform Act of 1976[4] made significant changes to the statutory limitations on deductibility of investment interest. These changes, with minor modifications, governed the tax treatment of investment interest until the passage of the Tax Reform Act of 1986. Under the 1976 Act, interest on investment indebtedness incurred by noncorporate taxpayers generally was limited to $10,000, plus the taxpayer's net investment income. No offset of investment interest was permitted against capital gain income. A taxpayer could also deduct an additional $15,000 per year for interest paid or accrued in connection with investment indebtedness incurred by the taxpayer to acquire stock in the corporation, or a partnership interest, where the taxpayer, spouse and children owned, at least 50% of the stock or capital interest in the enterprise. Any interest which was disallowed under these rules was subject to an unlimited carryover and could be deducted in future years (subject to the applicable limitation).

Under the 1976 Act, no limitation was imposed on the deductibility of personal interest.[5]

The Act also included requirements for the capitalization and amortization of real property construction period interest and taxes. §189.

B. Definition of "Investment Interest"

"Investment interest" is defined by pre-1986 TRA §163(d)(3)(D)(i) as interest "paid or accrued" on indebtedness "incurred or continued" to "purchase or carry" property held for investment. This definition alone was provided by §163(d)(3)(D) prior to its amendment by the Tax Reform Act of 1984 (P.L. 98-369). Section 56(b) of P.L. 98-369 added §163(d)(3)(D) (ii) which provides that, for purposes of the above definition, "interest" includes any amount allowable as a deduction in connection with personal property used in a short sale.

C. The Tracing Problem

The general definition of "investment interest" in §163(d)(3)(D)(i) involves language similar to that of §265(2) (relating to the disallowance of interest on indebtedness incurred or continued to purchase or carry tax-exempt obligations) §264(a) (concerning indebtedness incurred or continued to purchase or carry certain life insurance, endowment and annuity contracts), and §1277(c) (relating to the disallowance of certain interest paid or accrued on indebtedness incurred or continued to purchase or carry certain types of bonds). All involve problems of tracing.

1. Prop. Regs. §1.57-2(b)(1)(iii)

While there have been no regulations issued under §163(d), proposed regulations under §57 (minimum tax) indicate the probable IRS interpretation of words and phrases contained in §163(d).[6] The proposed regulations adopt a facts and circumstances approach. Under Prop. Regs. §1.57-2(b)(iii), where indebtedness is incurred or paid solely for the purpose of purchasing or carrying property which is used in a trade or business or which is clearly property for personal use (home, automobile, boat, etc.), the interest on the indebtedness will not be treated as investment interest. Similarly, where indebtedness can be traced to a particular activity or property, the character of the interest expense will be determined by the nature of the activity or property. The following excerpt from Prop. Regs. §1.57-2(b)(1)(iii) indicates the probable IRS approach to situations in which tracing becomes more complex:

---

[1] P.L. 91-172, 91st Cong. 1st Sess., §221 (1969). For a general discussion of the rules applicable to the deductibility of investment interest, *see* 279 T.M., *Interest Expense Deductions.*

[2] *See* Code §57(a)(1), (b).

[3] *See* H.R. Rep. No. 782 (Conf.), 91st Cong., 1st Sess. 302 (1969).

[4] P.L. 94-455, 94th Cong. 2d Sess., §§201 and 209 (1976).

[5] *See* Code §163(a), (d).

[6] Note that these particular regulations were not adopted when other final minimum tax regulations were adopted on Sept. 12, 1978. *See* T.D. 7564, 43 Fed. Reg. 40459 *et seq.* (Sept. 12, 1978). Retroactive changes made to the minimum tax provisions by the Revenue Act of 1971 (P.L. 92-178) were cited as the reason for the failure to adopt these sections of the proposed regulations.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

"In addition, if substantially identical amounts are borrowed and expended simultaneously it will be inferred that the resulting indebtedness was incurred for the purpose of such expenditure. Indebtedness which was originally incurred for one purpose may be continued for another purpose. Thus, if the taxpayer incurred an indebtedness to purchase business property but continued the indebtedness in order to avoid liquidation of property held for investment, the indebtedness is continued in order to carry the property held for investment. An indebtedness may be incurred or continued for multiple purposes. Where such a multiple purpose is established, including an investment purpose, a portion of the loan will be treated as incurred or continued in order to purchase or carry property held for investment. In cases where the proceeds of an indebtedness cannot be traced by application of the principles of this subdivision to a particular activity or property, it will be inferred that the indebtedness was incurred or continued in order to carry property held for investment. In some cases, however, it may be established that all or part of such indebtedness was not incurred or continued in order to carry property held for investment. Thus, where a taxpayer owns $100,000 in value of appreciated investment property, indebtedness in excess of that amount will ordinarily not be considered to be incurred or continued in order to carry investment property."

The following examples illustrate the proposed IRS approach to determining whether indebtedness was incurred or continued to purchase or carry property held for investment:

"*Example (1):* A taxpayer obtained an unsecured loan of $100,000 on March 16, 1970. On the same day, he purchased securities of a company in the amount of $120,000. It will be inferred that the $100,000 loan was incurred for the purpose of purchasing such securities.

"*Example (2):* A taxpayer who owns substantial amounts of business property and investment property with a value in excess of $150,000 obtains an unsecured loan of $150,000 on June 5, 1970. The taxpayer is unable to show that the loan was for business or personal, as opposed to investment, use. It will be inferred that the loan was incurred for the purpose of purchasing or carrying investment property.

"*Example (3):* The facts are the same as in example 2, except that the taxpayer is able to establish that he owned no more than $70,000 of investment property during the taxable year, it will be inferred that only seven-fifteenths of the loan was incurred for the purpose of purchasing or carrying investment property.

"*Example (4):* If, under the facts of Example 3, the taxpayer obtained two different loans totaling $150,000 at different interest rates, seven-fifteenths of each loan will be considered indebtedness incurred or continued to purchase or carry property held for investment."

2. Cases under §265

As noted above, §265(2) disallows a deduction for interest on indebtedness "incurred or continued" to "purchase or carry" tax-exempt obligations. Under §265, where there is no demonstrably direct link between the borrowing and the tax-exempt obligations, circumstantial evidence must be used to establish a reasonable inference of a "sufficiently direct relationship" between the borrowing and the investment in tax-exempts.[7]

In Rev. Rul. 82-163,[8] the IRS applied the §265 analysis used by the Tax Court in *Mariorenzi*[9] to analyze the relationship between a loan and other concommitant activities engaged in by the taxpayer. The Service ruled that interest was investment interest subject to §163(d) in the following situation:

B, a customer of X, qualified for and obtained a second mortgage loan from Y of $100x. B deposited the proceeds in B's account in a savings and loan association. One month later, B withdrew $100x from the saving account to purchase an interest in a managed commodity fund. B's investment in this fund was arranged by X, but this investment was not part of B's securities account.

In the same ruling, the Service concluded that interest was not subject to the §163(d) limitations in the following situation:

The taxpayer, A, is a customer of X, a brokerage firm that is a member of a national securities exchange. Y, an affiliate of X and engaged in the mortgage lending business, offered A a loan secured by a second mortgage on A's personal residence. This loan was available only to customers of X who had a securities account with the net value of at least 50% of the amount of the loan. A qualified for a loan of $50x and used the entire proceeds to construct an addition to A's personal residence. The loan agreement provided that interest on the loan will be paid from A's securities account.

D. Persons Subject to §163(d)

The investment interest limitation applies to any "taxpayer other than a corporation."[10] Thus, the provision applies to individuals, trusts and estates. However, the provision does not apply to partnerships or to S corporations as such. Instead, investment income and expenses are treated as flowing through to the partners and S corporation shareholders with any applicable limitation being imposed at the partner or shareholder level, as the case may be.[11] Pre-1986 TRA treatment of interest incurred to purchase or carry an interest in an S corporation or partnership, however, is not entirely clear.[12] Prop. Regs. §1.57-2(b)(2)(i) implies that the interest would not be

investment interest where the underlying assets are not investment assets.[13]

In the case of trusts and estates, a modified flow-through principle appears to apply.[14] It would seem that the flow-through principle will apply to the extent that trust and estate income is actually distributed to the beneficiaries.[15] Thus, the trust or estate apparently would be subject to the limitation formula to the extent that it did not distribute its income. Finally, note that, in the case of a trust, the amount of the deductible investment interest is limited to the net investment income (*i.e.*, the $10,000 base found in §163(d)(1)(A) does not apply).[16]

E. Net Investment Income Factor

Under pre-1986 TRA §163(d)(1)(B), the term "net investment income" means the excess of investment income over investment expenses.[17] Investment income is defined more specifically as:

> (i) Gross income from interest, dividends,[18] rents and royalties,
>
> (ii) The net short-term capital gain attributable to the disposition of property held for investment, and
>
> (iii) Any amount treated under §§1245, 1250 and 1254 as ordinary income,

but only to the extent such income, gains and amounts are not derived from the active conduct of a trade or business.[19]

The term "investment expenses" means ordinary and necessary business expenses, real property taxes, bad debts, depreciation (determined under the straight-line method),[20] amortization, non-business expenses attributable to production of income or maintenance of property, and depletion (cost rather than percentage).[21]

F. Special Rules

Under a special rule, property subject to a net lease is treated as property held for investment, and not property used in a trade or business if, for a taxable year, (i) the sum of the deductions of the lessor with respect to the property which are allowable solely by reason of §162 (other than rents and reimbursed amounts with respect to such property) is less than 15% of the rental income produced by the property, or (ii) the lessor is either guaranteed a specific return or is guaranteed in whole or in part against loss of income.[22] In addition, interest paid or accrued on indebtedness incurred or continued in the construction of property to be used in a trade or business shall not be treated as investment interest.[23]

II. Overview

A. Investment Interest

1. Elimination of $10,000 Deductible Amount

The Tax Reform Act of 1986 (P.L. 99-514), §511(a), revises the §163(d) investment interest limitation for noncorporate taxpayers to make it more restrictive. As revised, the $10,000 deductible amount (increased, under pre-1986 TRA law, by $15,000 to $25,000 for debt incurred for certain closely-held business interests as explained above) is completely eliminated. Investment interest may only offset net investment income.

2. Passive Loss Coordination

To coordinate the revised §163(d) investment interest limit with the passive loss rules of §469, revised §163(d)(3)(B) excludes as investment interest any interest taken into account in determining passive activity income or loss under §469. Since the passive loss limits encompass all rental property, including net lease property that was formerly covered by §163(d) (*see* Conference Report at II-138), revised §163(d) completely eliminates the special rules for net lease property. However, revised §163(d)(5)(A) provides that "property held for investment" includes (i) property which produces "portfolio income" (which is excluded from passive loss computations) and (ii) any ownership interest held by a taxpayer in an activity involving the conduct of a trade or business which is not a passive activity and with respect to which the taxpayer does not materially participate. An example of this type of activity would be any working interest in any oil or gas property which the taxpayer holds directly or through a general partnership interest.[24]

B. Personal Interest

The 1986 TRA, Act §511(b), adds new §163(h) to the Code, disallowing deductions for "personal interest" paid or accrued during the taxable year by a noncorporate taxpayer. Section 163(h)(2) defines the term "personal interest" as any interest allowable as a deduction for income tax purposes other than:

> (i) Interest paid or accrued on debt incurred or continued in connection with the conduct of a trade or business (other than the trade or business of performing services as an employee);
>
> (ii) Any §163(d) investment interest;
>
> (iii) Any interest taken into account under new §469 in computing passive activity income or loss;
>
> (iv) Any "qualified residence interest"; and
>
> (v) Any interest payable on estate tax deferred under §§6163 or 6166.

[16] Pre-1986 TRA §163(d)(1) (last sentence).

[17] §163(d)(3)(A).

[18] In a case invovling pre-1983 law, the Tax Court decided that the income of a subchapter S corporation did not retain its character when passed to the individual stockholders and sub S "dividends" were dividends for purposes of §163(d). Under the subchapter S Revision Act of 1982, P.L. 97-354, subchapter S was substantially rewritten to treat S corporations more or less as conduits so that income character is passed through. The Tax Court noted that, under the 1982 Act, operating income of a S corporation would presumably no longer qualify as investment income for purposes of §163(d). *Crook v. Comr.*, 80 T.C. 27 (1983).

[19] Pre-1986 TRA §163(d)(3)(B).

[20] *See* PLR 8340024.

[21] Pre-1986 TRA §163(d)(3)(C).

[22] Pre-1986 TRA§163(d)(4)(A).

[23] Pre-1986 TRA §163(d)(4)(B).

[24] *See* Code §469(c)(3).

The foregoing definition thus treats as "personal interest" interest on debt incurred by an employee to purchase an item such as a car or computer used by the employee in the course of his employment. Personal interest will also include any interest that accrues on a tax deficiency. *See* Conference Report at II-154.

C. Related Provisions

The 1986 TRA also makes change to other provisions relating to the tax treatment of interest including: amortizable bond premium (§171); capitalization of interest (§263A); loans from certain life insurance contracts (§264(a)); and alternative minimum tax itemized deductions (§56).

III. Detailed Analysis

A. Investment Interest Limitations

1. General Rule

As noted above, a noncorporate taxpayer's investment interest may not exceed the net investment income of the taxpayer for the taxable year.[25] Any amounts not allowed as a deduction by reason of the general limitation may be carried over and deducted as investment interest paid or accrued in the succeeding taxable year to the extent that the taxpayer has investment income in that year. §163(d)(2).

2. "Investment Interest" Defined

The term "investment interest" as it appears in new §163(d)(3) is generally the same as that under the old law, *i.e.*, it includes interest "which is paid or accrued on indebtedness incurred or continued to purchase or carry property held for investment." The term "investment interest" does not, however, include:

(i) Any qualified residence interest (discussed below); or

(ii) Any interest which is taken into account under §469 in computing income or loss from a passive activity of the taxpayer.[26]

3. "Property Held for Investment" Defined

The term "property held for investment" generally includes (i) any property which produces income of a type described in §469(e)(1) (*i.e.*, portfolio income), and (ii) any interest held by a taxpayer in an activity involving the conduct of a trade or business which is not a passive activity and with respect to which the taxpayer does not materially participate. §163(d)(5). Under §163(d)(5)(C), the terms "activity", "passive activity" and "materially participate" taxpayers have the meanings given such terms by §469.

Section 469(e)(1) portfolio income includes gross income from interest, dividends, annuities or royalties not derived in the ordinary course of a trade or business (*i.e.*, most types of passive income other than rental income), as well as gain or loss attributable to the disposition of such property.

The term "material participation" as defined in §469(h) requires taxpayer involvement in the operation of an activity on a basis which is regular, continuous *and* substantial. However, any rental activity (other than with respect to working interests in oil and gas property and certain rental real estate activities undertaken by natural persons who "actively participate" within the meaning of §469(i)(6) in such activity) is included in the term "passive activity" without regard to whether the taxpayer materially participates in the activity.[27]

Note: While the material participation standard of §469 is based on §1402(a) (relating to the self-employment tax) and Code §2032A (relating to estate tax valuation of farm property), existing authorities interpreting §§1402(a) and 2032A are not expected to be controlling for purposes of the passive loss (and thus the investment interest) rules.[28]

Note: The active participation requirement is waived with respect to credits under §42 (low income housing) and §48(o) (rehabilitation).[29]

Conversely, the term "passive activity" does not include any working interest in any oil or gas property which the taxpayer holds directly or through an entity which does not limit the liability of the taxpayer with respect to such interest, regardless of whether the taxpayer materially participates in the activity.[30] Therefore, a working interest in oil or gas property held by the taxpayer through a general partnership interest would be subject to the investment interest limitations (assuming that the taxpayer does not materially participate in such activity) because it is not covered by the passive loss rules.

In a change from pre-1986 TRA law, property subject to a net lease is not treated as investment property, since it is treated as a passive activity under the passive loss rule.[31] Other exclusions from the investment interest limitations are (a) interest expense which in the same year is required to be capitalized (*e.g.*, construction interest subject to new Code §263A) and (b) interest disallowed under §265 (relating to tax-exempt interest).[32]

4. "Net Investment Income" Defined

As under pre-1986 TRA law, the term "net investment income" means the excess of investment income over investment expenses.[33] The term "investment income" in turn means the sum of the gross income from property held for investment and any net gain attributable to the disposition of such property, but only to the extent that such amounts are not derived from the conduct of a trade or business. §163(d)(4)(B).

In netting investment expenses against investment income, only those investment expenses that are allowed after

application of the 2% adjusted gross income floor for miscellaneous expenses are to be taken into account.[34] Moreover, in computing the amount of expenses that exceed the 2% floor, expenses that are not investment expenses are intended to be disallowed before any investment expenses are disallowed.

5. Persons To Whom Limitations Apply

As under pre-1986 TRA law, the investment interest limitation applies to any "taxpayer other than a corporation." [35] Therefore, as under prior law, individuals holding an interest in pass-through entities such as partnerships and S corporations should treat investment income and expenses as having flowed through to the partners and S corporation shareholders with any applicable limitation being imposed at the partner or shareholder level, as the case may be.[36] However, under the 1986 Act, it appears that characterization of the flow-through items as investment interest or expense may be made at the entity level. In discussing §469, the Senate Report on §469 contains the following example of the determination, at the limited partnership level, of whether certain items of income or loss of the partnership are characterized either as portfolio income and loss (which would be subject to the investment interest limitations) or income and loss from a passive activity (which would not be so subject to the passive loss limitations):

> "[A partnership that is engaged in the publication of a magazine] also holds a portfolio of dividend and interest-bearing securities, but the income from them is more than offset by the tax losses of operating the magazine. Each limited partner must separately account for his share of the portfolio income and the losses from the operations of the magazine, and may not offset them against each other in calculating his tax liability. The portfolio income retains its character as income that is not income from a passive activity, despite the fact that non-portfolio income and loss attributable to a limited partnership interest is treated as income or loss from a passive activity." [37]

As noted above, Prop. Regs. §1.57-2(b)(2)(i) implies that interest incurred to purchase or carry a partnership interest or S corporation stock would not be investment interest where the underlying assets are not investment assets. Under the 1986 Act, however, the treatment of interest incurred to purchase or carry a partnership or S corporation interest would appear to depend on whether or not the taxpayer holding such interest materially participates in the enterprise in which the partnership or S corporation is engaged.[38]

Presumably, the old rules, described above, apply in the case of trusts and estates, to the extent that trust and estate income is actually distributed to the beneficiaries. However, the Senate Report notes that the grantor of a grantor trust, through his material participation or lack of material participation in a business enterprise in which the trust holds an interest, may determine the characterization of the income or loss and the interest derived from that enterprise.[39]

6. The Tracing Problem

As noted above, if there is a connection in time and amount between a borrowing and expenditure, it may, in some cases, be inferred that the resulting indebtedness was incurred for the purpose of such expenditure.[40] However, making the connection between such an expenditure and indebtedness presents difficult problems of tracing not addressed by the 1986 Act. The Conference Report, in discussing standards appropriate for allocation of expenses and interest under the passive loss rule, suggests that regulations providing guidance to taxpayers with respect to interest allocation under that rule should be issued by December 31, 1986.[41] The Report states that

> "These regulations should be consistent with the purpose of the passive loss rules to prevent sheltering of income from personal service and portfolio income with passive losses. Moreover, the regulations should attempt to avoid inconsistent allocation of interest deductions under different Code provisions [such as §§265 or 291]." [42]

The Report suggests that, in the case of entities (but not individuals) a proper method of allocation (for purposes of the passive loss rules) may include allocation of interest to portfolio income on the basis of assets (although there may be situations in which tracing is appropriate because of the integrated nature of the transactions involved).[43] However, because of the difficulties of recordkeeping that would be required where interest expenses of individuals were allocated rather than traced, interest expense in the case of individuals generally will be traced to the asset or activity which is purchased or carried by incurring or continuing the underlying indebtedness.

7. Effective Dates

TRA 1986 provides a phase-in of the disallowance of deductions for investment interest under the new rules for calendar years 1987 through 1990.[44] Thus, the $10,000 investment interest threshold of former §163(d) is effectively phased-out over four years. Under the phase-out, 65% of up to $10,000 (a maximum of $6,500) of investment interest otherwise disallowed by revised §163(d) is allowed for taxable years beginning in 1987. Up to $4,000 (4% of $10,000) is allowed for taxable years beginning in 1988. A maximum of $2,000 (20% of $10,000) is allowed for taxable years beginning in 1989. Finally, for taxable years beginning in 1990, up to 10% of the $10,000 amount ($1,000) is allowed. The phase-out percentage only applies to investment interest expense incurred during the phase-out year in question. Investment interest suspended in a prior taxable year and carried to another year in the

[34] Conference Report II-153-154.

[42] *Id.*
[43] *Id.*
[44] §163(d)(6).

phase-out period may not be taken into account. *See* Conference Report at II-157.

The phase-in rules of the investment interest limitation are coordinated with the new passive loss rules of §469. Section 163(d)(4)(E) effectively provides that, during the four-year phase-in period of the §469 passive loss limits, the amount of any passive loss allowed under the phase-in will reduce investment income for purposes of determining the amount of investment interest that is allowable for the taxable year. However, the reduction of investment income for the phase-in loss will not be required as to any portion of such loss which is attributable to a rental real estate activity with respect to which the taxpayer actively participates during the taxable year.[45]

B. Personal Interest

Section 511(b) of TRA 1986 adds a new §163(h) which disallows a deduction for personal interest paid or accrued by noncorporate taxpayers during the taxable year. Section 163(h)(2) defines the term "personal interest" as any interest allowable as a deduction for income tax purposes other than:

(i) Interest paid or accrued on debt connected with the conduct of a trade or business (but excluding debt incurred while performing services as an employee);

(ii) Any §163(d) investment interest;

(iii) Any interest taken into account under the new §469 passive loss limits;

(iv) Any "qualified residence interest"; and

(v) Interest payable on estate tax deferred under §§6163 or 6166.

As noted above, the types of interest which will be disallowed under the foregoing include interest on debt incurred by an employee to purchase items such as a car or computer and interest that accrues on a tax deficiency. Excluded, however, are any interest subject to the revised §163(d) investment interest limits, any interest taken into account under the passive loss rules of §469, and any "qualified residence interest." Of these, the exclusion of "qualified residence interest" and the inclusion of interest on tax deficiencies will be of most interest to individual taxpayers.

1. Qualified Residence Interest Defined

Section 163(h)(3) defines "qualified residence interest" as interest paid or accrued during the taxable year on debt secured by a "qualified residence of the taxpayer (*i.e.*, the taxpayer's principal residence or second home) at the time the interest is paid or accrued. Under §163(h)(5), the second home is the residence designated by the taxpayer for the taxable year that it is used by the taxpayer or family member for personal purposes for the greater of (i) 14 days, or (ii) 10% of the number of days during the year for which the home is rented at a fair rental.[46] However, a second home may be treated as a qualified residence for the taxable year regardless of the lack of personal use if it is neither rented nor used as a residence at any time during the taxable year.[47]

Under §163(h)(3), qualified residence interest will not include any interest on debt secured by the residence to the extent the debt exceeds the lesser of:

(i) The fair market value of the residence; or

(ii) The sum of (a) the taxpayer's purchase price for the residence, (b) the cost of improvements, (c) the taxpayer's qualified medical expenses, and (d) the taxpayer's qualified educational expenses.

For purposes of clause (ii) above, the taxpayer's purchase price for the residence will be treated as not less than the outstanding aggregate principal amount of debt which was incurred on or before August 16, 1986, and which was secured by the qualified residence on August 16, 1986.[48]

Except as provided in regulations, the residence interest limitation is determined only as of the time the debt is incurred.[49] Thus, for example, if a residence that secures the debt declines in value after the debt is incurred, interest will not be disallowed as personal interest even if the value of the residence after the decline is less than the outstanding balance of the debt.

Under §163(h)(4)(B), qualified medical expenses are amounts incurred for medical care (within the meaning of §213(d)(1)(A), (B)) of the taxpayer, his spouse and dependents. However, insurance premiums as well as medical expenses that would be covered by insurance or otherwise do not constitute qualified medical expenses.

Qualified educational expenses are amounts paid for tuition and related expenses of the taxpayer, his spouse or dependents, as well as amounts paid for reasonable living expenses while away from home, while a student at a educational organization described in §170(b)(1).[50]

Qualified educational expenses and qualified medical expenses must be incurred within a reasonable period of time before or after the debt is incurred for the interest on the debt to be deductible as qualified residence interest.

Note that, for purposes of the revised alternative minimum tax for tax years beginning after 1986, the amount deductible under the residence limitation may be sharply reduced. Revised §§56(b)(1)(C) and (e) allow the deduction of interest only on debt incurred to acquire, construct or substantially rehabilitate the principal residence and second home. Interest on refinanced home debt is deductible only to the extent the refinanced debt does not exceed the amount of the refinanced indebtedness immediately before the refinancing.

2. Secured Debt Requirement; Cooperatives

Interest on debt, whether used for home improvements or qualified medical or educational expenses, will not be deductible unless the debt is secured by the taxpayer's principal residence or second home. The fact that state

[45] For an example of the interaction between the phase-in rules under the passive loss rules and the reduction in the taxpayer's net investment income under §163(d), *see* Conference Report at II-157, footnote 7.

homestead laws may restrict the rights of secured parties with respect to certain types of residential mortgages will not cause interest on the debt to be treated as nondeductible personal interest so long as the secured party's interest is perfected and the interest on the debt is otherwise qualified residence interest.[51]

Under §163(h)(5)(B), debt that is secured by housing cooperative stock held by a taxpayer as a tenant-stockholder (as defined in §216) is treated, for these purposes, as secured by the residence if the taxpayer is entitled to occupy the cooperative unit as a tenant-stockholder. If the stock may not be used as security by virtue of state or local law restrictions or pursuant to reasonable restrictions in the cooperative agreement, the stock may be treated as securing the debt if the taxpayer satisfies the Service that the debt was incurred to acquire the stock.

3. Interest on Deficiencies

As noted above, the interest on tax deficiencies is not deductible under the 1986 Act so any noncorporate taxpayer involved in an administrative or judicial proceeding involving prior tax shelter liabilities should consider paying the tax, and the interest thereon, and contesting the deficiency either in the Claims Court or the U.S. District Court rather than the Tax Court.

Rev. Proc. 84-58 [52] generally describes the rules for paying all or part of the tax and the interest on outstanding deficiencies without depriving the Tax Court of jurisdiction. Rev. Proc. 84-58 distinguishes between deposits made by taxpayers in the nature of "payments" and deposits in the nature of a "cash bond." Both stop the accrual of interest, but only a "payment" may be specifically allocated by the taxpayer to interest.

On October 23, 1986, the IRS issued a IR 86-144 and Ann. 86-108 [53] in which it interpreted and expanded upon the formal advice given in Rev. Proc. 84-58. The announcement was designed to provide guidance to taxpayers who wished to pay all or a portion of the interest accruing on outstanding deficiencies prior to the end of 1986, the last year for which an interest deduction thereon would be available (subject to the phase-in rules, discussed below). The announcement permits the taxpayer, in 1986, to designate that a portion of his payment be applied to interest in certain carefully delineated circumstances.[54]

4. Effective Date

The amendments to §163(h) disallowing the deduction of personal interest applies to taxable years beginning after December 31, 1986. However, as with investment interest, an "applicable percentage" of the taxpayer's personal interest will be deductible for taxable years beginning in 1987 through 1990.[55]

[51] Conference Report at II-156.

[55] §163(h)(6), cross referencing to §163(d)(6)(B) phase in rules for investment interest, discussed in II, A, 7 above.

C. Example

An example of the interaction between the passive loss rules, the investment interest limitation, the personal interest disallowance and other related provisions under the 1986 Act in a case in which a taxpayer owns a vacation home, subject to a mortgage, which is used partly for personal purposes and partly for business (rented) use follows:

(1) First, the taxpayer must determine the number of days of personal, as opposed to rental, use of the dwelling under §280A. Expenses (other than interest and taxes otherwise allowable) would then be allocated to each type of use, and disallowed to the extent attributable to personal use.[56]

(2) Next, the taxpayer must determine whether the dwelling meets the definition of a "residence" within the meaning of §280A(d)(1) and, thus whether the interest on the mortgage is "qualified residence interest" within the meaning of §163(d)(3)(B)(i), §163(h)(3) and§469(j)(7). Such definition will be met if the taxpayer, during the taxable year, uses the dwelling unit for personal purposes for the greater of (i) 14 days or (ii) 10% of the number of days during the taxable year that the dwelling is rented at a fair rental. If the dwelling is a "qualified residence":

(A) The passive activity loss (if any) of the taxpayer shall be determined without regard to the "qualified residence interest" attributable to the unit;[57]

(B) The investment interest limitation will not apply;[58]

(C) The rules governing the disallowance of a deduction for personal interest will not apply;[59] and

(D) The dwelling will qualify as a "residence" for purposes of §280A, and any deductions attributable to the fair rental of the unit (after deducting interest and taxes otherwise allowable) may not exceed the gross income derived from the fair rental of the unit for the taxable year.

Note: In addition to the foregoing, under the 1986 Act, the taxpayer's losses, if any, from rental of the unit may be deducted only to the extent that the taxpayer is "at risk" with respect to the activity.[60] In general, a taxpayer's "at risk" with respect to an activity to the extent of (i) the amount of money or property contributed, (ii) the amount of financing for which he is personally liable, and (iii) the amount of certain "qualified nonrecourse financing."

(3) If the dwelling does not meet the definition of "qualified residence" (whether or not the taxpayer materially participates in the rental activity:

(A) Any losses of the taxpayer (determined by taking into account the mortgage interest on the

[56] *See* Senate Report at 807; §280A(e)(1).
[57] §469(j)(7).
[58] §163(d)(3)(B)(i).
[59] §163(h)(2)(D).
[60] §465(a).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

unit) with respect to the rental of the unit will be subject to the passive loss rules, *except that*, if the taxpayer "actively participates" with respect to the rental activity (a standard requiring less personal involvement than material participation) he may deduct up to $25,000 (phased-out by 50% of the amount by which gross income exceeds $100,000) of the passive activity loss with respect to the activity;[61]

(B) Since the passive loss rules apply, the investment interest limitations will not apply.[62] This apparently is the case even where a portion of the passive activity loss is allowed under §469(i) by reason of the taxpayer's active participation in the activity;[63]

(C) That portion of the interest on the mortgage on the dwelling which is attributable to personal use arguably will be disallowed.[64] This is suggested by an example in the Senate Report [65] in which interest is first allocated to business use and personal use under §280A, and then that portion which is allocated to business, *i.e.*, rental, use would thereafter be tested under the rules applicable to investment interest under §163(d). In the final version of the 1986 Act, however, any rental activity was made subject to the passive loss rules,[66] thus removing it from the scope of both the investment interest limitation [67] and the personal interest disallowance.[68] It is unclear, however, under the passive loss rules, how interest (which is not qualified residence interest) is allocated between personal and business use in the case, *e.g.*, of a vacation home. If all of the interest thereon is treated as a passive activity expense, the effect may be to convert otherwise nondeductible personal interest to interest which is deductible, under the passive loss rules, to the extent of passive income.

(D) Although the expenses of the dwelling which are attributable to the rental of the unit may exceed the gross rental income from the unit under §280A, the deduction of the losses may be limited both by the passive loss rules and by the "hobby loss" provisions of §183.[69]

D. Miscellaneous Related Provisions

1. Amortizable Bond Premium Treated as Interest

Section 643 of the Tax Reform Act of 1986 amends §171(e) (relating to deduction of amortizable bond premium) to provide that, except as provided in regulations, the amount of any amortizable bond premium deductible under §171(a)(1) for any taxable year, shall be treated as interest for all purposes, including the investment interest limitations. This amendment generally applies to obligations acquired after October 22, 1986, in taxable years ending after such date.

2. Capitalization of Interest

Section 803 of the Tax Reform Act of 1986 adds new §263A to the Code which requires the capitalization of interest with respect to the production or construction of certain property, including all real property and all tangible personal property produced by the taxpayer which has (i) a class life of 20 years or more, (ii) an estimated production period exceeding two years, or (iii) an estimated production period exceeding one year and a cost exceeding $1,000,000. Capitalization is not required for personal use property. Under pre-1986 TRA law (§189), capitalized construction interest was amortizable over ten years instead of becoming a part of the basis of the asset. The amendment applies, with exceptions, to costs incurred after December 31, 1986, in taxable years ending after that date. However, property produced by the taxpayer for us by the taxpayer with respect to which substantial construction occurred prior to March 1, 1986 are grandfathered.[70]

In addition, under new Code §460(c)(3), taxpayers producing property under a long-term contract must capitalize interest costs to the extent income is not reported under the percentage of completion method. Conference Report at II-308-09. This amendment applies generally to contracts entered into after February 28, 1986.

3. Denial of Deduction for Interest on Loans From Certain Life Insurance Contracts

Act §1003 adds new §264(a)(4) (relating to the disallowance of a deduction for certain amounts paid in connection with insurance contracts) to provide that any interest paid or accrued on any indebtedness with respect to one or more life insurance policies owned by the taxpayer on the life of certain key employees and owners is disallowed to the extent that the total of the loans to such employees or owner exceeds $50,000.

In determining the total loans outstanding with respect to any one person, the $50,000 of permitted borrowings by the taxpayer with respect to life insurance covering that person is determined by aggregating all policies covering his life with respect to which the taxpayer has borrowed, even if these policies are held by more than one trade or business or more than one member of an affiliated group of the taxpayer.[71] The Conference Report further clarifies that the nondeductibility of interest on loans in excess of $50,000 is not affected by whether or not the proceeds of the loan are used in the trade or business of the taxpayer.[72]

The amendment to §264(a) is effective for contracts purchased after June 20, 1986 in taxable years ending after that date.

4. Alternative Minimum Tax Itemized Deductions

The Tax Reform Act of 1986 (§701) substantially revises the rules with respect to the computation of alterna-

tive minimum taxable income, including changes in the treatment of alternative tax itemized deductions, such as qualified interest expense. Under the Act, the definition of net investment income is conformed to the defintion adopted under §163(d) for regular tax purposes (although determined with regard to minimum tax items of income and deduction), and any investment interest deductions that are disallowed may be carried over.

Specifically, new Code §56(b)(1)(C) provides that, in determining the amount of interest allowable as an alternative minimum tax itemized deduction with respect to individuals, the investment and personal interest limitations of §163(d) and (h) shall apply with the following exceptions:

(i) Deductible personal interest includes "qualified housing interest" (as defined in §56(e)) instead of "qualified residence interest" (as defined in §163(h)(2)(D)). (*See* discussion, above.)

(ii) The phase-in periods under §163(d)(6) and §163(h)(6) do not apply for purposes of the alternative minimum tax. Therefore, during the four-year phase-in period, the amount of investment and personal interest deductible for minimum tax purposes will be less than that deductible for regular tax purposes; and

(iii) Interest on certain specified private activity bonds (generally those issued after August 1, 1986) will be treated as both includible in gross income and deductible under §163(d).

The minimum tax amendments apply generally to taxable years beginning after December 31, 1986.[73]

Chapter 6

DEDUCTION FOR MEALS, TRAVEL AND ENTERTAINMENT EXPENSES MODIFIED [ACT §142]

John Freeman Blake, Esq.
Silverstein and Mullens
Washington, D.C.

I. Overview

In its effort to restrict deductions in exchange for lower tax rates, the Tax Reform Act of 1986 makes major changes to the deduction available for business meals, travel and entertainment expenses. Several new restrictions are enacted for the deduction of business meals. First, the deduction for meals is generally cut back to 80% of the dollars expended for the business meal. Second, the substantiation requirements for business meals is stiffened. Third, in order for a deduction for a business meal to be taken, the taxpayer or his representative must be present at the meal.

The deduction for entertainment expenses are also restricted in a number of ways. First, the deduction is generally limited to 80% of the expense. Second, the deduction is limited to the cost to the taxpayer, unless the entertainment is connected with a charitable fund raising event. Third, deductions for the rental skyboxes at sporting events and facilities are limited to the cost of the highest price ticket available to the general public.

The deduction for travel expenses is also restricted in a number of ways. First, so-called "luxury water travel" is deductible only to the extent of the federal per diem available to federal employees. Second, travel as a form of education is no longer deductible. Third, travel for charitable purposes is not deductible unless there is no significant element of pleasure associated with the travel.

Finally, a new rule eliminates the deduction under §212 for the costs of attending a convention. This new rule affects taxpayers who deducted these costs as an expense incurred in the production of investment income, but does not affect taxpayers who deduct these costs as an expense incurred in the active conduct of a trade or business under §162.

II. Pre-TRA 1986 Law

Code §162 allows a deduction for ordinary and necessary business expenses. Code §212 allows similar deductions for expenses incurred in the production of investment income. In order for an activity to be deductible under either §162 or §212, the taxpayer must establish a business purpose for the expense. In the case of meals, the taxpayer must show that the business meal was conducive to the carrying on of the taxpayer's business or investment activities. In the case of other entertainment expenses and travel expenses, Code §274 requires the taxpayer to establish that, in addition to constituting ordinary and necessary business expenses, they are either directly related to the active conduct of the taxpayer's business, or, if directly preceding or following a substantial and bona fide business discussion, associated with the active conduct of the taxpayer's business.[1]

No deduction is allowed for personal, family, or living expenses, or for otherwise deductible expenses (including meals) to the extent that the expenses are lavish and extravagant under the circumstances.[2]

Section 274 also sets forth certain substantiation requirements for business expense deductions, which, if not met, result in the disallowance of a claimed deduction. The substantiation requirements of §274(d) must be met as a condition for deductibility of the following types of expenses:

(1) traveling expenses (including meals and lodging while away from home);[3]

(2) entertainment expenses, amusement expenses, or expenses for recreation activities or facilities expenses with respect to entertainment;

(3) business gifts; and

(4) expenses relating to luxury automobiles and other so-called listed property which is used for both personal and business activities (as defined in §280F(d)(4)).[4]

To deduct these expenses, §274(d) requires that the taxpayer must substantiate the following facts by adequate records, or sufficient evidence corroborating the taxpayer's statement:

(1) the amount of the expense or item;

(2) the time and place of the travel, entertainment, amusement, recreation, or use of the facility or property, or the date and description of the gift;

(3) the business purpose of the expense or other item; and

(4) the business relationship to the taxpayer of persons entertained, using the facility or property, or receiving the gift.

---

[1] Code §274(a)(1). For all purposes under §274, expenses incurred for the production of investment income (§212 expenses) are treated as if they had been incurred in the active conduct of a trade or business (§162 expenses).

[2] *See* §162(a)(2).

[3] Note that business meals are not subject to the substantiation requirements of §274 unless the meal is consumed while traveling away from home.

[4] §274(d).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

To meet the adequate records standard under Regs. §1.274-5(c), documentary evidence (such as receipts or paid bills) is required for any expenditure of $25 or more (except certain transportation charges).

No deduction or credit generally is allowed for the cost of purchasing or constructing entertainment facilities known as skyboxes (*see* §274(a)(1)(B)).

Travel expenses, other than lavish and extravagant expenditures for meals or lodging, incurred by a taxpayer while away from home in the conduct of a trade or business generally are deductible if substantiated pursuant to §274. No special rules limit otherwise allowable deductions for the costs of luxury water transportation. However, limitations do apply to cruise ship conventions,[5] and to foreign conventions.[6]

In the case of educational travel, traveling expenses may be deductible as business expenses if the taxpayer establishes that the travel (1) directly maintains or improves existing employment skills, and (2) directly relates to the taxpayer's duties in his or her employment or trade or business, and if the taxpayer substantiates the expenses as required by §274. No deduction is allowable unless the travel is undertaken primarily to obtain education. In addition, even if the travel meets this primary purpose test, no deduction is allowed for expenses allocable to personal activity incidental to the primary business activity (*see* H.R. Rep. No. 841, 99th Cong., 2d Sess. p. II-29 (1986) ("Conference Report")).

Traveling expenses away from home may also give rise to a charitable deduction if the taxpayer establishes that the travel expenses (whether paid directly by the individual or indirectly through a contribution by the individual to the charity, which then pays for the individual's travel) are incurred in rendering services to a qualified charitable organization, and if the taxpayer substantiates the expenses as required by §170(a)(1) and the regulations (*see* Conference Report, p. II-29).

The costs of attending a convention or seminar incurred in carrying on a trade or business are deductible under §162, subject to substantiation requirements of §274. However, no deduction is allowed for the cost of attending a convention outside of the North American area (*i.e.*, not in the United States, Canada, Mexico, or certain Caribbean countries) unless the taxpayer can show that it was as reasonable to hold the convention there as in the North American areas.[7] Certain Caribbean countries, including Bermuda, are treated as in the North American area if they make available certain tax information to U.S. authorities and if other specified requirements are met.

III. Changes made by the Tax Reform Act of 1986

A. Meal Expenses

Act §142 retains the deduction for business meals, but stiffens the substantiation requirements, imposes a new requirement that the taxpayer be present at the meal in order to deduct it, and reduces the deduction to 80% of the amount expended.

The 80% limitation is contained in new Code §274(n) and applies to both meal and entertainment expenses. The cutback for meals generally applies to all meal expenses, including meals away from home and meals furnished on an employer's premises to its employees (whether or not the meals are excludable from the employee's gross income under §119).

New Code §274(n)(2) provides for certain exceptions to the 80% limitation. Meals which fall within one of the following exceptions are fully deductible by the taxpayer:

(1) reimbursed meal expenses (in which case the employer or person making the reimbursement is subject to the 80% rule);

(2) employer-furnished meals that are excludable from the employee's gross income as *de minimis* fringes under Code §132(e) (including meals at certain eating facilities excludable under §132(e)(2));

(3) meals fully taxed to the recipient as compensation; and

(4) items sold to the public (such as expenses incurred by restaurants or dinner theaters for food or entertainment provided to their customers), or furnished to the public as samples or for promotion (such as expenses incurred by a hotel in furnishing complimentary lodging to potential customers).

According to the conference agreement accompanying the Act, a restaurant or catering firm may deduct 100% (rather than 80%) of its costs for food and beverage items, purchased in connection with preparing and providing meals to its paying customers, even though some portion of the items are consumed at the work site by employees of the restaurant or caterer.[8]

The Act also toughens the substantiation requirements applicable to business meals by providing that the deduction for meals is subject to the same business-connection requirement as applies under present law for other entertainment expenses. The Conference Report, p. II-26, states that a food or beverage expense, therefore, is not deductible unless the taxpayer establishes that the item was directly related to the active conduct of the taxpayer's trade or business, or, in the case of an item directly preceding or following a substantial and bona fide business discussion (including business meetings at a convention or otherwise), that the item was associated with the active conduct of the taxpayer's trade or business. Under this standard, no deduction is allowed unless business is discussed during, or directly before or after, the meal (except where a taxpayer is traveling away from home on business has a meal alone or with persons, such as family members, who are not business-connected, and a deduction is claimed only for the meal of the taxpayer).

In addition to the present-law rule contained in §162(a)(2) which disallows deductions for travel expenses (including meals) to the extent that they are deemed to be

[5] *See* Code §274(h)(2)
[6] *See* Code §274(c).
[7] *See* §274(h).
[8] *See* Conf. Rep., p. II-25.

lavish and extravagant, the Act contains a separate statutory prohibition specifically for lavish or extravagant business meals. This new disallowance rule applies whether or not the expense is incurred while the taxpayer is away from home, and whether the taxpayer incurs the expense alone or with others. New code §274(k)(1)(A) provides that no deduction is allowed for any food or beverage expense *unless* the expense is *not* lavish or extravagant under the circumstances. The wording of this disallowance rule differs from that contained in §162(a)(2), and appears on its face to be more restrictive than the current rule. Under the statutory language of new Code §274(k)(1)(A), if a meal is deemed to have been lavish or extravagant under the circumstances, the entire expense may be disallowed. This result would not occur under §162(a)(2), which disallows an expense only *to the extent* that it is deemed to have been lavish or extravagant.

While the statutory language of new §274(k)(1)(A) appears to disallow the entire expense if any portion is deemed to have been lavish or extravagant, it is not clear that this was the legislative intent of the new section. The conference agreement that accompanies the Act explains the interrelationship of the 80% limitation and the lavish and extravagant rule with the following example:

Example: Since the 80% reduction rule is applied only after determining the otherwise allowable deduction under §§162 and 274, if a taxpayer incurs otherwise deductible business lunch expenses of (for example) $80 for himself and if $30 of that amount is not allowable as lavish or extravagant, the remaining $50 is then reduced by 20%, leaving a deduction of $40.[9]

The language of new §274(k)(1)(A) comes directly from the House-passed version of the Act.[10] In addition, both the House Ways and Means Committee Report and the Senate Finance Committee Report accompanying each house's version of the Act contained the same example as was contained in the conference agreement.[11] Based upon this legislative history, it is clear that the various legislative staffs had in mind a disallowance similar in nature to that contained in §162(a)(2), which would disallow an expense only *to the extent* that the expense was lavish or extravagant.

Finally, to further curb the deduction for meals, new Code §274(k)(1)(B) provides that no deduction for food or beverage expenses is allowed unless the taxpayer or an employee of the taxpayer is present at the furnishing of the food or beverages (except where a taxpayer is traveling away from home on business has a meal alone or with persons, such as family members, who are not business-connected, and a deduction is claimed only for the meal of the taxpayer). For purposes of this rule, an independent contractor who renders significant services to the taxpayer (such as an attorney representing the taxpayer in a legal proceeding) is treated as an employee if he or she attends the meal in connection with the performance of the services.[12]

The Act includes a special exception to the 80% deductibility rule applicable during the calendar years 1987 and 1988 for costs for meals that are provided as an integral part of a qualified banquet meeting. A qualified banquet meeting is a convention, seminar, annual meeting, or similar business meeting (including meetings held at an employee training facility) if the following conditions are met: (1) the program includes the meal, (2) more than 50% of the participants are away from home, (3) there are at least 40 attendees, and (4) the meal event includes a speaker.[13]

B. Business Entertainment

Act §142(b), enacting new Code §274(n) reduces to 80% the amount of deduction otherwise allowable for business entertainment expenses. New Code §274(n)(2) provides exceptions allowing full deductibility for the following entertainment expenses:

(1) reimbursed entertainment expenses (in which case the employer or person making the reimbursement is subject to the 80% rule);

(2) traditional employer-paid recreational expenses for employees (*e.g.*, a holiday party);

(3) items fully taxed to the recipient as compensation, or excludable from income as §132(e) *de minimis* fringe benefits;

(4) items sold to or made available to the general public (*e.g.*, as promotional activities); and

(5) tickets and related expenses at certain charitable fund raising sports events.

In addition, under new Code §274(l)(1)(A), no amount of ticket costs in excess of the face value of the ticket is deductible, except in the case of tickets for certain charitable fund raising sports events.[14] According to the conference agreement accompanying the Act, the limitation to the face value amount applies prior to application of the 80% rule.[15]

Apart from the generally applicable entertainment facility rules, the Act disallows deductions for costs of rental or other use of a skybox or other private luxury box ("skybox") at a sports arena (to the extent the deductions are in excess of the cost of regular box seat tickets) by the taxpayer or a related party for more than one event (as determined taking into account all skybox rentals by the taxpayer in the same arena, along with any related rentals).[16] The skybox deduction disallowance rule is phased in over three years. The amounts disallowed for taxable years beginning in 1987 and 1988 are, respectively, one-third and two-thirds of the amounts that otherwise would be disallowed under the Act if the provision were fully effective in those years.[17]

Notwithstanding this disallowance rule, two types of expenses related to a skybox still may be deductible, subject to the 80% rule, if they meet the generally applicable requirements for deducting business entertainment ex-

[16] *See* new Code §274(l)(2)(A).
[17] *See* new Code §274(l)(2)(B).

penses. First, an amount not exceeding the face values of the highest-priced nonluxury box seats generally held for sale to the public on an event-by-event basis, multiplied by the number of seats in the skybox, is deductible. For example, if a category of box seats represents the highest-priced seats available (other than in skyboxes) and is offered to the public on a first-come, first-served basis, the face value of such box seat may be used in the deduction computation. On the other hand, the price of a limited number of seats that generally are made available by management only to a select group of purchasers (and not offered to the public generally) cannot be used in computing the allowable deduction for the skybox seats. Second, the deductibility of separately stated charges for food or beverages is determined under the rules generally applying to business meals (described above), including the percentage reduction rule and the disallowance of lavish or extravagant expenditures.[18]

C. Travel Expenses for Business, Education and Charitable Activities

The Act restricts the deduction for travel on luxury water transportation. Under new Code §274(m), the amount of any otherwise allowable deduction for the costs of a cruise ship or other luxury water transportation is limited to twice the highest federal per diem for travel in the United States, times the number of days in transit. This limitation does not apply with respect to expenses of cruise ship conventions, which remain subject to present-law limitations (§274(h)(2)), or where an exception to the 80% deduction rule applies.

The Act also restricts deductions for educational travel. Under new Code §274(m)(2), no deduction is allowed for costs of travel that would be deductible only on the ground that the travel itself constitutes a form of education. This provision overrules Regs. §1.162-5(d) to the extent that the regulation allows deductions for travel as a form of education. To explain the extent of this limitation, the Conference Report gives as examples of non-deductible travel the situations where a teacher of French travels to France to maintain general familiarity with the French language and culture, or where a social studies teacher travels to another state to learn about or photograph its people, customs and geography.[19] However, it would appear that if a person employed as a researcher travels to France for the specific purpose of reviewing documents not elsewhere available, the deduction would continue to be allowed.

The present-law rule applicable to medical deductions for lodging costs away from home (§213(d)(2)(B)) is extended to charitable deductions claimed for transportation and other travel expenses incurred in performing services away from home on behalf of a qualified charitable organization.[20] Under this rule, no deduction is allowed for travel expenses incurred in connection with work performed for a charity unless there is no significant element of personal pleasure, recreation, or vacation in the travel away from home. This is true whether the expense is paid directly by the individual or indirectly through a contribution to the organization. As under present law, an otherwise qualifying charitable deduction is deductible only if properly verified, and no charitable deduction is allowable for a contribution of services to a charitable organization.

D. Travel Expenses for Attending Conventions

The Act prohibits deductions for the costs of attending conventions which have been deductible as an expense incurred in the production of investment income under Code §212. Act §142(c) amends Code §274(h)(7) and provides that no deduction is allowed under §212 for travel or other costs of attending a convention, seminar, or similar meeting. Thus, registration fees, travel and transportation costs, meals, lodging expenses and other similar expenses incurred in connection with attending a convention, seminar, or similar meeting relating to investments, financial planning, or other income-production or §212 activities are not deductible. This disallowance rule does not apply to expenses incurred by a taxpayer in attending a convention, seminar, sales meeting, or similar meeting relating to the active conduct of a taxpayer's trade or business (within the meaning of §162).

IV. Effective Date

The changes made by Act §142 are effective for taxable years beginning after December 31, 1986.[21]

MODIFICATION OF SPECIAL INDUSTRY DEDUCTIONS

Jane M. Eldredge, Esq.
Lucia N. Smeal, Esq.
Silverstein and Mullens
Washington, D.C.

I. Limitation on Expensing of Soil and Water Conservation Expenditures

A. Introduction

A taxpayer may elect to expense (currently deduct) certain soil and water conservation expenses, pursuant to §175 of the Code, that would otherwise be added to the basis of the land on which the conservation action occurs. The deductible conservation expenses include costs of grading, terracing and contour furrowing, the construction of drainage and irrigation ditches, dams and ponds, the planting of wind breaks, and the eradication of brush.

In any one taxable year, a taxpayer may not deduct more than 25% of his gross income derived from farming. Any excess costs must be carried forward to succeeding taxable years.[1]

B. Detailed Analysis

1. New Conservation Plan Requirement

The Tax Reform Act of 1986 ("the Act") retains the taxpayer's option to elect to currently deduct expenditures incurred for the purpose of soil or water conservation. However, §401 of the Act adds new §175(c)(3) to limit the deduction's availability to those expenses incurred pursuant to a conservation plan approved by the Soil Conservation Service of the U.S. Department of Agriculture or a comparable state agency.

The Conference Committee Report[2] clarifies that an individual taxpayer's specific project does not require prior approval by a state or federal agency in order for the expenditures to qualify for the deduction; but, that an overall conservation plan which includes the taxpayer's land must be in effect at some time during the taxable year in which the taxpayer takes the deduction for conservation expenses.

2. Deductions for Expenditures on Wetlands and Center Pivot Irrigation System Repealed

New §175(c)(3)(B) specifies that deductions will no longer be available for expenditures incurred during the draining or filling of wetlands. Neither will a taxpayer be able to expense the costs of preparation of the land or the costs of the installation or operation of a center pivot irrigation system.[3]

The rationale expressed in the Report of the Senate Finance Committee[4] is that the availability of deductions for these expenses may have encouraged the present overproduction of agricultural products. The Senate Committee stated that it desired to "eliminate tax biases" in agricultural business decisions.[5]

C. Effective Date

These limitations are effective for expenditures made after December 31, 1986.

II. Repeal of Land Clearing Expense Deduction

Section 402 of the Act repealed the former election under §182 to expense the costs incurred in clearing land to make it suitable for farming. This repeal is a result of Congressional concern that too much land is going into agriculture for tax rather than prudent business reasons.[6] The Senate Committee Report clarified that the repeal of §182 does not repeal the deductibility of ordinary and necessary brush clearing or other expenses under §1672 which are necessary for maintenance of farm ground. It only repeals the deduction for brush clearing necessary to first use the land for agricultural purposes.

The repeal of the deduction is retroactive. It is effective for expenditures made after December 31, 1985.

III. Limitation on Certain Prepaid Farming Expenses

A. Introduction

Deductions allowed to be taken by farming syndicates had been limited even before the Tax Reform Act of 1986. Section 464(c) of the Code defines a farming syndicate as a partnership or corporation which is not an S corporation, engaged in the trade or business of farming, which either has shares or other interests which have been treated as if they were registered securities, or in which more than 35% of the losses are allocable to limited partners.

If a farming operation is classified as a farming syndication, a deduction is allowed for feed, seed, fertilizer or other farm supplies only in the taxable year in which those items are consumed, regardless of whether the taxpayer uses a cash basis or accrual method of accounting.

B. Detailed Analysis

The Act extends these farming syndicate limitations to certain other farming expenses. The Senate Finance Committee was concerned about the use of farming tax shelters by syndicators and others to create prepaid farming expenses in order to defer or escape taxation of nonfarm income.[7] Therefore, §404 of the Act limits deductions for "certain prepaid farming expenses." In general, a farmer using the cash method of accounting may not deduct prepaid farming expenses that exceed 50% of the deductible farming expenses (excluding prepaid farming expenses) for that taxable year.

Section 404 of the Act adds new §464(f) to the Code. Section 464(f)(2) applies to any farmer who (i) does not use the accrual method of accounting; (ii) has "excess prepaid farm supplies;" and (iii) is not a "qualified farm-related taxpayer."

"Excess prepaid farm supplies" are defined at §464(f)(4) to describe the costs of feed, seed, fertilizer or other similar farm supplies paid for the taxable year in which they were used, which costs would be allowable as deductions in subsequent taxable years when the supplies were used, but only to the extent these prepaid amounts exceeded 50% of the deductible farming expenses excluding prepaid supplies. The prepaid costs which are greater than 50% of the ordinary and deductible farming expenses are in excess of the amount which may be deducted by the taxpayer.

If an individual is a "qualified farm-related" taxpayer, the additional limitations do not apply. Code §464(f)(3) defines a qualified farm-related taxpayer as a taxpayer (i) whose principal residence is on a farm; or (ii) whose principal occupation is farming; or (iii) who is a member of a family whose principal residence is on a farm or whose principal occupation is farming; and for whom the aggregate prepaid farm supplies for the three preceding tax years are less than 50% of the aggregate deductible farming expenses, excluding prepaid farm supplies, for the same three-year period.[8] If the prepaid expenses have not been excessive in the past three years, the taxpayer will not be penalized for a one-year deviation.[9]

The second exception to the 50% test occurs if the taxpayer has excess prepaid farm supplies because of a change in his business operation due to extraordinary circumstances. For instance, a fire which destroyed all of a farmer's feed may require excessive prepaid expenses to replenish.

C. Effective Date

Section 404 of the Act applies to the deduction of costs paid or incurred for farm supplies after March 1, 1986, in taxable years beginning after that date.[10]

IV. Deduction for Intangible Drilling Costs and Mineral Exploration and Development Costs Modified

A. Introduction

Intangible drilling and development costs (IDCs) generally include expenditures for the preparation of wells for production and drilling for oil, gas or geothermal energy. IDCs include labor and material costs to clear and drain a well site, construct access roads, survey, build derricks or other necessary structures and to drill, shoot, fracture and clean the wells.[11] Prior to the TRA of 1986, persons holding an operating or working interest in an oil, gas or geothermal property could elect to expense (currently deduct) the costs of all IDCs or capitalize the costs and recover them through depletion or depreciation deductions.[12] Domestic and foreign IDCs were subject to the same tax rules. However, "integrated" producers (those who are also retailers or refiners) as defined in §291(b) of the Code could deduct only 80% of their IDCs. The remaining 20% of costs was required to be amortized over a 36-month period starting with the month in which the costs were paid or incurred.[13] All of the expenses for a nonproductive well, or "dry hole," could be expensed in the year the dry hole was completed.[14]

Mineral exploration and development costs include the costs of determining the existence, location, extent, quality of a mineral deposit and costs of constructing, preparing or drilling a mine for production. Prior to the TRA of 1986, a taxpayer could elect to expense or capitalize those costs regardless of whether they were domestic or foreign. The only limitations on the expensing of the costs applied to corporate taxpayers, who were required to capitalize 20% of the exploration and development costs using the schedule for 5-year accelerated cost recovery system (ACRS).

B. Overview and Analysis

1. Intangible Drilling Costs

a. General Rule

Under the TRA of 1986, taxpayers with operating or working interests in a well may still elect to expense the intangible drilling and development costs incurred in connection with the domestic production of oil, gas or geothermal properties. Foreign IDCs are treated differently because of the depressed oil industry in the United States and the strong competition from foreign markets.[15]

b. Integrated Producers

The percentage of domestic IDCs of "integrated producers" that may be expensed is reduced under the Act from 80% to 70% of total IDCs. The remaining 30% of costs must be amortized ratably over a 60-month (5-year) period starting with the month in which the costs are incurred or paid.[16] Integrated producers may still expense

the costs of a dry hole in the year in which the dry hole is completed.[17]

c. Foreign IDCs

Under Code §263(i) as added by Act §411(b), all IDCs incurred outside of the United States, at the election of the operator, may be: (i) amortized over a 10-year straight-line amortization schedule; or (ii) recovered as part of the basis through cost depletion.

The election to currently deduct all expenses of a foreign dry hole in the year the dry hole is completed is not changed by TRA 1986.

d. Exception to Foreign IDC Treatment

The changes to the treatment of foreign IDCs do not apply to IDCs incurred by domestic "companies pursuant to a minority interest in a license for Netherlands or United Kingdom North Sea development if such interest was acquired on or before December 31, 1985." [18]

2. Mineral Exploration and Development Costs

a. General Rule

The TRA of 1986 treats the taxation of oil, gas, geothermal and hard mineral production in a similar manner as a result of the currently depressed markets and the serious international competition among suppliers of these products.[19] Thus, the noncorporate taxpayer retains the option to currently deduct all exploration and development costs.

b. Corporation Rule Modified

Act §411 amends Code §291(b)(1) to require corporations to amortize 30%, rather than 20%, of their exploration and development costs. The amortization must be ratable over a 60-month period beginning in the month the costs are paid or incurred.

c. Foreign Exploration and Development Costs

Act §411(b) added a new §616(d) to provide that the exploration and development costs for minerals outside the United States are recovered at the taxpayer's election either: (i) over a 10-year straight-line amortization schedule; or (ii) as part of the basis for cost depletion.

C. *Effective Date*

The modification to the treatment of IDCs and mineral exploration and development costs is effective for costs paid or incurred after December 31, 1986.

V. Modification of Percentage Depletion Rules

A. *Introduction*

The pre-drilling costs of acquiring an oil or gas lease and the geological or geophysical costs incurred before any actual drilling occurs may be recovered either by the use of cost depletion or percentage depletion, whichever yields the larger deduction. The amount recovered under cost depletion cannot exceed the taxpayer's basis in the property. Under this method of depletion the taxpayer deducts the portion of the adjusted basis in the oil or gas property equal to the ratio of units of gas or oil sold from that property during the taxable year to the number of units at the beginning of the taxable year.

Percentage depletion allows the independent producer or royalty holder to deduct 15% of his gross income from an oil or gas producing property up to 50% of the net income from that property in any one taxable year.[20] All deductions for all oil and gas properties may not be greater than 65% of the taxpayer's overall taxable income.[21]

The Tax Reduction Act of 1975 added §613A to limit the availability of percentage depletion to independent producers and royalty owners. Percentage depletion was no longer available to "integrated producers," who are also retailers or refiners of oil or gas. In addition, percentage depletion was limited further. Independent producers could take percentage depletion for up to 1,000 barrels of average daily production of domestic crude oil or the equivalent in gas production.

For hard minerals, taxpayers may elect to use cost depletion or percentage depletion to recover acquisition and certain other related costs of mines and mineral deposits. Taxpayers must use whichever method produces the larger deduction.[22] Cost depletion reduces the adjusted basis of the mineral interest in a proportion equal to the ratio of the number of units sold from the property during the taxable year to the number of units at the beginning of the taxable year. On the other hand, percentage depletion is computed as a statutory percent of the taxpayer's gross income. The particular statutory percentage is set forth in §613(b) of the Code and varies from 5% to 22% depending on the type of mineral. There is no relationship between the statutory percentage and the taxpayer's basis in the property. If the taxpayer is a corporation, its percentage depletion of coal or iron ore, in excess of adjusted basis, is reduced by 15%.[23]

B. *Detailed Analysis*

1. Limitations of Percentage Depletion for Oil and Gas

After the 1975 Tax Reduction Act depletion amendments, it was not clear whether lease bonuses, advance royalties or other payments in advance of actual production from oil or gas properties were entitled to percentage depletion. In January 1984 the Supreme Court, in *Commissioner v. Engle*,[24] held that percentage depletion is available with respect to oil and gas lease bonuses or advance royalty payments. In June of 1984 the IRS announced the manner for determining the percentage depletion by recipients of bonuses and advance royalties.[25]

[25] House Report at 206, which cites I.R. Ann. 84-59, 1984-23 I.R.B., June 4, 1984.

Section 412 of the Act added Code §613A(d)(5) and §613(e)(4) to deny the availability of percentage depletion for lease bonuses, advance royalties or other payments without regard to actual production of oil, gas or geothermal properties, thus reversing the *Engle* decision.

This limitation applies to all amounts received or accrued after August 16, 1986.

2. Modification of Corporate Preference Items Relating to Hard Minerals

Section 412 of the Act increases the amount of the reduction of the available percentage depletion deduction from 15% to 20%. This amendment to §291(a)(2) of the Code is effective for taxable years beginning after December 31, 1986.

3. Percentage Depletion Available for Royalty Income From Coal and Domestic Iron Ore

Section 311 of the Act repeals corporate capital gains treatment for income from coal and domestic iron ore royalties resulting in the availability of percentage depletion under §631(c) for these amounts. (See Chapter 34 of this TRA Portfolio.)

This change is effective for all taxable years beginning after December 31, 1986.

VI. Repeal of Amortization of Railroad Grading and Tunnel Bores

Under Code §185 prior to its amendment by TRA 1986, domestic common carriers could elect to amortize over 50 years the adjusted basis of land improvements for railroad grading and tunnel bores. Qualified railroad grading and tunnel bores include all improvements resulting from excavations, construction of embankments, clearings, diversions of roads and streams, tunneling, and sodding of slopes necessary to construct, reconstruct, alter, protect, improve, replace or restore a right-of-way for railroad track.[26]

The §185 election for 50-year amortization of qualified railroad grading and tunnel bores is repealed under §242 of TRA 1986. As a result, such expenditures must now be capitalized and recovered upon disposition of the asset.

In general, repeal is effective for the portion of the basis of property attributable to expenses paid or incurred on or after January 1, 1987, the general effective date of the Act.[27] However, limited transition rules are provided. The election is still available for costs incurred pursuant to a binding contract entered into before March 2, 1986.[28] In addition, the election will still be permitted for costs incurred for construction, reconstruction, alteration, improvement, replacement, or restoration begun before March 2, 1986, but only if the lesser of $1 million or 5% of the cost has been incurred or committed before that date.[29] However, for either transition provision to apply, the improvements must be placed in service before January 1, 1988.[30]

[28] Act §242(c)(2)(A).
[29] Act §242(c)(2)(B).
[30] Act §242(c).

VII. Deduction for Bus and Freight Forwarder Operating Authority

Until enactment of the Bus Regulatory Reform Act of 1982,[31] intercity bus operators had to obtain operating permits from the Interstate Commerce Commission for particular routes. Only a limited number of permits were granted, giving protection against competition to some carriers. Thus, these authorities were considered a substantial part of a bus operator's assets and could be used as loan collateral.[32] Deregulation in 1982 increased the number of authorities granted and so authorities held previously became essentially worthless.[33]

Prior to the enactment of TRA 1986, no deduction was allowed for the decline in value of bus operating permits or licenses or freight forwarder operating authorities resulting from legislation which expanded the number of permits or licenses issued. The courts have denied the deduction on the ground that such permits and licenses continue to have value because the taxpayer is permitted to carry on the business.[34] However, under §266 of the Economic Recovery Tax Act of 1981,[35] motor carriers were granted a special 60-month deduction for the loss in value of operating authorities resulting from deregulation of the industry under the Motor Carrier Act of 1980.[36]

Section 243 of TRA 1986 amends §266 of the Economic Recovery Tax Act of 1981[37] to extend the 60-month ratable deduction allowed for motor carrier operating authorities to bus operating authorities. The deduction is based on the adjusted bases of the authorities. Eligible bus operating authorities include those issued under subchapter II of chapter 109 of title 49, United States Code and those issued for intrastate transportation of passengers by the appropriate State agency.[38] Further, only permits held on November 19, 1982 (the date of enactment of the Bus Regulatory Reform Act) or acquired under a binding contract in effect on that date are eligible for the 60-month deduction.[39]

The 60-month deduction is also extended to freight forwarder operating authorities.[40] However, for freight forwarders, the deduction is dependent on deregulation.[41] Also, the 60-month period begins with the later of the deregulation month or, at the election of the taxpayer, the first month of the taxpayer's first taxable year beginning after the deregulation month.[42] The "deregulation month" is defined as the month in which the Treasury Secretary determines that a federal law has been enacted which deregulates the freight forwarding industry.[43] For an au-

thority to qualify, it must be held at the beginning of the 60-month period,[44] and the adjusted basis for authorities for purposes of the deduction may not exceed the adjusted basis as of the start of the applicable 60-month period.[45]

As stated above, only bus operating authorities held on November 19, 1982, or acquired after that date under a binding contract in effect on that date are eligible for the 60-month deduction.[46] Hence, the effective date for the bus operating authority deduction is retroactive to taxable years ending after November 18, 1982.[47] Accordingly, the Act extends the statute of limitations for filing refund and credit claims for overpayments resulting from the new deduction. If a refund or credit claim is barred on or before one year after the date of enactment of TRA 1986 (October 22, 1986), the refund or credit may be allowed if a claim is filed on or before the date which is 18 months after the date of enactment.[48]

For freight forwarders, the effective date is for taxable years ending after the month preceding the deregulation month.[49]

Washington, D.C.

I. Modification of Hobby Loss Deduction

A. Introduction

Under §183 of the Code, no deductions are permitted (except those specifically allowed by that section) with respect to an activity engaged in by an individual or S corporation if the activity is "not engaged in for profit." An activity not engaged in for profit is one for which deductions are not allowable as trade or business expenses,[1] expenses for the production or collection of income,[2] or expenses for the management, conservation, or maintenance of property held for the production of income.[3] Therefore, if a taxpayer shows that his activity constitutes a trade or business or is undertaken for the production of income, which, in turn, requires the taxpayer to demonstrate a profit motive in entering into the business or income-producing activity, the deduction limitation of §183 does not apply.

The courts generally apply a facts and circumstances test to determine whether a particular activity constitutes a not-for-profit activity. The Tax Court has applied a "predominant profit motive" test,[4] while the Claims Court has created a standard which calls for entering a transaction "with the objective of, and a reasonable chance of making, a reasonable profit apart from tax considerations." [5] However, §183(d) creates a statutory presumption of profit intent if the gross income from the taxpayer's activity exceeds the deductions attributable to that activity for at least two taxable years out of the five consecutive taxable years ending with the taxable year under consideration. The Commissioner can rebut this statutory presumption, however.[6] A special rule applies in the case of activities consisting in large part of the breeding, training, showing or racing of horses. In this case, there is a presumption of profit intent if gross income exceeds deductions for two or more of the seven consecutive taxable years ending in the taxable year in question.[7]

In some cases, taxpayers have arranged a profit through the sale of assets or have managed to show a slight profit, sometimes through accounting manipulations. The Tax Court has generally ignored these schemes,[8] but the nature of the §183(d) presumptions tends to encourage their use.

B. Overview

Under the Tax Reform Act of 1986 (the "Act"), the number of taxable years in which gross income must exceed deductions for purposes of the statutory presumption of profit intent is expanded from two years to three years. Act §143(a). In the case of the presumption relating to the breeding, training, racing, or showing of horses, however, the number of taxable years in which a profit must be shown remains two out of seven. Under a provision (Code §67) limiting the deductibility of miscellaneous itemized deductions, deductions for hobby expenses (other than those costs which are otherwise deductible without reference to whether they were incurred in an activity engaged in for profit will be disallowed except to the extent that they exceed 2% of adjusted gross income when aggregated with all other miscellaneous itemized deductions.

C. Detailed Analysis

1. Section 183(d) Presumption

The Tax Reform Act of 1986 [9] amends §183(d) to provide that if the gross income from an activity exceeds the deductions attributable to it (without regard to whether or not the activity is engaged in for profit) in three or more of the taxable years in a period of five consecutive taxable years, the activity is presumed to be engaged in for profit.[10] However, the presumption of a profit intent in the case of an activity consisting in major part of the breeding, training, showing, or racing of horses retains its existing testing period of two out of seven taxable years.[11] These changes

are effective for taxable years beginning after December 31, 1986.[12] The Conference Report notes that, under the revised rule, an activity carried on by a taxpayer during 1987 is presumed not to be a hobby in that year if the activity is profitable in any three years out of the five calendar years 1983 through 1987.[13]

The legislative history does not indicate change in the general rule that an activity can still meet the for-profit standard even if the presumption is not met. Thus, the facts and circumstances test is retained and can be used by the Service to overcome the presumption.

The expansion of the number of years in the test period is the result of concern that the two-year period unduly benefited some taxpayers who structured their earnings and expenses in order to realize a profit in at least two out of five consecutive taxable years. It was felt that some taxpayers would incur losses as a cost of personal recreation if they could then take advantage of the presumption and be treated as engaging in a profit-seeking activity, given the subjective nature of the facts and circumstances test.[14]

2. Treatment under 2% Floor

The 1986 TRA also adds new Code §67 which allows miscellaneous itemized deductions to be taken only to the extent that they exceed 2% of adjusted gross income.[15] Code §67(b), which lists those itemized deductions that are excluded from the term "miscellaneous itemized deductions" for purposes of the 2% floor, does not include the deduction allowable under §183. Thus, effective for taxable years beginning after December 31, 1986,[16] the hobby loss deduction is subject to the 2% floor. Moreover, under new §56(b)(1)(A)(i) of the Code (as added by Act §701(a)), no deduction is permitted for any miscellaneous deduction as defined in §67(b) for purposes of determining the amount of an individual's alternative minimum taxable income. Thus, the hobby loss deduction will be completely disallowed in computing an individual's alternative minimum tax for taxable years beginning after 1986.

II. Home Office Deductions

A. Introduction

Despite the general rule that no deductions are permitted for personal or living expenses except as expressly allowed by the Code,[17] a taxpayer may take deductions for interest,[18] certain taxes,[19] and casualty losses [20] attributable to his personal residence. Prior to 1976, a deduction was allowed for an allocable portion of the expenses incurred in maintaining a personal residence if the taxpayer used a portion of that residence either in his trade or business or in the production of income. The regulations provide, however, that if the taxpayer only incidentally conducted the business in his home, the related expenses were treated as nondeductible personal expenses.[21]

The maintenance of an office in a personal residence typically occurs in two situations: self-employed taxpayers, and employees maintaining offices in connection with their duties as employees. In the absence of statutory guidance prior to 1976, a conflict arose between the Service, which ruled that the office must be required by the employer as a condition of employment and regularly used for the performance of the employee's duties,[22] and the courts, which allowed the deduction if the office were found to be "appropriate and helpful" to the employee's business.[23] The Tax Court described this latter test as "whether, like any other business expense, the maintenance of an office in the home is appropriate and helpful under all the circumstances." [24]

In order to resolve the conflict between the Service and the courts, Congress, in the Tax Reform Act of 1976, created definitive rules for the deductibility of home office expenses by adding Code §280A.[25]

Section 280A(a) disallows all deductions for a dwelling unit used by the taxpayer as his residence during the taxable year, except for those deductions otherwise allowed under §280A and those which are otherwise allowable in connection with the taxpayer's trade or business or with his income-producing activity.[26] However, the statute sets forth specific exceptions for certain business uses, rental use, storage use, and use for day care services; expenses for these activities are deductible as limited by the statute.[27] All of these exceptions require that the residence to be used on a "regular basis" for the qualifying activity.

1. Rental Use

The exception contained in §280A(c)(3) provides that §280A(a) "shall not apply to any item which is attributable to the rental of the dwelling unit or portion thereof (determined after the application of subsection (e))." The parenthetical reference to §280A(e) is to the limitation on rental deductions to an amount proportionate to the ratio of number of days rented to total number of days used.

In *Feldman v. Comr.*,[28] the taxpayer, a managing partner and director in an accounting firm, custom built a nine-room house with a two-car garage four miles from his employer's office. The following year, the taxpayer leased a 210 square foot area (which had been designed for office use) and one of the two garage spaces, where he kept his

business automobile, to his employer. In taxable year 1979, he reported $5,400 as rental income and deducted $2,975 in depreciation and other costs. He met frequently in the home office with other firm directors because of the continual interruptions he experienced at his employer's office. On rare occasions he met there with clients. Over three dissents, the court held that the deductions were allowable under §280A(c)(3), since the payments were *bona fide* rental payments to the extent they were reasonable.

The Ninth Circuit affirmed *Feldman,*[29] holding that the taxpayer's interpretation that the four exceptions to §280A were independent of one another drew "support from the plain meaning of the statute." The Service had argued on appeal that amendments in the pending tax reform bill (H.R. 3838) would disallow a deduction for rental of a taxpayer's dwelling unit by his employer. However, the Ninth Circuit refused to view the possible action by Congress as indicating anything other than a possible "tacit admission that the statute as enacted contains an undesirable loophole." [30]

2. Amount of Deductions

The deductions allowed under the exceptions to §280A are limited by §280A(c)(5) to the excess of: (1) gross income derived from the use of the dwelling unit, over (2) the deductions allocable to the unit which are allowable without regard to business use. The effect of this limitation is to prevent a taxpayer from deducting a loss attributable to home office expenses. Under a tier system contained in the regulations, expenses allocable to home office use are deducted in the following order: (1) expenses, such as real estate taxes and mortgage interest, that are deductible without regard to business use; (2) expenses attributable to business use, other than expenses that result in an adjustment to basis; and (3) expenses, such as depreciation, that result in an adjustment to basis.[31]

The Service, in proposed regulations, has interpreted the gross income limitation of §280A(c)(5) restrictively by defining "gross income derived from use of a dwelling unit" as gross income from the business activity in the unit reduced by expenditures required for the activity but not allocable to the use of the unit itself, such as expenditures for supplies and compensation paid to other persons.[32] The Tax Court rejected the Service's position in *Scott v. Comr.*[33]

The taxpayer in *Scott* ran two businesses, a chemical analysis business and a rental business, out of an office in a separate building located adjacent to his home. The taxpayer claimed $1,965 in home office expenses (such as insurance, utilities, taxes, and repairs) which were allocable to the building. Under the Service's position, however, the home office expenses could not be used at all because expenses from both businesses not allocable to the office building ($31,985) exceeded gross income from the two businesses ($23,518).

The Tax Court rejected this approach and, noting that the court would hold a final regulation to that effect invalid, held that the proposed regulation (which is not entitled to judicial deference) was inconsistent with the statute, the legislative history, and a similar limitation in §183.

The Service in *Scott* also contended that the taxpayer had no gross income from the use of the home office because other business expenses exceeded business income. The court ruled that the phrase, "gross income derived from such use" was intended to distinguish income derived from other business activities (which is to be disregarded). The court held that the taxpayer was entitled to deduct the home office expenses since they did not exceed the gross income derived from the home office businesses, reduced by the deductions allowable without regard to such business use.

B. Overview

Reacting to the Tax Court's decision in *Feldman,* Congress moved to apply the existing limitations on the deductibility of home office expenses when an employee leases a portion of a home to his or her employer. Moreover, in response to the *Scott* decision, the home office deduction is limited to the taxpayer's net income from his business, but disallowed deductions may be carried forward to later years. However, the carryforward will also be subject to the net income limitation in those subsequent years.

C. Detailed Analysis

1. Requirements for Home Office Deductions

The amendment to §280A creates an absolute prohibition (with the exception of home mortgage interest and real property deductions, which would be deductible in any event) against deducting expenses attributable to the use of a home as a home office if an employee rents a portion of his or her home to the employer. This is accomplished by providing that §280A(c)(1) and (3), which provide a business use exception to the general rule prohibiting home office deductions, will not apply if the taxpayer rents all or a portion of his dwelling unit to his employer during a period in which he uses such dwelling unit in performing services as an employee.[34] The prohibition also applies to an individual who is an independent contractor since the House Report states that the individual will be treated as an employee for that purpose (and the party for whom the services are performed will be treated as the employer).[35]

Noting that generally allowing deductions for home office use under the limitations contained in §280A inherently creates the potential for abuse, the legislative history indicates a particular twin concern with the employer-employee lease relationship. First, there is the question of whether an employer-employee lease agreement can ever be negotiated at arms-length, especially when the employer can, as in the *Feldman* situation, provide additional tax deductions to the employee at no extra cost to itself.

[29] 791 F. 2d 781 (9th Cir. 1986).

[30] *Id.* at 784. The Ninth Circuit also noted that the House amendment "proves only that its members dislike the policy implications of the Tax Court's decision, not that the decision misconstrued the statute." *Id.*

[35] H.R. Rep. (hereinafter "H. Rep.") No. 426, 99th Cong., 1st Sess. 134 (1985).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Second, leasing arrangements such as those involved in *Feldman* could be used to create a sham transaction in which a portion of the taxpayer employee's salary is paid in the form of rent.[36] In fact, the Tax Court in *Feldman* allowed a home office deduction despite its own findings that the rental was not agreed to at arm's length and was actually made for more than the fair rental value of the space which was purportedly rented.[37]

This rule is effective for taxable years beginning after December 31, 1986.[38]

2. Limitations on Amount of Deduction

a. In General

Congress also sought to overturn the decision in *Scott v. Comr.*, which permits taxpayers to use home office deductions to offset unrelated income by either creating or increasing a loss from the business activity carried on in the home office. Under the Act, the amount of home office deductions which may be taken is limited to the taxpayer's net income from the business, except in the case of expenses (such as home mortgage interest) which are otherwise deductible.[39] This means that the taxpayer's gross income from the activity conducted in his home office is reduced by all other deductible expenses attributable to the activity (but not allocable to the dwelling unit itself) to arrive at the net income figure from which to deduct qualifying home office expenses. Thus, the home office deduction amounts could not be utilized by the taxpayer to either create or increase a net loss from the business activity to which they relate.[40] The effect of the law is to statutorily adopt Prop. Regs. §1.280A-2(i)(2)(iii).

b. Carryover of Unused Home Office Deductions

Those home office deductions which are disallowed due to the limitation on deductions against net income (described above) can be carried forward to subsequent taxable years. However, such a carryforward deduction continues to be subject to the income limitation in all subsequent years to prevent the creation or increase of a net loss (as described at II, c, 2, a).[41] The ability to carry forward unused deductions should mitigate some of the harshness of disallowing a deduction to the extent it exceeds net income from the taxpayer's business.

The provisions for limitation on the home office deduction as well as the carryforward rule are effective for taxable years beginning after 1986.

III. Five-Year Amortization of Trademark and Trade Name Expenditures Repealed

Prior to the Tax Reform Act of 1986, Code §177 permitted taxpayers to amortize over not less than 60 months the costs of acquiring, protecting, expanding, registering, or defending a trademark or tradename. However, amortization was not allowed for consideration paid for existing trademarks or trade names.[42]

The election to amortize trademark and trade name expenditures over five years permitted under Code §177 is repealed by §241 of the 1986 Act. After repeal, these expenditures will have to be capitalized and recovered upon disposition of the asset. Conference Report, p. II-78.

Repeal is effective generally for costs paid or incurred after December 31, 1986.[43] A limited transition rule is provided, however, in two situations. First, costs paid or incurred under a binding contract entered into before March 2, 1986 will be amortizable as under prior law.[44] Further, costs incurred in the development, protection, expansion, registration, or defense of a trademark or trade name begun before March 2, 1986 will also be amortizable under prior law, but only if the lesser of $1 million or 5% of the aggregate cost has been incurred or committed before that date.[45] However, these transition rules apply only to trademark and trade names that are placed in service before January 1, 1988.[46]

IV. Expensing of Certain Architectural Barriers Expenditures Made Permanent

Code §190 permits taxpayers to elect to deduct currently up to $35,000 of capital expenditures for the removal of architectural and transportation barriers from facilities or vehicles used in the taxpayer's trade or business. To qualify, removal must make the facilities or vehicles more accessible to the handicapped and elderly, and must meet the standard for barrier-free design promulgated by the Secretary with the concurrence of the Architectural and Transportation Barriers Compliance Board.[47]

Section 244 of the Act makes permanent the expensing election for architectural and transportation barrier removal, which was scheduled to expire after December 31, 1985 under prior law. Thus, taxpayers may still deduct these expenses in the year paid or incurred rather than capitalizing them.

The permanent deduction is available for expenses incurred in taxable years beginning after December 31, 1983.[48]

V. Deduction for Employee Achievement Awards Clarified [Act §122(d)]

Act §§122(c) and (d) reorganize Code §274 by removing from Code §274(b) references to employee achievement awards, which in turn are dealt with in Code §274(j) (as added by the Act). This change to the Code does not change the substance of the deduction previously allowed under Code §274(b), and appears to have been made for the purpose of clarifying the cross referencing from other

sections (notably §74(c)). Under the Act, as under prior law, an employee achievement award is a prize excludible from the employee's gross income (under §74(c), as added by the Act), and deductible by the employer (under §274(j)) to the extent that the cost to the employer does not exceed the amount allowable as a deduction under §274(j)(2). If the cost to the employer exceeds the deduction allowed under §274(j), the excess amount is included in the recipient's gross income.

Under §274(j)(3), an employee achievement award is an award given to an employee in recognition of the employee's length of service, productivity, or safety achievement, and the cost of which does not exceed $400, or if made under a qualified award plan does not exceed $1,600. A qualified plan award is an employee achievement award awarded as part of a written plan that does not discriminate in favor of highly compensated employees (as defined in Code §414(q)) and which provides awards the average cost of which do not exceed $400.

Act §122(e) provides that if an employee award is excludable from wages for income tax purposes, it is also excludable for employment tax purposes and from the social security benefit base.

This provision is effective for prizes and awards granted after December 31, 1986.[49]

VI. Bad Debt Reserve (Other Than Financial Institutions)

A. Background

Section 166 of the Internal Revenue Code provides a statutory deduction for both business and nonbusiness bad debts. A taxpayer faced with business bad debts may select one of two methods for deducting them: (1) the specific charge-off method, or (2) the reserve method for bad debts.[50] This selection is made through a taxpayer election made at the time of the filing of the tax return for the taxpayer's first fiscal year in which faced with a bad debt situation.[51] The specific charge-off method permits a deduction for a bad debt when such debt becomes either partially or wholly worthless; however, if the debt is later recovered, that amount is then included in income. Regs. §1.166-3. Under the specific charge-off method, a debt's total worthlessness is established through facts and circumstances, and depends in large part upon both the financial condition of the debtor and the value of any underlying collateral.[52] A wholly worthless debt becomes fully deductible in the year in which its worthlessness is established. Regs. §1.166-3(b). For a complete discussion of the rules relating to §166, *See* 19 T.M., *Bad Debts*.

1. In General

Under §166(c), the reserve method permits a deduction for a reasonable addition to a reserve for bad debts. The theory of the reserve is that taxpayers should be able to make an overall estimate of the uncollectible portion of its receivables as well as notes, loans and certain other evidences of indebtedness, and offset them against the applicable asset account. Thus, the Code permits an adjustment to the reserve in order to adjust the beginning reserve balance during the year for bad debt losses and recoveries made on previously deducted debts. This adjustment is necessary to properly reflect the receivables balance at the end of the taxable year. The reserve method offers an advantage to the taxpayer in that it does not have to establish either partial or complete worthlessness in order to satisfy the requirements of the specific charge-off method. It does, however, create the additional burden of proving that the addition to the reserve is "reasonable."

2. Computing the Addition to Reserve

Since the reserve for bad debt method necessarily involves estimating the addition to the taxpayer's reserve (as opposed to the precise measurement required under specific charge-off method), many formulas have emerged for estimating the reserve. The most prominent judicial formula is contained in *Black Motor Co. v. Comr.*[53] The *Black Motor* bad debt formula creates an experience factor by first dividing the average outstanding accounts receivable balance for six years (*i.e.*, the balance at the end of the current year plus that of the preceding five years) into the average debts actually charged off (after netting for recovered amounts) during the same period. The "experience factor" is then applied to the total outstanding receivables balance for the end of the current year less the reserve balance at year-end after charge-offs and recoveries. The result, if reasonable, is the addition to reserves for the year. Thus, the *Black Motor* formula compares the charge off of debts for the past six years with the amount of receivables during that period and applies the resulting percentage to the outstanding receivables at the end of the taxable year under consideration.

3. Bad Debt Reserves for Guarantees of Dealers

If a seller of goods receives a debt obligation from a purchaser in exchange for either property or services and then sells the debt obligation to a third party financing entity (*i.e.*, factors its receivables) with recourse, the seller may be called upon to guarantee the payment of the purchaser to the financing entity. The taxpayer's duty may arise as a guarantor, endorser, or indemnitor of the debt obligation. Absent a statutory provision, such a guarantee would not give rise to a deduction for a reserve for bad debt because technically the purchaser does not directly owe a debt to the taxpayer at that point. However, Code §166(f) permits a deduction for additions to a special reserve for bad debt for dealers in real or tangible personal property.

The §166(f) reserve applies to such dealers[54] for bad debts arising out of their liability as a guarantor, endorser,

[49] Cf. Act §151(c).
[50] Regs. §1.166-1(a).
[51] Regs. §1.166-1(b).
[52] Regs. §1.166-2(a).

[53] 41 B.T.A. 300 (1940), aff'd on other issues, 125 F. 2d 977 (6th Cir. 1942), acq. 1940-1 C.B. 1.
[54] Dealers are defined in Regs. §1.166-10(a)(1) as "a person who regularly sells property in the ordinary course of the person's trade or business."

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

or indemnitor of debt obligations attributable to the sale of real or tangible personal property (but not securities)[55] in the ordinary course of business. This reserve must be maintained separately from the reserve available under §166(c)[56] and is the exclusive reserve for guarantors, endorsers or indemnitors of debt obligations.[57]

B. Overview

The Tax Reform Act of 1986 repeals the reserve method for bad debts for taxpayers other than specified financial institutions. These taxpayers will be required to use the specific charge-off method in accounting for losses on bad debts. A wholly worthless business debt remains deductible in full in the year that it becomes worthless, thus retaining existing law on this point. The reserve method is repealed for dealers who guarantee, endorse, or provide indemnity agreements for debt obligations arising out of the sale by that dealer of real or tangible personal property in the ordinary course of business.

Any change from the reserve method of accounting for bad debts will be treated as a taxpayer-initiated change in method of accounting with the consent of the Secretary of the Treasury. To prevent taxpayers from deducting losses on debts twice, the new law generally requires that any balance in any reserve for bad debts as of the effective date be included in income ratably over a 4-year period. No offset to the full amount in the reserve account is allowed for any anticipated amounts that will not be currently accrued as income (under the rules allowing accrual basis service providers to exclude from income amounts which are statistically determined not to be collectible) until such amounts are actually collected.

Act §801 also creates new §448. Subsection 448(d)(5) provides that any accrual method taxpayer who receives amounts for the performance of services shall not be required to accrue any portion of those amounts which, based upon his experience, will not be collected. This provision, which amounts to a newly created reserve for bad debt is discussed fully in Chapter 22, Part II., *infra.*

C. Detailed Analysis

1. Bad Debt Reserve Repealed

The availability of the reserve method for bad debts for all taxpayers other than "small banks" (commercial banks whose assets do not exceed $500 million) and thrift institutions is repealed,[58] effective for taxable years beginning after December 31, 1986.[59] As a result, those taxpayers covered by the statute will be required to use the specific charge-off method in accounting for losses on bad debts. This is an effort to resolve the inconsistency between the bad debt reserve and the treatment of all other deductions under the "all events" test, since the use of the reserve method results in the current deduction of what are statistically future losses.[60] Further, the reserve method permits the allowance of a deduction before the taxable year in which it occurs, and therefore, the value of the deduction to the taxpayer is overstated while his overall tax liability is understated.[61]

The exception for "small banks" and thrift institutions was included because of Congress' concern that the repeal of the reserve method would jeopardize the ability of those institutions to maintain government-imposed capital requirements for lending and other activities.[62] However, a Senate move [63] to preserve the reserve method for finance companies (on the grounds of competitive disadvantage) failed to be included in the final agreement.

The Conference Report notes that (following repeal of the reserve method) in determining whether a debt is worthless when held by a utility, the fact that the utility is required to continue to provide services to a customer whose account has otherwise been determined to be uncollectible will not be considered as evidence that the debt is not worthless for federal income tax purposes.[64]

The reserve for bad debt method is also repealed for dealers who guarantee, endorse, or provide indemnity agreements with respect to debt obligations arising out of the sale of real or tangible personal property in the ordinary course of business by that dealer.[65] This provision also applies to taxable years beginning after December 31, 1986.[66] Thus, expenses which arise from a dealer's guarantee, endorsement or indemnity agreement are not deductible until the dealer suffers a loss as a result of honoring his guarantee, endorsement, or agreement. However, where the dealer is subrogated to the rights of the original creditor, the loss becomes deductible at the time the subrogation rights become worthless (either wholly or partially) and the amount is charged off on the dealer's books.[67]

The final agreement did not include a "booking requirement" contained in both House and Senate bills which would have limited the deduction of wholly worthless business debts to the amount written off on the taxpayer's books in an effort to conform the treatment of wholly worthless debts to partially worthless debts.[68] Under this rule no debt would be deductible as wholly or partially worthless for tax purposes until it was charged off on the taxpayer's books. Thus, as under pre-1986 TRA law, a wholly worthless debt will be deductible in full in the year that it becomes worthless. Conference Report at II-315.

2. Transitional Rules

Under the 1986 Act, any change from the reserve method to the specific charge-off method is treated as a change in the taxpayer's method of accounting which is

[55] *See* Regs. §1.166-10(a)(3). This regulation does, however, extend coverage of the reserve to other property related to the property with respect to which the taxpayer is a dealer.
[56] §166(f)(4)(A).
[57] §166(f)(2).
[58] Act §805(a) repealing §166(c).
[59] Act §805(d)(1).
[60] *See* H. Rept. No. 426, 99th Cong., 1st Sess. 640 (1985).
[61] *Id.*
[62] S. Rept. No. 313, 99th Cong., 2d Sess. 155 (1986).
[63] *Id.*

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

both initiated by the taxpayer and consented to by the Secretary of the Treasury.[69] The full amount of any balance existing in any reserve for bad debts as of the effective date will be restored to income ratably in each of the first four taxable years beginning after December 31, 1986.[70] No offset will be permitted for any anticipated amounts which will not be currently accrued as income under the rules that allow accrual basis service providers to exclude from income (until actually collected) those amounts that are statistically determined not to be collectible.[71] The amount of reserve subject to inclusion, where the reserve is established for a dealer's guarantees, endorsements or indemnity agreements, is subject to reduction by the amount of the remaining balance in any suspense account established under §166(f)(4).[72]

The Conference Report notes that the conferees intend to allow net operating loss and tax credit carryforwards to offset any positive §481 adjustment. Moreover, it was also the conferees' intent to recognize the §481 adjustment on taxable income ratably throughout the year in question for purposes of determining estimated tax payments.[73]

3. Technical Amendments

As a result of the repeal of both §166(c) and §166(f), certain technical amendments are made to Code §81,[74] §108,[75] §461(h),[76] and §805.[77]

4. Treasury Report Required

In an action taken by neither the House nor Senate, the conferees direct the Secretary of the Treasury to study and issue a report concerning the appropriate criteria to be used in determining if a debt is worthless for federal income tax purposes. The focus of this report will be the circumstances under which a rule providing for a conclusive or rebuttable presumption of the worthlessness of an indebtedness is appropriate. The final report must be submitted to the House Ways and Means Committee and the Senate Finance Committee by January 1, 1988.[78]

5. Planning Suggestions

That portion of the new law which requires that the existing reserve balance be restored into income ratably over a 4-year period should cause taxpayers to carefully review proposed reserve additions for the last year under the current reserve method. The existing reserve is included in income regardless of how long the reserve method has been in use by the taxpayer. Taxpayers should have the maximum reasonable amount placed in reserve for the last taxable year, since that would provide a current income tax deduction and position recapture to occur over the following four taxable years when the tax rates generally have decreased.

VII. Qualified Discount Coupons

A. Background

Retail discount coupons induce the purchase of a product through the allowance of a discount on the purchase price of the item. Discounts are typically available either in terms of a percentage of price or as a specified amount of cash off the retail price.

Section 466(a) of the Code provides that issuers of "qualified discount coupons" who use the accrual method of accounting may elect to deduct the cost of the coupons which are outstanding at the close of a taxable year and received by the taxpayer for redemption within a 6-month period immediately following the close of the taxable year.[79] The taxpayer's election constitutes a method of accounting and must be made for each trade or business of the taxpayer.[80] The taxpayer may be required to establish a suspense account to prevent the bunching of deductions in the year of election.[81]

A "qualified discount coupon" is a coupon which is both issued and redeemable by a taxpayer, and allows a discount on the purchase price of either merchandise or other tangible personal property.[82] However, the coupon cannot be used (either by itself or in conjunction with any other type of coupon) to reduce the price of any item by more than $5.00.[83]

Under §466(b)(4) [84] of the Code, the election is available only if a redemption chain is set up so that someone other than the issuer redeems the coupon from the consumer who receives the discount. Thus, for example, a supermarket must be interposed to redeem a "10% off" coupon for cereal on behalf of the cereal manufacturer which issued the coupon. The special rule for qualified discount coupons is an exception to the general rules of accounting and specifically to the economic performance test as measured by the "all events" test.[85] As a result, the operation of the rules on qualified discount coupons sometimes permits a deduction to be allowed in a year prior to the year in which the income is recognized. This occurs because a coupon received during the redemption period is deductible in computing the prior year's income even though it may relate to the sale of a product where the sales transaction took place in the current taxable year. Moreover, this

inconsistency may occur even though the coupon was outstanding at the end of the prior taxable year.

B. Detailed Analysis

The 1986 TRA repeals §466,[86] effective for taxable years beginning after December 31, 1986.[87] Congress felt that the qualified discount coupon provision created an unwarranted exception to the general rules of tax accounting by allowing such costs to be considered outside the all events test. Moreover, it was felt that the mismatch of income and deduction described above results in an incorrect measurement of taxable income.[88]

After the repeal becomes effective, a deduction will be allowed only for the costs of redeeming qualified discount coupons in the taxable year in which received for redemption. This conforms the treatment of discount coupons to the treatment of other items under the economic performance test.[89]

A statutory provision is made for those taxpayers who have elected to apply §466 for the last taxable year beginning before January 1, 1987 and are being forced to change their method of accounting due to the repeal.[90] Act §823(c)(2) provides that this measure treats the change created by the repeal as initiated by the taxpayer and made with the consent of the Secretary. The Act further requires that the net adjustments which are required by §481 of the Internal Revenue Code of 1986 to be taken account by the taxpayer [91] shall be reduced by the balance (if any) in the suspense account, and the net amount taken into account over a period not longer than four years.[92] The Conference Report states the conferees' expectation that the concepts of Rev. Proc. 84-74 [93] will generally apply in determining the actual timing of recognition or expense resulting from this adjustment.[94] This revenue procedure is the principal Service pronouncement relating to procedures under Code §446 and Regs. §1.446-1(e) for obtaining the Commissioner's consent to a change in method of accounting.

The Conference Report, p. II-322, also notes the conferees' intention to allow the net operating loss and tax credit carryforwards to offset any positive §481 adjustment. Moreover, the Report also expresses the intention that, in determining estimated tax payments, the §481 adjustment will be recognized in taxable income ratably throughout the year in question.[95]

Certain conforming amendments are also made.[96]

VIII. Exceptions to Membership Organization Deduction Rules Expanded

A. Introduction

Under §277 of the Code, social clubs and certain other taxable membership organizations may generally deduct expenses related to the furnishing of goods or services to members only to the extent of that income which is derived from members or from transactions with members.[97] Moreover, the dividends-received deduction available under Code §§243-245 are not available to organizations falling within the general rule of Code §277(a).

The purpose of Code §277 is to prevent membership organizations which are not tax-exempt from escaping the tax on business or investment income by using such income to serve its membership at less than cost and then deducting the book loss resulting from deductions taken for the cost of providing services and other items of value to the membership.[98]

For purposes of this rule, a statutory exception is provided for certain financial institutions,[99] insurance companies,[100] securities or commodities exchanges,[101] and certain membership organizations which made a §456(c) election prior to October 9, 1969.[102]

B. Detailed Analysis

The 1986 Act amends Code §277(b) by adding subsection (4) which provides that §277(a) shall not apply to an organization which is engaged primarily in the gathering and distribution of news to its members for publication.[103] This rule was reportedly a special exception created solely for Associated Press (a taxable membership organization) by Sen. Daniel Moynihan (D.- NY).[104] The amendment is effective for taxable years beginning after October 22, 1986, the date of enactment of the 1986 Act.[105]

IX. Certain Miscellaneous Business Costs Inventoried or Capitalized

A. Costs other than Interest

Under Code §263A, as added by Act §803(a), various costs which were previously deducted currently are now to be inventoried and deducted when property is sold or capitalized and recovered through depreciation. The Treasury Department is directed to prescribe regulations that

will govern the inclusion in inventory or capital accounts of all costs, both direct and indirect, (including taxes) which are (1) involved in the manufacture, construction, and other types of activity and are allocable to the production of real or tangible personal property and, (2) for certain large taxpayers, involved in the acquiring or holding for resale of inventory or other property acquired or held in the ordinary course of a trade or business.[106] These rules will not apply to *inter alia,* any property produced by the taxpayer pursuant to a long-term contract. §263A(c)(4). The rules do not modify existing treatment of the valuation of inventories on a basis other than cost (*e.g.* lower of cost or market valuations for first-in, first-out (FIFO) inventories) and do not apply to certain farmers. Conference Report at 305; §263A(d). It is expected that these rules will decrease the amount of expenses which are currently deductible and increase the amount of costs which are recovered through cost of sales, depreciation or amortization. A more complete discussion of this provision and its effective date is in Chapter 19, *infra.*

B. Interest Capitalization

Interest on debt is not treated as a cost allocable to inventory or items produced by a taxpayer. However, interest paid or incurred during the production period must be capitalized (1) for indebtedness directly attributable to production expenditures with respect to real, or tangible personal property produced by a taxpayer or (2) for indebtedness that could have been reduced if production expenditures had not been incurred.[107] Also, interest on indebtedness incurred or continued in connection with property used to produce property to which §263A(f) applies will be subject to this limitation. The production expenditures which are covered by this section are those for property which (1) has an estimated production period exceeding two years, (2) has an estimated production period exceeding one year if its cost exceeds $1,000,000, or (3) is real property, or property with a class life of 20 years or more (as determined under §168). §463A(f)(1) and (4). This amendment should decrease the amount of interest for which a current income tax deduction is allowed. A more complete discussion of this provision and its effective date is in Chapter 19, *infra.*

C. Sales and Transfer Tax Capitalization

As part of the repeal of the current deduction for state and local sales taxes, the 1986 TRA provides that any tax (other than certain property and income taxes) which is paid or accrued by the taxpayer in connection with the acquisition or disposition of property (*e.g.* sales taxes, real property transfer taxes) shall be treated as part of the acquisition cost or a reduction in the proceeds received upon the property's disposition.[108] A more complete discussion of this provision and its effective date is in Chapter 19, *infra.*

[106] Act §803, adding Code §263A.

X. Technical Amendments To Passenger Automobile Listed Property Rules And Gas Guzzler Tax

A. Introduction

1. Definition of Passenger Automobile

The Tax Reform Act of 1984 [109] placed limits on the use of both the investment tax credit (ITC) and accelerated depreciation recovery system (ACRS) deductions taken on passenger automobiles used in the taxpayer's trade or business. Under §280F, as added by the 1984 Act, the ITC was limited to $1,000 and the ACRS deductions to $4,000 in the first year and $6,000 in each subsequent year until the full cost of the automobile is recovered.[110] In return for the repeal of the contemporaneous recordkeeping requirements imposed on business drivers by the 1984 Act, the drafters of the Contemporaneous Recordkeeping Repeal Act of 1985 (P.L. 99-44) succeeded in reducing the limitation on ITC and ACRS deductions to $675 for ITC and $3,200 for ACRS in the first year, with $4,800 in each subsequent year until recovery is complete.[111] These limitations apply only to "passenger automobiles" as that term is defined in pre-TRA 1986 §280F(d)(5). For purposes of these limitations, the 1984 Act defined a "passenger automobile" as any four-wheeled vehicle which is manufactured primarily for use on public streets, roads, and highways with a gross vehicle weight rating of 6,000 pounds or less. However, the definition excludes vehicles used directly in the business of transporting persons or property for compensation or hire.[112]

2. Listed Property

The business use of certain tangible personal property listed in Code §280F(d)(4) (and referred to as "listed property") for less than 50% of the total use of such property causes denial of ITC and extension of the period for cost recovery.[113] Listed property includes passenger automobiles and any other property used as a means of transportation, property used for recreation, entertainment, or amusement, computers and peripheral equipment (except for equipment used exclusively at a regular business establishment or qualified home office), and other property specified in regulations.

3. Gas Guzzler Tax

The Energy Tax Act of 1978 [114] imposed a "gas guzzler" tax on automobile manufacturers whose automobiles (model years 1980 and later) had a fuel economy level below those levels published in the statute.[115] The term "automobile" is statutorily defined in terms almost identi-

[109] P.L. 98-369.

cal to those used in the 1984 Act to define "passenger automobile." [116] The Secretary of the Treasury, however, was given regulatory authority to prescribe an alternate rate schedule for "small manufacturers." [117] The term "small manufacturer" is statutorily defined as any manufacturer which manufactures (whether or not in the United States) in the two preceding model years less than 10,000 automobiles, and can reasonably be expected to manufacture fewer than 10,000 automobiles in the current model year for which the fuel economy is being determined.[118]

B. Overview

The Tax Reform Act of 1986 enacts technical amendments to the Tax Reform Act of 1984 with respect to the definition of "passenger automobile" in connection with both the §280F restrictions on recovery deductions and the imposition of the gas guzzler tax. The amendments clarify that the maximum weight for such vehicles is the gross unloaded weight, meaning that they are to be weighed without passengers or cargo. This does not apply, however, with respect to trucks and vans which would otherwise be included in the definition of passenger automobile. The gas guzzler tax is also amended to exempt small manufacturers which lengthen existing automobiles. The provisions relating to listed property are also modified to account for the leasing of such property (including computers) and to exclude from the listed property definition any property if substantially all of it is used in the trade or business of providing for hire to unrelated persons the transportation of persons or property.

C. Detailed Analysis

1. Passenger Automobile Definition

For purposes of the limitation on the investment credit and depreciation on luxury automobiles, the 1986 TRA modifies the definition of "passenger automobile" in §280F so that the term now refers to any 4-wheeled vehicle which is manufactured primarily for use on public streets, roads and highways and is rated at 6,000 pounds unloaded gross vehicle weight or less.[119] The change to *unloaded* gross vehicle weight clarifies the intent of the 1984 TRA that defining the term by reference to the weight of the automobile should not include the weight of the passengers or the weight of any cargo. However, the existing definition ("6,000 pounds gross vehicle weight or less") is retained for trucks and vans.[120]

The same clarification of the definition of passenger automobile is made with respect to the "gas guzzler" tax under §4064.[121] A transition rule, advanced by General Motors, exempts station wagons if the station wagon was a 1985 or 1986 model manufactured before November 1, 1985 and is originally equipped with more than 6 seat belts.[122] Moreover, an exception is made if the manufacturer under §4064 is a small manufacturer and would be treated as a manufacturer for purposes of the gas guzzler tax solely because it lengthens an existing automobile in a model year in which it is a small manufacturer. This exemption excepts the small manufacturer from the definition of "manufacturer" for purposes of imposing the gas guzzler tax.[123] The amendment for small manufacturers which lengthen existing automobiles applies as if made included in the amendments made by §201 of Public Law 95-618 (the gas guzzler provisions of the Energy Tax Act of 1978).[124] The luxury automobile and gas guzzler tax clarifications are effective as if included in the provision of the Tax Reform Act of 1984 to which the amendment relates.[125]

Note: The limits on automobile depreciation are also changed by the 1986 Act. Thus, for cars costing more than $12,800, the first year limit on deductions is $2,560, with varying amounts thereafter. For a more detailed analysis see Chapter 4, *supra*.[126] The investment tax credit was repealed generally for property placed in service after December 31, 1985 in taxable years ending after that date.[127]

2. Listed Property

The 1986 TRA clarifies the listed property requirements in three respects. First, the scope of use in a trade or business for purposes of determining the allowable investment credit or recovery deduction for listed property is expanded to include any deduction allowable to the employee for rentals or other payments under a lease of the listed property.[128] This is in addition to the existing requirements that the use of the listed property be both for the convenience of the employer and required as a condition of employment.

The exception from the definition of the term "listed property" which is provided for any computer or peripheral equipment used exclusively at a regular business establishment is clarified by the 1986 TRA to require that the computer or equipment also be owned or leased by the person operating the business establishment.[129] Thus, where an employee uses his own computer in the office, he will not be entitled to the deductions for depreciation. In the context of the conference report to the 1984 TRA, this restriction also applies to computers and peripheral equipment

---

[116] Code §4064(b)(1)(A) defines "automobile" as any 4-wheeled vehicle propelled by fuel which is manufactured primarily for use on public streets, roads or highways (but not exclusively on rails) and which is rated at 6,000 pounds gross vehicle weight or less.

[128] Act §1812(e)(2), amending Code §280F(d)(3) by adding the parenthetical "(or the amount of any deduction allowable to the employee for rentals or other payments under a lease of listed property)" after "recovery deduction allowable to the employee."

[129] Act §1812(e)(3), amending Code §280F(d)(4).

used in a home office which is used as a regular business establishment.[130]

The definition of "listed property" is also clarified with respect to that portion of the definition which includes "any other property used as a means of transportation". This definition is amended to exclude property if substantially all of its use is in the business of providing services consisting of the transportation of persons or property for hire to unrelated persons.[131]

A clerical amendment is also enacted which revises §280F(d)(2) to make it clear that if less than 100% of the use of any listed property during any taxable year is use described in §168(c)(1) then all use is treated as use described in §168(c)(1).[132]

The listed property modifications generally take effect as if included in the provision of the Tax Reform Act of 1984 to which it relates.[133]

XI. Demolition Loss Effective Date Clarification

A. Introduction

The Tax Reform Act of 1984 extended the disallowance of demolition expenses and losses under Code §280B to all structures on a permanent basis, effective with respect to taxable years beginning after December 31, 1983.[134] Before this change, §280B had only denied these deductions to an owner or lessee of a certified historic structure and the law was due to expire in connection with demolitions commenced after December 31, 1983.

The legislative history to the 1984 TRA called for the disallowance moratorium to extend to demolitions commencing after December 31, 1983.[135] The Conference Report purportedly followed the Senate bill;[136] however, the actual law passed was effective for *taxable years* beginning after December 31, 1983.[137] Thus, the key focus became the taxable year instead of the demolition. As a result, a "window" was created whereby a taxpayer could take deductions for demolition expenses and losses, including those attributable to certified historical structures, occurring after December 31, 1983, but prior to the end of the taxpayer's taxable year.

B. Effective Dates Clarified

In a technical correction, the Tax Reform Act of 1986 amends the effective date section of the Tax Reform Act of 1984 relating to the permanent disallowance of the deduction for demolition expenses of certain structures. The technical correction contained in the 1986 TRA makes the 1984 amendments effective for taxable years ending after December 31, 1983, but not for any demolition of a structure other than a certified historic structure, if that demolition commences before July 19, 1984 (the day after the date the 1984 TRA was enacted).[138] The correction also provides that where demolition is delayed until the completion of its replacement structure on the same site, the demolition is to be treated as commencing when construction of the replacement structure begins.[139] However, a Senate proposal which would have allowed the unrecognized basis in specific demolished structures to be allowed as an ordinary deduction in the year of demolition was defeated.

One of two transition rules concerns demolition of an Ethyl Corporation lead alkyl antiknock product facility in Baton Rouge, Louisiana.[140] The other concerns an unspecified bank headquarters building demolition.[141]

This amendment is effective as if included in the provision of the Tax Reform Act of 1984 to which it relates.[142]

Chapter 9

MODIFICATION OF CERTAIN NON-BUSINESS DEDUCTIONS

John Freeman Blake, Esq.
Jerry J. McCoy, Esq.
Silverstein and Mullens
Washington, D.C.

I. Two-Earner Married Couple Deduction Repealed [Act §131]

Pre-1986 TRA Code §221 provided married couples who file a joint return a deduction against income where both spouses work. The deduction was introduced in 1981 to reduce the inequity caused by combining two incomes for income tax purposes. The deduction equaled 10% of the lesser of the earned income of the lower-earning spouse or $30,000. Therefore, the maximum deduction was $3,000.

Act §131 repeals the deduction for two-earner married couples.

The rationale for repealing this provision is that, in light of lower tax rates, the higher standard deduction and larger personal exemptions, the deduction is no longer necessary. However, repeal of this provision will result in some inequity for married couples. For example, if both the husband and the wife earn $30,000 in 1988, have no other income, no deductions, no dependents, and file a joint return, they will pay a federal income tax (ignoring the standard deduction and personal exemptions) of $12,932.50. If the same couple were taxed separately as single taxpayers, each one would pay a tax (again ignoring the standard deduction and personal exemption) of $6,079.50, for a combined tax of $12,159.00. Therefore, the married couple pay an extra tax of $773.50 based solely on their status as a married couple. If the Act had retained the two-earner deduction, the couple's joint return tax would be reduced to $12,092.50—$66.50 less than the combined tax of two single taxpayers.

The repeal is effective for taxable years beginning after December 31, 1986.[1]

II. Deduction for Adoption Expenses Repealed [Act §135]

Pre-1986 TRA Code §222 provided for a limited itemized deduction for expenses of adoption expenses incurred in adopting a child with special needs. A child with special needs is one who is handicapped or who qualifies for adoption assistance payments under the Social Security Act. The deduction was limited to $1,500 of adoption expenses.

Act §135 repeals the adoption expense deduction. This provision is not primarily a revenue raiser. Instead, it reflects Congressional intent to reduce the role of the Code in social policy issues. The House Ways and Means Committee Report states that assistance to families adopting children with special needs is more appropriately accomplished through direct expenditures.[2]

Coinciding with the repeal of the adoption expense deduction, the Act, §1711, amended the Adoption Assistance Program of Title IV-E of the Social Security Act to provide federal matching funds to states, for financial assistance to adopting parents. The types of expenses eligible for matching funds under Act §1711 are the sort that were formerly deductible under Code §222. According to House Ways and Means Committee projections, the revenue gains resulting from the repeal of the deduction will be offset entirely by the new expenditures that will be made under the expanded Social Security Act program.[3]

The repeal of the adoption expense deduction and the commencement of the matching funds program under the Social Security Act are both effective for taxable years beginning after December 31, 1986.[4]

III. Floor Under Medical Expense Deduction Increased [Act §133]

Code §213 allows taxpayers who itemize deductions to deduct unreimbursed medical care expenses to the extent that the total of such expenses exceeds 5% of adjusted gross income.

Act §133 increases the floor above which medical expenses are deductible from 5% of adjusted gross income to 7.5%. The increased floor was designed to reduce the number of taxpayers claiming the deduction. It is believed that the deduction creates unnecessary complexity in the tax system. Yet, for compassionate reasons, it was decided that the deduction should be retained for those taxpayers whose medical expenses are truly extraordinary. Therefore, rather than repealing the deduction entirely, the Act increased the floor above which expenses must total before they become deductible.

The increase in the floor for medical expense deductions is effective for taxable years beginning after December 31, 1986.[5]

Note: The medical expense deduction is one of the few itemized deductions allowed by §56(b)(1) in computing an individual's alternative minimum tax after 1986. However, in computing the amount allowable for minimum tax purposes, the 7.5% adjusted gross income floor is raised to 10%.

IV. Deduction for State and Local Sales Taxes Repealed [Act §134]

Pre-1986 TRA Code §164 provided an itemized deduction for state and local income, property, sales and other taxes.

Act §134(a)(1) repeals the portion of §164 that provided for an itemized deduction for state and local sales taxes. Other state and local taxes continue to be deductible to the extent that they were deductible under pre-1986 TRA law.

Under Act §134(a)(2), the amount of the state or local sales tax attributable to property acquired in a trade or business or for investment is to be added to the basis of the property, or if paid by the seller, as a reduction of the amount received for the property.

The repeal of state and local sales taxes is consistent with a general goal of the Act to apply a reduced tax rate to a broader income base. Achieving this goal requires the Code to allow fewer itemized deductions. The repeal is also consistent with the general tax policy to deny deduction for personal consumption as opposed to business expenses. Domestic sales taxes, like interest payments on loans, have been deductible whether they stemmed from purchases of personal goods or material for trade or business. Foreign sales taxes, by contrast, can be deducted only if they are paid or accrued in carrying on a trade or business or an activity for profit.[6] The purpose of the provisions of the Act has been to treat sales taxes in conformity with the overall policy of the Code, by denying the deduction for personal expenses and treating those involving business or investment activities in a manner consistent with that of other costs of capital assets.

Another policy consideration favoring the repeal of the deduction is the widespread inconsistency with which sales taxes were treated under previous law. Taxes on certain items, such as alcoholic drinks, tobacco, gasoline and utility services, were not deductible. Corresponding taxes paid at the wholesale and manufacturing levels were also nondeductible. Further, the existed some inconsistency in the treatment of other sales taxes under the regulations for Code §164; taxes which were not imposed at the same rate on all transaction or which were construed as selective or imposed solely on services were denied deductibility.[7]

To some extent denial of the deduction might be viewed as regressive. This is because lower income taxpayers necessarily spend a greater portion of their income on personal expenditures. A deduction for consumption sales taxes against income taxes eases the tax burden of lower income taxpayers. However, lower income taxpayers are the least likely to itemize deductions. Therefore, little regressivity should result from the denial of the deduction.

During legislative debate on the Act, state and local authorities argued that denial of the deduction would create unfairness for taxpayers living in jurisdictions that rely heavily on a sales tax in lieu of other taxes. Alternatively, it was argued that denial of the sales tax deduction might encourage state and local governments to shift the tax burden to other, deductible, taxes. However, the Act reflects a Congressional judgment that no unwarranted unfairness will result, because only a small part of the general sales tax is claimed as a deduction by federal taxpayers.[8]

Elimination of the deduction is likely to make it more difficult for state and local governments to raise sales taxes because they can no longer argue that the burden of the increased tax is lessened by the federal income tax deduction.

Taxpayers who did not use the optional federal tables for computing the deduction for state and local sales tax have had to keep detailed and cumbersome records to substantiate a sales tax deduction. Elimination of the deduction can therefore be seen, in part, as an effort to reduce complexity in the tax system.

The repeal of the state and local sales taxes is effective for taxable years beginning after December 31, 1986.[9]

Observation: State, local and foreign real property taxes, state and local personal property taxes, and state, local, and foreign income taxes remain deductible under §164(a) for regular tax purposes after 1986 as itemized deductions. However, these taxes are disallowed by §56(b) for purposes of the alternative minimum tax if allowed only as itemized deductions for regular tax purposes.

V. Impact of Certain Housing Allowances on Mortgage Interest and Property Tax Deductions [Act §144]

While the Internal Revenue Code has no specific code section dealing with this rule, the Service ruled in Rev. Rul. 83-3 [10] that a minister who received a parsonage allowance that is excludable from gross income under §107 could not deduct the interest or property taxes incurred in owning the house. Although the ruling spoke specifically about parsonage allowances for ministers, the same situation arises for military personnel whose housing allowances are also excludible from gross income.[11] Therefore, the conclusions reached by Rev. Rul. 83-3 could be seen as having far broader application.

The rationale for denying deductions in this context comes from Code §265(l) (now §265(a)(1), which denies a deduction for interest expenses incurred to generate tax-exempt income. The purpose of Code §265 is to prevent a double tax benefit that results from deducting expenses related to items that are themselves excluded from taxable income. Rev. Rul. 83-3 argued that since the housing allowance was itself excludible under Code §107, expenses related to the house that would otherwise be deductible such as mortgage interest and property taxes would not be allowed as deductions. Although this aspect of the ruling

[11] Regs. §1.61-2(b).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

has not been challenged in court, another aspect of the ruling dealing with the analogous situation of excludible veterans education benefits and the deduction for education expenses has been challenged. In this latter context, the Tax Court has upheld the validity of the ruling.[12]

Act §144 overrules that portion of Rev. Rul. 83-3 that deals with expenses related to tax-exempt housing allowances. The repeal is accomplished by adding §265(6), which provides that §265 is not to be used to deny the deduction for mortgage interest or property taxes by reason of the taxpayer receiving either a military housing allowance or a parsonage allowance, both of which continue to be excludible from gross income.

This section of the Act is surprising in the sense that it is one of the Act's few pro-taxpayer provisions. It provides substantial relief to those taxpayers affected by it. Its application to military personnel makes it a significant provision in terms of the numbers of taxpayers affected.

Act §151(e) states that the amendment made by Act §144 "shall apply to taxable years beginning before, on, or after, December 31, 1986." In effect, this means that Act §144 is effective from the date of the issuance of Rev. Rul. 83-3 in 1983, reversing the impact of the ruling from its issuance.

VI. Deduction for Non-Business Casualty Losses Clarified [Act §1004]

Code §165(h) provides for a limited itemized deduction for casualty losses incurred by individuals not in connection with a trade or business. Personal casualty losses are allowed only if they arise from "fire, storm, shipwreck, or other casualty or theft." In addition, personal casualty losses are deductible only to the extent each loss exceeds $100, and only to the extent that all casualty losses for the year exceed 10% of the taxpayer's adjusted gross income. Finally, personal casualty losses are allowed as a deduction only to the extent that the loss is not reimbursed by insurance.

For some taxpayers, the value of the tax deduction is greater than the reimbursement from insurance. For other taxpayers, there is a risk that filing a claim for a loss will cause the insurance company to raise insurance rates or to cancel the policy. Some would argue that, to the extent of the insurance coverage that could have been recovered, the taxpayer has not sustained the loss by reason of the casualty, but rather has sustained the loss by reason of the voluntary decision not to file the claim.

Based upon this argument, the Service has taken the position that the casualty loss deduction is limited to the amount that exceeds what could have been recovered if the taxpayer had filed an insurance claim. However, some courts have ruled that the Code does not limit the taxpayer's deduction in this manner.[13]

Act §1004(a) adds subparagraph (4) to Code §165(h), providing that if a taxpayer has insurance that covers the loss, the taxpayer must file a timely claim for the loss as a prerequisite to taking any deduction for the loss.

This change is effective for losses sustained in tax years beginning after December 31, 1986.[14]

VII. Two Percent Floor Under Miscellaneous Itemized Deductions [Act §132]

A. Pre-1986 TRA Law

Prior law provided itemized deductions referred to as "miscellaneous deductions." Miscellaneous deductions include the following: (i) unreimbursed employee business expenses (other than those deductible "above-the-line"), including union and professional dues (Code §162(a)), and home office expenses of an employee (Code §280A); (ii) certain expenses related to investment income or property (such as attorneys fees, financial planning fees, investment counsel fees) if deductible under Code §212; (iii) tax return preparation costs and related expenditures if deductible under Code §212(3); (iv) gambling or hobby losses up to the amounts of gambling or hobby income (Code §§165(d) and 183); (v) certain adjustments where a taxpayer restores amounts held under claim of right (Code §1341); (vi) amortizable bond premiums (Code §171); and (vii) certain costs of cooperative housing corporations (Code §216).[15]

B. Changes Made by the Tax Reform Act of 1986

1. In General

Act §132(a) enacts Code §67, effective for tax years beginning after December 31, 1986, which imposes a new floor to the deduction of miscellaneous itemized deductions. Under the Act, miscellaneous itemized deductions are allowable only to the extent that they exceed 2% of adjusted gross income. The purpose of imposing the floor is to reduce the tax benefit of taking miscellaneous deductions and to reduce the number of taxpayers claiming the deduction. Therefore the floor is in line with two overall goals of the Act, to broaden the tax base by reducing the number of available deductions and to simplify the tax system.

Post-1986 TRA Code §67(b) defines the term "miscellaneous itemized deductions" to mean all itemized deductions *other than* deductions for the following items:

(i) Interest allowed under Code §163 (for new limitations on the deductibility of interest expenses, *see* Chapter 5);

(ii) State and local taxes deductible under Code §164 (to the extent they continue to be deductible under the Act; *see* IV, *supra);*

(iii) Personal casualty losses described in Code §165(c)(3) and gambling losses described in Code §165(d);

(iv) Charitable contributions deductible under Code §170;

(v) Medical expenses deductible under Code §213 (to the extent they continue to be deductible under the Act; *see* III, *supra*);

[12] *Kendel v. Comr.*, 50 T.C.M. 1279 (1985); *Becker v. Comr.*, 85 T.C. 291 (1985); and *Allen v. Comr.*, 51 T.C.M. 427 (1986).

[13] *Cf. Hills v. Comr.*, 691 F.2d 997 (11th Cir. 1982); *Miller v. Comr.*, 733 F.2d 399 (6th Cir. 1984).

[14] Act §1004(b).

[15] Conference Report on H.R. 3838, H.R. Rep. No. 514, 99th Cong. II-32.

(vi) Moving expenses deductible under Code §217;

(vii) "Impairment-related work expenses;"

(viii) Estate tax attributable to income in respect of a decedent deductible under Code §691(c);

(ix) Any deduction allowable in connection with personal property used in a short sale;

(x) Amounts incurred where a taxpayer restores an amount held under a claim of right under Code §1341;

(xi) Amounts deductible where annuity payments cease prior to recovery of investment in the contract under Code §672(b)(3);

(xii) Amortizable bond premiums deductible under Code §171; and

(xiii) Certain expenses relating to cooperative housing corporations deductible under Code §216.

Impairment-related work expenses (vii *supra*) are defined in Act §132(a) (Code §67(d)) to refer to expenses for attendant care services and other expenses necessarily incurred in order for a handicapped individual to be able to work. A handicapped person is defined by reference to Code §190(b)(3) as a person who has a physical or mental disability that results in a functional limitation to employment or which limits one or more life activities.

A short sale (ix *supra*) is a transaction in which the taxpayer sells stock which he does not own. In order to engage in the sale, the taxpayer borrows the required stock certificates. Later, the taxpayer must acquire new shares to replace the borrowed security. The taxpayer realizes a gain on the transaction if the replacement stock can be acquired at a lower price than the price at which the initial sale was made. A taxpayer realizes a loss on the transaction if the replacement stock costs more than the price received on the sale. The deduction for any loss on the transaction is a capital loss (long-term or short-term) and is subject to the limitation under Code §1211 for deduction of capital losses. Because these losses are governed by Code §1211, they are not further limited by the 2% floor applicable to miscellaneous deductions.

Restoration of amounts held under a claim of right (x *supra*) takes place if, after the taxable year, it is determined that the taxpayer was not entitled to keep property previously received. For example, if a taxpayer received a bonus based upon a formula and it later turned out that the computation had been incorrectly made, the taxpayer might be required to repay some or all of the bonus. If the taxpayer has already paid tax on the item in the prior year, he is eligible to take a deduction to compensate for this overpayment of tax. Any deduction allowed under these circumstances is allowed without regard to the 2% floor applicable to miscellaneous deductions.

All itemized deductions not listed in the above list are subject to the new 2% floor. This includes business expenses incurred by an employee to the extent these deductions are allowable only as an itemized deduction. Those employee business expenses allowed "above-the-line" in arriving at adjusted gross income are not subject to the 2% floor; *e.g.*, employee expenses reimbursed by the employer, expenses for travel while away from home, transportation expenses, business expenses of outside salespersons, and moving expenses to the extent allowed by Code §217.[16]

By defining miscellaneous deductions to include all deductions other than certain specified deductions, the Act leaves open some discrepancies as to the treatment of certain types of deductions. Specifically, charitable deductions from a trust or estate under Code §642(c) are not included in the above list. Therefore, although an individual charitable deduction under Code §170 is exempt from the 2% floor, a similar trust deduction is subject to it. In addition, the distribution deduction allowed to trusts and estates under Code §651(a) or 661(a) is also missing from the above list.

These results were not intended. House Resolution 395, which would have corrected numerous omissions and typographical errors in the Act, would have corrected each of these obvious omissions. However, the House Resolution never passed Congress and the President signed the bill with the errors included.

Code §67(c) directs the Service to issue regulations to prevent the 2% floor from being circumvented by deducting the expense in a passthrough entity, such as a partnership, S corporation or mutual fund, but not including such passthrough entities as estates, nongrantor trusts, cooperatives, and REITs. These regulations are to include such reporting requirements as may be necessary to carry out the intent of this provision.

2. Estates and Trusts

In the case of an estate or trust, Code §67(e) provides that the adjusted gross income is to be computed in the same manner as for an individual, except that the deductions for costs paid or incurred in connection with the administration of the estate or trust that would not have been incurred if the property were not held in the trust or estate are treated as allowable in arriving at adjusted gross income. As a result of this treatment, these costs are not subject to the 2% floor.

However, it is uncertain what is included in the phrase dealing with expenses which *would not have been incurred* if the property were not held in an estate or a trust. This phrase might be read to refer to all trustee and administrative fees. However, trustee fees are normally set at a rate that compensates the trustee for many types of services: administration services, custodial services and investment advice. Not all of these services represent services that would not have been incurred but for the fact that the property was held in trust. In particular, it appears that the portion of a trustee's fee allocable to investment advice might not be exempt from the floor because it is not an expense that would not have been incurred *but for* the fact that the property was held in trust. This analysis suggests that a trustee will have to make an allocation between that portion of the fee covered by the 2% floor (investment advice) and the portion exempt from the 2% floor (administrative services).

[16] Under the Act, moving expenses are no longer treated as "above-the-line" deductions and instead become itemized deductions. However, since moving expenses are subject to their own limitations, under §217, they are not subject to the 2% floor.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

However, the purpose of the trust and estate exception appears to be an effort to simplify the administration of trusts. If so, the very purpose of this exception is to avoid the necessity of making these types of allocations. It is unclear how this controversy will be resolved. Unless the issue is clarified in a future technical corrections act, it may take a court decision to define the intent of its portion of Act §132.

3. Special Rule for Actors and Performing Artists

Act §132(b) enacts Code §62(a)(2)(B). This new section contains a special rule for the employment-related expenses of an actor or other performing artist. Under this section, a "qualified performing artist" is allowed a new above-the-line deduction for employee business expenses allowable under §162 during a year if the performing artist for that year (i) had more than one employer (excluding any nominal employer[17]) in the performing arts, (ii) incurred allowable §162 expenses in connection with performing services as an employee in an amount exceeding 10% of gross income from the services, and (iii) did not have adjusted gross income, as determined before deducting such expenses, exceeding $16,000. For married couples filing a joint return, items (i) and (ii), above, are applied separately as to each spouse, but item (iii) is applied to the couple with respect to their combined adjusted gross income.[18]

4. Effective Date

The changes made by Act §132 are effective for taxable years beginning as of December 31, 1986.[19]

VIII. Augmented Charitable Deduction for Donation of Scientific Equipment

A. Overview

In general, Code §170(e)(1)(A) limits the amount of the deduction for charitable contributions of inventory property to the donor's basis, rather than the fair market value of the property. In 1981, however, Congress added §170(e)(4), providing a special rule for certain contributions by corporations to colleges and universities of appreciated property to be used for scientific research.

Act §231(f) expands the category of eligible donees under §170(e)(4) to include tax-exempt scientific research organizations.

B. Analysis

Under the general rule of §170(e) the deductible amount of a charitable contribution of inventory property is the fair market value of the contributed property, reduced by the amount of gain which would not have been long-term capital gain if the property had been sold by the taxpayer at its fair market value on the date of contribution.[20] The effect of this rule is to limit the donor's deduction for inventory property to such property's basis.

Section 170(e)(4), added to the Code in the Economic Recovery Tax Act of 1981, provides an augmented charitable deduction for corporate donations of newly-manufactured scientific equipment or apparatus to a college or university for research use in the physical or biological sciences. The provision contains a lengthy set of requirements for qualification. To qualify for the deduction, the following requirements must be satisfied:[21]

1. The contributed property must be tangible personal property of the type described in §1221(1) (*i.e.*, stock in trade, inventory property, or property held primarily for sale to customers in the ordinary course of business);[22]

2. The contribution must be made to an educational organization described in §170(b)(1)(A)(ii) which is also an institution of higher learning (as defined in §3304(f));[23]

3. The property must be constructed by the donor;[24]

4. The contribution must be made within two years after construction of the property is substantially completed;[25]

5. The donee must be the original user of the property;[26]

6. The property must be scientific equipment, substantially all the use of which by the donee is for research and experimentation (within the meaning of §174), or for research training, in the United States in physical or biological sciences;[27]

7. The donee must not transfer the property in exchange for money, other property or services;[28] and

8. The donor must receive from the donee a written statement representing that the use and disposition of the property will comply with requirements 6. and 7., *supra*.[29]

If all these conditions are met, a deduction is generally allowable equal to the sum of the taxpayer's basis in the property plus half of the unrealized appreciation. In no event, however, is a deduction allowable for more than twice the taxpayer's basis in the property.[30]

Section 231(f) of the 1986 Act extends the expanded deduction by amending §170(e)(4)(B)(i) (the second requirement in the foregoing list) to include an additional category of permissible donee. This category consists of scientific research organizations of the type described in new §41(e)(6)(B). These are organizations which: (1) are not educational institutions of higher learning (although such organizations continue to qualify independently as donees for such contributions); (2) are described in §501(c)(3) and exempt from tax under §501(a); (3) are organized and operated primarily to conduct scientific re-

search; and (4) are not private foundations as defined in §509(a).[31]

C. *Effective Dates*

The expanded deduction is applicable for taxable years beginning after December 31, 1985. Act §231(g)(1).

D. *Planning Suggestions*

This enlargement of the category of donees qualified for the expanded deduction offers additional planning opportunities for corporations whose activities include the construction of property subject to §170(e)(4). Formerly, only colleges and universities were permissible donees. While colleges and universities often maintain close relationships with corporations, such institutions are inherently independent organizations. By contrast, the 1986 Act permits expanded deductions for contributions to an organization which can be much more closely allied with the donor-corporation itself.

So long as a scientific research organization avoids private foundation status, it can qualify as a recipient of property qualified for an expanded deduction under §170(e)(4). For example, qualification might be possible for an organization which is affiliated with a university or other public charity (so as to qualify as a supporting organization under §509(a)(3), and hence avoid private foundation status), but not actually a part of such public charity. Another alternative might be an organization linked in a similar fashion to a §501(c)(6) trade association active in the physical or biological sciences. Section 509(a)(3) grants an exception from private foundation status to certain organizations of this type.[32] Such a linkage would only be feasible where the support of the trade association conformed to the requirements of §509(a)(2), but such an entity can often meet that test where its income comes primarily from membership receipts and other sources related to the organization's exempt function.

Chapter 10

COMPUTATION OF TAXABLE INCOME AND TAX FOR NONCORPORATE TAXPAYERS

John Freeman Blake, Esq.
Lynn K. Pearle, Esq.
Silverstein and Mullens
Washington, D.C.

I. Computation of Taxable Income: Standard Deduction and Personal Exemption [Act §§102, 103]

A. Overview

The Tax Reform Act of 1986 (the Act) has as a major goal the lowering of tax rates applicable to all taxpayers. To accomplish this, the Act broadens the taxable income base by reducing the items of income that are exempt from tax or specially treated under the Code. A secondary goal of the Act is to remove low income wage-earners from the tax roles and simplify the computation of tax for the majority of taxpayers.

The Act accomplishes this second goal by increasing the standard deduction, the personal exemption and the exemption for dependents. The increases in these items are phased in gradually over the next few years.

The standard deduction is available to all taxpayers who do not elect to itemize deductions. An election to itemize deductions would be made only if the total of all itemized deductions exceeded the dollar amount of the applicable standard deduction.

The personal exemption is designed to benefit low income taxpayers. The Act limits the benefit of the personal exemption by phasing it out for taxpayers whose taxable incomes reach a certain threshold level.

B. Standard Deduction

1. Pre-TRA 1986 Law

Pre-TRA 1986 law referred to the standard deduction as a "zero bracket amount" (ZBA). The following ZBAs apply for 1986 and reflect an adjustment for 1985 inflation.

Filing Status	*ZBA*
Joint returns and surviving spouses	$3,670
Heads of household	2,480
Single individuals	2,480
Married individuals filing separately	1,835

The ZBA is adjusted annually for changes in the consumer price index.[1]

[1] *See* 1954 Code §63.

A child eligible to be claimed as a dependent on his or her parents' return may use the ZBA only to offset earned income.[2] Thus, a child with unearned income exceeding the personal exemption amount must file a return and pay tax on the excess (reduced by any allowable itemized deductions).

2. Changes Made by the Tax Reform Act of 1986

a. 1987

For individual taxpayers other than elderly or blind individuals, the standard deduction amounts for taxable years beginning in 1987 are as follows:[3]

Filing Status	*Standard Deduction*
Joint returns and surviving spouses	$3,760
Heads of household	2,540
Single individuals	2,540
Married individuals filing separately	1,880

For elderly or blind individuals, the standard deductions listed in b., *infra*, are applicable in 1987—one year earlier than they are for other taxpayers.

b. 1988 and Later Years

The Act increases the standard deduction to the following amounts, effective for tax years beginning in 1988:[4]

Filing Status	*Standard Deduction*
Joint returns and surviving spouses	$5,000
Heads of household	4,400
Single individuals	3,000
Married individuals filing separately	2,500

Beginning in 1989, these increased standard deduction amounts are to be adjusted for inflation.[5] The method of

[2] *See* 1954 Code §63(e)(1)(D).
[3] Act §102(a), revising Code §63(h).
[4] *See* Act §102(a), revising Code §63(c).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

computing the inflation adjustment is described, *infra*, under the heading, "E. Adjustment for Inflation."

The increased standard deduction, coupled with lower tax brackets and larger personal exemptions, represents significant tax reduction for lower income taxpayers. For example, in 1986, a married couple filing a joint return showing $15,000 of adjusted gross income will receive the advantage of a ZBA of $3,670. Assuming the couple has no other dependents, they will report two personal exemptions for $1,080 each (total of $2,160). They will pay a tax of $1,170.50. The couple's marginal tax bracket on additional income is 16%. In 1988, the same couple will have a standard deduction of $5,000 and two personal exemptions of $1,950 (total of $3,900). The couple's tax will be $915, a reduction of $255.50 over the 1986 tax. The couple's marginal tax bracket on additional income will be 15%. By 1989, when the higher personal exemption of $2,000 is fully phased in, the couple's tax will be $900, representing a $270.00 reduction over the 1986 tax.

c. Additional Standard Deduction for the Elderly and Blind

In addition to the regular standard deduction, there is an additional standard deduction allowed to blind and elderly individuals.[6] This increased standard deduction replaces the additional personal exemptions allowed to the elderly and the blind under pre-TRA law.

Under the Act, as under pre-TRA law, a person age 65 or older on the last day of the taxable year is eligible for the additional standard deduction for the elderly.[7] Also as under pre-TRA law, the Act defines blindness as central visual acuity that does not exceed 20/200 in the better eye with correcting lenses, or if greater than 20/200 but is accompanied by a limitation in the fields of vision such that the widest diameter of the visual field subtends an angle no greater than 20 degrees.[8]

The new additional standard deduction for the elderly and the blind is $600 for a taxpayer who is married (whether filing jointly or separately) or is a surviving spouse ($1,200 for a taxpayer who is both elderly and blind). The additional standard deduction is $750 for an elderly or blind individual who is either unmarried or is not a surviving spouse ($1,500 for a taxpayer who is both elderly and blind). For elderly or blind taxpayers only, the standard deduction amounts listed above for 1988 and the additional $600 or $750 standard deduction amounts are effective beginning in 1987.[9] Beginning in 1989, the $600 and $750 additional standard deduction amounts will be adjusted for inflation.[10] The method of computing the inflation adjustment is described, *infra*, under the heading, "E. Adjustment for Inflation."

It appears that the additional standard deduction for the elderly and blind, when coupled with lower tax rates and a larger standard deduction, results in lower taxes despite the loss of the additional personal exemption allowed under pre-TRA law. In 1986, a single taxpayer who is both elderly and blind and has adjusted gross income of $15,000 will pay a tax of $1,317.50. In 1988, the same taxpayer will pay a tax of $1,282.50, a reduction of $35 over the 1986 tax.

d. Limitation on Standard Deduction for Certain Individuals

For individuals claimed as dependents on the return of any other taxpayer, the standard deduction is limited to the greater of $500 or the individual's earned income for the year.[11] This is discussed *infra* in "D. Rules for dependents."

The following taxpayer's are not entitled to any standard deduction:[12]

1. a married individual filing a separate return, where one spouse itemizes deductions;

2. a nonresident alien individual;

3. an individual making a return for a period of less than 12 months because of a change in annual accounting periods; or

4. estates or trusts, common trust funds or partnerships.

C. Personal Exemptions

1. Pre-TRA Law

For 1986, the personal exemption amount for an individual, the individual's spouse, and each dependent is $1,080. One additional personal exemption is provided for a taxpayer who is age 65 or older, and for a taxpayer who is blind.[13]

Each taxpayer may claim a personal exemption for himself or herself and for a dependent child (or other dependent) whose gross income does not exceed the personal exemption amount ($1,080 for 1986). In addition, parents may claim a personal exemption for a dependent child who has income exceeding the personal exemption amount if the dependent child is under age 19 or a full-time student. The child or other dependent also may claim a full personal exemption on his or her return.[14]

2. Changes Made by the Tax Reform Act of 1986

The Act increased the personal exemption for each individual, the individual's spouse, and each eligible dependent to the following amounts:[15]

Taxable Years	*Personal Exemption*
1987	$1,900
1988	1,950
1989	2,000

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Beginning in 1990, the $2,000 personal exemption amount will be adjusted for inflation.[16] The method of computing the inflation adjustment is described, *infra,* under the heading, "E. Adjustment for Inflation."

The Act repeals the additional exemption for an elderly or blind individual, beginning in 1987.[17] The loss of the additional personal exemption for elderly or blind individuals is compensated for by the additional standard deduction provided by Act §102(a) for elderly or blind individuals, beginning in 1987.

3. Phase Out of Personal Exemptions

The personal exemption is designed primarily to provide tax relief for lower income taxpayers. As a result, beginning in 1988, the benefit of the personal exemption is phased out for taxpayers having taxable income exceeding specified levels. (Act §101(a)). The income tax liability of these taxpayers is increased by 5% of taxable income within certain ranges. Therefore, for taxpayers within the specified ranges, the marginal tax rate applicable to these taxpayers is 33% (5% more than the otherwise applicable rate of 28%).

This phase out is accomplished by a formula that first imposes a 5% surcharge on taxable income in excess of a specified amount, listed *infra,* and then imposes a limit on the amount by which a taxpayer's tax may be increased by the 5% surcharge.[18] The limitation for the phase out of the personal exemption only is 28% of the deductions for personal and dependent exemptions allowable to the taxpayer for the taxable year. For example, in 1988, the personal exemption is $1,950. Twenty eight percent of $1,950 is $546. Therefore, for each personal and dependent exemption, the 5% surcharge will continue to apply until it generates an additional $546 of tax. It takes an additional $10,920 of income to generate $546 of tax at 5%. Therefore, the effect of the phase out formula for personal exemptions is to keep a taxpayer in the 33% marginal tax bracket for an additional $10,920 of taxable income for each personal and dependent exemption claimed by the taxpayer.

In 1989, the personal exemption increases to $2,000. Twenty eight percent of $2,000 is $560. Therefore, in 1989, each personal and dependent exemption claimed will keep a taxpayer in the 33% marginal tax bracket for an additional $11,200 of taxable income. The phase out of the personal exemption begins at the taxable income level at which the benefit of 15% rate is totally phased out (*See* Chapter 10, II, *infra*). For 1988, those levels are as follows:

Taxpayer Filing Status	*Taxable Income*
Joint returns and surviving spouses	$149,250
Heads of household	123,790
Single individuals	89,560
Married individuals filing separately	113,300

The taxable income levels listed above are subject to adjustment for inflation in taxable years beginning in 1989.[19] The method of computing the inflation adjustment is discussed, *infra,* under the heading, "E. Adjustment for Inflation."

The phase-out of the tax benefit of each personal exemption occurs serially. That is to say, the phase out of the benefit of the second personal exemption on a joint return does not begin until the phase out of the first is complete. Thus, in the case of a married couple filing jointly who have two children, in 1988 the benefit of the four personal exemptions would phase out over an income range of $43,680 ($10,920 times four). The phase out would commence at $149,250, and would be complete at taxable income of $192,930 ($149,250 plus $43,680).

D. Rules for Dependents

The Act provides that no personal exemption amount is allowable on the return of an individual who is eligible to be claimed as a dependent on another taxpayer's return (for example, on the return of a child who is eligible to be claimed as a dependent on the return of a parent).[20]

As in the pre-TRA law rule that the ZBA may be used by such a dependent individual only to offset earned income, the Act provides that any amount of the standard deduction in excess of $500 may be used by a dependent individual only to offset earned income. For dependent taxpayers, the standard deduction is limited to the greater of the following: (a) $500 (to be adjusted for inflation beginning in 1989) or (b) the individual's earned income up to the basic standard deduction amount (in 1988, $3,000 for a single individual).[21] Therefore, a dependent must file a federal income tax return only if he or she has either gross income exceeding the standard deduction amount for the dependent child (*i.e.*, the greater of earned income or $500) or unearned income exceeding $500.

Therefore, if a single dependent has $800 of unearned income and no earned income, the standard deduction available to the dependent is $500. If a single dependent has $800 of unearned income and $1,000 of earned income, the standard deduction available to the dependent is $1,000. If a single dependent has $3,000 or more of earned income, the standard deduction available to the dependent in 1988 is $3,000.

E. Adjustment for Inflation

Beginning in 1989 and 1990, both the standard deduction and the personal exemption, respectively, are increased for inflation. (Act §§102(a) and 103(a)). In addition, inflation adjustments are made for tax rate brackets and the thresholds for determining to whom the 5% surcharge in tax rates apply (*See* Chapter 10, II, *infra*). The purpose of the adjustment is to prevent "bracket creep" in which a taxpayer's tax increases because of income increases that are made to keep the taxpayer abreast of inflation. A similar inflation adjustment applies to the tax brackets, zero bracket amount and personal exemptions applicable under pre-TRA law.[22]

[22] *See* 1954 Code §1(f).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The inflation adjustment is made with reference to the Consumer Price Index (CPI) for all-urban customers published by the Department of Labor for the 12-month period ending on August 31 of each year. The amount of the adjustment to be made each year is the percentage, if any, by which the CPI for the immediately preceding year exceeds the CPI for 1987.[23] In the event the computation results in a number which is not a multiple of $50, the number is rounded to the next lowest $50. In the case of adjustments for married persons filing separate returns, the number is rounded to the next lowest $25, rather than the next lowest $50.[24] Note that if the CPI were to decline in any one year, a downward adjustment would be required by this formula. However, if the CPI were to decline below the 1987 level, no further downward adjustments would be made.

II. Determination of Tax [Act §§101, 301, 302]

A. Pre-TRA Law

Under pre-TRA law, the rate structure for computing tax consists of up to 15 taxable income brackets and tax rates, beginning above the zero bracket amount (ZBA). (1954 Code §1).

For married individuals filing jointly and surviving spouses, there are 14 taxable income brackets above the ZBA of $3,670. The minimum 11% rate applies to taxable income above $3,670; the maximum 50% rate applies to taxable income above $175,250. For married individuals filing separate returns, the ZBA is one-half the ZBA on joint returns, and the taxable income bracket amounts are one-half the amounts for joint returns.

For taxpayers who qualify as heads of households, there are 14 taxable income brackets above the $2,480 ZBA. The minimum 11% tax rate applies to taxable income above $2,480; the maximum 50% rate applies to taxable income above $116,870.

For single individuals, there are 15 taxable income brackets above the $2,480 ZBA. The minimum 11% tax rate applies to taxable income above $2,480; the maximum 50% rate applies to taxable income above $88,270.

B. Changes Made by the Tax Reform Act of 1986

1. Tax Rates—1987

For taxable years beginning in 1987, a five bracket rate schedule is provided.[25] This schedule is shown on the following table. The special rules, discussed *infra,* for phasing out the benefit of the lower brackets do not apply for 1987.

Tax rate	*Married, filing joint returns*	*Heads of household*	*Single individuals*
11%	$ 0-$3,000	$ 0-$2,500	$ 0-$1,800
15%	3,001-28,000	2,501-23,000	1,801-16,800
28%	28,001-45,000	23,001-38,000	16,801-27,000
35%	45,001-90,000	38,001-80,000	27,001-54,000
38.5%	Over $90,000	Over $80,000	Over $54,000

For married individuals filing separate returns, the taxable income bracket amounts for 1987 are one-half the amounts for joint returns. The bracket amounts for surviving spouses are the same as those for married individuals filing joint returns.

Note: For 1987, the tax on long term capital gain income will not exceed 28%.[26] This cap on the capital gain tax is designed to prevent a disruption in economic activity during 1987, when the top marginal tax rate on ordinary income will exceed 28%. Taxpayers having long term capital gains during 1987 will pay tax at the lesser of the following amounts:

(a) a tax computed at regular tax rates on all taxable income including long-term capital gain income; or

(b) a tax computed at regular tax rates on ordinary income, *plus* 28% of all long-term capital gain income.

New Code §1(j) will also be applicable in any future tax year in which the top marginal tax rate on ordinary income exceeds 28%. Therefore, if Congress were to increase tax rates in the future, the 28% cap on long term capital gains income would be automatically triggered unless Congress also amended Code §1(j). If Code §1(j) applied in a tax year after 1987, the income tax computed above would be further adjusted to include the 5% surtax on taxable income within certain ranges. This surcharge is discussed, *infra,* under the heading, "3. Phase out of the 15% bracket.

2. Tax Rates—1988 and Later Years

The tax structure applicable in 1988 and later years consists of two brackets and tax rates: 15 and 28%.[27] A standard deduction replaces the pre-TRA law zero bracket amount (ZBA). The brackets are as follows:

Married Individuals Filing Jointly and Surviving Spouses

Tax Rate	*Bracket*
ZBA	Replaced by standard deduction
15%	$0 to $29,750
28%	over $29,750

For married individuals filing separate returns, the 15% bracket applies to taxable income not over $14,875 while the 28% bracket applies to taxable income above $14,875—one-half the taxable income amount for joint returns.

Heads of Household

Tax Rate	*Bracket*
ZBA	Replaced by standard deduction
15%	$0 to $23,900
28%	over $23,900

[23] *See* Act §101, revising Code §1(f).
[24] *See* Act §101(a), revising Code §1(f).
[25] Act §101(a), revising Code §1(h)(2).
[26] *See* Act §302(a)enacting new Code §1(j). See discussion of long term capital gains taxation at Chapter 2.
[27] Act §101(a), revising Code §1(a), (b), (c) and (d).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Single Individuals

Tax Rate	*Bracket*
ZBA	Replaced by standard deduction
15%	$0 to $17,850
28%	over $17,850

Beginning in 1989, the range of income taxable at the 15% rate will be adjusted for inflation.[28] The method of computing the inflation adjustment is discussed, *infra,* under the heading, "4. Adjustment for Inflation."

3. Phase out of the 15% bracket

Beginning in 1988, the benefit of the 15% bracket is phased out for taxpayers having taxable income exceeding specified levels (the "applicable dollar amount"). The phase-out is accomplished by increasing the income tax liability of such taxpayers by 5% of their taxable income within the specified ranges. Therefore, for taxpayers within the specified ranges, the maximum tax rate applicable to a portion of the taxpayer's income will be 33% (5% in excess of the otherwise maximum rate of 28%).

This phase out is accomplished by a formula that first imposes a 5% surcharge on taxable income in excess of a specified amount, listed below, and then imposes a limit on the amount by which a taxpayer's tax may be increased by the 5% surcharge.[29] The limitation for the phase out of the tax benefit of the 15% bracket is 13% of the maximum amount of taxable income to which the 15% bracket applies. For 1988, the 15% bracket applies to taxable income of single taxpayers from zero to $17,850. Therefore the maximum amount of additional tax that will be imposed by the 5% surcharge is 13% of $17,850, or $2,320.50. Note that when this additional tax is coupled with the 15% tax applicable to income in this bracket, the taxpayer has paid a total of 28% on the income.

It takes $46,410 of income which, taxed at the 5% surcharge rate, will produce an additional tax of $2,320.50. Therefore, the effect of the phase out formula is to create a range of income in which the taxpayer's income is subject to a 33% tax. When the taxpayer's income exceeds the range, the marginal tax bracket applicable to the excess income is 28%.

For 1988, the phase out of the benefit of the 15% bracket begins at a dollar amount specified in the Code. This dollar amount threshold is listed below.[30] The limitation on the 5% surcharge has the effect of creating a range of taxable income within which the 5% surcharge is to apply. The range is shown in the following table beginning with the statutory threshold amount:

Filing Status	*Taxable Income Range*
Joint returns and surviving spouses	$71,900 and $149,250
Heads of households	$61,650 and $123,790
Single individuals	$43,150 and $89,560
Married individuals filing separately	$35,950 and $113,300

The amounts listed here will be adjusted for inflation beginning in 1989.[31] The method of computing the inflation adjustment is discussed, *infra,* under the heading, "4. Adjustment for Inflation."

In addition to phasing out the benefit of the 15% tax bracket, the Act phases out the benefit of the personal exemptions claimed by the taxpayer. The phase out of the personal exemptions begins at the point when the phase out of the benefit of the 15% bracket has been completed (*See* Chapter 10, I, *supra.*

Once the maximum rate adjustment has been reached, the taxpayer is again subject to the 28% tax bracket for income in excess of the adjustment range. In effect, these taxpayers will pay a flat tax of 28% on all of their taxable income.

4. Adjustment for Inflation

Beginning in 1989, both the tax rate brackets and the thresholds for determining to whom the 5% surcharge in tax rates apply are increased for inflation. In addition, inflation adjustments are made for the standard deduction and the personal exemption (*See,* Chapter 10, I, *supra*). The purpose of the adjustment is to prevent "bracket creep" in which a taxpayer's tax increases because of income increases that are made to keep the taxpayer abreast of inflation. A similar inflation adjustment applies to the tax brackets, zero bracket amount and personal exemptions applicable under pre-TRA law.

The inflation adjustment is made with reference to the Consumer Price Index (CPI) for all-urban customers published by the Department of Labor for the 12-month period ending on August 31 of each year. The amount of the adjustment to be made each year is the percentage, if any, by which the CPI for the current year exceeds the CPI for calendar year 1987. In the event the computation results in a number which is not a multiple of $50, the number is rounded to the next lowest $50. In the case of adjustments for married persons filing separate returns, the number is rounded to the next lowest $25, rather than the next lowest $50.[32] Note that if the CPI were to decline in any one year, a downward adjustment would be required by this formula. However, if the CPI declined below the 1987 level, no further downward adjustments would be made.

[32] *See* Act §101(a), revising Code §1(f).

III. Income Averaging Repealed [Act §141]

Pre-TRA Code §§1301 through 1305 allow certain taxpayers to elect to pay a lower tax on income received in one year if it exceeds the income received in three prior years by a certain amount. The effect of these provisions is to provide some relief to taxpayers whose incomes fluctuate from year to year by taxing the income as if it had been received ratably over the averaging period. The amount of income which may be averaged is the portion of the current year's taxable income that is more than 40% higher than the average of the prior three years' taxable income.

Act §141 repeals income averaging for all taxpayers effective for taxable years beginning after December 31, 1986.[33]

Income averaging was a mechanism for reducing tax inequity for taxpayers whose income fluctuates from year to year. Lower marginal rates and the two bracket system (15 and 28%) results in fewer changes to a taxpayer's marginal rate, even with fluctuating income. The repeal of income averaging is not expected to create significant tax inequity for taxpayers. Perhaps more importantly, the repeal of income averaging is seen as means of reducing complexity in the tax system.[34]

IV. Special Rules for Unearned Income of Minors

A. Introduction

Under pre-TRA law, income earned on assets owned by a minor child generally was taxed to the child at the child's rate, and such tax was computed in the same manner as that of an adult. Congress was concerned that parents were transferring income-producing property to their children for income shifting purposes, so that the income would be taxed at the child's lower marginal rate. To augment the reforms aimed at reducing income shifting between family members, Congress focused on children under the age 14 and concluded that it would be appropriate to attribute a parent's top marginal rate to such child's unearned income.

