Section 75 of the Tax Reform Act of 1984 added new §386, which prescribes a "look-through" rule where a corporation distributes a partnership or trust interest to its shareholders, or sells or exchanges such an interest in a §337 liquidation. The distribution or sale must be treated as if it included a distribution or sale of the corporation's proportionate share of the "recognition property" of the partnership or trust.

In a non-liquidating distribution, recognition property includes property the distribution of which triggers recognition under §311 or §336, including LIFO inventory, property subject to liabilities in excess of basis, appreciated property distributed in redemption of stock and installment obligations subject to §453B (relating to gain or loss on the disposition of installment obligations).[47] In the case of a distribution in complete liquidation, only LIFO inventory and installment obligations trigger recognition.[48] On a liquidating sale under §337, recognition property consists of property described in §337(b), that is, inventory, installment obligations arising from the disposition of inventory and installment obligations attributable to sales of non-inventory property prior to the adoption of a plan of complete liquidation.[49]

Under these rules a corporation might recognize gain on the distribution or sale of a partnership or trust interest even though the corporation has no built-in economic gain attributable to recognition property. Thus, if a corporation purchases at fair market value an interest in a partnership holding only appreciated inventory, but the partnership has no §754 election in effect, the corporation would recognize gain on an immediate non-liquidating distribution of the interest though the corporation has realized no economic benefit.

[46] H. Rep. No. 426, 99th Cong., 1st. Sess. 897 (1985).
[47] Code §386(c)(1).
[48] *Id.*
[49] Code §386(c)(2).

The 1984 TRA also added a provision to the effect that, for purposes of §§708, 743 and any other Subchapter K provisions specified in regulations, any distribution not otherwise treated as an exchange shall be treated as an exchange.[50] Although the conferees described this rule as applying only to distributions of partnership interests,[51] the statute is not itself so limited.

B. Limitation on Recognition of Gain

Under new §386(d), added by §1805(c)(1) of the 1986 Act, in any distribution to which §311 applies, the amount of gain recognized under §386(a) shall not exceed the gain that would have been recognized if the partnership interest had been sold at its fair market value. For example, a corporation that acquired a partnership interest at fair market value and immediately distributed the interest in a §311 transaction would recognize no gain, regardless of the basis of the partnership property attributable to the interest.[52]

Note: New §386(d) applies only in the case of a nonliquidating distribution to which §311 applies. Relief is not available in a liquidating distribution or §337 sale.

Note that new §386(d) will not insulate a distributing corporation from depreciation recapture under §751. Thus, a corporation that distributes a partnership interest will recognize depreciation recapture with respect to the partnership's recapture property attributable to the interest, even if the corporation derived no benefit from the depreciation deductions giving rise to the recapture income.[53]

Section 386(d) confers upon the Secretary the authority to disregard built-in loss on property contributed by a corporation to a partnership "for the principal purpose of recognizing such loss on the distribution." The intent of the Ways and Means Committee is that a corporation not be permitted to reduce gain inherent in a distributed partnership interest by "netting" gain and loss property.[54] The House Report notes that §311 does not permit such "netting" (since only gain is recognized under that section).[55]

The 1986 Act clarifies §761(e) by amendments limiting the reach of the provision to distributions of partnership interests.[56] The Secretary is authorized to provide exceptions to these rules. According to the Senate Report, it is intended that a distribution of a partnership interest by an estate or testamentary trust by reason of the death of a partner not be treated as a sale or exchange for purposes of §708(b) (relating to termination of a partnership).[57]

C. Effective Date

The amendments to §§386 and 761(e) apply with respect to distributions, sales and exchanges made after March 31, 1984, in taxable years ending after that date.[58]

Silverstein and Mullens
Washington, D.C.

I. Certain Built-in Gains of S Corporations Subject to C Corporation Tax

A. Background

With the repeal by §631 of the 1986 TRA of the *General Utilities* doctrine for liquidating distributions, Congress extended the principle of double taxation to all forms of subchapter C corporate distributions where property is distributed outside of corporate solution. However, these provisions would not prevent farsighted shareholders of certain closely held C corporations from circumventing the corporate level tax on liquidating distributions by converting their corporations to subchapter S status, waiting three years and liquidating. In such a case, although Code §1363(d) requires recognition of gain on liquidating distributions of appreciated property by S corporations, only one level of tax would be imposed because the distributee shareholders would be entitled to increase the basis for their stock under §1367(a) by the amount of gain recognized by the corporation.

B. Tax on Built-In Gain of S Corporations

In order to prevent circumvention of the repeal of the *General Utilities* doctrine by C corporations converting to subchapter S status, the 1986 TRA §632 substantially revises Code §1374 to impose a tax on the "built-in gain" recognized by former C corporations during the first ten years after electing S corporation status. Under revised Code §1374, a tax equal to the highest rate of corporate tax is imposed on the taxable sale, exchange or disposition within ten years after conversion to S status of any asset — including inventory, goodwill and going concern value — held by the corporation on the date of the conversion to the extent of the appreciation in the value of such asset as of the date of conversion. The corporate taxpayer has the burden of proving that any asset disposed of during this ten-year period was not owned by it on the date of conversion or that any such asset had a lower fair market value on the date of conversion than on the date of disposition.[1]

1. Recognized Built-in Gain

The tax imposed by revised §1374(a) is imposed on the "recognized built-in gain" of a corporation that converts to S status pursuant to a post-1986 election. §1374(d)(2) defines "recognized built-in gain" as the gain recognized on the "disposition" within the "recognition period" of any asset unless the corporation can establish either that the asset was not owned by it on the date of conversion or that the gain recognized exceeded the gain inherent in the asset as of the date of conversion. The recognition period is defined in §1374(d)(3) as the ten-year period beginning with the first day of the first taxable year for which the corporation was an S corporation.[2]

a. Dispositions

In Announcement 86-128[3] the Service took a broad view of the term "disposition" for §1374 purposes and interpreted it to include not only sales or exchanges but also "other income-recognition events that dispose of or relinquish a taxpayer's right to claim or receive income." Included among such events are a cash method taxpayer's collection of accounts receivable and completion of a long-term contract by a taxpayer using the completed contract method of accounting. Thus, in the Service's view, a cash method C corporation that converts to S status must, when the receivables are collected, be subject to a corporate level tax on the "fair market value" of the receivables as of the date of conversion. The burden will presumably be on the corporation to establish the appropriate discount factor on the receivables or else the full face amount of such receivables would be used for purposes of determining the amount of built-in gain.

Comment: The Announcement leaves open the question of whether the post-conversion collection of bills attributable to work in progress on the date of conversion to S status would be subject to the built-in gain tax, but the language of the Announcement seems broad enough to cover that situation. Presumably, the Service would consid-

[1] §1374(d)(2). Section references are to the Internal Revenue Code of 1986, unless otherwise indicated.

[2] Presumably, however, the ten-year period refers to ten calendar years, and not to ten taxable years.

[3] 1986-51 I.R.B. 22, reprinted in 5 *Tax Mgmt. Wkly. Rept.* 1519 (Dec. 5, 1986).

er the post-conversion collection of installment payments to be "dispositions" for purposes of revised §1374.

b. Treatment of Inventory

The Service, in Announcement 86-128 [4] confirmed its interpretation that built-in gain on inventory items is subject to the built-in gain tax.

Comment: Where a corporation owns inventory or goods in process on the date of conversion to S status and later finishes production and/or sells the inventory through its own marketing efforts, the corporation will have an incentive to maximize the portion of overall gain attributable to the post-conversion activity while the Service will have an incentive to maximize the portion of the gain attributable to the corporation's pre-conversion activity. Thus, rules similar to the intercompany pricing rules of §482 (or §936) may be relevant in determining the amount of built-in gain, although the Service's posture may be quite different from that when applying §482 to a domestic manufacturer that has foreign affiliates performing finishing and/or marketing activities.

Since recognized built-in gain is generally limited to gain on assets owned on the date of conversion by a corporation that converts to S status, a corporation with substantial inventory could have difficulty in identifying when inventory items are disposed of. Announcement 86-128 eases the burden somewhat by providing that taxpayers may use their inventory accounting method to identify inventory on hand on the date of conversion and to determine when such inventory is disposed of. Thus, for example, a corporation using the LIFO method would presumably not be subject to built-in gain tax on its sale of inventory if, during the first ten years after conversion, its additions to inventory exceed its costs of goods sold each year. On the other hand, a corporation using the FIFO method would virtually always be subject to the built-in gain tax within a short time after conversion to S status.

c. Property Acquired in Nonrecognition Transactions After Conversion

Since revised §1374(d)(2)(A) provides that the built-in gain tax does not apply to gain recognized on any asset not owned on the date of conversion by a corporation converting to S status, a narrow interpretation of the statute would permit the tax to be avoided by a like-kind exchange or reorganization exchange of built-in gain property. Although the property received by the corporation would carry with it the gain inherent in the built-in gain property, §1374(d)(2)(A) by its own terms does not apply to property other than that actually held on the date of conversion.

In Announcement 86-128 [5] however, the Service stated that it would issue regulations to the effect that property received in exchange for built-in gain property in carryover or substituted basis transactions would inherit the built-in gain and recognition period that had been applicable to the original built-in gain property. Thus, in a post-1986 consolidation or "C" reorganization of an S corporation with built-in gain assets with or into a corporation not otherwise subject to the built-in gain rules,[6] the built-in gain assets of the acquired corporation would retain that status even though the acquiring corporation (or other party to a consolidation) had always been an S corporation or became one pursuant to a pre-1987 election. Similarly, if an S corporation transferred built-in gain assets in a §1031 like-kind exchange, the property received in exchange would inherit the amount of built-in gain attributable to the transferred property and the remainder of the original recognition period with respect to such property.

Example: On January 1, 1990, at which time it owns a rental apartment building with $100 fair market value and an adjusted basis of $60 and no other appreciated or loss assets, Corporation X converts from C to S status. On July 1, 1995, at which time the apartment building is worth $150 and Corporation X has a $30 basis in it, all of the assets of Corporation X are acquired in a reorganization qualifying for §368(a)(1)(C) tax free treatment by Corporation Y, a corporation that has been an S corporation throughout its existence. Under Announcement 86-128, if Corporation Y disposes of the building before January 1, 2000, in a year in which it generates other taxable income, Corporation Y will recognize $40 in built-in gain from the disposition.

Comment: Even under Announcement 86-128, the recognition period expires ten years after the conversion to S status so that a corporation may avoid the built-in gain tax on the disposition of property received in a like-kind exchange or reorganization for any built-in gain property if such exchange property is sold more than ten years after the corporation converts to S status, even if such sale is less than ten years after the like-kind exchange or reorganization.

Section 1374(c)(1), which limits application of the built-in gain tax to S corporations that convert from C status, provides that an S corporation and any predecessor corporation are treated as a single corporation for purposes of determining of whether a corporation is subject to revised §1374. Thus, an S corporation that is the survivor of a post-1986 merger with a C corporation or an S corporation that converted to S status pursuant to a post-1986 election would, at least with respect to assets acquired from the merging corporation, be subject to the built-in gain tax.

2. Net Unrealized Built-in Gain Limitation

The amount of income on which the revised §1374 tax may be imposed is limited under §1374(c)(2) by the "net unrealized built-in gain" of the former C corporation on the date of conversion to S status. §1374(d)(1) defines the term "net unrealized built-in gain" as the excess of the total fair market value of the corporation's assets over its aggregate adjusted basis of those assets at the time of conversion. Thus, assets which at the time of conversion have an adjusted basis in the corporation's hands in excess of their fair market value reduce the amount of net unrealized

[4] *Id.*
[5] *Id.*

[6] A merger involving such corporations would be covered by revised Code §1374(c)(1), which treats an S corporation and all predecessor corporations as a single corporation for determining whether the S corporation converted from C corporation status.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

built-in gain and thus the amount of gain potentially subject to tax under §1374.

Example: Corporation X converts from C to S status effective January 1, 1990. On that date, Corporation X owns machinery with a fair market value of $100 in which it has an adjusted basis of $60 and a warehouse building with a fair market value of $50 in which it has an adjusted basis of $70. Although there is $40 of built-in gain on the machinery, Corporation X's net unrealized built-in gain, and thus the amount of built-in gain on which it is potentially subject to tax under §1374, is $20 ($40 - $20).

Comment: As is true of many other provisions of the 1986 TRA, the net unrealized built-in gain limit places a premium on taxpayers' obtaining sound appraisals of corporation assets prior to conversion to S status.

Because loss assets owned at the time of conversion reduce the exposure to built-in gain tax, shareholders of corporations planning to convert to S status have an incentive to transfer loss assets to the corporation prior to conversion. However, in Announcement 86-128 [7] the Service stated that it would issue regulations providing that the contribution of loss assets to a corporation in contemplation of its conversion to S status would not reduce the corporation's net unrealized built-in gain in situations where avoidance of the built-in gain tax motivated the contribution. The Service stated that contributions of loss property within two years prior to the earlier of the date of conversion or the date of filing an S election would be presumed to have such a tax avoidance motive absent the showing of a "clear and substantial" relationship between the loss property and the current or future business of the corporation.

3. Offsets Against Recognized Built-in Gain

Where an S corporation has recognized built-in gain during the first ten years after its conversion from C status, the built-in gain tax is imposed on the lesser of the recognized built-in gain for the year or the amount of taxable income from all sources that the corporation would have if it were a C corporation.[8] Thus, even where an S corporation disposes of a built-in gain asset within ten years after conversion from C status, it would not be subject to tax on the gain to the extent that it recognized net losses from its other assets and operations during the taxable year. Thus, where feasible, it may be desirable to defer dispositions of built-in gain assets to years when the corporation anticipates other losses.

Example: On January 1, 1990, when it owns an apartment building with a $100 fair market value and a $60 basis and no loss assets or other built-in gain assets, Corporation A converts to S status. On July 1, 1992, when its basis in the building is $50, Corporation A sells the building for $100. During 1992, Corporation A recognizes a $30 loss from operations. Because Corporation A's net income for the year, $20 ($50 less $30) is less than the $40 built-in gain recognized with respect to the building, Corporation A recognizes only $20 of gain under §1374 with respect to the sale.

Comment: Because under §1374(c)(2), the amount of recognized built-in gain — even if not subject to tax — reduces the amount of net unrealized built-in gain subject to the §1374 tax, the use of net operating losses pursuant to §1374(b)(2) to offset the built-in gain subject to tax in a given year represents a permanent reduction in the amount subject to the tax.

Although the amount of recognized built-in gain subject to tax under revised §1374 may not be reduced by net operating loss carryovers from other S corporation years,[9] it is reduced by net operating loss carryovers from C corporation years.[10] The only tax credits allowable to reduce a built-in gain tax are those carried forward from C corporation years of the corporation.[11] It is not clear whether tax credit carryforwards from C corporations that merge into S corporations subject to built-in gain tax are available to offset the tax on built-in gain from the acquiring corporation's disposition of its built-in gain assets.[12]

4. Effect of Built-in Gain Tax

As was true of former §1374, revised §1374 imposes a corporation level tax on the corporation recognizing the built-in gain. In turn, the amount of built-in gain tax liability reduces the amount of the corporation's taxable income that is passed through to the corporation's shareholders under §1366(a).[13]

Although electing prior to 1987 to convert to S status or initially electing S status for a new corporation may be desirable in many cases, such election may have detrimental consequences where losses are expected and the corporation's activities are in part loss-generating rental activities or ownership of loss-generating trades or businesses in which the corporation and most of its shareholders do not materially participate. The shareholders of an S corporation are denied deductions for passive activity losses of the corporation to the extent those losses exceed the shareholders' passive activity income, even if the corporation has net income from active trades or businesses.[14] However, closely held C corporations may offset their net active income with passive activity losses.[15]

5. Comparison with Former §1374

The built-in gain tax is in many ways much broader than the tax imposed by former §1374. Former §1374 applied to capital gain recognized by a former C corporation, whereas revised §1374 applies to the disposition of even ordinary income assets. Former §1374 applied only to capital gain in excess of $25,000 and only if such gain represented more than 50% of the corporation's taxable income for the year of recognition, whereas revised §1374 applies regardless of the amount of built-in gain recognized

[7] *See* footnote 3, *supra.*

[8] §1374(b)(1).

[9] §1374(d)(4)(B).

[10] §1374(b)(2).

[11] §1374(b)(3).

[12] §1374(b)(3)(A) provides that the only tax credits available to offset the tax on recognized built-in gain are those described in §1374(b)(3)(B). §1374(b)(3)(B) refers only to business credit carryforwards arising in taxable years "for which the corporation was a C corporation."

[13] Revised §1366(f)(2).

[14] *See* §469(a), discussed in Chapter 17, *supra.*

[15] §469(e)(2). In general, a closely held C corporation is one more than 50% of whose stock by value is owned directly or indirectly by five or fewer individuals. *See* §§469(j)(1), 465(a)(1)(B), and 542(a)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

during the taxable year. Former §1374 applied only to gain recognized within three taxable years after a C corporation converted to S status, whereas revised §1374 applies to gain recognized within ten years after a C corporation converts to S status.

On the other hand, revised §1374 is narrower than former §1374 in so far as it subjects to a separate tax only gain attributable to periods prior to conversion to S status, whereas former §1374 subjected to a separate tax all gain recognized within three years after conversion to S status even if the gain was attributable entirely to post-conversion appreciation.

C. Effective Date and Transition Rules

1. In General

The tax is effective for taxable years beginning after 1986 but does not apply to corporations that converted to S corporation status pursuant to elections made before January 1, 1987 — even if the election were not effective under the rules of Code §1362(b)(3) until after December 31, 1986. Act §633(b). Therefore, even a corporation that files an S election on December 31, 1986 is not subject to revised Code §1374.

2. Relief for Qualified Corporations

The 1986 TRA §633(d)(8) provides for partial relief from the built-in gain tax of revised Code §1374 for certain small closely held corporations that convert to S status effective prior to 1989. Act §633(d)(8) provides that, for purposes of applying revised Code §1374, "rules similar to" those set forth in Act §633(d)(1) - (7) apply to each "qualified corporation" which becomes an S corporation pursuant to a post-1986 election that is effective for a taxable year beginning prior to January 1, 1989.[16] Because many, if not most, corporations eligible for qualified corporation status will also be eligible for S corporation treatment, an understanding of the qualified corporation transition rules applicable to corporations that convert to S status prior to 1989 pursuant to post-1986 elections is important for effective tax planning for closely held corporations.

a. Qualified Corporations

Transition relief from the built-in gain tax is available to a corporation that converts to S status prior to 1989 pursuant to a post-1986 election only if that corporation is a "qualified corporation." The 1986 TRA, in §633(d)(5) and (6), defines the term "qualified corporation" as any corporation: (1) more than 50% of the value of whose stock as of August 1, 1986 and all times thereafter is held by no more than ten individuals, estates and certain trusts; and (2) which has a fair market value of not more than $10 million.

For purposes of determining whether no more than ten qualified persons own more than 50% of the value of a corporation's stock, stock owned by all people related under §318(a)(1) is treated as owned by a single individual.[17] Thus, if two family groups — each consisting of a husband and wife, three children, and five grandchildren who each own 5% of the stock — own the stock of a corporation meeting the fair market value tests, the corporation is a qualified corporation. On the other hand, if a corporation valued at less than $10 million is owned 5% by each of twenty unrelated individuals (or siblings), it is not a qualified corporation because no ten shareholders actually or by attribution own more than 50% of the value of the corporation's stock.

b. Relief Available to Qualified C Corporations: The Analogue

An understanding of the likely form of relief for qualified corporations that convert to S status before 1989 pursuant to post-1986 elections requires an understanding of the relief available to other qualified corporations in complete liquidations. 1986 TRA §633(d)(1) - (7) provides that the corporate level recognition of gain on liquidating sales and distributions imposed by 1986 TRA §§631 through 633 [18] can be avoided in part by qualified corporations which liquidate before January 1, 1989. Relief is not available even for qualified corporations that liquidate prior to 1989 as to gain (or loss) realized with respect to ordinary income assets, capital assets held for not more than six months ("long term capital assets"), and installment obligations on which gain remains to be recognized.

Under the transition rule of §633(d)(1) - (7), corporations meeting the stock ownership requirements that were valued at no more than $5 million will fully avoid gain or loss recognition upon liquidating distributions, sales or deemed §338 sales on long term capital assets other than installment obligations, while corporations meeting the stock ownership requirements and valued at between $5 million and $10 million will avoid gain or loss recognition on such long term capital assets in a declining proportion as the value of such corporations approached $10 million.

c. Relief from Built-in Gain Tax

Although the description of the relief available for qualified corporations that are S corporations in Act §633(d)(8) as "rules similar to" the transition rules applicable to qualified corporations liquidating before 1989 is somewhat confusing, the Service in Rev. Rul. 86-141,[19] set forth its interpretation of this transition rule. The Service noted that qualified corporations converting to S status effective prior to 1989 pursuant to post-1986 elections would obtain relief analogous to the relief available with respect to pre-1989 liquidations of qualified C corporations even if such converted corporations did not liquidate prior to 1989 (or even within ten years after conversion). Determination of whether such a corporation meets the stock ownership and fair market value tests for qualified corporation status is made both as of August 1, 1986 and as of the date of conversion to S status.

---

[16] Since the election must be effective for the corporation's year beginning before 1989, and not merely made before 1989, a calendar year corporation's election must be effective for calendar year 1988. Therefore, the election must be made no later than March 15, 1988. *See* §1362(b)(1)(B).

[17] Act §633(d)(6)(B).

[18] Note that Act §633(d)(1) literally provides that relief is available only from corporate level gain recognition imposed by Act §633. However, Act §633 does not impose any tax; it merely provides effective dates and transition relief. The House and Senate-passed concurrent resolutions which were not enacted would have corrected this oversight. Presumably, a technical corrections bill will be enacted to clarify the intended relief.

[19] 1986-49 I.R.B. 6.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The relief afforded such qualified S corporations having a fair market value of $5 million or less on both August 1, 1986 and the date of conversion relief from the corporate level tax imposed by revised Code §1374 with respect to long term capital assets other than installment obligations. Relief available to qualified S corporations having a fair market value of between $5 million and $10 million on either of the applicable dates is partial relief from the built-in gain tax of revised §1374 with respect to long term capital assets other than installment obligations. A portion of built-in gain on such assets equal to a fraction, the numerator of which is the amount by which the fair market value of the corporation exceeds $5 million and the denominator of which is $5 million, is not eligible for relief and accordingly is subject to the revised §1374 tax.

Example: Corporation X is at all times owned 100% by A, an individual. On August 1, 1986, the fair market value of Corporation X is $5 million. Effective January 1, 1988, when its fair market value is $7 million and it owns $4 million in undeveloped investment land in which it has a $3 million basis, $2 million of property held for sale in the ordinary course of business in which it has $1.5 million basis, and $1 million in cash, Corporation X converts to S status. On July 1, 1988, Corporation X sells for cash the property held for sale in the ordinary course of its business for $2.5 million and on July 1, 1991, Corporation X is liquidated, distributing to A the investment land, the proceeds of the sale of the property held for sale, and the cash. Corporation X's built-in gain, determined as of the date of conversion, is all $500,000 of the gain, which at that time was attributable to the property held for sale in the ordinary course of its business and $400,000 [$1 million x ($2 million divided by $5 million)] attributable to the investment property. The $500,000 of built-in gain recognized on the 1988 sale of the property held for sale in the ordinary course of business subjects Corporation X to the §1374 tax in that year and the $400,000 of built-in gain attributable to the investment property subjects Corporation X to tax under revised §1374 on the 1991 liquidating distribution of the land.

Rev. Rul. 86-141 provides that former §1374 will apply to a qualified corporation converting to S status prior to 1989 pursuant to a post-1986 election to the extent that revised §1374 does not apply to any built-in gain by virtue of Act §633(d)(8).[20] Thus, if such a corporation recognizes within three years after the date of conversion more than $25,000 in net capital gain attributable to long term capital assets held at the date of conversion [21] as to which revised §1374 does not apply by virtue of Act §633(d), and such gain exceeds 50% of the corporation's taxable income for the year,[22] the corporation will be subject to §1374 as in effect prior to amendment by the 1986 TRA.

Example: Assume the same facts as in the preceding example except that Corporation X liquidates on December 31, 1990, rather than on July 1, 1991, and that Corporation X has no taxable income for the year 1990 other than amounts recognized on the liquidating distribution of the land, which is then worth $5 million. The corporation would thus have $2 million ($5 million land value less $3 million land basis) in taxable income for the year, of which all but the $400,000 in built-in gain would be subject to former §1374. Since the $1.6 million subject to former §1374 exceeds both $25,000 and 50% of Corporation X's 1990 taxable income, Corporation X would be subject to tax not only on the $400,000 built-in gain but also on all but $25,000 of the remaining $1.6 million gain.

Because the approaches of former §1374 and revised §1374 are not parallel, the Service's attempt in Rev. Rul. 86-141 to divine congressional intent as to the application of former §1374 to qualified corporations may lead to some strange results. For example, because former §1374 applies only where the corporation's net capital gain exceeds 50% of its taxable income for the year, many qualified C corporations converting to S status prior to 1989 pursuant to post-1986 elections, which corporations have a fair market value in excess of $7.5 million, will not be subject to former §1374 on the disposition of long term capital assets with built-in gain even if such dispositions occur within three years after conversion. On the other hand, such corporations with a value less than $7.5 million would in many cases be subject to the corporate level tax imposed by former §1374.

Example: Pursuant to a January 1, 1988 election, Corporation X, which is a qualified corporation with no liabilities and owning a single investment property worth $7.6 million in which the corporation has a $4.6 million basis, converts to S status effective January 1, 1988. Based on Rev. Rul. 86-141, 52% ($2.6 million divided by $5 million) of the gain inherent in the property, or $1.56 million, is subject to revised §1374 and the remaining 48%, or $1.44 million, is subject to the rules of former §1374. If, on December 31, 1990, a year in which it has no other taxable income or loss, Corporation X sells the property for $7.6 million, it will recognize $3 million in gain, of which $1.56 million will be subject to the built-in gain tax of revised §1374. Although the sale would be within three years after Corporation X's conversion to S status, the remaining $1.44 million in gain would apparently avoid the tax imposed by former §1374 because such gain would represent less than 50% of corporation X's taxable income (which would include the $1.56 million in gain subject to the rules of revised §1374) for the year. On the other hand, if, in the same example, the investment property were at all relevant times worth $7.4 million and Corporation X had a basis in it of $4.4 million, only 48%, or $1.44 million, of the built-in gain would be

[20] *See* H.R. Rep. No. 841, 99th Cong. 2d Sess. II-206 (1986)("Conference Report").

[21] Rev. Rul. 86-141 does not explicitly set forth rules governing property acquired by such a qualified corporation after the date of conversion to S status and sold or exchanged within three years after such conversion. However, given the legislative intention to replace the scheme of former §1374 with the scheme of revised §1374 and given the general January 1, 1987 effective date for repeal of former §1374, an attempt to apply former §1374 to such a sale or exchange should be subject to challenge.

[22] Former §1374(a)(1). In addition, the corporation's taxable income for the year must exceed $25,000. Former §1374(a)(2).

subject to revised §1374, while 52%, or $1.56 million, of such gain would be subject to former §1374. As a result, in the year of sale, more than half of Corporation X's taxable income would be represented by capital gain subject to former §1374 and thus that provision would appear to operate to subject the corporation to a tax in addition to that imposed by revised §1374.[23]

d. Relief from Recognition on Liquidation

The transition rules applicable partially to exempt qualified C corporations from gain recognition under revised Code §336 also apply to exempt partially S corporations from the gain recognition imposed under revised Code §1363(d) in respect of pre-1989 liquidations.[24] Prior to the effective date of its revision by the 1986 TRA, Code §1363(e) exempted S corporations from recognizing the gain realized on distributions in complete liquidations.[25] Code §1363(d), as a result of the amendment of Code §1363(e), imposes gain recognition on liquidating S corporations effective generally for post-July 31, 1986 liquidations (except for liquidations completed before January 1, 1987), but subject to transition relief. Because the corporate level tax imposed pursuant to revised Code §1374 applies only to dispositions of built-in gain assets on which gain is recognized under other Code provisions — that is, revised Code §1374 is not a gain recognition provision — qualified corporations that convert to S status pursuant to post-1986 elections, have built-in gain assets at the time of conversion, and liquidate prior to January 1, 1989, may avoid built-in gain tax, and — to the extent the rules of that provision are applicable — tax under former Code §1374.

Example: Corporation X is a calendar year corporation which on August 1, 1986 and on all times thereafter has a fair market value less than $5 million and whose stock is owned entirely by ten individuals. On March 1, 1987, the corporation's shareholders make a valid S election which is effective for the corporation's taxable year beginning January 1, 1987. As of January 1, 1987, Corporation X owns an investment property having a fair market value of $2 million in which it has a $1.5 million basis; property held for sale to customers in the ordinary course of its business worth $1 million in which it has an $800,000 basis; and no other assets with built-in gain or loss. Corporation X is completely liquidated on June 30, 1988, at which time the investment property is worth $2.2 million and the property held for sale to customers in the ordinary course of its business is worth $900,000. Corporation X has no net operating or investment income or loss for the period January 1, 1988 through June 30, 1988. Although the amount of net unrealized built-in gain attributable to Corporation X's assets is $700,000 [($2 million - $1.5 million) + ($1 million - $800,000)] and although the amount of net unrealized built-in gain attributable to the property held for sale in the ordinary course of its business is $200,000, Corporation X recognizes under Code §1363(e) only the $100,000 in gain as of the date of liquidation attributable to the property held for sale in the ordinary course of business. By operation of Act §633(d)(1) - (7) all gain attributable to the investment property avoids corporate level gain recognition on the liquidation because Corporation X was a qualified corporation that liquidated prior to 1989. Moreover, for the same reason, former §1374 does not apply even though gain on the investment property entirely avoided the revised §1374 tax and such realized gain, if it had been recognized, would have exceeded both $25,000 and 50% of Corporation X's taxable income for the year. Only $100,000 of the $200,000 in net unrealized built-in gain attributable to the property held for sale in the ordinary course of business was subject to corporate level tax because Corporation X's taxable income for the year had it been a C corporation would have been only $100,000.[26]

Comment: Even though at the time of the liquidation in the above example, the property held for sale in the ordinary course of business was worth only $100,000 in excess of Corporation X's basis in it, Corporation X would have been liable for the revised §1374 tax on all $200,000 of net unrealized built-in gain attributable to such property if the corporation had earned an additional $100,000 in taxable income during 1988 through operations or as a result of the distribution in liquidation of other inventory or property held for sale or of short term capital gain assets. On the other hand, Corporation X would have had no tax under revised §1374 if it had losses of $100,000 either from 1988 operations or as a result of the distribution in the liquidation of inventory, property held for sale in the ordinary course of business or short-term capital assets.[27]

II. Amendments to Personal Holding Company Rules

A. Background

Corporations that are classified as personal holding companies are subject not only to regular corporate income tax, but also to a 50% tax on personal holding company income that is not distributed to shareholders.[28] The purpose of this rule is to prevent individuals from using the corporate form to accumulate passive income and thereby avoid higher personal income tax rates. The statutory approach is to tax such income at the maximum marginal rate for personal income. The personal holding company tax applies to corporations that meet the definition of a personal holding company without regard to the intentions of the shareholders in forming the corporation.

A corporation is a personal holding company if, (1) at any time during the last half of the taxable year, more than

[23] It is possible that the Service could, in determining whether former §1374 applied to a qualified S corporation, reduce the corporation's taxable income by the amount of gain subject to tax under revised §1374 in the year. However, it would be difficult to read former §1374(a)(1) to reach such a result. It is also possible that the Service could include as "net capital gain," for purposes of former §1374(a)(1), built-in capital gain recognized and taxed under revised §1374. However, the logical extension of such an interpretation would be to impose both the tax called for under former §1374 and the tax imposed under revised §1374 to such built-in capital gain, which was clearly never intended.

[24] The qualified corporation transition rule of Act §633(d)(1) - (7) is not by its terms limited to C corporations. When the eagerly anticipated technical corrections bill clarifies the reference to the provisions which the qualified corporation exception modifies, relief to all qualified corporations from the corporate gain level gain recognition imposed by Act §631 through 633 should be provided. *See* footnote 18, *supra*.

[25] Former §1363(e)(1).

[26] Revised §1374(b)(1).

[27] Revised §1374(b)(1).

[28] §541.

50% of its stock is owned by five or fewer individuals and (2) at least 60% of its adjusted gross income is "personal holding company income." [29] Personal holding company income is that portion of adjusted gross ordinary income consisting of dividends, interest, royalties and certain other types of income.[30]

A foreign personal holding company is a foreign corporation (1) over 50% of the total value of the stock of which is owned directly or indirectly by 5 or fewer individuals who are citizens or residents of the United States, and (2) at least 60% (50% with respect to certain corporations) of the gross income of which is foreign personal holding company income.[31] United States shareholders of a foreign personal holding company are treated as having received the undistributed foreign personal holding company income as a dividend on the last day of the corporation's taxable year.[32]

B. Rate Reduction

Act §104(b)(8) amends §541 by reducing the personal holding company tax rate from 50% to 38.5% in the case of taxable years beginning in 1987; a rate of 28% will apply for 1988 and later tax years. This amendment conforms the tax rate on undistributed personal holding company income to the maximum individual income tax rates under the 1986 Act.

C. New Exception For Computer Software Royalties

1. General Exclusion

Section 543(d), as added by Act §645(a)(2), excludes from the definition of personal holding company income "active business computer software royalties" received by a corporation in connection with the licensing of computer software.

In order to quality for the exclusion, the royalties must satisfy a four-part test, as follows:

(a) The royalties must be received by a corporation engaged in the active conduct of the trade or business of developing, manufacturing or processing computer software, and software from which the royalties are derived must be either developed or manufactured by the corporation (or its predecessor)[33] in connection with this trade or business, or directly related to the trade or business;[34]

(b) Such royalties constitute at least 50% of the corporation's ordinary gross income for the taxable year (the "50% test").[35]

(c) Deductions allowable under §§162, 174 and 195 that are properly allocable to the software trade or business must equal or exceed 25% of the corporation's ordinary gross income for the taxable year, or the average of these deductions for 5-taxable year period ending with such taxable year must be at least 25% of the average ordinary gross income for such period (the "25% test");[36] and in the case of a corporation that has not been in existence for at least 5 years, the period of its existence is to be substituted for the 5-taxable year period.

(d) The sum of (1) dividends paid (determined under §562), (2) dividends deemed paid (under §563(c)) and (3) consent dividends (determined under §565), equals or exceeds the amount, if any, by which personal holding company income exceeds 10% of ordinary gross income of the corporation for the taxable year.

Computer software royalties that satisfy these tests will not be considered personal holding company income for the purpose of determining whether a corporation is a personal holding company (*i.e.*, whether at least 60% of its adjusted gross income is personal holding company income). Thus, the higher the percentage of computer software royalties that constitute a corporation's adjusted gross income, the less likely it is that the corporation will be classified as a personal holding company.

Note: The rules for the exclusion of active business computer software royalties are structurally similar to the exceptions for rents, and mineral royalties and copyright royalties under §§543(a)(2), (3) and (4).

Act §645(a)(3) also modifies the definition of foreign personal holding company income by excluding active business computer software royalties.[37]

2. Special Rules

The general rules excluding active business computer software royalties from the definition of personal holding company income (and foreign personal holding company income) are subject to a number of refinements.

For purposes of the 25% test, new §543(d)(4)(B) stipulates that a deduction shall not be treated as allowable under §162 if it is specifically allowable under any other section. This rule prevents deductions allowable under §174 from being counted twice in applying the 25% test, and excludes deductions attributable to, for example, interest expense under §163.

Also, new §543(d)(4)(C) limits the deduction for compensation paid to principal shareholders for purposes of the 25% test. Thus, no deduction may be taken into account with respect to compensation for services rendered by the 5 shareholders holding the largest percentage (by value) of the outstanding stock of the corporation. Two special rules apply for this purpose. Deductions for compensation paid to less than 5% (by value) shareholders is not excluded,[38] and stock attribution solely by virtue of ownership by a partner (§544(a)(2)) is disregarded.[39]

For purposes of the 10% test, personal holding company income is computed by (a) excluding active business computer software royalties, and interest income of the corporation for any taxable year (i) which is in the 5-taxable year

[29] §542(a).
[30] §543.
[31] §552.

[36] §543(d)(4).
[37] §553(a)(1).
[38] §543(d)(4)(C)(i).
[39] §543(d)(4)(C)(ii).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

period beginning with the later of the first taxable year of the corporation or in which the software business was first conducted and (ii) during which the active business, 50% and 25% tests were satisfied, and (b) including adjusted income from rents and mineral royalties. §543(d)(5)(B).

Example: For its taxable year ending December 31, 1988 (its second taxable year), Corporation A has $100,000 of ordinary gross income of which $50,000 is received as royalties in connection with the licensing of computer software, $10,000 is interest income and $40,000 is rental income. Corporation A meets the active business and 25% tests for the taxable year. Provided that Corporation A distributes (or is deemed to distribute) at least $30,000 to shareholders, the royalty income will qualify as active business computer software royalties.

Finally, §543(d)(6) provides a special rule under which a taxpayer that receives software royalties will be deemed to have met the four-part test for active business computer software royalties if a member of the taxpayer's affiliated group of corporations meets the tests with respect to the software concerned. The §1504(a) definition of "affiliated group" applies for this purpose.[40]

D. Effective Dates

The exception for computer software royalties is effective for royalties received before, on, or after December 31, 1986.[41]

III. Technical Amendments Relating to Affiliated Group Definition

A. Background

1. Affiliated Group Definition

Prior to the amendments to Code §1504 made by the Tax Reform Act of 1984,[42] an affiliated group for purposes of determining eligibility to file a consolidated return was defined as one or more chains of "includible corporations" connected through stock ownership with a common parent corporation, which was itself an includible corporation, if (i) the common parent owned directly stock possessing at least 80% of the voting power of all classes of stock and at least 80% of each class of the nonvoting stock of at least one of the other includible corporations, and (ii) any other includible corporations were connected to each other or to the common parent under the same basic stock ownership test. For purposes of the stock ownership test, certain stock, such as nonvoting stock that was limited and preferred as to dividends, was not required to be considered.

Under the prior definition, a profitable corporation through the use of preferred stock, stock with varying voting rights, and stock with conversion features could acquire a net operating loss corporation even though the profitable corporation would own substantially less than 50%, in terms of value, of the stock of the loss corporation. To counter this abuse, as well as other perceived consolidated return abuses, the 1984 Tax Reform Act completely revised the definition of an affiliated group, to incorporate more stringent rules.[43] Under the revised definition, corporations must be linked together through ownership of at least 80% of the fair market of all outstanding stock, as well as 80% of the voting power of all classes of stock, in order to constitute an affiliated group. In determining stock ownership for this purpose, only nonvoting, nonparticipating stock that is limited and preferred as to dividends, redemption rights, and liquidation rights and that is not convertible into any other class of stock may be disregarded.

This revised, more stringent definition was generally effective for taxable years beginning after 1984.[44] However, under a grandfather rule,[45] the more stringent definition did not apply with respect to any corporation that on June 22, 1984, was a member of an affiliated group filing a consolidated return for such corporation's taxable year which included that June 22nd date, for purposes of determining whether that corporation continues to be a member of that group for taxable years beginning before January 1, 1988. The grandfather rule would cease to apply once a "sell-down" with respect to the corporation involved occurred.[46] A "sell-down" occurs if at any time after June 22, 1984, (i) more than a *de minimis* amount of stock of the corporation is sold or exchanged (including by redemption) or is issued other than in the ordinary course of business, and (ii) the requirements of revised §1504(a) are no longer satisfied after the sale, exchange, or issuance.

2. Includible Corporations — DISCs

As noted above, in order to qualify as a member of an affiliated group, a corporation must be an "includible corporation." Under existing law, a former DISC is not an includible corporation nor is a subsidiary of a former DISC. *See* Senate Report at 908. The reason for excluding a former DISC or former DISC subsidiary was that, prior to the 1984 Tax Reform Act, accumulated DISC income of a former DISC was included in the gross income of its shareholders as a dividend over a period of up to 10 years. Under Regs. §1.1502-14, if a former DISC and its parent could file consolidated returns, the former DISC's accumulated DISC income would be eliminated as a dividend from the parent's return and, consequently, would go untaxed. *Id.*

B. Analysis of Technical Corrections Affecting Affiliated Groups

1. Overview

The technical correction provisions of the 1986 Tax Reform Act,[47] (i) make a minor change in the definition of an affiliated group with respect to excludable stock, (ii) clarify the operation of the grandfather and sell-down rules, (iii) provide the common parent with an election to subject an affiliated group to the 1984 Act provisions regardless of the application of transition or grandfather rules, and (iv) and exclude any current DISC or other corporation having

[44] P.L. 98-369, §60(b)(1).
[45] P.L. 98-369, §60(b)(2).
[46] *Id.*, §60(b)(3).
[47] 1986 TRA, §1804(e).

accumulated DISC income derived after 1984 as a qualifying member of an affiliated group.

In addition, the technical corrections conform the definition of a subsidiary eligible to be liquidated under §332 with the more stringent 1984 Act definition of an affiliated group.

2. Excludable Stock Amendment

As amended by the 1986 Tax Reform Act, §1504(a)(4) excludes stock, if, among other things, the stock has redemption and liquidation rights which do not exceed the issue price of the stock (except for a reasonable redemption or liquidation premium). Prior to this amendment, such stock could be excluded only if the redemption and liquidation rights did not exceed the paid-in capital or par value represented by such stock (except for a reasonable redemption premium in excess of such paid-in capital or par values). The purpose of this change is to make irrelevant the accounting treatment given to the issuance of the stock.[48]

3. Grandfather Rule Clarifications

The 1986 Tax Reform Act, §1804(e)(2), clarifies that the grandfather rule of 1984 TRA §60(b)(2) will cease to apply as of the first day after June 22, 1984, on which the corporation involved would not qualify as a member of the group under pre-1984 TRA law. Thus, for example, a corporation that ceased to be a member of a group on July 31, 1985, under prior law but which on July 31, 1985, and thereafter qualifies as a member of the group under the 1984 Tax Reform Act's more stringent rule continues to be treated as a member of the group.[49] Moreover, a "sell-down" will not be deemed to occur and, consequently, the grandfather rule will continue to apply, if the percentage interest by fair market value in the stock of the corporation involved held by other members of the group does not decline as a result of the sale, exchange, or redemption of such corporation's stock.[50]

4. Election of Post-1984 Act Rules

Another change made by the technical corrections of the 1986 Tax Reform Act is to allow a common parent of an affiliated group to elect to have the more stringent 1984 Act definition of an affiliated group apply to such group for taxable years beginning after December 31, 1983, regardless of any grandfather or transition rule. Any election, once made, is irrevocable.[51]

5. Includible Corporations — Exclusion of Post-1984 DISCs

With respect to the definition of an includible corporation, the 1986 Tax Reform Act revises §1504(b)(7) to provide that a DISC or any or corporation that has accumulated DISC income that is derived after December 31, 1984, is excluded. However, it is intended that this definitional change will not affect the status of certain S corporations with DISC subsidiaries that were grandfathered by the Subchapter S Revision Act of 1982.[52]

6. Sections 332, 337, and 338 Conforming Changes

Finally, the 1986 Tax Reform Act technical corrections make a series of conforming amendments to the definitions of a controlled subsidiary for purposes of §332 (relating to the tax-free liquidation of a subsidiary), §337(c)(3) (relating to certain distributee corporations), and §338 (relating to a qualified stock purchase for purposes of the deemed asset acquisition election of §338).

Prior to the 1984 Act, the definition of a corporation qualified as a subsidiary that could be liquidated tax-free under §332 was substantially similar to the general definition applied in determining whether the subsidiary was a member of an affiliated group under pre-1984 Tax Reform Act §1504. Although the 1984 Act revised §1504, it did not change §332. According to the Senate Finance Committee Report,[53] this created a discontinuity between the two sections that could produce unacceptable tax consequences. The Report gives the following example.

> *Example*: Assume that beginning on January 1, 1985, P corporation's ownership of S Corporation satisfied §1504 (as amended by the 1984 TRA) but not §332 and that, under §1504, P and S filed consolidated returns for the 1985 calendar year. Assume further that (i) S adopted a plan of complete liquidation in 1985, sold all its assets, and then liquidated within twelve months from the date the plan was adopted, and (ii) P did not liquidate. Because S's liquidation did not qualify under §332, pre-1986 TRA §337 would apply to accord nonrecognition to the asset sales. That would be an appropriate result so long as P were taxed on S's liquidation, and that would, in fact, generally be the result given the inapplicability of §332. However, since P and S filed a consolidated return, S's liquidation would not be taxable to P under Regs. §1.1502-14(b), assuming S distributed no cash to P in the liquidation. Therefore, S could dispose of all of its assets and liquidate with neither P nor S incurring any current tax liability.

To prevent this result, the 1986 technical corrections, §1804(e)(6), revise §332(b)(1) to provide that the corporation receiving the liquidating distribution must, on the date of the adoption of the plan of liquidation and at all times until receipt of the liquidating distribution, be the owner of stock in the liquidating subsidiary meeting the requirements of revised §1504(a)(2). The Senate Finance Committee Report [54] states that in applying §1504(a)(2) for this purpose, the objective is to harmonize §332 and §1504(a)(2). Thus, it is generally intended that other parts of §1504(a), such as §1504(a)(4), are applicable. But, according to the Finance Report, §1504(a)(5)(E) is not applicable because it is not concerned with §1504(a)(2) but rather with the effect of transfers within a group of a member's stock. The revised §332(b)(1) definition also applies even if one (or both) of the corporation's involved is not an includible corporation under §1504(b). For example,

[48] S. Rep. No. 665, 99th Cong., 2d Sess. 908-909 (1986)("Senate Report").
[49] *Id.* at 909.

[52] Senate Report at 909.
[53] Senate Report at 910.
[54] *Id.*, at 911.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

under this rule, S in the Example above could be liquidated under §332, but S could avail itself of §337 only if P complied with §337(c)(3)(A)(i) (as in effect before the amendments made by 1986 TRA §631, discussed in Chapter 36, *supra*).

The 1986 technical corrections, §1804(e)(7), also revised the term "distributee corporation" under §337(c)(3). As amended, the term includes any corporation receiving a distribution in complete liquidation of the selling corporation to which §332 applies and includes each corporation upstream which receives a distribution complete liquidation of another distributee corporation to which §332 applies. For example, assume (i) M owns 100% of the stock of N, (ii) N owns 100% of the stock of O, and (iii) the three corporations file a consolidated return under §1504 (as amended by the 1984 TRA) for the calendar year 1985. If M transfers 30% of the stock of N to O, the three corporations would continue to be eligible, or be required, to file a consolidated return under §1504(a)(5)(E). If N adopted a plan of complete liquidation, sold all its assets, and liquidates within twelve months, under Regs. §1.1502-34, both M and O generally would be entitled to tax-free treatment under §332. However, N could not avail itself of §337 unless, among other things, both M and O complied with §337(c)(3)(A)(i). *See* Senate Report at 911.

Finally, the 1986 technical corrections, §1804(e)(8), conform the definition of "qualified stock purchase" in §338(d)(3) to the definition in §1504(a)(2).

C. *Effective Dates*

The 1986 TRA technical correction changes to the definition of excludable stock and the grandfather and sell-down rules, addition of the election to have the revised definition apply, and the exclusion of a DISC or any other corporation having accumulated DISC income are effective as if included in the 1984 Tax Reform Act. *See* 1986 TRA, §1881.

The revision to the §332(b)(1) definition generally applies with respect to plans of complete liquidation adopted after March 28, 1985. The revised definition also applies with respect to plans of complete liquidation adopted on or before March 28, 1985, pursuant to which any distribution is made in a taxable year beginning after 1984 (1983 in the case of an affiliated group that elects the revised, more stringent affiliated group definition) but only if the liquidating corporation and any corporation that receives a distribution in complete liquidation of such corporation are members of an affiliated group of corporations filing a consolidated return for the taxable year which includes the date of distribution.[55] The revised definition does not, however, apply if the liquidating corporation is a member of an affiliated group of corporations under §60(b)(2),(5),(6), or (8) of the Tax Reform Act of 1984, for all taxable years that include the date of any distribution pursuant to the plan of liquidation.[56] Thus, any affiliated group qualifying under the grandfather or other transition rules of the 1984 Act will continue to be subject to the former §332(b)(1) definition for purposes of a subsidiary liquidation.

The definition of a "distributee corporation" for purposes of §337(c)(3) is effective for plans of complete liquidation pursuant to which any distribution is made in a taxable year beginning after 1984 (after 1983 for an affiliated group to which an election to apply the revised §1504(a) affiliated group definition applies). 1986 TRA §1804(e)(7)(B).

Finally, the revised definition of a "qualified stock purchase" for §338 purposes applies in cases where the 12-month acquisition period (as defined in §338(a)(1) the Internal Revenue Code of 1954) begins after December 31, 1985.[57]

Note: The Senate Finance Committee Report sets forth six examples illustrating the application of the effective date rules for purposes of the revised §332 definition. The Report and the Examples are reproduced at page 610 of Volume I of this portfolio (pages 912 and 913 of the Senate Report.)

IV. Technical Corrections to the Corporate Reorganization Rules

A. *Overview*

Act §1804(g) makes two changes in the treatment of corporate reorganizations. Although these changes are denominated as technical corrections to the Tax Reform Act of 1984, Congress recognized that at least one of these changes has substantive implications by making its effective date prospective only.

B. *Treatment of Transferor Corporations*

Under prior law, several aspects of the treatment of target corporations in §368(a)(1)(C) and non-divisive §368(a)(1)(D) reorganizations upon their receipt and distribution of stock, securities, or boot were unclear or dependent upon whether such corporations distributed property to their shareholders. In the 1986 TRA, Congress attempted to introduce a somewhat more coherent system for the treatment of such corporations.

Section 1804(g) of the 1986 TRA amends Code §361 to provide in effect that target corporations in (C) and (D) reorganizations do not recognize gain or loss on their transfer to the acquiring corporation of property pursuant to the reorganization even to the extent that they receive — but do not distribute — boot received in exchange therefor. Instead, recognition generally is imposed, if at all, on the acquiring corporation on its transfer of boot or on the target corporation on its distribution to shareholders and creditors of retained assets. *See* Conference Report at II-843-44, Senate Report at 914.

Code §361 as amended makes clear that the liquidation rules do not apply to target corporations that liquidate pursuant to the plan of liquidation.[58] It thus reverses the premise behind *General Housewares Corp. v. United States*,[59] which applied former §337 to exempt gain on a target corporation's sale of stock received in a (C) reorganization as consideration for its assets. Such corporations will

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

recognize gain [60] — but not loss — on the distribution to shareholders and creditors in the reorganization of property not transferred to the acquiring corporation and of boot received from the acquiring corporation but on which the latter avoided recognition.[61] Because §§336 and 337 do not apply, distributions of retained property and certain boot even to 80% corporate shareholders will trigger recognition of gain to the target corporation under revised §361(c). Target corporations in such reorganizations will take a carryover basis in such boot, increased or decreased by the amount of gain or loss recognized by acquiring corporations on their transfer of such boot.[62] However, since acquiring corporations will recognize gain or loss on the transfer of such boot, target corporations will in most cases not realize any gain or loss on the distribution of any boot received.[63]

In general, the provisions enacted pursuant to 1986 TRA §1804(g) treat transfers to creditors pursuant to (C) and (D) reorganization plans similar to distributions to shareholders.[64] Thus, transfers to creditors of stock or securities of the acquiring corporation (or its controlling parent corporation) received in such a reorganization do not cause the target corporation to recognize gain, except to the extent such transactions generate cancellation of indebtedness income.[65] However, transfers to creditors of retained property or certain boot would cause the target corporation to recognize gain under revised §361(c).

The above provisions are effective for transactions pursuant to plans of reorganization adopted after October 22, 1986. Act §1804(g)(4).

C. Drop-Down of Assets Acquired in Reorganizations

Under prior law, the Service took the position that a transaction is "described in" Code §368(a)(1)(D) — and thus under Code §368(a)(2)(A) cannot qualify as a reorganization under Code §368(a)(1)(C) — where substantially all of the assets of a corporation are transferred to a second corporation controlled by the acquired corporation or its shareholders, even though the transaction does not qualify as a (D) reorganization because it does fulfill the requirements contained outside §368(a)(1)(D) for tax free treatment.[66] Section 368(a)(2)(C) permits an acquiring corporation in a (C) reorganization — but not in a (D) reorganization — to transfer to a controlled subsidiary assets acquired from a target corporation without jeopardizing tax free treatment of the transaction.

In the 1984 Tax Reform Act, Congress expanded the definition of "control" for purposes of determining whether a transaction is "described in" §368(a)(1)(D), reducing the threshold for control to 50% and taking into account ownership by attribution. *See* former §368(c)(2). Thus, where a corporation transferred substantially all of its assets to a commonly controlled corporation solely for stock but that corporation dropped those assets down to a subsidiary, there was doubt whether the transaction would qualify under any tax free reorganization provision since the assets would ultimately be acquired by a corporation indirectly controlled by the transferor corporation and thus would be "described in" §368(a)(1)(D), but would not qualify for tax-free treatment as a (D) reorganization because of the asset drop-down.

Section 1804(h) of the 1986 TRA deletes paragraph (2) of §368(c) and adds subparagraph (H) to Code §368(a)(2) to provide that the attribution rules introduced in the 1984 Tax Reform Act are applicable only for determining whether a transaction "qualifies under" §368(a)(1)(D), and not whether a transaction "is described in" that section. The Act also specifies that the priority rule in §368(a)(2)(A) does not apply, for purposes of the drop-down rule in §368(a)(2)(C), to characterize as a (D) reorganization a transaction described in both §368(a)(1)(C) and §368(a)(1)(D). *See* Act §1804(h)(3). Thus, in a reorganization qualifying as a (C) reorganization without regard to §368(a)(2)(A), the acquiring corporation may drop down the assets of the target corporation to a controlled subsidiary without thereby jeopardizing tax free treatment.[67]

This provision is effective for transactions pursuant to reorganization plans adopted after July 18, 1984. *See* 1986 TRA, §1881, and 1984 TRA, §64(b).

V. Technical Corrections to the Collapsible Corporation Rules

A. Background

As in effect before the 1986 TRA effective dates, §341(a) provides that gain from (1) the sale or exchange of stock in a collapsible corporation and (2) certain distributions by a collapsible corporation is to be treated as ordinary income to the extent that such gain would otherwise be gain from the sale or exchange of a capital asset held for more than 6 months. Accordingly, to the extent that stock in a collapsible corporation is sold or redeemed less than 6 months after its acquisition by the shareholder (resulting in short-term capital gain), the collapsible corporation rules do not apply.

Ordinarily, the inapplicability of §341 to short-term capital gains is of no consequence, since such gain is taxable at ordinary income rates. If, however, the shareholder has a substantial short-term or long-term capital loss, of which only a limited amount may be set off against ordinary income,[68] the fact that §341 applies only to gain that would otherwise be long-term capital gain is potentially significant, since the losses might be used more quickly.

Also, since the §341 rules do not apply to short-term capital gain, the complete liquidation of a corporation under §333 may be carried out without fear of collapsibility where the shareholders hold the stock for less than 6 months before the liquidation. This approach might prove useful where the corporation is formed to hold property during construction and the shareholders wish eventually to

operate the property in other than corporate from (without paying tax on appreciation in the property).

B. TRA Amendments

Act §1804(i) amends §341(a) so as to provide that the collapsible corporation rules shall apply whether or not the stock has been held for more than 6 months. Thus, what would have been short-term capital gain that could be "netted" against capital loss will be treated as ordinary income.

C. Effective Date

The §341(a) amendment is effective for sales, exchanges and distributions made after September 27, 1985.[69]

VI. Technical Corrections to Redemption Rules

A. Background

Section 304(a) provides that, in general, if each of two corporations are controlled by one or more shareholders, and in exchange for property one of the corporations (the "acquiring corporation") acquires stock in the other corporation (the "acquired corporation"), then the property is considered to have been distributed in redemption of the transferor's stock in the acquiring corporation. Whether the deemed redemption constitutes a dividend (§§302(d) and 301) or full payment in exchange for the transferor's stock (§302(a)) depends upon the extent of the reduction of the transferor's stock interest in the acquired corporation.[70] Before the 1986 TRA amendments, any transaction described in §304 was treated as a contribution by the transferor to the capital of the acquiring corporation.

If a §304 transaction constitutes a dividend to the transferor, the transferor's basis in the transferred stock is added to his basis in his stock in the acquiring corporation.[71] The acquiring corporation's basis in the transferred stock is equal to the transferor's basis in such stock.[72] If the transaction is treated as a distribution in full payment for the stock, the transferor's basis in his acquiring corporation stock remains unchanged.[73] The acquiring corporation's basis in the transferred stock is equal to the transferor's basis, increased by the amount of gain recognized by the transferor.[74]

Since, under pre-1986 TRA law, all §304 transactions are considered contributions to capital, and the basis to the acquiring corporation of the transferred stock is determined with reference to the transferor's basis, the acquiring corporation could not elect under §338 to treat an otherwise qualified acquisition as a deemed asset purchase. Section 338 requires that stock be acquired "by purchase," *i.e.*., that the acquired stock not have a carryover basis.[75]

B. 1986 TRA Amendment

Section 304(a), as amended by Act §1875(b), provides that the contribution to capital rule will not apply if the shareholder is treated as having exchanged its stock under §302(a). Thus, where §302(a) applies, the acquiring corporation is treated as having purchased the stock.

Therefore, under §304, as amended, an acquiring corporation may be eligible to elect §338 treatment of its acquisition of acquired stock.

> *Example*: A and B, who are unrelated, own 80% and 20%, respectively, of Corporation X stock. A, B, and C, all unrelated persons, each own 33⅓% of Corporation Y. A sells all of his Corporation X stock to Corporation Y for cash. Since A's interest in Corporation X is reduced from 80% to approximately 27%, the transaction qualifies as a disproportionate redemption under §302(b)(2). Thus, Corporation Y may elect to treat the acquisition as an asset acquisition under §338.

According to the legislative history, the amendment is not intended to alter pre-existing law treatment of the transferor-shareholder (including the transferor's basis in the stock of the acquiring corporation).[76]

C. Effective Date

The §304(a) amendment is effective with respect to stock acquired after June 18, 1984, in taxable years ending after such date.[77] It is not clear whether Treasury will provide a mechanism for a §338 election by an acquiring corporation that now qualifies for the election, but may not be able to make an election in timely fashion under §338(g)(1) (requiring election not later than the 15th day of the 9th month beginning after the month of the acquisition).

Chapter 39

COOPERATIVE HOUSING

A. L. Suwalsky, Jr., Esq.
Silverstein and Mullens
Washington, D.C.

I. Background

Cooperative housing corporations are governed by a strict set of tax rules [1] which may compare unfavorably with the alternate form of co-ownership of dwelling units, the condominium. Although to the casual layman these forms of co-ownership may seem almost identical, there are very substantial legal and tax differences between cooperatives and condominiums. Both are creatures of modern property law, since they were conceived of during the major period of development of the common law.[2]

Cooperatives and condominiums are similar in that the "unit owner" is entitled to the exclusive use and occupancy of a designated apartment.[3] However, the condominium apartment owner possesses legal title to his dwelling in fee simple and may sell, pledge or encumber it. As such, he is entitled to deduct mortgage interest and property taxes and to treat it for tax purposes the same as the owner of a one-family dwelling. The common elements of the building in which the unit is located are co-owned by the owners of the individual units and maintained and managed by an association of unit owners. The land on which the building is situated may be owned by the co-owners or leased.

The cooperative apartment dweller, on the other hand, does not own his unit. The cooperative housing corporation of which the co-op member is a stockholder normally owns the apartment building and either owns or leases the real property upon which it stands. The individual occupying a dwelling unit owns only shares of stock in the cooperative corporation and is referred to formally as a "tenant-stockholder." Each unit in the cooperative has assigned to it a certain number of shares of stock of the cooperative which must be owned in order to gain occupancy rights to the apartment. When an individual acquires these earmarked shares of stock, he receives a "proprietary lease" to the apartment. If the tenant-stockholder seeks to acquire occupancy rights in a cooperative apartment on credit, he must pledge his cooperative stock and proprietary lease to the lender. Such stock is generally considered personal property so that the lender does not receive a security interest in real property as in the case of a mortgage. If the cooperative corporation owns the improvements or the underlying land, it is liable for property taxes and usually for a mortgage obligation. Because of these distinctions, the tenant-stockholder's right to income tax deductions for a portion of the coop's property taxes and interest payments is governed by special provisions of the Code and the right to such deductions is deemed a matter of "legislative grace."

As might be expected, since the government has created the right to tax deductions for tenant-stockholders, inevitably terms and conditions have been attached to obtaining such deductions — terms and conditions to which the condominium or ordinary homeowner is not subject, and violation of which can result in loss of deductions to an innocent tenant-stockholder. Because of the inequality of treatment between condominium and cooperative owners, there seems to be a slight trend toward liberalizing the tax code requirements for deductions.

In brief summary, Code §216 allows deductions for the tenant-stockholder's "proportionate share" [4] of real estate taxes and interest deductible by the cooperative corporation if the requirements of Code §216(b) are met.[5]

Code §216(b)(1) defines a housing cooperative as a corporation having only one class of stock outstanding and each shareholder of which is entitled solely by reason of ownership of stock to occupy a unit for dwelling purposes. Eighty percent of the gross income of the cooperative must be derived from tenant-stockholders (as rent, usually styled as a "monthly assessment" or "maintenance fee"). A number of other rules are also prescribed by Code §216.

II. Tax Reform Act Changes

Under Act §644(a), a person other than an individual (*e.g.*, a corporation, partnership or trust) is permitted to own a cooperative apartment notwithstanding the fact that such legal person may not occupy the unit without the permission of the coop corporation pursuant to post-TRA §216(b)(5). This can greatly ease the pressure on a coop with unsold apartments or apartments owned by a financial institution because of foreclosure. Pre-TRA Code subsections 216(b)(5) and (6) dealing with stock acquired through foreclosure by a lending institution and stock owned by persons from whom the corporation acquired its property have been discarded and replaced by the afore-

[1] I.R.C. 1954, §216.

[2] They are sometimes styled for purposes of statutory classification as "horizontal property regimes."

[3] Referred to hereafter for convenience as an "apartment" — the property could be a town house or even a detached house, however. Other forms of co-ownership, which include co-ownership of offices, house trailers, parking spaces and boat slips, are beyond the scope of this discussion.

[4] That portion of the interest and taxes of the coop determined by reference to the ratio of the number of shares owned to all outstanding shares, notwithstanding the value of the apartment held under the shareholder's proprietary lease.

[5] Additionally, Code §216(c) provides in certain cases that the shares of a tenant-stockholder may be treated as property subject to the allowance for depreciation under Code §167(a).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

mentioned rule regarding prior approval of occupancy by the cooperative corporation. In retrospect, there seems to have existed no logical reason to limit coop apartment ownership to individuals. This may once have stemmed from misguided idealism about home ownership.[6]

Post-TRA subsection 216(d) provides that no deduction is allowable to any stockholder for amounts paid to the coop which are chargeable to the coop's capital account. Any such amounts must be capitalized and added to the shareholder's stock basis. Thus, if an assessment or a portion of the monthly maintenance fee paid by a corporate shareholder is for capital improvements, the shareholder cannot deduct such amount.[7]

Another provision makes it clear that in the case of a unit used by the shareholder in his trade or business, depreciation is limited to the adjusted basis of the stock owned.[8]

A further change permits the coop to allocate to a shareholder an amount of interest and taxes proportionate to the value of his unit rather than basing the allocation solely upon the number of shares the stockholder owns.[9]

Uncodified technical changes are made by the Act relating to the refinancing of certain "Qualified Cooperative Housing Corporations." [10]

III. Effective Date

The changes to Code §216 outlined above are generally applicable to taxable years beginning after December 31, 1986.[11] For a full discussion of the tax treatment of these forms of property ownership, both before and after the effective date of TRA-1986, *see* 408 T.M., *Cooperative and Condominium Apartments.*

Chapter 40

TAX TREATMENT OF REGULATED INVESTMENT COMPANIES

Andrew Huddleston, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

To be taxed as a regulated investment company (RIC), an entity must satisfy certain organizational, source of income, income distribution and asset diversification requirements, and must elect to be taxed as a RIC.[1] First, the entity must be a domestic corporation (or an association taxable as a corporation) that is registered under the Investment Company Act of 1940[2] as a management company or unit investment trust (or is exempt from registration as a common trust fund or similar fund).[3] Second, the entity must satisfy two income source requirements: (i) at least 90% of its annual gross income must be derived from dividends, interest, payments on certain securities loans, and gains from the sale or other disposition of stock or securities;[4] and (ii) less than 30% of its gross income may be derived from the sale or other disposition of stock or securities held for less than three months.[5] Third, the entity must distribute to shareholders each year at least 90% of the sum of its taxable income (without regard to capital gains) and its net tax-exempt income.[6] Fourth, the entity must satisfy asset diversification requirements, which limit the extent to which the assets of the RIC may include securities (other than government securities and securities of other RICs) either of any one issuer or any issuers a substantial portion of whose voting securities are owned by the RIC.[7]

Corporations that qualify as RICs are generally taxed under the rules applicable to regular subchapter C corporations. Unlike C corporations, however, RICs are allowed a deduction for dividends paid to shareholders, and thereby avoid the corporate-level tax on any income distributed to shareholders. In addition, any undistributed taxable income of a RIC (other than capital gains) is taxed at the highest corporate tax rate.[8]

Shareholders treat most distributions from a RIC as they would distributions from any other corporation. Thus, dividends received by individual shareholders generally are taxed as ordinary income to the extent of the RIC's earnings and profits. Special rules, however, provide that dividends paid out of net capital gains or, in the case of certain RICs, tax-exempt interest, are treated by the shareholders as long-term capital gains or tax-exempt interest, respectively.[9]

Many RICs are organized as "series" funds. A series fund is a single legal entity (either a corporation or a business trust) made up of several investment funds, each of which issues a separate class of stock of the entity. The owners of each separate class of stock have an interest only in the assets and income of the separate fund. Although the IRS has consistently treated a corporation organized as a series fund as a single corporation for tax purposes,[10] it has ruled privately that each series in a fund organized as a business trust would be taxed as a separate corporation.[11]

A RIC may adopt any fiscal year as its taxable year. It may treat certain dividends paid after the close of its taxable year as having been paid during the taxable year and deduct them during that year. Its shareholders are not required to include the dividends in income until the year in which they are actually paid.[12]

Before the Tax Reform Act of 1986, a taxpayer could buy stock in a RIC immediately before the ex-dividend date for payment of an exempt-interest dividend, hold the stock for 32 days after receiving the dividend, then sell it and recognize any loss on the sale.[13]

A personal holding company may qualify to be taxed as a RIC. However, if a RIC is also a personal holding company, any investment company taxable income which it earns will be taxed at the highest rate applicable to corporations.[14]

Under pre-1986 TRA law, RICs are not "third-party recordkeepers" for purposes of the notice requirements imposed by Code §7609 when the IRS issues summonses.

II. Overview—Statutory Changes

The Act makes 10 major changes in the tax treatment of regulated investment companies:

[1] Code §851-855.

[14] Pre-1986 TRA Code §852(b)(1).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

First, §651(a) of the Act amends chapter 44 of the Code by adding new Code §4982 to provide a nondeductible excise tax of 4% on the excess of each calendar year's required distribution of income over the amount actually distributed to stockholders. The required distribution is 97% of the RIC's ordinary income for the calendar year plus 90% of its capital gain net income measured for the year ending on October 31 in the calendar year. The required and actual distributions for a calendar year will be adjusted to account for excesses or deficits in the previous calendar year's distributions. Actual distributions will also include amounts taxed in previous years although not actually distributed.

Second, §651(b) of the Act modifies Code §§852 and 855 to provide for constructive receipt by RIC shareholders of dividends declared in December and paid before February 1 of the following year. The overall effect of the excise tax and the constructive receipt provisions should be to compel RIC shareholders to recognize almost all RIC income in the same calendar year that it is deducted by a RIC.

Third, §654 of the Act modifies Code §851 to provide that, when a RIC is organized as a series fund, each fund will treated as a separate corporation for tax purposes.

Fourth, §653 of the Act modifies Code §851 to net the increases and decreases of qualified hedges so that the increases will not be included in RIC income; thus, they will no longer be counted in determining whether or not the RIC has exceeded its yearly limit on income from sales of stock held for less than three months.[15]

Fifth, §653(b) of the Act amends Code §851(b) to expand the definition of RIC income to include gains from sources related to its business of investing in stock or securities; these sources include (but are not limited to) gains from foreign currency dealings, options and futures contracts.

Sixth, §132(a) of the Act adds new Code §67(c) which will prohibit by regulations the deduction of certain operating expenses by conduit entities such as RICs, if the these same expenses would be subject to the new 2% floor on deductions if they are reported by individual taxpayers. Thus, if RIC expenses fall into the investment expenses category of §212, they must be reported in income ratably by RIC shareholders and they will be deductible by each shareholder only to the extent that they exceed 2% of adjusted gross income.

Seventh, §657 of the Act amends the requirement that RICs distribute all dividends pro rata to allow certain preferential dividends to large investors to reflect the lower costs of administration due to the size of their investments.

Eighth, §652 of the Act amends Code §851(a) to expand the definition of a RIC to include business development companies.

Ninth, §1804(c) of the Act denies any loss on the sale or exchange of RIC stock held by a taxpayer for six months or less to the extent that the taxpayer received exempt-interest dividends with respect to that stock.

Tenth, §1878(j) of the Act eliminates the requirement that a corporation maintain shareholder records to qualify as a RIC. Nonetheless, if records are not maintained, the RIC is taxed on any undistributed income.

The Act also extends the time allowed for certain notices to be sent to shareholders from 45 to 60 days and provides that RICs are treated as third-party recordkeepers under Code §7609 for purposes of IRS summonses.[16]

III. Detailed Analysis

A. The 4% Excise Tax

The Act amends the Code by adding a new excise tax on the excess of the required distribution by a RIC for each calendar year over the amount it actually distributes (the "distributed amount") during the year.[17] This tax must be paid by March 15 following the end of the calendar year. The required distribution is defined generally as 97% of the RIC's ordinary income received during the calendar year plus 90% of its capital gain net income for the one-year period ending on October 31 of the calendar year. This amount must be increased by the "grossed-up required distribution" for the preceding calendar year less the distributed amount for that year. The grossed-up required distribution for any year is defined as 100% of both ordinary income and capital gain net income (again, for the year ending on October 31) plus the same increase from the previous year for the excess of the RIC's grossed-up required distribution over its actual distribution. It is, in effect, the taxable income of the RIC for the previous year plus all amounts from earlier years which are not treated under this provision as having been distributed.[18]

The ordinary income of a RIC for purposes of Code §4982 is its investment company taxable income as defined in §852(b)(2) and calculated for the calendar year but without deducting for dividends paid or taking any gain or loss for the sale of any capital asset. Its capital gain net income is the same as that of §1222(9), the excess of gains from sales or exchanges of capital assets over the losses from such sales or exchanges, calculated for the year ending on October 31 of the calendar year. The distributed amount for any calendar year is the sum of the dividends paid, as defined in Code §561, during that calendar year plus any amounts on which the RIC has paid corporate income tax and the excess from any previous year of that year's distributed amount over the same year's required distribution. If a RIC pays a deficiency dividend, the dividend will be taken into account in the calendar year it is paid and the income giving rise to it will also be treated as arising during that year. Thus, unlike the treatment of a deficiency dividend in Code §860, the payment of a dividend to satisfy a RIC's income distribution requirements will not cause retroactive readjustment which might subject the RIC to the 4% excise tax. The distributed amount will not, however, be increased by any dividends distributed

after the calendar year (covered by Code §855) or by any exempt interest dividend as defined in Code §852(b)(5).

It would be possible for a RIC to fail to meet the requirements for avoiding the excise tax when losses incurred after October 31 but before the close of the RIC's taxable year would prevent it from having sufficient earnings and profits for its distributions to be treated as dividends. To prevent this, the Act provides that a RIC is considered to have sufficient earnings and profits to treat any distribution as a dividend when it is designated as such by the RIC. This does not, however, cover any distribution which would be treated as a redemption under Code §302(a) and will apply only to the extent that the distributions during any calendar year do not exceed the RIC's required distribution for the calendar year.[19]

The Act also provides that capital losses incurred after October 31 of any taxable year are not included in calculating net capital gain for purposes of determining the amount of capital gain dividends which a RIC may distribute during the year.[20] Any capital losses incurred after October 31 are treated as arising after the first day of the next taxable year. The Treasury is authorized to issue regulations which will apply the same rule for determining a RIC's taxable income. The Conference Report states that these regulations should be drafted to prevent use of this rule for tax avoidance, such as paying return of capital dividends in a succeeding year or offsetting the taxes that would be incurred on capital gains recognized in the following year.[21]

There is one exception to the period specified for computing a RIC's capital gain. A RIC which uses a taxable year ending on either November 30 or December 31 may make an election to use its actual taxable year, rather than the year ending on October 31, to calculate its capital gain net income for purposes of the excise tax distribution requirement. The election is irrevocable.[22]

This change in the tax treatment of RICs was intended to eliminate a method of tax deferral available to RIC shareholders under previous law.[23] When a RIC used a taxable year other than the calendar year or distributed dividends after the close of its taxable year but elected to have these dividends treated as paid in the previous year (under Code §855), its shareholders might defer recognition of significant amounts of income until the following taxable year. A RIC with a taxable year ending on January 31 might distribute dividends to calendar year shareholders during January; the shareholders would not have to report the income until after the end of the following December. Similarly, a RIC with a calendar taxable year might elect to have dividends paid in January treated as having been paid before the end of the previous December; its shareholders recognized this income in the later year although the RIC deducted it in the earlier year.

The original House bill contained no provision concerning the treatment of RICs. The Senate, however, proposed to require all RICs to use the calendar year for tax purposes as well as providing a 5% excise tax on any dividends distributed under the provisions of Code §855.[24] The Conference, in response to criticism of the effects of this change, chose instead a more complicated pattern to ensure that RICs' income would be distributed currently without denying them flexibility in the choice of a taxable year.[25]

The amendments creating the 4% excise tax apply to calendar years beginning after December 31, 1986.[26]

B. Constructive Inclusion of Dividends

The Act also amends Code §§852 and 855 to provide that any dividend declared by a RIC in December of any calendar year and payable to shareholders as of a specified date in that month are deemed paid by the RIC and received by each shareholder on the record date, unless the dividend is actually paid on or after February 1 of the following year.[27] This provision does not apply for purposes of §855(a), thereby allowing a RIC that has a taxable year other than the calendar year to treat the dividend as paid prior to December. This amendment applies to calendar years beginning after December 31, 1986.[28]

C. Tax Treatment of Series Funds

Many RICs, referred to as series funds, are made up of several investment funds, each of which is beneficially owned by a separate class of shareholders. Under previous law, if a RIC was organized as a corporation, it was treated as a single corporation, even if it consisted of several funds. By contrast, there was uncertainty whether a series RIC organized as a business trust should be treated as a single corporation or as multiple corporations.[29]

The Act amends Code §851 to provide that each separate series of a series fund RIC will be treated for tax purposes as a separate corporation.[30] A fund is defined as a segregated portfolio of assets, the beneficial interests in which are owned by the holders of a class or series of the RIC's stock that is preferred over all other classes or series in respect of this portfolio of assets. Under this provision the qualification tests and other rules for RIC status will be applied on a fund-by-fund basis. For example, each fund would have to meet the diversification requirement to qualify for RIC status, and each fund also would calculate separately the amount of capital gains dividends that it may pay as well as the amount of tax exempt interest dividends that it may pay. Capital losses of one series would no longer offset capital gains from another series, thereby eliminating a shift of tax benefits among the shareholders of different series.

The Act also provides that, if a series fund has been treated as a single corporation up to the effective date of this revision, neither the corporation, its funds nor its

shareholders will realize or recognize income or loss as result of treating the funds as separate corporations.[31] Further, the Act provides that the tax attributes of such a RIC will be "appropriately" allocated among its funds.[32] Presumably, the IRS will draft regulations to clarify the tax consequences of this "deemed reorganization," although the statute does not specifically authorize their issuance.

For series funds which have been treated as a single corporation, the amendment will apply to taxable years beginning after October 22, 1986.[33]

D. Hedging Gains

The Act amends Code §851 (which defines a regulated investment company) to net any increases and decreases in the value of qualified hedge positions so that these transactions will be excluded in determining whether or not a RIC has met the requirement that not more than 30% of its income be derived from sales of stock held for less than three months.[34] This requirement has frequently been criticized for being an unnecessary guard against a RIC's functioning as a securities broker in view of the conditions imposed by the Investment Company Act of 1940 and, thereby, for imposing unnecessary complexity on the management of a RIC. A separate proposal before Congress would have eliminated the requirement altogether [35] but the Senate Finance Committee chose only to alleviate the problem by removing one of the principal pitfalls involved. Under previous law, the increase registered by one half of a hedge position would be included in income without being offset by the corresponding decrease, thereby, in many cases, swelling the amount of income earned on stock held for less than three months. Under the new provision, for purposes of applying this test, any increase in value on a position that is part of a designated hedge is offset by any decrease in value (whether or not realized) on any other position that is part of the same hedge. Increases and decreases in value are taken into account only to the extent attributable to increases or decreases in value during the period of the hedge. The rule applies both for calculating gains from the sale or other disposition of stock or securities held for less than three months and also for the gross income of a RIC under §851(b)(3).

A designated hedge is defined as any transaction where the RIC's risk of loss with respect to an investment in any property is reduced by (i) the RIC's having an option to sell, being under a contractual obligation to sell (*i.e.*, a put option), or having made (and not closed) a short sale of substantially identical property; (ii) the RIC's being the grantor of an option to buy (*i.e.*, a call option) substantially identical property; or (iii) under regulations authorized by the Act, the RIC's holding of one or more other positions. The positions that are part of the hedge must be clearly identified by the RIC in the manner prescribed by regulations.[36] A designated hedge may include a qualified covered call (as defined by §1092(c)).[37]

The Conference Report outlines the means for identifying a designated hedge until the regulations are issued.[38] The hedge may be identified by either of two means:

(i) The positions that are part of the hedge may be placed in a separate account that is maintained by a broker, futures commission merchant, custodian or similar person. The account must be designated as a hedging account and the person in charge of the account must make notations identifying the hedged and hedging positions and the date on which the hedge is established.

(ii) A broker, merchant, custodian or similar person may designate the positions as a hedge for purposes of these provisions, provided that the RIC is provided with a written confirmation stating the date the hedge is established and identifying the hedged and hedging positions.

These amendments apply to taxable years beginning after October 22, 1986.[39]

E. Expansion of RIC Income Definition

The Act liberalizes the types of income which may be included in determining whether a RIC has satisfied the requirement that it derive 90% of its income from permitted sources. In particular, the Act treats the following as permitted income: [40] (i) gains from options and futures contracts that are related to a RIC's portfolio assets; and (ii) gains from foreign currency transactions related to a RIC's investment activities. The Treasury is, however, given the authority to exclude foreign currency gains which are not ancillary to the RIC's principal business of investing in stock or securities, or the options and futures contracts which relate to them.[41] The Act also provides that the term "securities" as used for purposes of determining whether a corporation satisfies the income source rules has the same meaning as under §2(a)(36) of the Investment Company Act of 1940.[42]

These amendments apply to taxable years beginning after October 22, 1986.[43]

F. Treatment of RIC Operating Expenses

Section 132 of the Act adds Code §67 to limit the deduction of numerous expenses related to the production of income to their excess above 2% of an individual taxpayer's adjusted gross income. To prevent circumvention of this rule, the Act denies deduction of such expenses by conduit entities, including RICs. The Treasury is authorized to draft regulations which will specify the manner in which these expenses will be allocated to the individuals who are taxed on the income of the conduits.[44] Apparently, under

the new rule, the individuals, rather than the conduit, will deduct their shares of investment operating expenses and these deductions will be limited by the 2% of AGI floor. Neither the Act nor the Conference Report specifies that individual shareholders will add their shares of deductions into income, but the Report provision that the Treasury regulations should deal with reporting requirements to effectuate the statute strongly suggests that this is the procedure intended.[45]

These amendments apply to taxable years beginning after December 31, 1986.[46]

G. *Preferential Dividends*

Section 657 of the Act amends Code §562(c) (which requires a RIC to distribute dividends pro rata) to allow a RIC to pay different dividend rates where the difference reflects savings in administrative costs (but not differences in management fees). These dividends, however, may be paid only to shareholders who have made initial investments of at least $10 million.

This amendment applies to distributions made after October 22, 1986.[47]

H. *Business Development Companies*

As revised by the 1986 Act, Code §851(a) allows a business development company registered under the Investment Company Act of 1940 to qualify as a RIC. The same change is made in Code §851(a), which allows RICs to use stock of subsidiaries which furnish capital to development companies to satisfy certain stockholding requirements for RIC status.

Under previous law, a RIC had to be registered with the Securities and Exchange Commission at all times during its taxable year as either a management company or a unit investment trust under the Investment Company Act of 1940, or had to be a common trust fund or similar fund that is not included in the term "common trust fund" under the Internal Revenue Code and that is excluded by the Investment Company Act from the definition of investment company. To register under the Investment Company Act of 1940 a corporation must have at least 100 stockholders or must be making proposing to make a public offering.

The Small Business Incentive Act of 1980 allowed certain investment companies which provide capital and managerial assistance to small businesses to elect to be treated as "business development companies" instead of registering under the Investment Company Act. However, a small business investment company could qualify to be treated as a RIC only if it met the requirements of the Code, including registration under the Investment Company Act.

The 1986 Act allows any company registered under the Small Business Company Act, so long as it meets the other stockholding, asset, and distribution requirements in the Code. The Act does not impose any definition for a business development company beyond its being registered under the Small Business Incentive Act. An additional requirement to prevent a business development company's also being a personal holding company was included when the change was first proposed but was eliminated after other changes in the definition of a RIC made this qualification unnecessary.

This change is effective for taxable years beginning after December 31, 1986.

I. *The Disallowance of Losses on Certain Stock Sales*

Before the Tax Reform Act of 1984 (P.L. 98-369), it was possible for a taxpayer to convert short-term capital gain to long-term capital gain by buying stock of a regulated investment company immediately before the ex-dividend date of a long-term capital gain distribution and then selling the stock 32 days after receiving the distribution of the dividend. Although Congress made this conversion far more difficult in the 1984 TRA,[48] it did include a similar provision to prevent a similar benefit from the short-term ownership of stock on which a tax-exempt interest dividend is paid. Under pre-1986 TRA law, a taxpayer could buy RIC stock immediately before the ex-dividend date of an exempt-interest dividend, sell the stock 32 days after receiving the dividend and recognize any loss on the sale.[49]

The 1986 Act amends Code §852(b)(4) to disallow any loss on the sale or exchange of RIC stock, to the extent that the taxpayer has received exempt-interest dividends with respect to that stock, if the taxpayer has held the stock for six months or less.[50] The Act does contain an exception for sales or exchanges made pursuant to a periodic liquidation plan under Code §852(b)(4)(D).[51] Also, the Act gives the Secretary authority to shorten the 6-month requirement to a period which is not less than (i) 31 days nor (ii) the period between the regular dividend distributions in which the RIC distributes at least 90% of its net tax-exempt income.[52] The Secretary should shorten this distribution period only where the purpose of the holding-period requirement can be achieved without requiring that stock be held for six months. A RIC which regularly distributes between 90% and 110% of its net tax-exempt income earned between dividend payments will satisfy the purpose of the holding period requirement.[53] The holding period for purposes of this requirement will be measured by the rules of Code §246(c)(3) and (4) with the term of six months substituted for the number of days specified in Code §246(c)(3)(B).[54] This amendment applies to RIC stockholdings which begin after March 28, 1985.[55]

J. *Stock Ownership Records*

Under pre-1986 TRA law, all RICs were required to maintain records of stock ownership in compliance with regulations prescribed by the Treasury.[56] The Tax Reform Act of 1984 [57] modified previous law by allowing a personal

holding company to be treated as a RIC. The 1984 TRA provided, however, that any investment company taxable income of a RIC which is also a personal holding company would be taxed at the highest rate for corporations.[58] This change eliminated the necessity for a RIC to keep shareholder records which were intended to assure that it was not a personal holding company and thus maintain its RIC status. Therefore, the 1986 Act deletes from the Code the requirement that a corporation maintain shareholder records to qualify as a RIC.[59] However, the 1986 Act also provides that if a RIC does not maintain these records, its investment company taxable income will nonetheless be taxed at the highest corporate rate, since this is the treatment provided for personal holding companies.[60] Thus, unless a RIC is also a personal holding company, it will nonetheless need to maintain shareholder records to continue to have its investment company taxable income taxed at lower rates. If a RIC retains little income, however, the cost of omitting this recordkeeping may be relatively slight.

This amendment applies to calendar years beginning after December 31, 1982.[61]

K. Notice and Third-Party Recordkeeper Changes

Before the 1986 TRA, the Code required a RIC to send various notices to its shareholders within 45 days after the end of its taxable year.[62] These notices are customarily included as part of the RIC's annual report. The Securities and Exchange Commission has recently extended the time for mailing annual reports to shareholders from 45 days to 60 days after the end of the RIC's taxable year. Consequently, the Act has extended notice requirements to avoid the waste of repetitive mailings by RICs to their shareholders.[63] The lengthened period applies to notice for (i) capital gain dividends, (ii) exempt-interest dividends, (iii) income derived from taxes paid on that income to foreign countries, (iv) dividends deductible under Code §243,[64] and (v) spillover dividends under Code §855. This change is effective for taxable years beginning after October 22, 1986.[65]

Code §7609 contains certain procedural rules applicable to summons served by the IRS on "third-party recordkeepers." This term is defined to include various types of financial institutions such as banks, savings companies and brokers. The Act extends the protection of these rules to RICs and their agents, effective for summonses served after October 22, 1986.[66]

Chapter 41

REAL ESTATE INVESTMENT TRUSTS

A. L. Suwalsky, Jr., Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Background

A Real Estate Investment Trust ("REIT") is a legal entity organized in corporate, trust or association form which provides a vehicle for pooling the funds of a substantial number of investors to invest in real estate projects. If the requirements of Internal Revenue Code §§856 through 859 are complied with, the REIT functions as a pass-through entity or conduit, and profits from the real estate investment are taxed only on the investor level. There are two major categories of REITs, the equity REIT which owns property and generates most of its income through rents, and the mortgage REIT which invests primarily in mortgages and receives most of its income from interest and fees. By far, the most common type of REIT is the equity REIT. REITs can be further categorized by the type of properties in which they invest and the manner in which they choose to conduct operations.

As might be expected, there is a price to be paid in terms of rules and restrictions for a REIT's tax-favored status as a pass-through entity. These rules are complex and contain pitfalls and penalties justified by the fact that substantial tax revenues are being foregone. Although the first bill authorizing REITs passed the Congress in 1956,[1] the Treasury opposed the bill and President Eisenhower vetoed it. After the Treasury withdrew its objections in 1960, the legislation was enacted.[2] The original Code provisions dealing with REITs were quite restrictive and imposed the draconian penalty of (inevitably retroactive) disqualification and taxation of all income at corporate rates even if the income had already been distributed to shareholders/certificate holders.[3] As a result of actual operating experience, particularly in economic turndowns, major modifications were made in the provisions in the late 1970s and alternatives to absolute disqualification were provided.[4]

Notwithstanding the liberalization of the 1970s, the tax rules with respect to REITs remained restrictive and complex, arising, in part, from a fear on the part of some in the real estate industry that REITs possessed an unfair advantage vis-a-vis fully taxable real estate corporations. An example of these restrictions is the "independent contractor requirement" of §856(d) which requires that an independent contractor from whom the trust itself does not derive or receive any income be used to operate the properties owned by the REIT and to provide services to tenants. Other significant restrictions cover property which has been foreclosed upon, the minimum holding period for REIT property and annual limitations on sales of property owned by a REIT.[5]

The basic rules for the tax treatment of REITs immediately before TRA-1986 are summarized as follows. The general requirements for qualification as a REIT are set out in §856(a). It must have centralized management by trustees or directors whose actions are not subject to ratification by shareholders. Ownership must be evidenced by transferable shares or certificates. The REIT must be otherwise taxable as a domestic corporation but it cannot be a financial institution or an insurance company. Ownership of interests in a REIT must be held by at least 100 persons; five or fewer individuals cannot own, directly or indirectly, 50% or more in value of the outstanding interests in the REIT, *i.e.*, if all the REIT's income were considered personal holding company income, the REIT would not be a personal holding company. Section 856(b) provides that the conditions described in §856(a)(1)-(4) must be met during the entire taxable year; the condition in §856(a)(5) must exist at least 335 days of a taxable year or during a proportionate part of a taxable year of less than 12 months.

Further limitations on REIT status are contained in §856(c) which promulgates the "75 percent test," the "95 percent test" and the "30 percent test" relating to sources of income. At least 75% of a REIT's gross income during a taxable year must be derived from (1) rents from real property; (2) interest on obligations secured by mortgages

[1] H.R. 4392, 84th Cong., 2d Sess. (1956).
[2] P.L. 86-779, 86th Cong., 2d Sess. *See* H.R. Rep. No. 2020, 86th Cong., 2d Sess. (1960), 1960-2 C.B. 819.
[3] Holders of certificates of beneficial interest in a realty trust. Hereinafter both certificate holders and shareholders are referred to as "shareholders."
[4] Tax Reform Act of 1976, P.L. 94-455, 94th Cong., 2d Sess. (1976).
[5] The fear of domination of commercial real property ownership by REITs seems analogous to the wide-spread 19th century prohibition against ownership of real property by corporations which, of course, proved to be based on groundless apprehensions. The original business trusts set up to own real estate were established to get around such restrictions on corporate ownership of both real estate and securities and also to avoid a second level of taxation on income from such investments. This advantageous tax treatment ended in 1935 when the Supreme Court held in *Morrissey v. Comr.*, 296 U.S. 344, that business trusts were subject to corporate taxation.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

or interests in real property; (3) gain from the sale of property which is not held for sale in the ordinary course of business, income and gain from interests in other REITs; and (4) refunds and abatements of real property taxes, income and gain from foreclosure property, fee income arising from real property and gain from the sale of real estate assets. §856(c)(3). The 95% test requires that 95% of a REIT's gross income in a taxable year be derived from sources satisfying the 75% test plus other interest, dividends (without regard to the dividends received exclusion), and gain from the sale or other disposition of stock and securities. §856(c)(2). Additional complex rules apply to income or gains from foreclosure property for purposes of the 75 and 95% tests.[6]

The 30% test relating to REIT income prescribes that less than 30% of gross income must be derived from the sale or the disposition of stock or securities held for less than six months, property disposed in a prohibitive transaction and real property and interest in mortgages on real property held for less than 4 years. §856(c)(4).

A REIT is also strictly limited in the assets it may own. At the close of each quarter of the taxable year at least 75% of the value of its assets must be represented by real estate assets (including interest in mortgages on real property) cash and receivables and government securities; and no more than 25% of its total assets may be represented by securities (other than real estate securities). A REIT may not hold more than 10% of the outstanding voting securities of any issuer or invest more than 5% of the value of the total assets of the REIT in the securities of any one issuer. §856(c)(5). There are numerous elaborations and some exceptions to the foregoing rules.[7]

To ensure that the maximum amount of REIT income is taxed to the shareholders, §857(a) requires that a REIT distribute at least 95% of its earnings (excluding net capital gains) as taxable dividends. Certain adjustments are provided for. Further, the REIT must distribute at least 75% of its income before the end of the taxable year or face a 3% excise tax penalty on the underdistribution.[8]

The ordinary corporate tax levied by §11 is applied to undistributed earnings of a REIT. §857(b)(1). Separate taxes are imposed on income from foreclosure property (at the highest corporate rate)[9] on prohibitive transactions (at a 100% rate),[10] and on failure to meet either the 75% test or 95% income test while the REIT still maintains qualification as such under §856(c)(7) (at a 100% rate on the larger of the net amounts by which the REIT fails to make either the 95% or 75% test).[11]

For a full discussion of the provisions relating to the taxation of REITs, *see* 107 T.M., *Real Estate Investment Trusts*.

B. Overview

REITs lost a great deal of their appeal as investment vehicles in the mid-1970's when a change in economic conditions caused a significant number of poorly managed and over-optimistic REITs to fail or suffer severe setbacks. The changes in the taxation of income and losses from real estate investments made by The Tax Reform Act of 1986 [12] have engendered some comment in the financial community that REITs may now be favorably reconsidered as an investment vehicle by sophisticated investors. This predicted change in attitude comes about from a combination of provisions which ease the restrictions on REITs and impose new strictures on other forms of real estate investments, *e.g.*, the passive loss limitations, less favorable depreciation rules, elimination of the capital gains differential and imposition of an "almost escape-proof" minimum tax. The effect of the passive loss limitations and other changes made to the heretofore highly tax-favored status of real estate investments, when combined with lower marginal tax rates under the Act, has been to greatly increase investor interest in income-producing investments such as REITs.[13]

On balance, the changes made by TRA-1986 may be seen as favorable to REITs. Although more of a REIT's taxable income is required to be distributed before the end of each year and the nondeductible excise tax on failure to make required distributions is increased by one-third, a number of restrictions on operation were eased. The basic requirements for qualification as a REIT, however, remain in place. The Senate Report [14] notes that the modifications brought about by the bill are intended to allow REITs to act in accordance with existing market conditions and to retain the primarily passive nature of these real estate investments.[15]

II. The Tax Reform Act of 1986

A. Changes to Basic Requirements [16]

1. Calendar Year Accounting/Distributions

REITs formed after October 4, 1976 have always been required to be calendar year taxpayers.[17] The Act puts substantial pressure on fiscal year REITs to change to the calendar year by causing the fiscal year reporting entities to keep a second set of books on the calendar year basis and to make payouts to shareholders on a calendar basis. Among the amendments made to §4981 by the Act was the changing of "taxable year" to "calendar year" throughout the provision.[18]

2. Initial Change in Accounting Period

The 1986 TRA permits entities that have not commenced in an active trade or business to change their accounting year to the calendar year without obtaining the Commissioner's consent in conjunction with the making of an initial REIT election. This provision was designed to apply to new entities which were formed for the purpose of

becoming a REIT and which wish to adopt a calendar year after an initial period in which the proceeds of a stock offering were received. Granting permission to elect without consent should ease the newly-formed REIT's burden.[19]

3. Other Requirements

Notwithstanding the §856(a)(5) and (6) tests, if an entity otherwise meets applicable qualification requirements it may elect REIT status even though five or fewer persons own more than 50% of its stock or if it has fewer than 100 shareholders or holders of beneficial interests, providing that it was not a REIT in any prior year. The waiver is applicable to the first year following election. Act §661, amending §856 by adding subsection (h). If a corporation has never qualified as a REIT and has accumulated earnings and profits, eligibility to elect REIT status is dependent upon prior distribution of the accumulated E&P.

B. Penalty for Failure to Distribute

1. Generally

The penalty provisions of Code §4981 with respect to failure to make required distributions of income before the end of the taxable year were considerably stiffened by increasing the base to which the nondeductible excise tax is applied (introducing the term "required distribution"), by raising the rate from 3% to 4%, and by changing taxable year to calendar year. Act §668(a). Also, amended §4981(b)(1) provides that, in order to avoid the imposition of the excise tax, the "required distribution" to be made by the last day of each calendar year is 85% of the REIT's ordinary income for the calendar year plus 95% of the REIT's capital gain net income (as per §1222(9)) for the calendar year, plus any prior year's shortfall.[20]

2. Deemed Distributions

New Code §857(b)(8) provides that, with respect to any dividends declared by a REIT in December of any calendar year and payable to stockholders of record as of a specified date in December, such dividend will be deemed to have been paid by the REIT and received by the stockholder on the record date. This provision will apply only if such dividend is actually paid before February 1 of the following calendar year.[21] Note, however, that this provision does not apply for purposes of §858(a). *See* H.R. Rep. No. 841, 99th Cong. 2d Sess. at II-218 (1986) ("Conf. Rep.").

3. Section 6697 Penalty

Act §667 amends Code §6697 to provide for the elimination of the §6697 penalty tax relating to deficiency dividends (§860(f)). The Senate Report [22] indicates that this action was taken because the imposition of interest and penalties based upon the full amount of the deficiency is deemed adequate compensation to the Treasury for the deferred tax liability resulting when the REIT distributes less than the required distribution for a taxable year.[23]

4. Sufficient Earnings and Profits

The 1986 TRA also provides that a REIT will be deemed to have sufficient earnings and profits to treat as a dividend any distribution during any calendar year (other than a redemption) that is treated as a dividend by the REIT, but only to the extent that the amount distributed for such calendar year does not exceed the required distribution for that year. This is a coordinate provision to the changes in §4981 placing the excise tax computation on a calendar year basis and is applicable to fiscal year REITs.[24]

C. Asset and Income Requirements [25]

1. Use of Subsidiaries

For the first time, REITs would be permitted to hold assets through subsidiaries.[26] All assets, liabilities and items of income, deduction or credit of a "qualified REIT subsidiary" are to be treated as assets, etc. of the REIT. §856(i)(1)(B). A qualified REIT subsidiary is defined as a corporation 100% of whose stock was owned by the REIT at all times when the subsidiary was in existence. The Conference Report makes it clear that a corporation whose stock was acquired in conjunction with a §338 election is included.[27] Adding to the importance of this change is the fact that the "75% of income" test, [28] is permitted to be applied on an entity-wide basis, thereby allowing the REIT more flexibility than if it only held the assets on a single level.

2. New Capital

REITs are provided additional flexibility with the concept of "qualified temporary investment income." Act §662(b). Under this concept, if a REIT receives new equity capital and temporarily invests the proceeds in stock or debt instruments, then for a 1-year period beginning on the date the capital is received, income from these investments is treated as qualifying income for the 75% income test.

Qualified temporary investment income is defined as any income which (i) is attributable to stock or debt instrument, (ii) is attributable to the temporary investment of "new capital," and (iii) is received or accrued during the 1-year period beginning on the date which the REIT receives such capital. Act §662(b)(3) adding new subsection 856(c)(6)(D)(i).

Section 856(c)(6)(D)(ii) defines new capital as any amount received by the REIT (1) in exchange for stock in such trust (other than pursuant to a dividend reinvestment plan) or (2) in a public offering of debt obligations of such trust which have maturities of at least five years.

Also, for one year following the receipt of new equity capital, the income received from investment of the proceeds is deemed to be income from real estate assets and thus satisfies the 75% test of §856(c).

D. Definition of Rents and Interest

1. Shared Appreciation Mortgages

Act §662(c) amends Code §856 by adding new subsection 856(j). Section 856(j)(1) provides that for purposes of §§856(c) and 857(b)(6), any income derived from a "shared appreciation provision" will be treated as gain recognized on the sale of secured property. Section 856(j)(4) defines "shared appreciation provision" as any provision which is in connection with an obligation which is held by the REIT and is secured by an interest in real property, and which entitles the REIT to receive a specified portion of any gain realized on the sale or exchange of such real property (or of any gain which would be realized if the property were sold on a specified date).

Expenditures made with respect to the property by any holder are deemed to be made by the REIT (for purposes of §857(b)(6)(C)(ii)). §856(j)(2)(B). The REIT is treated as holding the secured property for the period during which it it held the shared appreciation provision (or, if shorter, the period during which the secured property was held by the person holding such property), and the secured property is treated as property described in §1221(1) if it is such property in the hands of the person holding the secured property (or if it would be such property if held by the REIT). The Conference Report states that the REIT's holding period of the obligation to which the shared appreciation provision relates (and not the obligor's holding period of the secured property if longer than the REIT's holding period) must be at least four years for the safe harbor of §857(b)(6)(C) to apply.[29]

Any gain achieved is treated as a gain on the sale or exchange of the underlying property and thus qualifies as 95% income under §856(c)(2)(D) unless the obligor on the obligation to which the shared appreciation provision relates is holding the property for sale to customers in the ordinary course of business (in which case the gain on the appreciation provision is treated as gain from the sale of a §1221(1) asset).[30]

2. Independent Contractor Rule

Under pre-1986 TRA law, the "75% of income" test is met with gross income derived from, *inter alia*, rents on real property owned by the REIT. However, if services are furnished to the tenants of rented properties, those services must be furnished by an independent contractor in order to have the rents qualify as rents from real property within the meaning of §856(d). The Act ameliorates the strict rule of existing law by placing REITs on the same footing as exempt organizations with respect to unrelated business taxable income. Act §663(a). This means that the REIT no longer needs to engage an independent contractor to provide certain basic services ("customary services") with respect to the property such as the furnishing of heat and light, cleaning of public areas of the property and the collection of trash. *See* Regs. §1.512(b)-1(c)(5) for further examples. The REIT may continue to employ the services of an independent contractor to furnish such "customary services" even though no longer required to do so.[31]

The Conference Report, [32] adds the additional clarifications that: (1) a REIT may operate a free parking lot open to tenants, their guests and customers on an unreserved basis but if a fee is charged the lot must be operated by an independent contractor; and, (2) a REIT may hire and compensate the independent contractors who provide the customary services that may be provided by a REIT in connection with the rental of real property to individual tenants, *e.g.*, cleaning of offices, rather than hiring an independent contractor to hire other independent contractors.[33]

3. Rent or Income Based on Net Income

A REIT will now be allowed to treat certain rents or interest based upon the net income or profits of a tenant or debtor as rents from real property (or as interest from a debtor). Act §663(b)(1). The rent (or interest) will qualify for this treatment if (1) it is received from a tenant or debtor that receives substantially all of its income from either the leased property or the property securing the loan or from either the leasing or subleasing of substantially all of the property, and (2) the rent or interest received by the tenant or debtor consists entirely of amounts which would be treated as rents or interest from real property if it were directly received by the REIT. Act §663. Pre-1986 law, [34] which permitted treatment of a proportionate amount of receipts to be treated as rent or interest from the real property, is retained. The change is a result of a feeling on the part of the Senate Finance Committee that real property lessors who lease to prime tenants on the basis of a fixed amount plus a percentage of profits from the prime's rental of the property should be able to qualify the payments, since the rents are only dependent upon the rents received from the property.[35] This is true even where the rents are based upon the gross receipts of the subtenants.[36]

E. Distribution Requirements

Under pre-1986 TRA law, a REIT must distribute 95% of its taxable income (without regard to any recognized net capital gains) in order to meet the distribution requirement of §857(a), which is based on REIT taxable income ("REITTI"). The Finance Committee noted that a cash method REIT may be required to recognize income in advance of receiving cash where it either sells property in exchange for obligations bearing OID, enters into deferred rental arrangements of the type encompassed by §467, or where the REIT has in good faith engaged in a transaction which it erroneously believes is a §1031 tax-free exchange. Thus, the REIT might have to borrow amounts ranging up to 95% of such income in order to meet its distribution requirement. Senate Report at 780. The TRA-1986 reduces the distribution requirement by the amount that the sum of such noncash types of income exceed 5% of REITTI (determined without regard to the REIT's dividends paid deduction or the net capital gain).[37]

F. Treatment of Capital Gains

1. Liberalization

The pre-1986 TRA general rule that REITs must recognize any capital gain for the taxable year (except to the extent that it pays a capital gain dividend) is modified so that the REIT can compute the net capital gain without an offset for net operating losses ("NOLs"). This rule would apply, regardless of whether the NOL was current or had been carried over from a previous year. If the REIT elects to pay capital gains dividends in excess of its net income, the REIT's NOL carryover will be increased by the amount of the dividend. Act §665(a) amending Code §857(b)(3)(C) and adding new subparagraph 857(b)(3)(D). The Senate Report [38] stated that, consistent with the conduit theory of REITs, the small individual investor should be entitled to the same capital gain treatment he would receive if he held the real estate asset directly.

2. Notice of Capital Gains Dividend

Notices of capital gains dividends which previously had to be mailed to shareholders within 30 days of the end of the REIT's taxable year, may now be sent with the annual report, if one is furnished.[39]

G. Prohibited Transactions

1. Safe Harbor Rules Liberalized

Prohibited transactions, such as the sale by a REIT of excess amounts of property held primarily for sale in the ordinary course of business, are subject to a 100% tax on net income from the prohibited transaction. The "safe harbor" provided by §857(b)(6)(C) of pre-1986 TRA law permitting not more than five such sales (other than foreclosure property) during the taxable year is raised to seven sales, provided the property has been held at least four years. Act §666(a) amending §857(b)(6)(C). The aggregate amount of permitted expenditures (includible in the property's basis) during that period has been raised from 20% to 30% of the selling price. Act §666(a)(2). A new alternative safe harbor rule permits a REIT to make an unlimited number of property sales during the taxable year as long as the adjusted bases of the properties sold do not exceed 10% of the total adjusted basis of all the REIT's properties at the beginning of the year and substantially all of the marketing and development expenditures for each property are made through an independent contractor.[40]

2. Effect of Net Loss

Losses from prohibited transactions as well as deductions attributable to such transactions where a loss was incurred, are not to be taken into account in determining net income derived from prohibited transactions. However, the net loss from a prohibited transaction may be taken into account in computing REITTI.[41]

H. Effective Date

The rules set out by Act §§661-69 are generally effective for taxable years beginning after December 31, 1986. Whether they will have a perceptible effect on the popularity of REITs as a vehicle for real estate investment is difficult to predict. With the limitations imposed on the partnership form of multiple ownership by the Act, Congress may find it necessary to further relax the REIT tax rules in order to achieve a satisfactory level of real estate investment and development.

Chapter 42

MORTGAGE BACKED SECURITIES: THE "REMIC"

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Background

The secondary mortgage market is an important segment of the economy. This market allows the originator (original lender) of mortgages to sell the mortgage secured debt instruments acquired to an entity organized for the purpose of acquiring a pool of mortgage secured obligations. This entity, in turn, raises the capital required to acquire the mortgages by issuing its own securities to investors. These securities, whether in the form of debt obligations, shares of stock, partnership interests, or, perhaps the most common of all, certificates of beneficial interest are collateralized by the mortgage secured debt instruments held by the issuing entity. As payments are received by the entity from the mortgagors, they are passed through to the interest holders. This device offers investors attractive returns with a substantial degree of security.

For the market to operate at optimum efficiency, an entity must first be formed to acquire a mass of mortgage obligations sufficiently large to minimize the risk of loss through defaults and foreclosures. Interests in the pool may then be sold to investors in various denominations. This frees up funds for the making of new mortgage loans by the originators, and allows investors who would otherwise be unwilling or unable to enter this market to participate in loans secured by real estate. Under pre-1986 TRA law, corporations were unsuitable for use as the pooling entity for several reasons, the foremost of which was the incidence of two levels of taxation. The type of entity usually availed was of a trust which issued to the investors participatory interests in the form of certificates having the attributes of debt instruments. Some of these were classified as partnerships for tax purposes, while others were treated as trusts. However, a number of federal tax, regulatory and accounting problems existed.

One often used device for the issuance of interests in a pool of mortgages under pre-1986 TRA law was a grantor trust. In this case, one major problem was the possibility of being treated as an association taxable as a corporation. In March of 1985, Treasury issued Regs. §301.7701-4(c)(1) (applicable to interests issued after April 27, 1984). Before this time, Regs. §301.7701-4(c) provided only that a management trust having power to vary the investment of the certificate holders is an association taxable as a corporation, and that such a trust lacking such power will be treated as a trust. The 1985 regulations amended these provisions by adding that a trust with only one class of ownership interests representing undivided beneficial interests in the trust assets will usually be treated as a trust if there is no power to vary the certificate holders' investments. The regulation further stated, however, that multiple classes of ownership will ordinarily result in classification as an association or partnership under §301.7701-2. However, it is further provided that trust status will be accorded even if there are such multiple classes (and no power to vary holders' investments) if it is formed to facilitate direct investment in the trust assets and the existence of multiple classes of ownership is "incidental to that purpose." Thus, some mortgage pool arrangements could qualify. There remained, however, a degree of uncertainty. The Conference Committee [1] observed that under these regulations, "if a trust held a portfolio of mortgages, and interests in the trust assets were divided so that one class of beneficiaries were to receive all principal collected by the trust and a specified rate of interest thereon until the trust had collected a specified amount of principal on the mortgages, and another class of beneficiaries were to receive all remaining amounts collected by the trust, then such trust would be treated as an association taxable as a corporation."