B. Overview

The Act, §1411(a), enacted a new provision Code §1(i), commonly referred to as the "Kiddie Tax," which will tax a portion of the "net unearned income" of children under age 14 at their parents' top marginal tax rate.

C. Detailed Analysis

The 1986 TRA provision applies if the child has not attained age 14 before the close of the taxable year and if either parent of such child is alive at the close of the year.

Generally, under the Act, unearned income of a child under age 14 will be tax-free up to $500. A child's unearned income in excess of $500 up to $1,000 will be taxed at the child's marginal rate. The rest of the child's unearned income is taxed to the child at the parents' top marginal rate. A child's earned income will continue to be taxed at the child's marginal tax rate.

The "Kiddie Tax" is created by three Code sections: §1(i), as enacted by Act §1411(a), which sets forth the operation of the tax; §63(c), as amended by Act §102(a), which sets forth the definition of the standard deduction; and §151(d)(2), as amended by Act §103(a), which disallows a personal exemption deduction for certain minors.

Under 1986 TRA Code §63(c)(5), the standard deduction of a child under age 14 who is claimed as a dependent is limited to the greater of $500 or the child's earned income, but not to exceed the regular standard deduction. If itemized deductions are elected, the greater of $500 of all itemized deductions or the total of allowable deductions directly related to the production of unearned income may be applied against unearned income. The $500 figures will be adjusted for inflation beginning in 1988. In addition, §151(d)(2) disallows the personal exemption for such child if he is claimed as a dependent by his parents.

After these computations are made, under §1(i) the first $500 of unearned income of such child in excess of the greater of (a) the $500 standard deduction or $500 of itemized deductions or (b) the total of directly related itemized deductions is then taxed to the child at his own rates. In addition, all of the child's earned income is taxed to the child at his own rates. The remaining amount of the child's unearned income is defined as the child's "net unearned income" and it is that amount which is taxed to the child at his parents' tax rate.

Example: During 1988 a dependent child under age 14 has $5,000 of unearned income from a custodial account created by his grandmother. He also has $3,000 of earned income from his after school jobs. Under §63(c)(3), as limited by (c)(5), the child's standard deduction is $3,000 for taxable years beginning after 1987. The first $1,000 of unearned income will be taxed to the child at his marginal tax rate. He can apply $500 of his standard deduction against this amount, leaving $500 taxable at 15%. The remaining $4,000 will be taxable to the child at his parents' marginal tax rate. After applying $500 of his standard deduction against unearned income, the child has $2,500 of his standard deduction remaining which he applies to his earned income, leaving $500 of earned income taxable at 15%. Therefore, of his $8,000 of taxable income, $1,000 will be taxed at 15%, $4,000 will be taxed at his parents' marginal rate and $3,000 is sheltered by his standard deduction.

The child's net unearned income is then added to his parent's actual taxable income and the parent's tax is recomputed to find the "allocable parental tax." Code §1(i)(3) provides that the "allocable parental tax" equals the tax that the parent would have paid had the parent's taxable income actually included such unearned income less the tax actually imposed on the parent's taxable income. The unearned income of children is not taken into account in computing any deduction or credit of the parent. A child's share of any allocable parental tax of his parent is equal to an amount that bears the same ratio to the total allocable parental tax as the child's net unearned income bears to the aggregate net unearned income of all children of such parent to whom these special rules apply.

[33] *See* Act §151(a).
[34] *See House Ways and Means Committee Report HR3838*, p. 114.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Example: Parents have three children, all under age 14. During 1988 each child has unearned income of $3,000. The parents have taxable income of $29,750. Of each child's unearned income, $1,000 is taxed at the child's marginal rate and $2,000 is taxed at the parents' rate. The parents' tax calculation is 15% of $29,750 or $4,462.50 plus 28% of $6,000 or $1,680. The additional tax of $1,680 will be split among the three children and each child will owe $560.

Under Code §1(i)(5), if the child's parents are not married, as determined under Code §7703, the custodial parent's income is used for purposes of computing the "Kiddie Tax." If the parents are married but filing separately, the higher income parent is used to compute the "Kiddie Tax." If the parents' taxable income is later adjusted to place them in a different tax bracket, presumably the child's tax will have to be recomputed.

The Treasury Department will issue regulations providing for the application of these provisions where either the child or the parent is subject to the alternate minimum tax for the year.[35]

Code §1(i) applies to all unearned income of a child under age 14, regardless of source. It thus applies to gifts made to the child from his parents, grandparents and friends. The new provision will be applicable to unearned income in trusts as well as custodial accounts created under the Uniform Gifts to Minors Act or Uniform Transfers to Minors Act. In addition, the provision applies to income earned on a child's earned income.

D. Effective Dates

Code §1(i) generally is effective for taxable years beginning after December 31, 1986. Therefore, the provision will apply to income from existing custodial accounts and income distributed from existing trusts, even though such custodial accounts and trusts were created before the effective date of the provision.

E. Planning Suggestions

This provision will discourage transfers from a parent to a child which are motivated solely for income shifting purposes, if the child is under age 14. However, income shifting may be less important due to the lowering of the individual rate schedules. Nevertheless, in future planning, consideration should be given to creating sprinkle spray discretionary trusts for children so that the trustee may control the amount and timing of income distributed to children under age 14. Note, however that undistributed trust income will be subject to the compressed tax bracket rates under the new trusts and estates provisions.

Consideration should also be given to changing investments of existing trusts and custodial accounts to growth oriented securities, tax-exempt municipal or state bonds, or Series EE bonds until the child reaches age 14. Zero coupon bonds should be avoided because the accrued income on such bonds is taxable currently even though not received.

It may be advantageous for a child under 14 to receive up to $1,000 of unearned income, of which $500 will be tax-free and the second $500 will be taxed at the child's marginal rate.

Transfers to minors remain advantageous for general estate planning purposes. A parent may wish to utilize his annual gift tax exclusion and unified credit to transfer property to his minor children, regardless of the income tax consequences. Since the highest estate marginal tax rate is 55% until 1988, when it becomes 50%, it still is advantageous in many estates to transfer property to children in order to avoid the estate tax on subsequent appreciation.

Practical problems involving the "Kiddie Tax" may be encountered. Since the child's return will be based upon his parent's computations, there may be tensions created if the parents are divorced. Moreover, subsequent adjustments in the parent's return will require adjustments in the child's return.

V. Filing Requirements [Act §104]

The Act changed the rules for determining when a return is required to be filed by a taxpayer. The changes were made to conform the filing requirements to the changes made to the standard deduction and personal exemptions. Under the Act, a taxpayer is required to file an income tax return if his gross income exceeds the sum of the personal and dependent exemptions plus the basic standard deduction available to the taxpayer.[36]

A single taxpayer, a head of a household, or a surviving spouse must file a return if gross income exceeds one personal exemption plus the applicable standard deduction.[37]

Married taxpayers who are eligible to file a joint return must file a return if their combined incomes exceed two personal exemptions plus the standard deduction available to joint returns. However, this higher threshold is only available to married taxpayers who had the same household as their home at the end of the taxable year.[38]

If a married couple elects to file separate returns, and neither spouse itemizes deductions, then each spouse must file a return if his or her income exceeds one personal exemption plus the standard deduction available to married persons who are filing separately. If either spouse itemizes deductions, then each spouse who has income in excess of the personal and dependent exemptions available to him or her must file a return.

For the purposes of determining whether a return is required to be filed, the standard deduction of an unmarried, elderly taxpayer includes the additional standard deduction available to him or her by reason of his or her age ($750 in 1987 and 1988, adjusted for inflation thereafter). For married, elderly taxpayers (whether or not they file a joint return), the standard deduction used to determine whether a return is required to be filed includes the one or

[35] Conference Report, p. II-767-68.

[37] *See* Act §104(a), revising Code §6012(a)(1)(A)(i), (ii) and (iii).
[38] *See* Act §104(a), revising Code §6012(a)(1)(A)(iv).

two additional standard deductions available to them by reason of their ages ($600 in 1987 and 1988, adjusted for inflation thereafter). However, the filing requirement applicable to blind taxpayers is not adjusted for the additional standard deduction available to them by reason on their blindness.[39]

For a dependent child under age 14 who is subject to a lower standard deduction under Code §63(c)(5), the lower amount is used to determine if a return is required to be filed by the child.[40]

Certain taxpayers are not eligible for any standard deduction under Code §63(c)(6). These taxpayers include married taxpayers filing separate returns where either one itemizes deductions, nonresident alien taxpayers, taxpayers filing a short-year return in order to change an annual accounting period, estates, trusts, common trust funds and partnerships. These taxpayers are required to file a return if gross income exceeds the personal and dependent exemptions available to the taxpayer for the year.[41]

The amendments made to Code §6012 by Act §104(a) are effective for taxable years beginning after December 31, 1986.[42]

[39] *See* Act §104(a), revising Code §6012(a)(1)(B).

Chapter 11

AMENDMENTS AFFECTING THE INVESTMENT, ENERGY, AND REHABILITATION CREDITS

Patrick G. Dooher, Esq.
Silverstein and Mullens
Washington, D.C.

I. Background

Code §46 provides for the allowance of an investment credit of up to 10% of the basis or cost of "§38 property" placed in service by the taxpayer during the taxable year. Section 48(a) sets forth the categories of property eligible for the credit, the most notable of which is tangible personal property.

An additional 10 to 15% credit is available to taxpayers for investments in certain types of energy property.[1] Energy property for which the energy credit was available through 1985 included ocean thermal property, solar, wind, or geothermal property, and qualified hydroelectric generating property.[2]

For expenditures incurred to rehabilitate certain buildings, an increased investment credit may be claimed in lieu of of the regular and energy investment credits. This rehabilitation credit is equal to 15% of the qualified rehabilitation expenditures (QRE) for a 30-year old building, 20% of such expenditures for a 40-year old building, and 25% of such expenditures for a certified historic structure.[3]

Section 48(g) sets forth the requirements that must be satisfied to obtain the rehabilitation credit. Under §48(g)(1)(A), a qualified rehabilitated building is a building (i) that has been "substantially rehabilitated," (ii) that was placed in service before the beginning of the rehabilitation, and (iii) that has retained 75% or more of the existing external walls as external walls in the rehabilitation process. Under §48(g)(1)(C), a building has been "substantially rehabilitated," if the qualified rehabilitation expenditures during the 24-month period selected by the taxpayer exceed the greater of (i) the adjusted basis of the building (and its structural components), or (ii) $5,000. Any expenditure by a lessee will not be considered a qualified rehabilitation credit expenditure if on the date the rehabilitation is completed, the remaining term of the lease (determined without regard to any renewal periods), is less than 19 years (15 years in the case of low-income housing).[4] An expenditure is a qualified rehabilitation expenditure, if, among other things, it is incurred for property (or additions or improvements to property) having a recovery period within the meaning of §168 of 19 years, and is incurred in connection with the rehabilitation of a qualified rehabilitated building; a rehabilitation expenditure does not qualify unless the straight-line cost recovery method under §168(b)(3) is elected with respect to the expenditure.[5]

Under §48(g)(1)(E), the 75% external wall test of §48(g)(1)(A)(iii) is deemed satisfied if, in the rehabilitation process, the following three requirements are met:

> (i) at least 50% of the building's external walls are retained in place as external walls;
>
> (ii) at least 75% of the building's external walls are retained in place as either external walls or internal walls; and
>
> (iii) at least 75% of the building's internal structural framework is retained in place.

Section 48(d) grants an election to the lessor of new §38 property to pass through the investment credit to the lessee instead of using the credit itself.

Code §47 requires the recapture of investment credits on property disposed of or ceasing to be §38 property prior to the end of certain designated periods.

If the regular investment credit, the 10 to 15% energy investment credit, or the 25% rehabilitation credit for certified historic structures is claimed, the basis of the property qualifying for the credit is reduced by 50% of the amount of the credit claimed under §48(q). If the 15% or 20% rehabilitation credit is claimed, the basis of the rehabilitated property must be reduced by the full amount of the credit.[6] The lower basis is used to compute cost recovery (or depreciation) deductions and capital gain or loss. In lieu of the 50% basis reduction where the regular credit is claimed, a taxpayer may elect to claim a reduced regular credit.[7]

II. Overview

The 1986 TRA[8] generally repeals the regular investment credit of up to 10% for property placed in service

after December 31, 1985. Extensive transition rules are provided. However, the credit on property qualifying under the transition rules, as well as credit carryforwards, may be subject to reduction.

The 1986 TRA [9] extends the energy investment credit for certain types of energy property for up to a three-year period.

Finally, the 1986 TRA [10] also restricts the rehabilitation credit, effective generally for property placed in service after 1986. Transition rules are provided under which property placed in service after 1986 may qualify for the more liberal pre-1987 rehabilitation credit. However, the credit on property qualifying for such transition relief may be reduced.

III. Analysis of Credit Changes

A. Termination of Regular Investment Credit

1. General

Code §49(a), as added by the 1986 TRA ("Act"),[11] provides that the 10% regular investment credit (which is effectively reduced to 6% for 3-year property by §46(c)(7)) will not apply to property placed in service after December 31, 1985. Section 49(b) provides three exceptions to the foregoing rule. First, the regular credit will be available for property that is "transition property" (including qualified progress expenditures on property that will constitute "transition property" when placed in service). Second, the regular credit will be available for qualified progress expenditures incurred before January 1, 1986, regardless of whether the property constitutes "transition property." Finally, the regular credit will remain available for qualified reforestation expenditures described in §48(a)(1)(F).

2. Transition Property

a. General

"Transition property" is defined in §49(e). In general, the definition relies on the transition rules provided under the revised Accelerated Cost Recovery System (ACRS) inAct §§203 and 204, but substituting an earlier effective date for the effective date used for ACRS purposes. In order to satisfy the general transition rules of the ACRS, property both must fall into a specific effective date category and must be placed in service by a specified date in the future depending upon its ADR class life. Both the category requirement and placement in service requirement are described below.

b. Category Requirement

As modified for purposes of the §49 termination provisions, property may qualify as transition property if it falls into one of the following effective date categories:

(a) Any property constructed, reconstructed, or acquired by the taxpayer pursuant to a written contract that was binding on December 31, 1985;

(b) Property that is constructed or reconstructed by the taxpayer, if (a) the lesser or $1 million or 5% of the cost of such property has been incurred or committed by December 31, 1985, and (b) the construction or reconstruction of the property began by the December 31st date;

(c) An equipped building or plant facility if (a) construction commenced as of December 31, 1985, pursuant to a written specific plan, and (b) more than one-half of the cost of the equipped building or facility was incurred or committed by the December 31st date; or

(d) Property readily identifiable with and necessary to carry out a written supply or service contract, or agreement to lease, that was binding on December 31, 1985.

(1) Binding Contracts

The Conference Report [12] elaborates at length upon the binding contract rule. The Report provides that, if a taxpayer transfers his rights in any property subject to the binding contract that is under construction or transfers his rights in the contract to another taxpayer, the revised ACRS will not apply to the property in the hands of the transferee taxpayer provided the property was not placed in service by the transferor before the transfer period.[13] Moreover, if a partnership terminates under §708(b)(1)(B) by reason of sales or exchanges of partnership interests, the partnership is to be treated as having transferred its rights in the transition rule property to the new partnership.

The Conference Report further states that the binding contract rule applies only to contracts in which the construction, reconstruction, or acquisition of property is itself the contract subject matter.[14] Moreover, a contract is to be considered binding only if it is enforceable under state law and does not limit damages to a specified amount, such as in a liquidated damages provision. A contract limiting damages to an amount equal to at least 5% of the total contract price, however, will not be treated as limiting damages. A contract granting the taxpayer an option to acquire property is not to be treated as a binding contract to acquire the property, but a contract under which the taxpayer grants an irrevocable put (an option to sell) to another taxpayer is considered a binding contract since the grantor of the put option does not have the ability to rescind unilaterally the commitment to sell. A contract subject to a condition not within the control or either party or a predecessor (except in limited circumstances described below) is considered binding. A contract binding as of December 31, 1985, will not be considered binding at all times thereafter if it is substantially modified after that date. However, design changes to a binding construction contract that are made for reasons of technical or economic efficiencies of operation and that cause an insignificant increase in the original contract price will not constitute substantial modification of the contract. Additionally, a supplementary

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

contract that stands on its own and does not govern by the binding contract rule will not adversely affect the status of the portion of the property subject to the binding contract transition rule.

The Report [15] further states that a binding contract to acquire a component of a larger property will not be treated as a binding contract to acquire the larger property for purposes of the transition rule. For example, a binding written contract entered into before January 1, 1986, to acquire an aircraft engine would not be treated as a binding contract that relates to the entire aircraft.

(2) Self-Construction

The Conference Agreement provides that a taxpayer is allowed transition relief for property under construction or reconstruction by the taxpayer, if (i) the lesser of $1 million or 5% of the property's cost was incurred or committed pursuant to a binding written contract in effect as of December 31, 1985, and (ii) the construction or reconstruction began by that date. For purposes of this transitional rule, the construction of property is considered to begin when physical work of a significant nature starts. Construction has not begun if work has started on only minor parts or components. Moreover, physical work does not include preliminary activities such as planning or designing, financing, exploring, researching, or developing.[16]

For purposes of the self-constructed property transition rule, a building is to be treated as including all the normal and customary components that are purchased from others and installed without significant modification, such as light fixtures.[17]

(3) Equipped Buildings and Plant Facilities

An equipped building or plant facility may qualify for transition relief if construction began on or before December 31, 1985, pursuant to a written plan, and more than 50% of the building or facility cost was incurred or committed by December 31, 1985.

The Conference Report [18] provides that if an equipped building fails the more than 50% adjusted basis test, each item of machinery and equipment to be installed in the building is treated separately for purposes of determining whether that item qualifies for transition relief. If, however, the more than 50% test is satisfied, "incidental appurtenances," as well as equipment and machinery installed in the building, qualifies under the equipped building category. The Report describes incidental appurtenances as appurtenances that are incidental to the operations carried on in the building but that are not themselves located in the building. For example, an adjacent railroad siding dynamo, or water tower used in connection with a manufacturing process, or other incidental structures or machinery and equipment necessary to the planned use of the building, may qualify as incidental appurtenances. However, appurtenances do not include a plant needed to supply materials to be processed or used in the building under construction. Significantly, the Conference Report makes it clear that the incidental appurtenances which will be subject to the transition rule are not to be counted in determining whether the equipped building satisfies the more than 50% test.

The written plan for the equipped building must be, according to the Conference Report,[19] a definite, specific, written plan of the taxpayer that is available as evidence of the taxpayer's intentions. The written plan may be modified, but only to a minor extent, after December 31, 1985. If substantial modifications in the plan are made, the equipped building transition rule will not apply.

The plant facility rule is designed to be comparable to the equipped building rule and to apply to facilities not housed in a building.[20] The transition rules [21] define a "plant facility" as a facility not including any building (or with respect to which buildings are an insignificant portion) and which is (i) a self-contained single operating unit or processing operation, (ii) located on a single site, and (iii) identified as a single unitary project as of December 31, 1985.

The Conference Report states that construction of a plant facility, which is required to have begun by December 31, 1985 in order to qualify under the rule, is not considered to have begun until it has commenced at the site of the plant facility. This rule does not apply if the facility is not to be located on land and, consequently, the initial work on the facility must begin elsewhere. Construction of the plant facility is deemed to begin only when actual work at the site commences. For example, when work begins on the excavation for footings, or the pouring the pads for the facility, or the driving of foundation pilings into the ground, then construction is deemed to begin. Preliminary work, such as clearing, test drilling, or excavation to change a land contour is not treated as the commencement of construction.[22]

(4) Supply and Service Contracts; Leases

Another transition rule of general effect provides that the revised ACRS (and consequently the investment credit) will not apply to any property that is "readily identifiable with and necessary to carry out a written supply or service contract, or agreement to lease," that was binding on December 31, 1985.[23] The Conference Report [24] explains that this transition rule is provided for those situations where a pre-January 1, 1986, written binding contract requires the construction or acquisition of property but the contract is not between the person who will own the property and the person who will construct or supply the property. The Report further states that the rule applies only where the specifications and amount of the property are readily ascertainable from the contract terms or related documents. A supply or service contract or lease agreement must satisfy the various, previously-described requirements for a binding contract, such as that no substantial modifications are being made to the contract after December 31, 1985. A change in the method or amount of compensation

for services under the contract will not be considered a substantial modification if, taken as a whole, the change does not affect the scope or function of the project. If additional property is included under a supply or services contract or lease agreement after December 31, 1985, the transition rule will not apply to the additional property.

The Conference Report [25] gives as an example of a lease agreement to which the transition rule could apply a finance lease (to the extent the transition rules continues to permit finance leases) under which a grantor trust is obligated to provide property. The Report also clarifies that the transition relief will apply to cable television franchise agreements embodied in whole or in part in municipal ordinances or similar enactments before January 1, 1986.

c. Placement in Service Requirement

The foregoing transition relief will not be available unless an additional placement in service requirements is satisfied.[26] To meet this requirement, property qualifying under a specific category must be placed in service by an applicable date based upon the property's ADR class life. For property whose class life is less than five years, such as a car or light-duty truck, the property must have been placed in service before July 1, 1986. For property whose class life exceeds five years but is less than seven years, such as a computer or photocopy equipment, the property must have been placed in service before January 1, 1987. For property with a class life of at least seven years but less than 20 years, the property must be placed in service before January 1, 1989. For example, a bus, which has a 9-year ADR class life [27] or a tugboat, which has an 18-year ADR class life,[28] which was under a binding purchase contract on or before December 31, 1985, must be placed in service by December 31, 1988, to qualify. Finally, for property whose class life is at least 20 years, the property must be placed in service before January 1, 1991. Thus, an item such as a billboard, which has a 20-year ADR class life,[29] must be placed in service by December 31, 1990. Finally, the applicable date for residential rental property and nonresidential real property is January 1, 1991. Thus, for example, the regular credit may remain available through 1990 for elevators installed in a new office or commercial building under contract or construction by December 31, 1985.

Property with no class life is treated as having a class life of 12 years.[30] Moreover, any property to be provided under a supply or services contract or lease agreement is treated as having a class life of 20 years.[31]

The ADR class life to be used in determining the property's qualification under the transition rule and its applicable placement in service date is, with one exception, the ADR class life prescribed in Rev. Proc. 83-35. The sole exception is that computer-based telephone central office switching equipment described in revised §168(e)(3)(E)(iii) is treated as having 6-year ADR class life. Thus, such equipment does not qualify for transition rule relief for purposes of the revised ACRS.

Note: The modifications made to the class lives of certain property for purposes of the alternative depreciation system in revised §168(g)(3)(B) do not apply for transition rule purposes. The transition rules [32] state that it is the class life of such property on January 1, 1986, that must be used.

The Conference Report [33] provides that taxpayers who have difficulty identifying what property is placed in service under their accounting system because they regularly enter into contracts for large stocks of identical or similar items of property to be placed in service as needed. Such taxpayers may assume that the first items placed in service after December 31, 1985 are those under a binding pre-January 1, 1986 contract. A similar rule is to apply to self-constructed property.

The Report [34] further states that property incorporated into an equipped building or plant facility need not independently satisfy the placed-in-service requirement. Such incorporated property qualifies for transition relief as part of the equipped building or plant facility provided the building or facility is placed in service by the prescribed placement in service date.

d. Sales and Leasebacks; Section 48(d) Election

Transition rules [35] provide that, if a taxpayer acquires property from a person either in whose hands such property met one of the transition rules or who placed the property in service before 1986, and if the taxpayer leases back the property to that person not later than the earlier of (i) the applicable placement in service date or (ii) the day that is 3 months after the property was placed in service, the property will be deemed to continue to qualify under the transition rule in the taxpayer's hands.

The Conference Report [36] provides that the rule will apply where the taxpayer acquires property from a manufacturer, places the property in service by leasing it to the ultimate user, and subsequently engages in a sale-leaseback within 3 months after the property was originally placed in service under the initial lease. The Report further states that, if the facility otherwise qualifies as an equipped building and if a portion of the facility is sold and leased back in accordance with the sale and the leaseback requirements, both the leased and retained portion will continue to qualify under the equipped building transition rule.

The Conference Report [37] states that a taxpayer in whose hands property qualifies for transition relief can elect under §48(d) to pass the credit claimed to a lessee of the property.

3. Credit Reduction

Section 49(c) requires a 35% reduction in the amount of the regular investment credit claimed on any transition property placed in service in a taxable year beginning after

June 30, 1987. Moreover, a lesser reduction in the regular credit is required for any property placed in service during a taxable year that straddles July 1, 1987. §49(c)(3). The straddle-year reduction is computed by multiplying 35% by the ratio of the number of months in the straddle year after June 30, 1987, to the total number of months in the straddle year. §49(c)(5). For a 1987 calendar year taxpayer, assuming a 12-month taxable year, a 17.5% cutback would be required since one-half the number of months in the calendar year falls after June 30, 1987.

Assuming a 12-month taxable year, the percentage reductions that are required for taxable years beginning August 1, 1986, through June 1, 1987, are as follows:

Month Year Begins	Percentage Reduction
August 1, 1986	2.9167%
September 1, 1986	5.8333%
October 1, 1986	8.7500%
November 1, 1986	11.6667%
December 1, 1986	14.5833%
January 1, 1987	17.5000%
February 1, 1987	20.4167%
March 1, 1987	23.3333%
April 1, 1987	26.2500%
May 1, 1987	29.1667%
June 1, 1987	32.0833%

These same rules also apply to any business credit carryforward attributable to the regular investment credit after June 30, 1987. §49(c)(3)(B).

For purposes of determining the amount of a credit carryforward from a taxable year straddling July 1, 1987, the credit carryforward is increased by the amount of any straddle-year reduction. This rule is designed to prevent a double reduction, one for the straddle year and a second for the first post-straddle year, in the amount of the credit carried to the first post-straddle year.

Observation: In determining what portion of a credit carryforward is attributable to the regular investment credit, §49(c)(5)(C) provides that the regular credit is deemed to be absorbed first in any taxable year. This is a favorable rule because if a taxpayer has regular and rehabilitation credits arising in a pre-1987 taxable year which contribute to a post-1986 credit carryforward, only the portion of the carryforward allocable to the regular credit is subject to the reduction, and it is this portion to which pre-1987 taxes are applied first. The rule thereby maximizes the portion of the carryforward considered attributable to the rehabilitation credit, which is not subject to the reduction.

Example: Assume that in 1985 the regular credit amounted to $50,000, the rehabilitation credit amounted to $50,000, and the combined $100,000 of credits offset $60,000 in taxes. For purposes of determining the credit carryover, the entire $50,000 of regular credit and only $10,000 of rehabilitation credit are treated as offsetting the $60,000 of taxes. Consequently, the $40,000 of unused credit, which becomes a credit carryover, is entirely attributable to the rehabilitation credit. Assuming the $40,000 carryover survives into 1987, it will not be subject to the applicable reduction required in 1987 for a regular credit carryover.

4. Full Basis Reduction

For transition property, a basis reduction equal to the full amount of the credit claimed must be made in lieu of the 50% basis reduction that obtains under pre-1986 TRA §48(q).[38] Moreover, the election to claim a reduced credit, in lieu of a basis reduction, is precluded by §49(d)(1)(B). However, if a taxpayer elected the reduced credit for qualified progress expenditures attributable to periods before January 1, 1986, no basis reduction is required with respect to such pre-1986 expenditures, and the election terminates with respect to post-1985 expenditures.[39]

4. Steel Company and Farmer Carryback

Under the 1986 TRA,[40] steel companies and farmers may effectively elect up to a 15-year carryback period in lieu of carrying forward unused regular credits to a taxable year beginning after 1986. The maximum amount to which the election can be applied is the lesser of (i) 50% of the portion of the taxpayer's existing carryforwards to which the election applies, or (ii) the taxpayer's net tax liability for the carryback period. Act §§212(b) and 213(b)(1) and (2). Moreover, farmers, but not steel companies, are limited to a maximum of $750. Act §213(b)(3). Thus, the maximum amount of credit carryforward for which a farmer can elect the extended carryback period is $1,500.

The carryback period as to which the election will apply is the period that begins with the corporation's or farmer's 15th taxable year preceding the first taxable year from which there is an unused credit included in the corporation's or farmer's existing carryforwards and that ends with the corporation's or farmer's last taxable year beginning before January 1, 1986.[41] However, in no event may the carryback period begin before the corporation's or farmer's first taxable year ending after December 31, 1961.[42]

Note: The add-on minimum tax of §56 (until its repeal by the 1986 TRA) may apply to the tax preference items of corporations to the extent the preference items exceed the greater of $10,000 or the regular tax deduction. The regular tax deduction is defined by §56(c) as the amount of tax (but excluding certain taxes) imposed on the corporation for the year reduced by nonrefundable credits, including the investment credit. As a result of the carryback election of a post-1986 regular credit carryforward, a tax that may have applied to cut minimum tax liability in a prior year may be reduced. The carryback rules specifically provide that the minimum tax of §56 need not be recomputed in such event to reflect any reduction in the regular tax arising from the carryback election.[43] A similar rule applies to any add-on minimum tax that may have been imposed on a noncorporate farmer for a year beginning before January 1,

[38] §49(d).
[39] §49(d)(2).
[40] Act §§212 and 213.

1982, when noncorporate taxpayers were also subject to the §56 minimum tax.[44]

B. Energy Investment Credit

1. Extension of Credit for Certain Property

The 1986 TRA[45] extends the energy investment credit for certain types of energy property.

Under new §46(b)(2)(A)(viii), the credit for solar energy property is 15% for the period January 1, 1986, through December 31, 1986, 12% for the period January 1, 1987, through December 31, 1987, and 10% for the period January 1, 1988, through December 31, 1988.

For geothermal property, a 15% credit is provided for the period January 1, 1986, through December 31, 1986, and a 10% credit is provided for the period beginning January 1, 1987, through December 31, 1988. §46(b)(2)(A)(ix).

For ocean thermal property, a 15% credit is provided for the period beginning January 1, 1986, and ending December 31, 1988. §46(b)(2)(A)(x).

Finally, for biomass property, a 15% credit is available from January 1, 1986, through December 31, 1986, and a 10% credit is available from January 1, 1987, through December 31, 1987. §46(b)(2)(A)(xi).

2. Cutback and Basis Reduction for Certain Energy Property

For energy property placed in service in a taxable year beginning after June 30, 1987, pursuant to §46(b)(2)(C) or (D), which provides extended grace period for placing in service certain types of energy property, a 35% reduction in the energy credit amount is required. If such property is placed in service in a taxable year straddling July 1, 1987, the straddle-year reduction described above in connection with the regular investment credit is required. These reductions will also apply to any portion of a credit carryforward to post-1986 years attributable to an energy credit allowed under §46(b)(2)(C) or (D). Moreover, a basis reduction equal to the full amount of such a credit claimed after 1985 must be made. Act §421(b).

The amendments made to these provisions by the 1986 TRA apply to periods beginning after December 31, 1985, under rules similar to rules under revised §48(m). Act §421(c).

C. Rehabilitation Credit

1. Reduced Percentages

The 1986 TRA[46] amends §46(b)(4) to replace the three-tier rehabilitation credit with a two-tier credit. The 15 and 20% credits for 30-year old and 40-year old buildings, respectively, are superseded by a 10% credit that will be available only for a building that was first placed in service before 1936. The 25% credit available for the rehabilitation of certified historic structures is replaced by a 20% credit.

2. Revised §48(g) Requirements

a. General

The 1986 TRA[47] revises §48(g). The three principal changes made in the revision are:

(i) For nonhistoric rehabilitations, to substitute the "alternative wall" test of former §48(g)(1)(E) for the 75% external wall requirement and, for certified historic rehabilitations, to eliminate completely any external wall test;

(ii) For nonhistoric rehabilitations, to require that the building have been first placed in service before 1936, and

(iii) For all rehabilitations, to conform the definition of a qualified rehabilitation expenditure to the revised Accelerated Costs Recovery System of §168, as amended by the 1986 TRA.

b. Qualified Rehabilitated Building; Substantial Rehabilitation

Revised §48(g)(1)(A) continues the requirements that a building must be "substantially rehabilitated" and must have been placed in service before the beginning of the rehabilitation in order to constitute a "qualified rehabilitated building" for rehabilitation credit purposes. Revised §48(g)(1)(C) also retains the pre-1986 TRA definition of "substantially rehabilitated." Under this definition, a building is treated as "substantially rehabilitated" only if the qualified rehabilitation expenditures during the 24-month period selected by the taxpayer and ending with or within the taxable year exceed the greater of $5,000 or the adjusted basis of the building (and its structural components).[48]

c. External, Internal Wall Test

The former "alternative wall" test, which becomes the sole test relating to the retention of walls for purposes of revised §48(g), calls for the satisfaction of three requirements:

(i) At least 50% of the existing external walls of the building must be retained in place as external walls,

(ii) At least 75% of the existing external walls of the building must be retained in place as internal or external walls, and

(iii) At least 75% of the existing internal structural framework of the building must be retained in place.

Comment: The "alternative wall" test was enacted by the Tax Reform Act of 1984[49] and was viewed as a liberalizing modification of the law. According to the Senate Finance Committee Report accompanying the 1984 Act,[50] the alternative test was enacted to facilitate the qualification for the rehabilitation credit by buildings that

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

were not square or rectangular in shape. Obviously, since the test was simply an "alternative" test (as the 75% test remained available for rehabilitation credit purposes), the alternative wall test could assist in qualifying a building for the credit that otherwise might not qualify. However, the substitution of this test as the sole test will significantly restrict a taxpayer's flexibility to modify a noncertified historic structure's internal structural framework in a rehabilitation. Initially, this becomes apparent from the 1984 Act Senate Finance Committee Report,[51] which states that all load-bearing internal walls and any other internal structural supports present in the building before rehabilitation begins, including columns, girders, beams, trusses, spandrels, and all other members that are essential to the stability of the building, must be treated as part of the building's internal structural framework for purposes of the alternative wall test. Thus, at least 75% of these items must be retained to qualify for the 10% credit under revised §48(g). Moreover, the Senate Finance Committee Report to the 1986 TRA [52] confirms that this test is intended to be more restrictive. It states that a building that is completely gutted will no longer qualify for the credit and then reiterates the same language from the 1984 Committee Report concerning the items that constitute a building's internal structural framework.

Revised §48(g) completely deletes the external wall requirement for certified historic structures. The Senate Finance Committee Report [53] states the Committee's belief that the Standards for Rehabilitation of the Secretary of the Interior ensure that certified historic structures are properly rehabilitated and that, therefore, the external wall requirement for such buildings was deleted to provide the Interior Secretary with "appropriate flexibility." The Report adds, however, that the 20% credit for certified historic structures should continue to be allowed only for true rehabilitations and not for substantially new construction and that the Interior Secretary is expected to continue generally to deny certification to rehabilitations in which less than 75% of the external walls will not be retained in place.

d. Pre-1936 Requirement

Another change, which is also a limiting change for noncertified historic structures, is the §48(g)(1)(B) requirement that the building must have been first placed in service before 1936. With the passage of time, fewer pre-1936 buildings will be worth rehabilitating from an economic standpoint, particularly in view of the more stringent retained wall requirement that will preclude gutting a building. Consequently, it is likely that the 10% credit for noncertified historic structures will eventually cease to be a viable rehabilitation incentive.

e. Qualified Rehabilitation Expenditure

Section 48(g)(2) restates the definition of a "qualified rehabilitation expenditure as follows. It is an expenditure that is properly chargeable to capital account for property for which depreciation is allowable under §168 and which is (i) nonresidential real property, (ii) residential rental property, (iii) real property that has a class-life of more than 12.5 years, or (iv) an addition or improvement to property or housing described in (i), (ii), (iii). Finally, the expenditure must be incurred in connection with the rehabilitation of a qualified rehabilitated building.

Revised §48(g)(2) refers to §168 and the revised ACRS for the definitions of "nonresidential real property," "residential rental property," and "class life." Under the revised ACRS, nonresidential real property is §1250 property that is not residential rental property or property with a class-life of less than 27.5 years.[54] Nonresidential real property is depreciated over 31.5-year recovery period.[55] Residential rental property is a building or structure where at least 80% of the gross rental income from the building or structure for the year is rental income from dwelling units but not including rental units used on a transient basis such as hotel or motel units.[56] Residential rental property is depreciated over 27.5 years on a straight-line basis under the revised ACRS.[57]

Note: The 1986 TRA does not amend the limitation of §48(a)(3) that property used for lodging, except on a transient basis, generally does not qualify for a credit with an exception provided for the rehabilitation of certified historic structures. Thus, residential rental property will continue not to qualify for a credit under §48(a)(3) unless the residential rental property being rehabilitated is a certified historic structure.

The final category of property that may qualify is real property having a class-life of more than 12.5 years. Revised §168(i)(1) provides that "class life" means the class life, if any, that would apply to property as of January 1, 1986, under the Asset Depreciation Range (ADR) system of §167(m). The class lives of property may generally be found in Rev. Proc. 83-35 [58] but these class lives will be subject to modification in accordance with §168(i)(1).[59] Under Rev. Proc. 83-35, farm buildings, which have a class life of 25 years, may qualify for the rehabilitation credit as may service stations and car wash buildings, which have 20-year class lives.[60]

Note: Land improvements such as sidewalks, roads, and landscaping have a 20-year class-life [61] and, thus, arguably qualify for the credit if made "in connection with" the rehabilitation of a qualified building. However, the proposed regulations under existing §48(g) [62] take the position that expenditures attributable to work done to facilities related to a building such as sidewalks, parking lots, and landscaping, are not considered made in connection with a qualified building rehabilitation.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Observation: A special rule in the pre-1986 TRA ACRS [63] effectively provides that a building and structural components will not be treated as 10-year property if the building is converted to a theme or amusement park structure after it was originally placed in service. The effect of this rule is to clarify that the building will be treated as 19-year real property eligible for the rehabilitation investment credit. This special rule is not retained in the revised ACRS. Moreover, the rehabilitation credit provisions [64] specifically provides that real property having a class life of more than 12.5 years may qualify for a rehabilitation credit,[65] in addition to specifying that nonresidential real property and residential rental property may qualify for the credit.[66] The legislative history is silent as to whether the omission of the special rule from revised §168 and the specification of a more than 12.5 year ADR class life for real property in revised §48(g) was intended to eliminate the rehabilitation credit for a building converted into an amusement park structure. This, however, is seems to be the result that is obtained.

Under revised §48(g)(2)(B), certain expenditures are excluded as "qualified rehabilitation expenditures" as under pre-1986 TRA law. The following amounts are excluded:

(i) Expenditures with respect to which an accelerated depreciation method is used.

(ii) The cost of acquiring any building or interest therein.

(iii) Any expenditure attributable to the enlargement of an existing building.

(iv) Any rehabilitation expenditure related to a certified historic structure or building in a registered historic district unless the rehabilitation is certified or the building is certified as not being historic.

(v) Any rehabilitation expenditure allocable to property that will be tax-exempt use property as defined in §168(h).

(vi) Any expenditure of a lessee of a building unless, on the date the rehabilitation is completed, the remaining lease term equals or exceeds the recovery period determined under revised §168(c). Thus, a lessee expenditure with respect to a commercial office building will not qualify unless the lease term is at least equal to the 31.5-year recovery period for nonresidential real property when the rehabilitation is completed.

[63] §168(c)(2)(G).
[64] Act §251.
[65] Revised §48(g)(2)(A)(iii).

f. Certified Historic Rehabilitations

Revised §48(g)(3) restates in precisely the same fashion as pre-1986 TRA law the definition of "certified historic structure" and "registered historic district." However, in a change from pre-1986 TRA law, a basis reduction equal to the full amount of the 20% credit will be required under §48(q)(3). Only a 50% reduction was required under the pre-TRA 25% credit for historic structures.

3. Effective Dates

The revised rehabilitation credit rules apply generally to property placed in service after December 31, 1986.[67] However, transition rules provide for the application of the pre-1986 TRA rules if the rehabilitation is completed pursuant to a written contract that was binding on March 1, 1986. The old rules will also apply if the rehabilitated property was acquired before March 2, 1986, or is acquired pursuant to a written contract binding on March 1, 1986, if (i) the rehabilitation is completed pursuant to a binding, written pre-March 2, 1986, contract, (ii) certain applications were filed with the Interior Department before March 2, 1986, or (iii) the lesser of $1 million or 5% of the cost of the rehabilitation was incurred before March 2, 1986, or was committed to be incurred pursuant to a binding written pre-March 2 contract. To qualify under the transition rules, the property must be placed in service before January 1, 1994.

For property placed in service after 1986 under the transition rules, the 15% credit for 30-year old property must be reduced to 10%, and the 20% credit for 40-year old property must be reduced to 13%. Act §251(d)(5). No reduction is required under the transition rules in the 25% credit for certified historic property. Moreover, no reduction is required in a credit carryforward to years beginning after 1986 for the portion of a business credit that is attributable to the rehabilitation credit. This is in contrast to the reduction required in the portion of a business credit carryforward attributable to a regular investment credit or energy investment credit. The non-reduction rule is particularly beneficial for a taxpayer who has a credit carryforward consisting of regular and rehabilitation credits since the regular investment credit is considered to be absorbed first under new §49(c)(5)(C). This absorption rule will maximize the amount of the credit carryforward to post-1986 years deemed attributable to the rehabilitation credit.

Note: The rehabilitation credit may be subject to the nonrecourse financing limitation of §46(c)(8) and (9) for property placed in service after 1986. For an analysis of this limitation as well as other limitations that may apply to all credits, *see* Chapter 14 *infra*.

Chapter 12

LOW-INCOME HOUSING CREDIT

George B. Delta, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

There is no low-income housing credit under pre-TRA law, but several other provisions relating to low and moderate-income housing are available. Among these benefits are 5-year rapid depreciation for rehabilitation expenditures for low-income housing, accelerated depreciation over 15 years, and an exemption from 10-year amortization of construction period interest and taxes under §189. The Tax Reform Act of 1986 ("TRA") repealed these tax breaks and replaced them with a credit for low-income housing.[1] Under the TRA, low-income housing generally is treated as residential rental property with a recovery period of 27.5 years. The cost of low-income housing is recovered using the straight line method of depreciation.[2] The rapid depreciation of rehabilitation expenditures under §167(k) also is repealed and construction period interest and taxes are subject to amortization. This chapter provides an overview of the low-income housing credit and its anticipated impact on low-income housing, specifically, whether the credit is likely to spur the production of additional low-income housing and to serve more effectively both low-income individuals and owners willing to provide affordable low-income housing.

II. Detailed Analysis

A. Overview

Section 252 of the TRA adds §42 to the Code, providing a low-income housing credit in an amount equal to the applicable percentage (described in II, C, below) of the "qualified basis" of each "qualified low-income building."[3] A qualified low-income building is one which at all times during the compliance period (a period of 15 years beginning on the first day of the first taxable year in which the credit is claimed) is part of a "qualified low-income housing project" to which §168, as amended by §201 of the TRA, applies.[4] A residential rental project is a qualified low-income housing project only if it meets: (i) either the 20-50 test, *i.e.*, at least 20% of the aggregate residential units in all existing buildings of the project are occupied by individuals with incomes of 50% or less of the area median, as adjusted for family size, or the 40-60 test, *i.e.*, at least 40% of the aggregate residential units in all existing buildings of the project are occupied by individuals with incomes of 60% or less of the area median, as adjusted for family size, whichever the taxpayer elects (once the election is made, it is irrevocable), (ii) the residential units described in (i) above are rent-restricted, *i.e.*, the gross rent paid (excluding rental assistance payments, but including all utilities except telephone) by families in units that are included in qualifying basis does not exceed 30% of the applicable qualifying income for a family its size, and (iii) the requirements of Code §142(d)(2)(B), (3), (4), (5), (6), and (7) are met in determining whether a project is a low-income housing project and a unit is a low-income unit (the unit is rent-restricted and the occupants meet either the 20-50 test or the 40-60 test).[5] The Conference Report refers to the 20-50 test and the 40-60 test as the "minimum set-aside."[6] The taxpayer must meet the minimum set-aside requirement within 12 months of the date a building (or rehabilitated property) is placed in service and at all times during the 15 year compliance period.[7]

Comment: The minimum set-aside requirement targets individuals having a smaller area median income than that allowed by pre-TRA law, under which a low-income unit was one that was held for occupancy by families having an income that did not exceed 80% of the area median income for that area, adjusted for family size.

B. Meeting the Minimum Set-Aside Requirement

All units comprising the minimum set-aside in a project must be suitable for occupancy, used on a nontransient basis, and are subject to the 30% gross rent limitation of §42(g) mentioned in paragraph II, A, above.[8] The owner of the project must elect to meet either the 20-50 or the 40-60 test when he places the project in service and must meet that test within 12 months of the date he places the building (or the rehabilitated property) in service. In meeting either test, students occupying units do not count as low-income tenants unless at least one of them is entitled to file a joint income tax return.[9] When two or more buildings

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

are placed in service on different dates as part of the same project, the minimum set-aside test is applied on a building-by-building basis. Thus, when a later building is placed in service, the owner of the project will not be meet either the 20-50 or the 40-60 test, whichever he has elected, with respect to the later building unless the project meets the elected test without regard to the later building on the date the owner places such later building in service, and the project meets the elected test on the later building within 12 months of the date the owner places it in service.[10]

The determination of whether a tenant qualifies for purposes of the minimum set-aside, whether such tenant continues to qualify for purposes of the set-aside, and other similar determinations of compliance are made by reference to §142(d).[11] The income of an individual and the median gross area income shall be determined in a manner consistent with the principles stated in §8 of the United States Housing Act of 1937 (the "Housing Act").[12] Thus, for a project which qualifies under the 20-50 test, a family of four meets this standard if it has income of no more than 50% of the area median income; a family of three meets this test if it has no more than 45% of the area median income; a family of two meets this test if it has no more than 40% of the area median income; and, a single individual meets this test if he has no more than 35% of the area median income. The income limits may be adjusted by the Secretary of the Treasury if determinations under §8 of the Housing Act do not accurately reflect that housing costs are unusually high in a given area relative to family income or if in a given area family income levels are unusually low.[13] Vacant units, formerly occupied by low-income individuals, may continue to be treated as occupied by low-income individuals for purposes of the minimum set-aside requirement and qualified basis as long as reasonable attempts are made to rent the unit and no other unit of comparable or smaller size is rented to a non-qualifying individual.[14]

The determination of whether a tenant's income exceeds the applicable income limit shall be made at least annually on the basis of the individual's current income. A qualified low-income tenant will continue to be such, notwithstanding minimal increases in his income. Thus, an individual that qualifies as a low-income tenant initially shall continue to qualify as long as his income does not increase to a level more than 40% above the maximum qualifying income, adjusted for family size. In addition, the level of the maximum qualifying income is adjusted annually.[15] If the tenant's income rises to a level in excess of 40% above the applicable income ceiling (or if the size of the tenant's family decreases so that a lower maximum family income applies to the tenant), however, that tenant no longer counts in determining whether the project satisfies the set-aside requirement.[16] If a project elects to satisfy a stricter set-aside requirement and significantly restricts the rents on the low-income units relative to the other residential units in the building (referred to as "deep rent skewing"), a special rule applies. Under this special rule, a low-income tenant will qualify as such as long as his income does not rise to a level in excess of 70% above the applicable income ceiling (or if the size of the tenant's family decreases so that a lower maximum family income applies to the tenant), and if the project ceases to comply with the set-aside requirement because of increases in existing tenants' income, no penalties are imposed if each available low-income unit is rented to tenants having incomes of 40% or less of the area median income, until the project is again in compliance.[17] A deep rent skewed project is one where at least 15% of all low-income units are occupied by tenants having incomes of 40% or less of the area median income, the average rent charged to tenants in rental units that are not low-income units is at least 3 times the average rent charged to tenants of low-income units of comparable size, and gross rent does not exceed 30% of the income limit applicable to the low-income individuals that occupy the unit.[18]

Observation: Due to the high cost of housing in New York City, §142(d)(6) contains a special rule that relaxes the definition of a qualified low-income housing project for projects in that city. Under this special rule, a project in New York City is a qualified low-income housing project if it meets a 25-60 test, that is, if at least 25% (as opposed to 40% under the general rule) of the aggregate residential units in the project are occupied by tenants with incomes 60% or less of the area median income.

C. *Credit Amount*

The low-income housing credit is claimed annually for a period of 10 years. Section 42(b)(2)(B) sets the credit rate so that the annualized credit amounts have a present value of: (1) 70% of the qualified basis of new buildings (defined under §42(i)(4) as buildings whose original use begins with the taxpayer) that are not federally subsidized, and (2) 30% of the qualified basis of new buildings that are federally subsidized and of existing buildings. Under §42(b)(2)(C), the discount rate for determining the present value in the computation of the 70% and 30% annualized credit amounts is equal to 72% of the applicable federal rate (AFR) for mid-term and long-term obligations. This discount rate is determined as of the month the taxpayer places the project in service and is compounded annually. The present value is determined on the last day of the first tax year of the 10 year credit period. For buildings placed in service in 1987, the applicable percentage is 9% for new buildings that are not federally subsidized, and 4% for new buildings that are federally subsidized and for existing buildings.[19] The 10 year credit period begins the taxable year during which the project is placed in service, or, at the taxpayer's election, the succeeding taxable year.[20] The election is irrevocable.

The applicable percentage shall be determined by the Secretary of Treasury to conform to the 70% and 30% present value statutory guidelines for buildings placed in service after 1987 and shall be adjusted monthly. *See* Conf. Rep. at 88-89 for an elaboration of the computation of the credit percentage.
[20] §42(f)(1).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The first year the taxpayer claims the credit, the allowable credit amount is determined using an averaging convention to reflect the number of months units comprising the qualified basis (discussed in II, D below) were occupied by low-income tenants during the taxable year.[21] For example, if one-half of the low-income units that the taxpayer included in eligible basis were occupied by low-income tenants in October, and the remainder were occupied in December, a calendar year taxpayer would adjust the allowable first year credit to reflect that low-income tenants occupied these units on the average for one-sixth of the year.[22] To the extent that this creates a reduction in the amount of the credit in the first year, an additional credit in the amount of the reduction is available in the eleventh year.[23] This first year adjustment does not affect the amount of the qualified basis for which the taxpayer claims a credit in subsequent years.

Comment: The cost of construction in urban areas is high, land is expensive, and the project may not retain much value after the 15 year compliance period. Consequently, if the owner of a low-income project must use the lower credit percentage because such project receives federal subsidies, it may not be economically feasible to construct low-income housing projects in urban locations. New low-income projects in rural areas that qualify to receive a federal subsidy under FHA §515, for example, may provide a good rate of return for investors even with the lower credit amount because such project is more likely to retain its value at the end of the 15 year compliance period.

D. Qualified Basis

The qualified basis amounts with respect to which the credit amount is computed are determined as the proportion of eligible basis in a qualified low-income building attributable to the low-income rental units. It is an amount equal to the applicable fraction (determined as of the close of the taxable year) of the eligible basis. The applicable fraction is the smaller of: (i) the unit fraction, the proportion of low-income units to all residential units, and (ii) the floor space fraction, the proportion of floor space of the low-income units to the floor space of all residential units.[24] Generally, in computing either fraction, low-income units are rent-restricted units that qualifying low-income tenants occupy, whereas residential units are all units, occupied or not.[25] The eligible basis of a new building is its adjusted basis.[26] For existing buildings acquired by purchase as defined in §179(d)(2), the eligible basis is the acquisition cost plus the cost of rehabilitation, if any, to such buildings incurred before the end of the first taxable year of the 10 year credit period, provided such rehabilitation is chargeable to capital account and is of a character subject to the allowance for depreciation.[27] There is no minimum rehabilitation requirement with respect to an existing building. However, if the taxpayer meets certain requirements (discussed below), rehabilitation expenditures will be treated as a new building and may qualify for the 70% present value credit.[28] Only the adjusted basis of the building (which is computed by taking into account all adjustments under §1016(a), except the adjustments in §§1016(a)(2) and (3) relating to depreciation deductions) is included in eligible basis.[29] The cost of land is excluded from the adjusted basis.[30]

Generally, the eligible basis of a building is determined at the time the building is placed in service.[31] For this purpose, rehabilitation expenditures are deemed to be placed in service at the close of the 24 month aggregation period (the 24 month period commencing with the date the taxpayer begins the rehabilitation).[32] Where the purchaser claims rehabilitation expenditures in connection with the acquisition of a building, the capital expenditures incurred through the end of the first year of the credit period are includible in eligible basis.[33] Therefore, since rehabilitation expenditures incurred within the 24 month aggregation period are deemed to be placed in service at the close of the 24 month period, such expenditures may be claimed at the close of the taxable year in which they are placed in service, or the following year, depending on the taxpayer's election.[34] An existing building that is purchased and any rehabilitation expenses incurred with respect to it do not qualify for the credit unless a period of at least 10 years lapses between the date of its acquisition by the taxpayer and the later of the date the taxpayer last placed the building in service and the date of the most recent "nonqualified substantial improvements," *i.e.*, substantial improvements for which the previous owner elected former §167(k) or pre-TRA §168, provided the taxpayer or a person related to the taxpayer as of the date the building was previously placed in service did not place such building in service.[35] Improvements are substantial only if they constitute at least 25% of the adjusted basis of such building during any 24-month period.[36] For purposes of determining whether 10 years have lapsed subsequent to the most recent substantial improvements, the date of the substantial improvement is the last day of the 24-month period referred to in the preceding sentence.[37] A placement in service as a result of a nontaxable exchange shall not be taken into account in computing the 10 year period discussed above.[38] Any other transfer will begin a new 10 year period.

Observation: No credit is allowed for existing buildings unless: (i) the owner purchased the building, (ii) the date of acquisition is 10 or more years after the building was last placed in service or the date of the most recent "nonquali-

fied substantial improvements" as defined in the previous paragraph above, and (iii) the taxpayer (or a person related to the taxpayer within the meaning of §§267(b) or 707(b)(1), as modified for these purposes by §42(d)(2)(D)(iii)(II)) did not previously place the building in service when the building was previously placed in service. §42(d)(2)(B).

The Secretary of the Treasury may waive the requirement that at least 10 years lapse between the date the taxpayer acquired the building and the later of the date the building was last placed in service and the date of the most recent substantial improvements for which the previous owner elected former §167(k) or pre-TRA §168 if such building is federally assisted and the waiver is necessary to avert the assignment of the mortgage to the Department of Housing and Urban Development ("HUD") or the Farmers' Home Administration ("FHA"), to avert a claim against a federal mortgage insurance fund, or similar circumstances of financial distress.[39] A building is federally assisted if it is substantially assisted, financed, or operated under §8 of the Housing Act, §§221(d)(3) or 236 of the National Housing Act of 1934, or §515 of the Housing Act of 1949 (the FHA program).[40]

For purposes of low-income housing, residential rental property has the same definition as under §103. Thus, residential rental property includes residential rental units, facilities for use by tenants, and other facilities reasonably required by the project. Costs of the residential rental units in a building which are not low-income units may be included in the eligible basis only if they are not above the average quality standard of the low-income units.[41] The quality of units is comparable if the construction or acquisition costs are comparable, and if such units are provided in a similar proportion to both low-income tenants and other tenants. The taxpayer may not include rehabilitation expenditures in eligible basis if these expenditures improve any unit in the building beyond a level comparable with the low-income units. Eligible basis may include amenities, including personal property, only if they are comparable to the cost of amenities in the low-income units. Swimming pools, recreational facilities, parking areas, and other tenant facilities may be included in eligible basis if there is no separate charge for the use of these facilities, and they are available on a comparable basis to all the tenants in the project.[42] Residential rental property may qualify for the credit even though a portion of the building in which the residential rental units are located is used for commercial purposes. No portion of the cost of such nonresidential property may be included in the eligible basis, however. The cost of such mixed use facility is allocable consistent with Prop. Regs. §1.103-8(b)(4)(v).[43]

Eligible basis for any taxable year does not include the amount of any federal grant, regardless of whether the grant constitutes gross income.[44] A federal grant includes any grant that is funded in whole or in part by the federal government, to the extent it is funded with federal funds. Examples of such grants that are not includible in eligible basis include Community Development Block Grants, Urban Development Action Grants, Rental Rehabilitation Grants, and Housing Development Grants.[45] If any portion of the eligible basis that is attributable to new construction, or the eligible basis that is attributable to rehabilitation expenditures, is financed with federal subsidies, the qualified basis is eligible only for the 30% present value credit, unless the federal subsidies are excluded from eligible basis.[46] A federal subsidy is any obligation the interest on which is tax-exempt under §103, or a direct or indirect federal loan, if the interest rate on the loan is below the applicable federal rate.[47] Examples of such subsidies are loans under FHA §515, and a reduced interest rate loan attributable in part to a federal grant.[48] The determination of whether rehabilitation expenses are federally subsidized is made without regard to the source of financing for the construction or acquisition of the building to which the rehabilitation expenses are made. Thus, a federal loan or tax-exempt bond financing that a taxpayer assumes or continues upon purchase of existing housing is disregarded for purposes of the credit on rehabilitation expenses.[49]

The rehabilitation expenditures that a taxpayer incurs with respect to any building shall be treated as a separate new building, if they meet certain requirements.[50] Rehabilitation expenditures qualify as a new building for purposes of the 70% present value credit if the average of such expenditures is at least $2,000 per low-income unit over the 24 month rehabilitation period that begins on the date the taxpayer commences the rehabilitation.[51] The $2,000 minimum is computed as an average and includes all of the qualifying expenditures in a building. It does not require that the taxpayer actually incur $2,000 of rehabilitation expenses for each low-income unit.[52] The determination of whether the taxpayer has met the $2,000 minimum is made at the end of the first year of the credit period of 10 years.[53] Thus, under §42(f)(1), the determination of whether the taxpayer meets the $2,000 minimum for rehabilitation expenditures will be made at the close of the year in which the taxpayer places in service the rehabilitated property or the close of the following year, depending on which year the taxpayer has elected as the initial year of the credit period. Rehabilitation expenses are placed in service at the close of the 24 month rehabilitation period.[54] Rehabilitation expenditures do not include the cost of acquiring a building or any interest therein.

The taxpayer determines the qualified basis for the rehabilitation expenditures in the same fractional manner as for new construction or acquisition costs, even though all rehabilitation expenses are incurred in connection with low-income units. The applicable fraction with respect to

the rehabilitation expenses is the applicable fraction for the building with respect to which such expenses were incurred, notwithstanding the fact that such rehabilitation is treated as a new building.[55] Rehabilitation expenses may be included in the basis of a building even without a transfer of the building.[56] Where the rehabilitation is to a group of units, the Secretary of the Treasury may provide through regulations that that the group of units is treated as a new building.[57]

E. Additions to Qualified Basis

The qualified basis of a building may be increased after the initial determination only by reason of an increase in the number of the low-income units or in the floor space of such units.[58] Credits claimed on such additional qualified basis are determined using a credit percentage that is two-thirds of the applicable credit percentage for the initial qualified basis and must receive an allocation of credit authority (paragraph II, F, below). Unlike credits claimed on the initial qualified basis, credits that the taxpayer claims with respect to additions to qualified basis are allowable annually for the remainder of the 15 year compliance period, regardless of the year such additional qualified basis is determined. The additional basis is determined by reference to the original adjusted basis of the property without deducting allowable depreciation for the property.[59]

The credit amount is adjusted for the first year using averaging conventions to reflect the number of months that low-income tenants occupied the units comprising the additional qualifying basis during the year.[60] Unlike the allowable credit for the 10 year credit period, any reduction of the credit in the first year for additions to qualified basis may not be claimed in a later year.[61] This first year adjustment does not affect the amount of the qualified basis for which a credit is claimed in subsequent years during the compliance period.

F. State Low-Income Housing Credit Authority Limitation

Section 42(h) creates a state volume limitation on the number of new low-income housing credits that are issued annually. Generally, any building eligible for the credit must receive an allocation of credit authority from the state or local credit agency in whose jurisdiction the low-income housing project is located, *unless* the taxpayer finances it with the proceeds of a tax-exempt bond which received an allocation pursuant to the private activity bond limitation added by the TRA.[62] There is no state volume limitation for projects financed by such tax-exempt bonds and the taxpayer need obtain no credit authority. Credit allocations count against a state's annual credit authority limitation for the calendar year in which the credits are allocated.[63] Generally, credits subject to the state credit authority limitation include any credits attributable to expenditures not financed with tax-exempt bonds subject to the new private activity bond volume limitation in Code §146. In the case of a building financed with the proceeds of tax-exempt bonds that are subject to the bond volume limitation, if 70% or more of the aggregate basis of the building and the land on which the building stands is financed with such proceeds, no portion of the credits attributable to such building is subject to the credit authority limitation. If less than 70% of the aggregate basis is attributable to the building and the land on which the building stands, only credits attributable to those bond-financed expenditures are not subject to the credit authority limitation.[64]

A building must receive low-income credit authority allocated to it for the calendar year which includes the last day of the first year of the credit period.[65] Authority must be received from the credit agency in whose jurisdiction the qualifying low-income building is located.[66] The credit agency's authority is reduced by the amount of the credit percentage multiplied by the qualified basis granted by the credit agency for the building. The state housing credit agency may not carry over any unused portion of its housing credit dollar amount that it does not allocate in any year.[67] A credit agency's credit limitation authority is reduced by the maximum amount of the credit that it grants, whether or not the low-income project is ultimately eligible for this amount.[68] At least 10% of each state's credit authority limitation is set aside for projects of qualified nonprofit organizations, defined as §501(c)(3) or (4) organizations one of the exempt purposes of which is the fostering of low-income housing.[69]

Credit agencies may not condition allocation of credits to the source of financing for the qualifying low-income building. The Treasury Department may prescribe regulations that require credit recipients to pay a reasonable fee to cover the administrative expenses of the credit agency.[70] Agencies allocating the credit must file with the Treasury Department reports containing: (1) the maximum applicable percentage and qualified basis of each building, (2) any fees charged to credit recipients, (3) the aggregate amount of the credits issued, and (4) any other information required by the Secretary of the Treasury.[71] The state housing credit is phased out after 1989.[72]

G. Recapture of the Credit and Penalty for Noncompliance

Qualified residential rental projects must satisfy the §42(g) minimum set-aside requirement during the 15 year compliance period. Low-income units comprising the qualified basis on which additional credits are based must comply with all the requirements in the same manner as units satisfying the minimum set-aside requirements. Units in addition to those meeting the minimum set-aside requirement must continuously comply with the income require-

ment. The penalty for a decrease in the amount of the qualified basis of the building at the close of the taxable year from the close of the last taxable year is the recapture of the credit with respect to the accelerated amount claimed for all previous years on the amount of the reduction in the qualified basis.[73]

If a building that is subject to the 15 year compliance period does not remain part of the low-income housing project during that entire period, there is recapture of the accelerated portion of the credits for the earlier years. Recapture events include noncompliance with the minimum set-aside, noncompliance with the gross rent requirement, a decrease in the qualifying basis of the project (even though the minimum set-aside continues to be satisfied), financing from tax-exempt bonds or from federal subsidies for the project, and any other similar events.[74]

As a general rule, any change in the ownership of the building is a recapture event. An exception is provided, however, if the seller posts a bond with the Secretary of the Treasury in a satisfactory amount and it can reasonably be expected that the purchaser of such building will continue to operate it as a low-income project during the balance of the compliance period.[75] Also, a partnership consisting of more than 35 individuals (or estates), may elect to be treated as the taxpayer, in which case no change in ownership will be deemed to occur for recapture purposes, provided that within a 12 month period at least 50% in value of the original ownership remains unchanged.[76] A reduction in basis by reason of a casualty is not a recapture event as long as the taxpayer restores such loss within a reasonable time.[77]

In the recapture year, the taxpayer may not claim the credit. The amount of recapture is the accelerated portion of the credits claimed in earlier years, with interest under §6621.[78] The accelerated portion of the credits in any year is the amount of credits for that year, less the amount which would have been allowed for that year if all credits had been allowed ratably over the 15 year compliance period.[79] Because credits on the initial qualified basis of a building are claimed over 10 years rather than the compliance period of 15 years, the amount of credit recaptured for noncompliance in the first 11 years is one-third of the credit for each year, plus interest.[80] Because credits claimed on additions to qualified basis are taken over 15 years (the credit percentage is two-thirds of the applicable percentage), there is no accelerated portion of credits attributable to additions to qualified basis.[81] If the maximum credit for which a project qualifies increases and then decreases, a last in first out rule applies in determining the order of the credit recapture. The Conference Report provides an example of the last in first out credit recapture rule. Assume a building qualifies under the 20-50 minimum set-aside, but in fact has 25% of its tenants earning 50% or less of area median income, and in Year 3 begins receiving a credit based on an additional 10% of the building so that the total qualifying basis for the credit is 35%. The credit amount on this additional 10% is two-thirds of the applicable credit percentage. If in Year 5 only 30% of the basis of the building qualifies, there is no recapture of the credits taken in previous years, because there is no accelerated portion of the credit amounts attributable to the 5% of the additions to qualified basis claimed since Year 3.[82]

If there are no additions to qualified basis and no previous recapture events, the credits are recaptured as follows (in addition to interest): one-third of the total credits for violations after the first year and before the end of the eleventh year, 4/15 after the eleventh year but prior to the expiration of the twelfth year, 1/5 after the twelfth year but prior to the expiration of the thirteenth year, 2/15 after the thirteenth year but prior to the expiration of the fourteenth year, 1/15 after the fourteenth year but prior to the expiration of the fifteenth year.[83] There is no credit recapture if the credits allowed under §42 were not used to reduce tax liability (*e.g.*, such credits may have been suspended under the passive loss rule of §469), however, the carryover of credits shall be adjusted.[84]

Example: If the taxpayer has elected to meet the 20-50 test and 30% of the tenants have incomes 50% or less of the area median income, the additional 10% of the tenants above the minimum set-aside must continue to meet the income requirement (*i.e.*, have incomes 50% or less of the area median income). If 5% of these tenants no longer meet the income requirement, recapture occurs, but only on the accelerated portion of the credit amounts allocable to the 5% basis of the project that is no longer eligible for the credit. Because the project continues to meet the 20-50 minimum set-aside, full recapture is not required. Should an additional 10% of these tenants fail to meet the 50% of area median income test in a subsequent year, the project would no longer comply with the minimum set-aside requirement, and full recapture would be required. The recapture equals one-third of the total of all the credits taken in previous years that were allocable to the 25% of the basis of the project that represented units that qualified as units occupied by tenants with incomes 50% or less of the area median income, with interest under §6621. The credits relating to the 5% of basis that were recaptured in a prior year are not taken into account again.

Within 90 days of the end of the first taxable year for which the taxpayer claims the credit, and for each subsequent year during the compliance period, the taxpayer must certify to the Secretary of the Treasury that the project has continuously complied with the set-aside requirement during the year, report the dollar amount of the qualified basis, the eligible basis, and the adjusted basis of the building, report the applicable credit percentage, whether he has elected to comply with the 20-50 or the 40-60 minimum set-aside test, report the maximum qualified basis that the

housing credit agency has permitted him to take into account and provide any other information that the Secretary of the Treasury deems necessary.[85]

Owners and operators of low-income housing projects on which they have claimed a credit must correct any noncompliance with the set-aside requirement or with a reduction in the qualified basis within a reasonable period after they discover or should have discovered such noncompliance.[86] If the taxpayer corrects the noncompliance within a reasonable time, there is no recapture. The Conference Report specifies that it does not contemplate the eviction of current tenants to return the project to compliance. However, each available residential unit of comparable or smaller size that becomes vacant while the project does not comply must be rented to qualifying low-income tenant before any are rented to other tenants until the building complies again.[87] Consequently, absent a disposition of the building, the event that will generally give rise to the penalty for noncompliance (credit recapture or a reduction in the allowable credit) will be rental of a unit to a tenant who is not a low-income tenant (other than temporary rental) during any period when the project does not comply with the set-aside requirement or the qualified basis amounts on which the credit is computed.[88]

H. Transferability of the Credit and At-Risk Limitation

A new owner of the property is eligible to continue to receive the credit as if the new owner were the original owner, using the same qualified basis and credit percentages that the original owner used. Rehabilitation expenditures on such property may qualify for a credit in the same manner as rehabilitation expenditures on other qualifying property. Except for a special rule for partnerships (paragraph II, G above), all dispositions of ownership interests in buildings are dispositions for purposes of recapture.[89] Unlike the earlier draft of the Senate Committee on Finance, there is no election for the new owner to assume the recapture liability for prior credits and to step into the shoes of the prior owner.[90]

The amount of the credit is subject to an at-risk limitation similar to the investment tax credit at-risk rules in the case of nonrecourse financing. However, §46(c)(8)(D)(ii)(II), providing that nonrecourse financing cannot exceed 80% of the credit base, does not apply to low-income housing. There is also an exception for lenders related to the buyer of low-income property.[91] Another exception exists where the loan (including seller financing) is no more than 60% of the basis of the property, and it is made by a charitable organization one of whose tax-exempt purposes includes the fostering of lowincome housing.[92] Furthermore, if the rate of interest for any financing by a qualifying charitable organization is below the applicable federal rate (AFR) less one percent, then the qualified basis to which the financing relates shall be reduced to reflect the present value of the payments of principal and interest, using the AFR as the discount rate.[93] There is a recapture of the credit should the borrower fail to repay fully with interest the financing provided by the charitable organization at the end of the 15 year compliance period.[94]

I. Coordination with the Passive Loss Rule

For purposes of the §469 passive loss rules, the credit (but not losses) for low-income housing is treated as arising from rental real estate activities in which the taxpayer actively participates.[95] Thus, the low-income housing credit is subject to the limitations imposed on credits from such activities, so that it is generally unavailable to offset tax attributable to income other than passive income.[96] As a result, even though new §42 provides a credit for low-income housing, in practice this credit is available only to taxpayers with passive activity income, such as rental income, for example.[97] Under special exception, however, a natural person may use low-income housing credits to offset tax on up to $25,000 of nonpassive income, subject to a phase-out between $200,000 and $250,000 of adjusted gross income (the $25,000 amount is reduced by one dollar for every two dollars over $200,000 of adjusted gross income of the taxpayer, computed without regard to passive losses).[98] The taxpayer does not have to actively participate in the low-income project to qualify for the $25,000 offset.[99] Thus, a limited partner in a partnership that owns low-income housing qualifies for the $25,000 offset. The basis of property is not reduced by the amount of low-income credits that the taxpayer claims.[100]

Observation: The credit is likely to be of limited utility to investors with adjusted gross incomes in excess of $200,000, unless they have significant amounts of passive income. This is important because the preferred investment vehicle for low-income housing projects has been the limited partnership. The practical inability of investors with adjusted gross incomes over $200,000 to use the low-income housing credit (unless such investors have passive activity income) reduces the pool of available investors. As a result, more low-income housing projects may have to be offered to the public to raise funds, with the expensive and cumbersome registration process that accompanies public offerings.

J. Transitional Relief from the Passive Loss Rule

Section 502 of the TRA provides some limited relief from the application of the passive loss rule for investors who had invested in low-income housing under pre-TRA law. Under this rule, any loss sustained by a qualified investor with respect to an interest in a qualified lowincome project for any taxable year in a "relief period" shall not be treated as a loss from a passive activity for purposes of §469.[101] A qualified investor is a natural person who holds

(directly or indirectly through an entity) an interest in a qualifying low-income project placed in service before August 17, 1986, if such investor: (1) made his initial investment in the project after 1983, or if the project was not placed in service before August 17, 1986, the investor held an interest in the project on December 31, 1986; and (2) is required to make payments after 1986 of 50% or more of his total original obligated investment in such project.[102] A person is treated as holding the interest if he had a binding contract to acquire such interest on the specified dates.[103] A qualified low-income project for purposes of the transitional rule retains its meaning under §1250(a)(1)(B), as under pre-TRA law.[104] The relief period is the period beginning with the taxable year in which the investor made his initial investment and ending the earliest of: (1) the sixth taxable year after the taxable year in which the investor made his initial investment, (2) the first taxable year after the taxable year in which the investor must make his final investment, and (3) the taxable year preceding the taxable year for which the project ceased to be a qualified low-income project under the meaning of §1250(a)(1)(B).[105] TRA §502(d)(3) provides that a person may not claim the low-income housing credit for any project, if such person has claimed relief from the passive loss rule pursuant to §502.

[102] §502(d)(1) of the TRA.
[103] *Id.*
[104] §502(c) of the TRA.
[105] §502(b) of the TRA.

Observation: This transitional relief from the passive loss rule for those who had invested in low-income projects under pre-TRA law treats investors who make a lump sum investment in a project differently from investors who contributed over a period of years. Thus, an investor who made his only investment in the project in one lump sum in 1985 receives no relief from the passive loss rule while an investor in the same project who made his initial investment also in 1985 and continues to make investments and is obligated to make them until 1988, is not subject to the passive loss rules through the end of 1989.[106] Congress made this distinction because of its concern that, without some relief from the passive loss rule, investors would default on their obligations to make additional contributions to low-income projects that they had invested in prior to the adoption of the passive loss rule.

K. Effective Date

The low-income housing credit is effective for projects placed in service in taxable years after 1986 (other than property grandfathered under the depreciation rules) and before 1990.[107] A building placed in service after 1989 is eligible for the credit if expenditures of 10% or more of the reasonably expected cost of the building are incurred prior to 1989, and the building is placed in service before 1991. Credit authority for such property placed in service in 1990 may be carried over from the 1989 volume allocation for the credit agency.[108]

Chapter 13

EXTENSION AND MODIFICATION OF RESEARCH CREDIT RULES

James F. Miller, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The Code §30 incremental research credit (commonly known as the "research and development credit") was enacted in 1981 to provide a substantial incentive for U.S. companies to allocate more of their resources to research and development.[1] As enacted by ERTA §221(a), the credit was 25% of the excess of (1) qualified research expenses for the taxable year incurred in carrying on a business over (2) the average amount of the taxpayer's yearly qualified research expenses in the preceding three taxable years (*i.e.*, the "base period"). The credit was temporary—available only for qualified research and development expenditures paid or incurred after June 30, 1981, and before January 1, 1986,—to enable Congress to evaluate its effectiveness and to determine whether it should be extended in its present or modified form.[2]

In 1986, after reviewing available information and testimony on its operation, Congress extended the credit for an additional four years "in order to obtain sufficient data and information to evaluate whether or not the credit should be further extended or modified." [3] However, Congress modified the application of the credit to encourage technological research that may develop new, innovative products. It established new rules designed to target the credit to high-tech activities and eliminate the ability of nontechnologically innovative activities to qualify for the credit.[4] Congress also added a new credit for "university basic research" because it "believe[d] it is desirable to provide increased tax incentives for corporate cash expenditures for university basic research where such expenditures do not merely represent a switching of donations from general university giving and where certain other maintenance-of-effort levels are exceeded." [5]

[1] *See* H.R. Rep. No. 201, 97th Cong., 1st Sess. 111 (1981). The research and development credit was originally added as Code §44F pursuant to §221 of the Economic Recovery Tax Act of 1981 (P.L. 97-34 or ERTA), but was renumbered as part of the tax credit simplification portion of the Tax Reform Act of 1984 (P.L. 98-369).

[5] S. Rep., p. 695.

II. Overview

Section 231 of the TRA 1986 redesignates the old Code §30 as Code §41 and extends the incremental research credit for eligible expenses paid or incurred through 1988.

Under newly designated Code §41, the credit is reduced to 20% and the definition of qualified research is narrowed to include only research: (1) undertaken to discover information which is technological in nature and intended to be useful in development of a new or improved business component; and: (2) substantially all the activities of which constitute elements of a process of experimentation for functional purpose. *See* §41(d)(1) and (3).

The prior-law provision [6] under which rental or other payments for the right to use personal property in conducting qualified research are eligible for the credit is repealed, although under regulations to be prescribed by the Treasury, payments to persons other than the taxpayer for the right to use (time-sharing) a computer in the conduct of qualified research remains eligible for the incremental research credit to the extent allowable under present law. *See* §41(b)(2)(A)(iii).

The new law introduces a "university basic research credit" [7] equal to 20% of all basic research payments made to universities and certain other organizations in excess of a special base amount. §41(a)(2). The university basic research credit is available to any corporation other than an S corporation, a personal holding company or a service organization as defined in §414(m)(3).[8]

Section 231(d) of the TRA 1986 makes both the incremental research credit and the university basic research credit subject to the overall limitation that applies to general business tax credits (*i.e.*, credits can offset only 75% of tax liability over $25,000).[9]

Under a tough rule [10] applicable to sole proprietors, partners, beneficiaries of an estate or trust, and shareholders of S corporations, the incremental research credit may offset only the tax attributable to the taxpayer's interest in the trade or business that generated the credit.

[6] §30(b)(2)(A)(iii)).

[7] §41(e).

[8] Code §41(e)(7)(E).

[9] Code §38(b)(4), as amended by §221 of the TRA 1986.

[10] §41(g).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The amendments regarding the incremental research credit are effective for taxable years beginning after December 31, 1985. Act §231(g)(1). The university basic research credit is effective for taxable years beginning after December 31, 1986. Act §231(g)(3).

III. Detailed Analysis

A. Qualified Research

As under prior law, §41(d)(1)(A) limits qualified research to research with respect to which expenditures may be treated as expenses under §174. Thus, it relates to "research and development costs in the experimental or laboratory sense" and includes costs incidental to the development of an experimental or pilot model, a plant process, a product, a formula, an invention or similar property, and the improvement of already existing property of the type mentioned.[11] However, §41(d)(1) further limits qualified research to research "(B) which is undertaken for the purpose of discovering information — (i) which is technological in nature, and (ii) the application of which is intended to be useful in the development of a new or improved business component of the taxpayer, and (C) substantially all of the activities of which constitute elements of a process of experimentation for" a purpose described in §641(d)(3), *i.e.*, "(i) a new or improved function, (ii) performance, or (iii) reliability or quality."

1. Technological Nature

The Conference Report to the TRA 1986 clarifies that research is technological in nature if the process of experimentation utilized in the research fundamentally relies on principles of the physical or biological sciences, engineering, or computer science including research intended to expand or refine existing principles of computer science).[12] For example, information relating to the development of new methodology for determining the rate of return on investments and for developing new methods of advertising presumably does not qualify because they are not based on physical sciences and, thus, are not technological in nature. *See* Conf. Rep., p. II-71-72.

2. Business Component

Under §41(d)(2)(B), the term business component is defined as "a product, process, computer software, technique, formula or invention" that is "held for sale, lease, or license," or "used by the taxpayer in a trade or business of the taxpayer." Code §41(d)(2)(C) clarifies that "[a]ny plant process, machinery, or technique for commercial production of a business component shall be treated as a separate business component (and not as part of the business component being produced)."

3. Process of Experimentation

The Conference Report defines the term process of experimentation as "a process involving the evaluation of more than one alternative designed to achieve a result where the means of achieving that result is uncertain at the outset." [13] Under the experimentation element of the qualified research test, the process of experimentation must be for a purpose related to a new or improved function, performance, or reliability or quality.[14] However, research relating to style, taste, cosmetic or seasonal design factors does not qualify.[15]

Comment: The type of experiments undertaken by pharmaceutical companies in developing and testing a new drug generally qualify because they are part of a process of scientific experimentation necessary to develop the drug. Similarly, the design of a new computer system and the design of new or improved integrated circuits for use in a computer or other scientific products are qualified research expenditures. This is because the design is not known at the beginning of the research and final design can be determined only through a process of experimentation that relates to an idea that is developed into a final product through trial-and-error testing.

4. Application of Tests

Section 41(d)(2)(A) states that the analysis as to whether research is "qualified" for purposes of §41(d)(1) "shall be applied separately with respect to each business component of the taxpayer." The Conference Report elaborates by pointing out that "[i]f the requirements * * * [set forth in §41(d)(1)] are not met with respect to a product, etc., but are met with respect to one or more elements thereof, the term business component means the most significant set of elements of such product, etc. with respect to which all requirements are met." [16] For example, if research on a new automobile engine as a whole does not satisfy all the tests, the development of a specific component (*e.g.*, a new firing system) may qualify.

5. Activities for Which Credit Not Allowed

Code §41(d)(4) specifies that expenditures incurred for the following activities are excluded from eligibility for the credit (regardless of whether the requirements described above relating to technological information, experimentation and functional purposes are met):

(a) Activities with respect to a business component after the beginning of commercial production of the component;

(b) Adaptation of an existing business component to a particular customer's requirement or need;

(c) Efficiency surveys, management studies, management techniques, market research, market testing and development (including advertising or promotions), routine data collections, or routine or ordinary testing or inspection of materials or business items for quality control;

(d) Research related to the reproduction of an existing business component (in whole or in part) from a physical examination of the component itself or from plans, blueprints, detailed specifications, or publicly available information with respect to such component;

(e) Research with respect to computer software which is developed by (or for the benefit of) the taxpayer primar-

ily for internal use of the taxpayer, unless the software is used in (i) qualified research (other than the development of the internal-use software itself) undertaken by the taxpayer, (ii) a production process that meets the requirements for the credit, or (iii) any other research activity provided in Treasury regulations;[17]

(f) Research conducted outside the United States;

(g) Research in the social sciences, arts or humanities; and

(h) Research to the extent funded by any grant, contract, or otherwise by another person (or governmental entity).

B. University Basic Research Credit

The university basic research credit set forth in §41(e) applies to the excess of (i) 100% of corporate cash expenditures for university basic research (*i.e.*, "basic research payments") over (ii) the sum of (a) the greater of two fixed research floors plus (b) an amount reflecting any decrease in nonresearch giving to universities by the corporation compared to such giving during a fixed base period, adjusted for inflation.

1. Qualifying Expenditures

Code §41(e)(2)(A) defines the term "basic research payment" as a cash expenditure paid pursuant to a written agreement between the taxpayer corporation and a university or certain other qualified organizations for "basic research" to be performed by the qualified organization (unless the recipient is a "scientific tax-exempt organization" or a specified "grant organization," as such terms are defined in §41(e)(6)(C) and (D), respectively). Code §41(e)(7)(A) defines "basic research" as any original investigation for the advancement of scientific knowledge not having a specific commercial objective, other than basic research in the social sciences, arts, or humanities or basic research conducted outside the United States.

2. Qualified Organizations

Section 41(e)(6) defines the term "qualified organizations" as including any of the following:

(a) "Educational institutions" that are described in §170(b)(1)(A)(ii) and constitute institutions of higher education within the meaning of §3304(f);

(b) "Certain scientific research organizations" that: (i) are organized and operated primarily to conduct scientific research, (ii) are described in §501(c)(3) (relating to exclusively charitable, educational, scientific, etc., organizations), and (iii) are not private foundations; and

(c) "Scientific tax-exempt organizations" organized and operated primarily to promote scientific research by colleges or universities pursuant to written research agreements, that expend on a current basis substantially all their funds (or all the basic research payments received by them) through grants and contracts for basic research by colleges and universities, and that are either (i) described in §501(c)(3) (other than a private foundation) or (ii) described in §501(c)(6) (trade associations).

3. Rules for Computing the University Basic Research Credit

The 20% university basic research credit applies to the excess of 100% of corporate basic research payments over the "qualified organization base period amount." Code §41(e)(1).

Code §41(e)(3) defines the term "qualified organization base period amount" as an amount equal to the sum of the "minimum basic research amount" plus the "maintenance-of-effort amount."

Code §41(e)(4) defines the "minimum basic research amount" as an amount equal to the greater of two fixed floors—

(i) One percent of the average of the sum of all in-house research expenses, contract research expenses, and credit-eligible basic research expenditures under former §30(e)(1) during the three taxable years immediately preceding the taxable year beginning after December 31, 1983 (*i.e.*, the "base period" as defined in §41(e)(7)(B)); and

(ii) the average of all credit-eligible basic research expenditures under old §30(e)(1) during the base period. *See* H.R. Rep. No. 426, 99th Cong., 1st Sess. 184 (1985)("House Report").

In the case of a corporation that was not in existence for at least one full year during a taxable year (other than a short taxable year) in the base period, §41(e)(4)(B) provides that the "minimum basic research amount" for the base period will not be less than 50% of the basic research payments for the current taxable year. If the corporation was in existence for one or two the base-period years, the fixed floor is to be computed with respect to such year or years. *See* House Report at 184.

Code §41(e)(5)(A) defines the "maintenance-of-effort amount" for any taxable year as the excess of: (i) the average of the "nondesignated university donations" made during the base period (as defined above), as adjusted by the §1 cost-of-living factor for the calendar year in which the such taxable year begins; over (ii) the amount of nondesignated university donations paid by the taxpayer in such taxable year. Code §41(e)(5)(B) defines "nondesignated university donations" as all amounts paid by the taxpayer to all colleges or universities for which a charitable deduction was allowable and that were not taken into account in computing the research credit.

C. Interplay of Incremental Research Credit and University Basic Research Credit

The amount of basic research payments to which the university basic research credit applies does not enter into the computation of the incremental research credit. Under §41(e)(1)(B), the portion of basic research payments which to which the university basic research credit does not apply (*i.e.*, the portion not exceeding the "qualified organization

[17] For example, if a taxpayer is developing robotics and related software for use in operating a manufacturing process, the taxpayer's cost of developing the software should be eligible for the credit. Software developed for internal use in administrative, financial or bookkeeping functions is generally not eligible, except when the software is truly "technologically innovative."

base period amount") enters into the incremental research computation (and in subsequent years enters into the base period amounts for purposes of computing the incremental credit).

Example: X Corp.'s qualified research expenses exceed base period research expenses by $200,000. It has a total of $100,000 in basic research payments. Assume the basic research floor amount is $40,000. Result: X Corp. may claim a $12,000 credit for basic research (*i.e.*, $100,000 minus $40,000, times 20%). X Corp. may also claim a $48,000 credit for qualified research expenses ($200,000 of qualified research expenses, plus $40,000 of basic research expenses for which the new credit was not claimed, times 20%). The total research credit, therefore, is $60,000.

D. Other Limits on the Credit

The research and development credit is not allowed against the alternative minimum tax (the "AMT"). *See* Code §55(b)(1). In addition, as a practical matter, the credit is further limited by the AMT because the credit can reduce a taxpayer's regular-tax liability only to the amount it would pay under the AMT.[18]

[18] Code §26(a), as amended by §701(c)(1)(A) of the TRA 1986.

The credit is also subject to the overall limitation that applies to general business tax credits, *i.e.*, credits can offset only 75% of tax liability over $25,000.[19]

A tough new rule applies to sole proprietors, partners, beneficiaries of an estate or trust, and shareholders of S corporations: the credit may offset only the tax attributable to the taxpayer's interest in the trade or business that generated the credit.[20]

Comment: This credit limitation is much harsher than the general credit limit imposed by the new passive-loss rules.[21] The general limit restricts passive-source credits to tax owed on "passive activity" income only if the taxpayer does not materially participate in the activity. The limit on research credits applies whether or not the taxpayer materially participates in the trade or business that gives rise to the credits.

[19] Code §38(c)(1), amended by §221 of the TRA 1986. *See* amended Code §38(b)(4).

Chapter 14

MISCELLANEOUS CREDITS

Jane M. Eldredge, Esq.
Patrick G. Dooher, Esq.
Silverstein and Mullens
Washington, D.C.

I. Extension and Modification of Targeted Jobs Credit

A. Introduction

Under pre-TRA 1986 law, the targeted jobs credit was due to expire December 31, 1985.[1] The targeted jobs credit had been equal to 50% of the qualified first year's wages of an employee who belonged to one of the nine targeted groups, up to a maximum of $6,000 of wages per individual and 25% of the qualified second year wages.[2] The "first year" was calculated from the day the employee started work for the employer. A credit equal to 85% of up to $3,000 of wages of a qualified summer youth employee also was allowed.

The nine targeted groups for whom the credit was available were (1) vocational rehabilitation referrals; (2) economically disadvantaged youths (ages 18-24); (3) economically disadvantaged Vietnam-era veterans; (4) supplemental security income recipients; (5) general assistance recipients; (6) economically disadvantaged cooperative education students (ages 16-19); (7) economically disadvantaged former convicts; (8) AFDC recipients and WIN registrants; and (9) economically disadvantaged summer youth employees (ages 16-17).[3] However, an individual was only treated as a member of a target group if on or before the employee's first day of employment, the employer made a written request to a designated local agency seeking a certification or had received a certification that the individual was a member of a "targeted group."[4]

B. Analysis

Although Congress extended the target jobs credit for another three years, making it available for wages paid to individuals who started work on or before December 31, 1988, it did not provide for retroactive certification for individuals who were employed between January 1, 1986 and October 22, 1986.[5] In addition, the maximum credit for the first year's wages was reduced from 50% to 40% of the individual's wages up to maximum of $6,000, thereby reducing the maximum allowable credit from $3,000 to $2,400.[6] The Act makes the credit available for first year wages only, not for any second year wages.

Under new Code §51(i)(3), the availability of the credit for non-summer employees is only for wages of individuals who have at least 90 days of employment, or who have completed at least 120 hours of work. Wages for a shorter work-period are not eligible for the targeted jobs credit.

The targeted jobs credit for wages paid to qualified summer youth employees is retained at 85% of the wages, up to a maximum of $3,000 of wages or a maximum credit of $2,550. However, the Act limits the availability of the credit to wages of a summer employee who has worked for at least 14 days or completed at least 20 hours of work.[7]

C. Effective Date

The extension and modification of §51 of the Code is retroactive to December 31, 1985.[8]

II. Alternative Minimum Tax Credit

A. Introduction

Under the minimum tax rules in effect prior to the enactment of the 1986 TRA, noncorporate taxpayers were subject to the alternative minimum tax to the extent that tax exceeds the taxpayer's regular tax for the taxable year. In general, the pre-1986 TRA alternative minimum tax was equal to 20% of alternative minimum taxable income. Alternative minimum taxable income, in turn, is equal to adjusted gross income, increased by certain tax preferences and decreased by alternative tax itemized deductions and an alternative minimum tax exemption amount.

Prior to the 1986 TRA, corporations could be liable for the add-on minimum tax of §56. This tax was equal to 15% of the corporation's tax preferences for the taxable year, to the extent those tax preferences exceed the greater of (i) $10,000 or (ii) the corporation's regular income tax.

The list of pre-TRA tax preferences, which could increase noncorporate alternative minimum taxable income or subject a corporation to the add-on minimum tax, was set forth in pre-TRA §57. Some of the preferences listed in §57, however, applied only to noncorporate taxpayers.

One potentially unfair aspect of the pre-1986 TRA minimum tax rules is that the alternative minimum tax and minimum tax may be imposed on preferences that simply reflect timing differences. For example, 19-year real property will yield the same total amount of cost recovery deductions under §168 over the prescribed recovery period, regardless of whether accelerated or straight line rates are employed. Under pre-TRA §57(a)(12), however, accelerated cost recovery on 19-year real property was treated as a preference for purposes of both the noncorporate alternative minimum tax and the corporate add-on minimum tax. It is a preference to the extent the accelerated deduction for the taxable year exceeds the deduction that would have been computed using the straight-line method for such property. Generally, a preference would result for the first six to seven years that the 19-year real property was in service, and an alternative minimum tax or add-on minimum tax might be imposed on the preference for one or more of those years. In the ensuing years, the straight-line cost recovery deduction would exceed the deduction using the accelerated rates because of the front-loading of the deductions in the first six to seven years. No compensating adjustment or credit, however, was provided in the ensuing years for regular tax purposes even though a minimum tax or alternative minimum tax may have been paid with respect to the front-loaded ACRS deductions by reason of the §57(a)(12) preference.

B. Overview of 1986 TRA Minimum Tax Credit

Effective for taxable years beginning after December 31, 1986, the 1986 TRA [9] completely revised the alternative minimum tax and extended the revised alternative minimum tax to corporate as well as noncorporate taxpayers. The Act completely repealed the §56 add-on corporate minimum.

The revised alternative minimum tax continues to be imposed only to the extent that it exceeds a taxpayer's regular tax for the taxable year. For corporations, the alternative minimum tax is 20% of alternative minimum taxable income reduced by a $40,000 exemption amount that is subject to phase-out when alternative minimum taxable income exceeds $150,000. The noncorporate alternative minimum tax is similarly computed but at a 21% rate with varying exemptions and phase-out thresholds.[10]

For both corporate and noncorporate taxpayers, alternative minimum taxable income is computed by taking taxable income, adjusting that income by the adjustments prescribed in §§56 and 58, and increasing the adjusted income by the preferences listed in §57. The adjustments required by §§56 and 58 may include a recomputed depreciation deduction based upon the alternative depreciation system of revised Code §168 or may include the substitution of a different accounting method, such as the percentage of completion method for the completed contract method. The adjustments are consistently applied for alternative minimum tax purposes from year-to-year. For example, if income is reported for year one using the percentage of completion method for minimum tax purposes, and if the same income is picked up for year two using the completed contract method for regular tax purposes, that income will not again be reported for minimum tax purposes in year two in computing alternative minimum taxable income. Rather, it will be subtracted from taxable income as an adjustment in arriving at alternative minimum taxable income for year two.

Note: The revised alternative minimum tax is fully analyzed in Chapters 32 and 33 of this portfolio.

In a significant change from pre-1986 TRA law, a minimum tax credit may become available if a minimum tax is paid as a result of timing differences. This credit, provided in Code §53,[11] will be available to the extent the alternative minimum tax liability incurred is due to timing differences, either because an item of income is reported more rapidly for alternative minimum tax purposes or because a deduction is taken into account more slowly for alternative minimum tax purposes. The minimum tax credit is available as an unlimited carryforward to ensuing years. The credit will be allowed to offset regular tax in any ensuing taxable year but only if, and to the extent that, the regular tax exceeds tentative minimum tax liability for the year.

C. Analysis of Minimum Tax Credit

1. Computation of Credit

Section 53(a) provides for the allowance of a minimum tax credit. Section 53(b) defines this credit as the excess, if any, of "the adjusted net minimum tax" imposed for all prior taxable years beginning after 1986 over the amount allowable as a credit in prior taxable years. Under §53(d), the "adjusted net minimum tax" for a taxable year is the net minimum tax imposed by §55 for that year reduced by the minimum tax liability that would have arisen for that year if the only adjustments and tax preference items taken into account in that year were "exclusion preferences."

The adjustments and preference items specified as "exclusion preferences" are:

(i) The itemized deductions allowed individuals by §56(b)(1), which includes such items as medical expenses and casualty losses;

(ii) The special deduction of §833(b) allowed Blue Cross and Blue Shield and similar health insurance organizations;

(iii) The percentage depreciation preference of §57(a)(1);

---

[9] Act §701.

[10] Under §55(d), the exemption amount is $40,000 for a joint return, $30,000 for a single taxpayer, and $20,000 for a married person filing a separate return or an estate or trust. The phase-out of the exemption begins at $150,000 of alternative minimum taxable income for a joint return, $112,500 for single taxpayers, $75,000 for married persons filing separately and estates and trusts. The phase-out is equal to 25% of each dollar of alternative minimum taxable income exceeding the applicable threshold amount.

[11] Added by Act §701(b).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(iv) The tax preference for tax-exempt interest on certain private activity bonds described in §57(a)(5);

(v) The tax preference for the charitable contribution of appreciated property described in §57(a)(6);

(vi) For taxable years beginning after 1989, the special earnings and profits adjustments for corporations set forth in §56(g) to the extent excluded from gross income for any taxable year for regular tax purposes or not deductible for any taxable year for purposes of §56(g).

Note: Although the book income preference of §56(c)(1) for corporations for taxable years beginning in 1987, 1988, 1989, may result from exclusion items such as tax-exempt interest, the book income adjustment is not adjusted to eliminate such exclusion preferences.[12] Thus, the full amount of the book income adjustment may be taken into account in determining the amount of the minimum tax credit.

Although the exclusion preferences are not allowed for purposes of the minimum tax credit, the computation under which they are eliminated from the credit computation is quite favorable. Only if an alternative minimum tax would be imposed for the taxable year solely because of the existence of the exclusion preferences will the minimum tax credit be subject to a cutback because of such preferences. The following three examples, the last of which is derived from the Senate Finance Committee Report,[13] demonstrate the beneficial effect of this computation:

Example (1): Assume that a married couple filing a joint return for 1988 (i) has zero regular taxable income, (ii) in arriving at zero taxable income has deducted itemized deductions of $15,000 that are disallowed for alternative minimum tax purposes by §56(b)(1) and has deducted the $5,000 standard deduction that is also denied under §56(b)(1) for minimum tax purposes, and (iii) has realized a $500,000 deferred installment sales profit that must be reported in full for minimum tax purposes as an adjustment under §56(a)(6). Their alternative minimum taxable income based on the foregoing facts is $520,000 for 1988, and their tentative alternative minimum tax at a 21% rate equals $109,200. Since they owe no regular tax on the zero taxable income, the $109,200 becomes their alternative minimum tax for 1988. For purposes of computing the credit, the $500,000 of deferred installment sales gain is not an exclusion preference, but the $20,000 §56(b)(1) adjustment is such a preference. To determine the reduction in the §53 credit for the exclusion preference, the alternative minimum tax must be recomputed by taking into account only the exclusion preference, in this case $20,000. Recomputed alternative minimum taxable income would therefore equal the couple's zero taxable income for regular tax purposes plus the $20,000 exclusion preference. However, no alternative minimum tax would be owed on this $20,000 of alternative minimum taxable income because the $40,000 exemption amount would reduce that income to zero. Although the exemption amount was completely phased-out in computing the $109,200 alternative minimum tax on the $520,000 of alternative minimum taxable income, no phase-out of the $40,000 exemption amount occurs when alternative minimum taxable income is only $20,000. Thus, there is no reduction in the §53 credit for exclusion preferences, and the credit equals the full amount of the minimum tax of $109,200.

Observation: The example in the Senate Finance Committee Report set forth as Example (3) below confirms that the recomputation of the alternative minimum tax using only exclusion preferences is made without regard to any exemption phase-out that may have occurred in arriving at the net alternative minimum tax.

Example (2): Assume that a married couple filing a joint return for 1988 has taxable income of $200,000 and that the tax on this income at a 28% flat rate equals $56,000 because of the phase-out of the lower bracket rates and personal exemptions. Further assume that the couple has a $35,000 tax-exempt interest preference under §57(a)(5) and a $500,000 deferred installment sales gain for 1988 . Adding back the 1988 standard deduction of $5,000, the couple's total alternative minimum taxable income will equal $740,000 ($200,000 + $5,000 + $35,000 + $500,000). The tentative alternative minimum tax on this $740,000 is $155,400 at a 21% rate. To arrive at the net alternative minimum tax, the $56,000 regular tax is subtracted from the $155,400 tentative alternative minimum tax to yield a net $99,400 alternative minimum tax. To compute the minimum tax credit, the alternative minimum tax is recomputed taking into account only the tax-exempt interest and the standard deduction. Recomputed alternative minimum taxable income equals $240,000 ($200,000 + $5,000 + $35,000) less a $17,500 exemption amount (which has been partially phased out because alternative minimum taxable income exceeds the $150,000 joint return phase-out threshold). Thus, the recomputed tentative alternative minimum tax is 21% of $222,500 or $46,725. However, this $46,725 tentative alternative minimum tax does not give rise to alternative minimum tax liability because the $56,000 regular tax exceeds this tentative tax. Consequently, there is no reduction for the exclusion preferences, and the minimum tax credit therefore equals the $99,400 net alternative minimum tax.

Example (3): Assume that for 1988 a married couple filing a joint return has no taxable income, an installment sales gain adjustment of $400,000, and exclusion preferences of $100,000. Total alternative minimum taxable income equals $500,000, which at a 21% rate yields a $105,000 alternative minimum tax. Recomputing the alternative minimum tax taking into account only the exclusion preferences of $100,000 yields an alternative minimum tax of $12,600 (.21% of ($100,000 reduced by $40,000 exemption)). Thus, the minimum tax credit is $92,400 ($100,000 reduced by $12,600).

[13] *Id.*, at 536.

2. Application of Credit

The §53 credit is available as a carryforward to offset regular tax liability indefinitely.[14] Because it is available as an indefinite carryforward, it is unnecessary for a taxpayer to determine which prior year's minimum tax credit is being used in a particular year.[15]

Under §53(c)(1), a minimum tax credit carried to a particular taxable year may only offset the taxpayer's regular tax liability for that year, as reduced by other nonrefundable credits set forth in subparts A, B, and D of Part IV, dealing with the credit provisions of the Code.[16] In other words, only regular tax liability remaining after the application of other nonrefundable credits may be offset by the minimum tax credit. This rule, however, is favorable since the other nonrefundable credits are generally subject to more stringent limitations on their use than the minimum tax credit. For example, the general business credit of §38 is provided a carryover period of 18 years under §39 (three years back, 15 years forward); the minimum tax credit is allowed indefinitely.

The one additional limitation on the minimum tax credit, set forth in §53(c)(2), is that the minimum tax credit may not reduce a taxpayer's tax liability for a year below the tentative minimum tax for that year. The tentative minimum is defined in §55(b) as the gross minimum tax reduced by the alternative minimum foreign tax credit for the taxable year. For example, if the taxpayer for a taxable year has a $30,000 minimum tax credit, a $40,000 regular tax liability, and a $20,000 tentative minimum tax liability, the taxpayer may apply only $20,000 of the $30,000 minimum tax credit against the $40,000 regular tax liability. The $20,000 tentative minimum tax liability limits further use of the minimum tax credit. The $10,000 not allowed because of the tentative minimum tax limitation is carried forward to future taxable years.

Observation: The §53 minimum tax credit, in conjunction with the adjustments made in computing alternative minimum taxable income, should eliminate much of the penalty aspects of the minimum tax, at least to the extent that the minimum tax is not attributable exclusion preferences. For instance, in Example (1) above, if the taxpayers reported the $500,000 gain for regular tax purposes in 1988, the year that the sale occurred, their net regular tax liability would have been $138,600 ($500,000 minus the $5,000 standard deduction multiplied by 28%). If, instead, it is further assumed that the taxpayers report $500,000 deferred gain in 1989 for regular tax purposes, their regular tax liability for 1989, assuming a continuation of the 28% rate and no increase in the standard deduction, will be $138,600. Against this $138,600 regular tax, the taxpayers will have available as a carryforward the $109,200 minimum tax paid in 1988. Thus, for 1989, they will owe only an additional $29,400 in tax. The aggregate two-year tax consisting of the $109,200 alternative minimum tax for 1988 and the net $29,400 regular tax for 1989 equals the $138,600 the taxpayers would have paid if the gain had been reported in full for 1988. There is no minimum tax for 1989 under the foregoing facts because, for minimum tax purposes, the $500,000 of installment sales gain was completely reported in the preceding year, 1988, and is therefore subtracted in arriving at alternative minimum taxable income for 1989.

3. Corporate Acquisitions

Any unused minimum tax credit carryforward of a corporation that is acquired in a tax-free reorganization or liquidation to which §381(a) applies may be taken into account by the acquiring corporation.[17] Use of the acquired corporation's unused minimum tax credit, however, may be subject to limitation by revised §§382 and 383.[18] For a discussion of the limitations under revised §§382 and 383, *see* Chapter 35, *infra*.

III. Extension of Orphan Drug Credit

A. Introduction

A tax credit of 50% of the qualified clinical testing expenses during a taxable year is allowed [19] for testing related to the use of a drug for a rare disease or condition for which it was designated under §526 of the Federal Food, Drug and Cosmetic Act.[20] These drugs are "orphan" drugs because the rare diseases or conditions which they are intended to treat occur so infrequently in the United States, that it is economically not feasible for a company to recover the costs of testing drugs to treat it. In order to be eligible for the credit, the "orphan drugs" must be designated as such under §526 of the Federal Food, Drug and Cosmetic Act.[21]

B. Extension of Orphan Drug Credit

TRA 1986 extends the orphan drug credit for 50% of the expenses incurred in clinical testing of "orphan drugs" through December 31, 1990.[22]

IV. Increase in Earned Income Credit

A. Introduction

Since 1975, the Code has contained the earned income credit which "is intended to provide tax relief to low-income working individuals with children and to improve incentives to work." [23] Under pre-TRA 1986 law the credit was equal to 11% of the first $5,000 of earned income of an "eligible individual" up to a maximum credit of $550.[24] The amount of the availabale credit was phased-out between $6,500 and $11,000 of the individual's adjusted gross income (AGI) (or, if greater, the earned income).[25]

An "eligible individual" was either (1) married, with at least one dependent child; (2) a surviving spouse maintain-

[25] Pre-TRA Code §32(b).

ing a household for a dependent child; or (3) an unmarried head of household with a dependent child.[26] The dependent child must reside with the individual for more than one-half of the taxable year, in order for the taxpayer to be eligible for the credit.[27]

Tables are provided for the taxpayer to impute the amount of the available credit.[28] The credit may be paid to eligible individuals directly in their paychecks during the year, if they elect advance payments;[29] or claimed as a credit on an income tax form.

B. Analysis

1. Increased Amount of Credit

The Act increases the rate of the credit from 11% to 14% of the base amount of earnings.[30] The Act also amends the base amount from $5,000 to $5,714 for 1987, thereby increasing the maximum credit from $550 to $800.[31]

Under amended §32(b), the credit phase-out begins at $9,000 of earnings, and is completely phased out at earnings of $17,000. The increase of the earnings level for which the phase-out of the credit begins is effective for taxable years beginning after 1987.

2. Inflation Adjustments

The Act created new Code §32(i) which is an inflation adjustment which allows the income base and the starting phase-out period to be adjusted each successive year by multiplying the income base by the cost-of-living adjustment determined under §1(f)(3).[32] All amounts will be rounded up to the nearest $10.[33]

3. Employee Notification

The Secretary of the Treasury is directed to promulgate regulations requiring employers to notify employees (other than students with summer jobs) who have not had any tax withheld from their wages that they may be eligible for refunds due to the earned income credit.[34]

V. Repeal of Political Contributions Tax Credit

A. Introduction

Under pre-TRA 1986 tax law, individuals were eligible to claim a credit against their income tax of 50% of their political contributions and newsletter fund contributions, up to a maximum credit of $50 per individual. A $100 maximum credit was allowed for a married couple filing a joint return.[35]

B. Analysis

Section 112 of the Act repeals Code §24 providing for the political contributions tax credit, effective for taxable years beginning on or after January 1, 1987. The Senate report stated that with the reduction in tax rates, the base-broadening of tax reform, the lack of incentive for those with no tax liability to make political contributions, the relatively high incomes of those who use the credit and the costliness of verification of the contributions were sufficient reasons for repealing the political contributions credit.[36]

Chapter 15

NEW OR REVISED CREDIT LIMITATIONS

Patrick G. Dooher, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Nonrefundable Personal Credits

The credits that may be applied to offset a taxpayer's tax liability for a taxable year are generally found in Part IV of Subchapter A of the Code, §§21 through 52. These credits may be grouped into two broad categories, refundable credits, which as the name implies are refunded if they exceed the taxpayer's tax liability for the year, and nonrefundable credits, which may be applied only to offset tax liability. The Code divides the nonrefundable credits into three subgroups: personal credits, miscellaneous credits, and business credits.

Prior to miscellaneous amendments by the 1986 TRA, the nonrefundable personal credits set forth in Subpart A of Part IV are as follows:

Description	*Code Section*
Household and Dependent Care	§21
Elderly and Disabled	§22
Residential Energy	§23
Political Contribution	§24
Mortgage Certificate	§25

The foregoing Subpart A personal credits are subject to a tax liability limitation contained in §26. Under §26, the sum of the nonrefundable personal credits for a taxable year cannot exceed the taxpayer's tax liability for that year. Section 26(b) defines "tax liability" as the tax imposed under the income tax provisions for the taxable year, with the exception of eight penalty-type taxes. The excluded penalty taxes, which cannot be offset by nonrefundable credits, are:

(i) The corporate minimum tax of §56,

(ii) The penalty taxes under §72(m)(5)(B), (o)(2), or (q) on certain distributions, such as premature distributions out of qualified plans to 5% owners,

(iii) The penalty tax of §408(f) for certain distributions from individual retirement accounts,

(iv) The accumulated earnings tax of §531,

(v) The personal holding company tax of §541,

(vi) The tax imposed by §1351(d)(1) on recoveries of foreign expropriation losses,

(vii) The §1374 tax on certain capital gains of S corporations, and

(viii) The §1375 tax on certain passive investment income of S corporations.

Section 26(c) provides a cross-reference to §55(c) for the treatment of nonrefundable personal credits under the alternative minimum tax for noncorporate taxpayers.

B. Miscellaneous Credits

Certain so-called "Miscellaneous Credits" are set forth in Subpart B of Part IV. These credits, also nonrefundable, are as follows:

Description	*Code Section*
Foreign and Possession Taxes	§27
Clinical Testing	§28
Nonconventional Fuels	§29
Research	§30

The §27 foreign and possession tax credit is subject to special limitations set forth in §901. The clinical testing credit and the nonconventional fuels credit are subject to the tax liability limitation of §26, as reduced by any nonrefundable credits allowed by Subpart A for the taxable year.

The research credit, prior to its revision by the 1986 TRA, is also subject to the §26 tax liability limitation, reduced by the nonrefundable personal credits of Subpart A and the clinical testing and nonconventional fuels credits. However, in contrast to the clinical testing and the nonconventional fuels credits, the research credit is provided up to a three-year carryback and a 15-year carryforward period if the research credit for a taxable year exceeds that year's tax liability limitation for research credit purposes.[1]

C. Business Credits

The last set of nonrefundable credits that are subject to limitation are the business credits.[2] Subparts D, E, and F provide for the following credits.

[1] Code §30(g) prior to amendment by the 1986 TRA.

[2] Subpart C of Part IV sets forth the following refundable credits that are not subject to limitation: the §31 wage withholding credit, the §32 earned income credit, the §33 nonresident alien, foreign corporation withholding credit, the §34 gasoline and special fuels credit, and the §35 tax overpayment credit.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Description	*Code Section*
General Business	§38
Alcohol Fuels	§40
ESOP	§41
Investment Credit Amount	§46
Investment Credit Recapture	§47
Investment Credit Definitions	§48
Targeted Jobs Credit Amount	§51
Targeted Jobs Credit Special Rules	§52

The general business credit of §38 is a composite of four separate credits — namely, the alcohol fuels credit, the ESOP credit, the investment credit, and the targeted jobs credit. The reason for grouping these credits under §38, the substantive rules for which are found in other Code provisions, is to provide a unified tax liability limitation and unified carryback and carryforward rules for the credits so grouped.

Section 38(a) provides that the general business credit (*i.e.*, the sum of the four separate credits) allowed for a taxable year is equal to the sum of (i) the business credit carryforwards carried to such taxable year, (ii) the amount of the current business credit, plus (iii) the business credit carrybacks carried to such taxable year. Thus, the general business credit adopts the FIFO ordering principle of applying business credit carryforwards first against tax, followed by the current year business credit, and lastly, by the business credits carried back.

Under §38(c), the total business credit determined under §38(a) cannot exceed the sum of (i) the first $25,000 of the taxpayer's "net tax liability" for the taxable year, plus (ii) 85% of the taxpayer's "net tax liability" exceeding the first $25,000. The term "net tax liability" is defined by §38(c)(2) as tax liability within the meaning of §26(b) reduced by the sum of the nonrefundable personal credits, foreign tax credit, clinical testing credit, nonconventional fuels credit, and the research credit. Section 38(c) also sets forth special rules to split the $25,000 amount that the general business credit can fully offset between a husband and wife filing separate returns and to apportion the $25,000 amount among the component members of a controlled group of corporations.

Under §39(a)(1), an unused general business credit, to the extent it is attributable to the amount of the current year business credit, is carried back to each of the three taxable years preceding the unused credit year and is carried forward to each of the 15 taxable years following the unused credit year. The credit carryover is taken into account for a particular carryover year in the manner provided in §38(a).

D. Alternative Minimum Tax

The alternative minimum tax, which prior to its revision by the 1986 TRA applied only to noncorporate taxpayers, contains an additional limitation on the use of nonrefundable credits. Section 55(c)(1), as in effect before the enactment of the 1986 Act, precludes the application of the nonrefundable credits (other than the §27 foreign tax credit) against alternative minimum tax liability. To the extent that a credit that may be carried over for regular tax purposes, such as the research or general business credit, is disallowed because of the application of the alternative minimum tax, §55(c)(3) intends that the credit carryover be increased by the amount of the disallowed credit. However, after amendment by Tax Reform Act of 1984,[3] §55(c)(3) fails to achieve the desired result because of a technical drafting flaw. The 1984 version of §55(c)(3) provides that the amount of the carryover increase equals the tax liability limitation for the credit involved reduced by the amount of minimum tax. The tax liability limitation, however, may bear no relationship to the amount of the credit disallowed by the alternative minimum tax. In contrast, the pre-1984 §55(c)(3) provided that the increase in the amount of a credit carryover on account of the alternative minimum tax was computed by substituting for the tax liability limitation for a particular credit, the amount of the credit allowable against the regular tax, reduced (but not below zero) by the amount of the alternative minimum tax.

II. Outline of 1986 TRA Changes

The 1986 TRA makes the following changes to the substantive provisions of the credits:

Nonrefundable Personal Credits: The political contribution credit of §24 is repealed, effective for taxable years beginning after December 31, 1986.[4] In addition, miscellaneous changes were made to the mortgage certificate credit to conform that credit to changes made in the tax-exempt bond area. The mortgage credit certificate conforming changes are generally effective for certificates issued after August 15, 1986. Act §§1301(f)(2) and 1311(b)(2).

Miscellaneous Credits: The principal change to the miscellaneous credits is that the research credit is completely revised, redesignated as §41, and made part of the general business credit of §38. Act §231(d). The research credit revisions are generally effective for taxable years beginning after December 31, 1985. Act §231(g).

Business Credits: As mentioned, the research credit is made part of the general business credit of §38. In addition, a new credit, the low-income housing credit of new §42, is added as another component of the general business credit. Act §252(a). The low-income housing credit will generally apply to buildings placed in service after December 31, 1986. The 10% regular investment credit of §46 is generally terminated for property placed in service after December 31, 1985, as provided in §49. The rehabilitation credit, which is a component of the investment credit, is generally revised for property placed in service after December 31, 1986. Act §251(d). The targeted jobs credit is extended to apply to employees hired before 1989. Act §1701(a). Finally, the ESOP credit of §41 is repealed as to compensation paid or accrued after December 31, 1986. Act §1171.

The foregoing substantive changes are analyzed more completely in chapters 11, 12, 13, 16 and 17 of this portfolio.

[3] P.L. 98-369, §474(q).
[4] 1986 TRA, Act §§151 and 112.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

In the credit limitation area, the following changes have been made that will be considered in more depth herein:

General Business Credit: Effective for taxable years beginning after 1985, the 85% tax liability limitation in §38 has been reduced to a 75% limitation. Thus, after 1985, the general business credit can offset the first $25,000 of tax liability (after reduction by other nonrefundable credits) and 75% of any remaining liability in excess of the first $25,000. Act §221. In addition, because the research credit has been made a component of the general business credit for taxable years beginning after 1985, and because the low-income housing credit has been made a component as to property placed in service after 1986, these two credits will be subject to the tax liability limitation of §38 and carryover rules of §39.

Nonrecourse Financing Limitation: Because of the extension of the at-risk rules of §465 to real property, effective generally for property placed in service after 1986 (Act §§201(d)(7)(A) and 203), the nonrecourse financing limitation of §46(c)(8) will apply to the rehabilitation credit on rehabilitated property placed in service after 1986.

Passive Loss and Credit Limitation: For taxable years beginning after 1986, all business credits other than the foreign tax credit will be subject to the passive activity loss and credit limitations of §469.

Alternative Minimum Tax: Effective for taxable years beginning after 1986, the alternative minimum tax will be incorporated directly into each separate credit limitation and will apply to corporate as well as noncorporate taxpayers. In addition, in a retroactive technical correction,[5] the noncorporate limitation of §55(c)(3) in effect for taxable years beginning after 1983 has been amended to correct the technical flaw that could preclude the carryover of a nonrefundable business credit disallowed by reason of the alternative minimum tax.

III. Detailed Analysis

A. Consolidation of Credits into General Business Credit

1. Components of Credit

The 1986 TRA adds two credits to the roster of credits included under the §38 general business credit and strikes one credit from the roster. Effective generally for taxable years beginning after December 31, 1985, the 1986 TRA adds the research credit, which prior to 1986 was a miscellaneous credit contained in §30 of the Code, to the list of general business credits and redesignates it as the §41 credit.[6] Effective generally as to buildings placed in service after December 31, 1986, the 1986 TRA adds a new §42 low-income housing credit as a component of the §38 general business credit.[7]

Finally, the 1986 TRA repeals the ESOP credit of §41 and strikes the §41 credit from the list of credits included under the general business credit.[8] In general, the repeal of the §41 ESOP credit is effective as to compensation paid or accrued after December 31, 1986. Consequently, for 1986, there are two §41 credits listed under §38. The listing of the two credits for 1986 will have no practical significance to a corporate taxpayer that might qualify for both credits. Each credit amount should be determined under its own applicable §41 rules and the amounts so determined will be subject to the general §38(c) tax liability limitation in effect for 1986.

Accordingly, the list of credits included under §38 after the 1986 TRA will be as follows:

(i) The investment credit (including the rehabilitation credit) determined under §46(a);

(ii) The targeted jobs credit determined under §51(a);

(iii) The alcohol fuels credit determined under §40(a);

(iv) The ESOP credit determined under §41(a), which remains in effect as to compensation paid or accrued through December 31, 1986;

(v) The research credit determined under §41(a), effective generally for taxable years beginning after 1985; and

(vi) The low-income housing credit determined under §42(a), effective generally for buildings placed in service after 1986.

2. Tax Liability Limitation for 1986

Effective for taxable years beginning after December 31, 1985, the 1986 TRA[9] reduces the percentage tax liability limitation in §38(c) from 85 to 75%. Thus, as amended, the amount of the general business credit for a taxable year beginning after 1985 may not exceed the sum of (i) the first $25,000 of the taxpayer's net tax liability for the taxable year plus (ii) 75% of any net tax liability for the taxable year exceeding $25,000. The definition of "net tax liability" remains unchanged for 1986. However, both the §38(c) tax liability limitation and the §26 net tax liability definition are revised, principally to incorporate changes made under the alternative minimum tax rules taking effect for taxable years beginning after 1986. The alternative minimum tax revisions to the credit limitations are discussed in II, D, *infra*.

3. Credit Carryover

To reflect the addition of the research credit of §41 to the roster of general business credits, a new transitional rule is added in Code §39(d) to account for a research credit carryforward from 1985 to 1986 as well as to account for a business credit carryback to a year before 1986 in which a research credit was claimed. Act §231(d)(3)(C)(i). Section 39(d)(3) effectively requires that a research credit carryforward under §30(g) to a taxable year beginning after 1985 be combined with any other credits carried forward to the first post-1985 taxable year. The research and other business credits so combined are

[5] 1986 TRA, Act §1847(a)(1).
[6] 1986 TRA, Act §231.
[7] 1986 TRA, Act §252.
[8] 1986 TRA, Act §1171.
[9] 1986 TRA, Act §221.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

subject to the post-1985 general business credit limitation such as the 75% percentage limitation on tax liability exceeding $25,000. Section 39(d)(3) further requires that, if a general business credit is carried back to a taxable year beginning before 1986, it is treated as being used to offset tax liability only after the application of any research credit under §30(g) for the carryback year.

B. Nonrecourse Financing Limit

1. General

For taxable years beginning after December 31, 1986, a regular investment credit, to the extent still allowed under the investment credit termination rules of §49, and the rehabilitation credit, as revised by the 1986 TRA, will continue to be subject to the general business credit limitation of §38. Moreover, effective generally for property placed in service after 1986, the nonrecourse financing limit of §46(c)(8) is expanded to apply to investment and rehabilitation credits derived by certain taxpayers from real property. This is accomplished by the amendment of §465(c)(3) by the 1986 TRA [10] to eliminate for post-1986 taxable years the at-risk exception for the holding of real property. Since the nonrecourse financing limit of §46(c)(8) applies to the activities subject to the at-risk limits of §465 and since real property will no longer be an excepted activity, investment and rehabilitation credits derived from real property placed in service after 1986 by a taxpayer subject to the §465 rules must satisfy the §46(c)(8) requirements with respect to the financing on the property.

As a threshold matter, the §465 rules and, consequently, the §46(c)(8) requirements apply to individuals and closely held C corporations meeting the stock ownership requirements for a personal holding company.[11]

Thus, as to an individual or closely held C corporation, §46(c)(8) provides that the basis of property on which the investment and rehabilitation credit is determined is reduced by the amount of nonrecourse financing on the property. Nonrecourse financing includes any amount as to which the taxpayer is protected against loss — for example, guarantees or stop-loss agreements. Nonrecourse financing also includes amounts borrowed from a person who has an interest in the activity in which the property is used or from a person related to such person.

2. Qualified Commercial Financing Exception

An exception from the nonrecourse financing limit is made for "qualified commercial financing." [12] Qualified commercial financing includes nonrecourse financing provided or guaranteed by any federal, state, or local government, or borrowed from a qualified person. A qualified person includes any person actively or regularly engaged in the business of lending money but who is not any person who is related to the taxpayer, the person from whom the taxpayer acquired the property (or any person related to that person), or any person who receives a fee with respect to the taxpayer's investment in the property (or a person related to such person).[13] The qualified finance exception will not apply if the amount of the nonrecourse financing with respect to the property exceeds 80% of the taxpayer's basis in the property. In addition, the exception will not apply if the property was acquired by the taxpayer from a related person.

3. Partnerships and S Corporations

The determination of nonqualified, nonrecourse financing is made at the partner or shareholder level in the case of partnerships and S corporations.[14] If a qualified person provides recourse financing to an S corporation, an allocable share of such financing is treated as recourse to the S corporation's shareholder. Thus, even though the shareholder may not be personally liable for the S corporation's debts, the S corporation shareholder will be treated as liable as to the shareholder's allocable share of such financing. The S corporation's property qualifies for this exemption only if it is used by the S corporation in an active trade or business which has at least three full-time non-owner employees during the entire 12-month period ending on the last day of the taxable year, and if the services of such individuals are directly related to the business. A full-time employee must also be active in the management of the business. Because of these active business and employee requirements, it is unlikely that the S corporation recourse financing exemption will prove helpful in obtaining at the shareholder level an investment or rehabilitation credit derived from property that will be used by the S corporation for rental purposes.

The amount of any partner's or S corporation shareholder's allocable share of financing will be made in the same manner as the credit with respect to the property as allocated among the partners and shareholders.

4. Subsequent Years; Lessees

A subsequent decrease in nonqualified, nonrecourse financing may increase the amount of the investment and rehabilitation credit available to a taxpayer.[15] A subsequent increase in nonqualified, nonrecourse financing may, correspondingly, cause recapture of a credit previously claimed.[16]

Special at-risk coordination rules are provided for a regular or rehabilitation credit passed through to a lessee under §48(d).[17] In general, a lessee will be allowed a full credit only if the lessee is obliged to make rental payments that equal 30% of the present value of the amount for which the lessee is treated as having acquired the property by reason of the lessor's election. In addition, the lessee's credit is limited to the amount that would have been allowed to the lessor had the lessor's basis in the property been equal to the lessee acquisition amount, and the lessor had not made the pass-through election. Thus, the lessee

[10] 1986 TRA, Act §503.

[11] Under §542(a)(2), the stock ownership rules are met if five or fewer individuals hold more than 50% in value of the outstanding stock of the corporation at any time during the last half of the taxable year, applying attribution rules.

[12] §46(c)(8)(d)(ii).

[13] The definition of a related person is quite broad and includes any person related under §§267(b) or 707(b)(1), substituting a 10% ownership requirement for the 50% ownership provision in those rules, as well as any commonly controlled trades or business as defined in §52(a) and (b).

[14] §46(c)(8)(E).

[15] §46(c)(9).

[16] §47(d).

[17] §48(d)(6).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

will receive the full credit only if the lessor (who is subject to the at-risk rules) is at-risk with respect to the property.

C. *Passive Activity Limit*

1. *Overview*

The passive activity loss and credit rules are analyzed in considerable detail in Chapter 17 of this portfolio. However, because of their importance in the credit area, the rules will be reviewed here, particularly as they relate to credits.

Effective generally for taxable years beginning after December 31, 1986, the 1986 TRA [18] enacts new Code §469 to limit the "passive activity losses and credits" of certain taxpayers. In general, a "passive activity" is any activity involving the conduct of a trade or business in which the taxpayer does not materially participate. The taxpayers to whom the §469 limitations will apply include individuals, estates, trusts, personal service corporations, and (to a lesser extent) other closely held C corporations. §469(a)(2).

If a loss or credit is derived from a passive activity by one of the foregoing taxpayers (other than closely held C corporations), the loss or credit will be limited to income generated from other passive activities. Any loss or credit not allowed by reason of the §469 limits will be available as a carryforward to future years and will generally be allowed when passive income is generated from the activity or from other passive activities or, in the case of losses, the activity is sold or otherwise disposed of.

2. *Definition of Passive Activity*

Post-TRA 1986 §469(c) defines a "passive activity" as any activity involving the conduct of any trade or business in which the taxpayer does not materially participate. A passive activity includes any rental activity, regardless of whether it constitutes a trade or business and regardless of the taxpayer's "material participation" in the activity. However, if the rental activity requires the provision of substantial services, such as a hotel, the activity is not treated as passive so long as the taxpayer materially participates. For purposes of the passive activity definition, a trade or business will include any activity involving research or experimentation within the meaning of §174 or, to the extent provided in regulations, any activity in connection with a trade or business or any §212 income-producing activity. §469(c)(5), (6).

Under §469(h), a taxpayer "materially participates" in an activity only if the taxpayer's involvement in the activity is regular, continuous, and substantial. In determining whether a taxpayer materially participates, the activities of a spouse will be attributed to the taxpayer. Moreover, a special rule permits a retired farmer or a surviving spouse of a farmer to be treated as a material participant if, prior to retirement or death, the farmer materially participated in the farming activity. A corporation subject to §469 is treated as materially participating if over 50% (by value) of the shareholders materially participate in the activity or if, in the case of a closely held C corporation (but not personal services corporation), the business is an active business meeting the requirements of §465(c)(7)(C)(i), (ii), and (iii).

Except as provided in regulations, a taxpayer is not treated as materially participating in a limited partnership to the extent of the taxpayer's interest as a limited partner.[19] For example, if a taxpayer holds a 25% general partnership interest and a 25% limited partnership interest in the same partnership and the taxpayer materially participates in the partnership's activities, the losses and credits allocable to the 25% limited partnership interest will be treated as passive. To prevent avoidance of the passive loss and credit limits, regulations may be issued to override the general rule that a limited partnership interest is treated as passive.

3. *Taxpayers Subject to Passive Limits*

Section 469(a)(2) provides that the following taxpayers may be subject to the passive loss and credit limits:

(i) Any individual, estate, or trust,

(ii) Any closely held C corporation, and

(iii) Any personal service corporation.

However, under §469(e)(2), the passive loss and credit limits are less restrictively applied to closely held C corporations than to the other categories of taxpayers subject to the rule.

Section 469(j)(1) defines a "closely held C corporation" as any C corporation where, at any time during the last half of the taxable year, more than 50% in value of the outstanding stock is owned by no more than five individuals (applying the personal holding company attribution rules). A "personal service corporation" is defined under §469(j)(2) as a corporation whose principal activity is the performance of personal services that are substantially performed by employee-owners. However, a corporation will not be treated as a personal service corporation unless more than 10% of the stock by value is held by employee-owners.

4. *Definition of Passive Loss and Credit*

The passive activity loss for a taxable year is determined by netting the aggregate income and losses from all passive activities. If the aggregate losses exceed the aggregate income, the resulting net loss is the taxpayer's "passive activity loss." [20] According to the Conference Report,[21] all deductions arising from passive activities, including deductions allowed under §§162, 163, 164, and 165, must be taken into account, even if claimed as itemized deductions on the taxpayer's return. Interest deductions attributable to passive activities are treated as passive activity deductions and will not be treated as investment interest subject to the revised investment interest limits of §163(d).

Section 469(d)(2) defines a "passive activity credit" as the amount, if any, by which the sum of various business credits derived from passive activities exceeds the taxpayer's regular tax liability for the taxable year allocable to

[18] 1986 TRA, Act §501(a), (c).

[19] §469(h)(2).

[20] §469(d)(1).

[21] H.R. Rep. No. 841, 99th Cong., 2d Sess. II-139 (1986).

passive activities. Because of this definition, which looks to "regular tax liability . . . allocable to all passive activities," a passive activity credit will not be allowable under §469 unless passive activity income for the year exceeds passive losses and thereby generates "regular tax liability."

The credits subject to limitation as passive activity credits are as follows:

(i) The §936 possessions credit;

(ii) The clinical testing credit;

(iii) The nonconventional fuels credit; and

(iv) The general business credit which, after 1986, will include the regular credit to the extent still allowed by the §49 termination rules, the rehabilitation credit, the energy investment credit, the research credit, the alcohol fuels credit, the targeted jobs credit, and the new low-income housing credit.

Under §469(e), (i) portfolio income (interest, dividends, annuities, royalties, and investment gains), (ii) expenses other than interest that are clearly and directly allocable to portfolio income, and (iii) interest expense properly allocable to portfolio income are not taken into account in determining the income or loss from an activity. For this purpose, however, an interest in the passive activity is not treated as investment property so that gains and losses upon disposition of a passive activity interest will be taken into account in determining passive activity income and loss. Investment earnings on an activity's working capital will be treated as portfolio income for purposes of the foregoing rule.

Earned income will not be treated as passive income for purposes of the passive limits. §469(e)(3).

5. Exceptions

Section 469(e)(2) permits the passive losses and credits of a closely held C corporation, other than a personal service corporation, to offset "net active income" — income without regard to passive activity income or loss and portfolio income or loss.

Section 469(i) provides a limited exception for individuals who actively participate in real estate activities. Under this exception, up to $25,000 of passive losses (or the amount of credit that is the deduction equivalent of the passive loss) may be used to offset nonpassive income. However, this $25,000 amount is phased out if the taxpayer's adjusted gross income (AGI), excluding passive losses, exceeds $100,000. For every $2 of AGI above $100,000, the $25,000 amount is reduced by $1. Thus, the exception vanishes if AGI exceeds $150,000.

The $25,000 amount is available generally only if the taxpayer is an "active participant" in the rental activity. A taxpayer will not be treated as an active participant if, at any time during the taxable year, the taxpayer's interest in the activity is less than 10% by value of all interest in the activity. §469(i)(6). Moreover, a taxpayer's interest as a limited partner will not be treated as an interest with respect to which the taxpayer actively participates. §469(i)(6)(C).

Two special rules apply to the rehabilitation and low income housing credits. First, the $25,000 amount (in a deduction-equivalent sense) is available regardless of active participation by the taxpayer. §469(i)(6)(B). Second, under §469(i)(3)(B), the threshold for the phase-out of the $25,000 amount is raised to $200,000.

Section 469(j)(5) defines the term "deduction equivalent" as an amount which, if allowed as a deduction, would reduce the regular tax liability for the taxable year by an amount equal to such credits. Assuming a taxpayer's taxable income is entirely subject to tax at the 28% rate and the taxpayer has no itemized deductions dependent upon the amount of the taxpayer's AGI, the deduction equivalent of credits equal to the $25,000 amount is $7,000.

6. Suspended Passive Losses and Credits

Losses and credits not allowed under §469 are suspended until such time as the taxpayer generates passive income from the passive activity or has income from unrelated passive activities. Under §469(g), if a taxpayer disposes of his entire interest in any passive activity in a fully taxable transaction, any suspended loss as well as any loss arising in the year of disposition will be allowable as follows:

(i) First, against income or gain from the passive activity for the taxable year including any gain recognized on the disposition;

(ii) Second, against net income or gain for the taxable year from other passive activities; and

(iii) Finally, all other income or gain.

A capital loss from the disposition of the passive activity will, however, be subject to the §1211 capital loss limitations. §469(g)(1)(C). Moreover, under §469(g)(1)(B), losses will continue to be suspended if the taxpayer transfers the interest to a related person described in §§267(b) or 707(b)(1). If the interest is sold in a §453 installment sale, a ratable share of the suspended losses will be allowed each year in accordance with the amount of the installment sale gain reported for that year for regular tax purposes. §469(g)(3).

If an interest in a passive activity is transferred by reason of the taxpayer's death, suspended losses will be allowed on the taxpayer's final return to the extent that the losses exceed the step-up in basis (to fair market value) that occurs under §1014 upon death. §469(g)(2). Any excess shall not be allowed as a deduction for any taxable year.

Under §469(j)(6), if an interest in a passive activity is transferred by gift, the basis of the interest will be increased by the amount of the suspended losses and such losses will no longer be allowable as a deduction for any taxable year.

Section 469(j)(9) allows a taxpayer, upon a fully taxable disposition of a passive interest, to elect to increase his basis in the passive activity by the amount of any unused credit which reduced the basis of the property for the taxable year in which the credit arose. The basis increase is made as of the time immediately before the transfer. If this election is made, the passive activity credit will not be allowed in the future. If the election is not made and if the

 ©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

transfer does not otherwise cause recapture of the credit, the suspended credit will be allowed to offset the regular tax from the gain, if any, generated on the transfer or to offset the regular tax from passive income subsequently generated from other activities.

Under §469(f), if an activity ceases to be a passive activity, suspended passive losses and credits will be allowed as an offset against future income and future regular tax liability from active operations. Otherwise, the suspended deductions and credits continue to be treated as arising from a passive activity (*i.e.*, they may be used to offset income from other passive activities). Similar principles apply to a change in status of a closely held C corporation or personal service corporation. §469(f)(2).

7. Effective Dates and Phase-In Rules

The passive loss and credit limits apply generally to taxable years beginning after December 31, 1986. Act §501(c)(1). However, loss and credit carryovers from a taxable year beginning before 1987 and carried to a taxable year beginning after 1986 are not subject to the limits. Act §501(c)(2). Moreover, special transition rules apply to low-income housing.[22]

Under §469(l), the passive loss and credit limits are phased in over four years if (i) the taxpayer held the interest in the passive activity, or was under a binding contract to acquire the interest in the passive activity, on the date of enactment (October 22, 1986) and at all times thereafter, and (ii) the passive activity was being conducted on October 22, 1986, or the property used in the activity is acquired pursuant to a binding written contract in effect on August 16, 1986, or construction of the property began on or before August 16, 1986.

A binding contract qualifies under this rule, even if the taxpayer's obligation to acquire an interest is subject to contingencies, so long as the contingencies are beyond the reasonable control of the taxpayer. Under the phase-in, 65% of a passive activity loss and credit will be allowed for taxable years beginning in 1987. This allowance percentage is reduced over the ensuing three taxable years as follows: 40% for 1988, 20% for 1989, and 10% for 1990. The balance not allowed is suspended and may not be taken into account in computing the amount allowable under the phase-in in a subsequent year during the phase-in period.

It is important to note that, in computing taxable income under the revised alternative minimum tax taking effect for post-1986 taxable years, §58(b) requires full suspension of a passive activity loss without regard to the §469(l) phase-in. For example, if a taxpayer has a $100,000 passive loss for 1987 attributable entirely to straight-line ACRS real property depreciation on a rental property, $65,000 of the loss may be deducted for regular tax purposes under the phase-in but no amount is allowable as a deduction for minimum tax purposes. However, §53 will provide a minimum tax credit to the extent that a minimum tax must be paid as a result of the lack of the phase-in for minimum tax purposes. The minimum tax credit is carried forward and may be applied against regular tax liability in ensuing years.

[22] *See* Act §501(c)(3) and Act §502.

D. Post-1986 Tax Liability Limitation: Alternative Minimum Tax

1. Nonrefundable Personal Credits

Effective for taxable years beginning after 1986, TRA 1986 [23] amends the tax liability limitations for nonrefundable personal credits, miscellaneous credits, and the general business credit to make the alternative minimum tax a direct limitation on a taxpayer's ability to offset tax liability for a taxable year by such credits. Since, commencing in 1987, corporate as well as noncorporate taxpayers will be subject to the revised alternative minimum tax, the alternative minimum tax limitation will apply to corporations for the first time.

Accordingly, the tax liability limitation for nonrefundable personal credits is revised to provide that the sum of such credits may not exceed the excess, if any, of the taxpayer's regular tax liability for the taxable year over the taxpayer's tentative minimum tax for that year, determined without regard to the alternative minimum foreign tax credit.[24] A taxpayer's "regular tax liability" is the income tax imposed on the taxpayer for the taxable year, reduced by the following 10 penalty-type taxes:[25]

(i) The alternative minimum tax of §55,

(ii) The penalty taxes under §72(m)(5)(B), (o)(2), or (q) on certain distributions, such as premature distributions out of qualified plans to 5% owners,

(iii) The penalty tax of §408(f) for certain distributions from individual retirement accounts,

(iv) The accumulated earnings tax of §531,

(v) The personal holding company tax of §541,

(vi) The tax imposed by §1351(d)(1) on recoveries of foreign expropriation losses,

(vii) The §1374 tax on certain built-in gains of S corporations,

(viii) The §1375 tax imposed on S corporations having passive investment income and subchapter C earnings and profits,

(ix) The tax imposed by §7518(g)(6)(A) on nonqualified withdrawals from capital construction funds, and

(x) The §§871(a) and 881 taxes on certain income of nonresident aliens and foreign corporations.

The taxpayer's "tentative minimum tax" is the taxpayer's alternative minimum tax liability for the taxable year, unreduced by the taxpayer's regular tax for the taxable year; *i.e.*, the tax determined by multiplying the taxpayer's alternative minimum taxable income reduced by the minimum tax exemption amount multiplied by the applicable minimum rate, which is 20% for corporations and 21% for noncorporate taxpayers.[26]

[24] §26(a), as amended by 1986 TRA, Act §701(c)(1).
[25] §26(b), as amended by Act §701(c)(1).
[26] §55(b), as added by the 1986 TRA, Act §701(a).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

2. Miscellaneous Credits

The tax liability limitations on the two remaining miscellaneous credits — the clinical testing credit and the nonconventional fuels credit — are also amended to incorporate the alternative minimum tax as a direct limitation on the use of the credits. Each respective limitation [27] provides that the credit may not exceed the excess, if any, of the regular tax (reduced by the sum of the nonrefundable personal credits) over the tentative minimum tax for the taxable year.

3. General Business Credit

The limitation on the general business credit is similarly amended to incorporate directly the alternative minimum tax. As revised by TRA 1986 for taxable years beginning after December 31, 1986,[28] §38(c) provides that the general business credit allowed by §38(a) for any taxable year shall not exceed the lesser of (i) the allowable portion of the taxpayer's net regular tax liability for the taxable year, or (ii) the excess, if any, of the taxpayer's net regular tax liability for the taxable year over the tentative minimum tax for the taxable year.[29] The allowable portion of the taxpayer's net regular tax liability is equal to the first $25,000 of net regular tax liability plus 75% of the net regular tax liability for the year that exceeds $25,000.[30] Finally, the taxpayer's "net regular tax liability" is the taxpayer's regular tax liability reduced by the nonrefundable personal credits and the miscellaneous credits.[31]

An additional change made in the §38(c) general business credit limitation by the alternative minimum tax provisions is to permit C corporations to use the regular 10% investment credit to offset up to 25% of the corporation's alternative minimum tax liability. Act §701(c)(4), amending Code §382(c)(3). Post-TRA §38(c)(3) [32] provides that a C corporation may use its general business credit, to the extent the credit is attributable to the regular investment credit allowed under §46, against the greater of:

(i) the lesser of (a) the allowable portion of the taxpayer's net regular tax liability for the taxable year, or (b) the excess, if any, of the taxpayer's net regular tax liability for the taxable year over 75% of the tentative minimum tax for the taxable year, or

(ii) 25% of the taxpayer's tentative minimum tax for the year.

However, §38(c)(3) further provides that in no event should a credit be allowed which, in combination with the alternative tax net operating loss deduction and the alternative minimum tax foreign credit, would reduce the alternative minimum tax below an amount equal to 10% of the amount that would be determined as the alternative minimum tax without regard to the alternative tax net operating loss deduction and the alternative minimum tax foreign tax credit.

The net effect of this last limitation is to require that a corporation pay some alternative minimum tax for any given taxable year. In any case, the benefit that a corporation will derive from the allowance of the regular investment credit against the alternative minimum tax will be limited because §49 generally terminates the regular investment credit for property placed in service after 1985. Only to the extent that the regular investment credit is allowed under the §49(b) transition rules or to the extent that the regular investment credit is available as a carryforward from a preceding taxable year will the §38(c)(3) allowance provision come into play.

For all noncorporate taxpayers and for virtually all corporate taxpayers, the alternative minimum tax will be the principal limitation on the use of the general business credit, particularly after 1987 when the rate differential between the minimum tax and maximum regular tax rate for individuals is only 7 percentage points and the corporate regular and minimum tax rate differential is only 14 percentage points.

For example, assume an individual's taxable income and alternative minimum taxable income for 1988 is $500,000 and that the individual has a $200,000 rehabilitation credit for 1988. The taxpayer's regular tax due to the phasing out of the 15% lower bracket rate and personal exemptions will be an approximately 28% flat tax on the $500,000, or $140,000. Under the regular tax limitation of §38(c), the taxpayer's regular tax liability limitation is equal to the first $25,000 of this $140,000 tax plus 75% of the $115,000 balance, which equals $86,250; thus, the total regular tax liability limitation is $111,250. However, the taxpayer's tentative minimum tax on the $500,000 of alternative minimal taxable income is $105,000. Thus, the maximum amount of rehabilitation credit that the taxpayer may apply against his regular tax is $35,000 ($140,000 regular tax minus $105,000 tentative minimum tax).

[27] §§28(d)(2) and 29(b)(5), as amended by 1986 TRA, Act §701(c)(2) and (3).

Chapter 16

EXTENSION OF AT-RISK RULES TO REAL ESTATE

James F. Miller, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Code §465 limits, in the case of certain taxpayers engaged in certain activities specified in §465, the allowance of any loss from such activities to the amount with respect to which the taxpayer is at risk for the activity at the close of the taxable year. The §465 at-risk rules were added to the Code by the Tax Reform Act of 1976 [1] and later modified by the Revenue Act of 1978.[2]

Under the at-risk rules, a taxpayer's deductible losses from an activity for any taxable year are limited to the amount the taxpayer could actually lose in the activity (*i.e.*, the amount for which the taxpayer is at risk). The initial amount at risk is generally the sum of: (1) the taxpayer's cash contributions to the activity; (2) the adjusted basis of other property contributed by the taxpayer to the activity; and (3) amounts borrowed for use in the activity with respect to which the taxpayer is personally liable, or has pledged as security for repayment property not used in the activity. §465(b)(1) and (2). This amount is generally increased each year by the taxpayer's share of income, and is decreased by the taxpayer's share of losses and withdrawals from the activity.

A taxpayer is generally not considered at risk with respect to borrowed amounts if: (1) the taxpayer is not personally liable for repayment of the debt (nonrecourse loans); or (2) the lender has an interest (other than as a creditor) in the activity (except to the extent allowed in regulations). §465(b)(3). The taxpayer is also not considered at risk with respect to amounts for which the taxpayer is protected against loss by guarantees, stop-loss arrangements, insurance (other than casualty insurance), or similar arrangements. §465(b)(4). Losses which may not be deducted for any taxable year because of the at-risk rule may be deducted in the first succeeding year in which the rule does not prevent the deduction. §465(a)(2).

Before the Tax Reform Act of 1986 (the "Act"), §465, with limited exceptions, applied to all activities except the holding of real property other than mineral property. Due to this exclusion, individuals investing in real estate could offset current taxable income from other sources (*e.g.*, wages) with tax losses that would never be matched by economic losses. The allowance of such non-economic losses for tax purposes was a necessary basis for many tax-sheltered real estate investments. The deferral of tax liability guaranteed a return to the investor that often made an otherwise non-economic investment possible.

The Reagan Administration became concerned that such tax-driven non-economic investment activity was diverting capital from more productive uses and was causing over-investment in real estate, thus distorting prices and capital costs throughout the economy.[3] It proposed, therefore, a broad application of the at-risk rules to real estate.

Congress, on the other hand, perhaps in the belief that other proposals (such as, for example, limitations on passive losses and investment interest) were sufficient in themselves to alleviate concerns about sheltering income with artificial losses, focused on the fact that limited-risk financing was being used to artificially inflate value and, thus, recoverable basis in property acquired by purchase. Thus, to "limit the opportunity for overvaluation of property (resulting in inflated deductions), and to prevent the transfer of tax benefits arising from real estate activities to taxpayers with little or no real equity in the property," Congress extended the present law at-risk rules to real estate, with an exception for certain nonrecourse financing provided by organizations in the business of lending.[4]

II. Overview

Section 503 of the TRA 1986 extends the §465 at-risk rules to the activity of holding real property, with an exception for taxpayers engaged in the activity of holding real property who will be considered at risk with respect to their share of any "qualified nonrecourse financing" which is secured by real property used in such activity.

The extension of the at-risk rules to the activity of holding real property is effective for property placed in service after December 31, 1986, and for losses attributable to an interest in a partnership or S corporation or other pass-through entity that is acquired after December 31, 1986.

III. Detailed Analysis

A. Qualified Nonrecourse Financing

Under new §465(b)(6)(B), the term "qualified nonrecourse financing" means any financing (i) which is borrowed by the taxpayer with respect to the activity of holding real property, (ii) which is borrowed by the taxpayer from a "qualified person" or represents a loan from any Federal, state, or local government or instrumentality thereof, or is guaranteed by any Federal, state, or local government, (iii) except to the extent provided in regulations, with respect to which no person is personally liable for repayment,[5] and (iv) which is not convertible debt.

Code §465(b)(6)(D)(i) provides that a "qualified person" has the meaning given such term by §46(c)(8)(D)(iv) which states that a "qualified person" means any person which is actively and regularly engaged in the business of lending money [6] and which is not —

(i) a related person with respect to the taxpayer,

(ii) a person from which the taxpayer acquired the property (or a related person to such person), or

(iii) a person who receives a fee with respect to the taxpayer's investment in the property (or a related person to such person).[7]

Code §465(b)(6)(D)(ii) provides that §46(c)(8)(D)(iv) will be applied without regard to subclause (I), if the financing from the related person is "commercially reasonable and on substantially the same terms as loans involving unrelated persons." [8]

In the Conference Report to the 1986 TRA, the conferees state that it is their intention that terms of nonrecourse financing will be considered "commercially reasonable" if "the financing is a written unconditional promise to pay on demand or on a specified date or dates a sum or sums certain in money, and the interest rate is a reasonable market rate of interest (taking into account the maturity of the obligation)." [9]

The Senate Report states that under this rule, "real estate joint ventures may obtain financing from an otherwise qualified lender who has an equity interest in the venture, provided the lender is not the seller or related to the seller. Seller financing, of course, cannot qualify under this rule. The rule is not intended to facilitate the transfer of tax benefits or the overvaluation of property (and inflation of deductions). In addition, as is generally the case under the at risk rules, the financing must actually be debt and not disguised equity." [10]

The rationale for this rule is simple: seller financing is not treated as an amount at risk because there may be little or no incentive to limit the amount of such financing to the value of the property. In the case of commercial financing secured solely by the real property, however, the lender is less likely to make loans which exceed the property's value or which cannot be serviced by the property. This is so even when the lender is a joint venturer with the borrower.

B. Special Rule for Partnerships

Code §465(b)(6)(C) states that "[i]n the case of a partnership, a partner's share of any qualified nonrecourse financing of such partnership shall be determined on the basis of the partner's share of liabilities of such partnership incurred in connection with such financing (within the meaning of §752)." Thus, a partnership's nonrecourse financing may increase a partner's (including a limited partner's) amount at risk provided the financing is qualified nonrecourse financing for both the partner and the partnership. For purposes of determining whether partnership borrowings are treated as qualified nonrecourse financing with respect to the partnership, the partnership is treated as the taxpayer. For the purpose of determining whether a share of partnership borrowings is treated as qualified nonrecourse financing with respect to a partner, the partner is also treated as the borrower. The amount with respect to which the partners are treated as at risk cannot be more than the total amount of the qualified nonrecourse financing at the partnership level.[11]

C. Activity of Holding Real Property

Section 503(a) of the 1986 TRA repealed §465(c)(3)(D) which excluded from the application of §465(a) "the holding of real property (other than mineral property)" and "personal property and services which are incidental to making real property available as living accommodations." This latter phrase was intended to exclude from the at-risk rules the operation of a hotel, motel, or a furnished apartment.[12] Code §465(b)(6)(E), as added the by 1986 Act, clarifies that, as a general rule, to the extent an activity was not subject to the at-risk rules under former §465(c)(3)(D), it will be treated under current law as the activity of holding real property, which includes the provision of services and the holding of personal property which is merely incidental to the activity of making real property available as living accommodations. Note that the holding of mineral property does not constitute an activity of holding real property.

---

[5] The Senate Report states in this regard that "[r]egulations may set forth the circumstances in which guarantees, indemnities, or personal liability (or the like) of a person other than the taxpayer will not cause the financing to be treated as other than qualified nonrecourse financing." S. Rep. at 749.

[6] The Senate Report notes that such persons generally would include "a bank, savings and loan association, credit union, or insurance company regulated under Federal, State, or local law, or a pension trust." S. Rep. at 749.

[7] Thus, for example, seller financing and promoter financing are not qualified nonrecourse financing.

[8] The Senate Report notes that the Act adopts the definition of related person applicable under the investment tax credit at-risk rules. Under this rule, related persons generally include family members, fiduciaries, and corporations or partnerships in which a person has at least a 10% interest. S. Rep. at 749-750.

[9] H.R. Rep. No. 841, 99th Cong., 2d Sess. II-135.

[10] S. Rep. at 749 (footnote omitted). In accordance with this pronouncement, the Finance Committee stated, in a footnote, its intention that the Treasury Department examine §704 and §752 "in light of the exception from the at-risk rules for nonrecourse loans made by qualified institutional lenders that are also partners (or related to partners), and in light of changes made by the Deficit Reduction Act of 1984."

[11] S. Rep. at 750.

[12] H.R. Rep. No. 1445, 95th Cong., 2d Sess. 70 (1978).

IV. Implications

Although many typical nonrecourse financing techniques qualify as at-risk amounts under the above rules, several common financing arrangements do not. Perhaps the most important of the newly nonqualified techniques is seller financing. The prohibition on seller financing can create problems where debt obligations on distressed properties are being restructured (*e.g.*, in workout situations). Lenders frequently acquire title to the property (*e.g.*, by foreclosure) in these situations before transferring it to a new owner. That chain of events would cause the loan to become "seller" financing, even if the original loan was for cash and the new owner assumes the old debt. On the other hand, the seller financing taint can be avoided if the property is transferred directly from the prior owner to the new owner. In this regard, lenders and buyers must be alert to the significance of the form as well as the substance of their transactions.

For loans to partnerships, qualification of a loan must be tested at the partnership level. The individual partner's share of the nonrecourse debt is determined based on the partnership rules generally applicable to the allocation of partnership liabilities. A loan disqualified at the partnership level does not provide an at-risk amount to any of the partners.

Finally, the Senate Report states that if a qualified nonrecourse financing is assumed or if property is taken subject to a nonrecourse debt which constituted qualified nonrecourse financing in the hands of the original borrower, such debt may be considered as qualified nonrecourse financing as to the transferee only if both the loan and the lender qualification requirements continue to be met with respect to the new borrower.[13] It is not clear how this rule applies to wraparound financing (wherein the original loan remains in place and the incremental debt "wraps around" the original loan). Presumably, the qualification of the overall wrap loan would determine whether any part of the debt is an at-risk amount.

[13] S. Rep. at 750. The Senate Report also notes that "[t]he same rule applies to subsequent transfers of the property taken subject to the debt, and to the admission of new partners to a partnership (or sale or exchange of partnership interest), so long as the debt constitutes qualified nonrecourse financing with respect to each transferee or new partner."

Chapter 17

LIMITATIONS ON LOSSES AND CREDITS FROM PASSIVE ACTIVITIES

James F. Miller, Esq.
Silverstein and Mullens
Washington, D.C.

I. Overview

Prior to the enactment of the TRA 1986, no limitations generally were placed on the ability of a taxpayer to use deductions from a particular activity to offset (*i.e.*, shelter) income from other activities. Similarly, most tax credits could be used to offset tax attributable to income from any of the taxpayer's activities. Both the Reagan Administration and Congress became concerned that extensive shelter activity was contributing to public concerns that the tax system is unfair, and to the belief that tax is paid only by the naive and unsophisticated.[1] The Congressional response to these concerns was to adopt, in §501 of the TRA 1986, a set of rules which directed the benefit of tax preference items "primarily to taxpayers with a substantial and *bona fide* involvement in the activities to which the preferences relate." [2] These rules, set forth in new §469, strictly limit the ability of individuals (including partners and S corporation shareholders), trusts, estates, closely held C corporations and personal service corporations [3] to use losses (both noncash or "paper" losses, such as depreciation and accrued expenses, and out-of-pocket or "real" losses) and credits from "passive activities" to shelter their income from "nonpassive" sources.

For purposes of the new passive loss and credit limitation rules, a "passive activity" includes any activity involving the conduct of a trade or business in which the taxpayer does not "materially participate." §469(c). Congress believed it appropriate to examine the materiality of a taxpayer's participation in an activity because "[a] taxpayer who materially participates in an activity is more likely than a passive investor to approach the activity with a significant nontax economic profit motive, and to form a sound judgment as to whether the activity has genuine economic significance and value.[4] However, Congress felt that the material participation standard was "not wholly adequate" to rental activities, because rental activities "generally require less ongoing management activity, in proportion to capital invested, than business activities involving the production or sale of goods and services." [5] Because, in its determination, "[t]he extensive use of rental activities for tax shelter purposes under pre-1986 TRA law, combined with the reduced level of personal involvement necessary to conduct such activities, make clear that the effectiveness of the basic passive loss provision could be seriously compromised if material participation were sufficient to avoid the limitations in the case of rental activities," Congress made rental activities passive *per se* for purposes of the loss limitation rules.[6]

Congress thought, however, it would be appropriate to provide "[a] limited measure of relief * * * in the case of certain moderate-income investors in rental real estate, who otherwise might experience cash flow difficulties with respect to investments that in many cases are designed to provide financial security, rather than to shelter a substantial amount of other income." [7] Accordingly, it permitted "natural persons" to offset up to $25,000 of nonpassive income (*e.g.*, salary or active business income) by using losses from rental real estate activities with respect to which the individuals "actively participate." [8] This allowance, examined in more detail below, is phased out ratably as the taxpayer's adjusted gross income (determined without regard to deductible IRA contributions, taxable social security benefits and any passive activity loss) increases from $100,000 to $150,000 (or $200,000 to $250,000, in the case of certain credits).