To avoid this problem, the issuer of interests in a mortgage pool held by a trust had to structure the interests as debt instruments collateralized by the mortgage pool. This, solution, however, was not entirely satisfactory. There was always the danger of these instruments being classified as equity instead of "true debt." To avoid this, some minimum equity in the issuance of the obligations was usually advised in the form of overcollateralization. This, however, reduced the efficiency of the vehicle. Also, it was usually advised to avoid a too-close timing between the receipt by the issuer of the monthly payments on the mortgages and the payments made by it to the security holders which might provide ground for treating the issuer as a mere agent of the investors. As a result, the interest holders were usually paid quarterly with the issuer incurring the risk of reinvesting the funds collected between such quarterly payments. In addition, there was the "phantom income" problem.

The "phantom income" problem arises from the fact that one characteristic of a mortgage-backed security is its being called in before maturity due to the prepayment of some of the underlying mortgages. This will almost inevitably occur as the mortgagors either sell of refinance the property. Where the collateralized debt instruments have been issued at discount, as is often the case, the issuer is entitled to deduct the original issue discount under §163(e). However, in the case where one or more classes of such instruments are statistically almost certain to be called

[1] H.R. Rep. No. 841, 99th Cong., 2d Sess. p. II-223 (1986). ("Conf. Rep.").

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

before maturity, the calculation of the §163(e) deduction based on the nominal maturity date understates the issuer's real annual interest cost. Neither §163(e) nor §1272 (providing the rules for current inclusion of OID in income of the holder of an OID debt instrument, the rules of which are incorporated in §163(e) by reference) makes any provision for anticipated prepayment based on an analysis of probabilities.

These are some of the problems which caused Congress to conclude that "considerable uncertainty exists concerning several aspects of the Federal income tax treatment of [multiple class arrangements used in the packaging of mortgages]." [2] Therefore, Congress decided to create a new type of vehicle for the issuance of multiple class securities collateralized by real estate mortgages, and to provide a comprehensive set of rules applicable to all transactions relating to the use of such entities. The provisions enacted by the Finance Committee as extensively modified by the Conference Committee (the House bill contained no comparable provisions) were intended to create an exclusive vehicle, accompanied by exclusive tax consequences,[3] for issuing multiple class real estate mortgage-backed securities.

II. Overview

A. The REMIC

The Tax Reform Act of 1986 [4] creates a new entity, the Real Estate Mortgage Investment Conduit ("REMIC"), which, unless otherwise specifically provided, is not subject to tax and is not to be treated for tax purposes as a corporation, partnership, or trust.[5] Its income is taxable to the REMIC interest holders as provided in the REMIC rules.[6] The partnership audit procedures,[7] however, are to apply to REMICs.[8]

A REMIC is any entity, irrespective of how it may be characterized under the law of the jurisdiction in which formed or would be characterized for federal tax purposes absent these provisions, to which a REMIC election applies for the taxable year and all prior taxable years.[9] Its taxable year is a calendar year.[10] A REMIC election may be made, provided certain qualifications are met, on the entity's return for its first taxable year and applies to all subsequent years unless terminated.[11] If an entity ceases to be a REMIC (due to failure to meet the qualifications) at any time during a taxable year, its status is revoked for the entire year and all subsequent years. There are provisions, however, permitting REMIC status to be retained at the discretion of the IRS in the event of inadvertent termination provided the REMIC and all interest holders agree to any adjustments that may be required to carry out the purposes of the REMIC rules.[12]

Qualifications for REMIC status are:

(1) All of the interests in the entity must be either "regular" or "residual" interests (defined below).

(2) There can be only one class of residual interests, and all distributions to such interests must be pro rata.

(3) As of the close of the 4th month after the entity's "startup day" (defined below), and each quarter ending thereafter, substantially all of the assets of the REMIC must consist of "qualified mortgages" and "permitted investments," (defined below).[13]

A "qualified mortgage" is any obligation (including any participation or certificate of beneficial ownership therein) principally (directly or indirectly secured by an interest in real property. It must be *transferred to* the REMIC on or before the startup day, or *purchased by* the REMIC within three months beginning on the startup day. It may also be a "qualified replacement mortgage" or an interest in another REMIC transferred to the REMIC on or before the startup day.[14] The "startup day" is any day selected by the REMIC which is on or before the first day on which interests in the REMIC are issued.[15]

A "qualified replacement mortgage" is any mortgage that would meet the requirements of a qualified mortgage if transferred to the REMIC on or before the startup day, and which is received in exchange for another obligation within three months from the startup day, or in exchange for a "defective obligation" within a 2-year year period beginning with the startup day.[16]

"Permitted investments" is defined as:[17]

(1) a cash flow investment (investments of amounts received under qualified mortgages for a temporary period before distribution to REMIC interest holders),[18]

(2) a "qualified reserve asset," meaning any intangible property held for investment and as part of a qualified reserve fund, (*i.e.*, a fund reasonably required to defray REMIC expenses or amounts due on regular REMIC interests in the event of defaults on mortgages; the amount of the fund is to be promptly reduced as payments are received on mortgages held by the REMIC).[19] Under a special rule, a reserve does not qualify for any taxable year (or subsequent year) if more than 30% of the gross income from reserve assets is from the disposition of property held for less than three months (other than dispositions required

[19] §860G(a)(7)(A) and (B); Conf. Rep. at II-227.

to prevent default on a regular interest where the threatened default results from defaults on one or more qualified mortgages).[20]

(3) Foreclosure property (property which would be foreclosure property under §856(e) in the hands of a REIT and which is acquired in connection with the default (or imminent default) of a qualified mortgage held by the REMIC). Such property ceases to be foreclosure property one year after the mortgage pool acquired it. §860G(a)(8).

Where a REMIC issues an interest, regular or residual, in exchange for property, the basis of the property in the REMIC's hands is its fair market value at the time of the transfer.[21]

If a REMIC makes a distribution of property with respect to any interest held in it, gain shall be recognized on the distribution in the same manner as if it had sold the property to the distributee for its fair market value. This amount is the basis of the property distributed in the hands of the distributee.[22]

B. Regular Interests

1. In General

A regular REMIC interest is any interest other than a residual interest. There may be two or more classes of regular interests. The terms of a regular interest must be fixed on the startup day, and it must unconditionally entitle the holder to a specified principal amount (or other similar amount).[23] Further, if interest or similar payments are provided, they must be based on a fixed rate (or, to the extent provided in regulations, a variable rate).[24] The interest may provide for payments of principal before maturity contingent on prepayments of qualified mortgages held by the REMIC and other income from permitted investments.[25]

2. Taxation of Regular Interest Holders

A regular interest in a REMIC can be acquired either for cash or in exchange for property conveyed to the REMIC. No gain or loss is recognized to the transferor on the transfer of any property to a REMIC.[26] The adjusted bases of interests (both regular and residual) received in a transfer of property are equal to the adjusted bases of the property transferred. This amount is allocated among the interests received in proportion to their respective fair market values.[27]

A regular interest, whatever its actual form, is treated for tax purposes as a debt instrument, and all amounts includible in gross income by the holder are determined under the accrual method of accounting.[28] Where a regular interest is disposed of, any gain realized is treated as ordinary income to the extent it does not exceed the excess of:

(1) the amount which would have been included in ordinary income if the yield were 110% of the applicable federal rate (determined under §1274(d) without regard to the lowest three-month rate lookback provision of paragraph (2)) as of the beginning of the taxpayer's holding period, over

(2) the amount actually includible in gross income with respect to the interest.[29]

The issue price of a regular interest acquired for cash is the amount paid for the interest. Where the interest was acquired in exchange for property, the issue price is the fair market value of such property.[30] Thus, where the stated redemption price at maturity [31] of the interest exceeds the issue price, there is OID which must be included in income currently under the rules of §1272. Where the issue price of an interest exceeds its adjusted basis, for periods during which the interest is held by the transferor (or by another person whose basis is determined in whole or in part by reference to such transferor's basis (*e.g.*, a controlled corporation to which the interest is transferred in a §351 transaction), such excess is accrued, in the case of a regular interest, in the same manner as market discount under the provisions of §1276(b).[32] Where the adjusted basis of a regular interest exceeds the issue price, the excess is amortizable in the same manner as bond premium under the rules of §171.[33]

In view of the fact that regular interests are treated as debt instruments, §1272 (relating to the current inclusion of OID in income of the holder of an OID instrument) was amended to provide special rules for debt instruments the payment of all or some portion of the principal amount of which is contingent as to time. New §1272(a)(6) [34] provides rules for the determination of the daily portion of OID where the principal is subject to acceleration. Under these rules, there is allocated to each day in the accrual period the excess (if any) of:

(i) the sum of (1) the present value of all remaining payments due as of the close of the period, and (2) payments during the period of amounts included in the stated redemption price of the instrument at maturity over:

(ii) the adjusted issue price of the instrument as of the beginning of the accrual period.[35]

The present value of future payments is determined on the basis of the instrument's original yield to maturity (compounding at the close of each period and adjusted for the length of the accrual period). Also taken into account are events which have occurred before the end of the accrual period and a prepayment assumption determined in the manner prescribed by regulations.[36]

These rules apply to any regular interest held in a REMIC or any qualified mortgage held by a REMIC. They also apply to any other debt instrument if payments

thereunder may be accelerated by reason of prepayments of obligations securing the instrument (or such other events as may be prescribed by regulations).[37]

C. *Residual Interests*

1. *In General*

A residual interest may also be acquired from the REMIC for either cash or property. A residual interest is defined as an interest in a REMIC that is not a regular interest and is designated as a residual interest.[38] As in the case of regular interests, the basis of a residual interest acquired in exchange for property transferred to a REMIC is the basis of the property transferred.[39] Its issue price is determined as is that of a regular interest, *i.e.*, the amount of cash paid for the interest or, where acquired in exchange for property transferred to a REMIC, the fair market value of property transferred.[40] A residual interest has no stated principal amount and no fixed redemption price.

2. *REMIC Taxable Income (Loss)*

The relationship between the holder of a residual interest and the issuing REMIC is similar in many respects to that of a partner and partnership; income and loss of the REMIC is passed-through to the residual interest holders. Such holder takes into account his daily portion of the taxable income or loss of the REMIC for each day during the taxable year the holder held the interest.[41] A ratable portion of the REMIC's taxable income (or net loss) for each calendar quarter is allocated to each day in the quarter, and, this amount is then allocated to the residual interest holders pro rata for each such day.[42] As noted above, there can be only one class of residual interests.

a. *Taxable Income of a REMIC*

Section 860C(b)(1) provides that REMIC taxable income is determined as if it were an individual on the accrual basis with the following modifications:

(i) All regular interests are treated as if they were indebtedness of the REMIC. §860C(b)(1)(A). This will result, generally, in interest deductions for amounts includible in income of the regular interest holders (other than payments of principal),

(ii) If the REMIC holds any market discount bond, such discount must be currently included in income as it accrues using economic (constant interest) accrual as in the case of OID under §1272. §860C(b)(1)(B);

(iii) No income, gain, loss or deduction attributable to a "prohibited transaction" is taken into account. §860C(b)(1)(C). Such income is taxed to the REMIC at a rate of 100% under §860F (discussed below); and

(iv) The deductions referred to in §703(a)(2) (relating to the determination of the taxable income of a partnership) (other than any deduction under §212) are not allowed. §860C(b)(1)(D).

[37] §1272(a)(6)(C).
[38] §860G(a)(2).
[39] §860F(b)(1)(B).
[40] §860G(a)(10).
[41] §860C(a)(1).
[42] 860C(a)(2).

(b) *Net Loss of a REMIC*

The net loss of a REMIC is the excess of the deductions allowable in computing taxable income over the REMIC's gross income, determined with the modifications set forth above in (i) through (iv). §860C(b)(2).

3. *Taxation of Holders of Residual Interests*

The provisions set forth above describe how pass-through principles are applied to residual interest holders. As in the case of a partnership, distributions to such holder by the REMIC are not includible in gross income to the extent such distributions do not exceed the holder's basis in such interest.[43] Where basis is exceeded, however, the distributions are treated as gain from the sale or exchange of the interest.[44]

Also, as in the case of a partnership interest, the basis of a residual interest is increased in the amount of REMIC taxable income passed-through to the holder, and is decreased (but not below zero) by (1) amounts distributed to the holder, and (2) any net loss of the REMIC taken into account by the holder.[45]

The amounts of the REMIC's taxable income passed-through to the residual interest holder are treated as ordinary income.[46] As in the case of a partnership, the amount of a REMIC's net loss taken into account by a holder for any quarter of the REMIC is limited to his adjusted basis in the interest as of the close of the quarter; any loss pass-through disallowed under this limitation may be carried forward indefinitely.[47]

a. *Special Rules for "Excess Accruals"*

The REMIC provisions also limit the amount by which income passed-through to a residual interest holder for any quarter may be offset by net operating losses. In general, the taxable income of such holder for any taxable year may in no event be less than the "excess inclusion" for such year.[48] Excess inclusions are computed on a quarterly basis. The "excess inclusion" for a calendar quarter means the excess of the amount of REMIC income passed-through over the sum of the "daily accruals" with respect to the interest for the days in the quarter the interest was held.[49] Regulations may provide that where a residual interest has no significant value, the "excess accrual" is simply the amount of REMIC income passed-through without regard to daily accruals.[50]

The daily accrual for each residual interest for each quarter of the REMIC is determined by allocating to each day its ratable portion of the product of the adjusted issue price of the interest at the beginning of the quarter and 120% of the long-term applicable federal rate (as determined under §1274(d) as if the interest were a debt instrument). The adjusted issue price is the original issue price increased by the total of all daily accruals for all

previous quarters and decreased by any distributions made before the beginning of the quarter.[51]

The above described minimum amount of REMIC income pass-through to be taken into account by a residual interest holder does not apply to any organization to which §593 (relating to certain financial institutions) applies, unless otherwise provided in regulations where necessary to prevent tax avoidance.[52] If a residual REMIC interest is held by an organization subject to the tax imposed by §511 on unrelated business income, any excess inclusion computed with respect to that interest is subject to such tax.[53]

Where residual interests are held by a real estate investment trust (REIT), any excess of the aggregate excess inclusions determined with respect to such interests over the REIT taxable income (within the meaning of §857(b)(2), excluding any net capital gain) are allocated among the REIT shareholders in proportion to the dividends received by them, and any amount so allocated is treated as an excess inclusion with respect to a residual interest held by the shareholder.[54]

b. Treatment of Nonrecognized Gain/Loss

Where the issue price of a residual interest, determined as of the date of issue by the REMIC, exceeds the holder's adjusted basis in the interest, such excess is included in gross income ratably over the anticipated period during which the mortgage pool will be in existence.[55] Where the holder's adjusted basis in the interest received from the REMIC exceeds its issue price, the excess is allowable as a deduction ratably over the same period.[56]

c. Application of the Wash Sale Rule

For purposes of the wash sale rules of §1091, a REMIC residual interest is treated as a security. In applying these rules to any loss claimed on the sale or other disposition of such interest:

(i) Except as provided in regulations, any residual interest and any interest in a taxable mortgage pool (*see* definition below) comparable to a residual interest are treated as substantially identical stock or securities, and

(ii) Subsections (a) and (e) of §1091 are to be applied by substituting "6 months" for "30 days" each place it appears.[57]

d. Procedural Rules

As noted above, a REMIC is treated as a partnership for purposes of subtitle F of subchapter C, which contains the special rules for the tax treatment of partnership items.[58] Also, for purposes of subtitle F, holders of residual interests are treated as partners.[59] The statute further provides that any return required by these partnership audit rules must include the amount of "daily accruals" (discussed in C, 2, a above). The Secretary is directed to prescribe such regulations requiring reporting to residual interest holders by the REMIC as frequently as is necessary or appropriate to permit them to compute taxable income accurately.[60]

D. Prohibited Transactions; Liquidations

A tax is imposed in the amount of 100% of the net income realized by a REMIC from "prohibited transactions."[61] Net income is defined as the excess of gross income from prohibited transactions over the deductions directly connected with them, but there is not taken into account any item attributable to a prohibited transaction on which there was a loss.[62] A "prohibited transaction" is defined as:

(1) Disposition of a qualified mortgage,

(2) Income from nonpermitted assets,

(3) Compensation for services, and

(4) Gain from the disposition of cash flow investments.[63]

The disposition of a qualified mortgage is a prohibited transaction other than pursuant to: (i) the substitution of a qualified replacement mortgage for a qualified mortgage, (ii) a disposition incident to a foreclosure, default, or imminent default of the mortgage, (iii) the bankruptcy or insolvency of the mortgage pool, or (iv) a qualified liquidation (defined below).[64]

A nonpermitted asset is any asset other than a qualified mortgage or a "permitted investment."[65] The latter term means any: (i) cash flow investment, (ii) qualified reserve asset, or (iii) foreclosure property.[66] These terms were discussed in A, *supra*.

Compensation for services means any amount received by the pool representing a fee or other compensation for services. §860F(a)(2)(C).

Finally, with respect to gain from the disposition of cash flow investments, an exception is made for qualified liquidations.[67]

A "qualified liquidation" means a transaction in which the REMIC must adopt a plan of liquidation, sell all of its assets (other than cash) within the liquidation period, and distribute (or credit) all sale proceeds plus cash (except amounts needed to meet claims) to the interest holders on or before the last day of the liquidation period.[68] The liquidation period means the period from the date the plan was adopted through the close of the 90th day after such date.[69]

E. Miscellaneous Technical Amendments

1. Treatment for REIT Purposes

For purposes of applying the provisions of §856 (relating to REITs), an interest in a REMIC is treated as an interest in real property, and any amounts included in gross income by reason of the holding of such interest is treated as interest. However, if less than 95% of the assets of a REMIC are interests in real property (determined as if the taxpayer held the assets) it is treated as an interest in real property only in the proportion which the assets of the REMIC consist of such interests.[70]

2. Treatment for Section 593 Purposes

Section 593(d)(4) [71] (relating to mutual savings banks and certain other financial institutions) provides that a REMIC interest shall be treated as a qualifying real property loan or, where less than 95% of the REMIC's assets are qualifying real property loans (determined as if the taxpayer held the assets), in the proportion which the REMIC assets consist of such loans.

3. Other Technical Amendments

Amendments similar to those described in 1 and 2, above were made to §7701(a)(19) (defining domestic building and loan association).[72] Also, §582(c) (providing ordinary income or loss treatment of gains and losses from the sale or exchange by a bank of certain property including evidences of indebtedness) was amended to provide that a REMIC interest is to be treated for purposes of that subsection as an evidence of indebtedness.[73]

F. Taxable Mortgage Pools

Act §673 amends §7701 (as amended by Act §201(c)) by adding new subsection (i) (after redesignating (i) as (j)) which contain provisions applicable to "taxable mortgage pools."

In general, a taxable mortgage pool is to be treated as a corporation for tax purposes and may not be included in a consolidated return.[74]

A taxable mortgage pool is defined as any entity (other than a REMIC) if:

> (i) Substantially all of its assets are debt obligations (or interests therein) and more than 50% of these obligations or interests are secured by real estate mortgages (or interests therein),
>
> (ii) The entity is the obligor on debt obligations with two or more maturities, and
>
> (iii) Payments on the obligations referred to in (ii) are geared to receipts from the obligations referred to in (i). Any portion of an entity which meets these qualifications shall be treated as a taxable mortgage pool.[75]

Nothing in §7701(i) is to be construed to treat a domestic building and loan association as a taxable mortgage pool.[76]

For purposes of these rules, equity interests which correspond to varying classes of debt are to be treated as debt to the extent regulations provide.[77]

If a REIT or REIT subsidiary is a taxable mortgage pool, regulations are to provide adjustments similar to those of §860E(d) (discussed above — passing- through to the REIT shareholders the tax consequences of residual interests held by the REIT) to the REIT shareholders.[78]

G. Effective Dates

The amendments made by Act §671 (all of the provisions discussed above except the amendments of §1272 and §7701) apply to taxable years beginning after December 31, 1986.[79]

The amendments made to §1272 apply to debt instruments issued after December 31, 1986 in taxable years ending after that date.[80]

The amendments made by Act §673 (relating to taxable mortgage pools) takes effect on January 1, 1992. It does not apply to any entity in existence on December 31, 1991. This ceases to apply, however, with respect to any entity as of the first day after December 31, 1991 on which there is a substantial transfer of cash or other property to the entity.[81]

For purposes of the extension of the wash sale rules made by §860F(d) (discussed above), the taxable mortgage pool provisions of Act §673 apply to taxable years after December 31, 1986. Act §675(c)(3).

III. Detailed Analysis

A. Basic REMIC Qualifications and Operating Rules

As indicated above, a REMIC's form is irrelevant so long as it meets REMIC qualifications regarding the composition of its assets and the interests issued by it. It can be a corporation, partnership, trust or other organization or simply a segregated pool of assets.[82] Most of the problems outlined in the introduction would appear to have been effectively dealt with and the way cleared for the efficient exploitation of the secondary mortgage market free from encumbering uncertainties regarding tax aspects.

The principle REMIC assets, obligations, including participations or certificates of interest in obligations, secured directly or indirectly by real estate, are referred to as "qualified mortgages," and will usually have been acquired on or before the startup date (*i.e.*, the date on or after which interests in the REMIC may be issued).[83] As of the close of the fourth month after this startup day and as of the end of each quarter thereafter, substantially all of the REMIC assets must consist of qualified mortgages or

permitted investments.[84] "Substantially all" is intended to permit only "*de minimis* amounts of other assets." [85] These qualified mortgages must have been transferred to the REMIC on or before the startup day [86] or have been purchased by it within the 3-month period beginning with the startup day.[87] A regular REMIC interest transferred on or before the startup day is treated as a qualified mortgage.[88] The mortgage portfolio once established as described can never be changed except as specifically provided.

The Committee Report states that stripped coupons or stripped bonds may be treated as qualified mortgages if they are real estate secured obligations, as will interests in grantor trusts to the extent the trust assets would be treated as qualified mortgages.[89] Further, it is intended that interests such as those described in Regs. §301.7701-4(c)(2), Example (2) should be treated as qualified mortgages. In the cited example, there are two classes of certificates evidencing rights to payments from pooled mortgages held by a trust, Class C and Class D. The C holders are entitled to 90% of payments of principal and interest on the mortgages and the D holders to the remainder. In the event of default, the rights of the D holders are subordinated to those of the C holders. The example states that there is a "limited recourse guarantee" running from the issuer of the certificates to the C holders.

Observation: Section 860G(a)(1), which defines regular interest, provides that the terms of such interest must be fixed on the startup day and must unconditionally entitle the holder to receive a specified principal amount (or similar amount). However, the Conference Report [90] states that payment of the principal amount may be made contingent, in effect, on the absence of defaults on mortgages in the collateral pool. The Report adds that an interest will not fail to qualify as a regular interest because payment of the principal (or similar) amount is subordinated to payments on other regular interests in the REMIC "and are dependent upon the absence of defaults on qualified mortgages." [91] Thus, it is intended that regular interests in a REMIC may resemble the types of interests described in Regs. §301.7701-4(c)(2) (Example (2)), discussed above.[92]

The REMIC is entitled to exchange real estate secured obligations held by it for other real estate secured obligations for a 3-month period beginning on the startup day. Also, a "defective qualified mortgage," *i.e.*, a qualified mortgage with respect to which there is a default or threatened default by the obligor,[93] can be exchanged for a qualified mortgage within the 2-year period beginning on the startup day.[94]

[91] *Id.*
[92] *Id.* In footnote 7, it is stated that the status of an interest as a regular interest in this case does not depend on whether the subordinated regular interest is sold or retained.
[93] Conf. Rep. at II-227, footnote 6.
[94] §860G(a)(4)(B)(ii).

The only activities permitted to a REMIC are essentially the collection of payments on the mortgages held by it and the temporary investment of such "cash flow" proceeds before distribution to interest holders in passive type assets yielding interest only. The Committee Report states that a "guaranteed investment contract" would qualify for such an investment. Under this arrangement, the REMIC agrees to turn over collected proceeds to a third party who agrees to return them with interest at times coinciding with the times payments are to be made to the REMIC interest holders.[95]

A "qualified reserve fund" made up of intangible assets is also authorized but is strictly limited to reasonable provisions for payment of expenses and to secure payments on regular interests that may otherwise be delayed or defaulted due to delays or defaults by the obligors on the mortgages in the pool. Funding should take into consideration the creditworthiness of such obligors and any guarantees backing up their obligations (VA, FHA, etc.). The reserve required should reflect the retirement of regular interests.[96] Section 860G(a)(7)(C) specifies that no more than 30% of the gross income of the reserve in any taxable year can be from the sale of assets held for less than three months. An exception to this rule is provided allowing the disposition of reserve assets to prevent default on payment to a regular interest holder where such default results from a default on one or more of the mortgages in the pool.[97]

As will be discussed below, a tax of 100% on the net income from "prohibited transactions" is imposed on the REMIC. §860F(a)(1).

B. REMIC Interests

A REMIC interest can be acquired by: (1) transferring property to the REMIC in exchange for the interest, (2) purchase of the interest from the REMIC, or (3) acquisition of the interest from another holder. The normal basis rules of §1012 apply except that where an interest is acquired in exchange for property transferred to the REMIC, the transferor takes a basis in the interest equal to the basis of the property transferred. Where several interests are acquired, their basis is determined by proration based on fair market value.[98] No gain or loss is recognized by the transferor or the REMIC in such an exchange.[99] The basis of any property *received by the REMIC* in such an exchange is its fair market value determined at the time of transfer.[100] Regulations may provide, however, that in certain circumstances, where the property transferred is a mortgage, basis may be deterined using the fair market value of such property at a reasonable time before the transfer to the REMIC where the mortgage was purchased for the purpose of making such transfer.[101]

Note: As pointed out below, the fair market value of property transferred to a REMIC in exchange for a regular interest is deemed to be the fair market value of the

REMIC interest issued. This avoids valuation problems to a large extent.

1. Regular Interests

a. In General

As indicated in the Overview, *supra*, a regular REMIC interest, regardless of its form, must have certain characteristics which will permit the issuing REMIC and the holder to determine their respective taxable incomes. The interest is to be treated as a debt instrument in the hands of the holder and as an obligation of the REMIC for purposes of determining the REMIC's taxable income (loss) for each quarter of its taxable (calendar) year. As already noted, it must unconditionally entitle the holder to receive a specified principal (or similar) amount.

A regular interest may be a debt instrument or a share of stock, a partnership interest, an interest in a trust, or any other form permitted by local law. In all cases, however, there must be "a specified amount that could be identified as a principal amount if the interest were in the form of debt." [102] The Committee Report provides as an example a partnership interest where the holder is to receive a specified amount in redemption of the interest and where the income allocated to the interest is a specified percentage of the specified outstanding redemption amount.

To compute the amount includible in income with respect to a debt instrument, it is necessary to determine its issue price, its yield to maturity, and its stated redemption price at maturity. While it is technically possible for a regular interest to have a zero yield, this will, for all practical purposes, never be the case. Where interest (or an amount similar to interest) is payable on a regular interest, it must be paid at a fixed rate or at a rate qualifying as a variable rate under Regs. §1.1275-5 (defining "variable rate debt instruments"). §860G(a). The amounts includible are computed as if the holder were an accrual basis taxpayer irrespective of the method of accounting used for reporting other items of income.[103]

Comment: It must be clearly understood that there is no *direct* correlation between the taxable income of the REMIC and the amounts includible in the income of the holder of a regular interest. The latter must take into account that portion of the REMIC's income that would be taken into account by an accrual basis holder of a debt instrument with terms equivalent to those of the regular interest.[104] The REMIC's deductions for interest and the amounts includible in the income of the regular interest holder will generally coincide since both are governed by the rules relating to the issuers and holders of debt instruments. However, the interest holder must compute the amounts includible in taxable income without regard to the REMIC's actual taxable income for the taxable year (if any).[105]

Regular interests are to be treated as debt instruments for *all purposes* of the Code.[106] Thus, where the "revised issue price" of a debt instrument, defined as the sum of the issue price plus the aggregate amount of OID includible income of all holders (determined without regard to any reductions by reason of payment of acquisition premium),[107] exceeds the holder's basis in the instrument at the time of acquisition, the excess is market discount. The Finance Committee bill provisions relating to mortgage backed securities provided for the recognition of gain or loss upon the transfer of property to a REMIC in exchange for an interest. However, under the Conference agreement, as provided in §860F(b)(1), there is no gain or loss at the time of the exchange. In the case of a regular interest, any excess of the fair market value of the interest over the transferor's adjusted basis in the property transferred to the REMIC is "included in gross income (as determined under rules similar to rules of §1276(b))." [108] In other words, such excess is treated as market discount to be accrued either ratably or on a constant interest basis at the election of the holder during any period the interest is held or is held by any person whose basis is determined in whole or in part by reference to the basis of the interest in the hands of such transferor, *i.e.*, a controlled corporation to which the interest was transferred in a transaction described in §351. The Conference Report makes it clear that such market discount equivalent is to be included in the interest holder's income currently as if an election had been made under §1278(b).[109]

Where the transferor's basis in the property transferred to the REMIC exceeds the fair market value of the interest received in the exchange, the excess is allowed as a deduction under rules similar to those of §171 which relate to the amortization of bond premium. §860F(b)(10(D)(i).

Observation: Note that the equivalents of market discount or bond premium are to be taken into account under rules "similar to" those provided by §§1276(b) and 171. A REMIC regular interest is not a debt instrument; it is treated as if it were a debt instrument. Thus, there is a degree of flexibility in the application of the Code sections referred to. For example, §1278(a)(1)(C)(i), as amended by Act §1803(a)(6) provides that, except as otherwise provided by regulations, the term "market discount bond" shall not apply to any bond acquired by the taxpayer at original issue. In the case of a regular REMIC interest, however, where the equivalent of the stated redemption price at maturity (generally, the stated principal amount or similar amount) exceeds its issue price, it will have OID to be taken into account under rules similar to those of §1272. Even so, it may still have the equivalent of market discount under the rules discussed above.

Example: Property is transferred to the REMIC in exchange for a regular interest with a fair market value of $50,000. The transferor's basis in the property at the time of transfer was $40,000. The interest has a stated

[109] Conf. Rep. at II-232. A similar rule applies to any market discount debt instruments or REMICs held by the REMIC itself. *See* §860C(b)(1)(B). However, in this case, the discount must be accrued on a constant interest basis only as provided by §1276(b)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

redemption price at maturity of $60,000. The issue price of the interest is $50,000. Thus, has $10,000 of O*Id.* It also apparently has $10,000 of market discount. If the rules of §1276(b) are applied, the interest holder may elect to accrue market discount on a constant interest basis. In this case, §1276(b)(2)(A) provides that market discount is accrued under the rules of §1272 as if it were OID and the instrument were issued for an issue price equal to the basis of the taxpayer in the bond immediately after acquisition. Further, where the instrument has OID, its stated redemption price at maturity is treated as equal to its revised issue price (in the case of a newly issue REMIC interest, its issue price). The coordination of the computations of OID and the accrual of market discount is to be effected under regulations which have not been issued to date.[110] How these rules are to be applied to regular REMIC interests is unclear. Regulations are needed for guidance.

The REMIC is subject to the reporting requirements of §1275 (relating to the issuance of OID obligations).[111] Regular interests are to be treated as evidences of indebtedness for purposes of §582(c)(1) (making them noncapital assets in the hands of certain financial institutions). Finally, where the holder's basis exceeds the amount payable at maturity (or, in some instances, an earlier call date) bond premium could be amortized under the rules of §171.[112]

(1) Prepayment Terms

One characteristic of a REMIC regular interest which distinguishes it from most debt instruments is that the *time* (but not the amount) as of which the principal amount is payable may be contingent. As mortgages in the pool are prepaid (resulting primarily from refinancing or sale of the underlying property), the terms of the interest may permit (or oblige) the REMIC to apply the proceeds and/or other income from permitted investments to payment of the principal amount of one or more classes of regular interests. Where such regular interest was issued at discount, and it is probable that some or all of the principal will be paid before maturity, the computation of the OID accruing during each accrual period is distorted since the instrument's yield to maturity can be computed only if there is a known schedule of principal payments. While such contingency as to prepayment does not disqualify an interest, special rules are necessary to permit the issuing REMIC and holder to compute the OID with a greater degree of accuracy than under the §1272 rules as in effect before their amendment.

(2) Basic OID Rules

Under §1272, providing the rules for determining the amount of OID includible in the income of the holder of an OID debt instrument, the instrument's adjusted issue price at the beginning of each accrual period is multiplied by the instrument's yield to maturity (as adjusted to reflect the length of the period). The amount so determined is then reduced by the amount of any qualified periodic interest payable during the period.[113] Assume a debt instrument with an issue price of $85,000 bearing annual interest of 9.5% payable semiannually the stated redemption price at maturity of which is $100,000. There is $15,000 of OID.[114] To determine the daily portion of OID (for purposes of inclusion under §1272(a)(1)) accruing in each six-month accrual period, the yield to maturity must be determined. This is the rate of interest which will produce a present value of $80,000 when applied to discount all payments due under the instrument.[115] This will, of course, depend on the maturity date; the longer the term, the lower the yield. Assume this to be 10.8% compounded semiannually. For the first accrual period, the OID is computed to be $70: ($80,000 × .054) - $4,250 (assuming $4,250 is the amount of qualified interest paid). The daily portion of OID is obtained by dividing $70 by 180 (using a convention of 12 30-day months in a year). The adjusted issue price for determining OID for the next accrual period is $80,070.[116] The holder's basis in the debt instrument is increased by the amount of OID includible in income under the rules of §1272.

(3) Prepayment Situation

Where an OID debt instrument is prepaid, the holder computes gain or loss by treating the premature retirement as a sale or exchange. If the amount received exceeds basis, there is a gain.[117] In the situation described in (a) above, there will always be a gain since the yield on the basis of which OID is computed is less than the actual yield when prepayment is taken into consideration. As a general rule, deductions allowed to the issuer under §163(e) equal the amounts includible in the income of the holder(s).[118] Where the instrument is retired before maturity, the issuer's §163(e) deductions are understated.

Where it is ascertained at the time of issue of a regular REMIC interest issued at discount that such interest will probably be retired (or partially retired) before maturity, special rules are provided under §1272 to insure that the amount of OID computed for each accrual period or portion thereof is not understated.[119] The REMIC will compute the yield to maturity taking into account a prepayment assumption based on factors to be set forth in regulations.[120]

[110] §1276(b)(2)(B)(i) and (ii).

[111] Conf. Rep. at II-231. *See* Prop. Regs. §1.1275-3. These rules apply to any debt instrument issued after May 8, 1976 that has original discount (with certain exceptions not applicable to REMIC interests).

[112] *Id.*

[113] *See* Prop. Regs. §1.1272-1(c).

[114] *See* Prop. Regs. §1.1273-1(a). This assumes that the *de minimis* rule of §1273(a)(3) does not apply.

[115] *See* Prop. Regs. §1.1271-1(f).

[116] *See* Prop. Regs. §1.1272-1(e).

[117] *See* below for the provisions treating that portion of the gain approximating unaccrued OID as ordinary income.

[118] The *de minimis* rule of §1273(a)(3) does not apply. Also, the issuer's deduction is not affected by the reduction allowed under §1272(a)(7) where the original holder sells the debt instrument and the acquirer pays an acquisition premium.

[119] §1272(a)(6), as added by Act §672; former §1272(a)(6) is redesignated as (7).

[120] The Conference Report states that it is intended that the prepayment assumption to be used in calculating yields to maturity and, hence, present values of future payments under the §1272(a)(6) rules "will be that used by the parties in pricing the particular transaction." The assumption is determined by the assumed rate of prepayments on qualified mortgages held by the REMIC and the assumed rate of earnings on temporary investment of REMIC cash flow receipts insofar as the rate of return on such investments will affect the timing of payments on regular interests. On the other hand, in accruing OID (or market discount) with respect to mortgages held by the REMIC, only assumptions about the prepayments on such mortgages are to be taken into account. Conf. Rep. at II-238 and footnote 22.

This will be further adjusted where partial prepayments of principal are made during an accrual period. This adjusted yield will then be applied to compute the present values of all payments due under the instrument at the beginning and end of each accrual period. OID for a given accrual period is then determined as the excess (if any) of:

(i) the sum of (1) the present values of all payments due under the interest as of the close of the accrual period and (2) all payments made during the period of amounts included in the stated redemption price at maturity, *i.e.*, all amounts other than qualified periodic interest, over

(ii) the adjusted issue price of the interest at the beginning of the period. §1272(a)(6)(A).

The adjusted issue price is the original issue price plus all amounts includible in the income of any holder (without regard to any reductions by reason of acquisition premium).

Observation: This method resembles the computation of OID in the case of certain debt instruments issued for property calling for fixed or minimum payments within a specified time period under Prop. Regs. §1.1275-4(d)(2)(iv).

This special rule for computing OID is applicable not only to REMIC regular interests, but also to any qualified mortgage held by a REMIC as well as any other debt instrument subject to prepayment by reason of prepayments of other obligations securing such instrument (or, to the extent provided by regulations, by reason of other events).[121]

Where a regular interest is issued in exchange for property, the provisions of §1273(b)(3) apply without regard to whether the interest or the property is publicly traded. This means that the interest's issue price is equal to the fair market value of the property exchanged. The Committee Report [122] states that it is intended that the fair market value of the property is to be determined by reference to the fair market value of the regular interests received in exchange. Thus, where property is transferred to the REMIC, and the regular interests received in exchange have a value of $100,000, this is their issue price (to be allocated among the interests in proportion to their fair market values).

Comment: This assumes that regular interests can be valued fairly readily. For example, pursuant to §1274, if the interest bears coupon interest of 6.5% and its stated principal amount is $50,000, and if, applying the market interest rate of 9%, the interest is valued at $35,000, Thus, it has $15,000 of OID. Where the interest provided is determined to be excessive, the Conference Report states that the interest will not qualify as a regular interest. Thus, if a regular interest is issued in the form of a debt instrument, where it has a coupon rate "substantially in excess of prevailing market interest rates (adjusted for risk)," it is intended that the interest may be treated either as a residual interest or as a combination of a regular and a residual interest.[123]

When a regular interest issued at discount is disposed of, there comes into play a rule similar to that of §1271(a)(2) this provision provides that where a debt instrument with OID is issued with the intention to call before maturity, any gain on disposition which does not exceed the OID as reduced by the amount of OID includible in the income of any holder (without regard to reductions by reason of acquisition premium) is ordinary income. Of course, if the instrument is held to maturity, all of the OID will have been included in the holder's income. In the case of a regular interest disposed of before maturity, it is treated in a similar manner. Any gain is ordinary income to the extent of the amount which would have been includible in the holder's income if the yield had been 110% of the applicable federal rate (a rough approximation of the market interest rate) reduced by the OID includible under the §1272 rules to the date of disposition. In selecting the applicable federal rate, *i.e.*, short, mid or long-term, the prepayment assumption is to be applied.

Note: It is contemplated that payments on regular interests will be made quarterly, as has been the custom with most preenactment mortgage backed securities. The accrual period will, therefore, usually be a calendar quarter. This is reflected in the provisions set forth below relating to residual interests.

2. Residual Interests

a. In General

Section 860G(a)(2) defines a residual interest as an interest in a REMIC *designated as a residual interest* which is not a regular interest. There can be only one class of residual interests and all distributions with respect to them must be pro rata.[124] Such interests have many of the characteristics of partnership interests, and they are treated as such for purposes of subtitle F.[125] This means that the holders will receive a Form K-1 from the REMIC and must report all REMIC items consistently with their treatment by the REMIC in its information return. Application of the rules set forth below may require more frequent reporting to residual interest holders by the REMIC of its income or loss, and regulations are authorized to require REMIC to furnish such information to holders "as frequently as is necessary or appropriate to permit such holders to compute their taxable income accurately." [126]

b. Pass-Through Rules

(1) REMIC Taxable Income (Loss)

The REMIC must compute its taxable income or loss for each calendar quarter in essentially the same manner as an accrual basis individual with modifications similar to those applicable to a partnership (except that deductions under §212 are allowed.) [127] These exceptions provide that (1) regular interests, if not debt instruments, are treated as indebtedness of the REMIC, (2) market discount on any market discount bond is included in income for the year in which such discount accrues, as determined under the rules

[121] §1272(a)(6)(C).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

of §1276(b)(2), and §§1276(a) and 1277 do not apply, and (3) there is not taken into account any income, gain, loss or deduction attributable to prohibited transactions.[128] Where the deductions allowed the REMIC exceed its gross income, it has a loss for the quarter.[129]

(2) Amounts Taken Into Account by Interest Holders

The holder of a residual interest takes into account his daily portion of the taxable income or loss of the REMIC for each day during the taxable year the interest is held. The daily portion is determined on a quarterly basis with each day allocated its ratable share of the quarter's taxable income (or loss). This amount is then allocated among the residual interest holders pro rata for each such day.[130]

Example: A REMIC's taxable income for a quarter is $1,000. There are two residual interests. The holder of a 60% interest holds it during the entire quarter. The holder of a 40% interest transfers it halfway through the quarter to another taxpayer. At the quarter's end, the 60% interest holder's daily portions total $600 treated as received ratably over the quarter. Each holder of the 40% interest is treated as receiving $200 ratably over the portion of the quarter in which the interest was held.[131] Income or loss so taken into account are ordinary income or loss.[132] *See* §860C(e)(1).

Rules similar to partnership rules apply to distributions and losses. Distributions to a residual interest holder are not includible in gross income to the extent they do not exceed the holder's adjusted basis in the interest, and to the extent distributions do exceed such basis, they are treated as gain from the sale or exchange of the interest.[133] Note that a residual interest is treated as an evidence of indebtedness for purposes of §582(c).[134]

The amount of loss taken into account by a residual interest holder under these rules is limited to his adjusted basis in the interest at the close of the quarter (or time of disposition, if earlier). The basis is determined without taking into account the net loss for the quarter.[135] Any loss disallowed by this limitation may be carried over indefinitely to succeeding quarters.[136]

The basis of a residual interest holder in his interest is increased by the amount of income taken into account under these rules and is decreased, but not below zero, by (1) distributions and (2) any net loss of the REMIC taken into account.[137]

Note: These adjustments to basis are apparently to be made at the end of each quarter. In some cases, the proper computation of the holder's taxable income will require information to be supplied quarterly by the REMIC. Also, if the residual interest is sold, basis must be adjusted to the date of sale. It is evident that accurate records must be maintained by the REMIC on a quarterly basis to enable it to provide the necessary information.

Example: Assume that A at the beginning of the year holds a 10% residual interest in a REMIC with a basis of $3,000. On June 30, there is a distribution with respect to A's interest of $3,000. The REMIC taxable income (loss) for the four quarters of the year is: $4,000, ($8,000), ($4,000), and $2,000. These data may be made available to interest holders more frequently than annually (as in the case of the partnership Form K-1), and regulations are authorized to require such reporting.[138] There is taken into account under §860C(a) for the first quarter 10% of the REMIC taxable income or $400. The adjusted basis of A in the interest at the close of the quarter is $3,400. For the second quarter, basis is first reduced by the $3,000 distribution. Therefore, as of the close of the quarter, basis is equal to $400. Thus, only $400 of the interest's $800 share of the loss is passed-through. This is carried over to the next quarter. For the third quarter, none of the $400 share of the loss is allowable since A's basis in the interest is still zero. For the last quarter the gain passed-through is $200, but this is offset by the loss carryover from the third quarter (assuming a FIFO carryover rule). For the year, then, A has ordinary income of $400 from the first quarter. He has ordinary loss of $400 from the second quarter. There is no income or loss from the third or fourth quarters, and there is a carryover of $200 from the second quarter and of $400 from the third quarter to be applied against future quarters of the REMIC interest (but only against income of this same interest).

Note: Where a residual interest is disposed of, the basis adjustment on account of the holder's daily portions of income or loss is deemed to occur immediately before the disposition.[139]

(3) Minimum Inclusions in Income

Section 860E(a)(1) generally provides that the taxable income of a residual interest holder for any taxable year shall not be less than the "excess inclusions" for such year.[140] Excess inclusions are determined for each quarter.

To determine the excess inclusion for a calendar quarter, there is first determined the amount taken into account under §860C(a), discussed immediately above. The excess inclusion for any quarter is the excess, if any, of such amount over the sum of the "daily accruals" for the interest during such quarter. To determine this latter amount, there is allocated to each day in the quarter its ratable portion of the product of the interest's adjusted issue price multiplied by 120% of the long-term applicable federal rate (defined by §1274(d)).[141]

The adjusted issue price of a residual interest is its issue price (cash paid or fair market value of interest if received

[141] §860E(c)(2). This rate is compounded quarterly. The rate is determined as if the interest were a debt instrument issued on the date the interest was issued by the REMIC. §860E(c)(2)(C).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

in exchange for property transferred to REMIC) increased by the amount of daily accruals for all prior quarters and reduced (but not below zero) by any distributions made with respect to the interest before the beginning of the quarter. §860E(c)(2)(B).

Note: According to the Conference Report at II-234, these minimum inclusion principles prevent the offset of a portion of the net income of the REMIC taken into account by the holder of a residual interest by any net operating losses of the holder (as the heading of §860E(a) implies). Presumably, the amount taken into account under §860C(a) for the taxable year is first determined by taking into account both income and loss quarters before applying these minimum inclusion rules. Thus, they do not prevent the allowance of REMIC losses passed through under the rules of §860C to the extent of the adjusted basis of the holder, nor do they apply to prevent the carryover of such losses where they exceed basis to succeeding quarters. These losses are not "net operating losses."

The above described minimum inclusion rules of §860E do not apply to §593 organizations (mutual savings and similar institutions operated for mutual benefit and without profit) unless the Secretary otherwise determines it appropriate in order to prevent tax avoidance.[142] If the holder of a residual interest is subject to the tax on unrelated business income imposed by §511 (tax-exempt organizations, generally) any excess inclusions are treated as subject to such tax.[143]

To the extent provided by regulations (which may apply in appropriate cases to residual interests issued before the regulations are issued), where a residual interest does not have "significant value," the minimum inclusion rules are to be applied without regard to daily accruals. In other words, the entire amount taken into account is to be treated as unrelated business income or income subject to withholding at the statutory rate in the case of nonresident alien holders.[144] No portion of such income may be offset by net operating losses irrespective of who holds the interest. It is intended that these regulations would not apply where the value of the residual interest is at least 2% of the combined values of the regular and residual interests.[145]

c. Other Rules Relating to Residual Interests

Where the issue price of a residual interest received in exchange for property transferred to a REMIC exceeds the basis in the hands of the transferor of such property at the time of transfer, the equivalent of market discount is taken into account ratably by the holder as ordinary income over the anticipated period during which the mortgage pool will be in existence. This applies also to any holder in whose hands the interest is transferred basis property.[146] In the case where there is the equivalent of bond premium, it may be amortized ratably over the same period.[147]

As noted in the Overview, *supra*, the wash sale rules of §1091 apply to residual interests as if they were securities. Further, except as provided in regulations, all REMIC residual interests (or similar interests in taxable mortgage pools) are treated as substantially identical property. In applying the wash sale rules to residual interests, loss from the disposition of such an interest is disallowed where another interest (or option to acquire such interest) is acquired within six months of the disposition, rather than 30 days as in the case of other securities.[148]

The Conference Report notes that conferees understand that REMIC income allocated to holders who purchased their interests from other holders after a significant change in value could be substantially accelerated or deferred due to a premium or discount. In such cases, it is recognized that modifications of the rules governing the taxation of holders of residual interests may be appropriate where the rules result in such acceleration or deferral.[149] Presumably, the broad regulatory authority granted by §860G(c) will permit such modifications.

Where a residual interest is held by a REIT, excess inclusions under §860E are allocated and passed-through to the REIT shareholders and treated as excess inclusions in their hands, *i.e.*, they may not be offset by any net operating losses.[150]

C. Prohibited Transactions

Under the REMIC rules, the REMIC must, insofar as practicable, be a passive entity which acts as a middleman between the interest holders and the obligors on the real estate secured obligations held by it. Its activities are, therefore, strictly limited. Other than qualified mortgages, it cannot own any income producing assets other than those necessary to the carrying out of its essential functions. Income earned by it which is not considered necessary for this purpose is, in effect, confiscated by a 100% tax.

This tax is imposed on the net income from "prohibited transactions," [151] which term includes the disposition of qualified mortgages, the earning of income from assets which are not "permitted," the receipt of any fees or other compensation for services, and the realization of gain from the disposition of "cash flow investments." [152]

In determining the net income from such transactions, deductions "directly connected" to the transactions are allowed, but if any transaction results in a loss, such loss is not allowed to offset net income from any other transaction, nor may expenses relating to such net loss transactions be deducted in determining net income from any other transaction.[153]

There are certain exceptions to the transactions listed above. For example a qualified mortgage may be disposed of if it meets the requirements of §806F(a)(2)(i)-(iv).[154] The Conference Report notes that payment by the obligor

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

on a debt instrument is not to be considered as a disposition of the debt instrument.[155]

If a REMIC adopts a plan of complete liquidation and within a period of 90 days from such adoption sells all of its assets and distributes or credits to all interest holders all of the sale proceeds and any other cash in its hands (cash sufficient to meet claims is permitted to be retained) dispositions of assets pursuant to such "qualified liquidation" [156] are not prohibited transactions.

Note: In the event of any distribution by a REMIC, whether or not in liquidation, of an asset to an interest holder, gain is recognized by the REMIC as if it had sold the property to the distributee for its fair market value.[157] Note that no loss may be recognized by reason of such distribution even if the property's value is less than the REMIC's basis in the property. Presumably, any gain recognized by reason of this rule is subject to the 100% tax.

Query: Would such distribution of property in kind in a liquidation disqualify the liquidation? If the property is deemed sold to the distributee, presumably it would not. If the property is loss property, however, the qualified liquidation rules would seem to require its sale by the REMIC within the 90-day liquidation period.

The REMIC is allowed to invest the receipts from its mortgage pool temporarily pending their distribution to interest holders,[158] provided that the proceeds are paid out promptly at the next succeeding regular payment date.[159] Regulations are authorized to prevent unreasonable accumulations of assets.[160] Such investments are "cash flow" investments. The realization of any gain from the disposition of such a cash flow investment is a prohibited transaction and, consequently, is subject to the 100% tax of §806F(a)(1).[161]

Aside from qualified mortgages and cash flow investments, the only other assets a REMIC may possess are "qualified reserve assets, and "foreclosure property." The former are defined as intangible property held for investment as part of a "qualified reserve fund," a fund reasonably required to pay REMIC expenses or as additional security to insure the payment of amounts due to the holders of regular interests in the event of defaults (including late payments) on mortgages in the pool.[162] This fund must at all times reflect what is "reasonable" for these purposes in light of all the circumstances. As mortgages are paid off and as regular interests are retired, the fund must be adjusted.[163]

The Overview, *supra* sets forth the statutory requirement that the fund's gross income from the disposition of assets held for less than three months must not exceed 30% of the fund's total gross income in any taxable year and all subsequent taxable years.[164] Gain on the disposition of a reserve fund asset, however, is not taken into account if the disposition of such asset is required to prevent default on a regular interest where such default is threatened by reason of a default on one or more of the mortgages in the pool.[165]

"Foreclosure property" is property acquired in connection with the default or imminent default of a qualified mortgage.[166] It retains this status for one year after its acquisition. Presumably, this property can be shifted to a qualified reserve fund in appropriate circumstances.

D. Terminations

Clearly, unless the operation of a REMIC is closely monitored by its managers, it may be found in violation of one or more of these various, often highly technical, rules. If the entity is found at any time to own assets other than (except for a *de minimis* amount) qualified mortgages and permitted investments, its status as such [167] will cease, with possibly disastrous tax consequences to the investors. In general, if the entity ceases to be a REMIC at any time during its taxable year, its status is revoked for the entire year and all subsequent years.[168]

Note: Apparently, termination will not result from engaging in prohibited transactions alone. The net income is taxed at 100%, but REMIC status is not affected.

In recognition of these potentially harsh consequences, the statute specifically provides authority to the IRS to grant relief in the event of an inadvertent termination.[169] This is to be accomplished by regulations, to be administered on a case by case basis, requiring that the failure(s) to qualify as a REMIC result from inadvertent, good faith error (and not by reason of any attempt to manipulate the REMIC provisions to gain tax advantages). Steps must be taken by the REMIC promptly as soon as the disqualifying event is discovered to correct the default.[170]

The IRS can simply ignore the failure, or it can condition nonrevocation of REMIC status on the acceptance by the interest holders and the REMIC of sanctions (*i.e.*, treatment of the REMIC as a C corporation for one or more quarters with resulting two levels of tax). Of course, it may be determined that the failures were too serious to qualify for this discretionary relief.

Observation: If the IRS refuses to grant relief under §860D(b)(2) despite a showing that the termination event was inadvertent, and there was a good faith effort to comply with the REMIC provisions, is there any remedy open to the taxpayers affected? Presumably, a court might require relief where it can be established that the refusal was an arbitrary abuse of discretion. However, the statute does not provide for judicial review, and it is unclear in what form such relief may be sought.

[164] §860G(a)(7)(C). Conf. Rep. at II-228.
[165] *Id.*
[166] The statute refers to the definition in §856(e) relating to REITs. §860G(a)(8).
[167] *See* definition of a REMIC, §860D(a)(4).
[168] §860D(b)(2).
[169] §860D(b)(2)(B).
[170] §860D(b)(2)(B)(iii).

E. Technical Amendments

Regular and residual interests in a REMIC are treated as qualifying real property loans for purposes of §593(d) (relating to bad debt reserve qualifications for mutual savings and similar institutions) and §7701(a)(19) (relating to the definition of domestic building and loan association) in the same proportion that the assets of the REMIC would be treated as qualifying real property loans (100% if 95% or more of the REMIC assets during an entire calendar year consist of such loans).[171] The Conference Report notes that it is intended that in the case of residual interests the amount treated as a qualifying real property loan not be in excess of the holder's adjusted basis in the interest.[172]

For REIT purposes, all REMIC interests are treated as real estate assets in the same proportion that the REMIC assets would be treated as real estate assets for purpose of determining REIT status (100% if 95% of the REMIC assets would be treated as real estate assets at all times during the taxable year).[173] In the case of a residual interest, its fair market value, and not the value of the REMIC assets, is used in the §856(c)(5) asset test.[174] All income derived from a regular or residual interest is treated as interest for purposes of applying the REIT provisions.[175]

F. Effective Dates: Taxable Mortgage Pools

The REMIC provisions discussed above apply to taxable years beginning after December 31, 1986. Thus, a REMIC may be organized and January 1, 1987 may be selected as the startup date on which interests can be issued to investors.

It is intended by Congress that REMICs are to be the exclusive means of issuing multiple class real estate mortgage backed securities without the imposition of two levels of taxation.[176] Thus, Act §673 amends §7701 (as amended by Act §201(c)(3)) by adding new subsection (i) which provides that a "taxable mortgage pool" is to be treated as a separate corporation which is not eligible for joining in a consolidated return.

A taxable mortgage pool (TMP) is defined as any entity *other than a REMIC* if (i) substantially all of the assets of the entity consist of debt obligations (or interests therein) of which more than 50% are secured by real estate mortgages, (ii) the entity has outstanding debt obligations in two or more maturities,[177] and (iii) under the terms of these obligations payments due bear a relationship to payments on the debt obligations held by the issuing entity.[178] For purposes of this definition, to the extent provided by regulations, equity interests of varying classes which correspond to maturity classes of debt are treated as debt.[179]

Any portion of an entity which qualifies as a TMP is to be treated as a TMP.[180]

According to the Conference Report "[T]he TMP provisions are intended to apply to any arrangement under which mortgages are segregated from a debtor's business activities (if any) for the benefit of creditors whose loans are of varying maturities." [181]

Excepted from this classification is any domestic building and loan association or any portion thereof.[182]

New §7701(i) to take effect on January 1, 1992. The TMP provisions are not to apply to any entity in existence on December 31, 1991 unless there is a substantial transfer of cash or other property to such entity after such date.[183] Thus, existing entities which would be classified as TMPs may continue to operate under their present tax regime (which, in some cases, may be unclear or unsatisfactory). However, no new mortgage backed security issuing entities meeting these very broad TMP qualifications may be organized after 1991 without submitting to taxation as corporations.

The amendments made to the OID rules (addition by Act §672 of new subsection 1272(a)(6)) apply to instruments issued after December 31, 1986.[184]

For purposes of applying the amendments to the wash sale rules (under which interests in REMICs as well as interests in entities which would qualify as TMPs if organized after 1991), the taxable mortgage pool provisions of Act §673 apply to taxable years after December 31, 1986.[185]

For another discussion of REMICs, *see* Silversmith, "REMICs: A Major Change in the Rules for Issuing Mortgage-Backed Securities," 2 *Tax Mgmt. Real Est. J.* 294 (Dec. 1986).

Chapter 43

TECHNICAL AMENDMENTS RELATING TO PARTNERSHIPS AND S CORPORATIONS

Samuel M. Maruca, Esq.
Silverstein and Mullens
Washington, D.C.

I. Retroactive Partnership Allocations

A. Background

Section 706(d), added to the Code by §72 of the Tax Reform Act of 1984, mandates that if during any taxable year there is a change in any partner's interest in the partnership, each partner's distributive shares of partnership items for the taxable year shall be determined by regulations. The provision is intended to prevent retroactive allocation of partnership items by, for example, delayed payment of cash expenditures and the allocation of deductions for such expenditures to partners entering at the time of payment. The Treasury has not as yet issued §706(d) regulations.

Under §706(d)(2)(A), certain deductions of cash basis partnerships ("allocable cash basis items") are assigned to partners on an accrual basis, day-by-day, during any year in which there is a change in any partner's interest in the partnership. Section 706(d)(2)(c)(i) states that where any portion of an allocable cash basis item is properly assignable to a prior taxable year, it is assigned to the first day of the taxable year of payment. Such an item is allocable among those who were partners during the period to which it is properly assignable. Amounts allocable to a person who is not a partner on the first day of the year of payment must be capitalized and treated under §755.[1]

B. TRA 1986 Amendment

Apparently some taxpayers have taken the position that, under §706(d), cash basis items attributable to a prior taxable year of the partnership need not be allocated under the general rule unless there is a change in the partners' relative interests in the partnership in the taxable year of payment. Section 1805(a) of the 1986 Act remedies this apparent flaw in the statute by clarifying that (i) the term "allocable cash basis item" is determined without reference to any particular taxable year (*i.e.*, a year in which partners' interests vary) and (2) allocable cash basis items assignable to a prior period are to be assigned to the first day of the current taxable year. Thus, the rules requiring proper assignment to allocable cash basis items now apply regardless of whether there is a variation in the partners' interests in the year of payment.

C. Effective Date

The §706(d) amendments apply to amounts attributable to periods after March 31, 1984.[2]

II. Disguised Sales to Partnerships or Partners

A. Background

The Tax Reform Act of 1984 amended §707(a) to provide that, under regulations, if there is a direct or indirect transfer of property by a partner to a partnership and a related transfer of property by the partnership to a partner, and the transfers, viewed together, are properly characterized as a sale of the property, they will be so treated. The provision was intended to prevent taxpayers from disguising a sale of property as a nontaxable contribution to partnership capital under §721 and a nontaxable distribution under §731.

B. Extension to Property Exchanges

Section 1805(b) of the 1986 Act amends §707(a)(2)(B) to provide that the disguised sale rules apply to transactions properly characterized as exchanges, as well as those characterized as sales. Thus, for example, a transfer of investment real estate to a partnership coupled with a transfer of other investment real estate from the partnership to a partner would be taxed in accordance with §1031 (relating to like-kind exchanges). Any "boot" received by a partner in the transaction would be currently taxable under §1031(b) and the nonrecognition rule of §731(a) would not apply.

C. Effective Date

The amendment to §707(a) generally applies to property transferred after March 31, 1984.[3]

III. Distribution of Partnership and Trust Interests

The 1986 Act places a limitation on the amount of gain recognized by a distributing corporation in a nonliquidating distribution of a partnership or trust interest. For a complete discussion of this amendment, *see* Chapter 37, Section IV, *supra*.

[1] §706(d)(2)(D).

[2] Act §1881; P.L. 98-369 §72(c)(1).

[3] Act §1881; P.L. 98-369 §73(b)(1)(B). *See* §73(b)(2) and (3) of the 1984 Act for special transitional rules.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

IV. Like-Kind Exchanges

A. Background

Section 77 of the 1984 Act amended §1031 to provide that any property received by a taxpayer in a purported like-kind exchange will not be treated as like-kind property unless the property is identified as the property to be received in the exchange, before the day which is 45 days after the transfer of the property relinquished in the exchange, or the property is received within a certain time period. (*See* §1031(a)(3)(B)).

B. TRA 1986 Amendment

In an attempt to avoid potential confusion regarding the 45 day rule, §1805(d) of the 1986 TRA amends §1031(a) to provide that property identified on the 45th day, as well as property identified prior to such day, qualifies as like-kind property (assuming all other §1031 requirements are satisfied with respect to the exchange).

C. Effective Date

The amendment to §1031(a) generally applies to transfers made after July 18, 1984, in tax years ending after that date.[4]

V. Amendments to S Corporation Rules

A. Background

1. Qualified Subchapter S Trusts

Section 1361(c) and (d) permits a "qualified subchapter S trust" to be a shareholder of an S corporation. Section 1361(d)(3) defines a "qualified subchapter S trust" as a trust the terms of which require that, *inter alia*, there be only one income beneficiary during the life of the current income beneficiary. In addition, all of the trust income must be distributed (or required to be distributed) currently to an individual who is a citizen or resident of the United States.[5]

2. Accumulated Adjustments Account

Section 1368(c)(1) provides that in the case of an S corporation that has accumulated earnings and profits, distributions that do not exceed the corporation's "accumulated adjustments account" are tax-free to shareholders to the extent of their adjusted stock basis. The accumulated adjustments account is defined in §1368(e)(1)(A) as an account of the S corporation which is adjusted, generally, in the manner provided in §1367 (relating to adjustments to the basis of S corporation stock).

In general, the accumulated adjustment account is increased by separately and nonseparately computed items of income under §1366(a)(1), and reduced by separately and nonseparately computed items of loss and deduction under §1366(a)(1), and by tax-free distributions to shareholders under §1368.

B. 1986 TRA Amendments

1. Qualified Subchapter S Trusts

The 1986 Act amends §1361(d) to provide that a substantially separate and independent share of a trust treated as a separate trust under §663(c) shall be treated as a separate trust for purposes of the qualified subchapter S trust definitions.[6] The separate share rules of §663 provide generally that for purposes of §§661 and 662 (relating to trusts that may accumulate income or that distribute corpus during the taxable year, *i.e.*, complex trusts), in the case of a single trust having more than one beneficiary, substantially separate and independent shares of different beneficiaries shall be treated as separate trusts.

Note: In the case of a complex trust with multiple beneficiaries that holds corporate stock, the application of the separate share rule could provide significant planning flexibility.

2. Accumulated Adjustments Account

The 1986 Act amends §1368(e)(i) to specify that no adjustment to the accumulated adjustments account shall be made for Federal taxes attributable to any year in which the corporation was a C corporation.[7] Thus, the deduction for Federal taxes for a C corporation year passed through to shareholders in an S corporation year does not reduce the amount that may be distributed tax free to shareholders.

C. Effective Dates

The amendments to §§1361 and 1368 apply to taxable years beginning after December 31, 1982.[8]

Chapter 44

AMENDMENTS RELATING TO COMPLIANCE REVISIONS

John F. Lefevere, Esq.
Silverstein and Mullens
Washington, D.C.

I. Tax Shelter Registration

A. Introduction

The Tax Reform Act of 1984 [1] continued the trend begun with the Tax Equity and Fiscal Responsibility Act of 1982 [2] in strengthening taxpayer compliance through tougher penalty provisions. The 1984 Act created a registration requirement for tax shelters, and penalties for failing to register a shelter, failure to report the tax shelter's identification number, and failure to maintain a list of tax shelter investors.

1. Tax Shelter Ratio Test

As enacted by the 1984 Act, Code §6111(a) requires any tax shelter organizer to register the shelter with the Secretary of the Treasury not later than the day on which interests in the shelter are first offered for sale. For purposes of defining which tax shelters must register, §6111(c)(1) states that a tax shelter is any investment if a reasonable person could infer from the offering representations that the tax shelter ratio for any investor (as of the close of any of the first 5 years ending after the offering date) may be greater than 2 to 1 and which is either a substantial investment, required to be registered under state or Federal securities laws, or sold under a state or Federal registration exemption. For this definition, the term "tax shelter ratio" is defined in §6111(c)(2) as the ratio which the aggregate amount of the deductions and 200% of the credits which are represented to be allowable to any investor under subtitle A [3] for all periods up to and including the close of the taxable year in question bears to the investment base (*i.e.*, the money and adjusted basis of property contributed) as of the close of that year.[4]

Shortly after enactment of the 1984 Act, the Service issued temporary regulations to aid in the interpretation of the tax shelter registration requirement.[5] These temporary regulations indicate that for purposes of calculating the tax shelter ratio, deductions are the amount of gross deductions and other similar tax benefits potentially allowable with no offset for any gross income either derived or expected to be derived from the investment.[6] "Credits" are the gross amount of credits potentially allowable with respect to the investment calculated without regard to any possible tax liability resulting from the investment or any potential recapture of the credits.[7] A deduction or credit is deemed to be represented as potentially allowable if oral or written representations are made at the time of the offering and subsequently through prospectuses and other written material [8] and can also be inferred from the explicit representation of any one tax benefit.[9] If not explicitly represented, the amount of each deduction or credit should be reasonably estimated, including the most accelerated allowable basis for cost recovery deductions under the ACRS.[10]

The tax shelter ratio requirement is also treated as having been met (thereby requiring registration) if the shelter both meets the requirements of §6111(c)(1)(B) and the ratio may be greater than 2 to 1 for any one investor [11] or greater than 2 to 1 under any one method of financing available to the investor.[12]

2. Tax Shelter Penalties

a. Penalty for Failure to Register a Tax Shelter

Section 6707(a) of the Code was enacted in the 1984 Act as a method of enforcing the tax shelter registration requirements. If the person required to register the shelter (*i.e.*, the principal organizer or a participant in the organization) fails to do so on or before the date prescribed under §6111(a)(1), or does file but provides false or incomplete information, a penalty is imposed in an amount equal to the greater of $500 or the lesser of either (a) 1% of the aggregate amount invested in the shelter, or (2) $10,000.[13] Although the penalty for failure to register is excused if the

[13] Code §6707(a)(1) and (2). The Senate felt that $500 was an insufficient deterrent and would have increased the penalty to the greater of 1% of the aggregate invested amount or $10,000. *See* S. Rep. No. 313, 99th Cong., 1st Sess. 193-194 (1986) ("Senate Report").

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

failure was due to reasonable cause,[14] the $10,000 limitation on the penalty does not apply if the failure to file resulted from intentional disregard of the requirements of §6111.[15]

b. Failure to Furnish Tax Shelter Identification Number

Section 6707(b) was enacted by the 1984 Act as a means of enforcing the requirement under §6111(b)(1) that the tax shelter identification number be furnished both from shelter sales persons (to investors) and by investors claiming tax benefits from the shelter (to the Service). A person who is required to furnish the identification number to each investor (because he sold or transferred an interest in the shelter) but fails to do so must pay a penalty of $100 for each such failure.[16] If the person who is required to furnish the identification number (because he claims tax benefits from the shelter) files a return but fails to include the identification number, he is liable for a penalty of $50 for each such failure, unless the failure is due to reasonable cause.[17]

c. Penalty for Failure to Maintain Lists of Tax Shelter Investors

As part of Congress' attack on abusive tax shelters, §6112 was added by the 1984 Act to require that any person who organizes or sells a potentially abusive tax shelter must maintain a list which (1) identifies each person who is sold an interest in the shelter and (2) such other information as may be required by regulations. A "potentially abusive tax shelter" is one which is required to be registered under §6111 or is determined by regulations to be an entity, plan, or arrangement having the potential for tax avoidance or evasion.[18] The 1984 Act also created, as a means of enforcement, Code §6708. This section subjects any person who fails to maintain an investment list in accordance with §6112 to a penalty of $50 for each such failure, unless the failure was due to reasonable cause and not to willful neglect.[19] Each separate omission of a person required to be identified on the investor list is treated as separate failure subject to penalty,[20] with a maximum penalty of $50,000 for any calendar year.[21]

B. Overview of 1986 TRA Changes

The Tax Reform Act of 1986 modifies the tax shelter ratio test for the purpose of determining when tax shelters should be registered. In addition, it increases the penalties in three areas: failure to register a tax shelter, failure to include the tax shelter identification number on the tax return, and failure to maintain lists of investors in potentially abusive tax shelters.

Note: A Senate provision to impose a user fee on holders of tax shelter interests was dropped in conference. The user fee would have required taxpayers who, with respect to each tax shelter, claimed on their tax returns cumulative net losses (plus three times the value of cumulative tax credits) that exceeded cumulative actual cash invested in the tax shelter to pay a user fee of 1% of the losses claimed and 3% of the credits claimed with respect to that tax shelter. The measure was designed to help raise sufficient revenue to cover the Service's costs of administering the tax shelter law.[22]

C. Detailed Analysis

1. Tax Shelter Registration Ratio

Under the 1986 TRA, a tax shelter organization is required to register its tax shelter with the Service if the ratio of deductions plus 350% of the credits to the cash actually invested is greater than 2 to 1 for the underlying investment.[23] This is accomplished by substituting 350% for the 200% in pre-1986 TRA Code §6111(c)(2)(A).[24] The change raises the percentage of credits from 200% under pre-1986 TRA law, which yields a credit to deduction conversion at a 50% rate of tax, the pre-1986 TRA maximum individual rate. This provision is designed to maintain the proper conversion of credits into deduction-equivalents as a result of the lowering of the individual rates to a maximum of 28% by the 1986 Act.[25] However, the 2 to 1 ratio of §6111 is not changed by the 1986 Act.

This amendment applies to any tax shelter within the meaning of §6111 in which interests are first offered for sale after December 31, 1986.[26]

2. Tax Shelter Penalties

a. Failure to Register a Tax Shelter

Effective on the date of enactment (for tax shelter interests sold after that date) the pre-1986 TRA $10,000 maximum penalty applicable to tax shelters which fail to register with the Service is deleted.[27] Thus, the penalty for failure to register is the greater of 1% of the aggregate amount invested in the shelter, or $500.[28] The $500 figure serves as a minimum penalty. However, with deletion of the $10,000 maximum, the maximum amount of penalty is unlimited (or, more precisely, only limited by the size of the investment in the tax shelter).

This amendment applies to failures with respect to tax shelters in which interests are first offered for sale after the

[14] Code §6707(a)(1). This is a question of fact, taking into account all representations which the organizer knew or should have known about. T.D. 7964, *supra* footnote 5, Temp. Regs. §301.6707-1T, Q&A-4.

[28] *Id.*, creating Code §6707(a)(2)(A) and (B), as revised.

date of enactment of the 1986 Act (*i.e.*, after October 22, 1986).[29]

b. Failure to Report Tax Shelter Identification Number

The penalty for an investor taxpayer who fails to report a tax shelter identification number on his tax return is raised from $50 to $250.[30] However, the exception for failure to report where the failure is due to reasonable cause is retained. The change reflects the belief of the Senate Finance Committee that the $50 penalty is too low.[31] The amendment applies to returns filed after the enactment date of the 1986 Act (*i.e.*, October 22, 1986).[32]

c. Failure to Maintain List of Tax Shelter Investors

Although the 1986 Act retains the $50 per investor penalty for failure to maintain lists of persons who invest in potentially abusive tax shelters as required by §6112, the maximum penalty which may be imposed for such failure in any one calendar year is raised to $100,000.[33] The exception for failure to include an investor name due to reasonable cause (but not willful neglect) remains unchanged, and (unlike the Senate version), the penalty per name omitted remains at $50, rather than being raised to $100 per name.[34] The higher maximum is effective for failures occurring or continuing after the date of enactment of the 1986 Act (*i.e.*, after October 22, 1986).[35]

II. Revised Penalty Provisions

A. Introduction

The actions taken by Congress with respect to penalties in the Tax Reform Act of 1986 evidence a concern that the penalty provisions as previously constituted were disorganized and further that in many cases the penalties were considered to be too low to act as an effective deterrent to the activities penalized. The penalty provisions prior to their amendment by the 1986 are are described below.

1. Penalties for Failure to File Information Returns or Statements and Furnish Copies

a. Failure to File Information Returns or Statements

Section 6652(a) of the Code imposes a $50 fine on a taxpayer's failure, without reasonable cause, to timely file statements and information returns. Specifically, this penalty applies to each failure to file a statement with respect to the amount of payment to another person required by provisions relating to certain information at source,[36] fishing boat operator reporting,[37] information on income tax withheld,[38] failure to make a return required for direct sellers,[39] brokers,[40] the payment of wages in the form of group term life insurance,[41] certain tip reporting,[42] mortgage interest received in a trade or business from individuals,[43] cash received in a trade or business,[44] foreclosures and abandonment of security,[45] exchanges of certain partnership interests,[46] and certain dispositions of donated property.[47] The penalty also applies with respect to a return required by the section relating to the windfall profit tax on crude oil.[48]

The penalty is imposed unless the taxpayer can show that such failure is due to reasonable cause and not to willful neglect.

Under §6652(a)(2), a special, self-assessed[49] penalty applies to any taxpayer who fails to file a statement of payment amounts to third persons required for the payment of dividends,[50] patronage dividends,[51] or interest.[52] The penalty is $50 per failure to file, but the taxpayer is excused from the penalty if he can show that he exercised due diligence in attempting to satisfy the requirement with respect to the statement.

If one or more failures occurs which are governed by the penalties under §6652(a)(1) or (2) and it is shown that the taxpayer intentionally disregarded the filing requirement, a special penalty is imposed. This penalty is not less than 5% of the gross proceeds required to be reported in the case of a broker reporting,[53] and $100 for each failure in the case of returns of direct sellers, mortgage interest received, cash received, and foreclosures and abandonments.[54] In all other situations described above, the penalty shall not be less than 10% of the aggregate amount of the items which are required to be reported.[55] Moreover, the $50,000 limitation does not apply to these penalty amounts.[56]

b. Failure to Furnish Copies to Persons Entitled to Them

Section 6678 imposes a penalty of $50 on each payor or other person who is required to furnish a statement or copy of a statement or return to third parties and fails to do so. The person who so fails may avoid the penalty if he shows that his failure was due to reasonable cause and not to willful neglect, and the maximum penalty for all such failures during a calendar year cannot exceed $50,000.[57] Those reporting situations generally covered by this re-

[29] Act §1532(b).

quirement track the situations described in A, 1, a, *supra*, with additional requirements for statements furnished by certain pass-thru entities to their interest holders.[58]

Several special penalty provisions exist in this area. Any partner who transfers his partnership interest and receives money or property attributable to inventory or unrealized receivables and who fails to notify the partnership of the exchange as required by §6050K(c)(1) is subject to the $50 per failure penalty.[59] Of greater importance is the penalty imposed upon payors who fail to provide their payees with statements of interest, dividends and patronage dividends. Those who fail to meet this requirement must pay a self-assessed [60] penalty of $50 for each failure unless he can show that he exercised due diligence in attempting to satisfy the requirement.[61]

2. Penalty for Failure to Pay Tax

a. Failure to Pay Tax

Section 6651(a)(2) provides that if a taxpayer fails to pay the tax due on any return specified in §6651(a)(1) [62] on or before the date prescribed for its payment, determined with regard to any extension of time for payment, a penalty is imposed as an addition to tax at a rate of .05% (*i.e.*, one-half of one percent) of the tax if the failure is not for more than one month. This penalty is in the nature of a civil penalty. If the failure continues, the addition to tax continues at the .05% rate for each month (or fractional month), but not in excess of 25%. However, the failure to pay tax penalty is excused if there is reasonable cause and the failure is not due to willful neglect.

b. Coordination of Failure to File Penalty and Failure to Pay Assessed Deficiency Penalty

Code §6651(c)(1)(B) provides a special rule which coordinates the failure to file penalty of §6651(a)(1) and the failure to pay an assessed deficiency penalty under §6651(a)(2). The special rule, which applies if both penalties are imposed, reduces the failure to pay penalty by that amount of the failure to file penalty which is attributable to the tax for which notice and demand has been made but which has not been paid within 10 days of the notice and demand (*i.e.*, to that amount of the assessed deficiency which is overdue). As a practical matter, the special offset rule permits a taxpayer who never files his return to pay a smaller cumulative penalty than one who files a return but files it late. This is because the taxpayer who files late is liable for the total penalty consisting of both the failure to file and the failure to pay the tax penalty, while the taxpayer who never files has his failure to pay penalty reduced by his failure to file penalty as a result of the operation of §6651(c)(1)(B).

3. Negligence and Fraud Penalties

a. Fraud Penalty

Under §6653(b)(1), if any part of any underpayment of income, estate, gift and certain excise taxes which is required to be shown on a return is due to fraud, then a fraud penalty equal to 50% of the total underpayment is imposed. This penalty is in the nature of a civil fraud penalty. In addition, an amount equal to 50% of the interest payable under §6601 [63] is added to the tax due. Subsection (b)(4) provides that in the case of a joint return, the fraud penalty is not imposed on the tax of a spouse unless some part of the underpayment is due to the fraud of such spouse.

b. Negligence Penalty

The negligence penalty has two components. First, if any part of an income, gift or windfall profit tax underpayment is due to negligence or intentional disregard of the rules and regulations (where there has been no intent to defraud), there is an addition to tax equal to 5% of the underpayment.[64] The second component, contained in §6653(a)(2), provides for an addition to tax of 50% of the interest payable under §6601 for an underpayment of such tax which is attributable to negligence. The negligence penalty is imposed for the period beginning on the last date prescribed for payment of the underpayment (determined without regard to extensions) and ending on the date of the assessment of the tax, or the date of the payment of the tax, if that is earlier.[65] In addition to its statutory imposition on income, gift, and windfall profit taxes, the negligence penalty has also been extended by the Tax Court to the tax on self-employment [66] and by the Service to the accumulated earnings tax.[67]

In 1986, the Sixth Circuit in *Asphalt Products, Inc. v. Comr.*,[68] reversed a Tax Court decision and held that the negligence penalty should only be applied to that portion of the deficiency attributable to the taxpayer's negligence, rather than applying it to the entire underpayment, where the amount of the underpayment substantially exceeded the portion attributable to negligence.

c. Special Negligence Penalty

In the case of interest, dividends, or patronage dividends, §6653(g) provides that if a payment is made by the payor and shown on an information return, and the payee fails to include any portion of the payment in gross income, this failure is treated as negligence, unless the payee can show otherwise by clear and convincing evidence.

[58] Required by Code §6031(b) (partnerships reporting to partners), §6034A (fiduciaries of trusts and estates reporting to beneficiaries) and §6037(b) (S corporations reporting to their shareholders). *See* Code §6678(a)(3)(F).

[59] Section 6678(c).

[60] Section 6678(b)(2)

[61] Section 6678(b)(1).

[62] Generally, this includes all tax returns, since §6651(a)(1) requires that returns be filed if required by subchapter A of chapter 61 (except for information returns required in part III) which encompasses most income, estate and gift tax returns, and also requires returns to be filed under subchapter A of chapter 52 (distilled spirits, wines and beer), subchapter A of chapter 52 (certain tobacco taxes) and subchapter A of chapter 53 (firearms).

[63] Interest on underpayment, nonpayment or extension of time to pay tax are imposed by Code §6601.

[64] Code §6653(a)(1).

[65] Code §6653(a)(2)(B).

[67] *See* Rev. Rul. 75-330, 1975-2 C.B. 496.

[68] 796 F. 2d 843 (6th Cir. 1986).

4. Penalty for Substantial Understatement of Income Tax Liability

A substantial understatement penalty of 10% is imposed under §6661(a) if the taxpayer's tax liability is understated without reasonable cause. The 10% is imposed on the amount of any underpayment which is attributable to the understatement. An understatement is the amount by which the tax which should be shown on the return exceeds the amount of tax which is actually shown (reduced by a §6211(b)(2) rebate.[69] An underpayment is "substantial" if the amount of the understatement for any taxable year exceeds the greater of 10% of the tax required to be shown on the return, or $5,000.[70] In the case of any corporation, other than an S corporation or a personal holding company, the addition to tax is the greater of 10% of the tax required to be shown or $10,000.[71]

The taxpayer, however, may receive some relief from this penalty if there either was (or is) substantial authority for his tax treatment of the item,[72] or he adequately disclosed the relevant facts concerning the item's tax treatment on the return or in a statement attached to the return.[73]

The "substantial authority" standard is stricter than the reasonable basis standard contained in §6653, but less stringent than the "more likely than not" standard, which is based on having a better than 50% chance of being upheld in litigation.[74] Substantial authority is established when the weight of accepted authorities supporting the tax treatment of the item is substantial in relation to the authority supporting the contrary position.[75] Accepted authorities include the Internal Revenue Code, statutes, regulations, court cases and administrative pronouncements (such as Revenue Rulings) tax treaties, (as well as official explanations and regulations to them) and Congressional intent (as reflected in committee reports and floor statements of managers).[76] However, conclusions reached in treatises, legal periodicals, legal opinions and Internal Revenue Service documents (such as General Counsel Memoranda) are not authority, except to the extent that, for example, a private letter ruling is directed to the taxpayer in question.[77] In practice, however, taxpayers take questionable positions on tax returns which are not based on authority, either in the hope of escaping audit or in reliance upon a tax advisor's opinion.

B. Overview

The Tax Reform Act of 1986 adds a new Part II to Subchapter B of chapter 68 dealing with the failure to file certain information returns. Encompassed within Part II are penalties for failure to file certain information returns, failure to furnish certain payee statements and failure to include correct information where an information return or payee statement is furnished. There is also an expanded penalty for failure to pay tax. After due consideration, the 5-percent level of the existing negligence penalty was retained, with the penalty being applied to the entire portion of the underpayment, not just the portion attributable to the negligence. In this regard, the Sixth Circuit opinion in *Asphalt Products Co. v. Comr.*, is overruled by the conference action. The penalty for substantial understatement of tax liability is doubled to 20% in the case of many taxes, including the individual income tax, corporate income taxes and the unrelated business income tax. However, due to conflicting provisions in the Omnibus Budget Reconciliation Act of 1986, it is unclear whether and when a higher 25% penalty will be imposed due to a substantial understatement. Finally, in a technical amendment to the Tax Reform Act of 1984, an amendment to Code §6229 is added which applies the period of limitations for making assessments to an addition to tax or an additional amount imposed under Subchapter A of chapter 68 on partnership items.

C. Detailed Analysis

1. Penalties for Failure to File Information Returns or Statements

By adding new Part II to subchapter B of chapter 68 (§§6721-6724), the 1986 Act consolidates the penalty for failure to file an information return with the Service with the penalty for failure to supply a copy of that information return to the taxpayer and places them in the same subchapter of the Code. The pre-TRA penalty for failure to file an information return with the Service is repealed,[78] as is the pre-TRA penalty for failure to furnish a copy of the information return to the taxpayer.[79] Both committees expressed a desire to make the consequences of noncompliance more easily understood by taxpayers while facilitating administration on the part of the Service, and sought to do this through simplification and consolidation of the penalties.[80] Although the penalty for single failures is kept at $50 per failure, the maximum penalty is raised to $100,000 in each separate category of failure.[81] The committees indicated a belief that the efficacy of the penalties were diminished where there were massive failures to file, but at the same time declined to totally eliminate the maximum amount imposed in light of the disproportionately enormous tax liability which would be suffered in relation to both the taxpayer's culpability and the imposition of other federal penalties.[82] However, where there is intentional disregard of the filing requirement, pre-TRA law (which imposes a higher penalty depending upon the type of return involved, with no stated maximum penalty) was retained.[83]

The penalty for failure to file due to intentional disregard is $100, with no $100,000 limitation.[84] Moreover, this

penalty is not taken into account when applying the other penalties, (other than due to intentional disregard), which impose a $100,000 limitation.[85] One example of the higher penalties reflected in Code §6721(b)(1) is with respect to the penalty for a failure to file a return required under §6050I [receipt of more than $10,000 in the course of trade or business from one transaction (or two or more related transactions)] Under §6652(a)(3)(A)(iii) before repeal the penalty for intentional disregard was $100 for each failure. Under §6721(b)(1)(A) the penalty for intentional disregard is $100 per failure or 10% of the aggregate of such failures, which ever sum is greater.

New §6722 imposes a penalty on each failure to furnish a payee statement to the person to whom it is required to be furnished of $50 per failure, with a maximum total penalty of $100,000 for all such failures during a calendar year.[86] A special rule imposes a $50 penalty (for each failure) on any transferor of a partnership interest who fails to furnish the partnership of the exchange of his partnership interest as required by §6050K. However, the statute does not impose a maximum total penalty.[87]

New Code §6723 imposes a penalty for failure to include correct information (whether through the omission of information or the inclusion of incorrect information) on either an information return or on the copy of such a return supplied to the taxpayer, unless the failure was due to reasonable cause and not willful neglect.[88] Each failure results in a penalty of $5.00 with a maximum penalty imposed on the person who failed to include the information of $20,000 for all such failures in any one calendar year.[89] However, a $100 penalty, without maximum penalty amount, applies where the taxpayer has intentionally disregarded the requirement to file accurate information returns.[90] Moreover, the penalty itself does not apply to an information return if the Service has already imposed the penalty for failure under §6676 to supply the correct taxpayer identification number on the same return.[91] The Senate Report indicates that if the Service has imposed the penalty for failure to file an information return, it may not in addition then impose the incorrect information penalty on the same return.[92]

Section 6724 provides definitions and special rules. In the case of interest, dividend, and patronage dividends, where information returns are filed with the Service and statements are furnished to payees, the new law prohibits the separate $100,000 limitations (applied under §§6721 and 6722) and the $20,000 limitation (applied under §6723) from applying to a failure to file one of these types of statements.[93] Moreover, any penalty imposed on such a failure shall not be taken into account in applying those limitations to other penalties, or for applying the limitations on other returns or statements.[94] However, the penalty will not apply if the taxpayer has exercised due diligence in attempting to satisfy the filing requirement.[95] The penalty is self-assessed and not subject to deficiency procedures.[96]

The new law also clarifies that, in 16 separate instances of substantive information reporting requirements in the Code, the requirement to supply a copy of the information return to the taxpayer is triggered by its obligation to file the information return rather than by the actual filing of the return.[97] In the opinion of both committees, this clarified the requirement and refuted the technical argument made by some taxpayers that furnishing the copy to the taxpayer was only required once the person required to supply the copy had actually provided the return to the Service.[98]

Code §6676(a), which imposes a $5 (or $50) penalty on a failure to include a taxpayer identification number (TIN) on any return, statement or other document, was also amended to increase the maximum penalty from $50,000 to $100,000.[99]

With three exceptions, these amendments apply to returns the due date for which (determined without regard to extensions) is after December 31, 1986. In the case of amendments clarifying the penalties for failure to furnish payee statements, the amendments to §6042(c),[100] §6044(e),[101] and §6049(c) [102] apply to returns the due date for which (determined without regard to extensions) is after the date of enactment of the Act (*i.e.*, after October 22, 1986).[103]

2. *Increase in Penalty for Failure To Pay Tax*

a. In General

The 1986 Act increases the penalty for failure to pay tax and the penalty on a tax which has been assessed but not yet paid from one-half of 1% to 1% per month when two specific contingencies have been met.[104] When the higher penalty rate has been established for any month in regard to a particular type of tax and taxable year, the 1% rate is applicable to any penalty for failure to pay taxes for that taxpayer for all subsequent months.[105] The two situations

[85] Code §6721(b)(1)(B).

[86] Code §6722(a), added by Act §1501(a). The definition of payee statement, contained in Code §6724(d)(2) is generally the same as under pre-TRA law, with the exception of the addition of a payee statement relating to the payment of royalties which is required by Code §6050N(a). *See* Code §6724(d)(2)(Q).

[87] Code §6722(b), added by Act §1501(a). In the House and Senate versions of H.R. 3838, the penalty was imposed at a rate of 5% of the amount which should have been reported. *See* House Report at 830 and Senate Report at 176.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

occur when (1) a notice of intention to levy has been sent pursuant to §6331(d), or (2) notice and levy has been made upon the assets of the taxpayer pursuant to §6331(a), because the Service feels that the collection of the tax is in jeopardy.

In the case of the notice of intention to levy, the 1% penalty amount is imposed for each month or fraction of a month beginning after the day which is 10 days after the date on which the notice is given under §6631(d).[106] In this situation, the increase in penalty rates occurs at the start of the month following the month in which the 10-day period expires. Where the notice and demand are made because the Service feels that the collection is in jeopardy, the increase in the penalty occurs at the start of the month following the month in which notice and demand are made.[107] Thus, when the §6631(a) levy is invoked, the 1% interest rate is imposed for each month (or fraction thereof) beginning after the day on which notice and demand for immediate payment are given under the last sentence of §6631(a).[108]

Example: If notice of levy is given under §6331(d) on April 24, 1987, the ten day period ends on May 4. The 1% rate would begin on June 1, because the increased rate does not begin until the start of the month following the month in which the ten day period ends.

Both committee reports emphasize that the penalty amount will remain at one-half of 1% during the period when the Service makes initial and then repeated attempts to contact the taxpayer by mail. Once the standard mailing cycle has been completed and the Service must switch to more costly methods, such as telephoning and personal visits to the taxpayer, the 1% rate becomes effective.[109]

The changes were made in line with the position of the President's Proposals for tax reform, which advanced the position that those taxpayers who delay the payment of properly owed taxes should be required to pay penalties approximately equal to the overall cost of collecting the delinquent taxes.[110] Thus, once the Service has generally initiated more expensive collection procedures (at the points in the collection process described above), the higher penalties are effective.

The House Ways and Means Committee rejected a "cost of collection charge" system which would have required the taxpayer to pay for the specific costs of specific Service actions which were required to collect delinquent taxes from him.[111] The Senate Finance Committee version of the bill would have required a report from the Treasury Department which described the proposed cost of such a cost of collection charge system,[112] but this was rejected by the conference committee.[113]

The amendments which increase the penalty for failure to pay tax where notice under §6331(d) or notice and demand under §6331(a) has been given apply to failures to pay which began after December 31, 1986, and to failures to pay which began on or before December 31, 1986, if after that date, notice or renotice is given under §6331(d) or notice and demand are given under §6331(a).[114]

b. Coordination of Penalty for Failure to File and Failure to Pay Assessed Deficiency

Section 6651(c)(1)(A) and (B) are rewritten as §6651(c)(1), so that the special offset rule described above is repealed.[115] As rewritten, the coordination of the failure to file and the failure to pay tax shown is improved, because the 5% failure to file penalty during a particular month is reduced by the one-half of 1% failure to pay penalty for the same month.[116] This amendment applies to amounts assessed after December 31, 1986, with respect to failures to pay which begin before, on, or after that date.[117]

3. Negligence and Fraud Penalties

In general, both committees expressed concern that the negligence and fraud penalties were not being applied in a large number of cases in which such an action would have been fully justified.[118] Although the modifications discussed below were designed to improve the operation of both types of penalties, the Reports emphasize that both the Service and the courts share a "significant responsibility" and are expected to ensure that the penalties are fully asserted where appropriate.[119]

a. Fraud

The first component of the fraud penalty, the basic percentage amount, under §6653(b) is raised to 75% by the new law.[120] However, the scope of the fraud penalty is reduced so that it essentially applies only to that portion of the underpayment attributable to the fraud.[121] The House Report indicates that there was concern that the penalty was otherwise an insufficient deterrent to fraudulent behavior, since the same penalty could be imposed on two taxpayers with identical underpayments where one underpayment was attributable wholly to fraud and the other only partially to fraud.[122] The law attempts to accomplish this objective by changing the burden of proof in fraud cases so that once the Service has established that any portion of the underpayment is attributable to fraud, the entire underpayment is treated as attributable to fraud, except to the extent that the taxpayer can establish that any portion is not so attributable.[123] It was felt that this was a proper approach since the facts necessary to establish that the underpayment is not due to fraud are generally within the taxpayer's control; however, the committees emphasized that it was their intent that the fraud penalty only apply to the portion of the underpayment attributable to fraud.[124]

[116] *See* House Report at 832 and Senate Report at 179.
[117] Act §1502(c)(2).
[118] House Report at 834 and Senate Report at 180.
[119] *Id.*
[120] Code §6653(b)(1)(A), as amended by Act §1503(a).
[121] *Id.*
[122] *See* House Report at 834.
[123] Code §6653(b)(2), as amended by Act §1503(a).
[124] House Report at 835 and Senate Report at 182.

The revised fraud penalty makes no change to the second component of the fraud penalty. Thus (in addition to the 75% of underpayment addition to tax) an amount equal to 50% of the interest payable under §6601 is added to tax for the period beginning on the last day prescribed for payment of the underpayment (determined without regard to any extension) and ending on the date of assessment of the tax (or the date of payment, if earlier).[125]

Despite these modifications, the statute of limitations for false or fraudulent returns under §6501(a) is unchanged. Therefore, if a return is filed which is in some respect fraudulent, the statute of limitations never expires as to the whole return.[126] The statute also continues the existing innocent spouse rule in the case of joint returns; the penalty does not apply to the spouse unless some part of the underpayment is due to the fraud of that spouse.[127]

The amendments made with regard to the fraud penalty are effective for returns the due date for which (determined without regard to extensions) is after December 31, 1986.[128]

b. Negligence Penalty

Despite the failure of Senate efforts to increase the rate of the negligence penalty and narrow its application only to the portion of the underpayment of tax due to negligence,[129] the conference agreement did expand the scope of the penalty by applying it to all taxes under the Code.[130]

For the first time, the term "negligence" is given a clear definition. As redrafted, the term includes any failure to make a reasonable attempt to comply with the provisions of the Code.[131] This was intended to encourage Service agents to assert the penalty where its application may have been considered unclear in the past. The committee reports indicate that the term also encompasses any careless, reckless, or intentional disregard of the rules or regulations; however, negligence is not limited to these items. Thus, all behavior which is considered negligent under existing law, as well as any behavior considered negligent by the courts but not specifically included within the law's definition is or remains subject to the negligence penalty.[132] Moreover, the term "disregard" is defined to include any careless, reckless or intentional disregard.[133]

As redrafted by the conference committee, §6653(a)(1) retains pre-TRA law with respect to the 5% rate and application of the penalty amount to the entire amount of the underpayment rather than just to the portion of the underpayment attributable to negligence.[134] The conferees also clarified that the Sixth Circuit decision in *Asphalt Products Co. v. Comr.*[135] inaccurately states existing law and also is of no effect, since the conference agreement provides that once one element of negligence has been demonstrated, the negligence penalty applies to the entire underpayment.[136]

The amendments made with respect to the negligence penalty apply to returns the due date for which (determined without regard to extensions) is after December 31, 1986.[137]

c. Special Negligence Penalty

The penalty for "special negligence" (*i.e.*, failing to include in income that interest and dividends shown on an information return) under Code §6653(g) is expanded to include any failure to show amounts properly that are shown on the information return.[138] As expanded, this measure applies to any item on an information return as defined in §6724(d)(1),[139] a return of partnership income filed under §6031, a return of an S corporation filed under §6037, the return of an estate or trust filed under §6012(a), a return relating to unemployment compensation filed under §6050B, or a return relating to state and local income tax refunds filed under §6050E.[140] If such an amount has been shown on one of the returns specified above, and the payee (or other person with respect to whom the return is made) fails to show that amount on his own return the negligence penalty is imposed on any portion of the underpayment attributable to such failure.[141] More importantly, this failure is treated as negligence in the absence of clear and convincing evidence to the contrary, meaning that the Service can automatically impose the negligence penalty in these situations. For the purpose of this penalty, an information return is any such return under new Code §6724(d)(1) which is now subject to the penalties for failure to provide an information return.[142]

According to the House Report, which accompanies the House version of H.R. 3838, the 5% special negligence penalty is determined at the top marginal rate applicable to the taxpayer.[143] The following example appears in the House Report and would have to be modified to take into account the lower maximum marginal rates as enacted in the 1986 Act:

> *Example:* A taxpayer fails properly to report as income $1,000 that was reported on an information return as interest income, and also fails to report an additional $1,500 of income that is not reported on an information return. Assume that the top marginal rate from the income the taxpayer actually reported is 25%, but that after $1,500 of additional income, the taxpayer will be in the 35% bracket. The $1,000 of income that was

[139] Code §6653(g)(1)(A).
[140] Code §6653(g)(1)(B).
[141] This modifies §6653(a)(1)(A), which applies the negligence penalty to the total underpayment (even where only a portion of the underpayment is due to negligence).
[142] *See* House Report at 835 and Senate Report at 181.
[143] The conference agreement follows the Senate amendment which is the same as the House bill, so that despite the lack of statutory language, the application of the marginal rate appears to have been intended. *See* Conference Report at II-782.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

reported on the information return is considered to be taxed in the 35% bracket. Thus, the penalty is $17.50 ($1,000 x .35 (tax rate) x .05 (penalty rate)).[144]

The amendments affecting the special negligence penalty apply to returns the due date for which (determined without regard to extensions) is after December 31, 1986.[145]

d. Interaction of Fraud and Negligence Penalties

Where the underpayment of tax is partially attributable to negligence and partially to fraud, the negligence penalty does not apply to any portion of the underpayment which has a fraud penalty imposed on it, even though the negligence penalty otherwise generally applies to the entire underpayment.[146] This provision, along with the more precise targeting of the negligence and fraud penalties, were designed to increase the efficiency of the penalties. The Senate Report notes a concern that under existing law imposing the same penalty on two taxpayers having identical underpayments, but due in different degrees to negligence and fraud, is an insufficient deterrent to either type of behavior.[147]

4. Penalty for Substantial Understatement of Liability

a. The Tax Reform Act of 1986

The percentage penalty imposed as an addition to tax for the substantial understatement of tax is doubled to 20% of the amount of the underpayment of tax attributable to the understatement.[148] The types of taxes to which this increase applies include individual income taxes, corporate income taxes, and the unrelated business income tax.[149] The level of the penalty was increased to provide a more sufficient deterrent to those who rely on both the "audit lottery" and reliance on the advice of tax advisors to avoid the penalty.[150] The amendment affecting the substantial understatement penalty applies to tax returns the due date for which (determined without regard to extensions) is after December 31, 1986.[151]

b. Interaction with the Omnibus Budget Reconciliation Act of 1986

In an attempt to bolster the revenue intake from the substantial underpayment penalty, the drafters of the Omnibus Budget Reconciliation Act [152] agreed to amend Code §6661 further by increasing the substantial understatement penalty to 25% of the amount of any underpayment attributable to the understatement.[153] Although the House version would have made the change effective for returns the due date of which are after December 31, 1986,[154] the conference agreement made the increased penalty effective for penalties assessed after the date of enactment of OBRA,[155] and repealed §1504 of the 1986 Act.[156] This legislative scheme would have succeeded except for the fact that President Reagan signed the Omnibus Act on October 21, 1986, one day before he signed the Tax Reform Act of 1986, because of the delay in passing the enrolling legislation on the tax bill.[157] Although technically the higher penalty was overturned by the subsequent signing of the tax bill as to post-1986 returns, it is believed that clarification of the situation will come in a technical corrections bill.[158] In the interim, the Service issued an information release, IR 86-149.[159] The release said that those taxpayers who substantially understated their income tax liability for 1982 and later years will face the 25% penalty beginning with penalties assessed after October 21, 1986. Thus, the increased amount applies to tax returns due after December 31, 1982. However, the release ended by stating that "[a]lthough Congress intended the increased penalty provisions of the Omnibus Budget Reconciliation Act to apply to tax returns due after December 31, 1986, the IRS is studying the effect, if any, of the Tax Reform Act provisions on these returns." [160] This presumably permits the Service to back down from its position in the event that the release incorrectly interpreted the new laws.

5. Period of Limitations for Penalties

A new subsection (g) is added to §6229 so that the provisions concerning the period for making assessments on partnership items also apply to any addition to tax or additional amount imposed under subchapter A of chapter 68 (*i.e.*, §§6651-6662) which will be treated as if such addition or additional amount were a tax imposed by subtitle A. This change, which is a technical correction to the Tax Reform Act of 1984, applies as if included in the provision of that Act to which the correction applies.[161]

III. Information Reporting Requirements

A. Introduction — Pre-1986 TRA Law

The Tax Equity and Fiscal Responsibility Act of 1982 [162] and the Tax Reform Act of 1984 [163] both contain various measures such as criminal and civil penalties and withholding which are designed to create improved taxpayer compliance and to raise revenues. One important weapon has been those provisions relating to information reporting. Generally, these returns are required where a certain type of income (such as tips or mortgage interest receipts) are

received in a manner which may not otherwise be susceptible to scrutiny by the Service.

1. Reporting by Brokers

Under Code §6045, certain brokers must file information returns regarding business which they transact for customers, if Treasury regulations so require.[164] For this purpose, a "broker" is a person who stands ready to effect sales to be made by others in the ordinary course of a trade or business.[165] Prior to the 1986 Act, regulations were issued to require reporting of the gross proceeds from the sales of securities, commodities, regulated futures contracts and precious metals.[166] However, real estate transactions have not been included and there was some concern in Congress that a sizeable number of such transactions have been going unreported.

2. Supplying Taxpayer Identification Numbers on Tax Returns

A taxpayer must include his taxpayer identification number (TIN) and, in the case of a taxpayer who is filing a joint return (or is married filing separately) the TIN of his spouse.[167] However, the taxpayer need not include the TIN of a dependent on his return, even if the dependent is a parent, child, or other qualifying dependent.

Members of recognized religious sects (or divisions thereof) which are opposed to the acceptance of private or public insurance, including Social Security, and who meet the requirements of the Secretary of Health and Human Services [168] may apply for exemption from the self-employment tax.[169] If the application is accepted, the applicant can receive the TIN directly from the Service. The Service also administratively provides TINs directly to nonresident aliens, instead of requiring them to procure the numbers directly from the Social Security Administration. However, in other cases, such as foreign students, the TINs are obtained under special procedures of the Social Security Administration.

3. Information Reporting on Royalties

Along with interest, rents, annuities, pensions, and other gains, profits and income, royalties aggregating $600 or more which are made in the course of a payor's business to another person must be reported in an information return.[170] The failure to include the taxpayer's TIN in the return is not subject to penalty and reportable royalty payments are not subject to backup withholding.

4. Information Reporting on the Receipt of Mortgage Interest

Under pre-1986 TRA law, any person who, in the course of his trade or business, receives from any individual mortgage interest which aggregates $600 or more for any calendar year (on any one mortgage) must file an information report with the Service and furnish a statement to the payor.[171] Under temporary regulations, the Service has required that the receipt of mortgage interest by a cooperative housing corporation be reported to the Service on an information return, with a statement furnished to the tenant-stockholder making the payment.[172] However, the Service suspended this requirement for calendar year 1985 in Announcement 86-3, pending modification and clarification of the temporary regulations.[173]

5. Information Reporting Requirements for Passthrough Entities

The fiduciary of a trust or estate who prepares that entity's income tax return must furnish a statement containing any information which the Service requires to be disclosed by regulations to each beneficiary who receives a distribution from the trust or estate (with respect to the taxable year at issue), and to each beneficiary to whom any item of income (with respect to the taxable year at issue) is allocated.[174] However, if a person holds an interest as the nominee of a beneficiary, the fiduciary is required to furnish the information to him.

The same rules apply to holders of partnership interests.

6. Mailing Requirements for Certain Payee Statements

In the case of payments of dividends, patronage dividends, and interest, the payor must furnish the payee with a statement of the payment either in person or by separate mailing via first class mail.[175] The form for reporting is, in each of the three cases, determined by the Service's regulations. In general, nothing more than an information report has been permitted to be enclosed in a mailing.

7. Tax-Exempt Interest Reporting Requirements

The regulations under Code §265 require that any taxpayer who has deductions allocable to any class of exempt income (or any property or activity where its income is not required to be included in gross income) must attach an itemized statement with his tax return. The statement must show the amount of each class of income and show the allowable deductions allocable to each class.[176] However, tax-exempt interest need only be reported by those taxpayers receiving Social Security benefits which are taxable.

B. Overview

Largely as a result of the need to raise additional revenues as part of the "revenue neutral" goal of the 1986 tax reform legislation, Congress again strengthened the information reporting rules. The 1986 Act imposes reporting requirements on real estate brokers, the head of each

Federal executive agency engaged in government contracting, and persons paying royalties exceeding $10 per year. For the first time, taxpayer identification numbers (TIN) will have to be supplied for dependents claimed on tax returns, unless the dependent is less than five years old. Those who are currently exempted from social security self-employment taxes may continue to obtain their TINs from the Service.

Tax-exempt income must now be reported on a tax return if the taxpayer is required to make a return of income under §6012. In addition, more specific content rules are created for the separate mailing requirement for certain information reports.

A technical correction to the 1984 Act requires the nominee of a partnership interest owner to furnish the name of the true owner and such other information as the Secretary may require through regulations. Another technical corrections section requires that the same information be furnished to a trust or estate by the nominee of a person holding an interest in that trust or estate.

Note: A House provision which would have required state and local governments which impose income tax to provide information returns to both the individual taxed and the Service was defeated in conference.[177]

C. *Detailed Analysis*

1. *Information Reporting on Real Estate Transactions*

The Senate Report stated a concern that a sizeable number of real estate transactions are not being reported on tax returns.[178] As an extension of Regs. §1.6045 (which requires the reporting of the gross proceeds of sales of securities, commodities, regulated futures contracts, and precious metals) the 1986 Act requires that "real estate brokers" report real estate transactions in a return.[179] The statute sets up a hierarchy for determining who is a real estate broker, so that any of the following persons are responsible (in the order in which listed): (1) the person responsible for closing the transaction (including any attorney or title company), (2) the mortgage lender, (3) the seller's broker, (4) the buyer's broker, or (5) a person designated in the Service's regulations.[180] The real estate broker so designated is also considered to be a "broker" for purposes of §6045(c). Treasury is also given the authority to issue regulations which specify who the person responsible for closing the transaction is, as well as uniform rules concerning which person involved in a closing has primary responsibility for the information reporting.[181] The conference report notes that the regulations need not rely upon the presence or absence of a legal obligation at closing. In addition, the conference report suggests that the Service provide guidance to taxpayers well before the effective date of the requirement, including rules on which type of real estate transactions are included and excluded (such as refinancing) from the scope of the requirement, as well as what gross proceeds should be reported.[182]

The reporting is to be done on a Form 1099 similar to that required for other broker transaction reporting. All penalties and related provisions applying to general information reporting requirements for brokers also apply to real estate transaction reporting. In addition, real estate information reporting may be done on magnetic media, including filing by one entity of all magnetic media reports.[183] Moreover, all penalties and related provisions that apply to the general broker reporting requirements also apply to the real estate reporting requirements, since the reporting is mandatory under Code §6045(a) and (b).[184]

As enacted, the real estate transaction will not be subject to backup withholding, except to the extent required by regulations.[185] The Treasury is to provide guidance to taxpayers on how to implement backup withholding with respect to real estate transactions.[186]

These provisions apply to real estate transactions closing after December 31, 1986.[187]

2. *Information Reporting on Federal Agency Contracts*

In yet another reflection of Congress' reaction to public concern over government contractors who avoid paying taxes, the Act imposes a reporting obligation on the heads of federal agencies which enter into contracts with the private sector.[188] The Act requires the head of federal agencies to file an information return indicating the name, address, and taxpayer identification number of each person with which that agency enters into a contract.[189] For this purpose, a "Federal executive agency" is any executive agency (other than the General Accounting Office) as defined in 5 U.S.C. §105,[190] any military department defined in 5 U.S.C. §102,[191] and the United States Postal Service and the Postal Rate Commission.[192] Moreover, the Service is permitted to extend such reporting requirements by regulations to subcontracts under the contracts which are subject to the statute [193] and to licenses granted by executive agencies.[194] Although the law does not prescribe any minimum threshhold amount for contracts, subcontracts and licenses below which the reporting requirements will not apply, the Service is delegated regulatory authority to prescribe classes of contracts or licenses to which the section will not apply.[195]

While permitting the Secretary of the Treasury to issue appropriate regulations, the Senate Report suggests that the information returns be filed within a certain time period of signing the contract, such as 30 days, rather than waiting until the end of the calendar year.[196] The Service is delegated authority to require "such other information" as is required in the return;[197] to that end, the Senate indicated that the Service has the authority to require returns to be in such form and at such time as necessary to make it useful as a source of information for collection purposes.[198]

In the case of consolidated returns where each corporation may have a separate taxpayer identification number, the Secretary is given authority to require that the information return include both the corporation's TIN as well as the TIN under which it files its consolidated return, to facilitate the matching of federal contracts with delinquent collections.[199]

The statute states that the provisions apply to contracts and subcontracts entered into (and licenses granted) before, on, or after January 1, 1987.[200] The Senate interpreted this to mean that all contracts signed on or after that date are subject to information reporting, and further that all contracts signed prior to that date are subject to such reporting if they are still in effect on January 1, 1987.[201]

3. Information Reporting on Royalties

In an effort to remedy the lack of specificity in pre-1986 TRA law requirements (and thus combat the appreciably lower reporting levels for royalty income reporting which existed in relation to other types of income), the 1986 Act provides that a person who makes a royalty payment aggregating $10 or more to any other person in a calendar year must provide an information report to the Service, with a copy to the taxpayer.[202] If payments are made to a nominee and the nominee makes payments aggregating $10 or more to another person, the nominee must report the information to the taxpayer and the Service.[203]

The Senate Report gives as examples of the royalties covered by the new law: payments made with respect to the right to exploit natural resources (such as oil, gas, coal, timber, sand, gravel, and other mineral interests), and payments for the right to exploit intangible property, such as copyrights, trade names, trademarks, franchises, books and other literary compositions, musical compositions, artistic works, secret processes or formulas, and patents.[204]

The general rules for information reporting for payments of interest and dividends apply to this new rule. If a payee does not provide the payor with his (payee's) TIN (which for individuals would be the social security number) the royalty payments generally become subject to backup withholding.[205] Thus, overall, the reporting requirements are more specific and the threshold level for reporting is lowered.[206]

The required returns must contain the name and address of the payee and the total annual royalties paid to him, and otherwise comply with the forms and regulations prescribed by the Service.[207] According to the Senate Report, the information report must be provided to the taxpayer by the end of January (of the year following the calendar year of payment) and the report to the Service must be provided by the end of February.[208] Payors who file large numbers of such returns are subject to the Service's rules on magnetic media filing.[209]

The payor must also furnish a statement to the payee showing the name and address of the person required to make the return and the aggregate amount of payments to the payee which are required to be shown on the return. This statement (in a form prescribed by the Service) must be furnished in person or by first class mail (with adequate notice of what it contains) on or before January 31 of the year following the calendar year in which the return is made.[210] The statute does provide certain exceptions to the statement rules. Thus, unless otherwise provided in the regulations, the return and statement rules do not apply to the following persons described in Code §6049(b)(4):[211] (1) a corporation,[212] (2) a §501(a) tax-exempt organization or individual retirement plan,[213] the United States or one of its wholly-owned agencies or instrumentalities,[214] a state, the District of Columbia or United States possession (or one of their instrumentalities, political subdivisions, or wholly-owned agencies),[215] a foreign government (or its political subdivisions, instrumentalities or wholly-owned agencies),[216] or an international organization (or its instrumentalities or wholly-owned agencies).[217]

The royalty reporting requirements also amend Code §6676 to impose the $50 penalty if the payor has failed to include the payee's TIN on the return, unless he can prove he exercised due diligence in attempting to provide the number.[218] Moreover, the backup withholding rules apply to royalty payments.[219]

The royalty reporting provisions apply to payments made after December 31, 1986.[220]

4. Taxpayer Identification Numbers for Dependents

A taxpayer claiming a dependent who is at least five years old on his tax return must report that dependent's

taxpayer identification number on the tax return.[221] This law has been nicknamed "TINS for TOTS." The requirement applies to returns the due date for which (determined without regard to extensions) is after December 31, 1987.[222]

The effective date for this requirement was delayed by the conferees for one year from its original date (January 1, 1987) in order to give taxpayers ample time (prior to the first return on which they will be required) to apply for and receive TINs for those dependents who do not have them. Moreover, the delay is intended to give the Service and Social Security Administration sufficient time to publicize the new requirement.[223]

The conferees indicated that the Service can continue its practice of denying deductions for dependents if the taxpayer can not establish that it is proper to claim the person as a dependent.[224] The amendment will be useful in aiding the Service to track down instances where divorced taxpayers have each claimed the same child as a dependent on their own returns and denying the deduction to one or the other parent.

Those individuals who, due to religious beliefs, acquire their TINs from the Service through an exemption from complying with Social Security Administration requirements can continue to do so, according to the conferees. Moreover, the service is permitted to continue its administrative practice of directly issuing TINs to nonresident aliens.[225]

5. Tax-Exempt Interest Required to be Reported on All Returns

Section 6012 is amended by the 1986 Act to require that every person who is required to file a return for a taxable year must include the amount of tax-exempt interest received or accrued during the taxable year in that return.[226] The House Report notes that is requirement is applicable to all taxpayers, including individuals, corporations and others.[227] It is designed to aid in checking compliance with Code §265 and to compile information for possible future tax changes.[228] Moreover, it will help taxpayers calculate the correct taxable amount of Social Security and the new minimum tax.[229]

6. Mailing Requirements for Payee Statements

In the case of dividends,[230] patronage dividends,[231] and interest,[232] the mailing containing the payee statement now contain adequate notice that such statement is enclosed. Moreover, the mailing requirement also applies to the information reporting requirement for royalties added by the 1986 Act (and discussed above).[233] In addition to the information reports and tax forms which the Service under pre-1986 law permitted to be enclosed, the 1986 TRA rules allow the payor to enclose a statement of the taxpayer's specific account with the payor,[234] a check, or a statement explaining why no check is enclosed.[235] Each enclosure and the outer envelope must contain the following statement: "Important Tax return Document Enclosed." However, a mailing will not be deemed to be a complying statement mailing if it encloses any other material (such as advertising, promotional material, or an annual or quarterly report), since such enclosures make it less likely that the taxpayer will recognize the importance of the documents and utilize them in preparing his return.[236]

The mailing requirements are applicable to information returns filed after the date of enactment (*i.e.*, after October 22, 1986).[237]

The 1986 Act also makes the payee statement requirements of banks and collecting agents for foreign items (such as foreign country bond interest and foreign corporation dividends) in excess of $600 which are collected outside of the United States for a citizen or resident of the United States depend upon being required to file the information return rather than having filed the information returns.[238] This requirement applies to returns the due date for which (determined without regard to extensions) is after December 31, 1986.[239]

7. Reporting to Nominees of Passthrough Entities

Section 6034A of the Code was amended to provide that the fiduciary of a trust or estate must furnish to a nominee of a beneficiary the same information which would be furnished to the beneficiary.[240] In addition, the person who holds the estate or trust interest as a nominee for the beneficiary must (in a manner prescribed by Treasury) furnish to the estate or trust the name of the beneficiary, his address and any other information required by the Treasury.[241] In addition, the nominee must (in a manner prescribed by the Treasury) furnish to the beneficiary that information which is provided to him by the trust or estate in accordance with Code §6034(a).[242] These requirements apply to taxable years of trusts and estates beginning after the date of enactment (*i.e.*, after October 22, 1986).[243]

The same requirement is applied to any person who holds an interest in a partnership as a nominee for another person. Thus, Code §6031 is amended to add nominees.[244] As with the nominee of the estate or trust, the nominee of a

person holding a partnership interest must furnish the partnership with the name, address and other required information about that person, as well as furnishing the information provided by the partnership under §6031 to the person for whom he is nominee.[245] This amendment applies to partnership taxable years beginning after the date of enactment (*i.e.*, after October 22, 1986).[246]

8. Information Reporting by Cooperative Housing Corporation

Congress amended Code §6050H to provide that amounts received from a tenant-shareholder by a cooperative housing corporation will be deemed to be interest received on a mortgage in the course of a trade or business engaged in by the cooperative, to the extent of the tenant-shareholder's proportionate interest as described in Code §216(a)(2).[247] This change is effective as if included in the provision of the Tax Reform Act of 1984 to which it relates.[248] Thus, it applies to mortgage interest received after December 31, 1984 and effectively reinstates the Service's treatment of such interest under the temporary regulations before they were suspended.

IV. Modifications to the Interest Rules

A. Introduction — Pre-1986 TRA Law

1. Interest Rates on Underpayments and Overpayments of Tax

The interest rate which is used to compute interest on either an underpayment of tax [249] (where the taxpayer pays interest to the Service) or an overpayment of tax [250] (where the Service pays interest to the taxpayer) is the same because it is calculated under Code §621. Section 6621(a) provides that the annual interest rate is to be an adjusted rate established by Treasury. The rate (which is set twice a year and in effect for six months) is equal to the average predominate prime rate quoted by commercial banks to large businesses, as determined by the Board of Governors of the Federal Reserve System.[251] This rate is not as reflective of prevailing rates as actual market rates involving other governmental transactions and is unrealistic to the extent that it does not reflect the normal banking practice of lending funds at rates higher than the rates paid for funds.

2. Interest on Accumulated Earnings Tax

In Revenue Ruling 72-324 [252] the Service agreed to follow decisions in the Court of Claims,[253] the Sixth Circuit,[254] and the Ninth Circuit [255] which held that because the accumulated earnings tax is an additional amount or addition to tax under Code §6601(e)(2), interest on the tax does not begin to run until notice and demand for payment is made. Thus, interest is not imposed until there has been no payment of the addition to tax within 10 days of notice and demand for payment. Moreover, the interest only runs from the date of notice and demand until the date of payment of the addition.[256] Thus, there is generally less incentive (from an interest point of view) to report an accumulated earnings tax liability than there is for other types of taxes.

3. Mandatory Imposition of Interest on Unpaid Tax

Under Code §6601(a), it is mandatory that interest be charged whenever any tax or installment of tax has not been paid. The Service has no leeway to excuse the payment of interest, and has refused to do so even where additional interest liability has been created as a result of Service error or delay. The Service's position is that, once the tax liability has been established, the amount of interest is merely a mathematical computation based upon the rate of interest and the due date of the return; it can only be reduced when the underlying deficiency is reduced.[257] However, the Service does have statutory authority to abate interest if it results from a mathematical error of a Service employee assisting a taxpayer in the preparation of a return.[258]

4. Compounding of Interest When Deficiency is Suspended

Code §6622(a) provides that interest on the underpayment of tax is computed by compounding the interest daily. However, if a taxpayer consents to an immediate assessment of income, estate or gift taxes, and pays the tax within 10 days of the notice and demand for payment, interest is stopped on the 30th day after the filing of the taxpayer's consent, if that date is earlier than the date of notice and demand.[259] But interest continues to accrue on previously charged interest, because the Service does not have a statutory mechanism to prevent it.

5. Imposition of Interest on "Tax-Motivated" Transactions

Section 6621 defines the following as tax motivated transactions to which a special high interest rate will be applied: (1) any valuation overstatement within the meaning of Code §6659(c),[260] (2) a transaction in which any loss is disallowed under the at-risk rules or a credit is disallowed for investment tax credit purposes,[261] (3) any tax straddle,[262] (4) any use of an accounting method which, under the Service's regulations, is a use which may result in a substantial distortion of income for any period,[263] or (5) any other type of transaction which the Service's regulations specify will be treated as a tax motivated transaction for purposes of the higher interest rate.[264] The special high

interest rate imposed on a substantial underpayment attributable to such transactions is 120% of the adjusted rate established under §6621(b).[265] For the last half of 1986, this meant that the special interest rate was 120% of the 10.8% rate which was effective from July 1, 1986, through December 31, 1986.[266]

However, the Tax Court has held that the higher interest rate would not apply to a sham transaction since that type of event is not included in either the statutory definition or the regulations.[267] In the *Forseth* case, the result was even more pronounced since the taxpayer was involved in a sham tax straddle. The court found that the transaction was a straddle in form but not substance, leading to the anomalous holding that a tax-motivated tax straddle is subject to the higher interest rate, but a sham tax straddle (which is arguably more egregious in terms of taxpayer conduct) is not.[268]

B. Overview of the 1986 TRA Changes

The TRA of 1986 creates differential interest rates which are designed to result in a more favorable revenue situation for the government. In addition, interest on accumulated earnings taxes accrues from the date when the original return was due to be filed. The Service is given authority to abate interest which is attributable to errors and delays by Service officers and employees and required to do so in certain instances of erroneous refunds. Moreover, an amendment provides that there will be no compounding when interest on a deficiency on income, estate, gift and certain excise taxes is suspended under §6601(c). Finally, the section (renumbered as §6621(c)) dealing with the interest on substantial underpayments attributable to tax motivated transactions is modified to include any sham or fraudulent transaction within the definition of the term "tax motivated transaction."

C. Detailed Analysis

1. Differential Interest Rates

Under the revised system for calculating interest rates on the underpayment and overpayment of taxes, a one-percent differential is created between the rates payable, favoring the government. Thus, Treasury must pay taxpayers an interest rate on overpayments equal to the federal short-term interest rate plus two percentage points.[269] Where the taxpayers pay interest on underpayments, however, the interest rate is based upon the federal short-term rate plus three percentage points.[270] In both cases, the interest rates are rounded off to the nearest full percentage. The rates will be adjusted quarterly, with the rate determined during the first month of the calendar quarter and effective for the following calendar quarter.[271] This reduces the current three month lag between the date when the rate is determined and the date when it becomes effective to two months. The revision in calculation of interest rates was designed to prevent taxpayers from either overpaying to take advantage of an excessively high rate or delaying payment as long as possible to take advantage of an excessively low rate charge.[272] It also reflects Congress' feeling that the currently utilized interest rates are not sufficiently modeled on other interest rates in the general economy.[273]

The Service is also given authority to issue regulations to coordinate §6621 with §6601(f).[274] The latter section provides that no interest is imposed on that portion of a tax due which is satisfied by a credit of an overpayment. While the Service can net many offsetting underpayments and overpayments, Congress felt it necessary to give it a transitional period during which to coordinate the two sections. The regulations will provide for the netting of such payments through a period ending three years after the enactment of the law, by which time the Service is expected to have computerized netting procedures.[275]

These provisions are effective for purposes of determining interest for periods after December 31, 1986.[276]

Note: Rev. Rul. 86-146 established the rate on overpayments at 8% and the rate on underpayments at 9% for the quarter beginning January 1, 1987.

Act §1511 provides 18 technical amendments which clarify that certain transactions calculated in terms of a single interest rate are defined in terms of the interest rate on underpayments.[277] For example, the interest on the failure to surrender property which is subject to a Service levy is defined in terms of the interest rate on underpayments only.[278] For certain other transactions, the interest rate is defined in terms of the interest rate on overpayments, rather than the single interest rate under pre-TRA law.[279] For example, the interest rate on the return of monies wrongfully levied upon by the Service (where the monies are returned to the taxpayer) is defined in terms of the interest rate on overpayments.[280] These technical amendments apply for purposes of determining interest for periods after December 31, 1986.[281]

2. Interest on Accumulated Earnings Tax

The 1986 Act provides that interest is imposed on underpayments of the accumulated earnings tax from the due date (without regard to extensions) of the income tax return for the year the tax is initially imposed.[282] By imposing interest from the date the return was originally

due to be filed, Congress is attempting to equalize the treatment of interest in this area with that in the rest of the Code.[283]

This amendment applies to returns the due date for which (without regard to extensions) is after December 31, 1985.[284]

D. Authority to Abate Interest

The 1986 TRA gives the Service authority and discretion to abate the interest attributable to the delay caused by a Service official or employee who either fails to perform an administerial act in a timely manner or makes an error in performing a ministerial act.[285] However, the abatement will only be available if no significant aspect of such error or delay can be attributed to the taxpayer involved and after the Service has contacted the taxpayer in writing concerning the deficiency or payment.[286] Abatement would not be available for the period of time between the date a taxpayer files a return and the date the Service commences an audit (regardless of the length of time). Moreover, abatement would also not be available if the taxpayer filed a return but did not pay the taxes, regardless of how long it took the Service to contact him and request payment.[287]

The House Report indicates that the type of ministerial acts which the measure is aimed at include both issuing a statutory notice of deficiency and a notice and demand for payment after all procedural and substantive preliminaries have been completed.[288] A ministerial act is thus a procedural action rather than a decision in a substantive area of tax law and is limited to nondiscretionary acts where all of the preliminary prerequisites (such as conferencing and review by supervisors) have taken place.[289] The House Report gives as an example of grounds for abatement, an unreasonable delay in the issuance of a statutory notice of deficiency after the Service and the taxpayer have already completed their efforts to resolve the matter.[290]

The Senate Report states that the Service may define a ministerial act in regulations, as well as issuing regulations (under its general authority to do so) which determine what constitutes timely performance of various ministerial acts performed by the Service.[291] Although this regulatory authority is not discussed in the conference report, the conference agreement adopted the Senate version of the tax reform legislation and the Senate language therefore presumably can be implemented by the Service.

The law also mandates that the Service abate the assessment of all interest on any erroneous refund under §6602 until the date demand for repayment is made.[292] However, this abatement power is not available if the taxpayer or a related party has in any way caused the erroneous refund or the erroneous refund exceeds $50,000.[293] Once the Service has requested repayment and the taxpayer does not pay, interest would then begin to apply to the amount of the erroneous refund.[294]

The authority to abate interest attributable to errors and delays by the Service applies to interest accruing with respect to deficiencies or payments for taxable years beginning after December 31, 1978.[295] A special statute of limitations rule provides that if the refund or credit of any amount resulting from this amendment is prevented through operation of any law or rule of law (including *res judicata*) at any time before the close of the date which is one year after the date of enactment (*i.e.*, after October 22, 1986), the refund or credit (to the extent attributable to the amendment) may still be made or allowed, but only if the claim for it is filed before the close of the one year period.[296]

E. Suspension of Compounding Where Interest on Deficiency is Suspended

The 1986 Act provides that, in cases where a waiver on the restrictions on assessment of a deficiency (on income, estate, gift and certain excise taxes) is filed after the the Service and the taxpayer have agreed on the tax, the compounding of interest will be suspended from the thirty-first day after the waiver is filed until the date when notice and demand are issued by the Service.[297] This corrects a mechanical problem which suspended the imposition of interest but did not suspend the compounding of interest on amounts which had previously accrued on the underlying deficiency. Since the law is made effective for interest accruing in taxable periods after December 31, 1982,[298] but the Service does not have the data processing capacity to unilaterally suspend compounding on the subject interest, the conference report suggests that affected taxpayers apply for refunds and, in appropriate cases, have the Service perform the required computations to suspend the compounding.[299]

However, if a credit or refund resulting from an application of this amendment is prevented at any time before the close of the date which is one year after the date of enactment (*i.e.*, October 22, 1986) by the operation of any law or rule of law (including *res judicata*), refund or credit may be made (to the extent of the amount attributable to the application of the amendment) or allowed if the claim is filed before October 23, 1987 (the close of the one year period).[300]

F. Clarification of "Tax Motivated Transactions" for Interest Purposes

transactions is amended by the 1986 Act to include "any sham or fraudulent transaction" in the meaning of "tax motivated transactions."[301] The intent of the conferees in making this change was to be consistent with the legislative intent of the original idea behind §6621(d) and to overrule the *Forseth* and *DeMartino* decisions,[302] which the conferees viewed as anomalous. Thus, the conferees sought to specifically overrule these cases through these provisions. The clarification of the inclusion of sham and fraudulent transactions in this provision is made retroactive by applying it to interest accruing after December 31, 1984, except in the case of any underpayment if there was a final court decision before the date of enactment of the 1986 Act.[303]

V. Fringe Benefit Plan Information Returns

A. Introduction — Pre-1986 TRA Law

Under Code §6039D, every employer which maintains a "specified fringe benefit plan" must file an information return for any portion of a year in which an "applicable exclusion" applies.[304] For this purpose, a "specified fringe benefit plan" is any qualified group legal services plan,[305] any cafeteria plan,[306] and any educational assistance program.[307] An "applicable exclusion" occurs when, under the respective Code sections, the taxpayer-employee has excluded a benefit from gross income. The return filed must show the number of total employees, those eligible to participate and actually participating in the plan, the total cost of the plan during the year and other identifying information concerning the employer.[308]

B. Detailed Analysis

In a technical correction, the 1986 Act repeals §6039D as added by P.L. 98-612 (which extended for one year the exclusion from gross income of certain fringe benefits) and §6039D as added by P.L. 98-611 (an Act relating to the Educational Assistance Programs) as amended.[309] The effect of the amendment is to integrate the definition section of §6039D as enacted in each Act (the Acts being enacted on the same day) so that the term "specified fringe benefit plan" and "applicable exclusion" for purposes of certain fringe benefit plan returns includes (1) qualified legal services plans, (2) any cafeteria plans, and (3) any educational assistance plans. This amendment is effective as if included in the provision of the Tax Reform Act of 1984 to which it relates.[310]

A different section of the 1986 Act further amends the fringe benefit reporting requirements by expanding the definition of "specified fringe benefit plan" and correlating the definition of "applicable exclusion" to the new definition. Thus, in addition to the pre-1986 TRA restated definition discussed above, the term "specified fringe benefit plans" includes a group term life insurance plan,[311] an accident or health plan,[312] and a dependent care assistance program.[313] The term "applicable exclusion" is defined as the specific Code section of the newly redefined "specified fringe benefit plan" under which benefits under a specific type of plan are excludable from gross income.[314]

The information return filed under these rules must also show the number of highly compensated employees who are listed in three categories of information: (1) the number of employees, (2) those employees eligible to participate, and (3) those employees actually participating.[315] In addition, the requirement for additional information returns under §6039D is relaxed to a certain extent by permitting the Treasury to require such returns only from a representative group of employers.[316] The revised requirements are effective generally, as with the nondiscrimination and other rules for statutory employee benefit plans, for plan years beginning after after January 1, 1987.

Chapter 45

REVISED ESTIMATED TAX REQUIREMENTS

Lucia N. Smeal, Esq.
Andrew E. Huddleston, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Individual taxpayers who receive salaries and wages are generally subject to withholding for federal income taxes.[1] Taxpayers who are self-employed or otherwise not subject to withholding must make quarterly payments on their estimated tax liability. These payments must in total equal 100% of the previous year's tax liability or 80% of the current year's liability, whichever is lower. The payments are due by April 15, June 15, September 15 of each year and January 15 of the following year.[2]

When a taxpayer fails to make estimated tax payments, he or she is subject to a penalty. Any amounts withheld by an employer from wages or salary are considered to be estimated tax payments.[3]

Corporations must make estimated tax payments on their regular taxable income only;[4] no payment is required on the basis of a corporation's alternative minimum taxable income, although the corporation must pay that tax liability if it proves to be higher than its regular tax.

Trusts and estates are not required to make estimated tax payments. Trusts must pay their income taxes at the time they file their returns; estates are allowed to pay the entire liability in four quarterly installments beginning at the time the return is filed.

There are no estimated tax payments required of private foundation's for the excise taxes on net investment income nor on tax-exempt organizations for unrelated trade or business income.

II. Overview

The Tax Reform Act of 1986 makes several changes to the estimated tax payment requirements and penalty provisions. The measure of estimated tax payments is increased from 80% to 90% of the current year's tax liability.[5] Corporations now will have to make estimated tax payments on their alternative minimum taxable income.[6] Also, liability for estimated taxes is extended to trusts and estates,[7] to private foundations for excise taxes on net investment income, and to tax-exempt organizations for unrelated business income tax.[8] Finally, the Act waives estimated tax penalties for underpayments of tax attributable to retroactive changes made by TRA 1984 and TRA 1986.[9]

III. Detailed Analysis

A. Current Liability Test

The required total for each year's estimated tax payments is increased from 80% to 90% of a taxpayer's current year tax liability under §1541 of TRA 1986. Thus, individual taxpayers must make estimated tax payments for the year equal to the lesser of 100% of the previous year's tax liability or 90% of the current year's tax liability to avoid the §6654 penalty. These changes are effective for taxable years beginning after December 31, 1986. However, the increased percentage for computing estimated taxes does not apply to the estimated tax payment due January 15, 1987, because it is the final payment for taxable year 1986.[10]

To conform with the change in the current liability test, the Act sets the applicable percentages for determining annualized income installments under Code §6654(d)(2) at 22.5% for the first installment, 45% for the second installment, 67.5% for the third installment, and 90% for the fourth installment.[11] The alternative annualizing rule permits taxpayers to pay estimated tax installments based on the "applicable percentage" of tax computed by placing on an annualized basis the taxpayer's taxable income, alternative minimum taxable income, and adjusted self-employment income for the months in the current tax year ending before the installment due date. Finally, the Act revises the applicable percentages for payment of estimated taxes in three installments by nonresident aliens not subject to

withholding on wages, again to reflect the change from 80% to 90% in the current liability test.[12]

B. Estates and Trusts

The Tax Reform Act of 1986 requires estates and trusts to pay estimated income taxes in the same manner as individual taxpayers. This change, contained in Act §1404, is effective for taxable years beginning after December 31, 1986. In conjunction with the extension of the estimated tax rule to estates, the Act repeals §6152, which permitted estates to pay their income tax in four quarterly installments after the year in which it was earned. However, estates are exempt from having to pay estimated taxes for their first two taxable years. In addition, §643 is amended to permit trusts to elect to assign any amount of their estimated tax payments to their beneficiaries. This election is made on the trust's tax return, which must be filed within 65 days after the end of the trust's taxable year. The beneficiary is deemed to have received a distribution on the last day of the electing trust's taxable year for Federal income tax purposes, and, under the statute, the payment will be treated as having been made by the beneficiary on January 15 following the end of the trust's taxable year. However, in contradiction of the Act, the conference report states that, for purposes of the beneficiary's estimated tax liability, credit for the payment is treated as being received on the date the election is made by the trustee.[13] Also, a trust's estimated tax payments may be credited to a beneficiary only to the extent that they exceed the amount of income tax which the trust shows on its own return for the same taxable year.[14]

C. Corporate Minimum Tax

Under revised §6154(c)(1), corporations now will have to make estimated tax payments on their alternative minimum taxable income. This change was added by Act §701(d) and is effective for taxable years beginning after December 31, 1986.

Observation: This provision is likely to have problematic and costly effects in view of the revision of the alternative minimum tax for corporations. Through the introduction of the book income preference as an element of the minimum tax, Congress has ensured that many corporations will actually be taxed under this regime rather than under the regular corporate tax. Calculating the book income preference will require determining business untaxed reported profits, which in turn is based on financial statement income as adjusted to be on a comparable basis as taxable income.[15] Calculation of book or financial income presents considerable uncertainty, compounded by the authority which Congress has given to the Treasury to deal with omissions or duplications of items in the application of the book income preference.[16] Determination of estimated tax payments on the ultimate amount of tax under this system may prove extremely difficult for many corporations, with substantial penalties for those which err in projecting too conservatively.

D. Tax-Exempt Organizations

Section 6154 is amended by TRA 1986 to extend liability for estimated taxes to private foundations for excise taxes on net investment income [17] and to tax-exempt organizations for unrelated business income tax.[18] Act §1542 requires that these entities pay estimated taxes in four quarterly installments, in the same manner as is currently required of corporations, for taxable years beginning after December 31, 1986.

It is interesting to note that neither provision originated in either the House or Senate Committee versions of the Act and little discussion of the change is found in the Conference Report.[19] The estimated tax requirement for tax-exempt organizations with unrelated trade or business income was included to pay for a special transition rule sponsored by Massachusetts Senators Kerry and Kennedy to offset the cost of continued tax-exemption for a specific public housing project.[20] The parallel change for private foundations with net investment income was offered in a floor amendment by Senator Matsunaga of Hawaii to provide revenue to allow convention and trade-show educational activities to be excluded from the definition of unrelated trade or business.[21]

E. Waiver of Penalties for TRA 1984 and TRA 1986 Changes

The Act waives estimated tax penalties imposed by §§6654 and 6655 for underpayments of tax attributable to retroactive changes made by TRA 1984 and TRA 1986. For TRA 1984, Act §1879(a) waives estimated tax penalties for any period before April 16, 1985 (March 16, 1985 for corporations subject to Code §6655) for underpayments created or increased by TRA 1984. For TRA 1986, Act §1543 waives estimated tax penalties for any period before April 16, 1987 (March 16, 1987 for corporations subject to §6655) for underpayments created or increased by TRA 1986. Thus, with respect to TRA 1986 changes, taxpayers have until these dates to pay their full 1986 tax liability without incurring any additions to tax.

Note: Although the statute deals specifically with abatement of penalities for underpayments due to changes introduced by the Act, the conference report details a different, contradictory rule for underpayments of tax by corporations attributable to expected 1986 investment tax credits. (The regular investment tax credit is repealed for property placed in service after 1985 by Act §211.) It states

[12] Act §1541(b)(3). Note that Section 1841 of the technical corrections portion of TRA 1986 restores the §6654(j) provision permitting nonresident aliens to pay their estimated tax liability in three, rather than four, installments. This change is discussed in III, F, *infra*.

that the §6655 penalties only will be waived for corporate taxpayers to the extent that: (1) the underpayment of an installment results from a corporation taking into account investment tax credits on property placed in service after December 31, 1985 but before the date of enactment of the Act; and (2) the corporation actually pays the underpayment within 30 days of the enactment of the Act.[22] This rule would have applied to investment tax credits for property placed in service after December 31, 1985.

The IRS responded to this conflict by issuing Rev. Rul. 86-136 1986-48 I.R.B. 9, in which it announces that it will ignore the conference report as being in error and observe the rule contained in the statute. The ruling goes on, however, to note that the dates for correcting underpayments are final. They will not be modified either by extensions that a taxpayer may obtain for filing his return or for taxpayers who do not use the calendar year as their taxable years. Also, the ruling notes, the Act provides no relief from interest on underpayments of estimated tax. Interest will continue to be assessed on underpaid tax liabilities before April 15 (or March 15) 1986, even though no penalty is charged.

[22] Conference Report at II-64.

F. Nonresident Aliens — TRA 1984 Correction

Section 1841 of the technical corrections portion of TRA 1986 restores a provision permitting nonresident aliens to pay their estimated tax liability in three, rather than four, installments. Under §6073 before its repeal by the Tax Reform Act of 1984, nonresident aliens (other than those whose wages are subject to withholding under §3402) were not required to make their first installment payment of estimated tax until June 15 (the 15th day of the sixth month) of the taxable year. This provision was inadvertently deleted by TRA 1984.[23] To correct this error, the final bill adds new §6654(j), which permits nonresident aliens to pay their estimated tax liability in three installments on June 15, September 15, and January 15 of the following taxable year (or the 15th day of the sixth, ninth, and first month in the case of a fiscal year taxpayer). Fifty percent of the annual payment is due on the first installment. In addition, the Act sets the applicable percentages for determining annualized income installments at 45% for the first installment, 67.5% for the second installment, and 90% for the third installment.

Chapter 46

CHANGES AFFECTING ADMINISTRATIVE AND JUDICIAL PROCEDURES

Steven C. Wallace, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The 1986 TRA enacts three provisions designed to enhance administrative and judicial efficiency. In the administrative arena, the Internal Revenue Service (IRS) is provided with discretion to rescind a notice of deficiency after issuance. In the area of Tax Court procedure, the Tax Court is provided with the power to assess a damages penalty of up to $5,000 if a taxpayer fails to exhaust administrative remedies before filing a Tax Court petition. Additionally, the Tax Court has been given the discretion to certify for appellate review a Tax Court interlocutory order before a full decision is issued. These and other administrative and judicial provisions enacted or amended by the 1986 TRA are discussed below.

II. Analysis of Provisions

A. Suspension of Limitations if Third Party Records Not Produced

In general, the Code provides a three-year statute of limitations for the assessment of a tax deficiency.§6501. In cases of fraud, willful tax evasion, or a failure to file, however, there is no limitations period. Also, an exception is provided in the case of a sizable understatement of income, in which event a six-year limitations period applies.[1] The three-year statute of limitations also applies to most criminal prosecutions. A six-year statute of limitation, however, applies in instances of fraud, attempted fraud and willful evasion of payment, among other offenses.[2]

Before the the 1986 TRA, these statutes would continue to run if the IRS sought records held by third parties. The statutes were suspended if the taxpayer intervened to attempt to quash the IRS summons for the records held by the third-party recordkeeper.[3] If the taxpayer did not intervene, but the IRS nevertheless had to bring an action against the third-party recordkeeper to compel production of its records, the statute of limitations could expire before final determination as to the availability of the records.

The 1986 TRA amends §7609 to provide that if a dispute between the third-party recordkeeper and the IRS is not resolved within six months after the IRS issues an administrative summons, the statute of limitations is tolled until the issue is resolved.[4] The suspension applies both to the limitations period on assessing deficiencies and to the limitations period on commencing criminal prosecutions. The third-party recordkeeper is required to provide notice of the suspension of the running of the statute to the taxpayer whose records are the subject of the dispute, if the summons requesting the records does not identify the taxpayer by name.[5] Failure by the third-party to do so does not, however, prevent the suspension of the statute.[6] As under pre-1986 TRA law, the statute of limitations continues to be suspended during the period when a taxpayer intervenes in the dispute between the IRS and a third-party recordkeeper. The statute is suspended from that date until the entire dispute is resolved. Senate Report at 207.

The amendment of §7609(c) relating to the suspension of the statute during a third-party recordkeeper dispute is effective on the date of enactment of the 1986 TRA, October 22, 1986. Act §1561(c).

B. Authority to Rescind Notice of Deficiency

Under pre-1986 TRA law, once the IRS had issued a statutory notice of deficiency (90-day letter), it did not have the authority to withdraw the letter. The notice had to be issued before the expiration of the statute of limitations as the notice was a condition precedent to the assessment by the IRS of a tax deficiency. Under §6213, the IRS may not assess an income tax deficiency until at least 90 days after the notice has been sent to the taxpayer (150 days if the notice is addressed outside the U.S.). Moreover, during this 90 (or 150) day period, the taxpayer may file a Tax Court petition, and, if such petition is filed, the assessment of the deficiency is barred until the Tax Court's decision is made final. A notice of deficiency is not valid unless issued before the expiration of the statute of limitations. Once the notice is issued, only a Tax Court decision can alter its effect.

Under §6501(c)(4) the IRS and taxpayer may mutually consent in writing to extend the statute. The IRS customarily seeks a mutual consent to extend when it determines that the statute will expire before it will complete its examination of a taxpayer's return or before IRS action at the appellate level is completed. Generally, a taxpayer will agree to the extension because the IRS otherwise will issue a protective notice of deficiency for the maximum possible deficiency. From the taxpayer's stand-

[6] Senate Report at 207.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

point, a notice of deficiency is presumed to be correct, and the taxpayer will have the burden of introducing sufficient proof to overcome the presumption. If the taxpayer believes that further investigation by the IRS will reduce or eliminate a potential deficiency, it is obviously in the taxpayer's interest to consent to the extension. However, not infrequently a protective notice will be issued even if the taxpayer is willing to consent to an extension because of a lack of, or breakdown in, communication between the taxpayer and the IRS.

Consequently, before the 1986 TRA, a protective notice of deficiency could remain outstanding even though neither the taxpayer nor the IRS was fully prepared to contest a deficiency in Tax Court. In light of such a situation and similar situations where the taxpayer and IRS would prefer to dispose of a case administratively, the 1986 TRA,[7] amends §6212 to allow the withdrawal of a statutory notice where the IRS and the taxpayer mutually agree. Once properly rescinded, the notice is treated as if it never existed. Therefore, limitations regarding credits, refunds, and assessments relating to the rescinded notice are void, and the parties are returned to the rights and obligations existing prior to the issuance of the withdrawn notice.[8] Also, the IRS may issue a later notice for a deficiency greater or less than the amount of the rescinded notice.[9] This withdrawal procedure is effective for statutory notices of deficiency issued on or after January 1, 1986. Act §1562(b).

Specific application of the withdrawal procedure is unclear. Code §7805, empowers the Secretary to establish by regulation the procedures necessary to implement the new withdrawal of notice provision to assure that the taxpayer has consented to the withdrawal of the statutory notice. The regulations should also clarify the effect of rescission and other provisions of the Code. Presumably, the regulations will condition IRS consent to the withdrawal of the notice of deficiency upon the taxpayer's willingness to extend the statute of limitations for deficiencies, since it is unlikely that the IRS would jeopardize its opportunity to reissue a deficiency notice. The legislative history is silent as to the details of the forthcoming regulations.

Whether a notice can be rescinded once the taxpayer has filed a Tax Court petition is an open question although there is no apparent statutory bar to a withdrawal in such instance. Presumably, the Tax Court's dismissal of the petition without prejudice would be required. The possibility also exists that the IRS might agree to rescind a notice of deficiency even after the 90 (or 150) day period for filing a petition, as set forth in the notice of deficiency, expired.

C. Penalty for Failure to Pursue Administrative Remedies

Under the pre-1986 TRA Law, §6213(a), taxpayers dissatisfied with deficiencies proposed by the IRS on audit could take their case to the Tax Court without resorting to the IRS's administrative appeals procedure. No penalty would be incurred for a failure to exhaust administrative remedies. A potential disadvantage of such failure might be a denial of an attorney's fee award under §7430 if the taxpayer "substantially prevailed" in court and showed that the IRS's position in the proceeding was unreasonable. Section 7430(b)(2) provides that a court shall not award reasonable litigation costs under §7430(b) in any civil tax proceeding unless the court determines that the prevailing party has exhausted the administrative remedies available within the IRS. Regs. §301.7430-1 details the factors that the IRS normally will consider in determining whether such administrative remedies have been exhausted by the taxpayer.

The decision whether to exhaust administrative remedies or proceed directly to court was often determined solely by economic considerations. In order to receive consideration at the IRS's appeals level, a written protest detailing the facts and the authorities on which the taxpayer is relying is ordinarily required. The written protest might run for 10 to 50 pages and entail a considerable expenditure of a practitioner's time and corresponding expenditure of the client taxpayer's funds. The protest is generally followed by a conference between an IRS appeals officer and practitioner. A Tax Court petition, in contrast, may be as short as two to five pages setting forth a mere outline of facts. Moreover, it is the IRS's standard practice in a Tax Court action to refer the case to its appeals office for initial negotiation of a settlement. Thus, the Tax Court petition route may provide the same administrative review as the protest route but at a considerably lower cost. As previously mentioned, the sole detriment of filing the petition is the potential loss of an attorney's fee award for failure to exhaust administrative remedies.

The 1986 TRA adds a penalty provision for failure to pursue administrative remedies that will significantly alter the foregoing economic equation. The 1986 TRA,[10] amends §6673 to provide that unreasonable failure by a taxpayer to exhaust administrative remedies is an additional basis that the Tax Court may consider in imposing up to $5,000 in damages against the taxpayer under §6673. Before the 1986 TRA amendment, §6673 gave the Tax Court discretionary authority to award up to $5,000 in damages to the United States where the taxpayer institutes or maintains proceedings primarily for delay or advances frivolous or groundless positions. With the addition of the failure to exhaust remedies ground as an additional basis for §6673 damages, the written protest route may be selected as the more economical approach in more cases.

The addition of a penalty provision for failure to exhaust administrative remedies had its genesis in the House Bill.[11] Under the House Bill, a nominal $120 penalty would have been imposed for such failure. The penalty would apply where the taxpayer did not exercise "reasonable efforts in good faith" to resolve a case administratively. The House Report listed five situations in which the taxpayer

[7] Act §1562.

[9] Conference Report, p. II-810, Act §1562.
[10] Act §1552.
[11] H.R. 3838 as passed by the House, §1316, adding §6710 to the Code, p. 1005-1006.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

would be considered to have satisfied the "reasonable efforts" standard, as follows:[12]

(i) The taxpayer is only challenging an existing ruling or regulation or similar matter that an appeals officer is not authorized to negotiate;

(ii) The taxpayer has attended one first-level Appeals meeting;

(iii) The taxpayer cannot attend a first-level meeting because it would be unduly burdensome;

(iv) The IRS has waived the Appeals meeting; or

(v) The case has been pending before Appeals for six month without action.

The Conference Committee struck the House penalty and substituted the §6673 damages amendment. No reason was given for this action but it presumably represents a recognition that the House $120 penalty would have an insignificant impact. The Conference Report [13] does not say whether the five factors listed in the House Report would also apply in considering §6673 damages.

Regs. §301.7430-1 details standards for determining whether a taxpayer exhausted administrative remedies for purposes of recovering reasonable litigation costs in civil tax proceedings. It is unclear whether this regulation will provide the blueprint to the Tax Court in assessing §6673 damages. It should be noted, however, that the examples in the regulation take a more restrictive approach on exhaustion than do the examples set forth in the House Committee Report.

Note: The 1986 TRA states that the amendment to §6673 applies to proceedings commenced after the date of enactment, October 22, 1986. Act §1552(b). Presumably, "proceedings" refers to Tax Court proceedings, which are initiated by the filing of a petition. This effective date may work some inequity since the only notice that a penalty might be exacted for failing to pursue remedies was the $120 House passed penalty. Even assuming awareness of the penalty, it is unlikely a taxpayer's decision to forego appeals would have been swayed by the proposed $120 change. The $5,000 damages provision, on the other hand, might have had an impact, but this change was made in Conference. By that time, the taxpayer may have bypassed appeals and been irrevocably committed to filing the petition because of receipt of a notice of deficiency.

D. Jurisdiction Over Failure to File Penalty

Before the 1986 Tax Act, the Tax Court held that it did not have jurisdiction over any addition to tax for failure to pay the amount of tax shown on the taxpayer's return, even though it has jurisdiction to redetermine a deficiency in tax with respect to that return.[14]

The 1986 TRA,[15] amends §6214 by giving the Tax Court jurisdiction over an addition to tax for failure to pay an amount shown on the return in cases where the Tax Court already has jurisdiction to redetermine a deficiency in tax with respect to that return. This amendment does not otherwise alter the jurisdiction of the Tax Court. It also does not affect §6651(a)(1), the late filing addition to tax or the procedure for assessing additions to tax under §6662(b). *See* Conf. Report, p. II-804.

This change is effective for any action or proceeding before the Tax Court which has not become final before the date of enactment, October 22, 1986. Act §1554(b).

E. Appeals from Tax Court Interlocutory Orders

To date, the Second Circuit has held that the U.S. Court of Appeals does not have any jurisdiction over any interlocutory order issued by the Tax Court.[16]

The 1986 TRA,[17] amends §7482 to provide for appeals of Tax Court interlocutory orders where the Tax Court judge certifies: (1) that a controlling question of law is involved with respect to which there is a substantial ground for difference of opinion and (2) that an immediate appeal from that order may materially advance the ultimate termination of that litigation. Application of appeal must be made within 10 days after entry of an interlocutory order and, at that time, the U.S. Court of Appeals may exercise its discretion to grant the appeal. Tax Court proceedings are stayed only in the event that the Tax Court judge or the U.S. Court of Appeals authorizes a stay in proceedings. This provision applies to Tax Court orders entered after the date of enactment (*i.e.*, October 22, 1986). Act §1558(c).

F. Limits on Award of Court Costs and Fees

Before the 1986 TRA, the maximum amount of reasonable litigation costs which could be awarded to a prevailing party in any civil tax proceeding was limited to $25,000.[18] Moreover, §7430(f) provided that the authority to award litigation costs terminated as to actions commenced after December 31, 1985. Act §1551 makes §7430 permanent and amends it to more closely conform to the provisions of the Equal Access to Justice Act (28 U.S.C. §2412).[19]

Act §1551(a) removes the $25,000 limitation, but Act §1551(c) redefines the term "reasonable litigation costs" in §7430(c) to provide in part that: (1) reasonable attorney's fees may not exceed $75 per hour unless the court determines that an increase in the cost of living or a special factor, such as the limited availability of qualified attorneys for such a proceeding, justifies a higher rate; (2) no expert witness may be compensated at a rate in excess of the highest rate of compensation for expert witnesses paid by the U.S. government.

Act §1551(b) adds a paragraph (4) to §7430(b) to prohibit an award for reasonable litigation costs for any portion of the proceedings during which the prevailing party is found to have unreasonably protracted the proceedings.

Act §1551(d) modifies the definition of "prevailing party" in §7430(c)(2) in two respects. First, under revised §7430(c)(2)(A)(i) it must be established that the position

[12] H.R. Rep. No. 426, 99th Cong., 1st Sess., p. 841-42 (1985).
[13] Conference Report, p. II-802-803.
[14] *Young Est. v. Comr.*, 81 T.C. 879 (1983).
[15] Act §1554.
[16] *Shapiro v. Comr.*, 632 F.2d 170 (2d Cir. 1980).
[17] Act §1558.
[18] §7430.
[19] *See* Conference Report, pp. 798-802.

of the United States was "not substantially justified," rather than "unreasonable," as under the pre-1986 TRA version. Second, §7430(c)(2)(A)(iii) adds a requirement that the party seeking an award must satisfy the net worth limitations of 5 U.S.C. §504(b)(1)(B) (as in effect on October 22, 1986). The "substantially prevailed" requirement of §7430(c)(2)(A)(ii) is retained.

Act §1551(e) adds a paragraph (4) to §7430(c) to provide that the term "position of the United States" includes both the position taken by the government in the civil proceeding and any administrative (*i.e.*, prelitigation) action or inaction of IRS District Counsel.

Pursuant to Act §1551(h), the 1986 TRA amendments to §7430 apply to amounts paid after September 30, 1986, in civil actions or proceedings commenced after December 31, 1985. (Accordingly, awards of attorney's fees in cases commenced before January 1, 1986, are governed by §7430 as in effect before that date. *See* Conference Report, p. II-802.) Section 7430 is made permanent by the deletion of §7430(f). Moreover, the 1986 amendments apply to any case commenced after December 31, 1985, and finally disposed of before the date of the enactment of the 1986 Act (*i.e.*, October 22, 1986), except that in such cases the 30-day period for seeking an award is deemed to commence on the date of enactment, October 22, 1986.

G. Tax Court Practice Fee

Before the 1986 Tax Act, the Tax Court imposed a $25 application fee before admission to practice before the Tax Court. Tax Court Rule 200. No fee was imposed after the application fee had been paid.

The 1986 TRA,[20] adds §7475 which authorizes the Tax Court to impose a periodic registration fee on practitioners admitted to practice before it. The Tax Court is to establish the level of fee and the frequency of its collection, but the fee may not exceed $30 per year. These funds are available to the Tax Court to pay independent counsel engaged by the court to pursue disciplinary matters. This provision is effective January 1, 1987. Act §1553(c).

H. Modified Levy in Forfeiture Rules

Under pre-1986 TRA law, Code §6334 listed various payments, such as unemployment benefits, workmen's compensation, a minimum amount of ordinary wages, as well as certain pensions and annuities, that were exempt from levy. The IRS could not seize these payments to collect delinquent taxes by serving a levy on the payment source.

The 1986 TRA,[21] amended §6334 to provide that effective for amounts payable after December 31, 1986, the IRS is prohibited from levying any amount payable to an individual as a military service-connected disability benefit under specified provisions of Title 38 of the United States Code. The term "service-connected" means that the disability was incurred or aggravated in the line of duty in the act of military service. The exemption covers direct compensation payments, as well as other types of support payments for education and housing.

[20] Act §1553.
[21] Act §1565.

Before the 1986 Tax Act, Code §7325 stated that in cases where goods are seized as being subject to forfeiture, the Secretary had to comply with certain listing and notice procedures where the Secretary believed the appraised value of the seized good was $2,500 or less.

The TRA 1986,[22] increases the value of personal property subject to these listing and notice procedures. The listing and notice requirements now apply where the Secretary believes the appraised value of the goods is $100,000 or less. This amendment is effective on the date of enactment of the 1986 Act, October 22, 1986.

The TRA 1986,[23] amending Code §6323, also specifies that the forfeiture of property under local law seized by a law enforcement agency of State, county, or other local governmental subdivision shall relate back to the time of seizure, except to the extent that under local law the holder of an intervening claim or interest would have priority over of the interest of the State, county, or other local governmental subdivision in the property. This amendment is effective on the date of enactment of the 1986 Act, October 22, 1986.

The TRA 1986,[24] provides new procedures for tax sales of seized property where no person offers the minimum price. This amends Code §6335 which provided that where no person offers the minimum price, the property shall be declared to be purchased at such price for the U.S.

The TRA 1986,[25] provides that before the sale of the property seized by levy, the Secretary shall determine a minimum price for that property. In addition, the Secretary shall determine whether the purchase of such property by the U.S. at such a minimum price, would be in the best interests of the U.S. If no person bids the minimum price, the U.S. can purchase the property only if the Secretary has determined that the purchase would be in the best interest of the U.S. If the minimum price is exceeded, the sale goes to the highest bidder. If the Secretary determines that purchase of the seized property by the U.S. is not in the best interests of the United States and no person bids the minimum price, then the property shall be released to the owner and the expense of the levy and sale shall be added to the amount of tax for the collection of which the levy was made. This provision applies to properties seized after the date of the enactment of the Act (October 22, 1986) and to properties seized on or before such date which are held by the U.S. on such date.

Before the 1986 Tax Act, Code §7425, in general, provided that before federal tax liens could be extinguished, notice had to be given to the U.S government. Several cases held that forfeitures of land sales contracts were not subject to these notice requirements.[26] Notice provided the Government with the opportunity to redeem the property.

The TRA 1986,[27] provides that forfeitures of land sales contracts are subject to the notification requirements effec-

[22] Act §1566.

Chapter 47

INCOME TAXATION OF TRUSTS AND ESTATES

Lynn K. Pearle, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Congress generally believed that the prior system for taxing trusts and estates allowed for substantial income tax avoidance and a lack of equity among taxpayers. Specifically, Congress felt that the use of trusts permitted tax abuse by the accumulation of income at the trust's separate bracket or by dispersion of income among multiple beneficiaries based on each beneficiary's relative tax bracket.

Although Congress believed that the tax benefits resulting from the ability to split income between a trust or estate and its beneficiaries should be eliminated or significantly reduced, it also felt that it would not be necessary to make significant structural changes in the taxation of trusts and estates.

The major thrust of the Act provisions is to reduce the income tax advantages of the use of trusts and estates. The provisions are aimed at eliminating income shifting between family members and income deferral through the use of overlapping fiscal years.

II. Overview

To eliminate the use of trusts and estates for income shifting purposes, the Act revises the tax rate schedule applicable to trusts and estates, eliminates the *Clifford* and spousal remainder trusts, requires that trusts adopt the calendar year as their taxable year, and makes other miscellaneous changes.

III. Rate Schedules for Trusts and Estates

The Act retains the pre-1986 TRA system of taxing trusts and estates but compresses the rates applicable to income accumulated in trusts and estates. The compressed rates will reduce the benefits of pre-1986 TRA law resulting from a "ride up the brackets" for trusts and estates as separate taxpayers.

Act §101 amends §§1(e) and (g), the tax tables applicable to trusts and estates. The new rates provide that accumulated income of both existing and newly created non-grantor trusts and estates will be taxed at the following rates in taxable years beginning after December 31, 1987:

Taxable income	*The tax is*
0 to $5,000	15% of taxable income
Over $5,000	$750, plus 28% of excess over $5,000

Example: An individual in the top 28% bracket transfers income-producing property to a complex trust. The trust produces $6,000 of income and pays a tax of $1,030. If the donor had retained the property he would have paid a tax of $1,680 on the income. The transfer to the trust saved him $650, which may not cover the cost of administering the trust. If the individual is subject to the 5% surcharge (*see* §1(g)), the savings would increase to $900.

Beginning in 1988, the benefit of the 15% bracket is phased out for trust and estate income over $13,000 (the "applicable dollar amount"). The phase-out is accomplished by increasing the income tax liability of such trusts and estates by 5% of the taxable income between $13,000 and $26,000. Thus, for trusts and estates with taxable income of $26,000 or more, the 28% rate in effect applies to all of the entity's taxable income rather than only to the amount of taxable income above $5,000. For taxable years after 1988, the applicable dollar amount will be adjusted for inflation. Act §101(a). Accordingly, the effective rate of the new brackets beginning after December 31, 1987 is as follows:

If taxable income is:	*The tax is:*
Not over $5,000	15% of taxable income
Over $5,000 but not over $13,000	$750, plus 28% of the excess over $5,000
Over $13,000 but not over $26,000	$2,990, plus 33% of the excess over $13,000
Over $26,000	$7,280, plus 28% of the excess over $26,000

Under new §1(h), a transitional rate structure for 1987 imposes the following income tax rates on estates and trusts:

If taxable income is:	*The tax is:*
Not over $500	11% of taxable income
Over $500 but not over $4,700	$55, plus 15% of the excess over $500

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Over $4,700 but not over $7,550	$685, plus 28% of the excess over $4,700
Over $7,550 but not over $15,150	$1,483, plus 35% of the excess over $7,550
Over $15,150	$4,143, plus 38.5% of the excess over $15,150

These rates will apply only to income accumulated in the trust or estate. Trusts which distribute income currently will not be affected by this change and the income from these trusts will continue to be taxed to the beneficiary at his marginal tax rate. However, under new §1(i), the so-called Kiddie Tax provision affecting the taxation of unearned income of a child, if the child is under age 14, a portion of the income will be taxed at the parents' top marginal rate. The amendments made by §1(i) apply to taxable years beginning after December 31, 1986.

By compressing the rate schedule for trusts, there will be minimal income tax incentives for creating a trust, unless income is distributed currently to a beneficiary who is age 14 or over. Even if there may be a temporary tax savings resulting from the use of trusts, the throwback rules continue to apply to recoup any tax rate savings realized. Moreover, the lowering of the individual rate schedules further decreases the incentive for income splitting between family members.

Income shifting still may be accomplished in a limited way. If a child is under age 14, such child's unearned income up to $500 will be tax-free and from $500 to $1,000 will be taxed at the child's marginal rate. After the child attains the age of 14, income shifting of unearned income in excess of $1,000 may accomplish a meaningful reduction in total family taxes. Thus, transfers to children over age 14, either through custodial accounts or trusts which distribute income currently still may be advantageous.

Other devices for income shifting may fit particular circumstances. It may be possible to employ children in a limited manner. The usefulness of the gift and leaseback arrangement continues, although the use of trusts and the "Kiddie Tax" in connection with this arrangement must be carefully considered. Single premium and other tax deferred insurance and annuity products may be effective means of shifting income.

IV. Grantor Trust Rules

The Act eliminates income splitting by use of a *Clifford* or spousal remainder trust. Act §1402(a) amends §673 by eliminating the pre-1986 TRA exception for a reversion to the grantor that occurred more than 10 years from the date of the transfer to the trust. Under revised §673(a), the grantor is treated as the owner of any portion of the trust in which he has a reversionary interest in either the principal or income therefrom, if the value of the reversion equals or exceeds 5% of the value of that portion of the trust when contributed. The possibility that an interest may return to the grantor or his spouse solely under intestacy law is to be ignored.[1] Moreover, if the trust's beneficiary is a lineal descendant of the grantor, and such person holds the entire present interest in any part of the trust, the grantor is not deemed to have retained a proscribed power or interest in the trust if this interest or power takes effect only after the death of a lineal descendant under the age of 21.[2] The 5% valuation of a reversionary interest is parallel to §2037 and will probably be applied in a similar manner, by using actuarial tables to value reversionary interests, etc.

Note: Based on the current Treasury tables, a trust would have to continue for 32 years for the value of the remainder interest to be less than 5%.

Conforming changes are made to §§674(b)(2), 676(b) and 677(a), which had referred to the pre-1986 TRA §673 "period" and now refer to a §673 "event."

Act §1401(a) adds new §672(e) under which the grantor is treated as holding any power or interest held by his spouse if the spouse is living with the grantor at the time of transfer. This amendment applies to transfers made after March 1, 1986. Act §1401(b). The status of a person holding a power or interest as a spouse of the grantor with whom the grantor is living is determined at the time of the transfer of the property to the trust. Sen. Rep. at 871. It is not clear how this provision will be applied if the grantor and the powerholder are subsequently divorced.

Because of these structural changes, income from *Clifford* and spousal remainder trusts (whether distributed or not) will be taxed to the grantor. This provision applies to transfers to trusts made after March 1, 1986 unless the trust was created pursuant to a binding property settlement on or before such date. Act §1401(c). *Clifford* or spousal remainder trusts created before March 1, 1986 will continue to be treated as non-grantor trusts, with the distributed income taxed to the beneficiary and not the grantor. However, if a pre-March 1, 1986 *Clifford* or spousal remainder trust distributes income to a beneficiary under the age of 14, a portion of the income will be taxed at the parents' top marginal rate. A grandfathered pre-March 1, 1986 trust should not receive any post-March 1, 1986 additions or the trust will be taxed in part as a non-grantor trust and in part as a grantor trust.

Amended §673 and new §672(e) will have implications beyond eliminating *Clifford* spousal remainder trusts. For example, amending §673 to eliminate the 10-year rule means that *inter vivos* charitable lead trusts may be treated as grantor trusts if the principal reverts to the grantor after the charitable term, even if the charitable term exceeds 10 years.

Moreover, under §674(c), a grantor's spouse may serve as co-trustee with a non-related non-subordinate party and the trust will be deemed an independent trust. However, under new §672(e) the grantor will be treated as holding the spouse's power, which would make the trust a grantor trust, notwithstanding the protection of §674(c).

The *Clifford* and spousal remainder trusts were often used as a method of income splitting for financing a child's education. Other methods are still available, such as joint

[1] S. Rep. No. 313, 99th Cong., 2d Sess., p. 871 (1986)("Sen. Rep.").
[2] §673(b).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

purchases, where the child purchases a 10-year term interest and the parent purchases the remainder. However, with lower individual rates, it is questionable whether income-shifting techniques which are more complicated than simple trust arrangements will be of great interest to clients.

V. Taxable Years of Trusts

Under new §645, added by Act §1403, both existing and newly created trusts must adopt a calendar year as their taxable year. This provision applies to all types of non-grantor trusts except tax-exempt and wholly charitable trusts described in §§501(a) and 4947(a)(1), respectively, and will be effective for taxable years beginning after December 31, 1986.

This change will eliminate what has been an important post-mortem estate planning tool, the deferral of income by the judicious selection of a trust's fiscal year. Under pre-1986 TRA law, a trust on a fiscal year ending January 31 could defer eleven months of a beneficiary's income.

Moreover, this change means that trusts and their beneficiaries both will be on a calendar year and will file a return on April 15. This change will increase the workload of tax preparers to prepare Forms 1041 and K-1 at a time they are preparing Forms 1040.

Thus, under the Act, every trust now on a fiscal year will have a short taxable period beginning in 1987 and ending December 31, 1987. Under Act §1403(c)(2), a beneficiary who has to include short-period income resulting from this change will be allowed a 4-year ratable spread of the income beginning with the first taxable year after 1986. Therefore, if the amount includible in the income of a beneficiary for the short year is $8,000, the beneficiary will include $2,000 of income in four successive tax years beginning in 1987. This rule applies to distributions of DNI of the trust but does not apply to any accumulation distributions occurring during the short taxable year.[3]

Although Congress recognized that the same possibilities of deferral are present in the case of estates, due to the short duration of an estate, no change was made with regard to an estate's fiscal year.[4] Thus, it may be beneficial to keep estates open as long as possible before funding testamentary trusts.

VI. Tax Payments

Act §1404 amends §6654 to require that new and existing estates (after their second taxable year) and all trusts pay estimated tax. Note that funded *inter vivos* trusts which are used as estate substitutes will not have the benefit of the two year exemption for estates. The estimated tax requirement is the same as required for individuals.

Under new §643(g), added by Act §1404(b), a trust which has made estimated payments in excess of its income tax liability may elect to assign such excess to its beneficiaries, by an election on the trust's tax return which is filed within 65 days after the end of the trust's taxable year. Such an allocation will allow the payment to be applied to the beneficiary's estimated tax payment due on January 15 of the following year. If the trustee makes such an election, the amount of credits assigned to beneficiaries is considered a distribution under the 65-day rule of §663.[5]

Thus, the beneficiary to whom credit is assigned is deemed to receive a distribution on the last day of the trust's year for federal income tax purposes. Nevertheless, the beneficiary will treat the credit as received on the date the election is made for purposes of the beneficiary's estimated taxes. Conf. Rep. at II-766. It is not clear whether the trustee must allocate the credit among multiple beneficiaries in proportion to the beneficiaries' respective shares of distributable net income.

The estimated tax provision applies to taxable years beginning after December 31, 1986. Act §1404(d). Trusts currently on a fiscal year will first be subject to the estimated tax requirement for the short period ending December 31, 1987, as mandated by the new §645.

Act §1404(c)(1) repeals §6152, the present rule permitting executors to pay an estate's income tax in four equal installments. This provision, while accelerating the payment of the tax, will ease the administrative burden on the executor. The repeal of the rule permitting estates to pay income tax in four equal installments applies for taxable years beginning after December 31, 1986.

VII. Multiple Trusts

The Tax Reform Act of 1984 added §643(e) which provided that two or more trusts will be treated as one trust under Treasury regulations if the trusts have substantially the same grantors and beneficiaries and a principal purpose of the trust is the avoidance of federal income tax. This rule applied to tax years beginning after March 1, 1984, regardless of when the trusts were created.

Act §1806(b) redesignates §643(e) as §643(f) and repeals the authorization for multiple trust regulations with respect to trusts which were irrevocable on March 1, 1984, except with respect to contributions to corpus made after March 1, 1984.

This provision protects preexisting multiple trusts from the aggregation rule of§643. Presumably, to the extent that new §643(f) does not apply, the prior law of *Stephenson Trust Co. v. Comr.*, 81 T.C. 283 (1983), which invalidated a portion of the regulations, is controlling.

VIII. Distributions in Kind

The Tax Reform Act of 1984 added §643(d) which provided that a trustee or executor can elect to treat a distribution of property as carrying out DNI only to the extent of the lesser of the property's basis or its fair market value at the time of distribution.

Act §1806(a) amends §643(d) and redesignates it as §643(e). Redesignated §643(e)(3)(B) requires that an election by an executor or trustee to recognize gain on property distributed in kind must apply to all property distributed by

[3] Sen. Rep. at p. 873.

[5] H.R. Rep. No. 841, 99th Cong., 2d Sess., p. II-766 (1986)("Conf. Rep.")

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the estate or trust during the taxable year to which the election applies, unless the election is revoked with the consent of the Secretary. This provision is retroactive to distributions made on or after June 2, 1984, the original effective date of redesignated §643(e).

This amendment eliminates the possibility of electing to recognize gain on an asset-by-asset basis. However, since the election may be made on a year-by-year basis, the executor or trustee still may group assets together for distribution in the same year when an election with regard to such assets is advantageous.

IX. Deductibility of Trustee Fees and Other Administration Expenses

Act §132 adds new §67, under which miscellaneous itemized deductions will be allowed to an individual only to the extent they exceed, in the aggregate, a floor equal to 2% of adjusted gross income. Under §67(b), "miscellaneous itemized deductions" include all itemized deductions other than the deductions under certain specified Code provisions. Exceptions include the deduction under §691(c) for estate tax paid on income in respect of a decedent. Section 212, the deduction for expenses for the production of income, is not one of the specified deductions.

The Conference Report indicates that, in the case of an estate or trust, deductions excluded from the application of the 2% floor are items "that are paid or incurred in connection with the administration of the estate or trust and that would not have been incurred if the property were not held in such trust or estate . . ." [6] It may not be clear which expenses are incurred only because the property is held in trust. For instance, trustee's commissions and the cost of preparing a Form 1041 should be deductible without application of the 2% floor since those expenses are incurred only because the property is held in trust. However, expenses such as fees for a safety deposit box may be subject to the 2% floor since the trust property may have been placed in a safety deposit box even if it had not been held in trust.

The Conference Report indicates that expenses incurred by a grantor trust will be subject to the 2% floor.[7] Moreover, the 2% floor probably applies in the final year of the estate or trust when the excess administration expenses are distributed to the beneficiaries.

X. Alternative Minimum Tax

Section 58(c) provides rules for the application of the alternate minimum tax to an estate or trust. Act §1875(a) amends §58(c) to provide that both items of tax preference and itemized deductions shall be apportioned among an estate or trust and its beneficiaries in accordance with regulations provided by the Secretary.

Chapter 48

THE NEW GENERATION-SKIPPING TRANSFER TAX CONTAINED IN THE TAX REFORM ACT OF 1986, H.R. 3838

Lloyd Leva Plaine*
Sutherland, Asbill & Brennan
Washington, D.C.
and
Atlanta, Georgia

I. Pre-TRA Law

As part of the Tax Reform Act of 1976 (P.L. 94-455), a generation-skipping transfer tax ("GSTT") was introduced into the Internal Revenue Code of 1954 as Chapter 13.[1] In general, the pre-TRA GSTT was imposed on transfers which resulted from trusts in which beneficiaries assigned to two or more generations younger than the grantor's generation could be benefited from the same assets ("generation-skipping trusts").

The GSTT applied not only to a trust but also to a " 'generation-skipping trust equivalent' . . . which, although not a trust, had substantially the same effect as a generation-skipping trust." [2] Examples of this are "arrangements involving life estates and remainders, estates for years, insurance and annuities, and split interests." [3]

A generation-skipping transfer under pre-TRA law took the form of either a "taxable distribution" or a "taxable termination" with respect to a generation-skipping trust or trust equivalent.[4] There was no generation-skipping transfer for purposes of the GSTT if the transfer was subject to federal gift tax or estate tax.[5]

In very general terms, a "taxable distribution" meant any distribution out of corpus (in the fiduciary accounting sense) from a generation-skipping trust to a beneficiary who was assigned to a generation younger than the grantor's generation (a "younger generation beneficiary") and who was assigned to a generation younger than any other younger generation beneficiary of the trust. An individual who at no time had anything other than a future interest or power (or both) in the trust was not considered to be a younger generation beneficiary.[6] The most typical example of a taxable distribution would be a corpus distribution to the grantor's grandchild from a trust for the benefit of the grantor's children and grandchildren.

A "taxable termination," stated very generally, was the termination (by death, lapse of time, exercise or nonexercise, or otherwise) of an interest or power in a generation-skipping trust of any younger generation beneficiary who was assigned to any generation older than the generation assignment of any other person who was a younger generation beneficiary of that trust. Further, it did not include a termination of an interest or power of a person who at no time had anything other than a future interest or power (or both) in the trust.[7] Where more than one beneficiary was assigned to a single generation, the taxable termination did not occur until the interest of the last of those beneficiaries terminated.[8] The most typical example of a taxable termination would be the death of the last surviving child of the grantor, where the trust is for the benefit of the grantor's children and grandchildren.

Taxable distributions and taxable terminations did not include transfers up to a limit of $250,000 per deemed transferor to a grandchild of the grantor which vested in the grandchild when the child's generation's interest ended.[9]

A person was considered to be a beneficiary of a trust if he or she either had a present or future interest or power in the trust. Although there were certain exceptions to this, even a remote possibility of receiving trust income or corpus was treated as an interest. The rules concerning who had an interest or a power; when an interest or power was a "future" or "present" interest or power; and when an interest or power terminated were among the most complicated in the GSTT area and made the determination of

when a taxable termination actually occurred extremely complex.[10]

The tax was imposed only if and when a generation-skipping transfer actually occurred. The GSTT was designed to be substantially equivalent to the tax which would have been imposed if the property had actually been transferred outright to each successive generation. The federal estate or gift tax bracket of a member of the skipped generation (a "deemed transferor") [11] was used as a measuring rod for purposes of determining the tax imposed on the generation-skipping transfer.

The tax was extremely complicated and a trap for the unwary. It applied to trusts no matter what the size of the generation-skipping transfer and thereby required trustees to examine all transfers from trusts to determine if they were generation-skipping transfers which would give rise to the GSTT. The law was so complex that the only final regulations which were promulgated dealt with the effective date provisions and the tax return filing requirements. Other regulations which were proposed in 1981 were extensively criticized and were never made final. Further, as will be explained in more detail below, it was possible through very sophisticated planning to avoid, minimize and defer the application of the tax.

II. Legislative History of the TRA 1986 GSTT

The repeal of the pre-TRA GSTT had been strongly urged by the American Bar Association and the American Bankers Association and bills were proposed for its repeal.

On November 4, 1981, the Treasury Department testified before the Senate Finance Subcommittee on Estate and Gift Taxation with respect to S. 1695, a bill in the 97th Congress to repeal the GSTT. At that time, the Treasury Department asserted that it was opposed to repeal and in favor of modifying the GSTT provisions.

In a letter dated April 29, 1983, from John E. Chapoton, Assistant Treasury Secretary for Tax Policy, to Senator Steven D. Symms, Chairman of the Senate Finance Subcommittee on Estate and Gift Taxation, the Treasury Department submitted a proposal with the stated goal of simplifying and improving the GSTT. The proposal stated that it was not simply an attempt to patch up some of the problems of the GSTT, but it was a "fundamentally different and far simpler approach to the problem of generation-skipping." A draft of statutory language to implement the April 29, 1983 Treasury proposal was released on November 9, 1983, with revised drafts released January 6, 1984, and February 2, 1984. The Treasury proposal was the basis for H.R. 6260 which was introduced on September 18, 1984, in the 98th Congress.

On November 27, 1984, the Treasury Department issued to the President its Report on Tax Simplification and Tax Reform ("Treasury I") which contained a GSTT which was based on the latest draft of the April 29, 1983 Treasury proposal. On May 29, 1985, the President signed The President's Tax Proposals to the Congress for Fairness, Growth, and Simplicity which omitted the GSTT proposal. The September 1985 Joint Committee on Taxation Options contained a GSTT which, although based upon the April 29, 1983 Treasury proposal, made several changes in it. The proposed Tax Reform Act of 1985, H.R. 3838 (99th Cong., 1st Sess. (1985)), passed by the House of Representatives on December 17, 1985, contained a GSTT which made further changes in the April 29, 1983 Treasury proposal. The proposed Tax Reform Act of 1985, H.R. 3838, which passed the Senate, did not have a provision with respect to the GSTT; it, therefore, would have continued the old GSTT. The Conference Report on the Tax Reform Act of 1986 ("the Act"), filed on September 18, 1986, adopted the House version of the GSTT with some amendments. The House and Senate passed the Conference Report on September 25, 1986, and September 27, 1986, respectively. The Act was enacted when the President signed it into law on October 22, 1986.

Specifically, consistent with the approach taken in the April 29, 1983 Treasury proposal, the GSTT contained in the Act as proposed by the House Ways and Means Committee was specifically designed to amend:

> "the existing generation-skipping transfer tax, which attempts to determine the additional gift or estate tax that would have been paid if property had been transferred directly from one generation to another," and it imposes a simplified tax determined at a flat rate. "The generation-skipping transfer tax is expanded to include direct generation-skipping transfers (*e.g.*, a direct transfer from a grandparent to a grandchild) as well as transfers (subject to tax under the existing tax) in which benefits are 'shared' by beneficiaries in more than one younger generation." [12]

The GSTT in the Act made six fundamental changes in the GSTT system. First, under the TRA 1986 GSTT, Code §2631(a), every individual is permitted to make transfers aggregating as much as $1,000,000 during his or her lifetime or at death which, if an allocation of the exemption is made, are wholly exempt from the GSTT. In addition, *inter vivos* transfers that qualify for the applicable exclusions from the federal gift tax are also excluded for GSTT purposes as are transfers from a trust, which if made *inter vivos* by an individual, would not be treated as taxable gifts under §2503(e) relating to the exclusion of certain transfers for educational or medical expenses. The old $250,000 per deemed transferor grandchild exclusion from the GSTT was eliminated. Second, the "deemed transferor" concept was eliminated and a flat rate of tax is imposed on the non-exempt transfers, *i.e.*, the transfers not covered by the exemptions or the applicable federal gift tax exclusions. Under Code §2641, they are taxed at a flat rate equal to the maximum federal estate tax rate in effect at the time of the transfer. Third, distributions of income are subject to the GSTT. Fourth, the tax applies only to current interests. Fifth, the GSTT does not apply to powers at all. Sixth, the tax applies to direct skips, *i.e.*, transfers subject to federal estate tax or gift tax where all interests in the property are

transferred to or held for the benefit of recipients at least two generations below that of the transferor without the payment of federal estate or gift tax in an intervening generation. However, under Act §1433(b)(3), there is a $2,000,000 exemption per grandchild for each transferor for direct skips made before 1990 to grandchildren of the transferor which vest in the grandchild.

The TRA 1986 GSTT is somewhat less complex than the pre-TRA GSTT, but it is not a simple and workable alternative to the pre-TRA GSTT. For example, it ignores future interests, and the exemptions could take most trusts out of the scope of the tax. However, it retains the most complex aspects of the pre-TRA GSTT, which include the determination of: 1) who has an "interest" in the generationskipping trust, and 2) when that interest terminates. The GSTT is postponed until actual distributions are made to lower generation beneficiaries or until all interests in the higher generations terminate. Further, the TRA 1986 GSTT, as did the pre-TRA GSTT, contains many interrelated complex definitions.

Although the $1,000,000 exemption is a good mechanism for narrowing the scope of the GSTT, in the case of transfers in excess of the $1,000,000 exemption, the high level of the flat rate on such transfers causes the exemption to lose much of its effect. This is because the transfers above $1,000,000 are not permitted to run up the federal estate tax brackets. They are taxed at the maximum federal estate tax bracket as though the prior $1,000,000 exempt generation-skipping transfer were not exempt but were a taxable generation-skipping transfer. Further, because the $1,000,000 exemptions are not freely transferable between spouses, drafting to ensure that the $1,000,000 exemptions are utilized is very difficult.

III. The Department of the Treasury and the House Ways and Means Committee Cite Problems with the Pre-TRA GSTT

In Treasury I, the Treasury, in explaining why changes in the GSTT were necessary, pointed out the following problems with the pre-TRA GSTT:

(1) The scope of the pre-TRA GSTT was overbroad which meant that every trust (no matter how small in size) which had beneficiaries in two or more generations below the generation of the grantor, was a generation-skipping trust subject to the provisions of Chapter 13. Such trusts were found in even the simplest wills. The broad scope of the tax, combined with its complexity, was likely to result in a high level of inadvertent noncompliance and, therefore, an uneven application of the tax.

(2) The complexity of the pre-TRA tax (which included no fewer than thirteen defined terms fitting into an intricate pattern of rules and exceptions) made it difficult to understand and caused additional planning costs which were borne by taxpayers and the government.

(3) The difficulties associated with administering the tax were such that the record keeping which the IRS had to undertake would have been extremely costly and perhaps close to impossible. Specifically, the IRS had to keep records of federal estate and gift tax information regarding every individual regardless of whether the individual had ever filed a federal gift tax return or his estate had ever filed a federal estate tax return.

(4) The effectiveness of the pre-TRA GSTT was questioned. Because of its numerous exceptions, it was possible through the sophisticated mechanisms (described below) for the more well-to-do individuals to avoid, minimize and defer the application of the GSTT. Therefore, the tax was deemed to be unfair because it benefited the very well-to-do as compared to families of more modest wealth.

The House Ways and Means Committee in its Report said that its reasons for change were attributable to its belief:

> as it stated when the generation-skipping transfer tax originally was enacted in 1976, . . . the purpose of the three transfer taxes (gift, estate, and generation-skipping) is not only to raise revenues, but also to do so in a manner that has as nearly as possible a uniform effect. This policy is best served when transfer tax consequences do not vary widely depending on whether property is transferred outright to immediately succeeding generations or is transferred in ways that skip generations. The committee determined that the present generation-skipping transfer tax is unduly complicated. Therefore, the committee determined that this tax should be replaced with a simplified tax, determined at a flat rate. The bill accomplishes the committee's goal of simplified administration while ensuring that transfers having a similar substantial effect will be subject to tax in a similar manner.[13]

For reasons set forth below, it is submitted that the TRA 1986 GSTT does not fully accomplish the Committee's goal.

A. Sophisticated Mechanisms For Minimizing The Old GSTT

The following outlines some of the sophisticated mechanisms for avoiding, minimizing and deferring the application of the pre-TRA GSTT.[14]

1. The GSTT could be avoided in small estates if the instrument was drafted in a way to take advantage of the $250,000 per deemed transferor grandchild exclusion from the GSTT by ensuring that the distributions to grandchildren vested at the time of the generation-skipping transfer.

2. The GSTT could be minimized through *layering*. This was only possible if the individual had enough assets to totally skip his children's generation with some of those assets. Layering involved establishing separate trusts for each generation level instead of having one trust for all generations. For example, a client with $4,000,000 and two children could have established a trust of $1,500,000 for his children for life with the remainder passing to the grandchildren. Of that amount, $500,000 would have qualified

[13] Report, p. 824.

Tax.* §51 (1981); Kalik and Kartiganer, Tax on Certain Generation-Skipping Transfers, American Bar Association, Section of Real Property, Probate and Trust Law, Annual Meeting Outlines (Aug. 2, 1983).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

for the grandchild exclusion and the other $2,500,000 ($4,000,000 minus $1,500,000) could have been placed in a trust for the grandchildren for life with the remainder passing to the great grandchildren. There would have been a GSTT with respect to the remaining $1,000,000 in the first trust at the death of the client's last surviving child but there would not have been any GSTT with respect to the $2,500,000 in the second trust at the death of the child.

3. Under the income exception, in general, a distribution from current income (within the meaning of §643(b)) of the trust would not have been treated as a taxable distribution regardless of the generation level of the person to whom such distributions were made.[15] Therefore, in a spray trust benefiting several generations, if current income distributions had been made to great grandchildren there would not have been a GSTT. However, if there had been distributions of both trust income and principal in any one taxable year, then distributions of income would have been deemed to have been made to persons in descending order of generation.[16] In other words, if income had been distributed to a grandchild and principal to a child within the same taxable year of the trust, then for purposes of the GSTT, the child would have been deemed to have received a distribution of principal.

4. Further, using taxable distributions where possible was advantageous because the tax base was lower than the tax base for taxable terminations. The tax base for taxable distributions was the sum of the taxable gifts made by the deemed transferor plus generation-skipping transfers with respect to which he was the deemed transferor. By contrast, the tax base for taxable terminations was the sum of the adjusted taxable gifts made by the deemed transferor during life plus the taxable estate of the deemed transferor plus generation-skipping transfers with respect to which he was the deemed transferor.[17]

5. By changing the identity of the deemed transferor to a less well-to-do individual, the GSTT could be minimized because the tax base for the GSTT would have been lowered.

6. Further, by taking advantage of some of the most complex provisions in the pre-1986 GSTT (*i.e.*, those determining when there is a termination of an interest or power), the GSTT could be deferred. These rules operated to defer the GSTT until the termination of the last power or interest in a given generation level when the property then benefited a younger generation level. However, these rules were very complex because it was often difficult to determine when an interest or power had terminated as well as when someone had an interest or power.[18] Because it was the Congressional intent that the GSTT be imposed "only once each generation with respect to the same trust share or interest," [19] there was a deferral of the tax under the following circumstances:

a. When there was a termination of a younger generation beneficiary's interest or power but there was another younger generation beneficiary of the same generation who at the time of the termination had an interest or power in the same trust assets.[20]

b. When there was a termination of an interest or power of a younger generation beneficiary, if that beneficiary afterward continued to have an interest or power in the same trust assets.[21]

c. When there was a termination of a younger generation beneficiary's interest or power if an older generation beneficiary retained an interest or power in the same trust assets.[22]

d. When the termination of an interest or power of a younger generation beneficiary caused a new interest or power in those same assets to arise in another younger generation beneficiary who was in an older generation or the same generation as the younger generation beneficiary.[23]

IV. Overview of the GSTT Contained in the Tax Reform Act of 1986

The GSTT contained in the Act imposes a GSTT on all transfers which result in the avoidance of the federal estate and gift tax in a generation below that of the transferor. The GSTT is imposed on transfers resulting from trusts (and trust equivalents) in which beneficiaries assigned to a generation two or more generations below the transferor's generation may be benefited from the assets. ("Generation-skipping trust").

Example: A grandparent ("GP") establishes a spray trust for his child ("C") and grandchild ("GC"). If the trustee were to distribute trust income or principal to GC during C's life, that would be a generation-skipping transfer.

The GSTT would also be imposed on direct generation-skipping transfers ("direct skips") where the transferor transfers property to a beneficiary who is assigned to a generation two or more generations below the transferor's generation, and the transfer is a taxable gift or is includible in the estate of the transferor.

Example: A GP transfers $50,000 to GC. The amount which is a taxable gift (after the $10,000 annual exclusion), $40,000, is a generation-skipping transfer.

[15] §2613(a)(1), 1954 Code.
[16] §2613(a)(2), 1954 Code.
[17] §2602, 1954 Code.
[18] The proposed regulations with respect to these sections were issued on January 2, 1981 in the Federal Register as §§26.2611-26.2613. There has been much criticism of the regulations, and they were never adopted as final. The Treasury itself has said that it was very difficult if not impossible to draft regulations for the old GSTT. One example of the complexity under the proposed regulations was that a Uniform Gifts to Minor Act account established by a grandparent for a grandchild was a generation-skipping trust equivalent. The child, if he was not the custodian, was considered to have a future interest because his right to the property was contingent upon the happening of an event outside his control. His future interest would have remained future and there would not have been a GSTT imposed at the time of the child's death unless the property was used to fulfill his legal obligations. Prop. Regs. §§26.2613-4(d) and 4(e), *Example 3.*

The following exemptions are contained in the new GSTT: transfers which, if made *inter vivos* by an individual, would not be treated as taxable gifts because of §2503(e) relating to the exclusion of certain transfers for educational or medical expenses; *inter vivos* transfers which were not taxable gifts because of the $10,000 annual exclusion under §2503(b); the $1,000,000 exemption for generation-skipping transfers; and the $2,000,000 per grandchild exemptions with respect to direct skip generation-skipping transfers made before 1990 from a transferor to the transferor's grandchild which vest in the grandchild.

V. Detailed Explanation of the GSTT Contained in the Tax Reform Act of 1986

Many of the provisions of the TRA 1986 GSTT raise the same issues as the pre-1986 GSTT. Therefore, it will be helpful in understanding the new tax to refer to certain portions of the regulations and proposed regulations dealing with the pre-1986 GSTT, *e.g.*, the effective date rules contained in Regs. §26.2601-1 and the proposed nominal interest rules contained in Prop. Regs. §26.2613-2(b)(3).

A. Definitions

As was true of the pre-1986 GSTT, the TRA 1986 GSTT contains many interrelated terms and definitions. Understanding the meaning of those terms is critical to comprehending the tax.

1. Generation-Skipping Transfer

A generation-skipping transfer is a transfer of *income or corpus* to a beneficiary who is assigned to a generation at least two generations below the generation of the transferor, *i.e.*, only transfers to grandchildren or younger generations are subject to tax.

Example: An outright transfer to C is not a generation-skipping transfer, but a transfer from GP to GC would be (if C were alive). Generation-skipping transfers include "taxable distributions," "taxable terminations" and "direct skips." [24] The term GSTT does not include a transfer to the extent the transfer is subject to a federal gift tax or estate tax with respect to a beneficiary assigned to the first generation below that of the transferor, and any transfer which, if made *inter vivos* by an individual, would not be treated as a taxable gift because of §2503(e) relating to the exclusion of certain educational or medical expenses. It does not include any *inter vivos* transfer which is exempt from federal gift tax by reason of §2503(e) or by reason of §2503(b) relating to the annual exclusion from the federal gift tax.[25]

2. Trust/Trustee

The term trust includes any arrangement (other than an estate) which, although not a trust, has substantially the same effect as a trust, such as a life estate, remainder, estate for years, insurance and annuity contracts.[26] A trust in which beneficiaries with present interests are assigned to a generation which is two or more generations below that of the transferor's generation is a generation-skipping trust. Substantially separate and independent shares of different beneficiaries are treated as separate trusts.[27] In the case of an arrangement which is not a trust but is treated as a trust, the person in actual or constructive possession of the property is considered to be the trustee.[28]

3. Transferor

Establishing the identity of the transferor is the first step in determining whether there has been a generation-skipping transfer. In a transfer of a kind which is subject to federal estate tax, the decedent is the transferor.[29] In a transfer of a kind which is subject to federal gift tax, the donor is the transferor.[30]

If a couple were to gift-split (under §2513), the transfer would be treated as made one-half by each spouse for purposes of the GSTT.[31] Therefore, each spouse is the transferor with respect to one-half of the transfer which means both spouses' exemptions may be used for the transfer of one spouse's assets. This helps to ensure that both spouses will be able to use their exemptions even if their ownership of property is uneven.

In the case of qualified terminable interest property ("QTIP") where a martial deduction was allowed for federal gift [32] or estate tax purposes,[33] the donee spouse or the surviving spouse, as the case may be, would be treated as the transferor with respect to generation-skipping transfers occurring upon the property's disposition by (or on the death of) the transferor's spouse. The donor spouse or the estate of the decedent, respectively, may elect to treat such property for purposes of the GSTT as though the QTIP election had not been made.[34] This election makes the donor spouse or the decedent, as the case may be, the transferor. As will be explained more fully below, if the election were made and the donor spouse or the estate of the decedent, as the case may be, were the transferor, the transferor's exemption (which might otherwise have been wasted) could be allocated to property with respect to which generation-skipping transfers will occur upon the property's disposition by (or on the death of) the transferor's spouse.

4. Interest

The determination of whether a person has an interest for purposes of the GSTT is one of the keys to the application of the GSTT. The term is used in many of the other definitions. A person has an interest if the person:

a. Has a right (other than a future right) to receive income or corpus from the trust.

Example: A person with a life estate;

b. Is a permissible current recipient of income or corpus (and is not described in §2055(a)).

[24] §2611(a).
[25] §2611(b) and Report p. 826.
[26] §2652(b)(1) and (3).
[27] §2654(b).
[28] §2652(b)(2).
[29] §2652(a)(1)(A).
[30] §2652(a)(1)(B).
[31] §2652(a)(2).
[32] §2523(f).
[33] §2056(b)(7).
[34] §2652(a)(3).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Example: A current beneficiary of a spray trust; or

c. Is described in §2055(a) and the trust is a charitable remainder annuity trust, a charitable remainder unitrust or a pooled income fund.

An interest which is used primarily to postpone or avoid the GSTT will be disregarded.[35]

5. Skip Person/Non-Skip Person

The definitions of "skip persons" and "non-skip persons" are complex and confusing because the new GSTT uses each term in defining the other term. The new GSTT uses the term "skip person" to refer to:

a. A person assigned to a generation which is two or more generations below the transferor's generation assignment.

Example: A grandchild of the transferor;

b. A trust if all interests in such trust are held by skip persons.

Example: A trust for the benefit of the grandchildren ("GC") and great grandchildren ("GGC") of the transferor; or

c. A trust if no person is holding an interest in the trust and at no time after the transfer may a distribution be made from such trust to a non-skip person.

Example: A trust for the ultimate benefit of the grandchild of the transferor, under the terms of which, for the first ten years, the trustee is to accumulate income and make no distributions of income or principal.[36]

A "non-skip person" is defined as any person who is not a skip person.[37]

6. Taxable Events

There are three types of generation-skipping transfers under the GSTT: "taxable distributions," "taxable terminations," and "direct skips."[38]

a. A "taxable distribution" occurs when there is a distribution of income or principal from a trust (other than a taxable termination or a direct skip) to a skip person, *i.e.*, a distribution of income or principal from a trust to a beneficiary who is assigned to a generation which is two or more generations below that of the transferor's generation.[39] The distribution must not be subject to federal gift tax or estate tax with respect to a person in the first generation below that of the transferor. Any transfer from a trust which, if made *inter vivos* by an individual, would not be treated as a taxable gift by reason of §2503(e) (relating to exclusion of certain transfers for educational and medical expenses) would be excluded from the term "generation-skipping transfer" and, therefore, would not be a taxable distribution.

Example: A trust established by GP for C. If the trustee were to make a distribution to GC (during the life of C), that distribution would be a taxable distribution.

b. A "taxable termination" occurs when there is a termination (by death, lapse of time, release of power, or otherwise) of an interest of a beneficiary in property held in a trust if the beneficiary is assigned to a generation which is older than that of any other beneficiary with an interest in the property and if the other beneficiaries with an interest in such property are all assigned to generations which are at least two generations below the transferor. The termination must not be subject to federal gift tax or estate tax with respect to a person in the first generation below that of the transferor. It is a taxable termination unless:

(i) Immediately after the termination, a non-skip person has an interest in such property; or

(ii) At no time after such termination may a distribution (including distributions on termination) be made from such trust to a skip person.

The taxable termination does not occur until the interests of all other non-skip persons end.[40]

Example: A trust established by GP for C and GC. At the death of C, there would be a taxable termination if GC were alive and if there were no other trust beneficiary with an interest who was in the same generation as C or in an older generation.

Example: A trust established for transferor's wife for 5 years, then to GC for 5 years with remainder payable to C. When the wife dies, there is a termination of an interest in property held in trust immediately after which there is not a non-skip person with an interest in the property. Therefore, it is not excepted from the definition of a taxable termination under §2612(a)(1)(A). The only non-skip person, C, has only a future right to trust property and that does not give him an interest. After the termination, distribution will be made to a skip person, GC. Therefore, the termination is not excepted from the definition of a taxable termination by §2612(a)(1)(B). It is a taxable termination even though C, a non-skip person, has a vested remainder in the property.

If, upon the termination of an interest in property held in a trust a specified portion of trust assets is distributed to skip persons who are lineal descendants of the holder of such interest (or to one or more trusts for the exclusive benefit of such persons), such termination shall constitute a taxable termination with respect to such portion of the trust property.[41]

From a planning perspective, you can defer GSTT by having several non-skip beneficiaries so that the taxable termination will not occur until the termination of all such non-skip beneficiaries' interests. The beneficiaries must have interests which are not nominal, and the trust should not have substantially separate and independent shares of

[35] §2652(c). The concept of what is a nominal interest is a complex one. The proposed regulations under the old GSTT are a useful guide. Prop. Regs. §26.2613-2(b)(3).
[36] §2613(a).
[37] §2613(b).
[38] §2611(a).
[39] §2612(b).
[40] §2612(a)(1).
[41] §2612(a)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

different beneficiaries or else the taxable termination will not be deferred.

c. A "direct skip" is a transfer, subject to federal estate tax or gift tax, of an interest in property to a skip person (*i.e.*, a transfer for the benefit of a person assigned to a generation at least two generations below the transferor). This includes a transfer, subject to federal estate tax or gift tax, to a trust where there are no persons with an interest who are not skip persons.[42]

Example: GP transfers property outright to GC or to an irrevocable trust solely for the benefit of GC (C, who is parent of GC, is alive). The transfer is a gift for federal gift tax purposes, and it is a direct skip for GSTT purposes.

If a grandchild is the beneficiary but his parent, who is a lineal descendant of the transferor (or of the transferor's spouse or former spouse), is deceased at the time of the transfer, then there is not a direct skip because (for purposes of determining whether there is a direct skip) the grandchild is treated as though he were the child and all lineal descendants of the grandchild are moved up a generation.[43]

B. Taxation of Multiple Skips

Where a single trust provides for transfers to more than one generation of younger generation beneficiaries, the property (unless an exemption is allocated to it) is subject to transfer tax with respect to each generation.

Example: A trust for transferor's C for life, then for transferor's GC for life with remainder to transferor's GGC would be subject to transfer tax three times, *i.e.*, federal gift or estate tax when the trust was established, and to a GSTT both at the death of the C and at the death of the GC. If there is a generation-skipping transfer and immediately after such transfer the property is held in trust, then §2653 provides that for purposes of the GSTT (other than generation assignment) the trust is treated as if the transferor were assigned to the first generation above the highest generation of any person who has an interest in such trust immediately before the generation-skipping transfer.

Example: A trust for transferor's C for life, then for transferor's GC for life with remainder to transferor's GGC, would be subject to transfer tax three times, *i.e.*, federal gift or estate tax when the trust was established, and to a GSTT both at the death of the C and at the death of the GC. However, distributions from the trust during GC's life after C's death would not be considered taxable distributions because the transferor would be considered to be in the C's generation.

Where the §2653 adjustment is made to the transferor's generation, the inclusion ratio is not affected, but proper adjustment shall be made to the inclusion ratio with respect to such trust, as prescribed in regulations, to take into account any GSTT borne by such trust which is imposed on such generation-skipping transfers. However, if the generation-skipping transfer involves a pour-over from one trust to another, §2653 provides that the inclusion ratio for the new trust shall be determined by treating the nontax portion of such distribution (*i.e.*, the amount of such distribution multiplied by the applicable fraction) as if it were part of a generation-skipping transfer exemption allocated to such trust.

There is not a double GSTT where two generations are skipped. Therefore, a double skip is a good method for saving transfer taxes.

Example: Transferor gives $2,000,000 to GC. The GSTT (if no exemptions apply) is the same for this transfer as it would be for a gift by transferor of $2,000,000 to GGC.

Example: Transferor creates a spray trust for C, GC, and GGC. GC dies before C. GC's death is not a taxable termination because C, a non-skip person, still has an interest in the trust. Then, C dies. This a taxable termination. Thereafter, the oldest generation level with an interest in the trust is GGC. The transferor is deemed to be in GC's generation. Therefore, a distribution to GGC is not a taxable distribution (because GGC is not a skip person as he is only one generation below the transferor).

C. Taxable Amount Before Exemptions and Before Inclusion Ratio

The taxable amount does not include the amount of any federal estate tax or gift tax payable with respect to a transfer. To determine the taxable amount for purposes of the GSTT, property is normally valued at it fair market value at the time of the generation-skipping transfer reduced by the amount of any consideration furnished by the transferee.[44] Where a direct skip is included in the transferor's gross estate, the value is the value for purposes of the federal estate tax — taking into account §2032 and §2032A.[45] With respect to taxable terminations which occur at an individual's death, an election can be made to value all such property in taxable terminations in accordance with §2032 (even if the estate does not elect §2032).[46]

The taxable amount is determined in a different manner for the different types of generation-skipping transfers. The determination of the taxable amount generally parallels the determination of the taxable amount in the most closely analogous transfer subject to federal estate or gift tax.

The taxable amount for a taxable distribution is the fair market value, at the time of distribution, of the property received by the transferee reduced by any expenses incurred by the transferee in connection with the determination, collection or refund of GSTT with respect to such taxable distribution.[47] It includes the GSTT itself and, therefore, is tax inclusive. If any GSTT, with respect to a taxable distribution, is paid out of the trust (instead of by the transferee), an amount equal to the GSTT paid shall be treated as a taxable distribution.[48]

[42] §2612(c)(1).
[43] §2612(c)(2). (*N.B.*: *See* footnote 80 and accompanying text.)
[44] §2624(a) and (d).
[45] §2624(b).
[46] §2624(c).
[47] §2621(a).
[48] §2621(b).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The taxable amount for a taxable termination is the fair market value, at time of the termination, of all the property with respect to which the taxable termination has occurred, reduced by the allowable deduction similar to the deduction allowed by §2053 (relating to expenses, indebtedness, and taxes) for amounts attributable to the property with respect to which the taxable termination has occurred.[49] It includes the amount of the GSTT itself and, therefore, is tax inclusive.

The taxable amount for a taxable distribution or for a taxable termination is supposed to accord with the transfer tax treatment which would obtain if the transfer had been made to a member of the skipped generation who then left the property at death to the ultimate transferee. This assumes that the member of the skipped generation had a federal estate tax base which was subject to the maximum federal estate tax rates and had not taken advantage of federal estate tax deductions such as the marital deduction or the charitable deduction.

The tax inclusive nature of taxable distributions and taxable terminations lead to extremely high levels of GSTT. It would be preferable to have all the generation-skipping transfer taxable amounts be determined on a tax exclusive basis.

The taxable amount for a direct skip is the fair market value at the time of the transfer of only the property received by the transferee.[50] It does not include any federal gift or estate tax payable with respect to such transfer. It does not include the GSTT itself and, therefore, is tax exclusive.

The formula to determine the GSTT taxable amount for a direct skip where the GSTT is paid out of the property is:

$$\frac{\text{total amount transferred after payment of estate or gift tax}}{100\% + \text{maximum federal estate tax rate}}$$

(Therefore 155% in 1986 and 1987 and 150% thereafter).

Example: If GP in 1988 were to bequeath $4,500,000 net of estate tax to a GC, the GSTT would be paid by the GP's estate out of the $4,500,000 but only on the amount actually received by the GC. To determine what the GC received, the fraction above is used. The GSTT on that bequest in 1988 would be 50% of $3,000,000, or $1,500,000; determined as follows:

$$\$4{,}500{,}000 \div 150\% = \$3{,}000{,}000$$

When the direct skip is also a taxable gift, the amount of the gift for purposes of the federal gift tax shall be increased by the amount of any GSTT imposed on the transferor with respect to the gift.[51]

The treatment of direct skips is alleged to parallel the tax treatment which would apply if the transfer had been made to a member of the skipped generation who then immediately used the property (net of transfer tax) to make a gift to the ultimate recipient and to pay the gift tax thereon. Further, it is not supposed to impose a GSTT higher than the transfer tax which would have been paid in the skipped generation had the property passed through that generation. However, it assumes that the member of the skipped generation would already have made so many gifts that he would be in the maximum federal gift tax bracket.

D. Liability for GSTT

Unless directed pursuant to the governing instrument by specific reference to the GSTT, the GSTT on a transfer shall be charged to the property constituting the transfer.[52]

Example: Assume a decedent were to leave $1,000,000 outright to GC and none of the $1,000,000 or $2,000,000 exemptions were allocated to it. If the decedent's will stated that all federal estate tax were payable out of the residue but did not mention the GSTT, then the GSTT will be paid by the estate from the $1,000,000 bequest. The GC would receive $666,667 and 50% of that amount, $333,333, would be paid by the estate as GSTT on the bequest.

Therefore, it is advisable to reexamine tax clauses and determine whether they need to be changed or a new provision should be added to be sure the GSTT is paid out of the desired assets.

In the case of a taxable distribution, the transferee is liable for the GSTT.[53] The trustee is liable for the GSTT in the case of a taxable termination.[54] In the case of a direct skip not from a trust, the transferor is liable for the GSTT, and in the case of a direct skip from a trust, the trustee is liable for the GSTT.[55]

E. Exemptions

1. Predeceased Child Exclusion

A transfer is not considered to be a direct skip where the transfer is made to a grandchild of the transferor (or of the transferor's spouse or former spouse) and, at the time of the transfer, the parent of such individual who is a lineal descendant of the transferor (or of the transferor's spouse or former spouse) is dead. The grandchild is treated as if such individual were a child of the transferor and all of that grandchild's children are treated as if they were grandchildren of the transferor. This is reapplied in the case of lineal descendants below a grandchild.[56]

2. Gift Tax Exclusions

The GSTT does not apply to any transfer which, if made *inter vivos* by an individual, would not be treated as a taxable gift by reason of the exclusion under §2503(e) for certain tuition or medical payments.[57] Code §2642(c) also

[49] §2622.
[50] §2623.

[57] §2611(b)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

provides that any *inter vivos* transfer which is exempt from federal gift tax because of either the §2503(e) exclusion or the §2503(b) $10,000 annual exclusion is exempt from the GSTT.[58]

3. $1,000,000 Exemption

Under the TRA 1986 GSTT every individual is entitled to make cumulative transfers, during his lifetime or at death, of up to $1,000,000 without any GSTT being imposed on the generation-skipping transfers made from such property. Once a transfer, or portion of a transfer, is designated as exempt because the exemption was allocated to it, all subsequent generation-skipping transfers of such assets or of the income of such assets or the appreciation in such assets is also exempt from GSTT. Each individual (or his or her executor) may irrevocably allocate the $1,000,000 exemption to property transferred at any time by such individual with respect to any type of generation-skipping transfer with respect to which the individual is the transferor.[59] Therefore, a married couple is allowed a generation-skipping transfer exemption of $2,000,000; $1,000,000 for each spouse, and married individuals may elect to treat *inter vivos* transfers as made one-half by each spouse.[60]

In the case of qualified terminable interest property where a marital deduction was allowed for federal gift or estate tax purposes, an individual may allocate all or a portion of his or her exemption to property with respect to which a generation-skipping transfer will occur upon its disposition by the transferor's spouse (or on the transferor's spouse's death) as a result of a §2652(a)(3) election to treat that property for purposes of the GSTT as through the QTIP election had not been made. If the §2652(a)(3) election were made, the first spouse, *i.e.*, the original transferor, would be treated as the transferor of property with respect to which generation-skipping transfers occur upon the property's disposition by the transferor's spouse (or on the transferor's spouse's death), and, therefore, the first spouse's exemption could be allocated to such property. If the §2652(a)(3) election were not made, the property would be treated as QTIP property for purposes of the GSTT. In that case, the spouse of the first spouse would be treated as the transferor and could use his or her own exemption but not the exemption of the first spouse. Without this §2652(a)(3) election, the first spouse's exemption could be wasted if the bulk of his or her assets went into a QTIP trust.

The availability of the election would make the QTIP the more desirable marital deduction vehicle to the extent necessary to use the first spouse's exemption if otherwise the generation-skipping transfer exemption of the first spouse to die would not be used. Of course, if the QTIP trustee were to distribute all of the property from the trust outright to the surviving spouse, the first spouse's exemption could not be utilized at the death of the surviving spouse. It is not good policy to have the choice of which type of marital deduction to use be controlled by the GSTT. The exemption should have been made freely transferable between spouses as was the case in H.R. 6260, *supra.*

It should be noted that if the surviving spouse had no assets of his or her own, the surviving spouse's generation-skipping transfer exemption would be wasted if the §2652(a)(3) were effective for all of the marital deduction property. From a planning perspective, if the §2652(a)(3) election can be a partial election, the election should be made only to the extent necessary to use the first spouse's exemption. If §2652(a)(3) does not allow a partial election, then two separate marital deduction trusts should be established and one of them which is a QTIP trust should be funded with only sufficient property to use the first spouse's exemption.

In a case in which you want to use both spouses' generation-skipping transfer exemptions, it is important to ensure that the less well-to-do spouse has sufficient assets to fully utilize his or her exemption if he or she were to predecease the more well-to-do spouse. The more well-to-do spouse could establish an *inter vivos* QTIP trust for the other spouse. The donee spouse would be considered to be the transferor with respect to the disposition of the assets in the trust at his or her death as long as the §2652(a)(3) election were not made. The QTIP trust should be a trust which does a great deal of generation-skipping after the donee spouse's death, and the donee spouse's generation-skipping transfer exemption should be allocated to the trust so that the trust will be wholly or largely exempt from the GSTT.

Once a transfer, or portion of a transfer, is designated as exempt, because the exemption is allocated to it, all subsequent generation-skipping transfers of such assets (or of the income therefrom or of the appreciation in such assets) would also be exempt from the GSTT.

a. Allocation of $1,000,000 Exemption

An individual can allocate his or her exemption to property transferred at any time by the individual. Once made, the allocation is irrevocable. It can be made by the individual during life on a timely filed federal gift tax return for *inter vivos* transfers or by filing the allocation with the Secretary in a manner to be prescribed in forms or regulations.[61] An individual or his executor can make an allocation of the exemption on or before the date for filing the individual's federal estate tax return (determined with regard to extensions) in a manner to be prescribed by the Secretary in forms or regulations.[62]

Unless an individual elects not to have §2632(b) apply, the section will cause any unused portion of the individual's generation-skipping transfer exemption (*i.e.*, the portion that has not been allocated by the individual or treated as allocated under §2632(b)(1) to a prior direct skip) to be allocated to direct skips made by an individual during life to the extent necessary to make the inclusion ratio zero, or if the direct skip exceeds the unused exemption, the entire unused exemption will be allocated to the property transferred. The unused generation-skipping transfer exemption

of an individual available at death which is not allocated within the time prescribed by §2632(a), shall be deemed allocated, first, to direct skips occurring at such individual's death and, second, to trusts of which the individual is the transferor and from which taxable distributions or taxable terminations might occur at or after his or her death. Allocation within the direct skips shall be in proportion to the values (at the time of the allocation) of such property or trust, multiplied by the inclusion ratio with respect to such property or trust. The subsequent allocations for taxable distributions and taxable terminations are made in the same manner.[63]

A transferor to a trust could allocate at the time he transfers property to a trust (or at any time thereafter) any or all of his exemption to the trust property, even if no GSTT would have been payable at that time. The value of the property at the time of the allocation would determine the amount of the exemption used regardless of its value when distributed from the trust.

If none of the property contributed to a trust were exempt, either because the exemption had already been fully used or because no allocation was made to use the exemption, all distributions from the trust to a beneficiary in a generation two or more levels below that of the grantor would be subject to a GSTT. If a grantor were to transfer property to a trust whose value exceeded the exemption amount allocated to the property, the trust would be partially exempt, and each and every generation-skipping distribution from the trust would be partially exempt from tax.

Example: If a transferor were to transfer $1,000,000 in trust for the benefit of his children and grandchildren and were to allocate $1,000,000 of his or her exemption to the trust, no part of the trust income or corpus would ever be subject to the GSTT even if the value of the trust property were to appreciate to $5,000,000 or more. If the transferor were to allocate only $500,000 of his or her exemption to the trust, only one-half of all distributions to grandchildren would be subject to the GSTT and only one-half of the trust property would be subject to the GSTT on termination of the children's interest. If, after the creation of the trust, the transferor were to allocate an additional $250,000 of his or her exemption to the trust, the exempt portion of the trust would be redetermined, based upon the values of the trust property *at the time* of the allocation. This new inclusion ratio would apply to future distributions and terminations, but generally would not change the tax treatment of any past events.[64]

This freedom from later GSTT puts a premium on making the allocation (with respect to transfers made by the transferor during life) early, before assets appreciate. It also could be desirable to allocate the exemption to assets which will appreciate. It would be beneficial to use a value freezing technique so that the value of property outside the trust would be frozen and the property with respect to which the election is made appreciates. For example, a recapitalization could be done and the common stock could be placed in the generation-skipping trust using part of the $1,000,000 exemption. Further, the exemption could be used to establish a funded irrevocable life insurance trust.

4. Direct Skip Exemptions

A transfer before 1990 from a transferor to a grandchild of the transferor (where the parent of the grandchild who is a lineal descendant of the transferor is alive) is exempt from GSTT and, therefore, is not a direct skip for purposes of the GSTT to the extent that the aggregate transfers from such transferor to such grandchild do not exceed $2,000,000. To be entitled to the exemption, as was the case under the interpretation of the old GSTT with respect to the $250,000 grandchild exemption, the property must vest in the grandchild. Therefore, when drafting for the $2,000,000 exemption it is important to be sure nothing in the instrument interferes with the vesting. For example, it is important that the minors' provision which is in most instruments would not prevent a grandchild's interest from vesting.[65] Married individuals may elect to treat the exempt transfers as made one-half by each spouse.[66]

If the transfer which qualified for the direct skip exemption was made into a trust for a grandchild, subsequent transfers from the trust to the grandchild will be taxable distributions. This results because there was no generation-skipping transfer of property when the trust was set up since the transfer was excluded from being a direct skip by §2612(c)(2). Therefore, the provisions of §2653 which would prevent this result if there had been a generation-skipping transfer are not applicable. To avoid this result, distribute outright to the grandchild instead of establishing a vested trust. A Uniform Gifts to Minors Account ("UGMA") probably should not be used because it may be considered to be a trust equivalent as it was under Prop. Reg. §26.2611-4(b), Example 7 of the old GSTT. [Hopefully, this problem will be corrected in a later technical corrections act.]

An individual cannot allocate any of the exemption to property with respect to which a direct skip will occur upon its disposition by the transferor's spouse (or on the transferor's spouse's death) as a result of a §2652(a)(3) election to treat that property for purposes of the GSTT as though the QTIP election had not been made because it would not be a direct skip when the transfer was made. It could only be a direct skip with respect to the transferor if the original transfer could be viewed as occurring at the death of the transferor's spouse. If the §2652(a)(3) election were made so that the surviving spouse were not considered the transferor, a transfer at the death of the surviving spouse to grandchildren would be treated as a taxable termination. Therefore, from a planning perspective, it is important to recognize that if the first spouse uses the §2652(a)(3) election to utilize his or her $1,000,000 exemption, neither spouse would probably be able to utilize his or her own $2,000,000 direct skip exemption with respect to the nonexempt portion of the property. This is another reason for

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

only making the §2652(a)(3) election with respect to sufficient property to utilize the first spouse's $1,000,000 exemption.

In a case in which you want to use both spouses' direct skip exemptions, it is important to ensure that the less well-to-do spouse has sufficient assets to fully utilize his or her exemptions if he or she were to predecease the more well-to-do spouse. The more well-to-do spouse could establish an *inter vivos* QTIP trust for the other spouse. The donee spouse would be considered to be the transferor with respect to the disposition of the assets in the trust at his or her death as long as the §2652(a)(3) election were not made. The QTIP trust should be a trust from which there would be direct skips at the donee spouse's death which would immediately vest in the grandchildren so that the donee spouse's direct skip exemptions would be utilized.