Congress further determined that because (1) because limited partnerships "commonly are used as vehicles for marketing tax benefits to investors seeking to shelter unrelated income," and (2) a limited partner "generally is precluded from materially participating in the business activity of the partnership," a taxpayer's participation in an activity as a limited partner should not be considered "material," except as provided in regulations.[9]

Finally, because the oil and gas industry currently "is suffering severe hardship due to the worldwide collapse of oil prices," and because it felt that "financial risk" is a

more "relevant" standard to oil and gas activities than material participation, Congress created a measure of relief for taxpayers who "are willing to accept an unlimited and unprotected financial risk proportionate to their ownership interests in oil and gas activities." [10] Accordingly, for purposes of the passive loss rules, the term "passive activity" does not include a "working interest" in "any oil or gas property which the taxpayer holds directly or through an entity which does not limit the liability of the taxpayer with respect to such interest." [11]

As a general rule, deductions or credits from passive activities, to the extent they exceed income from all such passive activities may not be applied against nonpassive income or tax attributable to such nonpassive income. Such "suspended" losses and credits must be carried forward and treated as deductions and credits from passive trade or business activities in future years. §469(b). Suspended losses from an activity are allowed in full only when the taxpayer disposes of his entire interest in the activity in a fully taxable transaction. §469(g). Congress believed it "appropriate to treat losses of the activity as not realized by the investor prior to disposition of his interest in the activity," because "[t]he effort to measure, on an annual basis, real economic losses from passive activities gives rise to distortions, particularly due to the nontaxation of unrealized appreciation and the mismatching of tax deductions and related economic income that may occur, especially where debt financing is used heavily." [12] Congress felt that "[o]nly when a taxpayer disposes of his interest in an activity is it possible to determine whether a loss was sustained over the entire time that he held the interest." [13]

The new rules limiting the application of passive losses and credits raise many important issues. The following discussion outlines these rules in detail and identifies certain problem areas not addressed in the statute or Committee Reports.

II. Detailed Analysis

A. Passive Activity

Code §469(c)(1) defines a "passive activity" as any activity which involves the conduct of any trade or business, and in which the taxpayer does not materially participate. The term "passive activity" includes any "rental activity," [14] but does not include any working interest in oil or gas property which the taxpayer holds directly or through an entity which does not limit the liability of the taxpayer with respect to the interest.[15] For purposes of §469(c)(1)(A), the term "trade or business" includes (1) activities generating deductions allowable under §174 as research and experimentation expenditures,[16] and (2) to the extent provided in regulations, an activity conducted for profit (within the meaning of §212), including an activity that is not a trade or business.[17] In this regard, the Conference Report anticipates "that the exercise of this [regulatory] authority may be appropriate in certain situations where activities other than the production of portfolio income are involved. This regulatory authority is meant to cause the passive loss rule to apply with respect to activities that give rise to passive losses intended to be limited under this provision, but that may not rise to the level of a trade or business." [18]

Under §469(h)(1), a taxpayer will be treated as materially participating in an activity only if the individual is involved in the operations of the activity on a regular, continuous, and substantial basis. Under §469(h)(2), except as provided in regulations, no interest in a limited partnership as a limited partner will be treated as an interest with respect to which a taxpayer materially participates. The material participation standard is inapplicable to rental activities and working interests in oil and gas properties.[19]

1. Definition of Activity

In applying the passive loss rule, one of the most important determinations that must be made generally is the scope of a particular activity. The determination is important for several reasons. For example, defining an activity too broadly would permit taxpayers to amalgamate undertakings that are in fact separate. By aggregating separate undertakings, a taxpayer could shelter income from a nonpassive activity with losses and credits from a passive activity. Defining activities too narrowly, however, could prevent taxpayers from offsetting losses from one or more passive activities against profits from other passive activities. On the other hand, defining activities too narrowly could enable taxpayers to trigger suspended losses upon what is, in fact, a partial disposition.

The Senate Report states that the determination of what constitutes a separate activity is intended to be made in a "realistic economic sense." [20] The question to be answered is "what undertakings consist of an integrated and interrelated economic unit, conducted in coordination with or reliance upon each other, and constituting an appropriate unit for the measurement of gain or loss." [21]

Applying the "economic interrelationship" rules to farming and rental activities is likely to be fairly simple. Generally, each farm and each rental project will be a separate activity. Similarly, it is possible that each location in a retail or service operation might also be a separate activity. Beyond that, the facts and circumstances must be carefully considered.

In the case of affiliated groups of corporations filing consolidated returns, the rules are applied on a consolidated basis. The separate activities of the group are identified without regard to entity boundaries within the group. Thus, an activity may be conducted by several corporations, and

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

conversely, one corporation may be engaged in several activities.[22]

Note: The Conference Report, at II-140, observes that the passive activity rules apply to corporations filing consolidated returns on a consolidated group basis in the following instances:

(i) In applying the special rule that passive losses may not offset the portfolio income of closely held corporations;

(ii) In determining whether the corporations in the group materially participate in an activity; and

(iii) In determining whether a member of the group is a personal service corporation.

The Conference Report states that, as an example, a corporation may be treated as a personal service corporation where the owners performing the requisite services are employed by a subsidiary of the parent corporation.

The question of what constitutes a separate activity has diminished relevance, however, where a limited partnership participates in several undertakings. Under the statute, no interest in a limited partnership as a limited partner is treated as an interest with respect to which the taxpayer materially participates, regardless of the nature and extent of the partnership's undertakings and the limited partners' roles in the undertakings.[23] Thus, if but for their participation as limited partners, taxpayers would be considered as materially participating in one or more of several undertakings of a limited partnership, it becomes imperative under the Bill for such taxpayers to engage in such undertakings through a general partnership or S corporation.

The special treatment of limited partnership interests might lead to attempts to attribute activities to a limited partnership interest that are clearly not passive (such as personal services) so as to shelter the income from such activities. The Senate Report makes it clear that "any undertaking that is accorded special treatment under the passive loss rule * * * is not treated as part of the same activity as any undertaking that does not receive identical treatment under the passive loss rule." [24]

Similarly, income received by an individual from the performance of personal services with respect to a passive activity is not treated as income from a passive activity.[25] Thus, for example, in the case of a limited partner who is paid for performing services for the partnership (whether by way of salary or guaranteed payment), such payments cannot be sheltered by any passive losses.

Unexpected results can follow. Assume the sole shareholder of an S corporation engaged in a passive activity receives a salary of $5,000 for services and that the deduction at the corporate level will result in a $5,000 tax loss. The shareholder will have $5,000 in earned income and a $5,000 passive activity loss passed through from the S corporation. The passive loss, therefore, cannot be used to offset the income.

[22] Conference Report at II-140.
[23] §469(h)(2).
[24] Senate Report at 741.
[25] §469(e)(3).

2. Material Participation

a. Involvement in Operations on a Regular, Continuous, and Substantial Basis

Outside of the limited partnership context (discussed below), the presence or absence of material participation in an activity generally must be determined with reference to all the facts and circumstances. In determining whether a taxpayer materially participates, the participation of the taxpayer's spouse is taken into account.[26]

The Senate Report sets forth several factors (none of which is conclusive) to consider in determining whether involvement in the operations of an activity is regular, continuous, and substantial.[27]

First, a taxpayer is most likely to have materially participated in an activity in cases where involvement in the activity is the taxpayer's principal business. By contrast, when an activity is not a taxpayer's principal business, it is less likely that the taxpayer is materially participating.

Second, a taxpayer is most likely to have materially participated in an activity in cases where the taxpayer is regularly present at the place or places where the principal operations of the activity are conducted.

Third, a taxpayer is most likely to have materially participated in an activity in cases where he performs management functions requiring the exercise of independent discretion and judgment, such as decision making.[28] A taxpayer's role is not substantial if he merely approves management decisions made by others. The Senate Report makes clear that the degree of a taxpayer's knowledge or experience regarding an activity is "highly significant" in determining whether his participation in management is likely to amount to material participation.[29]

These factors together make it clear that taxpayers who are engaged in the business of real estate development, for example, will generally be regarded as materially participating in the projects (with the key exception of rental activity) which they manage and, therefore, will be entitled to apply the losses and credits from such projects against other income. If such taxpayers utilize employees or contract services to perform the daily functions in running the project, that fact alone will not prevent them from qualifying as materially participating, so long as they "personally perform sufficient services to establish material participation." [30]

[26] §469(h)(5).
[27] Senate Report at 732-34. Note also that the Treasury is required under §469(k)(1) to issue regulations specifying what constitutes "material participation."
[28] In this regard, the Conference Report notes that in an agricultural activity, the types of decision-making that may be relevant to a taxpayer's material participation include, but not by way of limitation, decision-making regarding (1) crop rotation, selection, and pricing, (2) the incursion of embryo transplant or breeding expenses, (3) the purchase, sale, and leasing of capital items; (4) breeding and mating decisions; (5) the selection of herd or crop managers who then act at the behest of the taxpayer, rather than as paid advisors directing the conduct of the taxpayer. Conference Report at II-148.
[29] Senate Report at 734.
[30] *Id.*, at 735.

The Conference Report clarifies that "an individual who works full-time in a line of business consisting of one or more business activities generally is likely to be materially participating in those activities (except to the extent provided otherwise in the case of rental activities), even if the individual's role is in management rather than operations." [31] The Conference Report further states that "[t]his clarification is not intended to alter the description of material participation in the Senate Report in any respect. Rather, it recognizes the substantial likelihood that, despite the difficulty in many circumstances of ascertaining whether the management services rendered by an individual are substantial and *bona fide*, such services are likely to be so when the individual is rendering them on a full-time basis and the success of the activity depends in large part upon his exercise of business judgment.[32] Moreover, "a taxpayer is likely to be materially participating in an activity, if he does everything that is required to be done to conduct the activity, even though the actual amount of work to be done to conduct the activity is low in comparison to other activities." [33]

These concepts of material participation were crystallized in two colloquies on the Senate floor between Senators Packwood and Hatfield concerning material participation by owners of hotels (which, as discussed below, are not considered rental activities so that it is not passive *per se*). In these colloquies, Senator Packwood, then Chairman of the Senate Finance Committee, confirmed that a taxpayer who owned a hotel condominium unit would still materially participate in the operation of the hotel if, on a regular, continuous and substantial basis, he engaged in each of the following activities:

1. Establishment of hotel unit's rental rates;

2. Establishment and review of hiring and other personnel policies including review of management personnel;

3. Review and approval of periodic and annual audited financial reports;

4. Preparation of operating and capital expenditure budgets;

5. Establishment of financial reserve requirements;

6. Selection of banks;

7. Participation in meetings concerning the hotel unit with agents and contract management personnel to review operations and business plans to conduct on-site inspections;

8. Participation in off-site business promotion activities;

9. Establishment of procedures for payment of the hotel unit expenses;

10. Review of personal property tax assessments and procedures for payment of property taxes; and

11. Establishment of responsibility for debt service payments.[34]

[31] Conference Report at II-147-48.
[32] *Id.* at II-148.
[33] *Id.*
[34] Cong. Rec. (June 24, 1986) at pp. S8244-S8246; Cong. Rec. (Sept. 27, 1986), p. S13958.

The colloquies emphasize that a hotel unit owner's mere ratification of the decisions of management agents or employees does not constitute material participation in hotel operations. It should be emphasized that these colloquies, although indicative of congressional intent, do not carry the same weight as a committee report. Therefore, it is possible that the Service could issue regulations that reflect additional or different criteria for determining whether a hotel condominium unit owner materially participates in that hotel activity.

b. Closely Held C Corporations and Personal Service Corporations

Closely held C corporations or personal service corporations that are subject to the passive loss rules will be treated as materially participating in an activity with respect to which one or more shareholders, owning in the aggregate more than 50% (by value) of the outstanding stock of the corporation, materially participate. See §469(h)(4)(A). Thus, for example, a corporation with 5 shareholders, each owning 20% of the stock, is treated as materially participating in an activity if three or more of such shareholders so participate. Alternatively, §469(h)(4)(B), by reference to §465(c)(7)(C), provides that a closely held C corporation subject to the passive loss rules may also be treated as materially participating in an activity if:

(i) during the entire 12-month period ending on the last day of the taxable year, the corporation had at least 1 full-time employee substantially all the services of whom were in the active management of the business,

(ii) during the entire 12-month period ending on the last day of the taxable year, the corporation had at least 3 full-time, nonowner employees substantially all of the services of whom were services directly related to the business, and

(iii) the amount of the deductions attributable to the business which are allowable to the taxpayer solely by reason of §§162 and 404 for the taxable year exceeds 15% of the gross income from the business for the year.

Note: As previously mentioned, the two foregoing tests are applied on a group-wide basis in the case of affiliated corporations filing consolidated returns. According to the Conference Report, at II-140, if, for example, one or more shareholders holding more than 50% of a member's stock materially participate in an activity of any member of the group, the group is considered as materially participating. Similarly, if the three requirements that must be met under the alternative test of §469(h)(4)(B) are met by any member (or several members together) as to any activity, then the group is treated as materially participating in the activity.

(1) Closely Held C Corporations

Section 469(j)(1) refers to "closely held C corporations" as defined in §465(a)(1)(B) which, in turn, refers to "a C corporation with respect to which the stock ownership requirement of paragraph (2) of §542(a) is met." Section 542 (defining a personal holding company) provides that the term "personal holding company" means any corporation if *inter alia*, "[a]t any time during the last half of the taxable year more than 50% in value of its outstanding

stock is owned, directly or indirectly, by or for not more than 5 individuals."

(2) Personal Service Corporations

Under §469(j)(2), the term "personal service corporation" has the meaning given such term by §269A(b)(1) which provides that a "personal service corporation" means a corporation the principal activity of which is the performance of personal services and such services are substantially performed by employee owners." Section 269A(b)(2) states that an "employee-owner" is "any employee who owns, on any day during the taxable year, more than 10% of the outstanding stock of the personal service corporation." Section 469(j)(2)(A) substitutes "any" for "more than 10%." Section 269A(b)(2) further states that [f]or purposes of the ownership requirement, §318 shall apply, except that "5%" shall be substituted for "50%" in §318(a)(2)(C). Section 318(a)(2)(C) provides that "[i]f 50% or more in value of the stock in a corporation is owned, directly or indirectly, by or for any person, such person shall be considered as owning the stock owned, directly or indirectly, by or for such corporation, in that proportion which the value of the stock which such person so owns bears to the value of all the stock in such corporation." Section 469(j)(2)(B) substitutes "any" for "50% or more in value" in §318(a)(2)(C). Section 469(j)(2) further provides that "[a] corporation shall not be treated as a personal service corporation unless more than 10% of the stock (by value) in such corporation is held by employee-owners (within the meaning of section 269A(b)(2), as modified [herein]."

The broad employee-owner category is a very stringent provision and is made even more so by the fact that stock ownership can be attributed to employees who do not own stock directly. Stock-attribution rules are not unusual, but the attribution rules applied in the passive-activity context make it very difficult for any service corporation to determine whether it is subject to the limitation. A corporation's employees are considered to be "owners" if they own stock in the corporation or if:

They own stock in any other corporation that owns stock in the corporation;

The employee's spouse, children, grandchildren or parents own stock in the corporation; or

Their partnership, partners or a trust or estate in which they are a beneficiary owns stock in the corporation.

For all these purposes, ownership of an option is considered the same as ownership of stock, and more extensive constructive ownership rules apply. Any service corporation would have substantial difficulty in showing that the required number of its employees are not "owners."

Further complicating the situation is the fact that neither "personal services" nor "substantially performed" are defined. While the definition of "personal services" clearly encompasses the trades and professions, there is precedent for treating any activity that produces income, other than the sale of a product or the use of capital, as a personal service. If the broadest definition is used for this purpose, *any* corporation that provides services, rather than products or capital, could be viewed as providing personal services. Examples might include airlines, rent-a-car companies, broadcasting companies, theaters, trucking and delivery companies and railroads. If the services provided by such a company are "personal" and are "substantially" performed by employee-owners, the company is a personal service corporation, provided the aggregate 10% ownership test is met.

With regard to the "substantially performed" test, any definition would clearly be satisfied by service companies where only employees own stock and would frequently apply to those with a high percentage of employees owning stock. However, in many service companies, even those with thousands of employees and with no stock ownership incentives, a narrow definition could still apply. Under a broad definition of the term, if the service is "personal," but is provided by the organization as a whole rather than by a particular employee, it is possible that the service will be deemed to be "substantially performed" by management, and, as a result, stock ownership by management employees would be the relevant criterion.

Finally, note that "[i]n the case of a personal service corporation which is a member of a consolidated group, similar principles are intended to apply. For example, a corporation may be treated as a personal service corporation for purposes of the rule where the owners who render the requisite services are employees of a subsidiary, rather than of the parent corporation.[35]

c. Limited Partnerships

Section 469(h)(2) provides that "[e]xcept as provided in regulations, no interest in a limited partnership as a limited partner shall be treated as an interest with respect to which a taxpayer materially participates." When a taxpayer is both a limited and a general partner in a limited partnership, lack of material participation is conclusively presumed with respect to the limited partnership interest and the taxpayer must prove that he is materially participating as a general partner in the activity of the limited partnership.

The Secretary is empowered under §469(k)(3) to provide regulations "requiring net income or gain from a limited partnership or other passive activity to be treated as not from a passive activity." This grant of authority should be used to "prevent taxpayers from manipulating the rule that limited partnerships generally are passive, in attempting to evade the passive loss provision." [36]

d. Treatment of Retired Individuals and Surviving Spouses Participating in Farming Activity

Section 469(h)(3) provides that a taxpayer is materially participating in any farming activity for a taxable year if §2032A(b)(4) or (5) "would cause the requirements of §2032A(b)(1)(C)(ii) to be met with respect to real property used in such activity if such taxpayer had died during the taxable year."

Section 2032A(b)(1)(C)(ii) provides that one of the elements of the definition of "qualified real property" (for

[35] Conference Report at II-140.
[36] Senate Report at 731.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

purposes of estate tax valuation of certain farm real property) is that "during the 8-year period ending on the date of the decedent's death there have been periods aggregating 5 years or more during which * * * there was material participation by the decedent or a member of the decedent's family in the operation of the farm or other business."

Section 2032A(b)(4) provides in relevant part that "[i]f, on the date of the decedent's death the requirements of paragraph (1)(C)(ii) with respect to the decedent for any property are not met, and the decedent—(i) was receiving old-age benefits under title II of the Social Security Act for a continuous period ending on such date, or (ii) was disabled for a continuous period ending on such date, then paragraph (1)(C)(ii) shall be applied with respect to such property by substituting 'the date on which the longer of such continuous periods began' for 'the date of the decedent's death' in paragraph (1)(C)."

Section 2032A(b)(5)(C) provides that "[i]n any case in which to do so will enable the requirements of paragraph (1)(C)(ii) to be met with respect to the surviving spouse, this subsection and subsection (c) [regarding tax treatment of dispositions and failures to use for qualified use] shall be applied by taking into account any application of paragraph (4)."

3. Rental Activity

The Senate Report states that the "extensive use of rental activities for tax shelter purposes under present law, combined with the reduced level of personal involvement necessary to conduct such activities, make clear that the effectiveness of the basic passive loss provision could be seriously compromised if material participation were sufficient to avoid the limitations in the case of rental activities." [37] Accordingly, §469(c)(2) provides that the term "passive activity" includes "any rental activity," regardless of whether the taxpayer materially participates in the activity.

a. Defining Rental Activity

Section 469(j)(8) defines "rental activity" as any activity where payments are principally for the use of tangible property. Under this standard, an activity will generally be regarded as rental activity if it involves a long-term rental period and a low turnover in the lessees of the property, or if expenses of day-to-day operations are insignificant in relation to rents produced by the property, or in relation to the amount of the depreciation and the cost of carrying the rental property.

On the other hand, if "significant services" are provided generally in connection with the use of any property, the activity may not be considered a rental activity under the passive loss rules.[38] For example, because of the services provided to guests (such as maid service, room service, valet service, etc.), renting hotel rooms, resort condominiums or similar facilities on a daily or weekly basis would not constitute "rental activities" under the general rules and, therefore, could *not* be a real estate rental activity for purposes of the special $25,000 allowance for real estate rentals (examined below). However, the passive activity loss limitation may still not apply if the material participation standard is met.

Long-term rental periods and low turnover of lessees indicate a rental activity, whereas short rental periods and heavy tenant turnover may cause an activity not to be a rental activity, especially if significant services are provided. It is not clear whether nursing homes and elderly care facilities that are rented on a continuous basis and provide some services will be considered rental activities.[39]

Note: The Senate Report, at 741, provides that the S corporation rules concerning rental income provide a "useful analogy" in determining whether an activity is a rental activity for §469 purposes. Consequently, the following revenue rulings, determining that income received by a subchapter S corporation was not rent, may prove instructive in the passive loss area:

Rev. Rul. 61-112, 1961-1 C.B. 399, ruling that amounts received under a share-farming arrangement are not "rents" when the taxpayer participates to a material degree in the production of farm commodities through physical work or management decisions, or a combination of both.

Rev. Rul. 64-232, 1964-2 C.B. 334, concluding that amounts received from leasing glassware, silverware, tables, chairs and electronic equipment are not rents where the taxpayer performs delivery and pickup functions with respect to the items and washes, polishes, repairs and stores them prior to their lease to a customer.

Rev. Rul. 65-83, 1965-1 C.B. 430, ruling that construction barricade, golf cart, crane, and dress suit rentals were not "rents" due to the significant services performed in connection with the rentals.

Rev. Rul. 65-91, 1965-1 C.B. 431, providing that (i) fees for the storage of grain are not rents because of the services that are performed in inspecting and turning the grain in order to prevent spoilage and infestation; (ii) payments received for the handling and storage within a refrigerated warehouse are not rents where the owner of the warehouse supplies the necessary labor for moving the goods in and out of the warehouse and is responsible for providing housekeeping services, refrigeration, maintenance and other necessary services; and (iii) amounts received from the operation of a parking lot where the vehicles are parked by attendants are not rents.

Rev. Rul. 65-40, 1965-1 C.B. 429, stating that amounts received for the short-term leasing of motor vehicles are not rents where the lessor furnishes maintenance, gas and oil, tire repair and changing, cleaning and polishing, oil changing and lubrication, and engine and body repair.

Rev. Rul. 70-110, 1970-1 C.B. 176, ruling that demurrage, which is the exchange made by a transportation company or shipper for unreasonable detention of its

shipping containers (railroad cars, ships, air cargo pallets, etc.) is not rent.

Rev. Rul. 70-206, 1970-1 C.B. 177, determining that payments received for making television sets available to hospital patients and for required services, including unlocking and locking and adjusting and repairing the sets, are not rents.

Rev. Rul. 75-349, 1975-2 C.B. 349, concluding that a subchapter S corporation that distributes feature length motion pictures to exhibitors for a share of the box office receipts and does support work, prepares advertising, furnishes advance personnel, inspects theaters, and delivers and picks up the films, or that itself rents theaters to exhibit the films and retains all the box office receipts, does not receive rents.

Rev. Rul. 76-48, 1976-1 C.B. 265, ruling that amounts received for the use of tennis and handball courts by players who are provided with locker room and parking facilities, lesson fees with no additional charge made for the use of the court, and sales of sport items by a shop on the premises, are not rents.

Rev. Rul. 76-469, 1976-2 C.B. 252, providing that amounts received as part of a business of leasing motor vehicles under long-term leases are not rents where the lessor provides maintenance, repair and other significant services to the lessee.

Rev. Rul. 81-197, 1981-2 C.B. 166 (Situation Two) ruling that the chartering of aircraft to provide transportation where the aircraft owner retains possession, command, and control of the aircraft was not a lease arrangement but rather the furnishing of the aircraft.

b. Special Rule for Rental Real Estate Activities

Although by deeming rental activity to be intrinsically passive Congress effectively eliminated rental activity as a viable form of tax shelter, it nevertheless determined that a "limited measure of relief * * * [is] appropriate in the case of certain moderate-income investors in rental real estate, who otherwise might experience cash flow difficulties with respect to investments that in many cases are designed to provide financial security, rather than to shelter a substantial amount of other income." [40] Thus, up to $25,000 of losses and credits (in a deduction equivalent sense) from rental real estate activities in which "any natural person" "actively participates" (as defined below) may be used to offset nonpassive income of the taxpayer.[41]

The $25,000 allowance is applied by first netting income and loss from all of the taxpayer's rental real estate activities in which he actively participates. If there is a net loss for the year from such activities, net passive income (if any) from other activities is then applied against it, in determining the amount eligible for the $25,000 allowance.[42]

Example: Assume taxpayer A has $25,000 of losses from a rental real estate activity in which he actively participates. If A also actively participates in another rental real estate activity, from which he has $25,000 of gain, resulting in no net loss from rental real estate activities in which he actively participates, then no amount is allowed under the $25,000 allowance for the year.

(1) Active Participation

Section 469(i)(6)(A) provides that an individual is not actively participating in a rental real estate activity for any period if, at any time during the period, the interest (including any interest of the individual's spouse) is less than 10% (by value) of all interests in the activity. For purposes of determining whether a taxpayer's interest in the activity amounts to at least 10%, "separate buildings are treated as separate rental real estate activities if the degree of integration of the business and other relevant factors do not require treating them as parts of a larger activity (e.g., an integrated shopping center)." [43]

Once the taxpayer has met the 10% ownership test, he must establish active participation in the activity.[44] The Senate Report makes clear that, unlike the material participation standard, the active participation test can be satisfied without regular, continuous, and substantial involvement in operations, "so long as the taxpayer participates, e.g., in the making of management decisions or arranging for others to provide services (such as repairs), in a significant and *bona fide* sense. Management decisions that are relevant in this context include approving new tenants, deciding on rental terms, approving capital or repair expenditures, and other similar decisions." [45] In addition, "a lessor under a net lease is unlikely to have the degree of involvement which active participation entails," although leasing space pursuant to a net lease would otherwise qualify as "rental activity." [46] The Committee Report further states that "services provided by an agent are not attributed to the principal, and a merely formal and nominal participation in management, in the absence of a genuine exercise of independent discretion and judgment, is insufficient." [47] Thus, the bottom line appears to be that if the taxpayer makes the important management decisions, and exercises independent judgment in doing so, he will be considered to actively participate in an activity. Regardless of the scope of a limited partner's participation in an activity, §469(i)(6)(C) provides that no interest as a limited partner in a limited partnership shall be treated as an interest with respect to which the taxpayer actively participates.

Finally, note that the Treasury is required under §469(k)(1) to issue regulations which specify what constitutes "active participation."

[40] Senate Report at 718.

[41] §469(i). The Conference Report, at II-142, clarifies that a trust is not intended to qualify for the $25,000 allowance "so that individuals cannot circumvent the $25,000 ceiling, or multiply the number of $25,000 allowances, simply by transferring various rental real properties to one or more trusts."

[42] Conference Report at II-141.

[43] Senate Report at 743.

[44] Note that, as with the material participation standard, in determining whether a taxpayer actively participates, the participation of the taxpayer's spouse will be taken into account. §469(i)(6)(D).

[45] Senate Report at 737-38.

[46] *Id.* at 738, 742.

[47] *Id.* at 738.

(2) Phase-Out of Allowance

As a general rule, the $25,000 is phased out by 50% of the amount by which the taxpayer's adjusted gross income for the year (calculated without regard to net passive losses, deductible IRA contributions, or taxable social security benefits) exceeds $100,000.[48] Thus, the $25,000 offset is disallowed totally for taxpayers with adjusted gross income above $150,000. For the rehabilitation investment credit described in §48(o) and the low-income housing credit described in §42, (i) the phase-out range is increased to between $200,000 and $250,000 of adjusted gross income, and (ii) the offset is allowed regardless of whether the taxpayer actively participates in the activity generating the credits.[49]

In the case of the low income housing credit, the waiver of the active participation requirement applies only to property placed in service before 1990. However, if the property is placed in service in 1990, the active participation requirement is waived if at least 10% of the total project costs are incurred before 1989.[50]

(3) Special Rule for Estates

Section 469(i)(4)(A) provides that an estate is deemed to actively participate, for the two years following the taxpayer's death, in a rental real estate activity in which the taxpayer actively participated before his death. Thus, the taxpayer's estate may continue to receive the same tax treatment with respect to the rental real estate activity as did the taxpayer in the taxable year of his death. The rationale for this provision is "to facilitate the administration of the estate without requiring the executor or fiduciary to reach decisions with respect to the appropriate disposition of the rental real property within a short period following the taxpayer's death." [51]

Section 469(i)(4)(B) provides that for purposes of the special two year rule, the $25,000 dollar limitation will be reduced by the amount of the exemption under §469(i)(1) (without regard to the phase-out) allowable to the decedent's surviving spouse for the taxable year ending with or within the taxable year of the estate.

(4) Married Individuals Filing Separately

Section 469(i)(5)(A) provides that the amount of the $25,000 allowance, and the adjusted gross income ranges in which the allowance is phased out (*i.e.*, $100,000 to $150,000, except in the case of certain credits where the range is $200,000 to $250,000) is halved in the case of married individuals filing separate returns. Section 469(i)(5)(B) states that the above limitation shall not apply to a taxpayer who is a "married individual filing a separate return for any taxable year" and "does not live apart from his spouse at all times during such taxable year." In such cases, the Conference Report states that the amount of the $25,000 allowance is reduced to zero.[52] Absent such a rule, "married taxpayers where one spouse would be eligible for a portion of the $25,000 amount if they filed separately would have an incentive so to file; the conferees believe that rules that encourage filing separate returns give rise to unnecessary complexity and place an unwarranted burden on the administration of the tax system." [53] The Treasury is given regulatory authority to deal with changes in marital status and changes between joint returns and separate returns to carry out these and other provisions set forth in §469.[54]

B. Treatment of Losses and Credits

1. Losses

a. General Rules

Section 469(a)(1)(A) provides that the passive activity loss rules apply to any individual, estate or trust, any closely held C corporation, and any personal service corporation. Under §469(d)(1), the determination of passive activity loss is made on an aggregate basis. Thus, losses from passive activities may only offset income from other passive activities.

For example, assume than an individual has a net loss of $10,000 from his investment in rental housing (in which he does not actively participate) and a net income of $10,000 from a "non-working" limited partnership interest in an oil and gas venture (or from any other business in which he is not a material participant). The individual would have neither passive activity income nor passive activity loss, since the passive loss nets out the passive income.

On the other hand, if the above individual has $20,000 of passive activity losses, he would have a $10,000 passive activity loss. Section 469(b) states that such a "suspended" passive activity loss for the year is carried forward indefinitely, but not carried back, and is allowed in subsequent years against passive activity income. Section 469(j)(4) further provides that "[t]he passive activity loss and the passive activity credit (and the $25,000 amount under subsection (i)) shall be allocated to activities, and within activities, on a pro rata basis in such manner as the Secretary may prescribe."

For each separate activity, the portion of the loss that is suspended and carried forward is determined by the ratio of net losses from that activity to the total net losses from all passive activities for the year. Such an allocation is necessary in order to determine the cumulative suspended losses for any particular activity which are then allowed in full upon disposition. The application of these rules is demonstrated in the following example, for years after 1990. Substantially different rules apply during the 1987-1990 transition period (discussed below).

Example: Assume taxpayer X owns three rental buildings in which he does not actively participate. He has $25,000 of net losses from Building A and $15,000 of net losses from Building B. Building C produces $20,000 of rental income. X can offset the $20,000 of passive income with $20,000 of passive losses. The $20,000 of remaining loss is suspended and is allocated as follows:

[48] §469(i)(3)(A).
[49] §469(i)(6)(B), (i)(3)(B).
[50] Act §501(c)(3).
[51] Conference Report at II-142.
[52] *Id.*
[53] *Id.*
[54] §469(k)(5).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

$12,500 to Building A (*i.e.*, $20,000 net passive loss × $25,000/$40,000)

$7,500 to Building B (*i.e.*, $20,000 net passive loss × $15,000/$40,000)

In the case of the $25,000 allowance for passive losses from rental real estate activities in which the taxpayer actively participates, a situation could arise in which losses would be allowable for the year under the passive loss rule, but the taxpayer has insufficient (or no) nonpassive income against which to apply them. The Senate Report states that in such a case, "the otherwise allowable rental real estate losses are thereupon treated as losses which are not from a passive activity. They are treated as net operating losses (NOLs) arising in that year, and may be carried forward and back in accordance with the rules applicable to NOLs." [55]

The Senate Report further points out that in the case of individuals, estates and trusts, and personal service corporations, "nonpassive losses and NOLs are taken into account only after reducing income from passive activities by current and suspended deductions from passive activities (but not below zero). * * * This permits the taxpayer to obtain the full benefit of suspended passive activity losses * * * before using any losses that are not from passive activities (or NOL carryovers). If a taxpayer has net passive activity income for the year (after the application of all suspended passive losses), the income may be offset by current-year nonpassive losses and by NOL carryovers." [56]

b. Special Rule for Closely Held Corporations

Section 469(e)(2)(A) provides that "[i]f a closely held C corporation (other than a personal service corporation) has net active income for any taxable year, the passive activity loss of such taxpayer for such taxable year (determined without regard to this paragraph)—(i) shall be allowable as a deduction against net active income, and (ii) shall not be taken into account under subsection (a) to the extent so allowable as a deduction. A similar rule shall apply in the case of any passive activity credit of the taxpayer." Section 469(e)(2)(B) defines "net active income" as the "taxable income of the taxpayer for the taxable year determined without regard to—(i) any income or loss from a passive activity, and (ii) any item of gross income, expense, gain, or loss described in paragraph (1)(A) [relating to portfolio income]." [57]

Thus, while closely held C corporations (other than personal service corporations) are not permitted to use passive-activity losses to reduce portfolio income, the losses can be used to offset income from the corporation's active businesses. Accordingly, these corporations can use tax shelter losses with relatively few restrictions and may find such investments relatively attractive.

c. Relation to Investment Interest Limitation

Section 163(d)(4)(D) provides that interest deductions attributable to passive activities are treated as passive activity deductions, not as investment interest. Thus, such interest deductions are subject to limitation under the passive loss rule, and not under the investment interest limitation. The Conference Report further clarifies that "income and loss from passive activities generally are not treated as investment income or loss in calculating the amount of the investment interest limitation." [58] However, under §163(d)(4)(E), any passive losses allowed by reason of the phase-in of the passive loss rules (discussed below)—other than losses from rental real estate activities in which the taxpayer actively participates—reduce net investment income.

d. Relation to At-Risk Rules

The determination of whether a loss is suspended under the passive loss rules is made after the application of the amended at-risk rules. The Senate Report states that a "loss that would not be allowed for the year because the taxpayer is not at risk with respect to it is suspended under the at-risk provision, not the passive loss rule. * * * Such amounts may become subject to the passive loss rule in subsequent years when they would be allowable under the at-risk * * * limitations." [59] The Report further provides that "[a]mounts at risk are reduced even if deductions which would be allowed under the at-risk rules are suspended under the passive loss rule. Similarly, basis is reduced as under present law, even in the case where deductions are suspended under the passive loss rule. However, if an amount at risk or basis has been reduced by a deduction not allowed under the passive loss rule, the amount at risk or basis is not again reduced when the deduction becomes allowable under the passive loss rule." [60]

e. Special Rule for Qualified Residence Interest

Section 469(j)(7) provides that passive activity losses shall be computed without regard to "qualified residence interest." Section 163(h)(3)(A) defines qualified residence interest as interest paid or accrued during the taxable year on indebtedness secured by any property which (at the time the interest is paid or accrued) is a qualified residence of the taxpayer. Section 163(h)(3)(B) provides that qualified residence interest shall not include "any interest paid or accrued on indebtedness secured by any qualified residence which is allocable to that portion of the principal amount of such indebtedness which, when added to the outstanding aggregate principal amount of all other indebtedness previously incurred and secured by such qualified residence, exceeds the lesser of—(i) the fair market value of such qualified residence, or (ii) the sum of—(I) the taxpayer's basis in such qualified residence (adjusted only by the cost of any improvements to such residence), plus (II) the aggregate amount of qualified indebtedness of the taxpayer with respect to such qualified residence." Section 163(h)(5)(A) defines "qualified residence" as the principal residence (under §1034) of the taxpayer, and one other residence of the taxpayer which he selects for purposes of

[59] Senate Report at 723. The Report further notes that "[d]uring the 5-year period over which the passive loss rule is phased in, these rules interact in the same manner.
[60] *Id.*, footnote 9.

this subsection for the taxable year and which he uses as a residence within the meaning of §280A(d)(1).

2. Credits

a. General Rules

Section 469(a) provides that "the passive activity credit" for the taxable year shall not be allowed for any individual, estate or trust, any closely held C corporation, and any personal service corporation. Under §469(d)(2), the term "passive activity credit" is defined as the amount (if any) by which "(A) the sum of the credits from all passive activities allowed for the taxable year under—(i) subpart D of part IV of subchapter A [(*i.e.*, the transitional investment credit, the jobs credit, the research credit, the low-income housing credit and the rehabilitation tax credit)], or (ii) subpart B (other than §27(a) [regarding the foreign tax credit] of such part IV [(*i.e.*, the credit for clinical testing expenses for certain drugs for rare diseases or conditions determined under §28 and the credit for producing fuel from a nonconventional source determined under §29)], exceeds (B) the regular tax liability of the taxpayer for the taxable year allocable to all passive activities." [61] In other words, if the taxpayer has an aggregate passive activity loss for the year, no tax credits from passive activities can be used currently, even though the taxpayer has a net regular tax liability for the year.

As with disallowed passive activity losses, disallowed credits can be carried forward indefinitely until there is regular tax liability from passive activities to trigger their use.[62] At that time, the credits lose their character as passive activity credits to the extent of the regular tax liability from passive activities and are aggregated with any other credits for the year to determine the limitations on their use and how they are to be used.[63]

b. Interaction with Other Credit Limitations

For taxable years beginning after 1986, §38(c) provides that the general business credit may not exceed the lesser of (i) the first $25,000 of a taxpayer's net regular tax liability plus 75% of the excess, or (ii) the excess, if any, of the taxpayer's net regular tax liability over the tentative minimum tax. This overall limitation is applied after the amount of credits allowable under the passive loss rule is determined.[64] However, the limitation on the credit for research and development activities to the tax on income from such activities is applied before the passive loss limitation is applied to such credits.[65]

c. Relation to the $25,000 Real Estate Rental Allowance

The Senate Report makes clear that passive credits may be allowable to offset tax on nonpassive income with respect to the $25,000 real estate rental offset.[66] In applying the $25,000 allowance, credits are converted to a "deduction equivalent." Section 469(j)(5) provides that "[t]he deduction equivalent of credits from a passive activity for any taxable year is the amount which (if allowed as a deduction) would reduce the regular tax liability for such taxable year by an amount equal to such credits." Assuming a 28% marginal tax rate, the $25,000 allowance is equivalent to a $7,000 credit.

Credits are allowed to offset tax on the portion of the $25,000 allowance that the taxpayer has not been able to offset by the use of the deductions. The amount of tax on such remaining portion (and thus the amount of credits that can be used against other income) is determined by comparing (i) the amount that the taxpayer would owe (disregarding credits) with respect to income other than any net passive losses, but reduced by rental real estate deductions in the amount allowable under the $25,000 rule, with (ii) the amount that the taxpayer would owe (again disregarding credits) if the allowable rental real estate deductions equaled $25,000 (or less as appropriate, *i.e.*, in the phase-out range for this amount.[67]

3. Activity No Longer Treated As Passive

Section 469(f)(1) provides that, with respect to either active participation or material participation, a change in the nature of the taxpayer's involvement in an activity does not trigger the allowance of deductions carried over from prior taxable years. Thus, for example, if a taxpayer begins to participate actively in an activity in which, in prior years, he did not actively participate, the rule allowing up to $25,000 of losses from rental real estate activities against nonpassive income will not apply to losses from the activity carried over from such prior years. The same rule applies to credits, to the extent that active participation is relevant to their allowability. By contrast, the Conference Report notes that "losses (or credits) carried over from a year in which the taxpayer did actively participate, but that were not allowed against nonpassive income in such year because they exceeded $25,000 (as reduced by the applicable AGI phase-out), are deductible (or allowable) under the $25,000 rule in a subsequent year, but only if the taxpayer is actively participating in the activity in such subsequent year." [68]

4. Change in Status of Closely Held C Corporation or Personal Service Corporation

Section 469(f)(2) provides that "[i]f a taxpayer ceases for any taxable year to be a closely held C corporation or personal service corporation, this section shall continue to apply to losses and credits to which this section applied for any preceding taxable year in the same manner as if such taxpayer continued to be a closely held C corporation or personal service corporation, whichever is applicable." In other words, if a closely held C corporation or a personal service corporation ceases to meet the definition of a closely held C corporation or personal service corporation, respectively, subject to the passive loss rule in any year, losses from a passive activity conducted by the corporation and previously suspended by reason of the application of the passive loss rule are not triggered by the change in status,

[61] Section 469(j)(3) defines "regular tax liability" by reference to §26(b), which refers to the tax imposed by Chapter 1 ("Normal Taxes and Surtaxes") of the Code.
[62] §469(b).

but are allowed against income from that activity. Any previously suspended losses and (deduction equivalent) credits in excess of income from the activity continue to be treated as from a passive activity. Losses and credits from an activity arising in a year when the corporation does not meet the definition of either a closely held C corporation or a personal service corporation, respectively, are not subject to the limitation under the passive loss rule.

5. Dispositions

a. General Rule

Section 469(g)(1) provides that if during the taxable year a taxpayer disposes of his entire interest in any passive activity (or former passive activity) in a fully taxable transaction, "any loss from such activity which has not previously been allowed as a deduction (and in the case of a passive activity for the taxable year, any loss realized on such disposition) shall not be treated as a passive activity loss and shall be allowable as a deduction against income in the following order: (i) Income or gain from the passive activity for the taxable year (including any gain recognized on the disposition). (ii) Net income or gain for the taxable year from all passive activities. (iii) Any other income or gain."

The Senate Report states that "[the reason for this rule is that, prior to a disposition of the taxpayer's interest, it is difficult to determine whether there has actually been gain or loss with respect to the activity." [69] Once there is no possibility that the taxpayer will recognize any additional income from a passive activity, there is no justification for continued suspension of any losses from that activity. A disposition of the "entire interest" guarantees there will be no future income produced, and a "fully taxable" transaction ensures that any inherent taxable gain is recognized currently.

Example: Taxpayer X has been involved in two rental activities (*i.e.*, Building A and Building B), and no other passive activities. Building A, with respect to which X has $100 of suspended losses, is sold for a gain of $50. Building B produces net income of $25 for the year. The $100 of suspended losses for Building A first offsets the $50 gain on the sale of Building A. The remaining $50 of loss offsets the $25 of passive income from Building B and $25 of other income of the individual.

It is unclear whether a gain realized on the sale of one passive activity (net of the suspended losses on the activity) can be offset by passive losses from other activities. Since the disposition rule operates on an activity-by-activity basis, it may be that it cannot. If so, any such gain would appear to be taxable in the year of disposition.

b. Disposition of Entire Interest

For a disposition of a passive activity to be complete, the taxpayer must dispose of all interests he holds in entities engaged in the activity as well as all assets used in the activity that he may own directly. If a partnership (general or limited) or S corporation conducts two separate activities, fully taxable disposition by the entity of all the assets used or created in one activity constitutes a disposition of the partner's or shareholder's entire interest in the activity. Similarly, if a grantor trust conducts two separate activities and sells all the assets used or created in one activity, the grantor is considered as disposing of his entire interest in that activity. The Senate Report stresses the importance of maintaining "adequate records" of the suspended losses that are allocable to a particular activity in order for such losses to be allowed in full upon disposition of the taxpayer's interest in such activity.[70]

It bears noting that because any gain from the disposition of a passive activity or from the sale of assets used in a passive activity produces current-year passive activity income, suspended losses from an activity can be used to offset that gain *regardless* of whether the disposition is complete and fully taxable.

c. Fully Taxable Transaction

An exchange of the taxpayer's interest in an activity in a nonrecognition transaction, such as an exchange governed by §§351, 721, or 1031 in which no gain or loss is recognized, does not trigger suspended losses. The Conference Report clarifies, moreover, that "a transaction constituting a sale (or other taxable disposition) in form, to the extent not treated as a taxable disposition under general tax rules, does not give rise to the allowance of suspended deductions. For example, sham transactions, wash sales, and transfers not properly treated as sales due to the existence of a put, call, or similar right relating to repurchase, do not give rise to the allowance of suspended losses." [71]

d. Related Party Transactions

Under §469(g)(1)(B), a taxpayer is not treated as having disposed of an interest in a passive activity, for purposes of triggering suspended losses, if he disposes of it in an otherwise fully taxable transaction to a related party (within the meaning of §267(b) or §707(b)(1), including applicable attribution rules).[72] In the event of such a related party transaction, because it is not treated as a disposition for purposes of the passive loss rule, suspended losses are not triggered, but rather remain with the taxpayer. Such suspended losses may be offset by income from other passive activities of the taxpayer.

When the entire interest owned by the taxpayer and the interest transferred to the related transferee in the passive activity are transferred to a party who is not related to the taxpayer (within the meaning of §267(b) or §707(b)(1), including applicable attribution rules) in a fully taxable transaction, then to the extent the transfer would otherwise qualify as a disposition triggering suspended losses, the taxpayer may deduct the suspended losses attributable to his interest in the passive activity.

e. Interaction with Capital Loss Limitation

Section 469(g)(1)(C) provides that to the extent that any loss recognized upon a fully taxable disposition of a

[69] Senate Report at 725.

[70] *Id.* at 725-26.

[71] Conference Report at II-143.

[72] The test under these related party provisions can be met if there is a family or fiduciary relationship between the taxpayer and the transferee. The test will also be met if certain business relationships exist, generally based on a greater-than-50% common ownership interest existing between the taxpayer and the transferee.

taxpayer's entire interest in a passive activity is a loss from the sale or exchange of a capital asset, it is limited to the amount of gains from the sale or exchange of capital assets plus $3,000 (in the case of individuals). The capital loss limit is applied *before* the determination of the amount of losses upon a disposition under the passive loss rules.

Example: Taxpayer A has a capital loss of $10,000 upon the disposition of a passive activity. The disposition triggers the allowance of $5,000 of previously suspended ordinary losses. However, the capital loss deduction is limited to $3,000 for the year (assuming the taxpayer has no other gains or losses from the sale of capital assets for the year). The remainder of the capital loss from the disposition is carried forward and allowed in accordance with the provisions determining the allowance of such capital losses.

f. Disposition by Death

Section 469(g)(2) provides that if a taxpayer engaged in a passive activity dies, the suspended passive activity losses will be allowed on the decedent's final return to the extent such losses are greater than the excess (if any) of (1) the basis of such property in the hands of the transferee (generally "stepped up" to its fair market value at date of death) over (2) the adjusted basis of such property immediately before the death of the taxpayer. Any losses to the extent of such excess are not available as a deduction for any taxable year. The net effect is similar to taxing part of the step-up in basis.

These rules apply on an activity-by-activity basis rather than to the aggregate of the passive activities of the decedent. Thus, a decedent's total passive activity losses may not be reduced by the full amount of the step-up in the bases of his interests in such passive activities.

Example: Decedent X was engaged in the rental of Buildings A and B prior to his death. The passive activity loss from Building A is $4,000. The excess of the basis of Building A in the hands of the transferee ($5,000) over the decedent's adjusted basis ($2,000) in the property is $3,000. The passive activity loss allowed by reason of death, therefore, is $1,000. The excess of the basis of Building B in the hands of the transferee ($50,000) over the decedent's adjusted basis ($10,000) is $40,000. The aggregate amount of such excess amounts ($43,000) far exceeds the aggregate passive activity losses for Building B ($4,000). Thus, the passive activity loss from Building B is zero. However, because the disposition by death rules apply on an activity by activity basis, $1,000 of passive activity losses from Building A is nevertheless allowed in the year of death.

g. Installment Sales

In the case of installment sales of an entire interest in a passive activity, §469(g)(3) modifies the normal rule that accumulated passive losses are fully deductible in the year the activity is disposed of. In such cases, suspended losses are allowed in each taxable year of the installment obligation in the same ratio as the gain recognized on such sale during each such taxable year bears to the gross profit from the sale realized (or to be realized) when payment is completed. For example, if 10% of the installment gain is recognized in the year of sale, 10% of the accumulated passive activity losses will be deductible in that year.

In IRS Advance Notice 87-8, reprinted in the January 5, 1987 issue of the *Tax Management Weekly Report*, the IRS clarified that, under temporary regulations to be issued, if a taxpayer sells an interest in an activity in a taxable year beginning after December 31, 1986, and the income from the activity is passive under §469, the gain on the sale is passive income for purposes of §469. Gain from such a sale is income from a passive activity as recognized under the installment method of reporting.

The Service also explained that gain from sales in taxable years beginning before 1987 is not income from a passive activity.

h. Gifts

Section 469(j)(6) provides that a gift of all or part of the taxpayer's interest in a passive activity does not trigger suspended losses. Suspended losses are added to the basis of the property immediately before the gift. Suspended losses of the donor are eliminated when added to the donor's basis, and are not allowable as a deduction for any taxable year.

While this rule sounds simple, in practice it can become very complex. For one thing, it theoretically requires a portion of the suspended passive activity loss allocated to the passive activity to be further allocated in even greater detail to the specific assets of that activity. Also, if the passive activity is held in partnership form, the partnership does not increase its basis in the assets.

i. Abandonment

The Conference Report states that "[t]he scope of a disposition triggering suspended losses under the passive loss rule includes an abandonment, constituting a fully taxable event under present law, of the taxpayer's entire interest in a passive activity. Thus, for example, if the taxpayer owns rental property which he abandons in a taxable event which would give rise to a deduction under §165(a) of present law, the abandonment constitutes a taxable disposition that triggers the recognition of suspended losses under the passive loss rule." [73]

j. Basis Adjustment for Credits

Section 469(j)(9) provides an election in the case of a fully taxable disposition of an interest in an activity in connection with which a basis adjustment was made as a result of placing in service property for which a credit was taken. Upon such a disposition, the taxpayer may elect to increase the basis of the credit property (by an amount no greater than the amount of the original basis reduction of the property) to the extent that the credit has not theretofore been allowed by reason of the passive loss rule. At the time of the basis adjustment election, the amount of the suspended credit which may thereafter be applied against tax liability is reduced by the amount of the basis adjustment.

Example: Taxpayer X places in service rehabilitation credit property which generates an allowable credit of $1,000. The basis of the property is reduced by $1,000 as required under the provisions governing the rehabilitation tax credit. However, Taxpayer X is prevented under the

[73] Conference Report at II-143-44.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

passive loss rule from taking any portion of the credit. In a subsequent year, having been allowed no portion of the credit by virtue of the passive loss rule, Taxpayer X disposes of his entire interest in the activity in a fully taxable transaction, including the property whose basis was reduced. Immediately prior to the disposition, Taxpayer X elects to increase the basis of the credit property by $1,000 (*i.e.*, the amount of the original basis adjustment).

k. Changes in Nature of Activity

The Conference Report clarifies that "[t]he fact that the nature of an activity changes in the course of its development does not give rise to a disposition for purposes of the passive loss provision. For example, when a real estate construction activity becomes a rental activity upon the completion of construction and the commencement of renting the constructed building, the change is not treated as a disposition." [74]

C. *Treatment of Portfolio Income*

1. General Rule

Section 469(e)(1)(A) provides that, in determining the income or loss from any passive activity, there shall *not* be taken into account (1) any "portfolio income"; (2) expenses (other than interest) which are "clearly and directly" allocable to portfolio income; (3) interest expense "properly" allocable to portfolio income; and (4) gain or loss attributable to the disposition of property either (a) producing portfolio income or (b) held for investment. Any interest in a passive activity is not treated as property "held for investment" for purposes of §469(e)(1)(A).

The term "portfolio income" for these purposes generally includes "gross income from interest, dividends, annuities, or royalties not derived in the ordinary course of a trade or business," [75] or, in other words, gross income from activities traditionally regarded to be investments. These include investments in stocks, bonds and other assets that produce such income, as well as other assets "held for investment." [76] Production of interest, dividend or royalty income does not necessarily classify an activity as a portfolio activity, however. For example, dividend and interest income produced by a dealer in securities is "derived in the ordinary course" of the securities business and, therefore, does not qualify as portfolio income.

Section 469(e)(1)(B) further provides that for purposes of determining portfolio income, "any income, gain, or loss which is attributable to an investment of working capital shall be treated as not derived in the ordinary course of a trade or business." [77] Thus, for example, interest earned on funds set aside by a limited partnership operating a shopping mall, for the purpose of expanding the mall, is treated as portfolio income and is not taken into account in determining a limited partner's passive income or loss from the activity of operating a shopping mall.

2. Loans Made to Pass-through Entities

The Conference Report provides some guidance on the treatment of the return earned on loans made to pass-through entities.[78] If the lender has an ownership interest in the entity, the interest income on the loan will be treated as a non-portfolio item to the extent the lender is allocated a share of the entity's interest expense on that loan. In the case of a partnership, this rule would be applied without regard to any special allocation of interest expense to the lender.

Example: Taxpayer X is a 10% partner in a partnership to which he has made a loan. X receives $1,000 of interest income on the loan. Under normal partnership rules, X would be allocated $100 of interest expense. Economically, X should end up with $900 in net taxable interest income as a result of the loan. The special rule stated in the Conference Report achieves this result by treating $100 of the interest income as a passive activity item, eligible to be offset by the $100 deduction, and the $900 balance as portfolio income, not eligible to be offset by passive losses.

The conferees intend that Treasury issue regulations to provide the above result. According to the Conference Report, "[s]uch regulations may also, to the extent appropriate, identify other situations in which [such] netting * * * is appropriate with respect to a payment to a taxpayer by an entity in which he has an ownership interest. Such netting should not, however, permit any passive deductions to offset nonpassive income except to the extent of the taxpayer's allocable share of the specific payment at issue. Such regulations may, if appropriate, provide that taxpayer's allocable share of the payment for this purpose will be determined without regard to special allocations." [79]

3. Regulations re Expenses Allocable to Portfolio Income

Section 469(k)(4) requires the Treasury to prescribe regulations as may be necessary or appropriate to carry out provisions of this section, including regulations "which provide for the determination of the allocation of interest expense for purposes of this section." The Conference Report states that "[t]he conferees anticipate that regulations providing guidance to taxpayers with respect to interest allocation will be issued by December 31, 1986. These regulations should be consistent with the purpose of the passive loss rules to prevent sheltering of income from personal services and portfolio income with passive losses. Moreover, the regulations should attempt to avoid inconsistent allocation of interest deductions under different Code provisions [*e.g.*, an interest deduction that is disallowed under §265 or §291 should not be allowed, capitalized, or suspended under another provision]." [80]

The Conference Report further notes that "[i]n the case of entities, a proper method of allocation may include

[74] *Id.*, at II-145.

[75] §469(e)(1)(A)(i). Note that §469(e)(4) provides, for purposes of paragraph (1), that "income from dividends shall be reduced by the amount of any dividends received deduction under §§243, 244, or 245."

[76] In this regard, the Conference Report makes clear that REIT dividends, income received from a RIC or a real estate mortgage investment conduit (REMIC) are treated as portfolio income. Conference Report at II-146, footnote 3.

[77] Working capital generally includes amounts set aside for the reasonable needs of the business.

[78] Conference Report at II-146-47.

[79] *Id.* at II-147.

[80] *Id.* at II-146.

for example, allocation of interest to portfolio income on the basis of assets, although there may be situations in which tracing is appropriate because of the integrated nature of the transactions involved. Because of the difficulty of recordkeeping that would be required were interest expense of individuals allocated rather than traced, it is anticipated that, in the case of individuals, interest expense generally will be traced to the asset or activity which is purchased or carried by incurring or continuing the underlying indebtedness." [81]

Note: In Announcement 87-4, released on December 31, 1986, the Service stated that temporary regulations to be issued will generally provide that, for purposes of the investment interest rules of §163(d), the personal interest rules of §163(h), and the §469 passive activity rules, interest expense (other than qualified residence interest) will be allocated on the basis of the use of debt proceeds - *i.e.*, a tracing approach. For example, interest on debt used to purchase an interest in a passive activity will be taken into account in the computation of passive activity income and loss. The temporary regulations will further clarify that interest on debt incurred to purchase a partnership interest or S corporation stock will be treated as trade or business interest if the assets of the partnership or S corporation are used solely in the conduct of a trade or business. If the taxpayer holding the partnership interest or S corporation stock does not materially participate in the trade or business conducted by the entity, the interest on the acquisition debt will be taken into account in computing the taxpayer's income or loss from the passive activity.

The conferees clearly recognized that the fact that both portfolio and other activities are conducted within the same entity does not allow them to be combined so that the portfolio portion must still be separated. For example, a partnership engaged in a business that invests excess capital in interest-bearing securities will have both business and portfolio allocations to its partners. By the same token, the taxpayer's return on capital invested in an entity can be treated as a portfolio investment even though the funds are actually used by the entity for other purposes. If the investment is in the form of a loan, the return on the loan will normally be portfolio income. A capital contribution, on the other hand, could generate business or other non-portfolio income or loss.

4. *Regulatory Authority of Treasury in Defining Non-Passive Income*

Section 469(k)(2) requires the Treasury to issue regulations with regard to the definition of income that is treated as portfolio income or as otherwise not arising from a passive activity. The Conference Report states that "[t]he conferees intend that this authority be exercised to protect the underlying purpose of the passive loss provision, i.e., preventing the sheltering of positive income sources through the use of tax losses derived from passive business activities." [82]

The Conference Report provides the following key examples where the exercise of such authority may be appropriate: "(1) ground rents that produce income without significant expenses, (2) related party leases or sub-leases, with respect to property used in a business activity, that have the effect of reducing active business income and creating passive income; and (3) activities previously generating active business losses that the taxpayer intentionally seeks to treat as passive at a time when they generate net income, with the purpose of circumventing the rule." [83]

D. Working Interests in Oil and Gas Property

Section 469(c)(3)(A) provides that "[t]he term 'passive activity' shall not include any working interest in any oil or gas property which the taxpayer holds directly or through an entity which does not limit the liability of the taxpayer with respect to such interest." Thus, losses and credits derived from such interests can be used to offset other income of the taxpayer without limitation under the passive loss rule.[84]

The Senate Report states that "a working interest is an interest with respect to an oil and gas property that is burdened with the cost of development and operation of the property. Rights to overriding royalties, production payments, and the like, do not constitute working interests, because they are not burdened with the responsibility to share expenses of drilling, completing, or operating oil and gas property. Similarly, contract rights to extract or share in oil and gas, or in profits from extraction, without liability to share in the costs of production, do not constitute working interests. Income from such interests generally is considered to be portfolio income." [85]

The Senate Report further clarifies that "[a] working interest generally has characteristics such as responsibility for signing authorizations for expenditures with respect to the activity, receiving periodic drilling and completion reports, receiving periodic reports regarding the amount of oil extracted, possession of voting rights proportionate to the percentage of the working interest possessed by the taxpayer, the right to continue activities if the present operator decides to discontinue operations, a proportionate share of tort liability with respect to the property (*e.g.*, if a well catches fire), and some responsibility to share in further costs with respect to the property in the event that a decision is made to spend more than amounts already contributed." [86] That a taxpayer is entitled to decline, or does decline, to make additional contributions under a buyout, nonparticipation, or similar arrangement, or that tort liability may be insured against does not contradict such taxpayer's possessing a working interest.[87]

If the liability of the taxpayer is limited, such as through a limited partnership or S corporation, the interest possessed by such taxpayer is not a working interest for purposes of the statute. The Senate Report points out that "[t]he same result follows with respect to any form of ownership that is substantially equivalent in its effect on liability to a limited partnership interest or interest in an S

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

corporation, even if different in form. The rule is applied by looking through tiered entities." [88]

A special rule applies in any case where, for a prior taxable year, net losses from a working interest in a property were treated by the taxpayer as not from a passive activity. In such a case, §469(c)(3)(B) provides that "any net income from such property (or any property the basis of which is determined in whole or in part by reference to the basis of such property) for any succeeding taxable year shall be treated as income of the taxpayer which is not from a passive activity."

Example: Taxpayer X claims nonpassive losses for a year with regard to a working interest in an oil property. After the property begins to generate net income, X transfers his working interest to an S corporation in which he is a shareholder. X's interest with regard to the oil property will continue to be treated as not passive.

The Senate Report cautions that "[u]nder some circumstances, deductions relating to a working interest may be subject to limitation under other provisions in the Internal Revenue Code. For example, protection against loss through nonrecourse financing, guarantees, stop-loss agreements or other similar arrangements, may cause certain deductions allocable to the taxpayer to be disallowed under §465. Such limitations are applied prior to and independently of the passive loss rule." [89]

E. Effective Date and Transition Rules

1. Effective Date

In general, the new limitations on losses and credits from passive activities apply to passive activity losses incurred in tax years beginning after 1986 and to passive activity credits attributable to property placed in service in those same years.[90] Under a special rule for carryovers, the new limitations do not apply to any loss, deduction or credit carried to a taxable year beginning after December 31, 1986, from a taxable year beginning before January 1, 1987.[91]

2. Transition Rule

a. General

Section 469(l) applies a special phase-in rule (for the regular tax but not the alternative minimum tax) in the case of any passive activity loss or credit for any taxable year beginning in calendar years 1987 through 1990 which is (i) attributable to a "pre-enactment interest" but (ii) not attributable to a carryforward to such taxable year of any loss or credit which was disallowed under §469 for a preceding taxable year. Under this phase-in rule, a percentage of losses from "pre-enactment interests" is made subject to the passive loss limitation in accordance with the following table:

Taxable Years Beginning In	Percentage of Losses Subject to Limitation
1987	35%
1988	60%
1989	80%
1990	90%

b. Pre-enactment Interests

Section 469(l)(3)(B)(i) defines "pre-enactment interest" as "any interest in a passive activity held by a taxpayer on the date of the enactment of the Tax Reform Act of 1986, and at all times thereafter."

Example: Assume Taxpayer X, who has interests in no other passive activities, bought a limited partnership interest in an apartment project on October 22, 1986 (the day of enactment). Assume, further, that X's net passive activity loss from the apartment project is $10,000 for his 1987 taxable year. X would be able to deduct, without limitation, $6,500 of the loss. The remaining $3,500 would be subject to the passive activity loss limitation.

Section 469(l)(3)(B)(ii) provides that a contractual obligation to purchase an interest in a passive activity that is binding on the date of enactment and at all times thereafter shall be treated as an acquisition of the interest in the activity. The Conference Report states that "[a] binding contract qualifies under this rule, even if the taxpayer's obligation to acquire an interest is subject to contingencies, so long as the contingencies are beyond the reasonable control of the taxpayer.[92]

The Conference Report clarifies that if investors contribute additional capital to an activity after October 22, 1986, their interests will still qualify for full relief under the phase-in to the extent that their percentage ownership interests do not change as a result of the contribution. However, if a taxpayer's ownership interest increases after October 22, 1986, then (except to the extent the increase arises pursuant to a pre-enactment binding contract or partnership agreement), the portion of his interest attributable to the increase will not qualify for phase-in relief.[93]

Section 469(l)(B)(iii) provides that, as a general matter, in order to qualify for transition relief, the interest acquired by a taxpayer must be in an activity which has commenced by October 22, 1986. For example, a rental activity commences when the rental property has been placed in service in the activity. The Conference Report provides in this regard that "[w]hen an entity in which the taxpayer owns an interest liquidates or disposes of one activity and commences another after the date of enactment, the new activity does not qualify for transition relief. In the case of property purchased for personal use but converted to business use (e.g., a home that the taxpayer converts to rental use), similar rules apply." [94]

Section 469(l)(B)(iii) further provides that in the case of an activity that has not commenced by October 22, 1986,

[88] *Id.*
[89] *Id.*
[90] Act §501(c)(1).
[91] Act §501(c)(2).
[92] Conference Report at II-148-49.
[93] *Id.* at II-149.
[94] *Id.*

phase-in relief nevertheless applies if the entity (or an individual owning the activity) has entered into a written binding contract in effect August 16, 1986 and all times thereafter, to acquire the assets used to conduct the activity. Likewise, phase-in relief applies in the case of self-constructed business property where construction of the property to be used in the activity has commenced on or before August 16, 1986.

c. Portion of Loss or Credit Eligible for Phase-in

The conferees understood that during the phase-in period, a taxpayer might own both pre-enactment and post-enactment interests in passive activities. Therefore, they provided clarification regarding the calculation of the amount of passive loss qualifying for the phase-in. Pursuant to §469(l)(3)(A), it is first necessary to determine the amount of passive loss that would be disallowed absent the phase-in. Phase-in relief then applies to the lesser of the taxpayer's total passive loss, or the passive loss taking into account only pre-enactment interests.

Example: Taxpayer X has $500 of passive loss relating to pre-enactment interests which would be disallowed in the absence of the phase-in rule. X also has $200 of net passive income from post-enactment interests. The total passive loss, therefore, is $300. Thus, the phase-in treatment applies to $300 (*i.e.* the lesser of $500 or $300). *See* Conference Report at II-149-150.

For purposes of this rule, the pre-enactment and post-enactment losses are calculated by including credits, in a deduction equivalent sense.

d. Passive Loss and Credit Carryforwards During Phase-in Period

Under the Conference Agreement, any passive loss that is disallowed for a taxable year during the phase-in period and carried forward is allowable in a subsequent year only to the extent that there is net passive income in the subsequent year (or there is a fully taxable disposition of the activity). Conference Report at II-150.

Example: Taxpayer S has a passive loss of $100 in 1987, $65 of which is allowed under the applicable phase-in percentage for the year and $35 of which is carried forward. Such $35 is not allowed in part in a subsequent year under the phase-in percentage applying for such year. If X has a passive loss of $35 in 1988, including the amount carried over from 1987, then no relief under the phase-in is provided. If X has a passive loss of $50 in 1988 (consisting of $35 from 1987 and $15 from 1988, all of which is attributable to pre-enactment interests), then $6 of losses (40% of the $15 arising in 1988) is allowed against active income under the phase-in rule. The $35 loss carryover from 1987 is disallowed in 1988 and is carried forward (along with the disallowed $9 from 1988) and allowed in any subsequent year in which the taxpayer has net passive income. *See* Conference Report at II-150.

e. Application to $25,000 Allowance

The applicable phase-in percentage for any transition year applies to the passive loss net of any portion of such loss that may be allowed against nonpassive income under the $25,000 loss allowance for active participants in rental real estate activities. Conference Report at II-150. In other words, the $25,000 exception is applied to the aggregate net passive losses before phase-in and not to the remaining nonutilized losses after the phase-in calculation.

f. Application of the Alternative Minimum Tax

Section 701 of the TRA 1986 revises the alternative minimum tax for individuals and corporations. With respect to individuals, Act §701 adds, *inter alia*, new Code §58(b) which provides that, in computing the alternative minimum taxable income of the taxpayer for the taxable year, §469 shall apply, except that * * * §469(l) (relating to the phase-in) shall not apply.

g. Qualified Low Income Housing Projects

Act §502 provides that any loss sustained by a "qualified investor" with respect to an interest in a "qualified low-income housing project" — a project constructed or acquired pursuant to pre-August 16, 1986 contracts — for any taxable year in the "relief period" shall not be treated as a loss from a passive activity for purposes of §469.

Although the phase-in of the disallowance of the passive loss limitation does not apply for alternative minimum tax purposes, it appears that the transition rule for qualified low-income housing is applicable. Under Act §502, a qualified investor's interest in a qualified low-income housing project for any taxable year in the relief period is not treated as a passive loss for purposes of §469. Accordingly, when new §58 states that §469 shall apply in computing the alternative minimum tax, losses from interests in the low-income housing projects described in Act §502 appear to be excluded from the alternative minimum tax calculation since they are not treated as §469 losses.

The legislative history to the Act is silent as to whether Congress intended to exclude losses with respect to interests in such low-income housing projects from the calculation of the alternative minimum tax. However, the fact that Congress expressly did not apply the phase-in of the passive loss limitation may be evidence that its failure to make similar provision for Act §502 was intentional.

III. Implications

A. The Established Developer versus the New, Inexperienced Developer

The enactment of the passive loss rule has shifted the focus of real estate investment from real estate as a tax shelter to real estate as a source of income. A prime example of income-oriented real estate is a fully-leased, nonresidential building whose tenants have entered long term (at least 10 years) leases at market rents. Under the passive loss rule, such a building will be particularly attractive to investors with heavy tax losses from previous passive investments made under pre-1986 TRA law which permitted such losses to be fully applied against one's income — whatever its source. If such investors could purchase an interest in the building, with a share of the rent stream, they could offset their tax losses from their other passive investments with the income derived from their interest in the building.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Two obvious questions arise: (1) who currently owns such buildings, and (2) why would such owners be interested in selling these buildings? As a rule, developers who have established reputations for building quality buildings will be better able to lease up their buildings than newer developers. Accordingly, with respect to the first question, income-oriented real estate generally will be owned by established developers in their own right or by limited partnerships with an established developer/general partner. Many such developers are C corporations which traditionally have sought to maximize income rather than tax losses from real estate projects they own.

Regardless of the form in which a developer participates in the ownership of an income-oriented building, a developer usually needs capital for future construction. Current law encourages the developer to borrow money to fund such construction, often using proceeds from refinancing the debt secured by an income-producing building. However, the passive loss rule, together with the broadened at-risk rule and investment interest limitation, discourage such borrowing. Thus, in answer to the second question, the developer may wish to sell interests in his building to raise capital.

If a developer sells interests in his building, in what form will they be marketed? One form of investment would be a limited partnership interest. The return to the limited partners would be the rent from the tenants. The price charged for such limited partnership interests will be a function of the anticipated return. The more financially secure the tenant, the greater the price for the limited partnership interest. In other words, the limited partnership interests could have ratings similar to those for REITs or collateralized mortgage obligations (CMOs). The advantage of the limited partnership structure over REITs or CMOs is its flexibility. Unlike a limited partnership, REITs and CMO trusts have little control over the management of the underlying real estate. Moreover, developers who currently participate in their buildings as general partners in limited partnerships would not have to change the form of ownership of such buildings. Instead they could simply restructure the existing partnerships to emphasize income, rather than loss, generation and to provide for allocation of most or all rental income to existing and incoming limited partners.

Thus, the passive loss rule could benefit the established developers but hinder the ability of newer developers to raise capital. Since the passage of the Economic Recovery Tax Act of 1981, the limited partnership real estate tax shelter has been a primary means of financing development. The lure of tax losses (interest and ACRS deductions) encouraged investment in such partnerships. New, often inexperienced developers, entered the real estate field by means of syndicating limited partnerships, resulting in gross overbuilding.

The passive loss rule takes dead aim at such developers. Under the rule, limited partners who purchased their interests with deferred purchase money notes will not be able to finance their installment payments with the tax savings arising from the application of losses generated by their investment against their incomes. Many limited partners will default on their notes. As a result, developers will be forced to sue these limited partners. While these suits are pending, the developers will lack a major source of capital. Moreover, they may never recover the full amount of the notes. When coupled with the inadequacy of rental income to service the debt on the buildings owned by these partnerships, this loss of capital could lead to foreclosure.

Of course, established developers are aware of the problems the newer developers will face under the passive loss rule. As noted above, many of these developers are C corporations who traditionally have undertaken income-oriented projects. These developers can use losses from troubled projects owned by the real estate tax shelter limited partnerships syndicated by the newer developers. Accordingly, they can be expected to be eager buyers of these projects. This point was not lost on the Finance Committee, which estimated that corporate taxes could decline by $12.7 billion as a result of the enactment of the passive loss rule.

B. The Developer Who Engages in Rental Activity and Sales Activity; Structuring Real Estate Ownership

Cognizant that real estate limited partnerships engaged in rental activity have been a primary source of tax avoidance, Congress determined that all rental activity should be treated as an intrinsically passive activity regardless of whether one materially participates in the rental activity. Critics of this aspect of the passive loss rule argue that by treating rental activity as passive *per se*, the Act unfairly penalizes taxpayers who engage in rental activity as part of their trade or business. Indeed, a good argument can be made that the material participation standard is strong enough to weed out taxpayers who invest in rental activity solely for tax avoidance purposes from those who engage in rental activity as part of their trade or business.

Regardless of the merits of these arguments, the passive loss rule itself suggests that taxpayers who engage in rental activity as part of their trade or business can avoid the rule by operating through a closely held C corporation. As mentioned earlier, a closely held C corporation (other than a personal service corporation) may offset active income with passive losses. Thus, a taxpayer who both sells and rents houses can offset the income from the sales of the houses with any excess losses from the rental activity, if he engages in such activities through a closely held corporation. Conversely, if a taxpayer engages in such activities in his individual capacity or through an S corporation, partnership or personal service corporation, he cannot apply the rental losses against sales income.

Therefore, a closely held C corporation may be the best manner in which to engage in rental activity as a trade or business if one has substantial active income from another trade or business. This is so despite the new corporate minimum tax. The minimum tax plan requires a corporation to compute its tax twice — once under the regular tax and once under the minimum tax — and pay whichever is higher. The minimum tax would be calculated at at a 20% rate, but would eliminate many of the tax losses allowed under the regular tax.

The only significant tax preference associated with rental real estate included in the minimum tax base, however, would be the so-called "alternative depreciation" de-

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

fined as straight-line depreciation over 40 years. In view of the fact that the Act already stretches the life of residential real estate to 27.5 years and nonresidential real estate to 31.5 years, with the cost of both types of property to be recovered using the straight-line method of depreciation, the additional tax resulting from the taxation of such "alternative depreciation" should not significantly reduce the amount of the offset of excess passive losses from rental activity against active income.

C. Intentionally Failing the Material Participation Standard

The strict definition of material participation opens up significant potential for arranging a taxpayer's business affairs such that the he will not materially participate in an activity that can generate substantial income to the taxpayer. For example, if a builder/developer owns a management company producing net income in which he does not materially participate, the income from the business will be passive and, therefore, eligible to be offset by other passive losses. Although Treasury has broad regulatory authority to limit the efficacy of this strategy, it would appear anomalous to make the material participation test very strict for activities generating losses but not so strict for activities generating income.

D. Dispositions Where Suspended Losses From Activity Exceed Potential Gain

In situations where the accumulated losses from a passive activity exceed the potential gain from its sale (particularly where the activity has declined in value) or where a major portion of the gain will have to be recognized in any event, taxpayers should dispose of their interest in the activity and claim the suspended losses. In this regard, taxpayers should make certain that they meet the criteria for a complete and fully taxable disposition. Otherwise, the accumulated losses may continue to be suspended and produce no current tax benefit.

E. The Regulations Caveat

No matter what planning advice is given with respect to the limitations on losses and credits from passive activities, one should remember that Congress gave Treasury extensive regulatory authority to preserve the underlying purpose of the limitations: to prevent the sheltering of positive income sources through the use of tax losses derived from passive business activities.

For another discussion of the new passive loss rules, *see* Madden, "The Passive Loss Rules: A New Day for Real Estate," 2 *Tax Mgmt. Real Est. J.* 264 (Dec. 1986).

Chapter 18

MODIFICATION OF INSTALLMENT SALES RULES *

Donald B. Reynolds, Jr., Esq.
Silverstein and Mullens
Washington, D.C.

I. New Restrictions on Installment Sales

A. Introduction

Under the 1954 Code, a taxpayer who disposed of certain types of property in exchange for the purchaser's obligation to make deferred payments (*i.e.*, an "installment obligation") generally recognized the gain on the disposition in the years in which the deferred payments were received. Following the enactment of the Installment Sales Revision Act of 1980, virtually all deferred payment sales qualified for the installment method of accounting. A taxpayer disposing of property in a transaction that qualified under the installment method, however, could always "elect out" of the installment method and recognize gain on the transaction in accordance with its regular accounting method.

Under the pre-TRA 1986 rules, the following three types of transactions qualified for the installment method:

(1) Regular sales or dispositions of personal property (*i.e.*, inventory) by a dealer on an installment plan or on certain revolving credit plans (§453A);

(2) Sales or other dispositions of real property where at least one payment is to be received in a year following the year of sale; and

(3) Casual sales or other dispositions of personal property (*i.e.*, non-inventory property) where at least one payment is to be received in a year following the year of sale.

Comment: Regs. §1.453-2(d)(1) defines a "revolving credit plan" to include cycle budget accounts, flexible budget accounts, continuous budget accounts, and other similar plans or arrangements for the sale of personal property where the customer agrees to pay each billing month a part of the outstanding balance on his account.

Under the installment method, the taxpayer reports gain as he receives the installment payments. Under §453(c), the gain recognized by the taxpayer is equal to: (1) the gross profit which the taxpayer recognizes on the entire sale divided by the total contract price; multiplied by (2) the payments received in that year. For purposes of computing the taxpayer's gain under this rule, payments are deemed to include cash, other property, marketable securities, assumptions of certain liabilities and evidences of indebtedness of the purchaser that are payable on demand or are readily tradeable. Thus, the installment method fulfilled its underlying legislative purpose by deferring tax on a seller's gain until the seller had sufficient liquidity or financial wherewithal to pay the liability.

Comment: For a detailed analysis of the the pre-TRA 1986 rules applicable to installment sales, *see* 48 T.M., *Installment Sales*.

Upon the disposition of an installment obligation, the seller recognizes gain or loss under §453B(a) equal to either (i) the difference between the amount realized and the basis of the obligation, in a case where the obligation is satisfied at other than face value or is sold or exchanged, or (ii) the difference between the fair market value of the obligation at the time of disposition and its basis, in the case of distribution, transmission or disposition other than by sale or exchange. The basis of an obligation is equal to the excess of its face value over the amount of income that would be recognized if the obligation were satisfied at its face amount. §453B(b).

A disposition of an installment obligation may arise in a variety of ways. For example, a disposition can arise when a corporation distributes an installment obligation to its shareholders. A number of cases also considered the question of whether a pledge of an installment obligation constituted a disposition.[1] In these decisions, the courts applied a facts and circumstances test to determine whether the pledge of an installment obligation as collateral for a loan should be treated as a disposition of the obligation. Basically, as long as the taxpayer retained sufficient economic benefits and burdens of ownership with respect to the installment obligation and the pledge of the installment obligation occurred in connection with a bona fide loan, the taxpayer had a good chance of establishing that the loan did not constitute a disposition.

Homebuilders and other real estate developers devised a financing technique known as "builder bonds," through which sellers of real estate were able to report their gain, for tax purposes, under the installment sales method and, at the same time, by pledging installment obligations, realize

* The author wishes to acknowledge the contribution of Joseph P. Giljum, who prepared the examples incorporated in Section I, C, 1, a. Mr. Giljum is the author of 48 T.M., *Installment Sales*.

[1] *See, e.g., United Surgical Steel Co. v. Comr.*, 54 T.C. 1215 (1970), acq., 1971-2 C.B. 3; *Town & Country Food Co., Inc. v. Comr.*, 51 T.C. 1049 (1969), acq., 1969-2 C.B. xxv.

a large portion of their sales price in cash immediately following the sales transactions. For example, in a simple case, a homebuilder could finance the sale of his inventory by accepting mortgage notes from the purchasers and then "cash out" a large portion of the principal amount of the notes by pledging them as security for a long-term loan from an independent lender. The IRS sanctioned this basic technique in a number of private letter rulings.[2]

After several earlier efforts by the Treasury to propose legislation which would preclude the use of builder bonds, the House of Representatives included in its version of H.R. 3838 a provision which would have severely restricted the ability of taxpayers to continue to report income under the installment method after pledging installment obligations. Basically, the House concluded that a taxpayer who pledged installment obligations was economically in the same position as a taxpayer who sold property for cash. Thus, the House believed that pledges of installment obligations ran contrary to the original purpose of the installment method [deferring the tax liability of a seller in a case where the seller did not have the wherewithal to pay its taxes because it received illiquid installment obligations in the sales transaction].

To correct this perceived incongruity, the House version of H.R. 3838 generally would have treated the pledge of an installment obligation as collateral for a loan as a disposition. Thus, the proceeds of the loan would have been treated as a payment on the underlying installment obligation, thereby giving rise to immediate gain.[3]

Whereas the House of Representatives focused on the specific issue of pledges of installment obligations, the Senate opted for a much broader revision of the installment method rules. First, the Senate determined that the installment sales method was inappropriate in the case of gains realized by dealers who sold inventory under a revolving credit plan. Moreover, the Senate took a similar view of sales of publicly-traded property and concluded that such sales should not be eligible for the installment method. Finally, the Senate indicated that with respect to sales of other business or rental property, the installment method should not be available "to the extent that the taxpayer has been able to receive cash from borrowings related to its installment obligations." [4] The Senate, however, adopted a more expansive view than the House in determining which loan proceeds of a taxpayer are "related" to its installment obligations. That is, the Senate concluded that debt other than debt secured by pledges of specific installment obligations should give rise to an acceleration of a taxpayer's gain that otherwise would be deferred under the installment method. In this regard, the Senate Report noted that:

> "The committee believes that the borrowings of a taxpayer generally are related to its installment obligations in one of two ways. In general, either the taxpayer would not undertake all or a portion of the borrowings but for its extending credit in connection with the sale of its property or the taxpayer's borrowing ability is enhanced by the presence of the installment obligation among the taxpayer's assets. The committee recognizes, however, that it is extremely difficult to determine with any precision the extent of the nexus between the taxpayer's borrowings and its installment obligations. Hence, the committee believes it appropriate to adopt a rule which assumes that the borrowings of the taxpayer may be allocated among the taxpayer's assets on a pro rata basis . . . .
>
> "The committee recognizes that arguments may be made that, in certain circumstances, a taxpayer's borrowings may appear to have no nexus whatsoever to its installment obligations, and that in other circumstances, a taxpayer's borrowings may appear to be so closely related to its installment obligations that the installment obligations could appropriately be treated as having been disposed of. Nevertheless, rather than making necessary the difficult and subjective inquiry regarding the nexus between the borrowings of a taxpayer and its installment obligations, the committee believes that imposing a limitation based on a pro rata allocation of the taxpayer's borrowings is an appropriate accommodation of competing concerns." [5] [Footnote omitted.]

In order to accomplish its objective of defining those borrowings of a taxpayer that are related to its installment obligations, the Senate adopted a complicated "proportionate disallowance rule" which treats a portion of the outstanding indebtedness of a taxpayer as a payment against the taxpayer's installment obligations. Thus, the Senate opted for a much more comprehensive revision of the installment sales method and enacted restrictions that will affect an extremely broad segment of taxpayers who utilize the installment method.

B. Overview

TRA 1986 significantly restricted the availability of the installment sales method of accounting. Specifically, the changes enacted in the Act preclude dealers in personal property from using the installment method with respect to sales under a revolving credit plan. Further, sales of publicly traded property are no longer eligible for the installment method. Finally, the Act included provisions limiting the availability of the installment method with respect to sales of real or personal property that constitutes inventory, as well as sales of business or rental real estate.

C. Detailed Analysis

1. Proportionate Disallowance Rule

As noted above, under pre-TRA 1986 law, a taxpayer could borrow against its installment obligations without adversely affecting its ability to report gain under the installment method, so long as the taxpayer did not pledge

[2] *See, e.g.*, PLR 8149041.

[3] Section 903 of the House version of H.R. 3838 would have added a new §453C entitled "Pledges, Etc., of Installment Obligations." It provided an exception from the disposition rule for pledges of obligations in connection with short-term loans payable within 90 days. The Bill also provided that loan proceeds would not be treated as a payment against an underlying installment obligation to the extent that a portion of the obligation was payable within 9 months of the date on which it arose. For a description of the House bill, see H.R. Rep. No. 426, 99th Cong., 1st Sess. 609-15 (1985).

[4] S. Rep. No. 313, 99th Cong., 2d Sess. 123 (1986) (hereafter cited as "Senate Report").

[5] Senate Report at 123-24.

the obligations as collateral in a manner that resulted in a "disposition." In contrast, under the new "proportionate disallowance rule," the existence of any outstanding borrowings by the taxpayer will give rise to a deemed payment with respect to a number of different types of installment obligations.

The proportionate disallowance rule limits the amount of a sale which qualifies for the installment method in the case of obligations arising out of (i) sales of personal property by dealers (*i.e.*, inventory) under the installment plan,[6] (ii) sales of real property by dealers,[7] and (iii) sales of real property used in the taxpayer's trade or business or held for the production of rental income, but only if the sales price for such property exceeds $150,000.[8]

Comment: TRA 1986 does not limit the use of the installment method with respect to obligations arising from an individual's sale of personal use property or property used or produced in the trade or business of farming.[9]

a. Allocable Installment Indebtedness

In order to apply the proportionate disallowance rule, a taxpayer must first determine the amount of its "allocable installment indebtedness" ("AII") for each taxable year. AII is treated as a payment, immediately before the close of the taxable year, on "applicable installment obligations" that arose during that taxable year and that are still outstanding at the end of the taxable year.[10] The effect of this rule is to treat a portion of the taxpayer's debt as a payment toward his installment obligations, thereby accelerating a portion of the gain that otherwise would have been deferred under the installment method.

In computing AII, one must first determine the "installment percentage," which is the face amount of the taxpayer's "applicable installment obligations" (defined below) outstanding at the end of the taxable year divided by the sum of (i) the face amount of its installment obligations outstanding at that time and (ii) the adjusted basis of all its other assets.[11] The installment percentage is multiplied by the taxpayer's average quarterly indebtedness for the taxable year; from that amount, subtract the AII attributable to applicable installment obligations arising in previous years, but still outstanding at the end of the current taxable year.[12] In making these calculations, individual taxpayers must exclude assets that are personal use property within the meaning of §1275(b)(3) (including installment obligations arising from the sale of such property) from the installment percentage; in calculating average quarterly indebtedness, individuals must exclude indebtedness substantially all the security for which is personal use property.[13]

"Applicable installment obligations" include any installment obligations held by the seller or a member of its affiliated group that arise from the sale, after February 28, 1986, of (i) personal property on the installment plan by a dealer in personal property or (ii) real property held by the taxpayer for sale to customers in the ordinary course of the taxpayer's trade or business.[14] The term also includes installment obligations that arise from the sale, after August 16, 1986, of real property used in the taxpayer's trade or business or held for the production of rental income, *provided that the selling price of the property exceeds $150,000.*

Comment: TRA 1986 authorizes the Treasury to issue regulations that require all (or any portion) of the taxpayer's applicable installment obligations to be aggregated as a single obligation. §453C(e)(3). It appears that Congress included this provision in §453C to prevent taxpayers from circumventing the $150,000 ceiling by fragmenting a sale into a number of smaller (but interdependent) transactions.[15] A similar rule is incorporated in §1274(c)(3)(A)(ii), which exempts from the original issue discount rules, sales of certain farms for less than $1,000,000.

New §453C(c)(1) provides that in each subsequent taxable year, the taxpayer is not required to recognize gain attributable to applicable installment obligations arising in any prior year to the extent that payments on the obligations do not exceed the AII attributable to such obligations. Payments in excess of the AII will be accounted for and taxed in accordance with the normal installment sales rules, *i.e.*, based on the gross profit percentage.

The basic rules for calculating AII may be illustrated perhaps more clearly in the following manner:

Step 1. Determine the face amount of those obligations (to which the proportionate disallowance rule applies) which are outstanding at the end of that year.

Step 2. Determine the face amount of *all* installment obligations (both those to which the proportionate disallowance rule applies as well as all other installment obligations) which are outstanding at the end of that year.

Step 3. Determine the adjusted basis of all assets of the taxpayer, other than installment obligations, held as of the end of that year.

Step 4. Determine the average quarterly indebtedness of the taxpayer for that year.

Step 5. Divide *Step 1* by the sum of *Step 2* and *Step 3.* [This is the installment percentage.]

Step 6. Multiply the result (quotient) determined in *Step 5* by the amount determined in *Step 4.*

Step 7. Subtract any AII that is attributable to applicable installment obligations arising in previous years that are outstanding at the end of the taxable year.

[6] §453C(e)(1)(A)(i)(I). Section 811 of TRA 1986 added a new §453C to Code, which sets forth the proportionate disallowance rule. Act §812 added a new §453(j) to deny the use of the installment method with respect to obligations arising from sales under a revolving credit plan or sales of readily traded property. In this chapter, all references to the provisions enacted by TRA 1986 are cited by reference to the new Code sections, as amended.

Example: Assume the following facts: The taxpayer has $100,000 in face amount of installment obligations (to which the proportionate disallowance rule is applicable) which are outstanding at the end of that taxable year (*Step 1*). The face amount of all installment obligations outstanding at the end of the taxable year amounts to $200,000 (*Step 2*). The adjusted basis of all other assets of the taxpayer amounts to $200,000 (*Step 3*). The average quarterly indebtedness of the taxpayer outstanding for the year amounts to $200,000 (*Step 4*). Divide $100,000 (*Step 1*) by $400,000 (the sum of *Step 2* and *Step 3* [$200,000 + $200,000]), which results in a quotient of ¼, or 25% (*Step 5*). The $200,000 average quarterly indebtedness of the taxpayer (*Step 4*) is then multiplied by the quotient (25%), the result being $50,000 (*Step 6*). Assuming that there was no AII in a previous year (*Step 7*), the amount treated as a payment as of the end of the taxable year is $50,000. The amount of gain, of course, would depend upon the gross profit ratio for such year.

Comment: In view of the limited exemption for sales of dealer and rental real estate (*i.e.*, sales of less than $150,000), the proportionate disallowance rule can be expected to have a significant impact on real estate transactions. This result is all the more likely given the traditional reliance of real estate purchasers on various forms of seller financing. Owners of real estate also may find that their tax planning under the new passive loss rules runs at cross purposes with the proportionate disallowance rule. For example, all other things being equal, a taxpayer might conclude that it is beneficial, under the passive loss rules, to convert inactive real estate into rent producing property that generates "passive" rental income that can be offset by other "passive" real estate losses. Such a conversion, however, would cause any installment obligations received by the owner on an ultimate sale to be subject to the proportionate disallowance rule since the property would constitute property held for the production of rental income under §453C(e)(1). Alternatively, if the real estate generated no rental income while owned by the taxpayer and was sold in a raw, undeveloped state, the taxpayer could argue that the property was not used in a trade or business or held for the production of rental income. Under this theory, any installment obligations received in a sale would not qualify as "applicable installment obligations," and the taxpayer might be able to avoid the consequences of the proportionate disallowance rule.

b. Outstanding Debt

As noted above, to calculate AII, a taxpayer must compute its average indebtedness for the year. Generally, the calculation is made on a quarterly basis.[16] However, if a taxpayer has no applicable installment obligations that arose from the regular sale of personal property on the installment plan or from sales of real property in the ordinary course of business, it will calculate its average annual indebtedness at the close of its taxable year, rather than on a quarterly basis.[17] In calculating its outstanding indebtedness, a taxpayer is to determine all indebtedness outstanding at the end of the measuring period, including accounts payable and accrued expenses, as well as other amounts more commonly considered as indebtedness, such as bank loans, bonds or indebtedness arising from the purchase of property.[18]

Taxpayers may have the ability to reduce the amount of debt immediately prior to the date on which it is calculated (whether on a quarterly or annual basis) by paying accrued expenses and "similar items" that would be included in the principal amount of outstanding debt under the principles described above. The Senate Report stipulates that any payments made in such circumstances in order to reduce outstanding indebtedness are to be ignored in making the calculation called for by §453C(b).[19]

Comment: The Senate Report only specifically refers to attempts by taxpayers to reduce their outstanding indebtedness through last minute payments of accrued expenses and "similar items"; it is unclear how similarly motivated repayments of loan principal will be viewed. (Taxpayers required to calculate their indebtedness on a quarterly basis would presumably have little opportunity for this type of manipulation.) In an analogous situation, Congress has acted to prevent year-end loan repayments from reducing an exempt organization's "acquisition indebtedness" for purposes of the tax on unrelated debt-financed income. Thus, under these rules, an exempt organization is required to calculate its acquisition indebtedness on a monthly basis. *See* §514(c)(7); Regs. §1.514(a)-1(a)(3). Since Congress failed to include this type of averaging mechanism to preclude year-end loan repayments, it can be argued that such repayments by taxpayers required to calculate their indebtedness under §453C(b)(4) should be respected for purposes of the proportionate disallowance rule.

In calculating the amount of a taxpayer's indebtedness, §453C incorporates the principles of §§483 and 1274.[20] Thus, if, under these provisions, a portion of the principal of a debt is recharacterized as interest because the debt fails to bear the appropriate interest rate, the reduced amount of principal will count as outstanding debt for purposes of the proportionate disallowance rules.

c. Special Rules Applicable to Affiliated Groups and other Related Parties

Under §453C(e)(2), all persons treated as a single employer under §52 shall be treated as one person for purposes of the proportionate disallowance rule. The section also authorizes the Treasury to issue regulations for the treatment of transactions between such persons. The legislative history of TRA 1986 indicates that, under these regulations, the related entities will be treated as a single taxpayer and each affiliated member is to be treated as having the assets and liabilities of every other member.[21] Indebtedness between members of the group, other than applicable installment obligations, will be disregarded, how-

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ever. Also, the adjusted basis of any asset transferred from one member of the group to another will be reduced by the amount of the gain which has not been recognized or otherwise has been deferred either under Regs. §1.1504-13 or because the gain was eligible to be reported on the installment method. The AII computed for the affiliated group is to be allocated pro rata to the applicable installment obligations of all of the group members without regard to the actual outstanding indebtedness of the particular members. The proportionate disallowance rule is then applied to accelerate an appropriate amount of the gain that would have otherwise been deferred with respect to the applicable installment obligations.[22] The effective date for these rules may be after the effective date of the TRA 1986 amendments but prior to the eventual issuance date of the regulations.[23]

Similarly, the Act grants the Treasury the authority to promulgate regulations disallowing the use of the installment method in whole or in part for transactions in which the effect of the proportionate disallowance rule would be avoided through the use of related parties, pass-through entities, and intermediaries.[24] The Conference Report indicates, for example, that the regulations should, in appropriate cases, aggregate the assets and liabilities of a partnership and its partners in determining the extent to which partners may report gain from the sale of partnership assets under the installment method. Moreover, in a case where a taxpayer sells his interest in a related party (*i.e.*, a partner sells his partnership interest), any installment obligations arising from the sale will be treated as applicable installment obligations to the extent that a sale of the underlying assets of the related party would give rise to applicable installment obligations.[25]

d. Alternative Minimum Tax

As enacted by §701 of TRA 1986, new §56(a)(6) provides that the installment method of accounting does not apply for purposes of the revised alternative minimum tax (for both individuals and corporations) as to (i) post-March 1, 1986, dealer dispositions and (ii) other dispositions subject to the proportionate disallowance rules (post-August 16, 1986 sales). Thus, for purposes of the revised alternative minimum tax, all gain realized on a disposition of the type described above is treated as reported in the year of disposition. In ensuing years when the deferred installment gain is reported for regular tax purposes, that gain is completely eliminated from alternative minimum taxable income.

The new alternative minimum tax provisions are analyzed in Chapters 32 and 33.

e. Timeshares and Residential Lots

Section 453C(e)(4) creates special exceptions to the disproportionate disallowance rule for certain sales of timeshare interests and unimproved residential lots. Dealers selling timeshares or unimproved lots in the ordinary course of their trade or business may elect to preclude the proportionate disallowance rule from applying to installment obligations arising from such sales. In the case of sales of lots, the election is available only where the land is sold in an unimproved condition and neither the seller nor an affiliate will subsequently develop it.[26] For these purposes, however, the installation of roads and sewers will not be treated as development or improvement activity.[27] In order for this election to be available with respect to sales of either lots or timeshare interests, the sale must be to an individual and the individual's installment obligation may not be guaranteed or insured by any third person other than an individual.[28] Thus, the existence of insurance covering the individual's obligation to pay the debt will preclude the obligation from qualifying for the election regardless of whether the insurance is provided by the Federal government or a private concern.[29]

Section 453C(e)(4)(A)(i)(I) defines a timeshare as the right to use a specified parcel of residential real estate for a period not exceeding six weeks per year.[30] Finally, in applying the six-week limitation described above, timeshare rights of certain relatives (spouse, child, grandchild, parent) are treated as being owned by the individual who finances his purchase with an installment obligation.[31]

If a taxpayer elects the special rule applicable to timeshares and unimproved residential lots, upon receiving payments due under the installment obligations, the taxpayer must pay interest to the Federal government, at a rate equal to the applicable Federal rate under §1274, on the tax deferred under the installment method. Such interest compounds semiannually and is payable over the life of an installment obligation as payments are received. Thus, upon receipt of a payment, the taxpayer must pay the interest accruing on the deferred tax liability attributable to that particular payment.[32]

f. Exception for Certain Sales by Manufacturers to Dealers

TRA 1986 provided one other exception from the proportionate disallowance rule for installment obligations arising from the sale of tangible personal property by a manufacturer (or one of its affiliates) to a dealer, provided that (i) the dealer is obligated to make payments of principal only when the dealer resells (or rents) the property, and (ii) the manufacturer has the right to repurchase the property at a fixed (or ascertainable) price following no more than nine months after the sale to the dealer.[33] Further, in order for the exception to apply, the aggregate face amount of the installment obligations from the sale of tangible personal property by the manufacturer to dealers (which meet the requirements described previously) must equal at least 50% of the total sales to dealers that give rise

to such receivables in both the current taxable year and the preceding taxable year (the "50% test").[34] The taxpayer will be treated as failing to meet the 50% test only if the taxpayer fails to meet the test for both the taxable year and the preceding taxable year.[35] The determination of the amount of the taxpayer's receivables is made using a weighted average on a monthly basis.[36] Obligations issued prior to the enactment of TRA will be considered to meet the requirements of the exception if the obligations are conformed to the requirements of the Act within 60 days of enactment.[37]

Obligations that qualify under the exception described above are not treated as applicable installment obligations.[38]

2. Revolving Credit Plans

TRA 1986 added §453(j) precluding the use of the installment method by taxpayers who sell property on a revolving credit plan. For these purposes, the Act incorporates the definition of "revolving credit plan" from Regs. §1.453-2(d).[39] All payments to be received with respect to sales under a revolving credit plan will be treated as received in the year of disposition. Thus, the effect of the repeal is to mandate the use of the accrual method of accounting for these sales.

3. Publicly-Traded Property

New §453(j) also denies the use of the installment method for sales of stock or securities that are traded on an established securities market and, to the extent provided in regulations, other property of a kind regularly traded on an established market. The Act effectively requires taxpayers to account for sales of these types of property under the accrual method, and all payments will be treated as received in the year of disposition.

The legislative history indicates that Congress determined that, as a matter of tax policy, sales of publicly-traded property should not be eligible for the installment method since the liquid nature of the property ensures that a taxpayer can always easily sell the property on the public market.[40] The committee reports, however, provide no guidance as to what types of property, other than stock or securities, should be ineligible for the installment method under the eventual regulations.

Comment: Under the pre-1986 TRA installment method rules, a seller's debt instruments that are "readily traded in an established securities market" are treated as a payment in the year of sale.[41] Presumably, the regulations implementing the TRA rules applicable to publicly-traded property will incorporate guidelines similar to those in Temp. Regs. §15A.453-1(e)(4) in defining the terms "readily traded" and "established market." According to the legislative history, where sales take place on an established market and cash settlement generally occurs several days after the trade date, both cash and accrual basis taxpayers will recognize gain or loss on the day the trade is executed and not on the day when settlement occurs.[42]

Congress also directed the Treasury to issue regulations preventing the avoidance of the above rules through the use of related parties or other intermediaries. For example, if a taxpayer sells his stock in a wholly owned corporation, the only assets of which are stock or securities that are traded on an established securities market, the taxpayer will not be able to use the installment method for reporting gain on the sale of stock. This rule, however, will not apply where the person selling the interest could not have caused the entity to sell its publicly-traded stocks or securities (*i.e.*, the seller is a non-controlling partner in a large partnership).[43]

4. Effective Dates

a. Disproportionate Disallowance Rule

The proportionate disallowance rule generally applies to taxable years ending after December 31, 1986, with respect to dispositions made after February 28, 1986.[44] A taxpayer must treat installment obligations arising from sales after February 28, 1986 but before the first taxable year ending after December 31, 1986 as having arisen during the first taxable year of the taxpayer beginning after December 31, 1986.[45] This rule generally will apply to calendar year taxpayers who hold installment obligations arising from 1986 sales that closed after February 28, 1986.

With respect to installment obligations arising from the sale of real property in the ordinary course of a trade or business, any gain from AII allocated to installment obligations that arise (or are deemed to arise) in the first taxable year ending after December 31, 1986 is taken into account ratably over the three taxable years beginning with such taxable year. For any installment obligation arising in the second taxable year of the taxpayer ending after December 31, 1986, the gain is taken into account ratably over the two taxable years beginning with that year. Notwithstanding, the rules relating to subsequent payments on applicable installment obligations shall apply to cases covered by this transition rule as though the proportionate disallowance rule was fully effective in the first taxable year ending after December 31, 1986.[46]

If an installment obligation arises from the sale of personal property in the ordinary course of a trade or business of the taxpayer, any increase in the taxpayer's tax liability for the first taxable year ending after December 31, 1986 on account of the proportionate disallowance rule is treated as being imposed ratably over the three taxable years beginning with such taxable year. Any increase in tax liability for the second taxable year of the taxpayer ending after December 31, 1986 on account of the proportionate

[34] Act §811(c)(2)(B)(i).

[37] *Id.*, Act §811(c)(2)(C).
[38] Act §811(c)(2)(D); Senate Report at 130.
[39] Conference Report at II-297. The regulation is described, *supra*, at I, A, 1.
[40] Senate Report at 124.
[41] *See* pre-1986 TRA §453(f)(4), (5).
[42] Senate Report at 131.
[43] Senate Report at 131.
[44] Act §811(c)(1).
[45] Conference Report at II-300.
[46] Act §811(c)(6); Conference Report at II-300.

disallowance rule (disregarding the ratable share of increase from the preceding taxable year) is treated as being imposed ratably over the two taxable years beginning with such taxable year. As in the case of the transition rule for dealer real estate, the rules relating to subsequent payments on applicable installment obligations apply as though the proportionate disallowance rule was fully effective for taxable years ending after December 31, 1986.[47]

For applicable installment obligations other than those arising from the sale of real or personal property in the ordinary course of the taxpayer's trade or business, the proportionate disallowance rule is effective for taxable years ending after December 31, 1986, *with respect to sales after August 16, 1986*. Sales after August 16, 1986 but before a taxpayer's first taxable year ending after December 31, 1986 are to be treated as arising in the first taxable year of the taxpayer ending after December 31, 1986. Conference Report at II-300.

b. Revolving Credit Plans

The elimination of the installment method for sales on revolving credit plans is effective for taxable years beginning after December 31, 1986.[48] Taxpayers who use the installment method for sales of property under revolving credit plans and must change their method of accounting may include the adjustment to income from ceasing to use the installment method over a period not exceeding four years. The percentage of the adjustment will be included in those four years beginning with the first taxable year beginning after December 31, 1986 as follows:[49]

Year 1	15%
Year 2	25%
Year 3	30%
Year 4	30%

c. Publicly-Traded Property

The repeal of the installment method for sales of publicly-traded property applies to taxable years beginning after December 31, 1986.[50]

II. The Impact of the General Utilities Repeal on Installment Sales Rules

A. Introduction

Before the enactment of TRA 1986, a corporation liquidating under §337 could distribute certain installment obligations to its shareholders without accelerating the gain deferred with respect to the obligations under the installment method. That is, under pre-1986 TRA §453(B)(d)(2), the distribution in liquidation would not be treated as a disposition of the installment obligations accelerating the remaining gain. Identical treatment was available under pre-1986 TRA §453(B)(d)(1) for distributions of installment obligations in connection with §332 liquidations.

In order to qualify for the special treatment described above in a §337 liquidation, the installment obligations distributed to the shareholders must have arisen from sales of the distributing corporation's assets occurring after the adoption of the plan of liquidation. Furthermore, if the obligations arose from the sale of the corporation's inventory, the sale was required to qualify as a bulk sale as defined in §337(b)(2) (as well as satisfy the requirement that it occur on or after the date of adoption of the plan). If these requirements were satisfied, the distribution of the installment obligations by the liquidating corporation would not constitute a disposition for purposes of §453, provided that the distribution occurred within the twelve-month liquidation period called for by §337. However, the liquidating corporation would recognize ordinary income to the extent that the various recapture provisions (*e.g.*, §§1245 and 1250) apply.[51]

Following the enactment of the Installment Sales Revision Act of 1980, it also became possible for shareholders who received a distribution of installment obligations satisfying the above rules effectively to "assume" the corporation's installment method treatment with respect to the obligations. That is, the shareholders were entitled to treat the receipt of the deferred payments under the obligations as a payment (when received) in respect of their stock (rather than being required to treat the receipt of the *installment obligations* as a payment in exchange for stock).[52]

As described in Chapter 36, Congress determined that virtually all distributions by liquidating corporations should trigger corporate-level tax. This so-called repeal of the *General Utilities* doctrine generally repealed §337. Chapter 36 also discusses the transition rules applicable to certain small, closely-held corporations. These corporations will continue to be eligible for the pre-TRA 1986 provisions of both §337 and the installment sales rules.

B. Detailed Analysis

Certain conforming amendments enacted by §631(e) of TRA 1986 amended the installment sales rules so as to implement the repeal of the *General Utilities* doctrine. Specifically, Act §631(e)(9) repeals the exception previously provided for distributions pursuant to §337 liquidations.[53] Thus, except in those cases covered by special transition rules, a liquidating distribution by a corporation of installment obligations arising from sales of its property (regardless of whether such sales occur before or after the adoption of the plan of liquidation) will constitute a disposition of the obligations and accelerate all gain that had theretofore been deferred under the installment method rules. Thus, the gain will be recognized by the liquidating corporation in the year of the distribution.

Because TRA 1986 continues to allow a parent to liquidate an 80% controlled subsidiary without triggering gain at the subsidiary level, §453B(2) continues to provide an exception from the disposition rules for installment obligations distributed pursuant to a §332 liquidation.

Thus, where an installment obligation is distributed in a §332 liquidation and the basis of such obligation in the hands of the parent corporation is determined under §334(b)(1), the subsidiary will not recognize gain on the distribution of the installment obligation.[54]

Notwithstanding the above amendments, shareholders receiving certain installment obligations in a §331 liquidation can continue to "assume" the installment method for purposes of reporting their gain on the distribution. Consequently, the shareholders receiving the installment obligations will treat subsequent payments under the obligations as payments in exchange for their shares.[55] To qualify for this provision, the distributed installment obligations must arise out of a sale or exchange by the distributing corporation of its assets during the 12-month period beginning on the date the plan of complete liquidation was adopted. Further, the liquidation must be completed within the 12-month period. If these conditions are satisfied, the distribution of the installment obligations generally will not constitute a payment to the distributee shareholder in exchange for his stock.

TRA 1986, however, carries over certain other restrictions from prior law. First, the deferral treatment available under §453(h) to shareholders who receive distributions of installment obligations is not available with respect to installment obligations arising from the sale of the distributing corporation's inventory other than inventory sold in a bulk sale.[56] As under prior law, §453(h)(1) defines a bulk sale as a sale of substantially all of the corporation's inventory to a single person. Further, as under pre-1986 TRA law, shareholder distributees cannot take advantage of §453(h)(1) where the obligor under the distributed installment obligation is related to the shareholder within the meaning of §1239(b) and the corporate property sold consists of depreciable property.[57]

The conforming amendments to the installment sales rules enacted by §631(e) of TRA 1986 incorporate the same effective dates and transitional rules as the broader amendments contained in §631. These rules, set forth in Act §633, are described in detail in Chapter 36.

III. Recognition of Section 751 Gain in an Installment Sale

Section 112 of the Tax Reform Act of 1984 amended §453(i) to provide that "recapture income" arising from an installment sale will be recognized in the year of disposition regardless of the amount of payments received by the seller in that year. Under the 1984 amendment, the seller's gain in excess of the recapture income continued to be recognized in accordance with the standard rules governing installment sales. The 1984 Act defined "recapture income" as the amount which would be treated as ordinary income under §1245 or §1250 in the year of the disposition if all payments payable pursuant to the terms of the sale were received in that first year.[58]

Comment: Before the 1984 Act, all gain recognized under the installment sales method was treated as ordinary income until the full amount of recapture income was reported by the seller. The ordinary income, however, was reportable in accordance with the installment method (*i.e.*, as payments were received by the seller). Thus, the 1984 Act mandated an acceleration of all recapture income in the year of disposition of the property regardless of whether the seller received payments in that year that would otherwise give rise to gain under the installment method.

The Technical Corrections included in Title XVIII of TRA 1986 amended §112 of the 1984 Act. Specifically, Act §1809(c) amended §453(i) to clarify that the depreciation recapture rules apply to an installment sale of a partnership interest. That is, TRA 1986 amended the definition of "recapture income" in §453(i)(2) to provide that the term includes not only the amount of ordinary income that would be recaptured under §1245 or §1250 upon a sale, but also the amount of ordinary income that would be recaptured under §751 by reason of §751 treating §1245 and §1250 recapture as an "unrealized receivable." The effect of the technical correction is to ensure that the recapture provisions of §453(i) cannot be avoided by selling a partnership interest in an entity that owns property subject to recapture.

The technical correction included in §1809(c) of TRA 1986 is effective as though it were included in section 112 of the 1984 Act.[59] Consequently, §453(i), as amended, generally applies to dispositions made after June 6, 1984, unless the disposition was made pursuant to a contract that was binding on March 22, 1984 and at all times thereafter.[60]

Chapter 19

NEW CAPITALIZATION RULES FOR DEALERS AND PRODUCERS

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The Act [1] adds new §263A to the Code [2] which changes the accounting treatment of costs for property produced by the taxpayer (inventory of manufacturers, self-constructed assets, and noninventory property produced for sale) and property held by a taxpayer for resale (inventory of retailers and wholesalers).

A. Pre-TRA 86 Law

Generally taxpayers which produce, purchase or sell property in the ordinary course of their business must accumulate the cost of that property in inventory and deduct it when the property is sold.[3] The purpose of maintaining inventories is to assure that the costs of producing or acquiring goods are matched with the revenues realized from their sale. This is accomplished by accumulating these costs when they are incurred and disallowing a current deduction until sold or only as consumed.

There are generally three types of taxpayers which have inventories — manufacturers, wholesalers, and retailers.

1. Purchasers of Goods for Resale

Wholesalers and retailers generally purchase the goods which they include in their inventories and include only direct acquisition costs in inventory. The inventory cost for retailers and wholesalers should include the invoice price of goods less trade or other discounts plus transportation and other necessary charges incurred in acquiring possession of the goods.[4] Cash discounts, approximating a fair interest rate, may or may not be deducted at the taxpayer's option, providing it follows a consistent practice. Costs in acquiring possession of goods may include brokerage or franchise service fees and handling charges.[5] Storage costs are generally not added to the costs of goods but are currently deducted by the taxpayer.[6]

2. Goods Manufactured for Inventory

Manufacturers may produce goods for their inventory, for sale to customers on special order, or for their own use. If a manufacturer produces goods for inventory, it must inventory all costs in accordance with the "full absorption" method prescribed in Regs. §1.471-11. These regulations require that all direct costs — materials forming an integral part of the product or consumed in the manufacturing process and labor directly involved in the fabrication of the product — be included in the cost of items in inventory. Direct labor costs include not only wages and salaries of production workers and supervisors, but also such items as vacation and holiday pay, payroll taxes, and payments to supplemental unemployment benefit plans paid or incurred on behalf of employees engaged in direct labor.[7]

Indirect costs are divided into three categories — those which must be included in inventory, those which the taxpayer can choose to include in inventory or currently deduct, and those which the taxpayer must include in inventory if it has included the costs in inventory for financial statement purposes. Costs which a taxpayer is required to inventory are repair expenses, maintenance, utilities (such as heat, power, and light), rent, indirect labor and production supervisory wages (including basic compensation, overtime pay, vacation and holiday pay, shift differential, payroll taxes, and contributions to a supplemental unemployment benefit plans), indirect materials and supplies, tools and equipment not capitalized, and costs of quality control and inspection to the extent such costs are incident to and necessary for production or manufacturing operations or processes.[8]

Costs which a taxpayer may currently deduct include marketing, advertising, selling, and other distribution expenses; research and experimental expenses, (including engineering and product development expenses); losses under §165; percentage depletion in excess of cost depletion; depreciation and amortization reported for Federal income tax purposes in excess of depreciation reported for financial statement purposes; income taxes attributable to income received on the sale of inventory; pension contributions to the extent they represent past service costs; general and administrative expenses incident to and necessary for the taxpayer's activities as a whole, rather than to production or manufacturing operations or processes; and salaries paid to officers attributable to the performance of services that are incident to and necessary for the taxpayer's activities as a whole, rather than to production or manufacturing operations.[9]

Costs for which capitalization depends on financial statement treatment include taxes otherwise allowable as a deduction under §164 (other than state, local, and foreign income taxes) attributable to assets incident to and neces-

sary for production or manufacturing operations; depreciation reported on financial statements and cost depletion on assets incident to and necessary for production; pension and profit-sharing contributions representing current service costs otherwise allowable as a deduction under §404, and other employee benefits incurred on behalf of labor incident to and necessary for production; costs attributable to rework labor, scrap, spoilage, and strikes that are incident to and necessary for production; factory administrative expenses (not including any cost of selling or any return of capital); salaries paid to officers attributable to services performed incident to and necessary for production; and insurance costs incident to and necessary for production; (*e.g.*, insurance on production machinery and equipment).[10]

If a taxpayer uses a method of accounting for financial reporting purposes that would not be allowable for federal income tax purposes (such as the "prime cost" method, which includes as inventory costs only direct costs), taxes otherwise allowable as a deduction under §164 (other than state, local and foreign income taxes), depreciation and amortization reported for financial statement purposes, production-related administrative costs, production-related officers' salaries, and production-related insurance costs must be taken into account in inventory. However, in these circumstances, employee benefit costs and costs attributable to strikes, rework labor, scrap, and spoilage need not be included in inventory costs.[11]

Indirect production costs required to be treated as inventory costs must be allocated to goods in a taxpayer's ending inventory using a method of allocation that fairly apportions such costs among the goods produced. The regulations authorize use of the standard cost method, the practical capacity method or the manufacturing burden rate method.[12] In general, the standard cost method assigns a predetermined rate (*e.g.*, $X per direct labor hour) for each element of product cost, including direct materials and labor and fixed and variable overhead. The manufacturing burden rate method is similar to the standard cost method but assigns predetermined rates only to overhead costs. The practical capacity method, which is one form of standard costing, determines the amount of fixed indirect production costs which must be allocated to inventory based on actual production and allows the deduction of those fixed indirect productions costs attributable to unused capacity.

3. Self-constructed Property and Non-inventory Goods Manufactured for Sale

If a manufacturer produces for itself goods that have a useful life which extends beyond the end of the taxable year, it is required to capitalize the direct materials and labor costs associated with that project.[13] Such "capital" expenditures become part of the basis of the acquired, constructed, or improved property. These costs may be recovered over the useful life of the property through depreciation or amortization deductions if the property is used in a business or investment activity and has a determinate useful life, and is therefore subject to an allowance for depreciation or amortization. Otherwise, such costs are recovered when the property is sold or otherwise disposed of. At the time of sale or other disposition, any unrecovered basis of the asset is offset against the amount realized in computing gain or loss.

Depreciation on property used in the construction for a project must also be capitalized.[14] The treatment of other indirect costs as capitalized costs or currently deductible expenses, however, is not clear. Some cases require that indirect costs attributable to a project be capitalized[15] while other cases only require the capitalization of incremental or variable indirect costs.[16] Under Treasury regulations, the use of "incremental" costing for indirect costs (in lieu of full absorption costing) is expressly proscribed in the case of inventories of manufacturers, but no such prohibition applies for self-constructed property. In some instances, the IRS has acknowledged the deductibility of certain indirect costs incurred during self-construction. In *Idaho Power*, for example, the Service conceded that the taxpayer was entitled to deduct payroll taxes incurred with respect to employees engaged in construction of the property.

4. Construction Period Interest and Taxes

Interest and taxes incurred during construction or improvement of real property (other than low income housing) to be used or held for sale in a trade or business must be capitalized and recovered upon the sale of the property or through amortization over a ten year period.[17] The construction period begins when the construction of the building or other improvements commences and ends on the date it is ready to be placed in service or held for sale. The amount of interest which must be capitalized is that portion of the total interest incurred during the construction period which could have been avoided if funds had not been expended for construction.[18]

5. Sales Taxes

Real and personal property taxes, sales taxes, and other state, local and foreign taxes paid or accrued in a taxable year in the carrying on of a business or investment activity are deductible for federal income tax purposes.[19] The restrictions in §189, discussed previously, and §263 (capital expenditures for buildings, or improvements or betterments made to increase the value of property) may limit those deductions.

B. Reasons for Change

Both Congressional tax-writing committees believed that the current rules regarding the capitalization of costs incurred in producing property were deficient. The existing

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

rules might allow costs that were in reality costs of producing, acquiring, or carrying property to be deducted currently, rather than capitalized as part of the basis of the property and recovered when the property was sold or as it was used by the taxpayer. This produced a mismatching of expenses and the related income and, in the opinion of the committees, an unwarranted deferral of taxes. Also, different capitalization rules might apply under current law depending on the nature of the property and its intended use. These differences might create distortions in the allocation of economic resources and the manner in which certain economic activity was organized.[20]

The committees further believed that, in order to more accurately reflect income and make the income tax system more neutral, a single, comprehensive set of rules should govern the capitalization of costs of producing, acquiring, and holding property, including interest expense, subject to appropriate exceptions where application of the rules might be unduly burdensome. The Senate Finance Committee believed that the treatment of taxes upon the sale or purchase of a capital asset used in a business or investment activity should be consistent with the treatment of other costs incurred in the disposition or acquisition of such assets.[21]

II. Overview

A. General Rule

The 1986 TRA directs the Treasury Department to prescribe a uniform set of capitalization rules applicable to all costs incurred in manufacturing or constructing property, and in purchasing and holding property for resale. These rules should be similar to those currently applied to extended period long-term contracts. Interest costs will be subject to capitalization if they are allocable to the construction of real property, or personal property that is long-lived property or requires an extended period to produce.

B. Expenses Other Than Interest

The Treasury Department is directed to prescribe regulations that will govern the inclusion in inventory or capital accounts of all costs, both direct and indirect (including taxes), which are (1) involved in the manufacture, construction, and other types of activity involving the production of real or tangible personal property, and (2) for large taxpayers, involved in the acquiring or holding for resale of inventory or other property acquired or held in the ordinary course of a trade or business. These rules will be similar to those currently applied to extended period long-term contracts. The rules do not modify existing treatment of the valuation of inventories on a basis other than cost (*e.g.*, lower of cost or market valuations for first-in, first-out (FIFO) inventories).

Property produced in a farming business (as defined in §2032A and which is not required to use the accrual method of accounting under §§447 or 448(a)(3)) where the preproductive period is less than two years is not subject to the uniform capitalization rules. There is also a special election out of the uniform capitalization rules for most farmers. The price which the electing farmer must pay is that its plants and animals will be treated as §1245 property and gain upon the sale of the plant or animal will be taxed as ordinary income to the extent of the deductions taken as a result of the election. The farmer (and related parties) must also depreciate all property predominately used in the farming business and placed in service in any taxable year in which the election is in effect, based on the new alternative depreciation method in §168(g).

The new rules prescribe in some detail the costs which taxpayers who acquire property for resale (generally retailers and wholesalers) must allocate to inventory. Retailers and wholesalers will not be subject to the more stringent capitalization rules if their average annual gross receipts for the three preceding taxable years are $10,000,000 or less. The Treasury Department should prescribe elective rules for simplified uniform capitalization rules for retailers and wholesalers and include extensive examples on which taxpayers may rely prior to the issuance of regulations.

There will be no allocation of general and administrative costs resulting from research and experimental expenditures under §174 or of development and other costs of oil and gas wells or mineral property which qualify under §§263(c) and 616(a).

C. Interest Capitalization

Interest on debt is not treated as a cost allocable to inventory or items produced by the taxpayer. However, interest paid or incurred during the production period must be capitalized (1) for indebtedness directly attributable to production expenditures with respect to real or tangible personal property produced by a taxpayer, or (2) for indebtedness that could have been reduced if production expenditures had not been incurred. Also, interest on indebtedness incurred or continued in connection with property used to produce property to which new §263A(f) applies will also be subject to this limitation. Those production expenditures which are covered by this section include expenditures for property which (1) has an estimated production period exceeding two years, (2) has an estimated production period exceeding one year if its cost exceeds $1,000,000, or (3) is real property, or personal property with a class life of 20 years or more (*i.e.*, 15- and 20-year property). The production period begins when construction or production commences and ends when the property is ready to be placed in service or is ready to be held for sale. The determination of whether interest is incurred or continued for the production of property should be similar to the rules under current §189, which is repealed.

D. Sales and Transfer Tax Capitalization

As part of the repeal of the current deduction for state and local sales taxes, the 1986 TRA provides that any tax (other than certain property and income taxes) imposed upon the acquisition or disposition of property shall be treated as part of the acquisition cost or a reduction in the proceeds received upon the property's disposition.

E. Effective Date

In general the uniform capitalization rules are effective for costs and interest paid or incurred after December 31,

[20] House Committee on Ways and Means, Tax Reform Act of 1985, H.R. Rep. 99-426, 99th Cong., 1st Sess. at 625 (Dec. 7, 1985) (hereinafter referred to as the "House Report"); Senate Committee on Finance, Tax Reform Act of 1986, S. Rep. 99-313, 99th Cong., 2nd Sess. at 140 (May 29, 1986) (hereinafter referred to as the "Senate Report").

[21] Senate Report at 57.

1986. However, there is an exception for self-constructed assets with respect to which substantial construction had occurred prior to March 1, 1986. Such assets will remain subject to the current tax accounting rules.

Taxpayers who use inventories are required to restate their inventory balances as of the beginning of the first taxable year beginning after December 31, 1986. In effect, beginning inventory must be revalued to reflect the greater deferral of production costs under the new rules. The increase in the inventory value resulting from this change, *i.e.*, the §481 adjustment, will be spread over the period which the taxpayer has used inventories or four years, whichever is less. The timing for inclusion of the §481 adjustment in income will be governed by Rev. Proc. 84-74. Any positive §481 adjustment will be allowed to offset net operating loss and tax credit carryforwards, and that for purposes of determining estimated tax payments, the adjustment will be recognized ratably throughout the year.

III. Detailed Analysis

The Act prescribes a uniform set of capitalization rules applicable to all costs incurred in manufacturing or constructing property, and in purchasing and holding property for resale. In addition, interest costs will be subject to capitalization if they are allocable to the construction of real property or personal property that is long-lived property to be used by the taxpayer or requires an extended period to produce.

A. Uniform Capitalization Rules

1. Basic Changes

The Treasury Department is directed to prescribe regulations that will govern the inclusion in inventory or capital accounts of all costs, both direct and indirect (including taxes), involved in manufacturing, construction, and other types of activity of real or personal property and, for certain large taxpayers, are involved in the acquiring or holding for resale of inventory or other property in the ordinary course of a trade or business.[22] The rules will apply to all real and tangible assets and those intangible assets which are acquired for resale.[23] Intangible assets which are produced by a taxpayer are not subject to the uniform capitalization rules. The rules do not modify existing treatment of the valuation of inventories on a basis other than cost (*e.g.*, valuation of inventories at market by a taxpayer using the lower of cost or market method, or valuation of security inventories at market).[24] However, the Conference Report states that the rules will apply to inventories valued at cost by a taxpayer using the lower of cost or market method. Property produced by a taxpayer for use other than in a trade or business or activity engaged in for profit also will be exempt from these rules.[25]

The new capitalization rules are not intended to modify present law governing the determination of whether an expenditure results in a separate and distinct asset that has a useful life substantially beyond the taxable year.[26] The rules merely prescribe those costs associated with a capital asset that must be included in its basis or otherwise capitalized. The standard which the Treasury is to use in determining which indirect costs should be capitalized are those rules applicable to extended period long-term contracts, set forth in Regs. §1.451-3.[27] The rules are also not intended to change the deductibility of costs that are properly treated as repair costs under current law and that do not relate to the manufacture, remanufacture, or production of property.[28] Also, "cushion gas," the gas necessary to maintain operating pressure in an underground gas storage facility sufficient to meet peak customer demand, as well as some portion of the "emergency reserve" gas, will not be allocated to overhead or other indirect costs under the uniform capitalization rules.[29]

Contributions to a qualified pension, profit-sharing, or stock bonus plan and other employee benefit expenses are considered indirect costs which must be capitalized as any other indirect cost unless the contribution relates to past service costs.[30] The determination of whether a contribution to a qualified plan relates to past services does not depend on the allocation between "normal cost" and "past service costs" required under the minimum funding standard of §412 or the plan's benefit formula. The determination may be based in part on any actuarial funding methods that may be used by qualified defined benefit plans.[31] The allocation of costs of qualified plans will be made after determination of any applicable limitations on deductions for federal income tax purposes. In other words, a taxpayer may not allocate employee benefit costs which are not otherwise currently deductible (for example, because of the limits in §404) to inventory or to a capital account while deducting the full amount of deductible employee benefit expenses as a current expense.[32]

The regulations are expected to be patterned after the rules currently applicable to extended period long-term contracts.[33] Thus, manufacturers which were not subject to the extended period long-term contract rules must now capitalize warehousing of finished goods, depreciation or

[22] §263A(a), (b), and (h).

[23] *Id.* Under §263A(b), tangible property includes films, sound recordings, video tapes, books, and other similar property embodying words, ideas, concepts, images, or sounds, by the creator thereof. Thus, these rules will apply to the production of a motion picture or writing of a book and will supercede the provisions of repealed §280 of the 1954 Code. Act §803(b)(2)(A). No inference is intended as to the nature of these properties under present law or for other provisions of the Act. Committee of Conference, Tax Reform Act of 1986, Conference Report to Accompany H.R. 3838, H. Rep. 99-841, 99th Cong. 2d Sess. II-308 (hereinafter referred to as the "Conference Report").

[31] Senate Report at 142-3.

[32] *See* Senate Report at 143.

[33] Senate Report at 141. The House Report stated that the rules would be patterned after rules in current law applicable to extended period long-term contracts as well as the full absorption rules. House Report at 626 (note 42). The Conference Report indicates that it basically follows the Senate Amendment to H.R. 3838, and so it appears that more reliance should be placed on the extended period long-term contract rules than on the full absorption regulations in determining possible provisions prior to issuance of temporary regulations.

depletion for tax purposes (not just financial accounting purposes), rework, scrap, spoilage, current service costs of pension and profit sharing plans, and direct and indirect service support functions.

Comment: Taxpayers might consider requesting the permission of the IRS to change to an inventory method which allows more current deduction of costs. Such a method might be the practical capacity method which allows a deduction for that portion of fixed indirect costs which are attributed to unused capacity.

Since the extended-period long-term contract regulations deal primarily with production involving contracts, the Treasury Department is given the flexibility to adapt the rules to production which does not involve contracts.[34] Thus, taxpayers will be required to defer deduction of indirect costs that benefit assets produced or acquired for resale. The regulations are to provide the same flexibility for allocations which is allowed for indirect costs allocable to extended period long-term contracts.[35]

For example, retailers and wholesalers should now be required to inventory costs incident to purchasing inventory (*e.g.*, wages or salaries of employees responsible for purchasing), costs for repackaging and assembling goods, costs of processing goods while in the taxpayer's possession, costs of storing goods (including rent or depreciation, insurance and taxes attributable to a warehouse and wages of warehouse personnel),[36] and general and administrative costs allocable to these functions. For retailers, only offsite storage costs (*i.e.*, a facility distinct from the facility wherein the taxpayer conducts his business) will be included in inventory; the cost of the facility where the retailer conducts its retail sales will continue to be currently deductible.[37]

There will be no allocation of general and administrative costs resulting from research and experimental expenditures under §174 or the development and other costs of oil and gas wells or mineral property which qualify under §§263(c), 616(a), or 617(a).[38] As in the long-term contract rules, selling, marketing, advertising and distribution expenses are not subject to the uniform capitalization rules.[39] The new capitalization rules under §263A do not apply, however, to contracts to which the long-term contract rules apply.[40] Unlike the Senate bill, the Act provides that depreciation for assets purchased prior to the effective date will be capitalized or added to inventory for the tax years in which the Act is effective.[41]

2. Exception for Certain Farm Property

a. General Rule

Property produced in a farming business (as defined in §2032A and which is not used by a taxpayer required to use the accrual method of accounting under §§447 or 448(a)(3)) where the preproductive period is less than two years is not subject to the new capitalization rules.[42] A farming business is the trade or business of farming and includes the operation of a nursery or sod farm, and the raising or harvesting of trees bearing fruit, nuts or other crops or ornamental trees (but excluding evergreen trees which are more than six years old at the time they are severed from their roots).[43] If plants bearing an edible crop for human consumption are lost or damaged (while in the hands of the taxpayer) from freezing temperatures, disease, drought, pests, or casualty, the capitalization rules do not apply to the costs of replanting the plants bearing the same type of crop on the same parcel of land or another parcel (for the same amount of acreage) in the United States.[44] It appears that this exception is available to farmers who are required to use the accrual method of accounting.

Even if the capitalization rules apply to farming property, the House Committee Report indicates that farmers and ranchers may determine the costs required to be capitalized by using a method similar to one of the simplified inventory valuation methods of current law (*e.g.*, the farm price or unit-livestock-price method), in lieu of capitalizing actual costs.[45]

Comment: It appears that corporations, partnerships and tax shelters required to use the accrual method under §§447 or 448(a)(3) should still qualify to use one of these simplified methods for determining costs to be capitalized or inventoried since there appears no prohibition on using a simplified method for determining capitalized or inventoried costs under the accrual method prescribed by these sections.

b. Preproductive Period

The preproductive period of plants is deemed to begin when the plant or seed is first planted or acquired by the taxpayer and end when the plant becomes productive or sold. The preproductive period of animals begins at the time of acquisition, breeding or embryo implantation, and ends when the animal is ready to perform its intended function. For example, the productive period of a cow used for breeding ends when the first cow is dropped.[46] The preproductive period in the case of a plant or animal that will have more than one yield is the period before the first marketable crop or yield of the plant or animal. In the case of any other plant or animal, it will be the period before the plant or animal is reasonably expected to be disposed of.[47]

[34] Senate Report at 142. See also the simplified rules for retailers and wholesalers discussed below.

[35] Senate Report at 142. *See* Regs. §1.471-11(d)(6)(ii).

[36] The Finance Committee specifically stated that storage costs incurred by a manufacturer following completion, or substantial completion, of the manufacturing process will be subject to the capitalization rules and this provision overrules *Heaven Hill Distilleries, Inc. v. U.S.*, 476 F.2d 1327 (Ct. Cl. 1973) and *Van Pickerill & Sons, Inc. v. U.S.*, 445 F.2d 918 (7th Cir. 1971) though it contains no inference as to the validity of those cases under current law. Senate Report at 142 (note 40).

[42] §263A(d)(1).

[43] Pre-1986 TRA law is retained for the preproductive expenses of growing timber and the above described ornamental trees (*e.g.*, Christmas trees). In addition, pre-TRA 86 law is retained with regard to which costs of growing timber are deductible in the year incurred and which costs must be capitalized. Conference Report at II-304-5.

[44] §263A(d)(2)(A). *See* §278(c) of the 1954 Code, repealed by Act §803(b)(6).

[45] §263A(e)(5). House Report at 629. *See* Regs. §1.471-6.

[46] House Report at 628.

[47] §263A(e)(3)(A). The House Report, p. 628, indicates that animals held for slaughter should not be subject to the uniform capitalization rules.

The use of any supply produced in a farming business by that farming business is treated as a disposition. The preproductive period for commercially grown plants in the United States shall be the nationwide weighted average preproductive period for such plants. The House Ways and Means Committee indicated that the Treasury Department is to periodically publish a list of preproductive periods for various plants produced in the United States in commercial quantities.[48]

B. Election out of Uniform Capitalization Rules for Covered Farmers

There is also a special irrevocable election out of the uniform capitalization rules and interest capitalization rules for all farmers other than those required to use the accrual method of accounting under §§447 or 448(a)(3) and growers of pistachio trees.[49] The election is also not available for costs incurred by citrus and almond grove growers before the close of the fourth taxable year beginning with the year in which the trees were planted.[50]

The price which electing farmers must pay is that their plants and animals are treated as §1245 property and gain upon the sale of a plant or animal will be taxed as ordinary income to the extent of the deductions taken as a result of the election.[51] Electing farmers and ranchers should be allowed to estimate the amount of preproductive period expenses subject to recapture under one of the simplified methods permitted to accrual method farmers under current law as non-electing farmers are allowed to use such methods for estimating expenses which are to be capitalized.[52]

The farmer (and parties related to him) must also depreciate all property predominately used in the farming business and placed in service in any taxable year in which the election is in effect based on the alternative depreciation method in Code §168(g). That method allows only straight line depreciation over the class life of most property, over 12 years for personal property with no class life, and over 40 years for real property.[53] Related parties include family members (spouse and minor children), corporations owned 50% or more by the taxpayer and members of his family, corporations in the same controlled group as described in §1563(a)(1), and partnerships owned 50% or more by the taxpayer and members of his family.

Comment: As a result of this provision and the irrevocability of the election, farmers who consider this election should be careful to determine if an election under §263A(d)(3) may adversely affect the depreciation of any related parties.

The election may be made only for the first taxable years which begins after December 31, 1986 and during which the taxpayer is a farmer.[54]

[48] House Report at 628.
[49] §263A(d)(3).
[50] If a citrus or almond grove is planted in more than one taxable year, the portion of the grove planted in any one taxable year is treated as a separate grove for purposes of determining the year of planting. House Report at 629. This provision replaces 1954 Code §278, repealed by Act §803(b)(6).
[51] §263A(e)(1).
[52] House Report at 630. *See* Regs. §1.471-6.
[53] §263A(e)(2).
[54] §263A(d)(3)(D).

1. Exception for Small Retailers and Wholesalers

Taxpayers who acquire property for resale (generally retailers and wholesalers) will not be subject to the more stringent allocation rules if their average annual gross receipts for the three preceding taxable years are $10,000,000 or less.[55] Aggregation rules similar to those in §448(c)(2) and (3) will apply to assure that related entities are treated as one taxpayer for purposes of determining qualification for this exemption.

Comment: Definitions which are developed in connection with §448(c) will probably be helpful in determining the definitions of provisions in this section.

2. Simplified Capitalization Method for Retailers and Wholesalers

The Conference Report directs the Treasury to prescribe elective rules for simplified uniform capitalization rules for taxpayers which acquire property for resale.[56] There is no current information on the manner in which this election is made. If a taxpayer acquiring property for resale does not elect this simplified method, it must apply the new uniform capitalization rules to that property under the same procedures and methods applicable to manufacturers. The Treasury Department is allowed to prescribe other methods of applying the uniform capitalization rules to taxpayers acquiring property for resale. Once the taxpayer has chosen the simplified method or method applicable to manufacturers, it must obtain the permission of the IRS to change its election.[57] The method applies not only to the taxpayer's operations in all succeeding taxable years, but also in the restatement of its beginning inventory balance on its first taxable year beginning after December 31, 1986.[58]

The Conference Report (II-305) states that the simplified method provided under Treasury's rules and regulations should generally follow the examples described in the Report (discussed below), and that, until rules or regulations are issued, taxpayers may rely on these examples.

The initial calculation of inventory for this elective simplified method will be without regard to the new capitalization rules. Taxpayers will then add an amount calculated in accordance with the simplified rules to the amount of ending inventory calculated under the old rules. For taxpayers using the last-in, first-out (LIFO) method, they will first determine their ending LIFO inventory without regard to the new inventory rules, and will then add the additional costs determined under the simplified method to their existing LIFO layers. Similarly, taxpayers using the first-in, first-out (FIFO) method which do not sell their entire beginning inventory must add a proportionate part of costs previously added under the simplified rules to the amount of beginning inventory in the ending inventory. The simplified method will be applied to each separate trade or business of a taxpayer.

Comment: By retaining the old capitalization rules in this situation for purposes of the new rules, Congress, and the regulations which the Treasury Department will eventu-

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ally release, may greatly complicate the tax accounting of retailers and wholesalers which must determine if this simplified method is beneficial.

The Conference Report (II-306), provides four categories of costs will be allocable to inventory under the simplified rules:

(a) offsite storage and warehousing costs of a facility whose primary function is the storage or warehousing of goods (including rent or depreciation attributable to a warehouse, property taxes, insurance premiums, security costs and other costs directly identifiable with the storage facility);

(b) purchasing costs, such as buyer's wages or salaries;

(c) handling, processing, assembly, repacking and similar costs including labor costs attributable to unloading goods (but not including labor costs attributable to loading of goods for final shipment to customers, or labor at a retail facility); and

(d) the portion of general and administrative costs allocable to these functions.

Storage costs will be allocated to ending inventory based on the ratio of total storage costs for the year to the sum of (1) the beginning inventory balance and (2) gross purchases during the year. If a taxpayer has $2,000,000 of beginning inventory, $8,000,000 of purchases during the year and storage costs of $1,000,000 for the year, 10%of the value of ending inventory will be added to ending inventory for storage costs ($1,000,000 ÷ ($2,000,000 + $8,000,000)). Accordingly, if the taxpayer's ending inventory is $3,000,000, then $300,000 will be added to ending inventory to account for storage costs; the remaining $700,000 of storage costs will be deducted as part of cost of sales. For a LIFO basis taxpayer, an addition for storage costs would only be made if there was an increase in ending inventory over beginning inventory. If there were an increase in ending inventory of $1,000,000 in the current period, then, based on the preceding example, $100,000 of cost (.10 × $1,000,000) would be added to the LIFO layer for the current year.

Purchasing costs are allocated between inventory costs and costs of goods sold based on the ratio of purchasing costs to gross purchases. Using the example in the prior paragraph, if the taxpayer incurred $500,000 of purchasing costs, its purchasing cost allocation factor would be 6.25% ($500,000 ÷ $8,000,000). Thus, in the case of the FIFO basis taxpayer above, $187,500 (.0625 × $3,000,000) of purchasing costs would be allocated to ending inventory and the remaining amount would be added to costs of sales and currently deducted. The LIFO basis taxpayer above would add $62,500 (.0625 × $1,000,000) to the LIFO layer for the increase in inventory in the current year.

Processing, repackaging and other similar costs are allocated based on the ratio of total processing, repacking and similar costs to the sum of (1) the beginning inventory balance, and (2) gross purchases during the year. This is the same calculation as required for allocation of storage costs described above. The Conference Report indicates that in allocating labor costs between inventoriable and noninventoriable functions, the taxpayer may use any reasonable method. It did not intend that detailed records establishing the amount of time spent by an employee on a particular function would be required to substantiate the allocation. If records, however, were available, they should be used in making the allocation.[59]

General and administrative expenses that are allocable in part to storage, purchasing and processing activities and in part to activities for which no capitalization is required are allocated based on the ratio of direct labor costs incurred in a particular function to gross payroll costs. Using the examples contained in the prior paragraphs concerning this subject, allocation would be required for the taxpayer's accounting department costs of $75,000 to the storage, and purchasing costs. Of the total costs for these functions, direct labor payroll represents $250,000, and $500,000, respectively, and gross payroll is $1,500,000 for the tax year. The apportionment of accounting costs to the storage function will be $12,500 ($75,000 × ($250,000 ÷ $1,500,000)) and to the purchasing function would be $25,000 ($75,000 × ($500,000 ÷ $1,500,000)).

3. Interest Capitalization

Interest on debt is not treated as a cost allocable to inventory or items produced by the taxpayer under the uniform capitalization rules discussed above. However, interest paid or incurred during the production period must be capitalized for indebtedness directly attributable to production expenditures with respect to real or tangible personal property produced by a taxpayer, or for indebtedness that could have been reduced if production expenditures had not been incurred.[60] Also, interest on indebtedness incurred or continued in connection with property used to produce property to which §263A(f) applies will be subject to this limitation.[61]

The production expenditures which are covered by this section are those for property which have (1) an estimated production period exceeding two years, (2) an estimated production period exceeding one year if its cost exceeds $1,000,000, or (3) real property or property with a class life of 20 years or more (as determined in §168).[62] The interest capitalization rules do not apply to a residence constructed by the taxpayer.[63]

The production period begins when construction or production commences and ends when the property is ready to be placed in service or is ready to be held for sale.[64] The

[59] Conference Report at II-306, note 5.

[60] §263A(f)(1) and (2). Production expenditures include cumulative production costs (including previously capitalized interest) required to be capitalized. Senate Report at 144 (note 44).

[61] §263A(f)(3). This is true even if the cost of that asset is not fully reflected in inventory or cost of sales. If the asset is partially used for production and partially for other purposes, only the portion of interest allocable to production must be capitalized. Senate Report at 144.

[62] §263A(f)(1) and (4)(A). The Act does not consider that certain property produced by taxpayers may have class lives both above and below the 20 year threshold depending on its use by the purchaser. Staff on the Senate Finance Committee have indicated that if the taxpayer knows of the intended use of the property, it will classify the property based on that knowledge. If the property is produced for inventory, the taxpayer should determine how its inventory is used and capitalize interest based on that portion of inventory which will have a class life of 20 years or more. This seems extremely complicated and taxpayers may be well advised to await further clarification of this problem in regulations.

[63] §263A(f)(2)(b).

[64] §263A(f)(4)(B). Planning and design activities do not generally cause the production period to begin, however, the production period will include

determination of whether interest is incurred or continued for the production of property should be similar to the rules under current §189 (which have yet to be issued in regulations).[65] Taxpayers which produce property under a long-term contract must capitalize interest costs to the extent that income is not reported under the percentage of completion method.[66]

Debt that can be specifically traced to construction or production expenditures for property is first allocated to that property. If construction or production expenditures exceed the amount of that debt, then interest on other debt of the taxpayer will be attributed to such construction or production.[67] The assumed rate of interest which cannot be deducted will be calculated at the average rate of interest on the taxpayer's outstanding debt (excluding debt specifically traceable to production or construction expenditures). This method of allocating interest must be used even though Financial Accounting Standards Board Statement 34 or a regulatory authority for a utility may not allow this method for financial or regulatory accounting purposes.[68] The regulations will be drafted to preclude avoiding this allocation through the use of related parties.[69]

Example: If a debt-free wholly-owned subsidiary constructs property subject to §263A(f), then a portion of any debt of the parent will be subject to the restriction on deduction.

For flow-through entities (partnerships, S corporations and trusts), the rules are applied first at the level of the entity constructing the property and then at the owner level to the extent that the flow-through entity does not have sufficient debt to support the production or construction expenditures.[70] If construction is for a particular customer who makes progress or advance payments, the customer is treated as constructing the asset. Thus interest payments attributable to the payments to the contractor are subject to the interest deduction restriction.[71] The contractor will still be subject to the interest deduction restriction to the extent progress or advance payments do not cover the accumulated contract costs.[72]

4. *Property Purchase and Disposition Tax Capitalization*

As part of the repeal of the current individual deduction for state and local sales taxes, the 1986 TRA provides that any taxes (other than state, local and foreign real property, personal property, income, war profits, and excess profits taxes and the windfall profit tax in §4986) imposed upon the acquisition or disposition of property shall be treated as part of the acquisition cost or a reduction in the proceeds received upon the property's disposition.[73] Accordingly, sales taxes will now be capitalized as part of the cost of goods sold in the business of a taxpayer, and real property transfer taxes will be added to the basis of a purchaser and will reduce the gain of a seller.

C. *Effective Dates and Transition Rules*

In general, the uniform capitalization rules are effective for costs and interest paid or incurred after December 31, 1986, in taxable years ending after that date.[74] However, there is an exception for self-constructed assets with respect to which substantial construction had occurred prior to March 1, 1986.[75] Costs and interest of such assets will remain subject to the current tax accounting rules. The change in the capitalization of taxes will also be effective for taxable years beginning after December 31, 1986.[76]

For fiscal year taxpayers which have inventories, the effective date is delayed until the first taxable year beginning after December 31, 1986. All taxpayers with inventories are required to restate their inventory balances as of the beginning of the first taxable year beginning after December 31, 1986 as if the uniform capitalization rules had been in effect for all prior periods.[77] In effect, beginning inventory must be revalued to reflect the greater deferral of production costs under the new rules. To the extent that the information to make such a determination is not available, the Treasury Department is directed to issue regulations or rulings which permit a taxpayer to estimate the amount by which inventory will be revalued by using available data.[78]

For example, a FIFO basis taxpayer (or LIFO basis taxpayer using the specific identification method) who has information on the increase in production costs deferred for recent periods for an item, but not for earlier years, may use the increase in recent periods as an estimate of the increase in prior years.[79] The illustrations in the Senate Report indicate that the increase calculated for current years is not just a straight average of the increases in current years, but is an average weighted by the number of items in the ending inventory from those current years.[80] If a LIFO basis taxpayer does not have information for production of an item in early years but does have information on a class of similar items only in recent years, the taxpayer may use the information for the class of similar

[77] Act §803(d)(2). Senate Report at 146-7. There is no restatement of beginning balances and no §481 adjustment for property which is held in the ordinary course of business but which is not inventory. Senate Report at 146. *See W.C. & A.N. Miller Development v. Comr.*, 81 T.C. 619 (1983).

[78] Senate Report at 147.

[79] Senate Report at 147.

[80] Assume that the number of items in ending inventory for a product by year of production are: 1983-150, 1984-100, 1985-100, and 1986-50; and the original and revised production costs are: 1983-$5.00 and unavailable, 1984-$6.00 and $7.00, 1985-$6.50 and $7.75, and 1986-$7.00 and $9.00. The weighted average increase in the production costs attributable to 1983 will be calculated as follows:

[(100 × ($7.00 - $6.00)) + (100 × ($7.75 - $6.50)) + (50 × ($9.00 - $7.00))] ÷ [(100 × $6.00) + (100 × $6.50) + (50 × $7.00)]. The weighted average increase during the period is 20.31%. Thus the value of the inventory would be as follows:

1983 - 150 × $5.00 × 1.2031 = $902.33
1984 - 100 × $7.00 = $700.00
1985 - 100 × $7.75 = $775.00
1986 - 50 × $9.00 = $450.00

items in recent years as its estimate of the increase in earlier years. A weighted average cost must also be used and this average must be weighted by the value of the items in inventory.[81]

Taxpayers who use the dollar-value LIFO method of accounting have more information to retrieve to revalue all of their prior LIFO layers, and thus, recognizing that such a reconstruction may not be possible, the Senate Report permits such taxpayers to revalue all of their LIFO layers under the new absorption rules by computing the change in current costs as a result of the new absorption rules for the three most recent tax years for which the taxpayer has sufficient information.[82] The taxpayer would then apply that percentage to restate the costs of the beginning LIFO inventory value of the entire pool for the year of the change. The year prior to the year of the change would become the new base year and current costs for that year are to be used for extension purposes in future taxable years. The percentage change is only applied to the base year costs of the inventory and not to the LIFO index for that year. If the taxpayer had sufficient information, the proper method to calculate the change in its LIFO inventory would be to redetermine the base year cost using the new absorption rules, and then recalculate the LIFO index for each ensuing year using the new absorption rules. To the extent that the taxpayer can show that costs which contributed to the average revaluation factor could not have affected a prior year, the revaluation factor applied to that year may be adjusted by an appropriate amount.

Example: A calendar year taxpayer first adopted the dollar value method in 1981 using a single pool and the double extension method. The taxpayer's beginning LIFO inventory for the year of change is as follows:

Base Year	Base Year Cost	Index	LIFO Carrying Value
	$14,000	1.00	$14,000
1981	4,000	1.20	4,800
1982	5,000	1.30	6,500
1983	2,000	1.35	2,700
1984	-0-	1.40	-0-
1985	4,000	1.50	6,000
1986	5,000	1.60	8,000
TOTAL	$34,000	—	$42,000

The taxpayer recomputes its inventoriable costs under the new capitalization rules for the ending LIFO layers for the three preceding taxable years as follows:

	Recorded Cost	Adjusted Cost	Percentage Change
1983	$ 35,000	$ 45,150	.29
1984	43,500	54,375	.25
1985	54,400	70,720	.30
TOTAL	$132,900	$170,245	.28

Applying the average revaluation factor to each layer of inventory, it is restated as follows:

Base Year	Base Year Cost	Index	LIFO Carrying Value
	$17,920	1.00	$17,920
1981	5,120	1.20	6,144
1982	6,400	1.30	8,320
1983	2,560	1.35	3,456
1984	-0-	1.40	-0-
1985	5,120	1.50	7,680
1986	6,400	1.60	10,240
TOTAL	$43,520	—	$53,760

The positive §481 adjustment is $11,760 ($53,760 - $42,000). Restatement of the inventory to reflect the year of change as a new base year will produce the following result:

Base Year	Base Year Cost	Index	LIFO Carrying Value
	$28,672	.625	$17,920
1981	8,192	.75	6,144
1982	10,272	.81	8,320
1983	4,114	.84	3,456
1984	-0-	.875	-0-
1985	8,170	.94	7,680
1986	10,240	1.00	10,240
TOTAL	$69,660	—	$53,760

Comment: The bill's "shortcut" method for making this determination may provide a reasonable estimate of a more arduous calculation.

The increase in the inventory value resulting from this change, *i.e.*, the §481 adjustment, will be spread over the period which the taxpayer has used inventories or four years, whichever is less.[83] The timing for inclusion of the §481 adjustment in income will be governed by Rev. Proc. 84-74.[84] The Conference Report states that any positive §481 adjustment will be allowed to offset net operating loss and tax credit carryforwards, and that for purposes of determining estimated tax payments, the adjustment will be recognized ratably throughout the year.[85]

[81] Senate Report at 149.

[82] The taxpayer has the option of using as many additional consecutive prior years as it desires. Senate Report at 152. Any taxpayer (manufacturer, producer, retailer, or wholesaler) using the dollar-value LIFO method may use the three-year look-back procedure irrespective of the data available to the taxpayer for determining revaluation of prior LIFO layers. Announcement 87-5, 1987-4 I.R.B. ---- (1/27/87).

[83] Act §803(d)(2)(B).

[84] 1984-2 C.B. 736. Conference Report at II-308.

[85] Conference Report at II-308.

If a taxpayer elects to use the simplified method of determining allocable costs, it must use that method in restating its beginning inventory value. LIFO basis taxpayers who lack sufficient data to precisely compute the §481 adjustment may use the method of approximation available to manufacturers as specified above.[86] The IRS has noted that this requirement may involve using information from a year in which no LIFO increment occured.[87] There is no restatement required for property which is held for sale to customers primarily in the ordinary course of business but which is not inventory.[88]

Chapter 20

LIMITATIONS ON COMPLETED CONTRACT METHOD

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

I. Pre-1986 TRA Law

If a manufacturer or contractor produces non-inventory goods for a customer and the contract qualifies as a long-term contract (*i.e.* a building, installation, construction or manufacturing contract which is not completed by the end of the taxable year that it is entered into), it can use the completed contract or percentage of completion methods as well as the cash or accrual methods to account for the income and expense of the contract.[1] A manufacturing contract qualifies, however, only if it involves the manufacture of either unique items of a type not normally carried in the finished goods inventory of the taxpayer, or items normally requiring more than 12 months to complete.[2]

Under the percentage of completion method, income is recognized according to the portion of the contract that is completed in each year.[3] The percentage of completion can be determined by either comparing the costs incurred as of the end of the taxable year to the total estimated costs to be incurred upon the completion of the contract, or comparing the work performed on the contract as of the end of the taxable year with the estimated total work to be performed.[4] All costs incurred for the contract are deductible in the year in which they are incurred although a contractor must maintain inventories for materials and supplies. Regs. §1.451-3(c)(3).

Under the completed contract method, the entire contract price is included in income in the year in which the contract is completed. All costs which are properly allocated to the contract are deducted in that year.[5]

Regulations adopted in 1976 provide detailed rules for the allocation of contract costs.[6] These costing rules essentially parallel the full absorption rules, except that, under the completed contract method, most financial conformity costs (*i.e.*, Category 3 costs) must be treated as contract costs. Thus, unless a contract is subject to the "extended period long-term contract" rules described below, the following costs are not contract costs: marketing and selling expenses (including the cost of developing bids); advertising expenses; distribution expenses; interest; general and administrative expenses attributable to the performance of services that benefit the contractor's activities as a whole (*e.g.*, payroll, legal, and accounting expenses); research and experimental expenses under §174; losses under §165; percentage depletion in excess of cost depletion; depreciation and amortization reported for tax purposes over that reported on financial statements; income taxes attributable to income received from long-term contracts; pension and profit-sharing contributions and other employee benefits (whether representing past or current service costs); costs attributable to strikes, rework labor, scrap, and spoilage; and salaries of officers that benefit the contractor's activities as a whole.

In 1982,[7] Congress directed Treasury to modify the rules relating to allocation of costs to long-term contracts. In the case of "extended period" long-term contracts — those that are not expected to be completed within 24 months from the contract commencement date — certain costs previously not treated as contract costs must be allocated to the contracts to the extent they either directly benefit or were incurred by reason of such contracts. These costs include, *inter alia*,:

(1) bidding expenses on contracts awarded to the taxpayer;

(2) repair expenses of equipment or facilities;

(3) general and administrative expenses properly allocable to long-term contracts under regulations;

(4) research and development expenses that either are directly attributable to particular long-term contracts existing when the expenses are incurred, or are incurred under an agreement to perform research and development;

(5) depreciation, capital cost recovery, and amortization for equipment and facilities currently being used in the performance of extended period long-term contracts, in excess of amounts reported for financial accounting purposes;

---

[1] The cash method of accounting is not available to taxpayers who are required to maintain inventories. However, if it clearly reflects income, the theoretical contractor who has no inventories can use the cash method. *See* H.R. Rep. No. 426, 99th Cong., 1st Sess., p. 619 (1985) (hereinafter referred to as "House Report").

[2] Regs. §1.451-3(b)(1)(ii). All section references in this Chapter are to the Internal Revenue Code of 1986, and the regulations thereunder.

[3] Regs. §1.451-3(c)(1).

[4] Regs. §1.451-3(c)(2).

[5] Regs. §1.451-3(d)(1).

[6] Regs. §1.451-3(d)(5).

(6) pension and profit-sharing contributions representing current service costs, and other employee benefits;

(7) rework labor, scrap, and spoilage; and

(8) depletion (whether or not in excess of cost depletion).[8]

The principal distinctions between the treatment of long-term contracts and the treatment of extended period long-term contracts involve: the deductibility of depreciation (in the case of assets used in the performance of particular long-term contracts, only book depreciation must be allocated to contracts in the former, whereas all such depreciation must be allocated to contracts in the latter); the deductibility of current-service pension costs (deductible for the former if beneficial to the taxpayer's activities as a whole, but in most instances partially allocable to the contract for the latter) and the deductibility of research and experimental costs (deductible for the former, but treated as contract costs for the latter if directly resulted to a particular contract or incurred under an agreement to perform research). In addition, rework labor, scrap, and spoilage costs are allocated to the contract in the case of extended period long-term contracts, but not for other long-term contracts.

An exception to the extended period long-term contract rules is provided for contracts for the construction of real property if the contract is expected to be completed within three years, or if the contractor's average annual gross receipts for the three taxable years preceding the year of the contract do not exceed $25,000,000.[9] The regulations as adopted in 1976 continue to apply to these construction contracts and to all other long-term contracts expected to be completed within two years.

The legislative history of TEFRA expresses Congress' intention that the portion of the taxpayer's general and administrative expenses that directly benefits extended period long-term contracts must be allocated to such contracts, even though the same type of costs also benefits other activities of the taxpayer. However, general and administrative expenses that are incurred in the operation of the taxpayer's general management or policy guidance functions (for example, salaries of financial officers) are currently deductible.[10]

Consistent with the TEFRA legislative history, the regulations adopt an expansive view of general and administrative expenses that directly benefit extended period long-term contracts and therefore must be allocated to such long-term contracts. Example of the types of functions the cost of which ordinarily are required to be allocated include administration of manufacturing or construction projects, personnel operations, purchasing operations, materials handling and warehousing operations, accounting and data services operations related to contract activities, data processing, security services, and legal departments that provide legal services with respect to contracts.[11] Functions for which allocation of costs ordinarily are not required include overall management and policy guidance (*e.g.*, services by the board of directors and the chief executive, financial, legal, and accounting officers if no substantial part of their services, relate to a particular contract), general financial planning and management, financial accounting, tax services, public relations, and internal audit.[12]

II. Overview

The Act generally repeals the use of the completed contract and accrual methods of accounting for long-term contracts and substitutes the use of the percentage of completion-capitalized cost method ("40% PCM method").[13] Contracts for construction or improvement of real property may still use the completed contract method and may allocate costs based on the regulations applicable to non-extended period long-term contracts if the contracts are estimated to be completed within two years from the commencement date of the contract and are performed by a contractor whose average annual gross receipts for the three years preceding the taxable year in which the contract was made do not exceed $10,000,000.[14] However, allocation is not required for independent research and development expenses expenses for unsuccessful bids and proposals, and marketing, selling and advertising costs. In addition, a taxpayer must capitalize any costs which it identifies as attributable to the contract pursuant to a cost-plus contract or pursuant to a contract for which costs are certified under federal statute or regulations.

III. Detailed Analysis

The Act generally repeals the use of the completed contract and accrual methods of accounting for long-term contracts and substitutes the use of the percentage of completion-capitalized cost method ("40% PCM method"), described below.[15] The definition of a long-term contract is unchanged from pre-1986 TRA law (*i.e.*, any contract for the manufacture, building, installation or construction of property if such contract is not completed within the taxable in which it is entered into).[16] Taxpayers who continue to use the percentage of completion method are subject to the look-back rule described below.[17]

A. Percentage of Completion-Capitalized Cost ("40% PCM") Method

The 40% PCM method requires that a taxpayer take into account 40% of items with respect to a contract on the percentage of completion method. In a change from pre-1986 TRA law, the percentage of completion is determined by comparing total contact costs incurred before the close of the taxable year with estimated total contract costs.[18]

[12] Regs. §1.451-3(d)(9)(vii).
[13] Act §804, adding Code §460.
[14] Act §804, adding §460(e).
[15] §460(a)(1).
[16] §460(f). H.R. Rep. No. 841, 99th Cong. 2d Sess., p. II-311 (1986) ("Conf. Rep."). Manufacturing contracts still must be for a unique item which is not normally in a contractor's finished goods inventory or normally require more than 12 calendar months to complete. The Treasury Department has the power to prescribe regulations for severing and aggregating contracts. *See* Regs. §1.451-3(e).
[17] §460(b)(1) and (3).
[18] §460(b)(2)(A). *See* footnote 4 and accompanying text for pre-1986 TRA rules for the methods of determining percentage of completion.

The contractor will multiply the total contract price and all costs allocable to the contract by the percentage of completion and will include 40% of those amounts as income and expense, respectively, less any amount included in income or deducted as expense in prior taxable years. Thus, 40% of the profit or loss from the contract will be recognized over the period of the contract. The remaining 60% of income and expense of the contract are to be accounted for under the contractor's normal method of accounting (*e.g.*, the completed contract or accrual method).

Example: If a taxpayer uses the accrual shipment method of accounting for long-term contracts, 60% of the gross income will be recognized upon shipment of the subject of the contract and 60% of the costs will be deducted at that time.

The costs allocated to a contract are those (including research and experimental costs) which directly benefit, or are incurred by reason of, the long-term contract activities of the contractor in the same manner as costs are allocated to extended-period long-term contracts under §451 and the regulations thereunder.[19] Independent research and development expenses, marketing, selling, and advertising expenses, and unsuccessful bid and proposal costs, are exempt from the allocation requirement.[20] A taxpayer must also allocate to a contract any costs for cost-plus or federal long-term contracts which it (or a related party) identifies as attributable to the contract by its terms or by federal, state or local law or regulations.[21] A federal long-term contract is any long-term contract (or subcontract) to which the United States or any agency of instrumentality thereof is a party.[22]

Example: General and administrative costs attributable to cost-plus contracts and to federal government contracts requiring certification of costs are treated as contract costs. This is true even though the costs may be deductible under existing regulations.[23]

The independent research and development expenses which are not to be allocated to long-term contracts are those incurred in the performance of independent research and development other than (1) expenses directly attributable to a long-term contract in existence when the expenses are incurred, or (2) any expense under an agreement to perform research or development (including any costs which qualify as independent research and development costs under the Federal Acquisition Regulations System).[24] However, the Conference Report specifies that the contractual arrangement regarding independent research and development shall not be severed from a long-term contract in such a manner as to render such costs ineligible for treatment as costs of a long-term contract or to accelerate the recognition of any income relating to those costs when compared with the amount of income that would be recognized under the contractor's regular method of accounting.[25] According to the Conference Report at II-312, this change expressly overrules the position of the IRS in several recent technical advice memoranda.

Observation: Contractors should carefully review the decision to use the 40% PCM method. For alternative minimum tax purposes, the contractor must report income based upon the percentage of completion method. §56(a)(3), as amended by Act §701(a). Thus, a taxpayer may find itself paying alternative minimum tax before completion of a contract and regular tax in the year of contract completion. The contractor will have the benefit of the alternative minimum tax credit carryforward only prospectively and may have a significant acceleration of income tax.

B. Exceptions to Use of 40% PCM Method

Contracts for construction or improvement of real property which are estimated to be completed within two years from the commencement date of the contract and are performed by a contractor whose average annual gross receipts for the three years preceding the taxable years in which the contract was entered into do not exceed $10,000,000 may still use the completed contract method and may allocate costs based on the regulations applicable to non-extended period long-term contracts as under pre-1986 TRA law.[26] To preclude avoidance of the restrictions on the completed contract method by use of multiple related entities, gross receipts of all trades or businesses (whether or not incorporated) which are under common control with the taxpayer within the meaning of §52(b), and all members of any controlled group of corporations of which the taxpayer is a member will be aggregated. A controlled group of corporations will have the same meaning as in §1563(a), except that a 50% requirement will be substituted for the 80% requirement in §1563(a)(1), and §1563(a)(4) and (e)(3)(C) shall be disregarded.[27]

Treasury is also to prescribe regulations for attribution of gross receipts of taxpayers who engage in construction contracts through partnerships, joint ventures and corporations.[28]

Contracts eligible for the small construction contract exception will remain subject to the pre-1986 TRA rules (*i.e.*, the regulations applicable to non-extended period long-term contracts).[29] Since such contracts involve the construction of real property, they are subject to the interest capitalization rules without regard to their duration.[30]

C. Percentage of Completion Look-Back Method

The Act contains a look-back provision with respect to any portion of a contract accounted for on either the 100% or 40% percentage of completion method.[31] Upon completion of the contract, the contractor computes the income

[19] §460(c)(1). These cost allocations are are also used to determine the percentage of completion of a contract. Conf. Rep. at II-311.

[20] §460(c)(4). Bid and proposal costs may be treated as unsuccessful for this purpose only after the taxpayer has withdrawn its bid or the contract has been awarded to another person. S. Rep. No. 313, 99th Cong., 2nd Sess., p. 145 (footnote 45) (1986) ("Sen. Rep.").

[21] §460(c)(2).

[22] §460(d). The rules of §168(h)(2)(D) which treat certain taxable entities as not being instrumentalities of the United States are applicable in this situation.

[23] Conf. Rep. at II-311.

[24] 48 C.F.R. §31.205-18(1985). §460(c)(5); Conf. Rep. at II-311.

[25] Conf. Rep. at II-312.

[26] *See* Regs. §1.451-3(d)(5); §460(e)(1).

[27] §460(e)(3).

[28] §460(e)(2).

[29] Conf. Rep. at II-312-3.

[30] *Id.*

[31] §460(b)(3).

which should have been reported in all of the years of the contract if actual total contract costs had been used instead of estimated total contract costs. To the extent the contractor included too large an estimate of the total contract costs, the government is due interest from the contractor on the imputed underpayment of tax from that taxable year until the year in which the tax on the contract is finally paid. Likewise, if the contractor underestimated the total costs of completing the contract, the contractor is due a refund of interest on the overpayment of income tax from the government from that taxable year until the year in which the tax on the contract is finally paid. Regardless of who is owed interest, the interest will be computed using the overpayment rate (*i.e.*, the lower rate) in §6621 and amended by TRA 1986.[32]

D. Interest Allocations

In general, interest attributed to long-term contracts must be allocated to the contract in the same manner as interest costs are allocated to property produced by the taxpayer under §263A(f).[33] Interest allocation is required for the small construction contracts which are exempt from the stricter allocation requirements of non-interest costs.[34] For purposes of determining if costs exceed the *de minimis* rule of §263A(f)(1)(B)(iii) and require capitalization of interest, the costs shall be determined on a contract by contract basis.[35] However, where taxpayers use the accrual method of accounting for long-term contracts, §263A (f)(1)(B)(iii) will be applied on a property-by-property basis.[36]

In applying §263A(f) for purposes of §460(c)(3)(A), the production period is the period beginning on the later of the contract commencement date (as defined in §460(g)), or if the taxpayer uses the accrual method with respect to long-term contracts, the date by which at least 5% of the total estimated costs (including design and planning costs) under the contract have been incurred.[37] The production period ends on the contract completion date.[38]

Comment: Because there is current deduction of all costs related to a contract accounted for on the percentage of completion method, there is effectively no capitalization of interest required for such contracts.[39]

E. Effective Date

The provisions of the Act are effective for long-term contracts entered into after February 28, 1986.[40]

For periods on, or after October 22, 1986, any independent research and development expenses taken into account in determining the total contract price are not be severable from the contract, and any independent research and development expenses are not be treated as amounts chargeable to capital account.[41]

Chapter 21

SIMPLIFICATION OF DOLLAR-VALUE LIFO METHOD FOR SMALL TAXPAYERS

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Background

If the production, purchase or sale of merchandise is a material income producing factor to a taxpayer, the taxpayer must maintain inventories. If inventories are required to be maintained, a taxpayer must generally use the accrual method unless otherwise authorized by the Commissioner.[1] Acceptable methods of accounting for inventories include specific identification, first-in, first-out (FIFO), last-in, first-out (LIFO), and, in certain limited circumstances, average cost.[2]

One method of applying the LIFO method to inventories is the dollar-value method.[3] Under the dollar-value LIFO method, the taxpayer accounts for its inventories on the basis of a pool of dollars rather than on an item-by-item basis.[4] Each pool of dollars includes the value of a number of different types of inventory items. Generally, for wholesalers, retailers, jobbers and distributors, items of inventory are pooled by major lines, types or classes of goods.[5] In the case of manufacturers, all inventory items which represent a natural business unit may be combined into a single pool.[6] Similarly, taxpayers may assign inventory items to one of a number of pools determined by the similarity of the different types of items to each other.[7] A taxpayer with average annual gross receipts of no more than $2,000,000 for its three most recent taxable years may elect to use a single pool for all items of inventory.[8]

The dollar-value LIFO method measures each pool of dollars in terms of the equivalent dollar value of the inventory at the time each portion of the pool of dollars is first added to the inventory account. In order to measure the pool of dollars in terms of equivalent dollar values, the use of the dollar-value LIFO method requires the development of an index which will discount current dollar values back to the equivalent dollar value in the first year the retailer or wholesaler used the LIFO method (called the "base year"). This is normally done by comparing the dollar amount of inventory items measured in present year prices against the dollar amount of the same inventory items in base year prices (the "double-extension" method).[9] If the wholesaler or retailer obtains the permission of the Internal Revenue Service, however, the index may be developed by comparing the dollar amount of inventory items measured in present year prices against the dollar amount of the same inventory items measured in the immediate prior year's prices. This computation yields an annual index component which, when combined with all prior annual index components, creates a cumulative index which discounts present dollar values back to the equivalent dollar values of the base year (the "link-chain" method).

In place of using actual changes in inventory prices, a taxpayer may use tables of price changes published by the Bureau of Labor Statistics as part of the "Producers Price Index" and "Consumer Price Index" publications to construct the index necessary to determine equivalent dollar values.[10] Use of these tables requires the taxpayer to construct an index specific to itself by taking a weighted average of price changes for specific categories of inventory. A taxpayer with average annual gross receipts for its three most recent taxable years of no more than $2,000,000 may use 100% of the index constructed with the published price changes. Taxpayers with average annual gross receipts above $2,000,000 are limited to an index equal to 80% of the index constructed with the published price changes.[11]

B. Reasons for Change

The LIFO method generally is considered to be an advantageous method of accounting for inventories, particularly when costs are rising. The LIFO method matches the costs of the most recent items manufactured or purchased against current sales receipts. When costs are rising, this results in a higher costs of goods sold, and consequently a lower taxable income.

The House Ways and Means Committee believed that the complexity and greater costs of compliance associated with the LIFO method, including the dollar-value LIFO method, had discouraged some smaller taxpayers from using the LIFO method in accounting for their inventories.

---

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The Ways and Means Committee believed that the LIFO method should be simplified for smaller taxpayers so that the use of method would be practical for all taxpayers.[12] This has been a continuing concern of Congress in the past several years and appeared to be the impetus for adding §474 (allowing certain small retailers and wholesalers to use a single LIFO dollar value pool) to the Code as part of the Economic Recovery Tax Act of 1981.

II. Overview

The 1986 TRA [13] allows certain small businesses to elect to use a simplified dollar-value LIFO method of inventorying costs. Taxpayers will qualify if they have average annual gross receipts for the preceding three taxable years (or for such portion of the preceding three years that the taxpayer actively engaged in a trade or business) of $5,000,000 or less. There are rules for aggregation of members of a controlled group for purposes of determining if the $5,000,000 threshold is met.

The pools for purposes of this method are the 11 general categories of the Consumer Price Index for all Urban Consumers for retailers using the retail method, or the 15 general categories of the Producers Prices and Price Indexes for Commodity Groupings and Individual Items for all other taxpayers. The change in a category for a year will be the annual price change component in calculating the index. The link change method is used to develop the equivalent dollar value for prior years.

The election may be made without the consent of the IRS and applies to all of a taxpayer's LIFO inventories. The taxpayer may only revoke the election with the consent of the IRS. The election is automatically revoked when the taxpayer exceeds $5,000,000 of average annual gross receipts in the preceding three taxable years. As with any LIFO election, a taxpayer who has written down its existing inventory below cost must restore that write-down to inventory in connection with this election. This method repeals the existing election to use one LIFO pool for the dollar value method of small businesses contained in §474, but allows taxpayers currently using that method to continue doing so.

III. Detailed Analysis

A. General Rule

The Act provides an election for certain small businesses to use a simplified dollar-value LIFO method in accounting for their inventories.[14] The simplified dollar-value LIFO method requires inventories to be grouped into pools in accordance with the major categories of the "Producer Price Indexes" or the "CPI Detailed Report." [15] The change in inventory costs for the pool for the taxable year is determined by the change in the published index from the preceding taxable year in the general category to which the pool relates.[16] The computation of the ending LIFO value of the pool is then made using the dollar-value LIFO method. The House Report indicates that the indices necessary to compute the equivalent dollar values of prior years are to be developed using the link-chain method.[17]

1. Eligible Businesses

A taxpayer is eligible to use the simplified dollar-value LIFO method if its average annual gross receipts for its three preceding taxable years (or for such part of the previous three years that the taxpayer has been actively engaged in a trade or business) do not exceed $5,000,000.[18] For purposes of this provision, rules similar to those in §448(c)(3) should apply in determining gross receipts.[19]

Comment: Based on discussions with staff on the Joint Committee on Taxation, gross receipts probably mean all receipts of a taxpayer and would not exclude investment receipts such as interest and dividends.

In the case of a taxpayer who is a member of a controlled group, all persons who are members of the controlled group are to be treated as a single taxpayer for the purpose of determining average annual gross receipts.[20] A controlled group consists of all persons who would be treated as a single employer under §52.[21]

2. Making the Election

A taxpayer may elect to use the simplified dollar-value LIFO method without the consent of the IRS.[22] The election is to be made at such time and in such manner as the Treasury Department may prescribe by regulations.[23] An election to use the method applies to the year of election and to all succeeding taxable years, unless permission to change to another method is obtained from the IRS, or the taxpayer becomes ineligible to use the simplified dollar-value LIFO method as a result of having exceeded $5,000,000 of average annual gross receipts in the preceding three taxable years.[24] If the taxpayer makes an election to use the simplified dollar-value LIFO method, the method must be used for all the inventories of the taxpayer that are accounted for using a LIFO method.[25]

If the taxpayer previously has used a method of accounting for its inventories which allows the value of the inventories to be written down below cost (*e.g.*, the lower of cost or market method), any amount of such write-down must be restored to income in accordance with §472(d) in the taxable year in which the election is effective.[26]

3. *Computation of Simplified Dollar-Value LIFO Inventories*

a. *General Rule*

The computation of inventory values using the simplified dollar-value LIFO method generally follows the rules provided for computation of inventories using the dollar-value LIFO method in Treasury regulations.[27] However, the simplified dollar-value LIFO method differs from pre-1986 TRA rules with regard to the manner in which inventory items are to be pooled, the use of published indices to determine an annual index component for each pool, and the technique to be used in computing the cumulative index for a pool for any given year.

The simplified dollar-value LIFO method requires the use of multiple pools in order to avoid the construction of a weighted index specific to the taxpayer. Rather than construct such an index, the annual change in costs for the pool as a whole is measured by the change in the published index for the general category. The percentage change for the year in the published index for the general category determines the annual index for the pool.[28]

The simplified dollar-value LIFO method uses the link-chain approach, rather than the double-extension approach, to compute a cumulative index for the purpose of determining equivalent dollar values in prior years.[29]

b. *Composition of Inventory Pools*

The simplified dollar-value LIFO method requires inventory pools to be established based on either the 15 general (2 digit) categories of the "Producers Prices and Price Indexes for Commodity Groupings and Individual Items" (currently "Table 6 — Producer prices and price indices for commodity groupings and individual items, Produces Price Indexes" published monthly by the Bureau of Labor Statistics) or the 11 general categories of the "Consumer Price Index for All Urban Consumers" (currently "Table 3 — Consumer Price Index for All Urban Consumers: Food expenditure categories, U.S. city average, CPI Retailer Report" and "Table 5 — Consumer Price Index for All Urban Consumers: Nonfood expenditures categories, U.S. city average, CPI Detailed Report" published monthly by the Bureau of Labor Statistics) as set forth in Regulations.[30] Retailers using the retail method must use the Consumer Price Index categories and all other taxpayers must use the Producers Price Index categories.[31]

c. *Selection of Index*

The taxpayer must establish which month of its taxable year it will use to measure the annual change in the index for all pools. Once the choice of month is established, another month may not be used unless advance permission to do so is granted by the Secretary of the Treasury. The annual change is measured from the established month in one calendar year to the same month in the next calendar year. If the published index figure which the taxpayer has used to measure annual change in costs for inventory pool is restated by the Bureau of Labor Statics after the taxpayer has filed its return for the taxable year in question, the return shall not be filed again or amended in order to reflect the restatement. Instead, the change in costs for the pool for the next taxable year will be measured with regard to the index figure which was used to measure the change in costs for the prior taxable year as the return was filed, and not the restated value.[32]

d. *Rules Applicable to Year of Change*

The first year for which the simplified dollar-value LIFO method is used will represent a new base year for the purpose of the dollar-value LIFO computation.[33] The base year dollar value of each pool will be the portion of the beginning inventory value for such first year which is attributable to the inventory items represented by such pool.[34]

The computations necessary to convert a taxpayer's inventories to the simplified dollar-value LIFO method will depend upon the method that was used to account for the inventories prior to the year of election. A taxpayer that has been using the FIFO method to value its inventories must establish base year dollar values for each of its pools by assigning the inventory items to their respective pools and combining their values in the ending inventory of the year prior to the election. The combined values of inventory items assigned to a pool constitute the base year layer of the pool for future dollar-value LIFO computations.[35]

A taxpayer that has been using a LIFO method must establish values for each of its pools expressed in base year dollars in generally the same manner as does a taxpayer that has been using the FIFO method. In order to preserve pre-existing LIFO layers, however, the entire value of the inventory is not considered as attributable to the base year as in the case for taxpayers that have been using the FIFO method. Instead, the taxpayer is required to restate the prior years' layers in values expressed in base year (*i.e.*, year prior to election) dollars by comparing the prices at which such goods were added to inventory and determining an index for the layer with reference to the present value of the same inventory items.[36]

[30] House Report at 601; Regs. §1.472-8(e)(3)(iv). This regulation provides that the 11 categories in the Consumer Price Index are food and beverages; housing, maintenance and repair commodities; fuels (other than gasoline); house furnishings and housekeeping supplies; apparel commodities; private transportation (including gasoline); medical care commodities; entertainment commodities; tobacco products; toilet goods and personal care appliances; and school books and supplies. The 15 categories in the Producers Price Index are farm products; processed food and feeds; textile products and apparel; hides, skin, leather, and related products; fuels and related products and power; chemicals and applied products; rubber and plastic products; lumber and wood products; pulp, paper, and applied products; metals and metal products; machinery and equipment; furniture and household durables; nonmetalic mineral products; transportation equipment; and miscellaneous products. Comment: Regs. §1.472-8(f)(2) may serve as a model for the conversion of another LIFO method to the simplified dollar value LIFO method for purposes of preserving the pre-existing LIFO layers.

Example: The following example from the House Report shows the computations required by a taxpayer in the first year in which it uses the simplified dollar-value LIFO method. The example assumed that the taxpayer used the FIFO method to calculate inventories in prior years.[37]

The taxpayer's inventory consists of a chemical, classified in the "Chemicals and Allied Products" general category, and a high school chemistry textbook, classified in the "Pulp, Paper and Allied Products" general category. The index numbers for the "Chemicals and Allied Products" general category are 200 for the prior year (the "base year") and 220 for the current year (the "first LIFO year"). The index numbers for the "Pulp, Paper and Allied Products" general category are 142 for the prior year and 150 for the current year. In the prior year, the present dollar value of the taxpayer's ending inventory was $30,000 for the chemical and $30,000 for textbooks. In the current year, the present dollar value of the taxpayer's ending inventory is $35,000 for the chemical and remains at $30,000 for the textbooks.

As the two types of inventory items are classified in different general categories, the taxpayer must set up a separate dollar-value LIFO pool for each. An annual index for each pool is determined by taking one (1) plus the percentage change in the index for the general category. The percentage change for a category is calculated by dividing the difference between the index in the current year and the index in the prior year by the index in the prior year. For the chemical, the percentage change is .1000 ((220 − 200) ÷ 200) and for the textbooks is .0563 ((150 - 142) ÷ 142).

For years after the first year in which the method is used, the annual index would be multiplied by the cumulative index for the prior year to determine the current cumulative index. For the first year in which the simplified dollar-value LIFO method is used, the annual index and the cumulative index are the same.

The present dollar value of the ending inventory for the current year is divided by the cumulative index to restate the ending inventory in its equivalent value in base year dollars. This amount is assigned to the existing LIFO inventory layers at base year cost and multiplied by the cumulative index for the year to which the layer relates in order to find an indexed dollar value for that layer. The excess of current year cost adjusted to base year cost over the base year cost of the beginning inventory (*i.e.*, the ending inventory of the prior year) is the increase in LIFO inventory for the current year which will be valued at the index for the current year. The sum of the indexed dollar values for the layers is the ending LIFO inventory value for the pool.

For the chemical product, the current year dollar value of inventory is divided by the index to determine the dollar value of current year inventory in base year dollars — $35,000 ÷ 1.100 = $31,818. The increase in current year inventory over the base year inventory is $1,818 ($31,818 − $30,000). That amount, which is at base year cost, is then costed at current year cost and added to the existing base year costs to determine the current LIFO inventory value (1,818 × 1.10 = $2,000 + $30,000 = $32,000).

For the textbooks, the current inventory costed at base year costs ($30,000 ÷ 1.0563 = $28,401) is less than base year cost of inventory ($30,000). Accordingly, there has been an invasion of the base year LIFO layer and the ending inventory of the taxpayer for textbooks will be $28,401. The $1,599 of base year cost in inventory which has been sold will be added to cost of goods sold and will reduce the taxable income of the taxpayer.

A taxpayer changing to the simplified dollar-value method from a method that allows inventories to be stated at less than cost (such as the FIFO method) must restore to income any amounts by which the previous inventories were written down below cost, as required by §472(d). The base year dollar value of the pools established for dollar-value computations will include any amounts required to be recognized as income by §472(d).[38]

e. Rules Applicable When Taxpayer No Longer Eligible for Simplified Treatment

A taxpayer using the simplified dollar-value LIFO method is required to change to a different method in the first year that it fails to meet the $5,000,000 average annual gross receipts test. Any change that would have been allowed if made directly from the method used immediately before the adoption of the simplified dollar-value LIFO method to the new method will be allowed at this time. The Conference Committee also anticipated that a taxpayer would always be allowed to return to the method used before the adoption of the simplified dollar-value LIFO method.[39]

Example: If a taxpayer had been using a FIFO method prior to the adoption of the simplified dollar-value method, it would be allowed to change to the same FIFO method it had used previously or any FIFO, LIFO, or other method that it would have been allowed to change to from the FIFO method used immediately prior to the adoption of the simplified dollar-value LIFO method.

In changing from the simplified dollar-value LIFO method to another method, the taxpayer is not required to obtain permission from the Secretary of Treasury for the change if it would not be required to obtain permission if changing directly from the method used immediately prior the adoption of the simplified dollar-value method to the new method. Likewise, the administrative burden of obtaining the change in method should be no greater that it would be if the change were made directly.[40]

Comment: The Conference Committee comments do not specifically cover those circumstances in which a taxpayer requests permission of the IRS to revoke its election.

Treasury is directed to prescribe regulations for the determination of inventory pools, if the taxpayer continues to use another dollar-value LIFO method, in a year in which an electing taxpayer fails to qualify for the election.[41]

B. Effective Date and Transition Rule

The provision is effective generally for taxable years beginning after December 31, 1986.[42]

Comment: This election may prove beneficial to those taxpayers with gross receipts between $2,000,000 and $5,000,000 which are now limited to increasing the costs of inventory by only 80% of the increase in these indices rather than 100% as allowed by this new provision.[43] It is unclear whether Treasury will amend those regulations which contain the 80% limit on the amount of the increase in the index which the taxpayer may use in computing its individual index and will use the definition of an eligible business under the revised §474 or continue to use the definition in §474(b) before the 1986 TRA.

Amended §474 replaces the pre-1986 TRA law rule allowing taxpayers with average annual gross receipts of $2,000,000 or less to elect to use a single inventory pool in accounting for its inventories using the LIFO method. Any taxpayer who has in effect a valid election to use the single pool method under prior former §474 may continue to account for its inventories using that election, so long as the taxpayer continues to meet its requirements.[44] The House Report indicates that a taxpayer accounting for its inventories using the single pool election of §474 of pre-1986 TRA law is not eligible to elect to use the simplified dollar-value LIFO method of the 1986 TRA for any year in which the election under pre-1986 TRA law is effective. A taxpayer may revoke the election to use the single pool method of §474 of pre-1986 TRA law without the consent of the Secretary of the Treasury.[45]

Chapter 22

CASH METHOD LIMITED; ACCRUAL METHOD LIBERALIZED

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

I. New Limitations on Use of Cash Method

A. Introduction

1. Pre-TRA 1986 Law

A taxpayer may generally elect on its first tax return to use any method of accounting that is regularly used in keeping its books if such method clearly reflects its income.[1] There are basically two methods of overall accounting for income tax purposes — the cash method and the accrual method. A method of accounting which reflects consistent application of generally accepted accounting principles in a particular trade or business will clearly reflect income.[2] A taxpayer may use different accounting methods for its books and for tax purposes if it maintains sufficient records which allow reconciliation of the results under the two methods.[3] Once a taxpayer has selected an accounting method, it may only change methods with the permission of the IRS.[4] If a taxpayer's accounting method does not clearly reflect its income, the IRS may specify which accounting method the taxpayer must use.[5]

Taxpayers who use the cash method of accounting generally recognize items of income when actually or constructively received and items of expense when paid.[6] Tax shelters which use the cash method of accounting generally may not recognize items of expense prior to economic performance of the items to which they relate.[7]

Taxpayers using the accrual method of accounting generally accrue items of income when all of the events have occurred that establish the taxpayer's right to receive the income and the amount of income can be determined with reasonable accuracy.[8] Likewise, items of expense are deductible when all events have established an obligation to pay, and the amount of the expense can be determined with reasonable accuracy. Taxpayers using the accrual method of accounting generally may not deduct items of expense prior to the time of economic performance.[9] Taxpayers must keep inventories and use the accrual method of accounting with respect to inventory items if the production, purchase or sale of merchandise is a material income producing factor for the taxpayer.[10] Certain corporations and partnerships with corporate partners that engage in agricultural activities with gross receipts exceeding $1,000,000 are required to use the accrual method of accounting.[11]

2. Reasons for Change

The House Ways and Means Committee indicated that the cash method of accounting frequently does not accurately reflect the economic results of a taxpayer's trade or business during a taxable year.[12] Since the cash method only focuses on when funds are received or disbursed, items of income and expense may be recognized in taxable years other than those in which economic events gave rise to those items. The House Report asserts that the cash method is not in accordance with generally accepted accounting principles. There is also the potential for mismatching of income and deductions, from the Treasury's viewpoint, when the parties to a transaction use differing accounting methods.

The House Ways and Means Committee conceded that the cash method was a simpler accounting method and that its simplicity justified its continued use for some taxpayers. The high cost of compliance with the accrual method was justification for allowing smaller businesses to use the cash method. The complexities required to account for growing crops and livestock under other methods of accounting justified continued use of the cash method in farming businesses other than those already required to use the accrual method. Finally, it was reasoned that individuals, especially those in professional activities, personal services corporations, and pass-through entities (such as partnerships, S corporations and trusts), should be able to use the cash method because they have traditionally used that method.

B. Overview

Under the 1986 TRA, C corporations and partnerships with a C corporation as partner may no longer use the cash method of accounting unless they qualify as farming businesses, qualified personal service corporations and entities

[12] Committee on Ways and Means, *Tax Reform Act of 1985*, H.R. Rep. 99-426, 99th Cong., 1st Sess. 605 (December 7, 1985) (hereinafter referred to as "House Report").

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

with average annual gross receipts of $5,000,000 or less for all prior taxable years, and all prior taxable years of any predecessor entity (beginning after December 31, 1985). Tax shelters may not use the cash method of accounting in any circumstance and tax exempt trusts with unrelated business income may not account for those unrelated activities on the cash method.

There are two requirements for an entity to meet the definition of a qualified personal service corporation. The first test ("the function test") requires that all the activities of the corporation are providing services in the fields of health, law, engineering (including surveying and mapping), architecture, accounting, actuarial science, performing arts, or consulting. The second test ("the ownership test") requires that employees performing services for the corporation in a field satisfying the function test, retired individuals who performed services for the corporation or its predecessors in such a field, the estate of such an individual, or any person who acquired its ownership interest as a result of a death of such an individual during the 24-month period following the individual's death, must own substantially all (*i.e.*, at least 95%) of the value of the outstanding stock in the corporation. Stock owned by a partnership, an S corporation, or a qualified personal service corporation will be considered as owned by the partners or shareholders. Stock which is held by any plan described in §401(a) that is exempt from tax under §501(a) is treated as held by the employees of the entity.

For the purpose of this section, a tax shelter will have the same definition as in §461(i) of the Code. Such provision includes (1) any enterprise (other than a C corporation) if at any time interests in the enterprise had been offered for sale in any offering required to be registered with a Federal or state agency having the authority to regulate the offering of securities for sale, (2) any syndicate within the meaning of §1256(e)(3)(B), or (3) any tax shelter within the meaning of §6661(b)(2)(C)(ii). For an enterprise engaged in the trade or business of farming, a tax shelter is (1) any tax shelter within the meaning of §6661(b)(2)(C)(ii), or (2) a farming syndicate within the meaning of §464(c).

These provisions are effective for taxable years beginning after December 31, 1986. Taxpayers (including tax shelters) which entered into loans, leases, certain real property contracts, and transactions with related parties prior to September 25, 1985, may continue to report income from those transactions on the cash basis. This revision of the law is a change in a taxpayer's accounting method and requires that the §481 adjustment be taken into account over a four-year period. Net operating losses and tax credit carry forwards will be allowed to reduce any positive §481 adjustment.

An unrelated provision included in this section that allows accrual basis taxpayers to not accrue in income any portion of income based on its experience will not be collected. This provision is effective for taxable years beginning after December 31, 1986.

C. Detailed Analysis

1. General Rule

Under the 1986 TRA, C corporations, partnerships with a C corporation as partner, and tax shelters may no longer use the cash method of accounting unless they are farming businesses, qualified personal service corporations and entities with average annual gross receipts of $5,000,000 or less for all prior taxable years, and all prior taxable years of any predecessor entity (beginning after December 31, 1985) which are not prohibited from using the cash method by other sections of the Code.[13] Section 511(b) tax-exempt trusts also may not use the cash method to account for any activity that constitutes an unrelated trade or business. Taxpayers may not avoid this rule by using a hybrid accounting method which records some, but not all, of the transactions on the cash method.[14] All individuals, sole proprietorships, and S corporations will be able to use the cash method of accounting. Those individuals who are members of partnerships or S corporations with C corporations as partners or shareholders will not be able to use the cash method to account for activities within those entities unless the C corporation partner or shareholder is a qualified personal service corporation, or a qualified farming business, or unless the partnership or corporation has average annual gross receipts of less $5,000,000 for all prior taxable years.

The Conference agreement deleted two provisions of the House bill, H.R. 3838, which allowed (1) a taxpayer, other than a financial institution or a utility, to accrue as income any amount to be received for the performance of services prior to the time the amount was billed, and (2) that economic performance of services provided to an accrual basis taxpayer generally would not have been considered to have occurred prior to the time the taxpayer was billed. The Conference Committee intended that no inference be drawn from its failure to adopt these two provisions as to the economic performance of these items under current law.[15]

2. Tax Shelters

The Conference Committee added the provision to the House Bill which prohibited tax shelters from using the cash method of accounting. For purpose of §448, a tax shelter has the same definition as in §461(i)(3).[16] Such provision includes (1) any enterprise (other than a C corporation) if at any time interests in the enterprise have been offered for sale and such offerings were required to be registered with the federal or state agency having the authority to regulate the offering of securities for sale, (2) any syndicate within the meaning of §1256(e)(3)(B), or (3) any tax shelter within the meaning of §6661(b)(2)(C)(ii). For an enterprise engaged in the trade or business of farming, as defined in §464(e), a tax shelter is (1) any tax shelter within the meaning of §6661(b)(2)(C)(ii), or (2) a farming syndicate within the meaning of §464(c).[17] The general exceptions for farming businesses, qualified personal service corporations, and entities with average annual gross receipts of $5,000,000 or less do not apply in the case of tax shelters.[18]

A tax shelter may not take advantage of the recurring item exception under §461(h)(3) to the rule requiring economic performance before an accrual basis tax payment may deduct an item of expense.[19] However, in the case of a tax shelter which is drilling an oil or gas well, economic performance will be considered to have occurred if the drilling of the well commences before the close of the 90th day after the close of the taxable year.[20]

3. Qualified Personal Service Corporations

There are two requirements for an entity to meet the definition of a qualified personal service corporation. The first test, a function test, requires that all the activities of the corporation are providing services in the fields of health, law, engineering (including surveying and mapping), architecture, accounting, actuarial science, performing arts, or consulting.[21] The second test, an ownership test, requires that employees performing services for the corporation in a field satisfying the function test, retired individuals who performed services for the corporation or its predecessors in such a field, the estate of such an individual, or any person who acquired its ownership interest as a result of a death of such an individual during the 24 month period after the individual's death, must own substantially all of the value of the outstanding stock in the corporation.[22]

Stock owned by a partnership, an S corporation, or a qualified personal service corporation will be considered as owned by the partners or shareholders of such entity. The Conference Report indicates that substantially all of the stock is defined to mean at least 95% of the value of stock.[23] In applying the ownership test, the applicable community property laws of any state will be disregarded.[24] Stock which is held by any plan described in §401(a) that is exempt from tax under §501(a) is treated as held by the employees of the entity.[25] At the election of the common parent of an affiliated group, all members of such affiliated group may be treated as a single group for the purpose of applying the ownership test if substantially all of the activities of such members involve the performance of services in the same qualified field.[26]

4. Farming Business Exception

Prior to the 1986 TRA, C corporations and partnerships with C corporation partners which engaged in the trade or business of farming were required to use the accrual method of accounting and capitalize preproductive expenditures if their gross receipts exceeded $1,000,000, or more than 50% of all the corporate voting power was retained by one family.[27] Farming businesses, by this definition, are still prohibited from using the cash method of accounting.[28] However, farming businesses in which (1) gross receipts for all preceding taxable years beginning after December 31, 1975 have not exceeded $1,000,000, or (2) at least 50% of the total combined voting power of all classes of stock entitled to vote, and at least 50% of the total number of shares of all other classes of stock are owned by members of the same family,[29] may continue to use the cash method. The House Report provides that a farming business for purposes of this section is any business engaged in the growing, raising, managing or training of crops or livestock. Unlike §447, it also includes the operations of a nursery, or sod farm.[30] For the purpose of determining whether an entity is engaged in a farming business, the definition of farming shall include the raising or harvesting of trees bearing fruit, nuts or other crops, or ornamental trees (including evergreen trees that are not subject to the capitalization provisions of §263A) as well as other timber.[31]

5. Small Business Exception

All taxpayers, other than tax shelters, with average annual gross receipts of $5,000,000 or less during the preceding three taxable years may continue to use the cash method of accounting.[32] Gross receipts are reduced by sales returns and allowances.[33] The calculation is not dependent on gross receipts during the current taxable year, but rather taxpayers must determine the sum of their gross receipts for the preceding three taxable years and divide by three.[34] If there is a partial taxable year in the preceding three years, then the gross receipts for that period are annualized.[35]

> *Example:* A taxpayer commences business on May 1, 1984, and adopts a calendar year as its taxable year. Its gross receipts for its first taxable year are $800,000, for calendar year 1985 — $3,000,000, and for calendar year 1986 — $7,000,000. Receipts for 1984 are annualized by dividing the actual gross receipts for the taxable year, $800,000, by the number of months which the taxpayer conducted business, 8, and multiplying that result by 12. In this case, average monthly gross receipts were $100,000, and annualized receipts for the period were $1,200,000. Average annual gross receipts for determining qualification for the cash method are $3,733,333 ((1,200,000 + 3,000,000 + 7,000,000) / 3). Thus this taxpayer may use the cash method for 1987.

If a taxpayer and its predecessors have operated for less than the three preceeding taxable years, the average is calculated for the number of years which the taxpayer has operated.[36] There is no discussion of a definition of a predecessor corporation or partnership in this context. Presumably these rules may not be avoided by a reorganization of a corporation or liquidation of a partnership with a subsequent formation of a new partnership.

This test contains an aggregation rules for all related entities. If related entities would be treated as a single

employer for purposes of subsections (a) or (b) of §52 (including a controlled group of corporations) or subsections (m) or (o) of §414 (including affiliated service groups), then their gross receipts are aggregated for purposes of determining if the entities can use the cash method as a result of the $5,000,000 exemption.[37]

6. Effective Date and Transition Rules

This provision is effective for taxable years beginning after December 31, 1986.[38] Taxpayers may elect to continue to report income from loans, leases, or transactions with related parties (as defined in §267(b) of the Internal Revenue Code of 1954 as in effect before the enactment of the 1986 TRA) entered into before September 25, 1986 on the cash method.[39] Further, contracts for the acquisition or transfer of real property or contracts for services related to the acquisition or development of real property may continue to be accounted for on the cash accounting method if they were entered into prior to September 25, 1985 and payment for the property or services is the sole element of the contract which was not performed as of September 25, 1985.[40] This transition rule applies to tax shelters as well as other entities.[41]

Any change from the cash method mandated by this section is treated as initiated by the taxpayer with consent of the IRS.[42] The §481 adjustment arising from this change in accounting must be taken into income over a period not exceeding four years in accordance with Rev. Proc. 84-74.[43] Net operating losses and tax credit carryforwards may offset any §481 adjustment, and the §481 adjustment will be recognized in taxable income ratably throughout the year to which it applies for estimated tax purposes. The timing for any negative §481 adjustment will be determined as if the adjustment is positive.[44]

Hospitals must take the §481 adjustment into income ratability over no more than a ten-year (instead of a four-year) period.[45] For purposes of this section, a hospital is a taxable or tax-exempt institution that meets all of the following requirements:

(1) It is accredited by the Joint Commission of Accreditation of Hospitals (JCAH), or is accredited or approved by a program of the qualified governmental unit in which such institution is located, if the Secretary of Health and Human Services has found the accreditation or comparable approval standards essentially equivalent to those of JCAH;

(2) It is primarily used to provide, by or under the supervision of physicians, on an inpatient basis, diagnostic services and therapeutic services for medical diagnosis, treatment and care of injured, disabled or sick persons;

(3) It has a requirement that every patient be under the care and supervision of a physician; and

(4) It provides 24 hour nursing services rendered or supervised by a registered professional nurse and has a licensed practical nurse or registered nurse on duty at all times.[46]

The hospital need not be owned by or on behalf of a governmental unit, or by a §501(c)(3) organization, or operated by a §501(c)(3) organization to meet the definition of a hospital so that investor-owned, for-profit hospitals will qualify for this favorable treatment.[47] The Treasury Department may exercise its administrative authority to prevent avoidance of the effective date rules by use of those administrative pronouncements and regulations which allow a taxpayer to change its taxable year without the permission of the IRS.[48]

II. Full Accrual of Income Not Required for Certain Service Providers

A. Introduction

1. Current Law

As discussed above, the accrual method of accounting requires inclusion of amounts in income when all events have occurred which fix the right to receive such income and such amount can be determined with reasonable accuracy.[49] The collectibility of such amounts is only considered under current law in determining the reserve for bad debts in accounts receivables. The 1986 TRA, however, repeals the bad debt reserve method for all taxpayers other than financial institutions.

2. Reasons for Change

The House Ways and Means Committee was concerned that taxpayers may be required to accrue income for

[37] §448(c)(2).
[38] Act §801(d)(1).
[39] Act §801(d)(2).
[40] Act §801(d)(3).
[41] Conference Report at II-288.

[44] Conference Report at II-289.
[45] §448(d)(7)(C)(ii).
[46] House Report at 609.
[47] Conference Report at II-288.
[48] Conference Report at II-207. The IRS recently issued an announcement which restricts the ability of taxpayers to change taxable years. IRS Announcement 86-101, I.R.B. 1986-41, 14. The announcement states that the IRS intends to issue temporary regulations which will restrict the ability of taxpayers to change their taxable years to avoid the impact of the 1986 TRA. Generally the temporary regulations will suspend the provisions of Regs. §§1.441-2(c), 1.442-1(c)(2), 1.706-1(b), and Temp. Regs. §18.1378-1, and any revenue procedure issued before September 18, 1986 that permits a taxpayer to change its taxable year (including a 52-53 week taxable year) without the consent of the IRS or under a procedure for securing expedited approval. As noted above, the IRS will only approve changes in according periods for substantial business purposes established under a mechanical test.

Approval may be granted in cases in which the taxpayer has had a substantial acquisition or divestiture in the preceding twelve months which would justify a change in accounting period. Special rules will also apply to taxpayers who wish to change their 52-53 week taxable year with reference to the same month of the year as that in the preceding taxable year. If a taxpayer meets one of the tests specified in the temporary regulations, it may change its taxable year without the permission of the IRS. The temporary regulations will generally apply to any change in annual accounting period if the income tax return for the short period involved in the change is filed after September 29, 1986. The temporary regulations will not, however, apply to cases where the due date for the short period (without regard to any extensions) is before September 29, 1986 and the income tax return is timely filed (with regard to extensions). The temporary regulations will not apply to a request to change to a calendar taxable year. Taxpayers who have short periods for which a tax return is due after September 29, 1986, but have timely filed a request with the IRS to use a non-calendar taxable year prior to September 30, 1986, are specifically exempted from the ambit of this announcement.
[49] Regs. §1.446-1(c)(1)(ii).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

services on amounts they are unlikely to collect (*see* House Report at 605-606). If a taxpayer includes accounts receivable in income when they bear no interest or late charge, income is overstated if that account is subsequently not collected. The present value of the deduction for the bad debt is less than the present value of the amount of income currently taxable. If an account bears interest or a late charge, the Ways and Means Committee did not allow exclusion of a portion of the account receivable because the present value of an obligation bearing interest is the same as the present value of the income accrued.

Comment: The explanation for this exception defies logic. The fact that an uncollectible amount accrues interest or a late charge, which realistically will also never be paid, does not make the present value of the income accrued equal the present value of the bad debt eventually deducted unless the taxpayer is not required to include the unpaid interest or late charge in income during the period over which they accrue. The 1986 TRA does not indicate that this nonaccrual of interest or late charges on uncollected accounts receivable is permitted.

B. Overview

An accrual basis taxpayer is not required to accrue as income any portion of amount billed for the performance of services which, on the basis of its own experience it will not collect. The rule does not apply if the taxpayer charges any interest or penalty for failure to make timely payment in connection with the amount billed. To the extent that collections of accounts receivable at the end of a taxable year exceed the amount included in income for those receivables, the taxpayer must recognize that amount in income. If a receivable is determined to be partially or wholly uncollectible and uncollectible receivables arising in the same year equal or exceed the amount of revenues not accrued that year, then a deduction will be allowed for that amount.

C. Detailed Analysis

1. General Rule

TRA 1986 adds new §448(d)(5) to the Code which allows any person using the accrual method of accounting who performs services to exclude from income a portion of its income from performing such services based on its experience will not be collected if it does not require its customers to pay interest on, or penalty for failure to timely pay, such amount.[50] The provision applies to taxpayers already on the accrual method and those forced to use the accrual method because of the Act.[51] The statute does not include a definition of the performance of services. The House Ways and Means Committee indicated that it does not include the activities of banks and other financial institutions.[52] One reasonable definition of services is in §448 defining personal service corporations. Services in the areas of health, law, engineering, architecture, actuarial science, performing arts or consulting by this definition should qualify for this special treatment.

If a taxpayer charges any interest or penalty for failure to make timely payment in connection with an amount billed, such sales will not qualify for less than full accrual of the amount of the sale. However, the offering of a discount for early payment of an amount billed will not prevent application of the rule as long as the full amount of the bill is otherwise accrued as income and the discount for early payment is treated as an adjustment to income in the year such payment is made.[53]

Comment: It is not clear how many accrual basis taxpayers who provide services do not impose some finance charge for delayed payment of billings. Also, there is nothing in the statute or legislative history which would prevent, for example, a department store from determining which portion of its year end accounts receivables are from services (*e.g.*, dry cleaning, shoe repair, hair styling) and excluding an estimate of the uncollectible portion of those receivables from income. Mechanically performing this task may make it uneconomical for the tax savings.

The House Ways and Means Report prescribes the method for determining the amount of income which is uncollectible. The taxpayer must determine the total amount billed (presumably for services and not for other products of the taxpayer) which are uncollected at the end of the taxable year and multiply that number by a fraction the numerator of which is the total amount of such receivables which were billed and determined not to be collectible within the most recent five taxable years of the taxpayer, and the denominator of which is the total of such amounts billed within the same five year period. If the taxpayer has not been in existence for the prior five taxable years, the portion of the five year period in which taxpayer has existed will be used.

Comment: The formula which the House Report specifies in its text overstates the amount of income which should be excluded in any taxable year. The fraction which is determined above should theoretically be multiplied by the amount of receivables from services rendered during the year which remain unpaid at the end of the taxable year instead by the amount of all services rendered during the taxable year. A large portion of the receivables billed during a year should have been collected by the end of the taxable year and there is no doubt as to whether they will be collected. The example provided in the House Report correctly calculates the amount of income which should be excluded.

For example, an accrual basis taxpayer has $100,000 of receivables that have been created during the most recent five taxable years. Of that $100,000 of receivables, only $1,000 has been determined to be uncollectible. Based on the taxpayer's experience, the amount of receivables outstanding at the end of the taxable year which is not expected to be collected is 1% ($1,000/$100,000).[54] There does not seem to be any reason to annualize these results for any short taxable period during the preceding five years.

As a result of this election, a taxpayer must keep accurate records of receivables from customers and the year to which payments are applied. At such time as the amounts received for receivables outstanding at the end of a

[50] §448(d)(5).

[53] House Report at 608.
[54] *Id.*

taxable year exceed the amounts included in income for those receivables, that excess must be included in income in the year of receipt.[55] To the extent that amounts outstanding at the end of a taxable year are determined to be uncollectible, there is no deduction for those amounts except to the extent that they exceed the amount of income which was not recognized in such year.[56]

The House Ways and Means Committee also indicated that the Treasury Department should provide a periodic system of accounting for billings which will not be collected where that system results in the same taxable income as would be the case if each receivable were recorded individually.[57] Apparently this provision means that the computation of the percentage of uncollectible receivables may be made on a periodic determination of receivables rather than by the individual receivables.

[55] *Id.*
[56] *Id.*
[57] *Id.*

2. Effective Date

This provision is effective for taxable years beginning after December 31, 1986.[58] A change to this method shall be treated as made at the initiative of the taxpayer with the consent of the Commissioner. It appears that the provision is elective, but there is no statement of how an election is to be made or revoked. A taxpayer is not required to exclude the full amount which is uncollectible based on prior experience and it is not clear if he could consistently exclude a percentage of the amount which is calculated to be uncollectible instead of the full amount. It also does not appear that there should be a restatement of the amount of receivables outstanding at the beginning of the first taxable year for which this provision is effective which would require a §481 adjustment. Receivables of prior years which are determined to be uncollectible in a taxable year after the effective date of this provision should still qualify for charge-off as a bad debt.

Chapter 23

RESTRICTIONS ON ADOPTION OF A FISCAL YEAR BY PASS-THROUGH ENTITIES AND PERSONAL SERVICE CORPORATIONS

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Pre-1986 TRA

1. General Rules

Taxable income is computed on the basis of a taxpayer's taxable year.[1] A taxpayer's taxable year generally is required to be the same as the taxpayer's annual accounting period, *i.e.*, the 12-month period on the basis of which the taxpayer regularly computes his income in keeping his books.[2] A taxable year that ends on the same day of the week in each year (a 52-53 week year) is also acceptable.[3] Taxpayers generally are allowed to select any taxable year on their first Federal income tax return that is consistent with their annual accounting period. The taxable year for most individuals is the calendar year. Certain types of entities, including partnerships and S corporations, are required to select taxable years that generally conform to taxable years of their owners. Once a taxable year is selected, the permission of the IRS is required for any change.[4]

2. Partnerships

Under current law, partners in a partnership take into account their allocable share of income, gain, loss, deduction or credit of the partnership for their taxable year in which the partnership's taxable year ends.[5] Such items of income, gain, loss, deduction, or credit are computed at the partnership level and reflect the partnership's (not the partner's) taxable year.[6] To the extent that the partner's and the partnership's taxable years are not the same, a deferral of income can result.

Example: Assume a partnership has a taxable year ending in June, while an individual partner has a calendar taxable year. The partner will include in his income tax return for the current calendar taxable year his distributive share of partnership items that arose in the first six months of the current calendar year and his share of such items that arose in the last six months of the prior calendar year. Partnership items arising in the last six months of the current calendar year will not be included in the partner's return until the following calendar year. Thus, the recognition of six months' of partnership income and expenses has been deferred by the partner until the following taxable year.

Current law requires a partnership adopting or changing a taxable year to use the taxable year of all of its principal partners (or the calendar year, if all of the partnership's principal partners do not have the same taxable year), unless the partnership establishes to the satisfaction of the IRS a business purpose for selecting a different taxable year.[7] A partnership that adopted its taxable year prior to April 2, 1954, is not required to change its taxable year regardless of whether or not the taxable year adopted is the same as the taxable year of all of its principal partners.[8]

In 1972, the IRS issued Rev. Proc. 72-51 [9] announcing the procedures it would follow in approving a request by a partnership desiring to change to, or adopt, a taxable year other than that of all of its principal partners. The Rev. Proc. provided that consideration would be given to all the facts and circumstances, including any distortion of income due to the deferral of income, in determining whether a taxable year different from that of all the principal partners is acceptable. However, in order to facilitate adoptions or changes with a minimum of distortion, a request by a partnership to adopt or change to an accounting period differing from that of its principal partners would generally be approved where the adoption of such change would result in the deferral of income to the partners of three months or less. Under Rev. Proc. 72-51, if a taxpayer adopted a taxable year providing three months or less deferral of income, the taxpayer was required to add a certain amount of income to the short period required to effect the adoption or change of taxable year (*i.e.*, the "§481 adjustment"). The taxpayer was then allowed to deduct this amount ratably over a 10-year period beginning with the year of change.

3. S Corporations

Under current law, shareholders of an S corporation take into account undistributed taxable income and net operating losses of the S corporation for their taxable year in which the S corporation's taxable year ends.[10] To the extent that the taxable year of a shareholder and an S corporation are not the same, a deferral of tax can result that is similar to the deferral with respect to partnerships, as discussed above.

Current law requires a corporation that makes an election to be taxed as an S corporation, or an S corporation that changes its taxable year, to adopt a "permitted year." [11] A permitted year is a calendar year or any other accounting period for which the S corporation establishes a business purpose to the satisfaction of the Secretary.[12] A corporation that was an S corporation for a taxable year that includes December 31, 1982 (or that was an S corporation for a taxable year beginning in 1983 by reason of an election made on or before October 19, 1982) may retain a taxable year that is not a permitted year.[13] However, if more than 50% of the stock of such an S corporation is newly owned stock, the S corporation must change its taxable year to a permitted year. Rev. Proc. 83-25 [14] provides procedures similar to those in Rev. Proc. 72-51, above, that the IRS will follow in approving a request by an S corporation to change to, or adopt, a taxable year other than a calendar year. Rev. Proc. 83-25 provides that requests will be approved where the adoption of the taxable year results in the deferral of income to shareholders of three months or less.

4. Personal Service Corporations

Under present law, personal service corporations generally are taxed in the same manner as other C corporations. A personal service corporation generally may adopt any taxable year on its first Federal income tax return that conforms with its annual accounting period.[15] A personal service corporation desiring to change its taxable year must first obtain the consent of the IRS.[16]

A personal service corporation normally reports its income and pays tax only at the corporate level. However, a deferral even greater than the deferrals available for partnerships and S corporations may be accomplished through the use of the personal service corporation.

Example: Assume a personal service corporation with a taxable year ending in January pays its calendar year employee-owners a minimal salary during the year and, immediately prior to the close of the corporation's taxable year (*i.e.*, sometime during January), declares a bonus to the employee-owners equal to the profits of the the corporation. The corporation obtains a deduction for the bonus paid in the year ending in January and the employee-owners need not report the bonus income until the following December, when the employee-owners' calendar taxable years end. Thus, the tax on the bonus is effectively deferred.

Current law provides special rules for a personal service corporation substantially all the services of which are performed for or on behalf of one other entity, and which is formed or availed of primarily to avoid or evade tax. The IRS is empowered to allocate all income, deductions, credits, exclusions, and other allowances between this type of personal service corporation and its employee-owners, if such allocation is necessary to prevent the avoidance or evasion of Federal income tax or to clearly reflect the income of the personal service corporation or any of its employee-owners.[17] This rule does not apply in the case where the personal services of the corporation are performed on behalf of more than one other entity, such as a professional corporation with more than one employee-owner.

B. Reasons for Change

The Senate Finance Committee believed that pre-1986 TRA law allowed an improper deferral of income for certain partners, shareholders in S corporations, and owners of personal service corporations. Older partnerships, partnerships where the taxable year of the principal partners is not representative of the taxable year of the majority partners, older S corporations, and personal service corporations, are allowed taxable years that make such deferral of income possible, while other partnerships and S corporations are required to use taxable years conforming more closely to the taxable years of their owners. The committee believed that this feature of pre-1986 TRA law decreased the fairness of the Code and provided an unwarranted competitive advantage to certain taxpayers.[18]

II. Overview

Under the Tax Reform Act of 1986 ("1986 TRA"), partnerships must adopt the same taxable year as the partners owning a majority interest in the partnership profits and capital. §706(b)(1)(B). If a majority of such partners do not have the same taxable year, the partnership is required to adopt the same taxable year as all of its principal partners. If all of the principal partners do not have the same taxable year, the partnership is required to adopt a calendar year. A partnership may establish to the satisfaction of the Service a business purpose for having a different taxable year. §706(b)(1)(C). S corporations and personal service corporations are required to adopt a calendar taxable year unless they have established to the satisfaction of the IRS a business purpose for having a different taxable year.

The Conference Report (at II-319) indicates that the reasons for approving a business purpose exception will be very stringent. If 25% or more of a taxpayer's gross receipts for a 12-month period are recognized in the last two months of the period (as in Rev. Proc. 83-25), the taxpayer will

qualify for the business purpose exception. Partnerships and S corporations which have obtained a business purpose exception (not just the three month deferral exception) for a taxable year not coinciding with their owners' after Rev. Proc. 74-33 became effective may continue to use their existing taxable years.

The Treasury should issue regulations which require that a taxpayer using a 52-53 week taxable year must include the items of income in the taxable year ending on the last day of the calendar month nearest to the close of its taxable year. Conference Report at II-319.

An unrelated change included in this section (Act §806(c)) now defines an employee-owner and his personal service corporation as related parties for purposes of §267. Thus, a personal service corporation may not deduct payments to an employee-owner prior to the time that person would include the payment in his gross income.

III. Detailed Analysis

A. General Rule

The 1986 TRA requires generally that all partnerships, S corporations, and personal service corporations conform their taxable years to the taxable years of their owners.[19] The Act provides that a partnership may not have a taxable year other than the taxable year of its partners owning a majority (greater than 50%) interest in partnership profits and capital, unless it establishes to the satisfaction of the IRS a business purpose therefor.[20] If partners owning a majority of partnership profits and capital do not have the same taxable year, the partnership must adopt the same taxable year as all its principal partners.[21] If the principal partners of the partnership do not have the same taxable year, the partnership must adopt a calendar year as its taxable year or the taxable year which the Treasury prescribes in regulations.[22]

Example: Assume a partnership has one principal partner which is a fiscal year corporation owning a 10% interest in partnership profits and capital. The remainder of the partners are individuals on a calendar taxable year; none of these individuals owns a sufficient interest in the partnership to be a principal partner. Under pre-1986 TRA law, the partnership would be required to adopt the same taxable year as the corporate partner (*i.e.*, the taxable year of its principal partner). However, under the 1986 TRA, the partnership would be required to adopt a calendar taxable year (*i.e.*, the taxable year of the majority of its partners).

In determining if the taxable year of the partnership will be the taxable year of the majority in interest of the partners, that alternative will only apply if partners who have an aggregate interest in partnership profits and capital of 50% or more have had the same taxable year in the three taxable years immediately preceding the beginning of such year for determination of the partnership's taxable year. If the partnership has not been in existence during all of the preceding three taxable years, consideration is given to the taxable years of such partners ending with or within the partnership's period of existence.[23] This rule applies so that the *same* partners are not required during the three-year period preceding the election to have had the taxable year which the partnership is to elect.

Example: A partnership has three equal partners. As of the end of 1986, the partnership has a calendar taxable year, two partners have a taxable year ending in June, and the third has a taxable year ending in December. However, two of the partners changed their taxable years in 1985 — one from June to December and the other from December to June. The partnership is now required to have a taxable year ending in June even though two of the partners changed their taxable years during the three year period preceding the year of determination of the partnership taxable year. During all three preceding periods, two-thirds of the partners had taxable years ending in June, even though they are not the same partners.

Comment: This provision will require partnerships to closely monitor the taxable years of their new partners and to require that existing partners inform them when they change their taxable year.

All S corporations must now adopt a permitted year as their tax accounting period, regardless of when the corporation elected to be taxed as an S corporation. §1378(a). The bill also requires that all personal service corporations must now adopt a calendar taxable year. §441(i)(1).

B. Business Purpose Exception

An exception is provided in each case where the partnership, S corporation, or personal service corporation establishes, to the satisfaction of the IRS, a business purpose for having a different taxable year. Unlike the Senate Report, the final bill provided that the deferral of income to owners for a limited period of time, such as the three months or less rule of pre-1986 TRA law, is not to be treated as a business purpose.[24]

A partnership, S corporation, or personal service corporation seeking to use a taxable year other than the taxable year required by this provision must obtain the consent of the IRS. The Senate Finance Committee expected that the concepts embodied in the current revenue procedures dealing with the taxable years of partnerships and S corporations [25] would be followed to the extent they did not conflict with the new law. Partnerships and S corporations having previously established to the satisfaction of the IRS in accordance with the terms of those revenue procedures, a sufficient business purpose for using a different taxable year (other than a year-end that resulted in a three month

[19] Act §806(a) amending §706(b)(1) and (4) (partnerships); Act §806(b) amending §§1378(a) and (b) (S corporations); and Act §806(c) adding §441(i) (personal service corporations).

[20] §706(b)(1)(B)(i).

[21] §706(b)(1)(B)(ii).

[22] §706(b)(1)(B)(iii).

[23] §706(b)(4).

[24] §706(b)(1)(C); §1378(b); and §441(i)(1); Conference Report to Accompany H.R. 3838, H.R. Rep. No. 841, 99th Cong., 2d Sess. II-318 (hereinafter referred to as the "Conference Report").

[25] Rev. Proc. 72-51, 1972-2 C.B. 832, and Rev. Proc. 83-25, 1983-1 C.B. 689.

or less deferral of income) will not be required to obtain the IRS's permission in order to keep such taxable year.[26]

Moreover, any partnership, S corporation, or personal service corporation may adopt, retain, or change to a taxable year, under procedures established by the IRS, if the use of such year meets the requirements of the "25% test" as described in Rev. Proc. 83-25.[27] In addition, the IRS may prescribe other tests to be used to establish the existence of a business purpose, if, in the discretion of the IRS, such tests are desirable and expedient towards the efficient administration of the tax laws.[28]

The Conference Committee intended that: (1) the use of particular year for regulatory or financial accounting purposes; (2) the hiring patterns of a particular business, *e.g.*, the fact that a firm typically hires staff during certain times of the year; (3) the use of a particular year for administrative purposes, such as the admission or retirement of partners or shareholders, promotion of staff, and compensation or retirement arrangements with staff, partners, or shareholders; and (4) the fact that a particular business involves the use of price lists, model year, or other items that change on an annual basis ordinarily will not be sufficient to establish that the business purpose requirement for a particular taxable year has been met.[29]

C. Definition of Personal Service Corporation

For purposes of this provision, a personal service corporation is generally the same as under §269A(b)(1) — a corporation the principal activity of which is the performance of personal services if services are substantially performed by employee-owners.[30] An employee-owner is any employee of the corporation who owns, on any day during the taxable year, any of the outstanding stock of the corporation.[31] In determining whether an employee owns stock in the corporation, the constructive ownership rules of §318 apply, except that the attribution of stock owned by a corporation to the employee is applied without regard to any requirement that the employee own a certain percentage of the value of the stock of that corporation.[32] For purposes of this provision, a corporation that has elected S corporation status will not be considered a personal service corporation.[33]

Comment: There are no regulations under §269A which define "substantial performance" by owner-employees. Some taxpayers have taken the position that, if there are a large number of non-owner employees, the services of an owner-employee may be insubstantial when compared with the services of non-owner-employees. Tax Management understands that the staff of the Joint Committee on Taxation are aware of this problem and are likely to recommend that the "substantial performance" terminology be replaced with a "material participation" requirement. In that manner, the participation by an owner-employee will subject the personal service corporation to the calendar year requirement.

D. Amendment of 52-53 Week Taxable Year Rules

The Conference Committee anticipated that Treasury would promulgate regulations regarding the use of the 52-53 week taxable year to prevent the evasion of the principles of the Act.[34] The regulations would provide that, for purposes of determining when taxable income is included by a partner or S corporation shareholder, a 52-53 week taxable year of a partner, shareholder, partnership, or S corporation would be treated as ending on the last day of the calendar month ending nearest to the last day of such 52-53 week taxable year.[35]

> *Example*: A calendar year partner will include its share of taxable income from a partnership with a 52-53 week taxable year ending on January 3, 1988 in its 1987 calendar year Federal income tax return.

The IRS may also prescribe similar rules to prevent the evasion of the principles of the fiscal year restrictions through the use of a 52-53 week taxable year by personal service corporations and the shareholder-employees of such corporations. The IRS will suspend the operation of Regs. §1.441-2(c) allowing taxpayers in certain cases to adopt, or change to, a 52-53 week taxable year without the approval of the IRS.[36]

E. Related Party Rules for Personal Service Corporations

The Conference Agreement extended the provisions of §267 to provide that a personal service corporation and its employee-owners are treated as related taxpayers regardless of the amount of the corporation's stock owned, directly or indirectly, by the employee-owner.[37] Thus, a personal service corporation may not deduct payments made to employee-owners prior to the time that such employee-owner would include the payment in gross income.[38]

F. Effective Date

These amendments are effective for taxable years beginning after December 31, 1986.[39] Entities required to change their taxable years as a result of these amendments will be required to file a return for the short taxable year that begins with the first day of their current taxable year beginning after December 31, 1986, and ends in accordance with the taxable year to which the entity must change.

[36] Conf. Rep. at II-319-20. *See* Announcement 86-101, 1986-41 I.R.B 14, which announces the Treasury's intention to suspend the application of Regs. §1.442-1(c)(2) to any change in accounting period if the income tax return for the short period is filed after September 29, 1986. These temporary regulations will not apply to any change in which the short period return is due prior to September 29, 1986, without regard to extensions, but is timely filed with regard to extensions.

[37] §267(a). Act §806(c)(2).

[38] Conf. Rep. at II-318.

[39] Act §806(e)(1).

Comment: It may be advantageous for a partnership or S corporation which must change its taxable year to accelerate 1988 income into a short period in 1987. While it will pay income tax on one quarter of the income at a time earlier than it would have had it not accelerated recognition and at a higher income tax rate, it will defer payment of the income tax on one-half of the income until its taxable years in 1989 and 1990. Whether this will be advantageous to a taxpayer will depend on the return it can earn on deferred payments. If the differential is insufficient to justify acceleration, cash basis taxpayers may consider deferral of billing for services rendered until after the short period to reduce the income bunching occurring upon change of the taxable year. This may also reduce the amount of tax due because of the reduction in rates.

The IRS recently issued two announcements which restrict the ability of taxpayers to change or adopt new taxable years.[40] The first announcement states that the IRS intends to issue temporary regulations which will restrict the ability of taxpayers to change their taxable years to avoid the impact of the 1986 TRA. Generally, the temporary regulations will suspend the provisions of Regs. §§1.441-2(c), 1.442-1(c)(2), and 1.706-1(b), and Temp. Regs. §18.1378-1T, and any revenue procedure issued before September 18, 1986 that permits a taxpayer to change its taxable year (including a 52-53 taxable year) either without the consent of the Commissioner or under a procedure for securing expedited approval. As noted above, the IRS will only approve a substantial business purposes for non-calendar taxable years if the taxpayer meets a mechanical test.

Approval may be granted in cases in which the taxpayer has had a substantial acquisition or divestiture in the preceding 12 months which would justify a change in accounting period. Special rules will also apply to taxpayers that wish to change their 52-53 week taxable year with reference to the same month of the year as that in the preceding taxable year. If a taxpayer meets one of the tests specified in the temporary regulations, it may change its taxable year without the permission of the IRS. The temporary regulations will generally apply to any change in annual accounting period if the income tax return for the short period involved in the change is filed after September 29, 1986. The temporary regulations will not, however, apply to cases where the due date for the short period (without regard to extensions) is before September 29, 1986, and the income tax return is timely filed (determined with regard to extensions). The temporary regulations will not apply to a request to change to a calendar year. Taxpayers that have short periods for which a tax return is due after September 29, 1986, but have timely filed a request with the IRS to use a non-calendar taxable year prior to September 30, 1986 are specifically exempted from the ambit of this announcement.

The second IRS announcement suspends those provisions of Rev. Procs. 72-51 and 83-25 which allow partnerships and S corporations to request approval of the adoption of taxable years which result in three months or less deferral of income to owners of those entities. Temporary regulations will require that taxpayers establish a substantial business purpose for adoption or retention of a non-calendar taxable year. This requirement will not, however, apply to sections of those revenue procedures which are not suspended by the temporary regulations (*e.g.*, §4.02 of Rev. Proc. 83-25).

This suspension applies to requests for determination of taxable year which was not filed prior to November 6, 1986. The temporary regulations do not apply to adoption of a partnership year that begins before January 1, 1986.

The Act provides that a partnership, S corporation, or personal service corporation that changes to a taxable year required by the amendment will be treated as having made the change with the consent of the IRS and will not be required to file for permission to make the change on Form 1128.[41] In the case of a partnership or S corporation, each partner or shareholder may elect to take the excess of income over expense for any short taxable year that results from the change in the taxable year into account ratably over the first four taxable years (including the owner's year which would otherwise include the income or loss of the entity's short taxable year) beginning after December 31, 1986.[42] Absent such an election, the amount of net income or loss for the short taxable year is currently included, in its entirety, by the owner.[43] The rule is applicable regardless of what type of entity the partner or S corporation shareholder is.[44]

Example: A personal service corporation that is a partner in a partnership required to adopt a new taxable year as a result of this provision is eligible to include the partner's distributive share of partnership income over four taxable years.

The Senate Finance Committee indicated that, in the case of a personal service corporation, the short taxable year resulting from the change of taxable year will be annualized under §443(b) and will not report solely the income earned during its short period.[45] A personal service corporation is not allowed a four-year spread for income earned during the short taxable year. Thus, shareholders of personal service corporations may be left with the harsh result of having two years of income included on one individual tax return.

As noted in the introduction, some partnerships and S corporations that adopted a taxable year other than a calendar taxable year which provided a deferral of income to owners of three months or less were required to include the amount of deferred income over a 10-year period.[46] The Conference Report indicates that any portion of such amount not taken into income as of the effective date of the amendment may be used to reduce the income attributable to any short taxable year resulting from the amendment.[47]

Chapter 24

MISCELLANEOUS ACCOUNTING METHOD AMENDMENTS

Charles E. Taylor, Esq.
Silverstein and Mullens
Washington, D.C.

I. New Income Accrual Requirements for Utilities

A. Introduction

1. Background

Under the accrual method of accounting, utilities, as well as all other taxpayers, must recognize income at the time when all the events have occurred which establish the utilities' right to receive the income and the amount of income can be established with reasonable accuracy. In Rev. Rul. 72-114,[1] the IRS allowed utilities to use a variation of the accrual method which recognizes income based upon the taxable year in which a customer's utility meter is read regardless of when it is billed (the "cycle meter reading" method) if that method is used for financial statement purposes. Under the cycle meter reading method, if the meter reading date falls within the current taxable year, the income attributable to utility service provided on or before the reading date is included in gross income in that taxable year. Any utility services provided to customers within the current taxable year after the last meter reading date of the year will be recognized as income in the following taxable year. A Tax Court case[2] expanded the use of the cycle meter reading method beyond that allowed in Rev. Rul. 72-114 by allowing utilities that do not use the cycle meter reading method for financial statement purposes to use it for federal income tax purposes.

2. Reasons for Change

The Senate Finance Committee believed that the cycle meter reading method of accounting incorrectly measured the taxable income of utilities because it did not provide for recognition of income as it was earned and because it might result in the mismatching of income and expense. Likewise, the Finance Committee believed that utilities which did not use meters should be required to recognize income as it was earned and not at some later time when it was billed, or might be billed, by the utility.[3]

B. Overview

The 1986 TRA[4] requires utilities to recognize income from providing their services to their customers in the year in which such services are provided and not in the year in which a meter is read or the time at which a customer is or may be billed. This will require a utility to estimate usage of services after the final meter reading or billing date which falls within the utility's taxable year. Utilities specifically covered are those providing electrical energy, water or sewage disposal, local gas or steam distribution, telephone and other communication services, and transportation of gas or steam by pipeline.

To reduce conflicts between the IRS and taxpayers, the 1986 TRA further provides that a method of accounting which took into account income from providing utility services to customers on the basis in which the customers' meters were read is a proper method of accounting for any taxable year beginning before August 16, 1986.

C. Detailed Analysis

1. General Rule

The 1986 TRA requires a utility to recognize income from providing services to its customers in the year in which such services are provided and not in the year in which a meter is read or the time at which a customer is or may be billed.[5] Services will be considered to be provided at the time the services are made available to the customer and used by him. For example, water is considered provided at the time the customer withdraws it from a utility's system.[6] This will require a utility to estimate usage of services after the final meter reading or billing date which falls within the utility's taxable year.[7] Where actual determination of the usage of services after the final meter reading or billing date is impracticable, an estimate may be made by assigning a pro rata portion of revenues determined as of the first meter reading date or billing date of the following taxable year.[8]

Utilities specifically covered by this provision are those providing electrical energy, water, sewage disposal, local gas or steam distribution, telephone or other communication services, and transportation of gas or steam by pipeline.[9] There is no requirement that the utility be regulated by a government or governmental agency for it to meet the definition of a utility.[10] It is anticipated that utility services which might come into existence at some future date will also be subject to these rules.[11]

The Finance Committee intended that this new provision will create no inference as to the proper recognition of

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

income by utilities before its enactment.[12] However, to reduce conflicts between the IRS and taxpayers, the 1986 TRA provides that, a method of accounting which took into account income from providing utility services to customers on the basis in which the customers' meters were read, is a proper method of accounting for any taxable year beginning before August 16, 1986.[13] This relief provision does not extend to any other method of reporting income by utilities such as a method which includes items in income on the date they are billed to a customer.[14]

2. Effective Date and Transition Rules

This provision is effective generally for taxable years beginning after December 31, 1986.[15] If a taxpayer is required to change its method of accounting for any taxable year as a result of this provision, the change will be treated as initiated by the taxpayer and made with the consent of the Secretary. The net §481 adjustment made as a result of this change for both income and expense should be taken into income ratably over the first four years for which the proposal is effective.[16] Net operating losses and tax credit carryforwards will be allowed to reduce any positive §481 adjustment. For estimated tax purposes, the §481 adjustment will be recognized as occurring ratably throughout the year to which the adjustment is allocated.[17]

The Conference Committee intended that utilities required to accrue income at the time utility services are furnished to customers may, at such time, accrue any deductions for the related costs of providing the utility services if economic performance has occurred with respect to those costs within that taxable year. The conferees further intended that any accounting method change required under this provision include any related change in accounting method for the related items of expense or deduction. The §481 adjustment is then to be determined on the net amount of the two changes and taken into account ratably over a four-year period.[18]

Comment: Since Rev. Rul. 72-114 [19] allowed utilities to deduct expenses relating to services sold after the final meter reading and before the end of the taxable year from income in the year sold, many utilities will have only an adjustment to income and no adjustment to related expenses.

II. Contributions in Aid of Utilities' Construction Included in Income of the Utility

A. Introduction

1. Pre-1986 TRA Law

Under pre-1986 TRA law, the income of a corporation does not include any contribution to its capital.[20] A corporation that is a regulated public utility which provides electric energy, gas (either through a local distribution system or through a pipeline), water, or sewage disposal services may treat contributions in aid of construction as non-taxable contributions to capital.[21] Any moneys received as contributions in aid of construction must be spent for tangible personal property which meets the intended purpose of the contribution before the end of the second taxable year ending after the taxable year in which the contribution was received. A contribution received in aid of construction (or any property constructed or acquired with such contributions) may not be included in the utility's rate base for rate-making purposes. Contributions in aid of construction may not include customer connection fees including amounts paid to connect the customer's line to an electric line, a gas main, a steam line, or a main water or sewer line, and amounts paid for starting and stopping services.[22]

No deductions are allowable with respect to a contribution in aid of construction, and property purchased with contributions in aid of construction has no depreciable tax basis and is not eligible for the investment tax credit.[23]

2. Reasons For Change

In an abrupt about-face from its position enunciated in enacting §118(b) in the Tax Reform Act of 1976, the House Ways and Means Committee believes that all payments made to a utility either to encourage, or as a prerequisite for, the provision of services should be treated as taxable income of the utility and not as contributions to capital. The Committee stated that contributions in aid of construction represent prepayments for future services to be rendered by regulated utilities which are never included in income.[24]

B. Detailed Analysis

1. General Rule

TRA 1986 amends §118(b) so that regulated public utilities may no longer exclude from income contributions in aid of their construction which have not been included in their rate base. Thus, a utility must include in gross income the value of any property that it receives to provide, or encourage the provision of, services to, or for the benefit of, the person transferring the property. Such transactions often will involve a builder transferring equipment, improvements to land, or money to fund such items to a utility to facilitate the provision of utility services to property constructed by the builder.

The House Report indicates that a utility is considered to have received property to encourage the provision of services if the receipt of the property is a prerequisite to the provision of services, if the receipt of the property results in the provision of services earlier than would have been the case had the property not been received, or if the receipt of the property otherwise causes the transferor to be favored in any way.[25] It does not matter that a utility has a general

[25] House Report at 644.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

policy, stated or unstated, that only requires or encourages certain types of potential customers to transfer property, including money, to the utility while other types of potential customers are not required to encouraged to make similar transfers. If members of a group making transfers of property are favored over other members of the same general group not making such transfers, the fact that the contributing members of the group may not be favored over the members of other groups in receipt of services will not prevent the inclusion of the value of the transfer in the utility's income.[26]

Example: If a utility generally requires developers of multiple tracts of residential housing to transfer property to the utility in order to obtain service, but does not require such a transfer from individual homeowners, the fact that both groups will receive service without preference of one group over the other will not prevent the utility from being required to include in income the value of the property received from the developers.

Where all members of a particular group make transfers of property to the utility, normally it will be presumed that such transfers are to encourage the provision of services, despite the absence of any formal policy requiring such transfers, unless it is clearly shown that the benefit of the public as a whole was the primary motivating factor in the transfers.[27]

The person transferring the property will be considered as having been benefited if he is the person who will receive the services, an owner of the property that will receive the services, a former owner of the property that will receive the services, or if he derives any benefit from the property that will receive services. House Report at 644.

Example: A builder who transfers property to a utility in order to obtain services for a house that he was paid to build on the property of another will be considered as having benefited from the provision of the services even though he may have never had an ownership interest in the property upon which he was building and may make the transfer to the utility after the house has been completed and accepted by its purchaser.[28]

2. Effective Date

Generally, contributions in aid of construction received after December 31, 1986, in taxable years ending after such date, must be included in income. Act §824(c).

III. Technical Corrections to the Tax Reform Act of 1984 Affecting Accounting Methods

A. Clarification of Cash Basis Exception to Tax Shelter Rule — §461(i)(2)

1. Introduction

Generally a cash basis tax shelter is not allowed a deduction with respect to any item any earlier than the time at which economic performance occurs.[29] An exception is provided under which prepaid expenses are deductible when paid if economic performance occurs within 90 days after the close of the taxable year and the tax shelter has sufficient cash basis to cover such deduction.[30] For purposes of this exception, economic performance with respect to the drilling of an oil and gas well will be treated as occurring when the drilling of the well commences. It is unclear whether the exception applies if economic performance occurs before the close of the taxable year because this is not "within 90 days after the close of the taxable year." For example, it is unclear whether the exception applies if a well is drilled, or economic performance occurs with respect to any other deduction, in the last month of the taxable year.

2. Detailed Analysis

TRA 1986 clarifies that the exception for items for which there is economic performance within 90 days after the close of the taxable year applies if economic performance occurs before the close of the 90th day after the close of the taxable year.[31] Thus, for example, if a well is drilled in the last month of the taxable year, the requirement that economic performance occur before the close of the 90th day after the close of the taxable year is satisfied. This provision is effective as if included in §461(i) when originally enacted.[32]

B. Clarification of Application of §464 in §461(i)(2)

1. Introduction

The farming syndicate rules of §464 apply to any tax shelter described in §6661(b)(2)(C)(ii) (*i.e.* an entity or arrangement the principal purpose of which is the avoidance or evasion of federal income tax) which is engaged in the trade or business of farming.[33] For purposes of applying §464 to these farm business tax shelters, it is unclear whether the exceptions under §464(c)(2), relating to holdings attributable to active management, apply in determining if the entity is a tax shelter.

2. Detailed Analysis

The technical corrections in the 1986 TRA clarify that any tax shelter described in §6661(b)(2)(C)(ii) which is engaged in the trade or business of farming generally will be treated as a farming syndicate for purposes of §464.[34] However, any person meeting the requirements of §464(c)(2) will not be subject to the provisions of §464 with respect to that person's interest in a tax shelter. Section 464(c)(2) defines the holdings in a farming syndicate which are attributable to active management, and therefore, will not be subject to the rules of §464. Such person's interest will still be subject to the restrictions in §461(i).

This provision is effective as if included in §461(i) when originally enacted.[35]

[34] Act §1807(a)(2).
[35] Act §1881.

C. *Treatment of Mining and Solid Waste Reclamation and Closing Costs*

1. *Introduction*

The 1984 TRA provided electing taxpayers with a uniform method for deducting, before economic performance, certain reclamation costs which were mandated by federal, state or local law.[36] Deductions accrued under this method were accounted for in a book reserve and were subject to recapture to the extent that reclamation costs were less than accumulated reserves. §§468(a)(2)(C) and (a)(3).

2. *Detailed Analysis*

The 1986 TRA clarifies that the reserve balance created by taxpayers which have elected to deduct mining and solid waste reclamation and closing costs before economic performance under §468 must be increased by the amount of deductions accrued in each year that are allocable to the reserve.[37] Without this clarification, taxpayers may have taken a double deduction for such expense (*i.e.*, once as an addition to the reserve and once as an expense not covered by the balance in the reserve) because there was no specific increase of the reserve for the current deductions taken.

The Act also clarifies that §468 is effective for deductions incurred after July 18, 1984, for taxable years ending after July 18, 1984.[38]

D. *Treatment of Decommissioning of Nuclear Power Plants*

1. *Introduction*

The Tax Reform Act of 1984 permitted electing taxpayers to accrue a deduction for contributions made to a qualified nuclear decommissioning fund, subject to certain limitations.[39]

2. *Detailed Analysis*

TRA 1986 clarifies that a taxpayer shall be deemed to have made a payment to a nuclear decommissioning fund on the last day of a taxable year provided that such payment is made within two and a half months after the close of that taxable year.[40] Under a transition rule, Treasury has the regulatory authority to relax, and appropriately adjust, the two and a half month rule for payments allocable to a taxable year beginning before January 1, 1987. Thus, payments before December 31, 1986 may qualify as payments to a nuclear decommissioning fund for prior taxable years. Treasury may decrease the amount of the deduction allowed the taxpayer to reflect the fact that the payment was made more than two and one-half months after the close of the taxable year. Though the wording is very obscure, it appears that any reduction in the income tax of the taxpayer because a payment more than two and one-half months after the close of the taxable year is attributed to a prior taxable year will be refunded to the taxpayer without any interest payable by the IRS for the period before the payment.[41]

The technical correction clarifies that the deductions of a fund are like those deductible by a corporation and that the tax treatment of fund income provided in §468A is in lieu of any other federal income tax.[42] A fund's tax liability is not deductible from its gross income, and, for purposes of subtitle F (Procedure and Administration), a fund shall be treated as a corporation and the tax imposed on the fund shall be treated similarly to the corporate income tax.[43] The 1986 TRA clarifies that a fund may invest only in those assets in which a Black Lung Trust Fund may invest.[44] This was necessitated because the Senate Report to the 1984 Tax Reform Act indicated that these were the investments allowed for a fund.[45] The statute, however, did not contain such a limitation. The bill also clarifies that this provision is effective for taxable years ending after July 18, 1984.[46]

E. *Effective Date for Net Operating Loss Provisions*

1. *Pre-1986 TRA Law*

The Tax Reform Act of 1984 amended §172(b), which specifies those years to which net operating losses may be carried, to allow a 10-year carryback in the case of a deferred statutory or tort liability loss for any taxable year beginning after December 31, 1983.

2. *Detailed Analysis*

The 1986 TRA adds a technical correction which confirms that the effective date for the amendment to §172(b) in the Tax Reform Act of 1984 was for losses for taxable years beginning after December 31, 1983.[47]

F. *Clarification of Rules for Earlier Effective Date for Economic Performance Rules — §461(h)*

1. *Introduction*

Section 91(g)(2) of the Tax Reform Act of 1984, as corrected before enrollment, provided a method for taxpayers to elect to have the earlier application of the changes in §461(h), relating to deduction of costs after economic performance, apply. The election applied to costs incurred "before" the enactment of the Act without regard to the amendments of 1984 TRA, and costs incurred "on or after" the date of enactment with regard to the amendments. However, the 1984 TRA actually applied to costs incurred after the date of enactment without regard to the amendments.[48]

2. *Detailed Analysis*

To clarify the election for early application of §461(h) allowed under §91(g)(2) of the Tax Reform Act of 1984, the 1986 TRA specifies that the election applies to costs incurred "on or before" the enactment of the Act without regard to the amendment of §461(h), and costs incurred "after" the date of enactment with regard to the amendment.[49] This election is known as the part year change in

method in the temporary regulations governing effective dates for §461(h).[50]

Under Act §1807(a)(6), Treasury can prescribe regulations to provide that taxpayers may elect to have §461(h) apply to their entire taxable year in which occurs July 19, 1984. This amendment was made because the temporary regulations issued by Treasury allowed such an election and it was not clear that it had statutory authority to do so.[51]

G. Special Rules for Designated Settlement Funds

1. Introduction

The 1984 TRA provided that liabilities were not treated as incurred before the time when economic performance occurred.[52] In the case of the taxpayer's liability to another person arising under any workers' compensation act or any tort, economic performance occurred as payments to such person were made, except to the extent provided in regulations.[53] It was unclear whether an irrevocable payment to a court ordered settlement fund, which extinguished the tort liability of the taxpayer to a person (or class of persons), constituted economic performance under §461(h).

2. Overview

The 1986 TRA allows payments made to a court-ordered settlement fund which extinguishes the taxpayer's tort liability to be considered economic performance of that liability and thus allows a current income tax deduction for the taxpayer's payment. The fund, which must be comprised entirely of qualified payments, must be managed and controlled by a majority of persons unrelated to the taxpayer and may not allow the taxpayer any interest in the income or principal of the fund. A designated settlement fund may not be created for any workers' compensation liability or any contested liability.

A qualified payment may not consist of stock or indebtedness of the taxpayer or a related party. The fund is a separate taxpayer and will be taxed on its income at the maximum tax rate for trusts. Payments to the fund are not taxable to the fund and distributions to beneficiaries are not deductible by it. No deduction is allowed a taxpayer if it received an amount as settlement of an insurance claim, excluded that amount from income, and used those funds to create the settlement fund. Payments to a trust or escrow fund other than a designated settlement fund do not constitute economic performance with respect to the tort liability of a taxpayer.

3. Detailed Analysis

a. General Rule

The technical correction portion of the 1986 TRA clarifies that under certain limited circumstances, an irrevocable payment to a court-ordered settlement fund that extinguishes tort liability of the payor constitutes economic performance with respect to such liability.[54] This provision applies only to qualified payments made to a designated settlement fund.

A "designated settlement fund" means a fund (1) which is established pursuant to a court order, (2) which is established for the principal purpose of resolving and satisfying present and future claims against the taxpayer (or any related person, within the meaning of §267(b), or formerly related person) arising out of personal injury, death or property damage, (3) which is administered by persons a majority of whom are independent of the taxpayer, (4) in which the taxpayer does not have a beneficial interest in the income or corpus, (5) to which no amount may be transferred other than qualified payments and (6) for which the taxpayer has made an election.[55] The Senate Report indicates that in meeting these requirements the fund must completely extinguish the taxpayer's tort liability with respect to a class of claimants, as determined by the court.[56] The election must be made in accordance with regulations set out by Treasury, and once made, can only be revoked with the Treasury's consent.[57]

A qualified payment means cash or property, other than stock or indebtedness of the taxpayer (or a related party), which is irrevocably contributed to a designated settlement fund pursuant to a court order, or any amount which may be transferred from the fund to the taxpayer.[58]

A designated settlement fund is not qualified if the taxpayer may benefit from the corpus or income of the fund. §468B(d)(2)(E).

> *Example*: If the taxpayer's future liability to claimants (or other parties) is contingent on the income of a settlement fund created by the taxpayer, then the taxpayer may benefit from the fund's income, and the fund is not a qualified designated settlement fund.[59]

A designated settlement fund is taxed as a separate entity at the maximum rate for income of trusts under §1(e).[60] Gross income of a designated settlement fund includes income from investment of fund assets, but excludes qualified payments made to the fund.[61] No deductions are permitted except for administrative costs (including State and local taxes) and incidental expenses of the designated settlement fund (including legal, accounting and actuarial expenses) that are incurred in connection with the operation of the fund and which would be deductible in determining the taxable income of a corporation.[62] Distributions to claimants are not deductible but are treated as having been made by the taxpayer for purposes of determining the claimant's taxable income.[63]

The Senate Report indicates that a contribution of property to a designated settlement fund is treated as if the taxpayer sold the property for fair market value and donated to the proceeds to the fund. Thus, the taxpayer's deduction is equal to the property's fair market value. The

[63] Sen. Rep. at 926 and Conf. Rep. at II-844.

taxpayer recognizes gain or loss at the time property is contributed, and the fund takes a fair market value basis in the property.[64]

No deduction is allowed for any qualified payment by a taxpayer to a fund of an amount received from the settlement of an insurance claim, to the extent the amount received is excluded from the taxpayer's gross income.[65] Payments to a trust or escrow fund, other than a designated settlement fund, do not constitute economic performance with respect to any tort liability of the taxpayer, unless provided otherwise by Treasury regulations.[66] The amendment, however, does not affect the treatment of payments made for certain personal injury liability assignments within the meaning of §130 to a third party who assumes responsibility for making such payments.[67]

These provisions do not apply to liability arising from any workers compensation act or contested liabilities (within the meaning of §461(f)). §468B(e). The Senate Report states that no inference about the current law treatment of such liabilities is intended.[68]

The technical correction also states that nothing in any provision of law shall be construed to provide that an escrow account, settlement fund or other similar fund is exempt from current income tax. If nondeductible contributions are made to such funds, the accounts or funds will be taxed as grantor trusts.[69] This provision reverses the Service's position in Rev. Rul. 71-119,[70] wherein it concluded that a United States District Court was not a fiduciary with respect to a settlement fund which it held and was not required to file a fiduciary income tax with respect to the income of the fund. This provision applies to accounts and funds established after August 16, 1986.

b. Effective Date

The general effective date for the technical corrections covers this provision and therefore this amendment will take effect as if included in the provision of the Tax Reform Act of 1984 to which it relates (*i.e.*, 1984 TRA §91).[71] Therefore, the amendment is effective for payments which would have been deductible after July 18, 1984 without regard to the amendments in §461(h).

H. Amendment of Treatment of Services

1. Introduction

Under §467(g), as added by TRA 1984, Treasury is to prescribe regulations under which deferred payments for services will be subject to rules similar to those applicable to deferred rents.

2. Detailed Analysis

The technical corrections clarify that the regulations to be issued under §467 (relating to deferred payments for services) will not apply to amounts to which §404 or 404A (relating to pension cost deductions) apply, or to amounts subject to any other provision specified in regulations.[72]

Chapter 25

EXPANDED RELATED PARTY RULES

Samuel M. Maruca,Esq.
Silverstein and Mullens
Washington, D.C.

I. Background

The Internal Revenue Code limits the availability of certain tax benefits in transactions between related parties. The primary purpose of these limitations is to prevent taxpayers from generating tax benefits where there is an identity of economic interests between the parties. For example, Code §267, the principal related party provision, describes a number of relationships between seller and purchaser (or payor and payee, in the case of certain otherwise deductible expenditures) that will result in a disallowance of losses (or deductions) on the transfer (or payment).

Other situations in which the related party rules apply are: sales of depreciable property (§1239); sales or exchanges of property between a partner and a controlled partnership, or between commonly-owned partnerships (§707); and subsequent dispositions of property acquired in installment sales (§453(e)).

II. Overview and Effective Dates

The 1986 TRA tightens significantly the rules governing sales of property between related persons by expanding applicable definitions of "related persons."

Code §1239, which prescribes ordinary income treatment for gain on sales of depreciable property between related persons, is amended by reducing from 80% to 50% the percentage ownership that results in application of the rule. Certain relationships described in Code §267(b) are incorporated, as are the constructive ownership rules in Code §267(c).

Similarly, TRA 1986 amends Code §707(b)(2) to provide for ordinary income treatment on sales of certain property between a partner and the partner's 50%-owned partnership, and between two partnerships of which the same person or persons own 50%.

The Act makes comparable changes in the definition of related persons for purposes of accelerated recognition on the disposition of property sold on the installment method (Code §453(f)). In addition, the rules proscribing installment treatment for sale of depreciable property under §1239(b) are clarified with respect to contingent payments. For this purpose, new §453(b)(8) provides that payments to be received for property include the aggregate of fixed payments plus the fair market value of contingent payments.

Observation: Due to the elimination of the capital gains exclusion, many of these new rules will have blunted effect in 1987 and no effect thereafter (unless the rate differential is reintroduced).

The amendments generally apply to sales after October 22, 1986, in taxable years ending after that date. The amendments do not apply, however, in the case of sales closed after August 14, 1986, pursuant to a binding contract in effect on that date and at all times thereafter.

III. Detailed Analysis

A. Sales of Depreciable Property

The Act amends Code §1239(b)(1) by eliminating the reference to "80-percent owned entities" and adopting the concept of "controlled entities" in lieu thereof.[1] Code §1239(c)(1), in turn, is amended to provide a definition of "controlled entity". A "controlled entity," with respect to any person, now includes (i) a corporation more than 50% of the value of the outstanding stock of which is owned, directly or indirectly, by or for such person, and (ii) a partnership more than 50% of the capital interest or profits interest in which is owned, directly or indirectly, by or for such person.[2]

In addition, Act §§642(a)(1) expands the reach of §1239 by including in the definition of "controlled entity" a number of the relationships described in §267(b), and by broadening the applicable attribution rules. Thus, under §1239(c)(1)(C) the following persons are considered related for purposes of §1239:

(1) two corporations that are members of the same controlled group;[3]

(2) a corporation and a partnership if the same persons own more than 50% in value of the outstanding

---

[1] Act§642(a)(1)(A).
[2] Act §642(a)(1)(B); Code §1239(c)(1).
[3] "Controlled group" follows the definition under the consolidated return rules (§1563), except that cross ownership of more than 50% ownership (as opposed to 80%) of either total voting power or total stock value of group members is sufficient to constitute a controlled group. *See* Code §§267(f)(1) and 1563(a).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

stock of the corporation and more than 50% of the capital or profits interest in the partnership;

(3) an S corporation and another S corporation if the same persons own more than 50% in value of the outstanding stock of each corporation; and

(4) an S corporation and a C corporation if the same persons own more than 50% in value of the outstanding stock of each corporation.[4]

Moreover, Act §642(a)(10(C) replaces the stock attribution rules applicable under §1239. Prior to enactment of the 1986 TRA, the attribution rules contained in §318(a) generally applied for §1239 purposes. Now, §1239(c)(2) includes §267(c) rules, with certain modifications, to apply as follows:

(1) ownership of stock by an entity (*i.e.*, by a corporation, partnership, estate or trust) is attributable to the owners in proportion to their interests in the entity; and

(2) an individual is treated as owning stock owned by his family (with the term "family" defined to include siblings by whole or half blood, spouse, ancestors and lineal descendants). Section 267(c)(5) provides special rules to limit multiple attributions under alternative constructive ownership rules.

Observation: The most significant change in the §1239 attribution rules is that an individual's siblings, ancestors and lineal descendants are now part of the attribution group. Previously, attribution applied only between spouses.

B. Partnerships

Section 707(b)(2) provides for ordinary income treatment on the sale or exchange of certain property between a partner and the partner's controlled partnership. The rule applies in the case of property that is not considered a capital asset as defined in §1221, in the hands of the transferee.

Prior to the Act, §707(b)(2) treated partnerships as controlled partnerships if the partner owned more than 80% of the capital or profits interest, or if the same persons owned such interests (in the case of two or more controlled partnerships). The Act amends §707(b)(2) such that ownership of a more than 50% capital or profits interest triggers ordinary income treatment.[5]

The Act makes two technical changes relating to partnership related party transactions.[6] First, for sales or exchanges after September 27, 1985, §707(b)(1)(A) and §707(b)(2)(A) apply whether or not the person constructively holding a 50% interest is himself a partner. This effectively allows §707(b)(1)(A) to override §267(a)(1) in situations where constructive owners are considered to own more than 50% of the capital or profits interests in the partnership.[7]

Second, the Act amends §707(b) to provide that the deferral provisions of §267(a)(2) apply to transactions involving two partnerships in which the same persons own, directly or indirectly, more than 50% of the capital interests or profits interests. This change is intended to replace Temp. Regs. §§1.267(a)-2T(c), questions 2 and 3, drafted pursuant to the Tax Reform Act of 1984.[8]

C. Installment Sales

1. In General

Act §642(a)(3) modifies the definition of related persons for purposes of accelerated recognition on the disposition of property sold on the installment method under §453(e).

Prior to the Act, relationships that caused accelerated recognition included only those specific in §318(a) (other than §318(a)(4)). The definition of "related person" under §453(f) now encompasses not only the relationships specified in §318(a), but also those enumerated in §267(b) (consisting of 12 additional specific relationships). Thus, for example, siblings, members of the same controlled group of corporations, and a grantor and fiduciary of a trust, are considered related for §6453 purposes. Accordingly, where a sibling disposes of property acquired from another sibling in an installment rule and the purchaser disposes of the property before all payments are received by the seller, amounts received on the second disposition are treated as received at that time by the seller.[9]

2. Contingent Payments

Act §6129b) amends the §453(g) rules proscribing installment treatment of §1239(b) transactions with respect to contingent payments. For this purpose, payments to be received for property include the aggregate of payments that are fixed as to amount, plus the fair market value of payments that are contingent as to amount.[10]

If the fair market value of contingent payments "may not be reasonably ascertained", the Act stipulates that the seller's basis is to be recovered ratably, and the purchaser may not increase its basis in the property by any amount before such time as the seller includes commensurate amounts in income.[11]

Observation: The Act does not specify precisely how the seller's basis is to be recovered. Presumably, if an installment sales contract calls for any contingent payments, basis must be recovered ratably over the term of the contract, even though the bulk of the purchase price (as finally determined) is fixed in amount and payable prior to contingent amounts.

Query: How is the seller's profit ratio to be determined?

Chapter 26

TAX STRADDLES

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The 1986 Tax Reform Act contains several amendments relating to the Code's tax straddle provisions (§§263(g), 1092 and 1256).[1]

Act §331 expands the so-called "year-end rule" of §1092(c)(4)(E).

Act §1808 makes four "technical corrections" to provisions enacted by the Tax Reform Act of 1984.[2] Of these, by far the most significant is the amendment to §108 of the Tax Reform Act of 1984, which is the subject of several Tax Court decisions. The other technical corrections are relatively minor.

II. Amendment of the "Year-End Rule"

Section 1092(c)(1)[3] defines a "straddle" as "offsetting positions with respect to personal property." Excepted from this definition is a straddle made up of offsetting positions consisting of one or more qualified covered call options and the stock to be purchased from the taxpayer under such options where the straddle is not part of a larger straddle.[4] A "qualified covered call" is, generally, an option granted by the taxpayer to purchase publicly traded stock held by the taxpayer.[5] It must have an expiration date more than 30 days from the date it was granted and cannot be a "deep-in-the-money option." Excluded are options granted by a dealer in connection with his activity of dealing in options. Finally, gain or loss with respect to the option must not be ordinary income or loss.[6]

For an option not to be deep-in-the-money, its strike price (*i.e.*, the price at which the option is exercisable) must not be lower than the "lowest qualified bench mark." §1092(c)(4)(C). The qualified covered call exception from the straddle provisions of §1092 recognizes that in most circumstances, the granting of a covered call is a transaction whose purposes in no way involve the abuses the straddle provisions were enacted to prevent, *i.e.*, to create what are in effect economically artificial losses which can be offset against income unrelated to the property involved in the straddle transaction and/or to defer the payment of tax on economic gain from one taxable year to the next. Where the option's strike price is equal to or only slightly lower than the price at which the covering stock is traded at the time the option is granted, it is almost impossible to manipulate the offsetting positions in such a way as to obtain the tax advantages described. The purposes of granting such an option are: (1) to protect, to the extent of the premium received, the value of the underlying stock against a decline in its price, and (2) to enhance the yield of the stock by retention of the premium received in the event the option expires without being exercised.

It was seen, however, that in the event the price of the stock moved upward, the grantor of the covered call could, at the end of the year, enter into a closing transaction (which amounts to the purchase of an offsetting call option), terminating his obligation thereunder at a loss. In other words, to close out the option, he would have to purchase the offsetting option at a price in excess of the amount of the premium received. The grantor could then dispose of the appreciated stock a few days later after the end of the year. This maneuver would permit the realization of a deductible loss while, in substance, maintaining a balanced position, permitting the deferral of tax on unrelated income.

To prevent this, §1092(c)(4)(E), prior to its amendment by the 1986 Act, provided a "special year-end rule," under which the above-described exception from the §1092(a) straddle rules did not apply in the above described circumstances where (1) the covered call was closed in one taxable year, and (2) gain on disposition of the covering stock was includible in income for a later taxable year unless the covering stock was held for 30 days or more after the closing of the option.

This rule did not, however, apply to prevent a similar abusive manipulation where the stock *declined* in value. The stock could be sold at a loss at year-end and the option closed (or, if the expiration date was near, allowed to expire unexercised) at the beginning of the succeeding year. To

---

[1] Two of these amendments, made by Act §1261(b) and (c), relate to foreign currency transactions. These are discussed in Chapter 60 of this portfolio.

[2] Act §1808 is contained in Act Title XVIII — Technical Corrections, subtitle A — Amendments Related to the Tax Reform Act of 1984.

[3] All references to sections, unless otherwise stated, are to sections of the Internal Revenue Code of 1986 and/or to its predecessor, the Internal Revenue Code of 1954.

[4] §1092(c)(4)(A).

[5] *See* §1092(c)(4)(B), which defines the term "qualified covered call option."

[6] *Id.*

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

correct this, Act §331, effective as to positions established on or after January 1, 1987, expanded the year-end rule so that it applies in there circumstances as well. Thus, in addition to the pre-1986 TRA rule of §1092(c)(4)(E), set forth above, where the covering stock is disposed of at a loss during any taxable year, and gains on the covered option(s) are includible in gross income for a later taxable year, and where such option was not held by the taxpayer for 30 days or more after the disposition of the stock, the qualified covered call exception to the definition of straddle is inoperative with respect to the positions described.

III. Amendments Relating to Foreign Currency Transactions

Section 1261(b) of the Act adds paragraph (7) to §1092(d) providing that for purposes of paragraph (2) (defining the term "position" as an interest, including a futures or forward contract or an option, in personal property), an obligor's interest in a nonfunctional currency denominated debt obligation is treated as a position in the nonfunctional currency. Thus, where a U.S. corporation (whose functional currency is the dollar) is the obligor of a note denominated in Swiss Francs, the acquisition of a long position in Swiss Francs will give rise to a straddle. Unless specifically excepted by some other statutory provision, the loss deferral rules of §1092 will apply to the straddle positions.

Under the rules of §988(a)(1), added by Act §1261(a), except as provided in regulations, a taxpayer may elect to treat any foreign currency gain or loss attributable to a forward contract, a futures contract, or option described in subsection (c)(1)(B)(iii) which is a capital asset in the hands of the taxpayer as a capital gain or loss. This election does not apply, however, to a position which is part of a straddle within the meaning is §1092(c) (without regard to the qualified covered call exception of §1092(c)(4)). Subsection (c)(1)(B)(iii) (part of the definition of a "§988 transaction") refers to positions which are not marked to market at the close of the year under §1256. Further §988(d)(1) provides that neither §1092 nor §1256 applies to a "§988 hedging transaction."

Section 1092(d)(7), as added by the Act, also provides that foreign currency for which there is an active interbank market is treated as "actively traded" for purposes of §1092(d)(1).

Section 1261(c) of the Act repeals §1256(e)(4) which provided that in the case of a bank, the requirements of §1256(e)(2)(A)(i) and (ii) need not be met for transactions entered into by such bank to qualify as "hedging transactions."

The interaction between these amendments to the straddle provisions and the 1986 TRA provisions relating to foreign currency transaction is discussed in Chapter 60.

IV. Amendments to §108 of the 1984 TRA

A. Section 108 of P.L. 98-369 and the Miller Decision

At the time P.L. 98-369 (Tax Reform Act of 1984) was being drafted, the IRS had issued a large number of deficiency notices disallowing losses based on transactions similar to those involved in Rev. Rul. 77-185, 1977-1 C.B. 48. In *Smith v. Comr.*, 78 T.C. 350 (1982), the Tax Court rejected the Commissioner's contention, based on this ruling, that the disposition of the loss leg of a straddle accompanied by its simultaneous replacement, locking in the unrealized gain from the gain leg, was not a completed transaction and thus did not give rise to loss recognizable under §165(c). The court did agree, however, with the alternative position that no loss was allowable because the transaction, concededly not entered into in the course of the taxpayer's trade or business, was not sustained in a transaction entered into for profit as is required by §165(c)(2). Not only was profit not the principal motive for entering into the transaction, but the evidence abundantly established that the taxpayer anticipated an overall pre-tax benefit loss since the out of pocket expenses (commissions, fees, etc.) exceeded any foreseeable gain from the hedged positions involved. In *Fox v. Comr.*, 82 T.C. 1001 (1984), involving straddles composed of put options on Treasury bills, *Miller* was followed in disallowing losses sustained in transactions which the court found were motivated primarily by anticipated tax benefits rather than economic profit. In that case, the court indicated in a dictum that the primarily for profit interpretation of §165(c)(2) might not apply where the tax motivated transaction in question was one which Congress intended to encourage.

The IRS did not, however, abandon its position that the disposition of the loss leg of such a straddle was not a completed or closed transaction, a position which, if ultimately sustained, would result in the disallowances of straddle losses even in cases involving professional traders acquiring straddle positions with a profit motive, *i.e.*, hoping to derive a profit from a favorable increase (or decrease) of the price spread. This led Congress to enact §108 of the Tax Reform Act of 1984.[7] Section 108(a) provided that "in the case of the disposition of 1 or more positions—

> (1) which were entered into before 1982 and form part of a straddle, and
>
> (2) to which the amendments made by title V of [ERTA] do not apply, any loss from such disposition shall be allowed for the taxable year of the disposition if such disposition is part of a transaction entered into for profit."

Section 108(d) in effect foreclosed the IRS from disallowing such straddle losses under the lack of closed transaction theory. In other words, as to straddle positions to which the ERTA provisions did not apply, the only ground for disallowance was the lack of a profit motive with respect to the transaction of which the loss position was a part. In addition, §108(b) provided that "any position held by a commodities dealer or any person regularly engaged in investing in regulated futures contracts shall be rebuttably presumed to be part of a transaction entered into for profit." A "commodities dealer" was defined in §108(f) as having the meaning given such term by Code §1402(i)(2)(B).

[7] Reference to "§108" in the discussion below is to this section of P.L. 98-369 and not to a Code section as are all other references to sections.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The scope and application of §108 was interpreted by the IRS in Temp. Regs. §1.165-13T. These regulations, which are in question and answer format, state (in A-2) that for §108 to apply, "the transaction must have sufficient substance to be recognized for Federal income tax purposes. Thus, for example, since a 'sham' transaction would not be recognized for tax purposes, §108 of the Act would not apply to such a transaction."

In *Miller v. Comr.*, 84 T.C. 827 (1985), involving Rev. Rul. 77-185 type straddle losses which, for all practical purposes, were indistinguishable from those involved in *Smith*, the taxpayer was successful in persuading the Tax Court that if the futures prices had moved in certain (admittedly unlikely) ways, a profit could have been realized, albeit substantially less than the benefits resulting from the deferral of tax. The court, after concluding that the straddle transactions were entered into primarily for their anticipated tax benefits, and that, absent §108 *Smith* would require disallowance of the claimed losses, concluded that the words "entered into for profit" as used in §108 did not have the same meaning as when used in §165(c)(2) as interpreted in the *Smith* and other decisions involving the statute. The Conference Report, H.R. Rep. No. 861, 99th Cong., 2d Sess. 1984-3 C.B. (Vol. 2) 1, 171 states, "[i]n determining whether the position is part of a transaction entered into for profit, it is intended that the provision be applied by treating the condition as satisfied if there is a reasonable prospect of any profit from the transaction." Since the court found that there was a reasonable prospect for profit, it held, in a reviewed opinion over a vigorous dissent by Judge Simpson and others, that the losses must be allowed under §108.

In *Miller*, the court rejected the Government's contention that the transactions involved were shams. In so doing, it appeared to equate "sham" with quasi fraud of the type involved in *Julien v. Comr.*, 82 T.C. 492 (1984), where the taxpayer was unable to present convincing evidence that the purported straddle transactions had ever actually been entered into in his behalf. If, on the other hand, the term as used in the regulations meant imbued with sufficient economic substance, apart from the tax benefits anticipated, to be entitled to recognition for tax purposes, as in *Knetsch v. U.S.*, 364 U.S. 361 (1960) (deduction for prepaid interest denied where loan proceeds used to purchase single premium annuity which was cashed in at the end of the succeeding year — a deferral scheme under which the taxpayer "loaned money to himself"), the court ruled that they were in conflict with *Smith* (where the lack of economic substance argument was rejected) and with §108, which contains no mention of economic substance. The court's interpretation of "entered into for profit" was applied in *Landreth v. Comr.*, T.C. Memo 1985-413; *Kurtz v. Comr.*, T.C. 1985-410, and *Perlin v. Comr.*, 86 T.C. 388 (1986). In each case the court found that the taxpayers had some reasonable expectation of profit.

B. 1986 TRA Amendments to §108(a): The London Options Cases

The holding in *Miller*, which effectively granted amnesty to thousands of taxpayers whose losses based on dispositions of pre-1982 straddle positions had been challenged by the IRS, was a matter of considerable concern to the IRS and, apparently, to Congress. After *Miller*, the Tax Court held in *Brown v. Comr.*, 85 T.C. 968 (1985) that a straddle scheme (in which, similar to the facts in *Julien*, *supra*, investors were provided by the promoter with schedules showing transactions purportedly carried out on their behalf) involved sham transactions since there was no evidence that the transactions had ever actually been effected. Similar sham transactions were found to exist in *Forseth v. Comr.*, 85 T.C. 127 (1985) and *Martino v. Comr.*, T.C. Memo 1986-263, both of which involved "factual shams," *i.e.*, prearranged or fictitious transactions involving rigged prices. These cases are, therefore, distinguishable from *Smith* or *Miller* in that they involved what may be termed shams in fact. In no decision prior to the 1986 Act amendments to §108, discussed below, had it ever been held that a straddle transaction was a sham in substance, that is, that it should not be recognized for tax purposes because it lacked economic substance, the argument rejected by the Tax Court in *Smith*.

As part of the 1986 Tax Reform Act, Congress amended §108, effective as if enacted by ERTA.[8] The language of §108(a), quoted above, "if such position is part of a transaction entered into for profit," was stricken out and the following was inserted: "if such loss is incurred in a trade or business, or if such loss is incurred in a transaction entered into for profit though not connected with a trade or business." This language is similar to that of §165(c)(2).

The House Report makes it clear that the intent of this language is to overrule the Tax Court's *Miller* decision: "It was not the intent of Congress in enacting §108 to change the profit motive standard of §165(c)(2) or to enact a new profit motive standard for commodity straddle activities. This technical correction is necessary to end any additional uncertainty created by the *Miller* case."[9] However, the Conference Committee Report makes no mention of *Miller* or of any intention to change the meaning of "entered into for profit," as used in §108(a) prior to its amendment.[10]

The effect of the amendment was quickly tested in *Glass v. Comr.*, 87 T.C. No. 68 (Nov. 17, 1986), a reviewed decision involving over a thousand petitioners whose cases were consolidated and who carried on their transactions through 17 offshore broker/dealers whose trading was effected on the London Metal Exchange. The case is referred to as the "London Options" case. For all practical purposes, the straddle transactions, although they involved a number of variations, were basically of the *Smith/Miller* type: deductible losses were deliberately created in Year One from disposing of a straddle's loss leg, which was immediately replaced with the consequent lock-in of gain on the offsetting leg. Both legs were disposed of in Year Two with net gain approximately equal to the Year One loss. At no time was there any significant risk of loss or potential for gain from the balanced or hedged positions maintained throughout. The Court, before addressing the legal issues involved, stated: "It requires no elaborate analysis of the facts to demonstrate that the petitioners did not

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

enter into these transactions primarily for economic profit and that the transactions under scrutiny were not a type of tax motivated transaction which Congress intended to encourage. . . . The expected tax benefits completely overwhelm any potential economic benefits that might have been expected from the straddles."

The Court then examined the legislative history of the amendments to §108. It noted the Conference Committee's dropping of the House Report's language relating to the overruling of *Miller* and the intent to require the same standards as those applied under §165(c)(2). It also noted difficult to reconcile statements by Rep. Rostenkowski on the one hand and a colloquy between Senators Dole and Packwood on the other regarding the Conference Report's omission of this language. It would appear that, finding the legislative history troublesome on this point, the court decided to base its decision on what it considered to be a significant change in the flush language of §108(a) as amended, quoted above.

After a review of the cases involving "sham transactions," the court distinguished those involving "shams in fact," such as those discussed above, and those involving "shams in substance." The court first noted that the tax objective of the straddles involved in *Glass* was to "move" income from Year One of the straddle scheme to a subsequent year and in the process convert it from ordinary income to capital gain.[11] The question posed, according to the court, was whether the intentional loss generating closing transactions in Year One of these schemes "fit within what §§165 and 1234 and new §108(a) intended." The court stated that, in the words of *Gregory v. Helvering*, 293 U.S. 465, 469 (1935), "[t]he question for determination is whether what was done, apart from the tax motive, was the thing which the statute intended." The court concluded that this question must be answered in the negative and accordingly denied the claimed losses.

The court noted that the only possibility for gain from a straddle is the "difference gain," that is, the convergence or divergence of the difference in the prices for the different delivery months involved. It then reasoned that this could not in any way be affected by the closing out and simultaneous replacement in Year One of one or more straddle positions. In other words, these transactions, viewed alone, had absolutely no profit motivation and, therefore, were sham transactions in substance. Thus, the Year One losses were not allowable.

The wording of amended §108(a), which the court earlier had noted eliminated "the concept of a 'position' as part of a transaction entered into for profit," thus disallows the loss unless it is "incurred in a transaction entered into for profit," and the motives for the *disposition of a given straddle position* may thus be considered without going into the question of whether there was a reasonable expectation of profit from *entering into the straddle transaction*, that is, the position disposed of and the other positions making up the straddle. The obscurity of the legislative history regarding whether or not Congress intended to change the meaning of "entered into for profit" was thus finessed by reliance on the amended language of §108(a).

Consistent with its disallowance of the Year One losses, the court also held that gains realized in Year Two must also be regarded as resulting from sham transactions, and must, accordingly, be disregarded for tax purposes.

The court pointed out that its holding was not in conflict with *Wehrly v. U.S.*, 792 F.2d 878 (9th Cir. 1986), which held, in a case involving a *Smith/Miller* type of straddle transaction and the application of §108(a) prior to its amendment, that the investor needs only a "reasonable expectation" of profit in order to recognize the loss, since "[t]he absence of economic substance in the London Option Transaction negates the existence of *any* profit motive." (Emphasis supplied).

C. *Other Amendments to §108*

Section 108(a) as originally enacted contained no reference to "trade or business." It provided only that a loss from the disposition of a straddle position would be allowed if it was part of a transaction entered into for profit. Subsection (b) then provided that a position held by a commodities dealer (defined by subsection (f) as having the same meaning given to such term by §1402(i)(2)(B)) or any person regularly engaged in investing in regulated futures contracts (defined by subsection (g) as having the same meaning given the term by §1256(b) as in effect prior to the enactment of P.L. 98-369) "shall be rebuttably presumed to be part of a transaction entered into for profit." In amending §108 by Act §1808(d)(2), Congress struck out subsection (b) and inserted a new subsection (b) eliminating any reference to a presumption and providing simply that for purposes of subsection (a), any loss incurred by a commodities dealer in the trading of commodities shall be treated as a loss incurred in a trade or business. As amended, §108(f) defines the term "commodities dealer" as any taxpayer who —

> (1) At any time before January 1, 1982, was an individual described in §1402(i)(2)(B) (as added by the 1984 TRA), or
>
> (2) Was a member of the family (within the meaning of §704(e)(3) of the 1954 Code) of an individual described in paragraph (1) to the extent such member engaged in commodities trading through an organization the members of which consisted solely of—
>
> > (A) One or more individuals described in paragraph (1), and
> >
> > (B) One or members of the families (as so defined) of such individuals.

Under §108(h) prior to amendment, the rebuttable presumption of §108(b) did not apply to any "syndicate" as defined by §1256(e)(3)(B). Under the amended §108, sub-

[11] Many of these straddles were entered into in 1975 and 1976 at which time, prior to the effective date of §1234(b) as amended by the 1976 TRA, gain or loss from a closing transaction entered into by the grantor of an option was ordinary income or loss. Many of the straddles involved options, and the transactions were handled in such a way that the Year One loss, geared to the amount of ordinary income it was desired to offset, was generated by the closing out of an option granted by the taxpayer. At the same time, in order not to leave the taxpayer exposed to risk with respect to the other leg of the option straddle, the gain leg, usually a purchased option, would be sold generating short-term capital gain, and this gain was deferred to Year Two by the usual futures straddle technique.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

section (h) provides that any loss incurred by a person (other than a commodities dealer) with respect to an interest in a syndicate (within the meaning of §1256(e)(3)(B)) is not considered a loss incurred in a trade or business.

The Conference Committee's comments on the §108 amendments omits, as already noted, any discussion of the changes made to §108(a) as they may affect a taxpayer situated similarly to the taxpayers in *Smith* and *Miller*. The Report states that the Conference agreement follows the House bill. Commenting on §108(b), it states that generally a taxpayer engaged in investment banking who regularly trades in commodities as a part of that business would be considered in the trade or business of trading commodities. Further, the report states that §108(b) applies to any position disposed of by a commodities dealer without regard to whether the position was in a commodity regularly traded by the person, whether it was traded on an exchange of which the dealer was a member, or whether an identical position was re-established on the same trading day or subsequently. The report clarifies that anyone owning a seat on a commodities exchange will be regarded as a "commodities dealer." [12]

The Conference Report, at p. II-845, also states that if a securities trading firm also regularly trades commodities in connection with its business, such trading will be treated as part of its trade or business. This rule applies only to the firm itself: it does not apply to the separate individual trading of its partners, principals, or employees, nor to partnerships or other organizations formed for the principal purpose of marketing tax straddles. *Id.*

The Report clarifies that §108(b) treatment is available not only with respect to losses incurred directly by a dealer, but also to a loss incurred by a commodities dealer in determining such person's income from an S corporation, partnership or trust. *Id.* Thus, if a dealer is a shareholder of an S corporation which incurs a commodity trading loss, the dealer is allowed the loss under §108(b). However, merely because a person is a shareholder in an S corporation, a partner in a partnership, or the holder of an interest in a trust engaged in trading commodities does not automatically bestow dealer status on that person. *Id.*

Finally, the report expresses the conferees' intent that the IRS bring all outstanding pre-ERTA straddle litigation to a "speedy resolution." *Id.*

In *King v. Comr.*, 87 T.C. No. 70 (December 2, 1986), the petitioner was a registered member of the Chicago Mercantile Exchange (CME) and its division, the International Monetary Market (IMM), and since 1950 had regularly traded commodities and RFC's and derived most of his income from such trading. In 1980 and 1981, the petitioner, through the IMM, entered into and disposed of a number of straddles involving positions in gold, incurring substantial losses. In view of the amendments to §108 outlined immediately above, the court held that the petitioner was entitled to summary judgment since (1) the IRS conceded that the petitioner was a "commodities dealer," within the meaning of §108(b) and (2) the IRS in its response alleged no facts from which it could be inferred that the transactions were shams in fact in view of the fact that all trades were carried out through a regulated exchange and pursuant to the rules thereof. In view of the 1986 amendments to §108, no issue existed as to whether the transactions in question were entered into for profit — it was sufficient that the losses were sustained on transactions effected by a commodities dealer.

Note: In *Glass*, *supra*, the court noted that at least some of the transactions there involved might involve shams in fact (*See Forseth* and *Martino*, *supra*) where prices were rigged in interdealer trades to correspond with desired tax consequences and were not subject to open outcry in the trading ring. However, the court stated that in view of its holding that the transactions there involved were shams in substance, it need not inquire into the sham in fact aspects of the case. In *King*, in view of the petitioner's dealer status, sham in fact would be the only ground for disallowing the losses there involved. However, since the pleadings showed that all trades had been effected on the exchange, there was clearly no material question of fact as to this issue. That the petitioner was a dealer and that he carried out the transactions on a regulated exchange were sufficient to entitle him to summary judgment.

V. Other Technical Corrections of the 1984 TRA Straddle Provisions

A. Coordination of S Corporation Election and Election Under 1984 TRA §102(g) and (h)

The 1984 TRA extended the mark to market and 60/40% long-term/short-term capital gains treatment, which formerly applied only to regulated futures contracts, to all "§1256 contracts," which include "dealer equity options," *i.e.*, stock options purchased or granted by an options dealer in the course of his business. These changes applied, generally, to positions established after July 18, 1984. Section 102(g) of the 1984 Act granted options dealers an election to apply mark to market and 60/40 treatment to positions established prior to the July 18 effective date and carried into taxable years which included the date of enactment of the 1984 Act, and Act §102(h) provided for installment payment of any additional taxes incurred pursuant to the election made under subsection (g). Also, §102(d) of the 1984 Act permitted qualified incorporated commodities dealers and options dealers to elect S corporation status without regard to the general requirement that such election must be made by the 15th day of the third month of the electing corporation's taxable year for which effective. There arose the question of how an S corporation election and the election under Act §102(g) and (h) were to be coordinated. Section 1808(a) of the 1986 Act: (1) adds a subsection (j) to 1984 Act §102, directing the Secretary to issue regulations as necessary to coordinate these elections; and (2) amends §102(d)(3) to allow regulatory flexibility as to the day for making the S election. These changes are effective as if enacted by the 1984 TRA. *See* 1986 TRA, §1881.

B. Amendment to §263(g)

Section 263(g) was enacted by ERTA primarily to deal with abuses involving so-called "cash and carry" straddles

[12] Conference Report at II-845.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

made up of a short commodity futures position and a long position in the commodity itself, usually a precious metal. Absent the requirement of §263(g) for capitalizing interest and carrying charges allocable to personal property making up a part of a straddle, the taxpayer could currently deduct such charges as an offset to ordinary income and, when the short position was closed out by delivery of the commodity, recoup these same expenses as long-term capital gains. Allowed as offsets to the charges required to be capitalized are certain amounts includible in gross income, such as interest, OID and market discount, and dividends. *See* §263(g)(2). If the owner of securities which constitute personal property which is part of a straddle (*e.g.*, stock held by the grantor of a covered call) pays interest on indebtedness incurred to purchase or carry the securities, or carrying charges with respect to the securities, such interest or carrying charges must be capitalized under §263(g)(1). In the case of a short sale of stock, the lender of stock which is part of a straddle (a transaction which will involve broker-dealers almost exclusively) may receive payments from the borrower in lieu of dividends or interest. The 1986 Act, §1808(b), amends §263(g)(2) to add to the list of items of income which offset the amounts which must be capitalized "any amount which is a payment with respect to a security loan (within the meaning of §512(a)(5)) includible in gross income with respect to such property for the taxable year." Thus, such lender, while required to capitalize interest and carrying charges allocable to the stock, may reduce these amounts by payments received in lieu of dividends or interest (or as other compensation) if such amounts are includible in his gross income.

Chapter 27

REVISED RULES FOR ALLOCATION OF PURCHASE PRICE IN ASSET ACQUISITIONS

Robert E. Liles, II, Esq.
Silverstein and Mullens
Washington, D.C.

I. Overview

Section 641 of the 1986 Tax Reform Act revised the rules for allocating the purchase price of a business to the assets by requiring the use of the residual method of valuation by both the transferor and transferee of the assets. The provision applies to all acquisitions of assets after May 6, 1986, with the exception of acquisitions pursuant to a binding contract in effect on such date and all times thereafter.

II. Detailed Analysis

A. Residual Method

Prior to the 1986 Tax Reform Act, the sale price from the sale of a business was allocated among the assets under one of three methods. The method generally thought to be the most accurate was the negotiation method, whereby sellers and buyers with adverse interests in the relative amounts of purchase price allocated to each asset were allowed to make a binding allocation by contract. Such negotiated allocations are in most circuits not overturned unless there is "strong proof" that the allocation did not reflect the parties' intent.[1] In the Third and Federal Circuits, stronger proof (equal to that sufficient to prove unenforceability due to mistake, undue influence, fraud, or duress) is required.[2] This method was generally accepted by the Internal Revenue Service.[3]

Another method of allocating purchase price involved determining the fair market values of each asset of the business (including intangibles) and allocating purchase price proportionally among the assets.[4] Where the fair market value of intangibles (particularly goodwill and other nonamortizable intangibles) could be accurately determined, the Service endorsed this method, even though it could result in a so-called "second tier" allocation of basis to assets in excess of their fair market value.[5]

The third method is the residual method of allocation. Under the residual method, purchase price is first allocated to cash, accounts receivable and other tangible or intangible assets up to their aggregate fair market value. Any remaining amount of purchase price is allocated to goodwill and other nonamortizable intangibles.[6] The residual method has gained favor with the Tax Court on the theory that it is a less subjective method of valuing goodwill and other nonamortizable intangibles.[7] The method has been criticized, though, by the Third Circuit as not properly reflecting goodwill and going concern value if there is either a premium or bargain element associated with the lump sum purchase.[8] The Third Circuit observed that if a premium is paid, goodwill will be inflated, and if a bargain element exists, goodwill will be understated.

Prop. Regs. §1.338(b)-2T adopts this residual method for §338 transactions. The proposed regulation establishes four asset classes (I, II, III, IV) and requires allocation of purchase price to each in order:

Class I. Cash, demand deposits, and similar accounts in banks savings and Loan associations (and other similar depository institutions).

Class II. Certificates of deposit, U.S. Government Securities, readily marketable stock or securities and foreign currency.

Class III. All assets, both tangible and intangible, (other than Class I, II, or IV assets.

Class IV. Intangible assets in the nature of goodwill and going concern value.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Any amount in excess of the amount allocated to classes I-III is allocated to Class IV. Temp. Regs. §1.338-2T(b). Section 1060(a) of the Code, as enacted by Act §641, imposes this same method on all buyers and sellers in "applicable asset acquisitions."

While the change is ostensibly designed to simplify taxation of asset acquisitions by eliminating litigation over the allocation of purchase price,[9] taxpayers should be warned that the simplification is apparently a one-way street. The Senate Finance Committee Report makes clear that "the committee does not intend to restrict in any way the ability of the Internal Revenue Service to challenge the taxpayer's determination of the fair market value of any asset by any appropriate method. For example, in certain cases it would be reasonable for the Service to make an independent showing of the value of goodwill or going concern value as a means of calling into question the validity of the taxpayer's valuation of other assets." [10]

Note: Some practitioners believe that Congress left a loophole in the residual method requirement of §1060 by failing to cover partnership payments under §736. It is argued that by using a partnership structure to accomplish the sale transaction, there is no allocation to goodwill. *See* "Treatment of the Residual Value of Assets Under New Section 1060," 27 *Tax Mgmt. Memo* 316 (Nov. 24, 1986). The step transaction doctrine may, however, limit the utility of such an approach.

[9] *See* Senate Finance Report at 255-54.
[10] Senate Finance Report at 255.

B. Applicable Asset Acquisitions

Section 1060(c) defines an "applicable asset acquisition" as any transfer of assets constituting a trade or business where the transferee's basis in such assets is determined wholly by reference to the consideration paid for such assets. The provision thus applies to all taxable asset sales, but would not apply to nontaxable transactions such as reorganizations. In addition, the provision applies to §1031 like kind exchanges where part of the consideration gives rise to gain under §1031(b).[11]

C. Information Reporting

Section 1060(b) of the 1986 Code provides the Treasury with authority to issue regulations requiring information reporting by buyers and sellers of the amount of consideration received for assets which is allocated to goodwill or going concern value. In addition, the Treasury may require reporting on modifications to the goodwill allocation and any other information with respect to other assets transferred in the transaction.

D. Effective Date

The revised allocation rules apply generally to asset acquisitions after May 6, 1986. An exception is provided for transactions pursuant to binding contracts in effect on May 6, 1986, and at all times thereafter.[12]

Chapter 28

MODIFICATIONS TO RECAPTURE PROVISIONS

Patrick G. Dooher, Esq.
Jane M. Eldredge, Esq.
Silverstein and Mullens
Washington, D.C.

I. Changes Affecting Depreciation Recapture

A. Background—Pre-1986 TRA Law

Section 1245(a) of the Code provides, in part, that if "section 1245 recovery property" is disposed of after December 31, 1980, previously claimed depreciation on such property must be recaptured as ordinary income but limited to the amount of gain realized on the disposition of the property. The recapture income must be recognized notwithstanding any other provision of the Code.

Section 1245(a)(5) defines "section 1245 recovery property" as any recovery property within the meaning of §168 other than the following four categories of recovery property:

(i) 19-year real property and low-income housing which is residential rental property as defined in §167(j)(2)(B);

(ii) 19-year real property and low-income housing described in §168(f)(2), *i.e.*, property used predominantly outside the U.S. ("foreign use property");

(iii) 19-year real property and low-income housing with respect to which an election to use the straight-line percentages has been made under §168(b)(3); and

(iv) low-income housing as defined in §168(c)(2)(F).

Thus, for example, commercial real estate constitutes "section 1245 recovery property" if accelerated percentages are used, since it does not fall within any of the above categories.

Recovery property fitting within one of these four categories is subject to the recapture rules of §1250. Section 1250 provides for recapture only to the extent accelerated depreciation on the property exceeds the amount of depreciation that would have been claimed using the straight-line method.

B. 1986 TRA Amendments to Section 1245

As a result of the revision of the Accelerated Cost Recovery System (ACRS) of §168 by §201 of the 1986 TRA, under which real property will generally be depreciated using straight-line rates over either 27.5 years (residential property) or 31.5 years (nonresidential real property), the 1986 TRA [1] amended Code §1245(a) to eliminate nonresidential real property as a category subject to the §1245 recapture rules.[2] Moreover, since accelerated depreciation is not available for most real property under the revised ACRS, gain on the disposition of such property will not be subject to recapture under §1250.

Observation: Another change wrought by the 1986 TRA, §§301 and 311, the elimination of favorable capital gains treatment for both corporate and noncorporate taxpayers, will have the important collateral consequence of reducing the significance of depreciation recapture. While the depreciation recapture rules will continue to recharacterize capital gain as ordinary income, that income will be subject to tax at the same rates. However, this recharacterization may still preclude the use of capital losses, which can only offset capital gains, and may result in the acceleration of installment sales gain under §453(i). The elimination of favorable capital gains treatment becomes fully effective for corporations after 1986 and for noncorporate taxpayers after 1987. Act §§301(c) and 311(c) and (d). For further discussion, *see* Chapter 2.

Note: Another 1986 TRA change that will diminish the role of the depreciation recapture provisions is the repeal of the *General Utilities* doctrine in the corporate area. Subject to some limited exceptions, gain on corporate liquidating distributions after 1986 will be recognized at the corporate level regardless of the applicability of the depreciation recapture rules. For a discussion of *General Utilities* repeal, *see* Chapter 36.

C. Effective Date

The revised ACRS is generally effective for property placed in service after 1986. For an analysis of the effective date and transition rules, *see* Chapter 4, I, E.

II. Dispositions of Certain Wetlands and Croplands

A. Analysis

Prior to the TRA 1986, gain on the sale or other disposition of converted wetlands or highly erodible crop-

[1] Act §201(d)(11).

[2] Since the 1986 TRA revision of the ACRS eliminated the term "recovery property," the definition of "section 1245 recovery property" was stricken from §1245. Act §201(d)(11)(D).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

lands was treated as a capital gain while losses were treated as ordinary losses and were fully deductible in the taxable year in which the sale or disposition occurred.

Congress was concerned about the adverse environmental impact of the conversion of wetlands and other highly erodible lands to farming uses.[3] Thus, Congress repealed the preferential tax treatment for the disposition of converted wetlands or highly erodible croplands.[4]

"Converted wetland" refers to land that is converted within the meaning of §1201(4) of the Food Security Act of 1985[5] and is held by (i) the person who converted the wetland, (ii) any other person who uses the land for farming for any period of time after conversion, or (iii) a person whose adjusted basis in the property is determined by reference to the basis of the person in whose hands the property was converted wetland.[6] In general, it is land that has been drained or filled for the purpose of making agricultural production possible if such production would not have been possible without such action. *See* H.R. 2100, §1201(2); House Report at 652.

"Highly erodible cropland" refers to highly erodible cropland within the meaning of §1201(6) of the Food Security Act of 1985[7] if at any time the taxpayer used it for farming purposes other than the grazing of animals.[8] Generally, this is land that is either classified as class IVe, VI, VII or VIII land under the Department of Agriculture's capability classification system; or land that would have an excessive average annual rate of erosion compared to the soil loss tolerance level, as determined by the Secretary of Agriculture. *See* H.R. 2100, §1201(6); House Report at 652.

1. Gain From Sale of Disposition

Under new §1257(a), the gain from the sale or disposition of a converted wetland or highly erodible cropland shall be treated as ordinary income, rather than a capital gain. The Senate and House reports explain that this change is designed to discourage conversions of the nation's wetlands and erodible lands to farming uses.[9] However, the elimination of the capital gain differential may obviate any practical deterrent based on rate of taxation of capital assets.

2. Loss Treated as Long-Term Capital Loss

Any loss recognized on the sale or disposition of a converted wetland or highly erodible cropland shall be treated as a long-term capital loss, rather than as an ordinary loss.

3. Effective Date

The TRA 1986 amendments apply to dispositions of converted wetlands or highly erodible croplands first used for farming after March 1, 1986 in taxable years ending after that date.[10]

III. Disposition of Certain Oil, Geothermal, and Mineral Properties

A. Introduction

Recapture rules have required that a portion of the gain upon the disposition of an oil, gas or geothermal or other mineral property be characterized as ordinary income. Intangible drilling costs, depreciation of personal property, and mining exploration costs are recaptured as ordinary income to the extent of the excess of the amount realized over the adjusted basis of the property if the basis had been adjusted by the amount of the expenditures which were incurred after December 31, 1975.

However, the House was concerned that the depreciation deductions which had been allowed had exceeded the actual decline in the value of the asset upon disposition. Therefore, the House stated that in these situations, capital gains treatment should not be allowed.[11]

B. Overview and Analysis

Act §413 expands and modifies the recapture provisions of §1254 to include depletion, to the extent the depletion deduction reduced the basis of the property.

1. Depletion Costs Included

Act §413 amends §1254 by subjecting depletion, intangible drilling costs and mining exploration and development costs to recapture upon disposition of the property of an interest in oil, gas, geothermal or other mineral property.

2. Disposition of Portion of Property

Code §1254(a)(2) is restated, but is substantively unchanged. In the event of the disposition of a portion of an interest in oil, gas, geothermal or other mineral property, the amount to be recaptured would be *pro rata*, based on the proportionate share of the interest disposed of in an oil, gas, geothermal or other mining property.

3. Effective Date

The amendments to §1254 apply only to the disposition of any oil, gas, geothermal or other mineral property that was placed in service after December 31, 1986 unless acquired pursuant to a binding written contract entered into before September 25, 1985. Act §413(c).

IV. Disposition of Certain Plants and Animals for which Preproductive Expenses were Deducted

A. Introduction

Preproductive period expenses are those expenses incurred prior to the disposition of the first marketable crop or yield if the subject farm property has a useful life in excess of one year. The expenses were deductible by farmers using the cash method of accounting in the taxable year in which the expenses were paid. However, farming corpo-

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

rations or partnerships with one or more corporate partners engaged in farming were not eligible to use the cash method of accounting and, therefore, were not able to currently deduct their preproductive period revenues.[12] These taxpayers are required to use an accrual method of accounting and therefore must capitalize their preproductive period expenses. *See* Chapter 7, III.

B. Overview

The TRA 1986 adopts uniform capitalization rules for taxpayers engaged in the trade or business of farming if the preproductive period is greater than two years.[13] Congress adopted uniform capitalization rules in an effort to match expenses and the related income and to correct what the House thought were distortions in allocations of economic resources.[14] However, the special rules adopted for farmers and ranchers are not the same as the uniform capitalization rules for inventory and construction costs. Corporations, partnerships, or tax shelters required to use the accrual method of accounting under §447 or §448(a)(3) are required to capitalize preproductive costs regardless of the length of the preproductive period.[15]

Capitalization of the preproductive period costs and the interest incurred prior to production is also required if the preproductive period of the crops or livestock is more than two years.[16] There is a special exception permitting the expensing of costs incurred in replanting the same type of edible plants after loss or damage to the plants in the taxpayer's hands due to freezing temperatures, disease, drought, pests or casualty.[17]

A farmer or rancher who is not required to use an accrual method of accounting under §447 or §448(a)(3) or who does not plant, cultivate, maintain or develop pistachio trees may elect to expense the preproductive expenses rather than capitalize them.[18]

C. Analysis

1. Recapture of Preproductive Expenses which Were Deducted

If a farmer or rancher elected to currently deduct all preproductive costs of plants or animals, the gain upon the disposition of the plant or animal is recaptured at the time of disposition. The gain is recaptured to the extent of prior deductions for preproduction expenses which, but for the election, would have been capitalized.[19]

2. Effect of Election to Deduct Preproductive Period Expenses on Depreciation

A taxpayer or any "related person" electing to expense his preproductive period expenses is required to use the "alternative depreciation" system[20] for all property of the taxpayer used predominantly in the farming business and placed in service during any taxable year during which the election was in effect.[21]

3. Definitions

a. A related person, for this purpose, includes the taxpayer, members of the taxpayer's family, corporations (including S corporations) or partnerships in which the taxpayer or members of his family own at least 50% of the value of the corporate stock or the partnership or a member of a parent-subsidiary controlled group of corporations as defined in Code §1563(a)(1). §263A(e)(2)(B).

b. Members of family include the taxpayer, his spouse and any of their children who have not reached 18 by the end of the taxable year. §263A(e)(2)(C).

c. *Preproductive period* means (1) in the case of a plant or animal that will have more than one crop or yield or one off-spring, the period of time from the date of acquisition to the first marketable crop or yield from the plant or animal; or 2) in the case of any other plant or animal, the period before such plant or animal is reasonably expected to be disposed of.[22] For this purpose, use by the taxpayer in a farming business of any supply produced in the business shall be treated as a disposition.

The preproductive period for certain commercially grown plants shall be based on a national average.[23]

d. *Farming business* means the trade or business of farming and specifically includes operating a nursery or sod farm, the raising or harvesting of trees bearing fruit, nuts or other crops, or ornamental trees *except* evergreen trees which are more than 6 years old at the time they are cut.[24]

4. Effective Date

These changes apply to costs incurred after December 31, 1986 in taxable years ending after that date.[25]

Chapter 29

PROVISIONS RELATING TO MERCHANT MARINE CAPITAL CONSTRUCTION FUNDS

John F. Lefevere, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The Merchant Marine Act of 1936, as amended,[1] creates federal income tax incentives for the owners and lessees of U.S.-flag vessels which are operated in the foreign or domestic commerce of the United States or in U.S. fisheries. Through the Capital Construction Fund (CCF), an owner or lessee of a vessel can establish what is essentially a government-sponsored tax shelter which permits a current deduction for amounts deposited into the CCF and also an exclusion from income of the earnings from the investment or reinvestment of amounts held in the Fund.[2] The CCF Agreement is entered into between the taxpayer and either the Secretary of Transportation [3] or, in the case of fishing vessels, the Secretary of Commerce.[4]

The nature of a withdrawal from a CCF determines how it will be treated for federal income tax purposes. If the taxpayer makes a "qualified withdrawal" in order to acquire, construct, or reconstruct a "qualified vessel" [5] or for the payment of the principal on the indebtedness incurred in connection with the acquisition, construction, or reconstruction of such vessel, then the amount withdrawn is treated as first being made out of the Agreement's capital account, then out of the capital gain account and finally out of the ordinary income account.[6] However, any withdrawal which is not used for a qualified purpose is treated as a "nonqualified withdrawal," with tax treatment in the opposite order from that described above for qualified withdrawals. Nonqualified withdrawals also cause interest to be imposed for a period beginning from the date of deposit of the amount being withdrawn (as calculated under the ordering rules for nonqualified withdrawals).

In return for receiving qualified withdrawal treatment, the taxpayer must reduce the tax basis of the qualified vessel by the amount of the withdrawal.[7] No provisions governing the CCF were included in the Internal Revenue Code of 1954 and interpretation of the CCF Agreements was left largely to the respective Departments which administer the Agreements, rather than to the IRS. President Reagan, in his proposals for tax reform,[8] called for the repeal of special tax treatment for CCFs.[9] The Proposals questioned whether there was still an underlying national security reason for subsidizing the construction of U.S.-flag vessels and indicated that direct subsidy programs would be a preferable method of achieving the support of naval defense functions.

II. Overview

Led by the House Ways and Means Committee, Congress rejected the President's proposed repeal of the CCF and instead strengthened its provisions. The Tax Reform Act of 1986 incorporated the tax provisions contained in the Merchant Marine Act of 1936 in §7518 of the Internal Revenue Code of 1986. The 1986 Act also imposed the maximum marginal rate of tax on nonqualified withdrawals made after December 31, 1986, in addition to the interest already imposed. Moreover, a 25 year limit was imposed on the amount of time monies can remain in a CCF without being withdrawn for qualified purposes. At the end of this period, 20% of the funds are treated as having been withdrawn as a nonqualified withdrawal in the 26th year, and an additional 20% is treated as withdrawn in each subsequent year until, at the end of the 30th year, 100% of the funds are deemed withdrawn as a nonqualified withdrawal.

The term "qualified withdrawal" is to be interpreted as including the purchase or lease of an "agreement vessel" (*i.e.*, a vessel subject to a CCF agreement) for a period of five years or more.

Finally, both the Secretary of Transportation and the Secretary of Commerce are required to certify to the Secretary of the Treasury that the amount of funds held in the CCF are appropriate for the vessel construction pro-

[1] 46 U.S.C. §1101 *et seq.*

[2] 46 U.S.C. §1177 (commonly referred to as §607 of the Merchant Marine Act of 1936, as amended).

[3] The Maritime Administration, formerly part of the Department of Commerce, is the agency directly involved in administration of the CCF.

[4] The National Oceanic and Atmospheric Administration (NOAA), U.S. Department of Commerce, is the administrative agency for fishing vessel CCFs.

[5] A "qualified vessel" is one which is constructed or reconstructed in the United States, documented under the laws of the United States, and operated in the United States, foreign, Great Lakes, or noncontiguous domestic trade (or, in the case of fishing vessels, in the fisheries of the United States). 46 U.S.C. §1177(k)(2). The concept includes those barges and containers which are carried aboard such vessels.

[6] 46 U.S.C. §1177(g)(1).

[7] 46 U.S.C. §1177(g)(3) and (4). The basis is reduced to the extent of any qualified withdrawal made from the ordinary income account. If the withdrawal is made from the capital gain account, in the case of a corporation (other than an S corporation), the basis reduction is five-eighths of the qualified withdrawal amount, while for any other person, the basis reduction is one-half of the qualified withdrawal amount.

[8] The President's Tax Proposals to the Congress for Fairness, Growth, and Simplicity (May 1985).

[9] *Id.* at 304-306.

gram contemplated by the CCF Agreement. Should it develop that the current funds exceed the needs of the taxpayer's program, the fundholder will be given three years to develop appropriate program objectives. Failure to meet the three year deadline will result in the excess funds being treated as a nonqualified withdrawal.

All amendments relating to the Capital Construction Fund apply to taxable years beginning after December 31, 1986.[10]

III. Detailed Analysis

A. Coordination of Merchant Marine Act and Internal Revenue Code

The tax provisions contained in §1177 of Title 46 U.S.C. are codified as §7518 of the Internal Revenue Code of 1986,[11] specifically, the Merchant Marine Act provisions relating to the ceiling on deposits,[12] the requirements as to investments,[13] nontaxability of deposits,[14] establishment of accounts,[15] the purposes of qualified withdrawals,[16] the tax treatment of qualified withdrawals,[17] the tax treatment of nonqualified withdrawals,[18] and the treatment of certain corporate reorganizations and changes in partnerships.[19] Moreover, the definitions of §1177(k) (§607(k) of the Merchant Marine Act of 1936) are incorporated by reference by Code §7518(i).

Code provisions are also added to treat amounts not withdrawn after 25 years in the CCF as nonqualified withdrawals,[20] and to tax nonqualified withdrawals at the highest marginal tax rate.[21]

Incorporation of the Merchant Marine Act CCF provisions into the Internal Revenue Code of 1986 may raise jurisdictional problems in Congress when further amendment of the CCF program is sought. The House Report contains an exchange of correspondence between House Ways and Means Committee Chairman Dan Rostenkowski and House Merchant Marine and Fisheries Chairman Walter B. Jones expressing the expectation that there would be future cooperation between the two committees when amendments to either §1177 of the Merchant Marine Act or Code §7518 are considered.[22] Each committee chairman noted that the Merchant Marine and Fisheries Committee had cooperated in creating the legislation without prejudicing the committee's jurisdictional rights under §1(n) of House Rule X. That Rule provides that the House Committee on Merchant Marine and Fisheries as a standing committee has jurisdiction over the merchant marine generally.[23]

B. Definition of "Qualified Withdrawals"

As defined in Code §7518(e), the term "qualified withdrawal" is a withdrawal made only for: (1) the acquisition, construction, or reconstruction of a qualified vessel (or barge or container which is a part of the complement of a qualified vessel); or (2) for the payment of the principal on indebtedness incurred in connection with the acquisition, construction, or reconstruction of such an item. However, in language included in the House Report and presumably adopted in conference, the leasing of certain agreement vessels is included for the first time. Thus, the phrase "acquisition, construction, or reconstruction" will be interpreted to include an acquisition through either the purchase or lease of an agreement vessel for a period of five years or more.[24] This interpretation is intended to reflect the current maritime industry practice of vessel acquisition through lease rather than purchase.[25] It also parallels both the scope of eligibility for establishing a CCF and of qualified withdrawals through a down payment on the purchase price or the payment of long-term indebtedness on a vessel.[26]

C. Tax Treatment of Nonqualified Withdrawals

The ordering rules for nonqualified withdrawals are retained in the codification of the CCF rules. However, in addition to the imposition of interest from the date the withdrawal is reported, Code §7518(g)(6) requires that in any taxable year in which a nonqualified withdrawal is made, the withdrawal is taxed at the highest marginal rate applicable to an individual (not exceeding 28 %) or a corporation (not exceeding 34%).[27] This is accomplished by excluding the nonqualified withdrawal from gross income and increasing the Chapter 1 tax by the product of the amount of the nonqualified withdrawal and the highest rate of tax specified in §1 (for individuals) or §11 (for corporations).[28]

A tax benefit rule is also set up so that if any portion of a nonqualified withdrawal is attributable to deposits (other than earnings on deposits) that did not reduce the taxpayer's tax liability in a year prior to withdrawal, it is not taken into account when calculating the tax at the highest marginal rate, and is treated as allowed as a deduction under §172 for the year of withdrawal.[29] Moreover, any nonqualified withdrawal which is excluded from gross income for purposes of calculating the highest marginal rate of taxation is also excluded from the determination of taxable income when calculating the net operating loss carryover and carryback under §172(b)(2).[30]

D. Twenty-Five Year Limit on Fund Deposits

In an effort to discourage fundholders from permitting monies to remain tax-exempt for extended periods of time

in a CCF without withdrawal for qualified purposes, the 1986 Act imposes a 25 year limit on such holdings.[31] The 25 year period begins to run on January 1, 1987, the date on which all monies previously deposited in a CCF are deemed to have been deposited.[32] If any amounts remain in the CCF after 25 years, specific percentages are treated as nonqualified withdrawals in each of five years.[33] The percentages are 20% (in the 26th year), 40% (27th year), 60% (28th year), 80% (29th year) and 100% in the 30th year.[34]

The Secretary of the Treasury is empowered to determine whether the amounts in a CCF exceed the amounts which are appropriate to meet the vessel construction program objectives of the Agreement.[35] The Secretary can make this determination from written reports which are to be submitted to him within 120 days of the close of the taxable year under an amendment to the Merchant Marine Act.[36] If an excess exists, that amount will be treated as a nonqualified withdrawal unless the fundholder develops appropriate program objectives within three years in order to dissipate the excess.[37]

E. Other Amendments

1. Exception to Definition of Tax Liability under §26(b)

As enacted by the Tax Reform Act of 1984, Code §26 provides a uniform limitation on the application of nonrefundable personal credits against tax by stating that the sum of the nonrefundable personal credits for a taxable year shall not exceed the taxpayer's liability for such year. The term "tax liability" is defined in §26(b) as the tax imposed under Chapter 1 (the income tax provisions) for the taxable year, except for eight specific taxes. The Tax Reform Act of 1986 adds, as a ninth category, the tax imposed at the taxpayer's highest marginal rate under Code §7518(g)(6)(A).[38]

2. Conformity with Merchant Marine Act of 1936

In keeping with the parallel changes made between the Merchant Marine Act of 1936 and the Internal Revenue Code of 1986,[39] conforming amendments were made to the Merchant Marine Act to cross-reference to Code §7518.[40] In addition, provisions identical to Code §7518(g)(5) and (6) were added to the Merchant Marine Act.[41]

[38] Act §261(c) adding subparagraph (I) at the end of §26(b)(2).

Chapter 30

REVISION AND EXTENSION OF LIMITATIONS ON TAX-EXEMPT BONDS

Robert E. Liles, II, Esq.
Brant Baber, Esq.
Margo B. Stern, Esq.
Silverstein and Mullens
Washington, D.C.

I. Overview

Title XIII of the 1986 Tax Reform Act restructures the provisions of the Code dealing with tax exempt bonds, imposes certain new restrictions and extends many existing restrictions. Sections 103 and 103A of the 1954 Code are reorganized into 11 new sections, §103 and §§141 through 150. Section 103 of the 1986 Code is a general section conferring Federal income tax exemption on the interest on obligations of a state or political subdivision thereof, subject to certain exceptions to tax exemption for nonqualified private activity bonds, arbitrage bonds and unregistered bonds. There is no §103A under the 1986 Code.

The substantive provisions of §§141 through 150 of the 1986 Code and their corresponding provisions under the 1954 Code are as follows:

Section 141: Private activity bonds (formerly IDBs) and qualified bonds.[1]

Section 142: Exempt facility bonds.[2]

Section 143: Mortgage revenue bonds, qualified mortgage bonds and qualified veterans' mortgage bonds.[3]

Section 144: Qualified small issue, student loan and redevelopment bonds.[4]

Section 145: Qualified 501(c)(3) bonds.[5]

Section 146: Volume Cap.[6]

Section 147: Other requirements for private activity bonds.[7]

Section 148: Arbitrage.[8]

Section 149: Registration and other requirements.[9]

Section 150: Definitions and special rules.[10]

[1] 1954 Code §103(b).
[2] 1954 Code §103(b)(4).
[3] 1954 Code §103A.
[4] 1954 Code §103(b)(6), (o)(3).
[5] 1954 Code §103(b)(3).
[6] 1954 Code §103(n).
[7] 1954 Code §103(b)(13), (14), (16), (17), (18), and 103(k).
[8] 1954 Code §103(c).
[9] 1954 Code §103(j), (h), (l), (m).
[10] 1954 Code §103(a)(2), 103(i).

Certain themes recur in the 1986 Act's tightening of restrictions and extension of existing restrictions. Keeping these themes in mind should aid the reader in following the discussion below:

1. The private business use and security interest tests for determining whether a bond is a private activity bond have been generally decreased from 25% to 10%. This applies in the case of both private activity bonds and qualified §501(c)(3) bonds.