F. Determination of Amount of Tax at Flat Tax Rate

The GSTT equals the taxable amount multiplied by the "applicable rate" which is the product of the maximum federal estate tax rate (55% in 1986 and 1987 and 50% thereafter) and the inclusion ratio with respect to the property.[67]

G. Inclusion Ratio

The inclusion ratio is determined by *subtracting the "applicable fraction" from one* where the applicable fraction is equal to:

generation-skipping transfer exemption allocated to trust (or to direct skip)
÷
value of property transferred to trust (or in direct skip) reduced by: (1) Federal or state death tax recovered from the trust attributable to such property, and (2) charitable deductions under §2055 or §2522 with respect to such property.[68]

The nontax or exempt portion of a trust equals the applicable fraction times the value of all property in the trust.[69]

Increasing the numerator or decreasing the denominator will create a larger applicable fraction thereby making the inclusion ratio smaller and the generation-skipping transfer smaller. If an individual transferred $1,500,000 to a charitable remainder trust where the value of the charitable interest was $500,000 and the individual allocated his entire $1,000,000 exemption to the trust, all transfers from the trust would be wholly exempt from the GSTT.

Where a transfer (other than a nontaxable gift) is made to a trust in existence before the transfer, the inclusion ratio is recomputed as of the time of such transfer. Further, if any allocation of the generation-skipping transfer exemption to property transferred to a trust is late, *i.e.*, it is not made on a timely filed required gift tax return and there was a previous allocation with respect to property transferred to such trust, the inclusion ratio is recomputed [70] as follows:

One *minus*

GST exemption allocated to property plus nontax portion of trust immediately before transfer
÷
value of property involved in transfer reduced by any charitable deductions under §2055 or §2522 with respect to such property plus the value of all property in trust immediately before transfer.[71]

The *value* used in the denominator of these applicable fractions is the value of the property at the time of the transfer or the direct skip except as set forth below:[72]

1. If the allocation of the generation-skipping transfer exemption is made on a timely filed federal gift tax return required by §6019 or is deemed made to direct skips made during lifetime under §2632(b)(1), the value of such property shall be its value for federal gift tax purposes and such allocation shall be effective from the date of the transfer.[73] If the allocation is not so made, but is made during the transferor's life, the value shall be determined as of the time such allocation is filed with the Secretary and shall be effective from the date of filing.[74]

2. The value of property transferred as a result of death of the transferor is its value for purposes of the federal estate tax and allocations at or after the transferor's death shall be effective from the date of death.[75] However, if the alternate valuation date or special use value is checked for federal estate tax purposes, this is unclear because the flush language of §2642(a) indicates the denominator in such case is the value "at the time of the transfer to the trust (or the direct skip)."

3. If QTIP property is included in a surviving spouse's estate and if the surviving spouse is treated as the transferor under §2652(a), the value of such property shall be its value for purposes of the federal estate tax in the surviving spouse's estate.[76]

Amounts transferred *inter vivos* in a direct skip which are nontaxable gifts because of the $10,000 annual exclusion under §2503(b) (taking into account gift-splitting under §2513) or certain payments to the providers of educational or medical services under §2503(e) will lead to a zero inclusion ratio. Transfers which are nontaxable gifts (which are not direct skips) and which are made to a trust will not be included in the denominator of the applicable fraction used to determine the inclusion ratio and, if it is the first such transfer to a trust, will lead to a zero inclusion ratio.[77]

If there is a generation-skipping transfer and immediately after the transfer such property is held in trust, then §2653 provides that the inclusion ratio is not affected. However, if the generation-skipping transfer involves a pour-over from one trust to another, the inclusion ratio for

the new trust shall be determined by treating the nontax portion of such distribution (*i.e.*, the amount of such distribution multiplied by the applicable fraction) as if it were part of a generation-skipping transfer exemption allocated to such trust.

VI. Practical Issues Involved in Planning for the Use of Exemptions and Exclusions

A. Value of Total Assets and Necessity to Plan to be Able to Utilize the Exemptions

If the value of a single person's assets or the value of a couple's total assets (after payment of death taxes) will be under $1,000,000 at the death of the single person or the death of the surviving spouse, any generation-skipping transfers would be totally exempt from the GSTT. If the value of a couple's total assets at the death of the surviving spouse (after payment of death taxes) will be between $1,000,000 and $2,000,000, then the couple's total assets could be exempt from the GSTT if the assets were titled correctly and if the testamentary instruments were written so that each spouse could use his or her $1,000,000 exemption.

It is important to ensure that the less well-to-do spouse has sufficient assets to fully utilize the available $1,000,000 and $2,000,000 exemptions regardless of the order of death. This should be done through gifts to the spouse, either outright or in a marital trust. In order to prevent the imposition of a federal estate tax at the death of the first spouse when the first spouse uses the $1,000,000 exemption, it would be necessary to establish a QTIP trust, with respect to which an election would be made under §2652(a)(3) to treat the first spouse to die as the transferor with respect to generation-skipping transfers occurring after the death of the surviving spouse.

To the extent that (after payment of death taxes) the value of a single person's assets will exceed $1,000,000 or the value of a couple's assets will exceed $2,000,000 at the death of the single person or the death of the surviving spouse, it is necessary to do more complicated planning to try to ensure the use of each person's exemptions and minimize the GSTT and other transfer taxes.

B. Inter Vivos Planning Using Exemptions and Exclusions

1. The Annual Exclusion from the Federal Gift Tax

Because the GSTT does not apply to any *inter vivos* transfer which is exempt from the federal gift tax by virtue of the annual exclusion, presumably one could add property to a grandfathered pre-September 26, 1985 irrevocable trust which, if the additions qualify for the annual exclusion and do not exceed the available annual exclusion, should not cause the property in the grandfathered trust to be subject to the GSTT.

Although the GSTT does not apply to any *inter vivos* transfer which is exempt from the federal gift tax, use of annual exclusion transfers must be planned carefully. The use of the annual exclusion must be coordinated with the use of the $1,000,000 exemption; otherwise the property, although transferred to the trust in a nontaxable transfer, can be subject to a later GSTT. Section 2642(c)(2) provides that if the first transfer to a trust (other than a direct skip) is a nontaxable gift, the inclusion ratio for such trust is "0". It also provides that subsequent transfers of nontaxable gifts (other than direct skips) to a trust will not be included in the denominator of the applicable fraction used to determine the inclusion ratio.[78] This can cause the property transferred to the trust as a nontaxable gift to be subject to a later GSTT where the inclusion ratio is not "0".

Example: If an irrevocable trust were established and funded with $30,000 for a child for life with remainder to grandchild, the child's income interest would qualify for the §2503(b) annual exclusion. If the child was 20 at the time of the transfer, the value of the child's life estate is $29,209.50 (Regs. §25.2512-5). If the transferor does not make any allocation of his or her exemption to the trust, then all of the property in the trust would later be subject to the GSTT. On the other hand, if $790.50 of the exemption (the amount equal to the taxable transfer to the trust) were allocated to the trust, then the property would be exempt from the GSTT.

(a) No exemption allocated to property transferred to the trust:

applicable fraction = 0 ÷ 790.50 = 0; inclusion ratio = 1.

(b) $790.50 of exemption allocated to property transferred to the trust:

applicable fraction = 790.50 ÷ 790.50 = 1; inclusion ratio = 0.

As the example demonstrates, it is important to make sure that a trust to which a nontaxable transfer is made has a sufficient amount of the $1,000,000 exemption allocated to property in the trust so that the benefit of the exclusion for nontaxable transfers is not lost. As the example also illustrates, coordinating the use of the annual exclusion and the $1,000,000 exemptions can allow the leveraged use of the exemptions, *i.e.*, where the amount transferred is higher than the amount of the exemption that needs to be allocated to it to cause a "0" inclusion ratio. On the other hand, if none of the exemption is allocated so that the numerator of the applicable fraction is "0", the nontaxable transfers will be totally subject to the GSTT. Particularly in the case of an insurance trust this can be a very valuable planning tool.

In using the annual exclusion, it is important to use property the value of which is readily ascertainable. Otherwise, if a sufficient amount of the $1,000,000 exemption has not been allocated to the trust and the IRS later adjusts the value of the gift, the inclusion ratio would be changed — perhaps when it was too late to allocate any additional portion of the $1,000,000 exemption to it.

2. $1,000,000 Exemptions

It may be difficult to determine whether and when to use the $1,000,000 exemptions *inter vivos*. To determine when and how the exemptions should be used involves consideration of the following factors which are difficult to predict:

[78] §2642(c).

(a) Determining whether and when generation-skipping transfers will occur from the property to which the $1,000,000 exemptions are to be allocated. If the "exempt" property is distributed to non-skip persons, the $1,000,000 exemption would be wasted.

(b) Determining to which assets the allocation of the $1,000,000 exemptions should be made, *i.e.*, which assets have the most appreciation potential, and determining when to allocate the exemptions. The freedom from later GSTT puts a premium on making the allocation in a timely manner with respect to transfers made by the transferor during life before assets appreciate and on allocating it to assets which will appreciate. It would be beneficial to use a value freezing technique so that the value of property outside the exempt trust would be frozen and the property with respect to which the allocation is made would appreciate. However, if a transferor believes the assets are likely to decrease in value, the transferor would be better off not allocating the exemption when the transfer is made (and electing out of a deemed allocation in the case of a direct skip).

Example: A recapitalization could be done and the common stock could be placed in the exempt trust. Further, the exemption could be allocated to a funded irrevocable life insurance trust which had only a small present value. The property could be used to purchase a remainder interest in a joint purchase of an asset.

(c) Determining which spouse's exemption should be utilized, *i.e.*, whether to gift split or whether to establish an *inter vivos* QTIP trust and elect under §2652(a)(3) to have the donor spouse be treated as the transferor.

If the $1,000,000 exemption were used *inter vivos*, it would be beneficial to put it in a separate trust because the client might want the terms of the exempt trust to provide for as much generation-skipping transfers as possible whereas the provisions of the nonexempt trusts could have less generation-skipping transfers. Moreover, to the extent that assets in excess of the exempt portion are subject to GSTT, it would be easier from an administrative perspective to have one trust that is fully exempt and another that is fully taxable.

To use the $1,000,000 exemption *inter vivos*, a present federal gift tax would have to be paid when the trust was funded (unless a QTIP trust was used). In some situations, this might not be a good utilization of the unified credit. It might be more desirable for non-GSTT reasons to use the unified credit in a more leveraged situation, such as a grantor income trust.

An *inter vivos* QTIP trust could be established and the donor could elect to be treated as the transferor under §2652(a)(3). In that way there would be no present federal gift tax, the unified credit would not be used, and any future appreciation in the property would be free from GSTT. However, such a trust may be disadvantageous because of distributions which will be made from the trust before and after the death of the donee spouse. Specifically, the trust income has to be distributed out to the donee spouse currently, trust principal could be distributed to the donee spouse, and federal estate tax could be paid at the death of the donee spouse from the trust. There appears to be no adjustment for the federal estate taxes payable at the donee spouse's death. Further, if the donor or donee spouse provides that such taxes are to be paid out of other funds, the payment may be considered to be an addition to the QTIP trust for generation-skipping transfer purposes. Therefore, much of the exemption would have been wasted.

It is also desirable to use the $1,000,000 exemption in a leveraged fashion, for example, as mentioned above, through the use of annual exclusions. In addition, its use can be leveraged if it is allocated to a charitable lead trust. Where property is transferred to a charitable lead trust, the inclusion ratio is reduced because the value of the charitable interest is deducted from the value of the property in the denominator of the applicable fraction. Therefore, although eventually all of the property originally placed in the trust will probably pass to the remaindermen, only an amount of the $1,000,000 exemption equal to the present value of the remainder interest needs to be allocated to the trust to exempt all transfers under the trust from the GSTT. If $1,500,000 is placed in the trust and the present charitable deduction is $500,000, only $1,000,000 of the exemption must be used to exempt the whole $1,500,000 in the trust (plus any later appreciation) from future GSTT.

The spouses could gift-split and the transfer would be treated as made one-half by each spouse. This is helpful where the poorer spouse does not have sufficient assets to fully use the $1,000,000 exemption.[79] Where one of the spouses has already used part of the $1,000,000 exemption, it might be preferable first to make a gift to the other spouse to be sure that each spouse is considered to be the transferor with respect to assets equal to that spouse's unused $1,000,000 exemption.

3. $2,000,000 Exemptions

The $1,000,000 exemptions shelter the property from all future GSTT whereas the $2,000,000 per grandchild exemptions only prevent the taxation of a direct skip made before 1990 which vests in the transferor's grandchild and, therefore, will be subject to federal estate tax at the grandchild's death. Therefore, in using the $2,000,000 exemptions, one should be careful that the $1,000,000 exemption is not overlooked.

It may be desirable to use the $2,000,000 direct skip exemptions *inter vivos* because they are only available through 1989. Moreover, as the federal gift tax is a tax exclusive tax, less transfer tax would be paid if the transfer were made by gift than if it were made at death (so long as the donor survives the gift by three years). The Treasury Department is considering a proposal to make the federal gift tax a tax inclusive tax.

Furthermore, the spouses could treat *inter vivos* transfers as made one-half by each spouse if the poorer spouse did not have sufficient assets to use the $2,000,000 exemptions.

As stated above, it is not possible for the donor spouse by establishing a QTIP trust with respect to which he elects to be considered the transferor under §2652(a)(3) to utilize his $2,000,000 exemptions for transfers to grandchildren at

[79] §2652(a)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the end of the QTIP. On the other hand, if the donee spouse were the transferor and the grandchildren were the remaindermen, there would be a direct skip with respect to which the donee spouse's $2,000,000 exemptions could be applied if the donee spouse died before 1990 and the transfer vested in the grandchildren.

The $2,000,000 exemption cannot be used to exempt generation-skipping transfers from a charitable lead trust to grandchildren who are the remaindermen. A transfer to such a charitable lead trust would not be treated as a direct skip at the time of the transfer to the trust because §2651(e)(3) would assign the charitable beneficiary to the transferor's generation and, therefore, the trust would not be a skip person. If, as is often the case, a transferor were to set up a charitable lead trust for charity for a term of years with property passing to his or her grandchildren at the end of the charity's interest, there would not be a direct skip when the trust was established because of the charity's interest and its assignment to the transferor's generation. The generation-skipping transfer would occur at the end of the charity's interest when the trust property would be likely to have appreciated. However, because there would not be a federal gift tax or estate tax at the end of the charity's interest, the generation-skipping transfer would be a taxable termination — not a direct skip, and therefore, the transferor's $2,000,000 per grandchild direct skip exemptions could not be used to exempt the generation-skipping transfer.

C. Testamentary Use of Exemptions and Exclusions

To the extent that the client has not used the available exemptions during life, it is important to be sure they are utilized after death. Further, even if the client has decided to use the exemptions during life, it is advisable to draft provisions in the client's will or trust as a safety net which would utilize the exemptions to the extent that they are still available at death. Planning and drafting for the testamentary use of the $1,000,000 exemptions is complex and planning and drafting for the use of the $2,000,000 exemptions, which are available only until 1990, superimposes additional complexities.

1. Planning for the Use of the Predeceased Child Exclusion

Because the application of this provision is determined by who happens to be alive at the time of the transfer, it is not really possible to plan to take advantage of it. However, in determining whether to make the election under §2652(a)(3) to treat the first spouse as the transferor, one should recognize that, if at the end of the QTIP trust there is a transfer to grandchildren, and the first spouse to die is the transferor, there will be a taxable termination. However, if the surviving spouse is the transferor, there is a chance that the child who is the parent of the grandchild and a child of one or both of the spouses might die during the surviving spouse's life. In that case, at the end of the QTIP trust, there would not be a direct skip because of the child's intervening death and, therefore, a GSTT would have been avoided.

N.B.: A transfer to a trust for the grandchild whose parent (who was a lineal descendant of the transferor, or of the transferor's spouse or former spouse) was deceased at the time of the transfer would not be a direct skip.[80] However, the way the GSTT provisions are drafted, subsequent distributions from the trust to the grandchild would be taxable distributions. Although the provisions of §2653 would prevent this result in a case where there was a direct skip to the trust because it would cause the transferor for subsequent generation-skipping transfers to be treated as though he or she were in the child's generation, §2653 would have no application to this situation because there was no generation-skipping transfer of property when the trust was set up since the transfer was excluded from being a direct skip by §2612(c)(2). To avoid this result, instead of establishing a trust for the grandchild, consider distributing outright to the grandchild.

2. $1,000,000 Exemptions

If the client's assets exceed the available $1,000,000 exemption, it might be appropriate to place property to which the $1,000,000 exemption will be allocated in a separate trust. Having a separate trust for the $1,000,000 exemption amount enables the trust to be used for reverse freezes, *i.e.*, property with the most appreciation potential could be placed in the trust or the trust could hold common stock from a recapitalization or it could purchase a remainder interest in a joint purchase of assets. Moreover, the client might want the terms of the exempt trust to provide for as much generation-skipping transfers as possible whereas the provisions of the nonexempt trusts could have less generation-skipping transfers. Furthermore, to the extent that assets in excess of the exempt portion are subject to the GSTT, it would be easier from an administrative perspective to have one trust that is fully exempt and another that is fully taxable.

To utilize the available $1,000,000 exemption by use of separate trusts, the will could contain a formula clause. To utilize the $1,000,000 exemption when the client wants the same terms as in other trusts established under the will, the executor could be given the power to allocate the exemption and divide the property into separate trusts. Therefore, although the terms of the trusts would be identical, one would be wholly exempt and the other would be subject to the GSTT. On the death of the first spouse, part of the $1,000,000 exemption can be used through the unified credit and the rest through the QTIP by making the election that the decedent will be considered to be the transferor with respect to the QTIP under §2652(a)(3). If it is done through the QTIP, you may be allowed to make a partial election (*Note:* this is not specifically covered in the statute) although, for purposes of administrative ease, you might want to use a separate trust for the exempt portion.

The executor could be directed to set up two separate trusts which could have either identical or different terms applicable after the death of the surviving spouse. The QTIP with respect to which the first spouse wanted to be the transferor would be funded by the executor with $1,000,000 and then the rest of the martial property could be placed in a second QTIP trust. One difference in the two QTIP trust provisions could be that at the death of the

[80] §2612(c)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

surviving spouse, all federal estate tax would be payable out of the nonexempt marital deduction trust so that the exempt amount would not be depleted. The surviving spouse's will could provide that all estate tax is to be paid out of the residue of his or her estate. One potential consequence of either of these tax payment provisions would be that the payment of the federal estate tax could be treated as a constructive addition to the trust for purposes of the GSTT. Further, using the QTIP for the first spouse's exemption has the further disadvantage, referred to above, that distributions from the QTIP trust to the surviving spouse deplete the exempt property and, effectively, waste a portion of the exemption.

3. When Should the First Spouse Elect to be Treated as the Transferor Under §2652(a)(3) with Respect to QTIP?

The first spouse will want to elect to be treated as the transferor with respect to enough of the QTIP trust, whether *inter vivos* or testamentary, to use the portion of his or her $1,000,000 exemption which would not otherwise be utilized. There is always the risk that the exemption could be wasted if the assets were distributed out of the QTIP to the donee or surviving spouse.

Except for the reason set forth in the above paragraph, it is probably preferable to have the donee or surviving spouse, as the case may be, be the transferor. First, the surviving or donee spouse can use the property to utilize his or her $1,000,000 and $2,000,000 exemptions if he or she does not have sufficient other assets to use them. Second, allocation of the $1,000,000 exemption to the QTIP, as described above, means that a portion of the exemption will be wasted because of distributions to the donee or surviving spouse and because of the estate tax payable at the death of the donee or surviving spouse. Moreover, if the child of one of the spouses dies during the life of the surviving spouse and the QTIP at his or her death goes outright to that child's child, a GSTT can be avoided because the transfer to the grandchild would not be considered a direct skip.[81] Finally, if the transfer from the QTIP at the death of the surviving spouse is to the grandchild or to a trust for the grandchild and the surviving spouse is considered to be the transferor, it will be a direct skip which is tax exclusive. If the first spouse had been treated as the transferor, the transfer to the grandchild would be a taxable termination which is tax inclusive.

4. $2,000,000 Exemptions

Because the transfer must vest in the grandchild to qualify for the $2,000,000 exemption, it is important to examine existing wills and trusts to see if they contain direct skips and if the direct skips vest if the transferor dies before 1990. If the distributions are outright to the grandchild, be sure the instrument's minors provision will not prevent the vesting. It may be desirable not to change the client's will until January 1, 1987 because, if the client dies before January 1, 1987, all generation-skipping transfers under a will executed before enactment would be exempt from the GSTT.[82]

If the transferor is the first spouse to die, it is impossible to use the $2,000,000 direct skip exemptions in his or her will or trust in excess of the unified credit amount without incurring a present federal estate tax. This is because, as stated above, the QTIP election under §2652(a)(3) that enables the first spouse to be considered the transferor and therefore use the first spouse's $1,000,000 exemption would not help in this situation since the transfer would not be a direct skip at the death of the first spouse in view of the surviving spouse's intervening interest. Therefore, if the first spouse wants to use his or her $2,000,000 exemptions, he or she should either use them during life or have a provision in the will or trust to utilize the exemptions.

Suppose the transferor is a surviving spouse, his $2,000,000 exemptions have not been used during life, and he dies before 1990. If he has assets in excess of the $1,000,000 exemption and wants to benefit his grandchildren and skip his children, then the will could have a provision that bequeaths property equal to the amount of the still available $2,000,000 exemption to each grandchild outright or to a trust for the benefit of each grandchild. Instead of making a specific bequest at the death of a surviving spouse to utilize the surviving spouse's $2,000,000 exemptions, if the marital deduction was a non-QTIP or a QTIP where the surviving spouse was considered to be the transferor under §2652(a), a provision could be used which would take property which would otherwise be a direct skip and vest it in the grandchildren.

5. Interrelationship of $1,000,000 and $2,000,000 Exemptions

When drafting testamentary instruments to utilize both spouses' $1,000,000 exemptions and the surviving spouse's $2,000,000 exemptions, it might be desirable to use more than one marital trust.

The first spouse could establish a QTIP trust and elect under §2652(a)(3) to be considered the transferor so that his or her $1,000,000 exemption could be allocated to that trust. In order to use the surviving spouse's $1,000,000 exemption, either a separate QTIP trust could be established, or the election referred to above could be made with respect to only part of the QTIP, so that the surviving spouse would be considered to be the transferor of enough property to use his or her $1,000,000 exemption.

Further, the QTIP itself could have a formula in it which would take effect at the death of the surviving spouse to establish different dispositions after the surviving spouse's death. The portion with respect to which the first spouse was considered to be the transferor under §2652(a)(3) could be directed to be distributed at the death of the surviving spouse to a trust which contains a great deal of generation-skipping transfers. In the portion with respect to which the surviving spouse was the transferor, the formula could provide that an amount equal to the surviving spouse's available $1,000,000 exemption after the surviving spouse's death would be distributed to a trust which contains a great deal of generation-skipping transfers. It could provide that if the surviving spouse died before 1990, the $2,000,000 exemptions would next be used, and if he or she died after 1989, a different disposi-

[81] §2612(c)(2).
[82] §1433(b)(2)(B) of the Act.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

tion of the property would be made. It is important that the $2,000,000 exemptions be made with property that is not exempt from the GSTT, otherwise the exemption would be partially wasted.

It is important to give the surviving spouse a special testamentary power of appointment (to appoint outright or in trust among his or her lineal descendants and perhaps to appoint to and establish a charitable trust) so that, if he or she is the transferor, he or she can change the disposition of the property at the time of his or her death, as necessary to use his or her $1,000,000 exemption in a way that does a great deal of generation-skipping transfers. Further, if he or she died before 1990, he or she could appoint the property to grandchildren and vest the property so that it too would qualify for the $2,000,000 exemptions. If he or she died after 1989, the power would give added flexibility to plan for generation-skipping transfers.

In order to get the $2,000,000 exemption, the property must vest in the grandchild at the death of the transferor. Therefore, the trustee, as is suggested above with respect to the $1,000,000 exemptions (where there is no vesting requirement), to have the discretion to divide the property into two trusts at the death of the transferor, one of which would vest and one of which would not.

D. Planning If Assets Exceed the Exemptions

The following points should be considered for planning very large estates:

(1) Once the exemptions have been fully utilized there are not any significant transfer tax reasons to keep property in a trust. Each $1.00 of additional generation-skipping transfers which is not covered by an exemption will be taxed at the top marginal federal gift and estate tax bracket (55% in 1986 and 1987 and 50% after 1987). Not only are the GSTT rates equivalent to the top federal estate and gift tax brackets, therefore, using the progressive brackets, the GSTT does not have a marital deduction, nor does it have a credit for tax paid on prior transfers.

(2) One advantage of keeping property in a trust is tax deferral. Through the use of a spray trust, the GSTT could be deferred until the death of the last member of a generation.

(3) There are, of course, many valid nontax reasons for keeping property in a trust.

(4) Whether a transfer is made in or out of a trust, a transfer can be made, which does not benefit child or grandchild, to a great-grandchild, *i.e.*, a double skip with the imposition of only one GSTT.

(5) The drafting of the trusts, as was the case under the old GSTT, should be very flexible and allow the trustee a lot of discretion. The drafting should allow the trustee the discretion to transfer property to beneficiaries so the property can be subject to federal estate or gift tax rather than to the GSTT because the former will probably be less expensive as the examples below demonstrate. In addition to giving the trustee the power to distribute property to the beneficiaries, the beneficiaries could be given special powers of appointment which an independent trustee could be empowered to turn into general powers.

(6) In some situations the GSTT could be higher than the federal estate tax avoided by skipping a generation. This could be the case, for example, because the exemption covers $1,000,000 of generation-skipping transfers and then the GSTT is a flat 55% in 1986 (50% after 1987). On the other hand, if property in excess of the generation-skipping exemption were subject to federal estate tax in the intervening generation, the beneficiary's unified credit could be used and the beneficiary's marital deduction, charitable deduction and federal estate tax brackets could be used. Therefore, it could be advantageous to establish a generation-skipping transfer trust which would utilize the available exemptions and then have the excess property vest in the intervening generation — at least to the point where the beneficiary's federal estate tax brackets have been utilized.

(7) After the exemptions have been used, non-exempt generation-skipping transfers can be more expensive than the federal gift tax. Therefore, it could be advantageous to cause a transfer of property to be subject to a federal gift tax rather than the GSTT. For example, a taxable distribution of $1,000 from a generation-skipping trust to a grandchild of the transferor in 1986 or 1987 would produce a $550 GSTT and the grandchild (who would be liable for the tax) would only have $450 left after taxes. If, on the other hand, the trustee distributed $1,000 to the transferor's child, there would not be a GSTT. The child could give the $1,000 to the grandchild and use his annual exclusion or unified credit so that no federal gift tax would be due. If the child had already used his or her annual exclusion and unified credit and was in the 55% gift tax bracket, he could give $645 to the grandchild and pay $355 in federal gift tax. In the GSTT situation the grandchild received a net of $450, whereas in the gift situation the grandchild received a net of at least $645.

(8) The GSTT rate can seem confiscatory. In certain situations, when combined with the federal estate tax that also must be paid, the total transfer tax equals 300% of the property received by the beneficiary. The following examples illustrate the effect of the tax after 1987 when the maximum federal estate and gift tax bracket will be 50%, in the tax exclusive direct skip (examples 1 and 2) and in the tax inclusive taxable termination (example 3).

Example 1: If a transferor who was in the 50% federal gift tax bracket were to make a gift in 1988 of $3,000,000 to his grandchild and did not apply any of his annual exclusion or $1,000,000 exemption to the transfer, and if the transfer did not qualify for the $2,000,000 direct skip exemption, he would have to pay $1,500,000 in GSTT and $2,250,000 in federal gift tax or a total of $3,750,000 in transfer taxes in order to transfer only $3,000,000. Therefore, the transferor had to use $6,750,000 in total assets in order to get less than 44.5% of those assets, $3,000,000, to his grandchild; more than 55.5% of the total assets were used to pay transfer taxes. The total transfer tax is 125% of the value of the property received by the grandchild.

Example 2: If a transferor who was in the 50% federal estate tax bracket were to make a bequest in 1988 of $3,000,000 to his grandchild and did not apply any of his $1,000,000 exemption to the transfer, and if the transfer did not qualify for the $2,000,000 direct

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

skip exemption, he would have to pay $1,500,000 in GSTT and $4,500,000 in federal estate tax or a total of $6,000,000 in federal transfer taxes in order to transfer only $3,000,000 to the grandchild. Therefore, the transferor had to use $9,000,000 in assets in order to get one third of those assets, $3,000,000, to his grandchild; two-thirds of the total assets were used to pay transfer tax. The total transfer tax is 200% of the value of the property received by the grandchild.

Example 3: If a transferor who was in the 50% federal estate tax bracket created a testamentary trust for children for life with the remainder to grandchildren, then, assuming the transferor did not apply his $1,000,000 exemption to the transfer, it would require $12,000,000 of the transferor's property to leave $3,000,000 to the grandchildren. From the $12,000,000, $6,000,000 of federal estate tax would be paid and if the $6,000,000 remaining property were the value of the property at the death of the children, $3,000,000 would be paid in GSTT and only $3,000,000 would be received by the grandchildren. Therefore, the transferor had to use $12,000,000 in total assets in order to get 25% of those assets, $3,000,000, to the grandchildren; $9,000,000, 75% of the total assets, was used to pay transfer taxes. The total transfer tax is 300% of the value of the property received by the grandchildren.

The GSTT is lower for direct skips than for taxable terminations or taxable distributions because the taxable amount for direct skips is tax exclusive whereas the taxable amount for taxable terminations and taxable distributions is tax inclusive. The GSTT for direct skips, although lower, must be paid earlier. Therefore, a tension is created between the type of generation-skipping transfer and the amount and timing of the GSTT. If the client wants to keep the property in trust and there will be generation-skipping transfers in excess of the exemptions, you need to decide whether to structure the generation-skipping transfers as direct skips or taxable terminations. A direct skip is tax exclusive but it is taxed early and at the earlier values than the tax inclusive taxable termination. If one expects the property to appreciate considerably, it could be preferable to use a direct skip.

VII. Miscellaneous Provisions

A. Generation Assignment

An individual who is a lineal descendant of a grandparent of the transferor (or of the grandparent of the transferor's spouse) shall be assigned to that generation which results from comparing the number of generations between the grandparent and such individual with the number of generations between the grandparent and the transferor (or the transferor's spouse).[83] Legal adoptions and relationships by half-blood are treated as relationships of whole blood.[84] A spouse of a transferor is assigned to the same generation as the transferor. A spouse of a lineal descendant of the transferor's grandparent (or of the transferor's spouse's grandparent) is assigned to the same generation as the lineal descendant.[85]

Other individuals are assigned to generations based on their date of birth as follows:[86]

Individual's Generation Assignment	Years Between Individual's Later Date of Birth and Transferor's
Transferor's generation	Not more than 12½ years
1st generation younger than transferor	More than 12½ years but not more than 37½ years
Another generation younger	Each succeeding 25 years

Individuals who are assigned to more than one generation by these rules are assigned to the youngest generation.[87]

If an estate, trust, partnership or other entity has an interest in property, each individual with a beneficial interest is assigned to a generation based on the rules set forth above.[88]

Any charitable trust described in §511(b)(2) and any organization described in §511(a)(2) shall be assigned to the transferor's generation.[89]

B. Credit for State Taxes

A credit not exceeding 5% of the GSTT is allowed for the GSTT imposed by a state with respect to generation-skipping transfers occurring by reason of death.[90]

C. Disclaimer

A disclaimer that results in property passing to a person at least two generations below that of the original transferor results in a GSTT.[91] *Example*: If C disclaims a bequest from parent and property goes to GC of transferor, a GSTT is imposed on the transfer in addition to an estate tax. The disclaimed property is primarily liable for the payment of the GSTT.

D. Income

Generation-skipping distributions are subject to GSTT whether they are made out of income or corpus. The recipient is entitled to an income tax deduction for the GSTT imposed on the distribution of income which is included in income of the distributee and to which the throwback rules of §666 do not apply.[92]

With respect to any GSTT on a taxable termination or a direct skip occurring as a result of the death of the transferor, a deduction is allowed for the portion of the GSTT attributable to items of the gross income which were not properly includible in gross income for periods before the date of such generation-skipping transfer.[93]

E. Basis

In addition to any adjustment to basis received under the federal gift [94] or estate tax basis provisions,[95] the basis of property "transferred" in a generation-skipping transfer generally is increased (but not above fair market value) by the amount of GSTT attributable to the excess of the property's value over the transferor's basis. A taxable termination occurring as a result of death receives a step-up in basis like that provided under §1014 except that if the inclusion ratio with respect to such property is less than one, the increase in basis is limited by multiplying the increase by the inclusion ratio.[96]

F. Personal Liability of Trustee

The personal liability of trustees is limited for increases in the GSTT in certain circumstances which are beyond the trustees' knowledge or control.[97]

G. Administration Provisions

The Code provisions governing administration of the gift and estate taxes are applicable to the GSTT (to the extent not inconsistent with the GSTT). The federal estate tax rules are applicable to the GSTT occurring as a result of death, and the federal gift tax rules are applicable in other cases.[98]

H. Return Requirements

The Secretary shall prescribe by regulations the person who is required to make the GSTT return and when. To the extent practicable, the regulations are to provide that the return shall be filed by the person liable for the payment of the GSTT under §2603(a) and the return shall be filed:

1. In the case of a direct skip on or before the date on which the estate or gift tax return is required to be filed.

2. In all other cases on or before the 15th day of the fourth month after the close of the taxable year (in which such transfer occurs) of the person required to make such return.[99]

I. Extension of Time for Payment of GSTT on Direct Skips

The special rules under which federal estate tax attributable to interests in certain closely held businesses may be paid in installments is also made applicable to direct skips which occur as a result of death.[100]

J. Redemptions of Stock to Pay GSTT

Tax-free redemptions of stock to pay GSTT in the case of such transfers occurring as a result of death is added to the parallel federal estate tax provision.[101]

VIII. Effective Dates

The pre-TRA GSTT is repealed retroactive to its initial effective date — June 11, 1976.[102] The statute of limitations period for filing claims for refunds of the pre-TRA GSTT is waived to the extent a claim is filed before the date one year after the enactment of TRA-1986.[103]

The TRA 1986 GSTT applies to generation-skipping transfers after the date of enactment, except *inter vivos* generation-skipping transfers occurring after September 25, 1985 and on or before the date of enactment are treated as if made after the date of enactment and are subject to the TRA 1986 GSTT. Generation-skipping transfers from trusts that were irrevocable on September 25, 1985 are exempt to the extent that the transfers are not attributable to additions to the trust principal occurring after that date.[104]

Generation-skipping transfers under wills executed before the date of enactment are exempt if the decedent dies before January 1, 1987. This rule is only applicable to generation-skipping transfers under wills, not to trusts.[105] This is a much broader exemption than that described in the Conference Report which states that only direct skips under such wills are exempt.[106] The Concurrent Resolution [107] contained an amendment which passed both Houses which would have extended this grandfathering to generation-skipping transfers under a revocable trust executed before the date of enactment if the grantor died before January 1, 1987. The Concurrent Resolution failed to pass the Congress. The amendment may be made retroactively in a later technical corrections act in which case it would have been advisable not to amend revocable trusts executed pre-enactment between the date of enactment and January 1, 1987.

Generation-skipping transfers under a trust are exempt to the extent the trust consists of property included in the decedent's gross estate (other than property transferred by the decedent during his or her life after the date of enactment), or reinvestments thereof, or generation-skipping transfers which are direct skips occurring by reason of the death of any decedent, but in each case only if the decedent was, on the date of enactment and at all times thereafter until death, under a mental disability to change the disposition of his or her property.[108]

An election may be made to treat *inter vivos* and testamentary contingent transfers in trust for the benefit of a grandchild as vested direct skips so that the $2,000,000 exemptions can be used. The transfers must have occurred before the date of enactment of TRA-1986 and the transfers would have been vested but for the fact that the trust provides if the grandchild dies before vesting, the property is transferred to his or her heir rather than to his or her

[108] §1433(b)(2)(C) of the Act.

estate. Both the effective date provision [109] and the Conference Report [110] incorrectly state that the contingent transfers are not direct skips. A transfer does not need to vest to be a direct skip. The contingent transfers are direct skips, but because they do not vest they do not qualify for the $2,000,000 exemption. If the election is made, the transfer would qualify for the exemption and would be subject to federal estate tax at the grandchild's death.

IX. Planning Considerations Involving the Effective Date Provisions

One must look at the client's entire situation, but it would probably be advantageous to use pre-September 26, 1985 irrevocable trusts ("grandfathered") to do a great deal of generation-skipping transfers since they will be exempt from GSTT to the extent the transfers are made from property not added to the trust after September 25, 1985.

Consider exercising special powers of appointment in grandfathered trusts to make additional generation-skipping transfers. Also consider using disclaimers of interests in grandfathered trusts if they are still timely (for example, a minor beneficiary), to do more generation-skipping transfers. Also consider using the annual exclusion to add property to grandfathered trusts if the transfer would be of a present interest and would not exceed the allowable annual exclusion. In addition, consider establishing a new trust rather than making transfers to grandfathered trusts of other than nontaxable gifts.

Review the effective date regulations under the old GSTT to see what powers in the grandfathered trust may destroy the grandfathering and what may be considered to be a constructive addition to the trust.[111] *N.B.*: The QTIP provision was not covered by the old effective date rules because they dealt with instruments which were drafted before the QTIP provisions were enacted. Discussions on both floors of Congress pointed out that the grandfathering was intended to apply to some of the same situations that were grandfathered under the old law's effective date provisions.[112] Specifically, they said it includes a trust that contains a special power of appointment so long as the exercise of the power (including the creation of a trust) cannot result in the creation of an interest which postpones, or a new power which can be validly exercised so as to postpone, the vesting of any estate or interest in the trust property for a period ascertainable without regard to the date of the creation of the trust.[113]

If generation-skipping transfers occur under a QTIP where the will was executed before TRA-1986 was enacted and the first spouse died before January 1, 1987, try to get the benefits of grandfathering by electing under §2652(a)(3) to have the first spouse be treated as the transferor.

Consider not changing wills which were executed before the enactment date until January 1, 1987. Otherwise, if the testator died before January 1, 1987 the grandfathering would be lost. Even a codicil which republishes the will might cause this result unless it specifically states that it is not applicable unless the testator dies after December 31, 1986. Of course, if the testator's assets are below the amount of the exemption, it would not be harmful to change the will and lose the grandfathering, since all of the generation-skipping transfers would be covered by the exemption. *N.B.*: The Conference Report states that this grandfathering applies only to testamentary direct skips,[114] but the statutory language applies to all generation-skipping transfers. Be careful not to waste the first spouse's exemption which might result if he or she dies before 1987 with a non-QTIP marital deduction and the surviving spouse dies after 1986.

Where the generation-skipping transfers will occur under a funded revocable trust rather than under the will, consider amending the trust to pour the property back to the estate upon death if the grantor dies before January 1, 1987 to try to get the benefit of the grandfathering of the will. In the alternative, consider taking the property out of the trust now. *N.B.*: Be sure the provisions of the will which would then dispose of the property make generation-skipping transfers and are consistent with the wishes of the testator; otherwise this would not be advisable. For example, if the will incorporates by reference the terms of the trust, this could be a good step to take.

Where a will which was executed before the enactment date pours over to an unfunded trust, if the testator dies before January 1, 1987, argue that the generation-skipping transfers are under the will, and, therefore, should be grandfathered under §1433(b)(2)(B) of the Act. If an individual dies after January 1, 1987 and meets the mental disability requirements,[115] argue that generation-skipping transfers under a testamentary trust are covered by that section's grandfathering.

If an individual died before the enactment date and had a funded revocable trust, argue that he met the mental disability requirements on the date of enactment, and therefore, all generation-skipping transfers should be grandfathered.[116] If the generation-skipping transfers occurred before the date of enactment because they were not *inter vivos* transfers, argue that they are exempt from the GSTT.

X. Planning Steps To Be Taken

The following planning steps should be taken immediately:

(1) Reexamine existing wills and revocable trusts which were drafted under the pre-TRA GSTT. These instruments should be redrafted in light of the TRA 1986 GSTT law because the provisions relating to the pre-TRA GSTT (such as vesting to obtain the $250,000 exclusion) will no longer be beneficial and, in some cases, they would be detrimental or totally without dispositive effect.

(2) Examine existing documents to make sure a client's will and trusts can utilize the $1,000,000 exemptions. Use QTIP trust marital deduction provisions if appropriate and give the donee or surviving spouse a special testamentary power of appointment. Be sure both spouses have sufficient assets so that regardless of the order of death the exemptions can be used.

(3) Give the executor broad powers to allocate the $1,000,000 exemption.

(4) Give the executor or trustee the authority to divide any trust into two separate trusts, one of which has a GSTT inclusion ratio of "0" and one of which has a GSTT inclusion ratio of "1".

(5) Be sure generation-skipping transfers under existing wills or trusts which provide for direct skips will vest if the testator dies before 1990 in cases where the $1,000,000 exemptions have already been used. *N.B.*: You may want to wait until January 1, 1987 to have the client sign a new will because of the potential grandfathering.[117]

(6) Consider giving a disinterested trustee the ability to give, at any time, any beneficiary in a generation below the transferor's generation a general testamentary power of appointment so that the trust property would be subject to federal estate tax rather than to the GSTT.

(7) Clients who have sufficient assets should consider using the $1,000,000 and $2,000,000 exemptions to make gifts while the federal gift tax is still tax exclusive.

(8) Take advantage of the annual exclusions.

(9) Try to leverage the $1,000,000 exemption by using it in conjunction with charitable trusts and annual exclusion gifts.

(10) Examine tax clauses to see if it is necessary either to make changes in them or to add other tax clauses to be sure the GSTT is paid from the assets which you want to bear the tax.

[117] §1433(b)(2)(B) of the Act.

Summary of GSTT Provisions in the 1986 Tax Reform Act

(1) Type of Generation-Skipping Transfer	(2) Example	(3) Taxable Amount (Before Exemptions or Inclusion Ratio)	(4) Tax Inclusive or Tax Exclusive	(5) Liability for Tax	(6) Exemptions	(7) Inclusion Ratio Where Only One Transfer is Made to Trust
Taxable Termination	Trust established by grandparent(GP) for child(C) and grandchild(GC). At death of C, there is a taxable termination if GC is alive and if there is no other trust beneficiary with a present interest who is in the same generation as C or in an older generation.	Value of all property with respect to which the taxable termination has occurred reduced by the allowable deduction similar to the deduction allowed by §2053 (relating to expenses, indebtedness, and taxes) for amounts attributable to the property with respect to which the taxable termination has occurred (§2622).	Tax Inclusive. (§2622).	Trustee. (§2603(a)(2)).	Every individual is allowed a GST exemption of $1,000,000 which may be allocated by such individual (or his executor) to property transferred at any time. Married individuals may elect to treat these exempt transfers made inter vivos as made one-half by each spouse. The exemption is used to determine the inclusion ratio.	The inclusion ratio (§2642) with respect to any property transferred in a taxable termination or a taxable distribution shall be one minus: GST exemption allocated to trust divided by Value of property transferred to the trust minus (federal estate tax or state death tax actually recovered from the trust attributable to such property and any charitable deduction allowed under §2055 or §2522 with respect to such property).
Taxable Distribution	Trust established by GP for C & GC. Trustee makes a distribution to GC. That distribution is a taxable distribution.	Value of property received by transferee reduced by any expense incurred by transferee in connection with the determination, collection or refund of GSTT with respect to such taxable distribution. (§2621(a)).	Tax Inclusive. If any GSTT, with respect to a taxable distribution is paid out of the trust, (instead of by the transferee) an amount equal to the tax so paid shall be treated as a taxable distribution. (§2621(b)).	Transferee. (§2603(a)(1)).	This exemption can be used for any type of GST (§2631), but the total exemption is $1,000,000. There are specific rules governing its use (§2632). The GSTT does not apply to any inter vivos transfer which is exempt from federal gift tax by virtue of the $10,000 annual exclusion or any exclusion under §2503(e) for certain tuition or medical payments. (§2611(b)(2)).	

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(1) Type of Generation-Skipping Transfer	(2) Example	(3) Taxable Amount (Before Exemptions or Inclusion Ratio)	(4) Tax Inclusive or Tax Exclusive	(5) Liability for Tax	(6) Exemptions	(7) Inclusion Ratio Where Only One Transfer is Made to Trust
Direct Skip from a Trust	GP establishes a revocable trust which at his death is to distibute the trust assets to GC. (C who is the parent of GC is alive at GP's death.) The property in the trust is in GP's estate for purposes of the federal estate tax, and the property transferred to GC is a direct skip for GSTT purposes at GP's death.	Value of property received by transferee. (§2623).	Tax Exclusive. (§2623).	Trustee. (§2603(a)(2)).	Transfer from a a transferor to a GC of the transferor (where parent of GC is alive) is exempt from GSTT and therefore is not a direct skip for purposes of the GSTT to the extent that the transfer vests in GC, is made before 1/1/90 and the aggregate transfers from such transferor to such GC do not exceed $2,000,000. (§1433(b)(3) of TRA 1986). Married individuals may elect to treat the exempt transfers made inter vivos as made one-half by each spouse.	The inclusion ratio (§2642) with respect to any property transferred in a direct skip shall be one minus: GST exemption allocated to the property transferred divided by Value of property transferred in direct skip minus (federal estate tax or state death tax actually recovered from property transferred attributable to such property and any charitable deduction allowed under §2055 or §2522 with respect to such property).
Direct Skip not from a Trust	GP transfers property outright to GC or to an irrevocable trust solely for the benefit of GC (C who is parent of GC is alive). The transfer is a gift for federal gift tax purposes, and it is a direct skip for GSTT purposes.	Value of property received by transferee. (§2623).	Tax Exclusive. (§2623). If direct skip is taxable gift, the amount of the gift for purposes of the federal gift tax is increased by the amount of any GSTT imposed on transferor with respect to the gift. (§2515).	Transferor. (§2603(a)(3)).		

As used in chart:

GST = Generation-skipping transfer.
GSTT = Generation-skipping transfer tax.
Source of GSTT = Unless directed pursuant to the governing instrument by specific reference to the GSTT, the GSTT on a transfer shall be charged to the property constituting such transfer. (§2603(b)).

Chapter 49

MISCELLANEOUS ESTATE AND GIFT TAX PROVISIONS

Lucia N. Smeal, Esq.
Silverstein and Mullens
Washington, D.C.

I. Information Required for Valid Special Use Valuation Election

Under Code §2032A, real property used in farming or in a closely held business may be valued for estate tax purposes based on its current use rather than its fair market value.[1] The purpose of this provision is to enable heirs who want to continue operation of a farm or closely held business to do so without having to sell the property to pay the federal estate tax.[2] For §2032A to apply, the executor of an estate must file a notice of election with the estate's Federal Estate Tax Return (Form 706).[3] In addition, all persons with an interest in the property must sign an agreement consenting to the election. Specifically, qualified heirs must consent to personal liability for the additional estate tax imposed under §2032(c) if the qualified use of the property ceases within 10 years of the decedent's death.[4] Persons who are not qualified heirs but who have an interest in the property must consent to the collection of any additional estate tax from the qualified real property.[5] The agreement also must be filed with the return [6] and must be in a form which is legally binding on all parties under local law.[7]

For decedent's dying before 1982, the election documents had to filed on or before the due date of the estate tax return.[8] For decedents dying after 1981, the election and agreement must be filed with the return whether or not it is filed by the due date.[9] Therefore, the election may be made on a late return. In addition, a protective election can be filed with a *timely filed* estate tax return.[10]

The Tax Reform Act of 1984 [11] retroactively amended §2032A(d) to provide regulatory authority for perfection of a defective election which is in "substantial compliance" with the regulations within 90 days after the estate is notified of the defect.[12] However, the Conference Report to the 1984 Act indicates that merely checking the applicable election box on the return is not enough. Rather, a notice of election and an election agreement that is in substantial compliance with the regulations must be included with the return as originally filed.[13] The Report further explains that, at a minimum, the agreement as originally filed must be valid under state law and must include the signatures of all parties having a present interest or other than a *de minimis* remainder interest in the specially valued property.[14]

The Tax Reform Act of 1986 in §1421 expanded the availability of perfection of a defective election for estates of decedents dying before January 1, 1986 who were denied special use valuation because they did not submit the necessary election documents with their estate tax return.

Section 1421 of TRA 1986 [15] grants retroactive relief for estates which were denied the special use valuation election because they did not submit all of the required documents for an election with their estate tax return. Specifically, §1421 of the Act validates special use elections by estates that elected special use valuation and provided substantially all information for such election required *on the estate tax return.* Under the Act, these estates are permitted to perfect their elections within 90 days of being notified of errors or omissions by the Treasury. Thus, late filing of the required attachments is permitted. The Conference Report indicated that the provision is intended to permit estates that used the March 1982 edition of Form 706, which did not specify that the agreement had to be sent with the return, to perfect their §2032A elections.[16] The Senate Report states that notices of elections and agreements may be filed late where the estate timely filed those documents to the extent requested and described on Form 706.[17] As noted above, the estate must have substantially complied with the requirements for special use valuation enumerated on the Federal Estate Tax Return, Form 706 (as opposed to the Treasury Department regulations).[18]

This relief provision generally applies to estates of decedents dying after December 31, 1976 [19] and before

[19] This is the original effective date of Code §2032A permitting perfection of special use valuation elections. P.L. 98-369, §1025(a).

January 1, 1986. However, perfection is not available if before the date of enactment of TRA 1986 (October 22, 1986), the statute of limitations has expired for (1) an estate's tax return and (2) refund or credit claims. Under Code §6075, estate tax returns must be filed within nine months after the date of the decedent's death. In addition, the executor may request an extension of up to six months to file the Form 706.[20] Generally, the IRS has three years from the later of the date the return was due or the date the return was actually filed to assess a deficiency.[21] Further, credits and refunds are not allowed unless claims are filed within three years from the time a return is filed or two years from the time the tax was paid, whichever is later.[22] Therefore, perfection is allowed only for estates which come within these time limitations as of October 22, 1986, the date of enactment of the Tax Reform Act of 1986.

II. Estate and Gift Tax Deduction for Certain Conservation Easement Donations

A. Introduction

Under §1422 of the Tax Reform Act of 1986, estate and gift tax deductions for donations of conservation easements will no longer be tested under the income tax rules defining a "conservation purpose." Although this appears to be a liberalization of pre-TRA 1986 law, this class of contributions remains subject to the uncertainty which originally led to enactment of the troublesome definition. A discussion of the history of the conservation easement provisions is necessary to put the TRA 1986 amendment in perspective.

As a general rule, estate and gift tax charitable deductions are denied for contributions of partial interests in property.[23] This restriction was originally enacted by the Tax Reform Act of 1969 (P.L. 91-172),[24] which denied tax deductions for donations of partial interests in property, except for an undivided portion of a taxpayer's entire interest in the property. However, the Conference Report on the Tax Reform Act of 1969 stated that a gift of an open space easement in gross is to be considered a gift of an undivided interest in property if the easement is in perpetuity.[25] Based on this language, the IRS in regulations [26] and rulings [27] permitted deductions for donations in perpetuity of open space, historical, and recreational easements.

Later, Code §170(f)(3)(B)(iii) was enacted [28] to permit deductions for easements having a term of 30 years. This provision was amended by §6(a) of the Tax Treatment Extension Act of 1980 (P.L. 96-541), to permit a deduction only for "qualified conservation contributions." That term was defined in a new Code §170(h), enacted by P.L. 96-541, §6(b). The §170(f)(3)(B)(iii) exception also was incorporated in Code §2055(e)(2) and §2522(c), making §170(h) applicable to donations for estate and gift tax purposes.

Code §170(h) [29] defines the term "qualified conservation contribution" as a contribution of a "qualified real property interest" to a "qualified organization," "exclusively for conservation purposes." [30] Only four specific conservation purposes will support a deduction. They are spelled out in Code §170(h)(4)(A) as follows:

> (1) the preservation of land areas for outdoor recreation by, or for the education of, the general public;
>
> (2) the protection of a relatively natural habitat of fish, wildlife, plants, or similar ecosystem;
>
> (3) the preservation of open space (including farmland and forest land) for scenic enjoyment of the general public or pursuant to a governmental conservation policy and such preservation will yield a significant public benefit; or
>
> (4) the preservation of an historically important land area or a certified historic structure.

These requirements have been very difficult to work with, primarily because of the uncertainty created by the use of such subjective terms as "relatively natural habitat," "scenic enjoyment of the public," and "significant public benefit." Although most of the major cases in this area have been on valuation, [31] the IRS rulings largely have dealt with applying these terms to prospective easement donations.[32]

Early in 1986, final regulations on qualified conservation contributions were released as T.D. 8069, 51 Fed. Reg. 1496 (January 14, 1986), effective for contributions not in trust of partial interests in property for conservation purposes made on or after December 18, 1980. These regulations list numerous factors which will be considered in testing donations under the terms set forth in the four conservation purpose requirements.

As stated above, under §1422 of TRA 1986, estate and gift tax deductions for contributions of conservation easements do not have to satisfy these income tax conservation purpose requirements.

B. Analysis

Taking estate and gift tax deductions for conservation easements out from under the income tax requirements is designed to grant relief where a deduction has been denied for income tax purposes because it did not meet one of the four specific conservation purposes outlined in §170(h)(4)(A). In that situation, under TRA 1986, taxpay-

ers will not be liable for increased estate and gift taxes at a later time when the income tax consequences are finally determined.

This provision originally was added by §717 of the Senate version of H.R. 3838. The Senate Finance Committee report on the easement provision explains that the provision is intended to "de-couple" the income, gift, and estate tax rules on conservation purpose requirements.[33] Under "Reasons for Change," the report gives the example of a conservation contribution being made that later is found to not satisfy the conservation purpose requirement. In this situation under current law, the report notes, the donor loses the income tax deduction and also may be subject to gift or estate tax. As a result, the charitable organization will end up owning the property and the donor may not have other funds to pay the tax.[34] In the "Explanation of Provision," the report says that the conservation purpose requirement is retained for income tax deductions. The report then simply says that, under the bill, contributions that are determined not to satisfy the income tax rules will "nonetheless not result in imposition of gift or estate tax." [35] No guidance is provided as to how the IRS should test contributions made strictly in estate and gift situations. The Conference Report on TRA 1986 gives no further explanation of the provision.[36] Also, no regulatory directive is given to Treasury regarding this change.

However, according to the statutory language, donations of conservation easements for estate and gift tax purposes will continue to have to meet the other definitions of §170(h). The contribution must be made to a qualified tax-exempt organization as defined in §170(h)(3). Moreover, the "exclusively for conservation purposes" language of §170(h)(1)(C) still applies to require that the conservation purpose be protected in perpetuity.[37]

Enactment of this provision has put conservation easement donations back where they were between 1969 and 1981, between the Conference Report language of the Tax Reform Act of 1969 and the passage of the cumbersome definition of "conservation purpose" in 1980. Taxpayers will no longer have to contend with the difficult and subjective definitions of "significant public benefit," "scenic enjoyment," and "relatively natural habitat." However, the down side to this congressional action is that the new provision does not solve the long-standing problem of uncertainty in this area of the law. Now, taxpayers have no set definition to rely upon as to what is a "conservation purpose" which will qualify the donation for an estate or gift tax deduction. This doubt could inhibit potential donors. Most observers believe that the change indicates Congress's intention to permit estate and gift deductions for broader purposes. However, the manner in which Treasury implements this intent is yet to be seen. Due to the lack of clarity which is still a part of the law, future changes in this area may be expected.

C. Effective Date

Under §1422(e) of TRA 1986, transfers occurring after December 31, 1986 do not have to meet the §170(h)(4)(A) income tax requirements for conservation easement donations.

Chapter 50

MODIFICATION OF EXEMPT ORGANIZATION RULES

Jerry J. McCoy, Esq.
Silverstein and Mullens
Washington, D.C.

I. Certain Title-Holding Companies Granted Tax Exemption and Debt-Financed Income Relief

A. Overview

Section 501(c)(2) grants exemption to a corporation organized to hold title to property, collect the income therefrom, and turn over the net amount thereof to another exempt organization. Exempt organizations frequently find it convenient or desirable to hold title to real estate through a separate entity because of, for example, limited liability or administrative convenience. Where one organization forms an entity to hold property for it, §501(c)(2) has been the traditional means for accomplishing this; a corporation formed by an exempt organization to hold title in this fashion will qualify for exemption under that provision. The IRS has taken the position, however, that such an organization is not tax-exempt if it has two or more parent organizations which are unrelated. *See* H.R. Rep. No. 841, 99th Cong., 2d Sess., p. II-824 (1986)("Conference Report"). Act §1603 adds Code §501(c)(25) to create a new category of exempt organization designed to provide relief from the rigid IRS interpretation of §501(c)(2). In addition, the new category of organization is exempt from the debt-financed property rules in the same manner as educational organizations and qualified pension, profit-sharing or stock bonus trusts.

B. Analysis

1. Qualification

The entity described in §501(c)(25) has the following characteristics:

a. It may be a corporation or trust;[1]

b. It may have not more than 35 shareholders or beneficiaries;[2]

c. It may have only one class of stock or beneficial interest;[3]

d. It must be organized for the exclusive purposes of acquiring real property, holding the title to and collecting the income from such property, and remitting the income (net of expenses) to one or more qualifying shareholders or beneficiaries;[4] and

e. The shareholders or beneficiaries must have certain rights, as described below.

Section 501(c)(25)(B) specifies that a corporation or trust may qualify under the new provision "without regard to whether the corporation or trust is organized by 1 or more organizations" of the appropriate type. This rule is intended to preclude the IRS from arguing that this new type of organization may have only one parent organization.[5]

The organizations which may be shareholders or beneficiaries of a §501(c)(25) title-holding company are as follows:

a. A qualified pension, profit-sharing or stock bonus plan that meets the requirements of §401(a);[6]

b. A governmental plan (within the meaning of §414(d));[7]

c. A Federal, state or local government, agency, or instrumentality;[8]

d. A §501(c)(3) organization;[9] or

e. Another §501(c)(25) organization.[10]

Note: In the case of an exempt organization not included in the foregoing list, the §50(c)(2) title-holding company will remain the only available vehicle for holding property in an exempt title-holding subsidiary.

An organization described in §501(c)(25) must permit its shareholders or beneficiaries to dismiss the organization's investment advisor, following reasonable notice, upon a majority vote of such shareholders or beneficiaries.[11] In addition, the shareholders or beneficiaries must be entitled to terminate their interest in the organization either: (1) by selling or exchanging their stock or trust interests to another qualifying organization (subject to Federal or State securities laws, and provided the sale or exchange will not increase the number of shareholders or beneficiaries above the statutory limit of 35); or (2) by having their stock or

interest redeemed by the corporation or trust upon 90 days notice.[12]

2. Application of Debt-Financed Income Rules

Although tax-exempt organizations are generally subject to tax on their unrelated business income, most types of passive income are excluded.[13] The general provision excluding passive income from that tax is not applicable to certain debt-financed income.[14] Section 514 of the Code taxes all exempt organizations on income from "debt-financed property." In general, property used for non-exempt purposes, and with respect to which an "acquisition indebtedness" exists, is classified as debt-financed property.[15] There are numerous exceptions and limitations under §514, including transitional and "grace period" rules which enable the use or disposition of certain encumbered property without tax consequences.[16] The Internal Revenue Service has taken the position that the unrelated debt-financed income rules are applicable to an exempt title-holding corporation described in §501(c)(2).[17]

Prior to the 1986 Act, an exception was provided under §514(c)(9) to the rule requiring taxation of income from debt-financed property. Under that exception, the term "acquisition indebtedness" does not include any indebtedness incurred by an educational institution (described in §170(b)(1)(A)(ii)) and its affiliated support organizations, or by a qualified pension trust, as a result of the acquisition or improvement of real property. As a result, the debt-financed income rules do not apply to such property.

Act §1603(b) amends §514(c)(9) by adding the title-holding organizations described in new §501(c)(25) to the list of categories qualifying under §514(c)(9) for relief from the debt-financed income rules.

C. Effective Dates

The exemption for §501(c)(25) organizations, and the accompanying amendment to the debt-financed income provisions, both apply to taxable years beginning after December 31, 1986. Act §1603(c).

D. Planning Suggestions

Creation of the new category of exempt organization expands considerably the planning alternatives available to exempt organizations with respect to their real estate activities. First, and most obviously, organizations which have been thwarted by the IRS in their attempts to combine their real estate investments in a single §501(c)(2) organization may now use the new §501(c)(25) entity to achieve the desired result. This will enable affected organizations to realize enhanced investment opportunities through the economies of scale they may achieve by pooling their resources.

The change in §514(c)(9), excusing the §501(c)(25) type of title-holding company from the debt-financed income rule, has considerable potential significance for §501(c)(3) organizations. Although designated a "clerical amendment" by §1603(b) of the Act, this change in effect permits any §501(c)(3) organization to create a §501(c)(25) organization, acquire real estate through the latter entity using borrowed funds, and avoid unrelated business income taxation on the debt-financed income produced. While the §514(c)(9) exception continues to have the same restrictions and limitations applicable under prior law, these limitations should not seriously impede the acquisition of pure investment property from an unrelated seller. Thus, subject to the limited restrictions in §514(c)(9)(B), the 1986 Act opens up a ready means for avoidance of unrelated debt-financed income for many §501(c)(3) organizations.

Exempt organizations which have heretofore utilized §501(c)(2) title-holding corporations should consider whether it may be advisable for them to restructure their operations so as to qualify under new §501(c)(25). As described above, the latter alternative offers an exemption to the debt-financed income rules and the possibility of multiple parents, neither of which is available to a §501(c)(2) organization. The §501(c)(25) organization can also provide additional planning latitude. For example, a trust can qualify under this provision whereas §501(c)(2) requires that a corporate format be used.

As with its predecessor, the §501(c)(2) title-holding company, the §501(c)(25) organization apparently cannot engage in any business other than its permitted real estate holding function.[18] However, that function may be somewhat broader in the case of the latter organization. In the case of a §501(c)(2) entity, both the Code and the regulations limit it to "the exclusive purpose of holding title to property, collecting income therefrom, and turning over the entire amount thereof, less expenses, to an organization which is itself exempt under this section [*i.e.*, §501]." [19] The permitted purposes of a §501(c)(25) organization are described in similar terms in §501(c)(25)(A)(iii), except that they include, in addition to holding title and collecting and remitting net income, the additional purpose of "*acquiring* real property." [Emphasis supplied.] There is thus a logical basis for concluding that a §501(c)(25) organization may engage in various forms of activity relating to the acquisition of real property, even though such activities might be beyond the permitted scope of a §501(c)(2) organization.

The legislative history is silent on this point, except insofar as the Senate Finance Committee Report indicated that this amendment is intended to permit "smaller, unrelated tax-exempt organizations . . . to pool investment funds for purposes of investing in real estate through a title-holding company." [20] Consider, for example, whether a §501(c)(25) organization could acquire a building by constructing it (or having it constructed by a general contractor); if the actions of the organization were in the nature of an investor's conduct (as opposed to that of a developer), this would seem to be within a reasonable construction of the permissible "acquiring" of real property. ment understands that Treasury personnel are not sympathetic to any expansive view of the permissible activities of the new form of title-holding company; nevertheless, this possibility should not be overlooked in appropriate circumstances.

II. Exceptions to the Unrelated Business Income Rules

A. Overview

Despite their general exemption from Federal income tax, tax-exempt organizations are subject to tax under §§511-514 on their unrelated business taxable income ("UBTI"). This tax applies to the gross income derived by an exempt organization from any unrelated trade or business regularly carried on by it, less allowable deductions directly connected with the business, both computed with various modifications. The 1986 Act includes several amendments specifying certain circumstances under which particular types of income will be exempt from the unrelated business income tax.

Specifically, the Act provides as follows:

1. An exception is provided, available only to exempt organizations described in §170(b)(2) or (3), for income received from the exchange or rental of membership or donor mailing lists with or to other exempt charitable organizations. [§513(h).]

2. An exception is provided to exempt organizations described in §170(b)(2) or (3) for income from activities related to the unsolicited distribution of low cost (not in excess of $5, adjusted for inflation) articles incidental to soliciting charitable contributions. [§513(h).]

3. The pre-1986 TRA exception for income derived from qualified trade show and convention activities of §501(c)(5) and (6) organizations is expanded: (a) to include shows or conventions where suppliers to the sponsoring organization's members sell products; and (b) to apply to §501(c)(3) and (4) organizations as well. [Amended §513(d)(3).]

B. Analysis

1. Rental of Mailing Lists

A 1981 case, *Disabled American Veterans v. U.S.*, 650 F.2d 1128 (Ct. Cl. 1981), held that income received by the Disabled American Veterans from other exempt organizations and commercial businesses for the use of its mailing list constituted unrelated business taxable income. The exception under §512(b)(2) for "royalties" was held inapplicable.

Section 1601(a) of the Act amends §513 of the Code to provide, in subsection (h)(1)(B), that the term "unrelated trade or business" does not include any trade or business consisting of either exchanging with another exempt charitable organization names and addresses of its donors or members, or renting such names and addresses to another such organization. The category of organizations to which this exemption applies are those listed in §170(c)(2) or 170(c)(3); both parties to the exchange or rental must be so described.

The effect of this statutory change is to reverse the rule of *Disabled American Veterans v. U.S., supra.* In that case, the DAV argued that income it received from other exempt organizations and commercial businesses for the use of its mailing list did not constitute unrelated business taxable income on grounds that: (1) its activities did not amount to a trade or business; and (2) in any event, the income in question represented passive royalty income excludible from unrelated business taxable income under §512(b)(2). The Court of Claims rejected both of these contentions, holding that an activity constitutes a trade or business for UBTI purposes if it is operated in a competitive, commercial manner. The DAV was found to have participated in an active direct mail industry, and operated in a competitive manner in renting its donor list. Because such rentals were not shown to have any substantial relationship to the accomplishment of its exempt purposes, except as a fundraising activity, the court found that the receipts from these rentals constituted UBTI. The royalty exclusion was held inapplicable on the ground that DAV's list rentals were the product of extensive business activity and thus did not constitute the type of "passive" income excluded under §512(b)(2).

New §513(h)(1)(B) thus reverses the rule of the DAV case on the list rental issue, but only in part. The rule exempting income from exchanges and rentals of lists applies only where the other party to the transaction is an exempt charitable organization. Income from rentals to taxable organizations, as well as tax-exempt organizations other than charities, are not exempt under §513(h)(1)(B). Also, rentals of mailing lists consisting of names other than members or donors are not covered by the 1986 amendments. Whether income from such rentals is thus taxable remains an open question. Query the effect of the amendments upon lists containing name of potential donors who, although solicited, have not yet made a contribution, or lists containing information in addition to mere names and addresses.

Although the Committee Reports contain no statement regarding the effect of §513(h) upon prior law, a floor statement by Chairman Rostenkowski of the House Ways and Means Committee indicates specifically that the new law is not to be viewed as raising any inference concerning prior law:

> "I also have discussed with Congressman Duncan the issue of whether the provision of the bill which excludes certain income from unrelated trade or business income creates any inference under present law. We have reached a common understanding regarding the following specific issue:
>
> "The question relates to Section 1601 of the bill which excludes from unrelated trade or business income revenues from the use of a tax-exempt organization's mailing list by another such organization. Section 1601 of the bill, which specifically exempts certain such revenues from the tax on unrelated business income in the future, carries no inference whatever that mailing list revenues beyond its scope or prior to its effective date should be considered taxable to an exempt organization." [21]

[21] Congressional Record, p. H8361 (September 25, 1986).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Aside from this, there is no indication whether Congress regards the DAV case as a correct interpretation of prior law, insofar as it is not modified by the 1986 statutory change.

2. Distribution of Low-Cost Articles

The regulations, in §1.513-1(b), provide that the unrelated business income tax is inapplicable where an organization "sends out low-cost items incidental to the solicitation of charitable contributions." No definition of what will be considered a "low-cost item" for this purpose is provided. This issue was also addressed in the DAV case, *supra,* which found that the distribution of low cost items to donors there amounted to a trade or business where: (1) the activity was conducted in a commercial manner; and (2) the contributions required were not greatly in excess of the retail value of the distributed items.

Section 1601(a) of the Act amends §513 of the Code to provide, in subsection (h), some clarification of this rule. As amended by the Act, §513(h)(2) defines the term "low-cost article" for this purpose as one having a cost not in excess of $5 to the organization which distributes it (or on whose behalf it is distributed). This $5 amount is indexed for increases in the cost of living for taxable years beginning after 1987.

An aggregation rule is provided in §513(h)(2)(B); thus, if two or more items are distributed to a single distributee, they will be aggregated and treated as a single article for purposes of the $5 limitation on the "low-cost article" exception.

Note: This rule will require organizations which seek to rely on the $5 rule to maintain careful records as to the number of articles sent to each distributee, as well as the cost thereof.

A distribution of low-cost articles will qualify for the §513(h) exception only if: (1) the article is not distributed at the request of the distributee; (2) it is distributed without the express consent of the distributee; and (3) the articles in question are accompanied by both a request for contributions and a statement that the distributee may retain the item regardless of whether a charitable contribution is made.

3. Trade Show Income

Under pre-1986 TRA law, §513(d) of the Code provided an exemption from the unrelated business income tax for income derived by §501(c)(5) organizations (labor, agricultural or horticultural organizations) and §501(c)(6) organizations (trade associations) for income derived from qualified trade show and convention activities at which members of the sponsoring organizations sell products and services. The Act expands this exception in two ways. First, the expanded exception covers trade shows and conventions at which suppliers to the sponsoring organization's members (and not merely the members themselves) sell products or services related to the organization's exempt activities. *See* Conference Report, p. II-823. Second, qualified trade show and convention activities of charitable organizations and social welfare organizations (exempt under §501(c)(3) and (4), respectively) will be covered by the §513(d) trade show exemption.

In the Tax Reform Act of 1976, the Code was amended to provide that the tax on unrelated business income would not apply to qualified convention and trade show activities, defined as including activities carried out by labor, agricultural, or horticultural organizations, or trade associations (§501(c)(5) and (6), respectively) under the following conditions: (1) an activity is conducted in conjunction with an international, national, state, regional, or local convention, annual meeting or show conducted by the organization; (2) one of the purposes of the organization in sponsoring the activity is promotion and stimulation of interest in and demand for the products and services of that industry in general; and (3) the show is designed to achieve that purpose through the character of the exhibits and the extent of the industry products displayed. *See* §513(d)(3)(B). Act §1602(a) adds an item to the list of permissible purposes — the education of persons in attendance regarding new developments or products and services related to the exempt activities of the sponsoring organization. In addition, the categories of organizations which may benefit from this exception are expanded by Act §1602(b) to include §501(c)(3) and §501(c)(4) organizations (charitable, educational, etc. organizations and social welfare organizations, respectively).

C. Effective Date

The rules described above are applicable to exchanges and rentals of member lists, and to distributions of low-cost articles, after October 22, 1986 (the date of enactment). Act §1601(b). Section 513(d), relating to trade shows, applies in its amended form to activities in taxable years beginning after October 22, 1986 (the date of enactment). Act §1602(c).

III. Estimated Tax Requirements

Section 6154 requires corporations to make quarterly payments of estimated income tax with respect to the corporate income tax imposed by 11, the corporate alternative capital gains tax imposed by §1201 and the tax imposed upon insurance companies under Subchapter L of the Code. Prior to the 1986 Act, neither an exempt organization incurring liability for the unrelated business income tax under §511, nor a private foundation incurring liability for the excise tax on investment income under §4940, was required to make estimated tax payments.

Section 1542(a) of the 1986 Act amends §6154 to require installment payments of estimated tax by organizations liable for the unrelated business income tax or the excise tax on private foundation investment income. This is accomplished by the creation of §6154(h), which provides that for purposes of §6154 (which imposes the obligation to make estimated tax payments) and §6655 (which imposes a penalty for failure to make such payments): (1) any organization subject to the unrelated business income tax, and any private foundation, is treated as a corporation subject to tax under §11; (2) any tax imposed by §511 or §4940 is treated as a tax imposed by §11; and (3) references in §§6154 and 6655 to "taxable income" are treated as including references to "unrelated business taxable income" or "net investment income," as the case may be.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The effect of this change is to require the affected organizations to begin making quarterly estimated tax payments, effective for taxable years beginning after 1986. Act §1542(b).

Comment: The legislative history states no rationale for this change, and it would seem to be prompted by a desire to increase revenue rather than any specific policy considerations.

Because the exempt organization estimated tax requirements are grafted into the existing corporate estimated tax rules, affected organizations will be able to avoid penalties under the same circumstances as taxable corporations. Thus, under the general rule of §6655(b), an organization paying 90% of its tax liability by the due date will not be subject to the penalty for underpayment of estimated tax.

In addition, the usual penalty exceptions are applicable. Accordingly, if an organization's actual payments equal the prior year's tax, or the tax based on the current year's rates but otherwise on the basis of the facts shown on the preceding year's return and the law applicable to the preceding year, or 90% of a tax on annualized income, no penalties will be due.[22] Likewise available would be the special exception in §6655(e) for payments due with respect to recurring seasonal income patterns; this exception might prove helpful in the case of exempt organizations who receive most of their unrelated business income from a trade show or other event which falls near the end of its taxable year. For further details, *see* Tarr, 1 T.M., *Estimated Tax*.

[22] *See* §6655(d)(1), (d)(2), and (d)(3), respectively.

IV. Definition of a Government Official for Private Foundation Purposes

Code §4941 imposes a penalty excise tax on certain acts of self-dealing between a private foundation and its "disqualified persons." In addition to substantial contributors, foundation managers, and related interests, certain government officials are also categorized as disqualified persons for this purpose. *See* §4946(c). The term "government official" is defined in §4946(c) as including certain specified categories of officials. Prior to the TRA §4946(c)(5) referred to state or local elective or appointive offices held by individuals receiving gross compensation at an annual rate of $15,000 or more. Section 1606 of the 1986 Act amends this definition to raise the compensation threshold from $15,000 to $20,000, effective for compensation received after December 31, 1985.

Note that the Act does not change a comparable compensation test in §4946(c)(4), which includes within the term "government official" an individual holding a position in the U.S. House of Representatives or Senate and receiving gross compensation at an annual rate of $15,000 or more. The Act does not change the $15,000 threshold in this provision.

I. New Provisions Affecting Fringe Benefits

A. Introduction

Gross income includes "all income from whatever source derived," including compensation for services.[1] This definition is broad enough to encompass any non-cash benefits conferred on an employee as a form of compensation.[2] In addition, for purposes of Social Security (FICA), Unemployment Insurance payroll taxes (FUTA), and income tax withholding, the Code defines wages as all remuneration for employment, including the value of non-cash remuneration.[3] The regulations issued pursuant to the employment tax laws indicate that the value of any non-cash compensation is to be determined by the excess of its fair market value over any amount paid for it by the recipient.[4]

As a result of a variety of exceptions that have been created over time, however, the treatment of in-kind compensation is governed not by a broad inclusion rule but by statutory provisions, regulations, and administrative rulings that create exclusions of certain fringe benefits from taxable income. For example, prior to the Tax Reform Act of 1984,[5] a number of fringe benefits had been statutorily excludable from an employee's gross income. Among these so-called "statutory" fringe benefits were (1) group-term life insurance (under $50,000); (2) accident or health benefits; (3) up to $5,000 of death benefits; (4) group legal services; (5) dependent care assistance; (6) certain benefits provided to members of the Armed Services; and (7) parsonage allowances.

In the 1984 Act, Congress expanded by statute the categories of excludable fringe benefits, addressing a large number of employee benefits provided in the form of tangible property, services, discounts and other types of non-cash compensation that had long been regarded by the business community as non-taxable income. The 1984 Act added §§132 and 117(d) to the Code to exclude from income certain fringe benefits that come within one of five categories: (1) no-additional-cost services, (2) qualified employee discounts, (3) working-condition fringes, (4) *de minimis* fringes, and (5) qualified tuition reductions.[6] These categories of fringe benefits are also excluded from employment taxes, income-tax withholding, and from the Social Security benefit base.[7] Some of the exclusions apply to benefits provided not only to the employee but also to the spouse and dependent children of an employee. Some apply to former employees who have separated from service for reasons of disability or retirement, and to their spouses and dependent children. Some apply to surviving spouses and children of deceased employees. In the case of many of the categories of fringe benefits, a nondiscrimination test is applied, which makes the exclusion unavailable to highly compensated employees, owners, or officers if the benefit is provided to such individuals on a discriminatory basis.

Thus, as a result of the 1984 Act, the receipt of any fringe benefit that does not qualify for specific exclusion is taxable to the recipient and includible in wages for employment tax purposes.[8] The inclusion amount is the excess of the fair market value of the benefit over the amount paid by the employee.[9]

B. Overview

Sections 1161-1168 and 1853 of the 1986 Tax Reform Act the statutory fringe benefits to (1) make adjustments to the nondiscrimination rules, (2) clarify provisions of the 1984 Act, (3) extend benefit programs scheduled to terminate, or change the ceilings on amounts excludable from taxable income, and (4) provide transitional rules. In addition, the Act lifts the moratorium on the exclusion of faculty housing benefits, in effect as a result of the 1984 Act, and limits expansion of the excludable military fringe benefits. Finally, the Act makes technical corrections affecting a number of the fringe benefits excludable under Code §§132, 125, and 117.

C. *Detailed Analysis*

1. *Changes in Statutory Fringe Benefits*

a. *Deductibility of Health Insurance Costs of Self-Employed Individuals*

(1) *Present Law*

Under present law, a self-employed individual, such as a sole proprietor or a partner, cannot deduct amounts paid for health or accident insurance for himself or herself. By contrast, an employee can exclude from income, under Code §106, the employer's contribution to a plan providing such benefits to the employee. The only deduction presently available to a self-employed individual is the itemized personal deduction of amounts paid during the taxable year for medical care of the taxpayer and the taxpayer's spouse and dependents, to the extent that the medical expenses exceed 5% of adjusted gross income.

(2) *1986 TRA Provisions*

Section 1161 of the Act amends Code §162, relating to trade or business expenses, by adding §162(m), which provides a deduction for 25% of the cost of health insurance coverage during the taxable year of a self-employed individual and the individual's spouse and dependents. The deduction may be used to calculate AGI, to the extent that the deduction does not exceed the individual's net earnings from self-employment. The individual (or spouse) must be ineligible to participate in any other health plan subsidized by an employer. The deduction for this benefit is subject to the nondiscrimination rules for health plans, and therefore the deduction is allowed only if the coverage is provided under one or more plans meeting the applicable nondiscrimination requirements of post-TRA §89. In effect, §162(m) treats the deduction as if the coverage were employer-provided.[10]

(3) *Effective Dates*

The provision is effective for taxable years beginning after December 31, 1986 and before January 1, 1990. To the extent that the §89 nondiscrimination rules do not apply to the first taxable year of this provision, §1161(b)(2) of the Act provides a transitional rule under Code §162(m)(2)(B) that substitutes any nondiscrimination requirements otherwise applicable.

b. *Educational Assistance Programs, Group Legal Plans, and Dependent Care Assistance Programs*

(1) *Present Law*

(a) *Educational Assistance Programs*

Under Code §127, amounts paid by an employer to provide educational assistance to an employee are includible in the employee's income, unless the cost of the benefit qualifies as a deductible job-related expense of the employee. To qualify, the education must either maintain or improve the skills required for the employee to perform the job or meet the employer's requirements imposed as a condition of employment. Further, the program may not discriminate in favor of highly compensated employees. An employee could exclude from income a maximum educational assistance benefit of $5,000 from a qualified plan. Code §127 expired for taxable years beginning after December 31, 1985.

(b) *Group Legal Services*

Code §120 provides that amounts contributed by an employer to a qualified group legal services plan for employees are excluded from the employee's gross income. Any services received by, or amounts paid to, an employee as reimbursement for the cost of that employee's legal services (or of the employee's spouse or dependents) are also excludable from the employee's income, provided that the plan meets the nondiscrimination test of Code §120(c)(3). Moreover, an organization that provides the legal services as part of the qualified plan is entitled to tax-exempt status under Code §501(c)(20). The provision for the exclusion for group legal services benefits and for the tax exemption expired for taxable years ending after December 31, 1985.

(c) *Dependent Care Assistance*

Under Code §129, amounts paid by an employer through a dependent care assistance program for care of an employee's dependents are excludable from the employee's income. The exclusion amount is limited to the amount of a single employee's earned income for the taxable year or, if the employee is married, to the lesser of the employee's earned income or the earned income of the employee's spouse. To qualify for the exclusion, the program must be a written plan, must benefit exclusively the employees, and must meet a nondiscrimination test. No automatic expiration date was set for this exclusion.

(2) *1986 TRA Provisions*

The Act retroactively extends for two years, through December 31, 1987, the exclusion for educational assistance programs, group legal services plans, and tax exemption for qualified group legal services organizations.[11] Thus, the exclusion for educational assistance programs will expire for tax years beginning after December 31, 1987, while the exclusion for group legal services plans will expire for tax years ending after that date. Section 1162 of the Act increases the cap on the exclusion for educational assistance from $5,000 to $5,250. The pre-1986 TRA nondiscrimination tests continue to apply, because the programs are scheduled to expire before the §89 nondiscrimination rules take effect. If the programs are extended after 1987, the §89 nondiscrimination standards will apply.[12]

Because of the two-year extension, §1162 of the Act provides a transitional rule that allows election of group legal services under a cafeteria plan in 1986. Under the rule, an employee may revoke an election to take cash or a qualified benefit other than group legal services and make a new election to take group legal services instead during 1986. This rule is limited to cafeteria plans that did not, under pre-1986 TRA law, allow employees to elect group legal services benefits for any period after December 31, 1985. The revocation and election must be made within 60

[10] Act §1161(a) enacting Code §162(m)(2)(B); H.R. Rep. 99-841, 99th Cong., 2d Sess., pp. II-538-9 (1986) ("Conference Report").

[11] Act §1162(a) and (b).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

days after the date of enactment (*i.e.*, before December 22, 1986). If the plan provided this benefit on August 16, 1986, however, the election is not available.[13]

Section 1163 of the Act imposes a $5,000 cap ($2,500 for a married person filing separately) on the exclusion for dependent care assistance.[14] Moreover, if the employer maintains an onsite child-care facility, the amount that may be excluded with respect to any dependent will be based on the individual's utilization and the value of services provided.[15] These provisions are effective for taxable years beginning after December 31, 1986.

According to Code §89(i)(2), as added by Act §1151(a), educational assistance programs, group legal plans, and dependent care assistance programs are statutory employee benefit plans only if employers elect to treat them as such. An election to do so will enable the employer to use the plans in order to satisfy the benefits test.[16]

2. Changes Affecting Campus Lodging

a. Pre-1986 TRA Law

Code §119 excludes from an employee's gross income the value of lodging provided by the employer if it is furnished for the convenience of the employer on the employer's business premises and the employee is required to accept the lodging as a condition of employment. Under pre-TRA law, the rental value of on-campus housing furnished to faculty or other employees by an educational institution does not qualify for the §119 exclusion.[17] Thus, the rental value of the housing (minus any amounts paid by the employee) is includible in the employee's gross income and constitutes wages for purposes of employment taxes and income tax withholding. In the 1984 Tax Reform Act, Congress placed a moratorium on the issuance of regulations before January 1, 1986 that would provide for inclusion in gross income of the excess of the fair market value of qualified campus lodging over the greater of either the operating costs of furnishing the lodging or the rent received.[18]

b. 1986 TRA Provisions

Act §1164 amends Code §119 to provide that the value of qualified campus lodging shall be excluded from the gross income of the employee. For purposes of federal income taxation, the fair market value of use (on an annualized basis) of qualified campus lodging is treated as not greater than 5% of the appraised fair market value of the lodging.[19] The person furnishing the appraisal must be independent of the educational institution and qualified to make appraisals of housing.[20] As a further requirement for qualification, a nondiscrimination test applies: the lodging must be furnished to any employee of the educational institution (or to the employee's spouse or dependents), not only to faculty employees.[21]

Under a safe-harbor rule, if the employee pays rent for qualified campus lodging in an amount equal to or in excess of 5% of the appraised value of the lodging, no amount is included for the benefit in the employee's wage base.[22] If the employee pays less than the lesser of (1) 5% of the appraised value or (2) the average of rentals paid by nonemployees to the same institution during the same period for comparable lodging, the excess value is includible in the employee's wages.[23]

If an appraisal is found defective or if none is obtained, the fair rental value for tax purposes must be determined by taking into account the average of rentals paid by individuals other than employees to the institution for comparable housing during the year in question.[24]

c. Effective Dates

The exclusion provision of Code §119(d) applies for taxable years beginning after December 31, 1985. For prior taxable years, the conference agreement directs the Service to follow the safe-harbor valuation rule of the bill as if it had been in effect for prior years (except with respect to any amount of value of campus lodging that was treated by the taxpayer as wages or included in income when furnished) and to use local tax assessments of the property for the qualified appraised value of the lodging.[25]

4. Changes Affecting Military Fringe Benefits

a. Pre-1986 TRA Law

Under pre-1986 TRA law, a number of benefits provided to members of the Armed Forces and their families, such as housing, food allowances, commissary and exchange shopping privileges, and health services, are excludable from gross income.

b. 1986 TRA Provisions

Under §1168 of the Act, the rules for the tax treatment of military benefits are consolidated and set forth in one statutory provision, designated as Code §134.[26] The conferees believed that understanding and administration of such tax benefits for members of the Armed Services and their dependents would thereby be improved.[27] Moreover, by explicitly identifying the military benefits excluded from income, the conferees intended to clarify that any benefits not expressly excludable from gross income under §134 or under other statutory Code provisions will be included in gross income.[28]

Section 1168 of the Act provides generally that the exclusion for military benefits applies only to those allowances authorized by any law or regulation (other than the Internal Revenue Code) on September 9, 1986.[29] The

Conference Report contains an exhaustive list of such benefits excludable under the provision, but authorizes the Secretary of the Treasury to expand the list if a benefit was unintentionally omitted.[30] Otherwise, the number and nature of excludable military benefits are not to be modified or adjusted, except for cash benefits payable pursuant to a law or regulation in effect on September 9, 1986 or determined by reference to cost, price, or similar indices.[31]

c. Effective Date

The provision is effective for taxable years beginning after December 31, 1986.

5. Changes Affecting the Employer's Deduction for Accrued Vacation Pay

a. Pre-1986 TRA Law

For deferred benefits, such as vacation pay earned by employees in one year but paid in a subsequent year, an accrual-basis employer generally may claim a deduction in its taxable year in which ends the taxable year of the employee for which the vacation pay vests or is paid. An exception applies to amounts paid within 2½ months after the close of the employer's taxable year in which the vacation pay is earned. Under pre-TRA law, a special rule of Code §463(a) allows an employer an election to deduct an amount that represents a reasonable addition to a reserve account for vacation pay, whether contingent or vested, earned by employees before the close of the current year and expected to be paid by the close of that year or within 12 months thereafter.[32]

b. 1986 TRA Provision

Section 1165 of the Act amends the special rule of Code §463(a) to limit the deduction to vacation pay actually paid during the current taxable year or within 8½ months after the close of the taxable year in which the vacation pay was earned by the employee.

c. Effective Date

This provision is effective for taxable years beginning after December 31, 1986.[33]

6. Changes Affecting Full-Time Life Insurance Salespersons

a. Pre-1986 TRA Law

Under pre-TRA law, a full-time life insurance salesperson was treated as an employee for purposes of eligibility for certain specific employee benefit exclusions enumerated in Code §7701(a)(20). The salesperson, however, is not treated as an employee for purposes of cafeteria plan provisions, under which an employee is offered a choice between cash and one or more employee benefits.[34]

b. 1986 TRA Provision

Section 1166 of the Act amends Code §7701(a)(20) to permit a full-time insurance salesperson to be treated as an employee for purposes of the cafeteria plan provisions (Code §125) to the extent the salesperson is otherwise permitted to exclude the value of the elected benefit from income.

c. Effective Date

The amendment is effective for years beginning after December 31, 1985.

7. Due Date for the Study of Welfare Benefit Plans

Section 560(b) of the Tax Reform Act of 1984 set the due date of February 1, 1985 for the completion of a study of welfare benefit plans. Section 1167 of the 1986 Act extends the due date to one year after the date of enactment: October 22, 1987.

8. Technical Corrections

a. The Line-of-Business Requirement

Code §132(a)(2) excludes from income certain employee discounts on property or services offered for sale to customers in the course of the line of business of the employer in which the employee is performing services. Section 1853(e) of the Act amends Code section 132(h)(2)(B) by clarifying that a leased section of a department store that offers beautician services and also makes sales of beauty aids in the ordinary course of business is to be treated as a part of the store operator's line of business. This treatment is to be available without requiring that a specified percentage of the beauty salon's revenue be earned through the sale of beauty products.

b. Working-Condition Fringe Benefits

(1) Automobile Product Testing

The conference agreement adopts that portion of the legislative history of the House bill which relates to an employee's personal use of an automobile as a working-condition fringe benefit, in the case of an automobile furnished for the purpose of product testing.[35] The Conference Report clarifies that, if the employer charges the employee a reasonable amount for any personal use of the automobile, the product-testing exclusion rule is not violated, provided that all of the other requirements for exclusion are satisfied. The charge will be sufficient if it exceeds the cost to the employer in making the product available to employees.[36]

(2) Definition of "Automobile Salesman"

The Conference Report clarifies that the exception to the working condition fringe benefit rule of Code §132(h)(3) for full-time automobile salesmen is not intended to be restricted to employees who have the formal title of "salesperson."[37] Rather, the term is intended to apply to full-time employees of an automobile dealer as floor salespersons or salesmanagers or who perform those functions as an integral part of their employment.[38]

c. De Minimis Fringe Benefits

The Conference Report clarifies that, under the de minimis fringe benefit exclusion of Code §132(e), transportation provided by the employer includes tokens and reimbursements to cover the costs of commuting by public transit, provided that the amount of such reimbursement does not exceed $15 per month or $180 per year.[39]

d. Definition of Dependent Children

Exclusions from gross income for no-additional-cost services and certain other fringe benefits generally apply to employer-provided benefits for use by an employee, the employee's spouse, or the employee's dependent child. Section 1853(a)(1) of the Act amends Code §132(f)(2)(B) to define a dependent child as any child of the employee who is either (1) a dependent of the employee or (2) under age 25 with both parents deceased. The amendment is effective as if included in the provisions of the 1984 Act.

e. Definition of Customer

Under pre-TRA Code §132(i) the term "customers" for §132 purposes did not include employees, except for purposes of §132(c)(2)(B), which relates to the determination of the employer's gross profit percentage as a cap on the exclusion of qualified employee discounts. The exception did not apply, however, to Code §132(c)(2)(A), which defines "gross profit percentage." Section 1853(a)(3) of the Act amends Code §132(i) to correct the discrepancy by making the exception of §132(c)(2)(B) applicable to both paragraphs of §132(c)(2). The amendment is effective as if included in the provisions of the 1984 Act.

f. Clarification of Employee Discounts

Section 1853(a)(2) of the Act amends Code §132(c)(3)(A) to clarify that, for purposes of the qualified employee discount rules, merchandise for which employees pay a discounted price is that which the employer offers to the employee for use by the employee.

g. Excise Tax on Fringe Benefits

Section 1853(c) of the Act amends Code §4977 (election to treat multiple lines of business as a single line of business) to relax the line-of-business limitation applicable to Code §132 exclusions for no-additional-cost services and qualified employee discounts, which under pre-TRA law limits the determination of the employees as of January 1, 1984. Under the amendment, the class of employees entitled to employee discounts is expanded to include those entitled to discounts on or after January 1, 1984. Section 4977 is to apply only with respect to employment within the United States, except as otherwise provided in Treasury regulations.

h. Cafeteria Plans

Section 1853(b) of the Act amends Code §125 to clarify the benefits that may be provided under cafeteria plans. The amendment removes the language referring to "statutory nontaxable benefits" and substitutes "qualified benefits." The effects of the provision are to (1) eliminate the implication that a taxable benefit provided through a cafeteria plan is nontaxable and (2) clarify that certain taxable benefits may be provided in a cafeteria plan.

The amendment makes two changes to the transition relief provided to certain cafeteria plans under the 1984 Act. First, it provides that a cafeteria plan existing on February 10, 1984 and maintained pursuant to collective bargaining agreements will be granted relief under the transitional rules until the last collective bargaining agreement relating to the cafeteria plan expires. When a collective bargaining agreement terminates is determined without regard to any extension of the agreement agreed to after July 18, 1984. If a cafeteria plan is amended to conform with the requirements of the Act or of regulations, it is not treated as a termination of the collective bargaining agreement. Second, a cafeteria plan that suspended a type or amount of benefit after February 10, 1984, and subsequently reactivated it will be eligible for transition relief.[40]

i. Telephone Service for Pre-Divestiture Retirees

Section 1853(d) of the Act applies a transitional rule under which the fair market value of free telephone service provided by the Bell System to its employees who retired prior to divestiture is excluded from income under the no-additional-cost and line-of-business exclusions.[41] The provision applies to an employee who separated from service prior to January 1, 1984 by reason of retirement or disability of an entity subject to the modified final judgment (as defined in Code §559(c)(4)). The exclusion is available to officers, owners, or highly compensated employees only if the no-additional-cost service is available to employees on a nondiscriminatory basis.

j. Qualified Tuition Reduction

Section 1853(f) of the Act provides transitional rules for the treatment of certain tuition reductions under Code §117(d). Code §117(d) provides that the tuition reduction exclusion, generally available to an employee of an educational institution, is not allowed if the tuition reduction plan of the institution is discriminatory. The amendment provides three special rules. The first tests the tuition reduction program of Oberlin College for nondiscrimination.[42] The second rule provides that any tuition reduction for a full-time course of study at the graduate level before July 1, 1988 is excludable from gross income if it would have been excludable under regulations in effect on July 18, 1984 (the enactment date of the 1984 TRA) and the reduction is provided with respect to a student who was accepted for admission to the course of study before July 1, 1984 and who began it before June 30, 1985.[43] The final rule contained in Act §1853(f) provides that, in testing a tuition reduction plan for discrimination, employees covered under a collective bargaining agreement where such benefits have been the subject of good faith bargaining are not counted. This provision is effective as if enacted as part of the 1984 TRA.

II. Stock Options (§321), Including Technical Corrections (§1855)

A. Introduction

When it enacted the Economic Recovery Tax Act of 1981, Congress re-established tax-favored stock options in the form of incentive stock options (ISOs). The earliest form of qualified options were "restricted stock options," which were first authorized by the Revenue Act of 1950. In 1963, Congress replaced the restricted stock option with a more limited form of option, the "qualified stock option." Subsequently, the Tax Reform Act of 1976 repealed qualified options as a tax-favored form of compensation.

In drafting Code §422A, which created incentive stock options, Congress drew heavily from the earlier rules applicable to restricted and qualified options. Consequently, many of the technical requirements that an option must satisfy to qualify as an ISO can be traced to the earlier Code provisions defining restricted stock options and qualified stock options.

The tax-favored status of ISOs results from the fact that the employee realizes no income upon receiving or exercising an ISO. Further, the employee's gain upon a sale of the shares acquired with an ISO has, prior to the 1986 TRA, been subject to tax at favorable capital gains rates, provided that (i) the employee did not transfer the stock within two years after the option was granted, and (ii) the employee held the stock for one year after option exercise before selling or otherwise disposing of it. In exchange for the favorable treatment afforded employees, §421 of the Code precluded an employer from claiming any deduction under §162 with respect to an ISO.

The tax treatment of ISOs contrasts with the treatment of nonqualified options. Such options are subject to §83, which applies generally to transfers of property in connection with the performance of services. Under these rules, an employee who receives a nonqualified option with an readily ascertainable fair market value realizes ordinary income, in the year of grant, equal to the value of option, less any consideration paid by the employee for the option. If a nonqualified option has no readily ascertainable fair market value at date of grant, the employee realizes ordinary income at the time he exercises the option (unless the acquired shares are subject to a substantial risk of forfeiture and are non-transferrable), equal to the difference between the value of the stock at the time of exercise and the option price. In addition, under §83(h), an employer that issues a nonqualified option generally can deduct, in the year the employee realizes income, an amount equal to the income taxed to the employee.

To qualify for the favorable tax treatment described above, an ISO and the plan under which it is granted must satisfy a number of technical requirements specified in §422A(b). Prior to the 1986 TRA, §422A(b) imposed a sequential exercise rule, which basically required that ISOs be exercised in the same order in which they were granted to the employee. Section 422A(b) also imposed a $100,000 ceiling on the amount of options that could be granted to an employee in any one year. That is, the plan was required to state that no employee could be granted, in any calendar year, options to purchase more than $100,000 of stock (the valued being determined at the time of grant), plus any available portion of the employee's "unused limit carryover."

Because Congress concluded that the sequential exercise rule and the $100,000 annual limitation unduly restricted the ability of employers to utilize ISOs, it repealed the sequential exercise rule and liberalized the annual ceiling on the amount of options that may be granted. Congress felt that these two restrictions hampered the ability of small employers and start-up companies to use ISOs as a means of attracting and motivating key employees. In enacting §422A in 1981, Congress intended that such companies should be able to use ISOs to better enable them to compete with larger employers for key employees.

B. Overview

The 1986 TRA included several amendments to the rules governing incentive stock options. Specifically, the Act amended §422A(b) by repealing the sequential exercise rule and liberalizing the annual $100,000 limitation. Further, the 1986 TRA made several technical corrections to the incentive stock option provisions contained in §555 of the Tax Reform Act of 1984.

The most significant change in TRA 1986 affecting ISOs, however, most certainly will result from the change in tax rates. The adoption of a single maximum individual tax rate of 28% (without any capital gains differential) should reduce the attractiveness of ISOs when compared to other forms of compensation. Moreover, the post-TRA 34% corporate rate will require employers to evaluate ISOs in a materially different way.

C. Detailed Analysis

1. Amendments to §422A

a. Sequential Exercise Rule

The 1986 TRA (§331(a)) repealed the sequential exercise rule of §422A(b)(7). This rule required that an ISO, by its terms, could not be exercisable while there was outstanding any other ISO granted to the optionee on an earlier date by his employer corporation or its parent or subsidiary. The effect of this rule was to require that incentive options be exercised in the order in which they were granted. Further, §422A(c)(7) provided that, for purposes of the sequential exercise rule, an ISO was treated as outstanding until it was exercised in full or expired by reason of the lapse of time. Thus, where an earlier option "blocked" the exercise of a later option, the cancellation of the earlier option before its expiration date would not enable the employee to exercise the later option any sooner because the earlier option was deemed to be outstanding until the date on which it would have expired. This provision was repealed by Act §331(b). The rules applicable to "qualified stock options" contained a slightly different variation of the sequential exercise rule.[44]

Congress originally imposed the sequential exercise rule upon qualified options to prevent the perceived abuse of employers' resetting option prices in a falling market.[45]

[44] *See* §§422(b)(5), 422(c)(6).

[45] *See* H.R. Rep. No. 749, 88th Cong., 1st Sess. 65 (1963).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The legislative history of the 1986 TRA suggests that Congress believed that companies that have experienced a decline in their stock prices were effectively precluded from using incentive options as a viable method of compensation.[46] Thus, under amended §422A, an employee may choose to exercise his ISOs with the lowest exercise price without regard to the date of grant of any of the options.

By repealing the sequential exercise rule, Congress removed one of the less obvious traps contained in §422A. Under the prior rules, if an employer modified an ISO but did not extend the option term, the "shadow rule" could prevent the employee from exercising the modified ISO since the employee was deemed to hold two options, the original option and the modified one. If the term of the modified option was not extended beyond the term of the original one, the original option could block the exercise of the modified option since the two options could be viewed as expiring at the same time.[47]

b. Annual Limitation on Amount of ISOs

The 1986 TRA liberalized the annual limitation in §422A(b)(8) on the amount of ISOs that an employer may issue to individual employees. Under §422A as originally enacted, an employee could not receive, in any calendar year, options to purchase more than $100,000 of stock (the value of such stock being determined at the time of grant), plus any available portion of a carryover amount. The carryover amount equaled one-half of the difference between $100,000 and the value of stock for which the employee was granted options under his employer's ISO plan (or under the ISO plan of the employer's parent or subsidiary) in a post-1980 year.[48] The statute allowed an unused carryover amount to be carried forward for three successive years. Further, the options granted to an employee in any year were treated as first counting toward the $100,000 ceiling for that particular year and then using up the carryovers in chronological order. That is, after the annual $100,000 amount was reached, the carryovers were then consumed, with the current year's options being allocated to the oldest carryover first.

Because Congress believed that the original form of the $100,000 limitation unduly restricted start-up companies in their ability to attract key employees, it modified the ceiling on the amount of stock for which an employee may be granted incentive options in any one year.[49] Consequently, under §422A(b)(7), as amended by Act §331(a) all ISO plans must provide that the aggregate fair market value (determined at the time of grant) of the stock *exercisable for the first time by an employee during any calendar year* shall not exceed $100,000. The amended Code section, however, repeals the concept of an unused limit carryover.

The modified ceiling represents a material liberalization of the incentive option rules. Under pre-1986 TRA §422A(b)(8), an employer could issue only $100,000 of options (plus any unused carryovers) to an employee each year. Under the post-TRA rules, the amount of options which may be granted is substantially greater in that an employer may issue, in a particular year, options to purchase up to $100,000 of stock in each of a number of future years (provided that no options had previously been issued which first become exercisable in any of such future years). Consequently, because ISOs may be exercisable for up to 10 years from the date of their grant, employers will be able to offer a key employee an increased amount of options immediately upon hiring the employee.

Example: An employer with an ISO plan hires a new employee in 1987 who is eligible to participate in the plan. The employer may immediately grant the employee, for example, five options, each of which entitles the employee to purchase $100,000 of the employer's stock, provided the vesting schedule for the options is such that options for no more than $100,000 of stock become exercisable in any one future year. Moreover, to the extent that the employee receives options for less than $100,000 of stock that are first exercisable in any particular future year, the employer may subsequently grant additional options that first become exercisable in that same future year.

c. Effective Dates and Plan Amendments

The two amendments to §422A described above apply to ISOs granted after December 31, 1986.[50] Although presumably all employers and employees will benefit from the repeal of the sequential exercise rule, it is not mandatory that existing plans be amended to delete this restriction because plans may incorporate provisions that are stricter than, but not inconsistent with, the requirements of §422A(b). Because the amendments are not applicable to options granted before January 1, 1987, it is not possible to amend options granted before this date to delete the sequential exercise requirement.

In contrast to the amendment repealing the sequential exercise rule, it appears that the modification to the annual ceiling on options will require an amendment to existing plans if the plan sponsor wishes to continue to grant ISOs after 1986. Post-1986 TRA §422A(b)(7) requires that the annual limitation be imposed "under the terms of the plan." Moreover, in certain circumstances a plan that contained only the pre-TRA annual limitation could permit an employee to receive an amount of options that exceeds the TRA-imposed restriction. For example, under the post-TRA rule, once an employee receives an option for $100,000 of stock that is first exercisable in, 1990, he may not be granted any additional options that first become exercisable in 1990. In the foregoing example, however, the pre-TRA annual limitation would permit the employer to grant up to $100,000 of options in each subsequent calendar year regardless of whether the additional options first became exercisable in 1990 or some other year. Given this potential incongruity between the two versions of the annual ceiling, an employer would be well-advised to incorporate the post-TRA version of §422A(b)(7) in its ISO plan if there is any possibility that ISOs will be granted under the plan after 1986.

If an employer fails to incorporate the TRA amendments into its ISO plan and continues to grant ISOs after

[46] *See* S. Rep. No. 313, 99th Cong., 2d Sess. 171 (1986).

[50] Act §321(c).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

1986, certain problems may be experienced because of the restrictions in §425(h). Section 425(h) provides that if an option is modified, the modification is considered the granting of a new option, and the "new" option must meet all of the requirements of §422A(b) as of the date of the modification, including the requirement that the option price equal the fair market value of the stock on the date of grant.[51] If an employer were to grant an option after 1986 that, by its terms, contained the sequential exercise rule, the employer and the employee would apparently be limited in their ability to amend the option to delete the restriction. Such an amendment presumably would result in a modification of the option because it would give the employee "additional benefits under the option." [52] The deemed "new" option would be required to have an option price equal to the fair market value of the stock on the modification date. Thus, if the stock had appreciated after the original date of grant, the employer would be required to reset the option price at the higher, current value.[53]

2. Technical Corrections

The Tax Reform Act of 1984 amended §422A to provide that, for purposes of determining whether the fair market value of stock equals the option price (as required by §422A(b)(4)), stock must be valued without regard to any restriction other than a restriction which, by its terms, will never lapse. The 1984 Act also added a parallel provision to §57(a)(10) to provide that, under the alternative minimum tax, the item of tax preference arising from the exercise of an ISO must be calculated by determining the value of the stock without regard to restrictions that will lapse in the future. The effective dates for these changes, which were contained in §555(c) of the 1984 Act, included several erroneous cross references to the substantive provisions enacted by §555(a) and 555(b). The 1986 TRA corrected these cross reference errors. In addition, the 1986 TRA clarified the application of a transitional rule incorporated in §555(c)(2) of the 1984 Act. Specifically, as modified by the 1986 TRA, the minimum tax rule described above generally applies to options exercised after March 20, 1984. In the case of an option issued pursuant to a plan adopted by an employer before May 15, 1984, however, the minimum tax rule applies only to options issued after December 31, 1984.

3. Tax Rate Changes

Although the amendments to §422A described above in III, A, *supra*, modify and liberalize two important rules governing the qualification of ISOs, the most significant effect of the 1986 TRA on incentive options may result from the reduced tax rates enacted by the statute. As discussed *infra*, it appears likely that the TRA's reduced rate structure will materially reduce the attractiveness of ISOs. Consequently, although Congress indicated its intention, by liberalizing certain rules in §422A, to make ISOs a more viable means of compensating employees, other more fundamental changes effected by the 1986 TRA will, in all likelihood, limit the degree to which employers use ISOs as a means of compensating key employees.

When the TRA rates are fully effective in 1988, individuals will be subject to a maximum tax rate of 28%, applicable to all of their income regardless of its characterization as compensation or capital gains. Under pre-TRA law, one of the primary benefits of ISOs to employees resulted from the capital gains rate differential. That is, under §422(a), an employee realized no income either upon receiving an ISO or upon exercising it. (The difference between the option price and the value of the shares on the exercise date, however, constituted a preference item for purposes of the minimum tax under §57(a)(10).) Further, assuming that the employee satisfied the holding period requirements, his gain on the ultimate sale of the shares would be taxed at the preferential capital gain rate. Given the differential between the maximum capital gain rate (20%) and the maximum rate applicable to compensation (50%), ISOs often were more attractive to employees than nonqualified options and other alternative forms of compensation that were subject to tax under §83 at ordinary income rates.

Because all income is subject to the single maximum rate of 28% once the TRA is phased in, from an employee's perspective, the attractiveness of an ISO may diminish significantly when compared to a nonqualified option. Under §83, an employee who receives a nonqualified option generally will realize income in the year of exercise equal to the difference between the exercise price and the value of the shares acquired. Under the 1986 TRA rates, this income would be subject to tax at the 28% rate, as would the gain on the ultimate sale of the stock. In contrast, under the 1986 TRA, the issuance and exercise of an ISO would continue to create no taxable income (other than as a tax preference item under §57(a)(3) of the revised minimum tax), and the gain on the ultimate sale of the stock (*i.e.*, the difference between the employee's cost basis in the shares and the sales proceeds) would be taxed at a maximum rate of 28%. Thus, the gain arising from both an ISO and a nonqualified option is taxed at the same rate.

It appears that, notwithstanding the uniform 28% rate, ISOs may continue to have some appeal because of the deferral element created by §422(a), if quick resale of the optioned shares is not contemplated.

Note: In the year of exercise, the bargain element of an ISO will continue to constitute a tax preference item under the alternative minimum tax. If the employee incurs minimum tax in the year of exercise, however, under post-TRA §53, he should qualify for the credit for prior year minimum tax liability in the first future year he has regular tax liability.

From the employer's perspective, the maximum corporate tax rate of 34% enacted by the 1986 TRA will modify the analysis that must be made when comparing ISOs to forms of nonqualified deferred compensation. Under Code §421(a)(2), the employer is entitled to no deductions with respect to ISOs granted to employees or the stock issued upon the exercise of ISOs. In contrast, under §83(h), upon an employee's exercise of a nonqualified option, the employ-

[51] Code §422A(b)(4).

[52] *See* Code §425(h)(3); Rev. Rul. 74-546, 1974-2 C.B. 142.