2. The percentage of so-called "bad" costs which may be paid with bond proceeds of a private activity bond is reduced from 10% to 5%. This restriction is further tightened by treating costs of issuance as "bad" costs.

3. Low and moderate income housing's preferential treatment is substantially reduced by more stringent qualifying income tests, application of the volume cap and extension of the rebate requirement.

II. Detailed Analysis

A. *Section 103*

Under the 1954 Code, all tax exempt bond rules (with the exception of the mortgage subsidy bond provisions of §103A) were contained in §103. Under the 1986 Code, §103 is the section which provides the organizational structure for the ten substantive provisions of §§141-150. 1986 Code §103(a) provides the general rule that interest on any state or local bond is not includable in gross income for Federal income tax purposes.[11] 1986 Code §103(b) provides three exceptions to the tax exemption provision: (i) private activity bonds which are not *qualified* private activity bonds;[12] (ii) arbitrage bonds,[13] and, (iii) bonds not properly registered.[14]

[11] A "state or local bond" is an obligation of a state or political subdivision thereof. 1986 Code §103(c)(1). "State" includes the District of Columbia or a United States possession. 1986 Code §103(c)(2). *Compare* §103(a)(1) of the 1954 Code (providing substantially the same rules).

[12] Qualified bonds are those listed in 1986 Code §141(d)(1). Bonds that would otherwise be qualified bonds are disqualified if the state volume cap requirements are not met (see 1986 Code §§141(d)(2) and 146) or if the bond fails any of the requirements of 1986 Code §147 (substantial user requirement, 120% maturity limit, 25% land acquisition limit, rehabilitation requirement for existing structures, skybox, etc. prohibition, public approval requirement, and restriction on issuance costs). *See* 1986 Code§ §141(d)(3) and (4).

[13] 1986 Code §103(b)(2); *see* 1986 Code §148.

[14] 1986 Code §103(b)(3); *see* 1986 Code §149(a).

B. *Private Activity Bonds*[15]

1. *Introduction*

The 1986 TRA changes the tax-exempt financing lexicon by deleting "industrial development bond" ("IDB") and substituting for it "private activity bond" ("PAB").[16] The Act tightens the qualifications for PABs. PABs are taxable unless the bond is a "qualified bond." [17] Qualified bonds are:[18] exempt facility bonds;[19] qualified mortgage bonds;[20] qualified veterans' mortgage bonds;[21] qualified small issue bonds;[22] qualified student loans bonds;[23] qualified redevelopment bonds;[24] or qualified 501(c)(3) bonds.[25]

2. *Trade or Business and Security Interest Tests*

Under the 1954 Code, bonds issued by a state or local government are IDBs if (a) all or a major portion of the bond proceeds are used directly or indirectly in the trade or business of a person other than a governmental unit or a §501(c)(3) organization,[26] and (b) the payment of principal or interest on the debt is in whole or in major part (i) secured by trade or business property or in "payments in respect of such property," or (ii) derived from payments in respect of property, or borrowed money, used or to be used in a trade or business.[27] Regs. §1.103-7(b)(3)(iii) establishes 25% as the "major portion" for both the trade or business and security interest tests. 1986 Code §141(a) provides that a PAB includes a bond which meets both the private business use test of §141(b)(1) and the private security or payment test of §141(b)(2). 1986 Code §141(b)(1) provides that the private business use test is met if more than 10% of the proceeds [28] of an issue are to be used for a private business use. Private business use is direct or indirect use in a trade or business of a person other than a governmental unit.[29] In calculating trade or business use, the activities of all §501(c)(3) organizations, the Federal Government, and all nongovernmental persons who are not natural persons are treated as trade or business activities.[30] As under pre-1986 TRA law, use as a member of the general public is not taken into account.[31]

While all activities by a §501(c)(3) organization are included in the 10% calculation, the issuer may elect to exclude from the proceeds side of the computation (for purposes of the private business tests or the private loan financing test) that portion of the bond proceeds which could qualify as a §501(c)(3) bond [32] if such portion had been issued as a separate issue.[33]

3. *Management Contracts*

Government-owned facilities may be treated as used in private business if a private person manages the facility under a management contract which in substance transfers use of the facility to the private person. Under pre-1986 TRA law, the IRS adopted standards for ruling that a management contract did not constitute private business use.[34] Under these standards the Service would issue a favorable ruling if:

> (1) The management services were provided for a reasonable, periodic flat fee, under a contract not exceeding five years (including renewals), with the exempt owner having the option to cancel the contract without penalty at the end of any two-year period; or
>
> (2) In the case of certain newly operational facilities, compensation was based on a percentage of gross revenues from the facility for a period which generally could not exceed one year.

In one of the few instances where Congress relaxed tax exempt bond rules, the Conference Report directs Treasury to change the requirements for a favorable ruling as follows: [35]

> (1) The periodic, fixed compensation requirement is relaxed to 50% of the compensation. No compensation may be based on net profits. Thus, a management contract calling for a fixed fee plus a percentage of gross revenues (not to exceed the fixed fee) would be permissible.
>
> (2) The two-year, no-penalty termination period is extended to three years.

4. *Output Contracts*

Under Treasury regulations issued under prior law, if a nonexempt person takes a sufficiently large portion of the output of a bond-financed facility (such as electric, gas or water utilities) owned by an exempt person, *i.e.*, state and local government or §501(c)(3) organization, the issue will be deemed to satisfy the trade or business and security interest tests. 1986 Code §141 further tightens this treatment of output contracts.

Regs. §1.103-7(b)(5)(i) provides that the use by nonexempt persons of a major portion of bond-financed output facilities, such as utilities, satisfies the trade or business test and security interest test if the use has the effect of transferring to the nonexempt persons the benefits of facility ownership and the burdens of paying the debt service on the issue. Such a transfer occurs where payments made or

[33] 1986 Code §141(b)(9). Such an election will have the effect of applying the qualifying §501(c)(3) bond portion against the §501(c)(3) organization's $150,000,000 volume limit. *See* §145(b).
[34] Rev. Proc. 82-14, 1982-1 C.B. 459.
[35] Conference Report at II-688-9.

to be made on the output contracts described in (a) and (b) below exceed 25% of the debt service on the bonds and (a) one nonexempt person agrees to take more than 25% of the total output of the facility over the term of the bonds, or (b) two or more nonexempt persons (each making minimum payments exceeding 3% of average annual debt service) agree to take, in the aggregate, more than 25% of the output of the facility.

1986 Code §141(b)(4) creates a new trade or business and security test limit for output facilities other than water facilities: if 5% or more of the proceeds of an issue are to be used with respect to an output facility, the issue is treated as meeting the trade or business and security interest tests if the amount of bond proceeds which may be expended on the portion of the facility attributable to output contracts with nonexempt persons is the lesser of 10% or $15,000,000. *See* Conference Report at II-689-90 (*Examples).* Where prior outstanding bond issues (other than refinanced issues) have benefited the facility, the $15,000,000 amount is reduced by the portion of such prior issues attributable to output contracts with nonexempt persons. Furthermore, the 3% of annual debt service qualifying provision under the regulations will be deleted.[36]

Example: Assume that City plans to build a $300 million power facility and that nonexempt Corporation agrees to take 20% of the output of the facility. Under the pre-1986 TRA regulations and assuming that there were no other output contracts for the facility, City could build the facility with $300 million of bond proceeds and the issue would not be an IDB. Under §141(b)(5), however, the issue will be a PAB if the amount of bonds issued with respect to the facility exceeds $255 million.[37]

5. Unrelated Uses

Under the 1954 Code, where the 25% major portion threshold is not met under the trade or business and security interests tests, the issue will not be an IDB regardless of the fact that private use proceeds are expended for a use completely unrelated to the state or local government's use of the rest of the proceeds. Thus, if a city issued bonds and 85% of the proceeds were used to build a courthouse while 15% of the proceeds were used to build a private office building across town, the bond would not be an IDB because 25% or less of the proceeds were used in the trade or business of a nonexempt person.

1986 Code §141(b)(3)(A) provides that an issue is a PAB if (1) more than 5% of the proceeds of an issue are used (a) for a private business use unrelated to the governmental use of the proceeds, or (b) for a disproportionate business use, and (2) a 5% security interest test is met. The Conference Report provides that the determination of a relation (or lack thereof) between the private use and the governmental use is made on a case-by-case basis focusing on the "operational relationship" between the uses.[38] The report stresses that proximity is a significant factor in the "operational relationship." Thus, in the example above, the bond would be a PAB.

Examples: The Committee Report cites the examples of a newsstand in a courthouse or a privately operated school cafeteria as related private uses and an administrative office building for the cafeteria company or office space for lawyers (presumably within the courthouse) as unrelated private uses.

Somewhat more amorphous is the concept of disproportionate (but related) private use. A related private use is disproportionate to the extent that the bond proceeds spent on the related private use exceeds the bond proceeds spent on the governmental use to which the private use relates.[39] Multiple, related private use facilities with respect to a single governmental use are aggregated.[40] Thus, private uses which are related to different governmental uses are compared separately.

Comment: The disproportionate related private use test is only relevant where the bond issue finances more than one governmental facility since private use proceeds can in no event exceed 10% of total proceeds without the bond becoming a PAB. Thus, the test comes into play where the private use is related to a relatively small governmental portion of the bond issue. Accordingly, the test will most often apply where a governmental use is added to a bond issue in order to provide a related use for a private use.

6. Private Loan Bonds

Under both the 1954 and 1986 Codes, private loan bonds are also treated as IDB/PABs. However, the 1954 Code definition is tightened.

Section 103(o)(1) of the 1954 Code provides that interest on consumer loan bonds is includable in gross income. Consumer loan bonds are obligations issued as part of an issue all or a significant portion (5% - *See* House Report at 493-494) of the proceeds of which are reasonably expected to be used to make loans to nonexempt persons. Exceptions are provided for exempt IDBs, qualified mortgage subsidy bonds, qualified veterans' mortgage bonds and qualified student loan bonds.[41] Additional "excluded loans" are excepted from the definition.[42]

Section 141(a)(2) of the 1986 Code provides that bonds meeting the private loan financing test are PABs. The private loan financing test is met if the proceeds of the issue used directly or indirectly to make or finance loans to persons other than governmental units exceed the lesser of 5% of such proceeds or $5,000,000.[43] Tax assessment loans and investments in nonpurpose obligations are excepted.[44]

7. Effective Date

The revised requirements for PABs apply to bonds issued after August 15, 1986.[45] Exceptions are provided for

certain binding contracts and refundings of bonds issued before August 16, 1986.[46]

C. *Exempt Facility Bonds*

1. *Introduction*

An exempt facility bond ("EFB") is a PAB that is tax exempt by reason of §142 of the 1986 Code. EFBs are generally the IDBs which qualified for tax exemption under §103(b)(4) of the 1954 Code, except that the following bonds exempt for certain facilities under the 1954 Code are no longer exempt:

- Sport facilities [47]
- Convention or trade show facilities [48]
- Parking facilities [49]
- Hydroelectric generating facilities [50]
- Air or water pollution control facilities [51]
- Industrial parks [52]
- Mass Commuting vehicles [53]

The 1986 Code includes one exempt facility not in the 1954 Code (qualified hazardous waste facilities) [54] and continues the exemption for the following facilities (subject to certain additional restrictions discussed *infra*):

- Airports [55]
- Docks and wharves [56]
- Mass commuting facilities [57]
- Facilities for the furnishing of water [58]
- Sewage facilities [59]
- Solid waste disposal facilities [60]
- Qualified residential rental projects [61]
- Facilities for the local furnishing of electric energy or gas [62]
- Local district heating or cooling facilities [63]

2. *Use of Proceeds*

Under §103(b)(4) of the 1954 Code, substantially all of the proceeds of an exempt facility IDB must be used to provide the exempt facility. Regs. §1.103-8(a) defines "substantially all" as 90% of the proceeds. "Proceeds" are determined net of costs of issuance (costs of issuance are thus considered "neutral" costs rather than qualifying ("good") or nonqualifying ("bad") costs)). Costs of issuance include bond election costs, costs of publishing notices, attorney's fees, printing costs, trustees fees for fiscal agents and similar expenses including underwriter's discount.[64] Amounts used to provide an exempt facility include amounts paid or incurred which are chargeable to the facility's capital account or would be so chargeable either with a proper election (as under Code §266) or but for an election to deduct such amounts.[65]

Section 142(a) of the 1986 Code requires that 95% of the "net proceeds" of the issue be spent for the exempt facility. Net proceeds are defined as proceeds less amounts invested in a reasonably required reserve or replacement fund ("4R Fund").[66] Therefore, costs of issuance are not part of the reduction to net proceeds and are thus treated as "bad" costs. *See* Conference Report at II-697.

3. *Low and Moderate Income Housing*

The 1986 Code substantially tightens the restrictions on EFBs issued to provide low and moderate income housing (called "qualified residential rental project"). Under 1954 Code §103(b)(4)(A), residential rental projects qualify for tax-exempt IDB financing if throughout the project period 20% of the units (15% in targeted area projects) are to be occupied by individuals of "low and moderate income." Residential rental projects are one or more proximate buildings containing one or more similarly constructed units which are used on other than a transient basis.[67] Hotels, motels, dormitories, fraternity and sorority houses, rooming houses, hospitals, nursing homes, sanitariums, rest homes, and trailer parks for use on a transient basis are not residential rental projects.[68] The low and moderate income determination is required to be made in a manner consistent with determinations of lower income families under §8 of the United States Housing Act of 1937, except that the percentage of median gross income which qualifies as low and moderate income is 80%.[69] Thus, a tenant meets the low and moderate income requirements if the aggregate income of all persons living in the unit does not exceed 80% of the median gross income for the area. Regulations with respect to adjustment of the incomes of tenants by family size under §103(b)(4)(A) of the 1954 Code were proposed by the Treasury Department and published in The Federal Register on November 7, 1985, to be effective for residential rental projects financed with the proceeds of tax-exempt bonds issued on or after January 1, 1986.[70] Under these proposed regulations, the 80% of median gross income limitation is deemed to apply to a family of four. For tenants with smaller size families, the percentage is reduced and for families of larger sizes the percentage is increased. The percentages of area median gross income ("AMGI") by family size are:

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Family Size	% of AMGI
8 or more	100%
7	95%
6	90%
5	85%
4	80%
3	72%
2	64%
1	56%

Amounts are rounded to the nearest increment of $50.

Example: Assume that a low and moderate housing project contains studio and one bedroom apartments which will be rented to persons of low and moderate income. The studio apartments are suitable for one person, the one bedroom apartments for two. If AMGI is $25,000, the studio apartments may be rented to persons with incomes of up to $14,000 and the one bedrooms may be rented to two person families with incomes of up to $16,000.

The qualified project period during which the income limitations apply under the 1954 Code is a period beginning on the date at least 10% of the units in the project are first occupied and ending on the latest of (a) ten years after the date on which 50% of the units are first occupied; (b) 50% of the term of the bond with the longest maturity in the issue; or (c) the date on which assistance under §8 of the United States Housing Act of 1937 terminates.[71]

Under the 1986 Code the low and moderate income test essentially becomes a low income test.[72] The 80% of AMGI is reduced to 50% of AMGI.[73] In order for a project to qualify, not less than 20% of the units must be occupied by persons with 50% or less of the AMGI. Alternatively, the issuer may elect at the time of issuance to opt for a 40-60 test, renting 40% of the units to persons with 60% of AMGI.[74]

Comment: The election is cast in terms of an issuer's election. The choice is obviously most critical to the developer since it is the developer who must live with the economic restraints. Accordingly, the bond documents should contain provisions by which the developer directs the issuer's choice of tests.

The family size adjustment provisions also apply to the AMGI percentages.[75] Thus the percentages of AMGI applicable to §142(d) qualified residential rental projects are as follows:

Family Size	50% Test % of AMGI	60% Test % of AMGI
8 or more	66%	80%
7	62%	75%
6	58%	70%
5	54%	65%
4	50%	60%
3	45%	54%
2	40%	48%
1	35%	42%

Example: Assuming that the housing project in the example above is subject to the 1986 Code income limits and the AMGI remains at $25,000, the income limit for two person families is $10,000 under the 50% test and $12,000 under the 60% test. Both of these numbers are less than the income of two people working full time at minimum wage. The income limit for 1 person units is $8750 under the 50% test and $10,500 under the 60% test.

Observation: Even in areas with relatively high AMGI, it is difficult to see how the operation of both the low income limits and the family size adjustments can produce a result that is economically feasible to the developer, in the absence of a rent-subsidy program. If AMGI is a relatively high $32,000, the single person income limit under the 50% test is $11,200. Using the rule of thumb that a person's housing cost should not exceed 30% of income, the tenant should not pay much more than $280 per month for a studio apartment. In such relatively high cost areas, it is doubtful that such rent is economically feasible. Such examples suggest that the practical intent of the new low income limits and family size adjustments is to end tax-exempt financing of residential rental housing.

The difficulty of using an EFB to finance residential rental housing is further complicated by the extension of the qualified project period to the latest of (1) 15 years after the date on which 50% of the units in the project are occupied, (2) the date on which no bonds are outstanding or (3) the date on which assistance under §8 of the United States Housing Act of 1937 terminates.[76] The qualified project period has been essentially extended by 50% (from 10 years to 15 years after the date on which 50% of the units are occupied).

Under the 1954 Code, initially qualifying low and moderate income tenants continued to be qualified tenants for their unit notwithstanding that the tenants' income subsequently increased beyond the income limit during their tenancy.[77] Under the 1986 Code, low income tenants with increasing incomes continue to be treated as qualifying tenants until such time as their incomes exceed 140% of the applicable income limit.[78] The determination of a tenant's qualification under the low income test must be made annually, based on current income.[79]

[71] Regs. §1.103-8(b)(7).
[72] Indeed, in HUD parlance, the test goes from a low income (80%) test to a *very* low income (50%) test. *See* 24 CFR §813.102.

[79] 1986 Code §142(d)(3)(A).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Example: Assume that a single person rents a studio apartment in a qualified residential rental project which has elected the 20-50 test. AMGI is $25,000. As explained in the example above, the tenant's initial income must be less that $8750. Under 1986 Code §142(d)(3)(B), the tenant will remain qualified until his income exceeds $12,250. Two person families (initial income limit of $10,000) continue to qualify until income exceeds $14,000.

Where a tenant ceases to qualify as a low income tenant, the project is not immediately disqualified. So long as the next available unit of comparable or smaller size is rented to a tenant who does not exceed the income limit, the project remains in compliance.[80]

Example: In the example above, if the income of the tenant in the studio apartment exceeds $12,250, the project will remain in compliance so long as the next available studio is rented to a tenant with the income of no more than $8750. If the tenants in the one bedroom apartment have income in excess of $14,000, the project can remain in compliance by renting the next available one bedroom or studio to a qualifying tenant.

Under 1986 Code §142(d)(4), where the project charges significantly lower ("deep skewed") rent to low income tenants, the allowable income increase is up to 170% of the applicable income limit.

In order to qualify as a deep rent skewed project, the owner of the project makes an election to comply with the more stringent deep rent skewing requirements throughout the project period.[81] Deep rent skewing has three requirements:

(a) 15% or more of the *low income* units in the project are occupied by tenants whose income is 40% or less of AMGI;

(b) Gross rent for *each* low income unit in the project does not exceed 30% of the applicable income limit for the individuals occupying the unit; and

(c) Gross rent for *each* low income unit in the project does not exceed 1/3 of the average rent with respect to units of comparable size occupied by tenants other than low income tenants.

Example: Assume that the residential rental project has 200 units, with 20 studios and 20 one bedroom apartments to be occupied by low income tenants. The issuer has made a 20-50 election and AMGI is $25,000. In order for the project to qualify for deep rent skewing, six of the 40 low income units must be rented to single people with incomes of no more than $7000 or couples with incomes of no more than $8000. Additionally rent on the "40% units" for the individuals cannot exceed $175.00 per month (*i.e.*, [$7,000 ÷ 12] × 30%) and rent for couples may not exceed $200.00 (*i.e*, [$8,000 ÷ 12] × 30%). Rent on the "50% units" for individuals cannot exceed $218.75 and rent for couples cannot exceed $250.00. Finally, comparable units must rent to non-low income individuals for at least $656.25 and $750.00 (three times the rent on the "*50% limits*"). Assuming that the developer could (or would want to) meet such requirements, the developer would be entitled to treat low income tenants as qualified until incomes of couples exceed $17,000 ($13,600 for 40% tenants) and incomes of single people exceed $14,875 ($11,900 for 40% tenants), provided that once a tenant exceeds these limits, he must be replaced by a 40% tenant.

Note: The deep rent skewing election is made by the owner, not the issuer, while the 20-50, 40-60 election is made by the issuer. *Compare* 1986 Code §142(d)(1) *with* 1986 Code §142(d)(4)(B).

Finally, the owner of each qualified residential rental project must make an annual certification to the Treasury Department of continuing compliance.[82] Failure to file without reasonable cause subjects the owner to a $100 penalty under §6652(j) but does not affect the tax exemption on the bonds.[83]

4. Additional Restrictions

The 1986 Code tightens the restrictions on tax exempt bonds for airports, mass commuting facilities, docks and wharves by providing that the facility must be owned by a governmental unit.[84] Such exempt facilities may be leased to or managed by a private person.[85] In order to qualify as an acceptable lease or management agreement, the private lessee or manager must make an irrevocable election not to claim depreciation or investment credit on facility property.[86] The lease or management agreement term may not exceed 80% of the reasonably expected economic life of the facility [87] and the lessee or manager may not have an option to acquire the facility for less than fair market value.[88]

Under the 1954 Code, an airport facility includes facilities which are directly related and essential to servicing aircraft, enabling aircraft to take off and land, or transferring passengers or cargo to or from aircraft.[89] Examples include terminals, runways, hangars, loading facilities, repair shops, and land-based navigation aids.[90] Additionally, functionally-related and subordinate facilities may be included in the airport facility if of a character and size commensurate with the airport and if located at or adjacent to the airport.[91] Examples of functionally-related facilities include terminal restaurants and retail stores, ground transportation, parking areas, and accommodations for temporary or overnight use by passengers.[92]

Docks and wharves include functionally-related property such as vessel docking structures, loading and unloading

[92] *Id.*

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

equipment, and related storage, handling, office and passenger areas.[93] Mass commuting facilities include functionally-related facilities such as parking garages and repair shops.[94]

The 1986 Code restricts functionally-related facilities for airports, docks and wharves, and mass commuting facilities by providing that bond proceeds may not be used for any of the following private business uses:

(1) Hotels or lodging facilities;[95]

(2) Retail facilities (including food service) in excess of the size necessary to serve facility employees and passengers;[96]

(3) Any retail facility (other than parking) outside the exempt facility terminal;[97]

(4) Any office building other than for the governmental unit or the facility operating authority;[98]

(5) Any industrial park or manufacturing facility.[99]

Storage or training facilities directly related to airport, docks and wharves or mass commuting facilities are eligible for construction with bond proceeds.[100]

Finally, office space for all EFB facilities is restricted. The office space must be located on the premises of the related facility and not more than a *de minimis* amount of the office functions performed may relate to any activities other than the day-to-day operations of the facility.[101]

5. Hazardous Waste

Solid waste disposal facilities do not include most hazardous waste facilities.[102] Thus, the 1986 Code contains a separate provision for qualified hazardous waste facilities.[103] The facility must be for disposal of hazardous waste by incineration or entombment [104] and the term hazardous waste does not include radioactive waste.[105] Moreover, the facility must be used by the general public rather than the generator of the waste.[106]

Query: How often does the general public (as opposed to a generator) have need for a hazardous waste disposal facility? Apparently, Congress intended that the owner/operator of the facility be unrelated to the generator of the waste.[107]

6. Effective Dates

The changes in EFB treatment apply to bonds issued after August 15, 1986. Act §1311(a). Exceptions are made for bonds for facilities under construction on such date or under binding contract. *See* Act §1312. A current refunding exception is also provided. *See* Act §1313.

D. Single Family Housing

1. Introduction

Section 103A of the 1954 Code provides extensive rules for the issuance of tax exempt bonds to finance mortgages on owner occupied residences. The section provides for two types of tax exempt mortgage subsidy bond: qualified mortgage bonds and qualified veterans' mortgage bonds.[108] The 1986 Code generally retains the mortgage subsidy bond provisions (called "mortgage revenue bonds").

The mortgage revenue bond provisions of §103A of the 1954 Code are contained in §143 of the 1986 Code. The 1986 Code tightens the following restrictions on qualified mortgage bonds:

(1) Consistent with the use of proceeds for EFBs, the required portion of net proceeds to be used to finance mortgage loans to "first-time" home buyers is increased from 90% to 95%;

(2) The limit on qualifying purchase price is decreased from 110% of the average purchase price to 90% of such amount for non-targeted area residences and from 120% to 110% in the case of targeted area residences;

(3) The mortgagor's family income may not exceed 115% of the median family income in the "applicable area"; provided, however, that, one-third of the bond proceeds available for mortgage loans originated in targeted areas may be used to finance mortgage loans for targeted-area residences without regard to median family income and the remaining portion of such bond proceeds may be used to finance mortgage loans for targeted-area residences of mortgagors whose family income does not exceed 140% of the applicable median family income.

The termination date of the qualified mortgage bond program is extended from December 31, 1987 to December 31, 1988. *See* 1986 Code §143(a)(1)(B).

2. Use of Proceeds

Section 103A(e)(1) of the 1954 Code requires that 90% or more of the lendable proceeds of mortgage bonds be used to finance the residences of mortgagors ("first-time buyers") who had no present ownership interest in their principal residence at any time during the three-year period ending on the date their mortgage is executed. If there is more than one mortgagor with respect to a particular residence, then each must meet the three-year requirement. However, if a person is liable on the mortgage note without a present ownership interest in the residence (for example, a co-signer) then the three-year rule does not apply to such person.[109]

Section 143(d) retains the three-year rule but increases the percentage of net proceeds which must be so used to

95%. This change is consistent with the change made with respect to EFB's.[110]

3. Purchase Price Limit

1954 Code §103A(f)(1) requires that qualified mortgage bonds finance mortgages where the acquisition cost of each residence does not exceed 110% of the average area purchase price applicable to such residence. Average area purchase price is calculated under Temp. Regs. §6a.103(A)-2(f)(3). 1986 Code §143(e) reduces the purchase price limitation to 90% of the average area purchase price applicable to such residence.

4. Income Limitation

Under §103A of the 1954 Code, issuers were not subject to limits on the income earned by mortgagors participating in a qualified mortgage bond program. Section 143(f) of the 1986 Code, however, places a family income restriction on participants in qualified mortgage bond programs.

Section 143(f)(1) requires that all owner-financing provided under a qualified mortgage bond financing be provided for mortgagors whose family income is 115% or less of the applicable median family income. Family income is determined under rules similar to those used with respect to qualified residential rental projects.[111] Applicable median family income is the greater of AMGI [112] for the area in which the residence is located or the statewide median gross income for the state in which residence is located.[113] In the case of financing provided for targeted areas [114] one-third of the financing may be provided without income limitation and the remainder of targeted area financing is subject to a 140% of applicable median family income limit.[115]

5. Qualified Veterans Mortgage Bonds

The qualified veterans mortgage bonds provisions of §103A(c)(3) are generally retained under §143(b) of the 1986 Code. The one change is the increase of the percentage of proceeds required to be used for the exempt purpose from 90% to 95%.[116]

6. Effective Dates

The changes to the qualified mortgage bond and qualified veterans mortgage bond rules apply to bonds (including refunding bonds) issued after August 15, 1986. Act §1311(a). Conference Report at II-716-17. A special transition rule is applicable to current refundings after such date. *See* Act §1312 and Conference Report at II-716-17.

E. Small Issue, Student Loan, and Redevelopment Bonds

1. Small Issue Bonds

The small issue bond exception to the IDB rules is incorporated in §144(a) of the 1986 Code with one significant change. Section 103(b)(6)(A) of the 1954 Code provides that substantially all of the proceeds of the exempt small issue must be spent for the exempt purpose. As with exempt facility bonds, the Service interpreted "substantially all" to mean 90% of the proceeds net of costs of issuance.[117] The Act tightens the substantially all to require that 95% of the net proceeds be so used.[118] Also, costs of issuance are not subtracted in the calculation of net proceeds.[119]

The sunset provision for the small issue exemption with respect to manufacturing and farm property is extended to December 31, 1989.[120] For uses other than manufacturing or farm property, the provision terminates on December 31, 1986 as scheduled. 1986 Code §144(a)(12(A).

2. Student Loan Bonds

Section 103(o)(3) of the 1954 Code provides that qualified student loan bonds are tax exempt if all or a major portion of the proceeds are used to make Federal Guaranteed Student Loans or Parents Loans, for Undergraduate Students. Under the 1986 Code, the restrictions on student loan bonds are tightened by the requirement that 90 to 95% (depending on the loan program) of the bond proceeds be used directly or indirectly to make student loans.[121] Further, the student borrower must be either a resident of the issuing state or enrolled in an educational institution in such state.[122]

3. Qualified Redevelopment Bonds

The 1986 Code also contains a new type of PAB, described in §144(c). The qualified redevelopment bond is tax-exempt if 95% of the proceeds are used with respect to a "designated blighted area" to:

(a) Acquire property by eminent domain, and clear and prepare the land for redevelopment;

(b) Rehabilitate real property so acquired;

(c) Relocate persons displaced under (a).[123]

Qualified redevelopment bonds may not be used to construct buildings for use by nongovernmental persons.[124] A "designated blighted area" is any blighted area designated by the governing body of a local general purpose governmental unit in the jurisdiction of which the area is located.[125] A blighted area may be designated by such governing body based on the "substantial presence of factors such as excessive vacant land on which structures were previously located, abandoned or vacant buildings, substandard structures, vacancies, and delinquencies in payment of real property taxes." [126] However, there may not be more than 20% of the total assessed value of real estate in a jurisdic-

tion designated as blighted.[127] An area may not receive a "blighted" designation unless it is at least 100 acres and is "contiguous and compact." [128] However, areas as small as ten acres may be designated if no more than 25% of the area will be provided to one person.[129] The repayment of qualified redevelopment bonds is restricted to certain types of tax revenue.[130] Bonds may be repaid by incremental tax revenues, general tax revenues or by a combination of the two.[131] No owner or user of property in the financial area may be subject to a charge, fee or tax rate which is different from that imposed on similarly situated owners outside the area.[132]

4. Effective Dates

The changes to the small issue and student loan provisions apply to bonds (including refunding bonds) issued after August 15, 1986. Act §1311(a); Conference Report at II-711 and II-713. Exceptions for binding contracts and certain current refundings are provided. *See* Act §§1312-13; Conference Report at II-712 and II-713.

The new redevelopment bond provision applies to bonds issued after August 15, 1986. Act §1311(a); Conference Report at II-725.

F. Qualified §501(c)(3) Bonds

1. Definition

The requirements for tax-exempt bonds whose proceeds are used by tax-exempt §501(c)(3) entities are tightened consistent with the changes in the definition of PABs. Under the 1954 Code, a §501(c)(3) organization was treated as an "exempt person" under the IDB rules.[133] So long as the trade or business and security interest tests were not met [134] and the organization did not use the proceeds in an unrelated trade or business,[135] the interest on the bonds was tax exempt.

Under the 1986 Code, such bonds are exempt only if all property acquired under the bonds is owned by a §501(c)(3) organization or a governmental unit,[136] and, assuming the §501(c)(3) organization were deemed a governmental entity, the bond would not be a PAB under §141(a) if the trade or business and security interest tests were applied by substituting 5% for 10%.[137] This rule also subjects the §501(c)(3) organization to the 95% use of net proceeds rule and the 2% limitation on bond issuance costs financed by bond proceeds.[138]

2. Bond Limit

Section 501(c)(3) organizations are also subject to a new $150,000,000 limit on the amount of tax exempt bonds which they may have outstanding at one time during any three-year period.[139] An otherwise qualified §501(c)(3) bond will not be tax exempt if the aggregate face value of the §501(c)(3) issue to which it belongs, when added to the outstanding bonds of the organization, exceeds $150,000,000.[140] The limit is designed to operate similar to the $40,000,000 per taxpayer limit on small issue IDBs and EFBs.[141] Bonds issued with respect to a hospital [142] and bonds which pursuant to election are not treated as qualified 501(c)(3) bonds are excluded from the $150,000,000 limit.[143] Bonds for which such an election is made, however, are subject to the state volume cap. *See* Conference Report at II-727.

3. Effective Date

The §501(c)(3) provisions generally apply to bonds (including refunding bonds) issued after August 15, 1986. *See* Act §1311; Conference Report at II-727. Where construction commenced or a binding contract existed prior to such time, the new rules do not apply. A transition rule is provided for certain current refundings and some advance refundings of bonds issued prior to August 16, 1986. *See* Act §§1312 and 1313; Conference Report at II-727-28.

G. Volume Cap

1. Limitation

Under the 1954 Code, states were subject to a ceiling on the amount of student loan bonds and IDBs which could be issued in any calendar year.[144] Low and moderate income housing IDBs were excepted from this volume cap.[145] The state volume cap for each year through 1986 was the greater of $200,000,000 or $150 multiplied by the state's population.[146] For years after 1986, the cap was to be reduced to $100 per person to account for the termination of the small issue exemption.[147]

Section 103A(g) of the 1954 Code provides a similar, but separate, volume cap on qualified mortgage bonds. The mortgage bond ceiling is the greater of $200,000,000 or nine percent of the average annual aggregate principal amount of mortgages executed in the state for single-family, owner-occupied residences during the preceding three years.[148]

The 1986 Code combines the separate IDB/student loan and qualified mortgage bond volume caps into a single cap at the reduced amount of $75 per state resident or $250 million, whichever is greater.[149] The cap is reduced to $50 per resident or $150 million after 1987.[150] Qualified residential rental project bonds are included under the cap for the

first time.[151] A three year carryforward of unused cap amounts is permitted for years after 1985.[152]

2. Veterans' Bonds

Under the 1954 Code, qualified veterans' mortgage bonds were subject to a separate state ceiling based on the amount of qualified veterans' bonds previously issued by the state.[153] This same volume cap is retained under the 1986 Code.[154]

3. Effective Date

The changes to the volume cap generally apply to bonds issued after August 15, 1986. Act §1311; Conference Report at II-741. An exception is provided for certain current refundings and a transition rule is provided for construction and binding contracts prior to the effective date. *See* Act §§1312 and 1313; Conference Report at II-741-43.

H. Other Requirements for PABs

1. Introduction

Section 147 of the 1986 Code consolidates several restrictions on PABs that were applicable to IDBs. The substantial user requirement,[155] the 120% bond maturity limit,[156] the 25% limit on land acquisition cost,[157] the existing-property acquisition rules (1954 Code §103(b)(17)), the prohibition against use of bond proceeds for sky boxes, airplanes, gambling establishments etc.,[158] and the public approval requirement [159] carry over from the 1954 Code. Minor extensions of the restrictions are made.

2. Bond Maturity Limit

Under §103(b)(14) of the 1954 Code most exempt IDBs were taxable if the weighted average maturity of the bonds exceeded 120% of the reasonably expected economic life of the financed facilities. This restriction is carried over to 1986 Code §147(b). Additionally, the 120% bond maturity limit is extended to §501(c)(3) bonds.[160]

3. Prohibition of Certain Uses

Under the 1954 Code, no part of the proceeds of an exempt facility,[161] industrial park,[162] or small issue IDB,[163] may be used to provide any airplane, skybox, or other private luxury box, any health club facility, any facility primarily used for gambling, or any store the principal business of which is the sale of alcoholic beverages for consumption off premises.[164] Under the 1986 Code, the prohibition is extended to all PABs,[165] with a special exception for health club facilities owned by §501(c)(3) organizations if the health club facility is directly used for the purpose of qualifying for the tax exemption.[166] Qualified redevelopment bonds are subject to the additional restriction that proceeds may not be used to provide any private or commercial golf courses, country clubs, massage parlors, hot tub facilities, suntan facilities or racetracks.[167]

4. Public Approval Requirement

Under §103(k) of the 1954 Code all IDBs are subject to a public approval requirement. Under the 1986 Code, the public approval requirement extends to PABs, including §501(c)(3) bonds.[168]

5. Limitation on Bond-Funded Issuance Costs

Under the 1954 Code, costs of issuance were treated as neutral costs and were not subject to any limitation. However, §147 of the 1986 Code provides a new 2% limitation on the amount of bond proceeds which can be spent for cost of issuance of PABs.[169] The provision makes the (otherwise-qualified) PAB taxable if bond proceeds are used to pay costs of issuance in excess of 2% of the aggregate face amount of the bonds.[170] A higher limit of 3.5% is allowed for qualified mortgage bonds and qualified veterans' mortgage bonds if the aggregate authorized face amount of the issue does not exceed $20,000,000.[171]

Query: Since many transactions will have costs of issuance in excess of 2%, such excess will not be bond-funded. How can it be determined whether more than 2% of bond proceeds have or have not been applied to pay costs of issuance or any other development costs under the "money is fungible" theory?

Costs of issuance subject to the 2% limitation include all costs incurred in connection with the financing.[172] The Conference Report [173] lists the following specific costs:

(1) underwriters' spread (whether realized directly or derived through purchase of the bonds at a discount below the price at which they are expected to be sold to the public);

(2) counsel fees (including bond counsel, underwriter's counsel, issuer's counsel, company counsel in the case of borrowings such as those for exempt facilities, as well as any other specialized counsel fees incurred in connection with the borrowing);

(3) financial advisor fees incurred in connection with the borrowing;

(4) rating agency fees;

(5) trustee fees incurred in connection with the borrowing;

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(6) paying agent and certifying and authenticating agent fees related to issuance of the bonds;

(7) accountant fees (*e.g.*, accountant verifications in the case of advance refundings) related to issuance of the bonds;

(8) printing costs (for the bonds and of preliminary and final offering materials);

(9) costs incurred in connection with the required public approval process (*e.g.*, publication costs for public notices generally and costs of the public hearing or voter referendum); and

(10) costs of engineering and feasibility studies necessary to the issuance of the bonds (as opposed to such studies related to completion of the project, but not to the financing).

Costs such as bond insurance premiums (including letter of credit fees) treated as interest for arbitrage purposes are not included as costs of issuance.[174] This standard probably also will apply to premiums generated by sale of bonds at a price above par.

6. Effective Date

The changes in the PAB restrictions generally apply to bonds, including refunding bonds, issued after August 15, 1986. Act §311(a). Current refunding and binding contract transition rules apply to the prohibited facility change. *See* Conference Report at II-731-32. The public approval provision applies to bonds (including refunding bonds) issued after December 31, 1986. Conference Report at II-732.

I. Arbitrage Restrictions

1. *Introduction*

The arbitrage restrictions of §103(c) of the 1954 Code are incorporated into §148 of the 1986 Code and, consistent with revisions made to other tax-exempt bond restrictions, further tightened.

2. Arbitrage Bond Definition

Section 103(c)(2) of the 1954 Code defines an arbitrage bond as any obligation issued as part of an issue all or a major portion of the proceeds of which are reasonably expected to be used directly or indirectly to acquire securities or obligations reasonably expected to produce a materially higher yield than the yield on the obligations of such issue or to replace funds so invested.

The definition of an arbitrage bond remains consistent with the 1954 Code,[175] with the 1986 Act clarifying that intentional acts to earn arbitrage after issuance will cause loss of tax exempt status.[176]

3. Higher Yielding Investments

The types of investments which produce arbitrage are expanded to include annuity contracts and "any investment-type property." [177]

4. Temporary Periods

Temporary period exceptions [178] remain unchanged except for pooled financings (loans, other than nonpurpose obligations, to two or more persons) where the temporary period is reduced to six months.[179] The optional waiver (contained in pre-1986 TRA regulations) of the temporary period in exchange for greater yield is deleted.[180] Loan repayment proceeds in pooled financings are limited to three month temporary periods; student loan pools are entitled to 18 month periods through 1988.[181]

Note: The general temporary periods for tax-exempt bonds are different than the six month temporary period for the PAB rebate requirement discussed at 7, *infra*.

5. 4R Funds

Pursuant to Regs. §1.103-14(d)(1), a reasonably required reserve and replacement fund ("4R Fund") is not subject to yield restriction. Under this regulation a 4R Fund generally may not exceed 15% of the face amount of the issue. 4R Funds continue to be excepted from arbitrage restrictions [182] under the 1986 TRA, but are limited to 10% of the proceeds of the issue, unless the issuer establishes that a higher amount is necessary.[183]

6. Computation of Bond Yield

State of Washington v. Comr. [184] held that proper computation of bond yield required reduction to account for costs of issuance. This has the effect of permitting higher yields on acquired nonpurpose obligations. Section 148(h) of the 1986 Code requires in effect that calculations of bond yield be made without reduction for costs of issuance. *See* Conference Report at II-745-46.

Bond insurance premiums continue to be treated as interest under the 1986 Code.[185] The Conference Report clarifies that this treatment extends to other credit enhancement fees such as letter of credit fees if the credit enhancement results in a net savings in interest expense. The fees are limited to fees arising from an arm's-length transaction and fees representing reasonable charges for the credit risk.[186]

7. Rebate Requirement

Section 103(c)(6)(D) of the 1954 Code requires the issuers of IDBs (other than low and moderate housing bonds) to rebate to the United States the earnings on acquired nonpurpose obligations in excess of the earnings which would accrue if the obligations yielded the same rate as the bonds.

The arbitrage rebate requirement is extended under the 1986 Code to all tax-exempt bonds other than mortgage revenue bonds.[187]

[186] Conference Report at II-747.
[187] 1986 Code §148(f).

8. Nonpurpose Obligation Limit

Under 1954 Code §103(c)(6)(C), issuers of IDBs (other than low and moderate housing bonds) may not invest amounts in nonpurpose obligations in excess of 150% of the scheduled interest and principal payments for the year. The 1986 TRA extends the 150% of annual debt service limitation on investments in nonpurpose obligations to all PABs except for §501(c)(3) bonds.[188]

9. Optional Penalty

The Treasury also has the option to impose a 50% penalty in lieu of loss of tax exemption for rebate violations.[189]

10. Effective Dates

The changes in the arbitrage rules generally are effective for bonds (including refunding bonds) issued after August 15, 1986. Act §1311(a); Conference Report at 749. The restriction on investments in annuity contracts applies to bonds (including refunding bonds) issued after September 25, 1985. Act §1314(a). The repeal of *State of Washington* applies to bonds (including refunding bonds) issued after December 31, 1985. Act §1314(c). *See* Conference Report at II-749-50.

J. Registration and Other Requirements for all Tax Exempt Obligations

1. Registration Requirement

The registration requirement of 1954 Code §103(j) is carried over to 1986 Code §149(a).

2. Prohibition on Federal Guarantee

The Federal guaranty prohibition of 1954 Code §103(h) is carried over into §149(b) of the 1986 Code.

Additionally, under §1316(e) of the 1986 TRA, refundings of certain federally-guaranteed bonds are permitted. The refunded bonds must have been issued before April 15, 1983 or have been not taxable by reason of §631(c)(2) of the Tax Reform Act of 1984.[190] The refunding bond: (a) must have a maturity date not later than the maturity date of the refunded bond, (b) may not exceed the outstanding amount of the refunded bond; (c) must have a weighted average interest rate which is lower than the weighted average interest rate on the refunded bond; and, (d) the net proceeds must be used to redeem the refunded bond not later than 90 days after the date of the issuance of the refunding bond.[191]

3. Information Reporting

Section 103(l) of the 1954 Code requires issuers of IDBs and certain other bonds to file information returns. The information reporting requirement is extended to all tax-exempt bonds.[192]

4. Advance Refundings

Regs. §1.103-15 prevents IDBs and mortgage revenue bonds from being advance refunded. Section 149(d) extends the prohibition on advance refundings to all PABs (except §501(c)(3) bonds) and reduces the advance refunding period from 180 days to 90 days.[193] Certain new technical requirements are imposed on permitted advance refundings.[194]

K. Special Rules

1. Volunteer Fire Department Bonds

The rules for bonds of certain volunteer fire departments exempt under §103(i) of the 1954 Code continue in §150(e) of the 1986 Code, subject to the requirement that at least 95% of the net proceeds be used for qualified purposes.

2. Loss of Deductions for Change in Use

1986 Code §150(b) provides new rules resulting in the loss of tax deductions for rent, interest or equivalent amounts by persons using PAB property if the use of the property is changed to a nonqualifying use. The loss of deductions is in addition to loss of the tax-exemption for the bonds. *See* Conference Report at II-733.

Homeowners whose homes are financed under qualified mortgage bonds or qualified veterans' mortgage bonds will lose their deduction for mortgage interest if there is a continuous period of one year in which the home is not the principal residence of at least one mortgagor.[195] Owners of qualified residential rental projects will lose their mortgage interest deductions for any period in which the qualified residential rental project rules of §142(d) of the 1986 Code are not complied with.[196]

Where a facility financed with qualified §501(c)(3) bonds is used in a trade or business of a person other than the §501(c)(3) organization or a governmental unit and the §501(c)(3) organization continues to own the property, the §501(c)(3) organization will be deemed to have unrelated business income of not less than the fair rental value of the property used by the nonexempt person.[197] Interest paid on exempt facility bonds is not deductible by the owner if the facility is not used for the purpose for which a tax-exempt bond could be issued on the date of such issue.[198] Similarly, for airports, docks and wharves and mass commuting facilities, if the facilities are privately owned, the interest paid on the bonds is nondeductible by the owner.[199]

3. Effective Dates

The change in use requirement applies to changes occurring after August 15, 1986 with respect to financing provided after such date. Act §1311(a); Conference Report at II-733.

L. Effective Date Provisions

1. General

The changes made in the 1986 Code provisions with respect to tax-exempt bonds generally apply to bonds issued after August 15, 1986.[200]

2. Certain Construction and Binding Contracts

The changes will not apply to bonds (other than refunding bonds) which were subject to an inducement resolution or other comparable preliminary approval adopted by an issuing authority before September 26, 1985 where one of the three following tests is satisfied:

(a) the original use commences with the taxpayer and construction, reconstruction, or rehabilitation began before September 26, 1985;

(b) the original use commences with the taxpayer and the taxpayer had a binding contract to incur more than 10% of the reasonably anticipated cost of the construction, reconstruction, or rehabilitation of the facility before September 26, 1985 and some of the expenditures were made before such date; or,

(c) the taxpayer acquired the facility pursuant to a binding contract entered into prior to September 26, 1985.[201]

Notwithstanding these construction and binding contract exceptions, the following changes apply to the bonds issued after August 15, 1986:

(a) the substantially all requirements under §103 of the 1954 Code are changed to 95% of the net proceeds;[202]

(b) the office space limitation of 1986 Code §142(b)(2);[203]

(c) the changes to the qualified mortgage bonds and qualified veterans' mortgage bonds under §143 of the 1986 Code;[204]

(d) the 1986 Code §144(a)(11) limitation on acquisition of depreciable farm property and the 120% maturity limitation;[205]

(e) the public approval and cost of issuance limitations under §147(f), (g);[206]

(f) the new arbitrage rules;[207]

(g) the information reporting requirement rules for bonds issued after December 31, 1986;[208]

(h) the new change in use rules.[209]

3. Current Refundings

The changes do not apply to certain current refundings of bonds issued before August 16, 1986 or bonds subject to the construction or binding contract exception described above.[210] The amount of the refunding issue may not exceed the amount of the refunded issue and the maturity of the refunding issue must either comply with the 120% maturity limitation or may not be longer than 17 years from the date of the original issue.[211]

Notwithstanding the current refunding exception, the following changes apply to the bonds:

(a) the public approval requirement of §147(f), if the maturity date of the refunding bond is later than the maturity date of the refunded bond;[212]

(b) the cost of issuance limitation under §147(g);[213]

(c) the new arbitrage rules;[214]

(d) the information reporting requirement rules for bonds issued after December 31, 1986;[215]

(e) the new change in use rules.[216]

III. Alternative Minimum Tax

The alternative minimum tax provisions made significant changes with respect to tax-exempt interest. These provisions are analyzed in Chapters 32 and 33. Generally, tax-exempt interest on PABs (other than qualified §501(c)(3) bonds) issued after August 7, 1986 is treated as a tax preference. *See* 1986 Code §57(a)(5). Additionally, tax-exempt interest received by a corporation will increase the corporation's book income so as to enter into the 50% book income over taxable income adjustment of 1986 Code §56(f).

Chapter 31

AMENDMENTS RELATED TO TRANSACTIONS INVOLVING DEBT INSTRUMENTS

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

The Code contains a number of provisions, most of which were enacted by the various revenue acts of the 1980's (ERTA, TEFRA and the 1984 TRA), relating to the timing and the computation of the amount of interest includible in gross income by the holder and deductible by the issuer of a "debt instrument." This term is defined as a bond, debenture, note or certificate or other evidence of indebtedness.[1] Since the term will be used frequently herein, it will be referred to by the symbol "DI." In April of 1986, proposed regulations were issued which interpreted and provided special rules and definitions for most of the Code provisions relating to the timing and computation of interest both for purposes of inclusion in gross income and qualification for deduction (without regard to other provisions of the Code restricting the deductibility of interest once the proper taxable year for accrual and the amount have been determined). While sometimes referred to as the "OID" (original issue discount) regulations, they relate not only to §§1271-1275 and §483, but also to §446 (general rules of tax accounting for the timing and computation of interest by both cash and accrual basis taxpayers) and §482.[2] The proposed regulatory provisions relating to short-term obligations have been adopted, to a large extent, by the 1986 TRA amendments to §1271 and §§1281-1283.

The Code provisions relating to DIs and the proposed regulations have, as their principal goal, the conformation of the Code provisions to the methods generally recognized by the commercial marketplace for computing the time value of money. Interest, for all purposes, is computed on the basis of compounding where not paid currently. This is known as "economic accrual," or accrual on a "constant interest basis." It reflects the principle that where interest is not paid currently, the amount accrued is added to the principal and itself generates interest. This principle was first reflected in the Code by amendments made to the rules governing the accrual of OID under the predecessor to §1272 in 1982.[3] The only area not affected by these Code provisions and the proposed regulations was the amortization of bond premium under §171. Under the 1986 TRA, this, too, must be computed using economic accrual. Most of the other amendments made to the Code provisions relating to the accrual of interest on debt instruments are in the form of "technical corrections" of pre-1986 TRA law.

One significant amendment to §1272 (relating to the computation of OID) is contained in the 1986 Act provisions governing "real estate mortgage investment conduits" (REMICS) and the holders of interests in such entities (Act §§671-675; subtitle H of title VI). This amendment is discussed in detail in Chapter 42, *infra*.

In addition to the amendments described above, the 1986 Act provides a number of "technical corrections" concerning market discount bonds.

This chapter covers the following topics:

(1) bond premium;

(2) short-term obligations;

(3) market discount bonds;

(4) technical and clerical amendments;

(5) amendments relating to REMIC interests;

(6) below market interest loans.

I. Bond Premium

A. Introduction

Where a DI is acquired, and the holder's basis immediately after acquisition exceeds the amount payable on maturity or on earlier call date (where the the amount payable on such earlier call date results in less premium to be amortized) such excess may be amortized over the period to maturity or earlier call date, and the amount attributable to the taxable year is allowed as a deduction.[4] This general rule applies only to DI's the interest on which is not excludable from gross income.[5]

Under §171, before its amendment by the 1986 TRA,[6] the method for determining the amount of amortizable premium deductible for a taxable year was the method "regularly employed by the holder, if such method is reasonable." [7] The regulations make it clear that straight line or ratable amortization is an acceptable method.[8]

[1] *See* §1275(a)(1). This same definition applies to the term "bond" where used in the Code provisions (a holdover from previous terminology); *See* §§171(d) and 1278(a)(3).

[2] LR-189-84, 51 Fed. Reg. 12022 (April 8, 1986), with corrections of clerical errors in 51 Fed Reg. 23431 (June 27, 1986).

[3] §1232A as enacted by P.L. 97-248.

[4] §171(b).

[5] §171(a)(1) and (2).

[6] P.L. 99-514, hereinafter referred to as "the Act."

[7] §171(b)(3).

[8] Regs. §1.171-2(f).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Under pre-1986 TRA law, the definition of "bond" provided by §171(d) restricted the application of §171 to DIs "issued by any corporation and bearing interest (including any like obligation issued by a government or political subdivision thereof)." Also excluded were DIs held as stock in trade, inventory or for sale to customers.

Congress determined that since there was no logical basis for not doing so, the provisions for amortization of bond premium should be brought into line with those for the accrual of bond discount.

B. Statutory Provisions

Act §1803(a)(11) amends §171(b)(3) (which sets forth the method for computing the amortization of bond premium) to provide that, except as otherwise provided by regulations, the amount of deductible premium for the taxable year is to be made on the basis of the "taxpayer's yield to maturity."

Observation: Note that the *taxpayer's* yield to maturity is used, not the yield of the DI. This will be explained in the analysis below.

The yield is to be based on the taxpayer's basis (for purposes of determining loss on sale or exchange) in the DI, compounding at the close of each accrual period (as defined in §1272(a)(5).[9]

Note: The accrual period of a DI is determined under the rules set forth in Prop. Regs. §1.1272-1(d).

Where the call date is used instead of the maturity date, *i.e.*, where it is assumed that the DI will be called on the call date at the call price, and, will thus result in a lower amount of amortizable premium, the DI is to be treated as maturing on such earlier date for the call price and then reissued on that date for such call.[10]

The restriction of these provisions to DI's issued by corporations (or governmental agencies) is striken from §171(d). Act §1803(a)(11)(B). Thus, premium on a DI issued by an individual may now be amortized.

The above amendments all apply to obligations issued after September 27, 1985. Act §1803(a)(11)(C)(i).

Under §171(c), as in effect under the pre-1986 Code, to amortize bond premium, the taxpayer had to make an election to have §171 apply. Such an election, if made with respect to any bond, applied to all bonds held at the beginning of the first taxable year to which the election applied, and to all bonds thereafter acquired. The election was irrevocable, unless, on application by the taxpayer, the Commissioner allowed such revocation, subject to conditions as the Commissioner deemed necessary to revoke the election. Act §1803(a)(11)(C)(ii) provides that where such an election was in effect on October 22, 1986 (date of Act's enactment), it is to apply to obligations issued after September 27, 1985 only if the taxpayer so chooses.

Section 171(e), as added by Act §643 (redesignating former §171(e) as §171(f)), provides that except as provided in regulations, the amount of any amortizable bond premium with respect to which a deduction is allowed under §171(a)(1) for any taxable year is to be treated as interest for purposes of this title. This provision generally applies to obligations acquired after October 22, 1986, in taxable years ending after such date. Act §643(b)(1).

Note: This clarifies what, without the specific statutory provision, may have been open to considerable dispute. Where a taxpayer invests $105,000 in exchange for a series of future payments to be made under a bond with a redemption price at maturity of $100,000, the amount of the premium amortizable each year offsets the interest income from the bond, reducing the amount of the latter includible in taxable income. Without §171(e), the entire amount of interest payments received without the amortization offset could be used in determining the amount of interest deductible under §163(d). Thus, §171(e) seems a reasonable measure to prevent avoidance of the restriction on interest on investment indebtedness.

In addition to the above provisions, Act §1803(a)(12) adds §171(b)(4) to provided that if a bond is acquired by a person in exchange for other property, and the basis of the bond is determined (in whole or in part) by reference to the basis of such other property, for purposes of §171, the basis of the bond is not to exceed its fair market value immediately after such exchange.

> *Example*: Individual A transfers to a wholly owned corporation property with a basis of $12,000 in exchange for a debenture of the corporation with a redemption price at maturity of $10,000. The basis of the debenture in A's hands, under §358(a)(1) is $12,000, and, without this special rule, there would be $2,000 of bond premium subject to amortization. However, if the fair market value of the debenture is $9,500, this is its basis for purposes of §171 under the special rule of §171(b)(4), and, consequently, there is no bond premium.

Note: There is no market discount since this rule applies *only for purposes of §171.*

Further, §171(b)(4) provides that a similar rule is to apply in the case where the bond is held by any person whose basis is determined in whole or in part by reference to the transferor in the above described situation. Thus, if A transfers the bond to another controlled corporation in exchange for its stock immediately after the first transaction, the basis of the bond in the hands of such second corporation cannot exceed $9,500.

Section 171(b)(4)(B) provides that these rules are not to apply to bonds received in exchange for other bonds in connection with a reorganization (as defined by §368). If any portion of the basis of the taxpayer in such a bond is not taken into account in determining bond premium by reason of §171(b)(4)(A), such portion is not to be taken into account in determining premium on any bond received in the reorganization exchange. Thus, if A's basis in the bond received from the controlled corporation is limited to $9,500 as in the example given above, and this bond is exchanged for another bond in a reorganization, A's basis in the bond received, for purposes of determining bond premium, cannot exceed $9,500.

[9] §171(b)(3)(A)(i) and (ii).
[10] *See* §171(b)(1)(B).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The amendments made to §171(b)(4) apply to exchanges after May 6, 1986. Act §1803(a)(12)(B).

C. *Detailed Analysis*

The following example demonstrates how the provisions discussed above operate.

> *Example*: On January 1, 1987, A purchases a bond for $55,242.14. The bond pays coupon interest semiannually of $3,000, and is redeemable at maturity at the expiration of three years from the date of purchase for $50,000. The taxpayer's yield to maturity, based on the purchase price, is 8% compounded semiannually.[11] For the first six-month accrual period, A computes interest based on the 8% annual yield as $2,209.69 ($55,242.14 x .04). Interest received is $3,000. There is, therefore, $790.31 of bond premium allocable to the first accrual period. This is subtracted from the $55,242.14 basis to compute the premium for the next period. This is computed to be $821.93. Premium amortized on this constant interest basis for the subsequent four accrual periods is: $854.80, $889.00, $924.56, and $961.54. These amounts are all deductible as interest. Further, the taxpayer's basis in the bond is reduced by the amount of premium amortized.

If the bond is callable at a date earlier than its maturity date, the taxpayer's yield is computed, using the method described above, to such earlier call date on the assumption that the bond will be called at the call price. If the yield is lower, resulting in lower amortization deductions, then amortization must be computed on the basis of such lower yield. If the bond is not called, amortization for subsequent accrual periods is computed as if the bond had been issued on the call date for the call price, and yield for these subsequent periods is computed and used to determine amortization for such subsequent periods.

Note: Section 171(b) retains the provision that in no case is the bond premium to include any amount attributable to any conversion features of the bond. Therefore, in the case of a convertible bond market interest rates for the type and quality of bond involved must be determined and applied to discount future payments due. Any excess of the aggregate present values of such payments is presumably attributable to the conversion features and the taxpayer's basis must be reduced by this amount in computing the amortization allowable.

If the bond described in the example above, which will be assumed to have a fair market value of $55,242.14, had been received by the taxpayer in exchange for property transferred to a wholly owned corporation in a transaction to which §351 applies, and if the basis of the property transferred in A's hands were $58,000, then, for purposes of §171, the basis of the bond cannot exceed $55,242.14.

[11] A DI's yield to maturity is the rate of interest which, when applied to determine the present values of all payments due under the DI, produces an amount equal to the DI's issue price. *See* Prop. Regs. §1.1272-1(f). When applied to a bond purchased for a premium, the taxpayer's yield is the rate of interest which when applied to determine the present values of all payments due produces an amount equal to the purchase price paid for the bond.

II. Short-Term Obligations

A. *Background*

Under §1271, as in effect under pre-1986 TRA law, rules were provided for taking into account OID on the redemption or disposition of a DI issued with the intention to call it before maturity. Also, rules were provided for the taking into account of OID on DIs other than short-term DIs, defined as DIs with a maturity date no more than one year from the date of issue.[12] While §1271(a)(3) provided rules for the taking into account of acquisition discount on short-term government obligations, there was no statutory rule for the taking into account of OID on short-term non-government obligations where it was not required to be taken into account currently under the provisions of §§1281-1283. For example, in the case of a typical certificate of deposit held by a cash basis taxpayer, the portion of the amount received on redemption which had to be reported as interest was determined under general principles of tax law.[13] In this case, all of the gain is treated as interest where the certificate is held to maturity. However, where a certificate is sold, some of the gain may be attributable to a decline in interest rates, and this should be treated as capital gain. Under Prop. Regs. §1.1271-3(b), applicable to short-term non-government obligations issued on or after July 18, 1984 (effective date of the 1984 TRA), the IRS takes the position that any gain realized on disposition is treated as ordinary income to the extent it does not exceed the DI's ratable share of OID. An election to compute accrued OID on a constant interest basis, compounding daily, is provided.[14]

These proposed regulations also permit the portion of gain from the disposition of a short-term government obligation attributable to acquisition discount and treated as ordinary income under §1271(a)(3) to be computed on either a ratable or constant interest basis.[15]

Note that short-term obligations may have either acquisition discount or OID. The tax consequences are the same. Such government obligations as T-bills will usually have acquisition discount since they will not be acquired on original issue. In the case of DIs other than short-term obligations, OID is the excess of the stated redemption price at maturity over the DI's issue price. The stated redemption price at maturity is, generally, all payments due under the instrument other than qualified periodic interest.[16] However, in the case of a short-term obligation, no payments of interest are treated as qualified periodic interest payments.[17] Thus, where a short-term obligation is acquired, either at original issue or from a holder for $90 and it is redeemable at maturity for $100, there is $10 of discount (acquisition or original, depending on the circumstances).

Under pre-1986 TRA §1271(a)(3), a short-term government obligation was defined as an obligation of the U.S.

[12] §1272(a)(2)(C).
[13] *See U.S. v. Midland Ross Corporation*, 381 U.S. 54 (1965).
[14] Prop. Regs. §1.1271-3(b)(4).
[15] Prop. Regs. §1.1271-3(a)(3) and (4).
[16] Prop. Regs. §1.1273-1(b)(1).
[17] Prop. Regs. §1.1273-1(b)(1)(ii)(D).

or any of its possessions, a State or any political subdivision thereof, or of the District of Columbia issued on a discount basis and payable without interest at a fixed maturity date not more than one year from the date of issue. This described the T-bill and some State obligations. However, a number of government short-term obligations may be issued at par but be subsequently acquired at a discount, and some may provide for payment(s) of interest before maturity. There seems to be no reason not to apply the §1271(a)(3) rules to these obligations as well, with modifications where necessary.

The rules of §1272 (relating to the accrual and current inclusion in income by both cash and accrual basis taxpayers of OID) do not apply to, *inter alia,* short-term obligations.[18] Interest deductions by the issuer of an OID instrument are allowed under §163(e) which, generally, permits the issuer to deduct the amounts includible under §1272 by the holder. Under general tax law principles, no deduction for interest by a cash basis issuer of a short-term DI is allowed until such interest is paid. This rule applies whether or not the interest is in the form of OID. Congress decided that this principle should be embodied in a Code provision since there appeared to be some uncertainty about it.

The Act also amended §1281 (requiring certain taxpayers to include in income currently acquisition discount or OID on short-term obligations held by them) to make it clear that this requirement extends not only to discount but also to any stated interest. Section 1281(b)(1), enumerating the short-term obligations to which §1281 applies, was also amended to make it clear that included are any obligations which are stripped bonds or stripped coupons held by the person who stripped the bonds or coupons.

B. Detailed Analysis

The following is a discussion of the technical corrections made by Act §1803(a)(1), (2), (3), (4) and (7) to provisions of the 1984 TRA.

Section §1271(a)(4)(A), as added by Act §1803(a)(1), provides that on the sale or exchange of a short-term non-government obligation, any gain realized is ordinary income to the extent of the ratable share of OID. Such ratable share is total OID multiplied by the following fraction: the number of days the obligation was held by the taxpayer *over* number of days after the date of original issue up to and including the maturity date. §1271(a)(4)(C).

Under §1271(a)(4)(D), the taxpayer may elect to compute such ratable share on a constant interest or economic accrual basis, using daily compounding. The yield to maturity based on the original issue price is applied to compute the daily amount of OID accruing, and as such interest is accrued it is added to the issue price and the holder's basis under rules similar to those of §1272.

Section 1271(a)(3) is amended to grant an election to accrue the taxpayer's ratable share of acquisition discount on the disposition of a short-term government obligation on a constant interest basis, using daily compounding.[19]

Note: Where a short-term obligation with OID or acquisition discount is disposed of before maturity, accrued discount computed on a constant interest basis will always be less than if computed on a straight line or ratable basis. Under the former method, the instrument's yield to maturity is applied to its issue price as adjusted for each daily accrual period.

The definition of short-term government obligation provided by §1271(a)(3)(B) is amended by Act §1803(a)(3). As amended, the term means any obligation of the U.S. or its possessions, or of a State or any political subdivision thereof or of the District of Columbia (unchanged) "which has a fixed maturity date not more than one year from the date of issue." The term does not include any tax exempt obligation. Thus, the term no longer is restricted to a DI issued on a discount basis and payable without interest at a fixed maturity date as under pre-1986 TRA law. It applies to any government short-term DI acquired at discount whether or not interest is payable before maturity.

Section 163(e)(2) is amended to add subparagraph (C) providing that a cash method obligor of a short-term DI may deduct any OID or other interest payable only when paid. Act §1803(a)(4).

Section 1281(b)(1) is amended adding new subparagraph (F) which includes as a short-term obligation any obligation which is a stripped coupon or bond held by the stripper or any person whose basis is determined with reference to the stripper's basis. Act §1803(a)(7).

The effective date for all of the above amendments relating to short-term obligations is the general effective date for technical corrections to the 1984 TRA. Thus, the amended statutory provisions apply as if enacted by such Act.

In addition to the above described amendments, Act §1803(a)(8) amended the provisions of §§1281 and 1282.

The general rule of §1281(a) is amended to provide that in addition to current inclusion in income of discount on certain short-term obligations, there is also includible any interest payable on the obligation as it accrues (other than interest taken into account in determining the amount of the acquisition discount. This current inclusion rule applies to all accrual basis taxpayers and certain cash basis taxpayers which Congress concluded in the 1984 provisions should be treated as if they were accrual basis taxpayers. The same effective date applies to the amendments of §1282(a) (deferring deductions for interest on debt incurred to acquire or carry the short-term obligations subject to §1281 current inclusion) which make its provisions consistent with the above described amendment to §1281(a).

The amendments made to §§1281 and 1282 apply to obligations acquired after September 27, 1985.[20]

III. Market Discount Bonds

A. Background

Sections 1276-1278 enacted by the 1984 TRA required for the first time (consistent with the general view of Congress that the Code provisions relating to interest should more nearly reflect the time value of money), that market discount be treated as interest. Market discount arises where the stated redemption price at maturity of a DI exceeds its basis immediately after acquisition.[21] Thus, where a bond redeemable at maturity for $10,000 is acquired for a price of $9,000, there is $1,000 of market discount. Where the bond has OID, the stated redemption price at maturity is treated as being equal to its revised issue price.[22] This term is defined as the DI's issue price plus all amounts includible in the income of any holders (under §1272) without regard to any reductions under §1272(a)(6) or (b)(4) by reason of premium paid.[23] Under the general rule of §1276(a), where the holder of a market discount bond disposes of it, any gain is treated as ordinary interest income to the extent of market discount accrued while the bond was held. Accrual is computed either on a ratable, straight line or constant interest basis.[24] Disposition of a bond includes not only a sale or exchange, but any transfer whether or not taxable. Where the disposition is other than a sale or exchange or involuntary conversion, the bond is deemed disposed of for its fair market value.[25]

Special rules are provided for dispositions in nonrecognition transactions. For purposes of triggering recognition of accrued discount, rules similar to those of §1245(b) are to be applied.[26] Thus, where the bond is transferred to a controlled corporation by a shareholder in a §351 transaction, the disposition, even if the fair market value of the bond exceeds the transferor's basis, did not, under pre-1986 law, trigger recognition of accrued discount under §1276(a).[27] In any nonrecognition transaction in which, under the above rules, recognition of discount was deferred, where the basis of the transferred bond in the transferee's hands was determined with reference to its basis in the transferor's hands ("transferred basis property"), the transferee was treated as having acquired the bond on the same date as did the transferor for an amount equal to the transferor's basis. Thus, where a bond redeemable for $10,000 which the transferor acquired for $8,000 and which, at the time of transfer, had a fair market value of $9,000 is transferred to a controlled corporation in exchange for stock or securities of the corporation, the corporation, which under §362(a) takes a basis in the bond equal to its basis in the hands of the transferor (increased by any gain recognized by the transferor). The transferee is then deemed to have acquired the bond for $8,000 on the same date it was acquired by the transferor. The bond will, therefore, have $1,000 of accrued market discount. If the transferor received a newly issued bond in the exchange with a redemption price at maturity of $10,000, the new bond would have a basis in his hands of $8,000 (under §358) and, hence, there would be market discount of $2,000. If the corporation sells the bond for $9,000, the $1,000 of gain is market discount. The transferor must accrue market discount on the newly issued bond. Thus, the market discount rules cannot be circumvented. However, if the corporation issued stock with a fair market value of $10,000, the market discount rules do not apply to the stock. If the stock is sold, the $2,000 of gain is all capital gain.

The Committee Reports relating to these provisions stated that (1) Congress did not intend to create market discount on the transfer of appreciated property in exchange for a security in a §351 exchange. Further, it was not intended to permit taxpayers to circumvent the market discount provisions by transferring a bond with accrued market discount in a §351 exchange, adding "in that case it may be appropriate to tax the accrued market discount to the transferor (regardless of whether the transferor received stock or securities in the exchange)."[28]

Under the effective date provisions of the 1984 TRA, the market discount provisions were inapplicable to bonds issued on or before July 18, 1984. Where such a pre-enactment bond is transferred after that date in exchange for a new bond in a §351 exchange, and the redemption price of the new bond exceeds the taxpayer's basis in the pre-enactment bond exchanged, there will arise market discount even though the taxpayer's investment position has not changed.

One further problem that needed to be addressed was how partial principal payments should be treated under the market discount rules.

B. Detailed Description of Amendments and Analysis

Section 276(d)(1)(C), as added by Act §1803(a)(5), provides that "paragraph (3) of section 1245(b) shall be applied as if it did not contain a reference to section 351." Thus, where a market discount bond is transferred in a §351 transaction, and the fair market value of the bond exceeds the transferor's basis, the transferor must recognize as ordinary income the accrued discount to the extent of such excess. Such recognized gain is added to the basis of the bond in the transferee's hands.[29] If the stated redemption price of the bond exceeds the transferee's basis immediately after acquisition, then the bond will constitute a market discount bond in the hands of the transferee.[30]

New §1278(a)(1)(C)(i) provides that, except as otherwise provided in the subparagraph or in regulations, the term "market discount bond" shall not include any bond acquired by a taxpayer at its original issue.[31]

There are however, two major exceptions to this general rule provided by §278(a)(1)(C)(ii) and (iii).

Where a bond is acquired at original issue by an underwriter or other broker/dealer wholesaler for sale to

[21] §1278(a)(2)(A).
[22] §1278(a)(2)(B).
[23] §1278(a)(4).
[24] §1276(b).
[25] §1276(a)(2).
[26] §1276(c)(1).
[27] *See* §1245(b)(3).

[28] General Explanation of the Revenue provisions of the Tax Reform Act of 1984, Joint Committee on Taxation, December 31, 1984 at 96.
[29] *See* H.R. Rep. No. 426, 99th Cong, 1st Sess. at 884 (1985) ("House Report").
[30] *Id.*
[31] Act §1803(a)(6).

the public, it is normally acquired at a price less than what is defined as the bond's "issue price" under §1273(b)(3) (initial offering price to the public (excluding bond houses and brokers)). In such a case, where the taxpayer's basis is determined under §1012 and is less than the bond's issue price, the general rule of §1278(a)(1)(C)(i) does not apply,[32] and the bond may be a market discount bond in the underwriter's or broker's hands.

Where a bond is newly issued in a reorganization (within the meaning of §368(a)(1)) in exchange for another bond having market discount, the general rule does not apply to the newly issued bond. This exception does not apply, however, if such other bond was issued on or before July 18, 1984 and if the newly issued bond has the same term and interest rate as the bond exchanged.[33]

The House Report at 884 states that this rule is intended to prevent the holder of a market discount bond from eliminating the taint of unaccrued market discount by swapping the bond for a new bond (*e.g.*, in a recapitalization).

Finally, §1278(a)(1)(C)(iv) provides that for purposes of the general rule of §1278(a)(1)(C)(i), if the adjusted basis of any bond in the hands of the taxpayer is determined by reference to its basis in the hands of a person who acquired the bond at original issue, the bond is treated as if acquired by the taxpayer at original issue. Thus, if a taxpayer holds a DI with an issue price of $8,000 and a stated redemption price of $10,000 and transfers the DI to a controlled corporation in a §351 transaction, the transferee's basis will equal the issue price plus any OID included in the income of the transferor to the time of transfer. Assume that $500 has been so included. The corporation will be treated as holding a DI newly issued for $8,500 with a redemption price of $10,000. It will include the $1,500 of OID in income currently under §1272. Without this rule, the bond might be treated as a market discount bond, and no current inclusion of the discount in income would be required.

Act §1803(a)(13)(A), applicable to obligations acquired after October 22, 1986, amends §1276(a) by adding new paragraph (3) (redesignating former paragraph (3) as (4)) to provide a special rule for bonds with partial principal payments.

Any partial principal payment on a market discount bond is to be included in gross income as ordinary income to the extent the payment does not exceed the accrued market discount of such bond.[34] Where this provision has been applied to a partial payment of principal, the amount of accrued market discount is reduced by the amount included in gross income.[35]

In a related amendment, §1276(b) (relating to the methods for accruing market discount) is amended by adding a new paragraph at the end thereof providing that in the case of a bond whose principal amount may be paid in two or more payments, the amount of accrued market discount is to be determined as provided in regulations.

Note: These amendments appear to be related to debt instruments issued by Real Estate Mortgage Investment Conduits (*See* Chapter 42, *infra*) but also cover other DIs providing for payments of principal in installments before maturity. How the regulations will deal with this problem remains to be seen.

Act §1803(a)(13)(B), effective after October 22, 1986, amends §1286(b)(1) (relating to the tax consequences of stripping a bond or coupon). Under pre-1986 TRA law, a person stripping a bond or coupon must include in gross income an amount equal to the sum of (i) interest accrued on the bond while held by the stripper and before the bond or coupon was disposed of (to the extent such interest was not already included in gross income), and (ii) any accrued market discount determined as of the time the bond or coupon was disposed of (to the extent such market discount has not already been included in gross income).[36] The amendment corrects an obvious oversight made in drafting the provisions of §1286. A clerical conforming amendment is made to §1286(b)(2).

IV. Technical and Clerical Amendments

Act §1803(a), contains a number of technical and clerical amendments which were required to clarify or correct errors and oversights. Some of these were part of the effective date rules contained in the Tax Reform Act of 1984; others occurred in enacting P.L. 98-612 and P.L. 99-121. P.L. 98-612, referred to as transitional by Congress, was intended to alleviate what were perceived as unintended hardships resulting from the rules enacted by the 1984 TRA relating to the imputation of interest. It took the form of amendments to §44(b) of the 1984 TRA which provided effective dates for that Act's amendments to §483 and §§1271-1286. Due to the circumstances under which the Act was drafted, numerous technical and clerical errors were made. Also, the provisions of 1984 TRA §44 contained a number of technical or clerical errors. The technical corrections to be outlined below are addressed to both Acts. The most significant of these corrections will be explained in some detail below. Others will be set forth in essentially the language of the correcting Act since an extended discussion of the Code provisions whose effective dates are clarified are beyond the scope of this chapter.

A. Transfers of Land Between Related Parties

Act §1803(a)(9) makes it clear that in the case of any pre-July 1, 1985 sale or exchange of land between related persons to which §483(f) applies, the discount rate of interest (for imputation purposes) is 6% compounded semiannually. This was unclear under the so-called "transition rules" of P.L. 98-612.

B. "Clarification" of Application of Section 1273(b)(3)(B)

Section 1273(b) (relating to the determination of the "issue price" of a DI) provides, generally, that where a DI

[32] §1278(a)(1)(C)(ii).
[33] §1278(a)(1)(C)(iii).
[34] §1276(a)(3)(A).
[35] §1276(a)(3)(B).
[36] §1286(b)(1)(B).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

is issued in exchange for property other than money, the issue price must be determined under §1274. Section 1273(b)(3), before its amendment, provided that in the case of a debt instrument issued for property and which: (1) is part of an issue a portion of which is traded on an established securities market, or (2) is issued for stock or securities traded on such market, the issue price of the DI is the fair market value of such property. This rule is expanded by Act §1803(a)(10) to provide a fair market value issue price where, to the extent provided by regulations, the DI is issued for property (other than stock or securities) of a kind regularly traded on an established market. This will, presumably, include commodities, foreign currencies, and perhaps some other types of fungible goods.

C. Clerical Amendments

Section 1274(c)(4)(A) (providing one of the exceptions to the general rule that §1274 applies to any DI issued for untraded property) is amended to change "for less than $1,000,000" to "for $1,000,000 or less." [37]

Section 483(d), before the 1986 TRA, provided that §483 does not apply to any DI to which §1272 applies. This is a somewhat awkwardly phrased exception. Section 1272 provides the rules for determining the amount of OID currently includible in income by the holder of a DI. What obviously was intended was to except from the interest imputation provisions of §483, DIs, whose issue price is determined under §1273(b) (*i.e.*, DIs issued for cash or traded property) and DIs to which §1274 applies (since §1274, in effect, preempts §483 in the case of DIs issued for untraded property unless specifically excepted by §1274(c)(3). Where one of these exceptions applies, then §483 may be applied (unless one of the exceptions enumerated in §483(d) applies). Act §1803(a)(14)(B) amends §483(d)(1) to strike out "any DI to which section 1272 applies," and to substitute "any debt instrument for which an issue price is determined under section 1273(b) (other than paragraph (4) thereof) or section 1274." Section 1273(b)(4) provides that where a DI is not issued for money and is not subject to §1274, its stated redemption price at maturity is its issue price. Thus, a DI whose issue price is determined under §1273(b)(4) is subject to §483.

D. Amendments Related to Section 44 of the Tax Reform Act of 1984

As noted above, 1984 TRA §44 generally provided effective dates for the OID/imputed interest amendments made by that Act. Act §1803(b) makes a number of technical and clerical corrections to these provisions. They clarify that the "transitional" rules of P.L. 98-612 apply only to debt instruments issued after December 31, 1984 and before July 1, 1985. They clarify that paragraphs (5), (6) and (7) of §44 as amended by the 1984 TRA (relating to assumptions of debt instruments and applicable only to assumptions before July 1, 1985) apply only to sales or exchanges to which §1274 or §483 (as amended by 1984 TRA §41(a)) apply. Thus, these assumption rules do not apply to sales or exchanges before January 1, 1985, and apply to pre-July 1, 1985 sales and exchanges only if they are subject to either §1274 or §483 as amended by the 1984 Act.

Section 44(b)(3) of the 1984 TRA, as originally enacted, contained the words "and before January 1, 1985" which seem to have been erroneously included since they make little sense in the context. Act §1803(b)(2) strikes out this phrase wherever it occurs in 1984 TRA §44(b)(3).

Additional technical or clerical amendments to 1984 TRA §44(b) and (g) are provided by Act §1803(b)(3), (4) and (5) as follows:

(3) Exception for Binding Contracts - Subparagraph (B) of §44(b)(3) of the Tax Reform Act of 1984 is amended to read as follows:

> "(B) Exception for Binding Contracts. - "(i) Subparagraph (A)(i)(I) shall not apply to any sale or exchange pursuant to a written contract which was binding on March 1, 1984, and at all times thereafter before the sale or exchange.
>
> "(ii) Subparagraph (A)(i)(II) shall not apply to any sale or exchange pursuant to a written contract which was binding on June 8, 1984, and at all times thereafter before the sale or exchange."

(4) Clerical Amendment - Clause (ii) of §44(b)(6)(B) of the Tax Reform Act of 1984 (as added by §2 of P.L. 98-612) is amended by striking out "greater than" and inserting in lieu thereof "not greater than."

(5) Clarification of Effective Date for Repeal of Capital Asset Requirement - Subsection (g) of §44 of the Tax Reform Act of 1984 is amended by striking out "before December 31, 1984" and inserting in lieu thereof "on or before December 31, 1984."

V. Amendments Relating to REMIC Interests

The amendments made to §1272(a) by Act §672 relating to interests issued by a Real Estate Mortgage Investment Conduit; (§§860A through G), or a taxable mortgage pool which are treated as debt instruments for all purposes of the Code are fully discussed in Chapter 42, *infra*. The amendments provide the method of computing the amount of the daily portion of OID accruable with respect to such an interest where it can be ascertained at the time of issue that all or a portion of the principal will be paid before maturity.

VI. Below Market Interest Loans

Act §1812(b) contains a number of amendments clarifying various aspects of the provisions of §7872 relating to "below market interest loans."

Section 4941(b) defining "self dealing" for purposes of the Code provisions relating to private foundations, is amended by Act §1812(b)(1) to clarify that the phrase "without interest or other charge" is to be applied without regard to the provisions of §7872. In other words, whatever interest may be imputed under §7872 is not taken into account in determining whether the transaction constitutes an act of self dealing.

[37] Act §1803(a)(14)(A).

Section 7872(f)(9) is amended by Act §1812(b)(2) to clarify that no withholding under chapter 24 is required with respect to any amount treated as transferred or retransferred under §7872(a) or any amount treated as received under §7872(b).

The definition of "demand loan" set forth in §7872(f)(5) is reworded by the amendment made by Act §1812(b)(3). The second sentence, as amended, reads: "Such term also includes (for purposes other than determining the applicable Federal rate under paragraph (2)) any loan if the benefits of the interest arrangements of such loan are not transferrable and are not conditioned on the future performance of services by an individual." Act §1812(b)(3) also adds a third sentence to §7872(f)(5): "To the extent provided in regulations, such term also includes any loan with an indefinite maturity."

Act §1812(b)(4) amends §7872(f)(2) (defining applicable Federal rate) to add the erroneously omitted words "compounded semiannually" to subparagraph (B) (which refers to the short-term rate) at the end thereof. All applicable federal rates are expressed in terms of semiannual compounding - *See* §1274(d) defining "applicable Federal rate."

Act §1812(b)(5) exempts from the provisions of §7872 obligations issued by the State of Israel if such obligations are payable in U.S. dollars and bear interest at an annual rate of at least 4%. Presumably the 4% referred to is simple interest.

Chapter 32

REVISED ALTERNATIVE MINIMUM TAX FOR NON-CORPORATE TAXPAYERS

Javed A. Khokhar, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The revision of the alternative minimum tax rules by the Tax Reform Act of 1986 is the latest in many rounds of legislative amendments dating back to 1969. To put the 1986 changes in perspective, a review of the history of AMT is necessary.

A. The Tax Reform Act of 1969

The minimum tax stems from tax reform studies first undertaken by the Treasury Department during the Johnson administration. The Treasury proposals [1] evidenced a concern that the tax laws permitted some individuals with large incomes to pay little or no tax, while other individuals with far less income were required to pay a higher percentage of their income in tax, and persons with low and modest incomes paid a significant share of their income in tax. It was felt that this undermining of the progressive rate structure and unfair allocation of the tax burden was caused by the existence of a favored tax status afforded certain types of income.

The Treasury proposals isolated four tax preferences that it felt contributed most significantly to the above-mentioned disparity in treatment among individuals (corporations were not subject to these proposals). These were the §1202 net long-term capital gains exclusion (with the alternative of taxing the entire gain at a 25% rate), tax-exempt interest received on state and local government bonds, the exclusion resulting from percentage depletion in excess of the capital invested in the ownership of minerals or other natural resources, and the appreciation element in charitable gifts of appreciated property to the extent deductible under §170.

Treasury then proposed a graduated minimum tax rate (7-35%) to be applied to an expanded income base. The income base was to consist of taxable income plus the above-mentioned preferences. If this tax was higher than the tax computed under the normal rates, it became the final tax liability.

In computing the minimum tax base, the individual was to be allowed all of his itemized deductions or a special $10,000 standard deduction if more advantageous. The proposals, however, also introduced a new concept called "allocation of deductions." This approach required an individual to allocate his non-business expense deductions between taxable and exempt income, and allowed such deductions only to the extent allocable to taxable income. This concept generally was aimed at preventing use of preference-related deductions against otherwise taxable income.

The Treasury studies recommended that certain individual nonbusiness itemized deductions [2] (that is, most itemized deductions) be allocated between income and preference income, with only the part allocable to taxable income being permitted as deductions in computing tax. Here, as in the minimum tax computation, there was relief for those with minor amounts of preferences; an individual with $5,000 or less of preferences was not subject to the allocation.

The Treasury studies served as the basis for the subsequent submission of proposals to Congress by the Nixon Administration and the ultimate enactment of an add-on [3] minimum tax by the Tax Reform Act of 1969 (P.L. 91-172).

The Tax Reform Act of 1969 (P.L. 91-172) added §56, 57, and 58 to the Code.[4] Under these provisions, effective for taxable years ending after December 31, 1969, both individuals and corporations were subjected to a minimum tax which was in addition to the regular tax. The minimum tax was calculated by applying a 10% rate to the minimum tax base. The minimum tax base was computed by adding together certain tax preferences and subtracting therefrom the regular federal income taxes paid by the taxpayer and an exemption amount of $30,000. Spouses who filed separate returns and each had tax preferences were required to split the $30,000 exemption amount.

The tax preference items included in the minimum tax base were:

(1) Excess investment interest. This item of tax preference was equal to the excess of investment interest expense over net investment income. It applied only to individuals, subchapter S corporations, and personal holding companies, and then only until 1972.

---

[1] *Treasury Tax Reform Studies and Proposals (Part 2)* pp. 132 and 142 (1969).

[2] The nonbusiness deductions to be so allocated were interest, taxes, casualty losses, charitable contributions, medical expenses, and cooperative housing expenses.

[3] An add-on minimum tax is a tax which is in addition to taxpayer's regular tax liability.

[4] Unless otherwise indicated, all section references herein are to the Internal Revenue Code of 1986.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(2) Accelerated depreciation on personal property subject to a net lease.

(3) Accelerated depreciation on real property.

(4) Amortization of rehabilitation expenditures.

(5) Amortization of certified pollution control facilities.

(6) Amortization of railroad rolling stock.

(7) The bargain element in stock options.

(8) Bad debt deductions of financial institutions. (This basically was a corporate preference item).

(9) Depletion deduction taken for the year over the cost of the property reduced for depletion taken in prior years.

(10) Capital gains. For noncorporate taxpayers, this preference was equal to one-half of the net long-term capital gain, to the extent it exceeded the net short-term capital loss.[5]

Because the minimum tax was not achieving its purpose, pressure was put on the Congress to tighten this provision to insure that the original objective was in fact achieved. Consequently, a considerable tightening of the minimum tax rules took place in the Tax Reform Act of 1976.

B. The Tax Reform Act of 1976 (P.L. 94-455)

The Tax Reform Act of 1976 (P.L. 94-455) strengthened the minimum tax provisions by increasing the effective tax rate and by adding some new items of tax preference.

The minimum tax rate was increased from 10 to 15%. For noncorporate taxpayers the exemption amount was reduced from $30,000 plus the regular income taxes to the greater of: (i) $10,000 or (ii) one-half of the regular income tax for the year.[6]

For noncorporate taxpayers the following new items of tax preference were added:

(1) Excess itemized deductions. This item of tax preference was equal to the taxpayer's itemized deductions (other than the deductions for medical expenses and casualty losses) in excess of 60% of adjusted gross income (reduced by the deductions for medical expenses and casualty losses).

(2) Intangible drilling costs. The excess of deductible intangible drilling costs paid or incurred in connection with productive oil and gas wells over the amount that would have been deductible if such costs had been capitalized and either amortized over a 10-year period or deducted over the lives of the wells as cost depletion.

(3) Accelerated depreciation on personal property. The tax preference item for accelerated depreciation on personal property subject to a net lease was expanded to cover all leased personal property.

For corporate taxpayers, no new tax preferences were added.

The changes made by the Tax Reform Act of 1976 were generally effective for taxable years beginning after December 31, 1975.

C. Revenue Act of 1978

The Revenue Act of 1978 (P.L. 95-600) restructured the minimum tax provisions applicable to noncorporate taxpayers for taxable years beginning after 1978. The add-on minimum tax, as in effect in 1978, no longer applied to the capital gains and the excess itemized deductions preference items. These two items of tax preference instead formed part of a new alternative minimum tax which took effect in taxable years beginning after 1978. Thus, for 1979 and later years, noncorporate taxpayers were subject to two distinct types of minimum tax: under §56, they were subject to an add-on minimum tax, and under §55 (enacted as part of the 1978 Act), they were subject to an alternative minimum tax.

1. The Add-on Minimum Tax

The add-on minimum tax, as in effect for taxable years beginning after 1978, was levied on the "minimum tax base" of a noncorporate taxpayer [7] at the rate of 15%. The "minimum tax base" was computed by adding together the items of tax preference for the taxable year and subtracting therefrom the greater of:

(a) the annual $10,000 exemption; or

(b) the regular tax deduction for the taxable year.

A noncorporate taxpayer's tax preferences subject to the add-on minimum tax included the following:[8]

(a) Depreciation on real property in excess of straight line depreciation;

(b) Depreciation on personal property subject to a lease in excess of straight line depreciation;

(c) Amortization of certified pollution control facilities (*i.e.*, the excess of 60-month amortization over depreciation otherwise allowable under §167;

(d) Amortization of railroad rolling stock (*i.e.*, the excess of 60-month amortization over depreciation otherwise allowable under §167);

(e) The bargain element of a qualified stock option (as defined in §422(b));

(f) Amortization of child care facilities (*i.e.*, the excess of 60-month amortization over depreciation otherwise allowable under §167);

(g) Percentage depletion in excess of the adjusted basis of the property; and

(h) Intangible drilling costs on oil, gas and geothermal wells in excess of net income from oil, gas, and geothermal wells.

[5] In the case of corporations, this item of preference was the excess of net long-term capital gain over net short-term capital loss multiplied by a ratio, the denominator of which was the regular corporate tax rate (*i.e.*, 48%) and the numerator of which was the regular corporate rate minus the capital gains rate applicable to corporations.

[6] For corporate taxpayers, the exemption amount was reduced to the greater of $10,000 or the full amount of regular tax.

[7] As in taxable years before the effective date of the Tax Reform Act of 1978, corporate taxpayers remained subject to the §56 add-on minimum tax.

[8] *See* §57(a), as in effect before its amendment by the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The "regular tax deduction" for noncorporate taxpayers was defined in §56(c) to mean one-half [9] of all Chapter 1 taxes for the year other than: (i) the minimum tax; (ii) the penalty tax on premature distributions from HR-10 plans (§72(m)(5)(B)); (iii) the tax on lump-sum distributions from tax-qualified pension plans (§402(e)); and (iv) the tax on premature distributions from individual retirement accounts (§408(f)) — reduced by various nonrefundable credits. These credits included: (i) the credit for tax withheld from a nonresident alien's income; (ii) the foreign tax credit; (iii) the credit for elderly; (iv) the investment tax credit; (v) the WIN credit; (vi) the political contributions credit; (vii) the general tax credit; (viii) the credit for the purchase of a new residence; (ix) the child care credit; (x) the targeted jobs tax credit; (xi) the residential energy credit; (xii) the alternative fuel production credit; (xiii) the alcohol fuels credit; and (xiv) the credit for increasing research activities.

2. Alternative Minimum Tax

The Revenue Act of 1978 added a new §55 to the Code. Section 55 imposed an alternative minimum tax on noncorporate [10] taxpayers' "alternative minimum taxable income" to the extent it produced a higher tax than the taxpayers' regular tax liability (as increased by §56 add-on minimum tax). "Alternative minimum taxable income" was determined by adding back to the taxable income of the taxpayer the preference items for the adjusted itemized deductions and the capital gains deduction for the taxable year.[11]

Note: In computing "alternative minimum taxable income," amounts otherwise included in income pursuant to §86 (as a result of the income tax credit for alcohol fuels allowable in the prior taxable year) or §667 (as a result of any accumulation distributions from a trust) were excluded.[12]

An individual taxpayer's preference for adjusted itemized deductions was equal to the taxpayer's itemized deductions (other than the deductions for medical expenses, casualty losses, state, local or foreign taxes, and estate taxes) in excess of 60% of adjusted gross income (reduced by the deductions for medical expenses, casualty losses, state, local, or foreign taxes, and estate taxes).[13] For estates and trusts, however, certain additional adjustments were necessary to arrive at the preference amount for adjusted itemized deductions.[14] In the case of individuals who did not itemize deductions, the zero bracket amount was treated as the deduction allowed.[15]

The alternative minimum tax was imposed according to the following rate table:

Alternative Minimum Taxable Income	*Tax*
Under $20,000	0
$20,000—$60,000	10%
$60,000—$100,000	$4000 plus 20% of the excess over $60,000
Over $100,000	$12,000 plus 25% of the excess over $100,000

For taxable years beginning after 1981, the Economic Recovery Tax Act of 1981 (P.L. 97-34) reduced the top alternative minimum tax rate to 20% on all alternative minimum taxable income exceeding $60,000.

For all practical purposes, the amount calculated under the above rate schedule represented the taxpayer's total tax liability (provided it exceeded the "regular tax" for the taxable year). Technically, however, the alternative minimum tax was equal to the gross alternative minimum tax calculated under the above schedule, minus the "regular tax" for the taxable year.

The term "regular tax" encompassed all taxes imposed by Chapter 1 (including §56 add-on minimum tax) for the taxable year other than: (i) the §72(m)(5)(B) penalty tax on premature distributions from HR-10 plans; (ii) the §402(e) tax on lump-sum distributions from tax-qualified pension plans; (iii) the §408(f) tax on premature distribution from individual retirement accounts; (iv) the §409(c) tax on early redemption of retirement bonds; and (v) the §667(b) tax on accumulated distributions from trusts — reduced by the sum of nonrefundable credits.[16]

Certain nonrefundable credits (other than the foreign tax credit) were allowable against the alternative minimum tax but only to the extent such tax was not attributable to the net capital gain or adjusted itemized deductions.[17] In addition, the investment tax credit, the WIN credit, and the targeted jobs credit were allowable against the alternative minimum tax only to the extent such credits were attributable to an active trade or business.[18] Any disallowed credits, however, increased the amount allowed as a carry-over. The foreign tax credit was allowed in full against the alternative minimum tax. In general, the foreign tax credit was computed under the regular foreign tax credit rules of §§901-908. The foreign tax credit limitation of §904(a), however, was computed separately for purposes of the alternative minimum tax. Consequently, the amount of foreign tax credit allowed against the alternative minimum tax was limited to the same proportion of the gross alternative minimum tax as the taxpayer's alternative minimum taxable income from foreign sources bore to his entire minimum taxable income from worldwide sources.[19]

[9] For corporate taxpayers, the full amount of Chapter 1 taxes is taken into account for computing the "regular tax deduction."

[10] The alternative minimum tax enacted by the Tax Reform Act of 1978 did not apply to corporate taxpayers.

[11] Both the adjusted itemized deductions and the capital gains deduction preferences were excluded from treatment as items of tax preference for purposes of the §56 add-on minimum tax as applied to noncorporate taxpayers.

D. The Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA)

Expressing its dissatisfaction with the way wealthy individuals continued to avoid paying any taxes through the use of exclusions, deductions, and credits, Congress, in TEFRA, once again revised the minimum tax rules applicable to noncorporate taxpayers.

Effective for taxable years beginning after 1982, TEFRA repealed the §56 add-on minimum tax (as it applied to noncorporate taxpayers) and the §55 alternative minimum tax (as in effect prior to TEFRA) and instead enacted a revised and expanded alternative minimum tax for noncorporate taxpayers.[20]

The Senate Finance Committee Report on H.R. 4961 noted:[21]

> "The committee has amended the present minimum tax provisions applying to individuals with one overriding objective: no taxpayer with substantial economic income should be able to avoid all tax liability by using exclusions, deductions and credits. Although these provisions provide incentives for worthy goals, they become counter-productive when individuals are allowed to use them to avoid virtually all tax liability. The ability of high-income individuals to pay little or no tax undermines respect for the entire tax system and, thus, for the incentive provisions themselves. Therefore, the committee has provided an alternative minimum tax which is intended to insure that, when an individual's ability to pay taxes is measured by a broad-based concept of income, a measure which can be reduced by only a few of the incentive provisions, tax liability is at least a minimum percentage of that broad measure. The only deductions allowed, other than costs of producing income, are for important personal or unavoidable expenditures (housing interest, medical expenses and casualty losses) or for charitable contributions, the deduction of which already is limited to a percentage of adjusted gross income.
>
> The committee's changes in the minimum tax also simplify the taxpayer's computations, since the present law add-on minimum tax is repealed. This change actually provides tax reductions for many middle-income taxpayers who pay a minimum tax on some preference income but also have substantial amounts of non-preference income. By adding all preferences into the base of the alternative minimum tax and focusing the minimum tax on high income individuals, the committee's provision increases tax liability only for income classes of taxpayers with over $100,000 of income."

E. The Tax Reform Act of 1984

The Tax Reform Act of 1984 (P.L. 98-369) made certain technical, not-so-technical, and clarifying amendments to §§55 and 57. In addition, the amendments made by the Act elsewhere (*e.g.*, renumbering and simplication of tax credits, extension of the ACRS recovery period for real estate, etc.) necessitated conforming amendments to the rules governing the computation of alternative minimum tax.

F. Alternative Minimum Tax Before the Tax Reform Act of 1986 [22]

For taxable years beginning before 1987, §55 imposed on individuals, estates, and trusts, an alternative minimum tax equal to the excess of the gross alternative minimum tax (or tentative alternative minimum tax) over the regular tax for the taxable year. Before comparing the gross (or tentative) alternative minimum tax to regular tax, however, certain adjustments were made to the "regular tax" computed under the normal Code rules. Specifically: (i) taxes imposed by §§72(m)(5)(B), 72(q), 402(e), 408(f), 409(c), and 667(b) were disregarded; and (ii) the "regular tax" was reduced by credits allowable under Subparts A, B, and D of Part IV of subchapter A.

The gross alternative minimum tax was determined by applying a flat 20% rate to the taxpayer's "alternative minimum taxable income," less the exemption amount specified in §55(f)(1).

Conceptually, the determination of "alternative minimum taxable income" was a two-step process: alternative minimum tax adjusted gross income was computed by using the regular tax adjusted gross income as the starting point. Alternative minimum tax adjusted gross income was then reduced by certain specified itemized deductions to arrive at alternative minimum taxable income.

Alternative minimum tax adjusted gross income was obtained by making the following adjustments to the regular tax adjusted gross income:

(1) Any amount included in gross income under §87 was excluded;

(2) Any amount included in gross income under §667 was excluded;

(3) The regular net operating loss deduction was replaced by the alternative tax net operating loss deduction as defined in §55(d); and

(4) The sum of items of tax preference deductible in arriving at adjusted gross income was added back.

The items of tax preference required to be added back were defined in §57(a) and included the following:

(1) Exclusion for Dividends. Dividends received by individuals from certain domestic corporations and excluded from gross income under §116 of the Code were an item of tax preference.

(2) ACRS Deductions. For recovery property subject to a lease (other than 19-year real property and low income housing), the excess of the ACRS deduction over the amount that would have been allowed as a deduction had the property been depreciated using a specified longer recovery period under the straight-line method constituted an item of tax preference. For 19-year real property, the

[20] TEFRA §201.

[21] S. Rep. No. 494, Vol. 1, 97th Cong. 2nd Sess. pp. 108-109 (1982).

[22] All references in this Code §are to Code sections as they stood before the enactment of the Tax Reform Act of 1986.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

amount of tax preference was the excess of the ACRS deduction over the amount that would have been allowed had the property been depreciated under the straight-line method.

(3) Accelerated Depreciation. For real property and leased personal property, which was placed in service before 1981 or which was excluded from the application of the ACRS rules, the excess of any allowance for exhaustion, wear and tear, obsolescence, or amortization over the amount that would have been allowable had the taxpayer used the straight-line method for each year of the property's useful life constituted an item of tax preference.

(4) Amortization of Pollution Control Facilities. The excess of the amortization deduction allowable for the year under the 60-month write-off election of §169 for "certified pollution control facilities" over what would otherwise be allowable as a depreciation deduction under §167 was treated as an item of tax preference.

(5) Mining Exploration and Development Costs. The excess of the deduction claimed for mining exploration and development costs under §616(a) or §617 over the amount that would have been deductible had such costs been capitalized and amortized over a 10-year period was treated as an item of tax preference.

(6) Circulation and Research and Development Costs. The preference amount for circulation expenditures was equal to the excess of the allowable deduction under §173 for the taxable year over the amount that would have been allowable had the expenditures been capitalized and amortized over a 3-year period. Similarly, the amount of tax preference for research and development costs was equal to the excess of the allowable deduction under §174 for the taxable year over the amount that would have been allowable had the costs been capitalized and amortized over a 10-year period.

(7) Depletion. The excess of the depletion deduction allowable over the adjusted basis of the property at the end of the year, disregarding the current year's depletion.

(8) Capital Gains. For individual taxpayers, the net capital gain deduction as determined under now-repealed §1202.

(9) Incentive Stock Options. The tax preference for incentive stock options was equal to the excess of the fair market value of a share of stock transferred to the taxpayer pursuant to the exercise of a stock option at the time of exercise over the option price .

(10) The amount of excess intangible drilling and development costs for the taxable year over the taxpayer's net income from oil, gas, and geothermal properties for that taxable year. Excess intangible drilling and development costs were the excess of such costs paid or incurred with respect to productive oil, gas, or geothermal wells that the taxpayer elected to deduct under §263(c) over the amount that would have been allowable for the taxable year if the costs had been capitalized and amortized in accordance with any method provided in §57(d). Section 57(d) prescribed either a 120-month amortization or any method permitted for determining cost depletion.

Once alternative tax adjusted gross income had been obtained, alternative minimum taxable income was computed by deducting the sum of alternative tax itemized deductions from alternative tax adjusted gross income. The alternative tax itemized deductions included: (i) casualty and wagering losses under §§165(c)(3) and 165(d); (ii) medical expenses under §213 (as modified by §55(e)(7); (iii) charitable contributions under §170; (iv) qualified interest as defined in §55(e)(3); and (v) estate taxes under §691(c).

Alternative minimum taxable income was then reduced by the exemption amount to arrive at the minimum tax base. The exemption amount was: (i) $40,000 for a joint return, (ii) $30,000 for a single return, and (iii) $20,000 for a separate return.

The gross (or tentative) alternative minimum tax was computed by applying a flat 20% rate to the alternative minimum tax base. The gross alternative minimum tax was reduced by refundable credits and the foreign tax credit. No nonrefundable tax credits, other than the foreign tax credit, were allowed against the minimum tax. The gross alternative minimum tax (net of credits) was then compared to the regular tax (net of credits). The taxpayer was required to pay the minimum tax if it was greater than the regular tax. Since nonrefundable credits were not allowed against the minimum tax, the taxpayer was allowed a credit carryover to the extent the taxpayer did not derive a tax benefit from such credits due to the imposition of the minimum tax.

G. The Tax Reform Act of 1986

Spurred by a concern that individuals with substantial economic incomes continued to avoid significant tax liability through an aggressive use of tax incentives, the 99th Congress again revamped the alternative minimum tax rules. The House Report on the Tax Reform Act of 1986 observed:

> "With respect to the taxation of individuals, fairness and taxpayer morale have been particularly harmed by the proliferation of tax shelters, whereby individuals with substantial economic incomes in effect purchase tax benefits that are not accompanied by significant economic burdens, and thereby may escape significant tax liability. Although some tax shelters depend upon the availability of tax preferences, many tax shelters exploit inherent structural features of the tax system (e.g. the contrast between allowing current depreciation and interest deductions, on the one hand, and not taxing unrealized appreciation, on the other). An effective minimum tax is necessary to allow the committee to substantially reduce the marginal tax rates applicable to high-income taxpayers without causing an overall percentage tax reduction for this group larger than for the average taxpayer."[23]

II. Overview

Section 701 of the Tax Reform Act of 1986 substantially amended §§55, 56, 57 and 58, and added §§53 and 59.

[23] H.R. Rep. No. 426, 99th Cong. 1st Sess., p. 306 (1985). ("House Report").

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The alternative minimum tax rules for individuals (and corporations), therefore, after the 1986 TRA, are contained in §§53, 55, 56, 57, 58 and 59.

For taxable years beginning after December 31, 1986, the amended §55 imposes on noncorporate taxpayers an alternative minimum tax equal to the excess of the "tentative minimum tax" for the taxable year over the "regular tax" for the taxable year. For §55 purposes, "regular tax" continues to have a special meaning: it means the regular tax liability for the taxable year (as defined in §26(b)) computed without regard to any tax imposed under §402(e) and any increase in tax under §47, and reduced by the foreign tax credit allowable under §27(a). The tentative minimum tax for noncorporate taxpayers is equal to 21% of the alternative minimum tax base, reduced by the alternative minimum tax credit. (Corporations pay alternativwe minimum tax at a 20% rate after the TRA.) The alternative minimum tax base is computed by reducing alternative minimum taxable income by the exemption amount.

Section 55(b)(2) defines alternative minimum taxable income as the taxable income of the taxpayer for the taxable year, adjusted in accordance with §§56 and 58 and increased by the amount of the items of tax preference provided in §57.

The foregoing definition of the Alternative Minimum Taxable Income (AMTI) has two clear implications:

First, the computation of AMTI is a computation entirely distinct and apart from the computation of taxable income for regular tax purposes.

Second, AMTI is computed in the same way as taxable income for regular tax purposes but with two types of modifications:

(i) certain items of income and deductions used in the computation of regular taxable income are adjusted as provided in §§56 and 58; and

(ii) certain items of tax preference, as provided in §57, are added back to taxable income (as adjusted under (i) above).

The adjustments required in the computation of AMTI are summarized below.

(a) Depreciation Deductions. For property placed in service after 1986, depreciation deductions are required to be calculated under the Alternative Depreciation System of §168(g) but using 150% declining balance method, switching to straight-line in later years.

(b) Mining Development and Exploration Costs. With respect to each mine or other natural deposit, mining development and exploration costs incurred after December 31, 1986, are required to be capitalized and amortized ratably over a 10-year period.

(c) Long-Term Contracts. For any long-term contract entered into by the taxpayer on or after March 1, 1986, the taxable income from such contract must be determined under the percentage-of-completion method as modified by §460(b).

(d) Net Operating Loss Deduction. In computing the AMTI, the alternative tax net operating loss deduction must be substituted for regular tax net operating loss deduction.

(e) Installment Sales. The installment sales method of accounting is not permitted for alternative minimum tax purposes. Thus, the taxpayer must include in AMTI the entire gain derived from the sale or other disposition of property under the installment method.

(f) Pollution Control Facilities. For certified pollution control facilities placed in service after December 31, 1986, the allowable deduction must be computed under the alternative system of §168(g).

(g) Circulation Expenditures. Circulation expenditures (deductible under §173) incurred after December 31, must be capitalized and amortized over a 3-year period.

(h) Research and Development Expenditures. Research and development expenditures (described in §174(a)) incurred after December 31, 1986, must be capitalized and amortized ratably over a 10-year period.

(i) Gain (or Loss) From the Sale or Exchange of Property. In determining gain (or loss), for AMTI purposes, from the sale or exchange of property with respect to which adjustments have been made as described in paragraphs (a), (b), (f), (g) and (h) above, the adjusted basis of such property will be determined based on the treatment prescribed in those paragraphs.

(j) Itemized Deductions. Taxpayers who do not itemize deductions are not allowed the standard deduction. Taxpayers who itemize deductions are not allowed the following deductions: (i) miscellaneous itemized deductions described in §67(b) (*e.g.*, reimbursed employee business expenses), (ii) state and local tax deduction, and (iii) medical expense deduction up to 10% of adjusted gross income. In addition certain clarifying changes are made with respect to qualified interest deduction.

(k) State and Local Tax Refunds. To the extent no deduction is permitted for state and local taxes in computing AMTI, a refund of such taxes is excluded from gross income.

(l) Farm Losses. In computing AMTI, no deduction for a loss from a tax shelter farm activity is allowed.

(m) Passive Losses. In computing AMTI, no deduction for losses from certain passive activities is allowed. Passive activity losses for AMTI purposes are computed in the same way as for regular tax purposes except that the adjustments described in §56 are taken into account and any deduction which is an item of tax preference under §57 is not taken into account. Also, for AMTI purposes, the phase-in rules of §469(l) do not apply.

After the taxable income of the taxpayer has been recomputed with the adjustments described in the preceding paragraphs, the amount of the items of tax preference is added back to the recomputed taxable income to arrive at AMTI. The items of tax preference for individuals are enumerated below.

(a) Depletion. With respect to each property, the excess of the deduction for depletion allowable under §611 over the adjusted basis of the property at the end of the taxable year.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(b) Intangible Drilling Costs. The amount by which the excess intangible drilling costs of the taxpayer exceed 65% of the taxpayer's net income for the taxable year from oil, gas, or geothermal properties.

(c) Incentive Stock Options. Where a taxpayer is granted an incentive stock option, the amount by which the fair market value of the shares at the time of option exercise exceeds the option price.

(d) Charitable Contributions of Appreciated Property. The amount by which a deduction under §170 would be reduced if all contributed property were taken into account at its adjusted basis.

(e) Tax-Exempt Interest. Tax-exempt interest on private activity bonds issued after August 7, 1986.

(f) Pre-TRA 1986 Accelerated Depreciation and Amortization. For property placed in service before January 1, 1987, the amount which would be treated as an item of tax preference under either §§57(a)(2), 57(a)(3), 57(a)(4) or 57(a)(12), as in effect prior to the enactment of TRA 1986.

Section 59(e) provides a taxpayer with the option of electing, for regular tax purposes, minimum tax treatment for circulation expenditures, research and development expenditures, mining development and exploration costs and intangible drilling costs. That is, the taxpayer may elect, for regular tax purposes, to treat these expenditures and costs as capital expenditures and costs and amortize them ratably over a 10-year period (three years in the case of circulation expenditures). If taxpayer makes this election then, with respect to these expenditures and costs, no adjustments or preference items will result for AMT purposes.

Once AMTI has been computed, it is reduced by the exemption amount to arrive at the alternative minimum tax base. The exemption amount is $40,000 for joint returns, $30,000 for single returns and $20,000 for separate returns. This exemption amount, however, is phased out by 25 cents for each $1 once AMTI reaches certain levels. The phase-out for joint returns begins at $150,000, at $112,500 for single returns and at $75,000 for separate returns.

As previously indicated, for noncorporate taxpayers, the tentative alternative minimum tax is equal to 21% of the alternative minimum tax base. The excess of the tentative alternative minimum tax over the regular tax for the taxable year is the taxpayer's net minimum tax liability.

Note that the only non-refundable credit that is allowed against the alternative minimum tax is the alternative tax foreign tax credit. The alternative tax foreign tax credit, however, may offset tentative minimum tax liability only to the extent of 90% thereof.

Any nonrefundable credit that fails to yield a regular tax benefit in the current taxable year due to the imposition of the alternative minimum tax is available as credit carryover provided a carryover for such credit is permitted under the normal Code rules. The mechanism utilized to accomplish this result is to limit the allowance of the aggregate amount of nonrefundable credits against the regular tax in any given year to the excess of the regular tax over the tentative minimum tax. In other words, to the extent incentive credits do not yield a tax benefit due to the imposition of the minimum tax, they are also disallowed for regular tax purposes thus, resulting automatically in a carryover.

Finally, a feature introduced by the TRA 1986 is the alternative minimum tax credit. This credit, along with the adjustment mechanism utilized in computing AMTI (*see* §§56 and 58), is intended to coordinate the regular tax and the minimum tax systems so that a taxpayer is not disadvantaged by being on the minimum tax system in one year and on the regular tax system in another. The §53 minimum tax credit provides that, if a taxpayer is subject to the minimum tax in any taxable year, that portion of the net minimum tax liability that is attributable to "deferral preferences" may be carried over to subsequent taxable years and utilized against the regular tax on a cumulative basis. The minimum tax credit, however, may not reduce regular tax below tentative AMT in any taxable year.

III. Detailed Analysis

A. Introduction to Revised AMT

The TRA 1986 makes significant changes to the AMT rules. It not only restructures the AMT considerably from a computational standpoint, it also extends the rationale underlying the AMT to new limits. The traditional role of the AMT has been to ensure that all taxpayers pay a minimum amount of tax. The message conveyed by the 1986 Act changes, however, is: all taxpayers will pay a minimum amount of tax and no taxpayer will derive more than a limited amount of benefit from tax incentives. That is not to say that the revised AMT will have a much greater significance than the pre-1986 Act version. On the contrary, certain profound changes elsewhere in the Code might diminish the significance of AMT for individual taxpayers. For instance, due to the Act's enactment of the passive loss limitation and investment interest limitation rules, the AMT base and the regular tax base are likely to coincide for most taxpayers who were in an AMT position prior to 1987. Also, due to a relatively small rate differential between the AMT for noncorporate taxpayers (*i.e.* 21%) and the regular tax (*i.e.,* top marginal rate of 28%) there will be less incentive for taxpayers to use preferences and other tax incentives. Note, however, that, since the passive loss limitation and investment interest limitation rules are phased-in over a 4-year period for regular tax purposes but not for AMT purposes, until 1990, the revised AMT will remain of major concern to individual taxpayers.

To assist the reader in understanding the detailed rules governing the computation of the AMT, some notable features of the revised AMT are discussed below.

The Alternative Minimum Tax (AMT), as revised by the 1986 Act, may be viewed as a back-door enactment of a flat tax system. It is characterized by three elements which render it a credible impersonator of a true flat tax system:

(i) The AMT provides a baseline standard against which each taxpayer must measure his tax liability even though it may not apply to him. In practice, however, the AMT is designed to apply to taxpayers with substantial economic incomes who use tax credits and other tax incen-

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tives [24] to reduce their tax liabilities below a 21% (the minimum tax rate for noncorporate taxpayers) effective rate of tax.[25] The AMT will not apply to taxpayers who do not use tax credits and other tax incentives. The taxpayers in this last category may pay tax at an effective rate above or below 21%, depending on their taxable income levels.

(ii) The AMT provides a single rate of tax, *i.e.*, 21% for noncorporate taxpayers (20% for corporations). It may be argued that this rate of tax is rather high to suit a flat tax system. Remember, however, that, given the revenue needs, the rate of tax in a flat tax system is a direct function of the tax base. Congress could have lowered this rate had it chosen to further broaden the AMT base.

(iii) The AMT applies a single tax rate to a tax base which attempts to define true economic income. Note the emphasis on the word "attempts." The AMT base, under the 1986 Act changes, however, makes a much more serious attempt to define true economic income than the prior version of the AMT. For example, the revised AMT base includes rapid depreciation on all personal property (rather than leased personal property only) and tax-exempt interest. It disallows the use of the completed contract method of accounting and the installment sales method of reporting income. Further, it disallows passive activity losses, tax shelter farm losses, and certain itemized deductions. The AMT base is far from comprehensive, however, because it still includes items that are inconsistent with the definition of true economic income, *e.g.*, the mortgage interest deduction, the state and local income and property tax deductions, the charitable contributions deduction, etc.

Another feature of the revised AMT is that it is a tax system unto itself which is entirely distinct from, and runs parallel to, the regular tax system. In other words, individuals are, after the 1986 TRA, subject to a two-track tax system. Any taxpayer who uses an incentive credit or other incentive item may find that he is obligated to keep two sets of books, one for regular tax purposes and one for AMT purposes, not only in the year of the use but also from year-to-year. For example, if a business taxpayer places an asset in service in 1987 and takes depreciation deductions under the ACRS, it will be advisable for him to maintain two depreciation schedules with respect to the asset, *i.e.*, one under the ACRS and one under the Alternative Depreciation System of §168(g). The schedule under §168(g) is required to compute the taxpayer's tentative AMT from year-to-year until the asset has been completely written off. What is true of depreciation deductions is also true of most other adjustments and preferences, *e.g.*, net operating losses, the completed contract method of accounting, research and development expenditures, mining development and exploration costs, and pre-TRA 1986 accelerated depreciation and amortization.[26] Taxpayers will also be required to keep a running record of the adjusted bases of assets (based on deductions allowed for AMT purposes) to compute the gain or loss to be taken into account in computing the AMTI upon the disposition of such assets. If a taxpayer is subjected to the AMT in any taxable year, he will be obligated to keep account of the minimum tax credit carryovers until the credits are fully absorbed.

Finally, the revised AMT deals with inequities inherent in the pre-TRA version of the AMT. Under pre-1986 TRA law, if a taxpayer was subject to AMT he never got the amount of regular tax benefit from the preferences (giving rise to the AMT) which he would have obtained if those preferences had not received preferential treatment in the first place. For instance, under prior law, if a taxpayer took a current deduction for mining exploration and development costs, he was required to include 90% of such costs in the AMT base. If this taxpayer never again became subject to AMT, not only 90% of mining exploration and development costs went unamortized for AMT purposes, the taxpayer also suffered the loss of regular tax benefit in the year of deduction due to the fact that the imposition of the AMT was permanent. The same was true of depreciation deductions (and other deferral preferences). Thus, a noncorporate taxpayer was required, for each year of the life of a depreciable asset, to include depreciation over and above the baseline deduction as a preference item and pay minimum tax on it. When the depreciation deductions for regular tax purposes fell below the baseline deductions, however, no negative adjustments were made to the AMT base and, consequently, the asset was never fully amortized for AMT purposes. The revised AMT eliminates these inequities by coordinating the regular and minimum tax systems. It employs two mechanisms to achieve this end: (i) an adjustment mechanism, and (ii) the alternative minimum tax credit.

The adjustment mechanism provided in §§56 and 58 requires the taxpayer to substitute minimum tax treatment for regular tax treatment of certain items. This will permit taxpayers to make negative adjustments. Consequently, in the case of depreciation deductions, for example, a taxpayer will be able to take a greater depreciation deduction for AMT purposes in later years than for regular tax purposes.

Also, the revised AMT permits a taxpayer a credit against regular tax in subsequent years for net AMT attributable to deferral items. Consequently, a taxpayer who takes a current deduction for mining exploration and development costs against the regular tax and pays AMT will be able to carry AMT over to subsequent years and credit it against regular tax.

In summary, the adjustment mechanism and the AMT credit are designed to ensure that a taxpayer is not disadvantaged by being on the AMT system in one year and on the regular tax system in another.

B. Computation of Net AMT Liability

As stated earlier, §55 imposes on noncorporate taxpayers an alternative minimum tax equal to the excess of the tentative minimum tax over the regular tax. Thus, although the alternative minimum tax is, in effect a true alternative tax in that it is imposed only if it exceeds the regular tax for the taxable year, technically, the regular tax continues to

[24] The tax incentives which will give rise to AMT liability are those which are enumerated in §§56, 57 and 58.

[25] Note that due to a small differential between the top marginal rate of regular tax for individuals (*i.e.* 28%) and the AMT rate (*i.e.* 21%) only a minimal use of tax incentives may trigger the AMT.

[26] Not all preferences and adjustments impose this burden on taxpayers. Some items, which enter into the AMT base, are fully disposed of in the year they arise, *e.g.*, tax-exempt interest, gain on installment sales, etc.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

be imposed and the amount of net minimum tax is the excess of the tentative alternative minimum tax over the regular tax for the taxable year.

The tentative minimum tax is obtained by multiplying the AMT base by 21% and substracting the AMT foreign tax credit therefrom. The tentative minimum tax is then compared to the taxpayer's regular tax (net of the regular tax foreign tax credit) to arrive at the net AMT liability.

The AMT base is computed by subtracting the exemption amount from alternative minimum taxable income. Alternative minimum taxable income is obtained by making certain adjustments to regular taxable income and adding back the sum of the items of tax preference.

These various steps involved in the computation of net AMT liability are fully analyzed in the sections that follow.

1. Alternative Minimum Taxable Income (AMTI)

As noted above, the first step in determining the AMT base is the computation of "Alternative Minimum Taxable Income." "Alternative Minimum Taxable Income" means the taxpayer's taxable income for the taxable year determined with the adjustments provided in §§56 and 58 and increased by the amount of the items of tax preference described in §57.[27] Thus, AMTI is determined in the same way as taxable income for regular tax purposes but with two types of modifications:

(i) adjustments are made to certain accounting practices and items of income and deductions to eliminate the tax preference or tax incentive element inherent in the treatment accorded to such accounting practices and items of income and deductions for regular tax purposes.

(ii) certain preference items, *i.e.*, certain exclusions from, and deductions taken against, gross income for regular tax purposes, are restored to AMTI.

The concept of adjustments introduced by the TRA 1986 is new to AMT. Some tax incentives which were labeled "items of tax preference" under prior law are, after the TRA, called adjustments, *i.e.*, depreciation deductions, amortization deductions for pollution control facilities, mining exploration and development costs, circulation expenditures, and research and development expenditures. In addition, certain items of adjustment have been introduced by the TRA 1986 which played no role in computing AMT under prior law, *i.e.*, disallowance of installment method of reporting, disallowance of completed contract method of accounting, disallowance of certain farm losses and passive losses, and exclusion of certain state and local tax refunds. Also, a modified version of itemized deductions allowed under prior law in determining the AMTI and the substitution of the alternative tax net operating loss deduction for the regular tax net operating loss deduction are, after the TRA, called adjustments.

The label of "tax preference," however, was not discarded. Section 57, which traditionally has dealt with the items of tax preference still retains some of the items (*i.e.* those that have not been repealed or redesignated as adjustments) that constituted tax preferences under prior law. That section also contains two items of tax preference added by the TRA 1986: tax-exempt interest and charitable contributions of appreciated property. The items of tax preference that have been repealed by the TRA 1986 include: dividends excluded under former §116 and the capital gains deduction under former §1202.

Note: The terms "adjustments" and "tax-preferences" are not mere labels. As explained below, the bifurcation of tax incentives (other than incentive credits) into "tax preferences" and "adjustments" by the 1986 Act has a profound significance. Prior to the 1986 Act, tax incentives (other than incentive credits), which involved merely a deferral of tax [28] were lumped together with tax incentives (other than incentive credits) which involved a permanent reduction or avoidance of tax [29] as tax preference items. The problem was not that both types of incentives were referred to as items of tax preference. Rather, the problem stemmed from the fact that both types of incentives received similar treatment in the computation of AMTI. This gave rise to inequitable results because, in the case of deferral incentives, when a taxpayer took up-front or accelerated deductions, he was exposed to AMT. In later years when the expenditure gave rise to income the taxpayer was subjected to regular tax on this income without any compensating adjustment for the AMT imposed earlier. Thus, the AMT in such cases assumed a penal character because although, in using a deferral incentive, the taxpayer was merely deferring regular tax, the AMT imposed, nonetheless, represented a final tax obligation.

Example: Suppose a taxpayer incurred $600X in circulation expenditures in 1984 and elected to take a current deduction under §173(a). The expenditures produced additional income of $500X in both 1985 and 1986. Suppose further that, the taxpayer was in the 50% tax bracket for all these years but that, in 1984, due to the circulation expenditures preference and some other preferences, the taxpayer was in an AMT position. In 1984, therefore, the taxpayer paid $80X in

[27] §55(b)(2).

[28] For example, a current deduction under §173(a) for circulation expenditures is a deferral incentive because it enables the taxpayer to defer the tax attributable to income offset by the current deduction to future years when the income attributable to the expenditures is generated. Assume a taxpayer in the 50% tax bracket incurred a $300 circulation expenditure in 1984 and elected to amortize it over a three-year period under §58(i). Assume further that this expenditure generated an additional income of $200 in each of the three years (*i.e.*, 1984, 1985, 1986). Since $100 of this additional income in each of the three years is offset by the circulation expenditures deduction, the taxpayer's net tax obligation attributable to the additional income in each of the three years is: 50% × ($200-$100) = $50. In other words, the taxpayer will pay an additional $50 in tax in 1984, 1985 and 1986. If, however, the taxpayer elected to take the entire $300 as a current deduction under §173(a) in 1984, his tax liability would be reduced by $150 (50% x $300) in 1984. On the other hand, the taxpayer's tax liability attributable to the additional income would be increased by $50 each in 1985 and 1986 because the deduction was utilized in 1984. Thus, the net effect of taking a current deduction would be to defer $100 of tax liability from 1984 to 1985 and 1986.

[29] The examples of such tax incentives included dividends excluded under §116 and the capital gains deduction. A taxpayer did not pay any regular tax attributable to such items. These items were included in the AMT base in the year in which they arose, however, and the taxpayer paid the minimum tax provided, of course, he was in an AMT position. The AMT imposed on these items represented the taxpayer's final tax obligation.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

AMT on $400X in circulation expenditures preference. In each of the taxable years 1985 and 1986, the taxpayer paid regular tax of $250X on the additional $500X income attributable to the circulation expenditures incurred and deducted in 1984. Had the taxpayer elected to amortize the $600X circulation expenditures ratably over a 3-year period under §58(i), the $200X of deductions in both taxable years 1985 and 1986 would have reduced the regular tax by $100X in those years. Thus, the taxpayer, by taking an up-front deduction in 1984 not only paid $80X in AMT but also paid an additional $100X in regular tax in 1985 and 1986.

To mitigate this form of double taxation, the 1986 Act, in addition to enacting an alternative minimum tax credit discussed below, divided the tax incentives (other than incentive credits) into "tax preferences" and "adjustments" and provided different treatment for each in computing AMTI. Items of tax preference are positive adjustments to AMTI, but only in the year in which they arise. On the other hand, not only may adjustment items be negative (the deduction for AMT purposes may be larger than that for regular tax purposes), but also, they may have an impact on AMT beyond the year in which they first arise. This treatment of deferral incentives, in conjunction with the minimum tax credit, is intended to ensure that these items are not subjected to both the minimum and the regular tax.

Example: Suppose a taxpayer incurs $600k in circulation expenditures in 1987 and elects to take a current deduction under §173(a). Since the taxpayer is in an AMT position in 1987, he pays AMT of $84k (21% of $400k in circulation expenditures preference). Under the adjustment mechanism, however, the taxpayer is entitled to amortize fully $600k of circulation expenditures over a 3-year period (*i.e.* 1987, 1988, and 1989) for AMT purposes. Thus, in computing his AMTI in 1988 and 1989, the taxpayer is entitled to a deduction of $200k against AMTI. If the taxpayer is in an AMT position in both of these years, the deduction will reduce his AMT by a total of $84k (21% × $200k + [21% × $200k]). In other words, the taxpayer will recoup the full amount of $84k paid in AMT in 1987. If the taxpayer is not in an AMT position in 1988 and 1989, the $84k of AMT paid in 1987 will be available as a credit against regular tax in 1988 and, if not fully absorbed in 1988, may be carried over to subsequent years until exhausted. Although the minimum tax credit may not reduce the regular tax below the tentative AMT, the $200k deduction (pertaining to the amortization of circulation expenditures) available against AMTI in each of the taxable years 1988 and 1989 will ensure that the $84k credit will be fully absorbed by regular tax in 1988 and 1989. Thus, it is clear that the AMT rules, as revised by the 1986 Act, are designed to ensure that a taxpayer is not subjected to both the AMT and the regular tax with respect to deferral incentives.

Finally, the adjustment items enumerated in §§56 and 58 do not involve deferral incentives. One adjustment, *i.e.*, the alternative tax net operating loss deduction, is merely an adjustment to regular taxable income. Another, itemized deductions, is more in the nature of a tax preference than a tax adjustment. By the same token, all items of tax preference enumerated in §57 do not involve permanent reduction or avoidance of tax. Two preferences, *i.e.*, intangible drilling and development costs and incentive stock options, share the deferral characteristic of adjustment items. The minimum tax credit, however, recognizes this and includes these preferences in items with respect to which the credit is available.

a. Items of Adjustment

The first step in the determination of AMTI is to recompute taxable income by providing a different and prescribed treatment to certain items in lieu of the treatment given such items for regular tax purposes. The taxpayer starts the computation of AMTI as if he were computing taxable income for regular tax purposes but with one difference: he disregards the regular tax treatment of items of adjustment and substitutes the treatment prescribed in §§56 and 58 for these items. This section deals with the items of adjustment and how they must be adjusted in arriving at AMTI.

(1) Accelerated Depreciation Deductions

(a) General

The 1986 Act completely revised the Accelerated Cost Recovery System (ACRS) of §168.[30] The statutory accelerated percentages for personal property, the Service's authority under which accelerated percentages were prescribed for real property as well as the optional straight-line percentages prescribed for all ACRS property were eliminated. Under the revised ACRS, the taxpayers must compute their recovery deductions by applying a statutory formula.

(i) Revised ACRS

Revised §168 provides that, generally for tangible property placed in service after December 31, 1986, a taxpayer's depreciation deduction must be determined by using (i) the applicable depreciation method, (ii) the applicable recovery period, and (iii) the applicable convention. The applicable depreciation methods are set forth in §168(b), the applicable classification and recovery period rules are contained in §§168(e) and 168(c), respectively, and the rules pertaining to applicable convention are provided in §168(d).

The post-TRA ACRS relies on the Asset Depreciation Range (ADR) guidelines for classifying assets. Generally, the ADR class lives are provided in Rev. Proc. 83-55, 1983-1 C.B. 745. Also, the Conference Report provides new ADR lives for some assets by either reclassifying assets or providing lives for assets not previously included in the ADR scheme. In summary, under the ACRS, as revised by the 1986 Act, personal property is grouped into six classes having recovery periods that extend from 3 to 20 years (with no salvage value):

(i) The 3-year class includes property with an ADR class life of four years or less and certain race horses.

[30] *See* Chapter 4, *supra,* for a discussion of amendments made to the ACRS system by the 1986 Act.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Automobiles and trucks are excluded from this class even though they have a 4-year ADR life.

(ii) The 5-year class includes property with an ADR class life of more than four years, but less than ten years. In addition, automobiles, light trucks, qualified technological equipment, computer-based central office switching equipment, certain renewable energy and biomass property, and research property are classified as 5-year property.

(iii) The 7-year class includes property with an ADR class life of at least 10 years and less than 16 years. This class also includes single-purpose agricultural and horticultural structures, railroad tracks, and property which does not have an ADR life and is not classified elsewhere.

(iv) The 10-year class includes property with an ADR life of at least 16 years and less than 20 years. Note that manufactured homes are not included in this class.

(v) The 15-year class consists of property with ADR life of at least 20 years, but less than 25 years. It also includes sewage treatment plants, telephone distribution plants and comparable equipment for two-way voice and data communication.

(vi) The 20-year class includes property with an ADR life of at least 25 years. It also includes municipal sewer pipes but excludes real property with an ADR midpoint of 27.5 years or more.

Real property is generally classified as either nonresidential real property or residential rental property. Nonresidential real property, which includes all real property that is not residential rental property and which does not have an ADR class life of less than 27.5 years, is assigned a recovery period of 31.5 years. Residential rental property, which includes manufactured homes and any building or structure generating at least 80% of its gross rental income from the rental of dwelling units, is assigned a recovery period of 27.5 years. Any other real property with an ADR class life of less than 27.5 years is generally assigned to the 20-year class.

Section 168(b) provides that property in 3, 5, 7, or 10-year class may be depreciated using a 200% declining balance method, switching to the straight-line method when the latter yields a larger deduction. Property in the 15 or 20-year class, however, must be depreciated by using a 150% declining balance method, switching to the straight-line method when the latter yields a greater deduction. The taxpayer may elect to use a straight-line method for property in any class.

Nonresidential real property and residential rental property must be depreciated using the straight-line method.

The applicable convention under revised §168(d) for all property other than real property is generally the half-year convention. A mid-quarter convention, however, must be used if the total bases of property which is subject to revised §168 and placed in service during the last three months of the taxable year exceed 40% of the total bases of all such property placed in service during that entire taxable year. For real property, the applicable convention is the mid-month convention. Also, under the revised ACRS, the half-year convention has been modified to provide a half-year's depreciation allowance for the year in which property is disposed of in cases where the disposition occurs during the recovery period.

Finally, as under the pre-TRA 1986 law, salvage value is disregarded in determining the depreciation deductions.

(ii) Alternative Depreciation System

Revised §168(g) provides for an "alternative depreciation system" for various types of property which, under the pre-TRA 1986 ACRS, was depreciated under special rules. The types of property subject to the alternative depreciation system include:

(i) Foreign Use Property. This includes property that is used outside the United States for more than half of a taxable year. Satellites and other property used in space are not treated as foreign use property if launched from the United States by a U.S. person.

(ii) Tax-Exempt Use Property. This includes property leased to, or otherwise used by, a tax-exempt entity.

(iii) Tax-Exempt Bond Financed Property. This includes property financed with the proceeds of tax-exempt bonds. If a part of the property is financed through conventional sources, the costs for that portion may be recovered under the regular depreciation system.

(iv) Imported Property. If a foreign country restricts U.S. imports or otherwise engages in discriminatory trade practices, the President of the United States may, by Executive Order, mandate the application of the alternative depreciation system to property imported from such foreign country. "Imported property" is defined as property that is manufactured outside the United States or property that has less than half its value added within the United States.

The recovery period for property subject to the alternative depreciation system is generally the ADR class life. Real property is assigned a recovery period of 40 years. Personal property with no assigned class life under the ADR guidelines is assigned a 12-year recovery period. In addition, a few other assets have been assigned special recovery periods for alternative depreciation system: five years for automobiles, light trucks and qualified technological equipment; 10 years for railroad tracks; 15 years for single-purpose agricultural structures; and 24 years for municipal wastewater treatment plants and telephone distribution plant and equipment.

The applicable depreciation method is the straight-line method for all classes of property. The half-year convention applies to personal property and the mid-month convention applies to real property.

The alternative depreciation system, as described above, also applies in computing a corporate taxpayer's earnings and profits for a taxable year under revised §312(k)(3), and in determining AMTI.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Finally, §168(g)(7) provides that, in lieu of using the accelerated or straight-line methods of depreciation over a property's regular recovery period, a taxpayer may elect to use the alternative depreciation system for any class of personal property placed in service during the taxable year. The election is made on a class-by-class and year-by-year basis. Thus, a taxpayer may choose to depreciate 3-year property under the regular depreciation system (ACRS) and 5-year property under the alternative system. The following year the taxpayer may choose to depreciate the 3-year property under the alternative depreciation system and 5-year property under the regular depreciation system (ACRS). Once an election to apply the alternative depreciation system to an item of property in a particular class is made it applies to all items of property in that class, however. An election to apply the alternative depreciation system to nonresidential real property and residential rental property, however, may be made on a property-by-property basis. An election under §168(g)(7), once made, may not be revoked.

(b) Definition

Technically, for all real and personal property placed in service after December 31, 1986,[31] the amount of adjustment equals the excess of the depreciation deduction under ACRS for the taxable year over the deduction that would be allowable under the alternative depreciation system with one modification: the 150% declining balance method (in lieu of the straight-line method) may be used for property other than §1250 property.[32] In practical terms, however, in computing AMTI, the ACRS deduction for all property placed in service after December 31, 1986, is replaced by a deduction computed under the alternative depreciation system with appropriate modifications.

As noted above, the alternative depreciation system provides recovery periods which are longer than the recovery periods under ACRS. For example, for purposes of the alternative depreciation system, 3-year recovery property may have an ADR class life of as long as four years; 5-year recovery property may have an ADR class life of as long as nine years; 7-year recovery property may have an ADR class life of as long as 15 years; and so on. Also, since, under ACRS, a 200% declining balance method is used for all property other than §1250 property as opposed to 150 percent declining balance method for AMT purposes, the depreciation deduction in the earlier years invariably is greater for regular tax purposes than for AMT purposes.

(i) Real Property

The alternative depreciation system assigns a recovery period of 40 years to both nonresidential real property and residential rental property, as compared to 27.5 years for residential rental property and 31.5 years for nonresidential real property under ACRS. Real property, however, is required to be depreciated under the straight-line method under both ACRS and the alternative depreciation system. Thus, in computing AMTI, the depreciation deduction for all §1250 property is determined by using a 40-year recovery period under the straight-line method. It is obvious, therefore, that all real property will result in an upward adjustment to AMTI unless the taxpayer elects to use the 40-year recovery period for regular tax purposes.

(ii) Personal Property

The depreciation deduction, for purposes of computing AMTI, is determined by using the asset's ADR class life and a half-year convention under the 150% declining balance method.[33] The taxpayer may switch to the straight-line method in later years when it would yield a larger deduction than under the 150% declining balance method. The taxpayer, however, is not permitted to use the 150% declining balance method for any property if, for regular tax purposes, the depreciation deduction for such property under §168 was computed using the straight-line method.[34] Since, for regular tax purposes, §168 provides shorter recovery periods and a 200% declining balance method of depreciation, it is obvious that, in earlier years, the taxpayer's deduction against regular taxable income will be greater than his deduction against AMTI resulting in AMT liability. For example, if a taxpayer puts an asset in the 3-year class with an ADR class life of four years in service in 1987, then assuming a cost basis of $3000, depreciation deductions for regular tax and AMT in 1987 are computed as follows:

$$\text{Regular Tax} = \tfrac{1}{2}(200\% \times \$3{,}000) \div 3 = \$1{,}000$$

$$\text{AMT} = \tfrac{1}{2}(150\% \times \$3{,}000) \div 4 = \$563$$

Assuming, in the above example, the taxpayer elected to use the straight-line method in lieu of the double declining balance method for purposes of determining his depreciation deduction for regular tax purposes, his deduction for regular tax and AMT are as follows:[35]

$$\text{Regular Tax} = \tfrac{1}{2}(100\% \times \$3{,}000) \div 3 = \$500$$

$$\text{AMT} = \tfrac{1}{2}(100\% \times \$3{,}000) \div 4 = \$375$$

Note that the depreciation adjustment applies to all personal property whereas, under prior law, the depreciation preference applied only to leased personal property. Also, under prior law, the depreciation preference was computed on an item-by-item basis, thus precluding netting. Under the revised AMT, however, the mechanics of computing AMTI clearly permit netting.

The following example illustrates how the post-TRA adjustment mechanism operates and how it differs from the pre-TRA preference mechanism.

Example: Taxpayer X, an individual sole proprietor, places assets A and B in service in 1987. Asset A has a cost basis of $3,000; it belongs to the 3-year class and

[31] The depreciation deduction adjustment may also apply to property placed in service before December 31, 1986, in one limited instance: when the taxpayer makes an election under §203(a)(1)(B) of the TRA 1986 to have the amendments made by the Act to ACRS apply to property placed in service after July 31, 1986 but before January 1, 1987.

[32] §56(a)(1).

[33] §56(a)(1)(A)(ii).

[34] *Id.*

[35] The taxpayer must use the straight-line method since he used the straight-line method for regular tax purposes.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

has an ADR life of 4 years. Asset B has a cost basis of $5,000; it belongs to the 5-year class and has an ADR life of seven years. The following table shows the depreciation deductions for both assets for regular tax and AMT purposes over the depreciable lives of the two assets.

Year		*Asset A (Cost Basis $3,000)*	*Asset B (Cost Basis $5,000)*	*Total Depreciation Deduction*
1987	Regular Tax	1,000	1,000	2,000
	AMT	563	536	1,099
1988	Regular Tax	1,334	1,600	2,934
	AMT	914	957	1,871
1989	Regular Tax	444	960	1,404
	AMT	609*	752	1,361
1990	Regular Tax	222	576	798
	AMT	609	612*	1,221
1991	Regular Tax	—	576*	576
	AMT	305	612	917
1992	Regular Tax	—	288	288
	AMT	—	612	612
1993	Regular Tax	—	—	—
	AMT	—	612	612
1994	Regular Tax	—	—	—
	AMT	—	307	307

Assumption 1: Asset A is in the 3-year class and has an ADR life of four years.

Assumption 2: Asset B is in the 5-year class and has an ADR life of seven years.

Assumption 3: The half-year convention is used throughout.

*In this year, the switch is made to the straight-line method to maximize the taxpayer's deduction.

Observation 1: Note in the Total Depreciation Deduction column that X is allowed a depreciation deduction of $2,000 in computing his regular taxable income for 1987. In determining his AMTI for 1987, however, X is required to substitute $1,099 for $2,000 as his depreciation deduction, an upward adjustment of $901. Assuming no other adjustments and preferences, X's AMTI for 1987 will be greater than his regular taxable income by $901, thus exposing him to AMT.

Observation 2: With respect to Asset A, note that the depreciation deduction available to X in computing regular taxable income is greater than the deduction available in computing AMTI in 1987 and 1988. This situation, however, is reversed in 1989, 1990 and 1991 when the AMTI deduction is greater than the regular tax deduction. Under pre-1986 TRA law, X would have a depreciation preference of ($1,000 − $563) = $437 in 1987 and of ($1,334 − $914) = $420 in 1988. But, in 1989, 1990 and 1991 when the regular tax deduction falls below the minimum tax standard, X would get no negative adjustment, *i.e.*, AMTI would not be reduced by the amount by which the minimum tax deduction exceeded the regular tax deduction. The adjustment mechanism under the revised AMT changes this. In 1989, for example, X gets a depreciation deduction of $444 in computing his regular taxable income while he receives a deduction of $609 in determining his AMTI, a downward adjustment of (609 − 444) = $165 to AMTI. He also gets downward adjustments of ($609 − $222) = $387 in 1990 and ($305 − 0) = $305 in 1991. Thus, his total upward adjustments in computing AMTI of ($437 + $420) = $857 over the life of Asset A exactly equal his total downward adjustments in computing AMTI of ($165 + $387 + $305) $857 over the life of Asset A. This, in effect, means that the downward adjustments, which push the AMTI below the regular taxable income, will compensate X in later years either by offsetting other upward adjustments to AMTI or through the minimum tax credit mechanism for AMT imposed in 1987 and 1988.

Observation 3: Note the netting effect of the adjustment mechanism in 1989. For Asset A, X has a depreciation deduction of $444 for regular taxable income purposes and a deduction of $609 for AMTI purposes, a downward adjustment of ($609 − $444) = $165 to AMTI. For Asset B, however, X has a depreciation deduction of $960 for regular taxable income purposes and a deduction of $752 for AMTI purposes, an upward adjustment of ($960 − $752) = $208 to AMTI. On a combined basis, however, X only has an upward adjustment of ($1,404 − $1,361) = $43 to AMTI in 1989 because the upward and downward adjustments are netted.

Observation 4: Note the necessity of keeping two different depreciation schedules for personal property placed in service after 1986: one for regular tax purposes and another for AMT purposes. If Asset A was the only asset placed in service by X in 1987 and 1991 was the first year he became subject to AMT, he would be required to go back to 1987 and reconstruct his depreciation schedule for Asset A for purposes of his AMTI computations in 1991.

(c) Exceptions

Not all depreciable personal property placed in service after 1986 gives rise to adjustments to AMTI under §56(a)(1). Under §§56(a)(1)(B) and 56(a)(1)(C), the adjustment does not apply to the following types of property.

(i) sound recordings described in §48(r)(5).[36]

(ii) films and video tapes which are generally depreciated under the income forecast method.[37]

(iii) any property which is depreciated under the unit-of-production method or any other method of depreciation not expressed in terms of years.[38]

(iv) any property with respect to which the taxpayer makes an election to depreciate under the alternative depreciation system.[39]

[36] §§56(a)(1)(B) and 168(f)(4).
[37] §§56(a)(1)(B) and 168(f)(3).
[38] §§56(a)(1)(B) and 168(f)(1)(B).
[39] §§56(a)(1)(B) and 168(f)(1)(A).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(v) certain public utility property (within the meaning of §167(l)(3)(A)) if the taxpayer does not use a normalization method of accounting.[40]

(vi) certain property placed in service after December 31, 1986, which qualifies for transitional relief and therefore is excepted from the application of the revised ACRS rules.[41]

(vii) property which is expensed under §179.[42]

In all the cases enumerated above, the depreciation deduction allowed for computing regular taxable income will be the deduction allowable in computing AMTI. Consequently, these types of property will have no impact on a taxpayer's AMT liability.

(d) AMT Planning

A taxpayer who finds himself in an AMT position in the current taxable year and who has placed certain depreciable assets in service during the year has some planning options. For instance, take the case of X in the Example above. If X finds that he is pushed into an AMT position in 1987 by taking rapid write-offs (under the 200% declining balance method) on Assets A and B, he should consider electing under §168(b)(5) to apply a straight-line method to either or both A and B. In the Example, if X elects to depreciate both assets A and B under a straight-line method, his depreciation deduction in computing regular taxable income for 1987 would be $1,000, whereas his deduction in computing AMTI would be $1099. This would not only eliminate any AMT exposure arising from depreciation of Assets A and B, but also would provide X with a $99 cushion to absorb upward adjustments in AMTI resulting from other sources.

Where taxpayers are in an AMT position without regard to the depreciation deductions attributable to assets placed in service during the current taxable year, a §168(g)(7) election provides them with a powerful tool to manage their AMT liability. Again take the case of X in the Example above. Suppose he has other preferences and adjustments in 1987 which subject him to AMT. X may elect under §168(g)(7) to depreciate both A and B under the alternative depreciation system. Thus, in 1987 X's depreciation deduction for regular tax purposes will be ½(100% of 3,000 ÷ 4) = $375 for Asset A and ½(100% of 5,000 ÷ 7) = $357 for Asset B. Since the deduction for AMTI purposes is $1,099 for both A and B, X's AMTI for 1987 will be adjusted downward by (1099 − 375 − 357) = $367. In other words, X will be able to absorb $367 by electing to depreciate A and B under the alternative depreciation system.

Comment: Electing under §168(g)(7) to depreciate property under the alternative depreciation system will always provide the taxpayer with a cushion to absorb upward adjustments in AMTI resulting from other sources. This is so because, while the recovery periods are the same for both regular tax and AMT purposes, the depreciation deduction for regular tax purposes must be computed using the straight-line method, whereas the 150% declining balance method is used in computing the depreciation deduction for AMT purposes. Therefore, a judicious use of the elections under §§168(b)(5) and 168(g)(7) can be an invaluable tool in managing a taxpayer's AMT liability, especially since these elections may be made on a class-by-class and year-by-year basis.

(2) Amortization of Pollution Control Facilities

(a) General

Section 169 provides that, with respect to any certified pollution control facility, a taxpayer may elect to amortize the amortizable basis of such property over a 60-month period. Since the ADR class lives or the recovery periods under the ACRS of such facilities would be much greater than 60 months, the rapid write-offs provided by §169 have traditionally been treated as a tax preference item.

(b) Definition

In computing AMTI, any rapid amortization deduction under §169 taken with respect to a certified pollution control facility placed in service after December 31, 1986, is disregarded and a deduction computed under the alternative depreciation system of §168(g) is substituted.[43] As discussed earlier, the depreciation deduction for each pollution control facility will be computed by using the ADR class life of such facility under the straight-line method. Thus, the upward adjustment in AMTI would equal the excess of the 60-month amortization deduction over the deduction computed under §168(g).

The discussion pertaining to the accelerated depreciation deductions adjustment in the preceding section generally applies to certified pollution control facilities amortization adjustment also.

(3) Mining Exploration and Development Costs

(a) General

Under §§616 and 617, a taxpayer is permitted to treat expenditures incurred for development and exploration of a mine as expenses deductible in the year paid or incurred. But for §§616 and 617, these expenditures would receive the less favorable tax treatment of capitalization and amortization over the producing life of the mine which would result in much smaller deductions spaced over many years.

(i) Mining Exploration Costs

Section 617(a) provides that a taxpayer may elect to deduct currently expenditures paid or incurred during the taxable year for the purpose of ascertaining the existence, location, extent, or quality of any deposit of ore or other mineral (other than oil or gas), provided such expenditures are incurred prior to the beginning of the development stage. The election under §617(a) does not apply to amounts which would not otherwise be allowable as a deduction for the taxable year. Accordingly, to the extent exploration expenditures are allocable to worthless property, they may be deductible under §165 but are not subject to the §617(a) election. The §617(a) election also does not apply to the following amounts:

[40] §§56(a)(1)(B) and 168(f)(2).
[41] §56(a)(1)(C).
[42] Sen. Rep. No. 313, 99th Cong., 2d Sess., p. 522, footnote 5 (1986). ("Senate Report").
[43] §56(a)(5).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(i) Amounts for which a percentage depletion deduction would not be available under §613.[44]

(ii) Amounts incurred in the acquisition or improvement of depreciable property; however, a depreciation allowance may be claimed with respect to such amounts.[45]

(iii) Amounts incurred for the purpose of ascertaining the existence, location, extent, or quality of any deposit of ore or other mineral (other than oil or gas) located outside the United States.[46]

Regs. §1.617-1(a) provides that the development stage of a mine or other natural deposit will be deemed to begin when, in consideration of all the facts and circumstances, deposits of ore or other mineral are disclosed in sufficient quantity and quality to reasonably justify commercial exploitation by the taxpayer. For example, core drilling expenditures paid or incurred by the taxpayer to ascertain the existence of commercially marketable ore are exploration expenditures. Also, expenditures for exploratory drilling from within a producing mine to ascertain the existence of what appears to be a different ore deposit qualify as exploration expenditures.

An election under §617(a) may be made by a taxpayer by deducting exploration expenditures on his income tax return for his first taxable year ending after September 12, 1966, for which he desires to deduct such expenditures.[47] For any taxable year for which a §617(a) election is effective, however, the taxpayer must deduct all expenditures currently to which §617(a) applies.[48] A §617(a) election, once made, cannot be revoked without the prior consent of the Commissioner.[49]

When a mining property with respect to which deductions have been taken for mining exploration costs under §617(a) is disposed of, such costs are subject to recapture as ordinary income under either §1254 or §617(d). In case both §1254 and §617(d) apply, §1254 will take precedence. When a mining property with respect to which mining exploration costs have been deducted under §617(a) reaches the production stage, such costs are subject to recapture under §617(b).

When a mine reaches the producing stage, §617(b)(1) provides two methods of recapture. Under the first method, the taxpayer must forego depletion on all mines or deposits reaching the producing stage during the taxable year until the amount of depletion which would have been allowed on each mine or deposit equals the amount of adjusted exploration expenditures with respect to such mine or deposit. Under the second method, the taxpayer may elect to include in gross income for the year an amount equal to the adjusted exploration expenditures with respect to all mines reaching the producing stage during that year. The amount included in gross income becomes part of the depletable bases of the respective mines; however, it is not considered to be gross income from the property for percentage depletion purposes. Adjusted exploration expenditures are defined as the exploration expenditures paid or incurred with respect to any property under §617(a) in all years reduced by: (i) the amount (if any) by which the deduction for percentage depletion, which would have been allowable for all years if no deduction for the exploration expenditures under §617(a) had been allowed, exceeds the actual depletion allowed for the corresponding years; (ii) the aggregate of all amounts included in gross income under §617(b) and §617(c); and (iii) the amount of gain to which §617(d) applies.

If a taxpayer does not make an election under §617(a) to currently deduct the mining exploration expenditures, such expenditures are capitalized and become part of the depletable basis of the property.

(ii) Mining Development Costs

Section 616(a) provides that a taxpayer may deduct all expenditures paid or incurred during the taxable year for the development of a mine or other natural deposit (other than an oil or gas well), provided the expenditures are paid after the existence of ores or minerals in commercially marketable quantities has been discovered. Section 616(a) does not, however, cover the cost of acquiring depreciable property. Regs. §1.616-1(a) provides that the development stage of a mine is reached when, taking into account all facts and circumstances, deposits of the minerals are shown to exist in sufficient quantity and quality to reasonably justify commercial exploitation by the taxpayer. The Service, in Rev. Rul. 69-540, 1969-2 C.B. 143, set down general guidelines for determining whether expenses are development expenditures. According to the ruling, development expenditures are those resulting directly from the mining process or activity of making the mineral in place accessible for production operations through the removal of material, by the driving shafts, tunnels, galleries and similar processes or activities. For §616(a) to apply, the mine must be in the development stage, expenditures must be for preparing the mineral deposit for extraction, and the expenditures must not be for equipment or facilities which related solely to the extraction of the mineral from the mine.

Section 616(b) provides that a taxpayer, instead of deducting development costs currently, may elect to defer such costs. If an election under this section is made with respect to a mine, then the excess of such costs incurred during the taxable year over net receipts is deductible ratably as the mineral benefits are produced and sold. This method of amortization is similar to cost depletion. Note, however, that the deferred development costs are not capitalized as mineral property cost for depletion purposes; the amortization on such costs is allowable as an ordinary deduction in addition to the depletion deduction in the years benefited. The election under §616(b) may be made on a mine-to-mine basis.[50] It applies only to expenditures incurred during the taxable year for which it is made.[51] However, it must cover all development expenditures for the taxable year for each mine. The election, once made, is irrevocable.[52]

(b) Definition

Mining development and exploration costs paid or incurred after December 31, 1986, which are allowable as a current deduction in computing regular taxable income under §616(a) or 617(a) must, for purposes of computing AMTI, be capitalized and amortized ratably over a 10-year period beginning with the taxable year in which the expenditures are made.[53] Thus, if a taxpayer takes a current deduction under §616(a) or §617(a) for mining development and exploration expenditures, his AMTI for the taxable year will be adjusted upward by 90% of such expenditures.

Example: A incurs $1,000 in mining exploration costs in 1987 and elects under §617(a) to deduct these costs currently in computing his regular taxable income. For purposes of computing his AMTI, A will be entitled to deduct only ($1,000 x 10%) = $100 in 1987. Assuming no other adjustments or preferences, A's AMTI for 1987 will be greater than his regular taxable income by $900.

If a taxpayer suffers a loss with respect to a mining property (*e.g.*, it is abandoned as worthless) for which deductions have been taken under §616(a) or 617(a) for mining development or exploration costs then, for purposes of computing AMTI, the entire unamortized portion of such costs is deductible in the year of the loss.[54] The amount of this loss deduction in computing AMTI is subject to only one limitation: it may not exceed the amount that would be allowable as a loss deduction under §165(a) had such costs remained capitalized.[55]

As stated earlier, mining exploration expenditures deducted under §617(a) are recaptured as ordinary income when the mine, with respect to which such expenditures were incurred, reaches the production stage or is disposed of. If the mining property is not disposed of, the recapture takes the form of either a denial of depletion deduction or inclusion in gross income. Either way, the downside of taking a current deduction for exploration costs under §617(a) is that, in later years, gross income is increased by the amount of the deduction. Mining development expenditures involve a similar mismatching of income and deductions because income is generally produced in year(s) subsequent to the year in which development expenditures are incurred and deducted. Section 56(a)(2) neutralizes this tax deferral effect of current deductions under §§616(a) and 617(a) by requiring a 10-year amortization of mining exploration and development expenditures. By the same token, a taxpayer who pays AMT due to the mining exploration and development costs adjustment, is compensated in later years for the amount of such AMT in either of the following two ways: (i) if the taxpayer is an AMT position, the 10% amortization deduction attributable to §616(a) and/or 617(a) costs deducted in an earlier year will adjust the AMTI downward in each of the following 10 years, thus reducing the AMT the taxpayer would otherwise owe; or (ii) if the taxpayer is not in an AMT position, the AMT credit stemming from the AMT imposed due to an adjustment made pursuant to §56(a)(2) will offset the regular tax in subsequent years until exhausted.