[53] In the example in the text, because the employer granted the ISO after 1986, the option was subject to the TRA 1986 amendments, which abolished the sequential exercise rule. Consequently, the modification would not create a "shadow" option that could serve to block the exercise of the deemed new option. *See* III, A, 1, *supra*.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

er generally may deduct an amount equal to the income realized by the employee with respect to the bargain element of the option. Given the availability of a deduction for nonqualified options and the post-TRA differential between the corporate and individual maximum rates, ISOs generally will become a less attractive form of compensation from the employer's perspective. Indeed, because the maximum corporate rate exceeds the maximum individual rate, it would appear that, in many cases, nonqualified deferred compensation could be structured to the advantage of both the employer and the employee. That is, in a simple case, an employer might gross up the nonqualified compensation payable to an employee to reimburse the employee for the 28% maximum tax rate. Inasmuch as the compensation would be deductible to the employer at a rate of up to 34% the value of the deduction to the employer may exceed the additional amount it must compensate the employee to make him whole. Thus, in the case described above, both the employer and the employee may prefer nonqualified compensation, such as nonqualified options, over ISOs.

Although the above analysis suggests that many employers may find nonqualified deferred compensation more attractive than ISOs, it is not clear that existing incentive options should be converted into nonqualified options. For example, if individual rates were to increase in the future and Congress were to reinstitute a capital gains rate differential, the benefits that have historically been available for ISOs and other qualified options presumably would reappear. Given this possibility, employers may choose to continue to maintain existing ISO plans and not tamper with outstanding ISOs until there is some further indication that the repeal of the capital gains differential is a permanent fixture in the tax law.

III. Nonqualified Deferred Compensation and Section 457

A. Introduction

1. Section 457

Section 457 of the Internal Revenue Code, as it existed before the enactment of the Tax Reform Act of 1986, imposed special rules on deferred compensation arrangements provided for employees of state and local governments. These rules continue to apply but in modified form.

These rules generally limit the maximum amount that may be deferred under the plan for any taxable year to the lesser of $7,500 or 33⅓% of the participant's includable compensation, *i.e.*, compensation net of the deferral amount. Special catch-up rules are provided for the last three taxable years before the participant reaches normal retirement age under the plan. Amounts contributed to a tax-sheltered annuity under §403(b) are taken into account in calculating whether an employee's deferrals exceeded these limits. Failure to satisfy these rules results in inclusion in income currently of any amounts deferred under the plan.

Section 457 also prevents distributions from being made available to an employee before separation from service unless the employee has experienced an "unforeseeable emergency." If the employee experiences an unforeseeable emergency, the amount needed may be distributed.

2. Constructive Receipt

Under Code §451, amounts are generally taxable to an employee when received or when "made available." If an amount is made available but not actually received, it is taxable under the doctrine of constructive receipt.

On February 3, 1978, the Service issued Prop. Regs. §1.61-16, which provides that, if payment of an amount of a taxpayer's fixed basic or regular compensation is deferred, at the taxpayer's individual election to a taxable year later than that in which the amount would have been payable but for the election, then the amount is treated as received in the earlier taxable year. As a result of a provision in the Revenue Act of 1978, however, the scope of this proposed regulation was effectively limited to employers that are tax-exempt.[54] Even though proposed in 1978, Prop. Regs. §1.61-16 had not, at this writing, been finalized.

B. Overview

The major change that the Act makes in §457 is to extend those rules to any organization exempt from income taxes.[55] At the same time, §457 continues to apply to deferred compensation of states, political subdivisions of states and agencies and instrumentalities of states. Further, the Act extends the §401(a)(9) rules applicable to distributions from qualified plans to deferred compensation arrangements under §457. In addition, under §457(d), specific payout rules are provided for lifetime and post-death distributions. The Act also generally repeals the constructive receipt rule for distributions that do not exceed $3,500. *See* Code §457(e)(9).

In general, the changes to §457 apply taxable years beginning after December 31, 1988. The special rules that extend the rules of §457 to tax-exempt employers, however, are generally effective for taxable years beginning after December 31, 1986. Act §1107(c).

C. Detailed Analysis

1. Application to Tax-Exempt Employers

As revised by the Act, §457 applies to "eligible deferred compensation plans." [56] "Eligible deferred compensation plan" is defined to include plans established and maintained by an "eligible employer." [57] "Eligible employer" means a state, political subdivision of a state and any agency or instrumentality of a state or political subdivision of a state and any other organization (other than a governmental unit) exempt from tax under "this subtitle." [58] The reference in this definition to "this subtitle" is a reference to subtitle A of the Internal Revenue Code, which includes all of the organizations exempt from tax as a result of §501 of the Code.

As a result of the Act, some of the organizations that will be subject to the rules of §457 on deferred compensation include:

1. title-holding organizations exempt under §501(c)(2);

[54] *See* §132 of the Revenue Act of 1978.
[55] Act §1107.
[56] Code §457(a), as modified by §1107 of the Act.
[57] Code §457(b).
[58] Code §457(e).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

2. charitable, religious and educational organizations, including nongovernmental schools, private hospitals and private foundations that are exempt from tax under §501(c)(3);

3. labor unions exempt under §501(c)(5);

4. trade associations, business leagues and professional football leagues exempt under §501(c)(6);

5. private clubs exempt under §501(c)(7);

6. fraternal orders exempt under §501(c)(8);

7. farmers' cooperatives exempt under §521(a).[59]

The principal significance of treating tax-exempt organizations as "eligible employers" subject to §457 is to impose limits on the amount of deferred compensation that can be made available to employees of those organizations on a tax-deferred basis. In many cases, executives will find themselves subject to much lower limitations than their counterparts who work for taxable employers.

Of additional importance is the broad reach of §457. Because of the history of §457 (it was originally instituted as a result of questions about salary reduction arrangements entered into by employees) many commentators have failed to note that, as modified, §457 applies to both compensation deferred at the employee's election as well as other types of deferred compensation. That is, §457 is now applicable to all types of deferred compensation whether the employee makes the deferral through salary reduction or whether the employer initiates the deferral. Failure to satisfy the requirements of §457 would cause the employee to be taxable on the amount of the deferral at the time there is no longer a substantial risk of forfeiture with respect to the deferred compensation, even if it was not otherwise available to the employee. That is, the employee would be taxed under principles analogous to those in Code §83 so that whether the employee could have reached the money or not under general income tax principles is of no consequence.[60]

Note: Section 457 does not apply to qualified plans, tax-sheltered annuities under §403(b) and transfers of property taxed under §83 of the Code.

Example: Employee A is hired by a tax-exempt trade association beginning in 1987. As remuneration for his services, Employee A will be paid annual compensation at the rate of $80,000 per year and, in addition, will have $10,000 deferred until termination of employment pursuant to a nonqualified deferred compensation arrangement. This deferred compensation arrangement was entered into at the insistence of the employer, who could not currently afford the remuneration requested by the employee. Since this arrangement does not satisfy the requirements of §457 (the amount exceeds the limits on includable compensation under §457(b)(2)) and because the amount is not subject to a substantial risk of forfeiture, the full $10,000 will be taxable to the employee in 1987.

2. Distribution Requirements

The Act makes several changes in the distribution requirements applicable to deferred compensation plans under §457. First, it requires that the plan meet the requirements of §401(a)(9) of the Code, which are generally applicable to qualified plans.[61] Under §401(a)(9), distributions are generally required to commence no later than April 1 of the year following the year in which the individual reaches age 70½ (the required beginning date). Further, §401(a)(9) contains specific rules regarding the method and form of distribution to participants and beneficiaries.

Second, for lifetime distributions, §457 requires that the distribution must be made under a form under which at least two-thirds of the total amount payable for the participant will be paid during the life expectancy of the participant, determined at the time the distribution begins, and any amount not distributed to the participant during life will be distributed after death at least as rapidly as the method that was being used during the life of the participant.

Third, in the case of distributions which do not begin until after the participant's death, the entire amount payable with respect to the participant must be paid during a period that does not exceed 15 years or, if the beneficiary is the surviving spouse, the life expectancy of such spouse. Distributions payable over a period of more than one year, whether during life or after death, must be made in a form in which the payments are made no less frequently than annually and do not substantially increase in amount.

Fourth, if the total amount payable to the participant does not exceed $3,500 and no additional amounts may be deferred by the participant under the plan, then the participant will not be taxed under the doctrine of constructive receipt merely because the participant could have elected to receive a lump-sum payable within 60 days of the election. Thus, in the case of amounts under $3,500, the participant can be given an election to receive a lump-sum without causing the participant to be taxable under the doctrine of constructive receipt. Larger amounts, however, would not have this special statutory protection.[62]

Fifth, while the Act does not expressly permit rollovers from a §457 plan, it does permit direct transfers between plans covered by §457 without adverse taxation to the participant. Thus, a participant may direct the "eligible deferred compensation plan" of one employer to transfer amounts to an "eligible deferred compensation plan" of his new employer and the employee will not be taxed. If, however, the employee receives the distribution at any time, the employee would be subject to income tax as a result of that receipt.[63]

3. Effective Date

The general effective date for §1107 of the Act, which contains §457 as modified, is for taxable years beginning

[59] Clde §521(a) does not provide a complete exemption for farmers' cooperatives but because of explicit language in §521(a) and the lack of any special exceptions in §457, it would appear that farmers' cooperatives are covered by these 1986 TRA provisions as well.

[60] Code §457(f).

[61] Code §457(d)(2)(A).

[62] Code §457(e)(9).

[63] Code §457(e)(10).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

after December 31, 1988.[64] Special effective dates, however, are provided for certain changes made by the Act.

The rules cash-outs and transfers of interests in a plan covered by §457, as contained in §457(e)(9) and §457(e)(10), apply to taxable years beginning after December 31, 1986.

Second, §457 applies to eligible deferred compensation plans established and maintained by tax-exempt organizations for taxable years beginning after December 31, 1986. Under special transition rules, §457 will not, however, apply to amounts deferred under such a plan if the amount was deferred from a taxable year beginning before January 1, 1987 or the amount was deferred from a taxable year beginning after December 31, 1986 pursuant to an agreement which was in writing on August 16, 1986 and on such date provided for a deferral for each taxable year covered by the agreement of a fixed amount or of an amount determined pursuant to a fixed formula. Any modification of the amount or formula will cause a loss of this grandfather protection. Further, any amounts deferred pursuant to the grandfather clause for deferrals for taxable years beginning before January 1, 1987 are taken into account in applying §457 to other amounts deferred under any eligible deferred compensation plan.[65]

Two special rules are also provided. First, the amendments to §457 do not apply to any qualified state judicial plan defined in §131(c)(3)(B) of the Revenue Act of 1978 as amended by §6252 of the Tax Equity and Fiscal Responsibility Act of 1982.[66] Second, the amendments do not apply to any employees on August 16, 1986, of either a deferred compensation plan which a nonprofit corporation organized under the laws of the State of Alabama with respect to which the Service issued a ruling dated March 17, 1976 that the plan would not affect the tax-exempt status of the organization or a deferred compensation plan with respect to which a letter dated November 6, 1975 submitted the original plan to the Internal Revenue Service with an amendment submitted on November 19, 1975 and the Internal Revenue Service responded with a letter dated December 24, 1985, but only with respect to deferrals under such plan.[67]

IV. Golden Parachutes (Technical Corrections)

A. Introduction

The Tax Reform Act of 1984 added Code §280G, designed to discourage "golden parachute" arrangements under which excessive severance payments are made to corporate executives at the time of a corporate takeover or a change in ownership or control. The section imposes a nondeductible 20% excise tax on the recipient of excess parachute payments and denies a deduction to the employer for excess parachute payments.

Parachute payments are payments in the nature of compensation to a disqualified individual where the payment is contingent on a change in ownership or control and the value of the payment equals or exceeds three times a base amount. The base amount is an average of the compensation paid to the individual during the five taxable years ending before the date on which the change in ownership or control occurs. Compensation included to determine the average amount includes compensation that was paid by the corporation with respect to which the change in ownership or control occurs and which was includable in the gross income of the disqualified individuals for the five previous taxable years. A parachute payment is also defined to include any payment in the nature of compensation to disqualified individual if the payment is made pursuant to an agreement which violates securities laws or regulations.

Excess parachute payments are parachute payments in excess of the base amount that are not reasonable compensation for personal services actually rendered by the disqualified individual. Under prior law, the taxpayer had the burden of establishing, by clear and convincing evidence, that a parachute payment is reasonable compensation for personal services actually rendered (or to be rendered). To the extent a taxpayer establishes that the payment involved is reasonable compensation for personal services, the payment involved is first applied against the base amount.

Disqualified individuals are defined as an individual who is an employee, independent contractor, or other person specified in regulations who performs personal services for any corporation and is an officer, shareholder, or highly compensated individual. (A personal service corporation or similar entity is treated as an individual for these purposes.)

The golden parachute provisions were effective for payments made under contracts entered into or renewed after June 14, 1984. The provisions are also effective for all payments made under a contract entered into before June 15, 1984, if, after June 14, 1984, the contract is amended or supplemented in significant, relevant respect. A contract generally is treated as amended or supplemented if it is amended or supplemented to add or modify, to the executive's benefit, a change in ownership or control trigger, to increase amounts payable (or, if payment is to be made under a formula, to modify the formula to the executives' advantage) in the event of such a trigger, or to accelerate the payment of amounts otherwise payable at a later date in the event of such a trigger.[68]

The golden parachute rules were criticized by the Tax Bar and opposed by Treasury as an unnecessary incursion by the federal tax laws into an area more effectively addressed by either federal securities laws or state law limitations on corporate waste. In the two years following the enactment of the provision, the forecast of many practitioners concerning the harsh impact of the golden parachute rules due to their overencompassing nature, have proved to be accurate. The harshest impact of the rules appears to be in the area of smaller, in some cases closely-held, corporations, which are sold or merged in the normal course of business and do not fit into the stereotype of the hostile takeover models that were of concern at the time the provision was enacted.

The technical corrections to Code §280G are, by and large, substantive changes designed to limit the application of the section and to narrow its scope.

The Conference Report does not discuss the changes except to reference the Senate amendment and to indicate that the Conference agreement follows the Senate amendment. Since the Conference agreement contains no discussion of the provisions, it is intended that the Senate report serve as the legislative history for the changes.

B. Overview

As part of its technical corrections to the Tax Reform Act of 1984, the 1986 Tax Reform Act modified the rules concerning golden parachute payments in Code §280G in several respects:

First, and perhaps most significant, the 1986 TRA provides an exemption from the golden parachute rules for payments made on account of a change in ownership or control if the company making the payment is a small business corporation or a corporation the stock of which is not readily tradeable on an established securities market, provided certain criteria are satisfied.[69]

Second, the Act clarifies that an amount that can be established as reasonable compensation does not enter into the computation of whether the threshold for establishing a parachute payment is met, nor is it included in calculating the amount of the actual parachute payment.[70]

Third, the Act narrows the scope of what constitutes a parachute payment by excluding from includable compensation distributions from qualified plans.[71]

Fourth, it requires that affiliated groups of corporations be treated as one corporation for purposes of evaluating the application of the golden parachute rules.[72]

Fifth, it limits the number of highly compensated employees of any one corporation to 250.[73]

Last, it clarifies that only agreements that violate *generally enforced* securities laws, rather than *any* securities laws, will be parachute payments and it places the burden on the Service to establish that there is a violation of such securities laws.[74]

Since these amendments are in the nature of technical corrections to the 1984 Tax Reform Act, they are effective as if enacted as part of the 1984 Act.[75]

C. Detailed Analysis

1. Exemption for Small Business Corporations

The Act amends §280G(b) (defining excess parachute payment) by adding a new paragraph providing an exemption for small business corporations.[76] The exemption excludes from the definition of parachute payment any payment to a disqualified individual by a corporation which, immediately before the change in ownership or control, was a small business corporation as defined in §1361(b). Also excluded, is any payment to a disqualified individual from a corporation (other than a small business corporation) if, immediately before the change in ownership or control, the stock of the corporation was not readily tradeable on an established securities market or otherwise and certain shareholder approval requirements are met with respect to the payment.[77]

A corporation qualifies as a small business corporation if the corporation does not have more than 35 shareholders, have a shareholder who is not an individual (other than an estate or qualifying trust), have a non-resident alien as a shareholder, and have more than one class of stock.[78]

With regard to the exception for corporation with no readily tradeable securities, the statute requires that the following shareholder approval requirements be satisfied. First, the parachute payment must be approved by a vote of those who owned, immediately before the change in ownership or control, more than 75% of the voting power of all outstanding stock of the corporation and all of the shareholders must receive adequate disclosure of all material facts concerning the payment which, but for this exemption, would be parachute payments with respect to a disqualified individual.

The statute also authorizes the Secretary to issue regulations that provide that a company will not be treated as one which has its stock readily tradeable on an established securities market where a substantial portion of the assets of the entity consists (directly or indirectly) of stock in such corporation and interests in such other entity are readily tradeable on an established securities market or otherwise. Thus, if a publicly traded corporation sells the stock of a 70% subsidiary and the assets of the subsidiary constitute a substantial portion of the assets of the parent, the legislative history indicates that the exemption for a corporation with no readily tradeable securities will not be available with respect to payments to disqualified individuals on account of the change in ownership or control of the subsidiary.[79]

The legislative history further indicates a concern that, absent specific rules, a taxpayer might utilize the exemption for shareholder approval to avoid the golden parachute provisions by creating tiers of entities. As a result, the legislative history provides that, where the gross value of the entity-shareholders' interest in the corporation constitutes a substantial portion of such entity's assets, the Secretary will adopt regulations requiring approval of the owners of the entity rather than the approval of the entity itself. Further, such shareholder approval may be obtained only if the entity- shareholder also has no stock that is readily tradeable.[80] On the other hand, the approval of the compensation arrangement by an authorized officer of the entity will be sufficient if the entity's interest in the corpo-

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ration constitutes less than a substantial portion of its assets, because the golden parachute provisions, in general, do not apply to the sale of less than a substantial portion of the assets of a corporation.

The Senate Report sets forth the requirements that must be satisfied to demonstrate shareholder approval. First, the payment must be approved by a separate vote of the shareholders who, immediately before the change in ownership or control, hold more than 75% of the voting power of all outstanding stock of the corporation, and (2) adequate disclosure must be made to all shareholders of the material facts concerning payments that, absent the exemption, would be parachute payments. Adequate disclosure includes full and truthful disclosure of the material facts and such additional information as may be necessary to make the disclosure not materially misleading. The Senate Report also states that an omitted fact will be considered material if there is a substantial likelihood that a reasonable shareholder would consider it important.[81]

The Senate Report provides that, in applying the shareholder approval test, shareholders who receive payments that would otherwise be parachute payments, absent shareholder approval, are not to be included for purposes of determining whether there is shareholder approval. Further, a shareholder who is related to the disqualified individual is also removed from the shareholder base. If all shareholders are disqualified individuals or related to disqualified individuals, however, disqualified individuals are not to be removed from the shareholder base. The test for relatedness is to be made under the principles of §318.[82]

2. Reasonable Compensation

Act §1804(j)(2) amends §280G(b)(4) by clarifying that in the case of parachute payments contingent on a change in ownership or control as set forth in Code §280G(b)(2)(A), the amount treated as a parachute payment shall not include the portion of the payment which the taxpayer establishes by clear and convincing evidence is reasonable compensation for personal services to be rendered on or after the date of the change in ownership or control. Thus, in the case of a payment that is made on account of a change in ownership or control, the amount treated as a parachute payment will not include the portion of the payment that the taxpayer establishes is reasonable compensation for personal services in the future. Further, such payments are not taken into account in determining whether the threshold (*i.e.*, three times the base amount) contained in the definition of parachute payments is exceeded.

The Senate Report provides an example of a specific instance in which compensation may be treated as reasonable compensation for services. In the case of payments to an individual as damages for a breach of contract, where the employer fires an employee before the end of the contract term and the employee collects as damages for salary and other compensation, the amount collected may be treated as reasonable compensation for services to be rendered if (1) the damages do not exceed the compensation the individual would have received if the individual continued to perform services for the employer; (2) the individual demonstrates by clear and convincing evidence that the payments were received because an offer to work was made and rejected; and (3) any damages were reduced by mitigation.[83] The Senate Report cautions, however, that if damages are collected for a failure to make severance payments, damages collected would not be for personal services because the individual does not have to demonstrate a willingness to work and reduce any damages by mitigation.[84]

The Senate Report also states that evidence that amounts paid to a disqualified individual for services that are not significantly greater than amounts for compensation (other than compensation contingent on a change in ownership or control or termination of employment) paid to the disqualified individual in prior years or customarily paid to similarly situated employees by the same employer or comparable employers will normally serve as clear and convincing evidence that the amount constituted reasonable compensation for such services.

As under pre-1986 TRA law, the amount treated as an excess parachute payment is reduced by the portion of the payment that the taxpayer establishes by clear and convincing evidence is reasonable compensation for personal services actually rendered before the change in control. For purposes of this provision, however, again as under pre-TRA law, reasonable compensation for services performed before the date of the change is first offset against the base amount.

3. Exemption For Payments Under Qualified Plans

The Act provides that the term "parachute payment" does not include any payment to or from (1) a plan that is qualified under §401(a); (2) an annuity described in §403(a); or (3) a simplified employee pension as defined in §408(k).[85] Payments from qualified plans are also not taken into account in determining whether the threshold for excess parachute payments is exceeded.[86]

4. Treatment of Affiliated Groups

The statute provides that all members of the same affiliated group (as defined in §1504, determined without regard to §1504(b)) are to be treated as one corporation for purposes of the golden parachute rules. Further, any person who is an officer or any member of such group will be treated as an officer of such one corporation.[87]

The Senate Report indicates that, in addition to the general definition of an affiliated group, for this purpose an affiliated group of corporations also includes tax-exempt corporations; insurance companies; foreign corporations (unless the disqualified individual is employed by a foreign corporation that is acquired by another foreign corporation, neither of which is subject to tax in the United States); corporations with respect to which possession tax credit

election under Code §936 is in effect for the taxable year; regulated investment companies and real estate investment trusts; and a DISC or former DISC.[88]

The Conference Report provides that, with respect to the golden parachute provisions the Agreement follows the Senate amendment. The Conference Report, however, in its only reference to the golden parachute technical correction provisions states that it is not intended, with respect to the golden parachute provisions relating to the adoption of the affiliated group rules, to create an inference with respect to the definition of a change in control.[89]

5. Limitation on Number of Individuals Treated As Highly Compensated

Under pre-TRA law, all employees, independent contractors, or other persons who were officers, shareholders, or highly compensated individuals were treated as disqualified individuals under the golden parachute rules. The Act limits the number of individuals that may be treated as highly compensated to 250 employees of the corporation.[90] Specifically, the Act provides that the term "highly compensated individual" only includes an individual who is (or would be if the individual were an employee) a member of the group consisting of the highest-paid 1% of the employees of the corporation or, if less, the highest-paid 250 employees of the corporation.[91] The Senate Report indicates that the term "highly compensated individual" is defined to include only an employee (or former employee) who is among the highest-paid 1% of individuals performing services for the corporation or for any corporation that is a member of an affiliated group, or the 250 highest-paid individuals who perform services for a corporation or for each member of an affiliated group.[92] It therefore appears that, for these purposes, the 250-employees rule does not apply on an affiliated group basis. Rather, it is the 250 highest-paid individuals who perform services for a *member* of an affiliated group.

6. Excluded Amounts Not Taken Into Account In Determining Whether Threshold Amount Is Met

The Act clarifies pre-TRA law by indicating that, if an amount is not treated as a parachute payment, it is also not taken into account in determining whether the threshold contained in the definition of a parachute payment is exceeded. The threshold is whether the compensation paid equals or exceeds three times the base amount. For this purpose, payments made with respect to a small business corporation or a corporation that satisfies the shareholder approval requirements; payments that are reasonable compensation for personal services to be rendered on or after the date of the change in ownership or control; and payments from or under a qualified plan are not taken into account.[93]

7. Limitation on Treatment of Payment Pursuant to Securities Law Violation as Parachute Payment

Pre-TRA law provides that a parachute payment includes any payment in the nature of compensation to a disqualified individual if the payment is pursuant to an agreement that violates any securities laws or regulations. The Act amends this provision to provide that there will only be a parachute payment if it is pursuant to an agreement that violates any *generally enforced* securities laws or regulations, thereby limiting the application of the golden parachute rules. Further, the Act provides that the burden of proof with respect to establishing that there is a violation of a law or regulation is on the Secretary of the Treasury.[94]

8. Clarification Concerning Independent Contractors

While the definition of disqualified individual under pre-1986 TRA law clearly includes an independent contractor, the definition of base period only refers to the period during which the disqualified individual was "an employee" of the corporation. The Act replaces "employee of the corporation" with "perform personal services" for the corporation.[95]

9. Clarification of Effective Date Provisions

The Senate Report provides that the golden parachute technical corrections are effective as if enacted as part of the Tax Reform Act of 1984. Thus, for example, amounts paid before the 1984 TRA date of enactment (June 15, 1984) under an agreement otherwise subject to the golden parachute provisions, may be exempt from the provisions under the small business corporation exception, the shareholder approval exception, the exception for payments from or under a qualified plan, or exceptions for payments of reasonable compensation for services to be rendered. In addition, shareholder approval may be obtained after the date of enactment of the 1984 TRA with respect to prior transactions.[96]

The Senate Report also clarifies that, where a nonqualified stock bonus plan is amended to prevent the forfeiture of previously granted but unvested shares in the event of the termination of the plan following a merger, consolidation or sale, the plan amendment will not be treated as a significant or relevant amendment which would deny the grandfathering provisions to the grant of shares under the plan prior to June 15, 1984.[97]

V. Group Term Insurance Technical Corrections

A. Introduction

Under pre-1986 TRA law, the cost of §79 group-term life insurance purchased by an employer for an employee is included in the gross income of that employee to the extent that its cost exceeds the amount necessary for purchase $50,000 of coverage plus any employee contributions towards the purchase of the insurance. This $50,000 limit applies to active employees and former employees other

than employees who terminated employment due to a disability. The cost of the insurance, generally, is computed under a table prescribed by regulations. If a group-term life insurance plan discriminates in favor of key employees, the full cost of the insurance is included in the gross income of the key employee at its actual cost, rather than its tabular cost. Subject to certain transition rules, the 1984 Tax Reform Act extended the application of the group-term life insurance rules to former employees.

B. Overview

The Act clarifies some of the existing group-term life insurance rules. First, it clarifies the definition of the cost includible in the gross income of a key employee participating in a discriminatory plan.[98]

Second, the Act clarifies the effective date of the 1984 TRA amendments relating to the treatment of former employees in the case of existing plans.[99]

Third, the Act amends the definition of key employee [100] and provides for the separate treatment of former employees in the application of the nondiscrimination rules.[101]

The Act also makes a conforming clerical amendment to §83.[102]

VI. Detailed Analysis

A. Determination of Includible Cost

The Act clarifies that, if a plan discriminates in favor of key employees, the cost of group-term life insurance includible in the gross income of a key employee shall equal the greater of:

(1) the actual cost of the insurance; or

(2) the §79(c) tabular cost.[103]

This provision applies to taxable years beginning after the date of enactment of the 1986 Act.[104]

B. Former Employees

The Act clarifies the effective dates of the 1984 TRA amendments which extended the $50,000 limit on excludible group-term life insurance to retired employees and the nondiscrimination rules to former employees.[105] These amendments do not apply to any plan in existence on January 1, 1984 (or a comparable successor to such plan) with respect to individuals who both attained age 55 on or before January 1, 1984 and were employed by the employer or its predecessor at any time during 1983.[106] Moreover, the 1984 TRA amendments also do not apply to employees who retired on or before January 1, 1984 and who were covered by the plan (or its predecessor) at the time of retirement.[107]

In applying the nondiscrimination rules, the employer may elect to disregard grandfathered employees.[108]

The Act also clarifies that, with respect to grandfathered individuals, a comparable successor plan includes any plan which does not provide increased benefits.[109] Thus, if the benefits provided to a grandfathered individual are increased that person will no longer come under the grandfather rule.[110]

C. Definition of Key Employee

The Act amends §79(d) by revising the definition of key employee to include any former employee who was a key employee at the time of retirement or separation from service.[111] The Senate Report states that an employee would be considered a key employee at the time of separation from service if the employee was a key employee for the year in which separation occurred or any of the four preceding years.[112]

D. Separate Treatment of Former Employees

The Act further amends §79(d) by providing that the coverage and benefit tests applicable in determining whether a plan discriminates will be applied separately to active and former employees.[113]

E. Coordination with Section 83

Pre-1986 TRA §83(e)(5) exempts "the cost of" group-term life insurance from the application of §83. The Act provides that §83 shall not apply to group term life insurance covered by §79 (*i.e.*, it strikes the reference to "the cost of" such insurance).[114] Therefore, the value of any group-term life insurance which becomes nonforfeitable upon retirement will be taxed to the employee in accordance with the principles of §79, rather than §83.[115]

F. Effective Date

The group-term life insurance technical amendments are effective as if included in the provisions of the Tax Reform Act of 1984 to which they relate,[116] except that amendment to §79(d)(1)(B) relating to the determination of the cost of §79 insurance to a key employee is effective for taxable years ending after the date of enactment of the 1986 Act.[117]

Chapter 52

NEW PROVISIONS FOR ESOPS

Taina E. Edlund, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

An employee stock ownership plan ("ESOP") is a qualified plan under which employer stock is held for the benefit of employees. The stock, which is held by one or more tax-exempt trusts under the plan, may be acquired through direct employer contributions or with the proceeds of a loan to the trust. Dividends paid on stock held in trust for employees may be distributed to employees or may be held in the trust.

There are two basic types of ESOPs: an employee stock ownership plan (commonly known as an ESOP) and a tax credit ESOP. ESOPs and tax credit ESOPs have several common statutory requirements. Each must be: (1) a defined contribution plan; that (2) meets the requirements of §401(a); (3) is designed to invest primarily in employer securities; and (4) meets the requirements of §409(e) [giving participants certain voting rights] and (h) [giving participants the right to demand employer securities and to require the employer to repurchase them].

Section 409(l) defines "employer securities" as common stock issued by the employer which is readily tradable on an established securities market. If such common stock does not exist, "employer securities" means common stock issued by the employer having a combination of voting power and dividend rights equal to, or in excess of, the class of the employer's common stock having the greatest voting power and the class of stock having the greatest dividend rights. §409(l)(2). In addition, "employer securities" include noncallable preferred stock if such stock is convertible at any time into the qualified common stock described above, at a conversion price which (as of the date of acquisition by the ESOP or tax credit ESOP) is reasonable. §409(l)(3). Employer securities issued by any member of a controlled group of corporations are treated as employer securities for all members of the controlled group. For purposes of §409, "employer securities" include securities issued by a member of a controlled group of corporations. Section 409(l)(4) provides that "controlled group of corporations" has the meaning given to such term by §1563(a) (determined without regard to §§1563(a)(4) and (e)(3)(C)) but the common parent need own only 50% (rather than 80%) of the voting stock and each class of nonvoting stock of a first tier subsidiary for that subsidiary and the others below it to qualify as members of the controlled group.

In general, if the employer has a class of securities required to be registered under Section 12 of the Securities and Exchange Act of 1934 or class of securities that would be required to be so registered except for the exemption from registration provided by §12(g)(2)(H) of the Exchange Act, the ESOP or tax credit ESOP must permit each participant to direct the voting of the securities allocated to his account.

An ESOP maintained by an employer that does not have registration-type class securities is not required to pass through voting rights to participants, except to the extent required by §409(e). Consequently, the vote pass-through is only required with respect to certain major issues which, under applicable state law or charter, must be decided by a "more than a majority vote of the outstanding common shares voted" (*e.g.*, mergers, consolidations, sales of substantially all of the corporation's assets). Further, under §401(a)(22), if any §401(a) defined contribution plan, including an ESOP but excluding a profit-sharing plan, is maintained by an employer the stock of which is not publicly-traded, and if, after acquiring securities of the employer more than 10% of the plan's assets are held in employer securities, voting rights must be passed through to participants in accordance with §409(e).[1]

Unless the employer securities are readily tradable on an established securities market, §409(h)(1)(B) requires that participants must be given the right to require the employer (not the ESOP) to repurchase the employer securities under a fair valuation formula.

Section 4975(e)(7) defines "employee stock ownership plan" as a defined contribution plan which (1) is a stock bonus plan qualified under §401(a) or a combination of a stock bonus and money purchase plan, both of which are qualified under §401(a); (2) is designed to invest primarily in qualifying employer securities; (3) is otherwise defined in regulations prescribed by the Secretary of the Treasury; and (4) meets the requirements of §§409(e) and (h).

Although a tax credit ESOP may be any type of defined contribution plan (except a money purchase pension plan alone), a leveraged ESOP may only be a stock bonus plan or a combination stock bonus and money purchase plan. *See* §§409(a) and 4975(e)(7).

---

[1] *See* §§409(e) and 401(a)(22).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Like all qualified defined contribution plans, an ESOP must provide a formula for allocating employer contributions and forfeitures to the participant's individual accounts.[2] The allocation formula may not discriminate in favor of officers, shareholders or highly paid employees.[3] Normally, allocations will be proportionate to the employee's compensation, but other factors, such as years of service, may be considered. However, in the case of a tax credit ESOP, the allocation of employer securities to participants' accounts must be based on the participants' relative compensation for the year. §409(b). Where the qualifying employer securities acquired by the plan are acquired with the proceeds of an exempt loan, such securities are to be placed in a suspense account.[4] As the principal and interest of the loan is repaid, a ratable amount of securities must be released from the suspense account and allocated to the accounts of participants for the year of repayment.[5] Regs. §54.4975-8(ii) also permits an alternative release and allocation method based on principal payments only. Income derived from securities acquired with the proceeds of an exempt loan must be allocated as income from the plan or, if the plan so provides, used to repay the exempt loan.[6] In the event of forfeitures, securities released from the suspense account must be forfeited only after other assets.[7]

A loan to an ESOP from a disqualified person, or which is guaranteed by a disqualified person, or collateralized by assets of a disqualified person, is prohibited except for the limited exemption granted leveraged ESOPs.[8] For this purpose, "disqualified person" has the meaning supplied by §4975. It is essentially the same as a "party-in-interest" under ERISA. The loan proceeds must be used within a reasonable time after their receipt to acquire qualifying employer securities or to repay the loan or a prior exempt loan.[9]

The Tax Reform Act of 1984 amended the ESOP provisions by adding several significant tax incentives designed to encourage employee stock ownership. First, the legislation permitted a tax-free rollover of the proceeds from the sale of a business to an ESOP or to certain worker-owned cooperatives, provided (1) immediately after the sale, the ESOP owns at least 30% of the value of employer securities; and (2) which the 15-month period beginning three months before the date of sale "qualified replacement securities" (as defined in §1042(c)(4)) are purchased by the seller. §1042(a) and (b). Second, the 1984 Act enacted a corporate deduction for dividends paid on ESOP stock, provided, *inter alia*, the dividends are paid out currently to employees. §404(k). Third, a bank, insurance company, or other commercial lender is permitted to exclude from income 50% of the interest received on loans to ESOP sponsors, provided the loan proceeds are used to finance an ESOP's acquisition of employer stock. §133(a). Fourth, part or all of an estate's liability for estate taxes may be assumed by an ESOP in return for a transfer from the decedent or decedent's estate of "employer securities" of an equal value, provided the company sponsoring the ESOP guarantees payment of the taxes. §2210(a). All of the changes made by the Tax Reform Act of 1984 greatly increased the utility of an ESOP as a method of corporate finance. For a complete discussion of the rules relating to ESOPs, *see* 354 T.M., *ESOPs*.

II. Overview

The Tax Reform Act of 1986 adds several tax incentives encouraging the utilization of an ESOP as both a means of corporate finance and an employee benefit plan. Thus, the Act (1) adds an estate tax exclusion for 50% of the proceeds of certain sales to ESOPs;[10] (2) expands the §404(k) employer deduction for dividends paid on ESOP stock;[11] (3) expands the partial interest exclusion by extending it to mutual funds and certain refinancings of loans, and (4) exempts reversions from defined benefit plans that are transferred to ESOPs within prescribed time limits from the new 10% reversion tax.

In addition to adding these tax incentives, the Act also makes several changes to the general ESOP provisions. First, the Act repeals the payroll based ESOP tax credit effective for compensation earned or accrued after December 31, 1986.[12] Second, the Act accelerates the otherwise applicable benefit commencement dates.[13] Third, distributions from ESOPs prior to January 1, 1990 will be exempt from the 10% tax on early distributions from qualified plans provided that certain requirements are met. Fourth, the Act also modifies the time period over which an employer may pay the put option price.[14] Fifth, effective for stock acquired after December 31, 1986, the Act requires that a plan offer qualified participants the opportunity to elect partial diversification of their accounts.[15] Sixth, the Act also adds a requirement that an independent appraiser make all valuations of nonreadily tradable employer securities with respect to activities carried on by the plan.[16] Seventh, the Act adds a new section imposing a 50% excise tax on certain allocations of qualified securities.[17]

Finally, the Act makes several other technical corrections to the §1042 nonrecognition rules[18] and the §2210 relief from estate tax liability rule.[19]

III. Detailed Analysis

A. Estate Tax Exclusion

The Act adds new Code §2057[20] which provides an exclusion from a decedent's gross estate of 50% of the

qualified proceeds from a qualified sale of employer securities by the executor of an estate to an ESOP prior to the due date of the estate tax return (including extensions). This provision applies to sales after October 22, 1986 (the Act's enactment date) and before January 1, 1992. §2057(f); Act §1172(c).

Section 2057(b) provides that a qualified sale is any sale of employer securities within the meaning of §409(l) by an executor of an estate to either (1) an ESOP described in §4975(e)(7), or (2) a §1042(c)(2) eligible worker owned cooperative.

In general, qualified proceeds are amounts received by the estate from the sale of employer securities that have been issued by a domestic corporation if the sale occurs at any time prior to the due date, including extensions, of the estate tax return.[21] Qualified proceeds, however, do not include the proceeds from a sale if the decedent received the employer securities (1) from a qualified §401(a) plan, or (2) as a transfer pursuant to an option or other right to acquire stock to which §§83, 422, 422A, 423 or 424 applies.[22]

Observation: The restricted definition of employer securities means that the exclusion is unavailable pursuant to an ESOP distribution or an employment related transaction. To be eligible for the exclusion, the executor of the estate must file a verified written statement with the Secretary.[23] This statement must contain a written statement by either the employer whose employees are covered by the ESOP or the authorized officer of a worker-owned cooperative consenting to the application of the new §4979A penalties regarding prohibited allocations of qualified securities.

B. Deductibility of Dividends

Effective for taxable years beginning after the date of enactment (October 22, 1986), the Act expands the §404(k) employer deduction available for dividends paid on ESOP stock to include dividends used to make payments on an exempt loan.[24] The legislative history also clarifies that dividends which are used to repay an exempt loan would not constitute an annual addition under §415.[25] Moreover, dividends on unallocated shares held in a pledge suspense account are also deductible.[26] The Act further amends §404(k) to clarify that dividends will be deductible in the year in which they are paid or distributed to the participant.[27] Dividends used to repay exempt loans are deductible in the year of repayment.[28] However, if the Secretary determines that the dividend contributes to the avoidance of taxation, the deduction may be disallowed.[29]

Finally, whereas under pre-1986 TRA law, §404(k)(2) provided that dividend payments were to be made only to "plan participants," Act §1854(b)(5) amends §404(k)(2) to provide that such dividend payments are to be made to "plan participants or their beneficiaries."

Note: Such liberalization of the dividend deductibility rules should further stimulate the use of ESOPs as a means of corporate financing, thereby reflecting the Congressional intent to create a tax favored tool for corporate capitalization.

C. Partial Interest Exclusion

The Act extends the availability of the 50% exclusion for interest paid on securities acquisition loans.[30] First, §851 regulated investment companies, *i.e.*, mutual funds, are added to the group of lenders eligible for the interest exclusion.[31] The Conference Report states that a mutual fund which is fully invested in ESOP obligations may pay out exempt interest obligations despite having certain amounts of cash or other assets on hand at the end of a taxable quarter.[32] The Secretary is directed to promulgate appropriate regulations which reflect this intent.

Moreover, since only 50% of the interest income from ESOP loans is excludible,[33] the Conference Report suggests that it may be appropriate for the mutual fund to have two classes of stock, one paying exempt interest dividends and the other paying taxable dividends. Such two class arrangements would not be subject to §654 (relating to series funds) since there would be no segregated portfolios of assets.[34] Extension of the partial interest exclusion to RICs is effective for loans used to acquire employer securities after the date of enactment (October 22, 1986), including refinancings of loans which were used to acquire employer securities after May 23, 1984.[35]

Observation: The permitted bifurcation of RIC income may give RICs a competitive advantage over other qualified lenders if it permits the RIC to allocate taxable interest to a tax-exempt institution and nontaxable interest to taxable institutions.

Second, as noted above, the partial interest exclusion also applies to refinancings of loans used to acquire securities after May 23, 1984.[36] The interest exclusion will also be available for loans made after the date of enactment which have a commitment date of no more than seven years, to the extent that, within 30 days, employer securities are transferred to the plan in an amount equal to the proceeds of the loan and the securities are allocable to participants' accounts within one year of the date of the loan.[37] The Conference Report clarifies that the seven year commitment period limit includes both the original commitment

[37] Act §1173(b)(2)(B). The Conference Report, at II-559, clarifies that the 30-day period described in amended §133(b)(1)(B) for transferring employer securities to the plan begins on the date when interest begins to accrue on the loan. Similarly, the Report clarifies that the 1-year period described in amended §133(b)(1)(B) for allocating stock to a participant's account begins on the date interest begins to accrue on the loan.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

period and the period of any subsequent refinancing.[38] For example, if prior to the date of enactment, an otherwise qualified securities acquisition loan with an original commitment date of five years is refinanced for an additional four years, the partial interest exclusion applies only to interest accruing in the first seven years. Interest prepayments, however, will not qualify for the exclusion since it applies only to accrued interest. *See* Conf. Rep. at II-559.

D. Asset Reversions

If certain requirements, discussed *infra*, are met, the new 10% excise tax under §4980(a) on reversions to the employer from a defined benefit plan is waived regarding any portion of the reversion that is transferred from the qualified plan to a §4975(e)(7) ESOP.[39] If the reversion amount is transferred to the ESOP, it also will not be includible in the gross income of the employer. §4980(c)(3)(A).

Assets transferred to the ESOP must be invested in employer securities or used to repay a securities acquisition loan within 90 days (subject to extension by the Secretary of the Treasury) of the transfer. §4980(c)(3)(B). Neither the statute nor the Conference Report specify whether the loan must be a prior "exempt loan." In addition, under §409(d), the employer securities in which the investment is made must remain in the plan for 84 months after they are allocated to participants' accounts unless distribution to participants is permitted under circumstances described in §409(d)(1)-(3) in accordance with the terms of the plan.

At least half the participants in the transferor qualified plan must be participants in the ESOP as of the close of the first plan year for which an allocation of securities is required. The Conference Report provides that for purposes of determining who are participants in a plan, only active employees, not retirees, who are plan participants need be considered.[40] Moreover, in spinoff terminations, the employees who participated in the spun-off portion of the transferor plan prior to the spinoff will also be taken into account in meeting the number participants requirement.[41]

Amounts that are transferred and are not allocated to participant accounts in the year of the transfer due to the §415 limits, must be credited to a suspense account and allocated from that account to the accounts of participants no less rapidly than ratably over a period not to exceed seven years. When such allocations are made to a participant's account, the allocation is treated as an employer contribution for purposes of §415(c), except that the §415(c) annual addition will not exceed the value of such securities as of time they were credited to the suspense account, and no additional employer contribution will be permitted to an ESOP before the allocation of such amount. §4980(c)(3)(C)(ii). The Conference Report clarifies that the prohibition against employee contributions to an ESOP which receives a transfer from a terminated defined benefit plan is not intended to prohibit contributions to an ESOP to the extent that the amount of the suspense account required to be allocated for a year does not exceed the §415 limits.[42] Section 4980 is generally effective for reversions occurring after December 31, 1985.

Observation: Thus, Conference Report suggests that large allocations from a profit-sharing plan sponsored by the employer may be used to block the release of suspended securities in a given year.

E. Tax Credit ESOPs

The Act repeals the §41 payroll based ESOP tax credit effective for compensation earned or accrued after December 31, 1986.[43] The Act also modifies the rules regarding distributions from a tax credit ESOP.[44] Distributions prior to expiration of the 84 month period after which a security is allocated to a participant's account or the death, disability or separation from service of the participant will be permitted upon plan termination. Act §1174(a). The Conference Report indicates that a termination will include a partial termination of the plan with respect to employees of a particular subsidiary or operating trade or business of the employer in those cases where the employees retain no significant interest in the ESOP sponsor.[45] The distribution modification applies to plan terminations occurring after December 31, 1984.[46]

The Act also provides that the new minimum coverage requirements will not apply to tax credit ESOPs if the ESOP is the only qualified plan of the employer and (1) the plan benefits at least 50% of all employees eligible under a nondiscriminatory classification, and (2) the sum of all amounts allocated to a participant's account for the year does not exceed 2% of the participant's compensation for that year.[47] This provision is generally effective for plan years after December 31, 1988.

Query: Do amounts allocated include earnings, forfeitures, employee contributions, etc.?

F. Distributions

The Act accelerates the benefit commencement dates otherwise applicable to qualified plans.[48] Unless a participant otherwise elects, distribution of the participant's account balance will begin not later than one year after the close of the plan year:

(1) in which the participant terminates employment due to retirement, disability or death, or

(2) which is the fifth plan year following the plan year in which the employee separates from service for any other reason (as long as the employee is not reemployed during that same five-year period).[49]

These distribution rules do not apply to any portion of a participant's account balance which includes employer se-

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

curities acquired with the proceeds of an exempt loan until the close of the plan year in which the loan is fully repaid.[50]

Unless the plan otherwise provides, these distributions generally must be made over a five-year period in substantially equal periodic payments (but not less frequently than annually). However, if the participant's account balance exceeds $500,000, the payment period may be extended by one additional year per $100,000 (or fraction thereof) in excess of $500,000.[51] The payment period, however, cannot be extended by more than a total of five additional years, regardless of the amount of the participant's account balance.[52] These dollar amounts are indexed in the same manner as the benefit limits under a defined benefit plan.[53]

These amendments apply to distributions attributable to stock acquired after December 31, 1986. Act §1174(b)(3).

Certain distributions from ESOPS before January 1, 1990 are exempt from the 10% tax on early distributions from qualified plans to the extent that, on average, a majority of the plan's assets have been invested in employer securities for the 5-year period before the distribution.[54] This provision will not apply to any distribution which is attributable to assets which have not been invested in employer securities at all times during the 5-year period. §72(t)(2)(C)(ii). If an ESOP has existed for less than 5 years, the plan's assets must have been invested for the entire period before distribution. If the plan converted into an ESOP, assets must have been so invested for the five years prior to the distribution.[55] Tacking of investment periods is permitted.[56] To qualify for exemption, however, the distribution must be attributable to those assets which were invested in employer securities for five years.[57] The conferees also intend that, in determining the length of time a plan has held securities distributed to a participant, a first-in, first-out rule applies.[58]

These provisions are generally effective with respect to distributions made in taxable years after December 31, 1986. Act §1123(e).

G. Put Options

The Act modifies the period over which an employer may pay the put option price.[59] Upon exercise of a put option, the option price must be paid in substantially equal annual payments beginning not more than 30 days after the exercise of the option, over a period not to exceed five years. §409(h)(5)(A). If the employer defers payment over the 5-year period, or any portion thereof, adequate security and reasonable interest must be provided regarding any unpaid amounts. §409(h)(5)(B). The delayed payment provisions are applicable only to total distributions within one taxable year of the recipient of the account balance.[60]

In the case of an installment distribution (presumably any distribution less than a total distribution), the option price must be paid within 30 days of the exercise of the option.[61]

The Act also extends the put option requirement to all stock bonus plans.[62] Moreover, in applying the put option provisions to other stock bonus plans, "employer securities" will include any security of the employer held by the plan.[63]

The put option provisions are applicable to distributions attributable to stock acquired after December 31, 1986.[64] However, in the case of the revised payment requirements, the plan may elect to have the amendment apply to all distributions after the date of enactment.[65]

H. Diversification Requirements

Effective for stock acquired after December 31, 1986, the Act requires that a plan offer qualified participants the opportunity to elect partial diversification of their account balances.[66] A qualified participant is an employee who has attained age 55 and has completed at least 10 years of participation under the plan.[67] Diversification elections are made during an employee's qualified election period. The qualified election period means the 5-year period which begins with either (1) the plan year in which the participant attains age 55, or (2) if later, the plan year after the plan year in which the employee first became a qualified participant.[68] Diversification elections then will be made during the 90-day period beginning after the close of each plan year within the qualified election period.[69]

Observation: The House Report, clarifies that, if an employee has not completed at least at least 10 years of participation by the time he attains age 55, the qualified election period will begin in the first year after which 10 years of participation are completed and end with the plan year following the plan year in which age 60 is attained.[70] Thus, an employee who completes 10 years of service after the plan year following the plan year in which age 60 is reached will have no election period.

If the diversification election is made, the employee may direct the investment of up to 25% of the account balance, or up to 50% of such account balance in the last year of the 5-year election period (*i.e.*, generally after the employee attains age 60).[71] To the extent that self-direction is elected, the ESOP must offer a distribution of the portion of the participant's account balance covered by the election, or it must offer at least three investment options. These investment options must be consistent with regulations to

be promulgated by the Treasury. §401(a)(28)(B)(ii). Although the statute is silent, the Conference Report provides that the diversification requirement cannot be satisfied through a distribution of employer securities.[72] The diversification requirement, however, will be satisfied if the qualified participant is offered the opportunity to transfer a portion of the employee's account balance into another plan allowing employee directed investment and containing the requisite diversification options.[73] The diversification requirement may also be satisfied by a distribution of that portion of the employee's account balance to which the election applies or cash in lieu thereof. If, under this rule, stock is distributed, the put option provisions will apply.[74] Moreover, amounts which are distributed to satisfy the diversification requirements may be rolled over to an IRA or another qualified plan.[75]

I. Independent Appraisal

The Act also provides that an independent appraiser, within the meaning of §170(a)(1), must make all valuations of employer securities not readily tradable on an established securities market with respect to activities carried on by the plan.[76] This amendment is effective for stock acquired after December 31, 1986. Act §1175(a)(2). The Conference Report does not clarify what is meant by the phrase "with respect to activities carried on by the plan." The House Report, however, indicates that the independent appraiser requirement applies to the valuation of employer securities contributed to or purchased by the ESOP.[77]

J. Prohibited Allocations

The Act provides that if there is a prohibited allocation of qualified securities by an ESOP or worker-owned cooperative, a 50% excise tax on the amount involved in the allocation is imposed on the employer or cooperative.[78] In addition, if a prohibited allocation occurs, the plan will be disqualified with respect to those participants receiving the prohibited allocation.[79] These participants, therefore, will include the amount of the allocation in income.[80] A prohibited allocation results if any portion of the assets attributable to (or allocable in lieu thereof) employer securities in a §1042 or §2057 qualified sale accrues to the benefit of:

(1) the taxpayer making the §1042 nonrecognition election;

(2) any person related to the taxpayer (within the meaning of §267(b)) or

(3) any other person who, after application of the §318(a) attribution rules, owns more than 25% of the value or the actual outstanding stock of the corporation (or certain related corporations) which issued the securities.[81]

To avoid the excise tax, an ESOP in which the decedent had an interest should not allocate to the decedent's account any assets involved in the qualified sale to the ESOP. Moreover, the employer should take care not to allocate other assets to the decedent in order to compensate for not making an allocation of the securities involved in the sale.[82]

A person is a 25% shareholder if such a person is a 25% shareholder at any time during the one year period ending on the date of the qualified sale. A person continues to be considered a 25% shareholder until all securities acquired in the sale are allocated.[83] A person will also be considered to be a 25% shareholder if such person is a 25% shareholder on the date the securities sold in the qualified sale are allocated. However, in that case, the individual is only a 25% shareholder regarding those securities allocated on the date the individual actually is a 25% shareholder.[84]

To determine whether the 25% ownership threshold is met, all securities allocated to a participant's account are treated as being owned by that participant.[85] However, persons ineligible to receive an allocation *solely* because they are lineal descendants of the taxpayer may receive an allocation of employer securities acquired in a qualified sale provided the total amount of securities so allocated to all lineal descendants does not exceed 5% of all employer securities acquired in the qualified sale.[86]

ESOPs which acquire securities in a qualified sale must provide that the prohibitions on allocations to the sellers, family members and 25% shareholders will be satisfied.[87] However, if the violation occurs during the nonallocation period, *i.e.*, more than 10 years after the securities were originally allocated, such restrictions shall not apply.[88]

K. Special Rules

Effective December 31, 1986, the Act amends §401(a)(22) to provide that the §409(e), pass through voting requirement will not apply to any employees in the business of publishing newspapers, and who are participants in any defined contribution plan established and maintained by their employer whose stock is not publicly traded.[89] In addition, nonvoting common stock of such an employer will be treated as employer securities if (1) the employer has a class of nonvoting common stock outstanding; and (2) the shares which the ESOP acquires have been issued and outstanding for at least 24 months.[90] This provision applies to stock acquisitions after December 31, 1986.[91] The Act also provides certain limited transition rules.[92]

L. Miscellaneous Technical Corrections

In addition to the changes discussed above, the Act also makes several technical corrections to provisions which

have an impact on ESOPs. First, the Act makes several amendments to §1042, regarding the nonrecognition of gain on sales of stock to ESOPs or §1042(c) worker cooperatives. Second, the Act also amends §2210 regarding the liability for payment of the estate tax in cases where employer securities are transferred to an ESOP or an eligible worker-owned cooperative.

1. Section 1042 Nonrecognition Rules

Act §1854(a) amends the §1042(b) requirement that the ESOP or cooperative must own at least 30% of the employer securities after the sale. Applicable to sales after July 18, 1984 and before the date of enactment, the ESOPs or cooperative must own at least 30% of either the actual securities outstanding or their value. §1042(b)(2). Applicable to sales after the Act's enactment date, the ESOP or cooperative must own, immediately after the sale, at least 30% of either the total number of shares of all classes of stock (other than §1504(a)(4) preferred stock) or the value of all outstanding stock of the corporation which issued the qualified employer securities.[93] The Act also provides that stock ownership for §1042(b) purposes shall be determined under the attribution rules of §318(a)(4). This provision applies to sales after May 6, 1986. Act §1854(a)(1)(B)(i).

The Act also amends the §1042(c)(4) definition of qualified replacement property.[94] The Act clarifies that qualified replacement property is limited to securities which are issued by a domestic operating company other than the corporation (or a member of the same controlled group) that issued the securities involved in the nonrecognition transaction.[95] A domestic operating corporation, generally, is a corporation more than 50% of the assets of which were, at the time the securities were purchased, used in the active conduct of a trade or business.[96] Section 581 or 583 financial institutions and insurance companies are included in the definition of an operating corporation.[97] If the corporation issuing the qualified replacement property either controls or is controlled (within the meaning of §304(c)) by one or more other corporations, all the corporations will be treated as one corporation for purposes of determining whether the corporation is a domestic operating corporation or the corporation which issued the qualified securities.[98]

The Act also clarifies that securities issued by a government or political subdivision will not be considered qualified replacement property.[99]

The Act further provides that §1042(a) nonrecognition treatment does not apply to any gain on the sale of qualified securities which is includible in the gross income of any subchapter C corporation.[100] This amendment is generally effective for sales after March 28, 1985, except it will not apply to sales made before July 1, 1986, if made pursuant to a binding contract in effect on March 28, 1985, and at all times thereafter. Act §1854(a)(6)(B)and (C).

Effective for dispositions after the date of enactment, in taxable years ending after that date, the Act also clarifies the coordination between the §1042 requirement that gain be recognized upon the disposition of any qualified replacement property and other provisions providing nonrecognition treatment.[101] New §1042(e) overrides other nonrecognition provisions and requires that gain realized upon disposition of qualified replacement property be realized at the time of the disposition. Gain, however, will not be recognized upon: (1) dispositions at death; (2) dispositions by gift; (3) certain exchanges in the event of a reorganization; or (4) subsequent sales by an ESOP in a §1042(a) transaction.[102] The amount of gain that may be recognized is limited to the amount that was previously unrecognized due to the acquisition of qualified replacement property.[103] A special rule applies in the case of a corporation controlled (within the meaning of §304(c)) by the taxpayer seeking nonrecognition treatment. If the taxpayer controls the corporation issuing the qualified replacement property, the taxpayer is treated as having disposed of the qualified replacement property when the corporation disposes of a substantial part of its assets other than in the ordinary course of its business.[104]

Section 1042(e) applies to dispositions after the date of the enactment of the Act (October 22, 1986), in taxable years ending after such date.[105]

2. Section 2210 Estate Tax Liability Changes

The Act amends §2210 to clarify that, with respect to decedents dying after September 27, 1985, only executors of estates which are eligible to make deferred payments of estate taxes under §6166 may be relieved of estate tax liability under §2210.[106] The Act further clarifies that the transfer of employer securities to an ESOP or eligible cooperative will not be deemed a disposition or withdrawal triggering the acceleration of tax payments under §6166(g).[107] Moreover, after the transfer, the ongoing ability of the ESOP or cooperative and the estate to make installment payments applicable to their respective interests shall be tested separately.[108] Thus, cumulative dispositions and withdrawals of amounts up to 50% of the estate's remaining interest would be permitted without triggering the acceleration of any unpaid tax.[109] Cumulative dispositions or withdrawals of up to 50% of the interest transferred to the ESOP or cooperative would also be allowed without triggering acceleration.[110]

The Act also provides that ESOP distributions to participants on account of death, disability, retirement or separations from service which result in a one year break in service, will not trigger the acceleration of any unpaid tax.[111] Moreover, no executor will be relieved of estate tax liability due to a transfer to an eligible cooperative unless that cooperative guarantees the payment of the tax liability.[112]

Chapter 53

WELFARE PLANS

Taina E. Edlund, Esq.
Diane J. Fuchs, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Pre-1986 TRA Law

Under pre-1986 TRA law, statutory employee benefit plans were subject to disparate nondiscrimination rules. Indeed, some plans were not subject to any nondiscrimination rules. Generally, if a plan favored highly compensated employees, the income tax exclusion for either all employees receiving the benefit or only the employee in whose favor discrimination is prohibited was denied. No uniform definition of highly compensated employee, however, applied to statutory employee benefit plans. Due to these differing standards, an employer could maintain two different types of plans for the same group of employees, and have one considered discriminatory, while the other might satisfy the applicable Code standards.

1. Health Plans

Under pre-1986 TRA law, no nondiscrimination tests applied to health benefits provided under a §105 insured employer-sponsored medical reimbursement plan. If, however, benefits were provided under a §105(h) self-insured medical reimbursement plan, a highly compensated employee could exclude a medical reimbursement only to the extent that the plan did not discriminate in favor of highly compensated employees, *i.e.,* amounts in excess of the benefits provided rank-and-file employees, known as "excess reimbursements," were taxable to the highly compensated.

Self-insured plans were considered discriminatory if they favored highly compensated employees regarding eligibility or benefits. Under the eligibility test of §105(h)(3), the plan was required to benefit (1) at least 70% of all employees, (2) at least 80% of all eligible employees, but only if 70% of all employees were eligible to participate, or (3) a class of employees that did not discriminate in favor of the highly compensated. In determining whether these criteria were met, an employer could exclude (1) employees who had not completed three years of service, (2) employees who had not reached age 25, (3) part-time or seasonal employees, (4) employees covered by a collective bargaining agreement, and (5) nonresident aliens earning no income from sources within the United States. In addition, all benefits provided for participants who are highly compensated employees were also required to be provided for the nonhighly compensated. Highly compensated employees were defined as (1) the five top salaried officers, (2) shareholders owning (after the application of §318) more than 10% in value of the employer's stock, and (3) employees in the top 25% of employees by salary (excluding nonparticipants and employees who are excludable for purposes of the eligibility test).

2. Group-Term Life Insurance Plans

Section 79 permits the exclusion of up to $50,000 of the cost of group term life insurance. Under pre-1986 TRA law, if a group term plan discriminated, key employees could not exclude the first $50,000 of the insurance cost. To be considered nondiscriminatory, the plan was required to satisfy one of the following eligibility tests:

(1) the plan had to benefit at least 70% of all employees;

(2) at least 85% of all participants had to be non-key employees;

(3) the class of employees receiving benefits must not have discriminated in favor of key employees; and

(4) if the plan was part of a cafeteria plan, the cafeteria plan requirements had to be met.

For purposes of these rules, an employer could exclude (1) employees who had not completed three years of service, (2) part-time and seasonal employees, (3) employees covered by a collective bargaining agreement, and (4) nonresident aliens having no income from sources within the United States.

All benefits available to key employees were required be available to all other employees. Group term benefits were not considered discriminatory, however, simply because the amount of life insurance provided bore a uniform relationship to compensation. A key employee was generally defined in the same manner as under the qualified plan top-heavy rules. Thus, key employees were officers, the top 10 owner-employees, 5% owners and 1% owners receiving at least $150,000 in annual compensation. If, at any time during the current year or any of the four preceding years, an employee fell into one of these categories, he or she would be a key employee in the current year.

3. Group Legal Services Plans

Section 120 permits an exclusion for contributions to, or services provided under, an employer-maintained group legal services plan. For the exclusion to be available, the plan must benefit a class of individuals that does not discriminate in favor of employees who are officers, shareholders, self-employed individuals or highly compensated. Moreover, the contributions or benefits provided under the plan may not discriminate in favor of these employees. For

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

purposes of testing for discrimination, employees covered under a collective bargaining agreement may be disregarded. In addition, the exclusion was not available if more than 25% of the amounts contributed during a year are provided for 5% owners or their spouses or dependents.

4. Educational Assistance Programs

Amounts paid or expenses incurred (up to $5,000 annually) under an employer-provided educational assistance program are excludable from income under §127. The exclusion, however, is not available if the plan discriminates in favor of employees who are officers, owners or highly compensated (or their dependents). Employees covered by a collective bargaining agreement may be excluded in determining whether the program discriminates. Moreover, no more than 5% of the amounts paid or incurred by the employer may be provided for 5% owners (or their spouses or dependents).

5. Dependent Care Assistance Programs

Section 129 provides an exclusion from income for amounts paid or incurred for an employee under a dependent care assistance program. For the exclusion to be available, the program must benefit a class of employees which does not discriminate in favor of employees who are officers, owners or highly compensated (or their dependents). Moreover, contributions or benefits provided under the plan may not discriminate in favor of these employees. Further, under the applicable concentration test, no more than 25% of the amounts paid or incurred may be provided for 5% owners (or their spouses or dependents). Employees covered under a collective bargaining agreement may be excluded in making the discrimination determination.

6. Welfare Benefit Funds

A voluntary employees' beneficiary association (VEBA) or a group legal services which is part of an employer plan is not tax-exempt unless the plan satisfies the §505(b) nondiscrimination rules. Thus, benefits may not be provided to a classification of employees which discriminates in favor of highly compensated employees. Moreover, no class of benefits may discriminate in favor of highly compensated employees.

7. Cafeteria Plans

Cafeteria plans are plans that offer participants a choice between cash and one or more employee benefits. The availability of these benefits choices on a nondiscriminatory basis does not give rise to the constructive receipt of income. If the plan discriminates in favor of the highly compensated, however, benefits are included in income.

B. Reasons for Change

According to the Conference Report, the provision of tax-favored employee benefits fulfills "important social policy objectives, such as increasing health insurance coverage among taxpayers who otherwise would not purchase or could not afford such coverage.[1] In enacting more stringent nondiscrimination rules, Congress indicated that these objectives would be furthered only if such benefits were available to a broader cross-section of employees. Moreover, under pre-TRA law, the definition of the prohibited group for discrimination purposes was vague, causing confusion.[2] Similarly, little guidance was provided under pre-TRA law regarding whether a pattern of coverage discriminated in favor of prohibited group members.

II. Overview

Code §89, as enacted by Act §1151(a), sets forth mandatory nondiscrimination rules for health and group term life insurance plans. Section 89 also, at the employer's election, may apply to other statutory employee benefit plans. These rules prohibit discrimination in favor of highly compensated employees (a term which Code §89 defines in a uniform manner). Health plans and group term life insurance plans may satisfy the nondiscrimination rules in one of two ways: by meeting an 80% coverage test or by satisfying a three-prong eligibility test plus a benefits test. Statutory employee benefit plans to which the nondiscrimination rules are electively applied must satisfy the three-prong eligibility test plus the benefits test. The alternative 80% coverage test is not available to these plans. In determining whether a plan discriminates, certain employees may be excluded from consideration.

An employer may choose to apply the nondiscrimination rules on the basis of separate lines of business. Each option or different benefit offered under a plan, however, is treated as a separate plan and must be tested separately. Other special rules also apply in determining whether certain statutory employee benefit plans are discriminatory.

If a plan discriminates, highly compensated employees must include the value of the discriminatory excess in gross income. The value of this excess varies depending on the type of plan involved. In the case of health and group-term life insurance plans, the discriminatory excess is determined with regard to the value of coverage provided. The value of benefits provided is the measure for all other statutory employee benefit plans.

The Act also revised the plan formality, permanence and exclusivity requirements. First, the pre-TRA law writing, enforceability and permanence requirements were extended to qualified tuition reduction programs, group legal services plans, cafeteria plans, educational assistance programs, dependent care programs, §132 fringe benefit programs and benefits provided under a welfare benefit fund. Second, two additional requirements were added: (1) employees must be given reasonable notice of available benefits; and (2) the plan must be maintained for the exclusive benefit of the employees. If a plan fails to meet these requirements, the value of the benefits provided (rather than the value of coverage) is included in the gross income of employees, to the extent the benefits are attributable to employer contributions.

The Act also imposed reporting requirements on employers maintaining discriminatory plans or maintaining plans failing to meet the writing, permanence and exclusiv-

[1] H.R. Rep. 99-841, 99th Cong., 2d Sess., p. II-650 (1986) ("Conference Report").

[2] *Id.*

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ity requirements. In such cases, the amount to be included in gross income must be reported to the affected employee and the IRS on Form W-2. If the employer fails to report these amounts, a penalty is imposed. The amount of the penalty generally equals the total value of all employer-provided benefits of the same type provided to the employee multiplied by the highest individual tax rate. This penalty is imposed in addition to any other penalties imposed under either §6652 or §6678. The penalty tax is nondeductible and may not be offset by credits or deductions. The penalty is imposed even though the employee includes part or all of the nonexcludable benefits in income.

The Act also modified the Code provisions pertaining to cafeteria plans. The Act amended the definition of a cafeteria plan to include a plan under which a participant may elect only between qualified benefits. A revised benefits test is also imposed which requires that the qualified benefits provided to key employees cannot exceed 25% of the aggregate of such benefits for all employees. An employer, however, may limit the option elections of a highly compensated employee to ensure that the nondiscrimination rules are satisfied. The uniform definitions of highly compensated employee, excludable employee and employer also apply to cafeteria plans.

The general effective date of the nondiscrimination rules is for plan years beginning after the later of (1) December 31, 1987 or (2) the earlier of December 31, 1988, or the date which is three months after the issuance of regulations.

III. Detailed Analysis

A. Plan Formality, Permanence and Exclusivity Requirements

Under pre-1986 TRA law, accident or health plans and group term life insurance plans were required to meet the following requirements:

(1) The plan had to be in writing;

(2) The employees' rights under the plan had to be legally enforceable; and

(3) The plan had to be established with the intention of being maintained indefinitely.

The Act extended these requirements to qualified tuition reduction programs, group legal services plans, cafeteria plans, educational assistance programs, dependent care programs, miscellaneous §132 fringe benefit programs and benefits provided under a welfare benefit fund.[3]

In addition, the Act added two other requirements:

(1) Employees had to be provided reasonable notice of the nature of the benefits available under the plan; and

(2) The plan had to be maintained for the exclusive benefit of the employees or their spouses and/or dependents.[4]

The Act provides that multi-employer plans do not fail to meet the exclusive benefit requirement simply because employers' contributions are commingled and used to pay each other's benefits.[5]

The Conference Report offers some clarification of the requirement that a plan be legally enforceable. In essence, the employer may not retain the discretion to determine when, and to whom, benefits are payable. The legislative history states that a plan will not be considered legally enforceable if it is discretionary with the employer.[6] For instance, a health plan which permits an employer to reimburse medical expenses at its discretion would not be legally enforceable, since the employee could not compel payment.[7] A plan, however, will not fail to satisfy the legal enforceability requirement simply because an employer may terminate the plan respecting claims which have not been incurred by the time of termination. If the employer maintains the right to terminate the plan with respect to incurred claims, however, the employee's right to payment of claims will not be considered legally enforceable and, therefore, employees will be taxed on the value of their benefits.[8]

Observation: Although the Conference Report is ambiguous, the failure of a plan to restrict an employer's right to terminate a plan will render benefits taxable even if the right is never exercised.

Comment: The Conference Report offers no explanation of what is meant by "reasonable notification." A plan which complies with ERISA's summary plan description requirements would probably be deemed, under regulations, to satisfy the reasonable notification requirement. Law developed under ERISA may be of use in clarifying the post-TRA exclusive benefit requirement. Cases and rulings regarding the §401(a)(2) exclusive benefit requirement for qualified plans also may be relevant in interpreting this requirement.

If a plan fails to satisfy the formality, permanence, exclusivity, etc. requirements, the value of the benefits provided (rather than the value of the coverage) will be included in the employee's gross income in the taxable year in which the benefits are received, to the extent they are attributable to employer contributions.[9] For instance, if a health plan fails to meet these requirements, the services provided under the plan and any reimbursements received are included in income.[10] Both highly and nonhighly compensated employees must include such amounts in gross income.

Comment: Presumably, the employee also includes in gross income the value of benefits provided to the employee's spouse or dependents, with no income being recognized by the spouse or dependents.

[10] *Id.*

B. Reporting Requirements

If a plan discriminates in favor of highly compensated employees, the employer must report the amount of the discriminatory excess to all affected employees and the IRS.[11] If the plan fails to meet the writing, permanency, exclusivity, etc. requirements, the amount includible in gross income also must be reported.[12] This amount is reported on Form W-2 by the due date, including extensions, for the filing of the form.[13]

If the employer (including a tax-exempt employer) fails to report the includible amount, §6652(l) imposes a penalty upon the employer.[14] The penalty is calculated by multiplying the total value of all employer-provided benefits of the same type provided to the employee by the highest individual income tax rate.[15] For purposes of determining the amount of employer-provided benefits, the value of the benefits provided, rather than the coverage, is to be used.[16] In the case of group term life insurance, the value of the benefit will equal the higher of the table cost or the actual cost of all coverage.[17]

The penalty tax of §652(l) is imposed in addition to any other penalties applicable under either §6652 or §6678.[18] The penalty, however, may be applied only once per employee per year.[19] The penalty tax is nondeductible and may not be offset by any credits or deductions.[20] Moreover, the penalty tax is due even though the employee actually includes part or all of the benefits in gross income.[21]

The penalty may be avoided if reasonable cause exists for the failure to comply with §89(l).[22] The Conference Report states that a reasonable difference in the valuation of health benefits prior to the issuance of valuation regulations constitutes reasonable cause.[23]

Comment: Presumably, precedent and regulations regarding what constitutes reasonable cause for not filing an annual report will be relevant in determining whether reasonable cause exists under §6652(l)(3).

C. Nondiscrimination Rules

1. Mandatory Versus Elective Application of Section 89

Section 89 mandatorily applies to §105(e) health or accident plans (hereinafter referred to as "health plans") and §79 group term life insurance plans.[24] Section 105(e) health plans include both insured and self-funded plans.[25] Section 89 does not apply, however, according to the Conference Report, to disability coverage to the extent that the proceeds payable under such coverage are included in the employee's gross income.[26] The Conference Report also provides that plans which provide ancillary benefits such as dental care, vision care or physical examinations are subject to §89.[27]

An employer may elect to treat any of the following plans as statutory employee benefit plans, thereby, making them subject to the §89 nondiscrimination tests:

(1) a §120(b) group legal services plan;

(2) a §127(b) educational assistance program; or

(3) a §129(d) dependent care assistance program.[28]

If an employer election is made, the plan need not satisfy any other additional nondiscrimination tests (aside from the §89 tests), provided the plan satisfies the applicable concentration of benefits.[29] Group legal service plans and educational assistance programs are not mandatory statutory employee benefit plans because the Code sections authorizing tax-favored treatment for such plans are scheduled to expire, unless renewed, prior to the effective date of §89.[30] If Congress extends the expiration date of these provisions, however, the Conference Report anticipates that they will be subject to the §89 rules.

2. Eligibility Tests

a. 50 Percent Test

Section 89(d)(1)(B) requires that at least 50% of the employees eligible to participate in a plan must be nonhighly compensated employees. This requirement will be satisfied if the alternative percentage test of §89(d)(2) is met. The §89(d)(2) alternative percentage test is met if the percentage of highly compensated employees who are eligible to participate does not exceed the percentage of nonhighly compensated employees eligible to participate. In illustrating this provision, the Conference Report considers an employer with 20 employees, 15 of whom are highly compensated.[31] Since more than 50% of its employees are highly compensated, the employer would fail the 50% test even if all of its employees were eligible to participate in the plan. If however, all employees are eligible, the employer would satisfy the alternative percentage test because the percentage of eligible highly compensated and nonhighly compensated employees would be the same, *i.e.*, 100%.

In applying either the 50% test or the alternative eligibility percentage test, comparable *health* plans may be aggregated.[32] Comparable plans, for purposes of the §89 rules, are plans of the same type in which the smallest benefit available to any participant is at least 95% of the

largest employer-provided benefit available to any participant in any such plan.[33]

b. 90/50 Percent Test

Section 89(d)(1)(A) requires that, for a plan to satisfy the §89(d) eligibility requirements, at least 90% of all nonhighly compensated employees (1) must be eligible to participate in the plan; and (2) if participating, must be eligible for an employer-provided benefit equal to at least 50% of the most valuable employer-provided benefit available to any highly compensated employee.[34]

For purposes of the 90/50% test, all plans of the same type (*i.e.*, all benefits excludable under the same Code section) are aggregated.[35] Therefore, if the employee is eligible to participate in two plans of the same type, the employee will be considered to be eligible for a benefit equal to the total value of benefits under both plans.[36] Similarly, in determining the highly compensated employee with the most valuable benefit, benefits under all plans of the same type are aggregated.[37]

In the case of health and group term life insurance plans, a participant's employer-provided benefit equals the value of that portion of the coverage provided which is attributable to employer contributions.[38] Tables assisting in the valuation of health plan coverage are to be issued.[39] For group term plans, the value of coverage is the §79(c) Table I cost, computed as though the employee were 40 years of age.[40] In applying the benefits test and the 50% component of the 90/50% test to a group term life insurance plan, the employer-provided benefit is the cost of insurance provided in the plan year under §79(c) for an individual who has attained age 40.[41] The benefit may be adjusted depending on an employee's compensation, unless a group term plan is aggregated with plans of a different type.[42] This adjustment is made by multiplying the amount by a fraction. The numerator is a uniform amount and the denominator is the employee's compensation.[43]

For purposes of this rule, the Conference Report states that a uniform definition of compensation enacted by the 1986 TRA for retirement plan and fringe benefit purposes applies.[44] Thus, compensation in excess of $200,000 is *not* taken into account in applying the benefits tests and the 50% component of the 90/50% test. Group-term life insurance coverage in excess of $50,000, however, cannot be disregarded, for this purpose, *i.e.*, it is treated as if provided through tax-favored dollars.[45]

Available salary reductions are not considered for purposes of the 90/50% test.[46] Moreover, to the extent that the availability of other benefits is contingent upon a salary reduction election, the contingent benefits can be allocated among different plans in any reasonable manner allowed by the Secretary and determined by the employer.[47]

With respect to health plans, in determining whether the 50% component of the 90/50% test (or the special 80% coverage test for health plans of §89(f)) is met, an employer may elect to separately test coverage of spouses and dependents by such plans and to consider only those employees with a spouse or dependent with respect to such coverage.[48] The Conference Report clarifies that coverage of an employee's spouse or dependent is tested together regardless of whether the employer maintains separate plans for employees with one spouse or dependent and for employees with two or more dependents.[49]

c. General Nondiscrimination

Section 89(d)(1)(C) provides that a plan may not contain any provision relating to eligibility that, by its terms or otherwise, favors highly-compensated employees. The Conference Report clarifies that §89(d)(1)(C) is not intended to disqualify arrangements where discrimination is quantifiable.[50] (This type of discrimination is covered by the various mathematical tests provided in §89.) Thus, the mere fact that an employer maintains separate plans for salaried and hourly employees and the benefits available under the hourly plan are less valuable than those available under the salaried plan would not cause the plan to be considered discriminatory. The §89(d)(1)(C) nondiscrimination test is designed to prevent more subtle forms of discrimination which are only apparent from an investigation of the facts and circumstances surrounding a plan. For instance, a plan may provide a benefit designed to satisfy the "highly individualized needs" of highly compensated employees, while ostensibly providing the same benefits to all employees. Thus, a plan providing unusual coverage for a rare disease to which only the owner or owner's dependent is subject, is discriminatory.[51]

3. Benefits Test

a. In General

Under §89, the average employer provided benefit actually received (*i.e.*, actual coverage) by nonhighly compensated employees under all plans of the same type must equal at least 75% of the employer-provided benefit received by highly compensated employees.[52] The "average employer-provided benefit" is an amount equal to the aggregate employer-provided benefit that is received by the employer's highly and nonhighly compensated employees, respectively, under all plans of the same type divided by the total number of highly or nonhighly compensated employ-

ees (whichever applies), regardless of whether they are covered by such plans.[53]

Plans of different types, other than health plans, may be aggregated for purposes of the benefits test, if the employer so elects under §89(g)(4).[54] Thus, the employer can aggregate the benefits provided under a group term life insurance plan and all group legal services plans (if the employer elects to treat the group legal services plans as statutory employee benefit plans).[55] Moreover, an employer may aggregate all accident and health plans with other types of plans in order to determine if the benefits test is met with respect to those other plans other than health plans.[56] If an employer chooses to aggregate, it must aggregate all plans of the same type. For example, if an employer wishing to aggregate maintains a group term life insurance plan and two group legal services plans, it must aggregate both group legal services plans with the group-term life insurance plan, not just one.[57]

If different types of plans are aggregated, the definition of excludable employee, *infra*, must be modified accordingly.[58] Thus, in determining which employees are excludable for purposes of determining the average employer-provided benefit, the definition is applied as if the aggregated plans constituted one plan.[59] The lowest age and service requirements of any of the aggregated plans, therefore, will apply.[60] Moreover, if members of a collective bargaining unit are not excluded for one plan, they cannot be excluded for the group of plans.[61] Therefore, in determining the average employer-provided benefit, the denominator of the fraction will be all nonexcludable employees as determined under the most expansive definition of any of the aggregated plans.[62]

b. Plan Safe Harbor

The Conference Report instructs the Secretary to prescribe regulations providing a safe harbor benefits test so that all benefits excludable under the same provision need not be valued.[63] Since the definition of a plan, *infra*, requires that all features be identical, any plan would, standing alone, satisfy the benefits test if based on the entire year, the percentage of nonhighly compensated employees benefited is not less than 75% of the highly compensated employees benefited.[64] Under this rule, an employer with multiple plans of the same type need aggregate plans only insofar as necessary to avoid discriminatory status. The employer thereby need only value the aggregated group. In an example provided in the Conference Report, for instance, where an employer maintains 10 health plans, one of which is discriminatory, the employer may aggregate the discriminatory plan with only so many of the other nine plans as is necessary to allow the group, as a whole, to satisfy the benefits test.[65]

c. Special Dependent Care Assistance Test

The Act applies a special benefits test to dependent care assistance plans which are not statutory employee benefit plans. In essence, the general benefits test, *supra*, applies with two modifications.[66] First, the average employer-provided benefit received by nonhighly compensated employees must be at least 55%, rather than 75%, of the average employer-provided benefit received by highly compensated employees.[67] Second, for purposes of applying the average benefits test to salary reduction amounts, employees with compensation, as defined by §414(q)(7), below $25, 000 per year will be disregarded.[68] If dependent care is provided both through salary reduction and otherwise, the treatment of employees earning less than $25,000 will be prescribed by regulations to be promulgated by the Secretary.

4. Alternative Test

A health plan or group term life insurance plan will not be considered discriminatory even if it fails the eligibility and benefits tests, discussed *supra*, so long as it complies with the alternative test set forth by §89(f). Under the alternative test, the plan will be considered nondiscriminatory if it benefits at least 80% of an employer's nonhighly compensated employees.[69] For purposes of this test, comparable plans may be aggregated, as described *supra*.[70] If, however, the plan (or plans) contain any provision which, by its terms or otherwise, discriminates in favor of highly compensated employees, the alternative test will not apply and the plan will have to satisfy the regular §89 eligibility and benefits tests.[71] Since the alternative test applies only to "insurance-type plans" (defined as accident or health plans and group-term life insurance plans, for purposes of the alternative test, eligibility for coverage is not sufficient; an individual must actually receive coverage to be considered as benefiting under the plan.[72]

Note: Employers having only one plan or a group of comparable plans are likely to satisfy this test, especially where such plans require no or minimum employee contributions.

5. Amount Includible in Income

If a plan discriminates in favor of highly compensated employees, §89(a) provides that an amount equal to the highly compensated employee's "excess benefit" will be included in the gross income of such employee in the employee's taxable year within which the plan year ends. In general, this discriminatory excess is the amount of the employer-provided benefit (including elective contribu-

tions) which would have to be paid in after-tax dollars to keep the plan nondiscriminatory.[73]

Specifically, a highly-compensated employee's excess benefit is defined as the excess of the employee's employer-provided benefit over the "highest permitted benefit." [74] To determine the highest permitted benefit, the nontaxable benefits of all highly compensated employees (beginning with employees with the greatest nontaxable benefits) under the plan are reduced by the amounts necessary to make the plan nondiscriminatory.[75] In reducing benefits, the Conference Report provides that, except as provided in regulations, benefits are reduced so as to satisfy the objective nondiscrimination tests in the following order:

(1) the 50% test;

(2) the 90/50% test; and

(3) the benefits test.

Alternatively, benefits may be reduced to satisfy the alternative 80% test.[76] The determination of the discriminatory excess with respect to the third eligibility test which generally prohibits discrimination in favor of highly compensated employees is to be made in accordance with regulations to be promulgated.[77]

In computing the excess benefit with respect to any type of benefit, all plans of the employer of the same type are taken into account.[78] In the case of health plans or group-term life insurance plans, the amount includible is the value of the coverage provided.[79] In the case of group-term life insurance, the value of coverage equals the greater of the cost of coverage under §79(c) (*i.e.*, the Table I rate) or the actual cost of coverage.[80] The Secretary is directed to issue tables assisting in the valuation of health plan coverage.[81] In the case of all other statutory employee benefit plans other than health plans and group-term life insurance, the discriminatory excess is determined with reference to the value of employer-provided benefits, not the value of coverage.[82]

D. Special Health Plan Rules

1. Separate Testing

If an employer maintains a health plan providing family coverage, the employer may elect to separately test the coverage for employees and the coverage for spouses or dependents.[83] All plans covering one or more family members of an employee are included in the definition of family coverage, regardless of whether a particular plan is limited to coverage of one family member, while another plan covers two or more members.[84] Separate testing can be applied only for purposes of the benefits test, the alternative 80% test and the 50% component of the 90/50% test.[85] The employer, however, may not aggregate with other non-health plans only family coverage or employee coverage.[86]

In separately testing coverage for spouses or dependents for purposes of the alternative 80% test and the 50% prong of the 90/50% test, an employer may consider only employees with spouses or dependents.[87]

Comment: Separate testing under the 80% test appears to have little value since 80% of nonhighly compensated employees, presumably, must still be covered. In applying the 90/50 test, however, separate testing may be more useful. For example, assume a plan provides uniform no cost coverage to all employees as well as for the family. If more than 10% of nonhighly compensated employees have no family, the plan fails the test since the value of coverage provided to at least 10% of nonhighly compensated employees is less than 50% of the value of coverage for employees with families. Where separate testing is used, however, the value of coverage provided to the families of the highly compensated may be disregarded.

For purposes of the benefits test, however, the employer may disregard only employees with spouses or dependents covered by another health plan providing core benefits which is maintained by another employer.[88] "Core benefits" are not specifically defined in the Act. Noncore benefits, however, according to the Conference Report and the Senate Report, consist of coverage for dental, vision, psychological and orthodontia expenses and elective cosmetic surgery.[89] If an employee or family member is excluded under this rule, any coverage actually provided to either the employee or to family members is disregarded in calculating the average employer-provided benefit fraction.[90] All of the employee's dependents must be covered by the other employer plan for this "core benefits" rule to apply.[91] Moreover, the core benefits rule does not apply if the employer's accident or health plan is aggregated with other plans in applying the benefits test to such other plans.[92] The employer may, however, in no event disregard highly compensated employees having coverage worth an amount that exceeds 133⅓% of the average employer-provided benefit for nonhighly compensated employees.[93] Moreover, if family coverage is tested separately, the family of a highly compensated employee may not be disregarded if such *family* coverage has a value exceeding 133⅓% of the average employer-provided benefits for the families of the nonhighly compensated.[94]

2. Sworn Statements

Any employer wishing to elect these optional separate testing rules must obtain (and preserve) sworn statements,

to be collected on IRS forms, regarding its employees' family and coverage status.[95] The statements need not be notarized.[96] The statements must include the name of the insurer and employer providing other coverage.[97] Absent a sworn statement, nonhighly compensated employees are presumed to have neither a family nor other core benefits coverage.[98] On the other hand, absent a sworn statement, highly compensated employees are presumed to have both a family and such other coverage.[99]

In lieu of obtaining these statements from all employees an employer may secure statements from a statistically valid sample in accordance with regulations to be promulgated.[100] This sampling must be performed by an independent third party.[101] If sampling is used, the rules regarding collection of statements and presumptions still apply.[102] The sampling, along with other information about it as may be required by the Secretary, must be attached to the employer's return.[103]

3. Part-Time Employees

In applying the benefits test to health plans, the employer may adjust the benefits provided to certain part-time employees.[104] First, if an employee normally works less than 22½ hours per week, the employer may deem benefits provided to have a value equal to twice that of the actual value of coverage provided. Second, if an employee normally works less than 30 hours per week, benefits provided may be deemed to have a value equal to up to 1½ times the actual value.

If the employer elects to use this special rule, it must be applied on a uniform nondiscriminatory basis for all employees.[105] Moreover, in applying the 50% component of the 90/50 test, the part-time employee rule applies to available benefits.[106] The rule will not apply for any purpose, however, in a plan year unless, during that year, more than 50% of the nonexcludable employees (determined *without* regard to plan provisions) work more than 30 hours per week.[107]

Note: The deemed increase in benefits due to the part-time employee rule does not apply to benefits provided pursuant to elective contributions.[108]

4. Coordination of Benefits

Sections 89(j)(9) and (10) provides rules regarding the coordination of a plan with health and disability benefits provided under any federal, state, or foreign law or any other health plan covering the employee or his or her family members.[109] If a plan is so coordinated, it will not fail to meet the nondiscrimination requirements regarding health benefits simply because the amount of those benefits are coordinated in a manner that does not discriminate in favor of highly compensated employees.[110]

In addition, in applying the nondiscrimination tests to health plans, the conferees authorized the Secretary to promulgate regulations disregarding state-mandated benefits in certain instances.[111] As an example, the Conference Report states that, when comparing state-mandated benefits, benefits that are mandated in one state but not in another may be disregarded.[112] Only ancillary, rather than core, benefits, however, may be disregarded.[113] Thus, if a state mandated an HMO option, the value of coverage under the HMO may not be disregarded.[114]

E. Special Group-Term Life Insurance Rule

In applying the benefits test and the 50% component of the 90/50% test to a group-term life insurance plan, the employer-provided benefit is defined as the cost of insurance provided in the plan year under §79(c) (*i.e.*, the Table I rates) for an individual who has attained age 40.[115] The benefit may be adjusted based on an employee's compensation, unless a group-term plan is aggregated with plans of a different type.[116] This adjustment is made by multiplying the benefit amount by a fraction. The numerator of the fraction is a uniform amount for all plans. The denominator is the employee's compensation.[117] For purposes of this rule, the Conference Report states that the TRA-enacted uniform definition of compensation for retirement and welfare benefit plan purposes applies.[118] Thus, compensation in excess of $200,000 shall *not* be taken into account in applying the benefits tests and the 50% component test.

F. Highly Compensated Employees

For purposes of the §89 nondiscrimination rules,[119] qualified tuition reduction programs, group legal services plans, cafeteria plans, educational assistance programs, §132 fringe benefits and welfare benefit funds,[120] the term "highly compensated employee" is defined under §414(q) (in the same manner as under the qualified plan provisions). Section 414(q) defines a highly compensated employee as an employee who, during the plan year or the previous plan year, was:

(1) a 5% owner of the employer;

(2) earned more than $75,000 (indexed for inflation) in annual compensation;

(3) earned more than $50,000 (indexed for inflation) in annual compensation and was in the top 20% of the employer's employees by compensation; or

(4) an officer of the employer within the meaning of §416(i) who received compensation greater than 150% of the dollar limit on annual additions to a defined contribution plan.[121]

An employee not considered highly compensated in the previous plan year, however, will not be considered highly compensated for the current plan year as a result either of officer status or of earning more than $50,000 or $75,000 unless the employee is also one of the top 100 employees of the employer in terms of compensation.[122]

In determining whether an employee is an officer, no more than 50 employees (or, if lesser, the greater of three employees or 10% of the employees) are to be treated as officers.[123] If no officer has compensation in excess of 150% of the defined contribution plan §415 dollar limit on annual additions for the year in question, the highest paid officer of the employer will be treated as an officer for purposes of determining which employees are highly compensated.[124] As in the case of the top-heavy plan rules, a partnership is considered to have officers for this purpose.[125] The determination of the identity and number of highly compensated employees is to be made on an employer-wide basis, rather than on a line of business or operating unit basis.[126]

For purposes of the definition of highly compensated employee, an employee is considered to be in the top-paid group if the employee is in the group consisting of the top 20% of employees ranked by compensation paid that year.[127] In determining the size of the top-paid group, the employer may exclude active employees who (1) have not completed six months of service; (2) normally work less than 17½ hours per week; (3) normally work during not more than six months during any year; (4) have not attained age 21; (5) are covered by a bona fide collective bargaining agreement; or (6) are nonresident aliens receiving no U.S. source income.[128]

The compensation of, and the benefits under, the plan for an individual who is a family member of either a 5% owner or one of the top 10 highly compensated employees are aggregated with the compensation and benefits of such 5% owner or highly compensated employee for purposes of determining whether the employee is a highly compensated employee.[129] Moreover, even if an employee is excluded for purposes of determining the number of employees in the top-paid group, such family members are still subject to this aggregation rule.[130] In the case of health benefits, however, where a family member would be aggregated with a 5% owner or one of the top 10 highly compensated employees, such family member shall be treated as a nonemployee family member.[131] "Family" for this purpose is defined as an employee's spouse and his lineal ascendants and descendants and their spouses.[132]

A former employee is treated as highly compensated if the employee was highly compensated on the date of separation from service or at any time after attaining age 55.[133] The Conference Report directs the Secretary to promulgate regulations treating an employee who continues to perform only *de minimis* services for the employer as separated from service for purposes of determining whether the employee is highly compensated.[134] In determining whether an employee is highly compensated, compensation within the meaning of §415(c)(3) is considered increased by elective contributions under a cafeteria plan, qualified cash or deferred arrangement, SEP and tax-sheltered annuity.[135]

The definition of highly compensated employees, for purposes of the employee fringe benefit rules, applies to years beginning after December 31, 1987.[136]

G. Excludable Employees

In applying the §89 nondiscrimination rules, the following employees may be excluded:

(1) employees who have not completed one year of service (six months in the case of core benefits under a health plan);

(2) employees working less than 17½ hours per week;

(3) seasonal employees normally working no more than six months during a year;

(4) employees who have not reached age 21;

(5) employees covered by collective bargaining; and

(6) nonresident aliens receiving no income from the employer which would constitute U.S. source income.[137]

For purposes of the one year/six month service requirement, an employee is excluded from consideration until the first day of the first day of the first month beginning after completion of the required period of service.[138] In excluding employees, the employer may substitute a shorter period of service, smaller number of hours or months, or lower age specified in the plan for purposes of the period of service, number of hours or months and age requirements, respectively.[139]

Except to the extent provided in regulations, however, an employee may not be excluded unless all employees in that category are excluded.[140] In addition, an exclusion (other than of nonresident aliens) must apply to all employee benefit plans of the employer of the same type.[141] In the case of a cafeteria plan, all benefits under the cafeteria plan

[121] The dollar limit on annual additions to a defined contribution plan currently equals $45,000.

are treated as provided under plans of the same type.[142] These rules do not apply, however, to differences in waiting periods for core and noncore health benefits.[143] The rules described in this paragraph are to be applied separately to lines of business that are treated separately for purposes of §89(h)(5).[144]

The Act also provides that for purposes of testing any plan maintained by an employer, notwithstanding the rules described in the preceding paragraph, employees excludable under the *age and service* requirements of §89(h)(1) may be tested separately if such employees are covered under a plan of the employer which satisfies the requirements of §89 separately with respect to such employees.[145] In addition, the Conference Report provides employer also may elect to test a particular group of excludable employees separately provided that the group is defined in a nondiscriminatory manner, solely with reference to the age or service requirements.

If an employer aggregates plans of different types in order to satisfy the benefits test, the excludable employee provisions apply as though the plans were all of the same type.[146] Thus, for instance, the lowest age or service requirements in any one of the plans would apply.[147]

H. Separate Lines of Business

If the employer establishes to the Secretary's satisfaction that it operates separate lines of business or operating units for *bona fide* business purposes, the eligibility, benefits, and alternative tests may be applied separately to employees in each line of business.[148] The plan must be available, however, to a group of employees which qualify under a classification set up by the employer and found by the Secretary not to be discriminatory in favor of highly compensated employees.[149]

To be considered a separate line of business, §414(r)(2) requires that three threshold conditions be met:

(1) the line of business must have at least 50 employees nonexcludable under §414(g)(8);

(2) the employer must notify the Secretary of its separate treatment; and

(3) the line of business meets the guidelines to be prescribed by regulations or the employer receives a determination from the Secretary that the line of business may be treated as separate.

Whether a separate line of business exists depends on the facts and circumstances.[150] In making this determination, differences between services provided and products produced by claimed separate lines are to be considered.[151] The employer's method of business organization also is relevant.[152]

More than one line of business or operating unit may be aggregated to satisfy the 50 employee requirement.[153] Section 414(r)(3) provides a safe harbor for a line of business if "the highly compensated employee percentages" with respect to the line of business is not less than one-half, nor more than twice, the percentage which highly compensated employees constitute of all employees of the employer. An employer is deemed to meet the 50% requirement if at least 10% of all highly compensated employees perform services solely for such line of business.[154] For purposes of the safe harbor, "highly compensated employee percentage" means the percentage which highly compensated employees performing services for the line of business comprise of all employees performing services for the line of business.[155]

The line of business rule, however, may not be used to circumvent the nondiscrimination tests.[156] Thus, certain job classifications, *e.g.*, hourly or leased employees, are not considered a separate line of business.[157] Moreover, secretaries and other support staff personnel would not comprise a separate line of business from the professional staff.[158] Further, members of an affiliated service group (within the meaning of §414(m)) may not be treated as separate lines.[159] In addition, an operating unit must operate in "a significantly separate geographic area from another operating unit in the same line of business.[160] Two plants in the same city, thus, could not be separate operating units.[161]

The Secretary is directed to promulgate regulations delineating the treatment of employees of a headquarters or home office.[162] The Conference Report clarifies that such employees are to be allocated to one line of business or an operating unit.[163] Such allocation, generally, will be in accordance with the performance of services.[164] Therefore, if the majority of an employee's services are performed for one line of business, the employee must be allocated to that business.[165]

Services provided by other employees for multiple lines of business are also to be allocated. The Conference Report provides that such an allocation is to be made in one of two ways.[166] First, employees may be allocated among lines of business on a pro rata basis in accordance with regulations to be prescribed.[167] Second, an employee may be allocated to any one line of business for which he performs substantial services, provided the allocation does not violate the

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

highly compensated percentage rule as described in the safe harbor.[168] Thus, if a line of business fails the 50% rule, highly compensated employees at headquarters not performing a majority of their services for a particular line of business must be allocated first to the failing line of business.[169] No highly compensated employee may be allocated, however, to a line of business if the allocation causes a violation of the 200% rule (regardless of whether a violation existed prior to the allocation).[170]

The Conference Report also provides that the Secretary should prescribe annual reporting rules for employers using the separate line of business rule.[171] The employer must include the basis for invoking the position. Moreover, if the employer has a separate line of business not falling within the safe harbor rule, that fact must be reported.[172]

The Conference Report directs the Secretary to establish guidelines outlining circumstances in which there is to be special scrutiny of lines of business.[173] As an example, the Conference Report states that, if a plan maintained for a separate line of business is significantly better or worse than that for another line of business, special scrutiny is required.[174] Another example is where a disproportionate amount of the accrued benefits under the plan of the separate line of business is for highly compensated employees.[175]

If a line of business does not satisfy the safe harbor rule and a plan of such business demands special scrutiny, the employer must obtain a determination from the Secretary that the line of business is separately operated for *bona fide* business purposes.

Moreover, if an employer uses the separate line of business rule all of its employees must be considered part of a line of business.[176] For instance, if an employer has 50 employees and 10 other employees not part of any line of business who would be separately tested, the 10 employees will be treated as part of some line of business. A line of business with only 10 employees, however, would need to be aggregated with another line to meet the 50 employee requirement.[177]

The Act also requires that benefits which are attributable to services for a line of business will be considered as provided by that line of business.[178] For purposes of the benefit rule, an employee performing services for more than one line of business who is allocated to one line of business is considered to provide services only for that line of business to which he is allocated.[179]

[178] Act §1115(a) adding §414(r)(5); Conference Report, p. II-525. This benefit rule was substituted for the rule providing that if employees from more than one line of business are eligible to participate in a plan, all of those lines of business would be treated as one.
[179] Conference Report, p. II-525-26.

I. Definitions and Special Rules

1. Time for Testing

The benefits test, the 50% component of the 90/50% test and the comparability tests all are applied on the basis of benefits or coverage provided during the entire year.[180] The Conference Report provides an illustration of the appropriate time for testing.[181] Assume employee A becomes nonexcludable on July 1 and on that date A is covered under a health plan providing coverage valued at $1,000 annually. The plan year is the calendar year so, for that plan year, A receives only $500 of benefits. This $500 is included in the numerator in determining the average employer-provided benefit. The employee, however, is only counted as one-half an employee for purposes of the denominator, since A was only a nonexcludable employee for half of the year.[182] This rule, however, does not apply to group-term life insurance plans if the employer adjusts the value of the benefit based on the employee's compensation.[183]

The Conference Report also provides a rule of convenience for health plans and group-term life insurance.[184] For purposes of applying the benefits test to active employees, an employer may treat employees who separate from service during the last three months of the plan year as continuing to work and receive benefits for the rest of the plan year.[185] Employees separating from service earlier in the plan year may be treated as continuing to work and receive benefits through the end of the month in which they separate.[186] These rules will prevent an employer from having to know the exact date of separation for purposes of calculating the average employer-provided benefit.[187] An employer may deem an employee to have separated from service on only the last day of the month or, in the case of the last quarter, as of the end of the year. After separation, employees will be considered to receive whatever benefit they were receiving before separation so long as that benefit was provided for at least 90 days before the separation.[188] If benefits change during the 90-day period, the relevant figure is the average benefit as calculated from the date the employee first became subject to the nondiscrimination rules to the date of separation from service.[189] This rule of convenience also applies to the alternative 80% test, the 90% component of the 90/50 test, the 50% test and the benefits safe harbor test.[190] For purposes of the eligibility tests, however, employees who have separated from service are deemed to have available, after separation, the benefits available before separation.[191] This benefits rule, however, does not apply in testing benefits actually received by, or available to, former employees.[192]

[189] *Id.*
[190] *Id.*
[191] *Id.*
[192] *Id.*

An additional rule of convenience is provided for employees not requiring any initial period of service for participation in a statutory employee benefit plan (not just health or group-term life insurance plans).[193] For purposes of the benefits test and the 90/50 test, an employer may disregard benefits provided to an employee during the period between commencement of employment and the first day of the calendar month after employment commencement.[194] This rule does not apply, however, to employees who begin work on the first day of the month.[195] Benefits paid during this initial period cannot be disregarded, however, if they relate to another period. Thus, according to the Conference Report, if an employer during the initial period pays for a year's worth of dependent care or provides an annual physical examination, only a proportionate part of the value of such benefit may be disregarded.[196] If initial period rule of convenience is used, the employer must use it for all employees.[197]

2. Special Rules for Dispositions and Acquisitions

If an employer becomes, or ceases to be, a member of a controlled or affiliated service group (within the meaning of §§414(b), (c), (m) or (o)), the requirements of §89 will be deemed to have been satisfied during the "transition period" if:

(1) the §89 rules were satisfied immediately before the acquisition or disposition, and

(2) the coverage under the plan does not change significantly during the transition period (other than due to the disposition in acquisition).[198]

The transition period begins on the date of the disposition or acquisition and ends on the last day of the first plan year beginning after the transaction.[199]

3. Separate Plans

Each option or different benefit offered under a statutory employee benefit plan, including different levels of coverage, is treated as a separate plan and must be tested separately.[200] Coverage under health plans that have different limitations on family coverage are to be treated as separate plans, one plan for individual employee coverage and one for each of the family coverage options. Group-term life insurance coverage that varies in proportion to compensation not exceeding $200,000 is not be to be considered as different options or benefits with respect to varying coverage, unless the plan is aggregated with different types of plans.[201] Moreover, two or more health plans may be treated as a single plan if they are identical in all aspects except that the employer subsidy (not elective contributions) for part-time employees is proportionately reduced on an uniform, nondiscriminatory basis. More than 50% of the nonexcludable employees (determined without regard to plan provisions), however, must work more than 30 hours per week during the plan year in question for this part-time rule to apply.[202]

4. Valuation

The Secretary is directed to prescribe regulations regarding valuation of coverage. Regarding health coverage, values for various standard types of coverage will be set forth in tables establishing the relative values of plans with certain characteristics.[203] These tables can use an identifiable standard plan as a reference point.[204] The tables are to be adjusted to account for the specific group and coverage involved. For example, to determine the value of discriminatory coverage, the actual costs expended may be considered and allocated among all coverages, including discriminatory coverage, on the basis of their relative values, as determined under the prescribed tables.[205] Also, in certain cases, the table values of coverage may be adjusted if the coverage would have been provided at group rates by an insurance company.[206] The Conference Report provides that it would also be appropriate to reduce the table value if the same coverage is provided under more than one plan.[207]

Special rules apply to group-term life insurance.[208] If coverage is found to be discriminatory, however, discriminatory coverage will be valued at the higher of §79(c) table cost or actual cost.[209]

5. Former Employees

The Act provides that, except to the extent provided in regulations, the nondiscrimination tests also apply to former employees.[210] The legislative history suggests that the class of former employees to be tested may be restricted to those employees who have separated from service due to disability or who have retired on or after a reasonable retirement age.[211] Further, employers may limit the class to employees who have retired within a specific time.[212] Reasonable assumptions regarding mortality may be made so that the employer need not determine if former employees are still alive.[213]

6. Self-employed Persons

Self-employed individuals are treated as employees and their earned income is treated as compensation for purposes of applying the nondiscrimination rules to qualified group legal service plans, educational assistance programs and dependent care assistance programs electing statutory employee benefit plan treatment.[214] A sole proprietor is treated as his own employer and a partnership is treated as the employer of each partner.[215]

7. Cafeteria Plans

The Act amends the definition of a cafeteria plan to include a plan under which a participant may elect only between qualified benefits in addition to a plan where a participant may elect between cash and qualified benefits.[216] As under pre-1986 TRA law, a cafeteria plan generally may not include a deferred compensation plan (except for profit-sharing or stock bonus plans that include a qualified cash or deferred arrangement.[217] Plans maintained by §170(b)(1)(A)(ii) educational organizations, however, may include such arrangements to the extent that an employee elects to have the employer pay contributions for post-retirement group life insurance if (1) all contributions for the insurance are made before retirement, and (2) such life insurance does not have a cash surrender value at any time. For purposes of §79, any such insurance is treated as group-term life insurance.[218]

The Act retains the pre-TRA law cafeteria plan eligibility test while changing the applicable benefits test. Under the revised benefits test, the qualified benefits provided to key employees (as defined by §416(i)) cannot exceed 25% of the aggregate of such benefits for all employees under the plan.[219]

Option elections by highly compensated employees, as defined by §414(q), can be limited by the employer so that the nondiscrimination rules are satisfied.[220] The Secretary is to prescribe regulations governing the imposition of these limits.[221] These regulations will ensure that the limits are applied in a nondiscriminatory manner which is consistent with the manner in which the discriminatory excess is allocated under §89, discussed, *supra.*

The Act also makes the following uniform definitions applicable to statutory employee benefit plans to cafeteria plans:

(1) highly compensated employees;

(2) excludable employees; and

(3) employer, including the definition of a leased employee.[222]

The Act also provides for coordination of the revised cafeteria plan provisions with employment tax provisions.[223]

8. Welfare Benefit Funds

For welfare benefit fund benefits not subject to any of the 1986 TRA nondiscrimination tests, the pre-TRA law nondiscrimination tests have been retained.[224] The following uniform definitions applicable to statutory employee benefit plans were also applied to welfare benefit funds:

(1) highly compensated employees;

(2) compensation (including the limitation on the amount which may be taken into account) with respect to life insurance, disability, severance pay and supplemental unemployment compensation,

(3) excludable employees; and

(4) employer (including the application of the leased employee rules).[225]

The Secretary is also directed to promulgate regulations regarding which nonemployees who participate in a plan will be regarded as highly compensated.[226]

J. Effective Dates

The general effective date of the nondiscrimination rules is for plan years beginning after the later of:

(1) December 31, 1987 or

(2) the earlier of (a) December 31, 1988, or (b) the date which is three months after the issuance of regulations under §89.[227]

The effective date for plans maintained pursuant to a collective bargaining agreement ratified before March 1, 1986, is the first plan year beginning *before* the earlier of

(1) the date on which the last of the collective bargaining agreements terminates, as determined without regard to any extension of such agreements made after February 28, 1986, or

(2) January 1, 1991.[228]

If the plan covers employees covered by the collective bargaining agreement and employees not covered by such an agreement, employees covered by the agreement are disregarded for purposes of the nondiscrimination rules until the rules are effective for such employees.[229]

Church plans, as defined by §414(e)(3), which maintain insured health or group-term life insurance plans need not comply with the nondiscrimination rules until plan years beginning after December 31, 1988.[230]

A special rule also applies to group-term life insurance plans which were exempt from the modifications made to the nondiscrimination rules by §223(d)(2) of the Tax Reform Act of 1984.[231] Individuals covered under such plans may be disregarded in applying the nondiscrimination rules to other employees. Thus, in testing a plan in existence on January 1, 1984 (or a comparable successor plan), employees who attained age 55 on or before January 1, 1984 and were either employed by the employer in 1983 or retired from employment with the employer on or before January 1, 1984, may be disregarded.[232]

The rules coordinating the application of the revised cafeteria plan provision with the employment tax rules are effective for taxable years beginning after December 31, 1983.[233]

IV. Technical Corrections to Welfare Benefit Plan Provisions

A. Reserves for Discriminatory Post-Retirement Benefits

Under pre-TRA law, no reserve could be taken into account in computing the account limit regarding post-retirement medical or life insurance benefits under a plan not meeting the §505 nondiscrimination standards. The Act provides that no reserve is taken into account in determining the account limit for a welfare benefit fund ("WBF") for post-retirement medical or life insurance benefits unless the plan meets the §505(b) nondiscrimination requirements regarding those benefits.[234] The Act also clarifies that certain post-retirement group-term life insurance benefits failing to satisfy §505(b) may be taken into account to the extent that the group-term benefits are provided under a grandfathered arrangement.[235]

B. Actuarial Certification

For §505 purposes, the account limit for a "qualified asset account" is generally the amount reasonably and actuarially necessary to fund incurred, but unpaid, claims for benefits with respect to which the account is maintained. The Act extends the actuarial certification requirement to post-retirement medical and insurance benefits.[236]

C. Aggregation of Funds

Pre-1986 TRA law did not specify that the dollar limits applicable to life insurance benefits and supplemental unemployment compensation benefits or severance pay benefits apply to the aggregate of reserves under all funds of an employer, rather than on a fund-by-fund basis. Moreover, it was not specified that the limit on reserves is to be applied to the aggregate of insured and self-insured benefits. The Act provides that, in computing the dollar limits applicable to the amount of reserves for disability benefits, post-retirement medical benefits or insurance benefits for which reserves may be accumulated, all WBFs of an employer are aggregated and treated as a single fund.[237]

D. Definition of Fund

Under pre-1986 TRA law, a fund was defined as any tax-exempt social club, voluntary employees' beneficiary association (VEBA), supplemental unemployment compensation benefit trust (SUB), or group legal services organization; any trust, corporation or other organization not exempt from tax; and, to the extent provided in regulations, any account held for any employer by any person. Moreover, if an employer contributed amounts to an insurance company for benefits and was entitled to a rebate and was liable if the benefit claims exceeded the amount paid, the contributions were considered to have been made to a WBF. Further, an employer was not allowed a deduction for premiums paid on a life insurance policy covering the life of any officer, employee or person financially interested in the employer, where the employer was the direct or indirect beneficiary of the policy.