Finally, §59(e) provides a taxpayer with an option to eliminate the minimum tax impact of mining exploration and development costs. Under §59(e), a taxpayer may elect to amortize mining development and exploration costs ratably over a 10-year period for regular tax purposes. If this election is made, §56(a)(2) does not apply to such costs.

(c) AMT Planning

The upward adjustment to AMTI resulting from mining development and exploration costs deducted under §616(a) or 617(a) (or from any other §56 item for that matter) may not be undesirable in all cases. This is because a taxpayer may have downward adjustments to AMTI in the current year from other sources which may offset the upward adjustment. For example, the taxpayer may have deducted circulation expenditures under §173, or research and experimental expenditures under §174, or even mining development or exploration expenditures under §616(a) or 617(a) in an earlier year which give rise to downward adjustments to AMTI in the current year. On the other hand, a current deduction under §616(a) or §617(a) may be wholly undesirable for one reason or another, *e.g.*, because it kicks in the phase-out of the exemption amount under §55(d)(3). Consequently, when a taxpayer incurs mining development or exploration costs he must determine to what extent, if any, an upward adjustment to AMTI in the taxable year is undesirable, especially since he has important options at his disposal to manage the amount of such adjustment. These options are discussed below.

(i) Mining Exploration Costs

The taxpayer has the option not to elect under §617(a) to take a current deduction for mining exploration costs. If an election under §617(a) is not made, mining exploration costs are capitalized and become part of the depletable basis of the mining property. Alternatively, the taxpayer may elect under §59(e) to capitalize and amortize mining exploration costs ratably over a 10-year period beginning with the year in which such costs are paid or incurred. Some of the relevant considerations bearing upon these options are summarized below.

(i) If the exploration costs are capitalized, they increase the taxpayer's depletable basis and, hence, the cost depletion deduction for regular tax purposes without any AMT exposure. Capitalization and the resulting increase in basis, however, will yield no benefit in terms of the size of the depletion deduction for regular tax purposes if the taxpayer claims percentage depletion. Provided the taxpayer claims percentage depletion, an election under §59(e) will yield an additional amortization deduction for regular tax purposes.

(ii) Since an election under §617(a) applies to all mining exploration costs paid or incurred during the taxable year,[56] the taxpayer may not capitalize a portion of such costs under §263. An election under §59(e), on the other hand, permits the taxpayer to

[53] §56(a)(2)(A).
[54] §56(a)(2)(B).
[55] *Id.*
[56] §617(a)(2)(B).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

capitalize and amortize ratably over a 10-year period any portion of mining exploration costs.[57]

(iii) An election to currently deduct mining exploration costs under §617(a) applies to such costs paid or incurred not only in current taxable year but also in any subsequent taxable year.[58] Consequently, if mining costs paid or incurred are deducted under §617(a) in the current taxable year, a portion of such costs paid or incurred in a subsequent taxable year may not be capitalized unless the Commissioner's consent is obtained to revoke the §617(a) election. On the other hand, since an election under §59(e) may be made with respect to a portion of mining exploration costs paid or incurred during a taxable year, it is obviously not binding on such costs incurred during a subsequent taxable year. Thus, if the taxpayer chooses to elect under §59(e), mining exploration costs incurred in a subsequent taxable year may be deducted under §617(a) or may be capitalized under §263.

(iv) If mining exploration expenditures are capitalized and amortized pursuant to a §59(e) election, the deducted expenditures shall, upon a subsequent disposition of the mining property, be recaptured as ordinary income under either §1254 or §617(d).[59] No such recapture, however, will be required if such costs are capitalized under §263 and recovered as depletion deductions.

Comment: Since, in taxable years beginning after 1987, capital gains and ordinary income are taxable at the same tax rates, the significance of recapture has been reduced considerably.

Comment: If a taxpayer chooses to capitalize only a portion of mining exploration costs under §59(e), must the taxpayer capitalize the balance of such costs under §263, or does he have the option to deduct the balance under §617(a)? If taxpayer may deduct the balance under §617(a) it will enable him to manage the amount of upward adjustment in AMTI in precise terms by controlling the amount of mining exploration costs that is subjected to the §59(e) election. Since §617(a)(2)(B) provides that an election under §617(a) applies to all mining exploration costs paid or incurred during the taxable year, there is a tension between §617(a) and §59(e). Since §59(e)(3) clearly provides that no other Code sections apply to amounts subject to an election under that section, however, it appears that §617(a)(2)(B) should not preclude capitalization of a portion of exploration costs under §59(e) while the balance is deducted under §617(a).

(ii) Mining Development Costs

Although mining development costs are capital in nature, §616(a) permits taxpayer to take a current deduction for such costs. In lieu of taking a current deduction, however, the taxpayer may elect under §616(b) to capitalize such costs with respect to each mine or deposit and amortize them ratably as the units of the produced ore or minerals benefitting from such costs are sold.[60] Note that, although the deferred mining development costs are not capitalized for depletion purposes, they are considered part of the adjusted basis for all other purposes.[61] The taxpayer also has the option to elect under §59(e) to capitalize and amortize any portion of mining development costs paid or incurred during the taxable year. Some of the considerations bearing upon a choice between an election under §616(b) election or a §59(e) election are summarized below.

(i) If an election under §616(b) is made, only that portion of the mining development costs may be deferred which is in excess of the net receipts from the ore or the minerals from the mine received or accrued during the same taxable year as the costs were paid or incurred.[62] The mining development costs not in excess of such receipts must be deducted currently under §616(a). An election under §59(e) permits taxpayer to capitalize all mining development costs regardless of the net receipts restriction.

(ii) An election under §616(b) may be made on a mine-by-mine basis. An election under §59(e), on the other hand, may be made with respect to any portion of mining development expenditures paid or incurred during the taxable year with respect to a particular mine.

(iii) The taxpayer may use both options and a current deduction under §616(a) concurrently: he may capitalize mining development costs with respect to one mine under §616(b), he may capitalize a portion of mining development costs with respect to other mines under §59(e), and deduct currently under §616(a) the balance of mining development costs with respect to other mines. A skillful manipulation of these choices can ensure that the taxpayer will derive maximum benefit from mining development costs paid or incurred during the current taxable year for regular tax purposes without suffering any AMT detriment.

(4) Certain Long-Term Contracts

(a) General

The Tax Reform Act of 1986 modified the accounting rules that apply to taxpayers providing goods or services under long-term contracts. Prior to the 1986 Act, a taxpayer with income and expenses from long-term contracts could use the cash or accrual methods of accounting generally available to all taxpayers. At the taxpayer's election, however, income and expenses attributable to long-term contracts could also be reported under either of two special methods of accounting: (i) the percentage of completion method, or (ii) the completed contract method.

A long-term contract is a building, installation, construction, or manufacturing contract that is not completed within the taxable year in which it is entered into. A manufacturing contract qualifies as a long-term contract, however, only if it involves the manufacture of either unique items of a type not normally carried in the finished goods inventory of the taxpayer, or items normally requiring more than 12 months to complete.[63]

[57] §59(e)(4)(A).
[58] *Id.*
[59] §59(e)(5).
[60] Regs. §1.616-2(a).
[61] §616(c).
[62] Regs. §1.616-2(a).
[63] Regs. §1.451-3.

Under the percentage of completion method, income is recognized according to the percentage of the contract that is completed during each taxable year. The determination of the portion of the contract completed during each taxable year may be made by either (i) comparing costs incurred during the year to the total estimated costs to be incurred under the contract, or (ii) comparing the work performed during the year with the estimated total work to be performed under the contract.[64] All costs attributable to a long-term contract are deductible in the year in which they are incurred.

Under the completed contract method of accounting, the entire gross contract price of a long-term contract is included in income in the taxable year in which the contract is completed and accepted. Also, all costs properly allocable to a long-term contract are deducted in the year of completion.

Under the amendments made by the TRA 1986, for long-term contracts entered into after February 28, 1986, taxpayers may elect to compute income from long-term contracts under one of two methods: (i) the percentage of completion method, or (ii) percentage of completion-capitalized cost method. Except in the case of certain real property construction contracts, these are the exclusive methods under which long-term contracts may be reported.

As under pre-TRA law, taxpayers may elect to use the percentage of completion method of accounting for long-term contracts. The 1986 Act, however, made several changes to the percentage of completion method of accounting:

(i) The exclusive method of determining the portion of the contract completed during the taxable year is the cost comparison method. The work-performed comparison method is no longer permissible.[65]

(ii) Contract costs are to be determined in accordance with the extended period long-term contract regulations provided in Regs. §1.451-3(b)(3).[66]

(iii) Interest must be allocated to the contract in accordance with the interest capitalization rules.[67]

(iv) Independent research and development costs; costs of unsuccessful bids and proposals; and marketing, selling and advertising costs are not allocable to long-term contracts.[68]

The percentage of completion-capitalized cost method is a hybrid method of accounting which combines the percentage of completion method and taxpayer's normal method of accounting. Under this method 40% of the long-term contract is reported under the percentage of completion method as described above.[69] The remaining 60% is reported under taxpayer's normal method of accounting.[70] Thus, 60% of the gross contract income will be recognized, and 60% of the contract costs will be deducted at the time required by taxpayer's normal accounting method. For example, if taxpayer uses the completed contract method, these items will be taken into account upon completion of the contract. If taxpayer uses an accrual method (*e.g.*, accrual shipment method), such contract items will be taken into account at the time of shipment.[71]

(b) Definition

For purposes of computing AMTI, any long-term contract entered into after February 28, 1986, must be accounted for under the percentage of completion method as modified by the 1986 Act. Thus, a taxpayer using percentage of completion-capitalized cost method for regular tax purposes will generally be required to make adjustments in AMTI. For instance, a taxpayer accounting for 40% of a long-term contract under the percentage of completion method and 60% under the completed contract method for regular tax purposes will be required to adjust AMTI upward in the early years. However, in the final year of the contract, when income for the 60% portion of the contract is recognized, there will be a downward adjustment in AMTI.

Any adjustments to AMTI may be eliminated by using the percentage of completion method for regular tax purposes.

(5) Installment Sales of Certain Property

(a) General

Prior to the Tax Reform Act of 1986, gain from certain sales of property in exchange for which the seller received deferred payments was reported on the installment method unless taxpayer elected otherwise. Eligible sales included dispositions of personal property on the installment plan by a person who regularly sold or otherwise disposed of personal property on the installment plan, and other dispositions of property including publicly traded property, where at least one payment was to be received after the close of the taxable year of the disposition.

The TRA 1986 modified the installment sales rules significantly. It enacted the proportionate disallowance rule which limits the use of the installment method based on a proportion of the taxpayer's outstanding debt. The rationale behind this rule is that, if a taxpayer holds installment obligations, part or all of his debt is related to those obligations. Either the extension of credit by the taxpayer necessitates borrowing or it enhances taxpayer's ability to borrow. Section 453C, therefore, limits the amount of gain that may be reported under the installment method from the following types of sales:

(i) sales made after February 28, 1986, of personal property by a person who regularly sells or otherwise disposes of the same type of personal property;

(ii) sales made after February 28, 1986, of real property held by the seller for sale to customers in the ordinary course of business; and

(iii) sales made after August 16, 1986, of real property used in the seller's trade or business or property held

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

for the production of rental income provided the sale price exceeds $150,000.

The proportionate disallowance rule operates by first determining the amount of a taxpayer's "allocable installment indebtedness" for each taxable year and treating such amount as a payment immediately before the close of the taxable year on "applicable installment obligations" that arose during that taxable year and that are outstanding at the end of the taxable year.[72] As a result, a portion of taxpayer's debt is treated as payment toward his installment obligation. The term "applicable installment obligation" is defined in §453(e) to mean an obligation arising from a sale of a type described in the preceding paragraph on an installment basis. The amount of "allocable installment indebtedness" is computed in accordance with the formula provided in §453C(b). The proportionate disallowance rule does not apply to the following transactions:

(i) disposition by an individual of personal use property;[73]

(ii) disposition of any property used or produced in the trade or business of farming;[74]

(iii) at the election of the taxpayer, sales of timeshares and unimproved lots of land provided the conditions of §453C(e)(4) are met; and

(iv) sales of tangible personal property by the manufacturer of the property to a dealer, but only if the dealer is obligated to make payments of principal only when the dealer resells (or rents) the property, the manufacturer has the right to repurchase the property at a fixed price after no longer than a 9-month period following the sale, and certain other conditions specified in §811(c)(2) of the Act are satisfied. The additional requirements of §811(c)(2) of the Act include: (i) for the taxable year in question and the preceding taxable year, the aggregate face amount of the obligations arising from qualified sales by the manufacturer is at least 50% of the total sales to dealers giving rise to such obligations; and (ii) the requirements of §811(c)(2) of the Act must be met by the taxpayer in his first taxable year beginning after October 22, 1986. For purposes of this provision, obligations issued before October 22, 1986, are treated as meeting the applicable requirements if such obligations are conformed to the requirements of §811(c)(2) of the Act by December 20, 1986.

Taxpayers who sell property on a "revolving credit plan" are not permitted to use the installment method. Such taxpayers are required to treat all payments as received in the year of disposition.[75] The term "revolving credit plan" is defined in Regs. §1.453-2(d).

Also, persons who sell stock or securities that are traded on an established securities market or, to the extent provided in Treasury regulations, property of a kind regularly traded on an established market are not permitted to use installment method.[76] All payments made to these persons will be treated as received in the year of disposition. Regulations are expected to provide that, where sales take place on an established market and settlement generally occurs several days after the trade date, both cash and accrual basis taxpayers will recognize gain or loss on the day the trade is executed and not on the day settlement occurs.[77]

The disallowance of the installment method for sales on revolving credit plans and for sales of publicly traded property is effective for sales of property made after December 31, 1986. The proportionate disallowance rule is effective as of January 1, 1987, for sales made on or after March 1, 1986. A taxpayer will treat installment obligations arising between March 1, 1986, but before the first taxable year ending after December 31, 1986, as having arisen during the first taxable year of the taxpayer beginning after December 31, 1986.

(b) Definition

For purposes of computing AMTI, gain from any disposition after March 1, 1986, of property to which proportionate disallowance rule of §453C applies, shall be determined without regard to the installment method and all payments shall be deemed to have been received in the year of disposition.[78] Thus, to the extent the proportionate disallowance rule permits the deferral of gain recognition upon the sale of personal and real dealer property and certain other business or rental realty, AMTI will be adjusted upward by an amount which equals the deferred gain. However, there will be no adjustments made to AMTI in cases of installment sales to which the proportionate disallowance rule does not apply, *i.e.*:[79]

(i) sales of personal use property by individuals,

(ii) disposition of any property used or produced in the trade or business of farming,

(iii) sales of timeshares and unimproved lots of land, and

(iv) certain sales of tangible personal property by manufacturers.

Comment: Although the revised AMT rules are not effective until 1987, §56(a)(6) disallows installment method of reporting income for sales made after March 1, 1986. The effect of this rule is that a taxpayer will recognize the entire gain from an applicable sale (*i.e.*, a sale that is subject to the proportionate disallowance rule) made after March 1, 1986, but within his taxable year beginning before January 1, 1987, for purposes of computing preTRA 1986 AMT. However, in later years when gain is recognized for regular tax purposes, no adjustment to AMTI will result.[80]

(6) Itemized Deductions

(a) General

The Tax Reform Act of 1986 made several changes to below-the-line [81] itemized deductions that are allowed in computing taxable income for regular tax purposes. The changes that are pertinent for AMT purposes are summarized below.

(i) Miscellaneous Deductions

Section 132(a) of the Tax Reform Act of 1986 added §67 to the Code imposing a 2% floor on miscellaneous deductions. The miscellaneous deductions are itemized deductions other than the following deductions:

(i) interest deduction under §163,

(ii) deduction for taxes under §164,

(iii) loss deductions under §165(c)(3) and §165(d),

(iv) charitable contributions deduction under §170.

(v) medical expense deduction under §213,

(vi) moving expense deduction under §217,[82]

(vii) any deduction allowed for impairment-related work expenses,

(viii) estate tax deduction under §691(c),

(ix) any deduction allowable in connection with personal property used in a short sale,

(x) deduction for amounts restored under claim of right under §1341,

(xi) deduction under §72(b)(3) (where annuity payments cease before investment is recovered),

(xii) deduction under §171 for amortizable bond premium, and

(xiii) deduction under §216 (relating to deductions in connection with cooperative housing corporations).

Thus, for taxable years beginning after December 31, 1986, all miscellaneous itemized deductions, other than those listed above, are allowable for regular tax purposes only to the extent they exceed 2% of the taxpayer's adjusted gross income. Some examples of these deductions include: unreimbursed employee expenses including union dues and professional fees, certain expenses related to investment income or property deductible under §212 (*e.g.*, attorney fees, financial planning fees), tax return preparation fees deductible under §212(3), etc.

(ii) Deduction for Taxes

Section 132(a)(1) amended §164 to disallow a deduction for state and local sales taxes. It also added §164(a)(5) to allow a deduction for generation skipping tax imposed by §2601 and any state tax described in §2604 with respect to property included in a generation skipping transfer. Consequently, for taxable years beginning after December 31, 1986, §164(a) allows a deduction for the following taxes:

(i) state, local, and foreign real property taxes,

(ii) state and local personal property taxes,

(iii) state, local and foreign income taxes,

(iv) windfall profit tax imposed under §4986, and

(v) generation skipping tax.

(iii) Medical Expense Deduction

Prior to the Tax Reform Act of 1986, an individual was allowed a deduction for medical expenses under §213 to the extent such expenses were in excess of 5% of his adjusted gross income for the taxable year. Act §133 increased this floor to 7.5% for taxable years beginning after December 31, 1986.

(iv) Interest Deduction

The Tax Reform Act of 1986 imposed new limitations on below-the-line deduction for investment and personal interest which are summarized below.

(I) Investment Interest

Section 163(d)(1) permits a taxpayer other than a corporation a deduction for investment interest, but only to the extent of the taxpayer's net investment income for the taxable year. Any investment interest disallowed may be carried forward to the following taxable year.[83]

"Investment interest" includes any interest paid or accrued on indebtedness incurred or continued to purchase or carry property held for investment.[84] Property held for investment includes property which produces portfolio income of the type described in §469(e)(1) (*i.e.*, interest, dividends, annuities, or royalties not derived in the ordinary course of a trade or business), and any interest in an activity involving the conduct of a trade or business with respect to which taxpayer does not materially participate and which is not a passive activity.[85] "Investment interest," however, does not include: (i) any qualified residence interest;[86] and (ii) any interest taken into account under §469 in computing income or loss from a passive activity.[87]

"Net investment income" means the excess of investment income over investment expenses.[88] Investment income is the sum of gross income produced by property held for investment and any net gain attributable to the disposition of such property.[89] Investment expenses include all deductible expenses (other than interest) which are directly connected with the production of investment income.[90]

Note that the investment interest limits are fully coordinated with passive loss limits of Code §469. For example, any interest taken into account in determining passive

[81] Below-the-line deductions are those that are allowed in computing taxable income after adjusted gross income has been computed.

[82] Moving expenses are, after the 1986 TRA, a below-the-line deduction. Prior to the 1986 Act, such expenses were allowed as a deduction in arriving at adjusted gross income (*i.e.*, they were an above-the-line deduction).

[83] §163(d)(2).
[84] §163(d)(3)(A).
[85] §163(d)(5).
[86] §163(d)(3)(B)(i).
[87] §163(d)(4)(A).
[88] §163(d)(4)(A).
[89] §163(d)(4)(B).
[90] §163(d)(4)(C).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

income or loss is excluded from the definition of investment interest in §163(d)(3). Also, for purposes of computing the net investment income limit on the investment interest deduction, "investment income" and "investment expense" do not include any item of income or loss taken into account under the passive loss limitation rules of §469.[91] During the four-year phase-in period of §469 passive loss rules, however, the amount of any passive loss that is allowed as a deduction will reduce the amount of investment interest that is allowable for the taxable year. A reduction in net investment income, however, will not be required for the portion of any passive loss during the phase-in period attributable to a rental real estate activity for which the taxpayer meets the active participation test.[92]

Revised §163(d) is effective for taxable years beginning after December 31, 1986. Act §511(e). The $10,000 investment interest threshold of former §163(d), however, is effectively phased out over four years. Under the phase-out, 65% of up to $10,000 (a maximum of $6,500) of investment interest otherwise disallowed by revised §163(d) is allowed for taxable years beginning in 1987. Up to $4,000 (40% of $10,000) is allowed for taxable years beginning in 1988. A maximum of $2,000 (20% of $10,000) is allowed for taxable years beginning in 1989. Finally, for taxable years beginning in 1990, up to 10% of the $10,000 amount, $1,000, is allowed. The phase-out percentage only applies to investment interest expense incurred during the phase-out year in question. Investment interest suspended in a prior taxable year and carried to another year in the phase-out period may not be taken into account.

(II) Personal Interest

Section 511(b) of the Tax Reform Act of 1986 enacted §163(h) to disallow all "personal interest" paid or accrued during the taxable year by a noncorporate taxpayer. Section 163(h)(2) defines "personal interest" as any interest allowable as a deduction for income tax purposes other than:

(i) Interest paid or accrued on debt connected with the conduct of a trade or business (but excluding debt incurred for performing services as an employee),

(ii) Any §163(d) investment interest,

(iii) Any interest taken into account under the new §469 passive loss limits,

(iv) Any "qualified residence interest" within the meaning of §163(h)(3), and

(v) Any interest payable on an estate tax deferred under §§6163 or 6166.

The foregoing definition thus treats as "personal interest" interest on debt incurred by an employee to purchase an item such as a car or computer used by the employee in the course of his employment. Personal interest also includes any interest that accrues on a tax deficiency. Excluded, however, from personal interest, is any interest subject to the revised §163(d) investment interest limits, any interest taken into account under the passive loss rules of §469, and any "qualified residence interest."

Section 163(h)(3) defines "qualified residence interest." It is interest paid or accrued during the taxable year on debt which is secured by the taxpayer's principal residence or second home at the time the interest is paid or accrued. Under §163(h)(5), the second home is the residence designated by the taxpayer for the taxable year that is used by the taxpayer or a family member for personal purposes for the greater of (i) 14 days or (ii) 10% of the number of days during the year for which the home is rented at a fair rental. If the second home is neither rented nor used as a residence at any time during a taxable year, however, the residence may be treated as the second home for the taxable year regardless of the lack of personal use.

Under §163(h)(3), "qualified residence interest" does not include any interest on debt secured by the residence to the extent that the debt exceeds the lesser of the following two amounts:

(i) The fair market value of the residence, or

(ii) The sum of (a) the taxpayer's purchase price for the residence, (b) the cost of improvements, (c) the taxpayer's qualified medical expenses, and (d) the taxpayer's qualified educational expenses.

For purposes of (ii) above, the taxpayer's purchase price for the residence will be treated as not less than the outstanding aggregate principal amount of debt which was incurred on or before August 16, 1986, and which was secured by the residence on August 16, 1986.

Except as provided in regulations, the residence interest limit is determined only as of the time debt is incurred. Thus, for example, if a residence that secures debt declines in value after the debt is incurred, interest will not be disallowed as personal interest even if the value of the residence after the decline is less than the outstanding balance of the debt.

Under §163(h)(4)(B), qualified medical expenses are amounts paid for medical care (within the meaning of §213(d)(1)(A) and (B)) of the taxpayer, his spouse, and dependents to the extent not compensated by insurance or otherwise.

Qualified educational expenses are defined by §163(h)(4)(C) as amounts paid for tuition and related expenses as well as amounts paid for reasonable living expenses while away from home of the taxpayer, his spouse, or dependent, while a student at an educational organization described in §170(b)(1).

Qualified educational expenses and qualified medical expenses must be incurred within a reasonable period of time before or after the debt is incurred for the interest on the debt to be deductible as qualified residence interest.

The 1986 TRA personal interest deduction disallowance rules apply for taxable years beginning after December 31, 1986. Act §511(e). Section 163(h)(6), however, provides a four-year phase-in for the disallowance. Under the phase-in rules, 65% of the personal interest disallowed will be allowed for taxable years beginning in 1987; 40% will be allowed for taxable years beginning in 1988; 20% for taxable years beginning in 1989; and 10% for taxable years beginning in 1990.

(b) Adjustments to AMTI for Itemized Deductions

In computing AMTI, special rules apply in determining the deductibility of below-the-line itemized deductions.

(i) Miscellaneous Deductions

No miscellaneous deductions (as defined in §67(b)) are allowed in computing AMTI.[93] Consequently, to the extent a taxpayer takes a miscellaneous deduction in computing taxable income for regular tax purposes in any taxable year, his AMTI will be adjusted upward by the amount of the deduction.

(ii) Deduction for Taxes

In determining AMTI, no below-the-line deduction is allowable for the following taxes:

(i) state, local, and foreign real property taxes,

(ii) state and local personal property taxes, and

(iii) state, local, and foreign income taxes.[94]

The only taxes that may be deducted in computing AMTI include: (i) the windfall profit tax, and (ii) the generation skipping tax. Thus, to the extent a taxpayer deducts in any taxable year specified real property, personal property or income taxes in computing taxable income for regular tax purposes, his AMTI for that taxable year will be adjusted upward by the amount of the deduction.

(iii) Medical Expense Deduction

In determining AMTI, medical expenses are allowable as a deduction to the extent such expenses exceed 10% of adjusted gross income computed for regular tax purposes.[95] Since, for regular tax purposes, medical expenses are allowed as a deduction to the extent they exceed 7.5% of adjusted gross income, in certain situations such expenses deducted against regular taxable income may result in an upward adjustment to AMTI.

(iv) Interest Deduction

The interest deduction rules for AMTI purposes are more restrictive than the rules that apply for regular tax purposes. Thus, in certain situations, interest deductions may give rise to an upward adjustment to AMTI.

(I) Investment Interest

In determining AMTI, the rules that govern the deduction of investment interest for regular tax purposes apply with two modifications:

(i) the phase-in rules prescribed in §163(d)(6) do not apply;[96] and

(ii) interest on any specified activity bond and any deduction referred to in §57(a)(5)(A) is treated as includible in gross income (or as deductible) for §163(d) purposes.[97]

The non-applicability of the phase-in rules of §163(d)(6) to AMTI computations will result in an upward adjustment to AMTI if a taxpayer deducts investment interest under those rules in arriving at taxable income for regular tax purposes.

(II) Personal Interest

In determining AMTI, the rules that govern the deduction of personal interest for regular tax purposes apply with two modifications:

(i) the phase-in rules of §163(h)(6) do not apply;[98] and

(ii) in lieu of a deduction for "qualified residence interest" as defined in §163(h)(3), a deduction for "qualified housing interest" as defined in §56(e), is allowed.[99]

Qualified housing interest is defined to include interest paid or accrued by taxpayer during the taxable year on indebtedness which is incurred for purposes of acquiring, constructing, or substantially rehabilitating two types of properties:[100]

(i) property which is the principal residence of the taxpayer (within the meanings of §1034) at the time interest is paid or accrued; or

(ii) property which is taxpayer's "second home" within the meanings of §163(d)(5)(A)(i)(II).[101]

"Second home," for this purpose, includes a house, apartment, condominium, or mobile home not used on a transient basis which is designated by the taxpayer for the taxable year and which is used by the taxpayer or a family member for personal purposes for the greater of (i) 14 days or (ii) 10% of the number of days during the year for which the home is rented at a fair rental.[102]

Note: Qualified housing interest includes interest only on indebtedness incurred to acquire, construct, or substantially rehabilitate a principal residence or a second home. The mere fact that a principal residence or second home serves as security for the indebtedness is not enough to qualify interest on the indebtedness as qualified housing interest. Thus, interest on a second mortgage will not qualify as deductible qualified housing interest unless the loan proceeds are used to acquire or substantially rehabilitate a principal residence or second home.

Interest on refinanced debt which qualifies as qualified housing interest is deductible, but only to the extent the refinanced debt does not exceed the amount of original debt that is refinanced.[103]

Thus, the qualified residence interest deduction in a taxable year may be greater than qualified housing interest deduction, resulting in an upward adjustment to AMTI. Also, if a taxpayer deducts qualified residence interest under the phase-in rules in arriving at regular taxable

[93] §56(b)(1)(A)(i).
[94] §56(b)(1)(A)(ii).
[95] §56(b)(1)(B).

[103] §56(e)(1)(B).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

income for a taxable year, his AMTI for that taxable year will be adjusted upward because the phase-in rules do not apply for AMTI purposes.

Note: Section 56(e)(3) grandfathers certain interest on indebtedness incurred before July 1, 1982, which did not qualify as "qualified housing interest" under the pre-TRA 1986 rules but which, nevertheless, was allowed as a deduction in arriving at AMTI.

(v) Standard Deduction

In determining AMTI, the standard deduction provided in §63(c) is not allowed.[104] Thus, a nonitemizing taxpayer who claims a standard deduction in arriving at regular taxable income will be required to adjust AMTI upwards for that year by the amount of the deduction.

(c) AMT Planning

The adjustment for itemized deductions is notable in two respects:

(i) an upward adjustment to AMTI in the current year resulting from itemized deductions is not followed by a downward adjustment to AMTI in a subsequent taxable year as is the case with some of the deferral adjustments discussed above; and

(ii) unlike any other adjustment, there is no mechanism or option available to a taxpayer to eliminate an adjustment resulting from itemized deductions.

Note, however, that itemized deductions for casualty losses under §165(c)(3), wagering losses under §165(d), and charitable contributions (other than those of appreciated property) under §170 may, theoretically at least, reduce a taxpayer's regular tax to zero without resulting in an AMT liability. The reason for this is that these deductions, along with the other deductions enumerated in §67(b), are allowable in computing AMTI.

(7) State and Foreign Tax Refunds

As stated earlier, itemized deductions for state, local, and foreign real property and income taxes, and state or local personal property taxes are not allowed in arriving at AMTI. As a corollary to this rule, any recovery of these taxes is excluded in computing AMTI.[105]

(8) Circulation and Research and Experimental Expenditures

(a) General

(i) Circulation Expenditures

Section 173 allows a taxpayer a current deduction for all expenditures to establish, maintain, or increase the circulation of a newspaper, magazine, or other periodical, for the taxable year in which such expenditures are incurred. Absent §173, expenditures to establish or increase circulation would, in all probability, have to be capitalized under §263. No current deduction, however, is allowed for expenditures incurred for the purchase of land, depreciable property, or the acquisition of circulation through the purchase of any part of the business of another publication.[106]

A taxpayer entitled to the deduction for circulation expenditures under §173 may, in lieu of taking such deduction, elect to capitalize that portion of the circulation expenditures which is properly chargeable to capital account.[107] In general, expenditures normally made from year-to-year with a view to maintaining circulation are not chargeable to capital account. On the other hand, expenditures made to establish or increase circulation are properly chargeable to capital account. For example, if a newspaper normally employs five persons to obtain renewals of subscriptions, the expenses attributable to those employees are not chargeable to capital account. If, however, the newspaper, in a special campaign to increase circulation, employs 20 additional persons for a limited time to solicit new subscriptions, these expenditures would be properly chargeable to capital account.[108] If a taxpayer makes an election with respect to expenses chargeable to capital account, such election applies to all expenditures which are so chargeable. The election, once made, is irrevocable except with the Commissioner's consent. The extent to which an amortization deduction with respect to capitalized expenditures is available will be determined under §§162, 263, and 461.[109]

(ii) Research and Experimental Expenditures

"Research and experimental expenditures" means expenditures incurred in connection with the taxpayer's trade or business which represent research and development costs in the experimental or laboratory sense. It generally includes all such costs incidental to the development of an experimental or pilot model, a plant process, a product, a formula, an invention, or similar property.[110] Expenditures by the taxpayer for the acquisition or improvement of land, or for the acquisition or improvement of depreciable or depletable property, however, do not qualify as "research or experimental expenditures" under §174(a).[111]

Section 174(a) provides that research or experimental expenditures paid or incurred by the taxpayer during the taxable year in connection with his trade or business may be treated as expenditures which are not chargeable to capital account. The expenditures so treated are allowed as a current deduction. A taxpayer may adopt the current deduction method of §174(a) for his first taxable year without the Commissioner's consent. If, however, the taxpayer fails to adopt such method for the first taxable year in which he incurs such expenditures, he cannot do so in a subsequent year unless he obtains the Commissioner's permission.[112] If the taxpayer adopts the current deduction method of §174(a), this method applies to all research and experimental expenditures and not only taxable income for the current year, but also taxable income for all subsequent years, must be computed under this method unless the Commissioner authorizes a change of methods.[113]

Section 174(b) provides that, in lieu of taking a current deduction under §174(a), a taxpayer may elect to capitalize and amortize research and experimental expenditures paid or incurred in connection with his trade or business provided such expenditures are: (i) properly chargeable to capital account; and (ii) not chargeable to depreciable or depletable property. Thus, the election under §174(b) is available only if the property resulting from the research and experimental expenditures has no determinable useful life. The capitalized expenditures must be amortized or depreciated over the useful life of the property.[114]

Expenditures with respect to which an election under §174(b) is in effect are allowable as a deduction over a period of not less than 60 consecutive months beginning with the month in which the taxpayer first realizes benefits from the expenditures.[115] The length of the amortization period is selected by the taxpayer at the time the election to defer the expenditures is made. The election under §174(b) to defer research and experimental expenditures applies to all such expenditures paid or incurred by the taxpayer or, if so limited by the taxpayer's election, to all such expenditures with respect to a particular project.[116]

If expenditures with respect to which the taxpayer has made a §174(b) election result in the development of depreciable (or depletable) property, the unrecovered research and experimental expenditures must be recovered as a depreciation deduction over the property's useful life.[117]

Example: For taxable year 1982, A elected to defer and deduct ratably over a 60-month period research and experimental expenditures incurred in connection with a particular project. In 1984, the total of deferred expenditures amounted to $60,000. At that time A had developed a process for which a patent was sought. On July 1, 1984, A first realized benefits from the marketing of products resulting from the process. Therefore, in his return for calendar 1984, A was entitled to an amortization deduction of $6,000. In 1985, A was entitled to an amortization deduction of $12,000. On July 1, 1986, a patent was granted to A. Consequently for calendar year 1986, A was entitled to an amortization deduction of only $6,000 and the balance of unrecovered expenditures ($60,000 - $24,000) must be amortized over the life of the patent beginning on July 1, 1986.

The §174(b) election, once made, applies to all subsequent taxable years unless a change to a different method is authorized by the Commissioner under §174(b)(2).

(b) Definition

(i) Circulation Expenditures

Circulation expenditures paid or incurred after December 31, 1986, which are deductible currently under §173 in computing regular taxable income, must be capitalized and amortized ratably over a 3-year period beginning with the year in which such expenditures are incurred in arriving at AMTI.[118] Circulation expenditures deducted under §173 will therefore result in an upward adjustment to AMTI. Thus, for example, if taxpayer deducts $45,000 under §173 in 1987, his AMTI will be adjusted upward by $30,000 because he is allowed a deduction of only (⅓ × $45,000) $15,000 for purposes of AMTI computations. The taxpayer's AMTI will, however, be adjusted downward by $15,000 in each of his taxable years 1988 and 1989, compensating him fully for the $30,000 upward adjustment to AMTI in 1987.

If the taxpayer suffers a loss with respect to circulation expenditures deducted under §173, then, for purposes of computing AMTI, the entire unamortized portion of such expenditures may be deducted in the year of the loss.[119] The amount of this deduction, however, is limited to the amount that would be allowable as a loss deduction under §165(a) if the circulation expenditure had remained capitalized.[120]

Note that, in lieu of deducting circulation expenditures under §173, the taxpayer may elect under §59(e) to capitalize and amortize such expenditures ratably over a 3-year period beginning with the taxable year in which such expenditures are incurred in computing his regular taxable income. If the taxpayer makes this election, no adjustment to AMTI will result.

(ii) Research and Experimental Expenditures

Research and experimental expenditures paid or incurred after December 31, 1986, which are deducted by the taxpayer currently under §174(a) in computing his regular taxable income, must be capitalized and amortized ratably over a 10-year period beginning with the year in which such expenditures are incurred in determining AMTI.[121] Research and experimental expenditures deducted under §174(a) will, therefore, result in an upward adjustment to AMTI. Thus, for example, if the taxpayer deducts $100,000 under §174(a) in 1987, his AMTI for 1987 will be adjusted upward by $90,000 because he is allowed a deduction of (1/10 × $100,000) = $10,000 in computing AMTI. The taxpayer's AMTI will, however, be adjusted downward by $10,000 a year in each of the subsequent nine years, compensating him fully for the $90,000 upward adjustment in 1987.

If the taxpayer suffers a loss with respect to research and experimental expenditures deducted under §174, then, for purposes of computing AMTI, the entire portion of unamortized research and experimental expenditures may be deducted in the year of the loss.[122] The amount of this deduction, however, is limited to the amount that would be allowable as a loss deduction under §165(a) if the research and experimental expenditures had remained capitalized.[123]

For purposes of computing his regular taxable income, the taxpayer, in lieu of deducting research and experimental expenditures under §174(a), may elect under §59(e) to capitalize and amortize such expenditures ratably over a

10-year period beginning with the year in which they are incurred. If this election is made, the taxpayer will have no adjustment to AMTI.

(c) AMT Planning

(i) Circulation Expenditures

In lieu of taking a current deduction under §173, the taxpayer has the option of electing to capitalize that portion of circulation expenditures which are properly chargeable to capital account.[124] Generally, expenditures incurred to maintain the circulation of a periodical are not chargeable to capital account, whereas expenditures incurred in establishing or increasing the circulation are so chargeable. The expenditures thus capitalized may be amortized, provided the taxpayer can demonstrate the limited useful life of the new subscriptions obtained.

Comment: The industry experience indicates that a magazine or a newspaper subscription typically runs for only one year and the average subscriber renews for only two or three years before dropping the subscription. It may, therefore, be possible to amortize the capitalized circulation expenditures over a 3-year period. Support for this position may be found in §59(e)(1) which permits a 3-year amortization of such expenditures.

The taxpayer also has the option of electing under §59(e) to capitalize and amortize ratably over a 3-year period all circulation expenditures.

The §173 election applies to only those expenditures which are chargeable to capital account.[125] The §59(e) election, on the other hand, may be made for all expenditures deductible currently under §173, including expenditures incurred to maintain circulation.[126]

Comment: Where the amount incurred for increasing the circulation during the taxable year is relatively small as compared to the amount expended on maintaining the circulation, an election under §173 will not help the taxpayer in eliminating upward adjustment to AMTI. In such a case, an election under §59(e) is indicated if taxpayer desires to eliminate the adjustment to AMTI.

The §59(e) election provides taxpayers with a great planning tool because it enables them to enjoy the best of both worlds, *i.e.*, capitalization under §59(e) to avoid AMT and a current deduction under §173 at the same time. For example, the taxpayer may capitalize under §59(e) just enough of the circulation expenditures necessary to avoid AMT and deduct the balance under §173.

Needless to say that before deducting circulation expenditures under §173, the taxpayer must assess the impact of such a deduction on his AMT liability. If such impact is negative he may utilize either an election under §173 or §59(e), whichever yields more favorable results.

(ii) Research and Experimental Expenditures

Under §174(b), a taxpayer may elect to capitalize and amortize ratably over a 60-month period research and experimental expenditures which are properly chargeable to capital account. If the capitalized expenditures result in depreciable or depletable property, the unrecovered expenditures must be depreciated over the property's useful life. The taxpayer may also elect under §59(e) to capitalize and amortize all research and experimental expenditures over a 10-year period. Some of the relevant considerations bearing upon a choice between these elections are summarized below.

(i) If taxpayer adopted the current deduction method of §174(a) for research and experimental expenditures incurred in a prior year, he may not make a §174(b) election for such expenditures incurred in the current year without obtaining the Commissioner's consent.[127] An election under §59(e) for the current year's expenditures may be made without such consent.

(ii) An election under §174(b) does not generally provide an amortization deduction until a year or more after the taxable year in which research and experimental expenditures are incurred. This is because, under §174(b)(1)(C), the taxpayer must wait until the first month in which he realizes benefits from the expenditures before he can begin to amortize them. An election under §59(e), on the other hand, will yield an immediate amortization deduction.

Comment: An immediate amortization deduction may or may not be desirable depending upon the tax situation of the taxpayer. For example, a taxpayer with expiring net operating loss carryovers may find an immediate deduction undesirable.

(iii) If research and experimental expenditures are not anticipated to result in depreciable or depletable property, an election under §174(b) is likely to provide a faster write-off. If, on the other hand, the research and experimental expenditures are anticipated to result in intangible depreciable property (*i.e.*, a patent), an election under §59(e) will provide a faster write-off.

(iv) An election under §174(b) applies to research and experimental expenditures paid or incurred not only in the current taxable year but also in all subsequent taxable years unless a change of method is authorized by the Commissioner.[128] An election under §59(e), on the other hand, provides more flexibility because it is a year-to-year election.

(v) An election under §174(b) applies to all research and experimental expenditures or, if so limited by the taxpayer, to all such expenditures attributable to a particular project.[129] Under no circumstances, however, can a taxpayer elect §174(b) with respect to a portion of the expenditures. An election under §59(e), on the other hand, may be made with respect to any portion of the research and experimental expenditures paid or incurred during the taxable year.[130]

Comment: The §59(e) election provides the taxpayer with a great planning tool because it enables him to enjoy

the best of both worlds, *i.e.*, capitalization under §59(e) to avoid AMT and a current deduction under §174(a) at the same time. For example, the taxpayer may capitalize under §59(e) just enough of the research and experimental expenditures to avoid AMT and deduct the balance under §174(a).

(9) Gain or Loss Upon Disposition of Certain Assets

As previously indicated, in the case of: (i) depreciation of real or personal property, (ii) amortization of pollution control facilities, (iii) mining development and exploration costs, and (iv) circulation and research and experimental expenditures, allowable deductions are determined for AMTI purposes under rules which are different from the rules that apply for regular tax computations. Since the AMT rules are designed to eliminate the deferral effect of the regular tax rules, AMT deductions are smaller than regular tax deductions, at least in the early years. To take into account this disparity, §59(a)(7) provides that, for purposes of computing AMTI, the adjusted basis of the types of assets described above is determined based upon the amount of deductions permitted for AMTI computations. Consequently, when an asset of the type in question is disposed of, the amount of gain or loss will be different for AMTI purposes than for regular tax purposes.

Example: A, a calendar year taxpayer, places depreciable personal property in service after December 31, 1986, at a cost of $3,000. The property has a recovery period of three years and its ADR life is four years. The following table shows the depreciation deductions available for both regular tax and AMTI purposes:

Year	*Type of Tax*	*Adjusted Basis*	*Deduction*
1987	Regular Tax	$3,000	$1,000
	AMT	3,000	563
1988	Regular Tax	2,000	1,334
	AMT	2,437	914
1989	Regular Tax	666	444
	AMT	1,523	609
1990	Regular Tax	222	222
	AMT	914	914
1991	Regular Tax	0	0
	AMT	305	305

Assuming the property is sold by A on January 1, 1989, for $4,000, A's gain for regular tax and AMT purposes is:

Regular Tax Gain = $4,000 − $666 = $3,334

AMT Gain = $4,000 − $1,523 = $2,477

(10) Disallowance of Passive Activity Losses

(a) General

Effective generally for years beginning after December 31, 1986, 1986 TRA §501 enacted Code §469 to limit the "passive activity losses" and credits of certain taxpayers. In general, a "passive activity" is any activity involving the conduct of a trade or business in which the taxpayer does not materially participate. The taxpayers to whom the §469 limits apply include individuals, estates, trusts, personal service corporations, and (to a lesser extent) other closely held C corporations.

If a loss or credit is derived from a passive activity by one of the foregoing taxpayers (other than closely held C corporations), the loss or credit will be limited to the income generated from other passive activities. Any loss or credit not allowed by reason of the §469 limits will be available as a carryforward to future years and will generally be allowed when passive income is generated from the activity or from other passive activities or, in the case of losses, when the activity is sold or otherwise disposed of.

(i) Definition of Passive Activity

Code §469(c) defines a "passive activity" as any activity involving the conduct of any trade or business in which the taxpayer does not materially participate. A passive activity includes any rental activity, regardless of whether it constitutes a trade or business, and regardless of the taxpayer's "material participation" in the activity. If the rental activity requires the provision of substantial services, however, such as a hotel, the activity is not treated as passive so long as the taxpayer materially participates. For purposes of the passive activity definition, a trade or business includes any activity involving research or experimentation within the meaning of §174 or, to the extent provided in regulations, any activity in connection with a trade or business or any §212 income-producing activity.

Under §469(h), a taxpayer "materially participates" in an activity only if the taxpayer's involvement in the activity is regular, continuous, and substantial. In determining whether a taxpayer materially participates, the activities of a spouse will be attributed to the taxpayer. Moreover, a special rule permits a retired farmer or a surviving spouse of a farmer to be treated as a material participant if, prior to retirement or death, the farmer materially participated in the farming activity. A corporation subject to §469 is treated as materially participating if over 50% (by value) of the shareholders materially participate in the activity or if, in the case of a closely held C corporation (but not a personal services corporation), the business is an active business meets the requirements of §465(c)(7)(C)(i), (ii) and (iii).

A taxpayer is not treated as materially participating in a limited partnership to the extent of the taxpayer's interest in the partnership as a limited partner. For example, if a taxpayer holds a 25% general partnership interest and a 25% limited partnership interest in the same partnership and the taxpayer materially participates in the partnership's activities, the losses and credits allocable to the 25% limited partnership interest will be treated as passive. To prevent avoidance of the passive loss limits, regulations may be issued to override the general rule that a limited partnership interest is treated as passive.

(ii) Taxpayers Subject to Passive Limits

Section 469(a)(2) provides that the following taxpayers may be subject to the passive loss and credit limits:

(i) Any individual, estate, or trust,

(ii) Any closely held C corporation, and

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(iii) Any personal service corporation.

Under §469(e)(2), however, the passive loss and credit limits are less restrictively applied to closely held C corporations than to the other categories of taxpayers subject to the rule.

Section 469(j)(1) defines a closely held C corporation as any C corporation where, at any time during the last half of the taxable year, more than 50% in value of the outstanding stock is owned by no more than five individuals (applying the personal holding company attribution rules). A "personal service corporation" is defined as a corporation the principal activity of which is the performance of personal services that are substantially performed by employee-owners. A corporation will not be treated as a personal service corporation, however, unless more than 10% of the stock by value is held by employee-owners.

(iii) Definition of Passive Loss and Credit

Although income or loss from each passive activity must be separately accounted for, the passive activity loss for a taxable year is determined by netting the aggregate income and losses from all passive activities. If the aggregate losses exceed the aggregate income, the resulting net loss is the taxpayer's "passive activity loss." According to the Conference Report,[131] all deductions arising from passive activities, including deductions allowed under §§162, 163, 164, and 165, must be taken into account, even if claimed as an itemized deduction on the taxpayer's return. It is unclear, however, whether a charitable contribution deduction that arises from the contribution of, for example, a facade easement by a limited partnership would be subject to the passive loss rule. Interest deductions attributable to passive activities are treated as passive activity deductions and will not be treated as investment interest subject to the revised investment interest limits of §163(d).

Section 469(d)(2) defines a "passive activity credit" as the amount, if any, by which the sum of various business credits derived from passive activities exceed the taxpayer's regular tax liability for the taxable year allocable to passive activities. The credits subject to limitation as passive activity credits include:

(i) The §936 possessions credit;

(ii) The orphan drug credit;

(iii) The nonconventional fuels credit; and

(iv) The general business credit which, after 1986, includes the rehabilitation credit, the energy investment credit, the research credit, the alcohol fuels credit, the targeted jobs credit, and the low-income housing credit.

Under §469(e): (i) portfolio income (interest, dividends, annuities, royalties, and investment gains), (ii) expenses other than interest that are clearly and directly allocable to portfolio income, and (iii) interest expense properly allocable to portfolio income, are not taken into account in determining the income or loss from an activity. For this purpose, however, an interest in the passive activity is not treated as investment property so that gains and losses upon disposition of a passive activity interest will be taken into account in determining passive activity income and loss. Investment earnings on an activity's working capital will be treated as portfolio income for purposes of the foregoing rule.

Earned income will not be treated as passive income for purposes of the passive limits.

(iv) Exceptions

Section 469(e)(2) permits the passive losses of a closely held C corporation, other than a personal service corporation, to offset all income except portfolio income.

Section 469(i) provides a limited exception for individuals who actively participate in real estate activities. Under this exception, up to $25,000 of passive losses (or the amount of credit that is the deduction equivalent of the passive loss) may be used to offset nonpassive income. This $25,000 amount, however, is phased out if the taxpayer's adjusted gross income (AGI), excluding passive losses, exceeds $100,000. Under the phase-out, for every $2 of AGI above $100,000, the $25,000 amount is reduced by $1. Thus, the exception vanishes if AGI exceeds $150,000.

The $25,000 amount is available generally only if the taxpayer is a "active participant" in the rental activity. A taxpayer will not be treated as an active participant if, at any time during the taxable year, the taxpayer's interest in the activity is less than 10% by value of all interest in the activity. Moreover, a taxpayer's interest as a limited partner will not be treated as an interest with respect to which the taxpayer actively participates.

Two special rules apply to the rehabilitation and low income housing credits. First, the $25,000 amount (in a deduction-equivalent sense) is available regardless of active participation by the taxpayer. Second, the threshold for the phase-out of the $25,000 amount is raised to $200,000.

Section 469(j)(5) defines "deduction equivalent" as the amount of credits which, if allowed as a deduction, would reduce the regular tax liability for the taxable year by an amount equal to such credits. Assuming a taxpayer's taxable income is entirely subject to tax at the 28% rate and the taxpayer has no itemized deductions dependent upon the amount of the taxpayer's AGI, the deduction equivalent of credits equal to the $25,000 amount is $7,000.

(v) Suspended Passive Losses and Credits

Losses and credits not allowed under §469 are suspended until the taxpayer generates passive income from the passive activity or has income from unrelated passive activities. Under §469(g), if a taxpayer disposes of his entire interest in any passive activity in a fully taxable transaction, any suspended loss, as well as any loss arising in the year of disposition, will be allowable as follows:

(i) First, against income or gain from the passive activity for the taxable year including any gain recognized on the disposition;

(ii) Second, against net income or gain for the taxable year from other passive activities; and

(iii) Finally, against all other income or gain.

[131] H.R. Rep. No. 841, 99th Cong., 2d Sess., II-139 (1986). ("Conference Report").

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

A capital loss from the disposition of the passive activity will, however, be subject to the §1211 capital loss limitations. Moreover, losses will continue to be suspended if the taxpayer transfers the interest to a related person. If the interest is sold in an installment sale, a ratable share of the suspended losses will be allowed each year in accordance with the amount of the installment sale gain reported for that year for regular tax purposes.

If a taxpayer dies, suspended losses will be allowed on the taxpayer's final return to the extent that the losses exceed the step-up in basis (to fair market value) that occurs under §1014 upon death.

Under §469(j)(6), if an interest in a passive activity is transferred by gift, the basis of the interest will be increased by the amount of the suspended losses and such losses will no longer be allowable as a deduction for any taxable year.

Section 469(j)(9) provides an election upon disposition of a passive interest under which a taxpayer may increase his basis in the passive activity by the amount of any unused credit which reduced basis of the property for the taxable year in which the credit arose. The basis increase is made as of the time immediately before the transfer. If this election is made, the passive activity credit will not be allowed in the future. If the election is not made and if the transfer does not otherwise cause recapture of the credit, the suspended credit will be allowed to offset the regular tax from the gain, if any, generated on the transfer or to offset the regular tax from passive income subsequently generated from other activities.

Under §469(f), if an activity ceases to be a passive activity, suspended passive losses and credits will be allowed as an offset against future income and future regular tax liability from active operations. Otherwise, the suspended deductions and credits continue to be treated as arising from a passive activity. Similar principles apply to a change in status of a closely held C corporation or personal service corporation.

(vi) Effective Dates and Phase-In Rules

The passive loss limits apply generally to taxable years beginning after December 31, 1986. Loss and credit carryovers from a taxable year beginning before 1987 and carried to a taxable year beginning after 1986, however, are not subject to the limits. Special transition rules apply to low-income housing. *See* Act §501(c)(3) and Act §502.

Under §469(1), the passive loss limits are phased-in over four years if (i) the taxpayer held the interest in the passive activity, or was under a binding contract to acquire the interest in the passive activity, on the date of enactment and at all times thereafter, and (ii) the passive activity was being conducted on the 1986 TRA's date of enactment or the property used in the activity was acquired pursuant to a binding written contract in effect on August 16, 1986, or construction of the property began on or before August 16, 1986. Under the phase-in, 65% of a passive activity loss and credit is allowed for taxable years beginning in 1987. This is reduced to 40% in 1988, 20% in 1989, and 10% in 1990.

(b) Definition

One rationale for the enactment of the passive loss rules of §469 is that a loss in the current year does not necessarily reflect a true economic loss, especially if it derives from an activity with future income potential. The loss can be determined with accuracy only when the activity is finally disposed of. Section 469 restricts a taxpayer's ability to defer taxes by means of passive activity losses.

The deferral that is prohibited by §469 for regular tax purposes is also prohibited by §58(b) for AMT purposes. Section 58(b) provides that, for purposes of computing AMTI, passive activity losses will be suspended. In determining the amount of loss that must be suspended in computing AMTI, the rules of §469 apply with four modifications:

(i) The adjustments of §56 shall be taken into account. Thus, for example, a taxpayer placing residential rental real estate in service in 1987 must compute his depreciation deduction for regular tax purposes by using a recovery period of 27.5 years. For purposes of computing AMTI, however, he is required to use a recovery period of 40 years. Assuming the rental activity generates a loss in 1987, the passive loss that must be suspended under §469 is determined by taking into account depreciation deductions computed over a useful life of 27.5 years, whereas a useful life of 40 years is used in determining the depreciation deduction that enters into the computation of passive activity loss that must be suspended under §58(b). Therefore, the amount of loss disallowed for AMT purposes will be smaller than the loss disallowed for regular tax purposes because of the smaller depreciation deduction.

(ii) Any deduction that is an item of tax preference under §57 shall not be taken into account. Thus, for example, if taxpayer's passive activity loss computed under §469 includes a percentage depletion deduction, such deduction will be disregarded in computing passive activity loss under §58(b). The rationale for this is that the depletion deduction is restored to AMTI under §57(a)(1) and disallowing it again under §58(b) as part of the passive activity loss would amount to double counting.

(iii) The phase-in rules of §469(l) do not apply for purposes of computing the passive activity loss that is disallowed under §58(b). Needless to say that this rule will produce serious AMT consequences to taxpayers who utilize the phase-in rules for regular tax purposes.

(iv) If a taxpayer is insolvent, the amount of passive activity loss that is disallowed under §58(b) in computing his AMTI is reduced by the amount by which taxpayer is insolvent.[132] The amount by which taxpayer is insolvent is the excess of liabilities over the fair market value of assets.[133]

In summary, the amount of passive loss that is disallowed in determining AMTI is computed after taking into account all adjustment and preference items described in

[132] §58(c)(1)(A).
[133] §58(c)(1)(B).

§§56-58 including the minimum tax passive farm loss adjustment discussed below.[134]

(11) Disallowance of Passive Farm Activity Loss

(a) General

From the standpoint of AMT, farming tax shelter activities are hit even harder than other passive activities. Section 58(a) subjects the losses from passive farming activities to another layer of restrictions before applying the general AMT passive activity loss limitations of §58(b). In other words, losses from passive farming activities are subject to disallowance first under §58(a). Any loss that is not disallowed under §58(a) will then be tested under the general passive activity loss limitations of §58(b) to determine the amount that is allowable in computing AMTI.

(b) Definition

For purposes of computing AMTI for any taxable year of a taxpayer (other than a corporation which is not a personal service corporation [135]), any loss deduction of such taxpayer attributable to a "tax shelter farm activity" is disallowed.[136] The amount of this passive farm activity loss that is disallowed is reduced by the amount of taxpayer's insolvency.[137] As previously indicated, the amount of the taxpayer's insolvency is the excess of his liabilities over the fair market value of his assets.[138] Any loss that is disallowed under this provision may be carried over to the first succeeding taxable year of taxpayer and treated as a deduction allocable to "tax shelter farm activity" in that year.[139] If the taxpayer disposes of his entire interest in any "tax shelter farm activity" during any taxable year, the entire amount of loss (including any carryovers) is deductible in computing AMTI for that taxable year.[140]

"Tax shelter farming activity" means:

(i) Any farming syndicate as defined in §464(c) as modified by §461(i)(4)(A).[141] A farming syndicate includes: (a) a partnership or other enterprise (other than a non-S corporation) engaged in farming if, at any time, any interest in the partnership or enterprise has been offered for sale in an offering required to be registered with any federal or state agency having authority to regulate the offering of securities for sale, (b) a partnership engaged in farming if more than 35% of the losses during any period are allocable to limited partners, and (c) any other enterprise (not including a non-S corporation) if there is an allocation of more than 35% of the losses to persons with "limited risks." Section 464(c)(2), however, provides an exception to the definition of a farming syndicate for holdings attributable to active management. Under this exception, the rules that would otherwise characterize an enterprise as a syndicate, because of a more than 35% loss allocation to limited partners or entrepreneurs, do not apply where the person to whom the loss is allocated previously actively participated in the management of any trade or business of farming for a period of not less than five years. Also, a participant is not treated as having a "limited risk" if he is an individual whose principal residence is on a farm which is farmed by the partnership or other enterprise.

(ii) Any other activity consisting of farming which is a passive activity within the meaning of §469(c) [142] but without regard to the material participation test of §469(c)(2).[143] Thus, under the second prong of the test, any farming activity not qualifying as a farming syndicate activity will, nevertheless, qualify as "tax shelter farming activity" if it is a passive activity within the meaning to §469(c) without regard to the material participation test.

Comment: The Senate Report states that, to avoid the problem of double-counting, the amount of deductions allocable to farming is determined after taking into account all adjustments and preferences (other than the adjustment for passive losses).[144] Unlike §58(b) (dealing with the regular passive loss limitation), §58(a), however, fails to make a provision for the avoidance of double-counting.

Comment: The Senate Report states that "there is no netting between different farming activities. An excess farm loss with respect to any farming activity is disallowed even if there is net income from other farming activities." Since this rule does not appear in the statute, however, it would be fair to assume that the aggregation rule of §469(d) should apply in determining the passive farm loss that is disallowed.

(12) Alternative Tax Net Operating Loss Deduction

(a) General

The final adjustment required in the AMTI computation is the substitution of the alternative tax net operating loss deduction for the regular tax net operating loss deduction.[145] Consequently, a taxpayer is required to make two parallel but distinct sets of net operating loss computations: (i) a regular tax net operating loss computation to be used in computing taxpayer's regular tax liability, and (ii) an alternative tax net operating loss computation to be used in computing taxpayer's AMT liability.

(b) Definition

The alternative tax net operating loss deduction is computed the same way as the regular tax net operating loss deduction but with two essential differences:

(i) the amount of net operating loss (within the meanings of §172(c)) for the loss year is computed: (a) by adjusting the taxable income as provided in §§56 and 58, and (b) by reducing the amount of loss by the sum of items of tax preference enumerated in §57 (except the preference for charitable contributions of appreciated property),[146] and

[134] Senate Report at 528. Note that, under §469 as finally enacted, interest allocable to passive activities is subject to the passive activity loss limitation and not the investment interest limitation.

[145] §56(a)(4).
[146] §§56(d)(1)(B)(i) and 56(d)(2)(A).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(ii) for taxable years beginning after 1986, the deduction is limited to an amount which is 90% of AMTI for the taxable year in which net operating loss deduction is claimed.[147]

Comment: The modifications required to convert the regular tax net operating loss deduction into the alternative tax net operating loss deduction are basically designed to take into account the differences between the regular tax base and the AMT base. The 90% limit is designed to ensure that the net operating loss deduction does not eliminate a taxpayer's entire AMT liability for any taxable year.

Example: A, a calendar year taxpayer, in 1988 has AMTI of $10 million and a minimum tax NOL of $11 million. A may not use the NOLs to eliminate the entire $10 million of AMTI. A may use the NOL to offset only $9 million (90% of $10 million) of AMTI. The balance of $2 million in minimum tax NOL may be carried forward to 1989.

The alternative tax net operating losses may be carried back or forward in accordance with §172(b)(2). Thus, such losses may be carried back three years and forward 15. As provided in §172(b)(2), a taxpayer must carry his alternative tax NOL to the third preceding year unless an election to forego the carryback period is made under §172(b)(3)(C).[148] If the entire amount of the loss is not absorbed by AMTI for that year, the remaining loss must be carried to the second preceding taxable year. To the extent the loss is not absorbed by AMTI in such year, it must be carried to the first preceding taxable year. Any remaining loss may then be carried forward to the 15 succeeding taxable years.

Comment: An alternative tax NOL is offset to the extent of available AMTI in the carryback or carryover year even though the taxpayer owed no AMT in that year.

Example: An individual incurs an alternative tax net operating loss of $25,000 in 1990. He does not elect to forego the carryback period. In 1987, the taxpayer had an AMTI of $26,000 but owed no AMT. His $25,000 of NOL will be carried back and absorbed fully by the $26,000 of AMTI in 1987. A thus derives no minimum tax benefit from his alternative tax NOL.

Comment: A taxpayer with an alternative tax NOL should consider making an election under §172(b)(3)(C) to forego the entire carryback period if no minimum tax benefit would be derived from the carryback (*i.e.*, the taxpayer had no AMT liability in prior years). This will preserve the loss for use in future years.

(c) Effective Date

The rules discussed above apply for purposes of computing alternative tax net operating loss for taxable years beginning after December 31, 1986.[149] For purposes of computing net operating losses for taxable years beginning before January 1, 1987, that may be carried over to post-1986 years, however, the rules in effect at the time of enactment of the TRA 1986 apply.[150]

b. Items of Tax Preference

After taxable income has been adjusted as mandated by §§56 and 58, the final step in the computation of AMTI is to add back the items of tax preference described in §57.[151] Items of tax preference are essentially items of exclusion or deduction from gross income which receive preferential treatment for regular tax purposes. To neutralize this preferential treatment, these exclusions and deductions are added back to taxable income to arrive at AMTI.

The items of tax preference are summarized below.

(1) Depletion Deduction

(a) General

Section 611 permits a taxpayer a reasonable allowance for depletion in the case of mines, oil and gas wells, other natural deposits, and timber. A depletion deduction, however, is allowed to a taxpayer only if: (i) the taxpayer has an economic interest [152] in the mineral property or standing timber; (ii) the property with respect to which depletion is claimed is exhaustible; and (iii) the costs with respect to which depletion is claimed are not represented by physical property. If such costs are represented by physical property a depreciation, rather than depletion, deduction may be claimed.

The Code provides two methods for computing a depletion deduction: (i) cost depletion (§§611 and 612), and (ii) percentage depletion (§§611, 613, and 613A). A taxpayer must compute depletion under both methods and is allowed to use the method that produces the larger deduction. Note, however, that percentage depletion is not allowed with respect to timber as well as oil and gas (with certain exceptions) property. Section 613A specifies that, for taxable years beginning after 1974, percentage depletion is not available (with certain exceptions) for domestic and foreign oil and gas production. The exceptions include: (i) regulated natural gas, natural gas sold on a fixed contract, and certain geothermal deposits, and (ii) independent producers and royalty owners of domestic oil and gas.

Conceptually, cost depletion allows the taxpayer a deduction for that part of his cost (*i.e.*, the investment in the mineral property or timber) which is allocable to the mineral property (or timber) sold or otherwise used in producing the income for the taxable year. Regs. §1.611-2(a) provides that the cost depletion deduction may be computed by dividing the taxpayer's basis (as computed under §612) by the number of mineral units remaining as of the taxable year and by multiplying the result by the number of mineral units sold within the taxable year. The basis of mineral property, for cost depletion purposes, is usually the adjusted basis for determining gain or loss, and includes any oil and gas drilling and development costs which have been capitalized (Regs. §1.612-1(b)(1)). Since depletion deductions reduce the taxpayer's basis in the

[147] §56(d)(1)(A).
[148] Conference Report, p. II-262.
[149] §56(d)(2)(A).
[150] §701(f)(2)(A) of the Act.
[151] §55(b)(2).
[152] For a definition of "economic interest" *see* Regs. §1.611-1(b)(1).

mineral property, cost depletion is no longer available once the taxpayer's basis has been reduced to zero.

As indicated above, the purpose behind cost depletion is to allow the taxpayer to recoup his investment in the mineral property on a tax-free basis. Percentage depletion, on the other hand, is an arbitrary allowance totally unrelated to the taxpayer's investment in the mineral property. It is computed as a specified percentage of gross income from the mineral property, subject to a ceiling of 50% of the taxable income from the property (computed without regard to the depletion deduction). The applicable percentages for various mineral properties are specified in §613(b). Since percentage depletion is based on gross income from the mineral property, it may be claimed as long as the property produces gross income. Thus, it offers the possibility of recovering, as a depletion allowance, an amount far in excess of the taxpayer's investment in the property. For this reason, investment in hard minerals and, to a certain extent, in oil and gas, has been a popular way for many taxpayers to produce a flow of tax-free cash. By the same token, percentage depletion has long been a favorite target of those seeking to close tax loopholes. Over the years, Congress has attacked this "tax-shelter" both directly [153] — by reducing the allowable depletion percentages — and indirectly by enacting this item of tax preference.

(b) Definition

The excess of the depletion deduction allowable [154] over the adjusted basis [155] of the property at the end of the year, disregarding the current year's depletion deduction, is an item of tax preference.[156] The excess is computed on each separate "property" as defined for depletion purposes.[157] Accordingly, basis in one property will not reduce excess depletion in connection with another.

The adjusted basis of the property at the end of the taxable year is determined under §1016 and the regulations thereunder. No adjustment is made to the basis of property subject to depletion as a result of the minimum tax.[158]

The preference is measured on a cumulative basis. Depletion will not be considered an item of tax preference until the total depletion deductions have exceeded the adjusted basis of the property. Then, the entire amount of the percentage depletion in excess of that basis will be considered an item of tax preference.

(2) The Intangible Drilling and Development Costs (IDCs)

(a) General

With respect to intangible drilling and development costs incurred in the development of oil and gas properties, the taxpayer has an option to either capitalize or currently expense such costs.[159] The statutory authority for currently expensing the IDCs is provided in §263(c). The IDCs are those costs which, in and of themselves, have no salvage value. These include amounts paid for labor, fuel, repairs, hauling and supplies, or any of them, which are used: (i) in the drilling, shooting, and cleaning of wells; (ii) in such cleaning of ground, draining, road making, surveying, and geological works as are necessary in preparation for the drilling of wells; and (iii) in construction of such derricks, tanks, pipelines, and other physical structures as are necessary for the drilling of wells and the preparation of wells for the production of oil or gas.[160] IDCs also include the cost of installing tangible equipment necessary for the drilling of wells and for preparing wells for production (although the equipment itself must be capitalized and depreciated). A well is considered complete when casing and a "Christmas Tree" have been installed. IDCs, however, do not include labor, supplies etc. used to install production facilities. For example, a taxpayer may not elect, under §263(c), to expense the following costs: (i) oil well pumps (on the initial completion of the well, and after the well has flowed for a time) including the necessary housing structures; (ii) oil well separators including the housing structures; (iii) pipelines from the wellhead to oil storage tanks as well as the oil storage tanks on the producing lease; (iv) salt water disposal equipment and recycling equipment; and (v) pipelines from the oil storage tanks on the producing leasehold to a common carrier pipeline.[161] In addition, the option to capitalize or currently expense IDCs is not available with respect to capital items. For example, the costs of materials used in structures constructed in the wells, drilling tools, pipe, casing, tubing, tanks, engines, boilers, etc. must be capitalized and depreciated.[162] By the same token, expenditures which must be charged off as expense may not be capitalized. Examples of such expenditures are costs of labor, fuel, repairs, hauling, supplies, etc. incurred in connection with the operation of the wells and of other facilities on the property for the production of oil and gas.[163]

IDCs that are capitalized, but which relate to a nonproductive well may, at the taxpayer's election, be deducted as an ordinary loss in the taxable year in which the nonproductive well is completed.[164] The capitalized IDCs relating to a productive well, on the other hand, may be recovered through depletion, provided such costs are not represented by physical property.[165] Examples of such costs include ground clearing, draining, road making, surveying, geological work, excavation, grading, drilling, shooting, and cleaning of wells. If the capitalized IDCs are represented by physical property, such costs must be recovered through depreciation.[166] Examples of such costs include amounts paid for wages, fuel, repairs, hauling, supplies, etc., used in the installation of casing and equipment and in the construction on the premises of derricks and other physical structures.

The rules described above relating to IDCs incurred in developing oil and gas properties also generally apply to IDCs incurred in developing geothermal deposits. Section 613(e)(3) defines a geothermal deposit as a "geothermal reservoir consisting of natural heat which is stored in rocks or in an acqueous liquid or vapor (whether or not under pressure)." Percentage depletion is allowed with respect to a geothermal deposit and such a deposit is not treated as a gas well for purposes of the limits on percentage depletion provided in §613A.

As stated above, under §263(c), costs that normally would be required to be capitalized are allowed as a current deduction provided the taxpayer so elects. This election provides the taxpayer with a timing benefit, allowing him to deduct immediately the costs incurred rather than deducting them over the life of the well or the equipment.

(b) Definition

The IDCs tax preference is defined as the excess of the excess intangible drilling and development costs for the taxable year over 65% of the taxpayer's net income from oil, gas, and geothermal properties for that taxable year.[167] The IDC tax preference amount, however, is computed separately for oil and gas and geothermal properties.[168]

For purposes of computing the IDC tax preference, excess IDCs are defined as the excess of the amount of intangible drilling and development costs paid or incurred with respect to oil, gas, (or geothermal) properties that the taxpayer elects to expense under §263(c) over the amount that would be allowed for the taxable year if the costs had been capitalized and amortized under one of the methods provided in §57(b).[169] Section 57(b), in turn, provides for: (i) a ratable amortization over a 120-month period beginning with the first month in which the production begins, or (ii) at the election of the taxpayer, any method permitted for determining cost depletion with respect to a well.

The net income from oil and gas (or geothermal) properties is defined as the gross income from all the taxpayer's oil, gas (or geothermal) properties, less any deductions allocable to these properties reduced by the excess intangible drilling and development costs.[170]

Comment: Since deductions specifically allocable to the properties producing gross income are allowed in computing the net income from oil, gas, (or geothermal) properties, deductions allocable to wells that turn out to be nonproductive will not offset gross income derived from productive wells.

The following example illustrates the computation of the IDC preference.

Example: The taxpayer, owning an economic interest in certain oil and gas properties, incurs $50,000 in IDCs during 1984, and elects to take a current deduction for these costs under §263(c). During 1984 the taxpayer derives $40,000 gross income from the property and incurs $15,000 in operating expenses. The taxpayer's IDC tax preference is computed as follows:

1. Calculation of Excess IDCs:	
IDCs currently deducted	$50,000
Less	
Allowed amortization deduction under §57(b)(1) (assuming the production begins in the 7th month of the year).	2,500
Excess IDCs	$47,500
2. Calculation of Net Income:	
Gross Income	$40,000
Less	
Allocable deductions	
IDCs	$50,000
Depletion	$ 6,000
Operating expenses	$15,000
Total Allocable Expenses	$71,000
Less	
Excess IDCs	$47,500
	$23,500
Net Income (GI less EIDCs)	$16,500
3. Calculation of IDC Tax Preference:	
Excess IDCs	$47,500
Less	
65% of Net Income	$10,725
Preference Amount	$36,775

Note, however, that IDCs incurred with respect to nonproductive wells do not give rise to a tax preference item. Under §57(a)(2)(B), such IDCs are disregarded in computing the excess IDCs. Nonproductive wells are those which are plugged and abandoned without having produced oil and gas in commercial quantities for any substantial period of time. Therefore, a plugged and abandoned well may have produced some oil and still be considered nonproductive, depending on the ratio of oil produced to costs of drilling.[171] The IDCs attributable to a nonproductive well may, at the taxpayer's election, be either capitalized or deducted currently as a loss, provided the taxpayer has not elected to deduct the IDCs currently under §263(c).

Consequently, a taxpayer will need to determine at the close of the taxable year, or at least by the time for filing the return, whether a well is productive. If the well is not determined to be nonproductive by the time the return is required to be filed, the IDCs with respect to it will be subject to AMT.[172] The taxpayer may, however, later file an amended return and claim a refund for the amount of minimum tax paid with respect to the well if it subsequently proves to be nonproductive.[173]

(c) Election Under §57(b)(2)

For purposes of computing the excess IDCs, a taxpayer may use either the 120-month period prescribed in §57(b)(1) or elect, under §57(b)(2), to use the cost depletion method. If the taxpayer elects cost depletion, this election must be made within the time prescribed for filing the taxpayer's tax return (including extensions) for the taxable year in which the IDCs are paid or incurred.[174] The cost depletion election must be made for each well separately.[175] Thus, a taxpayer may make the cost depletion election for some of his wells. Additionally, for purposes of computing the excess IDCs, the taxpayer may make the cost depletion election even if he uses some other method for computing his taxable income.[176] In the case of a partnership, the §57(b)(2) election must be made at the partnership level.[177]

In computing the cost depletion pursuant to a §57(b)(2) election, both depletable and depreciable IDCs are taken into account.[178] Depletable IDCs are those costs which are not represented by physical property (*e.g.*, costs incurred in ground clearing, draining, geological work, excavation, grading, etc.). Depreciable IDCs are those costs which are represented by physical property (*e.g.*, wages, fuels, supplies, etc., used in the installation of casing, equipment, and physical structures). The depletable and depreciable IDCs are treated as if capitalized, added to basis, and recovered under Regs. §1.611-2(a) (dealing with the cost depletion method). Note, however, that, in computing cost depletion pursuant to a §57(b)(2) election, only IDCs paid or incurred in the current year are taken into account.[179]

(d) Section 59(e) Election

Under §59(e), a taxpayer may elect to deduct IDCs ratably over a 10-year period beginning with the taxable year in which the IDCs are paid or incurred. If the taxpayer makes an election under §59(e), no preference amount will result from IDCs.[180]

(e) AMT Planning

Capitalization of IDCs under both Regs. §1.612-4 and §59(e) enable a taxpayer to eliminate the tax preference amount. The pros and cons of the two elections discussed below must be examined carefully to make an appropriate choice.

(i) Under the Regs. §1.612-4 election, the capitalized IDCs are recovered through depletion (if the expenditures do not result in physical property) or through depreciation (if the expenditures result in physical property) over the life of the well or equipment. Under §59(e) election, on the other hand, IDCs are amortized ratably over a 10-year period beginning with the taxable year in which the IDCs are paid or incurred. The taxpayer may choose the option that provides the longer or the shorter recovery period, depending upon his situation.

(ii) An election under Regs. §1.612-4 to capitalize IDCs is binding for all subsequent taxable years.[181] Consequently, a taxpayer may not shift between the current deduction method and the capitalization method from year-to-year. The §59(e) election, on the other hand, is not binding on subsequent taxable years. Thus, if a taxpayer made an election under §59(e) for the current year, IDCs paid or incurred in a subsequent taxable year may be deducted under §263(c).

Comment: There is a certain amount of tension between the Regs. §1.612-4 election and the §59(e) election. If a taxpayer makes a Regs. §1.612-4 election, he may not deduct IDCs paid or incurred in a subsequent taxable year under §263(c). If, however, the taxpayer is permitted to make an election under §59(e) with respect to IDCs paid or incurred in a subsequent taxable year, this would enable him to deduct a portion of such costs under §263(c).

(iii) If the taxpayer claims percentage depletion, capitalization of IDCs under Regs. §1.612-4 will not yield any additional deduction. Capitalization of IDCs under §59(e), however, will yield an additional deduction for regular tax purposes.

(iv) An election under Regs. §1.612-4 applies to all IDCs paid or incurred with respect to all properties not only in the current year but also in all subsequent years.[182] An election under §59(e), on the other hand, may be made with respect to any portion of IDCs paid or incurred during the taxable year.[183]

Comment: Since a taxpayer may elect to capitalize any portion of IDCs under §59(e) and deduct the rest under §263(c), §59(e) provides him with a planning tool to maximize the regular tax benefit of current deduction under §263(c) while avoiding AMT liability.

(v) If the IDCs are capitalized and amortized pursuant to a §59(e) election, the deducted expenditures shall, upon a subsequent disposition of the property, be recaptured as ordinary income under §1254. No such recapture, however, is required if the IDCs are capitalized in accordance with Regs. §1.612-4.

Comment: The significance of recapture under §1254 is considerably reduced after 1987 because of the elimination of the tax rate differential between ordinary income and capital gain.

(3) Incentive Stock Options

(a) General

Incentive stock options governed by §422A offer two tax benefits: the possibility of converting ordinary income into capital gain to the extent of the difference between the option price and the fair market value of stock at the time of exercise, and the deferral of recognition of gain until the time of disposition. The significance of the conversion

benefit was reduced considerably for post-1987 years because of the 1986 TRA's elimination of the tax rate differential between ordinary income and capital gain. The regular tax benefit of deferral was also reduced by the imposition of AMT on the deferral amount.

(b) Definition

Upon transfer of a share of stock pursuant to the exercise of an incentive stock option (ISO), the excess of the stock's fair market value at the time of exercise over the option price is an item of tax preference.[184] For purposes of determining the fair market value of a share of stock, any restriction, other than a restriction which by its own terms will never lapse, is disregarded.

Example: Taxpayer, a key executive in a corporation is granted an option in 1986 to purchase a maximum of 10,000 shares for $10 per share. He purchases 10,000 shares in 1987 when the fair market value of the corporation's stock is $15 per share. The preference amount for 1987 is calculated as follows:

Fair Market Value (per share)	
At the Time of Exercise	$15
Less Option Price	$10
Preference Amount (per share)	$ 5

Total Preference Amount — 10,000 × $5 = $50,000

This preference amount will not again be included in AMTI in the year the taxpayer disposes of the stock.[185] This result is achieved by adding the preference amount included in AMTI in the year of exercise to the basis of the stock. Thus, in the above example, the taxpayer's basis in the optioned stock will be $15 per share for purposes of computing gain to be included in AMTI upon ultimate disposition of the stock.

(4) Tax-Exempt Interest

(a) General

The Tax Reform Act of 1986 restructured the Code provisions dealing with tax-exempt bonds, imposed new restrictions and extended many existing restrictions.[186] Sections 103 and 103A of the 1954 Code were reorganized into 11 1986 Code sections: §103 and §§141-150. The Act changed the exempt financing lexicon by substituting the term "private activity bonds" for "industrial development bonds". Interest on a private activity bond is taxable unless the bond is a qualified bond.[187] Qualified bonds, the interest on which is tax-exempt, include:

(i) Qualified Exempt Facility Bonds (§142),

(ii) Qualified Mortgage Revenue Bonds (§143),

(iii) Qualified Small Issue Bonds (§144(a)),

(iv) Qualified Student Loan Bonds (§144(b)),

(v) Qualified Redevelopment Bonds (§144(c)),

(vi) Qualified §501(c)(3) Bonds (§145(a)).

Code §147 contains several restrictions on private activity bonds that previously applied to industrial development bonds. The substantial user requirement, the 120% bond maturity limit, the 25% limit on land acquisition cost, the existing property acquisition rules, the prohibition against use of bond proceeds for skyboxes, airplanes, gambling establishments, etc., and the public approval requirements carryover from the pre-1986 Act law. The 1986 Act extended the 120% bond maturity limit to §501(c)(3) bonds. The prohibition for skyboxes, airplanes, gambling establishments, etc., was extended to all private activity bonds except health facilities owned by §501(c)(3) organizations. Section 147(g), as enacted by the TRA, provides a 2% cap on the amount of proceeds which can be spent for cost of issuance of the bonds.

The registration requirement and federal guaranty prohibition were carried over from pre-TRA law into Code §149. The information reporting requirement was extended to all tax-exempt bonds. Section 149(d) extends the prohibition on advance refunds to all private activity bonds except §501(c)(3) bonds.

Also, under 1986 Code §265(b), banks and other financial institutions may not deduct interest expense allocable to tax-exempt interest on bonds acquired after August 7, 1986.

(b) Definition

Interest on "specified private activity bonds" issued after August 7, 1986, is an item of tax preference.[188] Specified private activity bonds include all "private activity bonds" as defined in §141 of the Code with the following exceptions:

(i) The term "private activity bond" does not include Qualified §501(c)(3) Bonds as defined in Code §145;[189] and

(ii) The term "private activity bond" does not include any refunding bond if the refunded bond (or, in the case of a series of refundings, the original bond) was issued before August 8, 1986.[190] For this purpose, bonds issued before September 1, 1986, which are covered under the Joint Statement on Effective Dates of March 14, 1986, are considered to have been issued before August 8, 1986.[191] The Joint Statement provided generally that interest on bonds satisfying the pre-TRA 1986 definition of governmental bonds (as modified by an expanded security interest test like that adopted under the Senate Amendment) is not a preference if bonds are issued before September 1, 1986.

Thus, interest on Qualified Small Issue Bonds, Qualified Mortgage Revenue Bonds, Qualified Small Issue Bonds, Qualified Student Loan Bonds, and Qualified Redevelopment Bonds, which is exempt from tax for regular tax purposes, is includible in AMTI as an item of tax preference.

In the case of tax-exempt interest dividends paid by a regulated investment company, the shareholders are required to include a portion of such dividends, to be determined under regulations to be prescribed by the Secretary, in AMTI as an item of tax preference.[192]

Finally, note that tax-exempt interest which is required to be included in AMTI under §57(a)(5)(A) may be reduced by allocable interest deductions disallowed under §265(b) for regular tax purposes.

(5) Charitable Contributions of Appreciated Property

(a) General

For income tax purposes, an individual, whether or not he itemizes his deductions, is allowed a charitable contribution deduction from adjusted gross income if he satisfied the requirements of §170 and other relevant Code sections. Generally, a contribution is deductible only if it is made to or for the use of a permissible donee as described in §170(c). In addition, §170(b) provides detailed rules limiting the deduction for charitable contributions. Broadly speaking, an individual donor may be limited in any one year to a deduction not in excess of 20%, 30%, or 50% of his "contribution base," defined by §170(b)(1)(F) as adjusted gross income computed without regard to any net operating loss carryback to the relevant taxable year.

The 50% limit applies to cash and ordinary income property contributions to public charities and private operating foundations (as defined in §4942(j)(3)).[193] The 50% limit also applies to contributions made to a nonoperating foundation provided it: either (i) qualifies as a "pooled fund" foundation,[194] or (ii) redistributes all contributions within a specified time period.[195]

The 30% limit applies to contributions made either to those nonoperating foundations which do not qualify for the 50% limit or, for the use of a charity.[196] The 30% limitation also applies to contributions of capital gains property made to those organizations which qualify for the 50% limitation.[197]

Note: Prior to the Tax Reform Act of 1984, contributions made to nonoperating foundations (other than those which were subject to the 50% limit) were subject to a 20% limit. For contributions made in taxable years ending after July 18, 1984, however, the TRA 1984 increased the limit to 30%.

The 20% limit applies to gifts of capital gain property made to organizations which do not qualify for the 50% limit.[198]

Note: The 50% limit is also an overall limitation which applies to all contributions. For purposes of computing this limit, contributions to public charities and private operating foundations are considered before contributions to nonoperating foundations or contributions for the use of charities are taken into account.[199] Thus, if a taxpayer makes contributions equal to 50% of his contribution base to a public charity in a taxable year, no contributions to a nonoperating foundation would be deductible in that taxable year. Contributions of capital gain property subject to the 30% limit are taken into account after all other charitable contributions (except capital gain property contributions subject to the 20% limit).[200] Contributions of capital gain property which are subject to the 20% limit are taken into account after all other charitable contributions have been considered.[201]

Any charitable contribution which is not deductible in a given taxable year under the limits described above, may be carried forward to the following five taxable years.[202]

The rules that apply to charitable contributions of appreciated property are summarized below.

(i) If the contributed property is ordinary income property (*i.e.,* property that would produce ordinary income if sold), the amount of deduction allowable for the taxable year is computed by applying the 50% or 30% limit to the property's adjusted basis.[203] In other words, the amount that is considered contributed to the charity is equal to the adjusted basis of the property. Examples of ordinary income property include inventory, stock-intrade, works of art created by the donor and other short-term capital assets.

(ii) If the contributed property is capital gain property (*i.e.,* property that would produce long-term capital gain if sold), as a general rule, the 30% or 20% limits applicable to capital gains property are applied to the full fair market value of the property in order to determine the allowable deduction for the taxable year. In other words, the contributions of capital gain property are taken into account at their full fair market value as a general rule. If, however, the contribution is made to a charity which is subject to 30% limit, or if the gift is of tangible personal property put to a use that is unrelated to the purpose or function upon which the donee's exemption is based, the donor must reduce the amount of contribution by 40% of the built-in gain (*i.e.,* the amount by which the fair market value of the property exceeds its adjusted basis).[204]

The taxpayer may also elect to reduce the amount of contribution by 40% of the built-in gain, in which case the 50% limit rather than the 30% limit will apply to his contribution of capital gain property.[205]

(b) Definition

For charitable contributions of "capital gain property," the amount by which the deduction allowable under §170 would be reduced if all "capital gain property" were taken into account at its adjusted basis, is an item of tax preference.[206] As indicated above, "capital gain property" means

[192] §57(a)(5)(B).
[193] §170(b)(1)(A).
[194] §170(b)(1)(E)(iii).
[195] §170(b)(1)(E)(ii).
[196] §170(b)(1)(B).
[197] §170(b)(1)(C)(i).
[198] §170 (B)(1)(D)(i).
[199] §170(b)(1)(B)(ii).
[200] §170(b)(1)(C)(i).
[201] §170(b)(1)(D)(i).
[202] §§170(d)(1), 170(b)(1)(B), 170(b)(1)(C)(ii) and 170(b)(1)(D)(ii).
[203] §170(e)(1)(A).
[204] §170(e)(1)(B). Note, however, that the 40% reduction requirement does not apply to contributions of qualified appreciated stock as provided in §170(e)(5).
[205] §170(b)(1)(C)(iii).
[206] §57(a)(6)(A).

any capital asset (including §1231 assets) the sale of which would result in a long-term capital gain.[207] "Capital gain property," however, does not include any property for which the taxpayer makes an election under §170(b)(1)(C)(iii) to apply the rules of §170(e)(1).[208] Thus, where the taxpayer elects to reduce the amount of contribution by 40% of the built-in gain, the preference does not apply.

In determining the amount of preference for charitable contributions of capital gain property, the following rules apply:

(i) The taxpayer computes the amount by which the charitable deduction would have been reduced by taking into account all capital gain property (including loss property) into account at its adjusted basis. Thus, unrealized gain on appreciated property is offset by unrealized loss on the loss property.

(ii) The amount of preference is determined by disregarding any amount that is carried forward to another year for regular tax purposes.[209] Consequently, if a portion of a charitable contribution deduction is carried forward because it exceeds the applicable limit, the portion so carried forward will not increase the amount of preference until it is allowed as a deduction for regular tax purposes.

(iii) The preference does not apply to carryovers of the deduction with respect to charitable contributions made before August 16, 1986.[210]

Example: A, a calendar year taxpayer, makes a contribution of capital gain property to a church in 1987 which is subject to the 30% limit. At the time of contribution, the fair market value of the property is $50,000 and its adjusted basis is $40,000. For 1987, A's adjusted gross income is $100,000. The amount of allowable deduction for 1987 is, therefore 30% of $100,000, or $30,000. Consequently, for regular tax purposes, A may deduct $30,000 in 1987 and carry over the balance of $20,000 to 1988. To compute the preference amount for 1987, however, the amount of deduction is limited to its adjusted basis. Using a pro rata allocation of adjusted basis rule, the $30,000 charitable contribution deductible in 1987 has an adjusted basis of 30,000 ÷ 50,000 × $40,000 = $24,000. Consequently, the amount of preference for 1987 is $30,000 − $24,000 = $6,000.

(c) AMT Planning

A taxpayer considering a gift of capital gain property to charity may have one or two options available to him to eliminate the amount of tax preference attributable to such a gift. For example, the taxpayer may own "capital gain property" the fair market value of which is less than its adjusted basis. If so, the taxpayer may combine such property with appreciated "capital gain property" in his gift to charity. The built-in loss will offset (wholly or partially) the built-in gain, thus eliminating (wholly or partially) the preference amount. Alternatively, the taxpayer may consider an election under §170(b)(1)(C)(iii) to reduce the built-in gain by 40%. If this election is made, the preference for contributions of "capital gain property" does not apply.

Example: Assume the same facts as in the Example in the preceding section. A makes an election under §170(b)(1)(C)(iii) to reduce the built-in gain by 40%. Thus, for regular tax purposes, the amount of contribution is reduced by 40% of $10,000 ($4,000) to $46,000. As a result of the election, however, A's deduction limit is also increased to (50% of $100,000) = $50,000 in 1987. Consequently, for regular tax purposes, A may deduct the entire $46,000 in 1987 with no carryovers and no tax preference amount. Note that, in addition to eliminating the preference amount, A also gets a significantly larger deduction against regular tax in 1987. All this is at a cost of a $4,000 reduction in the total amount of contribution.

Comment: The advisability of an election under §170(b)(1)(C)(iii) will turn upon the taxpayer's ability to absorb larger deductions against regular taxable income and upon the amount of built-in gain. If the amount of built-in gain is too large, the cost of such an election may not be worth the benefits.

(6) ACRS and Amortization on Property Placed in Service Before 1987

For property placed in service before January 1, 1987 (to which §§56(a)(1) and 56(a)(5) do not apply), the amount computed under §§57(a)(2), 57(a)(3), 57(a)(4) and 57(a)(12), as in effect prior to the enactment of TRA 1986, remains an item of tax preference.[211]

Section 57(a)(2) dealt with the preference amounts with respect to non-ACRS deductions taken on real property.

Under that provision, the excess of accelerated depreciation deductions allowable with respect to each §1250 property for the taxable year over the amount that would be allowable as a deduction for that taxable year if the taxpayer depreciated the property using a straight-line method for each taxable year of the property's useful life, constituted an amount of tax preference.

Section 57(a)(3) dealt with the preference amounts with respect to non-ACRS accelerated depreciations deductions taken on leased personal property. Under that provision, the excess of accelerated depreciation deduction allowable with respect to each §1245 leased property for the taxable year over the amount that would be allowable as a deduction for the taxable year if the taxpayer depreciated the property using a straight-line method for each taxable year of the property's useful life, constituted an amount of tax preference.

Section 57(a)(4) dealt with the preference amounts with respect to amortization of pollution control facilities. Under that provision, the excess of amortization deductions allowable for the taxable year under the 60-month write-off

[207] §170(b)(1)(C)(iv).
[208] §57(a)(6)(B).
[209] House Report at 313.
[210] §701(f)(4).
[211] §57(a)(7).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

election provided by §169 over the amount that would otherwise be allowable as a deduction under §167 or §168 constituted an amount of tax preference.

Section 57(a)(12)(A) dealt with preference amounts relating to ACRS depreciation deductions taken on leased recovery property (other than 19-year real property and low income housing). Under that provision, the excess of the deduction allowed under §168(a) for the taxable year over the deduction that would be allowed if the taxpayer used the straight-line method over a recovery period specified in the following table, constituted an item of tax preference.

Type of Property	*AMT Recovery Period*
3-year Property	5 years
5-year Property	8 years
10-year Property	15 years
15-year Public Utility Property	22 years

Section 57(a)(12)(B) dealt with preference amounts relating to ACRS deductions taken on 19-year real property or low income housing. Under that provision, the excess of ACRS deductions for each 19-year real property on low income housing property allowed under §168(a) for the taxable year over the amount that would be allowed if the taxpayer depreciated the property using the straight-line method over 19 years for real property, and 15 years for low income housing constituted an item of tax preference.

c. Coordination With Certain Limitations

Section 59(h) provides that in computing AMTI of a taxpayer for a taxable year, certain Code limits on the deductibility of losses will be applied by taking §56 adjustments into account and by disregarding any deductions which are items of tax preference under §57.

The limits specified in §59(h) include §465, §704(d) and §1366(d). Section 465 provides that an individual or a C corporation engaged in an activity covered by that section may deduct a loss only to the extent of the aggregate amount with respect to which taxpayer is at risk. Section 704(d) provides that a partner's distributive share of partnership loss shall be allowed only to the extent of the adjusted basis of such partner's interest in the partnership at the end of partnership's taxable year in which the loss occurred. Section 1366(d) provides a similar rule for shareholders of S corporations. Section 59(h) authorizes the Treasury to specify by regulations other Code provisions which are subject to this coordinating rule.

d. Optional 10-Year Write-Off of Certain Adjustments and Preferences

(1) General

With respect to certain capital expenditures for which the Code provides preferential treatment (*i.e.*, a current deduction) and which are designated as items of adjustment or preference under §§56 and 57, respectively, §59(e) provides the taxpayer, if he chooses, an option to elect a capital treatment and eliminate the adjustment or preference amount. Note that the §59(e) election is an added luxury in that all expenditures subject to this election may be deferred or capitalized under other Code provisions. Thus, a taxpayer desiring to eliminate the preference amount may choose between capital treatment under §59(e) and capital treatment under other Code provisions.

If an election is made under §59(e) with respect to an expenditure, the expenditure is capitalized and amortized in accordance with §59(e) for all purposes of the Code, and not just §55 purposes. Accordingly, once an election under §59(e) is made with respect to an expenditure, the expenditure is amortized under §59(e) for both regular tax and AMT purposes and no deduction is allowed under any other Code section.[212] Any amount to which an election under §59(e) applies is not treated as an item of adjustment under §56 or an item of tax preference under §57.[213]

(2) The Election

An election under §59(e) may be made only with respect to "qualified expenditures." "Qualified expenditures" means any amount that would, absent a §59(e) election, be allowable as a deduction in the year paid or incurred under:

(i) Section 173 (relating to circulation expenditures)

(ii) Section 174(a) (relating to research and experimental expenditures)

(iii) Section 263(c) (relating to IDCs)

(iv) Section 616(a) (relating to mining development expenditures), or

(v) Section 617(a) (relating to mining exploration expenditures).[214]

If an election under §59(e) is made with respect to circulation expenditures deductible currently under §173, such expenditures are capitalized and amortized ratably over a three-year period beginning with the taxable year in which they are paid or incurred.[215] On the other hand, if a §59(e) election is made with respect to any other qualified expenditure, the expenditure must be capitalized and amortized ratably over a 10-year period beginning with the taxable year in which the expenditures were paid or incurred.[216]

Section 59(e)(4)(A) provides that an election under §59(e) may be made with respect to any portion of a qualified expenditure. This implies that, if a taxpayer chooses to capitalize only a portion of a qualified expenditure, *e.g.*, circulation expenditures, paid or incurred during a taxable year, the balance may be deducted currently under the applicable Code provision (§173 in the case of circulation expenditures). This creates a tension between §59 and other Code or regulatory provisions which govern the capitalization of qualified expenditures. For example, an election to capitalize circulation expenditures under §173 applies to all such expenditures chargeable to capital account. Similarly, an election to capitalize research and experimental expenditures under §174(b) applies to all

[212] §59(e)(3).
[213] §59(e)(6).
[214] §59(e)(2).
[215] §59(e)(1).
[216] *Id.*

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

research and experimental expenditures (or, if so limited by the taxpayer, to all research and experimental expenditures attributable to a particular project) paid or incurred during the taxable year. The exercise of an option to defer and capitalize the mining exploration costs applies to all such costs paid or incurred during the taxable year. An election under §616(b) to capitalize the mining development costs applies to all such costs paid or incurred during the taxable year on a mine-by-mine basis. Finally, an election to capitalize the IDCs under Regs. §1.612-4 applies to all such costs paid or incurred during the taxable year with respect to all properties. Since §59(e)(3) expressly precludes the application of any other Code section to the amount with respect to which a §59(e) election is made, however, it appears that §59 should override other Code or regulatory provisions which would preclude a current deduction of only a portion of qualified expenditure.

Comment: The fact that a §59(e) election may be made for a portion of a qualified expenditure confers important advantages on the taxpayer. For example, where the taxpayer cannot absorb the full amount of a current deduction, either due to a potential minimum tax liability or some other reason (*e.g.*, expiring net operating loss carryovers), capitalization under the normal Code provisions exacts a penalty: the taxpayer must forego the current deduction and capitalize the entire amount of the expenditure. Section 59(e) offers a superior choice in such a case by permitting the taxpayer to capitalize just the right amount and claim a current deduction for the balance. Also, the §59(e) election may be utilized to defer the right amount of the mining exploration and development expenditures and the IDCs to maximize the percentage depletion deduction by avoiding the impact of the 50% and the 65% taxable income limits of §613(a) and §613A(d)(1) respectively.

(3) Basis Adjustment and Dispositions of Underlying Property

The statute is completely silent as to the basis adjustments required upon the capitalization of qualified expenditures under §59(e). Specifically, when a qualified expenditure is capitalized under §59(e), the question arises: should the basis of the underlying property be increased by the amount of the capitalized expenditure; or does an election under §59(e) create a separate asset with a basis equal to the amount of the capitalized expenditure? A related question involves the tax treatment to be accorded to the unamortized portion of the expenditures capitalized under §59(e) upon a sale, exchange, or other disposition of the underlying property. The answer to this as well as other related questions (*e.g.*, recapture) will, of necessity, depend upon how the basis adjustment question is answered.

Section 1016(a)(23), added to the Code by TRA 1986 provides that a proper adjustment shall be made to the basis of the property for amounts allowed as a deduction under §59(e).[217] It might be inferred from this that, upon making the §59(e) election, the taxpayer is required to add the amount of the capitalized expenditures to the property's basis. After all, if the basis of the property must be reduced for deductions taken under §59(e), it is logical to assume that the property's basis should initially be increased by the amount of the expenditures capitalized under §59(e). Such an inference could be accepted as accurate were it not for the problems caused by §59(e)(3).[218] For example, if the mining development expenditures capitalized under §59(e) are added to the depletable basis of the mining property, the taxpayer would be entitled to recover such expenditures through depletion deductions. Depletion deductions are, however, expressly barred by §59(e)(3) with respect to expenditures capitalized under §59(e). Again, if the mining property in the above example is abandoned as worthless before the capitalized development expenditures have been fully recovered, the taxpayer would be entitled to a loss deduction under §165 with respect to the unamortized portion of the mining development expenditures capitalized under §59(e). A loss deduction under §165 for amounts capitalized under §59(e), however, is similarly barred by §59(e)(3). Finally, §59(e)(3) can also be read to deny a basis adjustment attributable to the unamortized portion of the amounts capitalized under §59(e) for purposes of computing gain (or loss) upon the sale or exchange of the underlying property.[219]

An alternative approach would be to regard a §59(e) election as creating an intangible nontransferable asset separate and apart from the underlying property with a basis equal to the amount of expenditures capitalized under §59(e). The adoption of this approach would eliminate the double deduction problem and the problems encountered at the abandonment or sale of property under the first approach. Where the taxpayer, for example, capitalizes $10,000 in mining exploration costs under §59(e), such capitalization would create an asset separate and apart from the underlying mining property with a basis of $10,000. This asset would be amortized ratably over a 10-year period with the taxpayer getting a $1,000 deduction in each of the 10 years. If the mining property is abandoned before the $10,000 mining exploration costs have been fully amortized, the taxpayer will not face the problem of denial by §59(e)(3) of a loss deduction (under §165) attributable to the unamortized portion because he would simply continue to amortize the unamortized portion until exhausted. Again, if the mining property was sold, the capitalized mining exploration costs would not figure in the computation of gain (or loss) from the property, and any unamortized portion of the costs would continue to be amortized by the taxpayer, thus avoiding the problems posed by §59(e)(3).

This separate asset approach, however, is not without its problems. For example, §59(e)(5) requires a recapture of the IDCs, the mining exploration and the mining development costs when the underlying property is disposed of. In the example above, if the taxpayer disposes of the mining property after three years the question arises: is the taxpayer required to recapture only $3,000 of the mining

[217] The statute mistakenly refers to §59(d). It is expected that this error will be corrected in a forthcoming technical corrections bill.

[218] §59(e)(3) provides that "Except as provided in this subsection, no deduction shall be allowed under any other section for any qualified expenditure to which an election under this subsection applies."

[219] *See* Linden & Meyer, "Changes by TEFRA in Treatment of Oil, Gas and Mining Will Significantly Affect Planning," 57 J. Tax. 355 (1982), which pointed out similar problems created by the predecessor of §59(e), *i.e.*, §58(i).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

exploration costs or must the taxpayer recapture the entire $10,000? If the taxpayer is required to recapture only $3,000, the balance of $7,000 (for which the taxpayer would be taking deductions in future years) would go unrecaptured, a situation which is contrary to the mandate of §59(e)(5). On the other hand, if the entire $10,000 must be recaptured, the taxpayer would be required to recapture deductions which he had not taken, a situation which would require a statutory amendment to be effective. Also, if the taxpayer died before the $10,000 mining exploration costs had been fully amortized, the deductions for the unamortized portion would be lost forever.

A third, and perhaps, the most practical approach would be to clearly and carefully circumscribe, by regulations, the scope of the application of §59(e)(3). As drafted, the sweeping language of that paragraph would seem to deny any deduction for the amounts capitalized under §59(e) under any other Code section, including a deduction at the time of abandonment or sale of the underlying property. This may not have been the legislative intent. The concern behind the enactment of §59(e)(3) may have been to prevent a double deduction for the amounts capitalized under §59(e), *i.e.*, once under §59(e) and again as a depletion, or amortization deduction under other Code provisions (*e.g.*, §§611, 613, etc.) when the capitalized amounts are added to the basis of the underlying property. If this is so, the inference can be drawn that Congress expected the amounts capitalized under §59(e) to be added to the basis of the underlying property. In fact, if the scope of §59(e)(3) is limited so that it does not apply to amounts capitalized under §59(e) upon the sale, exchange, or other disposition of the underlying property, all other pieces of the puzzle (*i.e.*, the initial basis adjustment upon capitalization of qualified expenditures under §59(e), §1016(a)(23) basis adjustment, §59(e)(5) recapture provision, the problem of the unamortized amounts, etc.) fall into place. Under this approach, the amounts capitalized under §59(e) would be added to the basis of the underlying property, but only for purposes of computing gain or loss from a sale, exchange or other disposition of the property. This basis would be adjusted under §1016(a)(23) for all deductions taken under §59(e). If the underlying property were abandoned at a time when the §59(e) amounts had not been fully amortized, the taxpayer would be entitled to a loss deduction under §165 for the unamortized amounts. Similarly, if the underlying property were sold or exchanged, the taxpayer's gain would be reduced by the unamortized portion, and the recapture provisions of §59(e)(5) would apply to the extent the §59(e) amounts had been amortized by the taxpayer. Finally, in the case of a nontaxable transfer of the underlying property (*e.g.*, a §351 exchange), the taxpayer's basis in the property received in exchange (*i.e.*, stock in the transferee corporation in a §351 exchange) would reflect the unamortized portion of the §59(e) amounts, the §59(e) amortization schedule would be extinguished, and the transferee would amortize the inherited §59(e) amounts as part of the inherited basis in the underlying property. To the extent that the taxpayer has amortized §59(e) amounts prior to the transfer, the §59(e)(5) recapture provisions should apply. To effectuate this approach, only two clarifications are needed: (i) that the amounts capitalized under §59(e) are added to the basis of the underlying property, but only for purposes of computing the gain or loss (or the basis of property received in a nontaxable exchange) upon the sale, exchange, or other disposition of the underlying property; and (ii) that §59(e)(3) does not apply when the underlying property is sold, exchanged, or otherwise disposed of.

(4) Time and Manner of Making Election

The statute is silent as to the time and manner of making an election under §59(e). It only states that "an election under this subsection may be revoked only with the consent of the Secretary." [220] In view of this silence, guidance provided by the Service under the predecessor of §59(e), *i.e.*, §58(i), may be relied upon at least until such time as the Service issues revised rules.

Temp. Regs. §5f.0(a)(2)(i)[221] provides that an election under §58(i) may be made no later than the due date of the return for the taxable year (including extensions) for which the election is effective.

Comment: The timing of the election provides a taxpayer with an opportunity to plan for avoiding AMT by capitalizing under §59(e) the right amount of expenditures subject to that subsection and deducting the balance currently.

Temp. Regs. §5f.0(a)(3) provides that an election under §58(i) may be made by attaching a statement to the income tax return for the taxable year for which the election is made. The statement is required to contain the following information:

(i) The name, address, and taxpayer identification number of the electing taxpayer;

(ii) The fact that an election is being made;

(iii) The Code section under which the election is being made;

(iv) The taxable year and the property to which the election applies; and

(v) The information necessary to show that the taxpayer is entitled to make the election.

A partnership makes the §59(e) election separately by each partner with respect to the partner's allocable share of any qualified expenditure. A similar rule applies to S corporations and their shareholders.[222]

(5) Recapture of Amounts Subject to §59(e) Election

Section 1254, as revised by the TRA 1986, provides that, upon the disposition of an interest in a mine, well, or other natural deposit, the taxpayer must recapture as ordinary income the aggregate amount of: (i) expenditures deducted under §263, 616, or 617 with respect to such property which, but for such deduction, would have been included in the adjusted basis of such property; and (ii) the amounts deducted as depletion under §611 which reduced adjusted basis of such property. Of course, the amount of

[220] §59(e)(4)(B).
[221] *See* T.D. 7870 dated January 2, 1983.
[222] §59(e)(4)(C).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

gain recaptured as ordinary income is limited to the amount of gain realized upon the disposition of the property.

Section 59(e)(5)(A) requires that, upon the disposition of any §1254 property, any expenditures allocable to such property which were deducted under §59(e) must be recaptured as ordinary income. Thus, the IDCs and the mining development and exploration costs which are capitalized and amortized pursuant to a §59(e) election must be recaptured as ordinary income when the underlying property is disposed of.

With respect to mining exploration expenditures, §59(e)(5)(B) acts as a back-stop to §59(e)(5)(A). Thus, any mining exploration expenditures capitalized and amortized under §59(e) that are not recaptured as ordinary income under §1254 will be recaptured as ordinary income under §617(d).[223] Section 617(d) provides that, upon the disposition of a mining property, a portion of the mining exploration expenditures deducted currently under §617(a) must be recaptured as ordinary income. The portion required to be recaptured is the lesser of the adjusted mining exploration expenditures or the amount of the gain.

2. Tentative Minimum Tax

The tentative minimum tax in the case of noncorporate taxpayers is computed by multiplying the alternative minimum tax base by 21% and reducing the product by the alternative minimum tax foreign tax credit for the taxable year.[224] The AMT base is obtained by subtracting the exemption amount from AMTI.[225]

a. The Exemption Amount

For taxpayers who file a joint return (or who are surviving spouses[226]) the exemption amount is $40,000.[227] The exemption amount is $30,000 for unmarried individuals who are not surviving spouses.[228] For estates and trusts and married individuals filing separate returns, the exemption amount is $20,000.[229] These exemption amounts, however, are phased out by 25 cents for each $1 once AMTI reaches certain levels.[230] For married individuals filing joint returns and surviving spouses, the phaseout begins when AMTI reaches $150,000.[231] The entire $40,000 exemption amount is phased out when AMTI reaches $310,000. Consequently, for individuals filing joint returns, the AMT base is equal to AMTI, provided AMTI for the taxable year is $310,000 or more.

For unmarried individuals who are not surviving spouses or heads of household, the phaseout of the exemption amount begins when AMTI reaches $112,500.[232] The entire exemption amount of $30,000 is phased out when AMTI for the taxable year reaches $232,500. Thus, for such taxpayers, the AMT base is equal to AMTI if AMTI for the taxable year is $232,500 or more.

For estates, trusts and married individuals filing separate returns, the phase-out begins when AMTI for the taxable year reaches $75,000.[233] The entire exemption amount of $20,000 is phased out when AMTI for the taxable year reaches $155,000. Consequently, for such taxpayers the AMT base equals AMTI provided AMTI for the taxable year is $155,000 or more.

b. Alternative Minimum Tax Foreign Tax Credit

As previously indicated, the only nonrefundable credit allowable against AMT is the foreign tax credit. This result is achieved by reducing the tentative minimum tax (computed by multiplying the AMT base times, 21%) by the AMT foreign tax credit before AMT is compared with regular tax.

(1) General

The United States taxes domestic corporations and individual citizens and resident aliens on their worldwide income. This worldwide taxation may result in double taxation of the foreign income, *i.e.*, once in the country of source and again by the United States. With a view to avoid, or at least mitigate, this potential double taxation of U.S. persons, Congress enacted a dollar-for-dollar credit against U.S. tax for income taxes paid to foreign countries on foreign income. The foreign tax credit provisions are contained in §§901-908 and §960.

Since the basic function of the foreign tax credit is to prevent double taxation of the foreign source income and not to reduce U.S. tax on U.S. source income, §904 provides limits on the foreign tax credit to ensure that the credit is not greater than the U.S. tax attributable to foreign income. The §904 limit is expressed mathematically as follows:

$$\frac{\text{Tentative U.S. Tax} \times \text{Foreign Source Taxable Income}}{\text{Worldwide Taxable Income}}$$

Any foreign taxes disallowed because of the foreign tax credit limit may be carried back two years and forward five under §904(c).

(2) Computation of AMT Foreign Tax Credit

The AMT foreign tax credit is computed by utilizing the regular tax foreign tax credit rules, with the following modifications:

(i) In the formula for computing the §904 limit, tentative AMT is substituted for tentative U.S. tax[234] and foreign source taxable income and worldwide taxable income are computed by making the adjustments provided in §§56 and 58, as well as by adding back the §57 items of tax preference to taxable income.[235]

[223] *See* §§59(e)(5)(B) and 617(d)(5).
[224] §55(b)(1).
[225] §55(b)(1)(A).
[226] For a definition of "surviving spouse" *see* §2(a).
[227] §55(d)(1)(A).
[228] §55(d)(1)(B).
[229] §55(d)(1)(C).
[230] §55(d)(3).
[231] §55(d)(3)(A).
[232] §55(d)(3)(B).
[233] §55(d)(3)(C).
[234] §59(a)(1)(A).
[235] §59(a)(1)(B).

Comment: The allocation of adjustments and preferences to U.S. or foreign source income may change the ratio of foreign source taxable income to worldwide income for AMT foreign tax credit purposes. The AMT foreign tax credit allowable under §904 may, therefore, be more or less than the foreign tax credit allowable under §904 for regular tax purposes. Taxpayers will, therefore, be required to keep track of credit carryovers separately for regular and AMT purposes.

(ii) The amount of AMT foreign tax credit allowable under §904 for the taxable year is subject to another limit: it may not offset more than 90% of tentative minimum tax computed without regard to the foreign tax credit and the alternative minimum tax net operating loss deduction.[236] For example, assume that in 1987, a taxpayer has $10 million in AMTI (without regard to any AMT net operating loss deduction). The taxpayer's tentative minimum tax liability (computed without regard to the AMT foreign tax credit and the NOL deduction) is therefore $2.1 million. Accordingly, the AMT foreign tax credit may not exceed 10% of $2.1 million or $1,890,000. Stated differently, AMT foreign tax credit may not reduce taxpayer's tentative AMT liability (computed without regard to the foreign tax credit and NOL deduction) below 10% of such tax. Thus, in the example above, AMT foreign tax credit may not reduce taxpayer's tentative minimum tax below 10% of $2.1 million or $210,000. The mechanics of the 90% limitation computation are provided in §59(a)(2)(A). It provides that AMT foreign tax credit is limited to the extent tentative minimum tax computed under §55(b)(1)(A) exceeds 10% of such amount determined without regard to NOL deduction. The amount determined under §55(b)(1)(A) is 20% of the AMT base. The application of §59(a)(2)(A) is illustrated by the following example.

Example: Individual A has $10 million AMTI in 1988 and has a $2 million NOL deduction. It computes the 90% limitation under §59(a)(2)(A) as follows:

(i) Tentative AMT Determined under §55(b)(1)(A)

AMTI = $10 million

NOL Deduction = $2 million

AMT Base = $10 million − $2 million = $8 million

Tentative AMT = 21% of $8 million = $1.68 million

(ii) Tentative AMT Under §55(b)(1)(A) Without Regard to NOL Deduction

AMTI = $10 million

Tenative AMT = 21% of $10 million = $2.1 million

10% of Tentative AMT = $210,000

(iii) Excess of (i) over (ii)

Section 59(a)(2)(A) Limitation = $1,680,000−$210,000 = $1,470,000

Thus A's AMT foreign tax credits will be disallowed to the extent they exceed $1.47 million even though its §904 limitation is greater than $1.47 million. Note also that A will have a tentative AMT of at least ($1.68 million − $1.47 million) $210,000 which is 10% of 2.1 million tentative AMT liability computed under §55(b)(1)(A) without regard to NOL deduction.

Comment: The reason for computing the 90% limitation without regard to the AMT net operating loss deduction is to coordinate this limitation with the 90% limitation on AMTI that may be offset by AMT net operating loss deduction in any given year. The 90% limitation on NOL deduction is applied before the 90% limitation on AMT foreign tax credit. Thus, if alternative tax NOL deduction in any taxable year reduces the §55(b)(1)(A) tentative AMT below 10% of such tax (computed without regard to NOL deduction) no AMT foreign tax credit will be allowed that year against the minimum tax. For example, suppose A has an AMTI of $10 million and an NOL deduction of $11 million in 1987. Since the NOL deduction may offset AMTI only up to (90% of $10 million) $9 million, A's tentative minimum tax computed under §55(b)(1)(A) is 21 percent of $1 million) $210,000. Since under the 90% limitation on AMT foreign tax credits of §59(a)(2)(A) the tentative minimum tax may not be reduced below (10% of $2.1 million tentative tax under §55(b)(1)(A) computed without regard to NOL deduction) $210,000, no AMT foreign tax credit will be allowed A in 1987.

Any AMT foreign tax credit that is disallowed either due to the §904 limitation or the 90% limitation discussed above is available as a carryover in accordance with the rules provided in §904(c).[237] The amount of AMT foreign tax credit allowable in the carryover years, however, will again be subject to the two limitations.

3. Net AMT Liability

After a taxpayer has computed his tentative minimum tax for the taxable year it is compared with taxpayer's "regular tax" for the taxable year. If the tentative minimum tax is greater than the regular tax, the taxpayer pays the tentative minimum tax as his final tax liability for the taxable year. Technically, the tentative minimum tax, if greater than the regular tax, has two components, the regular tax and the net alternative minimum tax, with the excess of tentative minimum tax over the regular tax being referred to as the taxpayer's net alternative minimum tax liability.

As will be discussed *infra*, regular tax is not reduced by any nonrefundable credits (other than the foreign tax credit) prior to comparing it with tentative AMT. If, however, the comparison reveals that the regular tax is greater than the tentative AMT, then nonrefundable credits are applied to reduce regular tax but not below the tentative AMT.[238] Any nonrefundable credits that are not used against regular tax due to the tentative AMT limit, are available as carryovers under the normal Code provisions governing the carryovers of such credits.

a. Regular Tax

"Regular tax" as used in the AMT context is a term of art and is not synonymous with the amount of "regular tax" that a taxpayer may owe for taxable year. For pur-

[236] §59(a)(2)(A).

[237] §59(a)(2)(B).

[238] §55(c)(1) and (2).

poses of AMT, "regular tax" means the regular tax liability for the taxable year (as defined in §26(b)), computed without regard to §§402(e) and 47, and reduced by the foreign tax credit allowable under §27(a).[239] Thus, for purposes of comparison with tentative AMT, regular tax undergoes two types of adjustments:

(i) as specified in §§26(b) and 55(c)(1), certain taxes are disregarded, and

(ii) the only nonrefundable credit allowed against regular tax is the foreign tax credit.

(1) Taxes Disregarded

In computing "regular tax" for AMT purposes, taxes imposed under the following Code sections are disregarded:[240]

(i) §47 (pertaining to increases in tax);

(ii) §53 (relating to minimum tax);

(iii) Subsections (m)(5)(B), o(2), or (q) of §72 (relating to additional tax on certain distributions);

(iv) §402(e) (relating to the tax on lump-sum distributions);

(v) §408(f) (relating to additional tax on income from certain retirement accounts);

(vi) §531 (relating to accumulated earnings tax);

(vii) §541 (relating to personal holding company tax);

(viii) §1351(d)(1) (relating to recoveries of foreign expropriation losses);

(ix) §1374 (relating to tax on certain built-in gains of S corporations);

(x) §1375 (relating to tax imposed when passive investment income of S corporation having subchapter C earnings and profits exceeds 25% of gross receipts);

(xi) §7518(g)(6)(A) (relating to nonqualified withdrawals from capital construction funds taxed at highest marginal rate); and

(xii) §§871(a) and 881 (relating to certain income of nonresident aliens and foreign corporations.)

(2) Non Refundable Credits

Regular tax, computed without regard to the taxes described in the preceding section, is reduced by the foreign tax credit before comparing it with tentative AMT. If tentative AMT is greater than the regular tax, the taxpayer pays the tentative AMT and no nonrefundable credit (other than the foreign tax credit) is allowed against the regular tax. If, however, the regular tax (as reduced by the foreign tax credit) is greater than the tentative AMT, other nonrefundable credits are applied to reduce the regular tax, but not below the tentative AMT. Any nonrefundable credits that are not utilized against the regular tax due to the tentative AMT limit may be available as carryovers under the Code provisions dealing with such credit carryovers.

If the regular tax is greater than the tentative AMT, the nonrefundable credits (including the foreign tax credit) are applied against the regular tax in the following order:

(i) The sum of the dependent care credit (§21), the credit for the elderly (§22), and the mortgage interest credit (§25) is applied to reduce regular tax (before reduction by the foreign tax credit), but not below the tentative AMT (unreduced by the foreign tax credit).[241] If the sum of the credits provided in §§21, 22 and 25 is not fully absorbed by the regular tax for the taxable year due to the tentative AMT limit, not only this balance of these credits (except the §25 credit) lost permanently (because of a lack of carryover provision) but, also, no other nonrefundable credit (other than the foreign tax credit) will be allowed against the regular tax in that year. Any §25 credit disallowed due to the tentative AMT limit may be carried forward for three years.

(ii) Whether or not §§21, 22 and 25 credits were absorbed fully by the regular tax under (i) above, the taxpayer may next reduce both the regular tax and the tentative AMT by the foreign tax credit under §27.

(iii) The clinical testing credit (§28) is allowed to reduce the regular tax, but only to the extent the regular tax (as reduced by §§21, 22, 25 and 27 credits) exceeds the tentative AMT.[242] Any §28 credit disallowed under this provision is lost permanently.

(iv) Next, the credit for producing fuel from a nonconventional source (§29) is applied to reduce the regular tax to the extent the regular tax (as reduced by §§21, 22, 25, 27, 28 credits) exceeds the tentative AMT.[243] Any §29 credit disallowed under this limit is lost permanently.

(v) Next, the general business credit (*i.e.* the sum of the investment credit determined under §46(a), the targeted jobs credit determined under §51(a), the alcohol fuels credit determined under §40(a), the research credit determined under §41(a), and the low income housing credit determined under §42(a)) is applied against the regular tax. The amount of this credit allowable in any taxable year, however, is limited to the lesser of:

(i) the allowable portion of the taxpayer's net regular tax liability, or

(ii) the excess of the taxpayer's net regular tax liability over the tentative AMT.[244]

"Net regular tax liability" means regular tax reduced by the §§21, 22, 25, 27, 28 and 29 credits.[245] The allowable portion of net regular tax liability means $25,000, plus 75% of so much of net regular tax liability for the taxable year which exceeds $25,000.[246] Any general business credit disallowed under the limit discussed above is available as a carryover (*i.e.* three years back and 15 forward).[247]

[239] §55(c)(1).
[240] §§26(b) and 55(c)(1).
[241] §26(a).
[242] §28(d)(2).

[245] §38(c)(2).
[246] *Id.*
[247] §39(a).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(vi) Finally, the 1986 TRA-enacted minimum tax credit (§53) is applied against the regular tax, but only to the extent the regular tax (as reduced by the §§21, 22, 25, 27, 28. 29 credits and the general business credit) exceeds the tentative AMT for the taxable year.[248] Note that the minimum tax credit is cumulative, *i.e.*, it includes the minimum tax credits disallowed in prior years under the limit discussed above.[249]

C. Collateral Rules

1. Minimum Tax Credit

a. General

The philosophical basis of the add-on minimum tax, which applied to all taxpayers prior to the Tax Equity and Fiscal Responsibility Act of 1982 and to corporate taxpayers only prior to the TRA 1986, was that tax preferences and tax incentives were bad *per se* and therefore, taxpayers using them should pay a tax thereon. The philosophical basis of the alternative minimum tax (which now applies to all taxpayers) on the other hand, is that tax preferences and tax incentives are not evil *per se*, but a taxpayer should not be permitted to use them to reduce his tax liability below a minimum standard. Prior to the 1986 Act, this minimum standard was applied on an annual basis: a taxpayer paid the minimum tax if, in any taxable year, the use of tax preferences or tax incentives reduced the regular tax liability below the minimum standard. The minimum standard was abandoned in other years in which the regular tax was higher than the minimum standard, with no offsetting adjustments or credits for the minimum tax paid in a prior year. This application of the minimum standard on an annual basis often resulted in inequities because, due to the imposition of the AMT, taxpayers did not derive the amount of regular tax benefit from items of tax preference which they would have obtained if those items had not received preferential treatment in the first place. To eliminate this inequity, the drafters of the 1986 Act made two important changes to the AMT structure: they introduced (i) the adjustment mechanism (§§56 and 58), and (ii) the minimum tax credit of §53. It was seen earlier how the adjustment mechanism provides compensating adjustments to AMTI in subsequent years. The minimum tax credit similarly compensates the taxpayer for the loss of regular tax benefit in an AMT year by reducing the regular tax in subsequent years when the taxpayer is not in an AMT position.

b. Operative Rules

When a taxpayer is subject to minimum tax liability in any taxable year, the amount of adjusted net AMT paid in that year is available as a credit against his regular tax liability in future years. This credit, however, will not reduce the regular tax below the tentative AMT in any year. Note that the entire net AMT liability for a taxable year may not be available as a credit. Under §53(b), if a portion of net AMT liability for a taxable year is attributable to the itemized deductions adjustment, the depletion preference, the exempt interest preference, or to the preference for charitable contributions of appreciated property, such portion is not available as a credit.[250] Thus, in an AMT year, a taxpayer must make two distinct AMT computations: one taking into account all the items of adjustment (within the meaning of §§56 and 58) and preferences (within the meaning of §57), and another as if the only item of adjustment was the itemized deductions and the only items of preference were the depletion deduction, the exempt interest exclusion and the deduction for charitable contributions of appreciated property. The amount of net AMT available as a credit is then obtained by subtracting the result of the second computation from the result of the first.

In any taxable year, the amount of minimum tax credit that may be applied to reduce regular tax is limited, like all other nonrefundable credits, to the excess of the regular tax (as reduced by all other nonrefundable credits) over tentative AMT.[251] Thus, the minimum tax credit is available only after all other nonrefundable credits have been utilized and there remains an excess of the regular tax over tentative AMT. The amount of minimum tax credit that is not utilized against regular tax because of the tentative AMT limitation is carried over to the following taxable year, is aggregated, and becomes part of the minimum tax credit for that year.[252] The minimum tax credit may be carried forward indefinitely; however, it may not be carried back.[253]

2. Trusts and Estates

Under the AMT, as revised by the TRA 1986, the items of preferences and adjustments are no longer required to be apportioned between trusts and estates and their beneficiaries. Under §59(c), AMTI of a trust, estate or its beneficiaries is determined by computing the distributable net income (DNI) on an AMT basis to the extent it is not inconsistent with §643(a).[254] Thus, for purposes of AMTI, a trust or an estate will compute its DNI by taking into account the items of adjustments under §56 and 58, and the items of tax preference under §57, except to the extent it is inconsistent with the modifications provided in §643(a). For example, no exemption amount will be allowed in computing DNI for AMTI purposes.

3. Apportionment of Differently Treated Items

In the case of a regulated investment company or a real estate investment trust, items of tax preference and other items (*e.g.* items of adjustment, credits), which are treated differently for regular tax purposes, are required to be apportioned between such company or trust and its shareholders or holders of beneficial interest in accordance with regulations to be prescribed.[255]

In the case of a common trust fund, the differently treated items are required to be apportioned among the participants on a *pro rata* basis.[256]

4. Tax Benefit Rule

The Conference Report states that "Since the regular and minimum taxes generally are computed separately,

[248] §53(c).
[249] §53(b).
[250] §53(d)(1)(B).
[251] §53(c).
[252] §53(b).
[253] *Id.*
[254] Conference Report, p. II-263.
[255] §59(d)(1)(A).
[256] §59(d)(1)(B).

relief from the minimum tax under the tax benefit rule is not appropriate solely by reason of the fact that a taxpayer has received no benefit under the regular tax with respect to a particular item." [257] The statute, nevertheless, leaves it within the secretary's discretion to provide, by regulations, for the adjustment of differently treated items where the tax treatment accorded such items does not result in a reduction of the taxpayer's regular tax for any taxable year.[258]

[257] Conference Report, p. II-262.
[258] §59(g).

5. Short Taxable Year

Section 443(d) provides rules for dealing with short taxable years for AMT purposes. Essentially, §443(d) requires annualization of both the AMTI and the tentative minimum tax to determine the taxpayer's minimum tax liability for a short taxable year. The annualization is accomplished by multiplying the AMTI for the short period by 12 and dividing it by the number of months in the short taxable year. The tentative minimum tax is similarly annualized.

Chapter 33

ALTERNATIVE MINIMUM TAX FOR CORPORATE TAXPAYERS

Javed A. Khokhar, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The Tax Reform Act of 1986 imposed, for the first time in the history of minimum tax, an alternative minimum tax on corporate taxpayers. This tax replaced the add-on minimum tax to which corporate taxpayers were subject before the Act. The revised alternative minimum tax (AMT) imposed on corporations is similar to the AMT imposed on individual taxpayers. The following summary of the history of the minimum tax is intended to help put the 1986 Act changes in perspective.

A. The Tax Reform Act of 1969

The minimum tax stems from tax reform studies first undertaken by the Treasury Department during the Johnson administration. The Treasury proposals [1] evidenced a concern that the tax laws permitted some individuals with very large incomes to pay little or no tax, while other individuals with far less income were required to pay a higher percentage of their income in tax, and persons with low and modest incomes paid a significant share of their income in tax. It was felt that this undermining of the progressive rate structure and unfair allocation of the tax burden was caused by the existence of a favored tax status afforded certain types of income.

The Treasury proposals isolated four tax preferences that it felt contributed most significantly to this disparity in treatment among individuals (corporations were not subject to these proposals). These were the §1202 net long-term capital gains exclusion (with the alternative of taxing the entire gain at a 25% rate), tax-exempt interest received on state and local government bonds, the exclusion resulting from percentage depletion in excess of the capital invested in the ownership of minerals or other natural resources, and the appreciation element in charitable gifts of appreciated property to the extent deductible under §170.

Treasury proposed a graduated minimum tax rate (7-35%) to be applied to an expanded income base. The income base was to consist of taxable income plus the above mentioned preferences. If this tax was higher than the tax computed under the normal rates, it became the taxpayer's final tax liability.

In computing the minimum tax base, the individual was to be allowed all his itemized deductions or a special $10,000 standard deduction if more advantageous. The proposals did not stop there, however. They also introduced a concept called "allocation of deductions." This approach required an individual to allocate his non-business expense deductions between taxable and exempt income, and allowed such deductions only to the extent allocable to taxable income. This concept generally was aimed at preventing use of preference-related deductions against otherwise taxable income.

The Treasury studies recommended that certain individual non-business itemized deductions [2] (that is, most itemized deductions) be allocated between income and preference income, with only the part allocable to taxable income being permitted as deductions in computing tax. Here, as in the minimum tax computation, relief was provided for taxpayers with minor amounts of preferences: an individual with $5,000 or less of preferences was not subject to the allocation.

The Treasury studies served as the basis for the subsequent submission of proposals to Congress by the Nixon Administration and the ultimate enactment of an add-on [3] minimum tax by the Tax Reform Act of 1969 (P.L. 91-172).

The 1969 TRA added Code §§56, 57, and 58.[4] Under these provisions, effective for taxable years ending after 1969, both individuals and corporations were subjected to a minimum tax which applied in addition to the regular tax. The minimum tax was calculated by applying a 10% rate to the taxpayer's minimum tax base. The minimum tax base was computed by adding to the regular tax base certain tax preferences and subtracting the regular federal income taxes paid by the taxpayer and an exemption amount of $30,000. Spouses who filed separate returns, where each spouse had tax preferences, were required to split the $30,000 exemption amount.

The tax preference items included in the minimum tax base by the 1969 TRA were:

(1) Excess investment interest. This was the excess of investment interest expense over net investment income.

[1] Treasury Tax Reform Studies and Proposals (Part 2) pp. 132 and 142 (1969).

[2] The nonbusiness deductions to be so allocated were interest, taxes, casualty losses, charitable contributions, medical expenses, and cooperative housing expenses.

[3] An add-on minimum tax is a tax which applies in addition to taxpayer's regular tax liability.

[4] Unless otherwise indicated, all section references herein are to the Internal Revenue Code of 1986.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The preference applied only to individuals, subchapter S corporations, and personal holding companies, and then only until 1972.

(2) Accelerated depreciation on personal property subject to a net lease.

(3) Accelerated depreciation on real property.

(4) Amortization of rehabilitation expenditures.

(5) Amortization of certified pollution control facilities.

(6) Amortization of railroad rolling stock.

(7) The bargain element in certain tax-favored stock options.

(8) Bad debt deductions of financial institutions. This basically was a corporate preference item.

(9) The excess of depletion deductions taken for the year over the cost of the property reduced for depletion taken in prior years.

(10) Capital gains. For corporations, this was the excess of net long-term capital gain over net short-term capital loss multiplied by a ratio, the denominator of which was the regular corporate tax rate (*i.e.*, 48%) and the numerator of which was the regular corporate rate minus the capital gains rate applicable to corporations.[5]

Because the minimum tax was not achieving its purpose, considerable pressure was put on Congress to tighten it to insure that the original objective was achieved. A considerable tightening of the minimum tax rules took place in the Tax Reform Act of 1976.

B. The Tax Reform Act of 1976

The Tax Reform Act of 1976 (P.L. 94-455) strengthened the minimum tax by increasing the effective tax rate and adding some preference items.

The minimum tax rate was increased from 10% to 15%. For corporate taxpayers the exemption amount was reduced to the greater of: (i) $10,000, or (ii) the full amount of regular tax.[6]

Although a number of items of tax preference were added to the minimum tax base for noncorporate taxpayers, the minimum tax base for corporations remained unchanged. The items of tax preference for noncorporate taxpayers added by the 1976 TRA included:

(1) Excess itemized deductions. This was the taxpayer's itemized deductions (other than deductions for medical expenses and casualty losses) in excess of 60% of adjusted gross income (reduced by the deductions for medical expenses and casualty losses).

(2) Intangible drilling costs. The excess of deductible intangible drilling costs paid or incurred in connection with productive oil and gas wells over the amount that would have been deductible if such costs had been capitalized and either amortized over a 10-year period or deducted over the lives of the wells as cost depletion.

(3) Accelerated depreciation on personal property. The tax preference item for accelerated depreciation on personal property subject to a net lease was expanded to cover all leased personal property.

The 1976 TRA changes were generally effective for taxable years beginning after 1975.

C. Revenue Act of 1978

The Revenue Act of 1978 (P.L. 95-600) restructured the minimum tax provisions applicable to noncorporate taxpayers for taxable years beginning after 1978. The add-on minimum tax, as in effect in 1978, no longer applied to the capital gains and the excess itemized deductions preference items. These two items instead formed part of a revised alternative minimum tax which took effect in taxable years beginning after 1978. Thus, for 1979 and later years, noncorporate taxpayers were subject to two distinct types of minimum tax: under §56, they were liable for an add-on minimum tax, and under §55 they were liable for an alternative minimum tax.[7]

D. History of the Alternative Minimum Tax (AMT)

1. AMT Under the Revenue Act of 1978

The Revenue Act of 1978 added Code §55. Section 55 imposed an alternative minimum tax on noncorporate[8] taxpayers' "alternative minimum taxable income" to the extent it produced a higher tax than the taxpayers' regular tax liability (as increased by the §56 add-on minimum tax). "Alternative minimum taxable income" was determined by adding back to the taxpayer's taxable income the preference items for the adjusted itemized deductions and the capital gains deduction for the taxable year.[9]

Note: In computing "alternative minimum taxable income," amounts otherwise included in income pursuant to §86 (as a result of the income tax credit for alcohol fuels allowable in the prior taxable year) or §667 (as a result of any accumulation distributions from a trust) were excluded.[10]

An individual taxpayer's preference for adjusted itemized deductions was equal to the taxpayer's itemized deductions (other than the deductions for medical expenses, casualty losses, state, local or foreign taxes, and estate taxes) in excess of 60% of adjusted gross income (reduced by the deductions for medical expenses, casualty losses, state, local, or foreign taxes, and estate taxes).[11] For estates and trusts, however, certain additional adjustments were

[5] In the case of noncorporate taxpayers, this preference was equal to one-half of net long-term capital gain to the extent it exceeded net short-term capital loss.

[6] For noncorporate taxpayers, the exemption amount was reduced from $30,000 plus regular income taxes to the greater of: (i) $10,000, or (ii) one-half of the regular income tax for the year.

[7] For a summary of the add-on minimum tax applicable to noncorporate taxpayers under the 1978 Act, *see* chapter 32, *supra*.

[8] The alternative minimum tax enacted by the Tax Reform Act of 1978 did not apply to corporate taxpayers.

[9] Both the adjusted itemized deductions and the capital gains deduction preferences were excluded from treatment as items of tax preference for purposes of the §56 add-on minimum tax as applied to noncorporate taxpayers.

[10] *See* §55(b)(1), as in effect before TEFRA (P.L. 97-248).

[11] *See* pre-TEFRA §57(b)(1).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

necessary to arrive at the preference amount for adjusted itemized deductions.[12] For individuals who did not itemize deductions, the zero bracket amount was treated as the deduction allowed.[13]

The alternative minimum tax was imposed according to the following rate table:

Alternative Minimum Taxable Income	*Total Tax*
Under $20,000	0
$20,000—$60,000	10%
$60,000—$100,000	$4,000 plus 20% of the excess over $60,000
Over $100,000	$12,000 plus 25% of the excess over $100,000

For taxable years beginning after 1981, the Economic Recovery Tax Act of 1981 (P.L. 97-34) reduced the top alternative minimum tax rate to 20% on all alternative minimum taxable income exceeding $60,000.

For all practical purposes, the amount calculated under the above rate schedule represented the taxpayer's total tax liability (provided it exceeded the "regular tax" for the taxable year). Technically, however, the alternative minimum tax was equal to the gross alternative minimum tax calculated under the above schedule, minus the "regular tax" for the taxable year.

The term "regular tax" encompassed all taxes imposed by Chapter 1 (including §56 add-on minimum tax) for the taxable year other than: (i) the §72(m)(5)(B) penalty tax on premature distributions from HR-10 plans; (ii) the §402(e) tax on lump-sum distributions from tax-qualified retirement plans; (iii) the §408(f) tax on premature distributions from individual retirement accounts; (iv) the §409(c) tax on early redemption of retirement bonds; and (v) the §667(b) tax on accumulated distributions from trusts — reduced by the sum of nonrefundable credits.[14]

Certain nonrefundable credits (other than the foreign tax credit) were allowable against the alternative minimum tax, but only to the extent such tax was not attributable to the net capital gain or the adjusted itemized deductions.[15] In addition, the investment tax credit, the WIN credit, and the targeted jobs credit were allowable against the alternative minimum tax only to the extent such credits were attributable to an active trade or business.[16] Any disallowed credits, however, increased the amount allowed as a carry-over. The foreign tax credit was allowed in full against the alternative minimum tax. In general, the foreign tax credit was computed under the regular foreign tax credit rules of §§901-908. The foreign tax credit limitation of §904(a), however, was computed separately for purposes of the alternative minimum tax. Consequently, the amount of foreign tax credit allowed against the alternative minimum tax was limited to the same proportion of the gross alternative minimum tax as the taxpayer's alternative minimum taxable income from foreign sources bore to his entire minimum taxable income from worldwide sources.[17]

2. *AMT Under TEFRA*

Expressing its dissatisfaction with the way wealthy individuals continued to avoid paying any taxes through the use of exclusions, deductions, and credits, the Congress, in enacting TEFRA (P.L. 97-248), once again revised the minimum tax rules applicable to noncorporate taxpayers.

Effective for taxable years beginning after 1982, TEFRA repealed the §56 add-on minimum tax (as it applied to noncorporate taxpayers) and the §55 alternative minimum tax (as in effect prior to TEFRA) and instead enacted a revised and expanded alternative minimum tax for noncorporate taxpayers.[18]

The Senate Finance Committee Report on H.R. 4961 noted:[19]

> "The Committee has amended the present minimum tax provisions applying to individuals with one overriding objective: no taxpayer with substantial economic income should be able to avoid all tax liability by using exclusions, deductions and credits. Although these provisions provide incentives for worthy goals, they become counter-productive when individuals are allowed to use them to avoid virtually all tax liability. The ability of high-income individuals to pay little or no tax undermines respect for the entire tax system and, thus, for the incentive provisions themselves. Therefore, the Committee has provided an alternative minimum tax which is intended to insure that, when an individual's ability to pay taxes is measured by a broad-based concept of income, a measure which can be reduced by only a few of the incentive provisions, tax liability is at least a minimum percentage of that broad measure. The only deductions allowed, other than costs of producing income, are for important personal or unavoidable expenditures (housing interest, medical expenses and casualty losses) or for charitable contributions, the deduction of which already is limited to a percentage of adjusted gross income.
>
> The Committee's changes in the minimum tax also simplify the taxpayer's computations, since the present law add-on minimum tax is repealed. This change actually provides tax reductions for many middle-income taxpayers who pay a minimum tax on some preference income but also have substantial amounts of non-preference income. By adding all preferences into the base of the alternative minimum tax and focusing the minimum tax on high income individuals, the Committee's provision increases tax liability only for income classes of taxpayers with over $100,000 of income."

3. AMT Under the Tax Reform Act of 1984

The Tax Reform Act of 1984 (P.L. 98-369) made certain technical, certain not-so-technical, and certain clarifying amendments to §§55 and 57. In addition, the amendments made by the Act elsewhere (*e.g.*, renumbering and simplification of tax credits, extension of the ACRS recovery period for real estate, etc.) necessitated conforming amendments to the rules governing the computation of the alternative minimum tax.

4. Alternative Minimum Tax Before the Tax Reform Act of 1986 [20]

For taxable years beginning before 1987, §55 imposed on individuals, estates, and trusts, an alternative minimum tax equal to the excess of the gross alternative minimum tax (or "tentative alternative minimum tax") over the regular tax for the taxable year. Before comparing the gross (or tentative) alternative minimum tax, certain adjustments were made to the "regular tax" computed under the normal Code rules: (i) taxes imposed by §§72(m)(5)(B), 72(q), 402(e), 408(f), 409(c), and 667(b) were disregarded; and (ii) the "regular tax" was reduced by credits allowable under Subparts A, B, and D of Part IV of subchapter A.

The gross alternative minimum tax was determined by applying a flat 20% rate to the taxpayer's "alternative minimum taxable income," less the exemption amount specified in §55(f)(1).

Conceptually, the determination of "alternative minimum taxable income" was a two-step process: alternative minimum tax adjusted gross income was computed by using regular tax adjusted gross income as the starting point. Alternative minimum tax adjusted gross income was then reduced by certain specified itemized deductions to arrive at alternative minimum taxable income.

Alternative minimum tax adjusted gross income was obtained by making the following adjustments to regular tax adjusted gross income:

(1) Any amount included in gross income under §87 was excluded;

(2) Any amount included in gross income under §667 was excluded;

(3) The regular tax net operating loss deduction was replaced by the alternative minimum tax net operating loss deduction as defined in §55(d); and

(4) The sum of the items of tax preference deductible in arriving at adjusted gross income was added back.

The items of tax preference required to be added back were set forth in §57(a) and included the following:

(1) The Exclusion for Dividends. Dividends received by individuals from certain domestic corporations and excluded from gross income under §116 of the Code.

(2) ACRS Deductions. For recovery property subject to a lease (other than 19-year real property and low income housing), the excess of the ACRS deduction over the amount that would have been allowed as a deduction had the property been depreciated using a specified longer recovery period under the straight-line method. For 19-year real property, the amount of tax preference was the excess of the ACRS deduction over the amount that would have been allowed had the property been depreciated under the straight-line method.

(3) Accelerated Depreciation. For real property and leased personal property, which was placed in service before 1981 or which was excluded from the application of ACRS, the excess of any allowance for exhaustion, wear and tear, obsolescence, or amortization over the amount that would have been allowable had the taxpayer used the straight-line method for each year of the property's useful life.

(4) Amortization of Pollution Control Facilities. The excess of amortization deductions allowable for the year under the 60-month write-off election of §169 for "certified pollution control facilities" over the amount that would otherwise have been allowable as a depreciation deduction under §167.

(5) Mining Exploration and Development Costs. The excess of the deduction claimed for mining exploration and development costs under §616(a) or §617 over the amount that would have been deductible had such costs been capitalized and amortized over a 10-year period.

(6) Circulation and Research and Development Costs. The preference amount for circulation expenditures was equal to the excess of the allowable deduction under §173 for the taxable year over the amount that would have been allowable had the expenditures been capitalized and amortized over a three-year period. Similarly, the amount of tax preference for research and development costs was the excess of the allowable deduction under §174 for the taxable year over the amount that would have been allowable had the costs been capitalized and amortized over a 10-year period.

(7) Depletion. The excess of the depletion deduction allowable over the property's adjusted basis at the end of the year, disregarding the current year's depletion.

(8) Capital Gains. For individual taxpayers, the net capital gain deduction as determined under former §1202.

(9) Incentive Stock Options. The tax preference for incentive stock options was the excess of the fair market value of a share of stock transferred to the taxpayer at the time of option exercise over the option price .

Once AMT adjusted gross income had been obtained, alternative minimum taxable income (AMTI) was computed by deducting the alternative tax itemized deductions from AMT adjusted gross income. The alternative tax itemized deductions included: (i) casualty and wagering losses under §§165(c)(3) and 165(d); (ii) medical expenses under §213 (as modified by §55(e)(7); (iii) charitable contributions under §170; (iv) qualified interest as defined in §55(e)(3); and (v) estate taxes under §691(c).

Alternative minimum taxable income was then reduced by the exemption amount to arrive at the minimum tax base. The exemption amount was: (i) $40,000 for a joint

[20] All references in this section are to Code sections as they existed before the enactment of the Tax Reform Act of 1986.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

return, (ii) $30,000 for a single return, and (iii) $20,000 for a married individual filing a separate return.

The gross (or "tentative") alternative minimum tax was computed by applying a flat 20% rate to the alternative minimum tax base. Gross alternative minimum tax was then reduced by refundable credits and the foreign tax credit. No nonrefundable tax credits, other than the foreign tax credit, were allowed against the minimum tax. The gross alternative minimum tax (net of credits) was then compared to the regular tax (net of credits). The taxpayer was required to pay the minimum tax if it exceeded the regular tax. Since nonrefundable credits were not allowed against the minimum tax, the taxpayer was allowed a credit carry-over to the extent the taxpayer did not derive a tax benefit from such credits due to the imposition of the minimum tax.

E. Corporate Add-On Minimum Tax Prior to the TRA 1986

Prior to the Tax Reform Act of 1986, corporations were subject to an add-on minimum tax. In addition to the regular tax, §56 [21] imposed on corporate taxpayers a minimum tax equal to 15% of the corporate minimum tax base.

1. Corporate Minimum Tax Base

The corporate minimum tax base was equal to the sum of corporate tax preferences less $10,000 or the regular corporate tax (as determined under §56(c)) whichever was greater.

a. Corporate Tax Preferences

For C corporations the items of tax preference included: (1) accelerated depreciation of real property, (2) amortization of pollution control facilities, (3) bad debt reserves for financial institutions, (4) depletion, and (5) capital gains.

The amount of all the items of tax preference referred to above (except accelerated depreciation of real property), as determined under §57(a), was modified by §57(b).

The §57(b) modification was necessitated by §291, which mandated a 15-20% cutback in certain corporate preferences. Section 291, when first enacted by the TEFRA, provided for a 15% reduction in certain corporate preferences, including the amount not subject to ordinary income recapture upon the sale of §1250 property, the depletion deduction for iron ore and coal, the bad debt reserve deduction, and the amortization deduction for pollution control facilities. The modification of these preferences was effective for taxable years ending after 1982, except for the depletion deduction, which was effective for taxable years beginning after 1983. To avoid the double tax impact of the cutback, TEFRA amended §57(b) to provide for a corresponding reduction in the amount of the affected tax preferences that entered the corporate minimum tax base. The Tax Reform Act of 1984 amended §291 to increase the cutback of certain corporate preferences from 15% to 20%. The affected items included the amount not subject to ordinary income recapture upon the sale of §1250 property, the bad debt reserve deduction, and amortization of certified pollution control facilities. Again, corresponding amendments to §57(b) were made to reflect the increase in the §291 cutback. The amendments made by the 1984 TRA applied generally to taxable years beginning after 1984.

(1) Accelerated Depreciation on Real Property

(a) ACRS Deductions

In the case of 19-year real property, the preference amount was the ACRS deduction for the taxable year, less the amount that would have been allowable as a deduction for the taxable year had the property been depreciated using a straight-line method over 19 years. For low-income housing, the preference amount was the ACRS deduction for the taxable year, less the amount that would have been allowable as a deduction for the taxable year had the property been depreciated using a straight-line method over 15 years. §57(a)(12)(B).

Note: Prior to the passage of P.L. 99-121, the ACRS recovery period for real property was 18 years. In general, however, for property placed in service after May 8, 1985, P.L. 99-121 increased the recovery period to 19 years.

(b) Non-ACRS Depreciation Deductions

Accelerated depreciation on real property not governed by §168 continued to be a tax preference item. Section 57(a)(2) provided that the amount of tax preference for each item of §1250 property was the amount of the deduction allowable for the taxable year for exhaustion, wear and tear, obsolescence, or amortization, less the amount which would have been allowed had the taxpayer depreciated the property using the straight-line method for each year of its useful life (determined without regard to §167(k)).

(2) Amortization of Certified Pollution Control Facilities

Under §57(b)(1)(A), the corporate minimum tax base included 59-5/6% of the amount computed under §57(a)(4). Under §57(a)(4), the excess of amortization allowable for the taxable year under the 60-month write-off election of §169 for certified pollution control facilities over what would otherwise be allowable as a depreciation deduction under §167 was treated as an item of tax preference.

(3) Bad Debt Reserve Deduction for Financial Institutions

The corporate minimum tax base included 59-5/6% of the amount computed under §57(a)(7).[22] Section 57(a)(7) provided that, in the case of a financial institution to which §585 or §593 applied, this preference was the amount by which the allowable deduction for an addition to its bad debt reserve exceeded the amount that would have been allowable had the institution maintained its bad debt reserve for all taxable years on the basis of actual experience.

The amount which would have been allowable had the institution maintained its bad debt reserve on the basis of actual experience was the amount determined under §585(b)(3)(A) and the regulations thereunder.[23]

[21] All references in this section are to the Internal Revenue Code of 1954 prior to the amendments made by the Tax Reform Act of 1986.

[22] §57(b)(1)(A).

[23] Regs. §1.57-1(g)(14).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(4) Depletion Deduction

The corporate minimum tax base included the amount computed under §57(a)(8). The amount, however, was reduced to 71.6% of the amount computed under §57(a)(8) in the case of depletion for iron ore and coal.[24] Under §57(a)(8), the excess of the depletion deduction allowable over the property's adjusted basis at the end of the year, disregarding the current year depletion deduction, was an item of tax preference subject to the minimum tax. The excess was computed on each separate "property" as defined for depletion purposes under §614. Accordingly, basis in one property did not reduce excess depletion in connection with another property.

(5) Capital Gains

A corporation which had a net capital gain in a particular taxable year could choose to compute its tax liability under the alternative tax provisions of §1201, provided §1201 produced a tax liability lower than the tax rates of §11(b). The alternative tax was the sum of: (i) tax computed on the ordinary income portion of the taxpayer's income for the taxable year at regular tax rates of §11(b), and (ii) tax computed on the net capital gain for the taxable year at a flat 28% rate.

If a corporation computed its tax liability for a taxable year under §1201, its capital gain preference was computed under §57(a)(9)(B) by multiplying the net capital gain by a fraction. The numerator of this fraction was the differential between the top tax rate specified in §11(b) and 28% (the rate specified in §1201(a)). The denominator was the top corporate tax rate. In view of the cutback in the amount treated as capital gain upon the sale of §1250 property under §291, however, only 59-5/6% of the gain derived upon the sale of §1250 property was taken into account for purposes of determining the capital gain preference under §57(a)(9)(B).

For a corporation to which §1201 did not apply, the capital gain preference was to be computed in accordance with the regulations.[25] Such regulations, were never issued.

b. Additional Preferences for Personal Holding Companies

In addition to the preferences described in the preceding section, a personal holding company also included the following items of tax preference in its minimum tax base:

(1) accelerated depreciation on leased personal (or recovery) property,

(2) mining exploration and development costs,

(3) circulation and research and experimental expenditures, and

(4) intangible drilling costs.

(1) Accelerated Depreciation on Leased Personal Property

(a) ACRS Deductions

For leased recovery property (other than 19-year real property and low income housing), the excess of the ACRS deduction over the amount that would have been allowed as a deduction had the property been depreciated using a specified longer recovery period under the straight-line method constituted an item of tax preference. The longer recovery periods were 5 years, 8 years, 15 years and 22 years for 3-year property, 5-year property, 10-year property and 15-year public utility property respectively.[26] The preference amount was computed separately for each property.

(b) Nonrecovery Property

For leased nonrecovery property the amount by which the depreciation or amortization deduction taken on each §1245 property exceeded the amount that would have been allowed as a deduction if taxpayer had depreciated the property using the straight-line method over the useful life of the property was an item of tax preference.[27]

(2) Mining Exploration and Development Costs

The excess of the deduction claimed for mining exploration and development costs under §617(a) and §616(a), respectively over the amount that would have been allowed as a deduction had such costs been capitalized and amortized ratably over a 10-year period was an item of tax preference.[28]

(3) Circulation and Research and Experimental Expenditures

The preference amount for circulation expenditures was the excess of the allowable deduction under §173 for the taxable year over the amount that would have been allowable had the expenditures been capitalized and amortized ratably over a three-year period.[29] The amount of preference for research and experimental expenditures was the excess of the allowable deduction under §174(a) for the taxable year over the amount that would have been allowable as a deduction had the expenditures been capitalized and amortized over a 10-year period.[30]

(4) Intangible Drilling and Development Costs

The amount of excess intangible drilling and development costs for the taxable year over the taxpayer's net income from oil, gas, and geothermal properties for that taxable year was an item of tax preference.[31] Excess intangible drilling and development costs were the excess of such costs paid or incurred with respect to productive oil, gas, or geothermal wells that the taxpayer elected to deduct under §263(c) over the amount that would have been allowable for the taxable year if the costs had been capitalized and amortized in accordance with any method provided in §57(d). Section 57(d) prescribed either a 120-month amortization or any method permitted for determining cost depletion.

[24] §57(b)(1)(B).
[25] §57(a)(9)(B).

[27] §57(a)(3).
[28] §57(a)(4).
[29] Prior to the Tax Reform Act of 1984, circulation expenditures had to be amortized over a 10-year period to measure the preference amount.
[30] §57(a)(5).
[31] §57(a)(11).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(c) Regular Tax Deduction

For purposes of computing the corporate minimum tax base, §56(c) provided that the regular tax deduction was equal to the corporate tax determined under chapter 1 of the Code without regard to the accumulated earnings tax, the personal holding company tax and the add-on minimum tax and reduced by all the allowable nonrefundable credits.

2. Computation of Minimum Tax

The corporate minimum tax was computed by multiplying the corporate minimum tax base by 15/100. The corporate minimum tax base was obtained by reducing the sum of the items of tax preference by the regular tax deduction for the taxable year. A flat amount of $10,000 was substituted for the regular tax deduction if the amount of that deduction was less than $10,000.

In the case of a controlled group of corporations, the $10,000 deduction was apportioned among the group members in proportion to their regular tax deductions for the taxable year.

3. Rules Pertaining to Foreign Source Deductions

Tax preference items from foreign sources were included in the minimum tax base only if they resulted in foreign losses that reduced the tax imposed on U.S. source income. Capital gains from foreign sources were treated as an item of tax preference only if the jurisdiction of source gave them a preferential treatment.[32]

4. Tax Benefit Rule

Section 58(h) provided for an adjustment of items of tax preference to the extent that the preferential tax treatment accorded such items did not result in a regular tax benefit to the taxpayer.