The Act amended the definition of fund to exclude amounts which are held under three types of insurance arrangements:

(1) §264(a)(1) insurance contracts;

(2) certain "qualified nonguaranteed contracts;" and

(3) certain "guaranteed renewal contracts."[238] A "qualified nonguaranteed contract" is an insurance contract under which (1) there is no guarantee of renewal, and (2) other than current insurance protection, the only payments to which the employer or employees are entitled are nonguaranteed refunds or policy dividends that are experience rated and determined by factors other than the amount of welfare benefits paid to employees or their beneficiaries.[239]

The Act also provides that, except in the case of a reserve for post-retirement medical or life insurance benefits and any other arrangement between an insurance company and an employer under which the employer has a contractual right to an experience based refund or dividend, any account held for an employer by any person and defined as a fund under regulations issued under §419(e)(3)(C) shall be considered a fund no earlier than six months following the date on which final regulations are published.[240]

E. Tax on Unrelated Business Income

Under the 1984 TRA, the tax on unrelated business income of a social club, VEBA, SUB or group legal service organization applies to an amount equal to the lesser of the income of the fund or the amount by which the assets in the fund exceed a specific limit on amounts set aside for exempt purposes. Limits are also imposed on the amounts that may be set aside in a given year. The limit on the amount that may be set aside for purposes of the unrelated business income tax does not apply to certain existing reserves for post-retirement medical or life insurance benefits. This exclusion applies to income which is attributable to the amount of assets, as of the close of the last plan year ending before July 18, 1984. Similar amounts, deemed unrelated income, are included in the gross income of an employer maintaining a nonexempt WBF.

The Act clarifies that the transition rule for pre–existing reserves for post-retirement medical or life insurance benefits applies to assets set aside *as of* July 18, 1984, rather than to assets set aside as of the end of the plan year ending before July 18, 1984.[241] The Act also deletes §512(a)(3)(E)(ii) barring a set aside for assets used in the provision of permissible benefits (facilities).[242] The House

Report states that regulations are to provide that the value of facilities used to provide permissible benefits is disregarded in determining whether fund assets exceed the account limit for a qualified asset account.[243] Moreover, if any amount included in the gross income of an employer is deemed unrelated business income respecting a WBF, the amount of tax thus imposed is treated as a contribution to the fund on the last day of the taxable year and, thus, is deductible within normal limits.[244]

F. Tax on Disqualified Benefits

If a WBF (funded other than exclusively by employee contributions) provides a disqualified benefit during a taxable year, an excise tax equal to 100% of the disqualified benefit is imposed for that year on each employer maintaining the fund. A disqualified benefit is:

(1) any medical or life insurance benefit provided respecting a key employee other than from a separate account required under the rules limiting employer deductions;

(2) any post-retirement medical or life insurance benefit unless the plan meets the requirements of the applicable nondiscrimination rules; and

(3) any portion of a WBF reverting to the benefit of the employer.

A portion of a WBF is not considered to revert to the benefit of an employer simply because it is applied, in accordance with the plan, to provide welfare benefits to employees or their beneficiaries. Moreover, amounts returned to employees representing employer contributions are not treated as reverting to the benefit of the employer.

The Act defines "disqualified benefit" as any post-retirement medical or life insurance benefit provided with respect to a key employee if a separate account must be established and the payment is not from that account.[245] Moreover, any post-retirement medical or life insurance benefit provided respecting an individual in whose favor discrimination is prohibited is a disqualified benefit unless the §505(b) nondiscrimination rules are satisfied.[246] If a plan is not exempt from the discrimination rules under the rules applicable to collectively bargained plans, a discriminatory benefit is a disqualified benefit subject to the excise tax even though no discrimination test applies in determining the exempt status of the fund.[247] In addition, a payment reverting to the employer is not a disqualified benefit to the extent it is attributable to either (1) an employer contribution for which no deduction was allowed in the current or preceding year or (2) an employee contribution.[248] The Act also provides that an otherwise disqualified benefit is not a disqualified benefit if it is a post-retirement benefit (as defined by §512(a)(3)(E)) charged against an existing reserve for post-retirement medical or life insurance benefits.[249]

G. Effective Dates

The Act clarifies that the 1984 TRA rules relating to the excise tax on disqualified benefits generally apply to benefits provided after December 31, 1985.[250] The Act also clarifies that the amendments made by the 1984 TRA with respect to the unrelated business income tax are effective for taxable years ending after December 31, 1985.[251]

H. Fully Vested Vacation Pay Plans

The Act provides a transition rule in the case of a fully vested vacation pay plan in which payments are required within one year after the accrual of the vacation.[252] Moreover, if the taxpayer makes a §463 election for the taxpayer's first taxable year ending after July 18, 1984, then, in lieu of establishing a suspense account under §463, the election is treated as a change in the taxpayer's method of accounting and the adjustments under §481 are taken into account.[253] The time for making the §463 election is extended to six months after enactment of the 1986 TRA for a taxpayer otherwise eligible for the transition rule.[254]

V. Continuation Health Coverage Under the Consolidated Omnibus Budget Reconciliation Act (Technical Corrections) of 1985

A. Introduction

As part of the Consolidated Omnibus Budget Reconciliation Act of 1985 (P.L. 99-272), with some exceptions, employers that maintain health benefits plans for their employees are required to continue providing those benefits for a period of time for their employees and their dependents following certain qualifying events such as death, divorce, termination of employment or a reduction in hours. In general, the provisions apply only to employers with 20 or more employees and exclude certain church employers and the Federal government.

1. Scope of Continued Coverage

COBRA requires continued employer-provided health benefits for employees, spouses of employees and dependent children following a "qualifying event."

A "qualifying event" is one of five situations which would otherwise cause a loss of coverage under the plan, *i.e.*: (1) the death of the employee; (2) the termination of the employee's employment (other than for gross misconduct) or a reduction in the employee's hours; (3) the divorce or legal separation of the employee from the employee's spouse; (4) the employee's entitlement to Medicare; or (5) a dependent child ceasing to be a dependent under the generally applicable requirements of the plan.

2. Length of Continued Coverage

Where an employee is terminated or his hours are reduced so that he would otherwise no longer be entitled to health benefits, coverage must continue for at least 18

months after the qualifying event. For any other qualifying event, coverage must continue for 36 months.

In general, under the pre-1986 TRA provisions, the required coverage could terminate earlier than the 18- or 36-month period if any of the following occured:

a. the group health plan is terminated;

b. coverage ceases due to the failure to make timely payment of premiums required under the plan;

c. a spouse or child of the employee becomes a covered employee under another group health plan or becomes entitled to Medicare benefits; and

d. if the beneficiary is the spouse, he or she remarries *and* becomes covered under a group health plan.

3. Type of Coverage

Under COBRA, continued coverage benefits must be identical to the benefits provided under the health plan to other similarly situated employees and beneficiaries with respect to whom a qualifying event has not occurred. Continued coverage may not be based on evidence of insurability.

4. Premium Requirements

The employer does not have to pay for the extended coverage; the plan may require that the employee or beneficiary pay the premium. The premium, however, may not exceed 102% of the cost to the plan for the period of coverage for similarly situated employees or beneficiaries with respect to whom a qualifying event has not occurred. Whoever pays the premium may elect to pay it in monthly installments.

COBRA contains special rules for establishing premiums for self-funded plans. The premium must be equal to a reasonable estimate of the cost of providing coverage to similarly situated employees and beneficiaries determined on an actuarial basis and taking into account factors which will be set forth in regulations.

The health plan must also provide the employee or beneficiary the option to enroll under a conversion health plan (if otherwise available under the plan) during the 180-day period immediately following the end of the extended coverage period.

5. Notice of and Election for Continued Coverage

A group health plan must provide, at the time health plan coverage begins or the COBRA provisions take effect, written notice to each employee and spouse of his or her rights to elect continued coverage upon the occurrence of qualifying events. This means, for example, that a plan with a June 30 fiscal year must advise employees and spouses of their rights to extended coverage before July 1, 1986.

After plan participation begins, the employer must notify the plan administrator (if other than the employer) of certain specified events requiring an extended coverage election. Employees and beneficiaries are responsible for notifying the plan administrator of other qualifying events. Specifically, the employer must notify the plan administrator of the death, termination of employment or reduction in hours, or eligibility for Medicare of any employee within 30 days of each event, while the employee (or, where appropriate, the beneficiaries) must notify the administrator of events such as divorce, separation, or a dependent child's ceasing to qualify as a dependent. The administrator must renotify the employee or beneficiaries of their continuation rights within 14 days after the administrator is notified of the qualifying event.

In general, each employee or beneficiary must be provided with an opportunity to elect continued coverage under the plan. The election period must last for 60 days and must begin no later than the date on which the coverage would terminate under the plan as a result of the qualifying event.

6. Exceptions

The COBRA rules do not apply to a group health plan if the employer maintaining the plan "normally" employed fewer than 20 employees on a typical business day during the preceding calendar year. All employers maintaining the plan must be aggregated and if, in the aggregate, all the employers employed fewer than 20 employees, the rules do not apply.

There are also exceptions for plans maintained by churches, the federal government, the District of Columbia and any territory or possession of the United States. Plans established and maintained by state and local governments that receive funds under the Public Health Service Act are covered by the COBRA provisions except that there is no statutory penalty imposed for failure to comply.

7. Consequences of Failure to Comply With the COBRA Requirements

The failure to provide the continued coverage required by COBRA will result, under Code §162(k), in a denial of the federal income tax deduction for expenses paid or incurred for any group health plan maintained by the employer. Also, highly compensated individuals who participate in a plan for which the employer fails to follow the COBRA requirements, will not be permitted to exclude from income the amount contributed by the employer in his or her behalf. In addition, for those plans covered by ERISA, a penalty of up to $100 per day may be imposed for failure to provide the required notices.

Although there are no tax or ERISA *per diem* penalties for the failure of a state or local government (or instrumentalities thereof) to comply with COBRA, that Act authorizes any aggrieved individual to bring an action against the state or locality for appropriate equitable relief.

8. Effective Date

In general, COBRA applies to plan years beginning on or after July 1, 1986. For example, the provisions apply to calendar year plans starting January 1, 1987.

In the case of a plan that is maintained pursuant to collective bargaining agreement, COBRA applies to plan years beginning after the later of January 1, 1987, or the date on which the last of the collective bargaining agreements relating to a particular plan terminates.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

B. Overview

The 1986 Tax Reform Act makes several changes to COBRA's continuation health care provisions. The same changes, with a few minor exceptions, are made to the Internal Revenue Code, ERISA, and the Public Health Service Act. Essentially, the changes provide additional guidance concerning notification requirements, the maximum allowable period of continuation coverage, the election of coverage, the failure to pay premiums, and the type of coverage that is required under COBRA.

C. Detailed Analysis

1. Modifications of Plan Coverage

In general, COBRA requires that each qualified beneficiary who would lose coverage under an employer-provided health plan as a result of a "qualifying event" be entitled to elect, within a prescribed period, continuation coverage under the plan. The coverage must consist of coverage which, as of the time it is provided, is identical that provided under the plan to similarly situated beneficiaries with respect to whom a qualifying event has not occurred.[255] The 1986 Act clarifies that, if coverage under the plan is modified for any group of similarly situated beneficiaries, the coverage must also be modified in the same manner for all individuals who are qualified beneficiaries under the plan receiving continuation coverage.[256]

The Conference Report provides, as an example, that if the plan provides for an open enrollment, then qualified beneficiaries are to be permitted to make elections during the open enrollment period in the same manner as active employees. As a result, an individual who is a qualified beneficiary by reason of being a spouse of a covered employee, would have the same rights as active employees during an open enrollment period and would not be limited to the rights of spouses of covered employees.[257]

2. Maximum Required Period of Continuation Coverage

COBRA requires that continuation coverage continue for 18 or 36 months, depending on the nature of the qualifying event. For example, if the qualifying event is a termination of employment, the continuation coverage must be provided for 18 months. If, however, the qualifying event is the death of the employee-spouse, however, continuation coverage may have to be provided for up to 36 months.[258] Following the enactment of COBRA, there was confusion concerning the required length of coverage where two qualifying events occur, one of which requires 18 months of coverage and the other, 36 months. The Act clarifies that the maximum amount of coverage that must be provided from the date of the first qualifying event is 36 months of coverage.[259] To be eligible for a total of 36 months of continuation coverage beginning on the date of the first qualifying event, the second qualifying event must take place during the period of coverage of the first qualifying event.[260]

3. Grace Period for Payment of Premiums

COBRA provides that the maximum period required for coverage may be reduced if there is a failure to make "timely payment" of any premium required under the plan with respect to a qualified beneficiary.[261] COBRA, however, did not establish a time frame in which a failure to pay premiums would be deemed to be a failure to make timely payment. As a result, it was unclear when continuation coverage should terminate due to failure to pay premiums. The Act clarifies that the payment of premiums will be considered timely if made within 30 days after the due date or within a longer period if the plan permits a longer period in which to pay premiums.[262] The Conference Report adds that the period may be extended to include the period an insurance company allows the plan or the employer for failure to pay premiums.[263]

4. Termination of Continuation Coverage Upon Coverage by Another Group Health Plan Rather Than Upon Reemployment or Remarriage

Under pre-1986 TRA law, an event that terminated continuation coverage was the remarriage of the qualified beneficiary and the coverage of that beneficiary under another group health plan. Another event under pre-TRA law that terminated continuation coverage was the coverage of the qualified beneficiary under any other group health plan, or his or her entitlement to benefits under Medicare (Title XVIII of the Social Security Act). The Act modifies these COBRA provisions by providing that a termination of continuation coverage occurs when the qualified beneficiary becomes covered under any other group health plan regardless of whether there is a remarriage or whether the individual is the covered employee, a spouse or a dependent under the new group health plan.[264]

5. Clarification Relating to Election by Beneficiaries

The Act provides that if there is a choice among types of coverage under the plan, each qualified beneficiary is entitled to make a separate selection among such types of coverage.[265] The Conference Report states that if the covered employee does not elect continuation coverage, the spouse or dependent child is entitled to elect the coverage. Even if the employee elects certain coverage, the spouse or a dependent may elect different coverage.[266]

6. Notice Requirements

COBRA provided that each covered employee or qualified beneficiary must notify the plan administrator of the occurrence of certain qualifying events. COBRA, however,

[265] Act §1895(5), amending Code §162(k)(2)(B), ERISA §605(2) and PHSA §2205(2).
[266] Conference Report, p. II-859.

did not set a period within which the notification must take place.

The Act imposes a 60-day notification period in which divorced or legally separated spouses of covered employees, or dependent children ceasing to be dependent children under the generally applicable requirements of the plan, must notify the plan administrator of a qualifying event entitling the spouse or dependent child to continuation health care coverage.[267] The provision is effective with respect to qualifying events occurring after the 1986 TRA's date of enactment.[268]

7. Nonresident Aliens

The Act also contains an exception from the continuation coverage requirements for nonresident aliens. It provides that the term "qualified beneficiary" does not include an individual whose status as a covered employee is attributable to a period in which the individual was a nonresident alien who received no earned income (within the meaning of Code §911(d)(2)) from the employer which constituted income from sources within the United States (within the meaning of Code §61(a(3). The Act further provides that if an individual is not a qualified beneficiary pursuant to the previous sentence, the spouse or dependent child of the individual is also not considered a qualified beneficiary by virtue of the relationship to the individual.[269]

8. ERISA Definition of "Group Health Plan"

For ERISA purposes, COBRA defined group health plan as an employee welfare benefit plan within the meaning of Code §162(i)(3) which, in turn, references the definition of Code §213(d). The Act revises this definition to directly key it to Code §213(d).[270] While the purpose of this provision appears to have been purely technical, the Conference Report indicates that health benefits include dental and vision care (within the meaning of Code §213). The Conference Report also indicates that Congress did not intend that an employer could compel a qualified beneficiary to pay for non "core" benefits (such as dental and vision care) even if active employees are required to purchase coverage for such benefits under the plan.[271]

9. Aggregation Rules for Employers Under ERISA

The Act adds a new definition of "employer" to the ERISA continuation health benefits provisions. This definition provides that the term includes a controlled group of employers. Specifically, it provides that the leased employee rules of Code §414(n) and the controlled group rules of Code §414(t) (as added by the Act) apply for purposes of continuation health benefits in the same manner and to the same extent as they apply for purposes of Code §106. Furthermore, any regulations prescribed by the Secretary of the Treasury with regard to those Code provisions will be consistent and coextensive with any regulations prescribed by the Secretary of the Treasury.[272] The effective date for the provision is the same as for the Act's amendments to Code §414 involving controlled groups and leased employees.[273] In general, the rules will apply no later than for years beginning after December 31, 1988, although they may apply earlier if the Secretary of the Treasury issues regulations before that date, but, in no event will they apply earlier than for years beginning after December 31, 1987 or three months after the Secretary of the Treasury issues regulations.[274] There are special rules for collectively bargained plans.[275]

10. Effective Date

In general, unless otherwise indicated above, the effective date for the changes in the Act applicable to continuation health benefits are effective as if they were included in the enactment of the Consolidated Omnibus Budget Reconciliation of 1985.[276]

I. Qualified Plan Coverage Rules and Related Provisions

A. Introduction

In enacting §§1111 through 1115 of the Tax Reform Act of 1986, Congress generally sought to ensure that a larger number of employees would enjoy qualified plan coverage and that their benefits would become nonforfeitable earlier than under pre-TRA law. Under pre-TRA law, qualified plans satisfied the minimum coverage requirements if they benefited a certain specified percentage of employees or benefited a classification of employees which did not discriminate in favor of officers, shareholders or highly compensated employees. The term "highly compensated employee" was not statutorily defined. To ensure that employees with substantial benefits did not lose plan benefits upon separation from service, a qualified plan was required to provide that (1) benefits vest upon a participant's attainment of normal retirement age, (2) the participant was always vested in his employee contributions and (3) in general, benefits vested in accordance with one of three statutory "regular" vesting schedules. Section 411(a) delineated these three vesting options. Under the first option, full vesting was required upon completion of 10 years of service. Under the second option, known as "graded" vesting, vesting began at 25% after five years of service and increased in statutory increments to 100% after 15 years. Under a third option, known as "rule of 45" or "age-related" vesting, both age and service could be considered, provided that there was 50% vesting after 10 years of service with an additional 10% per year until 100% vesting was reached after 15 years of service. Special vesting rules applied to "class year" plans. Special rules also applied under Code §401(a)(5) and various IRS revenue rulings in determining whether defined contribution and defined benefit plans were integrated with social security benefits in a nondiscriminatory manner.

B. Overview

The 1986 TRA revised the qualified plan minimum coverage requirements,[1] imposed an additional minimum participation standard,[2] introduced a uniform definition of highly compensated employee,[3] which provides that the qualified plan and employee benefit plan nondiscrimination rules can be satisfied on a separate line of business or operating unit basis,[4] redefined compensation,[5] modified the integration rules for qualified plans to restrict Social Security integration,[6] tightened the qualified plan regular vesting provisions,[7] and repealed class year vesting.[8]

These amendments are generally effective for plan years beginning after 1988. The provisions adding the definitions of highly compensated employee, separate lines of business and compensation are generally effective for years beginning after 1986.

C. Detailed Analysis

1. Highly Compensated Employees

a. Definition

The Act added §414(q) which defines a highly compensated employee for qualified plan purposes. The definition, with a different effective date, also applies to certain code fringe benefit provisions. Under the revised definition, a highly compensated employee is defined as an employee who, during the plan year or the previous plan year,

(a) was a 5% owner of the employer;

(b) earned more than $75,000 (indexed for inflation) in annual compensation;

(c) earned more than $50,000 (indexed for inflation) in annual compensation and was in the top 20% by compensation; or

(d) was an officer of the employer within the meaning of §416(i) and received annual compensation greater than 150% of the applicable year's §415 dollar limit on annual additions to a defined contribution plan.[9]

[9] The dollar limit on annual additions to a defined contribution plan for 1986 equals $45,000.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

An employee not considered highly compensated in the previous plan year, however, will not be considered highly compensated for the current plan year as a result of either of officer status or of earning more than $50,000 or $75,000 unless the employee is also one of the top 100 employees by compensation.[10]

In determining whether an employee is an officer, no more than 50 employees (or, if lesser, the greater of three employees or 10% of the employees) are to be treated as officers.[11] If no officer has compensation in excess of 150% of the year's §415 defined contribution plan dollar limit, the highest paid officer of the employer will be treated as an officer for purposes of the highly compensated employee rules.[12] As in the case of the top heavy plan rules, a partnership is considered to have officers.[13] Moreover, the determination of the identity and number of highly compensated employees is made on an employer-wide basis, rather than on a line of business or operating unit basis.[14]

For purposes of the definition, an employee is considered to be in the top-paid group if he is in the group consisting of the top 20% of employees ranked by compensation paid that year.[15] In determining the size of the top-paid group, the employer may exclude active employees who (1) have not completed six months of service; (2) normally work less than 17½ hours per week; (3) normally work during not more than six months during any year; (4) have not attained age 21; (5) are covered by a bona fide collective bargaining agreement; or (6) are nonresident aliens receiving no U.S. source income.[16]

The compensation of, and the benefits under, the plan for an individual who is a family member of either a 5% owner or one of the top 10 highly compensated employees are aggregated with the compensation and benefits of the 5% owner or the highly compensated employee for purposes of determining who is a highly compensated employee.[17] Moreover, even if an employee is excluded for purposes of determining the number of employees in the top-paid group, such family member still is subject to the aggregation rule.[18] "Family" is defined as an employee's spouse and his lineal ascendants and descendants and their spouses.[19]

A former employee is treated as highly compensated if he was highly compensated on the date of separation from service or at any time after he attained age 55.[20] The Conference Report directs the Secretary to promulgate regulations treating an employee who continues to perform only de minimis services for the employer as having been separated from service for purposes of determining whether the employee is highly compensated.[21] Further, in determining whether an employee is highly compensated, compensation within the meaning of §415(c)(3), increased by elective contributions under a cafeteria plan, qualified cash or deferred arrangement, a SEP and a tax-sheltered annuity, is considered.[22]

The definition of highly compensated employee applies for purposes of §§79, 89, 106, 117(d), 120, 127, 129, 132, 274, 401(a)(4), 401(a)(5), 401(k)(3), 401(l), 401(m), 406(b), 407(b), 408(k), 410(b), 411(d), 414(m), 415(c), 423(b), 424(c), 501(c)(17), 501(c)(18), 505 and 4975 and 29 U.S.C. §1108.

b. Effective Date

The §414(q) definition of highly compensated employee generally applies to years beginning after December 31, 1986.[23] If, however, the substantive provision to which the definition relates is effective at a later date, the definition will be effective as of such later date.[24] The definition applies to employee benefit plans in years beginning after 1987.[25] The definition applies to the pension provisions effective for years beginning after 1988.[26] For purposes of §401(k) and §401(m), a special rule applies in the case of an employer incorporated on December 15, 1924.[27] If more than 50% of its employees in the top-paid group earn less than $25,000 (indexed for inflation), then the highly compensated employees include employees described in §414(q)(1)(C), determined without regard to the level of compensation of such employees.

2. Includible Compensation

The 1986 TRA added Code §414(s) which defines "compensation" for purposes of the nondiscrimination rules, including the actual deferral percentage limits for qualified cash or deferred arrangements for employee and employer matching contributions. Except as otherwise provided, compensation means the total compensation includible in an employee's gross income.[28] Moreover, an employer may elect to treat as compensation salary reduction amounts which are contributed by an employer under a cash or deferred arrangement, a tax-sheltered annuity program, a SEP or a cafeteria plan agreement and, therefore, are not includible in an employee's gross income.[29] If the employer so elects, it must apply such treatment on a consistent basis.[30] This requires that, if an employer treats elective contributions as compensation under one cash or deferred arrangement, it must do so for all such arrangements.[31] The compensation of self employed individuals will be determined under regulations reflecting the principles of the general rule.[32]

Section 414(s)(4) directs the Secretary to promulgate regulations prescribing alternative definitions of compensation which may be used by an employer. The Conference

Report provides that such alternatives must include an employee's basic or regular compensation, *e.g.*, disregarding bonuses and overtime.[33] Such an alternative definition, however, may be used only if its use would not discriminate in favor of highly compensated employees. Whether discrimination results is to be determined in objective manner based on the total includible compensation of employees.[34]

The §414(s) definition of compensation applies to years beginning after December 31, 1986.[35]

3. Coverage Tests

A qualified retirement plan must satisfy one of three alternative coverage tests:

(a) a percentage test under §410(b)(1)(A);

(b) a ratio test under §410(b)(1)(B); or

(c) an average benefits test under §410(b)(22).[36]

If an employer has no highly compensated employees, the plan automatically satisfies the coverage rules.[37]

a. Percentage Test

A plan satisfies the percentage test if it benefits at least 70% of all nonhighly compensated employees.[38] Employees who are plan participants are deemed to benefit under the plan and, thus, are considered in applying the percentage test. In the case of a qualified cash or deferred arrangement (or that portion of a defined benefit plan to which employee contributions or matching employer contributions are made), an employee eligible to make contributions to the plan is considered to benefit under the plan.[39]

b. Ratio Test

The ratio test is satisfied if the plan benefits a classification of employees set up by the employer which does not allow more than a reasonable difference between the coverage percentage of highly compensated employees and the coverage percentage of other employees.[40] The coverage percentage of highly compensated employees is the ratio of highly compensated employees who benefit under the plan to all such employees. The coverage percentage of other employees is the ratio of nonhighly compensated employees who benefit under the plan to all such employees. The ratio test is met if the coverage percentage of nonhighly compensated employees equals at least 70% of the coverage percentage of highly compensated employees.

Comment: Thus, for instance, a plan which benefits 100% of an employer's highly compensated employees must also benefit at least 70% of the employer's nonhighly compensated employees to satisfy the ratio test.

c. Average Benefits Test

A plan that satisfies the "reasonable classification" test of prior law (but not the post-TRA ratio test) will satisfy the average benefits test if the "average benefit percentage" for nonhighly compensated employees is at least 70% of the average benefit percentage for highly compensated employees.[41] The reasonable classification test of prior law will be applied as it is later modified judicially and administratively.[42] The test, however, is to be applied using the revised definitions of highly compensated employees and excludable employees, not the prior law definition of the prohibited group.[43] The test is to be applied on the basis of all the facts and circumstances.[44] Salient facts include the difference between the coverage percentages of the highly and non-highly compensated employees and the difference between the compensation of covered and excluded employees.[45] The Secretary is expected to promulgate regulations providing an objective safe harbor considering these and other relevant factors to facilitate compliance with the classification test.[46]

If the reasonable classification test is met, the plan must then satisfy the average benefit percentage requirement. Section 410(b)(2)(B) defines the average benefit percentage for a group of employees as the average of each employee's separate benefit percentage. "Benefit percentage" means the employer-provided contribution or benefit under all qualified plans, expressed as a percentage of the employee's compensation.[47] Employer-provided contributions include elective deferrals and forfeitures.[48] The Conference Report provides that, if benefit percentages are determined on the basis of employer-provided contributions, all such benefits are to be converted into contributions for testing purposes.[49] Likewise, if benefit percentages are determined on the basis of employer-provided benefits, contributions must be converted into benefits.[50]

The Conference Report provides that, in determining the amount of contributions or benefits, the approach taken by Rev. Rul. 81-202,[51] as modified by the Conference Report, controls.[52] Rev. Rul. 81-202 provides guidelines for determining whether several plans, considered as a single plan, provide discriminatory contributions and benefits. The ruling provides methods to adjust all types of benefits to a single form, methods to convert benefits into contributions and contributions into benefits, and methods for imputing the value for employer-provided Social Security benefits. For instance, utilization of the Rev. Rul. 81-202 approach means that, in the case of benefits testing, the benefit percentages are determined based on projected benefits.[53] The approach of Rev. Rul. 81-202 also controls in determining whether two plans which are treated as a

single plan for purposes of the coverage tests discriminate in favor of highly compensated employees.[54]

The Rev. Rul. 81-202 guidelines, however, are to be modified in several respects regarding the average benefits test and in order to determine whether two or more plans treated as a single plan under the percentage ratio or classification tests discriminate in favor of highly compensated employees.[55] First, the post-1986 TRA integration limits must be followed. Second, the post-TRA §414(s) definition of compensation, and the §401(a)(17) $200,000 limit on includible compensation apply.[56] Third, determinations under Rev. Rul. 81-202 must consider the rate at which benefits actually accrue. Moreover, when appropriate, the existence of different plan options, *e.g.*, loans or lump-sum distributions, that are available to a disproportionate number of highly compensated participants should also be considered.[57] These enumerated considerations, however, are not exhaustive.

The Conference Report also clarifies that, under Rev. Rul. 81-202, the same actuarial assumptions are to be used in valuing different benefits or contributions.[58] Moreover, in "appropriate circumstances" (the parameters of which are not addressed by the legislative history), Rev. Rul. 81-202 may be modified to consider reasonable salary projections. In circumstances justifying special scrutiny, the Secretary may require a certificate of comparability from an enrolled actuary.[59] As under prior law, the plan's vesting schedule also must be considered as provided by Rev. Rul. 74-165 [60] and Rev. Rul. 74-166.[61]

Note: It is not intended that the application of Rev. Rul. 81-202 to the average benefits percentage test be interpreted as requiring that an averaging approach be adopted for purposes of applying these rules to multiple plans being tested as a single plan under §401(a)(4).[62]

In determining benefit percentages, all pre-tax contributions or benefits are considered employer-provided, including elective contributions under a qualified cash or deferred arrangement.[63] Moreover, no qualified plan (including those which, standing alone, satisfy the percentage or ratio tests) may be disregarded in determining benefit percentages.[64] Contributions or benefits under other types of plans or programs (such as single employer plans or tax sheltered annuity programs), however, are disregarded.[65]

Once each employee's benefit percentage is determined, the average benefit percentage of highly and nonhighly compensated employees must be determined by averaging the individual benefit percentages of each employee, including those employees *not* covered by a plan.[66] Individual benefit percentages are to be computed in a similar manner as the actual deferral percentage of a group of employees under a qualified cash or deferred arrangement.[67]

In determining whether a plan satisfies the average benefits test, the employer may elect the period for which contributions and benefits are calculated.[68] An employer may calculate contributions or benefits either on an annual basis [69] or on the basis of a consecutive plan year period (not in excess of three years) ending with the current year.[70] The period of plan years chosen must be uniformly applied regarding all employees and cannot be changed without the consent of the Secretary.[71]

d. Aggregation and Comparability

In applying the percentage, ratio and average benefits tests, employees of corporations that are members of the same controlled group or all employees of a trade or business under common control are aggregated and treated as if employed by a single employer.[72] Likewise, employees of employers that are members of an affiliated group are treated as employed by a single employer.[73] The comparability analysis (regarding benefits and contributions) contained in Rev. Rul. 81-202 is to be modified as discussed, *supra*.[74]

e. Excludable Employees

In applying the percentage, ratio and classification tests, certain employees may be excluded. An employer may exclude:

(1) employees included in a unit covered by a collective bargaining agreement if there was evidence that retirement benefits were the subject of good faith bargaining;[75]

(2) in the case of a trust established or maintained pursuant to a collective bargaining agreement between airline pilots that must be represented in accordance with Title II of the Railway Labor Act and one or more employers, employees not covered by the collective bargaining agreement;[76]

(3) employees who are non-resident aliens receiving no earned income from sources within the United States;[77] and

(4) employees not meeting the age and service requirements prescribed by the plan.[78]

An employer may elect to separately test employees not meeting the §410(a)(1)(A) age 21 and service requirements.[79] Moreover, an employer may separately test one group of excludable employees without testing all excludable employees separately if the group is defined in a nondiscriminatory manner.[80] For example, an employer

could separately test employees excludable because they do not meet the age requirements, but not include in this separate testing employees excluded under the one year of service rule.[81] Moreover, an employer can also elect to separately test all employees excludable solely on the grounds that they are not age 21, but who are at least 18.[82]

f. Special Rules for Dispositions or Acquisitions

If a person becomes, or ceases to be, a member of a controlled or affiliated service group within the meaning of §§414(b), (c), (m) or (o)), the minimum coverage requirements are deemed satisfied during the transition period if

(1) the coverage rules were satisfied immediately before the acquisition or disposition, and

(2) the coverage under the plan does not change significantly during the transition period (other than due to the disposition or acquisition).[83]

The transition period begins on the date of the disposition or acquisition and ends on the last day of the first plan year beginning after the transaction.[84]

g. Former Employees

The coverage rules may be applied separately to former employees.[85] For this purpose, rules similar to those applicable to statutory employee benefit plans will apply.[86] The legislative history suggests that the class of former employees to be tested may be restricted to those employees who have separated from service due to disability or who have retired on or after a reasonable retirement age.[87] Employers may further limit the class to employees who have retired within a specific time.[88] Reasonable assumptions regarding mortality also may be made so that the employer need not determine if former employees are still alive.[89]

h. Line of Business Exception

If the employer establishes to the satisfaction of the Secretary that it operates separate lines of business or operating units for *bona fide* business purposes, the percentage, ratio and average benefits tests may be applied separately to employees in each line of business.[90] The plan must be available, however, to a group of employees which qualify under a classification set up by the employer and found by the Secretary not to discriminate in favor of highly compensated employees.[91]

To be considered a separate line of business, §414(r)(2) requires that three threshold conditions be met:

(1) the line of business must have at least 50 employees who are non-excludable under §414(q)(8);

(2) the employer must notify the Secretary of its separate treatment; and

(3) the line of business must meet guidelines to be prescribed by regulations or the employer must receive a determination from the Secretary that the line of business may be treated as separate.

More than one line of business or operating unit may be aggregated to satisfy the 50 employee requirement.[92]

Section 414(r)(3) provides a safe harbor for a line of business if "the highly compensated employee percentage" respecting the line of business is not less than one half, nor more than twice, the percentage which highly compensated employees constitute of all employees. An employer is deemed to meet the 50% requirement if at least 10% of all highly compensated employees perform services solely for such line of business.[93] For purposes of the safe harbor, "highly compensated employee percentage" means the percentage which highly compensated employees performing services for the line of business constitute of all employees performing services for the line of business.[94]

Whether a separate line of business exists depends on the facts and circumstances.[95] In making such a determination, differences between services provided and product produced by claimed separate lines are to be considered.[96] The employer's method of business organization also is relevant.[97]

The line of business rule, however, may not be used to circumvent the nondiscrimination tests.[98] Thus, certain job classifications, *e.g.*, hourly or leased employees, are not considered separate line of business.[99] Moreover, secretaries and other support staff personnel would not comprise a separate line of business from an employer's professional staff.[100] Further, members of an affiliated service group (within the meaning of §414(m)) may not be treated as separate lines.[101] In addition, an operating unit must operate in "a significantly separate geographic area from another operating unit in the same line of business." [102] Two plants in the same city, thus, could not be separate operating units.[103]

The Secretary is directed to promulgate regulations delineating the treatment of employees of a headquarters or home office.[104] The Conference Report clarifies that such employees are to be allocated to one line of business or an operating unit.[105] Such allocation, generally, will be in accordance with the performance of services.[106] Therefore, if the majority of an employee's services are performed for one line of business, the employee must be allocated to that line of business.[107]

Services provided by other employees to multiple lines of business are also to be allocated. The Conference Report provides that such an allocation is to be made in one of two ways.[108] First, employees may be allocated among lines of business on a pro rata basis in accordance with regulations to be prescribed.[109] Second, an employee may be allocated to any one line of business for which he performs substantial services, provided the allocation does not violate the highly compensated percentage rule described in the safe harbor.[110] Thus, if a line of business fails the 50% rule, highly compensated employees at headquarters who do not perform a majority of their services for a particular line of business must be allocated first to the failing line of business.[111] No highly compensated employee, however, may be allocated to a line of business if the allocation causes a violation of the 200% rule (regardless of whether a violation existed prior to the allocation).[112]

The Conference Report also provides that the Secretary should prescribe annual reporting rules for employers using the separate line of business rule.[113] The employer must include the basis for invoking the use of the rule. Moreover, if the employer has a separate line of business not failing within the safe harbor rule, that fact must be reported.[114]

The Conference Report also directs the Secretary to establish guidelines outlining circumstances in which there is to be special scrutiny of lines of business.[115] In illustrating such a case, the Conference Report states that, if a plan maintained for a separate line of business is significantly better or worse than that maintained for another line of business, special scrutiny is required.[116] Another instance where special scrutiny is demanded is where a disproportionate percentage of the accrued benefits under the plan of the separate line of business are for highly compensated employees.[117]

If a line of business does not satisfy the safe harbor rule *and* a plan of such business demands special scrutiny, the employer must obtain a determination from the Secretary that the line of business is separately operated for *bona fide* business purposes. Moreover, if an employer uses the separate line of business rule, all of its employees must be considered part of a line of business.[118] For instance, if an employer has 50 employees and 10 other employees not part of any line of business who would be separately tested, the 10 employees will be treated as part of some line of business. A line of business with only 10 employees, however, would need to be aggregated with another line in order to meet the 50 employee requirement.[119]

The Act also requires that benefits which are attributable to services for a line of business will be considered as provided by that line of business.[120] For purposes of the benefit rule, an employee performing services for more than one line of business who is allocated to one line of business is considered to provide services only for that line of business to which he is allocated.[121]

i. Special ESOP Rule

A trust that is part of a tax credit employee stock ownership plan, which is intended to be the only employer qualified plan, will not be treated as nonqualified solely because it fails to meet the coverage requirements so long as:

(1) the plan benefits 50% or more of all the employees who are eligible under a nondiscriminatory classification under the plan, and

(2) the sum of the amounts allocated to each participant's account for the year does not exceed 2% of the compensation of that participant for the year.[122]

j. Sanctions

If a plan fails to satisfy the minimum coverage rules, highly compensated employees, as defined by §414(q), are taxed on the value of their vested accrued benefit which is attributable to employer contributions and income on any contributions to the extent that such amounts have not been previously taxed to the employee.[123] If, however, the plan fails to meet the coverage requirements for more than one taxable year, any part of the vested accrued benefit will be taxed only once.[124] Nonhighly compensated employees are not taxable if the plan fails to satisfy the coverage standards.[125] This constitutes a radical departure from ERISA's prior provisions, under which the only sanction for failure to satisfy a qualification requirement, such as the minimum coverage rules, was plan disqualification.

k. Effective Dates

The amendments made to the minimum coverage rules generally are effective for plan years beginning after December 31, 1988.[126] The effective date for plans maintained pursuant to a collective bargaining agreement ratified before March 1, 1986 is the first plan year beginning *before* the earlier of;

(1) the later of

(a) January 1, 1989, or

(b) the date on which the last of the collective bargaining agreements terminates, determined without regard to any extension of such agreements made after February 28, 1986, or

(2) January 1, 1991.[127]

The addition of the separate line of business requirement is effective for years beginning after December 31, 1986.[128]

4. Minimum Participation Requirement

Code §401(a)(26), as added by the 1986 TRA, provides that a plan, to be qualified, must benefit, on each day of the plan year, the lesser of (1) 50 employees or (2) 40% of all employees.[129] If a plan fails to meet the minimum participation requirement, the entire plan fails to meet the §401(a) qualification standard and, therefore, is rendered taxable.[130]

In satisfying the minimum participation requirement, each plan maintained by an employer stands alone, *i.e.*, aggregation of comparable plans is not permitted.[131] In the case of contributions under §401(k) or §401(m), employees eligible to contribute under such plans will be considered as benefiting under the plan.[132] The minimum participation rule generally does not apply to a multi-employer plan, unless such plan covers professional employees, such as doctors, lawyers and investment bankers.[133]

a. Separate Benefit Structures

Section 401(a)(26)(F) grants the Secretary authority to promulgate regulations treating a separate benefit, separate trust or any other separate arrangement as a separate plan for purposes of the minimum participation rules.[134] A plan with two different formulae for calculating participants' benefits or contributions, thus, will be treated as two separate plans.[135] Moreover, if defined benefit plan assets are payable from more than one source, *e.g.*, more than one trust, each source may be considered a separate plan.[136] Further, if a particular person has priority regarding a source of assets for defined benefits, *e.g.*, a right to all or part of a possible reversion, such a person will be considered the sole participant of that "plan."[137]

In essence, Congress intended to define "plan" in the manner which would best advance the purposes of the minimum participation rules.[138] Therefore, if, under the facts and circumstances, an arrangement effectively provides a plan or account to a group of employees that would not meet the minimum participation requirements, more than one plan may be found.[139] In illustrating such a case, the Conference Report offers the example of a group of employees who agree to provide each employee with investment authority with respect to a separate pool of assets in a defined benefit structure.[140] In that case, if the employees are compensated for investment results that are obtained, each part of the asset pool may be considered a separate plan with respect to participant who controls its investment.[141] Moreover, combination defined benefit - defined contribution plans with benefit offset arrangements cannot be used to avoid the minimum participation requirements.[142]

b. Excludable Employees

Section 401(a)(26)(B) provides that certain employees may be excluded in determining whether the 40% requirement is satisfied. All employees excludable under §§401(b)(3) and (4)(A) of the minimum coverage rules, discussed *supra*, may be excluded. In addition, employees who have not attained age 21 or completed one year of service may be excluded if this group of employees, tested separately, satisfies the minimum participation requirements.[143] Benefits for these excluded employees, however, must be provided under the same plan as for other employees.[144] Moreover, benefits to these excluded employees may not be greater than comparable benefits provided to other non-excludable employees under the plan.[145] Further, no highly compensated employees, as defined under §414(q), may be included in the group of excluded employees for more than one year.[146] Thus, if a highly compensated employee is part of this group for more than one year, all employees must be considered in applying the 40% rule.[147] Except to the extent provided in regulations, §401(a)(26) does not apply to a plan covering only employees who are in a multiemployer plan within the meaning of §414(f) and who are covered by a collective bargaining agreement.[148] Further, under §401(a)(26)(D), except to the extent provided in regulations, a plan covering only employees described in §410(b)(3)(A) (*i.e.*, covered by a collective bargaining agreement where retirement benefits have been the subject of good faith collective bargaining) may exclude from consideration any employee who is not included in the unit or units in which the covered employees are included.

If any excludable employee is covered by a defined benefit plan, all employees will be taken into account in applying the minimum participation rule unless:

(1) the benefits provided under such coverage are comparable (or less than comparable) to the coverage of nonexcludable employees; and

(2) the plan covering the excludable employees would satisfy the minimum participation requirement (considering all employees) but for the fact that the plan has a different defined benefit structure from the plan covering nonexcludable employees.[149]

Therefore, defined benefit payments to nonexcludable and excludable employees must come from the same source.[150] Moreover, if only excludable employees are covered by the

defined benefit plan, all employees will be considered in determining whether the minimum participation requirements are met.[151]

c. Exemptions from the Minimum Participation Rules

The Conference Report authorizes the Secretary to exempt certain plans from the application of the minimum participation rules. First, the Secretary may exempt a plan benefiting no employee who is, or has ever been, a highly compensated employee with respect to service being credited under the plan, provided that the plan is not necessary to another plan or plans to satisfy the applicable §410(b) coverage rules, discussed *supra*.[152] Second, a plan that may not be terminated due to the provisions of the Single Employer Pension Plan Amendment Act (SEPPAA) because it is unfunded may be exempted by the Secretary.[153] For a nonterminable SEPPAA plan to be exempt it must:

(1) cease benefit accruals;

(2) obtain a letter of insufficiency for each plan year of exemption; and

(3) eliminate, in accordance with regulations, any different benefit structure or separate arrangement [154]

d. Exemption from Reversion Tax

Section 4980 imposes an excise tax on the reversion of plan assets to the employer upon the termination of a plan. The excise tax will not apply, however, if:

(1) the plan was in existence on August 16, 1986;

(2) the plan would fail to meet the minimum participation requirements if they were in effect on August 16, 1986; and

(3) there is no transfer of plan assets or liabilities or merger or spinoff after August 16, 1986.[155]

A termination and reversion are possible even if the plan relies on another plan, which was terminated, for its qualification.[156] In determining the amount of the reversion, the present value of a highly compensated employee's accrued benefits is determined by using an interest rate which equals the maximum interest rate that may be used for calculating accrued benefits under §411(a)(11)(B).[157] The Secretary is directed to issue regulations preventing avoidance of the interest rate provision through distributions prior to or in lieu of a reversion.[158]

e. Effective Date

The revised minimum participation rules are generally effective for plan years beginning after December 31, 1988.[159] The effective date applicable to plans maintained pursuant to a collective bargaining agreement ratified before March 1, 1986 is the first plan year beginning *before* the earlier of

(1) the later of —

(a) January 1, 1989 or

(b) the date on which the last of the collective bargaining agreements terminates, as determined without regard to any extension of such agreements made after February 28, 1986, or

(2) January 1, 1991.[160]

5. Minimum Vesting Requirements

a. Vesting Schedules

The 1986 TRA repealed class year vesting.[161] The Act also replaced the pre-1986 TRA regular §411 minimum vesting schedules with two alternative vesting schedules.[162] As amended, §411(a)(2)(A) provides a five-year cliff vesting schedule which requires that a participant's right to employer-derived benefits be non-forfeitable after the end of five years of service. Alternatively, §411(a((2)(B) permits seven-year graded vesting according to the following schedule:

Years of Service	*Percentage Vested*
less than 3	0%
3	20%
4	40%
5	60%
6	80%
7	100%

Benefits under collectively bargained multi-employer plans with respect to employees covered by a collective bargaining agreement may vest under the 10-year cliff vesting schedule of pre-TRA law, provided that employees covered by such plans who are not part of the bargaining unit vest under either five- year cliff, or seven-year graded vesting.[163]

Note: Benefits which vest due to these rules are immediately guaranteed by the Pension Benefit Guaranty Corporation.[164]

Notwithstanding the above amendments to the §411(a) regular vesting schedule, the accelerated vesting rules of §416 continue to apply (unrevised) to top heavy plans.[165]

A special 100% vesting rule applies to certain plans. As a condition of participation, a plan may require the completion of two years of service, rather than one year of service.[166] If the plan requires more than one year of participation, the plan must provide complete and immediate vesting of each participant's benefits as it accrues.[167]

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Under pre-TRA law, plans that provided immediate vesting could delay participation for up to three years.

Note: Qualified cash or deferred arrangements (and plans including CODAs) may not require the completion of more than one year of service as a precondition to participation.

Comment: Since years of service are determined under the usual §411 rules, pre-1989 years are taken into account.

If a plan amendment changes the vesting schedule, each participant with three years of service is given the right to elect to have the non-forfeitable percentage of his accrued benefit computed without regard to the amendment. Prior to the TRA, this right was only extended to participants with five years of service at the time of the amendment.[168] The Act also made conforming amendments to ERISA which reflect the revised vesting provisions.[169]

b. Effective Date

The 1986 TRA vesting rules generally are effective for participants with one hour of service in plan years beginning after December 31, 1988.[170] In the case of a collectively bargained plan which was ratified before March 1, 1986, the vesting rules are not effective until the earlier of:

(1) the later of —

(a) January 1, 1989 or

(b) the date on which last collective bargaining agreement terminates (determined without regard to any extensions after February 28, 1986), or

(2) January 1, 1991.[171]

6. Integrated Plans

a. Defined Contribution Plans

The 1986 TRA amended the rules applicable to the nondiscriminatory coordination of defined contribution plans with OASDI, *i.e.*, Social Security, by limiting the permitted disparity in plan contributions. The Act accomplishes this by limiting the extent to which the "excess contribution percentage" for a defined contribution plan may exceed the "base contribution percentage." [172] The "excess contribution percentage" for a plan is the percentage of compensation which is contributed under the plan with respect to the portion of each participant's compensation in excess of the plan's integration level.[173] The "base contribution percentage" is the percentage of compensation which is contributed under the plan with respect to the portion of each participant's that is not in excess of the specified integration level.[174] The plan's integration level is the amount of compensation specified under the plan at (or below) which the rate at which contributions are provided (expressed as a percentage) is less than the rate of contribution provided above that amount of compensation.[175] The relevant amount of compensation may be specified by either a dollar amount or a formula.[176] In no event, however, may the integration level exceed the OASDI contribution base (*i.e.*, the taxable wage base) in effect at the beginning of the plan year.[177] The Secretary may promulgate regulations "to prevent an employer from selecting a lower integration level that discriminates in favor of highly compensated employees.[178] A uniform integration level must be applied to all participants.[179]

Note: As discussed, *supra*, §414(s) defines compensation as all compensation includible in gross income. Compensation which exceeds the §401(a)(17) $200,000 limit (subject to cost-of-living adjustments), however, is not included in determining the contribution percentages.

A defined contribution plan satisfies the 1986 TRA permitted disparity limits if the excess contribution percentage does not exceed the *lesser* of:

(1) the base contribution percentage, or

(2) the greater of —

(a) 5.7 percentage points, or

(b) the old age insurance tax rate [180] in effect at the beginning of the plan year.[181]

Note: For 1986 the rate of tax attributable to old-age insurance is less than 5%. The Social Security Administration is to advise the Secretary when the rate exceeds 5.7% so that timely publication of the new rate can be made.[182]

Note: Contributions subject to the nondiscrimination rules applicable to cash or deferred arrangements, matching contributions and SEPs cannot rely on integration to satisfy the nondiscrimination rules.[183]

b. Defined Benefit Excess Plans

(1) General

To satisfy the permitted disparity limits, three requirements must be met.[184] First, the excess benefit percentage may not exceed the base benefit percentage by more than the maximum excess allowance.[185] Second, any optional form of benefit, preretirement benefit, and actuarial feature (and any other factor or feature under the plan) provided with respect to compensation in excess of the integration level must also be provided with respect to compensation not in excess of such level.[186] Third, benefits are to be based on average annual compensation.[187]

[187] *Id.*

(2) Excess Benefit Percentage

Section 401(l)(3) limits the extent to which the "excess benefit percentage" under defined benefit excess plans may exceed the "base benefit percentage." The excess benefit percentage is the value of benefits provided by the plan with respect to compensation in excess of the applicable integration level, expressed as a percentage of compensation.[188] The base benefit percentage is the value of benefits provided with respect to compensation not in excess of the applicable integration level, expressed as a percentage of compensation.[189] As with defined contribution plans, the applicable integration level may not exceed the social security wage base in effect at the beginning of the plan year.[190] Pursuant to regulations, however, excess plans may use two or more integration levels.[191] If multiple integration levels are utilized, each level's permitted disparity is based upon the percentages of compensation up to each level replaced by the employer-provided worker's benefit (PIA) under Social Security.[192]

Note: As in the case of defined contribution plans, the §414(s) definition of compensation applies, as does the §401(a)(17) $200,000 limit on includible compensation.

(3) Excess Allowance

Special rules define the maximum excess allowance by which the excess benefit percentage may exceed the base benefit percentage. Section 401(l)(4)(A) provides that, with respect to benefits attributable to any year of service taken into account under the plan, the maximum excess allowance is the lesser of: (1) ¾ of a percentage point or (2) the base benefit percentage. With respect to total benefits under the plan, the maximum excess allowance equals ¾ of a percentage point multiplied by the number of the participant's years of service (not in excess of 35) taken into account under the plan.[193]

A year is taken into account for purposes of determining the maximum excess allowance if benefits are treated as accruing on behalf of the participant in a given year.[194] Excess plans providing for the accrual of benefits over a participant's years in service, therefore, are treated as taking into account only years of participation.[195] The maximum excess allowance applies to both flat benefit final pay plans and unit benefit final pay plans.[196]

Section 401(l)(4)(C) directs the Secretary to promulgate regulations reducing the ¾% factor in cases where a plan uses integration levels in excess of covered compensation. As under prior law, "covered compensation" means the average of the contribution and benefit taxable wage bases (under Social Security) in effect for each year of the 35-year period ending with the year in which the employee attains age 65,[197] assuming there is no increase in the wage base for years after the determination year and before the employee attains age 65.[198] Reductions for higher integration levels are to be based on the decreasing percentages of compensation replaced by the employer-provided contributions under Social Security as compensation increases above covered compensation.[199] In addition, the Conference Report directs the Secretary to provide for such reductions on the basis of brackets of integration levels in excess of covered compensation. Such reductions and brackets should correspond to the comparable reductions and brackets for offset plans. The Secretary, however, is not authorized to provide for an increase in the ¾% factor for plans using integration levels lower than covered compensation.[200]

c. Defined Benefit Offset Plans

In the case of a defined offset plan, §401(l)(3)(B) provides that a participant's accrued benefit cannot be reduced due to the offset by more than the maximum offset allowance. In addition, benefits must be based on average annual compensation.[201]

In the case of benefits attributable to any year of service, the maximum offset allowance equals the lesser of

(1) ¾% of a participant's final average compensation, or

(2) 50% of the benefit which would have accrued without regard to the offset reduction.[202]

With respect to total benefits, the maximum offset allowance equals the lesser of:

(1) ¾% of a participant's final average compensation multiplied by the participant's years of service (not in excess of 35) taken into account under the plan, or

(2) 50% of the benefit which would have accrued without regard to the offset reduction.[203]

Final average compensation equals the lesser of

(1) the participant's average annual compensation for the three-consecutive year period ending with the current year, or

(2) the participant's full period of service.[204] Final average compensation, however, is calculated without regard to compensation in any year in excess of the taxable wage base for that year.[205]

Pursuant to regulations, the ¾ factor is reduced for participants with final average compensation in excess of covered compensation defined *supra*.[206] As in the case of excess plans, the reduction is based upon the decreasing percentages of compensation replaced by the employer-pro-

vided contributions under Social Security as compensation increases above covered compensation.[207] These reductions for offset plans are to correspond to those for excess plans using integration levels in excess of covered compensation.[208] The Secretary is directed to publish an annual table which sets forth offset factors for brackets of final average compensation in excess of covered compensation.[209]

d. Multiple Integrated Plans

The Secretary is directed to develop regulations to prevent the excessive use of permitted disparities, with respect to any employee, through the integration of more than one qualified plan.[210] These rules must limit to 100% the sum of the percentages, calculated separately for each plan with overlapping coverage, of the maximum benefit disparity actually used in each plan.[211]

e. Effective Dates

The 1986 TRA amendments to the integration rules generally apply to benefits attributable to plan years beginning after December 31, 1988.[212] In the case of a plan maintained pursuant to a collective bargaining agreement ratified before March 1, 1986, these rules do *not* apply to benefits pursuant to, and individuals covered by, such agreement in plan years beginning before the earlier of

(1) the later of —

(a) January 1, 1989, or

(b) the date on which the last of such collective bargaining agreements terminates without regard to any extensions after February 28, 1986, or

(2) January 1, 1991.[213]

7. Nondiscrimination Rules

a. General

Pursuant to a 1986 TRA conforming amendment to §401(a)(5), a classification is not considered discriminatory within the meaning of §§401(a)(4) or 410(b)(2)(A)(i) merely because it is limited to salaried or clerical employees.[214] Moreover, a plan will not be considered discriminatory within the meaning of §401(a)(4) simply because contributions or benefits of, or on behalf of, employees under the plan bear a uniform relationship to the compensation, as defined by §414(s), of these employees.[215] Further, a plan is not to be considered discriminatory if it favors highly compensated employees in a manner permitted under §401(l).[216]

b. Integrated Defined Benefit Plans

The Act applies a special rule to both excess and offset defined benefit plans.[217] The rule is designed to prevent employers from claiming credit for another employer's Social Security contributions in integrating its plan. Under the rule, a plan shall not fail to qualify under §401(a) "merely because the plan provides that the employer-derived accrued retirement benefit for any participant under the plan may not exceed the excess (if any) of —

(I) the participant's final pay with the employers, over

(II) the employer-derived retirement benefit (PIA) under Social Security attributable to the participant's service with the employer.[218] The employer-derived benefit is treated as accruing ratably over 35 years.[219] Final pay is defined as the total compensation (within the meaning of §414(q)(7) paid to the participant by the employer for any year (i) which ends during the five-year period which ends with the year in which the participant separates from service and (ii) for which the participant's total compensation from the employer was the highest.[220]

c. Single Plan Treatment

In determining whether two or more plans satisfy the nondiscrimination requirements of §401(a)(4) when considered as a single plan, certain special rules apply.[221] First, if the amount of contributions on behalf of the employees allowed as a deduction under §404 under these plans when taken together, bears a uniform relationship to the compensation (within the meaning of §414(s)) of such employees, the plans are not considered discriminatory simply because the rights of the employees to the employer contributions do not become nonforfeitable at the same time under the plans. Second, if regulations to be promulgated are satisfied, plans will not be considered discriminatory merely because employees' rights to benefits under the plans become nonforfeitable at different rates.

d. Effective Dates

The above amendments made by §1111 of the 1986 TRA generally apply to benefits attributable to plan years beginning after December 31, 1988.[222] In the case of a plan maintained pursuant to a collective bargaining agreement ratified before March 1, 1986, these rules do *not* apply to benefits pursuant to, and individuals covered by, such agreement in plan years beginning before the earlier of:

(1) the later of —

(a) January 1, 1989, or

(b) the date on which the last of such collective bargaining agreements terminates without regard to any extensions after February 28, 1986, or

(2) January 1, 1991.[223]

II. Contribution and Benefit Limitations

qualified defined benefit plans are subject to limits under Code §415. For defined contribution plans, the annual addition is limited to the lesser of 25% of compensation for the year, or $30,000. Under pre-1986 TRA law, the annual addition consisted of all employer contributions, a specified portion of employee contributions, and all reallocated forfeitures. This amount of employee contributions taken into account in computing a participant's annual addition was the lesser of one-half of the employee's nondeductible contributions or total nondeductible employee contributions in excess of 6% of compensation. Under pre-TRA law, the $30,000 limit was scheduled to be adjusted beginning in 1988 for post-1986 cost-of-living increases. The cost-of-living increases to the dollar limits were to be adjusted in the same manner as the adjustments to the primary insurance amounts under Social Security, which are generally adjusted by the percentage increases in the consumer price index.

The limit on annual benefits derived from employer contributions to a defined benefit pension plan is 100% of average compensation or $90,000, whichever is less. The $90,000 limit will be indexed beginning in 1988, to reflect post-1986 cost-of-living increases. Under pre-1986 TRA law, if retirement benefits commenced before age 62, the $90,000 limit was reduced so that it would be the actuarial equivalent of an annual benefit of $90,000 commencing at age 62. There was a floor on this reduction, however, prohibiting the dollar limit applicable to benefits commencing at or after age 55 from falling below $75,000. For benefits commencing before age 55, the $75,000 was reduced actuarially. Under pre-1986 TRA law, the reduction in the dollar limit for benefits commencing before age 62, and the reduction in the $75,000 amount for benefits commencing before age 55, had to be computed using an interest rate assumption not less than the greater of 5% or the rate specified in the plan for purposes of determining benefits payable before the normal retirement age.

Similarly, if retirement benefits under a defined benefit plan began after age 65, the $90,000 limit was increased to the actuarial equivalent of an annual benefit of $90,000 beginning at age 65. The increase was computed using an interest rate assumption not greater than the lesser of 5% or the rate specified in the plan. Pre-1986 TRA law did not require that a plan provide increased benefits for participants retiring after age 65.

Under pre-TRA law, where a participant had less than 10 years of *service*, the §415 limits were reduced by 10% per year for each year of service less than 10.

Under pre-TRA law, there were no special provisions for employees who are statutorily required to retire before age 55, such as certain police and firefighters, as well as commercial airline pilots. Also, under pre-1986 TRA law, there were no provisions permitting employers and participants to make contributions to a defined benefit plan to fund post-annuity starting date cost-of-living increases.

Under pre-1986 TRA law, provided the plan was not top-heavy, there was no limit to the amount of compensation that could be taken into account for purposes of computing the annual addition to a defined contribution plan or the annual benefit derived from the employer contributions under a defined benefit plan. If the plan was top-heavy, a $200,000 limit applied.

Plans that do not comply with the overall limits set forth in Code §415 are not qualified plans.

In enacting changes to the contribution and benefit limits, Congress was concerned that the dollar limits on benefits were more generous for individuals who retired before the Social Security retirement age (presently age 65) than the limits for individuals who retired on or after that age, because of the manner in which the dollar limits were actuarially reduced for early retirement. Congress believed that the rules encouraged early retirements.

In adjusting the dollar limits for qualified plans, Congress was concerned not only about the dollar amounts appropriate for the separate plan limits, but also about the relative attractiveness of defined contribution versus defined benefit plans and the appropriateness of the prior law adjustments for the cost-of-living. The 1986 TRA changes Act reflect the conclusion that defined benefit plans generally provide better overall retirement income security because participants in these plans are protected against bad investment experience and because many plans provide protection against inflation, at least up to normal retirement age, in that benefits are often based on final average pay. As a result, in setting the increases in the dollar limits on contributions and benefits under the two types of plans, Congress provided for a gradual change in the ratio between the defined benefit and defined contribution plan dollar limits.[224]

Congress was also concerned that the rule requiring reduced limits on benefits payable to participants with fewer than 10 years of service was not effectively limiting benefits for highly compensated employees with short periods of participation. The legislative history indicates Congress' awareness that some employers planned the timing of the establishment of a defined benefit plan (or an increase in benefits under a pre-existing plan) to coincide with projected retirement of one or more of the employer's highly compensated employees. As a result, some employers set up plans at a late date, rather than an earlier date, precluding other employees, such as rank and file employees, from accruing (and becoming vested in) greater benefits.[225]

B. Overview

The Tax Reform Act of 1986 made several adjustments to the annual contribution and benefit limits of Code §415. For defined contribution plans, while it did not change the $30,000 limit, it slowed down and changed the rate at which the dollar limitation increases to reflect changes in the cost-of-living.[226] In addition, the formula for computing the dollar limit must, after the TRA, include *all* after-tax contributions of a participant to any plan in which he or she participates.[227]

Under the revised provisions, the defined contribution plan dollar limit is tied to increases in the defined benefit dollar limit. The defined contribution plan dollar limit will not change until the defined benefit plan dollar limit

reaches $120,000 due to cost-of-living adjustments. Once the defined benefit plan limit reaches $120,000, the defined contribution dollar limit will increase so that it will always be 25% of the defined benefit dollar limit.[228] (Under prior law, the defined contribution limit was one-third the defined benefit limit.)

With regard to defined benefit plans, the $90,000 dollar limit will increase starting in 1988 to reflect post-1986 cost-of-living increases in accordance with the provisions of prior law.[229] The Act requires, however, that actuarial adjustments be made with regard to those participants retiring before the Social Security retirement age.[230] The Act removed the window period of pre-TRA law which retained the regular defined benefit plan dollar limit for individuals retiring between ages 62 and 65 and removed the $75,000 floor on actuarial reductions for participants retiring at or after age 55.[231]

Recognizing the special needs of certain categories of professionals such as police, firefighters and pilots who are often required to retire at an earlier age, more liberal actuarial reduction rules apply to these individuals.[232]

The Act introduces a defined benefit plan concept, whereby employers and employees may make after-tax contributions to defined benefit plans to provide for cost-of-living increases in benefits after the annuity starting date.[233]

The Act also places a cap on the amount of annual compensation that may be taken into account for purposes of plan qualification and nondiscrimination. The $200,000 limit previously applicable only to top-heavy plans and SEPs was applied to all qualified plans regardless of whether they are top-heavy.[234]

Note: A plan may incorporate by reference the revised Code §415 rules.[235]

The 1986 TRA modifications to the Code §415 limits apply generally to years beginning after December 31, 1986.[236] This effective date is modified in the case of plans maintained pursuant to collective bargaining agreements [237] and, contains protection for accrued benefits of participants in defined benefit plans in existence on May 6, 1986.[238] Further, where a plan satisfied the requirements of Code §415 for its last plan year beginning before January 1, 1987, the sum of the defined benefit plan fraction and the defined contribution plan fraction computed under Code §415(e)(1) will be deemed not to exceed 1.0 for that year.[239] There is a special effective date rule for the $200,000 limit on annual compensation. In general, that provision applies to benefits accruing in years beginning after December 31, 1988, except in the case of plans maintained pursuant to collective bargaining agreements which will have a later compliance date.[240] With regard to the inclusion of all employee contributions in the formula for determining the limit on annual additions to defined contribution plans, the application of the post-TRA rule does not require the recomputation of the additions for purposes of the combined plan fraction, for any year beginning before 1987.[241]

Note: Although plans do not have to be amended until the first plan year beginning after December 31, 1988, employers with defined benefit plans should amend plans to conform to the revised Code §415 limits as soon as possible. Failure to do so may result in participants accruing benefits in excess of the limits, possibly causing the funding of excess benefits on a nondeductible basis and the imposition of a 10% excise tax on nondeductible contributions.

C. Detailed Analysis

1. Defined Contribution Plans

a. Dollar Limitations

The §415 defined contribution plan dollar limit applicable to a limitation year is temporarily frozen at an amount equal to the greater of $30,000 or 25% of the defined benefit plan dollar limit for the limitation year. The dollar limit is scheduled to increase to reflect cost-of-living changes only when the defined benefit dollar limitation reaches $120,000. Thereafter, as the defined benefit contribution plan dollar limit increases to reflect changes in the cost of living, the defined contribution plan contribution limits will similarly rise, provided, however, that the defined contribution limit shall remain 25% of the defined benefit limit at all times.[242]

b. After-Tax Contributions

The Act provides that the definition of annual addition for purposes of computing the defined contribution plan limit will include 100% of all after-tax employee contributions, rather than the specified portion that was counted under pre-TRA law.[243] This denies participants the opportunity to contribute up to 6% of compensation without having to consider the contribution's impact on the §415 limits.

Note: The revised definition for annual additions to defined contribution plans does not require the recalculation of amounts added to the numerator of the defined contribution plan fraction with respect to any year beginning before January 1, 1987.[244]

The Act also liberalized the rules relating to employee contributions for retiree medical benefits. It provided an exclusion for contributions made by retired non-key employees for retiree medical coverage. Such amounts are not to be included in the percentage of compensation limit on annual additions.[245] Thus, for purposes of computing the

25% of compensation limit, contributions for retiree medical coverage are not included.

c. Technical Correction to Tax Reform Act of 1984

Section §1852(h)(2) of the Act expands the provisions of §528 of the Tax Reform Act of 1984 and Code §415(l)(1) to clarify that plan contributions used to provide medical benefits to retired employees, while being considered annual additions, will not be subject to the 25% of compensation limit generally applicable to defined contribution plans.

2. Defined Benefit Plans

a. Dollar Limitations

The Act does not change the maximum dollar limit on annual benefits payable from a defined benefit plan under prior law. That amount remains at $90,000 and is scheduled to be adjusted for post-1986 cost-of-living increases beginning in 1988. The adjustments will be made based on increases in the consumer price index.[246]

b. Actuarial Adjustments for Retirement Before Social Security Retirement Age

The Act increased the age at which the maximum dollar limit becomes payable from age 62 to the Social Security retirement age.[247]

"Social Security retirement age" is defined as the age used as the retirement age in the Social Security Act with some modifications.[248]

Note: The Social Security retirement age is currently 65, however, the age is scheduled to increase to age 67 by year 2017. In the future, the Social Security retirement age will depend on an individual's date of birth. For individuals born before January 1, 1938, the Social Security retirement age will be 65; for individuals born after December 31, 1937 and before January 1, 1955, the Social Security retirement age will be 66; and for individuals born after December 31, 1954, the Social Security retirement age will be 67.[249]

The limit on the annual benefit is actuarially reduced if the benefit commences before the Social Security retirement age to the actuarial equivalent of the limit applicable for benefits commencing at the Social Security retirement age.[250] Specifically, if benefits commence before the Social Security retirement age, the $90,000 dollar limit (but not the 100% limit) will be reduced so that it is the actuarial equivalent of an annual benefit of $90,000 beginning at Social Security retirement age. The Act also repealed the $75,000 floor for early retirement under which the dollar limit for benefits commencing at or after age 55 was not reduced below $75,000.[251] As a result, the dollar limit for benefits which commence *at any age* before the Social Security retirement age will be the actuarial equivalent of the inflation-adjusted limit ($90,000 for 1986) for benefits commencing at the Social Security retirement age.[252]

The adjustment of the dollar limit on benefits with respect to a participant who retires at or after age 62 and before the Social Security retirement age, is to be calculated in a manner consistent with the reduction for early retirement benefits under Social Security. Thus, for participants with a Social Security retirement age of 65, for example, early retirement will require a reduction equal to 5/9 of 1% for each month by which the individual's age at retirement precedes age 65. This results in a dollar limit equal to 80% of the maximum limit for normal retirement age for individuals who retire at age 62. Where the Social Security retirement age is 66, the dollar limit at age 62 is 75% of the maximum limit, and where the Social Security retirement age is 67, the dollar limit at age 62 is 70% of the maximum limit or $63,000.[253]

Benefits commencing prior to age 62 will be reduced to reflect the actuarial equivalent of the benefit payable at age 62. As under pre-1986 TRA law, the reduction is computed using an interest rate assumption not less than the greater of 5% or the rate specified in the plan for purposes of determining early retirement benefits.[254]

These provisions, which conform the normal retirement age under a plan to the Social Security retirement age, and also provide an early retirement reduction consistent with the Social Security reduction for early retirement, apply for purposes of both the dollar limit on benefits under a defined benefit plan and for purposes of determining the employer's allowable deduction for funding such benefits.[255]

Note: These provisions do not affect either the time at which plan participants may retire, nor do they directly affect the employer's assumptions for funding purposes concerning the time at which participants will retire. These provisions affect only individuals whose benefits exceed the dollar limits on benefits and, as a result, do not require an actuarial reduction for early retirement benefits for all participants whose benefits commence before the Social Security retirement age.[256]

The Act also modified the pre-TRA rule that permitted an increased §415 limit for benefits commencing after age 65. Under the revised provision, if retirement benefits from a defined benefit plan begin after the Social Security retirement age, the dollar limit is increased so that it is the actuarial equivalent of an annual benefit of $90,000 beginning at *the Social Security retirement age.* As under pre-1986 TRA law, the increase is computed using an interest rate assumption not higher than the lesser of 5% or the rate specified in the plan.

c. Reduction for Service Less Than Ten Years

The 1986 TRA reduces the maximum dollar limit for participants with fewer than 10 years of *participation* in a

[246] Act §1106(a). Code §415(d).

defined benefit plan.[257] Under pre-TRA law, the 10-year period related to years of service with the employer rather than years of participation in the defined benefit plan in question. The amendment discourages the establishment of defined benefit plans for top executives in the last few years before retirement. Where a plan is established close to retirement, so that the employee does not have 10 years of participation, the dollar limit is reduced ratably.[258] The proration, however, may not reduce the limit to an amount less than one-tenth of the dollar limit (*i.e.*, $9,000).[259] Service with the employer before becoming a participant, however, is disregarded in determining the §415 dollar limits on benefits payable under a defined benefit plan.

Example: If a participant, who would otherwise be entitled under the terms of the plan to receive the maximum annual benefit, had only three years of participation in the plan, the maximum benefit payable would be the lesser of 100% of compensation (reduced by 10% for each year of service less than 10), or $27,000 (three-tenths of $90,000).

The Act also provides that, to the extent provided in regulations, this proration will not only be applied to newly-formed plans (*i.e.*, plans formed within 10 years of retirement), but also to each change increasing benefits under a plan.[260] The Conference Report provides that an amendment improving the benefit formula may increase benefits by up to 1/10 of the §415 dollar limit for each year of participation after the amendment. A second amendment within 10 years of a prior amendment increasing benefits is subject to the limit under the phase-in triggered by the prior amendment (along with benefit increases under the prior amendment).[261]

The Conference Report provides that the phase-in for benefit increases does not apply to benefit improvements due to updating compensation in a career average pay plan, cost-of-living increases for retirees, the beginning of a new collective bargaining cycle, and other reasonable benefit improvements that are not primarily for the highly compensated employees.[262] The Conferees directed the Secretary to draft regulations to apply a concentration test under which the phase-in will apply to a benefit increase if the resulting increase in benefits is not primarily for highly compensated employees. The Secretary was also directed to provide rules permitting the tacking of participation under separate plans in circumstances not inconsistent with the purposes of the phase-in.[263]

d. Specialized Dollar Limit Rules

(1) Plans Maintained by Governments and Tax-Exempt Organizations

The Act contains special rules for tax-exempt or governmental employers and a specified class of merchant seamen. The Act exempts these classes from the provisions relating to the normal retirement age and the elimination of the $75,000 floor for benefits beginning at age 55.[264] Thus, for plans that qualify under this exception, the dollar limit applicable to benefits commencing at age 62 remains $90,000. For benefits commencing before age 62, the limit is reduced to an amount actuarially equivalent to a benefit of $90,000 commencing at 62. As under pre-1986 TRA law, actuarial equivalence is determined using an interest rate equal to 5% or the rate specified in the plan, whichever is greater. For plans qualifying for this exception, the limit on benefits commencing on or after age 55 will not be reduced to an amount less than $75,000 and, for benefits commencing before age 55, the applicable dollar limit is the actuarial equivalent of the $75,000 limit commencing at age 55.[265]

A governmental plan is defined as a plan within the meaning of Code §414(d). That section relates to plans established and maintained for its employees by the United States, the government of any state or political subdivision of a state or by any agency or instrumentality of any state or the federal government. A governmental plan also includes any plan to which the Railroad Retirement Act of 1935 or 1937 applies and any plan of any international organization which is exempt from tax by reason of the International Organizations Immunities Act.[266] Also covered under these provisions, is a "qualified merchant marine plan," defined as a plan in existence on January 1, 1986, in which the participants are merchant marine officers holding licenses issued by the Secretary of Transportation under Title 46 of the U.S. Code.[267]

(2) Special Limits for Qualified Police and Firefighters

Many governments require their police and firemen to retire at an age earlier than the Social Security retirement age. As a result, Congress did not believe it appropriate to provide for full actuarial reduction of the limit on benefits payable to participants in certain police and firefighter pension plans.[268] The Act limited the actuarial reduction of the limit on benefits payable to participants in qualified police or firefighters pension plans so that the benefits will never be actuarially reduced to an amount less than $50,000, regardless of the age at which the benefits commence. In addition, the Act's provisions conforming the retirement age, for purposes of the limits on benefits, to the Social Security retirement age, and modifying the actuarial reductions for early retirement, do not apply to such plans or to benefits provided to police officers and firefighters.[269] Further, the $50,000 amount below which benefits may not be actuarially reduced, will be adjusted at the same time and in the same manner as the $90,000 limit for defined benefit plans in accordance with increases in the consumer price index.[270]

A qualified participant is defined as a participant in a defined benefit plan maintained by a state or a political subdivision, and for whom the calculation of the period of service taken into account in determining the amount of the benefit in the defined benefit plan includes at least 20 years of service of the participant as a full-time employee of any police department or fire department, which is organized and operated by a state or political subdivision maintaining the defined benefit plan or as a member of the armed forces of the United States.[271] Correction officers, although covered under the Senate bill, were not included in the provision that was enacted.[272]

(3) Commercial Pilots

Commercial pilots were also given special treatment primarily because federal regulations require that commercial airline pilots retire at age 60 and Congress did not believe it appropriate to apply an actuarial reduction for early retirement where an individual is required to retire at an earlier age.[273]

The Act retained the $75,000 floor of pre-1986 TRA law for benefits commencing at or after age 55.[274] If benefits begin before age 55, the actuarial reduction for early retirement may not reduce the limit on benefits below the actuarial equivalent of the $75,000 limit at age 55.[275]

The Act also provided that if, as of the time an individual retires, Federal Aviation Administration (FAA) regulations require an individual to separate from service as a commerical airline pilot after attaining any age occurring on or after age 60 and before the Social Security retirement age, the age specified in the FAA regulations must be substituted for the Social Security retirement age, unless the individual separates from service before reaching age 60.[276]

The Conference Report clarifies that the rules applicable to commercial pilots are limited to individuals whose service as a pilot constitute substantially all of their service to which the benefit relates.[277]

3. Qualified Cost-of-Living Arrangements

The Act introduced an arrangement that may be established in conjunction with a defined benefit plan. Under this arrangement, special employer and employee contributions may be used to provide cost-of-living increases in addition to the primary retirement benefit, after the annuity starting date. To qualify, such arrangements must meet certain election requirements, additional nondiscrimination requirements, special rules for key employees, and the general qualification requirements of Code §401(a).[278]

A qualified cost-of-living arrangement is an arrangement in conjunction with a defined benefit plan that (1) provides a cost-of-living adjustment to a benefit provided under the defined benefit plan or a separate plan that is subject to the minimum funding standards of Code §412; and (2) meets four specific requirements and any other requirements set forth in regulations.[279] Under a qualified arrangement, employee contributions are not treated as annual additions for purposes of the defined contribution plan §415 limit. They are, however, treated as an annual addition for purposes of the combined plan limit of Code §415(e).[280] The benefit attributable to the employee contribution, however, will be treated as an employer-provided benefit for purposes of Code §415(b).[281]

The requirements that must be satisfied for an arrangement to qualify as a cost-of-living arrangement are:

(1) The cost-of-living adjustment of participants must be based (i) on increases in the cost-of-living after the annuity starting date, and (ii) on the average cost-of-living increases must be determined by reference to one or more indices prescribed by regulations, except that the arrangement may provide that the increase for any year will not be less than 3% of the retirement benefit (determined without regard to the arrangement).[282]

(2) The cost-of-living arrangement must be elective and available to all participants.[283] The arrangement must provide that the election may be made in the year in which the participant separates from service or attains the earliest retirement age under the defined benefit plan, or it may provide that the election may be made in both such years.[284]

(3) The arrangement must not be found under regulations or by the Secretary to create a pattern of discrimination with respect to participation therein.[285]

(4) In general, qualified arrangements may not permit key employees to participate. For this purpose, a key employee is defined under Code §416(i), except that for non top-heavy plans, officers who are key employees solely by reason of their officer status may participate.[286]

The legislative history clarifies that a qualified cost-of-living arrangement must satisfy *all* of the applicable qualification requirements of Code §401(a). For example, the right to the employer-provided portion of a cost-of-living benefit under a qualified arrangement is part of the accrued benefits subject to the Code §411 benefit accrual rules, including the Code §411(d)(6) anti-cutback rule, and, as a result, it will accrue and vest as the employee accrues and vests in the normal retirement benefit. Thus, an employer may reduce or eliminate the employer contribution under a qualified cost-of-living arrangement only with respect to benefits not yet accrued.[287] The right to the employer-derived portion of a qualified cost-of-living benefit is also subject to the vesting requirements. Employer-derived benefits are to be treated under rules similar to the

rules applicable to employer-derived early retirement benefits.[288] For example, according to the Conference Report, "the employer-derived portion of the cost-of-living benefit need not be provided to an employee who fails to satisfy the applicable conditions for receipt of the benefit, including any required employee contributions. Further, the cost-of-living benefit need not be provided to an employee who has separated from service and received a distribution of the employee's benefit without making the required contributions for the cost-of-living benefit. The employee could, however, return to service and buy back the benefit by proper repayment of the cashed out benefit." [289]

Cost-of-living increases must be available on the same terms for all participants. Thus, a greater subsidy could not be provided for employees who work until retirement than to those who separate from service with vested benefits before retirement.[290]

Note: For purposes of the lump sum distribution rules under Code §402(e)(4), the balance to the credit of an employee under a defined contribution plan does not include any amount transferred from such defined contribution plan to a qualified cost-of-living arrangement under a defined benefit plan.[291]

4. Limit on Annual Compensation

The 1986 TRA replaced the $200,000 compensation limit applicable to top-heavy plans and SEPs with a $200,000 limit for *all* participants regardless of whether they are key employees and regardless of whether the plan is top-heavy.[292]

Note: The limit applies for most purposes including the §404 provisions relating to allowable deductions and the nondiscrimination rules.[293] As a result, contributions and benefits must be based on no more than the first $200,000 of compensation each year. Thus, for a nonintegrated plan to provide the maximum dollar contribution to a defined contribution plan ($30,000 in 1986, for instance) for its highly paid participants, it would have to provide for a contribution rate of 15%.

Note: The Conference Report provides that the $200,000 limit applies to each year's compensation (including years before 1987), not solely to the final average or career average compensation of an individual.[294]

Regulations are required that will effectuate the intent of the $200,000 limit. According to the Senate Report, the purpose is to ensure that reductions in the maximum contributions or benefits do not reduce the contributions or benefits of low- and middle-income employees.[295] As a result, it would be inconsistent with this intent to define compensation so that the $200,000 limit has little effect on highly compensated employees, but the definition adversely impacts in low- and middle-income employees.[296] The $200,000 annual compensation limit will be indexed in the same manner and at the same time as the $90,000 defined benefit dollar limitation under Code §415(d).[297]

The Conference Report clarifies that, with regard to a defined benefit plan, the $200,000 limit applies to each year's compensation (including years before 1987), not solely to the final average or career average compensation of an individual.[298]

5. Code Section 415 Limits May Be Incorporated in Plans by Reference

The 1986 TRA provides that, except as provided in regulations and notwithstanding any other provision of law, a plan may incorporate by reference the §415 limits.[299]

While incorporation by reference is permitted, if the limit may be applied in more than one manner, the plan must specify the manner in which the limit is to be applied.[300] For example, for defined contribution plans, regulations provide several methods for establishing a suspense account for excess annual additions and for allocating amounts in the suspense account. Under the 1986 TRA, although the plan may incorporate the limit by reference, it must specify which method is to be used.[301] The Act does not change the requirements of pre-TRA law relating to definitely determinable benefits and the requirement that profit sharing and stock bonus plans specify a definite allocation formula. A plan will not fail to provide definitely determinable benefits merely because it incorporates the §415 limits by reference but, if an employee participates in both a defined contribution plan and a defined benefit plan maintained by the same employer, the manner in which the employee's benefits will be adjusted to comply with the §415(e) combined plan limit must be specified.[302]

6. Special Catch-Up Election for Tax-Sheltered Annuity Plans

The 1986 TRA amended the catch-up rules for tax-sheltered annuity plans under which an employee of certain specified institutions may elect to compute the annual exclusion allowance solely by reference to the maximum annual employee payment that could be made under the overall limit. The Act expanded the class of employers whose employees are entitled to the special catch-up elections to include health and welfare service agencies.[303] The Conference Report clarifies that the catch-up rules apply *before* separation from service.[304]

7. Planning Tip

The 1986 TRA changes to Code §415 generally apply to years beginning after December 31, 1986. Plan amendments are not required, however, until the first plan year

beginning after December 31, 1988.[305] Nevertheless, employers with defined benefit plans should amend their plans to conform to the revised §415 limits as soon as possible. Under ERISA, which has not been amended by the 1986 TRA with regard to the contribution and benefit limits, benefits must accrue and the minimum funding standard must be met based on the terms of the plan document. If the plan provides for benefits in excess of the Act's requirements after the effective date of the changes, the plan's terms control and benefit accruals cannot be reduced by future amendment, even though amendments are not required until 1989. Also, deductions in excess of the required limits are subject to a penalty tax. A failure to amend the plan by the effective date of the 1986 TRA provisions may result in participants accruing benefits in excess of the limits, possibly causing the funding of excess benefits on a nondeductible basis and the imposition of a 10% excise tax on nondeductible contributions under §4972.[306]

8. General Effective Dates

a. In General

In general, the changes to Code §415 apply for limitation years beginning after 1986. Also, in general, in the case of plans maintained pursuant to one or more collective bargaining agreements between employee representatives and one or more employers and ratified before March 1, 1986, the amendments to §415 do not apply to contributions or benefits pursuant to such agreements in years beginning before the earlier of January 1, 1989 or the date on which the last of the agreements terminates.[307]

There is a different effective date rule for the $200,000 annual limit on compensation. The $200,000 limit applies for benefits accruing in years beginning after 1988.[308] In the case of a collectively bargained plan, the amendments concerning the $200,000 compensation limit apply to benefits accruing in years beginning on or after the earlier of: (i) January 1, 1991, or (ii) the later of (a) January 1, 1989 or (b) the date on which the last of the collective bargaining agreements ratified before March 1, 1986 terminates.[309]

b. Transition Rules

(1) Benefits Accrued Before 1989

Beginning January 1, 1987, employer deductions for contributions to qualified plans are limited to amounts required to fund benefits subject to the reduced limits. The benefits that accrue under a plan, or the annual additions that are allocated to the plan, in excess of the reduced limits will have to be decreased to comply with the limits unless the benefits are grandfathered as "current accrued benefits."[310]

A current accrued benefit is the participant's accrued benefit determined as of the close of the last limitation year beginning before January 1, 1987. The accrued benefit must be expressed as an annual benefit determined pursuant to the rules in effect under pre-1986 TRA law. Generally, the current accrued benefit is determined pursuant to the terms and conditions of the plan. If there are any changes in the terms or conditions of the plan after May 6, 1986, they may not be taken into account. The current accrued benefit for this purpose, will not be increased by cost-of-living increases occurring after 1986.[311]

This transition rule allows individuals who were participants in a plan before January 1, 1987, provided the plan was in existence on May 6, 1986, to accrue a higher defined benefit than would be permitted under the 1986 TRA rules. This grandfather provision assures that the dollar limit for benefits payable under the plan is never less than the benefit accrued as of the end of the last limitation year beginning before January 1, 1987.[312]

(2) Rules Pertaining to Plans that Exceed Combined Fraction Rule

A transition rule applies to plans that satisfied the post-1986 TRA §415 requirements for their last years beginning in 1986. With regard to these plans, the Act requires that regulations be promulgated under which an amount is subtracted from the numerator of the defined contribution plan fraction (not exceeding the numerator) so that the sum of the defined benefit plan fraction and the defined contribution plan fraction computed under Code §415(e)(1) does not exceed 1.0 for such year.[313] The proposed enrollment technical corrections to this provision, which were not enacted, indicated that the computation should be determined as if the amendments made by the Act were in effect for such year.

III. 401(k) and Thrift Plans

A. Introduction

1. Cash or Deferred Arrangements

Section 401(k) of the Code was enacted by the Revenue Act of 1978.[314] Regulations under §401(k) were first proposed on November 10, 1981.[315] These proposed regulations have not yet been finalized.

Since the regulations were proposed under §401(k), cash or deferred arrangements (CODAs) have become widely used by employers because of their ability to allow tax benefits for salary reduction contributions made by employees to the plan. Section 401(k) plans are required to both satisfy the general nondiscrimination requirements for all qualified plans,[316] and must also satisfy the special requirements of §401(k).

One of the principal limitations imposed by §401(k) plans are the limitations on contributions that can be allocated to the highest paid group. This limitation is calculated by reference to the actual deferral percentages (ADP) of the employees eligible to participate in the plan. Under the rules as they existed before the Tax Reform Act

of 1986, the eligible employees were grouped by compensation and the ADP of the lower paid two-thirds was measured against the ADP of the upper paid one-third. Under this test, the ADP of the eligible employees in the top one-third group could not exceed:

(1) the ADP for the lower paid two-thirds multiplied by 1.5; or

(2) the ADP of the lower paid two-thirds multiplied by 2.5 but with the ADP of the upper paid one-third not to exceed the ADP of the lower paid two-thirds by more than three percentage points.[317]

Example: Under this test, if the ADP of the lower paid two-thirds were 6%, then the ADP of the upper paid one-third could not exceed 9%.

Within these limits, however, the only other dollar limitations applicable to the deferrals available under §401(k) were the same limitations applicable to qualified plans. Thus, for example, because §401(k) plans were generally profit-sharing plans, they were subject to the limitations of §415(c) and, thus, the total annual additions for an individual for a year could not exceed 25% of compensation or $30,000.[318]

2. After-Tax Employee Contributions

Before the Tax Reform Act of 1986, the only nondiscrimination requirements applicable to after-tax employee contributions to a qualified plan were general requirements to ensure that the plan was not excessively used for the benefit of the highly-compensated employees. The principal limitation imposed to ensure that this reasonableness requirement was satisfied is the imposition of a broad 10% of compensation limit on the amount of aggregate after-tax employee contributions that can be contributed by an employee to a plan over his years of participation.[319] Mandatory employee contributions are however, subject to a lower limitation of 6% of compensation.[320]

B. Overview

1. Limitations on Elective Contributions

Act §1105 adds new limitations on the amount of elective deferrals that an individual can make on a tax-deferred basis. These new limitations are imposed under new §402(g), which generally imposes a $7,000 limit on the amount of elective deferrals that any individual can make during a calendar year and have the amount excluded from his gross income. As used in the statute, "elective deferral" includes salary reduction contributions to a qualified CODA under §401(k) (which would otherwise be excludable from income under §402(a)(8)), salary reduction contributions to a tax-sheltered annuity under §403(b) and salary reduction contributions made to a simplified employee pension plan of a type similar to the cash or deferred profit-sharing plan.

If an individual makes an elective deferral in excess of $7,000 for a taxable year, the amount is included in the gross income of the individual for the year in which the deferral is made. If the excess deferral is separately allocated by the first day of March following the taxable year of the deferral and actually distributed by the following April 15, then the excess deferral will not be included in the individual's income in the year withdrawn from the plan, although the earnings on the excess deferral will be taxable for the year of withdrawal. In addition, the withdrawal will not be subject to the penalty tax under §72(t), even if the individual has not yet reached age 59½ at the time of the withdrawal.

Any excess deferral that is not timely withdrawn is not treated as part of the investment in the contract under §72 and therefore would not increase the individual's basis under the plan. Thus, failure to make a timely withdrawal pursuant to the provisions of §402(g)(2) would result in double taxation of the excess deferral.

The $7,000 limit under §402(g)(1) is increased to the greater of $9,500 or the $7,000 limit as adjusted for cost-of-living increases for contributions to tax-sheltered annuities under §403(b). The $7,000 limit is adjusted for cost-of-living in the same manner as adjustments are made under §415(d).

These new limitations apply to taxable years beginning after 1986. Thus, they are generally effective for calendar years starting January 1, 1987. Two special rules are provided that are of particular importance. First, elective deferrals by a partner for a taxable year beginning before January 1, 1987 and ending after January 1, 1987 are treated as having been made ratable during the taxable year.

The second special rule provides that employer contributions made to a CODA during 1987 that are attributable to services performed during 1986 are not subject to these new limitations if, under the plan as in effect on August 16, 1986, the employee makes the election before January 1, 1987 and the employer identifies the amount of the contribution before January 1, 1987.

2. Antidiscrimination Rules Under Section 401(k)

Act §1116 makes several substantial changes in the nondiscrimination rules applicable to CODAs under §401(k).

Probably the most significant of these changes is a change in the nondiscrimination percentages (ADPs) applicable under §401(k)(3). Under pre-1986 TRA law, these ADPs are computed separately for the highly-compensated employees and for the nonhighly-compensated employees. Under the Act, the ADP formula would be reduced so that the ADP of the highly-compensated employees cannot exceed 1.25 times the ADP of the nonhighly-compensated employees or, if greater, two times the ADP of the nonhighly-compensated eligible employees but not more than two percentage points greater than the ADP of the nonhighlycompensated eligible employees.

Failure to comply with the nondiscrimination rules of §401(k)(3) will not necessarily lead to the disqualification of the plan. Under §401(k)(8), if the excess contributions are distributed to the participants in a timely fashion, disqualification is avoided. Alternatively, pursuant to regu-

[317] §401(k)(3) before the Act.
[318] *See* §415(c).
[319] Rev. Rul. 80-350, 1980-2 C.B. 133.
[320] Rev. Rul. 72-58, 1972-1 C.B. 111.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

lations, the employee may elect to treat the excess contribution as an after-tax employee contribution, thereby potentially avoiding plan disqualification. In order to gain the protection of §401(k)(8), the excess contribution must be either distributed or recharacterized as an after-tax employee contribution before the close of the plan year following the year in which the excess contribution is made. If such a distribution is made or recharacterized, then the 10% excise tax on distributions before age 59½ under §72(t) will not be imposed.

Two other fundamental changes in the application of the nondiscrimination rules to plans under §401(k) are made by the Act. First, §414(s) is added to define compensation for purposes of §401(k) as well as for qualified plans generally. Second, the highly-compensated group will no longer consist of the highest-paid 1/3 of eligible employees but instead, will be calculated pursuant to a special Code provision, §414(q). Under §414(q), which will apply to all qualified plans, "highly-compensated employee" generally includes 5% shareholders, employees making over $75,000 a year, employees making over $50,000 a year who are in the top 20% of employees by pay, employees who are officers and make more than $45,000 a year (1½ times the dollar limit for defined contribution plans under §415(c)) and family members of any of the foregoing.

3. Antidiscrimination Rules for Thrift Plans

Act §1117 imposes special nondiscrimination rules on matching contributions and employee contributions in thrift plans. These new nondiscrimination requirements are imposed under new Code §401(m), which is similar to §401(k) in the tests imposed.

The principal nondiscrimination test imposed under §401(m) is very similar to the ADP test imposed under §401(k). Instead of using actual deferral percentages, §401(m) uses contribution percentages. Contribution percentages are computed for the eligible highly-compensated employees and for all other eligible employees separately. The contribution percentages for each group are the average of the ratios of the sum of the matching contributions and employee contributions paid under the plan on behalf of each employee over each employee's compensation. (Compensation is defined under new Code §414(s)). The statute indicates that pursuant to regulations, elective deferrals and qualified nonelective contributions may be taken into account for purposes of this test. Qualified nonelective contributions include employer contributions (other than matching contributions) that are not elective and that satisfy the vesting and distribution requirements of §401(k)(2)(B) and (C).

Once computed, the contribution percentages for the cligible highly-compensated employees on average cannot exceed the greater of:

(1) 125% of that percentage for all other eligible employees; or

(2) the lesser of (a) 200% of that percentage for all other eligible employees or (b) the percentage for all other eligible employees plus two percentage points.

In calculating these percentages, all employees who are eligible to make either employee contributions or to receive matching contributions are considered eligible employees.

If excess contributions are made to employees, a correction procedure similar to that provided under §401(k) is provided for plans covered by §401(m). That is, if the excess aggregate contributions are withdrawn before the close of the following plan year, the plan is not disqualified. If the excess aggregate contributions are withdrawn in a timely fashion, then the tax on early distribution under §72(t) will not be imposed.

The provisions of §401(m) are effective for plan years beginning after 1986.

4. Excess Contributions

In order to provide stronger disincentives for employees to make excess contributions under §401(k) or §401(m), a new excise tax under §4979 is imposed on excess contributions. The tax is imposed on the employer in an amount equal to 10% of the sum of the excess contributions under a CODA or the excess aggregate contributions under a §401(m) plan. The tax also is imposed on excess contributions under tax-sheltered annuities under §403(b) and cash or deferred SEPs under §408(k). This 10% excise tax can be avoided if the excess contributions are distributed before the close of the first 2½ months of the following plan year. Failure to make the distribution within that time period would lead to imposition of the tax. Distributions within this 2½ month period are treated as received and earned by the recipient in the earlier taxable year.

This new excise tax is effective for plan years beginning after 1986.

5. Other Rules

Several other changes to §401(k) are made by the Act. First, the rules of §401(k)(2)(B) are modified to permit distributions to be made from a §401(k) plan on events other than separation from service, death, disability, age 59½ or hardship. Under this provision, §401(k) plans may make distribution on termination of the plan without establishment of a successor plan, the sale by the corporation of substantially all the assets used in its trade or business, the sale by a corporation of its interest in the subsidiary with respect to an employee who continues employment with that subsidiary, attainment of age 59½ in the case of a profit-sharing or stock bonus plan and the hardship of an employee in the case of a profit-sharing or stock bonus plan.

In addition, the waiting period for eligibility to participate in a §401(k) arrangement would be limited to not more than one year of service.

Note: This requirement will cause substantial problems for many small employers that use §401(k) plans since such plans, in many cases, require three years of service and provide a fully-vested employer contribution to meet the qualification requirements of §401(k).

In addition, §401(k) plans are not permitted to condition any benefit other than matching contributions on the employee's decision whether to make elective contributions to the plan. For example, a plan could not require that an

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

employee make a minimum elective contribution to the plan in order to receive an employer contribution under the plan. The plan could, however, have matching contributions that are only made if employees make elective contributions.

Section 401(k) plans can no longer be adopted by states, local governments, political subdivisions, agencies or instrumentalities of those entities or any organization exempt from income taxes (under subtitle A of the Code).

6. Effective Date

The general effective date rule for these changes is for years beginning after 1988. However, the reduction in the ADP percentages, the requirement that benefits not be contingent on elective contributions, the new definitions of highly-compensated employee and compensation, and the provisions on prohibiting the adoption of §401(k) plans by state and local governments and tax-exempt employers are applicable for years beginning after 1986. A special exception provides, however, that for state and local governments and political subdivisions that adopted a §401(k) plan before May 6, 1986 or tax-exempt organizations that adopted a §401(k) plan before July 2, 1986, the new prohibitions do not apply. Also, the special rules on the treatment of excess contributions apply for years beginning after 1986.

C. Detailed Analysis

1. Limits on Elective Deferrals

One of the major changes for §401(k) and other salary reduction arrangements is the imposition of tax limits on the amount that an individual can defer on a salary reduction basis to a plan.[321] These limits are imposed on §401(k) CODAs, §403(b) tax-sheltered annuities, and salary reduction simplified employee pension plans under §408(k).

a. Dollar Limits

New §402(g) imposes dollar limitations on the elective deferrals that an individual can make for any taxable year.[322] That is, if an individual makes an elective deferral in excess of the applicable limit, then the excess amount is nevertheless taxable to the individual for the year of the deferral.

The general limitation on the amount of deferral allowable is $7,000 a year.[323] This amount is subject to cost-of-living adjustments in accordance with the rules applicable to pension plans.[324] Further, in the case of amounts contributed under tax-sheltered annuities under §403(b) contracts, the dollar limitation is $9,500 instead of $7,000, but the $9,500 figure is not adjusted for cost-of-living increases.[325]

These limitations apply to the "elective deferrals" made with respect to any taxable year The term "elective deferral" includes three types of contributions. First, it includes employer contributions under a qualified CODA under §401(k) that are not includable in income by reason of §402(a)(8).[326] Thus, in essence, this limitation on elective deferrals in §401(k) plans only applies to the employee's salary reduction contributions, not to the employer contribution or the matching contribution made by the employer.

Example: In 1987, an executive, who in the past has been participating in a §401(k) plan to the extent of $30,000 in salary reduction contributions, will nevertheless be taxable on $23,000 of those salary reduction contributions if he puts in as a salary reduction contribution more than $7,000 in that calendar year. However, if the corporation contributes amounts in excess of $7,000, it is not affected by the limits of §402(g).

Second, "elective deferral" applies to employer contributions to the extent not includable in gross income for the taxable year under §402(h)(1)(B). This provision is applicable to salary reduction contributions made to a simplified employee pension plan under §408(k).[327]

Third, employer contributions used to purchase an annuity contract under §403(b) under a salary reduction agreement within the meaning of §3121(a)(5)(D) are also treated as elective contributions.[328]

A special rule applies for certain "qualified organizations." Qualified organizations include educational organizations, hospitals, home health service agencies, health and welfare service agencies, churches (or conventions or associations of churches) and any organization described in §414(e)(3)(B)(ii).[329] Under these special rules, a "qualified employee," *i.e.*, an employee who has completed 15 years of service with the qualified organization,[330] may make salary reduction contributions to a level higher than those otherwise permitted by §402(g). The applicable limitation for the salary reduction contributions to the tax-sheltered annuity contract is increased by whichever of the following is the least:

(1) $3,000;

(2) $15,000 reduced by amounts not included in gross income for the prior year by reason of these provisions; or

(3) the excess of $5,000 multiplied by the number of years of service of the employee with the qualified organization over the salary reduction contributions made for such employee for prior taxable years.[331]

These rules in effect permit certain long-serviced employees of educational organizations, churches and health related entities a larger salary reduction contribution to a tax-sheltered annuity.

b. Treatment of Excess Contributions

Section 402(g) also establishes tax rules for the treatment of excess deferrals, *i.e.*, amounts deferred in excess of the limits set forth under §402(g)(1). As noted previously, the excess deferral is taxable to the individual in the year of

[321] Act §1105.
[322] §402(g)(1).
[323] *Id.*
[324] The adjustment is made in accordance with the adjustments under §415(d). §402(g)(5).
[325] §402(g)(4).
[326] §402(g)(3)(A).
[327] §402(g)(3)(B).
[328] §402(g)(3)(C).
[329] §402(g)(8)(B).
[330] §402(g)(8)(C).
[331] §402(g)(8)(A).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the deferral since no salary reduction exclusion is permitted.[332] In addition, any excess deferral that is not distributed from the plan during the taxable year of the deferral is not treated as "an investment in the contract" under §72.[333] As a result, the employee will not establish any basis in the plan from the excess deferral and subsequent distribution of that amount would be potentially taxable.

Special rules on the distribution of excess deferrals are provided in §402(g). These special rules contemplate a two-step procedure for the distribution of an excess deferral held by a plan. Under the first step, not later than the first March 1 following the close of the taxable year of the individual, the individual may allocate the amount of the excess deferral among the plans under which the deferrals were made and may notify the plans of the portion allocated to them. If only one plan is involved, this step would be unnecessary. If, however, excess deferrals were made to more than one plan, the employee would have to determine which plan contained the excess deferral and follow the procedures of this first step.

The second step would require that not later than the first April 15 following the taxable year of the excess deferral, each of the plans may distribute to the individual the amount allocated under that plan as an excess deferral. That distribution would have to include any income allocable to the excess deferral as well.[334] That distribution is permitted by the plan notwithstanding any other provision of law.[335]

Note: Because of the sweeping language permitting the distribution to be made notwithstanding any other provision of law, it would appear that the fiduciaries would be protected against fiduciary responsibility for permitting such a distribution to be made even though it might arguably otherwise violate Title I of ERISA. Note, however, that the distribution from the plan is permissive, not mandatory. As a result, it appears that the plan could determine whether or not to make the distribution to an individual of an excess deferral even though the individual had requested it.

A distribution made in accordance with these procedures is exempt from being included in gross income for income tax purposes and is also exempt from the early distribution tax imposed under §72(t). Further, the income on the excess deferral is treated as earned and received in the taxable year in which the excess deferral is made.[336] For purposes of §401(k), however, the excess deferral shall be treated as an employer contribution in determining the actual deferral percentage limits under §401(k)(3)-(A)(ii).[337]

Note: The 1986 TRA does not specifically address the treatment of these excess amounts for payroll taxes. Although the employer would be required to report these excess deferrals, presumably on the employee's Form W2,[338] no specific provision dealing with payroll taxes is included.

c. Effective Dates

The general effective date rule for these provisions is for taxable years beginning after December 31, 1986.[339] Since they apply to individuals rather than plans, this will generally mean that the new rules are applicable beginning with the calendar year 1987.

For plans maintained pursuant to collective bargaining agreements ratified before March 1, 1986, the effective date shall not apply to contributions made pursuant to the agreement for taxable years beginning before the earlier of:

(1) the date on which the last collective bargaining agreement terminates (determined without regard to extensions after February 28, 1986); or

(2) January 1, 1989.

Note: The justification for delayed effective dates for collective bargaining agreements is unclear since the provisions of §1105(c) only apply to elective contributions and are only tax rules, not plan rules, applicable to the individual.

The Act also provides special rules to facilitate the amendments authorized by the provisions of §402(g)(2). If a plan amendment is necessary in order to make the distributions authorized by §402(g)(2), then any distribution made before the close of the first plan year for which the amendment is required to be in effect shall be treated as made in accordance with the provisions of the plan as long as the amendment is made in accordance with the provisions of Act §1140, which generally allows plans to delay amendments until years beginning after 1988 as long as the amendment is retroactive to the required effective date and the plan operates in accordance with the amendment for the interim period.[340] Further, the Secretary of the Treasury or his delegate is specifically authorized to establish a model amendment to authorize the types of distributions provided in §402(g)(2) and any distribution made in accordance with such model amendment shall be treated as made in accordance with the provisions of the plan.[341]

The effective date rules also provide a special rule for partnerships. Under this rule, if the partnership year begins before January 1, 1987 and ends after January 1, 1987, *i.e.*, it is a fiscal year beginning in 1986 and ending in 1987, elective deferrals made on behalf of a partner for that taxable year are to be treated as being made ratably during the taxable year for purpose of §402(g)(3), which deals with the definition of elective deferrals. Thus, a partner who makes an elective deferral in 1987 that exceeds the $7,000 limitation would allocate part of the excess deferral to 1986, thereby reducing the amount of the excess deferral.

Example: A partnership has a fiscal year that ends on September 30, 1987. A partner during 1987 makes a $12,000 elective deferral to the §401(k) plan of the

[332] §402(g)(1)
[333] §402(g)(7).
[334] §402(g)(2).
[335] §402(g)(2)(A).
[336] §402(g)(2)(C).
[337] §402(g)(2)(B).

[338] Act §1105(b) amending §6051(a)(8).
[339] Act §1105(c)(1).
[340] Act §1105(c)(3)(A).
[341] Act §1105(c)(3)(B).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

partnership. Even though made entirely in 1987 the contribution is treated as having been made ratably during the partnership year, which means that the contribution would be treated as having been made at the rate of $1,000 per month with the first $3,000 of elective contribution having been made during 1986. As a consequence, the excess deferral for the partner would only be $2,000 ($9,000 minus $7,000) instead of $5,000 ($12,000 minus $7,000).

Note, however, that this provision can produce the opposite result as well.[342] Thus, a partner in the above example who makes a $12,000 elective deferral in November 1986 might also have that contribution treated as having been made ratably during the partnership year thereby creating an excess deferral in 1987. This latter interpretation, however, was apparently not intended and regulations may eliminate this problem.

The final special effective date rule has to do with elective contributions made during 1987 but attributable to services performed during 1986. Under this special rule, if a §401(k) plan receives such an elective contribution pursuant to the terms of the plan as in effect on August 16, 1986 and the employee makes an election with respect to the contribution before January 1, 1987, and the employer identifies the amount of the contribution before January 1, 1987, then the amount is treated for purposes of Act §1105 as having been made during 1986. Thus, in effect, the $7,000 ceiling would be waived with respect to that contribution.

Note: This special rule does not alter the tax treatment of the elective contribution for purposes other than the limitations of §402(g). Thus, for purposes of calculating the limits under §401(k)(3) (the ADP limits), the compensation and the contribution would be considered to have been made in 1987.

2. *Antidiscrimination Requirements for Section 401(k) Plans*

The 1986 TRA restructured the antidiscrimination provisions of §401(k) to change both the tests themselves and the method of computing the tests. In particular, the method for determining the group whose ADP percentages are limited was redefined to make that group the highly-compensated employees instead of the upper one-third, the definition of compensation was changed, and the ADP limitations were modified.[343]

a. *Definition of Highly-Compensated*

Whereas the §401(k) rules previously tested the ADP limitations by reference to the ADP of the lower paid two-thirds of eligible employees versus the ADP of the upper paid one-third of employees, the 1986 TRA eliminated this testing mechanism, substituting instead the general definition of highly-compensated employee. The definition of highly-compensated employee is generally the same as that used for qualified and welfare plan purposes.[344] That is, generally the employees who are considered highly-compensated include those who (1) are or were 5% owners, (2) receive compensation in excess of $75,000, (3) receive compensation in excess of $50,000 and are in the highest-paid 20% of employees for the year, and (4) are or have been officers and receive more than 150% of the §415(c)(1)(A) amount or such year ($45,000 in 1986).[345]

If, under (4), above, an employer has no officers within the meaning of §416(i) for the year who earn the requisite threshold amount of annual compensation, §414(q)(5)(B) provides that, nonetheless, the highest paid officer shall be considered an officer for this purpose. Further, under §414(q)(5)(A), no more than 50 employees are to be counted as officers for this purpose (or, if less than 50, no more than the greater of three employees or 10% of employees). This latter rule parallels the similar rule contained in §416 for counting officers for top-heavy plan purposes. Under §414(q)(2), any employee who was in the highest 100 paid employees in the current year and fits in any of the last three categories, above, will also be treated as highly-compensated. An employee not considered highly-compensated in the previous plan year, however, will not be considered highly-compensated for the current plan year as a result of qualifying under one of these three categories unless the employee is also one of the top 100 employees by compensation. The dollar limits in the definition are indexed for inflation.