F. The Tax Reform Act of 1986

Spurred by a concern that the minimum tax was not serving its purpose of preventing taxpayers with substantial economic income from avoiding all tax liability, the 99th Congress restructured and expanded the alternative minimum tax applicable to noncorporate taxpayers, repealed the add-on minimum tax applicable to corporate taxpayers, and enacted an alternative minimum tax for corporate taxpayers similar in structure and substance to that applicable to noncorporate taxpayers. The reasons for replacing the add-on minimum tax with a revised alternative minimum tax for corporate taxpayers (as well as revamping the AMT rules for noncorporate taxpayers) was explained by the Senate Finance Committee Report:

> "The Committee believes that the minimum tax should service one overriding objective: to ensure that no taxpayer with substantial economic income can avoid significant tax liability by using exclusions, deductions, and credits. Although these provisions may provide incentives for worthy goals, they become counterproductive when taxpayers are allowed to use them to avoid virtually all tax liability. The ability of high-income individuals and highly profitable corporations to pay little or no tax undermines respect for the entire tax system and, thus, for the incentive provisions themselves. In addition, even aside from public perceptions, the Committee believes that it is inherently unfair for high-income individuals and highly profitable corporations to pay little or no tax due to their ability to utilize various tax preferences.
>
> "In particular, both the perception and the reality of fairness have been harmed by instances in which major companies have paid no taxes in years when they reported substantial earnings, and may even have paid substantial dividends to shareholders. Even to the extent that these instances reflect deferral, rather than permanent avoidance, of corporate tax liability, the Committee believes that they demonstrate a need for change.
>
> "The Committee believes that the minimum taxes under present law do not adequately address the problem of tax avoidance, principally for two reasons. First, the corporate minimum tax, as an add-on rather than an alternative tax, is not presently designed to define a comprehensive income base. Second, the present minimum taxes on both individuals and corporations do not sufficiently approach the measurement of economic income. By leaving out many important tax preferences, or defining preferences overly narrowly, the individual and corporate minimum taxes permit some taxpayers with substantial economic incomes to report little or no minimum taxable income and thus to avoid all tax liability.
>
> "With respect to certain items that constitute tax preferences, at least for some taxpayers, under present law, the Committee believes that modifications of the definitions of the preferences are needed. In particular in the case of accelerated depreciation on real and personal property, the Committee believes that the present law fails to account for the fact that the useful lives of items of real and personal property generally are longer than the useful lives applying for minimum tax purposes.
>
> "Moreover, the Committee believes that certain items, not presently treated as preferences, must be added to the minimum tax base if the minimum tax is to serve its intended purpose of requiring taxpayers with substantial economic incomes to pay some tax. The items as to which the Committee has reached this determination include use of the completed contract method of accounting, use of the installment method by dealers, and use of capital construction funds by shipping companies.
>
> "With respect to corporations, the Committee believes that the goal of applying the minimum tax to all companies with substantial economic incomes cannot be accomplished solely by compiling a list of specific items to be treated as preferences. The minimum tax cannot successfully address concerns of both real and apparent fairness unless there is certainty that whenever a company publicly reports substantial earnings (either pursuant to public reporting requirements, or through voluntary disclosure for substantial non-tax reasons), that company will pay some tax (unless it has

[32] §58(g).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

sufficient net operating losses to offset its income for the year).

"Thus, the Committee believes that it is important to provide that the alternative minimum taxable income of a corporation will be increased when book income for the year exceeds alternative minimum taxable income. Such a provision will increase both the real and the perceived fairness of the tax system, eliminate the highly publicized instances in which corporations with substantial book income have paid no tax, and further broaden the minimum tax base to approach economic income more closely."[33]

II. Overview

Section 701 of the Tax Reform Act of 1986 substantially amended §§55, 56, 57 and 58, and added Code §§53 and 59. The alternative minimum tax rules for corporations (and noncorporate taxpayers), after the 1986 TRA, are therefore contained in §§53, 55, 56, 57, 58 and 59.

For taxable years beginning after 1986, amended §55 imposes on corporate taxpayers an alternative minimum tax equal to the excess of the "tentative minimum tax" for the taxable year over the "regular tax" for the taxable year. For §55 purposes, "regular tax" continues to have a special meaning. For corporations, it means the regular tax liability for the taxable year (as defined in §26(b)) computed without regard to any increase in tax under §47, and reduced by the foreign tax credit allowable under §27(a). The tentative minimum tax is equal to 20% of the alternative minimum tax base, reduced by the alternative minimum tax foreign tax credit. The alternative minimum tax base is computed by reducing the alternative minimum taxable income by the exemption amount.

Section 55(b)(2) defines alternative minimum taxable income as the taxable income of the taxpayer for the taxable year adjusted in accordance with §§56 and 58 and increased by the amount of the items of tax preference provided in §57.

This definition of Alternative Minimum Taxable Income (AMTI) has two clear implications:

First, computation of AMTI is a computation entirely distinct and apart from the computation of taxable income for regular tax purposes.

Second, AMTI is computed in the same way as taxable income for regular tax purposes, but with two types of modifications:

(i) certain items of income and deductions used in the computation of regular taxable income are adjusted as provided in §§56 and 58; and

(ii) certain items of tax preference, as provided in §57, are added back to the taxable income (as adjusted under (i) above).

The adjustments required in the computation of AMTI are summarized below.

(a) Depreciation Deductions. For property placed in service after 1986, depreciation deductions are required to be calculated under the Alternative Depreciation System of §168(g), but using the 150% declining balance method switching to straight-line in later years.

(b) Mining Development and Exploration Costs. With respect to each mine or other natural deposit, mining development and exploration costs incurred after 1986 must be capitalized and amortized ratably over a 10-year period.

(c) Long-Term Contracts. For any long-term contract entered into by the taxpayer on or after March 1, 1986, the taxable income from such contract must be determined under the percentage-of-completion method as modified by §460(b).

(d) Net Operating Loss Deduction. In computing the AMTI, the alternative tax net operating loss deduction must be substituted for regular tax net operating loss deduction.

(e) Installment Sales. The installment sales method of accounting is not permitted for the alternative minimum tax purposes. Thus, the taxpayer must include in AMTI the entire gain derived from the sale or other disposition of property under the installment method.

(f) Pollution Control Facilities. For certified pollution control facilities placed in service after 1986, the allowable deduction must be computed under the alternative system of §168(g).

(g) Circulation Expenditures. Circulation expenditures (deductible under §173) incurred after 1986 by personal holding companies must be capitalized and amortized over a three-year period. This adjustment does not apply to corporations other than personal holding companies.

(h) Gain (or Loss) From the Sale or Exchange of Property. In determining gain (or loss), for AMTI purposes, from the sale or exchange of property with respect to which adjustments have been made as described in paragraphs (a), (b), (f), and (g) above, the adjusted basis of such property will be determined based on the treatment prescribed in those paragraphs.

(i) Passive Losses. In computing AMTI, no deduction for losses from certain passive activities is allowed. Passive activity losses for AMTI purposes are computed in the same way as for regular tax purposes, except that the adjustments described in §56 are taken into account and any deduction which is an item of tax preference under §57 is not taken into account. Also, for AMTI purposes, the phase-in rules of §469(l) do not apply.

(j) Capital Construction Funds. Amounts deposited in a capital construction fund (established under §607 of the Merchant Marine Act of 1936) after 1986 are not deductible. Similarly, earnings of such a fund after 1986 are not excludable from gross income. In light of these adjustments, certain adjustments required by the Merchant Marine Act of 1936 (*e.g.*, basis adjustment for amounts withdrawn from the fund) will also not apply in computing the AMTI.

[33] Sen. Rep. No. 313, 99th Cong., 2d Sess., 518-520 (1986) ("Senate Report").

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(k) Special Deduction for Certain Insurance Providers. The special deduction allowed for certain existing Blue Cross/Blue Shield organizations and for new organizations meeting certain requirements with respect to high risk coverages under §833(b) of the Code is not allowable in computing AMTI.

(l) Book Income or Earnings and Profits. A corporate taxpayer is required to adjust its taxable income for business untaxed reported profits. For taxable years beginning in 1987, 1988, and 1989, one-half of the excess of the taxpayer's pre-tax book income over alternative minimum taxable income (determined without regard to this preference and without reduction by net operating losses) is added back to AMTI. Book income, for this purpose, is the income of the taxpayer as shown in financial reports or statements filed with the Securities and Exchange Commission or other federal, state, or local regulators, or provided to shareholders, owners, or creditors. Under certain circumstances, earnings and profits may be substituted for book income. Book income is adjusted to reflect only the corporations included in the consolidated federal income tax return. Thus, income from most foreign subsidiaries and §936 corporations is excluded.

For taxable years beginning in 1990, the earnings and profits concept is scheduled to replace the book income concept. Under this concept, the AMTI of the taxpayer will be increased by 75% of the excess of adjusted current earnings and profits over the AMTI (before this adjustment). If, however, AMTI (before this adjustment) exceeds the amount of adjusted current earnings and profits, then AMTI is reduced by 75% of such difference.

(m) Possessions Income. In the case of a corporation eligible for a credit under §936, AMTI will not include any income that is eligible for a §936 credit.

After a corporation's taxable income has been recomputed with the adjustments described in the preceding paragraphs, the amount of the items of tax preference is added back to the recomputed taxable income to arrive at the AMTI. The items of tax preference for a corporation are:

(a) Depletion. With respect to each property, the excess of the deduction for depletion allowable under §611 over the property's adjusted basis of the property at the end of the taxable year.

(b) Intangible Drilling Costs. The amount by which the excess intangible drilling costs of the taxpayer exceed 65% of the taxpayer's net income for the taxable year from oil, gas, or geothermal properties.

(c) Bad Debt Reserves. For certain financial institutions, the excess of the deduction allowable for a reasonable addition to a reserve for bad debts over the amount allowable under the experience method.

(d) Charitable Contributions of Appreciated Property. The amount by which a deduction under §170 would be reduced if all contributed property were taken into account at its adjusted basis.

(e) Tax-Exempt Interest. Tax-exempt interest on private activity bonds issued after August 7, 1986.

(f) Pre-TRA 1986 Accelerated Depreciation and Amortization. For property placed in service before 1987, the amount which would be treated as an item of tax preference under either §§57(a)(2), 57(a)(3), 57(a)(4) or 57(a)(12), as in effect prior to the TRA 1986.

Section 59(e) provides a corporation with the option of electing, for regular tax purposes, minimum tax treatment for circulation expenditures, mining development and exploration costs and intangible drilling costs. That is, the taxpayer may elect, for regular tax purposes, to treat these expenditures and costs as capital expenditures and costs and amortize them ratably over a 10-year period (three years in the case of circulation expenditures). If the taxpayer makes this election then, with respect to these expenditures and costs, no adjustments or preference items will result for AMT purposes.

Once AMTI has been computed, it is reduced by the exemption amount to arrive at the alternative minimum tax base. The exemption amount for corporate taxpayers is $40,000. This amount, however, is phased out by 25 cents for each $1 once AMTI reaches certain levels. The phase-out begins at $150,000 and the entire $40,000 exemption amount is phased out when AMTI reaches $310,000.

The tentative alternative minimum tax is equal to 20% of the alternative minimum tax base. The excess of the tentative alternative minimum tax over the regular tax for the taxable year is the taxpayer's net minimum tax liability.

Note that the only non-refundable credits allowed against the alternative minimum tax are the alternative tax foreign tax credit and the investment tax credit (ITC) carryovers and transition-rule ITC. The alternative tax foreign tax credit, however, may offset tentative minimum tax liability only up to 90%, and the ITC carryovers and transition-rule ITC may offset only up to 25% of tentative minimum tax liability.

Any nonrefundable credit that fails to yield a regular tax benefit in the current taxable year due to the imposition of the alternative minimum tax is available as a credit carryover, provided a carryover for such credit is permitted under the normal Code rules. The mechanism utilized to accomplish this result is to limit the allowance of the aggregate amount of the nonrefundable credits against the regular tax in any year to the excess of the regular tax over the tentative minimum tax. In other words, to the extent incentive credits do not yield a tax benefit due to the imposition of the minimum tax, they are also disallowed for regular tax purposes, resulting automatically in a carryover.

Finally, the TRA 1986 introduced the alternative minimum tax credit. This credit along with the adjustment mechanism utilized in computing AMTI (*see* §§56 and 58) are intended to coordinate the regular tax and the minimum tax systems so that a taxpayer is not disadvantaged by being on the minimum tax system in one year and the regular tax system in another. The minimum tax credit provides that, if a taxpayer is subjected to the alternative minimum tax in any taxable year, that portion of the taxpayer's net minimum tax liability that is attributable to "deferral preferences" may be carried over to subsequent

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

taxable years and utilized against the taxpayer's regular tax liability on a cumulative basis. The minimum tax credit, however, may not reduce the taxpayer's regular tax below tentative AMT in any taxable year.

III. Detailed Analysis

A. Introduction to Corporate AMT

At early stages of the process leading to the enactment of the 1986 TRA, certain private organizations published reports that over 100 major corporations which reported profits to their shareholders in 1981-85 paid no income taxes in one or more of those years. The resulting criticism of the U.S. tax system led to a call by various congressional leaders for the enactment of a stiff minimum tax which would ensure that corporations paid their "fair share" of tax. In view of this and the ultimate inclusion of a book income adjustment by the Act (to be replaced by an accumulated current earnings adjustment in 1990) in the minimum tax base, it is fair to say that the enactment of corporate alternative minimum tax by the TRA 1986 is a direct congressional response to a growing public perception that highly profitable corporations with substantial economic income were paying little or no tax.

Several factors combine to make the corporate alternative minimum tax (AMT) perhaps the most significant reform in the entire Tax Reform Act of 1986:

(i) The predecessor of the corporate AMT, the add-on minimum tax, was in the nature of a penalty tax imposed on the use of a handful of tax incentives. In view of the structure, the low rate (15%) and the narrow base, this tax was not regarded as a significant factor in corporate tax planning. The revised corporate AMT is the exact opposite: its structure, the rate of tax (20%) and the tax base combine to make it a very stiff tax. More ominously though, besides allowing little or no room for planning, it imposes on corporate tax planners the hardship of dealing with enormous complexity, administrative burden, and recordkeeping responsibilities.

(ii) The TRA 1986 broadened the minimum tax base for both corporate and noncorporate taxpayers to include many tax incentives, *e.g.*, the completed contract method of accounting, installment sales, tax-exempt interest, passive losses, charitable contributions of appreciated property, etc. While inclusion of these and other traditional tax incentives in the minimum tax base is significant, the inclusion of the book income adjustment (accumulated current earnings beginning in 1990) is revolutionary in that it ensures that AMT will be the predominant tax for many corporations.

(iii) The corporate AMT imposes a significant new tax burden on corporate taxpayers. The budget estimates indicated that the corporate AMT was expected to raise over $22 billion in revenues in fiscal years 1987 through 1990.[34]

Although the introduction of AMT was new to the corporate tax area, the AMT was not new to the tax scene. As noncorporate taxpayers have been subject to AMT since 1978, the 99th Congress had a wealth of experience to draw upon when considering the imposition of this tax on corporations. The lessons learned from this experience become evident when one considers the considerable restructuring and expansion that the AMT went through for both corporate and noncorporate taxpayers. As discussed below, the restructuring and expansion of the AMT is characterized by a number of novel features introduced by the Tax Reform Act of 1986 to the AMT system.

(a) The 1986 Act extended the rationale underlying AMT to new limits. The traditional role of AMT had been to ensure that all taxpayers pay a minimum amount of tax. The message conveyed by the 1986 Act changes, however, appears to be that all taxpayers with substantial economic income must pay a minimum amount of tax and that no taxpayer will derive more than a limited amount of tax benefit from tax incentives.

(b) The Alternative Minimum Tax (AMT), as revised by the 1986 Act, may be viewed almost as a back-door enactment of a flat tax system. It has all three elements that characterize a flat tax system:

(i) The AMT provides a baseline standard against which every corporate taxpayer must measure its tax liability even though it may not be subject to AMT. In practice, however, the AMT is designed to apply to taxpayers with substantial economic incomes that use tax credits and other tax incentives [35] to reduce their tax liabilities below a 20% (the minimum tax rate) effective rate of tax.[36]

(ii) The AMT provides a single rate of tax (20%). Arguably, this rate is rather high to suit a flat tax system. Remember, however, that, given the revenue needs, the tax rate in a flat tax system is a direct function of the tax base. Congress could have lowered this rate had it chosen to further broaden the AMT base.

(c) The AMT applies a single rate to a tax base which attempts to define true economic income. The AMT base, under the 1986 Act changes, makes a much more serious attempt to define true economic income than the prior version of corporate minimum tax. For example, the post-1986 TRA corporate AMT base includes rapid depreciation on all personal property; tax-exempt interest; mining development and exploration costs; intangible drilling and development costs; charitable contributions of appreciated property; and the book income adjustment. Further, it disallows the completed contract method of accounting; the installment sales method of reporting income; and certain passive activity losses. Especially, the book income adjustment (accumulated current earnings in 1990 and subsequent years) ensures that the corporate minimum tax base will include a taxpayer's true economic income.

(d) Another feature introduced by the 1986 Act is to make the AMT a tax system unto itself, entirely distinct from, and running parallel to, the regular tax system. Thus, after the 1986 TRA, corporations are subject to a two-track

[34] H.R. Rep. No. 841, Vol. II, 99th Cong., 2d Sess. p. II-862 (1986) ("Conference Report").

[35] The tax incentives which will give rise to AMT liability are those enumerated in §§56, 57 and 58.

[36] Note that, due to a relatively small differential between the top marginal rate of regular tax (34%) and the AMT rate (20%), only a marginal use of tax incentives may trigger the AMT.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tax system. Any taxpayer who uses an incentive credit or other incentive item may find that it is obligated to keep two sets of books: one for regular tax purposes and one for AMT purposes, not only in the year of the use but also from year-to-year. For example, if a corporate taxpayer places an asset in service in 1987 and takes depreciation deductions under the ACRS, it will be advisable for it to maintain two depreciation schedules with respect to the asset, *i.e.*, one under the ACRS and one under the Alternative Depreciation System of §168(g). The schedule under §168(g) must compute the taxpayer's tentative AMT from year-to-year until the asset has been completely written off. What is true of depreciation deductions is also true of most other adjustments and preferences, *e.g.*, net operating losses, the completed contract method of accounting, and mining development and exploration costs.[37] Also, for minimum tax purposes, taxpayers will have to keep a running record of: (i) the adjusted bases of assets (based on deductions allowed for AMT purposes) to compute the gain or loss to be taken into account in computing the AMTI upon the disposition of such assets, (ii) the minimum tax credit carryovers until the credits are fully absorbed, and (iii) any alternative tax foreign tax carryovers.

(e) Finally, the revised AMT deals with an inequity inherent in the prior version of AMT that applied to noncorporate taxpayers: if a taxpayer was subject to AMT, the taxpayer never got the amount of regular tax benefit from the preferences (giving rise to the AMT) which the taxpayer would have obtained if those preferences had not received preferential treatment in the first place. Under pre-1986 TRA law, for instance, if a taxpayer took a current deduction for mining exploration and development costs, he was required to include 90% of such costs in the AMT base. If this taxpayer never again became subject to AMT, not only would 90% of mining exploration and development costs go unamortized for AMT purposes, but also the taxpayer would experience the loss of the regular tax benefit in the year of deduction because the imposition of AMT was permanent. This was also true for depreciation deductions and other deferral preferences. Thus, for example, a noncorporate taxpayer was required, for each year of the life of a depreciable asset, to include depreciation over and above the baseline deduction as a preference item and pay minimum tax on it. When the depreciation deductions for regular tax purposes fell below the baseline deductions, however, no negative adjustments were made to the AMT base and, consequently, the asset was never fully amortized for AMT purposes. The revised AMT, as it applies to both corporate and noncorporate taxpayers, eliminates this inequity by coordinating the regular and minimum tax systems. It employs two mechanisms to achieve this end: (i) an adjustment mechanism, and (ii) the alternative minimum tax credit.

The adjustment mechanism provided in §§56 and 58 requires the taxpayer to substitute minimum tax treatment for regular tax treatment of certain items. This will permit taxpayers to make negative adjustments. Consequently, in the case of depreciation deductions, for example, a taxpayer will be able to take a greater depreciation deduction for AMT purposes in later years than for regular tax purposes thereby compensating the taxpayer for the minimum tax imposed in earlier years.

The revised AMT also allows taxpayers a credit against regular tax in subsequent years for the net AMT attributable to deferral items. Consequently, a taxpayer that takes a current deduction for mining exploration and development costs against regular tax and pays AMT will be able to carry credit for payment of the AMT over to subsequent years and use it against regular tax.

The adjustment mechanism and the AMT credit are designed to ensure that a taxpayer is not disadvantaged by being on the AMT system in one year and on the regular tax system in another.

B. Computation of Net AMT Liability

As stated earlier, §55 imposes on corporate taxpayers an alternative minimum tax equal to the excess of the tentative minimum tax over the regular tax. Thus, although the alternative minimum tax is, in effect a true alternative tax in that it is imposed only if it exceeds the regular tax for the taxable year, technically, the regular tax continues to be imposed and the amount of net minimum tax is the excess of the tentative alternative minimum tax over the regular tax for the taxable year.

The tentative minimum tax is obtained by multiplying the AMT base by 20% and subtracting the AMT foreign tax credit therefrom. The tentative minimum tax is then compared to the taxpayer's regular tax (net of regular tax foreign tax credit) to arrive at the net AMT liability.

The AMT base is computed by subtracting the exemption amount from alternative minimum taxable income. Alternative minimum taxable income is obtained by making certain adjustments to regular taxable income and adding back the sum of the items of tax preference.

The steps involved in the computation of net AMT liability are discussed below.

1. Alternative Minimum Taxable Income (AMTI)

As previously indicated, the first step in determining the AMT base is computing "Alternative Minimum Taxable Income (AMTI)." "Alternative Minimum Taxable Income" means the taxpayer's taxable income for the taxable year, adjusted as provided in §§56 and 58 and increased by the amount of the taxpayer's §57 items of tax preference.[38] Thus, AMTI is determined in the same manner as taxable income for regular tax purposes, but with two types of modifications:

(i) adjustments are made to certain accounting practices and items of income and deduction to eliminate the tax preference or tax incentive element inherent in the treatment accorded to such accounting practices and items of income and deductions for regular tax purposes.

(ii) certain preference items, *i.e.*, exclusions from, and deductions taken against, gross income for regular tax purposes, are restored to AMTI.

[37] Not all preferences and adjustments impose this burden on taxpayers. Some items, which enter into the AMT base, are fully disposed of in the year they arise, *e.g.*, tax-exempt interest, gain on installment sales, etc.

[38] §55(b)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The concept of "adjustments" was introduced by the TRA 1986. Some tax incentives which were labeled as "items of tax preference" under pre-1986 TRA law were reclassified as adjustments, *i.e.*, depreciation deductions, amortization deductions for pollution control facilities, mining exploration and development costs. In addition, certain items of adjustment were introduced by the TRA 1986, *i.e.*, the disallowance of the installment method of reporting, the disallowance of the completed contract method of accounting, and the disallowance of certain passive losses.

The label of "tax preference," however, was not discarded. Section 57, which traditionally has set forth the items of tax preference retains some of the items (*i.e.*, those that have not been repealed or redesignated as adjustments) that constituted tax preferences under pre-1986 TRA law. Section 57 also includes two items of tax preference added by the TRA 1986: (i) tax-exempt interest, and (ii) charitable contributions of appreciated property.

Note: The terms "adjustments" and "tax-preferences" are not mere labels. As explained below, the bifurcation of tax incentives (other than incentive credits) into "tax preferences" and "adjustments" by the 1986 Act has a profound significance. Prior to the 1986 Act, under the AMT regime as it applied to noncorporate taxpayers, tax incentives (other than incentive credits), which involved merely a deferral of tax [39] were lumped together with tax incentives (other than incentive credits) which involved permanent reduction or avoidance of tax [40] and were called tax preference items.

The problem was not that both types of incentives were referred to as items of tax preference. Rather, the problem stemmed from the fact that both types of incentives received similar treatment in the computation of AMTI. This gave rise to inequitable results because, in the case of deferral incentives, when a taxpayer took "up-front" or accelerated deductions, he was exposed to AMT. In later years when the expenditure gave rise to income, the taxpayer was again subjected to regular tax on this income, without any compensating adjustment for the AMT imposed earlier. Thus, the AMT in such cases assumed a penal character because, although in using a deferral incentive the taxpayer was merely deferring regular tax, the AMT imposed, nonetheless, represented a final tax obligation.

Example: Suppose an individual taxpayer incurred $600X in circulation expenditures in 1984 and elected to take a current deduction under §173(a). The expenditures produced an additional income of $500X each in 1985, and 1986. Suppose further that the taxpayer was in the 50% tax bracket for all these years but that, in 1984, due to the circulation expenditures preference and some other preferences, the taxpayer was in an AMT position. In 1984, therefore, the taxpayer paid $80X in AMT on $400X in circulation expenditures preference. In each of taxable years 1985 and 1986, the taxpayer paid regular tax of $250X on an additional $500X of income attributable to the circulation expenditures incurred and deducted in 1984. Had the taxpayer elected to amortize the $600X circulation expenditures ratably over a three-year period under §58(i), the $200X of deduction in each of the taxable years 1985 and 1986 would have reduced the regular tax by $100X in those years. Thus, the taxpayer, by taking an up-front deduction in 1984 not only paid $80X in AMT but also paid an additional $100X in regular tax in 1985 and 1986.

To prevent this form of double taxation under the corporate AMT, the 1986 Act, besides providing for a minimum tax credit discussed below, divided the tax incentives (other than incentive credits) into "tax preferences" and "adjustments," providing different treatment for each in computing AMTI. Items of tax preference are positive adjustments to AMTI but only in the year in which they arise. On the other hand, not only may the adjustment items be negative (the deduction for AMT purposes may be larger than that for regular tax purposes), but also, they may have an impact on AMT beyond the year in which they first arise. This treatment of deferral incentives, in conjunction with the minimum tax credit, is aimed at ensuring that these items are not subjected to both the minimum and the regular tax.

Example: Suppose a personal holding company incurs $600X in circulation expenditures in 1987 and elects to take a current deduction under §173(a). Since the taxpayer is in an AMT position in 1987, it pays AMT of $80X (20% of $400X in circulation expenditures preference). Under the adjustment mechanism, however, the taxpayer is entitled to amortize fully $600X of circulation expenditures over a three-year period (*i.e.*, 1987, 1988, and 1989) for AMT purposes. Thus, in computing its AMTI in 1988 and 1989, the taxpayer is entitled to deduct $200X against AMTI. If the taxpayer is in an AMT position in both of these years, the deduction will reduce its AMT by a total of $80X (20% of $200X + 20% of $200X). In other words, the taxpayer will recoup the full amount of $80X paid in AMT in 1987. If the taxpayer is not in an AMT position in 1988 and 1989, the $80X of AMT paid in 1987 will be available as a credit against regular tax in 1988 and, if not fully absorbed in 1988, in subsequent

[39] For example, the current deduction under §173(a) for circulation expenditures is a deferral incentive because basically it enables the taxpayer to defer the tax attributable to income offset by the current deduction to future years when the income attributable to the expenditures is generated. Assume an individual taxpayer in the 50% tax bracket incurred a $300 circulation expenditure in 1984 and elected to amortize it over a 3-year period under §58(i). Assume further that this expenditure generated additional income of $200 in each of the three years (1984, 1985, 1986). Since $100 of this additional income in each of the three years was offset by the circulation expenditures deduction the taxpayer's net tax obligation attributable to the additional income in each of the three years is: 50% × ($200-$100) = $50. Thus, the taxpayer will pay an additional $50 in tax in 1984, 1985 and 1986. If, however, the taxpayer elected to take the entire $300 as a current deduction under §173(a) in 1984, his tax liability would have been reduced by $150 (50% x $300) in 1984. On the other hand, the taxpayer's tax liability attributable to the additional income would have been increased by $50 each in 1985 and 1986 because the deduction was utilized in 1984. Thus, the net effect of taking a current deduction would be to defer $100 of tax liability from 1984 to 1985 and 1986.

[40] The examples of such tax incentives included dividends excluded under §116 and the capital gains deduction. A taxpayer did not pay any regular tax attributable to such items. These items were included in the AMT base in the year in which they arose, however, and the taxpayer paid the minimum tax, provided he was in an AMT position. The AMT imposed on these items represented the taxpayer's final tax obligation.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

years until exhausted. Although the minimum tax credit may not reduce the regular tax below tentative AMT, the $200X deduction (pertaining to the amortization of circulation expenditures) available against AMTI in each of the taxable years 1988 and 1989 will ensure that the $80X credit will be fully absorbed by regular tax in 1988 and 1989.

Thus, it is clear that the AMT rules, as revised by the 1986 Act, are designed to ensure that a taxpayer is not subjected to both the AMT and the regular tax with respect to deferral incentives.

Not all of the adjustment items enumerated in §§56 and 58 involve deferral incentives. One adjustment, the alternative tax net operating loss deduction, is merely an adjustment to regular taxable income, and no more. Another, book income, is more in the nature of a tax preference than a tax adjustment. Similarly, all items of tax preference enumerated in §57 do not involve permanent reduction or avoidance of tax. For example, intangible drilling and development costs share the deferral characteristic of adjustment items. The minimum tax credit, however, recognizes this and includes these costs in items with respect to which the credit is available.

a. Items of Adjustment

The first step in determining AMTI is to recompute taxable income by providing a different and prescribed treatment to certain items in lieu of the treatment given such items for regular tax purposes. The taxpayer starts the computation of AMTI as if it were computing taxable income for regular tax purposes but with one difference: it disregards the regular tax treatment of items of adjustment and substitutes the treatment prescribed in §§56 and 58 for these items. This section deals with the items of adjustment and how they must be adjusted in arriving at AMTI.

(1) Accelerated Depreciation Deductions

(a) General

The 1986 Act completely revised the Accelerated Cost Recovery System (ACRS) of §168.[41] The statutory accelerated percentages for personal property, the Service's authority under which accelerated percentages were prescribed for real property, as well as the optional straight-line percentages prescribed for all ACRS property were eliminated. Under the revised ACRS, the taxpayers must compute their recovery deductions by applying a statutory formula.

(I) Revised ACRS

Revised §168 provides that, generally for all tangible property placed in service after 1986, a taxpayer's depreciation deduction must be determined by using (i) the applicable depreciation method, (ii) the applicable recovery period, and (iii) the applicable convention. The applicable depreciation methods are set forth in §168(b), the applicable classification and recovery period rules in §§168(e) and 168(c) respectively, and the rules pertaining to applicable convention in §168(d).

[41] *See* Chapter 4 for a detailed discussion of amendments made to the ACRS system by the 1986 Act.

The revised ACRS relies on the Asset Depreciation Range (ADR) guidelines for classifying assets. Generally, the ADR class lives are provided in Rev. Proc. 83-55, 1983-1 C.B. 745. The Conference Report also provides new ADR lives for some assets by either reclassifying assets or providing lives for assets not previously included in the ADR scheme. Under the post-1986 TRA ACRS, personal property is grouped into six classes having recovery periods that extend from 3 to 20 years (with no salvage value):

(i) The 3-year class includes property with an ADR class life of four years or less and certain race horses. Automobiles and trucks are excluded from this class even though they have a 4-year ADR life.

(ii) The 5-year class includes property with an ADR class life of more than four years but less than ten years. In addition, automobiles, light trucks, qualified technological equipment, computer-based central office switching equipment, certain renewable energy and biomass property, and research property are classified as 5-year property.

(iii) The 7-year class includes property with an ADR class life of at least 10 years and less than 16 years. This class also includes single-purpose agricultural and horticultural structures, railroad tracks, and property which does not have an ADR life and is not classified elsewhere.

(iv) The 10-year class includes property with an ADR life of at least 16 years and less than 20 years. Note that manufactured homes are not included in this class.

(v) The 15-year class consists of property with an ADR life of at least 20 years but less than 25 years. It also includes sewage treatment plants, telephone distribution plants and comparable equipment for two-way voice and data communication.

(vi) The 20-year class includes property with an ADR life of at least 25 years. It also includes municipal sewer pipes but excludes real property with an ADR midpoint of 27.5 years or more.

Real property is generally classified as either nonresidential real property or residential rental property. Nonresidential real property, which includes all real property that is not residential rental property and which does not have an ADR class life of less than 27.5 years, is assigned a recovery period of 31.5 years. Residential rental property, which includes manufactured homes and any building or structure generating at least 80% of its gross rental income from the rental of dwelling units, is assigned a recovery period of 27.5 years. Any other real property with an ADR class life of less than 27.5 years is generally assigned to the 20-year class.

Section 168(b) provides that property in 3, 5, 7, or 10-year class may be depreciated using a 200% declining balance method switching to the straight line method when the latter yields a larger deduction. Property in the 15 or 20-year class, however, must be depreciated by using a 150% declining balance method switching to the straight line method when the latter yields a greater deduction. The taxpayer may elect to use a straight-line method for property in any class.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Nonresidential real property and residential rental property must be depreciated using the straight-line method.

The applicable convention under revised §168(d) for all property other than real property is generally the half-year convention. A mid-quarter convention, however, must be used if the total bases of property which is subject to revised §168 and placed in service during the last three months of the taxable year exceeds 40% of the total bases of all such property placed in service during that entire taxable year. For real property, the applicable convention is the mid-month convention. Also, under the revised ACRS, the half-year convention has been modified to provide a half-year's depreciation allowance for the year in which property is disposed of where the disposition occurs during the recovery period.

Finally, as under pre-TRA 1986 law, salvage value is disregarded in determining the depreciation deductions.

(II) Alternative Depreciation System

Revised §168(g) provides an "alternative depreciation system" for various types of property which, under the pre-TRA 1986 ACRS, was depreciated under special rules. The types of property subject to the alternative depreciation system include:

(i) Foreign Use Property. This includes property that is used outside the United States for more than half of a taxable year. Satellites and other property used in space are not treated as foreign use property if launched from the United States by a U.S. person.

(ii) Tax-Exempt Use Property. This includes property leased to, or otherwise used by, a tax-exempt entity.

(iii) Tax-Exempt Bond Financed Property. This includes property financed with the proceeds of tax-exempt bonds. If a part of the property is financed through conventional sources, the costs for that portion may be recovered under the regular depreciation system.

(iv) Imported Property. If a foreign country restricts U.S. imports or otherwise engages in discriminatory trade practices, the President of the United States may, by Executive Order, mandate the application of the alternative depreciation system to property imported from such country. "Imported property" is defined as property that is manufactured outside the United States or property that has less than half of its value added within the United States.

The recovery period for property subject to the alternative depreciation system is generally the ADR class life. Real property is assigned a recovery period of 40 years. Personal property with no assigned class life under the ADR guidelines is assigned a 12-year recovery period. In addition, a few other assets have been assigned special recovery periods for purposes of the alternative depreciation system: 5 years for automobiles, light trucks and qualified technological equipment; 10 years for railroad tracks; 15 years for single-purpose agricultural structures; and 24 years for municipal wastewater treatment plants and telephone distribution plant and equipment.

The applicable depreciation method is the straight-line method for all classes of property. The half-year convention applies to personal property and the mid-month convention applies to real property.

The alternative depreciation system also applies in computing a corporate taxpayer's earnings and profits for a taxable year under the revised §312(k)(3), and in determining AMTI.

Finally, §168(g)(7) provides that, in lieu of using the accelerated or straight-line methods of depreciation over a property's regular recovery period, a taxpayer may elect to use the alternative depreciation system for any class of personal property placed in service during the taxable year. The election is made on a class-by-class and year-by-year basis. Thus, a taxpayer may choose to depreciate 3-year property under the regular depreciation system (ACRS) and 5-year property under the alternative system. The following year, the taxpayer may choose to depreciate 3-year property under the alternative depreciation system and 5-year property under the regular depreciation system (ACRS). Note that, once an election to apply the alternative depreciation system to an item of property in a particular class is made, it applies to all items of property in that class. An election to apply the alternative depreciation system to nonresidential real property and residential rental property, however, may be made on a property-by-property basis. An election under §168(g)(7), once made, may not be revoked.

(b) Definition

Technically, for all real and personal property placed in service after 1986,[42] the amount of the adjustment equals the excess of the depreciation deduction under ACRS for the taxable year over the deduction that would be allowable under the alternative depreciation system with one modification: the 150% declining balance method (in lieu of the straight line method) must be used for property other than §1250 property or any other property that is depreciated under §168 by using the straight-line method.[43] In practical terms, however, in computing AMTI, ACRS deduction for all property placed in service after 1986 is replaced by a deduction computed under the alternative depreciation system with appropriate modifications.

As noted above, the alternative depreciation system provides recovery periods which are longer than recovery periods under ACRS. For example, for purposes of the alternative depreciation system, 3-year recovery property may have an ADR class life of as long as four years; 5-year recovery property may have an ADR class life of as long as nine years; 7-year recovery property may have an ADR class life of as long as 15 years; and so on. Also, since, under ACRS, a 200% declining balance method is used for all property other than §1250 property, as opposed to the 150% declining balance method for AMT purposes, the

[42] The depreciation deduction adjustment may also apply to property placed in service before December 31, 1986, in one limited instance: when the taxpayer makes an election under §203(a)(1)(B) of the TRA 1986 to have the amendments made by the Act to ACRS apply to property placed in service after July 31, 1986 but before January 1, 1987.

[43] §56(a)(1).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

depreciation deduction in the earlier years invariably is greater for regular tax purposes than for AMT purposes.

(I) Real Property

The alternative depreciation system assigns a recovery period of 40 years to both nonresidential real property and residential rental property as compared to 27.5 years for residential rental property and 31.5 years for nonresidential real property under ACRS. Real property, however, must be depreciated under the straight-line method under both ACRS and the alternative depreciation system. Thus, in computing AMTI, the depreciation deduction for all §1250 property is determined by using a 40-year recovery period under the straight-line method. Therefore, all real property will result in an upward adjustment to AMTI unless the taxpayer elects to use the 40-year recovery period for regular tax purposes.

(II) Personal Property

The depreciation deduction, for purposes of computing AMTI, is determined by using the asset's ADR class life and a half-year convention under the 150% declining balance method.[44] The taxpayer may switch to the straight-line method in later years when it would yield a larger deduction than that provided under the 150% declining balance method. The taxpayer, however, is not permitted to use the 150% declining balance method for any property if, for regular tax purposes, depreciation deductions for such property under §168 were computed using the straight-line method.[45] Since, for regular tax purposes, §168 provides shorter recovery periods and the 200% declining balance method of depreciation, in earlier years the taxpayer's deduction against regular taxable income will be greater than its deduction against AMTI, resulting in AMT liability. For example, if a taxpayer places an asset in the 3-year class with an ADR class life of four years in service in 1987, assuming a cost basis of $3000, depreciation deductions for regular tax and AMT in 1987 are computed as follows:

$$\text{Regular Tax} = \tfrac{1}{2}(200\% \times \$3{,}000) \div 3 = \$1{,}000$$

$$\text{AMT} = \tfrac{1}{2}(150\% \times \$3{,}000) \div 4 = \$563$$

Assuming, in the above example, the taxpayer elected to use the straight-line method in lieu of the double declining balance method for purposes of determining its depreciation deduction for regular tax purposes, the deductions for regular tax and AMT are as follows:[46]

$$\text{Regular Tax} = \tfrac{1}{2}(100\% \times \$3{,}000) \div 3 = \$500$$

$$\text{AMT} = \tfrac{1}{2}(100\% \times \$3000) \div 4 = \$375$$

Comment: Under the add-on minimum tax, preference items for C corporations included accelerated depreciation on real property only. The preference items for personal holding companies, however, also included accelerated depreciation on leased personal property. Under the corporate AMT, the depreciation adjustment for all corporate taxpayers applies to accelerated depreciation taken on all real and personal property. Also, under the pre-1986 TRA law, the depreciation preference was computed on item-by-item basis thus, precluding netting. Under the revised AMT, however, the mechanics of computing AMTI clearly permit netting.

The following example illustrates how the post-1986 TRA adjustment mechanism operates and how it differs from the earlier preference mechanism.

Example: Corporation X, a calendar year taxpayer, places two assets A and B in service in 1987. Asset A has a cost basis of $3,000; it belongs to 3-year class and has an ADR life of four years. Asset B has a cost basis of $5,000; it belongs to 5-year class and has an ADR life of seven years. The following table shows the depreciation deductions for both assets for regular tax and AMT purposes over the depreciable lives of the two assets.

Year		*Asset A (Cost Basis $3,000)*	*Asset B (Cost Basis $5,000)*	*Total Depreciation Deduction*
1987	Regular Tax	1,000	1,000	2,000
	AMT	563	536	1,099
1988	Regular Tax	1,334	1,600	2,934
	AMT	914	957	1,871
1989	Regular Tax	444	960	1,404
	AMT	609*	752	1,361
1990	Regular Tax	222	576	798
	AMT	609	612*	1,221
1991	Regular Tax	—	576*	576
	AMT	305	612	917
1992	Regular Tax	—	288	288
	AMT	—	612	612
1993	Regular Tax	—	—	—
	AMT	—	612	612
1994	Regular Tax	—	—	—
	AMT	—	307	307

Assumption 1: Asset A is in the 3-year class and has an ADR life of four years.
Assumption 2: Asset B is in the 5-year class and has an ADR life of seven years.

Assumption 3: The half-year convention is used throughout.

*In this year, the switch is made to the straight-line method to maximize deductions.

Observation 1: Note in the Total Depreciation Deduction column that X is allowed a depreciation deduction of $2,000 in computing its regular taxable income for 1987. In determining its AMTI for 1987, however, X is required to substitute $1,099 for $2,000 as its depreciation deduction, an upward adjustment of ($2,000-$1,099) $901 to AMTI. Assuming no other adjustments and preferences, X's AMTI for 1987 will be greater than its regular taxable income by $901 thus, exposing it to AMT.

[44] §56(a)(1)(A)(ii).
[45] *Id.*
[46] The taxpayer must use the straight-line method for AMT purposes since it used the straight-line method for regular tax purposes.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Observation 2: With respect to Asset A, note that the depreciation deduction available to X in computing regular taxable income is greater than the deduction available in computing AMTI in 1987 and 1988. This situation, however, is reversed in 1989, 1990 and 1991 when the AMTI deduction is greater than the regular tax deduction. Assuming that pre-1986 TRA law was in effect and that X was a personal holding company, it would have a depreciation preference of $437 ($1,000 - $563) in 1987 and of $420 ($1,334 - $914) in 1988. In 1989, 1990 and 1991, however, when the regular tax deduction falls below the minimum tax standard X would get no negative adjustment, *i.e.*, AMTI would not be reduced by the amount by which the minimum tax deduction exceeds the regular tax deduction. The adjustment mechanism under the revised AMT changes this. In 1989, for example, X gets a depreciation deduction of $444 in computing its regular taxable income, while it receives a deduction of $609 in determining AMTI, a downward adjustment of $165 ($609 - $444) to AMTI. It also gets downward adjustments of $387 ($609 - $222) in 1990 and $305 ($305 - $0) in 1991. Thus, the total upward adjustments in AMTI of $857 ($437 + $420) over the life of Asset A exactly equal the total downward adjustments in AMTI of $857 ($165 + $387 + $305) over the life of Asset A. This, in effect, means that the downward adjustments, which push the AMTI below the regular taxable income, will compensate X in later years either by offsetting other upward adjustments to AMTI or through the minimum tax credit mechanism for AMT imposed in 1987 and 1988.

Observation 3: Note the netting effect of the adjustment mechanism in 1989. For Asset A, X has a depreciation deduction of $444 for regular taxable income purposes and a deduction of $609 for AMTI purposes, a downward adjustment of $165 ($609 - $444) to AMTI. For Asset B, however, X has a depreciation deduction of $960 for regular taxable income purposes and a deduction of $752 for AMTI purposes, an upward adjustment of $208 ($960 - $752) to AMTI. On a combined basis, however, X only has an upward adjustment of $43 ($1,404 - $1,361) to AMTI in 1989 because the upward and downward adjustments are netted.

Observation 4: Note the necessity of keeping two different depreciation schedules for personal property placed in service after 1986: one for regular tax purposes and another for AMT purposes. If Asset A was the only asset placed in service by X in 1987 and 1991 was the first year X became subject to AMT, X would be required to go back to 1987 and reconstruct its depreciation schedule for Asset A for purposes of AMTI computations in 1991.

(C) Exceptions

Not all depreciable personal property placed in service after 1986 gives rise to adjustments to AMTI under §56(a)(1). Sections 56(a)(1)(B) and 56(a)(1)(C) provide certain exceptions. Specifically, the adjustment does not apply to:

(i) Sound recordings described in §48(r)(5).[47]

(ii) Films and video tapes which are generally depreciated under the income forecast method.[48]

(iii) Any property which is depreciated under the unit-of-production method or any other method of depreciation which is not expressed in terms of years.[49]

(iv) Any property with respect to which the taxpayer makes an election to depreciate under the alternative depreciation system.[50]

(v) Certain public utility property (within the meaning of §167(l)(3)(A)) if the taxpayer does not use a normalization method of accounting.[51]

(vi) Certain property placed in service after December 31, 1986, which qualifies for transitional relief and, therefore, is excepted from the application of the revised ACRS rules.[52]

(vii) Property which is expensed under §179.[53]

In all the cases enumerated above, the depreciation deduction allowed for computing regular taxable income will be the deduction allowable in computing AMTI. Consequently, these types of property will have no impact on a taxpayer's AMT liability.

(D) AMT Planning

Any corporation which finds itself in an AMT position in the current taxable year and which has placed certain depreciable assets in service during the year has certain planning options available to it. For instance, in the Example above, if X finds that it is pushed into an AMT position in 1987 by taking rapid write-offs (under the 200% declining balance method) on Assets A and B, it should consider electing under §168(b)(5) to apply a straight-line method to either or both A and B. If X elected to depreciate both assets A and B under a straight-line method, its depreciation deduction in computing regular taxable income for 1987 would be $1,000, whereas its deduction in computing AMTI would be $1099. This would not only eliminate any AMT exposure arising from depreciation of Assets A and B, but also would provide X with a $99 cushion to absorb upward adjustments in AMTI from other sources.

Where taxpayers are in an AMT position without regard to the depreciation deductions attributable to assets placed in service during the current taxable year, the §168(g)(7) election provides them with a tool to manage their AMT liability. Again, using X from the Example, if X has other preferences and adjustments in 1987 which expose it to AMT, X may elect under §168(g)(7) to depreciate both A and B under the alternative depreciation system. Thus, in 1987 X's depreciation deduction for regular tax purposes will be 1/2 (100% of 300/4) $375 for Asset A and 1/2 (100% of 5000/7) $357 for Asset B. Since the deduction for AMTI purposes is $1,099 for both A and B, X's AMTI for 1987 will be adjusted downward by (1099-375-357)=$367. Thus, X will be able to absorb $367 of upward adjustments to AMTI by electing to depreciate A and B under the alternative depreciation system.

[47] §§56(a)(1)(B) and 168(f)(4).
[48] §§56(a)(1)(B) and 168(f)(3).
[49] §§56(a)(1)(B) and 168(f)(1)(B).
[50] §§56(a)(1)(B) and 168(f)(1)(A).
[51] §§56(a)(1)(B) and 168(f)(2).
[52] §56(a)(1)(C).
[53] Senate Report, footnote 5, p. 522.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Comment: Electing under §168(g)(7) to depreciate property under the alternative depreciation system will always provide the taxpayer with a cushion to absorb upward adjustments in AMTI from other sources. This is because, while the recovery periods are the same for both regular tax and AMT purposes, the depreciation deduction for regular tax purposes must be computed using the straight-line method, whereas the 150% declining balance method is used in computing the depreciation deduction for AMT purposes.

Therefore, a judicious use of the elections under §§168(b)(5) and 168(g)(7) can be an invaluable tool in managing AMT liability, especially since these elections may be made on a class-by-class and year-by-year basis.

(2) Amortization of Pollution Control Facilities

(a) General

Section 169 provides that, with respect to any certified pollution control facility, a taxpayer may elect to amortize the amortizable basis of such property over a 60-month period. For corporate taxpayers, however, the election applies to only 80% of the amortizable basis.[54] The balance of 20% may be recovered through deductions under the ACRS.[55] Since the ADR class lives or the recovery periods under the ACRS of such facilities would be much greater than 60 months, the rapid write-offs provided by §169 have traditionally been treated as a tax preference item.

(b) Definition

For any certified pollution control facility placed in service after December 31, 1986, a corporation, in computing its AMTI for the taxable year, disregards the amortization deduction taken under §168 with respect to 20% of the basis of the facility and under §169 with respect to 80%, and substitutes a deduction computed under the alternative depreciation system of §168(g).[56] Under §168(g), the depreciation deduction for each pollution control facility must be computed by using the ADR class life of such property under the straight-line method. Thus, the upward adjustment in AMTI would equal the excess of the deduction taken under §§168 and 169(a) over the deduction computed under §168(g).

The discussion pertaining to the accelerated depreciation deductions adjustment in the preceding section generally applies to the certified pollution control facilities amortization adjustment also.

(3) Mining Exploration and Development Costs

(a) General

Under §§616 and 617, a taxpayer is permitted to treat expenditures incurred for development and exploration of a mine as expenses deductible in the year paid or incurred. For corporate taxpayers, however, this current deduction is limited to 70% of the mining development and exploration costs incurred during the taxable year.[57] But for §§616 and 617, these expenditures would receive the less favorable tax treatment of capitalization and amortization over the producing life of the mine, which would result in much smaller deductions spaced over many years.

(I) Mining Exploration Costs

Section 617(a) provides that a taxpayer may elect to deduct currently expenditures paid or incurred during the taxable year to ascertain the existence, location, extent, or quality of any deposit of ore or other mineral (other than oil or gas), provided such expenditures are incurred prior to the beginning of the development stage. The election does not apply to amounts which would not otherwise be allowable as a deduction for the taxable year. Accordingly, to the extent exploration expenditures are allocable to worthless property, they may be deductible under §165, but are not subject to a §617(a) election. The §617(a) election also does not apply to:

(i) Amounts for which a percentage depletion deduction would not be available under §613.[58]

(ii) Amounts incurred in the acquisition or improvement of depreciable property; however, a depreciation allowance may be claimed with respect to such amounts.[59]

(iii) Amounts incurred for the purpose of ascertaining the existence, location, extent, or quality of any deposit of ore or other mineral (other than oil or gas) located outside the United States.[60]

If a corporation makes an election under §617(a), it may deduct currently only 70% of mining exploration costs paid or incurred during the taxable year.[61] The balance of 30% must be capitalized and amortized ratably over a 60-month period beginning with the month in which such costs were paid or incurred.[62] No cost depletion is allowed with respect to mining exploration expenditures which are capitalized and amortized over a 60-month period.[63]

Regs. §1.617-1(a) provides that the development stage of a mine or other natural deposit will be deemed to begin at the time when, in consideration of all the facts and circumstances, deposits of ore or other mineral are disclosed in sufficient quantity and quality to reasonably justify commercial exploitation by the taxpayer. For example, core drilling expenditures paid or incurred by the taxpayer to ascertain the existence of commercially marketable ore are exploration expenditures. Also, expenditures for exploratory drilling from within a producing mine to ascertain the existence of what appears to be a different ore deposit qualify as exploration expenditures.

An election under §617(a) may be made by a taxpayer by deducting exploration expenditures on its income tax return for the first taxable year ending after September 12, 1966, for which it desires to deduct such expenditures.[64] A corporation choosing the current deduction option, however, must elect §617(a) treatment for all mining explora-

[54] §291(a)(5).
[55] §291(c)(1).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tion costs paid or incurred during the taxable year.[65] An election under §617(a) may not be made with respect to only a portion of such costs paid or incurred during the taxable year. Thus, a corporate taxpayer electing under §617(a) will deduct 70% of mining exploration costs paid or incurred during the taxable year currently and capitalize and amortize ratably over a 60-month period the balance of 30% of such costs. An election under §617(a) once made, cannot be revoked without the prior consent of the Commissioner.[66]

Mining exploration expenditures that are deducted partially under §617(a) and capitalized and amortized over a 60-month period partially under §291(b)(2) are subject to recapture as ordinary income under §1254.[67] To the extent §1254 does not apply, mining exploration expenditures deducted under §617(a) are subject to recapture as ordinary income under §617(d).[68] Mining exploration expenditures that are deducted under §617(a) are also subject to recapture under §617(b) when the mine reaches the production stage.

When a mine reaches the producing stage, §617(b)(1) provides two methods of recapture. Under the first method, the taxpayer must forego depletion on all mines or deposits reaching the producing stage during the taxable year until the amount of depletion which would have been allowed on each mine or deposit equals the amount of adjusted exploration expenditures with respect to such mine or deposit. Under the second method, the taxpayer may elect to include in gross income for the year an amount equal to the adjusted exploration expenditures with respect to all mines reaching the producing stage during that year. The amount included in gross income becomes part of the depletable bases of the respective mines; however, it is not considered to be gross income from the property for percentage depletion purposes. Adjusted exploration expenditures are defined as the exploration expenditures paid or incurred with respect to any property under §617(a) in all years reduced by: (i) the amount (if any) by which the deduction for percentage depletion, which would have been allowable for all years if no deduction for the exploration expenditures under §617(a) had been allowed, exceeds the actual depletion allowed for the corresponding years; (ii) the aggregate of all amounts included in gross income under §617(b) and §617(c); and (iii) the amount of gain to which §617(d) applies.

If a taxpayer does not make an election under §617(a) to currently deduct the mining exploration expenditures, such expenditures are capitalized and become part of the property's depletable basis.

(II) Mining Development Costs

Section 616(a) provides that a taxpayer may deduct all expenditures paid or incurred during the taxable year for the development of a mine or other natural deposit (other than an oil or gas well), provided the expenditures are paid after the existence of ores or minerals in commercially marketable quantities has been discovered. Section 616(a) does not, however, cover the cost of acquiring depreciable property. Regs. §1.616-1(a) provides that the development stage of a mine is reached when, taking into account all facts and circumstances, deposits of the minerals are shown to exist in sufficient quantity and quality to reasonably justify commercial exploitation by the taxpayer. The Service, in Rev. Rul. 69-540, 1969-2 C.B. 143, set down general guidelines for determining whether expenses are development expenditures. According to the ruling, development expenditures are those resulting directly from the mining process or the activity of making the mineral in place accessible for production operations through the removal of material, by the driving of shafts, tunnels, galleries and similar processes or activities. For §616(a) to apply, the mine must be in the development stage, expenditures must be for the purpose of preparing the mineral deposit for extraction, and the expenditures must not be for equipment or facilities which relate solely to the extraction of the mineral from the mine.

If a corporation exercises the option under §616(a) to currently deduct mining development costs paid or incurred during the taxable year, such deduction is limited to 70% of the costs by §291(b)(1). The balance of 30% must be capitalized and amortized ratably over a 60-month period beginning with the month in which such costs are paid or incurred.[69] No cost depletion is allowed with respect to mining development expenditures which are capitalized and amortized under §291(b)(2).[70]

Section 616(b) provides that a taxpayer, instead of deducting development costs currently, may elect to defer such costs. If an election under this subsection is made with respect to a mine, the excess of such costs incurred during the taxable year over net receipts is deductible ratably as the mineral benefits are produced and sold. This method of amortization is similar to cost depletion. Note, however, that the deferred development costs are not capitalized as mineral property costs for depletion purposes; the amortization on such costs is allowable as an ordinary deduction in addition to the depletion deduction in the years benefited. The election under §616(b) may be made on mine-to-mine basis.[71] It applies only to expenditures incurred during the taxable year for which it is made.[72] The election, however, must cover all development expenditures for the taxable year for each mine. The election, once made, is irrevocable.[73]

(b) Definition

Mining development and exploration costs paid or incurred after December 31, 1986, which are allowable as a current deduction in computing regular taxable income under §616(a) or 617(a) must, for purposes of computing AMTI, be capitalized and amortized ratably over a 10-year period beginning with the taxable year in which the expen-

ditures are made.[74] Thus, if a corporation takes a current deduction under §616(a) or §617(a) for 70% of the mining development or exploration costs paid or incurred during the taxable year and amortizes the balance over a 60-month period, it will result in an upward adjustment to the corporation's AMTI for the taxable year.

Example: Corporation A incurs $1,000 in mining exploration expenditures on January 1, 1987 with respect to which it makes an election under §617(a). For purposes of computing its regular taxable income for 1987, A is entitled to a deduction of ($700 + [12 × $300 ÷ 60]) = $760. For purposes of computing A's AMTI, however, it is entitled to a deduction of ($1,000 × 10/100) = $100 in 1987. Assuming no other adjustments or preferences, A's AMTI for 1987 will be greater than its regular taxable income by ($760 − $100) = $660.

If a taxpayer suffers a loss with respect to a mining property (*e.g.*, it is abandoned as worthless) for which deductions have been taken under §616(a) or 617(a) for mining development or exploration costs then, for purposes of computing AMTI, the entire unamortized portion of such costs is deductible in the year of the loss.[75] The amount of this loss deduction in computing AMTI is subject to only one limit: it may not exceed the amount that would be allowable as a loss deduction under §165(a) had such costs remained capitalized.[76]

As stated earlier, mining exploration expenditures deducted under §617(a) are recaptured as ordinary income when the mine with respect to which such expenditures were incurred reaches the production stage or is disposed of. If the property is not disposed of, the recapture takes the form of either a denial of a depletion deduction or inclusion in gross income. Either way, the downside of taking a current deduction for exploration costs under §617(a) is that, in later years, gross income is increased by the amount of the deduction. Mining development expenditures involve similar mismatching of income and deductions because income is generally produced in year(s) subsequent to the year in which the development expenditures are incurred and deducted. Section 56(a)(2) neutralizes this tax deferral effect of current deductions under §§616(a) and 617(a) by requiring a 10-year amortization of mining exploration and development expenditures. By the same token, a taxpayer which pays AMT due to the mining exploration and development costs adjustment, is compensated in later years for the amount of such AMT in either of the following two ways. First, if the taxpayer is an AMT position, the 10% amortization deduction attributable to §616(a) and/or 617(a) costs deducted in an earlier year will adjust AMTI downward by 4% of such costs in each of the first following five years (assuming the costs were paid or incurred in the first month of the taxable year) and by 10% of such costs in each of the next five years.[77] This reduces the AMT the taxpayer would otherwise owe. Alternatively, if the taxpayer is not in an AMT position, the AMT credit stemming from the AMT imposed due to an adjustment made pursuant to §56(a)(2) will offset the regular tax in subsequent years until the credit is exhausted.

Finally, §59(e) provides a taxpayer with an option to eliminate the minimum tax impact of mining exploration and development costs. Under §59(e)(1)(E), a taxpayer may elect to amortize mining development and exploration costs ratably over a 10-year period for regular tax purposes. If this election is made, §56(a)(2) does not apply to such costs.

(c) AMT Planning

The upward adjustment to AMTI resulting from mining development and exploration costs deducted under §616(a) or 617(a) (or from any other §56 item for that matter) may not be undesirable (whether wholly or partially) in all cases. This is because a taxpayer may have downward adjustments to AMTI in the current year from other sources which may offset the upward adjustment. For example, the taxpayer may have placed certain depreciable property in service in prior years with respect to which it is taking deductions under the ACRS, or it may have deducted mining development or exploration expenditures under §616(a) or 617(a) in an earlier year which give rise to downward adjustments to AMTI in the current year. On the other hand, a current deduction under §616(a) or §617(a) may be wholly undesirable for one reason or another, *e.g.*, because it kicks in the phase-out of the exemption amount under §55(d)(3). Consequently, when a taxpayer incurs mining development or exploration costs, it must determine to what extent, if any, an upward adjustment to AMTI in the taxable year in question is undesirable, especially since it has important options at its disposal to manage the amount of such adjustment.

(I) Mining Exploration Costs

The taxpayer has the option not to elect under §617(a) to take a current deduction for mining exploration costs. If an election under §617(a) is not made, mining exploration costs are capitalized and become part of the depletable basis of the mining property. Alternatively, the taxpayer may elect under §59(e) to capitalize and amortize mining exploration costs ratably over a 10-year period beginning with the year in which such costs are paid or incurred. Some of the relevant considerations bearing upon these options are summarized below.

(i) If exploration costs are capitalized, they increase the taxpayer's depletable basis and, hence, the cost depletion deduction for regular tax purposes without any AMT exposure. Capitalization and the resulting increase in basis, however, will yield no benefit in terms of the size of the depletion deduction for regular tax purposes if the taxpayer claims percentage depletion. Provided the taxpayer claims percentage depletion, an election under §59(e) will yield an additional amortization deduction for regular tax purposes.

(ii) Since an election under §617(a) applies to all mining exploration costs paid or incurred during the taxable year,[78] the taxpayer may not capitalize a portion of

[74] §56(a)(2)(A)
[75] §56(a)(2)(B)
[76] *Id.*
[77] The yearly adjustment in AMTI for the first five years is 4% because 30% of the costs are amortized over a 60-month period and, therefore, yield a yearly deduction equal to 6% of such costs against regular taxable income in each of the first five years.

[78] §617(a)(2)(B)

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

such costs under §263. An election under §59(e), on the other hand, permits the taxpayer to capitalize and amortize ratably over a 10-year period *any portion* of mining exploration costs.[79] Note, however, that 30% of the portion of such costs to which a §59(e) election does not apply, nevertheless, will have to be capitalized and amortized ratably over a 60-month period under §291(b)(2).

(iii) An election to currently deduct mining exploration costs under §617(a) applies to such costs paid or incurred not only in current taxable year but also in any subsequent taxable year.[80] Consequently, if mining costs paid or incurred are deducted under §617(a) in the current taxable year, a portion of such costs paid or incurred in a subsequent taxable year may not be capitalized unless the Commissioner's consent is obtained to revoke the §617(a) election. On the other hand, since an election under §59(e) may be made with respect to a portion of mining exploration costs paid or incurred during a taxable year, it is obviously not binding on such costs incurred during a subsequent taxable year. Thus, if the taxpayer chooses to elect under §59(e), mining exploration costs incurred in a subsequent taxable year may be deducted under §617(a) or may be capitalized under §263.

(iv) If mining exploration expenditures are capitalized and amortized pursuant to a §59(e) election, the deducted expenditures shall, upon a subsequent disposition of the mining property, be recaptured as ordinary income under either §1254 or §617(d).[81] No such recapture, however, will be required if such costs are capitalized under §263 and recovered as depletion deductions.

Comment: Since, in taxable years beginning after 1987, capital gains and ordinary income will be taxable at the same tax rates, the significance of recapture has been reduced considerably. If a taxpayer chooses to capitalize only a portion of mining exploration costs under §59(e), must the taxpayer capitalize the balance of such costs under §263 or, does it have the option to partially deduct the balance under §617(a) and partially capitalize it under §291(a)(2)? If the taxpayer may deduct the balance partially under §617(a), it will be able to manage the amount of upward adjustment in AMTI in precise terms by controlling the amount of mining exploration costs that is subjected to the §59(e) election. Since §617(a)(2)(B) provides that an election under §617(a) applies to all mining exploration costs paid or incurred during the taxable year, there is a tension between §617(a) and §59(e). Since §59(e)(3) clearly provides that no other Code sections apply to amounts subject to an election under that section, however, it appears that §617(a)(2)(B) should not preclude capitalization of a portion of exploration costs under §59(e) while the balance is partially deducted under §617(a) and partially capitalized under §291(b)(2).

(II) Mining Development Costs

Although mining development costs are capital in nature, §616(a) permits taxpayer to take a current deduction for such costs. In lieu of taking a current deduction, however, the taxpayer may elect under §616(b) to capitalize such costs with respect to each mine or deposit and amortize them ratably as the units of the produced ore or minerals benefiting from such costs are sold.[82] Note that, although the deferred mining development costs are not capitalized for depletion purposes, they are considered part of the adjusted basis for all other purposes.[83] The taxpayer also has the option to elect under §59(e) to capitalize and amortize any portion of mining development costs paid or incurred during the taxable year. Some of the relevant considerations bearing upon a choice between an election under §616(b) or a §59(e) election are summarized below.

(i) If an election under §616(b) is made, only that portion of the mining development costs may be deferred which exceeds the net receipts from the ore or the minerals from the mine received or accrued during the same taxable year as the costs were paid or incurred.[84] The mining development costs not in excess of such receipts must be deducted currently under §616(a), subject to the 70% limit under §291(b)(1). An election under §59(e) permits a taxpayer to capitalize all mining development costs regardless of the net receipts restriction.

(ii) An election under §616(b) may be made on a mine-by-mine basis. An election under §59(e), on the other hand, may be made with respect to any portion of mining development expenditures paid or incurred during the taxable year with respect to a particular mine.

(iii) The taxpayer may use both options and a current deduction under §616(a) concurrently: it may capitalize mining development costs with respect to one mine under §616(b), it may capitalize a portion of mining development costs with respect to other mines under §59(e), and deduct currently under §616(a) 70% of the balance of mining development costs with respect to other mines. Thirty percent of the balance of such costs will, of course, be capitalized and amortized under §291(b)(2). A skillful manipulation of these choices can ensure that the taxpayer will derive maximum benefit from mining development costs paid or incurred during the current taxable year for regular tax purposes without suffering any AMT detriment.

(4) Certain Long-Term Contracts

(a) General

The Tax Reform Act of 1986 modified the special accounting rules that apply to taxpayers providing goods or services under long-term contracts. Prior to the 1986 Act, a taxpayer with income and expenses from long-term contracts could use the traditional cash or accrual methods of accounting. At the taxpayer's election, however, income and expenses attributable to long-term contracts could also be reported under either of two special methods of accounting: (i) the percentage of completion method, or (ii) the completed contract method.

A long-term contract is a building, installation, construction, or manufacturing contract that is not completed

[79] §59(e)(4)(A)
[80] *Id.*
[81] §59(e)(5)
[82] Regs. §1.616-2(a)
[83] §616(c)
[84] Regs. §1.616-2(a)

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

within the taxable year in which it is entered into. A manufacturing contract qualifies as a long-term contract, however, only if it involves the manufacture of either unique items of a type not normally carried in the finished goods inventory of the taxpayer, or items normally requiring more than 12 months to complete.[85]

Under the percentage of completion method, income is recognized according to the percentage of the contract that is completed during each taxable year. The determination of the portion of the contract completed during each taxable year may be made by either (i) comparing costs incurred during the year to the total estimated costs to be incurred under the contract, or (ii) comparing the work performed during the year with the estimated total work to be performed under the contract.[86] All costs attributable to a long-term contract are deductible in the year incurred.

Under the completed contract method, the entire gross contract price of a long-term contract is included in income in the taxable year in which the contract is completed and accepted. Also, all costs properly allocable to a long-term contract are deducted in the year of completion.

Under the amendments made by the TRA 1986, for long-term contracts entered into after February 28, 1986, taxpayers may elect to compute income from long-term contracts under one of two methods: (i) the percentage of completion method, or (ii) the percentage of completion-capitalized cost method. Except for certain real property construction contracts, these are the exclusive methods under which long-term contracts may be reported.

As under pre-1986 TRA law, taxpayers may elect to use the percentage of completion method for long-term contracts. The 1986 Act, however, makes several changes to the percentage of completion method:

(i) The exclusive method of determining the portion of the contract completed during the taxable year is the cost comparison method. The work-performed comparison method is no longer permissible.[87]

(ii) Contract costs are to be determined in accordance with the extended period long-term contract regulations (Regs. §1.451-3(b)(3)).[88]

(iii) Interest must be allocated to the contract in accordance with the interest capitalization rules.[89]

(iv) Independent research and development costs; costs of unsuccessful bids and proposals; and marketing, selling and advertising costs are not allocable to long-term contracts.[90]

The percentage of completion-capitalized cost method is a hybrid method which combines the percentage of completion method and taxpayer's normal method of accounting. Under this method, 40% of the long-term contract is reported under the percentage of completion method as described above.[91] The remaining 60% is reported under taxpayer's normal method of accounting.[92] Thus, 60% of the gross contract income will be recognized, and 60% of the contract costs will be deducted at the time required by taxpayer's method. For example, if the taxpayer uses the completed contract method of accounting, these items will be taken into account upon completion of the contract. If the taxpayer uses an accrual method (*e.g.*, accrual shipment method), such contract items will be taken into account at the time of shipment.[93]

(b) Definition

For purposes of computing AMTI, any long-term contract entered into after February 28, 1986, must be accounted for under the percentage of completion method as modified by the 1986 Act. Thus, a taxpayer using the percentage of completion-capitalized cost method for regular tax purposes will generally be required to make adjustments in AMTI. For instance, a taxpayer accounting for 40% of a long-term contract under the percentage of completion method and 60% under the completed contract method for regular tax purposes will be required to adjust AMTI upward in the early years. In the final year of the contract, however, when income for the 60% portion of the contract is recognized, there will be a downward adjustment in AMTI.

Any adjustments to AMTI may be eliminated by using the percentage of completion method for regular tax purposes.

(5) Installment Sales of Certain Property

Prior to the Tax Reform Act of 1986, gain from certain sales of property in exchange for which the seller received deferred payments was reported on the installment method unless taxpayer elected otherwise. Eligible sales included dispositions of personal property on the installment plan by a person who regularly sold or otherwise disposed of personal property on the installment plan, and other dispositions of property including publicly traded property, where at least one payment was to be received after the close of the taxable year of the disposition.

The TRA 1986 modified the installment sales rules significantly. It enacted the proportionate disallowance rule which limits the use of installment method based on a proportion of taxpayer's outstanding debt. The rationale behind this rule is that if a taxpayer holds installment obligations, part or all of his debt is related to those obligations. Either the extension of credit by the taxpayer necessitates borrowing or it enhances the taxpayer's ability to borrow. Section 453C, therefore, limits the amount of gain that may be reported under the installment method from the following types of sales:

(i) sales made after February 28, 1986, of personal property by a person who regularly sells or otherwise disposes of the same type of personal property;

[85] Regs. §1.451-3
[86] Regs. §1.451-3(c)(2)
[87] §460(b)(2)(A)
[88] §460(c)(1)
[89] §460(c)(3)
[90] §460(c)(4)
[91] §460(a)(1)(A)
[92] §460(a)(1)(B)
[93] For a discussion of the revised rules governing long-term contracts, *see* Chapter 20, *supra*.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(ii) sales made after February 28, 1986, of real property held by the seller for sale to customers in the ordinary course of business; and

(iii) sales made after August 16, 1986, of real property used in the seller's trade or business or property held for the production of rental income, provided the sale price exceeds $150,000.

The proportionate disallowance rule operates by first determining the amount of a taxpayer's "allocable installment indebtedness" for each taxable year and treating such amount as a payment immediately before the close of the taxable year on "applicable installment obligations" that arose during that taxable year and that are outstanding at the end of the taxable year.[94] As a result, a portion of the taxpayer's debt is treated as a payment toward its installment obligations. "Applicable installment obligation" is defined in §453(e) as an obligation arising from a sale of a type described in the preceding paragraph on an installment basis. The amount of "allocable installment indebtedness" is computed in accordance with the formula provided in §453C(b). The proportionate disallowance rule does not apply to the following transactions:

(i) disposition by an individual of personal use property;[95]

(ii) disposition of any property used or produced in the trade or business of farming;[96]

(iii) at the election of the taxpayer, sales of timeshares and unimproved lots of land, provided the conditions of §453C(e)(4) are met; and

(iv) sales of tangible personal property by the manufacturer of the property to a dealer, but only if the dealer is obligated to make payments of principal only when the dealer resells (or rents) the property, the manufacturer has the right to repurchase the property at a fixed price after no longer than a 9-month period following the sale, and certain other conditions specified in §811(c)(2) of the Act are satisfied. The additional requirements of §811(c)(2) of the Act include: (i) for the taxable year in question and the preceding taxable year, the aggregate face amount of the obligations arising from qualified sales by the manufacturer must be at least 50% of the total sales to dealers giving rise to such obligations; and (ii) the requirements of §811(c)(2) of the Act must be met by the taxpayer in its first taxable year beginning after October 22, 1986. For purposes of this provision, obligations issued before October 22, 1986, are treated as meeting the applicable requirements if such obligations are conformed to the requirements of §811(c)(2) of the Act by December 20, 1986.

Taxpayers who sell property on a "revolving credit plan" are not permitted to use the installment method. Such taxpayers must treat all payments as received in the year of disposition.[97] "Revolving credit plan" is defined in Regs. §1.453-2(d).

Persons who sell stock or securities that are traded on an established securities market or, to the extent provided in regulations, property of a kind regularly traded on an established market, are not permitted to use installment method.[98] All payments made to these persons will be treated as received in the year of disposition. The regulations are expected to provide that, where sales take place on an established market and settlement generally occurs several days after the trade date, both cash and accrual basis taxpayers will recognize gain or loss on the day the trade is executed and not on the day settlement occurs.[99]

The disallowance of the installment method for sales on revolving credit plans and for sales of publicly traded property is effective for sales of property made after December 31, 1986. The proportionate disallowance rule is effective as of January 1, 1987, for sales made on or after March 1, 1986. A taxpayer will treat installment obligations arising between March 1, 1986, but before the first taxable year ending after December 31, 1986, as having arisen during the first taxable year of the taxpayer beginning after December 31, 1986.

For purposes of computing AMTI, gain from any disposition after March 1, 1986, of property to which the proportionate disallowance rule of §453C applies, is to be determined without regard to the installment method and all payments are deemed to have been received in the year of disposition.[100] Thus, to the extent the proportionate disallowance rule permits the deferral of gain recognition upon the sale of personal and real dealer property and certain other business or rental realty, AMTI will be adjusted upward by an amount which equals the deferred gain. There will be no adjustments made to AMTI, however, in cases of installment sales made by a corporation to which the proportionate disallowance rule does not apply:[101]

(i) dispositions of any property used or produced in the trade or business of farming,

(ii) sales of timeshares and unimproved lots of land, and

(iii) certain sales of tangible personal property by manufacturers.

Comment: Although the revised AMT rules are not effective until 1987, §56(a)(6) disallows the use of the installment method for sales made after March 1, 1986. Thus, taxpayers will recognize the entire gain from an applicable sale (*i.e.*, a sale subject to the proportionate disallowance rule) made after March 1, 1986, but within the taxpayer's taxable year beginning before January 1, 1987, for purposes of computing pre-TRA 1986 AMT. In later years when gain is recognized for regular tax purposes, however, no adjustment to AMTI will result.[102]

(6) Circulation Expenditures

(a) General

Section 173 allows a taxpayer a current deduction for all expenditures to establish, maintain, or increase the

circulation of a newspaper, magazine, or other periodical, for the taxable year in which such expenditures are incurred. Absent §173, expenditures to establish or increase circulation will probably have to be capitalized under §263. No current deduction, however, is allowed for expenditures incurred for the purchase of land, depreciable property, or the acquisition of circulation through the purchase of any part of the business of another publication.[103]

A taxpayer entitled to the deduction for circulation expenditures under §173 may, in lieu of taking the deduction, elect to capitalize that portion of the circulation expenditures which is properly chargeable to capital account.[104] In general, expenditures normally made from year to year with a view to maintain circulation are not chargeable to capital account. Conversely, expenditures made to establish or increase circulation are properly chargeable to capital account.

Example: If a newspaper normally employs five persons to obtain renewals of subscriptions, the expenses attributable to those employees are not chargeable to capital account. If the newspaper, in a special campaign to increase circulation, however, employs 20 additional persons for a limited time to solicit new subscriptions, these expenditures would be chargeable to capital account.[105]

If a taxpayer makes an election with respect to expenses chargeable to capital account, such election applies to all expenditures which are so chargeable. The election once made, is irrevocable except with the Commissioner's consent. The extent to which an amortization deduction with respect to capitalized expenditures is available will be determined under §§162, 263, and 461.[106]

(b) Definition

For a corporate taxpayer which is a personal holding company, a deduction under §173(a) will give rise to an upward adjustment to AMTI.[107] Section 56(b)(2)(C) provides that circulation expenditures paid or incurred after December 31, 1986, by a personal holding company, which are deductible currently under §173(a) in computing regular taxable income, must be capitalized and amortized ratably over a 3-year period beginning with the year in which such expenditures are incurred in arriving at AMTI.[108] Circulation expenditures deducted under §173(a) will therefore, result in an upward adjustment to AMTI.

Example: If a personal holding company deducts $45,000 under §173 in 1987, its AMTI will be adjusted upward by $30,000 because it is allowed a deduction of only (1/3 x $45,000)=$15,000 for purposes of AMTI. The taxpayer's AMTI, however, will be adjusted downward by $15,000 in each of its taxable years 1988 and 1989, compensating it fully for the $30,000 upward adjustment to AMTI in 1987.

If the taxpayer suffers a loss with respect to circulation expenditures deducted under §173, then, for purposes of computing AMTI, the entire unamortized portion of such expenditures may be deducted in the year of the loss.[109] The amount of this deduction, however, is limited to the amount that would be allowable as a loss deduction under §165(a) if the circulation expenditure had remained capitalized.[110]

Note that, in lieu of deducting circulation expenditures under §173, the taxpayer may elect under §59(e) to capitalize and amortize such expenditures ratably over a 3-year period beginning with the taxable year in which such expenditures are incurred in computing its regular taxable income. If the taxpayer makes an election under §59(e), no adjustment to AMTI will result.

(c) AMT Planning

In lieu of taking a current deduction under §173(a), the taxpayer may elect to capitalize that portion of circulation expenditures which are properly chargeable to capital account.[111] Generally, expenditures incurred to maintain the circulation of a periodical are not chargeable to capital account, whereas expenditures incurred in establishing or increasing circulation are so chargeable. The expenditures thus capitalized may be amortized, provided the taxpayer can demonstrate the limited useful life of the new subscriptions obtained.

Comment: The industry experience indicates that a magazine or a newspaper subscription typically runs for only one year and the average subscriber renews for only two or three years before dropping the subscription. It may, therefore, be possible to amortize the capitalized circulation expenditures over a 3-year period. Support for this position may be found in §59(e)(1) which permits a 3-year amortization of such expenditures.

The taxpayer also has the option of electing under §59(e) to capitalize and amortize ratably over a 3-year period all circulation expenditures. Some relevant considerations bearing upon these options are summarized below:

(i) The §173(a) election applies to only those expenditures which are chargeable to capital account. The §59(e) election, on the other hand, may be made for all expenditures deductible currently under §173(a), including expenditures incurred to maintain circulation.

Comment: Where the amount incurred for increasing circulation during the taxable year is relatively small as compared to the amount expended on maintaining circulation, an election under §173(a) will not help the taxpayer in eliminating the upward adjustment to AMTI. In such a case, an election under §59(e) is indicated if the taxpayer desires to eliminate the adjustment to AMTI.

(ii) If an election under §173(a) is made, it applies to all circulation expenditures properly chargeable to capital account.[112] An election under §59(e), on the other hand, may be made with respect to any portion of circulation

expenditures including those incurred on maintenance of circulation.[113]

Comment: The §59(e) election provides the taxpayer with a planning tool because it enables the taxpayer to enjoy the best of both worlds, *i.e.*, capitalization under §59(e) to avoid AMT and a current deduction under §173(a) at the same time. For example, the taxpayer may capitalize under §59(e) just enough of the circulation expenditures necessary to avoid AMT and deduct the balance under §173(a).

Before deducting circulation expenditures under §173(a), the taxpayer must assess the impact of such a deduction on its AMT liability. If such impact is negative, it may utilize either an election under §173(a) or §59(e), whichever yields more favorable results.

(7) Gain or Loss Upon Disposition of Certain Assets

As previously discussed, in the case of: (i) depreciation of real or personal property, (ii) amortization of pollution control facilities, (iii) mining development and exploration costs, and (iv) circulation expenditures, allowable deductions are determined for AMTI purposes under rules which are different from the rules that apply for regular tax computations. Since the AMT rules are designed to eliminate the deferral effect of the regular tax rules, AMT deductions are smaller than regular tax deductions, at least in the early years. To take into account this disparity in write-off rules, §56(a)(7) provides that, for purposes of computing AMTI, the adjusted bases of the types of assets described above are determined based upon the amount of deductions permitted for AMTI computations. Consequently, when an asset of the type in question is disposed of, the amount of gain or loss will be different for AMTI purposes than for regular tax purposes.

Example: A, a calendar year taxpayer, places depreciable personal property in service after December 31, 1986, at a cost of $3,000. The property has a recovery period of three years and its ADR life is four years. The following table shows the depreciation deductions that are available for both regular tax purposes and AMTI purposes:

Year	*Type of Tax*	*Adjusted Basis*	*Deduction*
1987	Regular Tax	$3,000	$1,000
	AMT	3,000	563
1988	Regular Tax	2,000	1,334
	AMT	2,437	914
1989	Regular Tax	666	444
	AMT	1,523	609
1990	Regular Tax	222	222
	AMT	914	914
1991	Regular Tax	0	0
	AMT	305	305

Assuming the property is sold by A on January 1, 1989, for $4,000, its gain for regular tax and AMT purposes is computed as follows:

Regular Tax Gain = $4,000 − $666 = $3,334

AMT Gain = $4,000 − $1,523 = $2,477

Thus, in computing its regular taxable income for 1989, A will take into account a gain of $3,334. whereas a gain of $2,477 will enter into its AMTI computations.

(8) Capital Construction Funds for Shipping Companies

(a) General

Under the Merchant Marine Act of 1936, as amended,[114] a taxpayer may enter into an agreement with the Maritime Administration[115] to maintain a Capital Construction Fund (CCF or Fund). Participation in the CCF program enables the owners or lessees of U.S.-flag vessels operating in the foreign or domestic trade of the United States or in U.S. fisheries to essentially establish a government-sanctioned tax shelter which permits them to currently deduct from income deposits into the CCF and also exclude from income those earnings which are from the investment or reinvestment of amounts held in the Fund. If the taxpayer makes a "qualified withdrawal" (*i.e.*, a withdrawal made for the acquisition, construction, or repair of a vessel covered by the CCF Agreement), the taxpayer must reduce its basis in the vessel,[116] but need not recognize any income. If, however, a nonqualified withdrawal is made, the withdrawal is taxed in accordance with ordering rules which treat the withdrawal as being made first out of the ordinary income account of the CCF, then from the capital gain account and finally from the capital account.

The Tax Reform Act of 1986 coordinates the Merchant Marine Act with the Internal Revenue Code for the first time and modifies some of the treatment of certain withdrawals made from the Fund. Qualified withdrawals are expanded under the Act to include the purchase or lease of an agreement vessel for a period of five years or more. With respect to nonqualified withdrawals, the maximum marginal tax rate on individuals and corporations is imposed on such withdrawals made after December 31, 1986. Moreover, a 25-year limit is imposed on the amount of time in which monies may remain in a CCF without being withdrawn for qualified purposes, with such funds being treated as withdrawn 20% in the 26th year, and an additional 20% in each subsequent year until 100% of the funds are deemed withdrawn in a nonqualified withdrawal in the 30th year. The Secretary of Transportation (in the case of U.S.-flag vessels used in the foreign and noncontiguous domestic trade) and the Secretary of Commerce (in the case of U.S. fishing vessels) are required to certify to the Secretary of the Treasury that the amount of funds held in a CCF are appropriate for the vessel construction, reconstruction or acquisition program contemplated in each CCF agreement. If the current funds in the CCF exceed the needs of the taxpayer's program, the fundholder is given three years to develop appropriate program objectives.

Failure to do so results in such excess funds being treated as a nonqualified withdrawal.

(b) Definition

In determining AMTI, the nontaxability of deposits and Fund earnings under post-1986 TRA Code §7815 (and the corresponding sections of the Merchant Marine Act §607)[117] do not apply to any amount deposited into the Fund after December 31, 1986, or to any earnings (including gains and losses) on amounts in the Fund after December 31, 1986.[118] Thus, in determining AMTI, amounts deposited in a Fund after 1986 are not deductible and earnings (including gains and losses) of the Fund after 1986 are not excludable.[119] Moreover, no reduction in basis is permitted under Code §7518(f) (or corresponding §607 provision of the Merchant Marine Act) for the withdrawal of such taxable income, gain, or Fund earnings to the extent that such amounts have previously been included in AMTI.[120] Any withdrawal of deposits or earnings from the Fund, however, are to be allocable first to deposits made before January 1, 1987 and earnings received or accrued before that date.[121] This means that amounts deposited in or earned by a Fund before 1987 are treated as withdrawn prior to amounts deposited or earned after 1986.[122]

(9) Special Deduction for Certain Insurance Companies

(a) General

Under changes made by the Tax Reform Act of 1986, Blue Cross and Blue Shield organizations and some other previously tax-exempt insurers lose their tax-exempt status for regular tax purposes. These insurers are, after the TRA, taxable under rules similar to those that apply to life insurance companies. Section 833(b) of the Code permits these previously tax-exempt insurance companies a deduction for a portion of the expenses associated with the resolution of insurance claims.

(b) Definition

Section 56(c)(3) provides that, in computing AMTI, the deduction permitted under §833(b) will be disallowed. Thus, an insurer which claims a deduction under §833(b) for regular tax purposes will have an upward adjustment to its AMTI.

(10) Possessions Corporations

(a) General

If a domestic corporation makes an election under §936(a), it is entitled to a credit against its U.S. income tax liability for the amount of tax that is attributable to the foreign source taxable income derived from the active conduct of a trade or business (including the sale or exchange of substantially all the assets of such trade or business) in Puerto Rico or the Virgin Islands and qualified Puerto Rico or the Virgin Islands source investment income, provided the corporation meets the gross income test of §936(a)(2)(A) and the active business test of §936(a)(2)(B). The corporation meets the gross income test if 80% or more of its gross income for the prior 3-year period is derived from sources within Puerto Rico or the Virgin Islands. It meets the active business test if 75% or more of its gross income for the prior 3-year period is derived from the active conduct of a trade or business in Puerto Rico or the Virgin Islands. The 75% test applies for taxable years beginning in 1987. The percentage was 65% for taxable years beginning in 1985 and 1986, 60% for taxable years beginning in 1984, and 55% for taxable years beginning in 1983.

(b) Definition

Section 59(b) provides that the AMTI of any domestic corporation which elects the benefits of §936 does not include the amount of income with respect to which a credit under §936(a) is available. Thus, a domestic corporation which claims a credit under §936(a) will exclude the following types of income from its AMTI:

(i) income derived from the active conduct of a trade or business in Puerto Rico or the Virgin Islands,

(ii) income derived from the sale or exchange of substantially all the assets used in the conduct of a trade or business in Puerto Rico or the Virgin Islands; and

(iii) qualified investment income derived from sources within Puerto Rico or the Virgin Islands.

The net effect of this adjustment is to prevent any AMT liability arising from the possessions source income with respect to which a credit under §936 is claimed.

(11) Disallowance of Passive Activity Losses

(a) General

Effective generally for years beginning after December 31, 1986, Act §501 enacted Code §469 to limit the "passive activity losses" and credits of certain taxpayers. In general, a "passive activity" is any activity involving the conduct of a trade or business in which the taxpayer does not materially participate. The taxpayers to whom the §469 limits will apply include individuals, estates, trusts, personal service corporations, and (to a lesser extent) other closely held C corporations.

If a loss or credit is derived from a passive activity by one of the foregoing taxpayers (other than closely held C corporations), the loss or credit will be limited to income generated from other passive activities. Any loss or credit not allowed by reason of the §469 limits will be available as a carryforward to future years and will generally be allowed when passive income is generated from the activity or from other passive activities or, in the case of losses, when the activity is sold or otherwise disposed of.

(I) Definition of Passive Activity

Post-TRA Code §469(c) defines a "passive activity" as any activity involving the conduct of any trade or business in which the taxpayer does not materially participate. A passive activity includes any rental activity, regardless of whether it constitutes a trade or business and regardless of the taxpayer's "material participation" in the activity. If

---

[120] Code §56(c)(2)(B). *See also* Senate Report at 529.
[121] Code §56(c)(2).
[122] Senate Report at 529.

the rental activity requires the provision of substantial services, however, such as a hotel, the activity is not treated as passive so long as the taxpayer materially participates. For purposes of the passive activity definition, a trade or business will include any activity involving research or experimentation within the meaning of §174 or, to the extent provided in regulations, any activity in connection with a trade or business or any §212 income-producing activity.

Under §469(h), a taxpayer "materially participates" in an activity only if the taxpayer's involvement in the activity is regular, continuous, and substantial. In determining whether a taxpayer materially participates, the activities of a spouse will be attributed to the taxpayer. Moreover, a special rule permits a retired farmer or a surviving spouse of a farmer to be treated as a material participant if, prior to retirement or death, the farmer materially participated in the farming activity. A corporation subject to §469 is treated as materially participating if over 50% (by value) of the shareholders materially participate in the activity or if, in the case of a closely-held C corporation (but not personal services corporation), the business is an active business meeting the requirements of §465(c)(7)(C)(i), (ii) and (iii).

A taxpayer is not treated as materially participating in a limited partnership to the extent of the taxpayer's interest in the partnership as a limited partner. For example, if a taxpayer holds a 25% general partnership interest and a 25% limited partnership interest in the same partnership and the taxpayer materially participates in the partnership's activities, the losses and credits allocable to the 25% limited partnership interest will be treated as passive. To prevent avoidance of the passive loss limits, regulations may override the general rule that a limited partnership interest is treated as passive.

(II) Taxpayers Subject to Passive Limits

Section 469(a)(2) provides that the following taxpayers may be subject to the passive loss and credit limits:

(i) Any individual, estate, or trust,

(ii) Any closely held C corporation, and

(iii) Any personal service corporation.

Section 469(j)(1) defines a "closely held C corporation" as any C corporation where, at any time during the last half of the taxable year, more than 50% in value of the outstanding stock is owned by no more than five individuals (applying the personal holding company attribution rules). A "personal service corporation" is defined as a corporation the principal activity of which is the performance of personal services that are substantially performed by employee-owners. A corporation will not be treated as a personal services corporation, however, unless more than 10% of the stock by value is held by employee-owners.

Under §469(e)(2), the passive loss and credit limits are less restrictively applied to closely held C corporations than to the other categories of taxpayers subject to the limits of §469. Section 469(e)(2)(A) provides that if a closely held C corporation (other than a personal service corporation) has net active income for any taxable year, the passive activity loss of such taxpayer for the taxable year (determined without regard to this paragraph) — (i) shall be allowable as a deduction against net active income, and (ii) shall not be taken into account under §469(a) to the extent so allowable as a deduction. A similar rule applies to any passive activity credit of the taxpayer. Section 469(e)(2)(B) defines "net active income" as the "taxable income of the taxpayer for the taxable year determined without regard to — (i) any income or loss from a passive activity, and (ii) any item of gross income, expense, gain, or loss described in paragraph (1)(A) [relating to portfolio income]." Thus, while closely held C corporations (other than personal service corporations) are not permitted to use passive-activity losses to reduce portfolio income, such losses can be used to offset income from the corporation's active business.

(III) Definition

Although income or loss from each passive activity must be separately accounted for, a taxpayer's passive activity loss for a taxable year is determined by netting the aggregate income and losses from all passive activities. If aggregate losses exceed aggregate income, the resulting net loss is the taxpayer's "passive activity loss." According to the Conference Report,[123] all deductions arising from passive activities, including deductions allowed under §§162, 163, 164, and 165, must be taken into account, even if claimed as an itemized deduction on the taxpayer's return. It is unclear, however, whether a charitable contribution deduction that arises from the contribution of, for example, a facade easement by a limited partnership would be subject to the passive loss rule. Interest deductions attributable to passive activities are treated as passive activity deductions and will not be treated as investment interest subject to the revised investment interest limits of §163(d).

Section 469(d)(2) defines a "passive activity credit" as the amount, if any, by which the sum of various business credits derived from passive activities exceeds the taxpayer's regular tax liability for the taxable year allocable to passive activities. The credits subject to limitation as passive activity credits include:

(i) The §936 possessions credit;

(ii) The orphan drug credit;

(iii) The nonconventional fuels credit; and

(iv) The general business credit which, after 1986, will include the rehabilitation credit, the energy investment credit, the research credit, the alcohol fuels credit, the targeted jobs credit, and the post-TRA low-income housing credit.

Under §469(e), (i) portfolio income (interest, dividends, annuities, royalties, and investment gains), (ii) expenses other than interest that are clearly and directly allocable to portfolio income, and (iii) interest expense properly allocable to portfolio income are not taken into account in determining the income or loss from an activity. For this purpose, however, an interest in the passive activity is not treated as investment property so that gains and losses upon disposition of a passive activity interest will be

[123] Conference Report at II-139.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

taken into account in determining passive activity income and loss. Investment earnings on an activity's working capital will be treated as portfolio income for purposes of the foregoing rule.

Earned income will not be treated as passive income for purposes of the passive limits.

(IV) Exceptions

Section 469(e)(2) permits the passive losses of a closely held C corporation, other than a personal service corporation, to offset all income except portfolio income.

Section 469(i) provides a limited exception for individuals who actively participate in real estate activities. Under this exception, up to $25,000 of passive losses (or the amount of credit that is the deduction equivalent of the passive loss) may be used to offset nonpassive income. This $25,000 amount, however, is phased out if the taxpayer's adjusted gross income (AGI), excluding passive losses, exceeds $100,000. Under the phaseout, for every $2 of AGI above $100,000, the $25,000 amount is reduced by $1. Thus, the exception vanishes if AGI exceeds $150,000.

The $25,000 amount is available generally only if the taxpayer is a "active participant" in the rental activity. A taxpayer will not be treated as an active participant if, at any time during the taxable year, the taxpayer's interest in the activity is less than 10% by value of all interest in the activity. Moreover, a taxpayer's interest as a limited partner will not be treated as an interest with respect to which the taxpayer actively participates.

Two special rules apply to the rehabilitation and low income housing credits. First, the $25,000 amount (in a deduction-equivalent sense) is available regardless of active participation by the taxpayer. Second, the threshold for the phase-out of the $25,000 amount is raised to $200,000.

Section 469(j)(5) defines "deduction equivalent" as the amount of credits which, if allowed as a deduction, would reduce the regular tax liability for the taxable year by an amount equal to such credits. Assuming a taxpayer's taxable income is entirely subject to tax at the 28% rate and the taxpayer has no itemized deductions dependent upon the amount of the taxpayer's AGI, the deduction equivalent of credits equal to the $25,000 amount is $7,000.

(V) Suspended Passive Losses and Credits

Losses and credits not allowed under §469 are suspended until the taxpayer generates passive income from the passive activity or has income from unrelated passive activities. Under §469(g), if a taxpayer disposes of his entire interest in any passive activity in a fully taxable transaction, any suspended loss as well as any loss arising in the year of disposition will be allowable as follows:

(i) First, against income or gain from the passive activity for the taxable year including any gain recognized on the disposition;

(ii) Second, against net income or gain for the taxable year from other passive activities; and

(iii) Finally, against all other income or gain.

A capital loss from the disposition of the passive activity will, however, be subject to the §1211 capital loss limitations. Moreover, losses will continue to be suspended if the taxpayer transfers the interest to a related person. If the interest is sold in an installment sale, a ratable share of the suspended losses will be allowed each year in accordance with the amount of the installment sale gain reported for that year for regular tax purposes.

If a taxpayer dies, suspended losses will be allowed on the taxpayer's final return to the extent that the losses exceed the step-up in basis (to fair market value) that occurs under §1014 upon death.

Under §469(j)(6), if an interest in a passive activity is transferred by gift, the basis of the interest will be increased by the amount of the suspended losses and such losses will no longer be allowable as a deduction for any taxable year.

Section 469(j)(9) provides an election upon disposition of a passive interest under which a taxpayer may increase his basis in the passive activity by the amount of any unused credit which reduced basis of the property for the taxable year in which the credit arose. The basis increase is made as of the time immediately before the transfer. If this election is made, the passive activity credit will not be allowed in the future. If the election is not made and if the transfer does not otherwise cause recapture of the credit, the suspended credit will be allowed to offset the regular tax from the gain, if any, generated on the transfer or to offset the regular tax from passive income subsequently generated from other activities.

Under §469(f), if an activity ceases to be a passive activity, suspended passive losses and credits will be allowed as an offset against future income and future regular tax liability from active operations. Otherwise, the suspended deductions and credits continue to be treated as arising from a passive activity. Similar principles apply to a change in status of a closely held C corporation or personal service corporation.

(VI) Effective Dates and Phase-In Rules

The passive loss limits apply generally to taxable years beginning after December 31, 1986. Loss and credit carryovers from a taxable year beginning before 1987 and carried to a taxable year beginning after 1986, however, are not subject to the limits. Special transition rules apply to low-income housing. *See* Act §§501(c)(3) and §502.

Under §469(1), the passive loss limits are phased-in over four years if (i) the taxpayer held the interest in the passive activity, or was under a binding contract to acquire the interest in the passive activity, on the date of enactment of the 1986 TRA and at all times thereafter, and (ii) the passive activity was being conducted on date of enactment or the property used in the activity was acquired pursuant to a binding written contract in effect on August 16, 1986, or construction of the property began on or before August 16, 1986. Under the phase-in, 65% of a passive activity loss and credit is allowed for taxable years beginning in 1987. This is reduced to 40% in 1988, 20% in 1989, and 10% in 1990.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(b) Definition

One rationale for the enactment of passive loss rules of §469 is that a loss in the current year does not necessarily reflect a true economic loss, especially if it derives from an activity with future income potential. The loss can be determined with accuracy only when the activity is finally disposed of.

The deferral that is prohibited by §469 for regular tax purposes is also prohibited by §58(b) for AMT purposes. Section 58(b) provides that, for purposes of computing AMTI, passive activity losses will be suspended. In determining the amount of loss that must be suspended in computing AMTI, the rules of §469 apply with four modifications:

(i) The adjustments of §56 are taken into account. Thus, for example, a taxpayer placing residential rental real estate in service in 1987 will compute its depreciation deduction for regular tax purposes by using a recovery period of 27.5 years. For purposes of computing AMTI, however, the taxpayer must use a recovery period of 40 years. Assuming the rental activity generates a loss in 1987, the passive loss that must be suspended under §469 is determined by taking into account the depreciation deduction computed over a useful life of 27.5 years, whereas a useful life of 40 years is used in determining the depreciation deduction that enters into the computation of the passive loss that must be suspended under §58(b). The amount of loss disallowed for AMT purposes, therefore, will be smaller than the loss disallowed for regular tax purposes because of the smaller depreciation deduction.

(ii) Any deduction that is an item of tax preference under §57 shall not be taken into account. Thus, for example, if the taxpayer's passive activity loss computed under §469 includes a percentage depletion deduction, such deduction will be disregarded in computing passive activity loss under §58(b). The rationale for this is that the depletion deduction is restored to AMTI under §57(a)(1) and disallowing it again under §58(b) as part of the passive activity loss would amount to double counting.

(iii) The phase-in rules of §469(l) do not apply for purposes of computing a passive activity loss that is disallowed under §58(b). This rule will produce serious AMT consequences to taxpayers which utilize the phase-in rules for regular tax purposes.

(iv) If a taxpayer is insolvent, the amount of passive activity loss that is disallowed under §58(b) in computing its AMTI is reduced by the amount by which taxpayer is insolvent as of the close of the taxable year.[124] The amount by which a taxpayer is insolvent is the excess of its liabilities over the fair market value of its assets.[125]

In summary, the amount of passive loss that is disallowed in determining AMTI is computed after taking into account all adjustment and preference items described in §§56-58.

[124] §58(c)(1)(A).
[125] §58(c)(1)(B).

(12) Book Income/Adjusted Current Earnings [126]

(a) Background

The corporation that reports substantial profits to its shareholders and yet pays no federal income taxes is a phenomenon that has received considerable publicity in recent years, and considerable attention from proponents of tax reform. Theoretically, there should be little disparity between income for financial accounting purposes and income for tax purposes as long as the income tax base is reasonably comprehensive and deductions are limited to those required to accurately measure net income. In recent years, however, the regular federal income tax system has fallen far short of satisfying these two conditions, and the supplementary minimum tax system has not come that much closer. The Tax Reform Act of 1986 [127] represents probably Congress' most determined effort ever to bring the federal income tax base closer to economic income. In particular, the revised minimum tax rules, eliminating for minimum tax purposes the incentive effect of the bulk of preferences still allowed for regular tax purposes, go a long way toward achieving the reformers' goal of compelling economically profitable corporations to pay some income tax, even without regard to the adjustments to be considered in this section.

Nevertheless, when the Senate was considering the 1986 Act, there was concern, despite the prospect of a substantially toughened minimum tax, that some profitable corporations would continue to escape tax liability.[128] Congress decided to attack the problem directly by requiring all corporations to pay a tax, at minimum tax rates, on at least 50% of their reported profits. This was to be done by requiring corporations to add into their AMTI an amount equal to 50% of the excess, if any, of reported profits over AMTI without regard to any reported profits adjustment.

The decision of the Senate to adopt this reported profits or book income adjustment for alternative minimum tax purposes evoked strong criticism from business and accounting groups. The chief complaint was that the tax disadvantage attached by the Senate bill to the reporting of profits for financial accounting purposes would create an undesirable tension between the tax and financial accounting rules. Managers and accountants would be torn between the desire to report profits and the desire to minimize taxes. To the extent they chose to sacrifice the former objective to the latter, it was argued, the accounting profession would come under pressure to adopt rules tending to understate economic income, with a resulting decline in the reliability of financial information. In addition, the Service would be put in the position of having to police financial accounting practices—a task that could be accomplished, if at all, only with great difficulty and at enormous cost.

The Conference Committee did not turn a deaf ear to these criticisms, but neither did it find them so persuasive that it was willing to give up the book income adjustment altogether. What emerged from the Conference Committee

[126] This section was prepared by Donald J. Mathison, Esq., Silverstein and Mullens, Washington, D.C.
[127] P. L. 99-514.
[128] *See* Senate Report at 520.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

and was enacted into law — as an apparent result of a political compromise — was a two-stage system under which the Senate's book income adjustment was preserved more or less intact for 1987, 1988, and 1989, and then is replaced in 1990 and subsequent years with an adjustment based on current earnings.[129]

Disinterested observers may be struck by the oddness of inserting into the tax law a concept as radical as the book income adjustment and providing for its expiration after a period of only three years. Some have attributed this unusual procedure to Congress' urgent need for revenue in 1987, 1988, and 1989. It is also noteworthy that the Conference Committee directed the Treasury Department to study the book income and earnings and profits provisions of the Act and report back to Congress by January 1, 1989.[130] Conceivably, a favorable report by Treasury concerning the book income adjustment could prompt Congress to extend its life and forestall its replacement with the less controversial earnings and profits adjustment.

This section will consider the two adjustments, that for book income and that based on earnings and profits.

(b) Book Income (1987, 1988, and 1989)

(I) General Rule

Consistent with the Senate bill, the Act provides that, for taxable years beginning in 1987, 1988, or 1989, a corporation must increase its AMTI by 50% of the amount (if any) by which its "adjusted net book income" (ANBI) for the year exceeds its AMTI for the year, determined without regard to the ANBI adjustment and also without regard to the alternative tax net operating loss deduction.[131] The Act provides that "ANBI" generally means "the net income or loss of the taxpayer set forth on the taxpayer's applicable financial statement," with certain adjustments.[132] "Applicable financial statement" is another defined term. The extensive definition of this term, to be discussed below, contains the most critical elements of the ANBI concept. At this point, however, it bears repeating that the practical effect of the ANBI adjustment is that any corporation with financial statement income in 1987, 1988, or 1989 will be required to pay a tax of no less than 10% of such income (20%, the AMTI rate, of the 50% of financial statement income that must be included in AMTI).

The Senate Report provides additional information not set forth in the statute concerning the mechanics of the book income adjustment.[133] A corporation may have negative amounts of either or both ANBI and AMTI. A positive amount exceeds any negative amount, and a smaller negative amount exceeds any larger negative amount. Thus, in an example given in the report, if a corporation has ANBI of $100 and AMTI (without regard to the ANBI adjustment) of negative $50, there will be a positive ANBI adjustment of $75—50% of the $150 excess of ANBI over AMTI. As a result, the corporation has AMTI of $25.

The financial statement income that Congress sought to tax by means of the ANBI adjustment is pre-tax income. Therefore, the Act provides that ANBI must be adjusted to disregard any federal or foreign income taxes that are directly or indirectly taken into account on a corporation's applicable financial statement.[134] The one exception to this rule is for foreign taxes that a corporation elects to deduct rather than to credit pursuant to Code §901. Note that it is not only separately stated Federal or foreign income taxes that must be disregarded, but also those "indirectly" taken into account. The legislative history makes it clear that a corporation cannot mitigate the consequences of the ANBI adjustment by including (that is, hiding) federal or foreign income taxes in other items of income or expense.[135]

Some corporations have taxable years that are different from their financial accounting years. "Appropriate adjustments" are to be made where the taxable year and the financial accounting year do not coincide.[136] Generally a corporation will be required to include in its AMTI for a taxable year a pro rata portion of the ANBI in each financial accounting year with which that taxable year overlaps.[137]

(II) Definition of Applicable Financial Statement

The term "applicable financial statement" (AFS) is given an elaborate definition.[138] A corporation is intended to have a single AFS for each taxable year. Many kinds of financial reports are eligible to constitute an AFS, but the Act establishes a hierarchy, so that, if a corporation has more than one kind of eligible report for a given year, as will often be the case, only one will be its AFS and the corporation will not be able to choose which report to use in computing its AMT liability.[139]

To be an AFS, a report must be some kind of financial statement. A financial statement is generally expected to include an income statement, a balance sheet, a statement of assets, liabilities, and owners' equity, a statement of changes in owners' equity, and other appropriate information.[140] An income statement alone, however, may constitute a taxpayer's AFS if the taxpayer does not prepare a balance sheet and other customary documents. An income statement will not establish income for AMT purposes, however, unless it reconciles with such other financial documents as the taxpayer does prepare.

At the top of the hierarchy is a statement filed with the Securities and Exchange Commission.[141] Such a statement is treated as a taxpayer's AFS before any of the other eligible kinds of reports.

Next in priority is a certified audited income statement used for credit purposes in a report to shareholders, or for any other substantial nontax purpose.[142] According to the

legislative history, a financial statement is considered to be certified if it is accompanied by an opinion of a professional accountant stating that it is generally consistent with the taxpayer's accounting principles.[143] If a corporation has more than one certified audited statement, a statement that is used for credit purposes takes precedence over all others, and a statement that is used in a report to shareholders takes precedence over a statement used for some other substantial nontax purpose.[144]

Third in priority is an income statement required to be provided to the federal government or any agency thereof, a state government or any agency thereof, or a political subdivision of a state or any agency thereof.[145] As in the case of certified audited income statements, there is an order of precedence within this category, so that a statement required to be made to the federal government or an agency thereof has priority over a statement required to be made to a state or an agency thereof, and a statement required to be made to a state or an agency thereof has priority over a statement required to be made to a political subdivision of a state or an agency thereof.[146]

Lastly, if a taxpayer has no financial report falling in any of the first three categories of AFSs, any income statement used for credit purposes, in a report to shareholders, or for any other substantial nontax purpose may constitute its AFS.[147] There is the same ranking of different kinds of statements within this category as in the case of certified audited income statements.[148] In applying this and all the rules of priority, only statements that are actually used by the taxpayer are given consideration.[149]

The question arises to what constitutes a corporation's AFS where it has more than one statement having precisely the same priority. The answer that may be inferred from the legislative history is that the latest in time will prevail.[150] Adjustments to financial statements made after the statements are issued, however, will not retroactively affect ANBI unless the original statements are actually restated.[151]

The further question arises as to what constitutes a corporation's AFS where it has no statement at all in any of the four categories. The Senate Report indicates the Committee's view that this will seldom be the case.[152] Noting that taxpayers are required to maintain books and records, the report states that a summarization of these books and records, where possible, may be used as a corporation's AFS. If a corporation has no books and records capable of summarization, however, financial statement net income or loss, for purposes of determining ANBI, will be treated as being equal to its subchapter C earnings and profits.[153]

In addition, a corporation having an AFS in the category having the lowest priority—namely, an unaudited income statement used for credit purposes, in a report to shareholders, or for another substantial nontax purposes—may elect to treat subchapter C earnings and profits as its financial statement net income or loss.[154] Whenever a taxpayer makes this election, the election will remain in effect as long as the taxpayer continues to be eligible to make it unless the Service consents to a revocation.

(III) Corporations with Affiliates

Many corporations consolidate with affiliated corporations for tax purposes, financial reporting purposes, or both. Different principles, however, govern tax and financial reporting consolidation.

ANBI, as the legislative history makes clear, is to be determined on a consolidated basis, for all the corporations included on one consolidated return and no others.[155] Given this rule and the disparity between tax and financial reporting consolidation principles, the AFS's of some corporations with affiliates will reflect the results of affiliate operations that should not be taken into account for tax purposes, while the AFS's of other corporations with affiliates will fail to reflect the results of affiliate operations that should be taken into account for tax purposes. Rules must be provided to appropriately adjust AFS net income or loss in light of this fact, and the Act recognizes this need.

The Act provides that, when a corporation files a consolidated return, its ANBI shall take into account items on its AFS that are allocable to members of its affiliated group included on the consolidated return.[156] Conversely, where an affiliated corporation is not included on a taxpayer's consolidated return, ANBI will take into account the earnings or loss of the affiliate only to the extent of dividends actually paid to the taxpayer and other amounts required to be included in the gross income of the taxpayer in respect of the affiliate's earnings[157] (for example, subpart F income of a controlled foreign corporation).

These somewhat sketchy statutory instructions are elaborated upon in the Senate Report. Summarizing the procedures to be followed to produce the proper ANBI for corporations with affiliates, the report states:

> It is anticipated that this adjustment will be accomplished by removing the net income and any related consolidating eliminations of companies that are included for financial statement purposes but not for Federal income tax purposes, and by adding in the net income and related consolidating eliminations of companies that are excluded for financial statement purposes but included for Federal income tax purposes.[158]

Although the concept, so explained, seems simple enough, it remains to be seen how simple it will be to apply in practice.

(IV) Special Kinds of Corporations

The Act and its legislative history set forth special rules for determining ANBI in the case of certain special kinds of corporations.

(i) Possessions Corporations

Where a taxpayer receives dividends from a §936 corporation, those dividends are augmented or grossed up, for purposes of measuring the taxpayer's ANBI, by the amount of any withholding taxes paid with respect to the dividends.[159] Any such withholding taxes are then treated as creditable foreign taxes for AMT purposes, but only to the extent the dividends with respect to which they are paid cause an increase in the taxpayer's AMTI.[160] The Conference Report provides two examples of the workings of this provision.[161]

In the first of these examples, a taxpayer receives a $90 dividend from a possessions corporation with respect to which the latter pays $10 in withholding tax. In this case, the dividend is treated as yielding $100 ANBI to the taxpayer (the possessions corporation cannot, of course, consolidate with the taxpayer for tax purposes, so only so much of its earnings as are actually or constructively distributed to the taxpayer are included in its ANBI). On the assumption that this dividend inclusion causes the AMTI of the taxpayer to be increased by $50—which will be the case if ANBI equals or exceeds AMTI without regard to the dividend inclusion, so that the grossed-up dividend increases AMTI by 50% of every dollar thereof—the taxpayer is then entitled to an additional AMT foreign tax credit of $5 (50% of the $10 of withholding taxes).

In the second example, the same dividend and the same withholding tax are assumed, but ANBI is assumed to be $20 less than AMTI without regard to the dividend inclusion. The amount of the dividend inclusion, $100, is not changed. Because, however, the dividend inclusion increases AMTI by only $40—50% of the $80 excess of ANBI over other AMTI—only 40% of the $100 dividend has the effect of increasing AMTI. Therefore, the taxpayer is entitled to only $4 of AMT foreign tax credit for the $10 of withholding tax.

(ii) Alaska Native Corporations

The Alaska Native Claims Settlement Act permits certain Alaska native corporations to use special asset bases in determining cost recovery and depletion deductions.[162] The ANBI of such corporations is to be adjusted to reflect cost recovery and depletion deductions predicated upon those special asset bases.[163]

The Alaska Native Claims Settlement Act also provides favorable timing rules for the deduction of certain expenses.[164] For ANBI purposes, such expenses will reduce ANBI in the same taxable year in which they are deductible for regular tax purposes.[165]

(iii) Cooperatives

In an addition to the ANBI rules as they emerged from the Senate, the Act provides that the ANBI of cooperatives subject to §1381 will not include patronage dividends and per-unit retain allocations deductible under §1382(b) even though such amounts may not be netted out on a given AFS.[166]

(iv) Insurance Companies

Although there is nothing actually in the Act concerning the determination of the ANBI of insurance companies, the Conference Report expresses the conferees' intent that, where the AFS of an insurance company is a statement prepared for regulatory purposes, ANBI will not include dividends to policyholders.[167]

(v) S Corporations, RICs, REITs, and REMICs

The book income adjustment does not apply to S corporations, regulated investment companies, real estate investment trusts, and real estate mortgage investment conduits.[168]

(V) Regulatory Authority to Make Adjustments

The Act grants broad authority to Treasury to issue regulations requiring the adjustment of ANBI "to prevent the omission or duplication of any item."[169] The Senate Report contains several paragraphs of discussion of this grant of authority, listing certain practices that might frustrate the purpose of the book income adjustment which Treasury might need its regulatory authority to suppress.[170] Among these practices are reporting profit or expense items directly to asset, liability, or equity accounts, restating prior year financial statements rather than making adjustments to financial statements for the current year, and claiming depreciation deductions in excess of basis and charging such excess depreciation to a contra-asset account.

Despite the breadth of the grant of authority, the report disclaims any intent to interfere generally in taxpayers' choice of accounting methods or to establish Treasury as the arbiter of acceptable accounting principles. It notes that taxpayers that compute income for financial reporting purposes according to tax accounting rules will not be subject to challenge.[171]

(c) Adjusted Current Earnings (Post-1989 Years)

(I) General Rule

Beginning in 1990, the ANBI adjustment will be replaced by an adjustment based on subchapter C earnings and profits.[172] The thrust of this replacement adjustment is that corporations will be required to pay tax on their economic profits for any taxable year, at the AMT rate, in an amount that is not less than 75% of their pre-tax earnings and profits for that year. The introduction of the earnings and profits adjustment in 1990, as noted, repre-

sents a concession by the Conference Committee to those business and accounting groups that opposed the book income adjustment adopted by the Senate, so the relative burdensomeness of the two different adjustments can be easily imagined.

To implement the earnings and profits adjustment, the Act coins the term "adjusted current earnings" (ACE). For any taxable year beginning after 1989, a corporation's AMTI is to be increased by 75% of the excess of its ACE over its AMTI determined without regard to ACE and also without regard to the alternative tax net operating loss deduction.[173] At the same time, for any taxable year beginning after 1989, a corporation's AMTI is to be reduced by 75% of any excess of the latter amount over the former.[174] Any reductions of AMTI under this provision, however, are limited to the net amount by which AMTI has been increased as a result of the ACE adjustment (taking into account both increases and reductions) in all prior taxable years.[175]

In making these calculations, negative amounts, whether of ACE or AMTI without regard to ACE, are to be taken into account no less than positive amounts.[176] The Conference Report—essentially the only legislative history that exists for the ACE adjustment—provides helpful examples.[177]

The definition of ACE is of central importance. Curiously, this term is defined by reference to the very term the meaning of which it modifies—AMTI. A corporation's ACE for a taxable year is its AMTI for that year without regard to the ACE adjustment (a necessary qualification to keep the definition from being circular), also without regard to the alternative tax net operating loss deduction, and with certain adjustments.[178] Of course, when ACE is so defined, it is the adjustments that are the vital part of the definition, and it is by means of these adjustments that Congress made the term in large part (but not completely) coextensive with subchapter C earnings and profits. These adjustments will now be examined.

(II) Exclusion Items

Perhaps the most significant adjustment is that for "exclusion items." Whenever an item is excluded from gross income for purposes of determining AMTI but is included for purposes of computing earnings and profits, that item must be included in ACE.[179] At the same time, the amount of an exclusion item included in ACE is reduced by any deduction allocable to that item that would have been allowable in computing AMTI if the exclusion item were includible in AMTI gross income.[180] The term "earnings and profits," as used in this context and in all ACE provisions, means earnings and profits as computed for purposes of subchapter C.[181]

The legislative history gives as an example of the application of these provisions to interest on tax-exempt bonds.[182] This interest is not includible in AMTI, yet it does enter into the computation of subchapter C earnings and profits. Hence, it must be included in ACE. At the same time, any costs incurred in carrying tax-exempt bonds, to the extent they would be allowable as deductions in computing AMTI if the interest from the bonds were includible in AMTI gross income, will be allowed as an offset against ACE.

If income items entering into the determination of earnings and profits but not of AMTI are included in ACE—if, that is, the underlying purpose is to conform ACE to earnings and profits—it would appear to follow that deduction items entering into the determination of AMTI but not of earnings and profits should not reduce ACE, and the Act contains such a rule. A deduction not allowed for earnings and profits purposes is also not allowed for ACE purposes.[183]

The legislative history makes it clear that this provision ordinarily precludes a dividends-received deduction in computing ACE.[184] The statute does, however, contain an exception for certain deductions allowed under Code §§243 and 245 for dividends qualifying for a 100% dividends-received deduction. Under this exception, if a corporation paying and a corporation receiving such a dividend cannot be members of the same affiliated group under §1504 by reason of §1504(b) (that is, because one of them is not an "includible corporation"), then the deduction will be allowed for ACE purposes to the extent the payor corporation is subject to federal income tax.[185] The legislative history presents an example of how this provision might apply to a foreign sales corporation.[186]

Note that, while items not deductible for earnings and profits purposes are also not deductible for ACE purposes, items that are deductible for earnings and profits purposes are not therefore deductible for ACE purposes. In this respect, the computation of ACE does not follow that of earnings and profits. Thus, while earnings and profits are reduced for federal and foreign income tax expense, such expense does not, as the legislative history makes clear, reduce ACE.[187] Neither is there any reduction of ACE for distributions to shareholders.[188]

(III) Depreciation and Depletion

(i) Depreciation

Depreciation deductions are the subject of another important ACE adjustment.[189] There are different adjustments for different classes of assets. The depreciation method to be used for ACE purposes depends in large part upon when the asset was placed in service. Separate methods may be required for (1) assets placed in service in taxable years beginning after 1989; (2) assets placed in

service in taxable years beginning before 1990 and subject to the modified accelerated cost recovery system (ACRS) introduced by the Act (generally, assets placed in service in taxable years after 1986 and before 1990); (3) assets placed in service in taxable years beginning before 1990 and subject to the original ACRS (generally, assets placed in service in taxable years after 1980 and before 1987); and (4) all other property (generally, property placed in service before 1981).

For each of these different classes of assets, the Act requires taxpayers to compare the depreciation deductions to which they would be entitled under a statutorily specified method of depreciation with the deductions to which they would be entitled under the depreciation method used for book purposes, and to use for ACE purposes whichever of those two methods yields deductions with a smaller present value.[190]

For the first category of assets, assets placed in service after 1989, the statutorily specified method is the alternative ACRS method of Code §168(g)—that is, straight-line over the ADR midpoint life.[191] For the second category, pre-1990 assets subject to the modified ACRS, the statutorily specified method is straight-line over the remaining ADR midpoint life property as of the beginning of the first taxable year beginning after 1989, using the adjusted minimum tax basis of the asset as of the close of the last taxable year beginning before January 1, 1990.[192] For the third category, pre-1990 assets subject to the original ACRS, the statutorily specified method is straight-line over the remaining ADR midpoint life as of the beginning of the first taxable year beginning after 1989, but using the adjusted regular tax basis of the asset as of the close of the last taxable year beginning before January 1, 1990.[193] For the fourth category, the statutorily specified method is whatever method is used for regular tax purposes.[194]

Significantly, the statutorily specified method for assets in each of the first three categories will, in most if not all cases, be the method used for purposes of computing earnings and profits.

In making the required comparison between the deductions yielded under the statutorily specified method and a taxpayer's method for book purposes, present value is to be determined, under regulations prescribed by Treasury, as of the later of the time the property is placed in service or the beginning of the taxpayer's first taxable year that commences after 1989.[195] In the period prior to the promulgation of regulations, the Conference Report states that, in making the present value determination, taxpayers should use as their discount rate the applicable federal rate under §1274(d).[196] The depreciation method used for book purposes by a taxpayer, or the method of accounting for any other item used for book purposes, is defined as the method of accounting for that item used by the taxpayer on its AFS as determined under the ANBI provisions.[197]

(ii) Depletion

There is also an ACE adjustment for depletion similar to that for depreciation. In the case of any property placed in service in a taxable year beginning after 1989, taxpayers are required to use as a depletion method for ACE purposes either the cost method determined under Code §611 or the method used for book purposes, whichever yields deductions with the smaller present value (determined in the same way as in the case of depreciation deductions).[198]

(IV) Section 312(n) Adjustments

Congress' intent to cause ACE to conform to subchapter C earnings and profits is further seen in the provision [199] that makes most of the earnings and profits computation rules of §312(n) applicable in determining ACE. These rules generally only apply, however, prospectively from the time the ACE adjustment is to replace the ANBI adjustment. Specifically, the Act contains the following limits on the application of the §312(n) rules:

(i) Paragraphs (1), (2), and (3) of §312(n)—relating to construction period carrying charges, intangible drilling costs and mineral exploration development costs, and certain amortization provisions, respectively—apply only to amounts paid or incurred in taxable years beginning after December 31, 1989.[200]

(ii) Paragraph (4)—relating to LIFO inventory adjustments—applies only to taxable years beginning after December 31, 1989.[201]

(iii) Paragraph (5)—relating to installment sales—applies only to installment sales in taxable years beginning after December 31, 1989.[202]

(iv) Paragraph (6)—relating to the completed contract method of accounting—applies to contracts entered into on or after March 1, 1986.[203]

(v) Paragraphs (7) and (8)—relating to redemptions and foreign corporations—do not apply at all.[204]

Consistent with the ACE depreciation and depletion rules, a taxpayer paying or incurring intangible drilling costs or mineral exploration and development costs in taxable years beginning after December 31, 1989, must use the method of deducting those costs that it uses for book purposes if that method yields deductions having a smaller present value (determined as in the case of depreciation and depletion deductions) than the method prescribed by §312(n)(2).[205]

(V) Other Adjustments

The Act prescribes various other ACE adjustments of more limited application.

(i) Life Insurance Contracts and Annuity Contracts

The income on any life insurance contract, as determined under §7702(g) for any taxable year, is included in ACE,[206] and a deduction is allowed for so much of any premium as is attributable to insurance coverage.[207] Similarly, income on an annuity contract, as determined under §72(u)(2), is included in ACE.[208]

(ii) Possessions Corporation Dividends

Dividends received from §936 corporations are to be grossed-up by the amount of any withholding tax paid by the §936 corporation in determining the ACE of the recipient, and an increased AMT foreign tax credit will be allowed the recipient, under rules similar to those applicable in computing the ANBI adjustment and the pre-1990 AMT foreign tax credit.[209]

(iii) Exchange of Debt Pools

When a taxpayer realizes a loss on the exchange of one pool of debt obligations for another such pool, and when the obligations in the second pool have substantially the same effective interest rates and maturities as those in the first, the loss is not recognized for ACE purposes.[210]

(iv) Life Insurance Companies

The acquisition expenses of life insurance companies are to be capitalized and amortized, for ACE purposes, in accordance with the treatment required under generally accepted accounting principles, with amortization to take place as if this rule applied to all taxable years.[211] The legislative history elaborates somewhat upon this adjustment, stating that the amortization method to be used is that required by the Financial Accounting Standards Board at the time the costs in question are incurred or, if there is no such required method at that time, a method that is acceptable under guidelines issued by the American Institute of Certified Public Accountants concerning generally accepted accounting principles.[212] The legislative history also makes it clear that expenses of pre-1990 acquisitions will be treated on a fresh-start basis—that is, under the assumption that such expenses have been treated in prior years in the same manner as required under the rule.

The acquisition expense rule does not apply, the Conference Report states (perhaps unnecessarily), to acquisitions of property and casualty insurance companies.[213]

The Conference Report also states that the small life insurance company deduction under §806 does not apply in computing ACE. Neither is the election that small property and casualty insurance companies can make to be taxed only on investment income under §831(b).[214]

(v) Ownership Changes

Whenever a corporation experiences an ownership change within the meaning of §382 after the 1986 TRA's enactment date, and the aggregate adjusted basis of the corporation's assets exceeds the net fair market value of the corporation's stock, the adjusted basis of each individual asset, for purposes of computing ACE, will be limited to its proportionate share of the value of the stock.[215]

(vi) Special Types of Corporations

Like the ANBI adjustment, the ACE adjustment is wholly inapplicable to S corporations, regulated investment companies, real estate investment trusts, or real estate mortgage investment conduits.[216]

(13) Alternative Tax Net Operating Loss Deduction

(a) General

The final adjustment required in the AMTI computations is the substitution of alternative tax net operating loss deduction for the regular tax net operating loss deduction.[217] A taxpayer is required to make two parallel but distinct sets of net operating loss computations: (i) a regular tax net operating loss computation to be used in computing taxpayer's regular tax liability, and (ii) an alternative tax net operating loss computation to be used in computing taxpayer's AMT liability.

(b) Definition

The alternative tax net operating loss deduction is computed the same way as the regular tax NOL deduction but with two essential differences:

(i) the amount of net operating loss (within the meanings of §172(c)) for the loss year is computed: (a) by adjusting the taxable income as provided in §§56 and 58, and (b) reducing the amount of loss by the sum of items of tax preference enumerated in §57 (except the preference for charitable contributions of appreciated property),[218] and

(ii) the deduction is limited to an amount which is 90% of AMTI for the taxable year in which net operating loss deduction is claimed.[219]

Example: Corporation X, a calendar year taxpayer has $100,000 of gross income for 1987 and deductions of $150,000. The deductions include $20,000 depreciation on depreciable personal property placed in service in 1987 and a depletion deduction of $10,000. Corporation X's NOL for regular tax purposes is therefore $50,000. Assuming X's depreciation deduction for purposes of computing AMTI is $12,000, the depreciation adjustment to AMTI equals $8,000. Also, assuming the adjusted basis of the depletable property is $7,000, it gives rise to a depletion preference of $3,000. Corporation X's alternative minimum tax NOL for 1987, therefore, is $50,000 - $8,000 - $3,000 = $39,000.

The modifications required to convert the regular tax net operating loss deduction into the alternative tax net operating loss deduction are basically designed to take into account the differences between the regular tax base and the AMT base.

The 90% limit is designed to ensure that the NOL deduction does not wipe out a taxpayer's entire AMT liability for any taxable year.

Example: A, a calendar year taxpayer, in 1988 has AMTI of $10 million and a minimum tax NOL of $11 million. A may not use the NOLs to wipe out the entire $10 million of AMTI. A may use the NOL to offset only $9 million (90% of $10 million) of AMTI. The balance of $2 million in minimum tax NOL may be carried forward to 1989.

The alternative tax net operating losses may be carried back or forward in accordance with §172(b)(2). Thus, such losses may be carried back three years and forward 15. As provided in §172(b)(2), therefore, a taxpayer, must carry its alternative tax NOL to the third preceding year unless an election to forego the carryback period is made under §172(b)(3)(C).[220] If the entire amount of the loss is not absorbed by AMTI for such year, the remaining loss must be carried to the second preceding taxable year. To the extent the loss is not absorbed by AMTI in such year, it must be carried to the first preceding taxable year. Any remaining loss may then be carried forward to the 15 succeeding taxable years.

Comment: An alternative tax NOL is offset to the extent of available AMTI in the carryback or carryover year even though the taxpayer owed no AMT in that year.

Example: Corporation X incurs an alternative tax net operating loss of $25,000 in 1990. It does not elect to forego the carryback period. In 1987 it had an AMTI of $26,000 but it did not owe any AMT. The $25,000 NOL will be carried back and absorbed fully by the $26,000 of AMTI in 1987. A thus derives no minimum tax benefit from the alternative tax NOL.

Comment: A taxpayer with an alternative tax NOL should consider making an election under §172(b)(3)(C) to forego the entire carryback period if no minimum tax benefit would be derived from the carryback (*i.e.*, the taxpayer had no AMT liability in prior years). This will preserve the loss for use in future years.

The Conference Report clarifies that, in view of the parallel nature of the regular tax and AMT, any limits applying for regular tax purposes to the use by a consolidated group of NOLs or current year losses will apply for minimum tax purposes as well.[221]

(c) Effective Date

The rules discussed above apply for purposes of computing alternative tax net operating loss for taxable years beginning after December 31, 1986.[222] For purposes of computing net operating loss for taxable years beginning before January 1, 1987, that may be carried over to post-1986 years, however, the rules in effect at the time of enactment of the TRA 1986 apply.[223] Under a special rule, however, a corporation that has a pre-1987 deferred add-on minimum tax liability is required to adjust its NOL that may be carried forward to post-1986 years. Under this rule, the NOL that may be carried to a corporation's first taxable year beginning after December 31, 1986, must be reduced by any preferences that gave rise to the deferred add-on minimum tax.[224]

b. Items of Tax Preference

After taxable income has been adjusted as mandated by §§56 and 58, the next and final step in the computation of AMTI is to add back the sum of items of tax preference described in §57.[225] Items of tax preference are essentially items of exclusion or deduction from gross income which receive preferential treatment for regular tax purposes. To neutralize this preferential treatment, these exclusions and deductions are added back to taxable income to arrive at AMTI.

The items of tax preference are summarized below.

(1) Depletion Deduction

(a) General

Section 611 permits a taxpayer a reasonable allowance for depletion in the case of mines, oil and gas wells, other natural deposits, and timber. A depletion deduction, however, is allowed to a taxpayer only if: (i) the taxpayer has an economic interest [226] in the mineral property or standing timber; (ii) the property with respect to which depletion is claimed is exhaustible; and (iii) the costs with respect to which depletion is claimed are not represented by physical property. If such costs are represented by physical property a depreciation, rather than depletion, deduction may be claimed.

The Code provides two methods for computing a depletion deduction: (i) cost depletion (§§611 and 612), and (ii) percentage depletion (§§611, 613, and 613A). A taxpayer must compute its depletion under both methods and is allowed to use the method that produces the larger deduction. Note, however, that percentage depletion is not allowed with respect to timber as well as oil and gas (with certain exceptions) property. Section 613A specifies that, for taxable years beginning after 1974, percentage depletion is not available (with certain exceptions) for domestic and foreign oil and gas production. The exceptions include: (i) regulated natural gas, natural gas sold on a fixed contract, and certain geothermal deposits, and (ii) independent producers and royalty owners of domestic oil and gas.

Conceptually, cost depletion allows the taxpayer a deduction for that part of its cost (*i.e.*, the investment in the mineral property or timber) which is allocable to the mineral property (or timber) sold or otherwise used in

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

producing the income for the taxable year in question. Regs. §1.611-2(a) provides that the cost depletion deduction may be computed by dividing the taxpayer's basis (as computed under §612) by the number of mineral units remaining as of the taxable year and by multiplying the result by the number of mineral units sold within the taxable year. The basis of mineral property, for cost depletion purposes, is usually the adjusted basis for determining gain or loss, and includes any oil and gas drilling and development costs which have been capitalized (Regs. §1.612-1(b)(1)). Since depletion deductions reduce the taxpayer's basis in the mineral property, cost depletion is no longer available once the taxpayer's basis has been reduced to zero.

As indicated above, the purpose behind cost depletion is to allow the taxpayer to recoup its investment in the mineral property on a tax-free basis. Percentage depletion, on the other hand, is an arbitrary allowance totally unrelated to the taxpayer's investment in the mineral property. It is computed as a specified percentage of gross income from the mineral property subject to a ceiling of 50% of the taxable income from the property (computed without regard to the depletion deduction). The applicable percentages for various mineral properties are specified in §613(b). Since percentage depletion is based on gross income from the mineral property, it may be claimed as long as the property produces gross income. Thus, it offers the possibility of recovering, as a depletion allowance, an amount far in excess of the taxpayer's investment in the property. For this reason, investment in hard minerals and, to a certain extent, in oil and gas, has been a popular way for taxpayers to produce a flow of tax-free cash. By the same token, percentage depletion has long been a favorite target of those seeking to close tax loopholes. Over the years, Congress has attacked this perceived tax-shelter in a number of ways:

(i) by reducing the allowable depletion percentages;

(ii) by enacting this item of tax preference; and

(iii) by reducing the amount of percentage depletion deduction for corporate taxpayers under §291.

Section 291(a)(2), as amended by the TRA 1986, provides that, in the case of iron ore and coal, the amount of percentage depletion deduction otherwise allowable under §613 to a corporate taxpayer will be reduced by 20% of the excess of the deduction over the property's adjusted basis at the close of the taxable year.

(b) Definition

The excess of the depletion deduction allowable [227] over the property's adjusted basis [228] at the end of the year, disregarding the current year's depletion deduction, is an item of tax preference.[229] In the case of a corporate taxpayer, the amount of tax preference for AMT purposes is computed after reduction of the preference amount under §291(a)(2).[230] The excess is computed on each separate "property" as defined for depletion purposes.[231] Accordingly, basis in one property will not reduce excess depletion in connection with another property.

The property's adjusted basis at the end of the taxable year is determined under §1016 and the regulations thereunder. No adjustment is made to the basis of property subject to depletion as a result of the minimum tax.[232]

The preference is measured on a cumulative basis. Depletion will not be considered an item of tax preference until the total depletion deductions have exceeded the adjusted basis of the property. Then, the entire amount of the percentage depletion in excess of that basis (but reduced by 20% under §291) will be considered an item of tax preference.

Example: Corporation A has a percentage depletion deduction of $50,000 in 1987 with respect to an iron ore property. At the end of the taxable year 1987, A's adjusted basis in the property is $30,000. A's preference amount before reduction under §291(a)(2) is ($50,000 - $30,000) = $20,000. The preference amount that will be added back to A's AMT for 1987 is ($20,000 - 20% of $20,000) = $16,000. A's depletion deduction for regular tax purposes is also $16,000.

(2) The Intangible Drilling and Development Costs (IDCs)

(a) General

With respect to intangible drilling and development costs incurred in the development of oil and gas properties, the taxpayer has an option to either capitalize or currently expense such costs.[233] The statutory authority for currently expensing the IDCs is provided in §263(c). The IDCs are those costs which, in and of themselves, have no salvage value. These costs include amounts paid for labor, fuel, repairs, hauling and supplies, or any of them, which are used: (i) in the drilling, shooting, and cleaning of wells; (ii) in such cleaning of ground, draining, road making, surveying, and geological works as are necessary in preparation for the drilling of wells; and (iii) in construction of such derricks, tanks, pipelines, and other physical structures as are necessary for the drilling of wells and the preparation of wells for the production of oil or gas.[234] IDCs also include the cost of installing tangible equipment necessary for the drilling of wells and for the preparation of wells for production (although the equipment itself must be capitalized and depreciated). A well is considered complete when casing and a "Christmas Tree" have been installed. IDCs, however, do not include labor, supplies etc. used to install production facilities. For example, a taxpayer may not elect, under §263(c), to expense: (i) oil well pumps (on the initial completion of the well, and after the well has flowed for a time) including the necessary housing structures; (ii) oil well separators including the housing structures; (iii) pipelines from the wellhead to oil storage tanks as well as the oil storage tanks on the producing lease; (iv) salt water

[233] Regs. §1.612-4(a).
[234] *Id.*

disposal equipment and recycling equipment; and (v) pipelines from the oil storage tanks on the producing leasehold to a common carrier pipeline.[235] In addition, the option to capitalize or currently expense IDCs is not available with respect to capital items. For example, the costs of materials used in structures constructed in the wells, drilling tools, pipe, casing, tubing, tanks, engines, boilers, etc. must be capitalized and depreciated.[236] By the same token, expenditures which must be charged off as expense may not be capitalized. Examples of such expenditures are costs of labor, fuel, repairs, hauling, supplies, etc. incurred in connection with the operation of the wells and of other facilities on the property for the production of oil and gas.[237]

IDCs that are capitalized, but which relate to a nonproductive well may, at the taxpayer's election, be deducted as an ordinary loss in the taxable year in which the nonproductive well is completed.[238] The capitalized IDCs relating to a productive well, on the other hand, may be recovered through depletion, provided such costs are not represented by physical property.[239] Examples of such costs include ground clearing, draining, road making, surveying, geological work, excavation, grading, drilling, shooting, and cleaning of wells. If the capitalized IDCs are represented by physical property, such costs must be recovered through depreciation.[240] Examples of such costs include amounts paid for wages, fuel, repairs, hauling, supplies, etc., used in the installation of casing and equipment and in the construction on the premises of derricks and other physical structures.

The rules described above relating to IDCs incurred in developing oil and gas properties also generally apply to IDCs incurred in developing geothermal deposits. Section 613(e)(3) defines a geothermal deposit as a "geothermal reservoir consisting of natural heat which is stored in rocks or in an acqueous liquid or vapor (whether or not under pressure)." Percentage depletion is allowed with respect to a geothermal deposit and such a deposit is not treated as a gas well for purposes of the limits on percentage depletion provided in §163A.

As stated above, under §263(c) costs that normally would be required to be capitalized are allowed as a current deduction, provided the taxpayer so elects. This election provides the taxpayer with a timing benefit, allowing it to deduct immediately the costs incurred rather than deducting them over the life of the well, or the equipment.

In the case of an "integrated oil company," however, the amount that is otherwise allowable as a deduction under §263(c) is reduced by 30%.[241] "Integrated oil company" means any producer (within the meaning of §4998(a)(1)) of crude oil other than an independent producer within the meaning of §4992(b).[242] The 30% of the deduction that is disallowed in the current year may be capitalized and amortized ratably over a 60-month period beginning with the month in which such costs are paid or incurred.[243] Like IDCs deducted under §263(c), the costs that are capitalized and amortized under §291(b)(2) are subject to recapture as ordinary income under §1254 upon the disposition of the property.[244] Finally, the 30% portion of IDCs disallowed will not increase the property's depletable basis for cost depletion purposes.[245]

(b) Definition

The IDCs tax preference is the excess of the excess intangible drilling and development costs for the taxable year over 65% of the taxpayer's net income from oil, gas, and geothermal properties for that taxable year.[246] The IDCs tax preference amount, however, is computed separately for oil and gas and geothermal properties.[247]

For purposes of computing the IDC tax preference, excess IDCs are defined as the excess of the amount of intangible drilling and development costs paid or incurred with respect to oil, gas, (or geothermal) properties that the taxpayer elects to expense under §263(c) (but as reduced under §291(b)(1) for integrated oil companies) over the amount that would be allowed for the taxable year if the costs had been capitalized and amortized under one of the methods provided in §57(b).[248] Section 57(b), in turn, provides for: (i) a ratable amortization over a 120-month period beginning with the first month in which the production begins, or (ii) at the election of the taxpayer, any method permitted for determining cost depletion with respect to a well.

The net income from oil and gas (or geothermal) properties is defined as the gross income from all the taxpayer's oil, gas (or geothermal) properties less any deductions allocable to these properties reduced by the excess intangible drilling and development costs.[249]

Comment: Since deductions specifically allocable to the properties producing gross income are allowed in computing the net income from oil, gas, (or geothermal) properties, deductions allocable to wells that turn out to be nonproductive will not offset gross income derived from productive wells.

The computation of the IDCs preference may be illustrated by means of an example.

Example: Corporation A, an independent producer owning an economic interest in certain oil and gas properties, incurs $50,000 in IDCs during 1984 and elects to take a current deduction for these costs under §263(c). During 1984, the taxpayer derives $40,000 of gross income from the property and incurs $15,000 in operating expenses. The taxpayer's IDC tax preference is computed as follows:

[235] Rev. Rul. 70-414, 1970-2 C.B. 132.

1. Calculation of Excess IDCs:	
IDCs currently deducted	$50,000
Less	
Allowed amortization deduction under §57(b)(1) (assuming the production begins in the 7th month of the year).	2,500
Excess IDCs	$47,500
2. Calculation of Net Income:	
Gross Income	$40,000
Less	
Allocable deductions	
IDCs	$50,000
Depletion	$ 6,000
Operating expenses	$15,000
Total Allocable Expenses	$71,000
Less	
Excess IDCs	$47,500
	$23,500
Net Income [GI − EIDCs]	$16,500
3. Calculation of IDC Tax Preference:	
Excess IDCs	$47,500
Less	
65% of Net Income	$10,725
Preference Amount	$36,775

Assuming the same facts as in the example above, but assuming that A is an integrated oil company, its preference amount will be computed as follows:

1. Calculation of Excess IDCs:	
IDCs currently deducted	$50,000
Less reduction under §291	$16,667
Less allowable amortization deduction under §57(b)(1) (assuming production begins in the 7th month)	$ 2,500
Excess IDCs	$30,833
2. Calculation of Net Income:	
Gross Income	$40,000
Less	
Allocable Deductions	
IDCs	$33,333
Amortization of §291 Amount	$ 1,667
Depletion	$ 6,000
Operating Expenses	$15,000
Total Allocable Deductions	$56,000
Less	
Excess IDCs	$30,833
	$25,167
Net Income [GI − EIDCs]	$14,833
3. Calculation of IDC Preference:	
Excess IDCs	$30,833
Less	
65% of Net Income	$ 9,641
Preference Amount	$21,192

Note, however, that IDCs incurred with respect to nonproductive wells do not give rise to a tax preference item. Under §57(a)(2)(B), such IDCs are disregarded in computing the excess IDCs. Nonproductive wells are those which are plugged and abandoned without having produced oil and gas in commercial quantities for any substantial period. Therefore, a plugged and abandoned well may have produced some oil and still be considered nonproductive, depending on the ratio of oil produced to costs of drilling.[250] The IDCs attributable to a nonproductive well may, at the taxpayer's election, be either capitalized or deducted currently as a loss, provided the taxpayer has not elected to deduct the IDCs currently under §263(c).

Consequently, a taxpayer will need to determine at the close of the taxable year, or at least by the time for filing its return, whether a well is productive. If the well is not determined to be nonproductive by the time its return is required to be filed, the IDCs with respect to such well will be subject to AMT.[251] The taxpayer, however, may later file an amended return and claim a refund for the amount of minimum tax paid with respect to such well if it subsequently proves to be nonproductive.[252]

(c) Election Under §57(b)(2)

For purposes of computing the excess IDCs, a taxpayer may use either the 120-month period prescribed in §57(b)(1) or elect, under §57(b)(2), to use the cost depletion method. If the taxpayer elects cost depletion, such election must be made within the time prescribed for filing the taxpayer's tax return (including extensions) for the taxable year in which the IDCs are paid or incurred.[253] The cost depletion election must be made for each well separately.[254] Thus, a taxpayer may make the cost depletion election for some of its wells. For purposes of computing the excess IDCs, the taxpayer may make the cost depletion election even if it uses some other method for computing its taxable income.[255] For partnerships, the §57(b)(2) election must be made at the partnership level.[256]

In computing cost depletion pursuant to a §57(b)(2) election, both depletable and depreciable IDCs are taken into account.[257] Depletable IDCs are those costs which are not represented by physical property (*e.g.*, costs incurred in ground clearing, draining, geological work, excavation, grading, etc.). Depreciable IDCs are those costs which are

represented by physical property (*e.g.* wages, fuels, supplies, etc., used in the installation of casing, equipment, and physical structures). The depletable and depreciable IDCs are treated as if capitalized, added to basis, and recovered under Regs. §1.611-2(a) (dealing with the cost depletion method). Note, however, that in computing cost depletion pursuant to a §57(b)(2) election, only IDCs paid or incurred in the current year are taken into account.[258]

(d) Section 59(e) Election

Under §59(e), a taxpayer may elect to deduct IDCs ratably over a 10-year period beginning with the taxable year in which the IDCs are paid or incurred. If the taxpayer makes an election under §59(e), no preference amount will result from IDCs.[259]

(e) AMT Planning

Capitalization of IDCs under both Regs. §1.612-4 and Code §59(e) enables a taxpayer to eliminate the tax preference amount. The pros and cons of the two elections discussed below must be examined carefully.

(i) Under Regs. §1.612-4 election, the capitalized IDCs are recovered through depletion (if the expenditures do not result in physical property) or through depreciation (if the expenditures result in physical property) over the life of the well or equipment. Under the §59(e) election, on the other hand, IDCs are amortized ratably over a 10-year period beginning with the taxable year in which the IDCs are paid or incurred. Taxpayers may choose the option that provides the longer or the shorter recovery period depending upon their situation.

(ii) An election under Regs. §1.612-4 to capitalize IDCs is binding for all subsequent taxable years.[260] Consequently, a taxpayer may not shift between the current deduction method and the capitalization method from year-to-year. A §59(e) election, on the other hand, is not binding on subsequent taxable years. Thus, if the taxpayer made an election under §59(e) for the current year, IDCs paid or incurred in a subsequent taxable year may be deducted under §263(c), subject to §291(b)(1) restrictions.

Comment: There is a certain amount of tension between Regs. §1.612-4 election and §59(e) election. If the taxpayer makes a Regs. §1.612-4 election, it may not deduct IDCs paid or incurred in a subsequent taxable year under §263(c). If, however, the taxpayer is permitted to make an election under §59(e) with respect to IDCs paid or incurred in a subsequent taxable year, the taxpayer would be able to deduct a portion of such costs under §263(c). In view of §59(e)(3), however, it appears that §59(e) should prevail.

(iii) If the taxpayer claims percentage depletion, capitalization of IDCs under Regs. §1.612-4 will not yield any additional deduction. Capitalization of IDCs under §59(e), however, will yield an additional deduction for regular tax purposes.

(iv) An election under Regs. §1.612-4 applies to all IDCs paid or incurred with respect to all properties, not only in the current year but also in all subsequent years.[261] An election under §59(e), on the other hand, may be made with respect to any portion of IDCs paid or incurred during the taxable year.[262]

Comment: Since a taxpayer may elect to capitalize any portion of IDCs under §59(e) and deduct the rest under §263(c), subject to §291(b)(1) restrictions, §59(e) provides taxpayers with a planning tool to maximize the regular tax benefit of a current deduction under §263(c) while avoiding AMT liability at the same time.

(v) If the IDCs are capitalized and amortized pursuant to a §59(e) election, the deducted expenditures are upon a subsequent disposition of the property, recaptured as ordinary income under §1254. No such recapture, however, is required if the IDCs are capitalized in accordance with Regs. §1.612-4.

Comment: The significance of recapture under §1254 is considerably reduced after 1987 because of the elimination of the tax rate differential between ordinary income and capital gain.

(3) Bad Debt Reserves for Financial Institutions

(a) General

Under the amendments made by the Tax Reform Act of 1986, banks with gross assets of less than $500 million (§585) and thrift institutions (§593) are permitted to use a statutory formula to compute allowable bad debt deductions. In certain instances, the formula allows these taxpayers to claim larger deductions than they would be entitled to if they used the actual experience method.

To reduce the benefit of this preferential treatment somewhat, §291(a)(3) requires that the excess of deductions permitted for a reasonable addition to reserve for bad debts over the amount that would be allowable under the actual experience method be reduced by 20%.

(b) Definition

In the case of a financial institution to which §585 or §593 applies, the amount by which the deduction allowable for the taxable year for a reasonable reserve to bad debts exceeds the amount that would have been allowable had the institution maintained its bad debt reserve for all taxable years on the basis of actual experience is an item of tax preference.[263] Note, however, that the entire amount of preference does not enter into the financial institution's AMTI computations. Since, for regular tax purposes, the amount of preference is subject to reduction by 20%, the financial institution's AMTI is increased by the amount of preference net of the 20% reduction.[264]

Example: In 1987, a financial institution's allowable deduction for a reasonable addition to its bad debt reserves is $100,000. The deduction that would be allowable under the actual experience method is $60,000. The preference amount before reduction under §291(a)(3) is therefore $40,000. The reduction

under §291(a)(3) is $8,000 (20% of $8,000). Consequently, the deduction for regular tax purposes is ($100,000 - $8,000)=$92,000. The amount that is required to be added back to AMTI as a tax preference item is therefore ($40,000 - $8,000)=$32,000.

(4) Tax-Exempt Interest

(a) General

The Tax Reform Act of 1986 restructured the Code provisions dealing with tax-exempt bonds, imposed certain additional restrictions and extended many existing restrictions.[265] Sections 103 and 103A of the 1954 Code are reorganized into 11 new sections: §103 and §§141-150. The Act changed the exempt financing lexicon by substituting the term "private activity bonds" for industrial development bonds." Interest on a private activity bond is taxable unless the bond is a "qualified bond." [266] Qualified bonds, the interest on which is tax-exempt, include:

(i) Qualified Exempt Facility Bonds (§142),

(ii) Qualified Mortgage Revenue Bonds (§143),

(iii) Qualified Small Issue Bonds (§144(a)),

(iv) Qualified Student Loan Bonds (§144(b)),

(v) Qualified Redevelopment Bonds (§144(c)),

(vi) Qualified §501(c)(3) Bonds (§145(a)).

Section 147 contains several restrictions on private activity bonds that applied previously to industrial development bonds. The substantial user requirement, the 120% bond maturity limit, the 25% limit on land acquisition cost, the existing property acquisition rules, the prohibition against the use of bond proceeds for skyboxes, airplanes, gambling establishments, etc., and the public approval requirements carry over from pre-1986 TRA law. The 1986 Act extended the 120% bond maturity limit to §501(c)(3) bonds. The prohibition for skyboxes, airplanes, gambling establishments, etc., was extended to all private activity bonds except for health facilities owned by §501(c)(3) organizations. Section 147(g) introduces a 2% cap on the amount of proceeds which can be spent for cost of issuance of the bonds.

The registration requirement and federal guaranty prohibition were carried over into §149. The information reporting requirements were extended to all tax-exempt bonds. Section 149(d) extends the prohibition on advance refunds to all private activity bonds except §501(c)(3) bonds.

Also, under post-1986 TRA §265(b), banks and other financial institutions may not deduct interest expense allocable to tax-exempt interest on bonds acquired after August 7, 1986.

(b) Definition

Interest on "specified private activity bonds" issued after August 7, 1986, is an item of tax preference.[267] Specified private activity bonds include all "private activity bonds" as defined in §141 with the following exceptions:

(i) The term "private activity bond" does not include Qualified §501(c)(3) Bonds as defined in §145;[268] and

(ii) The term "private activity bond" does not include any refunding bond if the refunded bond (or, in the case of a series of refundings, the original bond) was issued before August 8, 1986.[269] For this purpose, bonds issued before September 1, 1986, which are covered under the Joint Statement on Effective Dates of March 14, 1986, are considered to have been issued before August 8, 1986.[270] The Joint Statement provided generally that interest on bonds satisfying the pre-TRA 1986 definition of governmental bonds (as modified by an expanded security interest test like that adopted under the Senate Amendment) is not a preference if the bonds are issued before September 1, 1986.

Thus, interest on Qualified Small Issue Bonds, Qualified Mortgage Revenue Bonds, Qualified Student Loan Bonds, and Qualified Redevelopment Bonds, which is exempt from tax for regular tax purposes, is includible in AMTI as an item of tax preference.

In the case of tax-exempt interest dividends paid by a regulated investment company, the shareholders are required to include a portion of such dividends, to be determined under regulations to be prescribed, in AMTI as an item of tax preference.[271]

Finally, note that tax-exempt interest which is required to be included in AMTI under §57(a)(5)(A) may be reduced by allocable interest deductions disallowed under §265(b) for regular tax purposes.

(5) Charitable Contributions of Appreciated Property

(a) General

For income tax purposes, a corporation (other than an S corporation), is allowed a charitable contribution deduction if it satisfies the §170 and other appropriate requirements. Generally, a contribution is deductible only if it is made to or for the use of a permissible donee as provided in §170(c). In addition, the amount that may be deducted in any taxable year is limited under §170(b). Section 170(b)(2) provides that a corporate taxpayer (other than an S Corporation) may not deduct charitable contributions made to permissible donees in any year that exceed 10% of its "contribution base." The "contribution base" of a corporate taxpayer consists of its taxable income for the relevant taxable year computed without regard to:

(i) charitable contributions deduction under §170,

(ii) net operating loss carrybacks under §172,

(iii) certain special corporate deductions provided in §§241-247 and §§249-250, and

(iv) any capital loss carrybacks permitted under §1212(a)(1).[272]

[265] For a discussion of the changes, *see* Chapter 30, *supra*.

[271] §57(a)(5)(B).
[272] §170(b)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Contributions in excess of the 10% limit may be carried forward and deducted in the five succeeding taxable years to the extent such carryovers, when added to the contributions made in each of those years, do not exceed 10% of the contribution base.[273] The excess contributions are first carried over to the first succeeding taxable year and are deducted in that year to the extent of the difference between the contributions made in that year and 10% of the corporation's contribution base. Any unused contributions are then carried over to the second succeeding taxable year and similarly deducted subject to the 10% limit. This process continues through the fifth year. Any contributions that are not utilized in the fifth succeeding taxable year are lost permanently.

The rules that apply in case of charitable contributions of appreciated property are summarized below:

(i) If the contributed property is ordinary income property (*i.e.*, property that would produce ordinary income or short-term capital gain if sold), the general rule is that the contribution is taken into account at its adjusted basis.[274] For example, if a taxpayer contributes inventory with a fair market value of $100 and adjusted basis of $60, the amount of contribution is $60 and not $100. If, however, a corporation (other than an S corporation) makes a contribution of property described in §1221(1) or §1221(2) to a public charity or a private operating foundation, the allowable deduction is the sum of the taxpayer's adjusted basis in the property plus one-half of the unrealized appreciation.[275] In no event, however, is a deduction allowable for more than twice the taxpayer's adjusted basis in the property. Thus, if one-half of the unrealized appreciation exceeds the taxpayer's adjusted basis, the allowable deduction will be limited to twice the taxpayer's adjusted basis.[276] Also, for this exception to the general rule to apply, the donee's use of the property must be related to its exempt function and the property must not be transferred by the donee in exchange for money, other property or services.[277] This exception also applies to contributions of §1221(1) property made by a corporation (other than an S corporation, a personal holding company, or a service organization) to an educational organization described in §170(b)(1)(A)(ii) or a scientific research organization described in §41(e)(6)(B) provided, the contributed property is scientific equipment constructed by the donee and certain other requirements are met.[278]

(ii) If the contributed property is long-term capital gain property (*i.e.*, property that will produce long-term capital gain if sold), the general rule is that the amount of allowable contribution is the property's fair market value. If, however, the donated property is tangible personal property and the public charity to which it is donated puts it to an unrelated use, or if the property is donated to a private foundation not described in §170(b)(1)(D) the amount of allowable deduction is reduced by 28/46.[279] This 28/46 reduction does not apply if the contributed property is stock for which quotations are readily available as of the date of contribution on an established securities market.[280]

(b) Definition

For charitable contributions of "capital gain property," the amount by which the deduction allowable under §170 would be reduced if all "capital gain property" were taken into account at its adjusted basis, is an item of tax preference.[281] As previously stated, "capital gain property" means any capital asset (including §1231 assets) the sale of which will result in a long-term capital gain.[282]

In determining the amount of preference for charitable contributions of capital gain property the following rules apply:

(i) The taxpayer computes the amount by which the charitable deduction would have been reduced by taking into account all capital gain property (including loss property) at its adjusted basis. Thus, unrealized gain on appreciated property is offset by unrealized loss on the loss property.