Section 414(q)(6) provides special attribution rules regarding certain family members. Under §414(q)(9), former employees will be treated as highly-compensated if the employee was highly-compensated when he or she separated from service or at any time after attaining age 55.

b. *Compensation Definition*

For purposes of measuring compensation, a new statutory definition of compensation is also made applicable.[346] This definition is the same as that generally used for qualified plan purposes.[347] In general, this definition provides that compensation includes all compensation currently includable in gross income. Salary reduction contributions under §§125, 402(a)(8), 402(h) and 403(b) may, by election, be included in compensation. Any other definition of compensation, however, will only be permitted to the extent authorized by regulations.[348]

c. *ADP Limits*

The Act §1116(a) reduces the ADP limit calculations so that the ADP of the highly-compensated employees cannot exceed 1.25 times the ADP of the nonhighly-compensated employees or, if greater, two times the ADP of the nonhighly-compensated eligible employees but not more than two percentage points greater than the ADP of the nonhighly-compensated eligible employees.[349] Under this new ADP test, the following limitations would apply:

[342] Act §1104(c)(4).
[343] Act §1116.
[344] §402(k)(5); §414(q) as added by Act §1114.
[345] §414(q).
[346] §414(s).
[347] *Id.*
[348] §414(s)(4).
[349] Amended §401(k)(3)(A).

ADP for Non-highly Compensated	*ADP for Highly Compensated*
1	2
2	4
3	5
4	6
5	7
6	8
7	9
8	10
9	11.25
10	12.50
11	13.75
12	15

Note: The net result of the ADP limits is a reduction in the deferrals available for the highly-compensated employees.

Example: "Before the 1986 TRA, a top-paid executive in a company with a §401(k) plan could have contributed 9% of his compensation to the §401(k) plan if the ADP of the lower paid two-thirds were 6%. After the Act, however, the executive's limit will instead be 8%.

d. Treatment of Excess Contributions

One of the more significant problems in administering §401(k) plans before the Tax Reform Act of 1986, had been compliance with the ADP limits. Because the limits are applicable for a current plan year, it is often difficult for administrators to determine whether the limits are being satisfied until after the close of the plan year. As a result, the limits could be inadvertently exceeded with the possible sanction of plan disqualification for violating the requirements of §401(k).

The Tax Reform Act of 1986 addresses this problem by adding new §401(k)(8).[350] Under §401(k)(8), a §401(k) plan will not be treated as having violated the ADP limits if the excess contributions and any income allocable to those contributions is distributed before the close of the following plan year, *i.e,* the plan year following the plan year in which the excess contribution was made.[351] Alternatively, to the extent provided in regulations, the employee could elect to treat the amount of the excess contribution as an amount distributed to the employee and then contributed by the employee to the plan.[352] That is, the employee would, in effect, be able to treat the excess contribution as an after-tax contribution. Any distribution of excess contributions and income is authorized to be made without regard to any other provision of law.[353]

For purposes of these rules, "excess contribution" is defined as, for any plan year, the excess of the aggregate amount of employer contributions actually paid over to the trust on behalf of a highly compensated employee for that plan year over the maximum amount of contributions permitted under the limitations of §401(k)(3)(A)(ii) (the ADP limits).[354] The statutory provisions prescribe that in reducing excess contributions, the excess contributions of the highly-compensated employee with the highest ADP percentage are to be reduced first.[355] Distributions are to be made to highly-compensated employees on the basis of the respective portions of the excess contribution attributable to each of the employees.[356]

For purposes of taxation, however, there is no tax exemption provided for the distribution. That is, the distribution of an excess contribution would be subject to income tax in accordance with the normal rules applicable to distributions from qualified plans.[357] A special exemption is, however, provided to waive the excise tax for early distributions from qualified plans under §72(t).[358]

In addition, a 10% excise tax is imposed on the employer for the taxable year on the sum of any excess distribution under a §401(k) plan which is part of the plan for the plan year ending in the taxable year and any excess aggregate contributions under the plan for plan years ending in that taxable year.[359] Thus, failure to distribute the excess contribution in accordance with these rules will cause the employer to have to pay a 10% excise tax on the excess amount.

For purposes of calculating this tax, "excess contribution" has the same meaning as provided for purposes of §§401(k), 403(b), 408(k) and 501(c)(18).[360] The term "excess aggregate contributions" means the aggregate amount of matching contributions and employee contributions (including qualified nonelective contributions) over the maximum amount of contributions permitted in accordance with the rules of §401(m).[361] As noted above, the excise tax applies to qualified plans, annuity plans under §403(a), tax-sheltered annuities under §403(b), simplified employee pension plans under §408(k) and plans described in §501(c)(18).[362]

An exception is provided, however, if the distribution is made within 2½ months after the close of the prior year. That is, the excise tax that would have been imposed on the employer is waived if the excess contribution or the excess aggregate contribution is distributed (or forfeited) before the close of the first 2½ months following the plan year.[363]

Note: The net result is that plans are provided with more flexible sanctions but will have to continue to monitor the ADP limits very closely. Plans will apparently be able to distribute the excess contributions to the employees but will have to do so within 2½ months after the close of the year in order to avoid the excise tax, and will thereby also avoid plan qualification problems. Once regulations are issued, employees may be able to elect to have the amounts recharacterized as after-tax contributions and left in the

plan if that would not cause problems under the rules of §401(m).

3. Antidiscrimination Rules for Employer Matching Contributions and Employee Contributions

The 1986 TRA establishes new nondiscrimination tests for employer matching contributions and employee contributions.[364] These rules are patterned after the provisions of §401(k) although there are difficult inter-relationship problems for employers that have both §401(k) plans and plans that permit either employer matching contributions or employee contributions.

a. Nondiscrimination Tests

New §401(m) establishes a nondiscrimination test similar to the ADP test of §401(k) for any "matching contributions" or "employee contributions." These tests are established by establishing a "contribution percentage" requirement that mechanistically is like the ADP test in §401(k)(3)(A). Thus, the contribution percentage for any plan year is satisfied if the contribution percentage for the eligible highly-compensated employees does not exceed the greater of:

(1) 125% of that percentage for all other eligible employees; or

(2) the lesser of 200% of that percentage for that percentage for all other eligible employees, or that percentage for all other eligible employees plus two percentage points.[365]

Generally, two or more plans of an employer to which matching contributions, employee contributions or elective deferrals are made are treated as one plan if they are so treated for purposes of §410(b). Also, if a highly-compensated employee participates in two or more plans of an employer to which such contributions are made, all of the contributions to those plans are aggregated for purposes of this test.[366]

In order to understand the provisions of §401(m), it is necessary that the terminology be defined. Of principal importance is the term "matching contribution." As defined, it includes any employer contribution made to the plan on behalf of an employee on account of an employee contribution made by that employee and any employer contribution made to the plan on behalf of an employee on account of the employee's elective deferral.[367] As a consequence, "matching contributions" apply to both matching contributions on after-tax employee contributions and matching contributions on before-tax employer contributions.

Note that "highly-compensated employee" is also defined in the same manner as for qualified plans under §414(q).[368]

The "contribution percentage" is calculated in the same manner as the actual deferral percentage under §401(k). That is, the contribution percentage for a plan year is the average of the ratios (calculated separately for each employee in the group) of the sum of the matching contributions and employee contributions paid under the plan on behalf of each employee for such plan year to the employee's compensation for that plan year.[369] The statutory provisions provide that under regulations the employer may elect to take into account in computing the contribution percentages elective deferrals and qualified nonelective contributions under the plan or any other plan of the employer.[370] For this purpose, the term "qualified nonelective contribution" means any employer contribution, other than a matching contribution, with respect to which the employee may not elect to have the contribution paid to the employee in cash instead of being contributed to the plan and the requirements of §401(k)(2)(B) and (C) are met.[371] The requirements of §401(k)(2)(B) and (C) are generally the requirements that prohibit distribution before the events specified in §401(k) and that require that the contributions be nonforfeitable when made.

For purposes of the testing, all eligible employees are included in the group tested for purposes of the contribution percentages. In addition, any employee who is eligible to make an employee contribution (or, if the employer takes elective contributions into account, elective contributions) or to receive a matching contribution under the plan being tested is to be considered an eligible employee for purposes of the plan.[372] Further, if employee contributions are required as a condition of participation in the plan, any employee who would be a plan participant if he made the necessary contribution is to be treated as an eligible employee on behalf of whom no employer contributions are made.[373]

Example: A defined contribution plan permits voluntary employee contributions to be made by any participant. If the only persons who make voluntary employee contributions are highly-compensated employees, then those employee contributions would not satisfy the test under §414(m) because all of the participants would be eligible to make contributions and would be treated as eligible employees. The plan would exceed the limitations of §401(m)(2).

b. Treatment of Excess Aggregate Contributions

Section 401(m) contains rules similar to those in §401(k) regarding the treatment of excess contributions. For purposes of §401(m), the applicable definition is "excess aggregate contributions." This term is defined as the excess for any plan year of the aggregate amount of the matching contributions and employee contributions (and any qualified nonelective contributions or elective contributions taken into account in computing the contribution percentage) actually made on behalf of highly-compensated employees for the year over the maximum amount of such contributions permitted under the limitations of

[364] Act §1117.
[365] §401(m)(2)(A).
[366] §401(m)(2)(B).
[367] §401(m)(4)(A). The term "elective deferral" is defined in the same way as in §402(g)(3)(A).
[368] §401(m)(8).
[369] §401(m)(3). The term "compensation" uses the definition in §414(s).
[370] §401(m)(3).
[371] §401(m)(4)(C).
[372] §401(m)(5)(A).
[373] §401(m)(5)(B).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

§401(m)(2)(A).[374] Just as in the case of §401(k) plans, the maximum amount is to be determined by reducing the contributions made on behalf of highly-compensated employees in the order of their contribution percentages beginning with the highest percentage.[375] Also, any distribution of the excess aggregate contributions is to be made to the highly-compensated employees on the basis of the respective portions of the amounts attributable to each such employee. Forfeitures of excess aggregate contributions may not be allocated to participants whose contributions are reduced under the reductions for excess aggregate contributions.[376] Further, the determination of the amount of excess aggregate contributions for a plan is made after first determining the excess deferrals under §402(g) and then determining the excess contributions under §401(k).[377]

Under the rules for excess aggregate contributions, a plan is not treated as failing the requirements of §401(m) for any plan year if before the close of the following plan year the amount of the excess aggregate contributions for the year and any income allocable to those contributions is distributed or, if forfeitable, is forfeited. Those distributions may be made without regard to any other provision of law.[378]

Distributions of the excess aggregate contributions are generally taxable in accordance with the rules under §§402 and 72. However, any employee contributions, since made on an after-tax basis, are not includable in income except to the extent attributable to income on those contributions,[379] and the tax on early distributions under §72 is not applied.[380]

Finally, the tax on excess contributions under §4979 is potentially applicable to any excess aggregate contributions in the same manner as it applies for excess contributions.[381]

c. Relationship to Section 401(k) Plan

One of the more difficult aspects of applying the new rules of §401(m) is determining the relationship between §401(m) and §401(k). Many plans permit both after-tax and before-tax contributions to a single plan and many §401(k) plans will provide matching contributions for both the employee contributions and the elective contributions made by employees. As a result, a common problem will be determining the applicability of the tests under §401(k) and §401(m) to a single plan and to multiple plans of the same employer.

The statutory rules do not provide definitive answers to all of the issues involved. One question, for example, is the extent to which qualified nonelective contributions by the employer can be used to satisfy the tests under §401(k) and §401(m) and, if so, whether such contributions are used first for purposes of one test or the other. While there is no definitive answer, the inference from the statutory provision appears to be that qualified nonelective contributions and elective contributions are first used to qualify the plan under the §401(k) test and then possibly could be used to qualify the plan under the §401(m) test to the extent not used in meeting the requirements of §401(k).[382] It seems unlikely that the same dollar contribution could be used for purposes of both the tests under §401(k) and the tests under §401(m).

Another issue is raised through the delegation of authority to issue regulations to prevent the multiple use of the alternative limitation with respect to any highly-compensated employee.[383] Because the Secretary has the authority to issue these regulations, it appears probable that some type of substantive rule was intended to prevent duplicate use of this alternative limitation. For this purpose, "alternative limitation" means the limitation in §401(k)(3)(A)(iii)(II) and the limitations of §401(m)(2)(A)(ii).[384] That is, the part of the ADP and contribution percentage requirement that permits the highly-compensated employees to have a deferral up to the lesser of 200% of the percentage for the other eligible employees or that percentage for the other eligible employees plus two percentage points.

Example: An employer maintains a §401(k) plan with a 100% matching employer contribution. If the non-highly-compensated employees make elective contributions of 2% of compensation, *i.e.*, their ADP is 2%, and the eligible highly-compensated employees make elective contributions of 4% of their compensation, the ADP tests of §401(k)(3) would appear to be satisfied with respect to the elective contributions. The matching contributions, because they would be identical in percentages to the elective contributions, would also appear to satisfy the contribution percentage requirements of §401(m). However, under the regulations under §401(m)(9), the highly-compensated employees would be obtaining a "multiple use of the alternative limitation." Therefore, the plan may not satisfy the requirements of both §§401(k) and 401(m).

No clear answer appears available on the definitive application of the rules that will prohibit the multiple use of the alternative limitation. Because that limitation will be widely used, any restriction is likely to have a major impact on the design of §401(k) plans.

d. Effective Date

The general effective date rule for the provisions governing §401(m) and the new excise tax on excess contributions is for plan years beginning after December 31, 1986.[385] In the case of collectively bargained plans, however, that were ratified before March 1, 1986, the amendments of Act §1117 do not apply to plan years beginning before the earlier of:

(1) January 1, 1989; or

(2) the date on which the last such collective bargaining agreement terminates determined without regard to any extensions after February 28, 1986.

A special date for certain annuity contracts under §403(b) is also provided. In the case of these tax-sheltered annuities, the amendments made by Act §1117 apply to plan years beginning after December 31, 1988, and in the case of collectively bargained agreements applicable to these contracts, the amendments do not apply to years beginning before the earlier of:

(1) the later of

(i) January 1, 1989; or

(ii) the date on which the last such collective bargaining agreement terminates determined without regard to extensions after February 28, 1986; or

(2) January 1, 1991.

Thus, §403(b) contracts generally have a one-year deferral of the effective date.

4. Other Changes

The 1986 TRA made a number of other changes in the rules applicable to these types of plans, especially §401(k) plans.

a. Withdrawal Restrictions

The 1986 TRA modifies the withdrawal rules applicable to §401(k) plans in part to reduce the possibility of employees making in-service withdrawals or otherwise withdrawing the allocations before termination of employment or retirement. This is accomplished in large part by the imposition of the excise tax on distributions before age 59½.[386] In addition, however, the withdrawal provisions of §401(k) are modified.

One of the results of this change in the withdrawal rules of §401(k)(2) is to limit the type of contribution that can be withdrawn as a result of hardship. The only withdrawals permitted are withdrawals of the employee's elective deferrals. Thus, amounts attributable to income on the elective deferrals, matching contributions and nonelective contributions are not withdrawable.[387]

Under the modifications, amounts held by the §401(k) plan may not be distributable to participants or other beneficiaries earlier than on one of the following specified events:

(1) separation from service, death or disability;

(2) termination of the plan without establishment of a successor plan;

(3) the date of the sale by a corporation of substantially all the assets [388] used by the corporation in the trade or business of the corporation with respect to an employee who continues employment with the corporation acquiring the assets;

(4) the date of the sale of such corporation's interest in a subsidiary [389] with respect to an employee who continues employment with such subsidiary;

(5) in the case of a profit-sharing or stock bonus plan, the attainment of age 59½; or

(6) in the case of contributions to a profit-sharing or stock bonus plan to which §402(a)(8) applies (dealing with elective contributions by employees), upon hardship of the employee.[390]

One of the principal changes incorporated into these provisions is the ability to make distributions to participants or beneficiaries on plan termination or on other events comparable to plan termination (*e.g.*, sale of substantially all of the corporate assets). While withdrawals are still permitted upon the hardship of the employee and that the definition has apparently not been changed by the Tax Reform Act of 1986, it should be kept in mind that the early distribution tax under §72(t) may effectively eliminate the interest of most employees in taking hardship withdrawals.

Note: Many commentators are concerned that the adverse tax consequences on accessing the money before age 59½ in a §401(k) plan may cause the nonhighly-compensated employees to reduce their elective contributions to the plan, thereby further restricting the deferral ability of highly-compensated employees and diminishing the usefulness of the plan as a retirement vehicle.

Note, however, that loans from §401(k) plans are still generally permitted.[391] In order for the interest on the loans to be deductible, however, the loan would have to satisfy the general rules on deductible interest as well as the special rules applicable to qualified plans.[392]

b. Service

Qualified plans are generally permitted to have a waiting period before which employees are eligible to participate in the plan based on the years of service with the employer. Under the rules of §410, that waiting period can be up to one year (with a vesting schedule) or up to three years (with 100% vesting), although the 1986 TRA will eventually reduce the three-year waiting period to a two-year waiting period.

The 1986 TRA, however, prohibited §401(k) plans from utilizing these general eligibility rules and instead, mandated that employees not be required to have more than one year of service with the employer maintaining the plan in order to participate in the CODA.[393]

Note: For those plans that have utilized a three-year waiting period with 100% vesting, the imposition of this rule may substantially increase the cost of maintaining a §401(k) plan since employees would have to be brought into the plan at a substantially earlier date.

c. Exempt Organizations

Section 401(k) expressly prohibits the adoption of qualified CODAs as part of a plan maintained by a state or local government or political subdivision thereof, or any agency or instrumentality thereof, or any organization

[386] *See* §72(t).
[387] Conf. Rep. at 389.

[392] §§163 and 72(p)(3).
[393] §401(k)(2)(D).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

exempt from tax under Subtitle A of the Internal Revenue Code.[394] Thus, governmental organizations, charitable organizations, trade associations, farmers cooperatives, social clubs, labor unions and other organizations will not be permitted to maintain §401(k) plans. An exception is provided, however, for CODAs adopted by a state or local government or political subdivision thereof before May 6, 1986 or by a tax-exempt organization before July 2, 1986.[395]

d. Benefits Not Contingent on Election to Defer

An additional new rule applicable to §401(k) plans is that any benefit provided by the employer cannot be conditioned directly or indirectly on electing to have the employer make or not make contributions under the arrangement in lieu of receiving cash.[396] This prohibition against benefits not being contingent on an election to defer is, however, not applicable to any matching contributions.[397] For example, a plan may not provide that voluntary after-tax employee contributions may not be made until an employee makes a minimum amount of elective deferrals under the plan. Further, elective deferrals cannot be used to satisfy the minimum contribution requirements for nonkey employees in a top-heavy plan.[398]

A special exception is provided for "qualified offset arrangements." A qualified offset arrangement is an arrangement with a defined benefit plan if the offset involved arrangement involved with respect to the two plans satisfies a series of requirements on April 16, 1986 and at all times thereafter:

(1) the benefits under the defined benefit plan is directly and uniformly conditioned on the initial elective deferrals up to 4% of compensation;

(2) the benefit provided under the defined benefit plan before the offset is at least 60% of the employee's cumulative elective deferrals up to 4% of compensation; and

(3) the benefit under the defined benefit plan is reduced by the benefit attributable to the employee's elective deferrals under the plan up to 4% of compensation and the income allocable thereto.[399]

5. Effective Date

Except as otherwise indicated above, the provisions applicable to §401(k) plans are effective for years beginning after December 31, 1988. However, many of the provisions, including the new ADP limits, the limits on benefits being made contingent on election deferral, the limitations on adoption by state and local governments and tax-exempt organizations, the rules on defining highly-compensated employees and compensation are applicable for years beginning after December 31, 1986. Thus, the more significant changes are actually applicable for plan years beginning after 1986.

The provisions allowing the distribution of excess contributions and the authority to issue rules allowing other types of contributions to be used in satisfying the tests of 401(k)(3) are effective for years beginning after December 31, 1986.[400] The rules allowing distribution on sale of plan assets or plan terminations generally (as found in §401(k)(2)(B)(i)(II)-(IV), apply to distributions after December 31, 1984.[401]

Also, a special effective date exists for collectively bargained arrangements ratified before March 1, 1986. These arrangements are not effected by the changes in Act §1116 before the earlier of:

(1) the later of (i) January 1, 1989 or (ii) the date on which the last collective bargaining agreement terminates determined without regard to any extensions after February 28, 1986; or

(2) January 1, 1991.[402]

Finally, if a plan amendment is required to allow a plan to make a distribution of any excess contributions under §408(k)(8), any distribution made before the close of the first plan year to which the amendment is required to be in effect in accordance with the rules of Act §1140 is to be treated as if made in accordance with the provisions of the plan.[403] Thus, plans can utilize the rules on excess contributions even if the plan has not been amended to explicitly so provide. The statutory provisions further provide that the Secretary or his delegate shall prescribe a model amendment to allow the plan to make the distributions provided in §401(k)(8) and that adoption of that amendment and a distribution in accordance with that amendment shall be treated as made in accordance with the provisions of the plan.[404]

IV. Other Qualification Rules

A. Introduction

1. Interest Rate Assumptions

The Retirement Equity Act of 1984 (REA) added provisions to the Internal Revenue Code and ERISA that preclude a plan from cashing out a participant without his consent if the present value of that participant's accrued benefit exceeds $3,500.[405] In determining the present value of the participant's accrued benefit, the statute requires that the present value is to be calculated by using an interest rate not greater than the interest rate that would be used as of the date of distribution by the Pension Benefit Guaranty Corporation (PBGC) for purposes of determining the present value of a lump-sum distribution on plan termination.[406]

In addition, REA requires that for plans subject to the requirement that a survivor benefit be provided to a surviving spouse, if the present value of the benefit under either the qualified joint and survivor annuity or the qualified preretirement survivor annuity exceeds $3,500, the spouse's

consent must be obtained before the plan can cash out any part of the present value in a form other than a qualified joint and survivor annuity or a qualified preretirement survivor annuity.[407] The applicable interest rate used for this purpose is calculated in the same manner.[408]

After the enactment of these provisions but before regulations were issued, some commentators felt that the interest rate requirements for determining the present value of the accrued benefit were only applied for purposes of determining whether the present value of the accrued benefit exceeded $3,500. That is, they felt that the provisions did not prohibit a plan from continuing to use its own interest rate in otherwise valuing accrued benefits. The regulations, however, took a broader view of these requirements and provided that, in valuing accrued benefits, the PBGC interest rate was to apply so that the present value of the nonforfeitable accrued benefit must be determined using an interest rate not greater than the PBGC rate to value immediate annuities for a plan terminating as of the distribution date or as of the first day of the plan year that contains the distribution date.[409] Further, the regulations took the position that any change in the interest rate is subject to the anti-cutback rules of Code §411(d)(6).[410] The effective date of these regulations provided that they were not applicable to contracts distributed or owned by a participant before September 17, 1985, unless additional contributions are made under the plan by the employer with respect to those contracts.[411]

2. Profits Required

One of the fundamental requirements for profit-sharing plans has been that contributions can only be made out of current or accumulated profits.[412] Contributions to profit-sharing plans may, however, be discretionary so that the employer may decide from year to year whether to make contributions to the plan. Because of the requirement of profits, however, some uncertainty has existed concerning whether it is permissible for tax-exempt employers to maintain a profit-sharing plan, since such employers are not normally considered to have profits.

3. Benefit Forfeitures

Under the vesting rules applicable to qualified plans, a participant who terminates employment when his accrued benefit or account is not fully vested will generally be subject to a forfeiture of the nonvested portion of that accrued benefit or account. In the case of profit-sharing plans, these forfeitures are either reallocated among the remaining participants or used to reduce the employer's contribution obligation in succeeding years. In defined benefit plans, however, forfeitures must be used to reduce future employer contributions.[413]

Before the Tax Reform Act of 1986, money purchase pension plans were required to follow the rule for defined benefit plans. That is, the forfeitures were required to be used to reduce succeeding years' employer contributions.

4. Bona Fide Collective Bargaining Agreements

Under the rules applicable to pension plans, a number of special provisions apply if the plan is maintained pursuant to a collective bargaining agreement. For example, employees may be excluded from eligibility to participate in a plan if they are covered by a collective bargaining agreement and if there was evidence that retirement benefits were the subject of good faith bargaining between the employer and employee representatives.[414] In addition, effective date rules are often delayed with respect to plans maintained pursuant to collective bargaining agreements. Before the 1986 TRA, there was no clear definition of a collective bargaining agreement in the law.[415]

5. Ratable Accrual of Benefits for Top-Heavy Purposes

Code §416 imposes requirements for qualified plans that are top-heavy. If the plan's accrued benefits are primarily (60% or more) for the benefit of key employees, the plan is considered top-heavy. Top-heavy plans are subject to faster vesting requirements, minimum contribution requirements and limits on the amount of compensation that may be taken into account.[416]

A defined benefit plan is top-heavy if the present value of the cumulative accrued benefits for key employees exceeds 60% of the present value of the cumulative accrued benefits for all employees under the plan.[417] Defined benefit plans must satisfy one of three accrual rules in Code §411 to maintain their qualified status.[418] The purpose of these accrual requirements is to prevent plans from postponing accruals (backloading benefit accruals) to circumvent the vesting and benefit requirements for qualified plans. Some of the permitted methods under §411, however, permit a degree of backloading.[419] Under pre-TRA law, plans may qualify by satisfying any of the three accrual rules of §411(b).

6. REA Exception

REA required pension plans to provide survivor benefits generally to certain married participants who retire under the plan (with payment in the form of a qualified joint and survivor annuity) and to surviving spouses of vested participants who die before their annuity starting date (with payment in the form of a qualified preretirement survivor annuity).[420] A transition rule was provided for participants who separated from service before REA's enactment date if their benefits were not in pay status as of that date (August 23, 1984). This provision applies to participants who complete at least one hour of service under the plan after December 1, 1974, and separate from service before the first day of the plan year beginning on or after January 1, 1976 where the plan is otherwise required

(*i.e.*, under pre-REA law) to provide a joint and survivor annuity. Under this transition rule, the participant is to be given the right to elect to receive benefits in the form of a qualified joint and survivor annuity.[421]

B. Overview

1. Interest Rate Assumptions

The 1986 TRA amended the interest rate assumption requirements for determining the present value of an accrued benefit. If the present value of the accrued benefit does not exceed $25,000, the amount to be distributed to the participant or beneficiary is calculated using the applicable PBGC rate. If the present value exceeds $25,000, however, the amount to be distributed is calculated using an interest rate no greater than 120% of the interest rate that would be used by the PBGC for that type of distribution. The distribution, however, cannot be reduced below $25,000 by using this higher interest rate.

2. Elimination of Profits Requirement

The 1986 TRA eliminated the requirement for profit sharing plans that contributions must be made from current or accumulated profits. Thus, sponsors of profit-sharing plans, like money purchase pension plans, may make contributions regardless of whether they are profitable and regardless of whether the employer is a tax-exempt organization.

3. Benefit Forfeitures

The 1986 TRA permits forfeitures in money purchase pension plans to be reallocated among participants or to be used to reduce employer contributions in succeeding years. Thus, forfeitures in a money purchase pension plan may be treated in the same way as forfeitures under a profit-sharing plan.

4. Bona Fide Collective Bargaining Agreements

The 1986 TRA makes it clear that any collective bargaining agreement will not be recognized for qualified plan purposes unless it is a bona fide agreement between employee representatives and employers.

5. Ratable Accrual for Top-Heavy Purposes

The 1986 TRA eliminated most of the flexibility in defined benefit plans in selecting an accrual method for purposes of determining whether the plan is top-heavy. For this purpose, defined benefit plans must generally use the fractional method of accrual, which avoids any backloading of benefits. Plans will, however, be free to continue to satisfy any of the three accrual rules for other purposes.

6. Exception From REA Provisions

The Act provides an exception from the survivor benefit requirements of REA for certain plans established before 1954 under which participation is substantially limited to people who retired before January 1, 1976.

C. Detailed Analysis

1. Interest Rate Assumptions

The Tax Reform Act of 1986 changes the method to be used by defined benefit plans in calculating the present value of a participant's accrued benefit.[422] Under these provisions, the present value of a participant's or beneficiary's accrued benefit is calculated in two parts; first, by using an interest rate no greater than the applicable interest rate in the case of a vested accrued benefit that does not exceed $25,000, and second, by using an interest rate no greater than 120% of the applicable interest rate if the vested accrued benefit exceeds $25,000, as determined under the first step outlined above. In no event, however, may the present value determined under the second step be less than $25,000.

For this purpose, the "applicable interest rate" is the interest rate that would be used as of the date of distribution by the PBGC for purposes of determining the present value of a lump-sum distribution on plan termination.[423] These rules apply both for purposes of calculating the present value of the interest rate for purposes of the cash-out rules in §411(a)(11) and for purposes of the consent rules in §417(e). Under these provisions, if a participant's total accrued benefit using the applicable PBGC rate is $50,000, the 1986 TRA would permit the plan to use 120% of the applicable PBGC rate, potentially making the participant's total accrued benefit $47,000 instead of $50,000.[424]

Note: The Conference Report indicates that Congress recognized that the PBGC is considering adopting new methods and interest rate structures for valuing accrued benefits on plan termination. If these methods and structures are adopted, the Treasury Secretary is to provide timely guidance regarding these methods under the provisions of the 1986 TRA.

The PBGC rate in effect at the beginning of the plan year may be used throughout the plan year if the plan so provides.[425]

These amendments apply generally to distributions in plan years beginning after 1984, except that they do not apply to distributions in plan years beginning after 1984 and before 1987 if the distributions were made in accordance with the requirements of the regulations issued under REA.[426] The adoption of a plan amendment before the close of the first plan year beginning on or before January 1, 1989 which provides for the calculation of the present value of accrued benefits in accordance with the 1986 TRA is not treated as a violation of Code §411(d)(6) (or ERISA §204(g))[427] if the plan reduces the accrued benefit for any plan year to which the amendment applies in accordance with the 1986 TRA.[428]

The effective date rules for this provision are particularly confusing. In general, the provisions apply retroactively for plan years beginning after 1984. Plans that have already made distributions in 1985 or 1986, however, are generally exempt from applying the 1986 TRA provisions

[421] REA §303.

[422] Act §1139.

[423] Code §§411(a)(11)(B)(ii) and 417(e)(3)(B); ERISA §§203(e)(2) and 205(g)(3).

to those distributions as long as the distributions were made in accordance with the REA regulations. The REA regulations were not effective for certain contracts distributed before September 17, 1985. In some cases, plans may have also made distributions during this interval (*i.e.*, before the REA regulations were issued) that are neither grandfathered, nor in compliance with the regulations. Thus, some plans may have made distributions between January 1, 1985 and September 17, 1985 that were not in compliance with the REA regulations and therefore are potentially subject to having the effective date rules of the 1986 TRA provisions applied retroactively to 1984.

A special exception is also made in these rules for certain plans maintained by corporations incorporated on April 11, 1934 that are headquartered in Tarrant County, Texas.[429]

2. Profits Not Required

The 1986 TRA added Code §401(a)(27), eliminating the requirement that profit- sharing contributions must be made from profits.[430] Under §401(a)(27), the determination of whether a plan under which contributions are made is a profit-sharing plan is made without regard to current or accumulated profits of the employer and without regard to whether the employer is a tax-exempt organization.

Thus, nonprofitable employers will be permitted, after making appropriate plan amendments, to contribute to profit-sharing plans even though they do not have the profits from which to make the contributions. The statute, however, would not appear to require any such contribution so that, if an employer chose to limit its contributions to profits, it appears that it may continue to do so. An existing profit-sharing plan that has such a profits limit will thus continue to operate in this fashion until an amendment deleting the profit requirement is made.

In addition, tax-exempt employers may maintain profit sharing plans without concern that the type of plan is inappropriate under the applicable provisions of law. This removes any doubt about the suitability of §401(k) cash or deferred profit-sharing plans for tax-exempt employers although, with some exceptions, after the 1986 TRA, tax-exempt organizations are no longer eligible to establish §401(k) plans.[431] While this provision may resolve any question about the viability of a profit-sharing plan for a tax-exempt organization from the perspective of the pension rules, such a plan would still only be suitable for a tax-exempt organization if it is acceptable under the exempt organization requirements applicable to that employer. For example, a §501(c)(3) organization would want to be certain that adoption of a profit-sharing plan was not considered to be the inurement of profit in violation of §501(c)(3).

The Secretary may require defined contribution plans to specify whether they are pension plans or discretionary contribution plans.[432]

These provisions are retroactively effective and apply to years beginning after 1985.[433]

3. Benefit Forfeitures

The 1986 TRA modified the provisions on benefit forfeitures to effectively allow money purchase pension plans to reallocate forfeitures among remaining plan participants.[434] This is accomplished by modifying §401(a)(8) to change the requirement for pension plans that forfeitures must not be applied to increase the benefits that any employee would otherwise receive under the plan. As modified by the 1986 TRA, §401(a)(8) only applies to defined benefit plans. Since money purchase pension plans are defined contribution plans, they would be exempt from the requirement and free to reallocate forfeitures among remaining participants. Whether such a forfeiture reallocation provision is utilized will be a question of plan design and until changed, existing money purchase plans will presumably continue to use forfeitures to reduce employer contributions in succeeding years.

These provisions apply to plan years beginning after 1985.

4. Bona Fide Collective Bargaining Agreements

The 1986 TRA modified the definition of "collective bargaining agreements" in the Internal Revenue Code to make it clear that the agreements must be bona fide.[435] This is accomplished by a modification of §7701(a)(46) to add a sentence providing that that the agreement shall not be treated as a collective bargaining agreement unless it is a bona fide agreement between employee representatives and one or more employers.

The apparent intention of this provision is to give the IRS authority to disregard collective bargaining arrangements established on a "friendly" basis that have no substantive validity.

This provision does not contain an explicit effective date. The Conference Report indicates that the provision is a clarification of pre-1986 TRA law and is therefore intended to be given retroactive effect where appropriate.[436]

5. Ratable Accrual of Benefits for Top-Heavy Purposes

The 1986 TRA established rules for determining the accrual method to be used in calculating whether a defined benefit plan is top-heavy.[437] These accrual rules specify that, for purposes of determining whether a plan is top-heavy, the accrued benefit of an employee other than a key employee is determined under the method used for accrual purposes of all plans of the employer or, if there is no method that meets that requirement, then not more rapidly than the slowest accrual rate permitted under the fractional rule of Code §411(b)(1)(C).[438]

These provisions largely prevent an employer from selecting a special accrual method for purposes of determin-

ing whether the plan is top-heavy to avoid the application of the top-heavy rules. The employer can use the same method being used by the plan (if that is the only plan of the employer) or the method used for all the defined benefit plans of the employer if there is a uniform method. In the absence of such a method, however, the employer must use the fractional method, which essentially requires that benefits be accrued on a straight-line basis over the working life of the employee.

The effective date of these rules is for plan years beginning after 1986.

6. REA Special Exception

The 1986 TRA provides an exception from the survivor benefit requirements of REA for certain plans.[439] This exception is available to plans described in §404(c) in which participation is substantially limited to individuals who, before January 1, 1976, ceased employment covered by the plan.[440] Section 404(c) is generally applicable to plans established before January 1954 that were, pursuant to an agreement between employee representatives and the federal government, operated under seizure powers of a major part of the productive facilities of the industry.

The provision also exempts from the requirements of REA §301 any defined benefit plan that is terminated pursuant to a resolution directing the termination of such plan which was adopted by the board of directors of a corporation on July 24, 1984 and that occurred on November 30, 1984.[441]

These provisions are retroactively effective as if included in REA. Act §1145(d).

V. Miscellaneous

A. Penalty for Overstatement of Pension Liabilities

1. Pre-1986 TRA Law

Under pre-1986 TRA law, an employer is allowed to deduct contributions (within limits) to a trust or annuity contracts used to fund a qualified plan.[442] If the Service determines that the assumptions used to calculate employer liabilities under a defined benefit plan are unreasonable, the limit on employer deductions must be recalculated using reasonable assumptions and the excess deduction is disallowed. There is no specific penalty for overstatement of employer liability under a defined benefit pension plan, however.

The conference agreement recognizes that overstatement of pension liabilities takes place primarily in small professional corporations and involves the use of unreasonable actuarial assumptions with respect to defined benefit pension plans.[443]

2. 1986 TRA Provisions

Section 1138 of the 1986 TRA enacts Code §6659A, which imposes a penalty on the employer for overstatement of deductions for pension liabilities. The penalty takes the form of a graduated addition to tax, to be assessed, collected, and paid as a tax that applies only to an income tax underpayment attributable to the overstatement.

The amount of the underpayment of tax is the excess of the employer's actual tax liability (resulting from a proper valuation of deductions) over the actual tax liability as reduced by the valuation overstatement. If the valuation claimed exceeds from 150 to 200% of the correct valuation, the addition to tax is 10% of the underpayment. If the claim exceeds the correct amount by more than 200 but not more than 250%, the addition to tax is 20%, and if the claim exceeds the correct valuation by more than 250%, the addition to tax is 30%. The penalty is subject to a de minimis rule for valuation overstatements under $1,000. The Secretary has discretionary authority to waive the penalty if the employer can demonstrate a reasonable basis for the deduction claimed and shows that the claim was made in good faith. The employer's reliance on an enrolled actuary or other professional, however, does not constitute such reasonable basis or good faith. The conference agreement reflects the expectation that the Service will assess the penalty not only in the case of unreasonable actuarial assumptions but also when employers use methods that accelerate deductions with respect to a plan.[444]

The provision applies to overstatements occurring after the date of enactment (October 22, 1986).

B. Treatment of Certain Fishermen as Self-Employed

1. Pre-1986 TRA Law

Code §§3121(b)(20) and 3306(c)(20) make an exception to the usual rules for determining an employer-employee relationship for members of fishing boat crews.

Under that exception, the fishermen are treated as self employed for purposes of employment taxes. The Service has determined, however, that, for purposes of determining whether a pension, profit-sharing, or stock bonus plan maintained by the owner or operator of the fishing boats is a qualified plan under §401(a), the fishermen are to be treated as employees.

2. New Provision

Section 1143 of the Act added Code §401(c)(6) to provide that, for purposes of the rules relating to qualified plans, members of fishing-boat crews are treated as self-employed individuals. The provision is effective for taxable years beginning after 1986.

C. Tax Treatment of Federal Thrift Savings Fund

1. Pre-1986 TRA Law

Beginning in 1987, federal employees are allowed to contribute up to 10% of their basic pay to the Thrift Savings Plan (the "Plan") maintained by the federal government. Such contributions will not be includible in the employee's income for the year of contribution but will be includible in income upon distribution from the Plan. Act §1147 provides rules governing the tax treatment of contributions to the Plan.[445]

[439] Act §1145.
[440] Code §401(a)(11)(E); ERISA §205(b)(3) and REA §303(f).
[441] Act §1145(c), adding REA §303(f).
[442] Code §§419(e) and 162.
[443] Conf. Rep., p. II-492.
[444] *Id.*
[445] Conf. Rep., p. II-497.

2. 1986 TRA Provision

The Act added Code §7701(j), providing that employee contributions to the Thrift Savings Fund are treated as contributions to a trust (as described in §401(a)) exempt from tax (under §501(a)). Even though the employee had an election to receive the amounts in cash, the employee's contributions to the Plan are not treated as constructively received. Thus, the amounts deferred are not includible in the employee's income until distributed.

The provision is effective on the 1986 TRAs enactment date (October 22, 1986) for the program scheduled to begin January 1, 1987.

VI. Leased Employees

A. Introduction

Under the rules applicable to qualified retirement plans, employees are generally eligible to participate in any qualified plan maintained by the employer after a prescribed period.[446] The Code requires, however, that in some cases a leased employee, *i.e.*, an employee employed by another entity whose services are leased to the employer, will be treated as an employee of the recipient employer, *i.e.*, the employer utilizing the services of the employee, for purposes of the qualified plans rules. Generally, a leased employee is any person who is not an employee of the recipient organization who satisfies certain specified requirements. These include the requirement that the services be provided under an agreement between the recipient and the leasing organization.[447] In addition, the individual must have performed these services for the recipient organization on a substantially full-time basis for at least one year.[448] Finally, the services must be of a type historically performed in the business field of the recipient by employees.[449]

A leased employee who satisfies these requirements is treated as an employee after the close of the one-year period set forth in §414(n)(2)(B), except that years of service under the plan include the prior period for which the leased employee performed those services. Thus, the leased employee would not have to be treated by the recipient organization as an employee until the one-year period was satisfied but, once it was satisfied, all prior service would have to be taken into account.

Under a safe harbor,[450] a leased employee was not treated as an employee of the recipient organization if two requirements were satisfied. First, the leasing organization had to provide a money purchase pension plan with a nonintegrated employer contribution rate of at least 7½%. Second, the plan had to provide for immediate participation and full and immediate vesting.[451]

B. Overview

The Tax Reform Act of 1986 revised the leased employee rules to make it more difficult for recipient organizations to avoid treating leased employees as employees for purposes of pension and welfare plan coverage.[452] Previously the leased employee rules only applied to pension plan coverage. The TRA change results primarily from two modifications to the safe harbor rules. First, the requirements for plan coverage by the leasing organization were increased to require that the contribution rate for the money purchase pension plan maintained by the leasing organization be at least 10% of compensation. Second, to utilize the safe harbor exception, the leased employees may not constitute more than 20% of the recipient organization's nonhighly-compensated work force. Several other exceptions and special rules were provided. The other rules are generally effective on a retroactive basis, whereas the changes to the safe harbor provisions are effective for services performed after 1986.

C. Detailed Analysis

1. Safe Harbor Provisions

To qualify for the safe harbor exception, two requirements are established. First, the leased employee must be covered by a plan of the leasing organization that meets certain requirements. Second, leased employees must not constitute more than 20% of the recipient organization's nonhighly-compensated work force.[453]

a. Plan Requirements

As a result of the Tax Reform Act of 1986, the plan requirements that must be satisfied to meet the safe harbor exception of §414(n) are three-fold. First, the leased employee must be covered by a plan of the leasing organization that is a money purchase pension plan with a nonintegrated contribution rate for each participant of at least 10% of compensation. Second, the plan must provide for full and immediate vesting. Third, each employee of the leasing organization must immediately participate in the plan. This last requirement, however, does not apply to an individual whose compensation from the leasing organization in each plan year during the four-year period ending with the plan year in question is less than $1,000.

The principal 1986 TRA change in this area is the increase in the safe harbor contribution rate from 7½% to 10% of compensation. This will make it more expensive for leasing organizations to utilize the safe harbor rule.[454]

For purposes of these rules, compensation is defined in the same manner as under §415 with three modifications. First, employer contributions are included in compensation if they are not included in gross income by reason of §402(a)(8) or §402(h)(1)(B) (which deal with elective contributions to §401(k) plans and salary reduction contributions to simplified employee pension plans under §408(k)).[455] Second, compensation includes any amount the employee would have received in cash but for an election under a cafeteria plan under §125.[456] Third, compensation

[446] *See* §§401-416.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

includes any amount contributed to an annuity contract under §403(b) under a salary reduction agreement.[457]

b. Twenty Percent of Nonhighly Compensated Work Force

The second requirement is that leased employees, determined without regard to §414(n)(5)(A), not constitute more than 20% of the recipient's nonhighly-compensated work force. In determining the recipient organization's nonhighly-compensated work force, employees who are highly-compensated are determined by reference to the statutory definition of highly compensated employee added by the Act.[458] The nonhighly-compensated work force is the aggregate number of individuals other than highly-compensated employees, who are employees of the recipient (excluding any leased employees) who have performed services for the recipient [459] (or the recipient and related persons) on a substantially full-time basis for a period of at least one year, or who are leased employees with respect to the recipient organization (determined without regard to this paragraph).[460]

Thus, in computing the nonhighly-compensated work force, all leased employees who are treated as employees and all other employees who have been working on a substantially full-time basis for at least a year are to be included, if they are not highly-compensated.

2. Applicability of Employee Leasing Requirements

Once a leased employee is determined to be an employee for purposes of §414(n), it is important to determine the purposes for which the individual will be treated as an employee. Before the Tax Reform Act, the requirements of §414(n) essentially extended only to the requirements for qualified plans and simplified employee pension plans. The Tax Reform Act, however, extended these requirements to most of the welfare plan rules that are subject to nondiscrimination requirements. Thus, the leased employee rules apply to the nondiscrimination rules for group-term life insurance under §79; the rules for nondiscriminatory welfare plans under §89; the special rule for exclusion of employer contributions to accident or health plans under §106; the rules relating to qualified tuition reduction plans under §117(d); the rules relating to group legal service plans under §120; the rules relating to cafeteria plans under §125; the rules relating to educational assistance under §127; the rules relating to dependent care under §129; the rules on certain fringe benefits under §132; the rules on employee achievement awards under §274(j); and the rules for employee beneficiary associations and other arrangements covered by §505.[461] These provisions substantially broaden the scope and importance of the leasing rules.

3. Years of Service

Before the Tax Reform Act, the employee leasing rules generally only applied after the leased employee had been a leased employee for a year but, once a leased employee was treated as an employee, the requirements retroactively required the inclusion of service. This requirement is essentially continued after the Tax Reform Act of 1986 except that the requirement that the employee be a leased employee on a substantially full-time basis for a period of one year is reduced to six months in the case of core health benefits. Thus, in the case of an employer that has a health plan that provides for basic health coverage, a leased employee covered by §414(n) would have to be treated as an employee for purposes of the §89 rules (when they become effective) after six months instead of one year.[462]

4. Recordkeeping Requirement

The Tax Reform Act of 1986 provides the Secretary of Treasury with the authority to develope regulations under §414(n) to minimize the recordkeeping requirements of §414(n) for certain employers. The employers that would be subject to these reduced recordkeeping requirements would be employers that do not have top-heavy plans and that use the services of persons other than employees for an insignificant percentage of the employer's total work load.[463] The Conference Report indicates that the recordkeeping rule would be applied for employers with respect to which the number of individuals performing substantial services as nonemployees is less than 5% of the number of nonhighly-compensated employees performing substantial services.[464] The Conference Report further states that an individual is to be treated as having performed substantial services as a nonemployee only if the individual has at least 1,500 hours of service and that the Secretary is to prescribe rules to minimize the recordkeeping necessary to determine if the 5% test has been satisfied.[465]

5. Effective Date

The 1986 TRA employee leasing rules are generally effective for taxable years beginning after 1983. The safe harbor rules, however, are effective for services performed after 1986. The recordkeeping authority under §414(o), if applied to years beginning before the date of enactment of the Tax Reform Act, is to be applied without regard to the requirement that an insignificant percentage of the work load be performed by persons other than employees.[466]

VII. Qualification Procedures

A. Introduction

1. Pre-Act Law

Generally, plans must be adopted during the year in which they are effective and plan amendments must likewise be adopted before the close of the plan year in which they are effective.[467] If a plan amendment arises from a "disqualifying provision," the period for making the plan amendment is extended throughout the "remedial amendment period." [468] A "disqualifying provision" generally

[457] §414(n)(5)(C)(iii)(III).
[458] *See* Code §414(a).
[459] For purposes of determining related persons, the definition in §103(b)(6)(C) applies. §414(n)(6)(A).
[460] §414(n)(5)(C)(ii).
[461] *See* §414(n)(3).
[462] *See* §414(n)(4) and §414(n)(2)(B).
[463] §414(o).

means a provision, or the absence of a provision from a plan or the amendment of a plan, that causes the plan to fail to satisfy the qualification requirements of the Code on the date the plan or amendment is made effective. A disqualifying provision also includes changes in the requirements enacted by ERISA or TEFRA. No other statutory changes have, however, been included within the parameters of a disqualifying provision.[469] The "remedial amendment period" is the period that generally begins when the plan or amendment is adopted or put into effect and ends at the time prescribed by law (including extensions) for filing the employer's income tax return for the taxable year in which the remedial amendment period began. The remedial amendment period is further extended for certain specified reasons, such as requesting an IRS determination letter on the plan or amendment.[470]

Note: Since changes made by the Tax Reform Act of 1986 are not within the definition of disqualifying provisions under the regulations, those changes would not be sufficient to allow plans to delay the adoption of amendments during the remedial amendment period. Instead, plans would generally be required to adopt the necessary amendments during the year in which the statutory changes were effective.

The IRS maintains a special procedure to enable small employers to more readily adopt qualified plans. Under the procedure for master and prototype plans, sponsors may obtain opinion letters on either a master plan (which includes both a plan and trust) or a prototype plan (which includes only a plan) and thereby ease the requirements for approval by the individual employer. This program has been popular with small employers because it minimizes the cost of adopting qualified plans and provides a more streamlined procedure for obtaining IRS approval of the plans as adopted. In the past, however, the has refused to allow sponsors to provide master or prototype plans under §401(k).[471] The Service apparently felt that the variables involved in §401(k) plans were such that it would be difficult to pre-approve the format of the plan and assure that the plan would meet all of the requirements of §401(k).

2. Reasons for Change

Existing qualified plans have, as a result of various tax law changes, been required to make numerous amendments in recent years. Changes have recently been required as a result of REA, the 1984 TRA, TEFRA, and other laws as well as a result of IRS regulatory changes. Because of the frequency with which amendments have been required and because of the desire to minimize the administrative burden and cost on plans, the 1986 TRA, recognizing that plan amendments would be required to many existing plans, provided a delayed procedure for amendments to allow all necessary amendments to be made at one time. Further, Congress tried to ensure that the necessary guidance would be available to plans to make proper amendments by mandating that the required regulations be issued before the date on which the amendments have to be made.

In addition, Congress felt that master and prototype plans should include §401(k) provisions. Congress was concerned that small employers were being denied an opportunity to utilize such plans because of the substantial cost involved in adopting and obtaining approval for individually designed plans.

B. Overview

The 1986 TRA altered the qualification procedures applicable to qualified plans to provide an extension, until the first plan year beginning after 1988, for making all of the amendments required by the Act. A condition of this extension is, however, that the plan operate in accordance with the applicable rules in the interim period and that the amendment be made effective retroactively for the required period. The Service is to develop and publish model amendments, which are to be available to plans for this interim period. The Act also requires that regulations be issued by February 1, 1988 in a number of specified areas critical to plan qualification. Finally, the Service is required to begin, no later than May 1, 1987, to accept applications for opinion letters on master and prototype plans under §401(k).

C. Detailed Analysis

1. Time for Making Plan Amendments

The Act extends the period for making amendments to qualified plans to keep them in compliance with the requirements of the Code.[472] This extension is made in a manner different from that provided for ERISA and TEFRA. That is, there is no extension of the remedial amendment period under §401(b). Instead, a non-Code provision provides an extension of the statutory requirements for amending plans.

Under this provision, any amendments required by reason of either Subtitle A (dealing with the general qualification rules for qualified plans) or Subtitle C (dealing with the requirements for ESOPs generally) of Title XI of the Act are not required to be made before the first plan year beginning on or after January 1, 1989. To have this extended period available, however, the plan must be operated during the period from effective date of the amendment to the plan year in which it is adopted in accordance with the requirements of the amendment (or in accordance with the requirements of an amendment prescribed by the Service and adopted by the plan) and the amendment, when adopted, must apply retroactively for this period.

The Act provides that a pension plan shall not be treated as failing to provide "definitely determinable benefits" or contributions or to be operated in accordance with the provisions of the plan merely because it utilizes the delayed amendment provisions.[473]

Note: The Act does not amend Title I of ERISA. Consequently, the fiduciary requirement of §404 of ERISA, as well as the other rules of Title I, are not subject to this delay. As a result, a plan that attempts to operate in accordance with rules that are not contained in the plan

[469] Regs. §1.401(b)-1(b).
[470] Regs. §1.401(b)-1(c) and (d).
[471] Rev. Proc. 84-23, §8.033, 1984-1 C.B. 457.
[472] Act §1140.
[473] Act §1140(a).

document may conceivably be faced with a legal challenge by a participant claiming benefits in accordance with the plan document as it then exists.

A further delay of the time for making the amendment is provided to plans maintained pursuant to one or more collective bargaining agreements. This delay is, however, only available if the employers ratified the agreement before March 1, 1986. In that event, instead of having to make the required plan amendment for the first plan year beginning on or after January 1, 1989, the amendment would have to be made by the first plan year beginning after the earlier of:

(1) the later of:

(a) January 1, 1989; or

(b) the date on which the last of the collective bargaining agreements terminate, determined without regard to any extensions after February 28, 1986, or;

(2) January 1, 1991.

These rules may provide even greater delay for collectively bargained plans.[474]

2. Model Amendment

The Act also requires the Service to prescribe amendments that allow a plan to meet the requirements of Subtitle A or Subtitle C of Title XI of the Act to the extent the amendments are required to be effective before the first plan year beginning after 1988.[475] That is, the Service must provide model amendments that can be adopted by plans for this interim period. The IRS published model amendments pursuant to §1140(b) of the 1986 TRA in Notice 87-2.

The Act provides that adoption of one of these model amendments and operation by the plan in accordance with the amendment automatically protects the plan against being treated as failing to provide definitely determinable benefits or contributions or failure to be operated in accordance with the plan provisions by reason of the adoption of such amendment and operation in accordance with its terms.

The Conference Report clarifies that the model amendment is to address only those amendments that are required to be made to maintain qualification for the period ending with the first plan year beginning after 1988.[476]

3. Required Date for Regulations

The Act requires that the Secretary to issue certain final regulations before February 1, 1988.[477] These regulations include regulations relating to:

(1) the nondiscrimination rules for integrated plans under Act §1111;

(2) the coverage requirements for qualified plans under Act §1112;

(3) minimum vesting standards under Act §1113;

(4) the definition of highly-compensated employee under Act §1114;

(5) separate lines of business and the definition of compensation under Act §1115;

(6) the rules for §401(k) plans under Act §1116;

(7) the nondiscrimination requirement for employer matching and employer contributions under Act §1117;

(8) the nondiscrimination requirements for tax-sheltered annuities under Act §1120; and

(9) the tax on excess distributions under Act §1133.[478]

These provisions seek to insure that the Service will issue the major qualification rules established by the Act in time to permit employers to properly respond to those requirements and make the necessary plan amendments. Note, however, that there is no penalty imposed on the government for failure to comply with this requirement and no additional delay is provided for making the amendments if the Service does not meet the required date for final regulations.

4. Master and Prototype Section 401(k) Plans

The Act requires the Secretary to begin accepting applications for opinion letters regarding master and prototype plans for qualified cash or deferred arrangements under §401(k). The Act requires that these applications be accepted not later than May 1, 1987.[479] This is designed to provide opportunities for smaller employers to adopt these plans at less cost.[480] Note, however, that the Act also permits simplified employee pension plans to adopt §401(k)-type features and thus, the availability of the master and prototype plan for §401(k) to smaller employers may be somewhat duplicative.[481] Further, the Service, in permitting master and prototype plans to be available under §401(k), probably will be highly restrictive in the options available. Because master and prototype plans are designed to be pre-approved plans that will probably automatically qualify when adopted by a particular employer, it will be difficult for the Service to approve master and prototype plans that permit the full range of variation allowed under §401(k). As a result, the Service may, as part of its master an prototype plan program, approve master and prototype §401(k) plans, but restrict the choices available in ways that will make the master and prototype plan models less desirable than those available for individually-designed arrangements.

VIII. Taxation of Employer Contributions and Tax on Nondeductible Contributions

A. Introduction

Code §404 provides, in general, that employer contributions to qualified plans are deductible in the year for which

[474] Act §1140(c).
[475] Act §1140(b).
[476] Conf. Rep., p. II-491.
[477] Act §1141.
[478] *Id.*
[479] Act §1142.
[480] *See* colloquy between Senators Baucus and Packwood, Congressional Record, S13959-13960, September 27, 1986.
[481] Act §1108.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the contributions are paid provided the contribution is an ordinary and necessary business expense or an expense for the production of income.[482] Section 404 provides deduction limits on the amount of deductible contribution an employer can make to any one plan or a combination of plans. The amount of the limit depends on the type of plan to which the contribution is made and whether an employee is covered by more than one plan of the employer. Where contributions to a plan exceed the deduction limits, the excess, in general, may be deducted in succeeding years as a carryover, provided certain numerical tests are satisfied and the contributions and the benefits which the contributions are funding do not exceed the overall limits on contributions or benefits set forth in Code §415.[483]

Specifically, Code §404(a)(3) permits a deduction for contributions to qualified profit sharing and stock bonus plans, provided the contribution does not exceed 15% of the aggregate compensation of all employees that are covered by the plan for the year in which the contribution is made. If the employer's contributions exceed the deduction limits, §404(a)(3) permits the excess to be carried over and deducted, within certain limits in later years. Under pre-TRA law, §404(a)(3) also provided that, where the contribution was less than the maximum amount permitted, the unused amount up to the maximum limit for that year, called a "limit carryforward," could be carried over and used in later years. The total amount of the limit carryforward that could be deducted in a later year could not exceed 25% of the aggregate compensation of the employees covered by the plan during the carryforward year.[484] Also under pre-TRA law, the term "stock bonus" or "profit sharing" trust was defined to exclude money purchase pension plans.[485]

Employer contributions to defined benefit plans are required to meet the minimum funding standards of Code §412. The deduction for contributions to defined benefit plans is limited to the greatest of:

(1) The amount necessary to meet the minimum funding standard for plan years ending with or within the taxable year;

(2) The level amount (or percentage of compensation) necessary to provide for the remaining unfunded cost of the past and current service credits of all employees under the plan (adjusted, if applicable, by a 10-year amortization of experience gains or losses) over the remaining future service of each employee; or

(3) An amount equal to the normal costs of the plan plus, if past service or certain other credits are provided, an amount necessary to amortize those credits plus experience gains or losses in equal annual payments over 10 years.[486]

Under the minimum funding standard, the portion of the cost of a plan that must be paid for a year depends on the nature of the cost. Each funding method allocates costs between "normal costs" which are generally required to be funded currently and "past service costs" which are spread over a period of years. The "full funding limitation" of Code §412 eliminates the requirement that additional employer contributions be made for a period during which the plan is fully funded. Employer contributions in excess of the deduction limits provided by the Code are not currently deductible but, as in the case of defined contribution plans, a deduction carryover is generally allowed.

Money purchase pension plans are treated as defined benefit plans for purposes of computing contribution limitations and carryovers. Thus, employer contributions to a money purchase plan are generally deductible to the extent required by the minimum funding standard. For money purchase plans, this is the contribution rate specified by the plan.

If an employer maintains a combination of pension plans (defined benefit or money purchase plans) and the same employee or employees participate therein for the same year, the employer's deduction for contributions for that year is generally limited to the greater of either 25% of the aggregate compensation of employees covered by the plans for the year or, the contribution necessary to meet the minimum funding requirements of the pension plan for the year.

Note that, under pre-TRA law, if the employer maintained both a defined benefit plan and a money purchase plan for the same employee for the same year, the limit did not apply because both plans were treated as pension plans.

In revising the law to eliminate the unused limit carry forward for defined contribution plans, and requiring that a combined limit be imposed when contributions are made to both defined benefit and money purchase plans for the same employee for the same year, Congress provided no justification for the elimination of the unused limit carryforward [487] and indicated that, with regard to the treatment of the combination of money purchase and defined benefit plans, it saw no reason why the combination of plans should not be subject to the same overall deduction limits as a combination of defined benefit and an annuity, profit sharing or stock bonus plan.[488]

Under pre-TRA law, there was no tax imposed on nondeductible contributions made by employers to qualified plans and SEPs.

B. Overview

The Act revised Code §404 by repealing the unused limit carryforward applicable to profit sharing and stock bonus plans and by subjecting money purchase plans, when maintained in combination with defined benefit plans of an employer and in which the same employee or employees of the employer participate, to the same overall contribution limitation rules as apply to the combination of defined benefit and defined contribution plans.

Also, the Act imposed a 10% tax on the employer making distributions to a qualified plan for contributions in excess of the deductible limits under Code §404.

[482] Code §404.
[483] Code §404(j).
[484] Code §404(a)(3).
[485] *Id.*
[486] Code §404(a)(1).

[487] *See* Senate Rep., p. 633.
[488] Senate Rep., p. 633.

The provisions apply, in general, to the employer's taxable years beginning after 1986. There is, with regard to the repeal of the unused limit carryforward, a transition rule protecting limit carryforwards that were unused before 1987.

C. *Detailed Analysis*

1. *Repeal of Limit Carry Forward*

The Act amended Code §404(a)(3)(A) concerning the limits on deductible contributions to stock bonus and profit sharing trusts by eliminating the rules permitting the carryforward of amounts by which the contribution for a particular year were less than the maximum amount permitted for that year. Thus, if an employer's contribution for a particular year is less than the maximum amount for which a deduction may be allowed, the unused limit may no longer be carried forward to subsequent years.[489]

The revised rules do not affect pre-TRA law concerning deduction carryforwards. Therefore, amounts paid to a profit sharing or stock bonus trust in excess of the 15% deduction limit for a particular pre-TRA year, may be deductible in the succeeding years in order of time, provided the deduction in any of the succeeding years does not exceed the 15% deduction limit for that year.[490]

2. *Deduction Limits Applicable to Combination Defined Benefit and Money Purchase Plans*

Under pre-TRA law, the combined limit for contributions to pension plans and stock bonus or profit sharing plans treated money purchase plans as pension plans and, therefore, no combined limit was applied where an employer maintained both a defined benefit and a money purchase plan. The Act amended Code §404(a)(7) to provide that the combined limit applies even where one of the plans is a money purchase pension plan: specifically, if an employer (1) maintains one or more defined contribution plans; (2) has one or more defined benefit plans and has one or more employees participating in more than one such plan; and (3) contributes to one or more qualified defined contribution plans (which includes money purchase plans), and one or more qualified defined benefit pension plans for a taxable year, then, the amount deductible in that taxable year must satisfy the overall deduction limits set forth in Code §404(a)(7). This overall deduction limit is the greater of 25% of the compensation otherwise paid or accrued during the taxable year to the beneficiaries under the plans or the amount of contributions made to or under the defined benefit plans to the extent necessary to satisfy the minimum funding standards of §412.[491]

Note: As under pre-TRA law, the combined limits do not apply where an employer does not have an employee that participates in both a defined benefit and a defined contribution plan of the employer.[492]

Note: The Act also provides that any plan described in Code §412(i), that is, fully insured plans, will be treated as defined benefit plans for these purposes.[493] In such cases, the annual premium is deemed to be the amount required to meet the minimum funding requirement.[494]

3. *Nondeductible Contributions Subject to 10% Excise Tax*

The Act subjects employers making nondeductible contributions to a qualified plan to a 10% excise tax.[495] The amount of the nondeductible contributions is determined as of the close of the employer's taxable year.[496]

Nondeductible contributions are defined as the sum of the amounts contributed to qualified employer plans that exceed the deduction limits in Code §404 and the amount of the prior year's contributions in excess of the deduction limits, reduced by amounts returned to the employer during the year, if any, and the portion of the prior year's nondeductible contributions that is deductible in the current year.[497]

A qualified employer plan is defined as: (1) any plan that satisfies the requirements of Code §401(a) that includes a trust exempt under §501(a); (2) an annuity plan described in Code §403(a); and (3) any simplified employee pension plan within the meaning of Code §408(k).[498] In the case of a plan that provides contributions or benefits for employees who are self-employed individuals (as defined in Code §401(c)(1)), the "employer" is the person treated as the employer in Code §401(c)(4).[499] Thus, for example, a partnership will be treated as the employer of each partner and an individual who owns the entire interest in an unincorporated trade or business will be treated as the employer.

Note: The excise tax applies to tax-exempt employers.[500] The tax applies to contributions that would, if the employer were not exempt, be nondeductible.[501]

Note: The Conference Report also imposes a limit of $200,000 on the amount of compensation that may be taken into account in computing deductions for plan contributions. This limit is to be adjusted for cost-of-living increases at the time and in the same manner that the overall limits on annual benefits under Code §415(d) are adjusted.[502]

The excise tax has a broad sweep because it contains no exceptions for nondeductible contributions such as those pre-1987 contributions in excess of the applicable deduction limits; amounts that provide benefits in excess of the currently applicable Code §415 limits pursuant to Code §404(j); amounts that are nondeductible because of unreasonable actuarial assumptions and those contributions required to satisfy ERISA minimum funding requirements or plan provisions. For these reasons, it is particularly important to amend, as quickly as possible, plans that permit contributions in excess of the revised minimum funding

requirement even though, in general, such amendments are not necessarily required to be made until January, 1989.[503]

4. Effective Dates

The 1986 TRA rules concerning the repeal of the unused limit carryforward and the rule imposing the combined plan deduction limitation on money purchase and defined benefit plan combinations are effective for taxable years beginning after 1986.

Note: The Conference Report, at p. II-481, indicates that the rules relating to deduction limits apply to the *employer's* taxable years beginning after 1986.

The Act contains a special grandfather rule effectively protecting limitation carryforwards accumulated in past years.[504] The Act provides that the deduction limit for any taxable year beginning after December 31, 1986, may be increased by the unused pre-1987 limitation carryforwards, provided the increased amount does not exceed 25% of compensation otherwise paid or accrued in the carryforward year to employees who benefit under the plan.[505]

The Act defines the unused pre-1987 limitation carryforward as the amount by which the 15% limit applicable to a profit sharing or stock bonus plan (as in effect on the day before the date of enactment of the Act) for any taxable year beginning before January 1, 1987, exceeded the amount paid to the trust for that taxable year (to the extent the excess was not taken into account in any taxable year before the year for which the limit is being calculated).[506]

The tax on nondeductible contributions applies to taxable years beginning after 1986.

Chapter 55

INDIVIDUAL RETIREMENT ARRANGEMENTS (IRAs) AND SIMPLIFIED EMPLOYEE PLANS (SEPs)

Marilyn E. Nelson, Esq.
Stuart M. Lewis, Esq.
Silverstein and Mullens
Washington, D.C.

I. New Provisions Affecting IRAs

A. Introduction

1. Pre-1986 TRA

Under pre-1986 TRA law, Code §219(a) and (b) permit an individual under age 70½ to deduct an annual contribution to an individual retirement arrangement (IRA) equal to the lesser of $2,000 or 100% of compensation (earned income, in the case of income from self-employment). The deduction is allowed without regard to whether the individual is covered under an employer's retirement plan. As an alternative to making deductible contributions to an IRA, a participant in an employer-sponsored retirement plan may make deductible voluntary contributions to a qualified plan, generally limited to the lesser of $2,000 or 100% of compensation for the year (or $2,250 if a spousal IRA is added).[1]

A married individual is allowed an additional deduction up to $250 (for a total of $2,250) for contributions to an IRA for the benefit of the spouse if the couple files a joint income tax return for the applicable year, the spouse has not attained age 70½, and the spouse has no compensation for the year.[2] The spouses may divide the contribution between them as they choose, so long as neither contribution exceeds $2,000. Since alimony received by a divorced spouse is treated as compensation for purposes of the IRA deduction limit,[3] a divorced spouse may contribute up to $2,000 of alimony and deduct the amount of the contribution from gross income.

An individual may contribute to an IRA for a taxable year up to the time for filing the return for that taxable year, not including extensions.[4] If the individual borrows the amount to be contributed to the IRA, the interest on the obligation is allowed as a deduction, unlike the provision of Code §265(2), which disallows deductions for indebtedness incurred to make tax-exempt investments. This disparity of treatment results because the income from an IRA is not wholly exempt, but only deferred until the principal and income from the IRA are withdrawn.

Under pre-1986 TRA law, premature withdrawals from an IRA (prior to age 59½) are includible for tax purposes in the owner's gross income and are also subject to an additional tax of 10%.[5] Investing IRA funds in any collectible, which includes stamps or coins, is deemed a distribution under Code §408(m), includible in the income of the owner of the IRA. The owner may withdraw funds from an IRA without penalty after age 59½; distributions must commence at the latest as of April 1 of the calendar year following the year in which the owner attains age 70½ or retires, whichever is later.[6] The surviving spouse may roll over distributions received after an employee's death into any type of qualified plan or IRA.[7]

2. Reasons for Change

When the IRA provisions of the Code were originally enacted in 1974 (in the Employee Retirement Income Security Act), they were not available to individuals who were active participants in employer-provided plans.[8] Congress eliminated the "active participant" restriction in 1981 in the Economic Recovery Tax Act (ERTA) and extended IRA provisions to all individual taxpayers, with the expressed purpose of raising the level of personal savings plans and making available uniform discretionary retirement savings arrangements.[9]

The Senate Finance Committee ("the Committee") found, however, that the expanded IRA provisions have not met their intended purposes.[10] The Senate Report cites data showing that, first, the level of aggregate personal savings has not increased discernibly since 1981, and secondly, that IRA utilization is lowest among taxpayers with adjusted gross income (AGI) under $30,000, a group that represents 76% of all taxpayers. The rate of investment in IRAs is highest among those with AGI in excess of $50,000.[11] The Committee was persuaded that the taxpayers in the higher income group would have made independent retirement savings without regard to the tax incentives and that the lower tax rates of the bill would themselves stimulate

additional saving, thereby eliminating the need for deductible IRAs for those who participate in employer-provided retirement plans.[12]

Therefore, the Committee recommended reinstating the pre-ERTA rules limiting IRA deductions to taxpayers not covered by employer-provided retirement plans. At the same time, the Committee's desire to continue a tax incentive for discretionary retirement savings provided the stimulus for the nondeductible IRA contributions element of the new bill.[13] In addition, the Committee acknowledged the anomaly of the current law's spousal deduction limit, in the case of a spouse whose annual earnings total less than $250, and the Committee's bill reflects a change in the spousal IRA rules.[14]

B. Overview

1. Provisions

Post-1986 TRA law makes sweeping revisions to the rules for deductibility of IRA contributions, making saving for retirement more complicated and contributing to an IRA less attractive for many taxpayers. Wage earners who are not "active participants" in an employer-maintained retirement plan will still be able to make deductible IRA contributions as under present law, to a limit of the lesser of $2,000 or 100% of gross income. For such wage earners the additional $250 contribution for the benefit of the noncompensated spouse is also available, with a change that allows a spouse to elect to be treated as having no compensation. However, present-law IRA provisions for taxpayers who are active participants in an employer-sponsored pension or profit-sharing plan are greatly restricted. Individuals with AGI over $35,000 and couples filing jointly with AGI over $50,000 (figured before any IRA deductions) will no longer be allowed any IRA deductions if they have such other retirement plans. Deductions for single individuals with AGI between $25,000 and $35,000 and couples with AGI between $40,000 and $50,000 will be phased out ratably as income rises above the lower limits, and voluntary employee contributions to a qualified plan will no longer be allowed.

The revisions permit individuals to make nondeductible IRA contributions to the extent that deductible contributions are not allowed, to the limit of the lesser of $2,000 ($2,250 if a spousal IRA is added) or 100% of compensation. Income from nondeductible contributions is not taxable until distributed to the owner. Uniform distribution rules and uniform basis recovery rules are extended to IRAs.

2. Effective Dates

Section 1103 of the Act makes the new provisions for the spousal IRA election effective beginning with the 1985 taxable year. Other provisions for eligibility, contributions, and basis recovery rules applied to distributions are effective for taxable years beginning after December 31, 1986. Uniform distribution rules are generally effective for years beginning after December 31, 1988.

C. Detailed Analysis

1. Eligibility

a. Active Participant Status

Section 1101 of the Act amends Code §219 to limit the deduction for contributions to an IRA available to "active participants" in an employer-maintained retirement plan. Specifically, the restriction applies to participants in (i) a qualified pension, profit-sharing, or stock bonus plan described in §401(a), (ii) a qualified annuity plan described in §403(a), (iii) an annuity contract under §403(b), (iv) a simplified employee pension plan under §408(k), (v) a federal or state government employee retirement plan, and (vi) a trust under §501(c)(18).[15]

Note: Specifically excepted from active participant status are (i) participants in a §457(b) eligible deferred compensation plan, (ii) members of Armed Forces Reserve components (unless an individual has qualified for "active duty" status by serving in that capacity in excess of 90 days during the year), and (iii) volunteer firefighters with accrued benefits no greater than $1,800 as of the beginning of the taxable year.[16]

The determination of "active participant" status is made without regard to whether an individual's rights under the employer-sponsored plan are nonforfeitable (*i.e.*, vested).[17] Moreover, active participant status depends upon the type of plan in which the individual is eligible to participate. In the case of a defined benefit pension plan, an individual is treated as an active participant if the individual satisfies the conditions for eligibility for any part of the plan year within the individual's taxable year, even if the individual elects not to participate.[18] However, the eligible employee under a defined contributions plan is not treated as an active participant unless the employer makes a contribution to the employee's account. Under a money purchase pension plan, an individual is an active participant if an employer contribution is required to be allocated to the individual's account with respect to the plan year ending with or within the individual's taxable year, even if the individual is not employed at any time during the plan year.[19] Any employer contribution added or any forfeiture allocated to the individual's account in a profit-sharing or stock bonus plan during the individual's taxable year causes the individual to be an active participant.[20] The conference agreement clarifies that elective contributions (*e.g.*, elective deferrals under a qualified cash or deferred arrangement) are treated as employer contributions.[21] And finally, an employee who makes a voluntary or mandatory contribution in the employee's taxable year is treated as an active participant.[22]

Active participants with adjusted gross income (AGI) in excess of a fixed amount may not make deductible

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

contributions to IRAs. Furthermore, as income of active participants rises above an "applicable dollar amount," the deductible amount of the IRA contribution is reduced ratably, and it is phased out completely when AGI reaches $10,000 above those limits. In the case of an individual, the applicable dollar amount of AGI is $25,000; $40,000 in the case of a married couple filing jointly; and $0, in the case of a married couple filing separately. Thus, to those limits, active participants may make the maximum amount of deductible contributions to an IRA ($2,000 for an individual and $2,250 with the spousal IRA added). Individuals with AGI in excess of $35,000, couples filing jointly with AGI over $50,000, and couples filing separately with AGI over $10,000 are ineligible to make any deductible contributions to an IRA. In the case of a married individual filing a joint return, the limitation applies if either the individual or the individual's spouse is an active participant in an employer-maintained retirement plan for any part of the plan year ending with or within the individual's taxable year.[23]

Note: The ending of the plan year has special significance for active participants who change jobs and move to one without an employer-maintained retirement plan. Any overlap of the plan year with the individual's taxable year may make such an individual ineligible for a deductible IRA.

b. Nonparticipant Status

If neither the individual nor the individual's spouse is an active participant in an employer-maintained retirement plan, the individual is eligible to make deductible contributions to an IRA as under present law. In the case of a two-worker married couple when one spouse is an active participant and the other is not, filing separately will give the nonparticipant spouse the privilege of making the maximum contribution permitted to a deductible IRA.[24]

Comment: A beneficiary of a retirement plan who is also a wage earner and not an active participant in an employer-maintained plan would be eligible, under the new rules, to make deductible IRA contributions.

2. Amount of Contribution

a. Nonparticipants

For those who are not active participants in an employer-maintained retirement plan, limits on deductible contributions are the same as under present law. The amount of the contribution is the lesser of 100% of compensation (or earned income, in the case of a self-employed individual) or $2,000, with no applicable dollar amounts placed on AGI.[25] The spousal IRA addition, as under present law, is $250. If the spouse earns a small amount of income, §1103 of the Act permits the spouse to elect to be treated as having no compensation for the year.[26] In the case of a two-earner married couple neither of whom is an active participant in a retirement plan, the maximum deductible amount is $2,000 for each. Nonparticipants may elect to have their deductible contributions treated as nondeductible.[27]

b. Active Participants

Active participants with AGI below the applicable dollar amount may may maximum deductible IRA contributions of $2,000. In the case of AGI over the applicable dollar amount, the deductible contribution is reduced by an amount that bears the same ratio to the applicable dollar limit as the taxpayer's AGI in excess of the applicable dollar amount bears to $10,000.[28] For example, in the case of a single individual who is an active participant with AGI of $30,000, the deductible amount of the IRA contribution would be $1,000 ($5,000 AGI in excess of $25,000 = 50% of $10,000; $2,000 reduced by 50% = $1,000). The IRA deduction limit is $0 for married couples filing separately if a spouse has AGI above $10,000. In the case of a married couple filing jointly with AGI of $49,000, the deductible amount would be reduced by 90%, or $1,800, thus allowing a deductible contribution of $200. Until the AGI reaches the phaseout amount, there is a floor of $200 on deductible contributions.[29] In addition, any deductible amount is rounded to the next lowest multiple of $10.[30]

Note: For purposes of applying the dollar limitations, AGI is calculated without regard to deductible IRA contributions, but with regard to taxable Social Security benefits and passive loss limitations.[31]

To the extent that they may not make deductible contributions, individuals may make nondeductible IRA contributions. Thus, an individual who is limited to making a deductible contribution of $500 may make a maximum nondeductible contribution of $1500 ($1750 in the case of a spousal IRA). Individuals with income greater than the phaseout amount may make the maximum nondeductible contribution of $2,000.[32] Moreover, §1102 of the Act permits a taxpayer to elect to treat any deductible contribution allowed as a nondeductible contribution.[33]

Nondeductible contributions may be placed in separate accounts or in the same account with deductible contributions. For the individual taxpayer's recordkeeping convenience, separate accounts may be advisable. However, because of the aggregation rules (*see* 3, a *infra*), it is not necessary to segregate the two types of contributions.

A taxpayer who makes a nondeductible contribution to an IRA must designate it on the tax return for the taxable year as a contribution for which a deduction is not allowable under Code §219.[34] The taxpayer may make such designated nondeductible contributions up to the due date of the tax return for the taxable year and may change the designation from deductible to nondeductible or vice versa in an amended return for the taxable year.[35]

Caveat: §1102 of the Act adds a penalty of $100 for overstatement of the amount of the designated nondeductible contributions made for any taxable year.[36]

3. Distributions

a. General

The Act extends the uniform basis recovery rules to IRAs. Moreover, IRA distributions generally are subject to the amended uniform distribution rules. Distributions must satisfy the requirements of Code §401(a)(9).[37] Taxation of earnings on nondeductible contributions will be deferred until distributions begin; the contribution made with after-tax dollars will not be taxable, but the distributions will be prorated among earnings, principal, and deductible contributions.[38] Under special rules applicable to IRAs under Code §72, all IRAs of an individual are aggregated and treated as one contract, and all distributions during a taxable year are treated as a single distribution. If a taxpayer has made both deductible and nondeductible contributions, any distribution during a taxable year will be treated as partially a return of the deductible contribution, of the nondeductible contribution, and of earnings for purposes of determining the amount includible in income for the taxable year.[39]

Example: Assume that (1) an active participant makes a $2,000 contribution for the 1987 taxable year, $1,500 of which is deductible, (2) no withdrawals are made from the IRA during the taxable year, (3) the account balance at the end of the taxable year is $2,200, and (4) no prior IRA contributions have been made. For 1988, assume that (1) the individual makes a designated nondeductible IRA contribution of $2,000 to another IRA account, (2) no withdrawals are made from the IRA during the taxable year, and (3) the aggregate account balance as of the end of the taxable year for both IRA accounts is $4,600. In this individual's 1989 taxable year, no IRA contributions are made and the individual withdraws $1,000 from the account to which a contribution was made for the 1987 tax year. At the end of the 1989 taxable year, the aggregate account balance of both IRA accounts is $4,000. The nondeductible percentage of the $1,000 withdrawn is equal to the percentage the total nondeductible contributions ($2,500) are of the total account balance at the end of the taxable year ($4,000) plus distributions during the year ($1,000). Thus, 2,500/5000, or 50% of the amount withdrawn ($500) is treated as a return of nondeductible contributions, and therefore not taxable.[40]

b. Mandatory Distributions

Distributions from an IRA must begin no later than April 1 of the calendar year following the year in which the owner reaches age 70½, regardless of whether the owner has retired.[41] An individual is subject to sanctions for failing to comply with this requirement.[42] Required distributions made from IRAs cannot be rolled over into another qualified plan in order to avoid the distribution rules of Code §401(a)(9).[43] Consistent with this requirement, rollovers of distributions received by the surviving spouse after an employee's death are restricted to IRAs, a change from present law, which permits a rollover into any type of qualified plan.[44]

c. Premature Withdrawals

An early distribution is a withdrawal by the owner prior to age 59½, except for disablement or death. As under present law, an additional tax of 10% is imposed on early distributions from IRAs.[45] IRAs are subject to most of the exemptions from that tax of the uniform distribution rules, with two exceptions.[46] Early distributions from an IRA because of early retirement or to pay medical expenses, unlike distributions made from qualified plans, are not exempt from the additional tax. However, the life annuity exemption applies to an IRA. Under this provision, a distribution prior to the owner's age 59½ is exempt from the additional tax if it is part of a series of substantially equal periodic payments for the life of the employee.[47] To be eligible, the annuity payments must begin after the employee's separation from service and be made at least annually.

4. Miscellaneous Provisions

Section 1102 of the Act retains the pre-TRA rule with respect to the time that contributions to an IRA must be made: up to the due date of the tax return for the taxable year without extensions. Permissible investments for IRAs have been expanded to include gold and silver coins issued by the United States government.[48] The deduction for interest on loans for investment in deductible IRAs is effectively denied through the general disallowance of personal interest under the Conference Agreement.[49]

D. Planning Suggestions

Since saving for retirement through IRAs becomes far more complicated under the new provisions of the Act, taxpayers who have been investing in IRAs as a supplement to employer-maintained retirement plans should begin now to consider their priorities for tax-deferred savings beginning in 1987, recognizing that only the earnings from nondeductible contributions will be deferred and that early withdrawal of nondeductible contributions will have the effect of withdrawing a prorated portion of deductible IRAs. Moreover, because of the penalty for overstatement of designated nondeductible contributions, those who wish to make such contributions should estimate their contributions conservatively if they plan to invest at the beginning of the year.

A taxpayer's earnings on nondeductible IRAs will require a much longer investment period to neutralize the early withdrawal tax (the "break-even" point) than would the same investment in a deductible IRA.[50] As a result, other types of investments with tax-deferred earnings may seem more attractive.

II. Simplified Employee Pension Plans

A. Introduction

Simplified employee pension plans (SEPs) are employer-established plans that are funded through individual retirement accounts but qualify for greater contributions than IRAs. If the requirements of §408(k) are satisfied, the annual deduction limit is roughly comparable to that for qualified defined contribution plans; *i.e.,* 15% of (i) the compensation from the employer that is includible in the employee's gross income or (ii) the employer contribution to the SEP that is includible in the employee's gross income, up to $30,000 per year.[51] In order to qualify, the SEP must meet specified requirements, including nondiscrimination and participation requirements. Under the pre-1986 TRA participation requirement, a contribution must be made under the SEP for each employee who has attained age 25 and has performed service during at least three of the immediately preceding five calendar years.[52]

B. Overview

The principal change made to the SEP rules by the Act was the addition of elective salary deferral provisions patterned after those available under §401(k) plans. Under these provisions, participants in qualifying SEPs will be able to elect to have salary reduction contributions made to the SEPs and will benefit from a tax deferral comparable to that available under §401(k) plans. Special requirements were added for SEPs that permit such salary deferral elections.

Several other changes were also made to the SEP provisions. One changes the nature of the income tax treatment of SEPs so that, for tax purposes, SEPs are treated like qualified plans rather than like IRAs. Thus, for example, a deduction is allowed for the employer contribution and an exclusion from income (like a salary reduction contribution in a §401(k) plan) is provided to the participant instead of requiring the participant to include the contribution in income and take a corresponding deduction on his or her individual tax return. In addition, the participation and integration requirements for SEPs were modified to make these rules more compatible with the rules for qualified plans.

C. Detailed Analysis

1. Salary Reduction Arrangements

The Act adds new Code §408(k)(6), permitting employees to make salary reduction contributions.[53] Under §408(k)(6), if certain requirements are satisfied, a participating employee may elect to have the employer make salary reduction payments to the SEP on his or her behalf as an "elective employer contribution."

In order to make this election available, four principal requirements must be satisfied by the SEP. First, the salary reduction election must be made or be in effect with respect to not less than 50% of the employees of the employer.[54] Second, the "deferral percentage" for each year for each highly-compensated [55] employee eligible to participate must not be more than the product derived by multiplying the average "deferral percentage" for all nonhighly-compensated employees by 1.25%.[56] Third, the salary reduction election may not be available in a year if the employer has more than 25 employees at any time during the preceding year.[57] Fourth, this election is not available to SEPs maintained by state and local governments, or political subdivisions thereof, or any agency or instrumentality thereof or any organization exempt from tax under the Internal Revenue Code.[58]

The SEP deferral percentage for an employee for a year is the ratio of the amount of elective employer contributions actually paid over to the SEP on behalf of the employee for the year to the employee's compensation for the year.[59] In calculating deferral percentages, matching and nonelective contributions apparently may not be taken into account in determining the deferral percentage.[60]

Three important distinctions exist between the limits calculated under §408(k)(6) and those calculated under §401(k). First, in §401(k)(3) the limits imposed on highly-compensated employees are imposed on the average deferral for the highly-compensated group whereas in §408(k)(6) the limits are imposed on each highly-compensated employee. Thus, in a SEP none of the highly-compensated employees can rise above the limits. Second, the limits may be lower in many cases in a SEP.[61] Third, matching and employer contributions that comply with the §401(k)(2) requirements may be counted to comply with the applicable ratio tests under §401(k) whereas they apparently are not counted, as noted above, for purposes of §408(k).[62]

Note: The effect of these disparities is that in many cases a small employer may still find a §401(k) plan more advantageous than a SEP. The employer would have to balance, however, the superior tax benefits of the §401(k) plan against the generally higher administrative costs associated with it.

[62] *See* Code §401(k)(3)(C).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

If a highly-compensated employee contributes more than is allowable under the 1.25 rule of §408(k)(6)(A)(iii), the excess elective employer contribution is treated as an "excess contribution." [63] Excess contributions are to be treated under rules similar to those applicable to §401(k) plans under §401(k)(8). Thus, excess contributions must be withdrawn in the first 2½ months of the following plan year to avoid a 10% excise tax under §4979.[64]

Note: The effect of these new rules is to increase the usefulness of SEPs for many small employers. Previously, a small employer that wished to use a §401(k) plan was required to actually adopt a §401(k) plan in order to achieve the salary reduction benefits. The Act, however, expands the availability of salary reduction arrangements to SEPs, thereby giving small employers an additional option. However, the rules applicable to a §408(k)(6) salary reduction arrangement are not identical to those available under §401(k) and may, in some situations, not be as advantageous. As a consequence, careful consideration should be exercised by small employers in determining whether to use a §401(k) plan or a §408(k)(6) SEP.

2. Taxation of SEPs

Post-1986 TRA Code §402(h)[65] prevents an employee from having constructive receipt by reason of salary reduction contributions made to a SEP that qualifies under §408(k)(6). In addition, §402(g)(1)[66] imposes a $7,000 limit on the amount of exclusion available for the taxable year of any individual. This $7,000 limit applies to both §401(k) plans and §408(k) plans.[67]

Note: The $7,000 limit is not a SEP limitation but a limitation on the income tax exclusion for the employee. Salary reduction contributions in excess of $7,000 will still be taxed to the employee currently.

Further, the taxation procedure for SEP contributions is changed by the Act. Instead of providing individual SEP participants with income and a corresponding deduction, the rules are made compatible with those for qualified plans. Thus, the employer contribution will be deductible to the employer [68] with an exclusion provided to the employee until such time as the employee becomes taxable on the SEP distributions.[69] The general deduction limitations, however, continue to be 15% of compensation up to $30,000, including any salary reduction contributions made under §408(k)(6).[70]

3. Participation Requirements

Post-1986 TRA participation requirements are also added for SEPs. As modified, the participation requirements of §408(k)(2) provide that the employer must make employer contribution to the SEP for each employee who has attained age 21,[71] has performed service for the employer during at least three of the immediately preceding five years and has received at least $300 in compensation from the employer for the year.[72]

For purposes of this calculation, employees who can be excluded from the participation requirements for qualified plans under Code §410(b)(3)(A) and (C) are also excluded in determining whether the SEP participation requirements are satisfied.[73] Thus, certain union employees and nonresident aliens may be excluded from the SEP.

The participation requirement is applied separately to elective arrangements.[74] Employees who are eligible to have employer contributions made on their behalf under §408(k)(6) are, however, treated as if the contribution was made.[75] The year that is used for purposes of SEPs is the calendar year except to the extent that the employer elects, pursuant to regulations, to utilize its taxable year.[76] Thus, in most cases SEPs will probably use the calendar year.

4. Integration

The Act also changes the applicable social security integration rules for SEPs. It deletes the pre-1986 TRA provisions of §408(k)(3)(D) and inserts in lieu thereof a provision requiring the SEP to comply with the integration rules of Code §401(l)(2). These are the same integration rules applicable to defined contribution qualified plans. The integration rules of §401(l)(2) do not, however, apply to salary reduction contributions under §408(k)(6).

Note: Although the SEP integration rules are effective for 1987, they are adopted by means of a reference to the integration rules in §401(l)(2), which are not effective until 1989. This discrepancy will presumably be resolved either by regulations or technical corrections legislation.

5. Effective Date

Except as otherwise noted, the new rules apply to years beginning after December 31, 1986.

III. Section 501(c)(18) Plans

A. Introduction

Trusts created before June 25, 1959, forming part of a pension plan funded solely by contributions of employees are entitled to tax exemption under Code §501(c)(18). Previously, the Internal Revenue Service concluded that

[63] Code §408(k)(6)(C)(ii).
[64] Code §4979 was added by Act §1117(b)(i).
[65] Code §402(h) is apparently mislettered and probably will eventually be relettered as §402(j). Added by Act §1108(b).
[66] Code §402(g) should be §402(i).
[67] This limit is adjusted for cost-of-living increases pursuant to Code §415(d). Code §402(g)(5).
[68] Act §1108(c), amending Code §404(h)(1).
[69] Act §1108(b), amending Code §402(h)(1). The provisions in §219(b)(2) of the Code that currently provide the limitations for SEP contributions are modified so that the limitations are now imposed under §402(h)(2) of the Code.
[70] Act §1108(b), amending Code §402(h)(2).
[71] Act §1898(a)(5) amends §§102 and 202 of the Retirement Equity Act of 1984 (REA) and §408(k)(2)(A) of the Internal Revenue Code of 1954 to reduce, from 25 to 21, the maximum age requirement that a SEP may impose for plan participation. Under REA, a pension plan could restrict participation to employees who had attained age 21 and completed one year of service, while the age restriction for employees participating in a SEP remained age 25. As a result of this amendment, which is effective for plan years beginning after the date of enactment, the maximum age that a SEP may require as a condition of participation will be 21 rather than 25.
[72] This amount (as well as the $200,000 limit under Code §408(k)(3)) are adjusted for cost-of-living increases in accordance with Code §415(d). Act §1108(d), adding subsection (8) to Code §408(k).
[73] Act §1108(d), adding Code §408(k)(2).
[74] Conference Report at II-407.
[75] Code §408(k)(2).
[76] Code §408(k)(7)(C).

contributions to pension plans exempt under §501(c)(18) were deductible as union dues by employees making those contributions.[77]

B. Overview

The Act permits salary reduction contributions to be made to an exempt §501(c)(18) trust under rules similar to those applicable under §401(k) of the Code. This change will, however, be of interest only to existing §501(c)(18) trusts since no new trusts can be established under that provision.

C. Detailed Analysis

The Act adds new §501(c)(18)(D), which permits an employee to designate certain contributions as deductible.[78] The contribution would be limited to the lesser of $7,000 or 25% of the employee's compensation includable in income for the year.[79] Further, the plan must satisfy the special nondiscrimination tests under §401(k)(3)(A)(ii).[80] Failure to satisfy that test will cause the amount to be treated as an excess contribution under a §401(k) plan.[81] Finally, the contributions must be treated as elective contributions under §402(g).[82]

These provisions are effective for taxable years beginning after December 31, 1986.

Chapter 56

ELECTIVE DEFERRAL LIMITATIONS AND NONDISCRIMINATION RULES FOR TAX-SHELTERED ANNUITIES

Diane J. Fuchs, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Tax-sheltered annuity programs are retirement programs established under Code §403(b) by public schools, state and local governments and agencies thereof and certain tax-exempt organizations (including churches and certain organizations associated with churches). The amount contributed to the plan, if the plan conforms to the requirements of Code §403(b), is excluded from the employee's income for the taxable year to the extent that the payment does not exceed the employee's exclusion allowance for that year. [1] In general, the exclusion allowance is equal to 20% of the employee's includable compensation from the employer multiplied by the number of the employee's years of service with that employer, reduced by amounts already paid by the employer to purchase the annuity. [2] Employer payments to purchase a tax-sheltered annuity contract for an employee are subject to the overall limitations on contributions and benefits applicable to qualified plans. This limit on annual additions generally is the lesser of 25% of compensation, or $30,000 (the defined contribution plan §415 limits). Certain catch-up elections allow an employer to contribute in excess of the usual percentage limits in certain years.

Under pre-1986 TRA law, there were no coverage or nondiscrimination rules that prohibited an employer's tax-sheltered annuity program from favoring highly compensated employees.

Also, under pre-TRA law, benefits under a tax-sheltered annuity program were includable in income when paid or made available.

In changing the Code §403(b) rules with regard to the maximum permitted amount of elective deferrals, Congress desired to address the disparity between those individuals who participate in plans that permit elective deferrals and those who participate in plans that do not. Under pre-TRA law, where a salary reduction arrangement was in effect, an employee could elect to exclude from income up to $30,000 a year, while those individuals whose employers did not provide salary reduction arrangements could not do so. [3] Congress dealt with this inequity by reducing the limits on contributions to a tax-sheltered annuity made pursuant to salary reduction agreements.

Congress was also concerned that there were no coverage or nondiscrimination rules under pre-1986 TRA law. Thus, employers could establish such plans for the exclusive benefit of their highly paid employees or officers. Congress determined that tax-sheltered annuity arrangements should not be permitted to cover relatively small numbers of employees and provide disproportionately large benefits to highly compensated individuals only. Rather, it determined that the opportunity to make elective deferrals should be available to all employees. [4]

Under pre-TRA law, benefits under tax-sheltered annuity programs, unlike other qualified plans, were subject to the constructive receipt rules and were subject to tax when amounts under the annuities became available. This rule was repealed because Congress saw no reason to maintain a disparity in the tax treatment of individuals covered by different types of tax-favored retirement arrangements. [5]

II. Overview

A. Contribution Limitations

In general, effective for taxable years beginning after 1986, salary reduction contributions to a tax-sheltered annuity are limited to $9,500 per year. [6] This amount is to be indexed to cost-of-living increases. [7] Special "catch-up" contributions of up to $3,000 per year (up to a maximum of $15,000) are permitted in addition to the $9,500, for employees of certain qualified organizations such as educational organizations, hospitals, home health service organizations, health and welfare service agencies, and church organizations. [8]

The annual limit on the amount of the salary reduction contribution is reduced below the $9,500 limit, dollar for dollar, by the amount excluded from an employee's income on account of the employee's elective deferrals under qualified cash or deferred arrangements pursuant to Code

[1] Employer contributions to a tax-sheltered annuity include contributions made by reason of a salary reduction agreement, whether or not evidenced by a written agreement.

§401(k) or simplified employee pensions (SEPs)(under §408). [9]

Note: The 1986 TRA does not permit tax-exempt organizations to establish new cash or deferred arrangements under §401(k), but does grandfather plans that were adopted before July 2, 1986. [10]

Elective deferrals under tax-sheltered annuity programs are taken into consideration for purposes of reducing the amounts that may be contributed to a nonqualified deferred compensation plan of the employer which satisfies the requirements of Code §457 [11] and to Code §401(k) cash or deferred arrangements. [12] Further, effective for taxable years beginning after 1986, participation in a tax-sheltered annuity plan may disqualify an individual from receiving a deduction for contributions to an IRA. [13] For years beginning after 1986, for purposes of the limits imposed on contributions to defined contribution plans, contributions not excluded from an employee's income will be taken into account in the calculation of the limit on annual additions under Code §415(c).[14]

B. Coverage and Nondiscrimination Rules

In general, effective for years commencing after 1988, if an employer permits any employee to make salary reduction contributions to a tax-sheltered annuity, the employer must permit all employees to do so. [15] The following employees, however, may be prevented from making salary reduction contributions to a tax-sheltered annuity: (1) employees who participate in an eligible deferred compensation plan of the employer under Code §457; (2) employees who participate in a qualified cash or deferred (§401(k)) plan of the employer; (3) nonresident aliens; and (4) students who normally work less than 20 hours per week. [16] An employer may require a minimum contribution to a salary reduction agreement of no more than $200. [17]

Also for taxable years commencing after 1988, contributions to tax-sheltered annuity plans that are not made pursuant to a salary reduction agreement will be subject to the post-1986 TRA nondiscrimination and coverage rules generally applicable to qualified plans. [18] If a tax-sheltered annuity plan, by itself, fails to satisfy the coverage and nondiscrimination requirements of Code §§401(a)(4) and 410(b), the employer may elect to aggregate the annuity plan with its other qualified plans to demonstrate that the plan satisfies the coverage requirements. [19]

In general, church plans are not subject to the post-1986 TRA nondiscrimination and coverage requirements. [20]

III. Detailed Analysis

A. Limits on Elective Deferrals

As part of the general limit on the exclusion for elective deferrals for cash or deferred arrangements under Code §401(k), Congress added a parallel limit on contributions to tax-sheltered annuities under Code §403(b). [21] The Act set the standard limit on elective deferrals to tax-sheltered annuities at $9,500. [22] The Conference Report clarifies that the $9,500 annual limit applies until the cost of living adjustments to the annual limit on general elective deferrals under a qualified cash or deferred arrangement raises that limit from $7,000 to $9,500, at which time the limit on elective deferrals under a tax-sheltered annuity also will be indexed in the same manner as the indexing of the annual limit for elective deferrals under CODAs. [23] Further, elective deferrals under tax-sheltered annuity arrangements are reduced by elective contributions to cash or deferred arrangements under Code §401(k) and SEPs.

Elective deferrals, for purposes of post-TRA Code §402(g), are defined, in pertinent part, as any employer contribution to purchase an annuity contract under §403(b) under a salary reduction agreement (within the meaning of §3121(a)(5)(D)). [24]

Note: The definition of elective deferrals to which the annual limit applies does not include a deferral where an employer allows employees a one-time election to participate in a contributory defined benefit plan with a single mandatory contribution rate or a tax-sheltered annuity program with elective deferrals. Also, if an employee is required to contribute a fixed percentage of compensation to the tax-sheltered annuity as a condition of employment, the contributions are not treated as elective deferrals. These two situations are not intented to be the only situations in which contributions are not to be treated as elective deferrals. The Conference Report indicates that the Secretary of the Treasury must issue guidance to employers on other contributions that are not to be treated as elective deferrals. [25]

Note: Because the post-1986 TRA limit applies to elective deferrals only, non-elective employer or employee contributions may be made that exceed the limit. Starting in 1989, however, the post-1986 TRA nondiscrimination and coverage rules must be satisfied. *See* discussion *infra*.

tion, a hospital, home health service agency, health and welfare service agency, church, or convention or association of churches. Under the exception, any eligible employee who has completed 15 years of service with the employer is permitted to make an additional salary reduction contribution under the following conditions:

(1) the additional contributions can be no more than $3,000 in any one year;

(2) in the aggregate, the total amount of contributions do not exceed $15,000, reduced by tax-sheltered annuity contributions not included in gross income in any prior taxable years, and

(3) in no event may the exception be used if an individual's lifetime elective deferrals exceed the individual's lifetime limit. The lifetime limit on elective deferrals for an individual, solely for purposes of this special catch-up rule, is $5,000 multiplied by the number of years of service that the individual performed with the employer. [26]

The Act amends Code §6051(a) concerning the requirement that an employee be provided with a Form 1099 concerning compensation received from the employer. It requires that a Form 1099 be provided showing the total amount of elective deferrals pursuant to the general elective deferral provisions, including deferrals with regard to tax-sheltered annuities and Code §457 plans. [27]

The limitations on elective deferrals, applicable to tax-sheltered annuities, apply to taxable years beginning after 1986. [28] There is a special rule extending the effective date for deferrals under plans maintained pursuant to collective bargaining agreements. Where a plan is maintained pursuant to one or more collective bargaining agreements between employee representatives and one or more employers, and the agreements were ratified before March 1, 1986, the elective deferral rules do not apply to elective deferrals for taxable years beginning before the earlier of the date on which the last of such collective bargaining agreements terminates, or January 1, 1989. [29] Although the limits do not apply to contributions made to plans maintained pursuant to collective bargaining agreements until the date described above, such contributions must be taken into account for purposes of applying the limit on elective deferrals to other plans. [30]

B. Nondiscrimination Requirements for Tax-Sheltered Annuities

Effective for years beginning after 1988, the 1986 TRA added nondiscrimination and coverage requirements applicable to tax-sheltered annuities. The Act provides that all tax-sheltered annuity plans must satisfy these rules except in the case of contracts purchased by a church. [31] For purposes of the church exclusion, a church is defined in the same way that it is defined in Code §3121(w)(3)(A). Further, the term includes any qualified church-controlled organization (as defined in §3121(w)(3)(B)). [32]

1. Elective Deferrals

If an employer permits elective deferrals, then all employees of the organization must be able to make elective deferrals. The employer, however, may impose a minimum contribution requirement but the amount may be no more than $200. [33] For purposes of elective deferrals, the Act provides that an employer may exclude any employee who participates in an eligible deferred compensation plan (within the meaning of Code §457), or a qualified cash or deferred arrangement of the organization, or another annuity contract described Code §403(b). Any nonresident alien described in Code §410(b)(3)(C) may also be excluded. Students who normally work less than 20 hours per week may be excluded (subject to the conditions applicable under Code §410(b)(4)). [34] The Conference Report, at p. II-418, notes that the 1986 TRA rules governing elective deferrals are to apply, under Treasury regulations, "with respect to the entity of the employer sponsoring the tax-sheltered annuity program."

2. Non-Elective Deferrals

a. In General

In general, non-elective or matching contributions must meet all of the post-1986 TRA coverage and nondiscrimination rules applicable to qualified plans. Specifically, they must satisfy the requirements of Code §401(a)(4), (5) and (26), as well as Code §410(b).[35] Thus, one of three tests must be satisfied: (1) a percentage test, (2) a ratio test, or (3) an average benefits test.[36]

---

[26] Act §1105. Code §402(g)(8).
[27] Act §1105(b) adding Code §6051(a)(8).
[28] Act §1105(c)(1).
[29] Act §1105(c)(2).
[30] Act §1105(c)(2).
[31] Act §1120(a).

[32] Act §1120(b) adding Code §403(b)(10). The term "church" includes: (1) a convention or association of churches, and (2) an elementary or secondary school that is controlled, operated, or principally supported by a church or by a convention or association of churches. The term "qualified church-controlled organization" means any church-controlled tax-exempt organization described in Code §501(c)(3) other than an organization that both (1) offers goods, services, or facilities for sale to the general public other than goods, services, or facilities that are sold at a nominal charge which is substantially less than the cost of providing such goods, services, or facilities, and, also, (2) normally receives more than 25% of its support from governmental sources or receipts for admissions, sales of merchandise, performance of services, or furnishing of facilities in activities that are not unrelated trades or businesses (House Report, p. 716). As a result, the tax-sheltered annuity nondiscrimination rules do not apply to the typical seminary, religious retreat center, or burial society, regardless of their funding sources, because they do not offer goods, services, or facilities for sale to the general public. Similarly, the rules do not apply to a church-run orphanage or old-age home, even if it is open to the general public, if not more than 25% of its support was derived from the receipts of admissions, sales of merchandise, performance of services, or furnishing of facilities (in other than unrelated trades or businesses) or from governmental sources. The House Report, however, indicates that it is specifically intended that the coverage and nondiscrimination rules are to apply to church-run universities (other than religious seminaries) and hospitals if both conditions (1) and (2) above exist. Auxiliary organizations of a church (including youth groups, women's auxiliaries, etc.) generally would satisfy neither of the conditions and thus, the coverage and nondiscrimination rules would not apply. Similarly, these rules generally do not apply to tax-sheltered annuity programs maintained by church pension boards or fund-raising organizations (House Report, p. 716).
[33] Act §1120(b). Code §403(b)(10)(A)(ii).
[34] Act §1120(b). Code §403(b)(10).
[35] Act §1120(b) adding Code §403(b)(10). Code §403(b)(10)(A)(i).
[36] Act §1112(b). Code §410(b). The Conference Report clarifies that, in applying the average benefits test, elective deferrals under a tax-sheltered annuity are to be disregarded (Conf. Rep., p. II-420).

In general, the nondiscrimination rules apply in the same manner to tax-sheltered annuity programs as they do to qualified plans. Thus, the full array of rules relating to nondiscrimination apply (for example, the $200,000 limit on the amount of compensation that may be taken into account, the special nondiscrimination rules applicable to matching contributions, the employee leasing rules and the minimum participation rules are applicable for purposes of testing whether non-elective contributions to a tax-sheltered annuity plan are discriminatory).[37]

b. Integration

Employers that maintain tax-sheltered annuity programs may integrate contributions or benefits under the post-1986 TRA integration rules: (1) for purposes of the average benefits test (Code §410(b)), (2) to establish comparability between programs (or between a program and a plan), and (3) for satisfying the benefits test within a plan (Code §401(a)(4)). The Conference Report, however, directs that the Secretary may not prescribe rules that permit disparity under the post-1986 TRA integration rules for employees who are not covered by Social Security. [38]

c. Aggregation of Plans

If a tax-sheltered annuity program, standing alone, fails to satisfy the percentage test, the ratio test, or the classification test under the post-1986 TRA nondiscrimination and coverage rules generally applicable to qualified plans, the employer may elect to treat the tax-sheltered annuity program and a qualified plan or another tax-sheltered annuity program as a single plan, solely for purposes of demonstrating that the tax-sheltered annuity program satisfies the coverage requirements. If the employer does this, for purposes of satisfying the coverage rules, the plans that are aggregated with the tax-sheltered annuity also must provide contributions or benefits that do not discriminate in favor of highly compensated employees. [39]

The requirement that aggregated arrangements provide comparable contributions or benefits generally applies in the same manner to tax-sheltered annuity programs as it does to qualified plans. Thus, the Conference Report indicates that the principles of Rev. Rul. 81-202, as modified by the Act for qualified plans in general, are to apply to tax-sheltered annuities. [40] The Conference Report directs the Secretary, however, to prescribe rules for tax-sheltered annuities that reduce the administrative burden of applying Rev. Rul. 81-202. For example, testing less frequently than annually may be permitted. [41]

The Conference Report also indicates that, in applying the average benefit percentage component of the average benefits test to a tax-sheltered annuity program, an employer may, at its election, include all qualified plans in determining the average benefit percentages. A tax-sheltered annuity program, however, may not be aggregated with a qualified plan for purposes of determining whether the qualified plan satisfies the applicable nondiscriminatory coverage rules, including the average benefits test. [42]

d. Excludable Employees

In general, the categories of employees that are excludable in applying the coverage and nondiscrimination rules to tax-sheltered annuities are the same as those excludable for purposes of qualified plans, except that, in addition, an employer may exclude from consideration students who normally work less than 20 hours a week. The Conference Report indicates, however, that the 20-hour requirement only applies if the employer excludes all students normally working less than 20 hours per week. [43]

e. Aggregation Based on Line of Business

The general rules regarding aggregation of employers and testing on a line of business or operating unit basis, are to apply to tax-sheltered annuities under rules prescribed by the Secretary. [44] The Secretary, however, may provide a special, narrower definition of employer for purposes of the rules applicable to elective deferrals under tax-sheltered annuity plans. [45]

C. Constructive Receipt

The Act specifically provides that the amount actually distributed to any distributee under a tax-sheltered annuity contract is taxable to the distributee in the year in which it is distributed under Code §72. [46] In effect, the Act makes the doctrine of constructive receipt inapplicable to tax-sheltered annuities. As a result, the determination of the year in which the taxation of distributions from tax-sheltered annuities occurs has been placed on an equivalent basis with distributions from qualified plans in general.