(ii) The amount of preference is determined by disregarding any amount that is carried forward to another year for purposes of regular tax.[283] Consequently, if a portion of a charitable contribution deduction is carried forward because it exceeds the 10% limit, the portion so carried forward will not increase the amount of preference until it is allowed as a deduction for regular tax purposes.

(iii) The preference does not apply to carryovers of the deduction with respect to charitable contributions made before August 16, 1986.[284]

Example: A, a calendar year taxpayer, makes a contribution of capital gain property to a Church in 1987 which is subject to the 10% limit. At the time of the contribution, the property's fair market value is $50,000 and its adjusted basis is $40,000. For 1987, A's contribution base is $300,000. The amount of allowable deduction for 1987 is, therefore, 10% of $300,000, or $30,000. Consequently, for regular tax purposes, A may deduct $30,000 in 1987 and carryover the balance of $20,000 to 1988. To compute the preference amount for 1987, however, the amount of deduction is limited to its adjusted basis. Using a pro rata allocation of adjusted basis rule, the $30,000 charitable contribution deductible in 1987 has an adjusted basis of 30,000/50,000 x $40,000 = $24,000. Consequently, the amount of preference for 1987 is $30,000 - $24,000 = $6,000.

Comment: A corporate taxpayer owning loss "capital gain property" should consider combining it with appreciated "capital gain property" in his gift to charity to eliminate or reduce the amount of preference.

(6) ACRS and Amortization on Property Placed in Service Before 1987

For property placed in service before January 1, 1987 (to which §§56(a)(1) and 56(a)(5) do not apply), the amount computed under §§57(a)(2), 57(a)(3), 57(a)(4) and 57(a)(12), as in effect prior to the enactment of TRA 1986, remains an item of tax preference.[285]

Note: The preference amounts computed under §§57(a)(3) and 57(a)(12)(A) apply to personal holding companies only.

Section 57(a)(2) dealt with the preference amounts with respect to non-ACRS deductions taken on real property.

Under that provision, the excess of accelerated depreciation deduction allowable with respect to each §1250 property for the taxable year over the amount that would have been allowable as a deduction for that taxable year if the taxpayer had depreciated the property using a straight-line method for each taxable year of the property's useful life, was an amount of tax preference.

Section 57(a)(3) dealt with the preference amounts with respect to non-ACRS accelerated depreciations deductions taken on leased personal property. Under that paragraph, the excess of the accelerated depreciation deduction allowable with respect to each §1245 leased property for the taxable year over the amount that would have been allowable as a deduction for the taxable year if the taxpayer depreciated the property using a straight-line method for each taxable year of the property's useful life, was an amount of tax preference.

Section 57(a)(4) dealt with the preference amounts with respect to amortization of pollution control facilities. Under that paragraph, the excess of amortization deduction allowable for the taxable year under the 60-month write-off election provided by §169 over the amount that would otherwise have been allowable as a deduction under §167 or §168 was an amount of tax preference.

Section 57(a)(12)(A) dealt with preference amounts relating to ACRS depreciation deductions taken on leased recovery property (other than 19-year real property and low income housing). Under that paragraph, the excess of the deduction allowed under §168(a) for the taxable year over the deduction that would have been allowed if the taxpayer used the straight-line method over a recovery period specified in the following table, was an item of tax preference.

Type of Property	*AMT Recovery Period*
3-year Property	5 years
5-year Property	8 years
10-year Property	15 years
15-year Public Utility Property	22 years

Section 57(a)(12)(B) dealt with preference amounts relating to ACRS deductions taken on 19-year real property or low income housing. Under that provision, the excess of ACRS deduction for each 19-year real property on low income housing property allowed under §168(a) for the taxable year over the amount that would have been allowed if the taxpayer had depreciated the property using the straight-line method over 19 years for real property and 15 years for low income housing was an item of tax preference.

[285] §57(a)(7).

c. Coordination With Certain Limitations

Section 59(h) provides that, in computing AMTI of a taxpayer for a taxable year, certain limitations of the Code on deductibility of losses will be applied by taking §56 adjustments into account and by disregarding any deductions which are items of tax preference under §57.

The limitations specified in §59(h) include §465, §704(d) and §1366(d). Section 465 provides that an individual or a C corporation engaged in an activity covered by that section may deduct a loss only to the extent of the aggregate amount with respect to which the taxpayer is at risk. Section 704(d) provides that a partner's distributive share of partnership loss shall be limited only to the extent of the adjusted basis of such partner's interest in the partnership at the end of partnership's taxable year in which the loss occurred. Section 59(h) authorizes the Treasury to specify by regulations other provisions of the Code which are subject to this coordinating rule.

d. Optional 10-Year Write-Off of Certain Adjustments and Preferences

(1) General

With respect to certain capital expenditures for which the Code provides a preferential treatment (*i.e.*, a current deduction) and which are designated as items of adjustment or preference under §§56 and 57 respectively, §59(e) provides the taxpayer, if it chooses, with an option to elect a capital treatment and eliminate the adjustment or preference amount. Note that the §59(e) election is an added luxury in the sense that all expenditures subject to this election may be deferred or capitalized under other Code provisions. Thus, a taxpayer desiring to eliminate the preference amount may choose between capital treatment under §59(e) and capital treatment under other Code provisions.

If an election is made under §59(e) with respect to an expenditure, such expenditure is capitalized and amortized in accordance with §59(e) for all purposes of the Code and not just §55 purposes. Accordingly, once an election under §59(e) is made with respect to an expenditure, such expenditure is amortized under §59(e) for both regular tax and AMT purposes and no deduction is allowed under any other section of the Code.[286] Any amount to which an election under §59(e) applies is not treated as an item of adjustment under §56 or an item of tax preference under §57.[287]

(2) The Election

An election under §59(e) is permissible only with respect to "qualified expenditures." "Qualified expenditures" means any amount that would, absent a §59(e) election, be allowable as a deduction in the year paid or incurred under:

[286] §59(e)(3).
[287] §59(e)(6).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(i) §173 (relating to circulation expenditures)

(ii) §263(c) (relating to IDCs)

(iii) §616(a) (relating to mining development expenditures), or

(iv) §617(a) (relating to mining exploration expenditures).[288]

If an election under §59(e) is made with respect to circulation expenditures deductible currently under §173, such expenditures are capitalized and amortized ratably over a 3-year period beginning with the taxable year in which they are paid or incurred.[289] On the other hand, if a §59(e) election is made with respect to any other qualified expenditure, such expenditure must be capitalized and amortized ratably over a 10-year period beginning with the taxable year in which the expenditures were paid or incurred.[290]

Section 59(e)(4)(A) provides that an election under §59(e) may be made with respect to any portion of a qualified expenditure. This implies that, if a taxpayer chooses to capitalize only a portion of a qualified expenditure (*e.g.*, circulation expenditures), paid or incurred during a taxable year, the balance may be deducted currently under the applicable Code provision, (§173 in the case of circulation expenditures). This creates a tension between §59 and other Code or regulatory provisions which govern the capitalization of qualified expenditures. For example, an election to capitalize circulation expenditures under §173 applies to all such expenditures chargeable to capital account. The exercise of an option to defer and capitalize the mining exploration costs applies to all such costs paid or incurred during the taxable year; an election under §616(b) to capitalize the mining development costs applies to all such costs paid or incurred during the taxable year on a mine-by-mine basis; an election to capitalize IDCs under Regs. §1.612-4 applies to all such costs paid or incurred during the taxable year with respect to all properties. Since §59(e)(3) expressly precludes the application of any other Code section to the amount with respect to which a §59(e) election is made, however, it appears that §59 should override other Code or regulatory provisions which would preclude a current deduction of only a portion of qualified expenditure.

Comment: The fact that a §59(e) election may be made for a portion of a qualified expenditure confers important advantages on the taxpayer. For example, where the taxpayer cannot absorb the full amount of a current deduction, either due to a potential minimum tax liability or some other reason (*e.g.*, expiring net operating loss carryovers), capitalization under the normal Code provisions exacts a penalty: the taxpayer must forego the current deduction and capitalize the entire amount of the expenditure. Section 59(e) offers a superior choice in such a case by permitting the taxpayer to capitalize just the right amount and claim a current deduction for the balance. Also, the §59(e) election may be utilized to defer the right amount of mining exploration and development expenditures and IDCs to maximize the percentage depletion deduction by avoiding the impact of the 50% and 65% taxable income limits found in §613(a) and §613A(d)(1), respectively.

(3) Basis Adjustment and Dispositions of Underlying Property

The statute is silent as to the basis adjustments required upon the capitalization of qualified expenditures under §59(e). Specifically, when a qualified expenditure is capitalized under §59(e), the question arises: should the basis of the underlying property be increased by the amount of the capitalized expenditure; or does an election under §59(e) create a separate asset with a basis equal to the amount of the capitalized expenditure? A related question involves the tax treatment to be accorded to the unamortized portion of the expenditures capitalized under §59(e) upon a sale, exchange, or other disposition of the underlying property. The answer to this, as well as other related questions (*e.g.*, recapture) will, of necessity, depend upon how the basis adjustment question is answered.

Section 1016(a)(23), added by TRA 1986, provides that a proper adjustment shall be made to the basis of the property for amounts allowed as a deduction under §59(e).[291] It might be inferred from this that, upon making the §59(e) election, the taxpayer must add the amount of the capitalized expenditures to the property's basis. After all, if the property's basis must be reduced for deductions taken under §59(e), it is logical to assume that the property's basis should initially be increased by the amount of the expenditures capitalized under §59(e). Such an inference could be accepted as accurate were it not for the problems caused by §59(e)(3).[292] For example, if the mining development expenditures capitalized under §59(e) are added to the depletable basis of the mining property, the taxpayer would be entitled to recover such expenditures through depletion deductions. Depletion deductions are, however, expressly barred by §59(e)(3) with respect to expenditures capitalized under §59(e). Again, if the mining property in the above example is abandoned as worthless before the capitalized development expenditures have been fully recovered, the taxpayer would be entitled to a loss deduction under §165 with respect to the unamortized portion of the mining development expenditures capitalized under §59(e). A loss deduction under §165 for amounts capitalized under §59(e), however, is similarly barred by §59(e)(3). Finally, §59(e)(3) can also be read to deny a basis adjustment attributable to the unamortized portion of the amounts capitalized under §59(e) for purposes of computing gain (or loss) upon the sale or exchange of the underlying property.[293]

An alternative approach would be to regard a §59(e) election as creating an intangible nontransferable asset, separate and apart from the underlying property with a

[288] §59(e)(2).
[289] §59(e)(1).
[290] *Id.*

[291] The statute mistakenly refers to §59(d). It is expected that this error will be corrected in a forthcoming technical corrections bill.

[292] Section 59(e)(3) provides that "Except as provided in this subsection, no deduction shall be allowed under any other section for any qualified expenditure to which an election under this subsection applies."

[293] *See* Linden & Meyer, "Changes by TEFRA in Treatment of Oil, Gas and Mining Will Significantly Affect Planning," 57 J. of Tax. 355 (1982), which pointed out similar problems created by the predecessor of §59(e), *i.e.*, §58(i).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

basis equal to the amount of expenditures capitalized under §59(e). This approach would eliminate the double deduction problem and the problems encountered at the abandonment or sale of property under the first approach. Where the taxpayer, for example, capitalizes $10,000 of mining exploration costs such capitalization would create an asset separate and apart from the underlying mining property with a basis of $10,000. This asset would be amortized ratably over a 10-year period with the taxpayer getting a $1,000 deduction in each of the 10 years. If the mining property was abandoned before the $10,000 mining exploration costs had been fully amortized, the taxpayer would not face the problem of denial by §59(e)(3) of a loss deduction (under §165) attributable to the unamortized portion because it would simply continue to amortize the unamortized portion until exhausted. Again, if the mining property were sold, the capitalized mining exploration costs would not figure in the computation of gain (or loss) from the property, and any unamortized portion of the costs would be continued to be amortized by the taxpayer, thus avoiding the problems posed by §59(e)(3). This separate asset approach, however, is not without its problems. For example, §59(e)(5) requires a recapture of the IDCs, the mining exploration, and the mining development costs when the underlying property is disposed of. In the example above, if the taxpayer disposed of the mining property after three years the question arises: is the taxpayer required to recapture only $3,000 of the mining exploration costs or must the taxpayer recapture the entire $10,000? If the taxpayer is required to recapture only $3,000, the balance of $7,000 (for which the taxpayer will be taking deductions in future years) will go unrecaptured, a situation which is contrary to the mandate of §59(e)(5). On the other hand, if the entire $10,000 must be recaptured, the taxpayer would be required to recapture deductions which it has not taken, a situation which would require a statutory amendment to be effective. Also, if the corporation dissolves before the $10,000 mining exploration costs have been fully amortized, the deductions for the unamortized portion would be lost forever.

A third, and perhaps the most practical, approach would be to clearly and carefully circumscribe, by regulations, the scope of the application of §59(e)(3). As drafted, the sweeping language of that paragraph would seem to deny any deduction for the amounts capitalized under §59(e) under any other Code section including a deduction at the time of abandonment or sale of the underlying property. This perhaps, was not the legislative intent. The concern behind the enactment of §59(e)(3), perhaps, was to prevent a double deduction for the amounts capitalized under §59(e), *i.e.*, once under §59(e) and again as a depletion, or amortization deduction under other Code provisions (*e.g.*, §§611, 613, etc.) when the capitalized amounts are added to the basis of the underlying property. If this reading of the legislative intent is accurate, the inference can be drawn that Congress expected the amounts capitalized under §59(e) to be added to the basis of the underlying property. As a matter of fact, if the scope of §59(e)(3) is limited so that it does not apply to amounts capitalized under §59(e) upon the sale, exchange, or other disposition of the underlying property, all other pieces of the puzzle (*i.e.*, the initial basis adjustment upon capitalization of qualified expenditures under the §59(e), the §1016(a)(23) basis adjustment, the §59(e)(5) recapture provision, the problem of the unamortized amounts, etc.) fall into place. Under this approach, the amounts capitalized under §59(e) would be added to the basis of the underlying property, but only for purposes of computing gain or loss from a sale, exchange or other disposition of the property. This basis would be adjusted under §1016(a)(23) for all deductions taken under §59(e). If the underlying property were abandoned at a time when the §59(e) amounts had not been fully amortized, the taxpayer would be entitled to a loss deduction under §165 for the unamortized amounts. Similarly, if the underlying property were sold or exchanged, the taxpayer's gain would be reduced by the unamortized portion, and the recapture provisions of §59(e)(5) would apply to the extent the §59(e) amounts had been amortized by the taxpayer. Finally, in the case of a nontaxable transfer of the underlying property (*e.g.*, a §351 exchange), the taxpayer's basis in the property received in exchange (*i.e.*, stock in the transferee corporation in a §351 exchange) would reflect the unamortized portion of the §59(e) amounts, the §59(e) amortization schedule would be extinguished, and the transferee would amortize the inherited §59(e) amounts as part of the inherited basis in the underlying property. To the extent the taxpayer has amortized §59(e) amounts prior to the transfer, the §59(e)(5) recapture provisions should apply. To effectuate this approach, only two clarifications are needed: (i) that the amounts capitalized under §59(e) are to be added to the basis of the underlying property, but only for purposes of computing the gain or loss (or the basis of property received in a nontaxable exchange) upon the sale, exchange, or other disposition of the underlying property; and (ii) that §59(e)(3) does not apply when the underlying property is sold, exchanged, or otherwise disposed of.

(4) Time and Manner of Making Election

The statute is silent as to the time and manner of making an election under §59(e). It only states that "an election under this subsection may be revoked only with the consent of the Secretary." [294] In view of this silence, guidance provided by the Service under the predecessor of §59(e), *i.e.*, §58(i), may be relied upon at least until the Service issues revised rules.

Temp. Regs. §5f.O(a)(2)(i) [295] provides that an election under §58(i) may be made no later than the due date of the return for the taxable year (including extensions) for which the election is effective.

Comment: The timing of the election provides a taxpayer with an opportunity to plan for avoiding AMT by capitalizing under §59(e) the right amount of expenditures subject to that subsection and deducting the balance currently.

Temp. Regs. §5f.O(a)(3) provides that an election under §58(i) may be made by attaching a statement to the income tax return for the taxable year for which the election is made. The statement is required to contain the following information:

[294] §59(e)(4)(B).
[295] *See* T.D. 7870, dated January 2, 1983.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(i) The name, address, and taxpayer identification number of the electing taxpayer;

(ii) The fact that an election is being made;

(iii) The Code section under which the election is being made;

(iv) The taxable year and the property to which the election applies; and

(v) The information necessary to show that the taxpayer is entitled to make the election.

(5) The Recapture of Amounts Subject to the Section 59(e) Election

Section 1254, as revised by the TRA 1986, provides that, upon the disposition of an interest in a mine, well, or other natural deposit, taxpayer must recapture as ordinary income the aggregate amount of "(i) expenditures deducted under §263, 616, or 617 with respect to such property which, but for such deduction, would have been included in the adjusted basis of such property; and (ii) the amounts deducted as depletion under §611 which reduced adjusted basis of such property." The amount of gain recaptured as ordinary income is limited to the amount of gain realized upon the disposition of the property.

Section 59(e)(5)(A) requires, that upon the disposition of any §1254 property, any expenditures allocable to such property which were deducted under §59(e) must be recaptured as ordinary income. Thus, IDCs and mining development and exploration costs which were capitalized and amortized pursuant to §59(e) election must be recaptured as ordinary income when the underlying property is disposed of.

With respect to mining exploration expenditures, §59(e)(5)(B) acts as a back-stop to §59(e)(5)(A). Thus, any mining exploration expenditures capitalized and amortized under §59(e) that are not recaptured as ordinary income under §1254 will be recaptured as ordinary income under §617(d).[296] Section 617(d) provides that, upon the disposition of a mining property, a portion of the mining exploration expenditures deducted currently under §617(a) must be recaptured as ordinary income. The portion required to be recaptured is the lesser of the adjusted mining exploration expenditures and the amount of the gain.

2. Tentative Minimum Tax

The tentative minimum tax for corporate taxpayer's is equal to 20% of the alternative minimum tax base, reduced by the alternative minimum tax foreign tax redit and, to a limited extent, by the pre-1986 TRA investment tax credit.[297] The foreign tax credit and the investment tax credit, in conjunction with the AMT net operating loss deduction, may not reduce tentative AMT below 10% of tentative AMT computed without regard to these credits and the net operating loss deduction. The AMT base is computed by subtracting the exemption amount from the AMTI.[298]

a. The Exemption Amount

The exemption amount for a corporate taxpayer is $40,000.[299] This exemption amount, however, is phased out by 25 cents for each dollar after AMTI reaches $150,000.[300] The entire exemption amount, therefore, is phased out when AMTI reaches $310,000. Thus, for a corporate taxpayer the AMT base is equal to AMTI when AMTI reaches $310,000 for a taxable year.

b. Alternative Minimum Tax Foreign Tax Credit

(1) General

The United States taxes domestic corporations and individual citizens and resident aliens on their worldwide income. This worldwide taxation may result in double taxation of the foreign income, *i.e.*, once in the country of source and again by the United States. With a view to avoid or at least mitigate this potential double taxation of U.S. persons, Congress enacted a dollar-for-dollar credit against U.S. tax for income taxes paid to foreign countries on foreign income. The foreign tax credit provisions are contained in §§901-908 and §960.

Since the basic function of the foreign tax credit is to prevent double taxation of the foreign source income and not to reduce U.S. tax on U.S. source income, §904 provides a limit on the foreign tax credit to ensure that the credit is not greater than the U.S. tax attributable to foreign income. The §904 limit is expressed as follows:

Tentative U.S. Tax
×
Foreign Source Taxable Income
÷
Worldwide Taxable Income

Any foreign taxes disallowed because of the foreign tax credit limit may be carried back two years and forward five under §904(c).

(2) Computation of AMT Foreign Tax Credit

AMT foreign tax credit is computed by utilizing the regular tax foreign tax credit rules, with the following modifications:

(i) In the formula for computing §904 limit, tentative AMT (before reduction by the foreign tax credit) is substituted for tentative U.S. tax[301] and foreign source taxable income and worldwide taxable income are computed by making the adjustments provided in §§56 and 58 as well as by adding back the items of tax preference provided in §57 to taxable income.[302]

Note that book income adjustment will not result in any change in the §904 AMT foreign tax credit limit. This is because, for purposes of the §904 fractions, the amount of book income adjustment is assigned the same proportionate source and character of income as AMTI before such adjustment.[303]

[296] *See* §§59(e)(5)(B) and 617(d)(5).

[302] §59(a)(1)(B).
[303] §59(a)(1)(C).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Comment: The allocation of adjustments and preferences to U.S. or foreign source income may change the ratio of foreign source taxable income to worldwide income for AMT foreign tax credit purposes. The AMT foreign tax credit allowable under §904 may, therefore, be more or less than the foreign tax credit allowable under §904 for regular tax purposes. Taxpayers will, therefore, be required to keep track of credit carryovers separately for regular and AMT purposes.

(ii) The amount of AMT foreign tax credit allowable under §904 for the taxable year is subject to another limit: it may not offset more than 90% of tentative minimum tax computed without regard to the foreign tax credit and alternative minimum tax net operating loss deduction.[304]

Example: In 1987, a taxpayer has $10 million in AMTI (without regard to any AMT net operating loss deduction). The taxpayer's tentative minimum tax liability (computed without regard to the AMT foreign tax credit and NOL deduction) is, therefore, $2 million. Accordingly, the AMT foreign tax credit may not exceed 90% of $2 million, or $1,800,000.

Stated differently, the AMT foreign tax credit may not reduce taxpayer's tentative AMT liability (computed without regard to the foreign tax credit and NOL deduction) below 10% of such tax. Thus, in the example above, the AMT foreign tax credit may not reduce the taxpayer's tentative minimum tax below 10% of $2 million, or $200,000. The mechanics of the 90% limit computation are provided in §59(a)(2)(A). It provides that AMT foreign tax credit is limited to the extent the tentative minimum tax computed under §55(b)(1)(A) exceeds 10% of such amount determined without regard to the alternative minimum tax NOL deduction. The amount determined under §55(b)(1)(A) is 20% of the AMT base. The application of §59(a)(2)(A) is illustrated by the following example.

Example: Corporation A has $10 million AMTI in 1988 and has a $2 million NOL deduction. It computes the 90% limit under §59(a)(2)(A) as follows:

(i) Tentative AMT Determined Under §55(b)(1)(A):
AMTI = $10 million
NOL Deduction = $2 million
AMT Base = $10 million - $2 million = $8 million
Tentative AMT = 20% of $8 million = $1.6 million

(ii) Tentative AMT Under §55(b)(1)(A) Without Regard to NOL Deduction:
AMTI = $10 million
Tentative AMT = 20% of $10 million = $2 million
10% of Tentative AMT = $200,000

(iii) Excess of (i) over (ii):
Section 59(a)(2)(A) Limit = $1,600,000 - $200,000 = $1,400,000.

Thus, A's AMT foreign tax credits will be disallowed to the extent they exceed $1.4 million, even though its §904 limitation is greater than $1.4 million. Note also that A will have a tentative AMT of at least ($1.6 million - $1.4 million) = $200,000 which is 10% of $2 million tentative AMT liability computed under §55(b)(1)(A) without regard to the alternative minimum tax NOL deduction.

Comment: The reason for computing the 90% limit without regard to the AMT net operating loss deduction is to coordinate this limitation with the 90% limit on AMTI that may be offset by the AMT net operating loss deduction in any year. The 90% limit on NOL deductions is applied before the 90% limit on the AMT foreign tax credit.[305] Thus, if the alternative tax NOL deduction in any taxable year reduces the §55(b)(1)(A) tentative AMT below 10% of such tax (computed without regard to NOL deductions) no AMT foreign tax credit will be allowed that year against the minimum tax.

Example: A has an AMTI of $10 million and an NOL deduction of $11 million in 1987. Since the NOL deduction may offset AMTI only up to (90% of $10 million) = $9 million, A's tentative minimum tax computed under §55(b)(1)(A) is (20% of $ 1 million) $200,000. Since the 90% limitation on AMT foreign tax credits under §59(a)(2)(A) is also (10% of $2 million tentative AMT under §55(b)(1)(A) computed without regard to NOL deductions) no AMT foreign tax credit will be allowed A in 1987.

Any AMT foreign tax credit that is disallowed either due to the the §904 limit or the 90% limit discussed above is available as a carryover in accordance with §904(c).[306] The amount of AMT foreign tax credit allowable in the carryover years, however, will again be subject to the two limits.

c. Investment Tax Credit

The Tax Reform Act of 1986 generally repealed the investment tax credit for assets placed in service after December 31, 1985. Under a transition rule, however, a credit is permitted for assets for which a binding contract existed on December 31, 1985. To qualify for the credit under the transitional rule, the property had to be placed in service by a specified date based on the recovery class to which the property belonged. Also, the investment tax credit carryovers, however, that had not expired by December, 1985 are allowable in 1986 and subsequent years. However, the carryovers are subject to a reduction of 35%. The transition property investment tax credits are also subject to a reduction and a basis adjustment under §49.

Section 38(c)(3) permits C corporations to apply carryover and transition-rule property investment credits against AMT to a limited extent. Thus, in a year in which a C corporation is in an AMT position, the carryover of transition property investment credits will be allowed: (i) to the extent sufficient to reduce net regular tax liability (*i.e.*, regular tax, net of credits allowed under subparts A and B) to 75% of the tentative minimum tax for the taxable year, or (ii) in an amount equal to 25% of the tentative minimum tax for the taxable year; whichever is greater. The investment credits, however, will not be permitted to reduce the tax payable below 10% of the amount that could be determined under §55(b)(1), without regard to the alternative tax NOL deduction and the AMT foreign tax credit.

[304] §59(a)(2)(A).

[305] Conference Report at II-262.

[306] §59(a)(2)(b).

3. Net AMT Liability

After a taxpayer has computed its tentative minimum tax for the taxable year it is compared with taxpayer's "regular tax" for the taxable year. If the tentative minimum tax is greater than the regular tax, the taxpayer pays the tentative minimum tax as its final tax liability for the taxable year. Technically, the tentative minimum tax, if greater than the regular tax, has two components, the regular tax and the net alternative minimum tax, with the excess of the tentative minimum tax over the regular tax being referred to as taxpayer's "net alternative minimum tax liability."

As will be discussed, *infra*, regular tax is not reduced by any nonrefundable credits (other than the foreign tax credit and, to a limited extent, the investment tax credit) prior to comparing it with tentative AMT. If, however, the comparison reveals that the regular tax is greater than the tentative AMT, nonrefundable credits are applied to reduce regular tax, but not below tentative AMT.[307] Any nonrefundable credits that are not used against regular tax due to the tentative AMT limit, are available as carryovers under the normal Code provisions governing the carryovers of such credits.

a. Regular Tax

"Regular tax" as used in the AMT context is a term of art and is not synonymous with the amount of "regular tax" that a taxpayer may owe for a taxable year. For purposes of AMT, "regular tax" means the regular tax liability for the taxable year (as defined in §26(b)), computed without regard to any increase under §47, and reduced by the foreign tax credit and, to a limited extent, investment credit.[308] Thus, for purposes of comparison with tentative AMT, the regular tax undergoes two types of adjustments:

(i) as specified in §§26(b) and 55(c)(1), certain taxes are disregarded, and

(ii) the only nonrefundable credits allowed against regular tax are the foreign tax credit and the investment tax credit.

(1) Taxes Disregarded

In computing "regular tax" for AMT purposes, taxes imposed under the following Code sections are disregarded:[309]

(i) §47 (pertaining to increases in tax);

(ii) §55 (relating to the minimum tax);

(iii) §531 (relating to the accumulated earnings tax);

(iv) §541 (relating to the personal holding company tax);

(v) §1351(d)(1) (relating to recoveries of foreign expropriation losses);

(vi) §7518(g)(6)(A) (relating to nonqualified withdrawals from capital construction funds taxed at highest marginal rate); and

(vii) §881 (relating to certain income of foreign corporations.)

(viii) §402(e) (relating to the special income tax on certain lump-sum distributions from tax-qualified reitrement plans).

(2) Non-Refundable Credits

The regular tax computed without regard to the taxes described above is compared with the tentative AMT as computed under §55(b)(1)(A) (*i.e.*, before reduction by the AMT foreign tax credit). If the tentative AMT is greater than the regular tax then (except for the exceptional case where the AMT foreign tax credit is so much greater than the regular tax foreign tax credit that it reduces the tentative AMT below the regular tax), no nonrefundable credits (other than foreign tax credit, and to a limited extent, the investment tax credit) will offset regular tax and AMT. In such a case, the taxpayer will first reduce the regular tax by the regular tax foreign tax credit and the tentative AMT by the AMT foreign tax credit subject, to the 90% limit of §59(a)(2)(A). It will then use the investment credit against regular tax and tentative AMT to the extent permitted by §38(c)(3). Note, however, that, if the amount of tax payable has been reduced by the AMT foreign tax credit to 10% of tentative tax as computed under §55(b)(1)(A) (without regard to net operating loss deduction and AMT foreign tax credit), no investment tax credit will be allowed against tentative AMT.

If, however, the regular tax is greater than tentative AMT determined under §55(b)(1)(A), nonrefundable credits can be used to reduce the regular tax but not below tentative AMT, unless the regular tax foreign tax credit is so much greater than the AMT foreign tax credit that it reduces the regular tax to equal tentative AMT. In such a case, the nonrefundable credits are applied to reduce the regular tax in accordance with the rules set forth below.

(i) As a first step, the taxpayer reduces the regular tax by the regular tax foreign tax credit and the tentative AMT determined under §55(b)(1)(A) by the AMT foreign tax credit subject to the 90% limit provided in §59(a)(2)(A).

(ii) Assuming the regular tax as reduced by the foreign tax credit is greater than the tentative AMT (as reduced by the AMT foreign tax credit), the clinical testing credit (§28) is applied to reduce the regular tax, but not below tentative AMT.[310]

(iii) Next, the credit for producing fuel from a nonconventional source (§29) is applied to reduce the regular tax to the extent the regular tax (as reduced by the §§27 and 28 credits) exceeds the tentative AMT (as reduced by the AMT foreign tax credit).

(iv) Next, the general business credit (*i.e.*, the sum of the investment credit determined under §46(a), the targeted jobs credit determined under §51(a), the alcohol fuels credit determined under §40(a), the research credit determined under §41(a), and the low income housing credit determined under §42(a)) is applied against the regular tax. The amount of this credit allowable in any taxable year is limited to the lesser of:

[307] §55(c)(1) and (2).
[308] §§55(c) and 38(c)(3).
[309] §§26(b) and 55(c)(1).
[310] §28(d)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(i) the allowable portion of taxpayer's net regular tax liability, or

(ii) the excess of taxpayer's net regular tax liability over tentative AMT.[311]

Net regular tax liability means regular tax reduced by the §§27, 28 and 29 credits.[312] The allowable portion of net regular tax liability means $25,000 plus 75% of so much of net regular tax liability for the taxable year as exceeds $25,000.[313] Any general business credit disallowed under the limit discussed above is available as a carryover (*i.e.*, three years back and 15 forward).[314]

Under a special rule (which permits the investment credit to offset tentative AMT to a limited extent), however, to the extent general business credit is attributable to the transition-rule and carryover investment credits, the general business credit is limited to the greater of:

(i) the excess of the regular tax (as reduced by §§27, 28 and 29 credits) over 75% of tentative AMT for the taxable year, but not to exceed the allowable portion of the taxpayer's net regular tax liability for the taxable year,

(ii) 25% of the taxpayer's tentative AMT for the taxable year.[315]

Note, however, that the general business credit, to the extent it is attributable to the transition-rule and carryover investment credits, will offset the regular tax even though no §§28 and 29 credits were allowable due to the tentative AMT limitation. This is because these investment tax credits are also allowable against tentative AMT.

Note also that, if net AMT liability has been reduced to 10% of tentative AMT computed under §55(b)(1)(A) without regard to the net operating loss deduction and the AMT foreign tax credit, the transition-rule and carryover investment credit will not be allowed to reduce the regular tax or tentative AMT.

(v) Finally, the 1986-TRA enacted minimum tax credit (§53) is applied against regular tax but only to the extent the regular tax, (as reduced by §§27, 28, and 29, and the general business credit) exceed tentative AMT for the taxable year.[316] Note that the minimum tax credit is cumulative, *i.e.*, it includes the minimum tax credits disallowed in prior years under the limit discussed above.[317]

C. *Collateral Rules*

1. *Minimum Tax Credit*

a. *General*

The philosophical basis of the add-on minimum tax, which applied to all taxpayers prior to the Tax Reform and Fiscal Responsibility Act of 1982 and to corporate taxpayers only prior to the TRA 1986, was that tax preferences and tax incentives were bad per se, and therefore, taxpayers using them should pay a penalty tax on them. The philosophical basis of the alternative minimum tax (which now applies to all taxpayers) on the other hand, is that tax preferences and tax incentives are not evil per se, but a taxpayer should not be permitted to use them to reduce his its liability below a minimum standard. Prior to the 1986 Act, this minimum standard was applied on an annual basis: a taxpayer paid the minimum tax if within any taxable year the use of tax preferences or tax incentives reduced the regular tax liability below the minimum standard. The minimum standard was abandoned in other years in which the regular tax was higher than the minimum standard with no offsetting adjustments or credits for the minimum tax paid in a prior year. This application of the minimum standard on an annual basis often resulted in inequities because, due to the imposition of AMT, the taxpayer did not get the amount of regular tax benefit from items of tax preference which he would have obtained if those items had not received preferential treatment in the first place. To eliminate this inequity, the drafters of the 1986 Act made two important changes to the AMT structure: they introduced (i) the adjustment mechanism (§§56 and 58), and (ii) the minimum tax credit. It was seen earlier how the adjustment mechanism provides compensating adjustments to AMTI in subsequent years. The minimum tax credit similarly compensates the taxpayer for the loss of regular tax benefit in an AMT year by reducing the regular tax in subsequent years when the taxpayer is not in an AMT position.

b. *Operative Rules*

When a taxpayer is subjected to minimum tax liability in any taxable year, the amount of adjusted net AMT paid in that year is available as a credit against its regular tax liability in future years. This credit, however, will not reduce the regular tax below the tentative AMT in any year. Note that the entire net AMT liability for a taxable year may not be available as a credit. Under §53(b), if a portion of net AMT liability for a taxable year is attributable to the depletion preference, exempt interest preference, or to the preference for charitable contributions of appreciated property, such portion is not available as a credit.[318] Thus, in an AMT year, a taxpayer is required to make two distinct AMT computations: one taking into account all the items of adjustment (within the meanings of §§56 and 58) and preferences (within the meaning of §57), and another as if the only items of preference were the depletion deduction, the exempt interest exclusion and the deduction for charitable contribution of appreciated property. The amount of net AMT available as a credit is then obtained by subtracting the result of second computation from the result of first.

In any taxable year, the amount of minimum tax credit that may be applied to reduce regular tax is limited, like all other nonrefundable credits, to the excess of the regular tax (as reduced by all other nonrefundable credits) over tentative AMT.[319] Thus, the minimum tax credit is available only after all other nonrefundable credits have been utilized and there remains an excess of the regular tax over tentative AMT. The amount of minimum tax credit that is not utilized against regular tax because of the tentative AMT

[311] §38(c)(1).
[312] §38(c)(2).
[313] *Id.*

limit is carried over to the following taxable year, is aggregated, and becomes part of the minimum tax credit for that year.[320] The minimum tax credit may be carried forward indefinitely, however, it may not be carried back.[321]

2. Apportionment of Differently Treated Items

In the case of a regulated investment company or a real estate investment trust, items of tax preference and other items (*e.g.*, items of adjustment, credits) which are treated differently for regular tax purposes, are required to be apportioned between such company or trust and its shareholders or holders of beneficial interests in accordance with the regulations to be prescribed by the Secretary.[322]

In the case of a common trust fund, the differently treated items are required to be apportioned among the participants on a pro rata basis.[323]

3. Tax Benefit Rule

The Conference Report states that "Since the regular and minimum taxes generally are computed separately, relief from the minimum tax under the tax benefit rule is not appropriate solely by reason of the fact that a taxpayer has received no benefit under the regular tax with respect to a particular item." [324] The statute, nevertheless, leaves it within the discretion of the Secretary to provide, by regulations, for the adjustment of differently treated items in cases where the tax treatment accorded such items shall not result in a reduction of the taxpayer's regular tax for any taxable year.[325]

4. Short Taxable Year

Section 443(d) provides rules for dealing with short taxable years for purposes of AMT. Essentially, §443(d) requires annualization of both the AMTI and the tentative minimum tax to determine the minimum tax liability of a taxpayer for a short taxable year. The annualization is accomplished by multiplying the AMTI for the short period by 12 and dividing it by the number of months in the short taxable year. The tentative minimum tax is similarly annualized.

5. Possessions Corporations

Possessions corporations are not subject to AMT on income with respect to which a credit under §936 is claimed.[326] This result is achieved by excluding from AMTI the amounts with respect to which the requirements of subparagraphs (A) or (B) of §936(a)(1) are met.

6. Estimated Taxes

Section 701(d) of the 1986 Act amended §6154(c), §6425(c)(1), and 6655(f) to provide that corporate taxpayers must pay estimated taxes on their potential §55 tax liabilities.

Chapter 34

COMPUTATION OF CORPORATE TAXABLE INCOME AND AMOUNT OF TAX

Samuel M. Maruca, Esq.
Silverstein and Mullens
Washington, D.C.

I. Inclusion of Contributions in Aid of Construction

A. Background

Public utilities providing water and sewage disposal traditionally have obtained a substantial amount of the capital necessary to construct facilities through contributions in aid of construction. The concept originated in a line of early Board of Tax Appeals cases in which potential customers provided a utility with money or property necessary to extend service lines to include them.[1] These courts held that the contributed amounts did not constitute taxable income to the utilities.

In 1958, the Service announced that it would follow the early cases with respect to regulated utilities.[2] In 1975, however it revoked the 1958 ruling.[3] Congress enacted §118(b) in response to this revocation.[4]

Congress considered §118(b) necessary for several reasons. First, Congress expected that the IRS ruling would increase substantially the tax liability of the utilities that had previously treated contributions in aid of construction as nontaxable contributions to capital, resulting in increased utility rates to customers. Since utility rate increases must be approved by public utility commissions, the working capital of the utilities would be substantially reduced, resulting in delays in furnishing service and curtailment of service expansion. Moreover, the immediate inclusion of these contributions in income would cause a mismatching of income and related expense, since the utility would have an increase in income in the year the contributions were received, but most of the expenditures attributable to those facilities would not arise until subsequent years.[5]

B. Repeal of Exclusion for Contributions

The 1986 TRA repeals the provision allowing a corporate regulated public utility to exclude from gross income contributions in aid of construction, or any other contribution by a customer or potential customer.[6]

The Ways and Means Committee Report (the "House Report") indicates that the repeal of the exclusion for contributions in aid of construction is intended to be very broad.[7] If the receipt of property or money by the utility causes the transferor to be favored in any way (*e.g.*, if the contribution results in earlier provision of services to the contributor than would have been the case absent the contribution), the utility must take such property or money into income. The House Report at 644 states that whether the utility has a policy, stated or unstated, requiring or encouraging contributions is irrelevant. Moreover, preferential service to the contributor is not required. For example, where housing developers but not individual homeowners are required to transfer property as a condition of service, the utility must include in gross income property transferred by the developers.

With respect to the degree of benefit that will trigger inclusion, the House Report contemplates that inclusion is required when the contributor derives any benefit for the property that will receive the services. This would be the case if, for example, a builder transferred property to secure services for a house he was paid to build, even though he never had an ownership interest in the house.[8]

C. Effective Date

The repeal is generally effective for contributions received after December 31, 1986, in taxable years ending after such date.[9]

II. Changes in Dividends Received Deduction

A. Background

Under Code §243, dividends received by a corporate stockholder are largely deductible. The purpose of this provision is to relieve corporate income distributed to corporate shareholders from a second tax at the corporate level.

Under pre-1986 TRA law, 85% of dividends received from outside an affiliated group are deductible. §243(a)(1).

[9] Act §824(c).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

For certain public utility preferred stock, the deduction is somewhat reduced.[10] Moreover, the Code generally limits the dividends received deduction to 85% of taxable income (computed without regard to the dividends received deduction and certain other items).[11]

There are a number of special rules applicable with respect to the dividends received deduction. Under §246A, the deduction is reduced where portfolio stock (generally, stockholdings of less than 50% of total voting power and less than 50% of value) is directly financed by indebtedness. This limitation applies for purposes of §245 (relating to dividends received from certain foreign corporations) as well as §§243 and 244.[12]

A second special rule disallows the deduction if the shareholder holds the stock for less than 45 days (90 days in the case of certain preferred stock), but only if the shareholder disposes of the stock.[13] The disposition requirement may result in retroactive disallowance of the deduction when the shareholder disposes of the stock after the close of the taxable year of receipt of the dividends. The holding period is computed without regard to periods in which the shareholder's risk of loss is reduced (where, for example, the shareholder has an option to sell substantially identical stock).[14]

B. TRA 1986 Amendments

1. Reduction in Dividends Received Deduction

The 1986 Act reduces the corporate dividends received deduction from 85% to 80%.[15] This reduction applies for purposes of the general rule of §243(a)(1), the deduction for dividends as public utility preferred stock under §244, the §246(b)(1) limitation as aggregate allowable dividends received deductions (now capped at 80%), the debt-financed portfolio stock rules under §246A and the limitation on the deduction for dividends received by a life insurance company under §805(a)(4)(B).

2. Technical Corrections to 1984 Act Provisions

The 1986 Act clarifies the §246A rules insofar as they apply to the dividends received deduction for dividends received from foreign corporations. First, the Act specifies that dividends received from wholly-owned foreign subsidiaries (§245(b)) and from foreign sales corporations ("FSCS")(§245(c)) are not subject to the limitation.[16] Second, the Act clarifies that the limitation must be applied before determining, under §246(a)(1) or (2), the ratio of the percentage of dividends that is deductible (which ratio is a function of the percentage of the payor's gross income that is effectively connected with a United States trade or business).[17]

The Senate Finance Committee Report contains the following example of how the limitation is to be applied:

Example: Assume that 70% of a domestic corporation's purchase price for portfolio stock of a foreign corporation described in §245(a) is debt financed. Assume further that 60% of that foreign corporation's gross income is effectively connected with the conduct of a trade or business in the United States. In the absence of §246A, the domestic corporation generally would be entitled to deduct 51% (85% times 60%) of any dividend received from the foreign corporation. Under §246A [as amended], the domestic corporation generally is entitled to deduct only 15.3% ((30% times 85%) times 60%) of any such dividend.[18]

The 1986 TRA amends §246(c)(1)(A) to provide that no dividends received deduction is allowable unless the taxpayer meets the 45 day holding period (90 days in the case of preference stock) requirement by the 45th day (90th day in the case of preference stock) following the ex-dividend date.[19] The House Report notes that the correction is not intended to require that the holding period be met by the date of receipt of the dividend, provided the stock is held for at least 45 days.[20] The Act also amends §246(c)(4) such that the rules requiring reduction of the taxpayer's holding period when its risk of loss is diminished will apply for all purposes of §246(c).[21] However, the Ways and Means Committee clarified that the 1984 Act did not modify the principle that an "out-of-the-money" call option that affords no protection against loss will not result in disallowance of the deduction.[22] The amendments made to §246 by Act §1804(b)(1)(A) and (B) apply to stock acquired after March 1, 1986. Act §1804(b)(1)(C).

C. Effective Dates

The reduction in the dividends received deduction is effective for dividends received or accrued after December 31, 1986, in taxable years ending after that date. The reduction in aggregate allowable deductions as a percentage of gross income under §246(b)(1) applies in taxable years beginning after December 31, 1986.[23]

III. Nondeductibility of Stock Redemption Expenses

A. Background

Code §162 allows as a deduction all "ordinary and necessary" expenses paid or incurred in a trade or business. According to some corporate taxpayers, this general provision includes amounts paid in connection with the redemption of stock for the purpose of discouraging takeover attempts ("greenmail" payments), and amounts paid to a shareholder or former shareholder in exchange for a promise not to purchase stock in the corporation for a specified or indefinite period of time (a "standstill" agreement).

The validity of deductions for the repurchase of stock by a corporation is uncertain. The courts have adopted

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

conflicting positions on the point.[24] However, the Supreme Court held that costs incurred in appraising minority shares in a purchase transaction are nondeductible capital expenditures.[25]

B. Disallowance of Deductions

Act §613(a) adds new §162(l) which provides that no deduction otherwise allowable shall be allowed for any amount paid or incurred by a corporation in connection with the redemption of its stock. Such amounts must be capitalized. This general rule does not apply to interest under §163 or to the deduction for dividends paid (within the meaning of §561). §162(l)(2)(A). Also excluded are expenses incurred in connection with the redemption of stock by a regulated investment company ("RIC") that issues only stock redeemable on demand.[26] This provision applies to any amount paid or incurred after February 28, 1986, in taxable years ending after such date. Act §613(b).

Note: The exclusion of interest expense will enable the taxpayer to finance redemption expenses, even if it cannot deduct them any longer.

The legislative history of §162(l) indicates that the provision is intended to be very broad, but not limitless. The disallowance rule applies to, *inter alia,* (1) all expenditures incurred by a corporation or by the selling shareholders or any related person (*e.g.*, a subsidiary of the redeeming corporation) in a redemption; (2) premiums paid for the stock; and (3) legal, accounting, brokerage and similar fees.[27] The Conference Report cautions, however, that otherwise deductible payments having no nexus with the redemption (other than temporal coincidence or shared general circumstances) will still be deductible.[28] Thus, a payment in discharge of other contractual obligations, such as compensation to an employee-shareholder or a payment in settlement of litigation, is deductible to the extent it is "clearly established" that the payment is not consideration for the stock or an expense of the redemption.[29]

The Conferees anticipated that the Service would scrutinize transactions temporally proximate but not directly related to a redemption. Specifically, an allocation of expenses between the redemption and the unrelated transaction is to be respected only if supported by all of the facts and circumstances. All payments made pursuant to "standstill" agreements, however, are to be considered related to any redemption of the payee's stock, and hence nondeductible.[30]

IV. Special Treatment for Capital Gains Repealed

A. Background

Pre-1986 law limited the tax payable in the case of a corporation having net long-term capital gain in excess of net short-term capital loss (*i.e.*, "net capital gain" as defined in §1222(11)).[31] Under the "alternative tax for corporations" (§1201), a corporation with net capital gain is subject to tax at (1) the regular corporate rate on taxable income reduced by the amount of the net capital gain, plus (2) 28% of the net capital gain. The alternative tax applies only if such tax is less than the regular tax.

B. Repeal of Corporate Capital Gains Rate Differential

The 1986 TRA repeals the favored treatment of corporate net capital gains accorded by the alternative tax by conforming the alternative rate provided in §1201(a)(2) to the top marginal rate on corporate income (34% under §11, as amended by the Act.) [32] For this purpose, the 5% surtax on corporate taxable income in excess of $100,000 is disregarded. Accordingly, even though corporate taxable income attributable to net capital gain could be subject to the regular tax at rates in excess of 34%, no special treatment is available.

Although the Act eliminates the rate differential for corporate net capital gains, the pre-existing statutory structure is retained intact. According to the Conference Report, the structure was retained "to facilitate reinstatement of a capital gains rate differential if there is a future tax rate increase." [33]

C. Effective Date and Transitional Rules

The amendments to §1201(a) apply to taxable years beginning after December 31, 1986.[34]

The Act provides a special transitional rule for taxable years that begin before January 1, 1987, and end in 1987. Under this rule, net capital gains is the sum of 28% of the lesser of: (1) pre-January 1, 1987 capital gain or net capital gain for the tax year, plus (2) 34% of the excess of net capital gain for the tax year over the amount of net capital gain taken into account under (1), *supra.*[35]

The Act permits §631(a) elections (relating to the special election to treat gain on cut timber as §1231 gain) for pre-January 1, 1987 taxable years to be revoked for any taxable years ending after December 31, 1986, without prejudice to further elections (*i.e.*, in the event a rate differential is reintroduced).[36]

V. Corporate Rate Reductions

A. Pre-TRA 1986 Rates

Corporate taxable income for taxable years beginning in 1982 and thereafter, but before the 1986 TRA effective date, is subject to tax in accordance with the following schedule:

[24] *Five Star Manufacturing Co. v. Comr.*, 355 F.2d. 724 (5th Cir. 1966) with *Proskauer v. Comr.*, 46 T.C.M. 679 (1983).
[25] *See Woodward v. Comr.*, 397 U.S. 572 (1970); *U. S. v. Hilton Hotels Corp.*, 397 U.S. 580 (1970).
[26] §162(1)(2)(B).
[27] Senate Report at 223.
[28] H.R. Rept. No. 841, 99th Cong., 2d. Sess. at II-169 (hereinafter "Conf. Rep.").
[29] *Id.*
[30] *Id.*
[31] §1201(a).
[32] Act §311(a); Code §1201(a).
[33] Conf. Rep. at II-107.
[34] Act §311(c).
[35] Act §311(d)(1).
[36] Act §311(d)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Taxable Income	*Rate*
$0 — $25,000	16%
$25,001 — $50,000	19%
$50,001 — $75,000	30%
$75,001 — $100,000	40%
over $100,000	46%

For taxable years beginning after December 31, 1983, taxable income in excess of $1,000,000 is subject to an additional tax equal to the lesser of (1) 5% of the excess over $1,000,000 or (2) $20,050. This additional tax completely eliminates the benefit of graduated rates for corporations having taxable income in excess of $1,405,000.

B. Rate Reduction

TRA 1986 substantially reduces the tax rate applied to corporate taxable income. Under Act §601(a), amending §11(b), such income will be subject to tax at the following rates:

Taxable Income	*Rate*
$0 — $50,000	15%
$50,001 — $75,000	25%
more than $75,000	34%

Corporate taxable income in excess of $100,000 is subject to tax equal to the lesser of (1) 5% of the excess over $100,000 or (2) $11,750, resulting in a complete phaseout of the benefit of graduated rates in the case of a corporation with taxable income of $335,000 or more. Amended §11(b)(flush language).

Observation: By virtue of the graduated rate structure established by the Act, *supra,* the tax on a C corporation with taxable income of $100,000 will be $5,750 less than the tax on $100,000 of income where the assets are held directly or in an S corporation (assuming tax at the maximum effective rate of 28% on the entire $100,000).

C. Effective Date and Transitional Rule

The corporate rate reduction applies to taxable years beginning on or after July 1, 1987. For taxable years that include that date, the blended rate rules of §15 apply. Act §601(b).

Example: Corporation X has a fiscal year ending April 30. For its fiscal year ending April 30, 1988, Corporation X has taxable income of $200,000. Under pre-1986 TRA rates, Corporation X's tax liability would have been $72,250. Under the new rate structure, the tax liability is $61,250. Applying the blended rate rules of §15, Corporation X's tax liability for its fiscal year ending April 30, 1988, is $63,088 ((61/365 x $72,250) plus (304/365 x $61,250)).

Chapter 35

REVISION OF NOL AND CREDIT CARRYOVER RULES

Donald B. Reynolds, Jr., Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Summary of TRA Changes

The Tax Reform Act of 1976 substantially revised the limitations on net operating loss ("NOL") carryforwards that apply, under §382, to transactions involving loss corporations. Although Congress adopted a 1978 effective date for the revisions to §382, it repeatedly extended the effective date. At the same time, §382 became the subject of extensive study and critical analysis by Congressional staff and professional tax groups. These efforts culminated in Act §621 of TRA 1986, which has adopted another comprehensive revision of §382.

The underlying theory of revised §382 is that, following a substantial change in ownership of a loss corporation (*i.e.*, more than a 50 percentage point change in stock ownership), its NOL should be utilized to the same extent and at the same rate as if no restructuring had occurred. In attempting to incorporate this principle into post-TRA 1986 §382, however, Congress produced a complex set of rules. After summarizing the state of pre-TRA 1986 law, this Chapter will review the latest Congressional effort to improve and refine §382 of the Code.

B. Pre-TRA 1986 Law

Section 172 of the Code establishes a basic exception to the general principle that federal income tax is determined and assessed on an annual basis. That is, in order to grant taxpayers a measure of relief in certain circumstances when their profitability fluctuates, §172 generally allows taxpayers to carry net operating losses back to the three taxable years preceding the loss and then forward to each of the 15 years following the loss.

As a general proposition, the Code preserves a corporation's tax attributes, including its NOL carryforwards and carrybacks, as long as the corporation continues its legal identity. Section 381 of the Code establishes rules governing the extent to which an acquiring corporation shall succeed to the tax attributes of another corporation following certain corporate transactions. Under these rules, NOL carryforwards may be liberally assumed by the acquiring corporation.[1] Section 381 applies to the liquidation of an eighty-percent-controlled subsidiary under §332, as well as to A, C, D, F, and G reorganizations.[2] While §381 generally allows the acquiring corporation to assume NOL carryforwards, the acquiring corporation may not carryback the NOL of the acquired corporation except in an F reorganization.[3]

Notwithstanding the general rules of §381, several statutory and judicial principles have restricted the availability of NOL carryovers in corporate acquisitions. These limitations, as they existed under pre-TRA 1986 law, are briefly described below.

1. Pre-TRA §382(a): Purchases

Pre-TRA §382(a) potentially limited NOL carryovers in the case of a substantial purchase of corporate stock. Basically, §382(a) precluded a corporation from carrying over its NOL in circumstances where (i) there was an increase of at least 50 percentage points in the stock ownership of the corporation's 10 largest stockholders during a two-year period (the "lookback period"); (ii) the increase occurred as a result of a "purchase";[4] and (iii) the loss corporation failed to continue to conduct a trade or business substantially similar to the trade or business it conducted before the change in stock ownership.[5]

If the three-part test of §382(a) was satisfied, the loss corporation's NOL carryforward was disallowed entirely. In contrast to the rules in §382(b) applicable to reorganizations, §382(a) did not provide for the carryforward of a reduced NOL.

2. Pre-TRA §382(b): Reorganizations

Pre-TRA §382(b) governed the availability of NOL carryforwards in tax-free A, C, F, and certain D and G reorganizations. The underlying premise of §382(b) was that a prescribed continuity of interest level must be satisfied in order to preserve the NOL carryforwards of a loss corporation that was a party to a reorganization. Further, the limitations in §382(b) applied regardless of whether the loss corporation was the acquired or acquiring corporation. Basically, §382(b) restricted the availability of NOL carryforwards if, pursuant to one of the reorganizations specified

[1] *See* §381(c)(1).
[2] §381(a).
[3] §381(b)(3).
[4] Although pre-TRA §382(a)(4) defined the term "purchase" as an acquisition in which the transferee acquired a cost basis in the acquired stock, the 50 percentage point change in ownership also could be triggered by an increase in stockholdings resulting from a redemption. *See* §382(a)(1)(B)(ii). Citations to §382 as it existed prior to the TRA 1986 amendments will be referred to as "pre-TRA §382."
[5] Each of the three separate requirements of pre-TRA §382(a) is the subject of an extensive body of law provided by regulations and judicial decisions. *See* 27 T.M., *Net Operating Losses — Sections 381, 382 and 269.*

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

above, the former stockholders of the loss corporation received or retained less than a 20% stock interest in the surviving corporation. Unlike §382(a), §382(b) did not incorporate a continuity of business requirement because, as a tax free reorganization, a transaction subject to §382(b) would fall subject to the continuity of business enterprise requirement imposed by the regulations under §368.[6]

If the 20% minimum ownership test was not satisfied, the loss corporation's NOL carryforward was reduced by 5% for each 1% difference between the 20% minimum standard and the actual interest received by the loss corporation's shareholders.[7]

3. Section 269: Tax Avoidance Limitation

Section 269 of the Code authorizes the Service to disallow any deduction, credit or other allowance if a corporation is acquired and the acquiring party's principal purpose for the acquisition is the evasion or avoidance of federal income tax. Section 269 potentially applies to both an acquisition of a controlling interest in a corporation by any person, as well as an acquisition of corporate assets by another corporation.[8] Unlike §382, §269 requires an evaluation of the subjective intent of the acquiring party, *i.e.*, whether the party's principal purpose for the acquisition was evasion or avoidance of tax. Because §269, unlike §382, does not incorporate any quantitative guidelines, §269 provides the Service with an open-ended means of challenging NOL carryforwards and other favorable tax attributes that may be acquired in a corporate transaction. Further, once the Service has determined that the principal purpose for an acquisition is tax avoidance, the disallowance of NOL carryovers and other items is presumptively correct.[9]

As might be expected given the somewhat broad and imprecise reach of §269, an extensive body of case law has developed under that code section.[10]

4. Libson Shops Doctrine

In *Libson Shops v. Koehler*,[11] the Supreme Court reviewed the merger of sixteen commonly-owned operating corporations into a seventeenth commonly-owned corporation which had previously managed the other sixteen corporations. Three of the operating corporations had incurred pre-merger losses, and continued to incur losses in the year following the merger. The surviving corporation deducted the NOL from the income generated by the assets of several of the other corporations in the year following the merger. Applying §122 of the 1939 Code, the Court held that the pre-merger NOL could not be carried over to the first taxable year of the surviving corporation. In reaching this conclusion, the Court applied a continuity of business enterprise theory and relied upon the fact that the business producing the postmerger income was not substantially the same business that incurred the NOL.

In the years following the Supreme Court decision, there has been dispute over the extent to which the *Libson Shops* doctrine survived as an operative principle of law under the 1954 Code.[12] Although the legislative history of The Tax Reform Act of 1976 stated that *Libson Shops* was not to be considered a controlling authority for years governed by the 1976 amendments to §382,[13] this statement is ambiguous when applied to the 1954 Code version of §382 inasmuch as the 1976 amendments never became controlling law.

5. Consolidated Return Regulations

In addition to the rules described above that applied to corporate acquisitions, the consolidated return regulations have imposed independent limitations that restrict the availability of NOL carryforwards. The regulations provide that when an acquired corporation becomes a member of an affiliated group, the acquired corporation's pre-acquisition NOL carryforward is subject to the separate return limitation year ("SRLY") rules. The effect of the SRLY rules is to allow a consolidated group to deduct the pre-consolidation losses of the acquired corporation only against the acquired corporation's post-consolidation income.[14] The SRLY rules also provide that an acquired corporation's "built-in" losses, as defined in Regs. §1.1502-15, may be deducted only against its post-acquisition income. For these purposes, the regulations define built-in losses as losses that accrue economically before the acquisition but are not realized, for tax purposes, until after the acquisition.

The consolidated return regulations also establish restrictions applicable if there is a change in ownership of the common parent's stock equal to more than 50% of the value of such stock. These limitations, known as the consolidated return change of ownership ("CRCO") rules, require that NOL carryforwards of the group that arise before the change in ownership only may offset income earned by the pre-acquisition members of the group.[15]

6. Tax Reform Act of 1976

As part of the Tax Reform Act of 1976, Congress adopted a comprehensive revision of the statutory limitations on NOL carryforwards. Although the statutory revision retained the formal dichotomy between §382(a) and §382(b), Congress attempted to provide for more uniformity between the two sets of rules. Although Congress originally adopted a 1978 effective date for the revised §382, it subsequently extended the effective date several times, most recently in the Tax Reform Act of 1984. Section 62 of the 1984 Act postponed the effective date until January 1, 1986.

[6] Regs. §1.368-1(d).

[7] Reorganizations involving corporations that were owned substantially by the same persons in the same proportion were exempted from §382(b). *See* pre-TRA §382(b)(3). This exception is based upon the theory that continuity of interest will exist in these transactions by reason of the common stock ownership.

II. Overview

A. *Preliminary Legislative Proposals*

Over the past several years, the NOL carryforward rules have been the subject of considerable study and debate. In September, 1983, the staff of the Senate Finance Committee proposed, as part of its preliminary report on the simplification of Subchapter C, a series of extensive amendments to §382.[16] The underlying premise of the Finance Committee staff's preliminary proposal was that following a change in ownership, a loss corporation (or its successor) should be entitled to use the NOL carryforwards to the same extent as the loss corporation would have used them had no acquisition taken place and had the loss corporation invested its assets in activities generating taxable income. Having identified this general principle, the staff proposal proceeded to describe two sets of limitation rules. One rule (the "purchase" rule) would apply to stock purchases, redemptions, and certain qualified acquisitions (*i.e.*, acquisitions resulting in a carryover basis) to the extent the consideration did not consist of the acquiring corporation's stock. The second rule (the "merger" rule) would apply to qualified acquisitions to the extent the consideration consisted of the acquiring corporation's stock, as well as to transactions in which an ownership change resulted from the issuance of new stock in exchange for cash or other property.

Commentators generally agreed with the "neutrality" principle adopted in the preliminary proposal of the Finance Committee staff (*i.e.*, that NOL carryovers should be available following an acquisition to the same extent as if no acquisition had occurred). There was considerable opposition, however, to the specific purchase and merger rules proposed by the staff.[17] The opposition generally focused on the complexity of the separate rules.

In light of the objections to the preliminary Finance Committee staff proposal, the final report prepared by the staff proposed a single rule which would limit the availability of NOL carryforwards in any case of a 50 percentage point change in ownership of the loss corporation. The staff, however, attempted to retain a "neutrality" principle ensuring that after a change in ownership, the loss corporation's NOL carryforward would be limited to the same use that would have been available to the loss corporation had no change in ownership occurred. To achieve this result, the Finance Committee staff made certain assumptions about the rate at which a typical loss corporation absorbs its NOL by offsetting it against taxable income. Based on statistics provided by the Joint Tax Committee, the staff assumed that the long-term federal rate established under §1274 of the Code provided an appropriate absorption rate. Thus, under the final staff proposal, the annual limitation on NOL carryforwards generally would be limited to an amount equal to the absorption rate (*i.e.*, the long-term federal rate) times the value of the loss corporation at the time of the change in ownership.[18]

B. *Final Legislation*

Act §621 of TRA 1986 enacted an amendment to §382 which draws, in large part, upon the Final Report of the Senate Finance Committee staff.[19] Thus, the Act incorporated a single rule limiting NOL carryforwards which applies in the case of any substantial change in the ownership of a loss corporation. Further, TRA 1986 adopted an absorption limitation which fixes, on an annual basis, the amount of earnings that may be offset by the loss corporation's NOL. This annual limitation is calculated by applying a rate of return against the value of the loss corporation at the time of the change in ownership. TRA 1986 established the federal long-term tax-exempt rate as the controlling rate for calculating the absorption limitation. In addition to the absorption limitation, TRA 1986 also imposes a general disallowance of NOL carryforwards if a two-year continuity-of-business enterprise standard is not met.

Under the rules enacted by TRA 1986, §269 continues to be available to the Service as an independent means of challenging NOL carryforwards following corporate acquisitions. Further, the legislative history states that the SRYL and CRCO limitations will continue to apply notwithstanding the amendment to §382. TRA 1986, however, overrules the *Libson Shops* doctrine for years governed by post-TRA 1986 §382. Finally, the 1986 Act generally repealed the amendments to §382 enacted by the Tax Reform Act of 1976. Other than in the case of special situations covered by transitional rules, the repeal of the 1976 amendments is effective retroactively to January 1, 1986. Consequently, the repeal by TRA 1986 prevents the 1976 amendments from becoming controlling law for the portion of 1986 preceding the date of enactment of the 1986 Act.[20]

C. *Effective Dates*

The 1986 amendments to §382 generally apply if an "ownership change," as defined in the statute, occurs with respect to a loss corporation after December 31, 1986. Act §621(f). The December 31, 1986 effective date is subject, however, to a number of transitional rules and special exceptions.

III. Detailed Analysis

A. *Ownership Change*

As noted above, TRA 1986 establishes a single set of rules in §382 for testing all changes in ownership of a loss corporation, regardless of whether the change occurs by

[16] *See* Staff, Committee on Finance, 98th Cong., 1st Sess., *The Reform and Simplification of the Income Taxation of Corporations* 95 (Comm. Print 1983). For other detailed studies proposing changes in §382, *see* American Law Institute, *Federal Income Tax Project: Subchapter C Proposals on Corporate Acquisitions and Dispositions* (1982); American Bar Association Tax Section Committee on Corporate Stockholder Relationships, Legislative Recommendation 1985-1.

[18] Final Report, *supra*, at 71-72.

[19] Act §621(a) of TRA 1986 (P.L. 99-514) contains the amendments to Code §382. Throughout this chapter, all citations to TRA 1986 are cited to §382 as it is amended by the Act. The citations refer to post-TRA §382 as "§382 or post-TRA §382."

[20] *See* H.R. Rep. No. 841 (Vol. II), 99th Cong., 2d Sess. pp. II-194-195 (1986) (Conference Report).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

reason of a purchase or a tax-free reorganization. Both the House and Senate bills adopted this approach, although a number of the definitional terms were modified during the course of the legislative process.[21] As enacted, post-TRA §382 will generally apply in the event of an "ownership change" in a loss corporation. The Act provides that the determination of whether an ownership change has occurred must be made after any "owner shift involving a 5% shareholder" and any "equity structure shift." [22]

Under post-TRA §382(g), an ownership change generally occurs when the percentage of stock (based on value) owned by one or more 5% shareholders in a "new loss corporation" increases by more than 50 percentage points over the lowest percentage of stock held by such stockholders, at any time during the "testing period," in an "old loss corporation" (or a predecessor).[23] An "old loss corporation" refers to a corporation which undergoes an ownership change and which was a loss corporation before the change. Code §382(k)(2). A "new loss corporation" refers to a corporation that is a loss corporation after an ownership change. The same corporation may be treated as an old loss corporation and a new loss corporation (*e.g.*, in the case of an owner shift involving a 5% shareholder that results from a stock purchase).[24]

Comment: Because the limitations of post-TRA §382 apply only after certain ownership changes (whether by reason of a purchase or reorganization), the Act should not impose any additional limitations upon the ability of a loss corporation to purchase a profitable business and offset its NOL against the income of the profitable assets.

For purposes of evaluating ownership changes, the testing period generally is the three-year period preceding the day on which any owner shift involving a 5% shareholder or any equity structure shift occurs.[25] Further, the Act defines a 5% shareholder as any person who holds 5% or more in value of the loss corporation's stock at any time during the testing period.[26] In this regard, the Act aggregates all less-than-five-percent shareholders and, effectively, treats them as one 5% shareholder.[27] Notwithstanding this aggregation rule, the Conference Report specifies that stock sales by less-than-five-percent shareholders of a public corporation to other less-than-five-percent shareholders will not, by themselves, give rise to an ownership change.[28]

As noted above, the definition of "ownership change" turns upon increases in the *value* of the loss corporation's stock held by 5% shareholders. In this regard, the Act provides that, except as provided in regulations to be promulgated by the Treasury, changes in proportionate stock ownership resulting from fluctuations in the market value of stock shall not be taken into account in determining whether an ownership change has occurred.[29] The Act also dictates that changes in the ownership of certain preferred stock are disregarded in determining whether an ownership change has occurred. For these purposes, TRA 1986 generally adopts the definition of preferred stock in §1504(a)(4) of the Code.[30] The Conference Report emphasizes, however, that the Treasury Department has broad authority to supplement this definition of preferred stock with additional regulations. These regulations presumably will implement the clear Congressional intent to overrule *Maxwell Hardware v. Comr.*[31] In that case, although the loss corporation's original shareholders retained common stock which represented more than 50% of the corporation's value, new shareholders received preferred stock entitling them to 90% of the corporation's earnings allocable to property contributed by the new shareholders. Under amended §382, the stock retained by the original shareholders in *Maxwell Hardware* would be ignored in determining whether an ownership change has occurred because such stock did not carry a significant right to participate in corporate earnings.[32]

1. *Owner Shift Involving a 5% Shareholder*

As noted above, a determination of whether an ownership change has occurred must be made after an "owner shift involving a 5% shareholder." Such an owner shift occurs when there is any change in the respective stock ownership of a corporation and such change affects the percentage of stock owned by a person who is a 5% shareholder before or after the change.[33] An owner shift involving a 5% shareholder may arise in any number of ways including the following:

(1) A taxable purchase of stock by a person who owns at least 5% of the corporation's stock either before or after the purchase;

(2) A sale or other disposition of stock by a person who holds at least 5% of the stock of the loss corporation either before or after the disposition;

(3) An exchange of property for stock in a transaction that satisfies §351 and results in a change in the percentage ownership of a 5% shareholder;

(4) A redemption that results in a change in the percentage ownership of a 5% shareholder;

(5) An exercise of a debt conversion privilege that results in a change in the percentage ownership of a 5% shareholder.

(6) An issuance of stock by a loss corporation that affects the percentage of stock ownership of a 5% shareholder.[34]

2. *Equity Structure Shift*

Under the Act, a determination of whether an ownership change has occurred also must be made following an "equity structure shift." An equity structure shift includes a reorganization within the meaning of §368 of the Code

[21] For example, the House bill referred to a change in ownership as a "trigger."
[22] *See* §382(g)(1).

(other than a divisive D or a G reorganization). Further, TRA 1986 authorizes the Treasury to issue regulations defining certain public stock offerings and "failed" reorganizations as equity structure shifts.[35] Following an equity structure shift, an ownership change will occur if, for example, the shareholders of the old loss corporation do not receive at least 50% of the stock in the surviving corporation (*i.e.*, the "new loss corporation").[36] This result will occur because if the shareholders of the old loss corporation receive less than 50% of the surviving corporation's stock, the original shareholders of the surviving corporation will experience an increase of more than 50% in their interest in the new loss corporation over their interest in the old loss corporation (which was zero).[37]

As illustrated by the discussion above, the determination of whether an equity structure shift causes an ownership change is similar to the evaluation made under pre-TRA §382(b). As is apparent, however, the Act, in effect increased the former 20% continuity of interest requirement to a more stringent 50% test.

3. Multiple Transactions

Because the determination of whether an ownership change has occurred requires that a 5% shareholder's ownership be evaluated for the preceding three years, the cumulative effect of ownership changes caused by a series of unrelated transactions clearly can result in an ownership change within the meaning of the statute. The Conference Report provides a number of examples illustrating this principle.[38]

Comment: Notwithstanding the Conferees' attempt to provide examples illustrating the effect of multiple transactions, the legislative history is silent with respect to the impact of "earn outs" and other escrow arrangements that commonly arise in corporate acquisitions. For example, if shares of an acquiring company are held in an escrow providing for their release to the target's shareholders upon the satisfaction of certain conditions (such as attaining a specified earnings level), it is not clear how the escrowed shares are evaluated in calculating whether an ownership change has occurred. The shares could be deemed to be owned by the target shareholders at the time they were placed in escrow or upon their release, if and when the escrow conditions are satisfied. Alternatively, the likelihood of the escrow conditions being satisfied theoretically could be viewed as having a bearing on whether the shares should be treated as owned by the target shareholders on the date the escrow is formed. Obviously, this latter principle may be difficult to apply in particular cases and may depend on future events that cannot be predicted with any certainty.

B. Testing Period

The applicable testing period for measuring whether an ownership change has occurred is, as noted above, generally three years. There are several significant exceptions to this general rule, however. First, if an ownership change occurs, the testing period applicable to a second ownership change does not begin before the day after the first ownership change. Thus, changes in stock ownership that caused the first ownership change do not count again and accumulate toward the 50% threshold that could trigger a second change. Moreover, a testing period does not begin before the first day of a taxable year in which the old loss corporation's NOL first arose. The theory underlying this rule is that taxable years ending before the tax attributes subject to §382 arose (*i.e.*, the NOL), should be disregarded for purposes of the testing period.[39]

C. Attribution and Other Rules Affecting Stock Ownership

Post-TRA §382 incorporates generally the attribution rules of §318, subject to several notable refinements.[40] Consequently, all evaluations of stock ownership required under §382 must be made with reference to certain shares that are treated as being constructively owned by a person. The variations from the basic rules of §318 are specified in §382(l)(3) and are explained in the Conference Report. The most noteworthy of these variations provides that stock owned by a corporation is attributed to all of its shareholders (and not just 50% shareholders) in proportion to their interests in the corporation. Moreover, except to the extent provided in regulations to be issued by the Treasury, stock attributed from a corporation to its shareholders will not be treated as owned by the corporation. The effect of this latter rule is generally to disregard intermediate corporations and evaluate changes in the stock ownership of a loss corporation with reference to the changes in the ultimate beneficial ownership of the corporation.

As explained previously, post-TRA §382 incorporates an aggregation rule which treats all less-than-five- percent shareholders of a corporation as a single 5% shareholder. This special aggregation rule applies with respect to shares owned actually or constructively by such less-than-five-percent shareholders.

Section 382 also provides that all transfers of stock resulting from gifts, death, divorce or separation are disregarded in determining whether an ownership change has occurred.[41] This exception should be particularly significant in the case of closely held corporations where, because of the concentration of ownership, the enumerated events (some of which are obviously uncontrollable) can lead to large shifts in stock ownership.

D. Limitations on NOL Carryforwards

Under post-TRA §382, upon the occurrence of an ownership change, two basic substantive provisions potentially limit the loss corporation's NOL carryforwards. First, if a continuity of business test is not satisfied, §382(c) disallows the carryforwards entirely. Second, if the continuity of business requirement is satisfied, the absorption limitation adopted by TRA 1986 will limit the rate at which the NOL may be utilized by the new loss corporation. *See* §382(b).

1. Continuity of Business Enterprise

Following an ownership change, a loss corporation's NOL carryforwards (along with certain built-in losses) are

[35] §382(g)(3).
[36] Conference Report, *supra*, at II-177 (*Example* 8).
[37] *See* §382(g)(1).
[38] Conference Report, *supra*, at II-178 to II-180.
[39] §382(i); Conference Report, *supra*, at II-185.
[40] §382(l)(3)(A); *see* Conference Report, *supra*, at II-180.
[41] §382(l)(3)(B).

disallowed entirely unless the continuity of business enterprise standards of Regs. §1.368-1(d) are satisfied throughout the 2-year period beginning on the "change date." [42] In a case where an owner shift involving a 5% shareholder triggers the ownership change, the change date is the date on which such shift occurs. Alternatively, if an equity structure shift triggers an ownership change, the change date is the date of the reorganization.

In general, the regulations under §368 provide that the acquiring corporation in a reorganization must either (i) continue at least one "significant" line of the acquired corporation's "historic business," or (ii) use, in any business, a "significant" portion of the acquired corporation's business assets. The regulations generally treat a historic business as the business most recently conducted by the acquired corporation. The regulations also specify that if the acquired corporation has more than one line of business, the acquiring corporation will satisfy the continuity of business enterprise requirement if it continues a significant line of business. Thus, under the regulations, the acquiring corporation may satisfy the continuity of business enterprise requirement if it continues one of three lines of business previously conducted by the acquired corporation.[43]

As explained previously, the pre-TRA 1986 requirements of §382(a) applicable to purchase transactions required that the loss corporation continue to carry on a trade or business "substantially the same" as that conducted before the change of ownership. Although the standard incorporated a significant degree of flexibility in that the loss corporation needed only to continue to conduct "substantially the same" trade or business, the regulations under §368 appear to incorporate an even less stringent standard. That is, the continuity of business enterprise test under the §368 regulations is satisfied if the acquiring corporation uses a "significant" portion of the target's historic business assets in *any* trade or business, regardless of whether it was historically conducted by the target. Therefore, factors traditionally analyzed under §382(a), such as whether the loss corporation continues to use the same locations, equipment and key employees, are irrelevant under post-TRA §382. [44]

Notwithstanding the adoption of a less stringent continuity of business test, there is a certain irony in the decision of Congress to incorporate the §368 regulations. Throughout the extended debate of the proposed revisions to §382, many commentators criticized the change of business test of pre-TRA §382(a) on the grounds that the standard was inherently imprecise.[45] Although Congress apparently agreed with this assessment,[46] it is not at all clear that TRA 1986 provides more definitive guidelines. For example, the continuity of business enterprise regulations rely, in several crucial respects, upon a facts and circumstances test. Thus, it remains to be seen whether taxpayers and the Service will reach a common understanding as to what constitutes a "significant line of business" or a "significant portion of [the] historic business assets in a business."

Comment: Given the broad legislative goals underlying post-TRA §382, a question can be raised as to whether any continuity of business test is appropriate. If an existing loss corporation changes its business operations, its NOL should be available, without limitation, to offset income generated by the modified business. Because one of the major purposes of the new legislation was purportedly to ensure that a "new loss corporation's" NOL is available to the same extent as it would be if no ownership change had occurred, it is unclear why a continuity of business rule should apply to a new loss corporation when presumably no such restriction applies to a loss corporation which experiences no ownership change.

2. *Annual Limitation on Carryforwards*

If an ownership change occurs and the continuity of business enterprise requirement described above is satisfied, the second major limitation on loss carryforwards established by TRA 1986 will apply. Under this set of rules, the amount of taxable income of the new loss corporation (*i.e.*, the original loss corporation in the case of a purchase or the surviving corporation in the case of a reorganization) that may be offset by "pre-change losses" shall not exceed, in any taxable year following the change date (*i.e.*, a "post-change year"), an amount referred to by the statute as the "§382 limitation." [47] The Act defines the term "§382 limitation" as the product of (i) the value of the old loss corporation immediately before the ownership change, and (ii) the applicable long-term tax-exempt rate.[48] As the name suggests, "pre-change losses" include NOL carryforwards arising in taxable years preceding the taxable year of the change date, as well as a pro-rata portion (based on the number of days before and after the change date) of any loss for the taxable year that includes the change date.[49] If two or more old loss corporations are reorganized into a single entity, a separate §382 limitation must be calculated for each corporation that undergoes an ownership change.

TRA 1986 provides that, for purposes of calculating the §382 limitation, the long-term tax-exempt rate shall be the highest of such rates in effect for the month in which the change date occurs or the two previous months. The long-term tax-exempt rate is a new rate which will be based upon the federal long-term rate established under §1274(d), as adjusted to reflect prevailing rates on long-term tax-exempt obligations with maturities of more than nine years.[50] The appropriate rate for calculating the annual absorption limitation had been the subject of considerable debate throughout the several-year period during which §382 was reviewed. In fact, the Senate bill adopted the federal mid-term (taxable) rate as the operative rate. The Conferees finally concluded that unless a rate lower than the federal long-term rate were adopted, there would exist an undue incentive for purchasing loss corporations.[51]

Comment: Leaving aside the question of whether a mid-term or a long-term rate is more appropriate for calculating the annual absorption limitation, the decision of the Conferees to incorporate a long-term tax-exempt rate in §382 may be questioned on several more fundamental grounds. As noted previously, the neutrality principle on which the amendment rests dictates that a new loss corporation's NOL should be available to the same extent as if no ownership change had occurred and the corporation had invested its assets in profitable activities. Consequently, it appears that a yield based on debt instruments, such as those calculated under §1274, is inherently too low for §382 since the neutrality theory suggests that the hypothetical loss corporation should be presumed to have invested its assets in equity (rather than debt) investments. If this analysis is accepted, because of the greater risk associated with equity investment, §1274 rates are an altogether irrelevant yard stick for the calculations called for by §382. Further, in a similar vein, it can be questioned why the hypothetical loss corporation constructed by §382 should be treated as having invested its assets in tax-exempt securities, as opposed to taxable investments returning a higher yield. The latter form of investment would certainly appear to be more consistent with the legislative goal of calculating the return that a typical business would earn on an investment of its assets.

Section 382 defines the value of the old loss corporation as the value of the stock of such corporation (including preferred stock described in §1504(a)(4)) immediately before the ownership change.[52] The Conference Report directs the Treasury Department to issue regulations which, in appropriate cases, will treat as stock any warrants, options, convertible debt, or other similar interests in an old loss corporation. The legislative history notes that, normally, the purchase price at which stock in the old loss corporation sells is strong evidence of the value of such stock. This would not be the case, however, if the purchase price reflects a premium attributable to a control element.[53]

Comment: The legislative history of TRA 1986 offers little guidance as to how the value of a loss corporation with subsidiaries is to be calculated. If the parent's stock is acquired by purchase for cash, the purchase price would constitute persuasive evidence of the corporation's value under the principle noted above. When the ownership change results, however, from other types of owner shifts or from an equity structure shift, it is unclear how the value of an affiliated group of corporations is determined. For example, a group of corporations could be valued on a consolidated or a corporation-by-corporation basis. Presumably, these two approaches could produce different results in a particular case.

In calculating the NOL carryforward limitations, several special rules apply with respect to the taxable year of the old loss corporation which includes a change date. First, the annual limitation does not apply to the portion of the old loss corporation's taxable income that is allocable, on a daily pro rata basis, to the portion of the year falling before the change date.[54] Notwithstanding, the Treasury has the authority to issue regulations that will allow an old loss corporation to allocate to the pre-change period all income from specific sales of assets concluded before the change date. That is, an old loss corporation could elect to close its books as of the change date.[55] Further, for the taxable year in which the ownership change occurs (*i.e.*, the first year subject to the absorption limitation), the §382 limitation will be reduced by a pro rata portion determined by comparing the number of days in the taxable year occurring before and after the change date.[56]

Finally, if, in any taxable year ending after the change date, the new loss corporation has insufficient income to absorb the full §382 limitation, the unused portion is included in the §382 limitation for the next taxable year.[57] Thus, if losses available under the §382 limitation are not usable in a particular year because of the lack of income, such losses will be deductible immediately upon the realization of income by the new loss corporation in a later year.

3. *Special Rules Reducing Value of Old Loss Corporation*

In certain circumstances, the value of an old loss corporation used to calculate the §382 limitation is subject to adjustments. Specifically, the Act provides that the value shall be reduced by an amount equal to the aggregate capital contributions made to the old loss corporation as part of any plan, a principal purpose of which is to avoid the limitations of §382. The statute also dictates that, except as provided in regulations issued by the Treasury, all capital contributions made during the two years preceding an ownership change shall be conclusively presumed to fail the principal purpose test.[58] For these purposes, a capital contribution includes any amount received by the old loss corporation in exchange for its stock, as a contribution to capital, or in a transfer subject to §351. The Conference Report also identifies several types of capital contributions that should be exempted from the value reduction rule under the eventual regulations. These exempted capital contributions include many contributions made upon organizing a corporation, contributions made during the first year of a corporation's existence during which there is an NOL, and capital contributions made to enable a corporation to continue its basic operations (for example, to fund its payroll or other operating expenses).[59]

TRA 1986 also establishes a special rule applicable to old loss corporations with nonbusiness assets which comprise one-third or more of the fair market value of their total assets.[60] In these circumstances, the old loss corporation's value must be reduced by the *net* excess value of the nonbusiness assets. In calculating this net value, a reduction is allowed for a portion of the old loss corporation's debt that bears the same ratio to total debt as the value of its nonbusiness assets bears to the value of all assets. *See* Conference Report at II-190.

[60] §382(l)(4).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Although stock and securities generally fall within the definition of nonbusiness assets, a special rule applies to stock or securities in a subsidiary corporation in which the old loss corporation owns 50% or more of (i) the combined voting power of all classes of voting stock and (ii) the total value of all classes of stock. Stock or securities in a subsidiary that meets this test do not constitute nonbusiness assets, and, for purposes of the nonbusiness asset rule, the parent loss corporation is treated as owning its pro rata share of the subsidiary's assets.[61]

E. Built-In Losses and Gains

Drawing upon the present consolidated return regulations, post-TRA §382 incorporates special rules applicable to built-in losses and gains. Basically, §382 treats all net unrealized built-in losses that are recognized during the "recognition period" as pre-change losses subject to the §382 absorption limitation described above.[62] The "recognition period" begins on the change date and extends for five calendar years.[63] Post-TRA §382 defines the term "net unrealized built-in loss" as the amount by which the aggregate adjusted bases of the old loss corporation's assets exceeds the value of such assets immediately before the ownership change.[64] The statute further defines a "recognized" built-in loss as *any* loss recognized during the five-year recognition period upon the disposition of an asset except to the extent that the new loss corporation demonstrates that (i) such asset was not held by the old loss corporation immediately before the change date, or (ii) such loss exceeds the excess of the adjusted basis of such asset on the change date over the fair market value of the asset on such date.[65]

Post-TRA §382 also authorizes the Treasury to issue regulations which treat as built-in losses certain "amounts which accrue on or before the change date but which are allowable as a deduction after such date." [66] The legislative history indicates that deductions deferred by §§267 or 465 are examples of the type of deductions that may be treated by the regulations as built-in losses. Depreciation deductions, however, may not be treated as built-in losses.[67] Thus, if a new loss corporation holds an asset which, as of the change date, has a basis exceeding its fair market value, the corporation may deduct, without limitation, depreciation calculated with reference to the basis of the asset.

Comment: Although Congress borrowed from the consolidated return regulations when it incorporated in §382 the concept of a "built-in deduction," the term has a broader application under the consolidated return regulations. Depreciation clearly can constitute a built-in deduction under the consolidated return regulations and, as such, is subject to SRLY. Moreover, the Service has ruled that operating expenses (*e.g.*, salary, pension contributions, and interest) incurred by a cash basis taxpayer are built-in deductions to the extent they are allocable to, and "economically accrue" in, a separate return year. Rev. Rul. 79-279, 1979-2 C.B. 316. It appears that the eventual regulations could, in appropriate circumstances, treat operating expenses as built-in losses for purposes of §382. For example, in a situation similar to Rev. Rul. 79-279 where a cash basis loss corporation is subject to §382, operating expenses which are allocable to the period preceding the change date, but which are paid after such date, could fall within the built-in deduction rule of §382(h)(6).

Section 382 creates a parallel set of rules applicable to unrealized built-in gains. Thus, a new loss corporation which recognizes a built-in gain during a taxable year falling within the five-year recognition period is entitled to increase its §382 limitation for that taxable year by the amount of the recognized built-in gain.[68] The statute defines a "recognized built-in gain" as any gain recognized on the disposition of an asset during the recognition period if the new loss corporation demonstrates that (i) such asset was held by the old loss corporation immediately before the change date, and (ii) such gain does not exceed the excess of the fair market value of such asset on the change date over the adjusted basis of the asset on such date.[69]

Both the built-in loss and the built-in gain rules contain a *de minimis* exception. Thus, the built-in gain or the built-in loss rules will not apply if the respective built-in gain or loss does not exceed 25% of the value of the old loss corporation's assets immediately before the ownership change.[70] For purposes of the *de minimis* exception, the following items are excluded in calculating the fair market value of the old loss corporation's assets: cash, cash items (as determined under §368(a)(2)(F)(iv)), and marketable securities having a value that does not substantially differ from their adjusted basis.[71]

Whether the *de minimis* exception will prove to establish an adequate threshold level remains to be seen. Obviously, the burden on a new loss corporation imposed by the built-in gain and loss rules can be immense since the rules require the corporation to value (and perhaps even appraise) all of the assets held by the old loss corporation at the time of the ownership change. Moreover, the statute effectively creates a presumption that all losses recognized by the new loss corporation on asset dispositions are built-in losses. Consequently, a considerable premium will be placed on substantiating the value of an old loss corporation's assets as of the change date.

F. Bankruptcy Proceedings

Special rules under post-TRA §382 apply if (i) the old loss corporation, immediately before the ownership change, was subject to a bankruptcy court's jurisdiction in a Title 11 or similar proceeding, and (ii) the shareholders and creditors of the old loss corporation (determined immediately before such ownership change) own 50% of the value and voting power of the loss corporation's stock immediate-

ly after the ownership change.[72] In these circumstances, §382 does not apply to limit the NOL of the bankrupt loss corporation following an ownership change (as defined in §382(g)), provided that the stock for debt exchange, reorganization or other transaction causing the ownership change is ordered by the bankruptcy court or occurs pursuant to a court-approved plan.[73]

For purposes of the rule described above, stock received by a creditor in exchange for debt counts towards the 50% threshold only if (i) the creditor held the debt for at least 18 months before the filing of the bankruptcy, or (ii) the debt arose in the ordinary course of the loss corporation's trade or business and was held by the creditor who, at all times, had the beneficial interest in the claim represented by the debt.[74] Debt incurred for both ordinary expenses and capital expenditures may, of course, arise in the ordinary course of the loss corporation's business.

If the exception for bankruptcy proceedings applies, §382 provides for several adjustments to the loss corporation's NOL carryforward. First, the NOL (as well as the excess credits under §383) of the loss corporation must be reduced by one-half of the amount of the cancellation of indebtedness income which, but for the application of §108(e)(10)(B), would have been realized by the corporation upon any stock-for-debt exchanges occurring in connection with the bankruptcy reorganization.[75] The effect of this rule is to reduce the NOL carryforward by 50% of the difference between the amount of debt cancelled by creditors and the value of the shares they receive in the reorganized debtor. Further, the loss corporation's NOL carryforward is reduced by any amounts that were deducted as interest on debt that is ultimately converted into stock pursuant to the bankruptcy reorganization, provided that this reduction is limited to amounts deducted as interest during any taxable year ending during the three-year period preceding the taxable year of the ownership change.[76] Lastly, if a loss corporation qualifies for the bankruptcy exception and then, within two years of the reorganization, experiences an ownership change within the meaning of the statute, the §382 limitation for post-change years ending after the second ownership change shall be zero.[77] Thus, the effect of the second ownership change is to eliminate all NOL carryforwards arising before the second ownership change.

Act §621(f)(5) of TRA 1986 provides that the bankruptcy exception to §382 generally applies if a bankruptcy petition was filed after August 13, 1986.

Comment: Notwithstanding the arguments of several commentators, the bankruptcy exception in §382 does not apply to exchanges of stock-for-debt made pursuant to informal workouts. The Conferees, however, directed the Treasury to report to the tax committees before January 1, 1988 regarding the issue of whether informal bankruptcy workouts should be covered by §382.[78] Although the bankruptcy exception enacted in TRA 1986 does not apply to informal workouts, the final measure included in §382 is significant when compared to the original House bill, which would have severely limited NOL carryforwards following a bankruptcy reorganization. Specifically, the House bill would have required that the §382 limitation be computed with reference to the value of the loss corporation's equity immediately following the bankruptcy proceeding. *See* H.R. Rep. No. 426, 99th Cong., 1st Sess. 261-62 (1985). Thus, the final version of §382 incorporates the policy of pre-TRA §382(b)(7) by providing special relief for a loss corporation undergoing a bankruptcy reorganization.

G. Thrift Institutions

The bankruptcy rules described immediately above in part III, F apply, in a modified form, to reorganizations of thrift institutions administered by the Federal Home Loan Bank Board, the Federal Savings and Loan Insurance Corporation, or a supervisory state financial agency. To qualify for the exception from §382, the reorganization generally must qualify as a G reorganization by reason of Code §368(a)(3)(D)(ii).[79] In such a case, the exception from §382 is available provided that shareholders, creditors and depositors retain a 20% (as opposed to 50% stock interest in the reorganized thrift institution.[80] For this purpose, post-TRA §382(l)(5)(F)(ii) treats deposits as stock. Further, a thrift institution which qualifies for the exception from §382 need not reduce its NOL carryforward by amounts relating to interest deductions and forgiveness of debt income associated with debt converted into stock in connection with the bankruptcy reorganization.[81] The bankruptcy exception in §382 applicable to thrift institutions is also more favorable in that ownership changes resulting from an issuance of stock or a subsequent equity structure shift do not trigger the §382 limitations provided that the stock issuance or equity structure shift is an integral part of the reorganization.[82] Thus, in these circumstances, thrift institutions are not subject to the "second ownership change" rule generally applicable to reorganized bankrupt corporations.

The favorable rules applicable to bankruptcy reorganizations involving thrift institutions apply only to equity structure shifts or other transactions occurring before January 1, 1989.[83]

H. Other Carryforwards

TRA 1986 also amended §383 to authorize the Treasury Department to issue regulations that will limit the ability of corporations to carry forward business credits, research credits, excess foreign tax credits and capital losses if ownership changes occur. The theory underlying these regulations will be that capital loss carryforwards and the "deduction equivalent" of credit carryforwards available to a new loss corporation will be limited to an amount of income that does not exceed the §382 limitation for the taxable year in question.[84]

I. Anti-abuse Rules

TRA 1986 provides the Treasury with a broad, general grant of authority to issue all regulations necessary to prevent the use of pass-through entities, such as partnerships, to avoid the limitations of post-TRA §382.[85] During the legislative consideration of the amendments to §382, practitioners had speculated that rather than acquire a loss corporation directly, corporations might find it advantageous to form a partnership and make a special income allocation to the loss corporation, thereby enabling it to use its NOL. Based on a directive in the Conference Report, it appears that this and other similar techniques will be scrutinized in eventual regulations that attempt to limit disproportionate income allocations to "loss corporation partners."[86] Although a number of commentators suggested that the "bright line" tests of §382 should supplant §269 and its subjective "tax avoidance" standard,[87] Congress refused to repeal §269. Thus, §269 will remain available to the Service as a means of challenging acquisitions of loss corporations. The Conferees did indicate, however, that the *Libson Shops* doctrine is inapplicable to transactions covered by post-TRA §382.[88]

The Conference Report also states that the SRLY and CRCO rules of the consolidated return regulations will continue to apply to affiliated groups of corporations.[89] Under pre-TRA 1986 law, the interplay of §382 and the consolidated return regulations raised several issues. For example, the regulations applied the 50 percentage point change in ownership test of §382(a) at the parent level and provided further that, following the requisite ownership change, any subsidiary that did not meet the continuity of business test could not carry forward its NOL to the consolidated return for subsequent years.[90] A number of similar interpretative problems will face the Treasury as it attempts to reconcile the post-TRA §382 limitations with the SRLY and CRCO rules.

Comment: Following the acquisition of a loss corporation, it is virtually certain that, in any subsequent year, the amount of the loss corporation's NOL that is usable under the "§382 limitation" will differ from the amount available under the SRLY rules. This result will follow because the §382 limitation must be calculated as of the change date by multiplying the value of the loss corporation against the long-term tax-exempt rate. The amount of the loss usable under the SRLY rules will vary from year to year, based on the amount of taxable income the loss corporation contributes to the consolidated group in any particular year. Thus, it appears that in the case of a new loss corporation that is a member of a consolidated group, the amount of the new loss corporation's NOL deductible under §382 may be subject to deferral in any year in which the §382 limitation exceeds the taxable income of either the consolidated group or the loss corporation member.

J. 1976 Amendments

TRA 1986 repealed the amendments made to §§382 and 383 by the Tax Reform Act of 1976, effective retroactively as of January 1, 1986.[91] Consequently, even though the 1976 amendments temporarily became law on January 1, 1986, transactions that are not subject to post-TRA §382 generally will be controlled by the 1954 Code version of §382.

K. Effective Dates

As enacted in TRA 1986, post-TRA §382 generally applies to ownership changes (as defined in §382(g)) that occur on or after January 1, 1987. The new rules also apply to equity structure shifts that result from reorganizations pursuant to plans adopted on or after the same date.[92] If an ownership change occurs with respect to a parent corporation's stock that also indirectly affects a subsidiary, the effective dates apply to the transactions occurring at the parent level. Thus, to determine whether an equity structure shift affecting a subsidiary is subject to the post-TRA 1986 rules, the adoption date of the plan of reorganization at the parent level must be reviewed.[93]

The Conference Report indicates that a fairly liberal set of rules will apply to determine when a reorganization plan is adopted. Specifically, a plan will be treated as having been adopted on the earlier of (i) the date on which the directors of all parties to the reorganization adopt the plan or recommend such adoption to their shareholders, or (ii) the date on which the shareholders approve the plan. Further, for purposes of the effective date rules, a corporation's directors may approve a reorganization plan based on general principles and negotiations conducted to date and delegate to the officers the authority to execute a final, refined plan. A subsequent ratification of the final plan by the board will not jeopardize the earlier adoption date.[94]

Finally, for purposes of determining whether an ownership change has occurred, the earliest testing period under post-TRA §382 begins on May 6, 1986. Notwithstanding, if an ownership change (as defined in post-TRA §382(g)) occurs after May 5, 1986 but before January 1, 1987 and post-TRA §382 does not apply to such ownership change, then the earliest testing period under the amended statute will not begin until the day after such ownership change.[95] Consequently, if 60% of the stock of a loss corporation is purchased on June 1, 1986, a subsequent purchase of the remaining 40% of the shares in 1987 will not trigger the application of post-TRA §382 because the 1986 transaction constituted an "ownership change," which occurred after May 5, 1986 but before January 1, 1987. Accordingly the testing period begins on the day following the first transaction (*i.e.* on June 2, 1986 in the example), and the second transaction, standing alone, will not result in an ownership change within the meaning of the statute. Alternatively, if, in the above example, the first purchase on June 1, 1986 involved only 40% of the loss corporation's shares, the testing period under post-TRA §382 would begin on May 6, 1986 because the 40% change did not give rise to an

ownership change as defined in post-TRA §382(g). Thus, in the latter case, a second stock purchase after December 31, 1986 of 15% of the loss corporation's shares would trigger the application of post-TRA §382 since the two transactions, in the aggregate, would result in an ownership change within the applicable testing period beginning on May 6, 1986.[96]

[96] Conference Report, *supra*, at II-196.

Comment: As illustrated by the two examples above, the effective date provision for testing periods can produce results that are arguably inequitable. That is, a significant stock purchase after May 5, 1986 that falls short of the 50% threshold for an ownership change, will be aggregated with other changes in 1987. Alternatively, a purchase on the same date of perhaps only a few more shares, which exceeds the 50% standard, is effectively grandfathered under pre-TRA law.

Chapter 36

NEW RULES GOVERNING CORPORATE LIQUIDATIONS REPEAL OF GENERAL UTILITIES DOCTRINE

John P. Warner, Esq.
Silverstein and Mullens
Washington, D.C.

I. Overview

In order to implement fully a double tax regime on C corporations and their shareholders, Congress in the 1986 TRA overturned the long-standing doctrine, which had its source in *General Utilities and Operating Co. v. Helvering*,[1] and pre-1986 TRA §336, that a liquidating corporation recognizes no gain or loss on its distribution of assets in liquidation. In general, Act §631 provides that, except in §332 liquidations, gain and — with some exceptions — losses on assets distributed by a liquidating corporation are to be recognized as if those assets were sold to the distributee shareholders at their fair market value. Corporations liquidating under §332 would not recognize gain or loss on distributions to the extent made to their 80% shareholders. Under §338(a), a target corporation whose stock is acquired in a qualified stock purchase could in general obtain a fair market value basis in its assets only at the cost of a tax on all gain inherent in those assets. In order to prevent the circumvention of a double tax on the liquidation of C corporations, C corporations that elect S corporation status after 1986 are subject to a separate tax upon gain from any taxable disposition within 10 years after the election with respect to pre-election appreciation. Act §631, amending Code §1374.

In general, the effective date for these provisions is January 1, 1987. However, transition relief is given to transactions carried out before January 1, 1988 pursuant to pre-August 1, 1986 contracts or corporate actions. Act §633(c)(1)(A). In addition, no gain or loss — other than with respect to ordinary income assets, short-term capital assets and installment obligations — is recognized by certain closely held corporations with a value of less than $10,000,000 with respect to liquidating sales and distributions (and deemed §338 sales) before January 1, 1989. Act §633(d).

II. Discussion

A. *Section 331 Liquidations*

1. *In General*

Under pre-1986 TRA §336, a liquidating corporation did not recognize gain or loss on a complete liquidating distribution except with respect to any LIFO depreciation recapture amount and the disposition of installment obligations pursuant to §453(B). Act §631 revises §336 to provide that a liquidating corporation will in general recognize gain or loss on its distribution of property in complete liquidation as if the corporation sold each of its assets at its fair market value[2] (or, to the extent greater, for the amount of debt to which each distributed property is subject or which the distributee shareholder assumes)[3] to the distributees. Aside from the transition relief given to certain small closely held corporations, discussed *infra*, no relief (other than the use of a S corporation[4]) is available from the double taxation rule for most corporations.[5]

To prevent circumvention of the general rule of gain of loss recognition to liquidating corporations, the 1986 TRA, Act §631(c), also amends §311 to provide that corporations distributing appreciated property (other than obligations of the distributing corporation or distributions qualifying for §355 treatment at the shareholder level) in nonliquidating distributions will recognize gain as if they sold such property at fair market value to the distributee.[6]

2. *Limits on Loss Recognition*

To prevent the acquisition of loss assets, the distribution of which would offset both corporate and shareholder gain, the liquidating corporation will not recognize any loss on a liquidating distribution of property to shareholders who own (directly or by attribution within the meaning of §267(c)) 50% of the stock of the liquidating corporation unless the property is distributed to all shareholders on a pro rata basis and the property is not "disqualified property" (*i.e.*, it was not acquired by the liquidating corporation

[1] 296 U.S. 200 (1935).

[2] Act §631(a), enacting revised Code §336(a).

[3] Act §631(a), enacting revised Code §336(b).

[4] Although corporations that have never been C corporations or that elected S corporation status pursuant to elections made before January 1, 1987 generally are not subject to a double tax regime on liquidation by operation of the normal rules of subchapter S, Act §632 revised Code §1374 to provide a tax equal to the highest rate of corporate tax on the taxable sale, exchange or disposition made within 10 years after electing subchapter S status of any asset held by the corporation on the election date to the extent of the appreciation in value of such asset ("built-in gain") as of the election date. For a more detailed discussion of the "built-in gain" tax imposed on S corporations, *see* Chapter 38, *infra*.

[5] Certain corporations with pass-through features, such as real estate investment trusts (REITs), may avoid such double taxation, *see* §§562(b) and 857(b)(2). For a complete discussion of REITs, *see* Chapter 41, *infra*.

[6] For a discussion of these rules, *see* Chapter 37, *infra*.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

in a §351 exchange or as a contribution to capital during the five years preceding the distribution). Denial of loss recognition in such a case would result even if the property was not distributed to the contributing shareholders and even if the property's fair market value exceeded its adjusted basis at the time of contribution.[7]

Example: A, B, and C, who are brothers, each owns one-third of the stock of Corporation X. On April 15, 1980, Corporation X purchased on the open market for $100 stock in a publicly traded company. On July 31, 1992, when the publicly traded stock is worth $80, Corporation X is liquidated, with B receiving all of the publicly traded stock. Because the publicly traded stock was distributed entirely to B — who under the attribution rules of §267(b) and (c)(4) is related to Corporation X — and not one-third to each of the shareholders, Corporation X does not recognize the $20 loss realized on the distribution. Presumably, B takes an $80 basis in such stock under §334(a) and begins his holding period on the date of the liquidating distribution.

There appears to be no statutory restriction on the recognition of gain on the liquidating distribution of appreciated property contributed in contemplation of the liquidation solely to permit the use of losses that are to be recognized on the liquidation, although in certain cases — especially where the appreciated assets consist of securities or assets not used in the corporation's trade or business — the Service could attack such transactions as shams.[8] However, unless there would otherwise be a capital loss on the shareholders' stock or the shareholders had otherwise unusable capital losses, the shareholders would be subject to an additional capital gain on their stock as a result of the contribution.

Example: Corporation X owns property with a fair market value of $100 in which it has an adjusted basis of $90 but earns no net income from operations. Corporation X also has a net operating loss carryover of $50. The corporation's shareholders contribute property used in its business having a value of $60 and an adjusted basis of $20. If the corporation is liquidated, the $40 of gain realized on the contributed property plus the $10 gain on the property previously owned will be recognized by the corporation but will be offset by the net operating loss carryover. Thus, barring application of a step transaction or sham doctrine, Corporation X will pay no tax on the liquidation and the shareholders will take a $60 basis in the contributed property. The shareholders would, however, recognize $40 more in capital gains (or $40 less in capital losses) on their shares as a result of the contribution and liquidation.

Further, for purposes of computing a liquidating corporation's loss on the sale, exchange or distribution of property acquired by the corporation in a §351 exchange or contribution to capital (or from the sale or exchange of property having an adjusted basis determined by reference to such property) where one of the principal purposes of such acquisition was to generate a loss in connection with the liquidation, the adjusted basis of such property will be reduced by the excess of the property's adjusted basis at the time of its acquisition over its fair market value on such date.[9] For this purpose, it is presumed, except to the extent provided in regulations, that loss assets acquired within two years before the adoption of the plan of liquidation were acquired with the tainted purpose.[10] Loss assets acquired more than two years before adoption of a plan of liquidation, unless they have no "clear and substantial relationship" to any of the corporation's existing or planned businesses, will not be treated as having been acquired with a tax avoidance purpose.[11] The rule does not apparently reduce the basis of such property for purposes of determining depreciation or amortization deductions.

The Conference Report at II-200 states that the conferees intended that in appropriate cases, if the adoption of a plan of complete liquidation occurs in a taxable year following the date on which the tax return including the loss disallowed by revised §336 is filed, the liquidating corporation may recapture such loss on the tax return for the taxable year in which such plan of liquidation is adopted. Alternatively, the corporation could file an amended return for the taxable year in which the loss was reported.

3. Regulatory Authority

Initial planning to avoid these new rules will have to be done cautiously. New §337(d) gives the Service broad authority to issue regulations "to carry out the purposes of" the repeal of the *General Utilities* doctrine, including regulations to ensure the purposes of the repeal are not circumvented by the (1) consolidated return regulations and reorganization rules, and (2) regulations to coordinate the provisions of the 1986 TRA §§631-634 with existing rules concerning the tax treatment of foreign corporations and their shareholders.[12]

B. Section 337 Liquidations

The 1986 TRA repeals former §337 and replaces it with a revised §337, discussed *infra*.[13] Pre-1986 TRA §337 generally provided that if a corporation adopted a plan of liquidation and, within 12 months thereafter, distributed all of its assets to its shareholders, no gain or loss would be recognized on the sale of certain property within that 12-month period. Thus under post-1986 TRA law, gain or loss on such sales — subject to the limits on loss recognition as to property contributed to the corporation for loss recognition purposes — is fully taxable to the liquidating corporation.

Comment: It may be of small consolation to taxpayers,

[7] Act §631(a), enacting §336(d)(1). Even though the corporation will not recognize the loss, the shareholder will, as under pre-1986 TRA law, take a §334(a) fair market value basis in the distributed loss asset because he recognizes gain or loss with respect to his stock under §331.

[8] *See Law v. McLaughlin*, 2 F. Supp. 601 (N.D. Cal. 1933).

[9] Act §631(a), enacting new Code §336(d)(2)(A). Rather than denying a loss deduction in the year such an asset is disposed of (at which time the prospects of a liquidation could be unknown), Treasury is authorized to permit a liquidating corporation to increase the amount of gain it recognizes in the year of liquidation by the amount of the disallowed loss. New §336(d)(2)(C).

[10] Act §631(a), enacting new §336(d)(2)(B).

[11] H.R. Rep. No. 841, 99th Cong., 2d Sess. p. II-201 (1986) ("Conf. Rep.").

[12] Act §631(a), enacting revised §337(d)(1) and (2).

[13] Act §631(d)(2), effective generally with respect to liquidations completed after 1986.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

but when the repeal of §337 is fully effective, practitioners will have little cause to worry about the *Court Holding* doctrine.

C. Section 333 Liquidations

Effective for liquidations completed after 1986, Act §631(e)(3) repeals §333, which provided for nonrecognition of gain to individual shareholders and certain non-controlling corporate shareholders on the liquidation within a single calendar month of a corporation, except to the extent that the liquidating corporation had earnings and profits or distributed money, stock or securities. Because corporations whose stock appreciates in value either have earnings and profits or have appreciated assets (the distribution of which, under revised §336, would generate earnings and profits), no benefit would result from a §333 election.

D. Section 332 Liquidations

1. In General

The 1986 TRA revised §337, to provide that a corporation liquidating under §332 will not recognize gain or loss on distribution of its property to an "80% distributee," *i.e.*, an 80% shareholder.[14] New §336(d)(3) provides that the liquidating corporation will not recognize loss on the distribution of property to minority shareholders in a §332 liquidation.[15] Gain will be recognized where the 80% corporate distributee is a tax-exempt entity unless the property distributed to it in liquidation is used by the entity in a taxable unrelated trade or business.[16] Gain is also recognized (except as provided in regulations) where the 80% corporate distributee is a foreign corporation.[17] Finally, gain will be recognized on the distribution of appreciated property to any minority shareholders in a §332 liquidation.[18]

In many cases, the rules will place a premium on distributing to minority shareholders cash and other property on which no gain or loss would be realized. Minority shareholders would take a fair market value basis under §334(a) in loss property distributed to them, so that the loss would evaporate without any tax benefit to either the corporation or the shareholders. On the other hand, the corporation would recognize gain on the distribution of appreciated property to such shareholders.

> *Example*: The stock of Corporation Z is owned 80% by Corporation N and 20% by A, an individual. Corporation Z has operating assets with a $60 fair market value and a $40 basis, investment assets with a $20 fair market value and a $10 basis, and $20 cash. If Corporation Z is liquidated in 1989 and A receives the investment assets in the liquidation, Corporation Z would recognize the $10 gain realized on those assets. If, on the other hand, A received the cash and Corporation N received the operating and investment assets in the liquidation, Corporation Z would recognize no gain or loss.

2. Section 336(e) Election

TRA 1986 also enacts new §336(e), which provides that, pursuant to regulations, where a corporation owns at least 80% of the voting power and value of a second corporation, and sells, exchanges or distributes (including in a liquidation) all of the stock it owns in the second corporation, the selling corporation may, in effect, elect to be taxed as if it had sold the second corporation's assets in a taxable sale and exclude any gain or loss from the stock sale. In effect, such 80% shareholders could treat stock sales and distributions as if they had sold or distributed the second corporation's assets after it had been liquidated. Presumably, as is true of elections under §338(h)(10), the target corporation would take a basis in its assets determined by reference to the stock purchase price and the purchasing or distributee corporation would take a basis in the target corporation stock equal to the purchase price.[19]

> *Example*: Corporation N owns all of the stock of Corporation Z, with which it does not file a consolidated return. The stock is worth $200 but Corporation N has a $50 basis in it. Because Corporation Z has reinvested much of its earnings to meet capital needs, it has a $160 basis in its $200 worth of assets. If Corporation N sells all of its Corporation Z stock to B, an individual, for $200 in 1988, under normal rules it would recognize $150 in gain and would (at 34% rates) be subject to a $51 tax on the sale. However, if Corporation N makes an election pursuant to regulations to be issued under section 336(e), it would recognize only the $50 gain inherent in Corporation Z's assets and would be subject only to $17 of federal income tax on the sale.

Although this election resembles a §338(h)(10) election, it is — unlike §338(h)(10) — potentially available for sales to individuals and to related corporations and for distributions — including liquidating and non-liquidating distributions not qualifying for §355 treatment.[20] Unlike §338(h)(10), which is available for certain stock acquisitions taking place over a period of no more than one year, the language of §336(e) suggests that all of the controlling corporate shareholder's stock interest must be sold (or distributed) in the same transaction.

3. Mirror Subsidiary Transactions

Regs. §1.1502-34 permits the aggregation of stock ownership by all members of a single consolidated group in determining whether the liquidation of a corporation quali-

[14] Act §631(a), enacting revised Code §337(a).

[15] Act §631(a). The loss inherent in an asset distributed to the minority shareholders in a §332 liquidation will be eliminated permanently, because such shareholder will recognize gain or loss on his stock under §331, and thus, will take a fair market value basis in such asset under §334(a).

[16] Act §631(a), enacting §337(b)(2)(A). If such a distributee disposes of distributed property — even in an otherwise tax-free transaction — or no longer uses the property in an unrelated trade or business, the gain that would have been recognized on the distribution by the liquidating corporation had the tax-exempt entity not used the property in an unrelated trade or business will be recognized by the distributee as unrelated business taxable income. §337(b)(2)(B).

[17] Act §631(d), enacting revised Code §367(e)(2).

[18] Conf. Rep. at II-202.

[19] Regs. §1.338(h)(10)-1T(g), Example 3(ii)(B).

[20] The Conference Report at II-204 provides that, in the case of a sale or distribution of all of the stock of such a controlled subsidiary to a 50% related person under §368(c)(2), regulations permitting the use of the §336(e) election will apply liquidation-reincorporation principles, possibly including "special rules for such [target] corporation's Section 381(c) tax attributes so that net operating losses may not be used to offset liquidation gains, earnings and profits may not be manipulated, or accounting methods may not be changed."

fies under §332 as the liquidation of an 80% controlled subsidiary. However, a question has arisen as to whether, absent regulations, the same aggregation rules would apply to treat each of the consolidated distributees in such a case as an "80% distributee" for purposes of permitting the liquidating corporation to avoid recognition of gain on the distribution. A colloquy between Senators Dole (R-Kans.) and Packwood (R-Or.) during the Senate floor debate on H.R. 3838 indicates that the aggregation rules of Regs. §1.1502-34 should apply — at least barring a change in the regulations — both for purposes of §332 and new §337.[21] However, that interpretation was challenged by Ways and Means Chairman Rostenkowski in a subsequent statement.[22]

Permitting the aggregation of stock ownership is critical for, among other things, so-called mirror subsidiary transactions, where an acquiring corporate group which, to fund a leveraged buy-out or otherwise, wants to sell off certain subsidiaries or divisions of a target corporation. To avoid tax on such resales, the acquiring group would have to obtain a fair market value basis in the unwanted stock or assets.

To accomplish this result, the acquiring group would form subsidiary corporations that would mirror those target corporation's subsidiaries or divisions that the acquiring group wished to sell. The group would contribute to those mirror subsidiaries cash equal to the fair market value of those target divisions or subsidiaries. The mirror subsidiaries and the acquiring corporation would then form a corporate acquisition vehicle that would be part of the acquiring consolidated group. After the acquisition vehicle purchased the target corporation's stock, the target corporation and the acquisition vehicle would be liquidated, with stock of the appropriate subsidiaries or assets of the appropriate divisions being distributed to the respective mirror corporations. Because the mirror subsidiaries' parent corporation would have a fair market value basis in the mirror subsidiaries' stock, it could sell such stock without any gain being realized. However, unless liquidation of the acquisition vehicle qualified for §332 treatment and the mirror subsidiaries qualified as 80% distributees, distribution of the target subsidiaries' stock or the target division's assets in the liquidation of the acquiring vehicle would be taxable to the acquiring vehicle.

> *Example*: Corporation T has two divisions, H and W. Division H owns assets with a fair market value of $50 in which Corporation T has a $30 basis. Division W owns assets with a fair market value of $50 in which Corporation T has a $50 basis. If Corporation A purchased the stock of Corporation T directly for $100 but wished to dispose of Division h, it or Corporation T would recognize $20 in gain. However, if Corporation A contributed $50 to each of two newly formed consolidated subsidiaries, Corporation M and Corporation N, and has those corporations each purchase 50% of the stock of Corporation T, and if Corporation T were thereafter liquidated with Corporation M receiving the Division H assets and Corporation N receiving the Division W assets in a §332 liquidation as to which Corporations M and N were "80% distributees," Corporation A could dispose of the Division H assets at no tax cost by selling the Corporation M stock, in which it has a $50 basis. However, if Corporations M and N were not "80% distributees," Corporation T would recognize gain on its distribution to Corporation M of the Division H assets under §336(a).

In a December 9, 1986 letter to congressional tax leaders, Treasury Secretary Baker indicated that, until the subchapter C study mandated by Act §634 is completed, Treasury would not issue regulations dealing with the issue of whether the aggregation rules of the consolidated return regulations would apply for purposes of §336(d)(3). The letter noted that, before the mandated subchapter C study is completed (or before legislation addressing the issue is enacted), "mirror subsidiary transactions will be subject to the Act as written," which, the letter noted "does not directly indicate whether the existing aggregation rules of the consolidated return regulations is applicable . . . ." The letter concluded that the IRS will "resolve ambiguities . . . as cases arise in the ordinary administrative process." The effect of the letter seems to discourage all but the most courageous from engaging in mirror subsidiary transactions and to put pressure on Congress to resolve the issue legislatively.

E. Section 338 Transactions

Act §631(b) amends §338(a)(1) to provide that a target corporation in a qualified stock purchase may obtain a fair market value basis in its assets under a §338 election only if it is treated as having sold all of its assets for their fair market values in a taxable transaction. This rule is consistent with the philosophy behind elimination of tax-free treatment for liquidating corporations on liquidating distributions or sales. In most cases, this rule would make a §338 election unattractive because all inherent gain in the target corporation's assets would be taxable at the time of the qualified stock purchase, whereas the benefits of the basis step-up obtained by making the election would be recognized only over time.

In contrast to the new rules regarding liquidating distributions, the new rules governing §338 elections contain no exceptions to the rule of loss recognition by the target corporation. Thus, there may be an incentive to contribute before completion of the qualified stock purchase non-amortizable and non-depreciable loss assets to a target corporation that has appreciated depreciable or amortizable assets or that has appreciated assets that the acquiring corporation wishes to dispose of. On the deemed §338 sale, the target corporation's gain would be offset — subject to the capital loss restriction rules — by the losses recognized with respect to the contributed assets. The target would get the same basis step-up in its gain assets that it would have obtained without the contribution.[23]

[21] 132 Cong. Rec. S13958 (daily ed. September 27, 1986).
[22] 132 Cong. Rec. E3389 (daily ed. October 2, 1986).

[23] It does not seem that §338(i)(1) gives the Service authority to issue regulations denying either loss recognition or the basis step-up because that provision merely authorizes regulations to treat stock and asset acquisitions the same. Subject to application of the sham transaction doctrine or a reverse *Court Holding* doctrine, a shareholder could contribute loss assets to a corporation about to sell its assets and the corporation would recognize the loss on the subsequent sale.

Moreover, the contributing shareholders would reduce the taxable gain recognized on the sale of their stock.

Needless to say, if the pre-sale contribution of loss property serves no business purpose of the target corporation — as might be the case where non-business assets are contributed immediately before the stock sale and are disposed of immediately after the sale — the contribution might be ignored for tax purposes.[24]

Example: Corporation T has $100 worth of depreciable assets used in its business and a $70 basis in those assets. In contemplation of a possible sale of its stock in Corporation T, A, the sole shareholder of the corporation, contributes $30 worth of securities in which he has a $60 basis. On January 1, 1989, A sells all of his Corporation T stock to Corporation P for $130. Corporation P properly elects §338 treatment with respect to the sale. Corporation T's $30 gain recognized on the deemed sale of its business assets is offset by the $30 loss it recognizes from the deemed sale of the securities. Corporation T, after the election, takes a $100 basis in the business assets and a $30 basis in the securities. Absent the contribution of the securities, Corporation T would have incurred a taxable gain of $30, or a federal income tax of $10.20 assuming a 34% rate, and A would have recognized a taxable gain of $30, or a tax of $8.40 assuming a 28% tax rate, on the sale (or, more likely, the sale price would have been reduced to reflect the corporate level tax).

Comment: The only incentive for a purchasing corporation to elect §338 treatment for a target corporation, the deemed sale of whose assets would generate a net loss, would be as consideration for a purchase price reduction. The benefits of the loss could be used only by the selling company[25] and not by the purchasing company, but the purchasing company would suffer the disadvantages of the lower asset basis.

As a result of the general recognition of gain to the target corporation in a section 338 qualified stock purchase, unless the §338 consistency rules are changed, the new rule of target corporation recognition puts an additional premium on making at least the carryover basis election in Temp. Regs. §1.338-4T(f)(6). Act §631(b)(3), however, expands §338(h)(10) to permit corporations which sell the stock of an affiliated target corporation in a qualified stock purchase as to which a §338 election is made to treat the sale as a sale of the target corporation's assets and not as a sale of the target corporation's stock, even if the selling corporation and the target corporation were not members of a consolidated return group. If a target corporation's assets cannot for some reason be purchased directly, use of §338(h)(10) or new §336(e), discussed above, where available may be attractive because either would permit the purchasing corporation to take a fair market value basis in the target corporation's assets at the cost of a single tax on the transaction.

[24] Although the limitations on loss recognition contained in revised §336(d) do not apply to deemed §338 sales, the Service's broad regulatory authority in revised §337(d) does apply to §338.

[25] *See generally* Regs. §1.338-IT(f).

F. Effective Dates and Transition Rules

1. In General

Although the 1986 TRA provides that the effective date of the repeal of the *General Utilities* doctrine is August 1, 1986, as a practical matter the new rules are not effective for liquidations completed before January 1, 1987, or for §338 transactions the acquisition date for which is before January 1, 1987.[26] In addition, there are several general transition rules that postpone the effective date. Distributions, sales and exchanges pursuant to pre-August 1, 1986 (i) plans of liquidation, (ii) binding contracts to sell more[27] of the stock of a liquidating company, or (iii) binding contracts to sell substantially all of a corporation's assets are not subject to the new rules if the appropriate liquidations are completed before January 1, 1988.[28] Section 338 transactions with pre-January 1, 1988 acquisition dates would not be subject to the new rules if carried out pursuant to pre-August 1, 1986 binding contracts.[29]

2. Pre-1989 Liquidations of Qualified Corporations

Somewhat longer transition relief would be available to some extent for certain closely held small corporations. The new rules apply only to a limited extent to liquidating sales, exchanges and distributions (and deemed sales pursuant to §338 elections) of "qualified corporations" — corporations more than 50% of the value of whose stock as of August 1, 1986 and all times thereafter is held by no more than 10 individuals, estates and certain trusts; which have a fair market value less than $10,000,000; and which completely liquidate before January 1, 1989.[30]

For purposes of determining whether no more than 10 qualified persons own more than 50% of the value of a corporation's stock, stock owned by all people related under §318(a)(1) is treated as owned by a single individual.[31] Thus, if two family groups — each consisting of a husband and wife, three children and five grandchildren who each own 5% of the stock — control a corporation meeting the fair market value tests, the corporation is a qualified corporation. On the other hand, if a corporation worth less than $10 million at the relevant times is owned 45% by an ESOP, 10% by each of three brothers and 2.5% by each of 10 unrelated employees, it is not a qualified corporation because the ESOP is not a qualified shareholder and the brothers' stock is not attributed to one another under §318.

In contrast to the rules governing qualification for a subchapter S election, the existence of non-qualified shareholders does not disqualify a corporation from "qualified

[26] Act §633(a). Note that in the case of a qualified stock purchase the acquisition date for which occurs on or before December 31, 1986, a §338 election pursuant to which the target corporation would not generally be subject to tax on the deemed sale of assets may be made after 1986 so long as it is made within eight and one-half months after the pre-1987 acquisition date. *See* Act §633(a)(2) and Code §338(g)(1).

[27] Concurrent resolutions passed by both the House and the Senate would have changed this to apply only to pre-August 1, 1986 contracts to sell more than 50% of the stock of a liquidating corporation. However, because of differences between the House and Senate versions of the resolution on other issues, no such resolution was enacted before the 99th Congress adjourned.

[28] Act §633(c)(1)(A)-(C).

[29] Act §633(c)(1)(D).

[30] Act §633(d)(1), (5) and (6).

[31] Act §633(d)(6)(B).

corporation" status; in fact, it seems that stock owned by a corporation (which cannot itself be a qualified shareholder) more than 50% of the stock of which is owned by an individual shareholder of the corporation seeking qualified corporation status would be attributed to the individual shareholder for purposes of meeting the more-than 50% ownership test. However, it is not clear that stock owned by a corporation would for this purpose be attributed to a controlling shareholder of that corporation if such controlling shareholder did not actually own stock in the corporation for which qualified corporation status is sought.

The concurrent resolutions passed by both the House and Senate would have restricted qualified persons to those who owned stock for at least five years prior to adoption of the plan of liquidation or qualified stock purchase or, if lesser, throughout the corporation's existence. However, due to differences on other issues, no concurrent resolution was enacted before the 99th Congress adjourned. Whether a technical corrections bill would impose this requirement retroactively remains to be seen.

Under the qualified corporation transition rule, qualifying corporations will nonetheless recognize gain or loss after 1986 with respect to ordinary income and short-term gain property and with respect to the disposition of installment obligations [32] (and would continue to be subject to the pre-1986 rules regarding depreciation recapture and tax benefits). Closely held corporations valued at no more than $5,000,000 will fully avoid gain or loss recognition upon liquidating distributions, sales or deemed §338 sales on long-term capital assets other than installment obligations. Corporations valued between $5,000,000 and $10,000,000 will avoid gain or loss recognition on such long- term capital assets in a declining proportion as the value of such corporations approached $10,000,000. Act §633(d)(3).

Whether to liquidate before 1989 to take advantage of the transition rule for qualified corporations will depend on numerous factors, including the amount of appreciated ordinary and short term capital assets the corporation owns, the burden of corporate level tax on annual earnings, the amount of additional depreciation and similar deductions that would be available following the liquidation, the desirability of getting assets out of corporate solution while current shareholders are alive, the feasibility of electing subchapter S treatment, and the availability of a suitable non-corporate vehicle to operate the corporation's business or property. Where transition relief is deemed desirable, most qualified corporations — other than those with rapidly appreciating values that could increase by 1988 to more than $5 million —would probably choose to delay a liquidation until 1988 to take advantage of the fully phased-in scheduled tax rates.

Example: The stock of Corporation T is owned 50% by each of two individuals, A and his son B, each of whom in 1988 has a $300,000 basis in his shares. Corporation T has a fair market value of $4 million, and owns the following assets: a rental apartment building which has a $3 million value (of which $500,000 is attributable to the underlying land) which it built in 1980 for $2.1 million (plus a $300,000 land cost) and which it has depreciated on a straight-line basis over a 30-year estimated useful life; and (ii) $1 million in marketable securities which it has held more than six months, in which it has an $800,000 basis. The building generates $300,000 in annual net operating income after debt service on an interest-only mortgage and the securities generate $60,000 in annual interest and dividend income. Thus, in 1988, assuming no liquidation, the corporation will generate $360,000 in net cash flow and $290,000 in taxable income after depreciation. Assuming a 34% corporate tax rate and a 28% individual tax rate, the shareholders would retain after taxes approximately $207,808 [.72($290,000 x .66) + $70,000].

If Corporation T were to liquidate in 1988, it would recognize $112,000 (.2 x $560,000) in §291 depreciation recapture but would otherwise avoid corporate level tax on the liquidation. Thus, the shareholders would together receive $3,961,920 ($4 million - $38,080 corporate level tax) in the liquidation. Each shareholder would be taxed on $1,680,960 ($1,980,960 - $300,000) of gain, resulting in a $470,669 individual tax liability. The shareholders would each net $1,510,291. Total tax on the liquidation would be $979,418.

Following the liquidation, A and B could sell $979,418 of the securities to pay taxes on the liquidation. Annual income from the corporation's assets, assuming a 6% return, would thus be reduced by approximately $58,750. However, the shareholders would take a $2.5 million basis in the apartment building for depreciation, which they could write off over 31.5 years, resulting in $79,365 in annual depreciation deductions. The shareholders would thus earn $301,235 in cash annually or $221,870 in taxable income after depreciation. After payment of individual income taxes at 28%, A and B together would net $239,111 annually or approximately $37,000 per year more than prior to the liquidation.

If Corporation T were not liquidated until A died in 1990, at which time Corporation T's basis in the apartment building (and underlying land) was $1.7 million and B's basis in his shares was $230,000 (because of post-1988 distributions of cash in excess of earnings and profits), Corporation T would would be subject to tax on $1.5 million [$4 million - ($1.7 million + $800,000)] in gain, which at 34% would be $510,000. A's estate or heirs would be subject to no tax on their shares by operation of §1014. B would be subject to a 28% tax on $1,515,000 [$2 million - ($255,000 + $230,000), or $424,200. Thus, a total of $934,200 in federal income tax — or approximately $45,000 less than in a 1988 liquidation — would be imposed on the liquidation.

Following the liquidation, A and B could sell $934,200 of the securities to pay taxes on the liquidation. Annual income from the corporation's assets would, assuming the securities would have earned 6% per year, thus be reduced by approximately $56,000. The shareholders would take a $2.5 million basis in the apartment building for depreciation, which they could write off over 31.5 years, resulting in $79,365 in annual depreciation deductions. The shareholders would thus have $304,000 in pre-tax earnings annually or $224,635 in taxable income after depreciation. After payment of individual income taxes at 28%, A and B

[32] Act §633(d)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

together would net $241,102 annually or only about $2,000 per year more than following a 1988 liquidation.

Some uncertainty exists as to the scope of the qualified corporation exception. Act §633(d)(1) provides that, in the case of a pre-1989 liquidation of a qualified corporation, the amendments made by Act §§631-634 [33] will not apply to "the applicable percentage of gain or loss which (but for [Act §633(d)(1)]) would be recognized by reason of the amendments made by this subtitle." Although this language clearly applies to corporate level gain realized on the pre-1989 liquidation of a qualified corporation, it does not seem to apply to some of the "technical and conforming" changes made by Act §631(d). For example, Act §631(d)(3) repeals Code §333, which is not a corporate nonrecognition provision but a shareholder nonrecognition provision. In Rev. Rul. 87-4, however, the IRS stated its position that "*all of the amendments made by subtitle D* [containing Act §§631-634] *are covered by the transition rule for qualified corporations*" and therefore relief is available for shareholder-level gain as well as corporate-level gain. (Emphasis added.) Thus, Rev. Rul. 87-4 concludes that the qualified corporation exception applies to §333 liquidations completed before January 1, 1989. Accordingly, the shareholders' pro rata shares of corporate earnings and profits in a §333 liquidation of a qualified corporation will be increased only to the extent that corporate-level gain recognition is required (such as for short-term gain) under the transitional rules.

Example: X is a qualified corporation with an applicable value of $7 million, accumulated earnings and profits of zero, and whose sole shareholder, A, has a basis in X's stock of $6 million. In 1988 X liquidates under §333, distributing its only asset, a parcel of undeveloped land with a fair market value of $4 million and a basis of $3 million, which X has owned for more than 6 months. X recognizes $400,000 of the gain (*i.e.*, 40%), resulting in an increase in X's earnings and profits of $264,000 ($400,000, minus X's tax on the gain, $136,000). A's gain on the distribution is $864,000 ($6,864,000 minus $6,000,000), of which he must recognize $264,000, representing the increase in earnings and profits.

Note that the qualified corporation transition relief is mandatory; a qualified corporation liquidating in 1987 or 1988 that has long-term capital loss properties it would like to distribute to its shareholders but would like to recognize the losses, for example, cannot as such elect out of Act §633(d). However, it might be able to "disqualify" itself by sales or transfers to non-qualified persons so as to violate the stock ownership requirements.[34] To be given effect, such transfers would have to have economic significance. However, that would generally be the case so long as the transferees retained the proceeds of liquidation.

[33] As enacted, Act §633(d)(1) literally exempts pre-1989 liquidations of qualified corporations from corporate level gain recognition imposed only by the amendments made by Act §633. However, §633 does not impose corporate level gain recognition but merely contains the transition rules themselves. However, to read the provision literally would be to render §633(d) meaningless. Moreover, the concurrent resolutions passed by both the House and the Senate but not enacted would have modified the subsection to exempt all corporate level gain from recognition otherwise resulting from the changes made by §§631-634. Presumably, a technical corrections bill will so provide.

[34] A sale of long-term capital loss property by a liquidating corporation to its shareholders might not be given effect since the proceeds of the sale would return to the shareholders in the liquidation.

Chapter 37

MODIFICATIONS TO CORPORATE DISTRIBUTION RULES

John P. Warner, Esq.
Samuel M. Maruca, Esq.
Silverstein and Mullens
Washington, D.C.

I. Distributions of Appreciated Property by C Corporations

A. Overview

Section 631(c) of the 1986 TRA continues the trend of requiring corporations to recognize gain on non-liquidating distributions. Although non-liquidating corporations have since 1969 been subject to a general rule requiring recognition of gain on their distribution of appreciated assets,[1] several exceptions to gain recognition have been available. Beginning with the Tax Equity and Fiscal Responsibility Act of 1982 ("TEFRA"), however, these exceptions to gain recognition have been continually narrowed. In general, after 1986, gain on non-liquidating distributions is subject to tax.

B. Removal of Exceptions to Gain Recognition

Under §311 prior to the 1986 TRA,[2] distributing corporations did not recognize gain on non-liquidating distributions if such distributions were (i) to non-corporate shareholders in partial liquidation or as a dividend of non-inventory property which had been used by the corporation in a 5-year business, (ii) to more-than-10% long-term shareholders and consisted of more-than-50% of the stock of a corporation engaged in a 5-year business, (iii) §303 redemption distributions, (iv) to private foundations in redemption of certain excess business holdings, or (v) by regulated investment companies (CRICs) in redemption of the stock of shareholders on demand.

Section 631(c) of the 1986 TRA eliminates all but the last of these exceptions to gain recognition by distributing corporations so that such non-liquidating distributions will generate a tax both to the distributing corporations and to the distributee shareholders. (The RIC distribution exception is preserved by Act §631(e)(11), adding Code §852(b)(6). For purposes of computing the distributing corporation's gain on these distributions, the fair market value of any asset distributed is considered to be no less than the amount of any liability to which the distributed property is subject or which the distributee assumes.[3] Non-liquidating distributions of obligations of the distributing corporation continue to avoid the general rule of gain recognition. *See* revised §311(b)(1)(A).

Unlike the 1986 TRA rules governing liquidating distributions,[4] Code §311 as revised continues the non-recognition of loss to distributing corporations on non-liquidating distributions. The 1986 TRA eliminates the pre-Act rule[5] of gain recognition attributable to LIFO reserves on the distribution of inventory assets but provides that all corporations using the LIFO inventory method must increase or decrease their earnings and profits by the annual increase or decrease in the excess of its inventory as accounted for under LIFO over what such inventory would be accounted for under a FIFO method.[6]

Comment: As a result of these changes, it will be more expensive to redeem the stock of individual shareholders using appreciated property. Where such shareholders have their stock redeemed, corporations will have a greater incentive to use either cash or corporate notes or, if possible, to structure such transactions to qualify for §355 treatment.

Although, as a general rule, §355 distributions remain tax free to the distributing corporation, Act §631(d)(1) enacts Code §367(e)(1), which provides that §355 distributions by U.S. corporations to foreign persons will cause the distributing corporations to recognize gain to the extent provided under Code §367 principles. Note that temporary regulations regarding transfers of stock or securities in "outbound" §351 exchanges provide that transfers by U.S. transferors of stock to foreign corporations are not taxable where the U.S. transferors own non-controlling interests in the foreign corporations and in certain other instances where the transferors agree to recognize, at the time the transferee disposes of the stock or securities transferred, gain realized on the exchange.[7]

C. *Effective Date*

In general, under Act §633(a)(3), the revised rules governing gain recognition are effective for non-liquidating distributions made after December 31, 1986. A somewhat inartfully drafted transition rule contained in concurrent resolutions passed in the 99th Congress by both the Senate and the House to correct errors in the conference report to the 1986 TRA would apparently have permitted "qualified corporation[s]" — corporations more than 50% of whose stock as of August 1, 1986 and at all times thereafter was held by ten or fewer individuals, estates and certain trusts and which corporations have a fair market value no greater than $5,000,000 — to avoid the revised rules at least with respect to pre-1989 non-liquidating distributions of property other than ordinary income or short term capital assets and installment obligations. For such closely held corporations having a fair market value between $5,000,000 and $10,000,000, availability of the pre-1986 TRA exceptions to recognition would have been reduced as the value of the corporation approached $10,000,000 and would have been unavailable thereafter. *Cf.* Act §633(d) (containing transitional rules for comple liquidations of "qualified corporations").

Unfortunately, no concurrent resolution containing technical changes to the TRA 1986 was enacted by the 99th Congress. As a result, nothing in the law as passed would prevent gain recognition even by "qualified corporations" on their pre-1989 non-liquidating distributions. This omission may, however, be corrected by technical corrections legislation.

II. Reduction in Stock Basis for Nontaxed Portion of Extraordinary Dividends

A. *Background*

Prior to enactment of the Tax Reform Act of 1984, corporations with short-term capital gain, otherwise taxable at a maximum rate of 28% under former §1201(a), could effectively convert it into income taxable at a maximum rate of 6.9% by purchasing stock in another corporation that was about to pay a dividend, receiving the dividend and selling the stock at a loss. If the corporation acquired the stock after the dividend was declared, the price it paid for the stock would include the full value of the dividend. The corporation then could deduct 85% of the dividend, under former §243(a)(1), provided it held the stock for at least 16 days (91 days for preferred stock),[8] with the result that the maximum tax on the dividend would be 6.9% (*i.e.*, 46% of 15%). Since the dividend value was reflected in the corporation's basis but not in the post-dividend stock value, the corporation could sell the stock after receiving the dividend and generate a loss that it could use to offset short-term capital gains from other capital transactions.

The 1984 Act added §1059, which provides that if a corporation received an "extraordinary dividend" on stock and disposed of the stock before holding it for more than a year, the basis of the stock would be reduced by the amount of the untaxed portion of the dividend. Former §1059(a). An extraordinary dividend was defined in §1059(c) in terms of the size of the dividend in relation to the shareholder's adjusted basis in its stock. The untaxed portion of the dividend was defined in §1059(b) as the excess of the value of the distribution over the taxable portion of the distribution.

B. *Overview of Amendments*

The 1986 TRA provisions enact an alternative test to determine whether a dividend is extraordinary. The taxpayer may elect to apply either the percentage-of-adjusted basis test under pre-1986 TRA law or a test based on the stock's fair market value as of the day before the ex-dividend date. The 1986 TRA changes the holding period required to avoid the basis reduction rule from more than one year prior to sale to more than two years before the dividend announcement date.

The Act confers special treatment on certain qualifying preferred stock, providing relief for transactions in which there is no potential for effectively purchasing a dividend that accrued prior to the purchase date. It also expands the term "extraordinary dividend" to include any distribution to a corporate shareholder in partial liquidation of the distributing corporation and any non-*pro rata* redemption of stock.

In certain respects, pre-existing law governing extraordinary dividends has been liberalized.

C. *Detailed Analysis*

1. *Determination of Extraordinary Dividend*

A dividend is considered extraordinary if the amount of the dividend equals or exceeds 10% (5% when the stock is preferred as to dividends) of the taxpayer's adjusted basis in the stock.[9] The Act provides an alternative test, available at the taxpayer's election: under §1059(c)(4), if the taxpayer establishes to the satisfaction of the Secretary of the Treasury the fair market value of any share of stock [10] as of the day before the ex-dividend date [11] the taxpayer may base the extraordinary dividend determination upon whether the dividend equals or exceeds 10% of this value instead of 10% of the adjusted basis of the stock.[12]

Note: The taxpayer will choose the fair market value alternative when the amount of the dividend received, multiplied by ten, is less than the fair market value as of the relevant date, but is equal to or greater than the taxpayer's adjusted basis in the stock.

Example: Corporation X buys common stock of corporation Y on January 1, 1988, for $20 a share. On January 1, 1990, Corporation Y's board of directors declares a $5 per share dividend, to be paid February 1. On January 31, 1990, Corporation Y stock has a fair market value of $51 a share, and Corporation X establishes this fact to the satis-

[8] *See* §246(c), prior to its amendment by P.L. 98-369, the Tax Reform Act of 1984. For a discussion of changes in the dividends received deduction provisions, see Chapter 34, section II.

[9] §1059(c).

[10] Presumably, the Secretary will promulgate regulations detailing the manner in which the fair market value rule is to be elected and its availability demonstrated by the taxpayer. *See* Code §1059(f). The proof of value will be difficult where the stock is not publicly traded.

[11] The term "ex-dividend date" means the date on which the share of stock becomes ex-dividend. Code §1059(d)(4).

[12] Act §614(b).

faction of the Secretary. Applying the percentage-of-adjusted-basis test, and assuming Corporation X has an adjusted basis of $20, the distribution would be an extraordinary dividend, since the amount of the dividend ($5) exceeds the product of the adjusted basis ($20) and the applicable percentage (10%), or $2. Corporation X may instead apply the fair market value test. Under this standard the distribution is not an extraordinary dividend, since the amount of the dividend ($5) is less than the product of the applicable percentage (10%) and the fair market value of the stock ($51).

According to the Senate Finance Committee Report, the purpose of the alternative fair market value test is to mitigate application of the basis reduction rule when a taxpayer can demonstrate that the stock has appreciated significantly since the date of the taxpayer's original investment.[13] The utility of the new test will depend in large measure on the valuation standards imposed by the Secretary.

2. Holding Period

Instead of a one-year post-acquisition holding period, the 1986 TRA provides that extraordinary dividends will trigger basis reduction if the taxpayer has not held the stock for more than two years before the dividend announcement date.[14] The term "dividend announcement date" means the day on which the distributing corporation declares, announces, or agrees to the payment of the dividend, whichever is the first to occur.[15] Thus, if there is a formal or informal agreement to pay the particular dividend prior to the declaration date, the date of this agreement will be considered the dividend announcement date for purposes of computing the two-year period.[16]

The Conference Report clarifies that whether an agreement to pay dividends exists will be determined based on all the facts and circumstance of each case. The Conference Agreement stipulates that, in general, an agreement in a joint venture arrangement that "dividends will be paid as funds are available" is not an agreement to pay a particular dividend in the absence of facts showing a "particular expectation" of a large dividend following acquisition of an interest in the venture.[17]

Act §1014(d), adding Code §1059(d)(7), prescribes an exception to the two-year holding period, applicable when three criteria are met. No extraordinary dividend will arise if (1) the stock was held by the taxpayer for the entire period the distributing corporation (and any predecessor corporation) was in existence, (2) except as provided in regulations, the only earnings and profits of the distributing corporation were those accumulated during this period, and (3) the application of the exception is not inconsistent with the purposes of §1059.

3. Qualifying Preferred Stock

Section 1059(e)(3) provides for special treatment of certain "qualifying preferred dividends."[18] In general, such dividends are treated as extraordinary dividends only to the extent the dividends the taxpayer receives during the period exceed the dividends it actually "earns." This provision is intended to provide relief to the extent that there is no potential for effectively purchasing a dividend that accrued prior to the date of purchase.[19]

Note: The special rule does not apply unless the dividend would otherwise be treated as extraordinary under the general rule of §1059(c)(2).

Section 1059(e)(3)(C)(i) defines the term "qualified preferred dividend" as any dividend payable with respect to stock that (1) provides for fixed (*i.e.*, unvarying) preferred dividends payable not less frequently than annually and (2) is not in arrears as to dividends when it is acquired by the taxpayer.

Once it is determined that the dividends are qualified preferred dividends, the taxpayer must apply the operative test to determine whether the dividends are extraordinary. This test is stated in the negative. A qualified preferred dividend will be treated as an extraordinary dividend only if (1) the "actual rate of return" on the stock exceeds 15% or, (2) if the actual rate of return is 15% or less and the taxpayer disposes of the stock within five years of acquisition, to the extent that the actual rate of return exceeds the "stated rate of return" on the stock. Code §1059(e)(3)(A). Stated otherwise, in the case of stock paying qualified preferred dividends at the rate of not more than 15%, such dividends are extraordinary only to the extent that dividends received exceed dividends payable at the stated rate.

A corporation determines whether its dividends received exceeds its dividends earned by first computing its "actual dividend rate." The actual dividend rate is the average annual amount of dividends received[20] during the period the corporation owned the stock, computed as a return on the lesser of (1) the corporation's adjusted basis and (2) the stock's liquidation preference.[21] This amount is then compared to the "stated dividend rate," defined as the rate of return represented by the annual fixed preferred dividends payable on the stock, also expressed as a percentage of the lesser of adjusted basis or liquidation preference.[22] To the extent the actual dividend rate exceeds the stated dividend rate, a portion of each dividend received will warrant extraordinary dividend treatment, and basis will be reduced by the untaxed part of the portion deemed extraordinary.[23]

[20] The legislative history, not the statute, provides for computation on an annual basis. *See* Conference Report at II-165. The Conference Report also clarifies that dividends are considered received if deemed received under Code §305. *Id.*
[21] Code §1059(e)(3)(B)(i). The Conference Report, at II-164 n.1a, specifies that a liquidation preference is to be computed without regard to any dividend arrearages.
[22] Code §1059(e)(3)(A)(ii).
[23] Code §1059(e)(3)(A)(ii). *See* Conference Report at II-165.

The Conference Report provides the following example of the special treatment for qualifying dividends:

> "[A]assume that on January 1, 1987, a corporation purchases for $1,000 ten shares of preferred stock having a liquidation preference of $100 per share and paying fixed preferred dividends of $6 per share to shareholders of record on March 31 and September 30 of each year. If the taxpayer does not elect to have the special rule apply, the basic rule would generally require the taxpayer to reduce the basis in the stock by the untaxed portion of each dividend received prior to the expiration of the two-year holding period. This is because a dividend exceeding 5% of adjusted basis (or fair market value, if shown to the satisfaction of the Secretary) paid semi-annually is an extraordinary dividend under the general rule. However, the special rule will apply to the stock. Under this provision, the taxpayer's stated dividend rate is 12% ($12/$100). If the taxpayer sells the stock on October 1, 1988 (after holding the stock for 1.75 years) and no dividends in excess of the fixed preferred dividends have been paid, its "actual dividend rate" will be 12.7% ($240/$1000 divided by 1.75). This 13.7% exceeds the 12% stated dividend rate by 1.7. This excess, as a fraction of the actual dividend rate, is 12.4% (1.7 divided by 13.7). Accordingly, each of the dividends will be treated as an extraordinary dividend described in §1059(a) to the extent of 0.74 per share ($6 × 12.4%). However, if the corporation does not sell the stock until January 1, 1989, and no dividends in excess of the fixed preferred dividends have been paid, its "actual dividend rate" will be 12% ($240/$1000 divided by 2.0). This does not exceed the stated dividend rate; accordingly, no portion of any dividend will be treated as an extraordinary dividend." [24]

In the absence of the special rule, under the basic definition of extraordinary dividend, preferred stock paying a dividend of 5% of the adjusted basis (or fair market value) of the stock would require a basis adjustment.[25] If the stock paid four quarterly 2½% dividends, however, none of the dividends generated would be extraordinary.[26]

4. Partial Liquidations and Non-Pro Rata Redemptions

The 1986 TRA expands the definition of "extraordi nary dividend" to include any redemption of stock that is part of a partial liquidation of the redeeming corporation, or that is not *pro rata* as to all shareholders.[27]

a. Partial Liquidations

For the purposes of §1059(e), a distribution is treated as in partial liquidation if it satisfies the requirements of §302(e).[28] Thus, a distribution is in partial liquidation if the distribution (1) is not essentially equivalent to a dividend and (2) is pursuant to a plan and occurs within the taxable year in which the plan is adopted, or the succeeding taxable year.

The Treasury Department will have the authority to require the distributing corporation to advise its shareholders as to the character of the distribution, since the determination of whether a distribution is in partial liquidation is made at the corporate rather than the shareholder level.[29] The Conference Report expresses the conferees' intention that there will be a presumption, rebuttable by clear and convincing evidence, that the distributing corporation's characterization is correct, and that the Treasury Department may require a taxpayer taking a contrary position to disclose on its return its reasons for doing so.[30]

This new provision applies to distributions in partial liquidation regardless of the taxpayer's holding period, and regardless of the size of the distribution.[31]

b. Non-Pro Rata Redemptions

Any non-*pro rata* redemption of stock, irrespective of the holding period or the size of the distribution, is considered an extraordinary dividend under revised §1059.[32]

5. Specific Exceptions and Additional Rules

The 1986 TRA liberalizes the extraordinary dividend provisions by excluding "qualifying dividends" as defined in §243(b)(1), except to the extent provided otherwise in regulations.[33] Generally, qualifying dividends are those received from an affiliate if the group has made a §243(b)(2) election and the distribution is out of earnings and profits for a year during the entirety of which the distributing and recipient corporations were affiliated.

Under pre-1986 TRA §1059(a), if the amount of an extraordinary dividend exceeded the taxpayer's stock basis, the excess was recognized immediately as gain. Revised §1059(a)(1) and (2) soften this rule. Under these provisions, the basis of stock paying on extraordinary dividend is reduced by the nontaxed portion of the dividend, but not below zero. Recognition of gain on nontaxed portions of extraordinary dividends is deferred until sale or other disposition of the stock. *See* §1059(a)(2).

According to the Conference Report, the Conferees expect that the amount of earnings and profits resulting from gain on the disposition of stock should be determined without regard to basis adjustments made under §1059. The intention of the Conferees is to prevent the double inclusion in earnings and profits of the untaxed portion of extraordinary dividends.[34]

6. Effective dates

The revised provisions generally are effective for dividends declared after July 18, 1986, with the exception of non-*pro rata* redemptions and distributions in partial liquidation, which are not subject to the revised rules unless declared after the date of enactment (October 22, 1986).[35]

However, the aggregation rule of §1059(c)(3) does not encompass pre-July 19, 1986 dividends. Thus, dividends declared prior to that date will not be treated as part of dividends declared after that date. *See* Act §614 (f)(2).

III. Effect on Earnings and Profits of Appreciated Property Distributions

A. Background

Section 312(a) provides that, as a general rule, on the distribution of property by a corporation with respect to its stock, the earnings and profits of the corporation must be reduced by the sum of the amount of money, the principal amount of the obligations of the corporation, and the adjusted basis of other property so distributed. Under pre-1986 TRA §312(b), on a distribution of appreciated inventory assets, earnings and profits must be increased by the amount of the appreciation and decreased by the lesser of (1) the fair market value of the inventory assets distributed and (2) the earnings and profits, as increased by the distribution. In effect, the distribution of inventory results in a reduction of earnings and profits in an amount equal to the basis of the inventory, and dividend income to the distributee in the amount of the appreciation.

Pre-1986 TRA §312(c), provided for adjustments to earnings and profits computations under §312(a) and (b) to reflect (1) liabilities attaching to distributed property or assumed by the distributee-shareholder and (2) any gain recognized by the corporation on the transaction. Under this rule, to the extent that the corporation recognized gain on a distribution, earnings and profits were reduced.[36]

In the Tax Reform Act of 1984, Congress added §312(n), which includes a number of significant changes to the earnings and profits computation rules. The purpose of these provisions is to ensure that a corporation's earnings and profits account reflects more closely its economic income.[37]

Among the §312(n) rules is a requirement that earnings and profits be increased by the amount of gain that would be recognized by the corporation on a distribution of appreciated property if §311(d)(2) did not apply.[38] §311(d)(2) also included certain other specific types of distributions.[39]

Section 312(n) also contains a provision to the effect that upon a redemption to which §302(a) or §303 applies, the earnings and profits of the distributing corporation are to be charged in an amount that is not in excess of the ratable share of accumulated earnings and profits attributable to the redeemed stock. §312(n)(8). The 1984 Act failed to prescribe an effective date for this rule, however.

Finally, the 1984 Act provided that with respect to a foreign corporation that for any taxable year derives less than 20% of its gross income from United States sources, certain of the §312(n) rules apply only in the case of taxable years beginning after December 31, 1985.

B. TRA 1986 Amendments

The 1986 TRA amends §312(b) in its entirety. Under new §312(b), on a distribution by a corporation, with respect to its stock, of any property (not merely inventory property) the fair market value of which exceeds its adjusted basis, the earnings and profits of the corporation must be increased by the amount of the excess and decreased by the fair market value of the distributed property.[40] For purposes of §312(a) and §312(b) as revised, the adjusted basis of distributed property is its adjusted basis as determined for earnings and profits computation.

Example: Corporation X has no accumulated or current earnings and profits. Corporation X in 1985 distributes property having a zero basis and a $1,000 fair market value in a § 311(d)(2) transaction. Corporation X recognizes no gain, but its earnings and profits account is increased to $1,000 (resulting in a dividend to the distributee-shareholder), and then reduced to zero. *See* House Report at 897.

The 1986 Act adds three additional amendments to §312. First, the 1986 Act repeals pre-1986 TRA §312(c)(3).[41] Accordingly, the computation of earnings and profits is to be made without adjustment for gain recognized by the corporation (thereby ensuring two levels of tax on appreciated property distributions). Second, pre-1986 TRA §312(n)(4) [relating to adjustments to earnings and profits for certain untaxed appreciation of distributed property] is repealed;[42] the amendment to the general rule of §312(b) renders it unnecessary. Finally, the Act provides that in the case of a foreign corporation described in §312(k)(4), §312(n)(4) and (6), as amended, (relating to earnings and profits adjustments for LIFO recapture and completed contract method of accounting) shall apply only in the case of taxable years beginning after December 31, 1985, and §312(n)(5), as amended, (relating to installment sales accounting) will apply only in the case of taxable years beginning after December 31, 1987.[43]

C. Effective Dates

The amendments to §312 apply as if they had been included in the Tax Reform Act of 1984 revisions to §312.[44] Thus, the amendments apply to taxable years beginning after September 30, 1984.[45]

Note: Revised §312(b) applies, by its terms, to any distribution of appreciated property. This would appear to

[36] *See* Regs. §1.312-3.
[37] S. Rep. No. 169, 98th Cong., 2d. Sess. 198 (1984).
[38] §312(n)(4). Under §311(d)(2), before its amendment by the 1986 Act, a corporation did not recognize gain on appreciated property distributed with respect to "qualified stock" (*i.e.*, stock held by a non-corporate shareholder who held at least 10% in value of the outstanding stock during the lesser of the five-year period ending on the distribution date or the duration of the corporation) if the distribution is described in §302(b)(4) or is a dividend of property (other than accounts receivable or inventory) that was used by the distributing corporation in an active business for the preceding five years.
[39] The 1984 Act contained no provision, however, providing for a reduction in earnings and profits by the amount of the distribution (or by the adjusted basis of the distributed property).

[40] Act §1804(f)(1)(A).
[41] Act §1804(f)(1)(B).
[42] Act §1804(f)(1)(D).
[43] Act §1804(f)(1)(E); Code §312(n)(8)(A) and (B).
[44] Act §1881. *See also* Act §1804(f)(3).
[45] P.L. 98-369, §61(e).

include distributions pursuant to one-month liquidations under §333. *See* Rev. Rul. 79-149, 1979-1 C.B. 132 (breeding animals not "inventory assets" under §312(b); distribution in §333 liquidation does not require increase to earnings and profits). Thus, appreciation on property distributed in a §333 liquidation in taxable years beginning after September 30, 1984, would be taxed to the shareholders at dividend rates. The House Report specifies, however, that the rules for computing earnings and profits in a §333 liquidation are not to be affected by the §312(b) revisions,[46] but this language does not appear in the Conference Report. In Rev. Rul. 87-1, reprinted in 5 *Tax Mgmt. Wkly. Rept.* 1596 (Dec. 29, 1986), the IRS followed the House Report and announced its position that the §312(b) revisions do not apply to §333 liquidations; accordingly, the IRS concluded that pre-1986 TRA §312(b) and (c) apply to such liquidations.

IV. Distribution of Partnership and Trust Interests

A. Background