Note: The constructive receipt rules, however, apply to nonqualified annuities.

This provision applies to taxable years beginning after December 31, 1985. [47]

Chapter 57

TREATMENT OF DISTRIBUTIONS

Diane J. Fuchs, Esq.
Silverstein and Mullens
Washington, D.C.

I. Minimum Distribution Requirements

A. Introduction

The Internal Revenue Code contains minimum distribution rules respecting qualified plans which govern both before-death and after-death distributions. The Code also provides before- and after-death minimum distribution rules for IRAs.

1. Pre-Act Before-Death Distribution Rules

The qualification of a pension plan depends on the plan satisfying certain rules concerning both the mandatory commencement, and the minimum amount, of distributions. A qualified plan must provide that the entire interest of each participant will be distributed no later than the participant's required beginning date.[1] Alternatively, the distribution may be made in substantially non-increasing annual payments which must begin no later than the participant's required beginning date, and be paid out over (1) the life of the participant; (2) the lives of the participant and the designated beneficiary; (3) a period (which may be a term certain) not extending beyond the life expectancy of the participant; or (4) a period (which may be a term certain) not extending beyond the life expectancies of the participant and the designated beneficiary.[2]

For both purposes, the required beginning date is generally April 1 of the calendar year following the calendar year in which either the participant attains age 70½ or retires, whichever is later. Under pre-1986 TRA law, the required beginning date for a 5% owner was April 1 of the calendar year following the calendar year in which the participant attained age 70½, even if the participant had not retired.[3]

Another requirement for before-death distributions, known as the "incidental benefits rule," is that the plan must provide for a form of distribution whereby the present value of projected payments to the participant, while living, is more than 50% of the present value of total payments projected to be made to the participant and his or her beneficiaries. Where a distribution option satisfies the requirements for joint and survivor annuities, however, it need not satisfy the incidental benefits rule.

The before- and after-death distribution rules applicable to qualified plans under pre-1986 TRA law also applied to tax-sheltered annuities under Code §403(b).[4] After the amendments to Code §408 made by the 1984 Tax Reform Act, the before- and after-death minimum distribution rules for IRAs have corresponded to the rules for qualified plans with the exception that distributions must commence from an IRA by April 1 of the calendar year following the year in which the IRA owner attained age 70½ regardless of the date of the IRA owner's separation from service.[5]

2. After-Death Distributions

The Code also contains minimum distribution requirements that govern distributions from qualified plans where a participant has died. The applicable rules depend on whether benefits commence before or after the participant's death.[6]

If a participant dies after the commencement of benefit payments, the remaining portion of the participant's interest must be distributed at least as rapidly as under the distribution method that was in effect prior to death. Where no distributions commenced before death, the participant's entire interest must, in general, be distributed within five years of the date of death. This rule is subject to two exceptions.[7] First, the five-year rule does not apply to that portion of a participant's after-death remaining interest payable to a designated beneficiary over the beneficiary's life (or over a period not extending beyond his or her life expectancy) if the distributions commence no later than one year after the date of death and are paid to the beneficiary under rules that meet the same minimum distribution requirements that apply to before-death distributions.[8] The second exception to the five-year requirement is where the designated beneficiary is the participant's surviving spouse.[9]

3. Rationale for Change

The 1986 TRA changes make the rules concerning the required beginning date for distributions uniform for all qualified plans and eliminate the disparities that exist, for example, in the distribution requirements for IRAs and for other qualified plans, as well as the disparities that exist between participants who are and are not 5% owners.[10] The legislative history also indicates that Congress believed that it was easing the administrative burdens in both the public and private sectors by eliminating the need for a subjective task to determine when withdrawals are required to begin, since, under pre-1986 TRA law, the time of separation from service was sometimes difficult to determine.[11] In imposing uniform minimum distribution rules with respect to the permissible periods over which benefits from any tax-favored retirement arrangement may be distributed, Congress was endeavoring to ensure that tax-favored retirement plans would be used to replace a participant's pre-retirement income stream at retirement, rather than for the indefinite deferral of tax on a participant's accumulation under the plan.[12]

In applying an excise tax for violations of the minimum distribution rules, Congress sought to avoid the sanction of disqualification which, it believed, was too onerous for a plan's failure to satisfy the highly technical distribution requirements with respect to any one participant. This is especially significant in light of the fact that plan administration is generally outside the control of most participants and a particular failure may have occurred with respect to one participant. Thus, while a plan should, by its terms, prohibit the violation of the minimum distribution rules, the legislative history indicates that an excise tax was the remedy chosen because Congress believed that such an operational error should not cause plan disqualification.[13]

B. Overview

The Tax Reform Act of 1986 extends the commencement of distribution rules previously applicable only to 5% owners and IRA participants to all participants in tax-favored retirement arrangements including qualified plans, IRAs, tax-sheltered annuities and custodial accounts. Thus, distributions from all qualified plans must commence no later than April 1 of the calendar year following the year in which the employee reaches age 70½, regardless of whether the employee retires.[14]

The Act also imposes an excise tax on amounts that were required to have been distributed during the taxable year under Code §§401(a)(9), 403(b)(10), 408(a)(6), 408(b)(3) or 457(d)(2), but which were not distributed. The tax is equal to 50% of the amount by which the minimum required distribution exceeds the actual amount distributed during the taxable year. The tax, which the Secretary of the Treasury may waive under certain circumstances, must be paid by the participant (or, if relevant, the beneficiaries of the estate.[15]

These provisions, in general, apply to years beginning after December 31, 1988. There are special rules with regard to plans maintained pursuant to collective bargaining agreements. There is also a transitional rule for 5% owners and an exemption for benefits with respect to which a designation was made under §242(b)(2) of the Tax Equity and Fiscal Responsibility Act of 1982.[16]

C. Detailed Analysis

1. Uniform Required Beginning Date

The Act revises the required beginning date rules in Code §401(a)(9)(C) to prohibit distributions that commence after the April 1 of the calendar year following the calendar year in which an employee attains age 70½.[17]

Distributions from all tax-favored retirement arrangements including plans of state and local governments and tax-exempt under Code §457, are subject to the 1986 TRA benefit commencement date rules. While in general, this provision is effective for years beginning after December 31, 1988. The Act contains a grandfather provision for individuals who attain age 70½ before January 1, 1988.[18] The grandfather rule, however, contains an exception. It does not protect 5% owners (as defined in §416(i)) at any time during the plan year ending with or within the calendar year in which the owner reaches age 66½ or any subsequent year.[19]

2. Excise Tax for Failure to Make Minimum Required Distributions

The Act imposes a 50% excise tax on the person receiving a distribution if the distribution is less than the required minimum distribution amount for the year.[20] The excise tax is applied to the amount by which the minimum required distribution exceeds the actual amount distributed during the taxable year.[21]

The excise tax applies to distributions during the taxable year from plans qualified under Code §401(a); from annuity plans and contracts described in Code §403(a) and (b), from IRAs and individual retirement annuities and from deferred compensation plans covered by Code §457.[22]

The Act does not specifically define the term "minimum required distribution." Rather, the Treasury Secretary is granted the authority to define the concept in regulations.[23]

The Conference Report sets forth guidelines to be followed by the Secretary in drafting these regulations. In general, it is intended that if a participant selects a permissible distribution option, the minimum required distribution in any year will be the amount required to be distributed in

[10] H.R. Rep. 426, 99th Cong., 1st Sess., p. 725 (1985).("House Report").
[11] House Report, p. 725. The example in the legislative history is the case of employees who cease their regular duties, but continue to work in connection with consulting agreements in order to postpone the commencement of benefit payments.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

that year under the payout option selected. First, the Conference Report states that, with respect to a defined contribution plan, the minimum required distribution must be determined as under pre-1987 law.[24] With respect to a defined benefit plan, the Conference Report requires that, if the participant selects an impermissible payout option and designates a beneficiary, the minimum required distribution in any year is the amount that would have been distributable to the participant in that year had the participant selected a joint and survivor annuity payable over the joint life and last survivor expectancies of the participant and the designated beneficiary. The actual ages of the beneficiary and the participant at the required beginning date must be taken into account. For this purpose, the survivor benefit is assumed to be the maximum percentage of the annuity payable during the participant's lifetime that will not violate the incidental benefit rule, but may not be more than 100% of the benefit payable to the participant.[25] The Conference Report provides that even if the distribution option is described in the plan and the plan receives a favorable determination letter, the excise tax will still apply.[26]

Where the participant selects an impermissible payout option and does not designate a beneficiary, the minimum required distribution in any year will be the amount that would have been distributable to the participant in that year had the participant selected an annuity payable over the participant's life expectancy, taking into account the participant's actual age on the required beginning date.[27]

The tax is imposed on the recipient of the distribution. The Secretary is permitted, in certain circumstances, to waive the excise tax for any taxable year. For the Secretary to do so, the taxpayer must establish to the secretary's satisfaction that the shortfall in the amount distributed was due to reasonable error and that reasonable steps are being taken to remedy the shortfall.

3. Effective Date

In general, the provisions concerning the excise tax for failure to satisfy the minimum distribution requirements apply to years beginning after December 31, 1988.[28]

The Act contains an exception, however, for distributions that are made to an employee in accordance with a benefit designation made before January 1, 1984, by the employee in accordance with §242(b)(2) of the Tax Equity and Fiscal Responsibility Act of 1982.[29]

Note: TEFRA amended §401(a)(9) to conform the distribution rules for distributions from qualified plans to those then applicable to Keogh plans or H.R. 10 plans. Thus, TEFRA applied the age 70½ distribution rule, for the first time to qualified plans.[30] TEFRA, however, contained a special transitional rule which exempted certain distributions made pursuant to employee designations made before January 1, 1984. Thus, if designations were made under the terms of a plan before January 1, 1984, to commence distribution after age 70½, provided the method of distribution satisfied the distribution rules in effect prior to TEFRA, such designations were protected by TEFRA without regard to the date that the distributions commence.[31] This protection continues notwithstanding the amendments made by Tax Act §1121 concerning the minimum distribution requirements.[32]

Special effective date rules apply to plans maintained pursuant to one or more collective bargaining agreements between employee representatives and one or more employers if the agreements were ratified before March 1, 1986. In that case, the 1986 TRA 50% excise tax does not apply to distributions made to individuals covered by the agreements in plan years beginning before the earlier of either (1) the later of the date on which the last of the collective bargaining agreement terminates, or January 1, 1989; or (2) January 1, 1991.

II. Taxation of Distributions

A. Introduction

In general, distributions from qualified plans and IRAs are includable in gross income in the year in which the distribution is made. An individual may elect to receive favorable tax treatment on a lump-sum distribution provided certain requirements are satisfied. In general, under pre-1986 TRA law, the portion of a lump-sum distribution from a qualified plan that was attributable to a participant's post-1973 service qualified for 10-year forward averaging and, the portion of such a distribution that was attributable to pre-1974 service was eligible for long-term capital gains treatment.

Pre-TRA law also contained special rules for the treatment of basis where an individual received a distribution from a qualified plan, IRA, or tax-sheltered annuity. Such basis was generated from employee contributions. If an amount was received before the annuity starting date, the individual was treated as first receiving employee contributions, which were non-taxable, and only when such basis was used up, as receiving taxable income. With regard to amounts received after the annuity starting date in the form of an annuity, under pre-1986 TRA law, each payment received by the employee was generally treated, in part, as a return of the employee's contributions, and, in part, as taxable income. The portion of each payment that was treated as a return of employee contributions was that amount which bore the same ratio to each payment as the employee's total compensation bore to his total expected payments over the period of the annuity. In the case of a straight-life annuity, the employee's life expectancy, as of his annuity starting date, was treated as the period over which the annuity would be paid for purposes of computing the total expected return under the contract. If the employee died prior to the expiration of his anticipated life expectancy, no deduction was provided for the employee's

unrecovered basis. Conversely, where the employee's life was longer than that which was anticipated at the time his benefits started, pre-1986 TRA law effectively excluded from income the amount in excess of the employee's total contributions (by continuing to apply the same exclusion ratio to all payments under the contract).

Under pre-TRA law, there was also a special rule for annuity payments from qualified plans where payments to the individual in the first three years equalled or exceeded the individual's aggregate employee contributions. In that situation, all distributions were treated as a return of employee contributions and were non-taxable, until all of the individual's employee contributions were recovered. After that, the distributions were fully taxable.

The 1986 TRA changes to the taxation of distribution rules reflect Congress' concern that the pre-TRA rules were inconsistent with the policy of providing individuals with income at retirement rather than during their working lives.[33] Congress also determined that the rules permitting individuals to rollover distributions into IRAs, thereby avoiding taxation until retirement age, effectively served to carry out the original purpose of the capital gains and 10-year averaging provisions. That is, the availability of rollovers mitigates the effect of a progressive tax structure on individuals receiving all of their benefits in a single year. Since amounts that are rolled over to a qualified recipient plan are taxed only as the amounts are withdrawn from the IRA, amounts distributed from tax-qualified plans and rolled over can be protected from taxation until the employee receives distributions from the recipient plan. In many cases, the employee will be in a lower tax bracket when this occurs. The tax results that will occur under the post-1986 TRA individual rates will similarly tend to effectuate this policy goal. As under pre-TRA law, rollovers will be available as a planning tool for qualifying distributions. Further, under the post-TRA individual rates, which provide for a fairly flat rate structure, the chances of an individual being in a substantially higher bracket in the year he or she receives a distribution are minimized. Given the post-TRA rate structure (*i.e.*, a decreased need for income averaging), Congress determined that 10-year averaging should be reduced to five-year averaging and that capital gains treatment should only be available on a very limited basis.[34]

Similarly, Congress felt that the pre-1986 TRA basis recovery rules for early distributions permitted the accelerated tax-free recovery of employee contributions and thereby encouraged the use of tax-favored plans for nonretirement purposes. Congress also believed that the three-year basis recovery rule provided favorable treatment to a very limited number of taxpayers and was inequitable with respect to others.[35]

B. *Overview*

The 1986 TRA modifies the rules governing the taxation of distributions from qualified plans in several significant respects. First, the Act eliminates 10-year forward averaging for lump-sum distributions in favor of five-year forward averaging. Ten-year forward averaging, however, is preserved for certain grandfathered individuals.[36]

Second, the Act phases out the capital gains treatment for distributions attributable to pre-1974 participation over a six-year period. Again certain grandfathering rules are provided.[37]

Third, the Act modifies pre-TRA law concerning the order of recovery of employee contributions and repeals the three-year basis recovery rule.[38] The 1986 TRA ordering rules make after-tax employee contributions less attractive.

Fourth, the Act provides special basis recovery rules for distributions from an IRA to which nondeductible contributions were made.[39] Under the TRA rules, the revised general basis recovery provisions are extended to IRAs. In addition, all IRAs of an individual are treated as a single contract and all distributions during a taxable year are treated as a single distribution.[40]

C. *Detailed Analysis*

1. *Elimination of 10-Year Forward Averaging*

The Act eliminates 10-year forward averaging for lump-sum distributions, replacing it with a provision that permits one-time five-year forward averaging for after age 59½.[41] Thus, special averaging for lump sum distributions before age 59½ is no longer permitted, except if the individual qualifies under a special "grandfather" rule discussed below. The five-year forward averaging is calculated in a similar manner as was used under pre-TRA law with respect to 10-year forward averaging.[42]

In general, the 1986 TRA averaging provisions apply to distributions received after December 31, 1986.[43] The Act provides an elective transition rule for individuals who attained age 50 before January 1, 1986.[44] Under this rule, a qualified individual may make a one-time election at any age with respect to a single lump sum distribution to use either 10-year forward averaging under pre-1986 TRA tax rates, or five-year averaging under the revised rates.[45] Not more than one election may be made under this transition rule with respect to any lump-sum distribution payable to that employee.[46] Thus, the election is in lieu of, and not in addition to, the single post-age 59½ election to claim five-year forward averaging under the post-TRA rules.[47]

Note: The statute provides a special rule for those who separate from service in 1986 and receive a lump sum distribution after December 31, 1986, and before March 16, 1987. Such individuals will be permitted to elect lump-

[46] Act §1122(h)(3)(C).
[47] Act §1122(h)(3)(C).

sum treatment for their distribution as if the distribution were received on the date the employee separated from service.[48]

2. Pre-1974 Capital Gains Treatment

The Act repeals the provisions of pre-TRA law permitting capital gains treatment for the portion of a lump sum distribution attributable to pre-1974 participation.[49]

Effective for distributions received after December 31, 1986, if a participant makes an election, the pre-TRA law's long-term capital gains treatment for the part of a lump sum distribution attributable to pre-1974 participation will apply, but will phase out on a percentage basis over a six-year period.[50] The phase-out schedule is as follows:

For Distributions During Calendar Year	*The Phase-Out Percentage Is*
1987	100
1988	95
1989	75
1990	50
1991	25

Thus, for example, in 1988, if a participant elects capital gains treatment, 95% of a distribution attributable to pre-1974 participation will be eligible for capital gains treatment.

Note: If an election is made for capital gains treatment, the statute precludes a future election of five-year forward averaging with respect to distributions from qualified plans in which the employee participates. Further, although it is not entirely clear, the election of capital gains phase-out treatment will likely involve a 28% rate rather than the flat 20% rate prescribed for purposes of the grandfather rule (see discussion below).

The capital gains provisions also contain a transition rule. Individuals who attained age 50 on or before January 1, 1986, may make an election under the transition rule to have a flat capital gains effective rate of 20% apply to the pre-1974 portion of the lump sum distribution.[51] This 20% rate applies to all electing grandfathered individuals, regardless of the maximum effective capital gains rate of the taxpayer under pre-TRA law.[52] Only one such election, however, may be made under the transitional rule. Thus, if the election is made before the participant reaches age 59½, no further elections may be made after he or she attains age 59½.[53]

3. Basis Recovery Rules

In general, effective for distributions from qualified plans and tax-sheltered annuities made after December 31, 1986, the Act imposes uniform basis recovery rules applicable for both pre- and post-annuity starting date distributions.

For these purposes, as under pre-TRA law, basis is determined separately with respect to each "contract" from which a distribution is being made.

a. Pre-Annuity Starting Date Distributions

(1) In General

In general, the Act modifies the basis recovery rules for pre-annuity starting date distributions to provide for the pro rata recovery of employee contributions from qualified plans and tax-sheltered annuities. As a result, such distributions are no longer treated as first coming from after-tax employee contributions.[54] The portion of each pre-annuity starting date distribution that may be excluded is that portion of the payment that bears the same ratio to the total payment as the participant's after-tax employee contributions (and amounts treated as after-tax employee contributions) bear to the total value of the participant's accrued benefit (or account balance) under the plan as of the date of distribution or as of such other time as the Secretary prescribes in regulations.[55] The Secretary is authorized to prescribe appropriate rules for estimating the amounts that are included and excluded where precise calculation would present an unjustifiable burden for the taxpayer.[56]

Note: If an employee is partially vested in employer contributions, the nonvested portion of the employee's accrued benefit is not included for purposes of determining the total value of the employee's accrued benefit.[57]

Where a distribution is made from a defined contribution plan or a separate account of a defined benefit plan, amounts distributed that are attributable to employee contributions (and earnings thereon) will be treated as a separate contract for purposes of applying the pro rata formula.[58] As a result, if an employee withdraws employee contributions from a plan, no part of the distribution will be considered attributable to employer contributions. The distribution will be partially non-taxable, *i.e.*, a return of employee contributions, and partially taxable, *i.e.*, a distribution of earnings on those contributions. Further, if an employee withdraws all amounts attributable to employee contributions and the amount is less than the employee's contributions, the employee may recognize a loss.[59]

Comment: Regulations may provide that, in general, employees will be able to withdraw amounts attributable to their employee contributions in whichever order they choose relative to employer contributions. The author understands that the Service may elect not to impose an ordering rule but rather might permit a retired employee to first withdraw amounts attributable to employee contributions before beginning the withdrawal of amounts attributable to employer contributions.

Query: How will the post-TRA pro rata rules be applied for purposes of net unrealized appreciation in employer securities. For example, if an employee withdraws all the funds in his employee account under the rule requiring a pro rata inclusion in income, it is unclear, with regard to appreciated employer securities, whether a basis adjustment would have to be made in the amount withdrawn from the employee's stock account, or whether the employee would be permitted to withdraw the amount in the employee's stock account without income tax liability.

(2) Transition Rule

The Act provides special relief from the post-TRA proration rules for certain distributions. In the case of a plan, which on May 5, 1986, permitted withdrawals before the occurrence of a separation from service, the TRA proration rules apply only to the extent that the amounts received before the annuity starting date (increased by amounts previously received under the contract after December 31, 1986) exceed the investment in the contract as of December 31, 1986.[60] The effect of the transition rule is to retain pre-TRA law basis recovery for amounts accrued as of December 31, 1986, in plans which, as of May 5, 1986, permitted in-service distributions.

It is not clear from the statute whether income earned before December 31, 1986, on employee contributions accrued as of December 31, 1986, is to be treated as part of the protected amounts, or whether such income is to be added to the post-1986 contract subject to the post-TRA proration rules.[61]

Comment: Another issue is how amounts earned on pre-1987 contributions are to be calculated. Many employers do not maintain adequate records for making such a determination. Those responsible for drafting regulations in this area are considering allowing employers to specifically account for such earnings, or to arbitrarily calculate the earnings by using an artificially determined earnings rate, which may be established by regulation.

b. Elimination of Three-Year Basis Recovery Rule

Among the most controversial provisions in the Act, due to its retroactive application and its primary impact on federal, state and local government employees (who typically participate in plans to which they make after-tax contributions), is the provision repealing the three-year basis recovery rule.[62] The repeal is effective with respect to any individual whose annuity starting date is after July 1 1986.[63]

c. Post-Annuity Starting Date Distributions

With the repeal of the three-year basis recovery rule, the exclusion ratio rules for annuity payments under pre-TRA law become applicable to all distributions received in annuity form. Thus, all post-annuity starting date distributions are treated as if a portion is attributable to after-tax employee contributions (and therefore excludable) and a portion is attributable to employer contributions (and therefore taxable).[64] The excludable amount of each payment is the amount that bears the same ratio to each payment as the total employee contributions ("investment in the contract") bear to the total expected payments over the period of the annuity.[65]

The Act limits, however, the total amount that an employee may exclude from income to the total amount of the employee's contributions.[66] Once the total amount of after-tax employee contributions have been excluded, annuity payments become fully taxable.[67]

On the other hand, if annuity payments cease before the employee's entire investment in the contract is recovered under the exclusion ratio provisions, unrecovered amounts are allowed as a deduction. Specifically, if, after the annuity starting date, the payments cease by reason of the death of the annuitant and, as of the date of the cessation, there is unrecovered investment [68] in the contract, then the amount of the unrecovered investment is allowed as a deduction to the annuitant for his last taxable year. Where the annuity contract provides for payments to a beneficiary or to the estate of the annuitant, and the payments are in the nature of a refund of the consideration paid, then the deduction is allowed to the beneficiary or the estate.[69] In general, this rule will be particularly helpful where an employee has a large basis in the annuity contract and dies earlier than his life expectancy.

Note: For purposes of Code §172 (concerning the net operating loss deduction), the deduction for the unrecovered investment in the contract is treated as if it were attributable to a trade or business of the taxpayer.[70]

The Act does not revise pre-TRA law with respect to distributions that are not received in the form of an annuity and that are paid after the annuity starting date. As under pre-TRA law, such amounts are deemed to be attributable first to income on the contract.[71]

Note: The separate contract rules with regard to after-tax employee contributions also apply to post-annuity starting date distributions.[72]

d. IRA Basis Rules

In general, effective for distributions occurring after December 31, 1986, amounts distributed from an IRA are included in the gross income of the payee or distributee in the manner prescribed for qualified plans and tax-sheltered annuities under Code §72, as amended by the Act.

---

[60] Act §1122(c)(3)(A). Code §72(e)(8)(D).

[61] For a discussion of this issue, *see* letter to Harry Conaway, Acting Associate Tax Legislative Counsel, U.S. Department of Treasury, from John M. Vine, dated November 10, 1986, concerning §1122(c)(3) of the Tax Reform Act of 1986.

[62] Act §1122(c)(1), repealing Code §72(d).

[63] Act §1122(h)(2)(A).

[64] Act §1122(c)(2). Code §72(b)(1).

[65] Act §1122(c)(2). Code §72(b)(1).

[66] Act §1122(c)(2). Code §72(b)(2).

[67] Act §1122(c)(2). Code §72(b)(2).

[68] Unrecovered investment for these purposes is treated as the investment in the contract as of the annuity starting date, reduced by the aggregate amount received under the contract on or after the annuity starting date and before the date as of which the determination is being made, to the extent that the amount was excludable from gross income. Act §1122(c)(2). Code §72(b)(4).

[69] Act §1122(c)(2). Code §72(b)(3)(B).

[70] Act §1122(c)(2). Code §72(b)(3)(C).

[71] Senate Report, p. 610.

[72] Conference Report, p. II-462.

In addition, there are special rules for IRAs. First, all IRAs of a particular individual are treated as one contract. Second, all distributions during any taxable year are treated as one distribution. Third, the value of the contract, income on the contract and investment in the contract are computed as of the close of the calendar year with or within which the taxable year of the individual ends.[73] The value of the contract for these purposes must be calculated by adding back any distributions made during the calendar year.[74]

Note: If amounts are withdrawn from an IRA during a taxable year, and the individual has previously made both deductible and nondeductible IRA contributions, the amount includable as income for the taxable year, is the portion of the amount withdrawn that bears the same ratio to the amount withdrawn for the taxable year as the individual's aggregate nondeductible IRA contributions bear to the aggregate balance of all IRAs of the individual (including rollover IRAs and SEPs).[75]

Care should be exercised in rolling over distributions from qualified plans to IRAs. Because all IRAs are treated as a single contract, rollovers of qualified plan distributions (which do not include amounts attributable to employee contributions) will reduce IRA basis. As a result, trustee-to-trustee transfers are desirable and, where a new employer cannot be persuaded to accept such a transfer, the amounts should be rolled over to an IRA that holds only the qualified plan distribution and, which, at a later time, may be transferred to another qualified plan.

4. Special Treatment for Rollover Distributions

a. Partial Rollovers

Under pre-TRA law, a partial distribution could be rolled over to an individual retirement account provided: (1) the employee made an election for the rollover, (2) the distribution was at least equal to 50% of the balance to the credit of the employee, and (3) the distribution was not one of a series of periodic payments.[76] To prevent the avoidance of the 1986 TRA basis recovery rules, the Act limited the rollovers of partial distributions by eliminating in-service rollovers. Under the Act, partial distributions may be rolled over only if the distribution is made pursuant to the same events that permit a lump-sum distribution under amended Code §402(e)(4)(A), that is, the death of the employee, separation of the employee from service (including the separation from service of a self-employed individual), or the employee's disability.[77] The Act repeals, however, the requirement that a partial distribution not be one of a series of periodic payments.[78]

The Act contains an exception from the revised partial rollover rules for distributions from ESOPs made in order to satisfy 1986 TRA diversification requirements under Code §401(a)(28). Such amounts may be rolled over even if the distribution does not otherwise qualify for rollover treatment. Presumably, a rollover is permitted even if the rollover amount does not constitute at least 50% of the balance to the credit of the employee.[79]

b. Extension of Rollover Period for Certain Frozen Deposits

The Act contains a rule to accommodate individuals who have deposited with bankrupt or insolvent savings institutions amounts that were to have been rolled over within the prescribed 60-day period. The provision permits amounts deposited in certain financially distressed financial institutions to be rolled over into an IRA or qualified plan notwithstanding that the rollover does not occur within 60 days of the date of the original distribution to the employee. In effect, under the rule, the 60-day period does not include periods while the deposit is frozen. Further, the individual has a minimum of 10 days after the release of the funds to complete the rollover.[80]

5. Repeal of Constructive Receipt for Qualified Annuities

Under pre-1986 TRA law, benefits with respect to tax-sheltered annuities under Code §403(b) were includable in income when paid or made available in accordance with the constructive receipt rules.[81] The Act repeals the application of constructive receipt to tax-sheltered annuities. Owners of tax-sheltered annuities are, after the TRA, subject to tax only when benefits are actually received.[82] Note, however, that constructive receipt rules continue to apply to "non-qualified" annuities.[83] These rules apply retroactively for taxable years after December 31, 1985.

6. Net Unrealized Appreciation

The Act revises Code §402(e)(4)(J), which permits the exclusion from gross income of net unrealized appreciation attributable to securities of the employer. For distributions after December 31, 1986, to the extent provided in regulations, a taxpayer may elect, before any distribution, not to have this paragraph apply with respect to the distribution.[84]

7. Effective Dates

The basis recovery rules are generally effective for distributions made after December 31, 1986.[85] The repeal of the three-year basis recovery rule is effective with respect to individuals whose annuity starting date is after July 1, 1986.[86] The provision limiting the income exclusion to the amount of the employee's investment in the contract applies to individuals whose annuity starting date is after December 31, 1986.[87] The 1986 TRA rules concerning the rollover of partial distributions are effective with respect to amounts distributed after December 31, 1986.[88] The repeal of the constructive receipt rules for tax-sheltered annuities is applicable retroactively for taxable years after December 31,

1985.[89] The rule concerning frozen deposits is generally effective with respect to distributions after the date of enactment.[90]

D. Technical Corrections

1. Retirement Equity Act of 1984

a. Lump Sum Distributions

In determining whether a distribution payable due to separation from service is a lump sum distribution, the balance to the credit of the employee at the time of distribution does not include any increased vesting which could result from the participant's later reemployment.

The IRS is instructed to develop regulations indicating that, should a participant's reemployment prior to the expiration of five consecutive one-year breaks in service result in additional vesting for amounts accrued prior to the break, any reduction in taxes due to the reclassification of the distribution as a lump sum distribution (*i.e.*, due to the election of 10-year forward averaging or the special rules governing the treatment of net unrealized appreciation in employer securities) may be recaptured by the participant. Once such a recapture is made, the prior lump sum distribution elections will be disregarded and additional elections will be permitted.[91]

b. Rollovers

In determining whether a distribution made to an employee upon separation from service may be rolled over into another qualified plan or an Individual Retirement Account (IRA), the Technical Corrections provisions indicate that the balance to the credit of the employee will not include any increased vesting which could result from the participant's later reemployment.[92]

Generally, distributions received due to a separation from service are excluded from gross income if they are rolled over into a qualified plan or an IRA. If, however, participants elect rollover treatment and, due to their reemployment prior to the expiration of five consecutive one-year breaks in service, receive an increase in the vesting percentage applicable to amounts accrued prior to the separation, any subsequent distributions will be ineligible for 10-year forward averaging or capital gains treatment.

The provisions relating to the denial of ten-year forward averaging and capital gains treatment for subsequent distributions will be inapplicable where the initial distribution was made without the consent of the participant (*e.g.*, the amount distributed was not in excess of $3,500).

The Act clarifies the circumstances under which participants must be notified of their rollover options.[93]

In the event that a distribution made to a participant is eligible for rollover treatment under Code §402(a)(5), the recipient must be notified that the distribution will not be currently taxed if transferred into another qualified plan or an IRA and that, to qualify for tax-free rollover treatment, the transfer must be made within 60 days of receipt. Previously, this notification was only required if the distribution was a "qualifying rollover distribution," as defined in Code §402(a)(5)(E).

c. Qualified Pre-retirement Survivor Annuity

The Act clarifies the type of benefit payable to a participant's surviving spouse where the participant dies after separation from service or attainment of normal retirement age but prior to the annuity starting date or dies while receiving disability benefits under the plan. Although unclear in the original language of REA, a surviving spouse who dies after separation from service or attainment of normal retirement age, but prior to the annuity starting date, will be eligible to receive benefits in the form of a qualified pre-retirement survivor annuity.[94]

In determining the form of distribution applicable to surviving spouses of participants who died while receiving disability benefits, the definition of annuity starting date is amended to exclude the commencement of auxiliary disability benefits. For purposes of REA §§103 and 203, Code §417(c)(1)(A) and ERISA §205(e)(1), a disability benefit will be considered auxiliary if the participant receiving such benefit will, upon attainment of early or normal retirement age, receive a benefit which meets the vesting and accrual provision of Code §411. In light of this amended definition, the surviving spouse of a participant who had been receiving auxiliary disability benefits prior to attainment of early or normal retirement age will be entitled to receive benefits in the form of a qualified pre-retirement survivor annuity. Should such disability benefits not be auxiliary, however, the normal form of payment to the surviving spouse would be a qualified joint and survivor annuity.

The Act provides guidance in calculating the qualified pre-retirement survivor benefits payable under defined contribution plans.[95]

Qualified pre-retirement survivor annuities which are offered by defined contribution plans must be the actuarial equivalent of at least 50% of the participant's vested account balance as the date of death. Under prior law, this minimum payment was calculated based on the participants' entire account balance, whether vested or not.

For purposes of this section, a participant's vested accrued benefit will include amounts attributable to employee contributions. However, prior to the calculation of the qualified pre-retirement survivor annuity, the accrued benefit will be reduced by the amount of any security interest held by the plan with respect to an outstanding loan in default.[96]

Also, the Act clarifies the scope of the transitional qualified pre-retirement survivor annuity rules in cases where participants had named individuals other than their spouses as designated beneficiaries.[97]

---

[89] Act §1122(h)(7).
[90] Act §1122(h)(8).
[91] Act §1898(a)(2), amending REA §§102 and 202 and Code §402(e).
[92] Act §1898(a)(3), amending REA §§102 and 202 and Code §402(a)(6).
[93] Act §1898(e), amending REA §207 and Code §§402(f)(1) and (2).
[94] Act §1898(b)(1), amending REA §§103 and 203, Code §417(c)(1)(A) and ERISA §205(e)(1).

[97] Act §1898(h)(1), amending REA §§303(c) and 2503.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Benefits payable to the designated beneficiary of a participant who performs at least one hour of service under the plan after August 23, 1984 and dies before both the annuity starting date and the effective date of REA will be subject to the qualified pre-retirement survivor benefit transitional rules. Under this amendment, the present value of any amounts payable to the participant's surviving spouse under these transitional rules will be used to reduce the present value of any death benefits payable to the beneficiary of such participant. If the participant designates more than one beneficiary, the present value of the death benefit payable to each beneficiary will be reduced proportionately.

Spouses may waive their rights to receive the qualified pre-retirement survivor annuity, with certain restrictions. If the waiver is made on or before the end of the second plan year after the provisions of REA apply, it is not treated as a transfer of property subject to the gift tax, prohibited assignment or alienation provisions of the Code or ERISA. In addition, death benefits waived by surviving spouses will not be included in their gross income, but in the gross income of the recipients.

d. Plans to Which Survivor Pay-Out Rules Apply: Transferee Plans

The Act provides that, for purposes of determining whether a plan may be excluded from the survivor benefit requirements generally applicable to qualified pension plans, a plan will not be considered a transferee plan if such direct or indirect transfer of assets was completed before January 1, 1985.

Distributions on behalf of a participant in a profit sharing or stock bonus plan are excluded from the survivor benefit requirements generally applied to qualified plans if: the participant does not elect to receive benefits in the form of a life annuity; the plan provides that, in the event of the participant's death, all vested accrued benefits will be payable to the surviving spouse; and the plan is not a direct or indirect transferee of a plan under which survivor benefits were required.

In addition to providing the exclusion for transferee plans having completed their transfers prior to January 1, 1985, the Act provides that the rules with respect to transferee plans will only apply if the transferred assets (and the investment income attributable to same) are provided separate accounting. Should a participant's transferred assets not be given separate accounting, they, along with all other benefits payable on behalf of the participant, will be subject to the survivor benefit requirements.[98]

e. Qualified Joint and Survivor Annuity

The Act clarifies that the normal form of payment for participants who do not die prior to their annuity starting dates is a qualified joint and survivor annuity. Prior to this revision, participants were required to retire under the plan prior to their date of death in order to receive a qualified joint and survivor annuity as the normal form of payment.[99]

f. Waiver of Survivor Benefits

The Act expands the period during which participants must be notified of their right to waive the qualified pre-retirement survivor annuity.[100]

Under prior law, participants were given the opportunity to waive the qualified pre-retirement survivor annuity form of payment during the period beginning on the first day of the plan year in which they reached age 32 and ending at the end of the plan year preceding the plan year in which they reached age 35.

Under Act §1898(b)(5), however, this period is extended through the later of: 1) the end of the plan year in which the participant attains age 35; 2) a reasonable period of time after the individual becomes a participant; 3) a reasonable period of time after the survivor benefits applicable to the participant becomes unsubsidized; or 4) a reasonable period of time after the survivor benefits become applicable to a participant. Participants who separate from service prior to attaining age 35 must also receive this notice of election within a reasonable time following the separation.

Further, the Act provides that a spousal consent to waive the qualified joint and survivor or qualified pre-retirement survivor annuity will not be valid unless the waiver allows the spouse to name a designated beneficiary and limit the form of payment that such beneficiary will receive. If the spouse does not choose to name a designated beneficiary or limit the form of benefit payment, the waiver must acknowledge the spouse's right to name the beneficiary or limit the form of payment, and indicate that one or more of these rights have been voluntarily relinquished. This provision is effective for plan years beginning after the date of enactment of the 1986 TRA.[101]

g. Spousal Consent Election Period and Notice Requirements

The Act applies the spousal consent election period restrictions and notice requirements to situations involving immediate distributions.[102]

An immediate distribution of a qualified joint and survivor or qualified pre-retirement survivor annuity with a present value in excess of $3,500 is not permitted unless the participant and/or surviving spouse consents in writing to such receipt. Similarly, annuities having a present value of less than $3,500 cannot be immediately distributed after the annuity starting date without the consent of the participant and/or spouse.

A spousal consent to waive the qualified joint and survivor or qualified pre-retirement survivor annuity under such circumstances will not be valid unless it is made within the expanded election period under Act §1898(b)(5) and it

[98] Act §1898(b)(2), amending REA §§103 and 203, Code §§401(a)(11)(B) and 401(a)(11)(B)(iii)(III), and ERISA §§205(b)(1)(C)(iii) and 205(b)(1).

[99] Act §1898(b)(3), amending REA §§103 and 203, Code §401(a)(11)(A)(i) and ERISA §205(a)(1).

[100] Act §1898(b)(5), amending REA §§103 and 203, Code §417(a)(3)(B), and ERISA §205(c)(3)(B).

[101] Act §1898(b)(6), amending REA §§103 and 203, Code §417(a)(2)(A), and ERISA §205(c)(2)(A).

[102] Act §1898(b)(10), amending REA §§103 and 203, Code §417(f), and ERISA §205.

allows the spouse to name a designated beneficiary or limit the form of payment such beneficiary will receive.[103]

h. Annuity Starting Date Definition

The Act defines the term "annuity starting date," whether or not the amount is payable in the form of an annuity.[104]

Where benefits are payable in the form of an annuity, the annuity starting date is the first day of the first period in which the distribution is scheduled to commence, regardless of when, or if, the payment is actually made. Where benefits are not payable in the form of an annuity, the annuity starting date is the date on which the participant becomes entitled to a benefit due to the occurrence of certain events.

The annuity starting date for participants receiving disability benefits is the first day of the first period for which the benefit can be received, provided that the disability benefit is not auxiliary. A disability benefit will be considered auxiliary if the participant receiving such benefit will, upon attainment of early or normal retirement age, receive a benefit which meets the vesting and accrual provisions of Code §411.

i. Qualified Domestic Relations Orders

The Act provides that the qualified domestic relations order provisions only apply to plans which are subject to the assignment and alienation provisions of Code §401(a)(13). Under prior law, it was unclear whether the qualified domestic relations order provisions applied to governmental plans or other plans under Code §414(d) not subject to the assignment and alienation provisions.[105]

The Act also clarifies that the payment of benefits pursuant to a qualified domestic relations order does not constitute garnishment of wages for purposes of applying federal or state law garnishment restrictions.[106]

The Act provides that, in certain circumstances, the participant's former spouse will not be considered a spouse in applying the general provisions of the plan.[107]

A qualified domestic relations order may provide for the division of the participant's accrued benefits under a separation agreement, precluding the spouse's entitlement to additional survivor benefits under the plan's general survivor benefit provisions. In such case, the participant may elect to waive the payment of survivor benefits without obtaining spousal consent.

Also, the Act clarifies that a plan providing for the payment of benefits to an alternate payee under a qualified domestic relations order will not be disqualified under the provisions of Code §§401(a), (k) and 409(d). This rule will apply even if payments to the alternate payee are made with respect to a participant who has not separated from service and such payments commence before the participant reaches the earliest retirement age under the plan.[108]

Further, the Act revises the definition of "earliest retirement date" for purposes of applying the qualified domestic relations order provisions to both defined benefit and defined contribution plans.[109]

According to this revised definition, the "earliest retirement date" is the date on which the participant attains age 50 or becomes eligible to receive a distribution from the plan due to a separation from service (whichever is later) or, if earlier, the date on which benefits become payable to the participant under the plan.

j. Procedures for Disputed Payments Under QDROs

The Act refines the procedures under which disputed benefit payments are to be deferred by the plan administrator.[110]

Pending the determination of whether a domestic relations order is a qualified domestic relations order (QDRO), the administrator is instructed to defer the payment of any benefits in dispute. While it is no longer necessary to hold these amounts in escrow accounts, they must be accounted for on a separate basis.

Amounts may be deferred for no longer than 18 months following the date on which benefits would otherwise be scheduled to commence. If a payment is deferred during this 18-month period, that payment, and each additional payment required to be made within the next 18 months, will be subject to segregation.

If the administrator determines the order is a QDRO within this 18-month period, payment of the segregated amounts will be made to the person(s) entitled to receive them. If the order is found to not to be a QDRO within this 18-month period and the plan administrator has received notice that either party involved in the dispute is attempting to rectify the order's deficiencies, payment of the participant's benefit may be delayed until such period expires.

k. Cash-Out Rules ($3,500)

The Act provides that only the vested portion of a participant's accrued benefit will be considered in determining whether its present value exceeds $3,500. Under pre-TRA law, both the vested and nonvested portions of a participant's accrued benefit were used to calculate its present value.[111]

If the present value a participant's vested accrued benefit exceeds $3,500, an immediate distribution of all or part of the benefit cannot be made without the consent of

[103] Act §1898(b)(10), amending REA §§103 and 203, Code §417(f), and ERISA §205.

[104] Act §1898(b)(12), amending REA §§103 and 203, Code §417(f)(2), and ERISA §205(h)(2).

[105] Act §1898(c)(4), amending REA §§104 and 204, Code §414(p), and ERISA §206(d)(3).

[106] Act §1898(c)(5), amending REA §§104 and 204 and ERISA §206(d)(3).

[107] Act §1898(c)(6), amending REA §§104 and 204, Code §414(p)(5)(A), and ERISA §206(d)(3)(F)(i).

[108] Act §1898(c)(7)(A)(v), amending REA §§104 and 204 and Code §414(p).

[109] Act §§1898(c)(7)(A)(v) and 1898(c)(7)(B)(ii), amending REA §§104 and 204, and Code §414(p)(4)(B), and ERISA §206(d)(3)(E)(ii).

[110] Act §1898(c)(2), amending REA §§104 and 204, Code §§414(p)(7)(A), (B) and (C), and ERISA §§206(d)(3)(H)(i), (ii), (iii) and (iv).

[111] Act §1898(d)(1), amending REA §§105 and 205, Code §411(a)(11)(A), and ERISA §203(1).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the participant and/or spouse. For purposes of this provision, an immediate distribution is deemed to occur if payment is made prior to the participant's normal retirement age or, if later, the date the participant attains age 62.

l. Transition Rules

The Act clarifies the scope of the transitional qualified pre-retirement survivor annuity rules in cases where participants had named non-spouse beneficiaries.[112]

Benefits payable to the designated beneficiary of a participant who performs at least one hour of service under the plan after August 23, 1984 and dies before both the annuity starting date and the effective date of REA will be subject to the qualified pre-retirement survivor benefit transitional rules. Under this amendment, the present value of any amounts payable to the participant's surviving spouse under these transitional rules will be used to reduce the present value of any death benefits payable to the beneficiary of such participant. If the participant designates more than one beneficiary, the present value of the death benefit payable to each beneficiary will be reduced proportionately.

Spouses may waive their rights to receive the qualified pre-retirement survivor annuity, with certain restrictions. If the waiver is made on or before the end of the second plan year after the provisions of REA apply, it is not treated as a transfer of property subject to the gift tax, prohibited assignment or alienation provisions of the Code or ERISA. In addition, death benefits waived by surviving spouses will not be included in their gross income, but in the gross income of the recipients.

The Act also provides that certain payments made under a profit sharing or stock bonus plan to a surviving spouse in a form other than a life annuity will be considered to satisfy the survivor benefit provisions of REA. Plans which were not technically exempt from the survivor benefit requirements during the transitional period or which did not satisfy the transitional rules with respect to a participant who died during that period, although amended in a timely manner to provide such exemption, will not be considered to violate the provisions of REA merely because they paid the participant's entire vested account balance to the surviving spouse in a form other than a life annuity.[113]

2. Tax Reform Act of 1984

a. Rollovers

The 1986 TRA permits the entire balance to the credit of an employee in a qualified plan to be eligible for rollover treatment under the partial distribution rules, provided the distribution is not a "qualified total distribution." Previously, only distributions representing a portion of the balance to the credit of an employee were deemed to be "partial distributions." [114]

Further, the Act clarifies that accumulated deductible employee contributions, as defined in Code §72(o)(5), will be disregarded in determining the balance to the credit of an employee under the revised partial distribution rules.[115]

Also, the Act clarifies that self-employed individuals will generally be treated as employees in determining the taxability of their distributions and the applicability of the rollover distribution rules.[116]

The Act provides that distributions received after an employee's death may be rolled over by the surviving spouse into IRAs only. Previously, the surviving spouse was permitted to roll the distribution over into any type of qualified plan, including individual retirement accounts.[117]

b. Distributions from Employee-Funded Plans

The Act clarifies that plans will be considered substantially employee-funded if 85% or more of the contributions made during a representative period are employee contributions. Further, all deductible employee contributions, as defined in Code §72(o)(5)(A), will be disregarded in determining the percentage of employee contributions.[118]

Further, the penalty imposed on premature distributions from annuity contracts will not apply to distributions which are made from a plan that is funded substantially through employee contributions.[119]

c. Estate Taxation

The Act repeals the exemption from estate and gift taxes for annuities created pursuant to community property laws. Under pre-1986 TRA law, contributions made to a revocable trust created under such laws were not included in the spouse's estate if he/she predeceased the employee.[120]

The Act modifies the grandfather rules under §525(b) of the Tax Reform Act of 1984 and §245(c) of the Tax Equity and Fiscal Responsibility Act of 1982 (concerning the repeal of the estate tax exclusion for qualified plan benefits) to provide that an election made under a qualified plan is irrevocable if all other conditions required for such grandfathering are met and the form of benefit distribution is not changed prior to death. Specific language has also been added to make the grandfather rules applicable to individuals who separated from service on or before January 1, 1985 (under the Tax Reform Act of 1984) or January 1, 1983 (under TEFRA) should the form of distribution elected not require payment until a subsequent date.[121]

III. Penalty Tax on Early Distributions from Qualified Plans

A. *Introduction*

1. *Withdrawal Restrictions*

Typically, under pre-1986 TRA law, benefits under defined benefit plans could be distributed to participants only on account of plan termination or the employee's separation from service, disability, or death. Defined contribution plans, generally, could permit the withdrawal of employer contributions after the expiration of a stated period of time or after the occurrence of a stated event such as hardship. Under pre-TRA law, however, special restrictions applied to the withdrawal of benefits from qualified cash-or-deferred arrangements (CODAs). Under pre-TRA law, CODAs could not permit a participant to withdraw elective deferrals (or earnings on those deferrals) until the participant's death, disability, separation from service, attainment of age 59½ or hardship. Hardship was defined under proposed regulations as an immediate and heavy bona fide financial need for which the participant does not have other resources reasonably available to satisfy the need.

With regard to tax-sheltered annuity programs invested in a custodial account of a regulated investment company such as a mutual fund, pre-TRA law provided that distributions could not be made to participants until the participant attained age 59½, died, became disabled, separated from service, or encountered financial hardship.

In general, the 1986 TRA, revised these rules concerning withdrawal restrictions and imposed more stringent withdrawal restrictions on all types of tax-favored retirement arrangements (with the exception of deferred compensation arrangements under Code §457) because Congress desired to strengthen the incentives for taxpayers to save for retirement and not divert those savings to non-retirement uses. Congress was also concerned that the rules concerning the events upon which distributions may be made were not uniform for all types of retirement arrangements.[122]

2. *Additional Income Tax on Early Distributions*

Under pre-TRA law, a 10% additional income tax was imposed on withdrawals from an IRA if the withdrawal was made before the owner attained age 59½, died or became disabled. A similar 10% additional income tax was imposed on all withdrawals from qualified plans made by or on behalf of 5% owners who had not yet attained age 59½, died, or become disabled.[123]

To encourage retirement saving and discourage distributions before retirement age, Congress enacted a uniform 10% tax for all early distributions includable in gross income from all tax-favored retirement plans (with the exception of unfunded deferred compensation plans of tax-exempt or state and local government employers under post-TRA Code §457). Recognizing a different purpose for ESOPs (to create an ownership interest for employees in employer securities and not necessarily to provide a vehicle for retirement saving), however, Congress exempted early distributions from ESOPs from the additional tax.

B. *Overview*

The Act revised the withdrawal rules with respect to CODAs and imposed restrictions on withdrawals from tax-sheltered annuity plans. It also imposed a revised tax on certain "early" distributions.

1. *Withdrawal Restrictions with Regard to Elective Deferrals*

The 1986 TRA revised prior law concerning withdrawals from CODAs attributable to a participant's elective deferrals. The Act permits withdrawals on (1) the termination of a plan even if there is no successor plan; [124] (2) the sale by a corporation of substantially all of its assets where its employees continue employment with the successor corporation; [125] and (3) the sale of a subsidiary by a corporation where its employees continue employment with the subsidiary.[126] The provisions apply only where the distribution consists of the participant's entire interest in the CODA; [127] They are effective retroactively to distributions after December 31, 1984.[128]

With regard to tax-sheltered annuity plans, the Act imposes limits on withdrawals from elective contributions (and the earnings thereon).[129] Distributions attributable to such amounts may only be made after the annuitant reaches age 59½, dies, becomes disabled or separates from service.[130] Hardship withdrawals are permitted only for amounts attributable to the elective deferrals, without the earnings thereon.[131] This provision is effective for taxable years beginning after December 31, 1988.

2. *Additional Tax on Early Distributions*

The Act imposes an additional income tax of 10% on the amounts includable in income as a result of an early distribution.[132] The tax applies to distributions from qualified retirement plans (plans qualifying under Code §401(a), 403(a), 403(b) and IRAs) if made before the participant attains age 59½, dies, or becomes disabled.[133] There are exceptions, however, for distributions which are: (1) made in annuity form for the participant's life; (2) made to an employee after separation from service on account of a plan's provisions permitting early retirement at age 55; (3) dividend distributions under Code §404(k); (4) amounts used for medical expenses that do not to exceed the deduction allowed for such expenses; (5) distributions from ESOPs under certain circumstances; and (6) payments to alternative payees under qualified domestic relations orders.[134] (Exceptions (2), (5) and (6) do not apply

to IRAs).[135] In general, these provisions apply to taxable years beginning after December 31, 1986.[136] There are some exceptions.

C. *Detailed Analysis*

1. *Withdrawal Restrictions*

The Act imposes several restrictions on withdrawals from §401(k) CODAs and also permits certain distributions not previously permitted from cash or deferred arrangements.

The Act also imposes certain withdrawal restrictions on Code §403(b) annuity plans.[137] The Act specifically provides that distributions before age 59½ from §403(b) tax-sheltered annuities may only occur if the employee separates from service, dies, or becomes disabled, or demonstrates hardship. The distributions may only be attributable to contributions pursuant to a salary reduction agreement within the meaning of §402(g)(3)(C).[138]

Note: Code §403(b) annuity contracts may not provide for the distribution of any income attributable to such contributions in the case of hardship.[139]

Note that, with regard to tax-sheltered annuities that are invested in regulated investment company stock (mutual funds), the Act also amended the Code to clarify that withdrawals for financial hardship can only be made with respect to contributions pursuant to a salary reduction agreement.[140]

Under pre-TRA law, if a 5% owner (as defined in §416) received a distribution from a qualified plan or a §403(a) annuity §403(a) before the individual attained age 59½, for any reason other than becoming disabled, to the extent the amounts received were attributable to contributions paid on his behalf while he was a 5% owner, a 10% additional income tax was imposed. The Act provides that such amounts distributed to a 5% owner or a successor of such an individual, will be subject to the 10% tax only to the extent that the amounts distributed are determined, under regulations prescribed by the Secretary, to exceed the benefits provided for the individual under the plan formula.[141]

With regard to IRAs, the Act repeals Code §408(f) which imposed an additional tax on early distributions from IRAs because, after the TRA, the general rules on the additional tax on early withdrawals apply to IRAs.[142]

The amendments to §403(b) imposing withdrawal restrictions apply to taxable years beginning after December 31, 1988. The technical changes to §72(m)(5)(A) concerning distributions to 5% owners as well as the repeal of §408(f) concerning the additional tax on early distributions from IRAs are effective for taxable years beginning after December 31, 1986.

None of the changes apply to any benefits for which a designation is in effect under TEFRA §242(b)(2). There is also an exception for certain distributions which were part of a pay status participant's election to receive benefits pursuant to a specific schedule for the distribution of the entire amount of such participant's accrued benefit, where the distribution is made pursuant to a written election and the employee has separated from service as of March 1, 1986.[143]

2. *Additional Income Tax on Early Withdrawals*

a. *General Rule*

The Act imposes on distributions made before age 59½, death or disability, a penalty tax equal to 10% of the amount of the distribution that is includable in the participant's gross income.[144]

The tax applies to distributions from plans qualified under §401(a), annuity plans described in §403(a), tax-sheltered annuities under §403(b), and IRAs. The term does not include deferred compensation arrangements under plans sponsored by tax-exempt organizations or state and local governments under §457.[145] The extra tax, plus the 1986 TRA §72 basis recovery rules will create a substantial disincentive to making withdrawals from qualified plans before age 59½.

b. *Exceptions*

(1) *Periodic Payments*

The early distribution tax does not apply to distributions that are part of a series of substantially equal periodic payments made at least annually for the life or life expectancy of the employee or the joint lives (or joint life expectancies) of the employee and his beneficiary.[146]

If periodic payments are elected and therefore not taxed, and then, subsequently, the periodic payments are modified (other than by reason of death or disability) within five years of the first payment and after the employee attains age 59½, or simply before the employee attains age 59½, the tax will be recaptured.[147] The recapture tax applies to the first taxable year in which the modification occurs and must be increased by an amount, determined under regulations, equivalent to the tax that would have been imposed, plus interest for the deferral period.[148] The deferral period is defined as the period beginning with the taxable year in which the distributions should have been included in gross income and ending with the taxable year in which the modification which triggers the tax occurs.[149]

Example: If, at age 50, a participant begins receiving payments under a distribution method which provides for

substantially equal payments over the individual's life expectancy, and, at age 58, the individual elects to receive the remaining benefits in a lump sum, the additional tax applies to the lump sum and to amounts previously distributed.[150] Further, even if the method of distribution is modified after the individual attains age 59½, the recapture tax will apply if the individual does not receive payments under a method that qualifies for the exception for at least five years. Therefore, if an individual begins receiving payments in substantially equal installments at age 56, and alters the distribution method to a form that does not qualify for the exception before he attains age 61, the additional tax will be imposed on amounts distributed before age 59½ as if the exception had not applied. The additional tax, however, will not be imposed on amounts distributed after age 59½.[151]

The five-year minimum payout rule is waived on the death or disability of the employee.[152]

The exception for periodic payments made for life does not apply to distributions from qualified plans, Code §403(a) and §403(b) annuity contracts, or from IRAs unless the series of payments begin *after* the employee separates from service.[153]

(2) Early Retirement

The 10% tax does not apply where an employee separates from service on account of early retirement under the plan after attaining age 55.[154]

This exception applies to both normal and early retirement following the attainment of age 55, and continues to apply if the employee returns to work for the same employer or for a different employer.[155] As a result, for example, the exception applies to a distribution to an employee who, on or after age 55, retires under a plan which provides for a normal retirement age of 55. The exception would not apply, however, to a participant who separates from service at age 52 and, pursuant to the early retirement provisions of the plan, begins receiving benefits at or after age 55. (Other exceptions, however, may apply.)[156]

Note also that if, upon retirement under one plan of the employer, the employee is entitled to a lump sum distribution from another plan of the employer, the early retirement exception still applies. Thus, if an employer maintains a defined benefit plan that provides for early retirement on separation from service after age 55 and also maintains a profit sharing plan which permits the participant to obtain a lump sum distribution upon retirement under the defined benefit plan, the distributions from both plans qualify for the exception.[157]

Note: An existing plan which does not have an early retirement provision may be amended to add an early retirement provision which qualifies for this exception.[158]

Comment: It is unclear how the "early retirement" exception will apply, if at all, to self-employed individuals because the concept of "separation from service" has not previously been applied to the self-employed.

(3) Dividend Distributions from Certain ESOPs

The tax also does not apply where the distributions are dividends paid with respect to the stock of a corporation described in Code §404(k).[159]

(4) Distributions to Pay for Medical Expenses

The Act provides that an early distribution used to pay an employee's medical expenses (or medical expenses of a family member) will not be taxed to the extent that the distribution does not exceed the employee's medical expense deduction under Code §213.[160] That is, amounts distributed to pay medical expenses that exceed 7½% of adjusted gross income, qualify for the exception regardless of whether the taxpayer itemizes deductions.

(5) Distributions from ESOPs Meeting Certain Criteria

The tax does not apply to distributions from an ESOP meeting certain requirements.[161] Specifically, the Act exempts distributions from an ESOP but restricts the exception to distributions made before January 1, 1990 to the extent that, on average, a majority of plan assets have been invested in employer securities (within the meaning of §409(1)) at all times during the five-year period preceding the plan year in which the distribution is made.[162]

Where an ESOP has been in existence for less than five years, a majority of the plan assets has been invested in employer securities during the entire period before the distribution.[163] Where a plan is converted to an ESOP, plan assets must have been invested for five plan years prior to distribution in employer securities. The Conference Report indicates, however, that a distribution from an ESOP that satisfies the preceding conditions, will not qualify for the exception from the early distribution tax unless the distribution is attributable to assets that have been invested in employer securities for the five-year period. Tacking of investment periods is permitted.[164]

Note: The Conference Report indicates that amounts transferred to an ESOP following a reversion from a defined benefit plan would qualify for the exception if a majority of the amounts transferred is invested in employer securities upon the transfer and the five-year investment requirement is met. It is intended that a first-in, first-out rule be used for purposes of determining the length of time a plan has held securities distributed to a participant.[165]

(6) Payments to Alternate Payees

The tax does not apply to payments to an alternate payee pursuant to a qualified domestic relations order within the meaning of Code §414(p)(1).[166]

(7) Special Lump Sum Distributions on Account of Plan Terminations

There is also an exception for lump sum distributions made before March 16, 1987, if the distribution is on account of a separation from service in 1986 and the employee treats the distribution for federal tax purposes as paid in 1986.[167]

(8) Miscellaneous

The exceptions for medical expenses and for distributions from ESOPs, as well as the exception for distributions after separation from service on account of early retirement under the plan after attainment of age 55, do not apply to individual retirement plans.[168]

Comment: While the legislative history indicates that the additional income tax on early withdrawals should not apply to involuntary cash-outs of amounts of $3,500 or less,[169] Tax Management understands that Treasury apparently intends to disregard the Conference Report because it is not supported by the statutory language.[170]

The exceptions to the early distribution tax rules are available to 5% owners to the same extent that they are available to all other employees.

c. Other Early Distributions — Non-Qualified Plans

The 10% tax on early distributions also applies to annuity contracts that do not fund qualified plans or tax-sheltered annuities.[171] The 5% income tax under pre-TRA law for early distributions from non-qualified annuities was increased to 10%, and the exception for "substantially equal" payments was revised to reflect the same provision applicable to qualified plans.[172] Exceptions from the tax were added for distributions under an immediate annuity contract and where an employer-purchased annuity at qualified plan termination is held until the employee separates from service.[173]

d. Effective Dates

The provisions concerning the additional income tax on early withdrawals apply to all distributions made in taxable years beginning after December 31, 1986. There is an exception, however, for individuals who, as of March 1, 1986, separated from service and commenced receiving benefits pursuant to a written election designating a specific schedule of benefit payments.[174]

Note: If the participant failed to make a written election, the requirement that benefits be paid pursuant to a written election will be deemed satisfied if the plan from which the benefits are paid provides for only one form of distribution or where (1) the plan provides that, absent an election to the contrary, a participant will be paid benefits according to the automatic form of payment specified in the plan, and (2) the individual is, in fact, receiving benefits in that form.[175] Note also, that the tax does not apply to the special elections made pursuant to TEFRA §242(b)(2).[176]

D. Technical Corrections to Tax Reform Act of 1984

1. Penalty Tax

The 1986 TRA provides that the 10% penalty tax for distributions made prior to age 59½ which are not prompted by death or disability will be applied to those individuals meeting the post-TRA definition of 5% shareholder. This penalty will not apply, however, to amounts attributable to benefits accrued before January 1, 1985.[177]

The Act revises the definition of "5% owner." The revised definition of "5% owner" is restricted to those individuals who were 5% owners (as defined in §416(i)(1)(B)) at any time during the five plan years preceding the plan year in which their distributions are made, rather than to those individuals who were 5% owners at any time during their employment. Since an individual's status at the time of distribution is, after the TRA, the determining factor in judging whether the premature distribution penalty applies, it is no longer necessary to separately account for those amounts contributed while the individual was not a 5% owner.[178]

2. Minimum Distributions

The Act makes a series of modifications to the minimum distribution rules.

The Act provides that distributions from an Individual Retirement Account or Individual Retirement Annuity contract must begin no later than the April 1 of the calendar year following the year in which the owner reaches age 70½, regardless of whether such individual has retired. Previously, such distributions had been required as of the April 1 of the calendar year following the year in which the employee reached age 70½ or retired, whichever was later. This provision also clarifies that such distributions are subject to the incidental benefit rules of Code §401(a).[179]

The Act adds provisions indicating that incidental benefit distributions will be treated as meeting the rules applicable to required distributions.[180]

IV. Loans

A. Introduction

ERISA permits a plan participant to borrow from a qualified plan in which he or she participates provided the loan bears a reasonable rate of interest, is adequately secured, is available to all participants and beneficiaries on

[167] Act §1124(a).
[168] Act §1123(a). Code §72(t)(3)(A).

[176] Act §1123(e)(4).
[177] Act §1852(a)(2)(A), amending §521 of the Tax Reform Act of 1984 and Code §72(m)(5)(A).
[178] Act §1852(a)(2)(B), amending §521 of the Tax Reform Act of 1984 and Code §72(m)(5)(C).
[179] Act §1852(a)(1)(A) and (B), modifying §521 of the Tax Reform Act of 1984 and Code §§408(a)(6) and 408(b)(3).
[180] Act §1852(a)(6), modifying §521 of the Tax Reform Act of 1984 and Code §401(a)(9).

a reasonably equivalent basis, is not made available to highly compensated participants in an amount greater than the amount made available to other participants, and is made in accordance with a specific plan provision regarding loans.[181] In general, the Code treats loans from qualified plans to participants as distributions, taxable to the participant as a distribution of plan benefits. There is an exception to this general rule for amounts withdrawn from a plan (by a participant) which do not exceed the lesser of: (1) $50,000 or (2) the greater of $10,000 or ½ of the participant's accrued benefit under the plan. The exception applies, in general, if the loan, by its terms, had to be repaid within five years.[182] Before the Tax Reform Act of 1986, the Code also provided that loans could be repaid within a reasonable period, not limited to five years, if the loan was used to acquire or improve a principal residence of the participant or a member of the participant's family.

Congress found two flaws with the rules governing the exceptions to the tax treatment of loans.[183] First, with regard to the $50,000 limit, Congress noted that some participants were borrowing from plans on an ongoing basis, effectively maintaining a permanent outstanding $50,000 loan balance through the use of balloon repayment obligations and bridge loans from third parties. Because maintaining a permanent outstanding loan balance did not carry out the congressional policy of encouraging retirement savings, Congress decided to limit the extent to which an employee could currently use assets held by a plan for non-retirement purposes and to insure that loans were actually repaid within a reasonable period.[184] In addition, with regard to the extension on the five-year repayment rule for participants' principal residences, Congress felt that the exception should be limited to the purchase of the participant's principal residence and should not be used for the benefit of family members.[185] Congress noted that the prior law was overly broad and difficult to apply.

B. *Overview*

The Act revises some of the rules with respect to loans from qualified plans in Code §72(p). First, it limits the $50,000 tax-free loan limit, in general, to $50,000 less the highest outstanding unpaid loan balance in the year before the new loan.[186]

Second, loans that exceed a five-year repayment period are limited to those used for the purchase of the principal residence of the participant.[187]

Third, it requires that loan repayments be amortized over a level period for the term of the loan and that loan payments be made no less frequently than quarterly.[188]

Last, the Act denies an interest deduction for loans that are made to key employees and also, where the loan is secured by amounts attributable to elective deferrals under cash or deferred arrangements (§401(k)) or tax-sheltered annuity arrangements (§403(b)).[189] Interest deductions are further limited by the Act's general rules concerning the deduction of consumer interest.[190]

In general, the loan provisions are effective for loans made, renewed, renegotiated, modified, or extended after December 31, 1986.[191]

C. *Detailed Analysis*

1. *Fifty-Thousand-Dollar Limitation*

The Act modifies the exception to the income exclusion rule where there were outstanding unpaid loan balances in the preceding year, by reducing the $50,000 limit.[192] Specifically, a loan, when added to the outstanding balance of all other unpaid loans from the plan, cannot exceed $50,000 reduced by the excess, if any, of the highest outstanding balance of loans from the plan during the one-year period ending on the day before the date the loan is made, over the outstanding balance of loans from the plan on the date the loan is made.

Example: A's vested benefits in a qualified plan equal to $200,000. On January 1, 1987, A borrows $30,000 from the plan. On October 31, 1987, A's outstanding balance has been reduced to $20,000. On November 1, 1987, A wishes to make another loan without triggering a taxable distribution. Under the new rule, A may borrow another $20,000. This is because X (New loan) + $20,000 (outstanding balance) may not exceed $50,000 minus $10,000 (the $30,000 highest outstanding balance for the year minus $20,000 outstanding balance on the day before the loan is made) or $40,000. Therefore, X = no more than $20,000.[193]

2. *Amortization of Loan in Level Payments*

The Act requires that all loan repayments be amortized in level payments over the term of the loan.[194] Thus, the practice of borrowing from a plan and not making repayment until retirement, plan termination or benefit payments commence will result in the amount of the loan being treated as a taxable distribution.

The legislative history indicates that level amortization of payments does not apply to a period when an employee is on a leave of absence without pay for up to one year.[195] On the other hand, the TRA provision does not preclude repayment or acceleration of the loan before the end of the commmitment period.[196] Further, a plan may require that a loan be repaid in full upon termination of employment, notwithstanding the amortization requirement.

3. Home Loan Exception

In general, prior law limited a participant's outstanding loan balance to $50,000 and extended the time within which a loan could be repaid from five years to a reasonable period, if the loan was for the purchase or rehabilitation of a principal residence of the participant or a member of the participant's family. Thus, for example, under prior law, a participant could borrow funds for an undefined reasonable time to help a family member, such as a child, purchase a condominium to use as a residence while in college.

The Act modifies this extended repayment period to apply only to the purchase of the principal residence of the participant.[197] As a result, plan loans to improve the existing principal residence of the participant or to purchase a second home are subject to the five-year repayment rule.

4. Deductibility of Interest

In general, the deductibility of interest on loans from a qualified plan or tax-sheltered annuity will be subject to the rules in the Act restricting the deduction of consumer interest.[198] Thus, in general, the interest on a loan from a plan to purchase a principal residence, will be deductible by a participant if the security interest for the loan is perfected under loan law on the taxpayer's principal residence and the loan is not for more than the participant's cost basis in the property.[199] Further, the interest on a loan from a plan to a participant to cover medical expenses or education expenses will be deductible if the medical expense qualifies for deduction within the meaning of Code §213(d)(1)(A) and (B) or the education expense for the participant or his immediate family is for study at an educational organization described in Code §170(b)(1). To be deductible, the debt for these two purposes must be secured by the taxpayer's principal residence, or second residence.[200]

There is an additional restriction placed on deductibility of interest where the participant is a key employee (as defined in Code §416(i) (relating to top-heavy plans) and where the loan is secured by amounts attributable to elective §401(k) or, §403(b) deferrals. No interest is deductible with regard to any loans made under either of these two conditions, even if otherwise deductible under the new consumer interest rules.[201]

Note: The Conference Report states that, for interest paid after December 31, 1986, no basis is allowed with respect to any interest paid on a loan from a qualified plan or tax-sheltered annuity.[202] Thus, the payment of interest will not increase a participant's basis in the plan.

5. Effective Date

The TRA loan provisions apply to loans made, renewed, negotiated, modified, or extended after December 31, 1986. The Act treats any renegotiation, extension, renewal, or revision after December 31, 1986, of an existing loan as a new loan on the date of such change.[203]

Thus, a participant would be able to avoid the Act's restrictive provisions of the Act by borrowing money before the end of 1986. The consumer interest rules concerning deductibility of interest, however, are effective, for interest payments made after December 31, 1986, regardless of the loan effective date rules, unless the deduction is grandfathered under the consumer interest rules.[204]

V. Penalty Tax on Excess Distributions

A. Introduction

Under pre-1986 TRA law, distributions from the various plans in which a participant participated, including IRAs, were taxed separately and were not subject to any overall limitations. Finding that there was no need to permit a participant to accumulate multiple maximum benefits from several employers, as well as individual savings in an IRA, Congress imposed an excise tax on certain excess aggregate retirement distributions.[205]

B. Overview

The Act imposes a 15% penalty tax on "excess distributions." The tax is imposed on the individual with respect to whom the excess distributions are made and the amount of the tax is reduced by the amount, if any, of the tax on early distributions under Code §72(t).

In determining an excess distribution, all distributions, with certain exceptions, with respect to any individual during any calendar year must be aggregated. Thus, annual distributions from all tax-qualified plans, tax-sheltered annuities, and IRAs, to the extent includable in gross income must be aggregated.

Where the aggregate amount of such distributions in any one year exceeds the greater of $112,500 adjusted for inflation or $150,000, a 15% additional income tax is imposed on the excess. Where distributions are taken in the form of lump sums distributions, up to $750,000 (also to be adjusted for inflation) is exempt from the excise tax.

There are special "grandfather" rules with respect to large amounts of accrued benefits accumulated as of August 1, 1986, which require a special election. Also, although retirement distributions with respect to an individual made after the death of the individual are excluded from the computation of the excess for purposes of the income tax, the Act imposes an additional 15% estate tax on individuals that die with excess accumulations.

In general, the excise tax applies to excess distributions made after December 31, 1986, while the estate tax applies to the estates of decedents dying after December 31, 1986. The excise tax and the additional estate tax, however, do not apply where distributions are made in 1987, but were made as a result of a termination of a qualified plan occurring in 1986.

C. *Detailed Analysis*

1. *Income Tax on Excess Distributions*

The Act imposes a penalty tax equal to 15% of the excess distributions received with respect to any individual during any calendar year.[206] The individuals with respect to whom the excess distributions are made are liable for the tax.[207] The Act provides, however, a rule coordinating the taxation of early distributions with the taxation of excess distributions. This rule provides that the tax on excess distributions is to be reduced by the amount, if any, of the tax imposed on early distributions to the extent the tax on early distributions is attributable to amounts considered excess distributions.[208] As a result, no distribution will be subject to both a 10% and 15% penalty tax.

A retirement distribution with respect to any individual is defined as the amount distributed during the taxable year under: (1) any qualified employer plan with respect to which such individual is, or was, the employee, and (2) any individual retirement plan.[209] "Qualified employer plans" include: (1) qualified pension, profit-sharing or stock bonus plans described in §401(a), (2) annuity plans described in Code §403(a), or (3) annuity contracts described in Code §403(b). It also includes any plan or contract which was determined by the Secretary to be such a plan or contract.[210]

The term "retirement distribution" is somewhat of a misnomer because the tax is not applied to distributions at retirement but to *any* distribution.

Note: Apparently, the distribution of property will be included as part of any retirement distribution at its fair market value. As a result, net unrealized appreciation in employer securities, even though not includable in gross income, is included for purposes of determining whether there is an excess retirement distribution.

In determining whether annual retirement distributions are excess distributions, the Act provides that the following retirement distributions may be excluded:

(1) distributions with respect to an individual made after the death of the individual;

(2) distributions with respect to an individual payable to an alternate payee, pursuant to a qualified domestic relations order (within the meaning of Code §414(p)) if includable in the income of the alternate payee;

(3) distributions with respect to an individual which are attributable to the employee's investment in the contract (as defined in Code §72(f)); [211] and

(4) distributions to the extent not included in gross income by reason of a rollover.[212]

Although excess retirement distributions with respect to an individual made after the individual's death are not subject to the 15% tax, they are subject to a special additional estate tax under 1986 TRA rules for post-death distributions (*see* discussion below).

The Act also provides that a distribution that qualifies as a distribution pursuant to a qualified domestic relations order must be treated as a retirement distribution to the person to whom paid for purposes of the imposition of the 15% tax. As a result, such amounts will be subject to the tax, if any, to the extent that the recipient under all qualified domestic relations orders, and any other retirement distributions, receives aggregate amounts that exceed the amount determined to be an excess amount.

Where retirement distributions with respect to any individual during any calendar year are received not just by the individual but by one or more other persons, all distributions made on account of that individual are aggregated for purposes of determining the amount of the excess retirement distribution.[213]

Note: It may be possible to avoid the penalty tax on benefits that exceed the limit, or to minimize the impact, if benefits are paid out in part as a lump sum (or lump sums) and in part as periodic distributions. If the retirement distributions with respect to an individual during any calendar year include a lump sum distribution to which an election to forward average under Code §402(e)(4)(B) applies, then, the limit is applied separately to the lump sum distribution and to the other retirement distributions.[214] Thus, if in one calendar year an individual received a lump sum distribution of $750,000 from a qualified plan, he could also receive up to $150,000 from an IRA or IRAs and not trigger the penalty tax. (*See* discussion below concerning the dollar amount of the limits.)

a. *General Limits*

Despite a lack of clarity in the statutory language, Tax Management understands that, for periodic payments, the excess distribution is the aggregate amount of the retirement distributions with respect to a particular individual during any calendar year to the extent that the amount exceeds the greater of $112,500 as adjusted for inflation,[215] or $150,000.[216] This should be clarified in technical corrections, regulations and in the "Blue Book" prepared by the staff of the Joint Committee on Taxation.

In general, with regard to lump sum distributions for which an income averaging election (pursuant to Code §402(e)(4)(B)) is made, the limit is five times the periodic limit (*i.e.*, $750,000).[217]

Note: Since elections under Code §402(e)(4)(B) may not be made with respect to distributions from IRAs, the

[217] Act §1133(a). Code §4981(c)(4). The $750,000 is to be adjusted for inflation at some time in the future because it is tied to the dollar limits on periodic distributions which are subject to increases in the consumer price index. *See* Act §1133(a). Code 4981(c)(1).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

$750,000 limit will not be available with respect to distributions from IRAs.

Note: The Conference Report specifically provides that accrued benefits may not be reduced retroactively to avoid the penalty tax.[218]

b. "Grandfather" Limits

There is a grandfathering rule for benefits accrued as of August 1, 1986. In general, the rule is advantageous only for amounts accrued as of August 1, 1986, if such amounts exceed $750,000.

To take advantage of this rule where a lump sum distribution is taken, the accrued benefit of the employee as of August 1, 1986, must exceed $562,500 and the employee must elect on the employee's return filed for a taxable year ending before January 1, 1989, to have the rule apply. If the rule applies, the full amount of the accrued benefits as of August 1, 1986, will be protected, however, amounts accrued after August 1, 1986, will be subject to the 15% penalty tax. In the case of a defined contribution plan, the accrued benefit on August 1, 1986, is the participant's account balance on that date. In the case of a defined benefit plan, the accrued benefit on August 1, 1986, is determined by assuming the participant separated from service on that date.[219]

Comment: The statute is silent concerning whether earnings attributable to amounts accrued as of August 1, 1986, will be grandfathered. Treasury is considering grandfathering such earnings. This issue may be addressed in regulations.

If the grandfather rule is elected with regard to periodic payments, rather than for a lump sum distribution, a pro-rata rule is applied to the amounts not grandfathered.[220] As a result, the $112,500 limit, adjusted for inflation (and not the $150,000 limit) is applied. The difference between $112,500, adjusted for inflation, and the portion of the distribution attributable to the grandfathered amount will be exempt.

Example: Assume: (1) an accrued benefit as of August 1, 1986, of $600,000, (2) an accrued benefit on the date of distribution of $800,000, (3) an actual distribution to the employee for the calendar year of $100,000, and (4) the participant elects grandfathering. The full non-grandfathered amount of the distribution will be exempt from the tax as follows: the portion of the $100,000 attributable to the grandfathered amount is $75,000 ($600,000 divided by $800,000 times 100% equals $75,000). The difference between the limit ($112,500) and the grandfathered portion of the distribution ($75,000) is $37,500. Since this exempt amount exceeds the $25,000 of the distribution which is not grandfathered, the full $25,000 is exempt from tax. Given the same facts, however, but with a $200,000 distribution, the entire non-grandfathered portion of the distribution, $50,000, is subject to the tax.

[218] Conference Report, p. II-477.
[219] Conference Report, p. II-477.
[220] Act §1133(a). Code §4981(c)(5)(A).

Note: The Conference Committee authorized the Secretary of the Treasury to develop an alternate grandfather rule.[221]

2. Additional Estate Tax on Excess Distributions

While a retirement distribution with respect to an individual made after the death of the individual is excluded from consideration for purposes of the income tax on excess distributions,[222] the Act imposes an additional estate tax equal to 15% of the "excess retirement accumulation."[223] The most striking aspect of this provision is that it imposes an estate tax even if no other estate tax is imposed on the participant's estate.

The Act provides that the lifetime unified credit (equivalent to a maximum of $600,000 in exclusions) may not be applied with respect to excess retirement accumulations.[224] Moreover, because this tax is imposed without regard to the participant's taxable estate, neither the marital deduction nor the charitable deduction is available. Thus, an additional tax of 15% will be applied to excess retirement accumulations even if the participant's estate is otherwise shielded from federal estate tax because of the marital or charitable deductions, or the unified credit.

An "excess retirement accumulation" for estate tax purposes is defined as the value of the individual's interests in all qualified plans, tax-sheltered annuities and individual retirement plans, as of the date of the decedent's death,[225] minus the present value (as of the valuation date) of an annuity for a term certain with annual payments equal to $150,000 where the payments are payable for a period equal to the life expectancy of the individual immediately before his or her death.[226]

The Act does not specify how the value of the individual's interest in the specified plans or the present value of an annuity for a term certain is to be determined. It provides the Secretary with the discretion to establish rules for determining the present value of an annuity for a term certain as of the valuation date for determining the value of the individual's interest in the specified plans.[227] Presumably, because no discretion is delegated to the Secretary with regard to the valuation of the individual's interests in the plans, Congress may have intended that the estate tax valuation rules under Code §2039 and the tables in conjunction with Code §2031 should be used. Nevertheless, the Conference Agreement directs, in general, that reasonable rates of interest are to be used and that the Secretary may prescribe a range of interest rates and other permissible assumptions for determining the excess.[228]

Comment: While there is no direct statutory authority for applying the "grandfather" rules to distributions on

[221] Conference Report, p. II-478.
[222] Act §1133(a). Code §4981(c)(2).
[223] Act §1133(d). Code §4981(d)(1).
[224] Act §1133(a). Code §4981(d)(2).
[225] In computing the value of the individual's interest in the specified plans, the value of the interest on the alternate valuation date under Code §2032 may be substituted for the value as of the date of the decedent's death. Thus, the value as of six months after the date of death may be used. (Act §1133(a). Code §4981(d)(3)(A).)
[226] Act §1133(d). Code §4981(d)(3).
[227] Act §1133(a). Code §4981(d)(3)(B).
[228] Conference Report, p. II-477.

account of death, the author understands that their application was intended and that this will be clarified in future pronouncements. Although not entirely clear from the statutory language, the author further understands that the exceptions for purposes of the additional income tax also apply to the additional estate tax.[229] (Of course, however, the income tax exception for distributions at death is not an exception for purposes of the additional estate tax.) As a result, for example, amounts attributable to employee contributions and amounts rolled over to IRAs will not be included for purposes of calculating the excess retirement accumulation.

The application of the additional estate tax to distributions from qualified plans may make certain plan investments less desirable. For example, life insurance net death benefits which are paid from a qualified plan and which constitute excess distributions will be subject to the 15% additional tax that would not be applicable if the payments were made pursuant to a life insurance policy not owned by a qualified plan. Thus the tax will generate, for life insurance purchased through qualified retirement plans, a federal tax disadvantage that would not be present for other life insurance purchases.

The additional estate tax raises several issues that do not appear to have been contemplated by the drafters of the provision, and that, hopefully, will be addressed in future pronouncements. For example, the issue of how much will be subject to the tax in states where the spouse may be considered the owner of one-half of the accrued benefit is significant. It also is not clear whether the "income in respect of a decedent" (IRD) income tax deduction of Code §691(c) applies. If the individual dies with excess retirement accumulation, the tax imposed is considered an estate tax, since Code §4981(d)(1) states that the "tax imposed by Chapter 11 (the estate tax provisions) with respect to the estate of any individual shall be increased by an amount equal to 15% of the individual's excess retirement accumulation." [230] Because it is considered an estate tax, there should be an income tax deduction available under Code §691(c) for the amount of estate tax paid with respect to such property. Code §691(c)(2), however, states that the "term 'estate tax' means the tax imposed on the estate of the decedent . . . under Code §2001 . . ." It is not clear whether the TRA-enacted estate tax provision of Code §4981(d) creates a tax imposed under Code §2001.

3. Effective Dates

In general, the amendments concerning the penalty tax on excess distributions apply to distributions made after December 31, 1986. Note, however, that the Conference Report indicates that distributions made after August 1, 1986, but before January 1, 1987, will reduce the grandfathered amount.[231]

The additional estate tax applies to the estates of decedents dying after December 31, 1986.[232]

There is a special rule for distributions made in 1987 on account of a plan termination which occurred before January 1, 1987.[233] The penalty tax will not apply to such distributions.

D. Technical Corrections

1. Retirement Equity Act

a. Qualified Domestic Relations Orders

The Act provides that distributions made to a spouse or former spouse under a qualified domestic relations order (QDRO) are generally included in the gross income of the spouse rather than the participant.[234]

Distributions made under a QDRO to an alternate payee other than a spouse or former spouse are to be included in the gross income of the participant. In determining whether a distribution is eligible for lump sum distribution treatment, amounts paid to an alternate payee other than a spouse or former spouse are considered part of the balance to the credit of the participant.

In addition, the participant's investment in the contract is allocated between the participant and the payee only if the payee is a spouse or former spouse. If the alternate payee is not a spouse or former spouse, the investment in the contract is not allocated and may be recovered by the participant under the applicable basis recovery rules.

2. Tax Act of 1984

a. Rollovers by Surviving Spouses

The 1986 TRA provides that distributions received after an employee's death may be rolled over by the surviving spouse into IRAs only. Previously, the surviving spouse was permitted to roll the distribution over into any type of qualified plan, including individual retirement accounts.[235]

VI. Excise Tax on Reversion of Qualified Plan Assets to Employer

A. Introduction

Under pre-1986 TRA law, provided certain requirements were satisfied, employers were permitted to terminate qualified plans, primarily defined benefit plans, and obtain a reversion of any surpluses remaining after the payment of all promised benefits. To discourage such terminations, Congress imposed a 10% excise tax penalty on reversions of excess assets to employers.

Code §401(a) requires that qualified plans be maintained for the exclusive benefit of employees and their beneficiaries and that, unless all liabilities with respect to participants and their beneficiaries have been satisfied, assets of the plan may not be used for, or diverted to, other purposes.[236] There are certain exceptions, however, to this general rule. First, if assets remain in a defined benefit plan

[229] The author understands that Treasury officials interpret the reference to the limit of §4981(c) in Code §4981(d)(3)(B)(i) to include both the dollar limit in §4981(c)(1) and the exceptions to the tax in §4981(c)(2). This should be clarified in the "Blue Book" and in regulations.

[230] Act §4981(a). Code §4981(d)(1).

[231] Conference Report, p. II-477.

[232] Act §1133(c)(1)(2).

[233] Act §1133(c)(3).

[234] Act §1898(c)(1), amending REA §§104 and 204, Code §§402(a)(9) and 72(m)(10).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

at plan termination as a result of actuarial error, then, after the plan has satisfied all liabilities, those assets may be returned to the employer. The Treasury, the Department of Labor and the PBGC jointly issued Implementation Guidelines which set forth the rules for certain terminations of qualified defined benefit plans involving reversions of excess assets. ERISA permits certain contributions to be returned to employers in three situations: (1) where the contribution is made by mistake of fact; (2) where the contribution is conditioned on initial plan qualification and the plan does not qualify; or (3) when the contribution is conditioned on its deductibility and the deduction is disallowed.

In general, all assets of a defined contribution plan must be distributed to employees. However, certain amounts properly allocated to a suspense account under a defined contribution plan may revert to the employer upon plan termination if the plan contains a provision permitting such reversion.[237]

In establishing an excise tax, Congress noted that, where plans are not used for retirement purposes and plan assets revert to the employer, the tax benefits should be recaptured. Noting that determining the particular year or years in which contributions resulting in a reversion arose and recouping the resulting tax benefit attributable to the reversion would involve undue complexity, Congress imposed a nondeductible excise tax at a uniform rate on reversions.[238] Congress did, however, provide an exception for transfers of excess assets from defined benefit plans to ESOPs to encourage employee stock ownership.[239]

B. Overview

To discourage asset reversions and to recapture the benefit of deferred earnings on contributions to qualified plans, Congress imposed a nondeductible 10% excise tax on all reversions of excess plan assets to employers with only one exception. The exception is for situations in which the amount of the reversion upon plan termination is transferred to an employee stock ownership plan. In general, the 1986 TRA provisions are effective for reversions occurring after December 31, 1985, except that the excise tax does not apply to reversions after that date which occur pursuant to a plan termination, where the termination date is before January 1, 1986. There are several exceptions to the effective date rules for particular employers that were able to obtain specific exemptions.

C. Detailed Analysis

1. In General

The 1986 TRA added Code §4980, imposing a 10% excise tax on reversions of qualified plan assets.[240] The tax is imposed on the person receiving the reversion, typically, the employer.

Note: For this purpose, in the case of a partnership that is treated as the employer maintaining the plan under Code §401(a), the partners are liable for the tax.[241]

The definition of a qualified plan, a reversion from which is subject to the excise tax, is any plan meeting the requirements of Code §401(a) or §403(a) or any plan which, at any time, has been determined by the Service to qualify as such a plan. Excluded from the definition of qualified plan are plans maintained by tax-exempt employers and governmental plans within the meaning of Code §414(d).[242] With respect to tax-exempt employers, the exception does not apply to the extent that the employer has been subject to unrelated business income tax or has otherwise derived a tax benefit from the qualified plan.[243]

The amount of the reversion subject to the excise tax is the amount of cash and the fair market value of other property received (either directly or indirectly) by an employer from the qualified plan.[244]

Except as provided in regulations, the Act provides an exclusion for any amounts distributed to or on behalf of any employee (or his beneficiaries) if the amount could have been distributed before termination without violating any of the provisions of Code §401.[245] Another exclusion from the tax is provided for a distribution to the employer that is allowed under Code §401(a)(2) where: (1) in the case of a multiemployer plan, the amount is returned to the employer as a result of a mistake of law or fact, or is a return of a withdrawal liability payment, (2) in the case of a non-multiemployer plan, the amount is returned as a result of a mistake of fact, and (3) in the case of any plan, the amount is returned due to the failure of the plan to initially qualify or the failure of contributions to be deductible.[246]

Note: A payment to an employer under a participating annuity purchased upon plan termination is treated as a reversion subject to the tax.[247]

2. Exception for ESOPs

An exception to the tax is provided for reversions on plan termination that are transferred to an ESOP.[248]

Note: The Conference Report provides that no inference should be drawn from this exception as to the circumstances in which asset transfers will or will not satisfy the exclusive benefit rule and any other applicable qualification requirements, for example, those under Code §414(l).[249]

The exception applies where the excess amount is transferred to an ESOP described in Code §4975(e)(7). The amount transferred must be invested in employer securities (as defined in Code §409(l)) or used to repay loans used to purchase such securities within 90 days after the transfer. Apparently, to avoid undue market disruption, the IRS is authorized to extend the 90-day period by regulation.[250] The plan must require that the amounts so transferred will remain in the plan until distribution to participants in accordance with the provisions of the plan.[251]

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Further, at least half of the participants in the terminated qualified plan from which the reversion assets emanated must be participants in the transferee ESOP as of the close of the first plan year for which an allocation of the securities is required.[252] The 50% calculation must be made as of the date the notice of intent to terminate is filed with the PBGC.[253] For purposes of determining which participants are required to be participants in the ESOP, only active employees (as opposed to retirees) need be included.[254]

Note: An ESOP may be maintained by any member of a controlled group of corporations, including a corporation other than the corporation that maintained the terminated defined benefit plan as long as the 50% test is met with respect to the employees participating in the ESOP.[255]

A last requirement involves special allocation rules. The Act requires that any portion of the reversion amount that is transferred to the ESOP which is not allocated under the plan to the accounts of the participants in the plan year in which the transfer occurs must be credited to a suspense account and allocated from the suspense account to the accounts of participants no less rapidly than ratably over a period of up to seven years and, when allocated to the accounts of participants, must be treated as an employer contribution for purposes of Code §415(c), except that the value of the employer securities attributable to each such allocation must not be more than the value of the securities at the time they were credited to the suspense account and no additional employer contributions may be made to the ESOP before the allocation of the transferred reversion to the accounts of participants.[256] This prohibition against employer contributions, which includes elective deferrals, is not intended to prohibit contributions to an ESOP to the extent that the amount of the suspense account required to be allocated for a year, when combined with additional contributions, does not exceed the limits under Code §415.[257]

Apparently, if an ESOP is terminated before the amounts have been fully allocated to the participants' accounts, the employer will be subject to the 10% excise tax on the reversion amounts that have not yet been allocated.[258] Dividends paid on employer securities that are held in the suspense account must either be (a) applied to repay an acquisition loan, or (b) paid out currently to plan participants and beneficiaries in proportion to their account balances on the date that the dividends are distributed.[259]

Note: All employees participating in the ESOP as of the close of the plan year in which the employer receives a notice of sufficiency from the PBGC with respect to the terminated defined benefit plan must be entitled to share in that year's allocation of the excess assets in the ESOP.[260]

Note: Although not statutorily prescribed, the legislative history indicates that employers must provide employees with a written notice describing the source of funds attributable to the allocations. That is, the employees must be advised that the amounts represent excess assets determined upon termination of a defined benefit plan.[261]

3. Effective Date

This excise tax applies to reversions occurring after December 31, 1985, but does not apply to a reversion received after December 31, 1985, if the termination date of the plan is before January 1, 1986.[262] For these purposes, the termination date is considered to occur on the proposed date of termination within the meaning of Code §411(d)(3).[263] The Act also provides special effective date rules for particular unnamed employers.[264]

With regard to transfers to ESOPs, the special provision applies to amounts transferred after March 31, 1985, and before January 1, 1989, *or* amounts transferred after December 31, 1988, pursuant to a termination which occurs after March 31, 1985, and before January 1, 1989.[265]

VII. Deferred Annuities Available Only to Natural Persons

A. Introduction

A deferred annuity is an annuity contract under which payments begin only after a specified period elapses after the purchase of the contract. In general, a deferred annuity has both an accumulation phase when the annuity is funded and a payout phase when the benefits are distributed. By contrast, an immediate annuity only has a payout phase. Typically, deferred annuities are purchased in order to save for retirement. They are purchased by individuals and also, in many circumstances, by employers in order to fund the employer's obligation to provide nonqualified deferred compensation to its employees. Deferred annuities are also used to fund benefits provided under qualified pension plan, profit sharing or stock bonus plans.[266]

Under pre-1986 TRA law, income credited to a deferred annuity contract was not taxed currently to the owner of the contract or to the insurance company issuing the contract. Amounts received by the owner of the annuity contract before the annuity starting date (including loans under, or secured by, the contract) were taxed as ordinary income to the extent that the cash value of the contract exceeded the owner's investment in the contract. A portion of each distribution received after the annuity starting date was taxed as ordinary income based on the ratio of the investment in the contract to the total distributions expected to be received.

With the 1986 TRA, Congress determined that non-natural persons, such as corporations, that own annuity contracts should not continue to receive the favorable tax

treatment provided under pre-TRA law. Congress believed that the prior law rules relating to deferred annuity contracts permitted employers to fund, on a tax-free basis, significant amounts of nonqualified deferred compensation for employees, thereby creating a disincentive for employers to provide benefits under qualified plans which are subject to greater regulation.[267] In addition, because typically, annuity contracts are used to provide benefits to top executives rather than to employees generally (as is required in the case of qualified retirement plans), Congress was concerned that the prior law treatment of deferred annuity contracts diluted the effect of the nondiscrimination rules applicable to qualified plans.[268]

B. Overview

Under the 1986 TRA provision, any contract held by a person who is not a natural person (such as a corporation), is not treated as an annuity contract for federal income purposes and the income on the contract for any taxable year is treated as ordinary income received or accrued by the owner of the contract during the taxable year. There are several exceptions to this general rule, including exceptions for qualified funding assets and annuities purchased by an employer on termination of a qualified plan. The provision has a retroactive effective date. It applies to contributions to annuity contracts after February 28, 1986.

The effect of this provision is to impose federal income taxation on the inside buildup of annuity contracts on employers who purchase annuity contracts to fund nonqualified deferred compensation arrangements. This provision will have a significant impact on the way that employers fund deferred compensation arrangements since many of these arrangements utilize annuity contracts as funding mechanisms.

C. Detailed Analysis

The Act adds Code §72(u).[269] The subsection provides that, if any annuity contract is held by a non-natural person, the contract: (1) is not treated as annuity contract for purposes of federal income taxation, and (2) the income on the contract for any taxable year of the policyholder is treated as ordinary income received or accrued by the owner during that taxable year.[270] The statute indicates that the holding by a trust or other entity as an agent for a natural person will not be taken into account.[271] Thus, if a group annuity contract is held by a corporation as agent for natural persons who are the beneficial owners of the contracts, the contract is treated as an annuity contract for federal income tax purposes. If an employer is the nominal owner of an annuity contract, however, the beneficial owners of which are employees, the contract will nevertheless be treated as held by the employer.[272] The legislative history indicates that this rule was imposed because Congress was concerned that the Service would have difficulty monitoring compliance with the general rule that a deferred annuity is not available on a tax-favored basis to fund nonqualified deferred compensation.[273]

The term "income on the contract" is defined for these purposes, with respect to any taxable year of the policyholder, as the excess of: (1) the net surrender value of the contract as of the close of the taxable year, plus all distributions under the contract received during the taxable year or any prior taxable year, less (2) the amount of net premiums under the contract for the taxable year and prior taxable years, and amounts includable in gross income for prior taxable years with respect to the contract.[274] Net premiums are defined as the amount of premiums paid into the contract, reduced by any policyholder dividends.[275] Thus, income on the contract means the excess of: (1) the sum of the net surrender value of the contract at the end of the taxable year and any amounts distributed on the contract for all years, less (2) the investment in the contract, that is, the aggregate amount of the premiums paid under the contract, minus policy dividends or the aggregate amounts received under the contract that have not been included in income.

The statute authorizes the Secretary of the Treasury to substitute "fair market value of the contract" for "net surrender value of the contract" in appropriate cases if it is necessary to prevent avoidance of the otherwise required income inclusion.[276]

There are five exceptions to which these rules do not apply. There are exceptions for situations in which the annuity is acquired by the estate of a decedent by reason of the death of the decedent, and in which the annuity is held under a qualified plan (as described in Code §401(a) or §403(a)), a tax-sheltered annuity program (described in Code §403(b)) or under an individual retirement plan.[277] There is also an exception for a qualified funding asset (as defined in Code §130(d)), but without regard to whether there is a qualified assignment.[278] This exception covers: (1) qualified funding assets purchased by structured settlement companies, and (2) annuity contracts (which otherwise meet the definition of a qualified funding asset) purchased and held directly by a property or casualty insurance company to fund periodic payments for damages.[279] There is also an exception for an annuity contact purchased by an employer upon the termination of a plan (described in Code §401(a) or 403(a)) and which is held by the employer until such time as the employee separates from service.[280] The last exception is for an immediate annuity, which is defined as an annuity which is purchased with a single premium or annuity consideration where the annuity starting date commences no later than one year from the date of purchase of the annuity.[281]

Section 72(u) is effective for contributions to annuity contracts after February 28, 1986.[282]

Chapter 58

AMENDMENTS TO EMPLOYMENT TAX RULES

Andrew Huddleston, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Employment Taxes—General Rules

1. Federal Insurance Contributions Act (FICA)

If a worker is classed as an employee, his compensation, subject to a base limit, is subject to FICA taxes, commonly known as Social Security taxes, which the employer is required to withhold from the employee's pay.[1] If the employer fails to withhold the tax when he or she should, the employer is still liable for payment of the tax.[2] The employer is also required to match the withheld amounts.[3] The term "employer" includes any individual, corporation, partnership, or United States government instrumentality, as well as most trusts.[4] An employee is defined in §3121(d) by several categories, including the broadest and most controversial, common-law employee.[5] An employee's contract of service must contemplate that he will perform substantially all the services personally.[6] Moreover, the statute excepts those persons who have a substantial investment in facilities — other than transportation facilities — used in performing the services.[7] Also, the services must be a continuing relationship rather than a single transaction.[8]

2. Federal Unemployment Tax Act (FUTA)

Subject to a credit for certain payments made into a state unemployment fund,[9] an employer is required to pay a 6.2% tax on the first $7,000 of wages paid per employee in 1985 and thereafter.[10] No such payments are required for independent contractors, since wages are defined as all "remuneration for employment." [11] With particular exceptions, "employment" is defined as "any service, of whatever nature, performed . . . by an employee for the person employing him" [12] In turn, an employer is any person who paid wages of $1500 or more in any quarter of the current calendar year or the prior calendar year, or who employed at least one person for part or all of twenty different days, each day being in a different calendar week of the current calendar year or the prior calendar year.[13]

With two exceptions — full-time life insurance salespeople and certain types of household workers — whoever is an employee for FICA purposes is also an employee for FUTA purposes.[14]

3. Withholding Taxes

Whether an employer pays the employee in cash or otherwise, the employer must withhold income taxes from the wages paid an employee.[15] The statute omits, however, any definition of employment. An employee is defined for this chapter without reference to the FICA provisions.[16] An employer is a person for whom services are provided, unless that person lacks control over paying wages, in which case the one in control of payment is deemed to be the employer.[17] The employer is liable for the payment of withholding taxes whether or not the taxes are actually withheld.[18]

4. Self-Employment Contributions Act (SECA)

The self-employed person, or independent contract, pays his own Social Security taxes in the form of self-employment taxes.[19] Subject to the same base compensation limit applicable to employees, self-employment income is defined as "net earnings from self-employment" less wages subject to withholding. If, however, the net earnings from self-employment are less than $400, no tax is due.[20]

5. Classifying Workers

Most workers classed as employees are common law employees, that is, persons who perform services for others within the legal relation of employer to worker under the usual common law rules.[21]

The regulations set forth the relevant factors in deciding doubtful cases under the usual common law rules. Generally the relationship exists when the person for whom

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

services are performed has the right to control and direct the person who performs the services, not only for the result of the work but also on the details and means to accomplish that result. It is not necessary that the employer actually direct or control the manner of performing the services; the right to do so is sufficient. The right to discharge a worker is also an important factor in identifying an employer. Another frequent but not invariable characteristic is the furnishing of tools or a place to work. A person who is subject to control only on the result to be accomplished is generally an independent contractor. Workers such as doctors, lawyers, dentists, veterinarians, construction contractors and public stenographers, who pursue an independent trade in which they offer services to the public, are independent contractors, rather than employees.[22]

B. Treatment of Certain Technical Personnel

Section 530 of the Revenue Act of 1978 [23] contains an exception to the general rules for employment taxes that allows taxpayers who have had a reasonable basis (such as industry practice) for treating certain workers as independent contractors rather than employees to continue this practice, thereby avoiding liability for employment taxes under FICA.

C. Exemption for Certain Clergy

Another exception to the general rule for employment taxes is made for ministers of a church, members of religious orders and Christian Science practitioners (referred to in the Code as "ministers"), who are treated as being self-employed for purposes of SECA, even though they may actually receive salary or wages which would ordinarily be taxed under FICA.[24] Further, under §1402(e)(2), if a minister has conscientious or religious objections to participation in an insurance plan such as Social Security, he may make an election to be exempt both from the self-employment tax and from receipt of all benefits under Social Security. The election must be made with the I.R.S. within two years of the taxpayer's becoming a minister and is irrevocable under current law.[25]

D. Exception for Churches and Church Organizations

The Tax Reform Act of 1984 [26] added Code §3121(w) to allow to churches and certain church-controlled organizations an irrevocable election to exclude all services performed for them from the definition of employment under FICA. Thus, by this election, a church or church organization would be exempted from payment of any FICA taxes. Employees of a church which makes this election would be treated thereafter as being self-employed and liable for self-employment taxes under SECA on their payment for services to the church. In general, the amount of payment which would be subject to the self-employment tax would be the same as that which would have been subject to the FICA taxes.

Section 1402(g) of the Code allows an exemption from SECA taxes to self-employed members of religious sects whose tenets forbid participation in a government-sponsored medical, retirement or death insurance program. To obtain the exemption, an individual must file an application with the I.R.S., including evidence of the beliefs of the sect as well as of the member's adherence to them. The taxpayer must also waive all benefits under social security.

E. Application of the FUTA Tax to Indian Tribal Governments

Under pre-1986 TRA law, Indian tribal governments are treated identically to any other employer for payment of the federal unemployment tax (FUTA). There is no exception to coverage for Indian governments which have been denied unemployment compensation coverage by the state where the tribal government is an employer. *See* Conference Report at II-833.

II. Overview

Section 1706 of the Act modifies section 530 of the Revenue Act of 1978 to disallow the treatment of certain technical personal as independent contractors by their employers for purposes of FICA taxes.

Section 1704(a) of the Act modifies Code §1402(e) to ensure that any person who chooses exemption from self-employment taxes will inform the religious body to which he belongs of the nature of his objection justifying the exemption. It further provides that the Secretary of the Treasury (or, by agreement, the Secretary of Health and Human Services) will verify that any person seeking this exemption understands the grounds on which it is available and that he seeks it on these grounds.

Section 1704(b) of the Act modifies Code §1402(e) to allow any person who has obtained exemption from self-employment taxes under that section to revoke that exemption before he actually receives or becomes entitled to receive benefits under the Social Security Act. In general, however, this revocation will only be available until April 15, 1988.

Section 1882 of the Act modifies Code §1402(g) to clarify that employees of churches and church-controlled organizations may not be exempt from self-employment taxes by reason of religious convictions if the employer is itself exempt from paying employment taxes under FICA. The Act also amends Code §3121(w) to provide for regulations under which a church will be allowed to revoke its election to be exempt from FICA taxes or to lose this exemption if it fails to provide employee wage and salary information as required.

Section 1705 of the Act provides that service in the employment of an Indian Tribal government is not employment for purposes of the Federal Unemployment Tax (Code §3306) if the Indian tribal government is not covered by a state unemployment compensation program on June 11, 1986.

III. Effective Dates

Section 1704(a) of the Act applies to applications for exemption filed after December 31, 1986. Act §1704(a)(3). Sections 1706 and 1882 apply to services rendered and

remuneration paid after December 31, 1986. *See* Act §§1706(b) and 1882(b)(3). Section 1705 applies to Indian tribal government which is not covered by a state unemployment compensation program as of June 11, 1986. Act §1705(b).

IV. Detailed Analysis

A. Treatment of Certain Technical Personnel

Before 1978, many businesses which failed to treat certain workers as employees for tax purposes were, on audit, assessed for the employer's share of Social Security and for income tax withholding. These assessments were at times large enough to cause bankruptcies. In response, Congress enacted §530 of the Revenue Act of 1978 [27] which was designed to provide clear rules for determining whether a worker would be treated as an employee or an independent contractor for tax withholding, FICA and FUTA. Section 530 has three main provisions:

(1) to end pre-1979 tax liabilities for employers who had a reasonable basis to treat workers as independent contractors;

(2) to give the same relief prospectively through 1979 for any employer who filed all required tax returns and who did not treat any person with a similar job as an employee for any period after 1977; and

(3) to prohibit I.R.S. issuance of regulations or revenue rulings on common law employment status before 1980.

The second and third provisions were extended indefinitely by TEFRA.[28]

One of the sources for a reasonable basis for treating a worker as an independent contractor was a long-recognized practice of a significant portion of the industry in which a person was employed.[29] As amended by the Act, §530 of the Revenue Act of 1978 no longer applies to any individual taxpayer who provides services as an engineer, designer, drafter, computer programmer, systems analyst or other similarly skilled worker to another person pursuant to an agreement between them.[30] Such taxpayers are to be classified as employees or independent contractors under the generally applicable common law standards for determining classifications. Also, the Treasury is authorized to draft regulations with respect to the employment status of the persons covered by this amendment.[31]

This amendment covers technical personnel whose services are provided by their employers to only one client during a taxable year as well those serving two or more clients. Further, the amendment applies to the specified technical personnel whether they work directly for their employers or through corporations which they control and which formally employ them to provide services to their actual employers. *See* Conference Report at II-834-35.

B. Exemption for Certain Clergy

The Treasury Department is authorized to issue regulations which will specify that any "minister" (minister of a church, member of a religious order or Christian Science practitioner) who seeks exemption from self-employment taxes under SECA must include certain information with his exemption application to the I.R.S.[32] This information must show that the minister has informed his church or religious order of his religious or conscientious objection to social security insurance as required by the regulations. Further, either the Treasury Department (or, by agreement as provided by the regulations, the Department of Health and Human Services) must communicate with the applicant to make its own verification that the applicant understands the grounds on which the exemption is available and that he seeks the exemption on these grounds. The communication may be by mail, telephone or in person so long as the procedure is adequate to ensure the applicant's awareness of the statutory requirements. *See* Conference Report at II-831-832.

For a limited period, ministers who have previously received an exemption under §1402(e) from SECA taxes may make an election to become subject to these taxes and receive Social Security benefits. The election is irrevocable and may only be made (1) before the minister has become eligible to receive benefits under the Social Security Act and (2) before the due date for filing a federal income tax return for the minister's first taxable year beginning after December 31, 1986 (including any extensions to file which he may receive). This election is irrevocable and imposition of SECA taxes for purposes of Social Security benefits will cover earnings after the date of the election. *See* Act §1704(b).

C. Exception for Churches and Church Organizations

Act §1882(a) revises Code §1402(g) to clarify that when a taxpayer who might have been eligible for exemption from self-employment taxation for being a member of a qualifying religious faith is also an employee of a church or church organization which has made an election to be exempt from employment taxes under FICA, he or she may not claim the self-employment tax exemption.[33] Without this provision, it would be possible for both church employer and employee to avoid all employment taxes on the services performed for the employer. This amendment does not restrict the employee's use of the §1402(g) exemption for services to any employer not exempt from FICA taxation. *See* Senate Report at 1071-72.

Under Code §1402(j), added by Act §1882 (b)(1), the employee's remuneration is determined for SECA taxes as it would be for FICA, modified by several special rules. The SECA tax base is determined separately from the tax base for other self-employment income. Therefore, income from church employment will not be reduced by any deductions, while income and deductions arising from other sources will not be affected by any items attributable to church employment. After 1989, however, these taxpayers will be allowed a deduction equal to their net self-

employment earnings from church sources multiplied by onehalf the SECA tax rate. The threshold for SECA taxation of church employees is $100, applied separately from the standard $400 threshold for income from other sources.

A church or church organization may revoke its election to be exempt from FICA taxation under regulations to be drafted by the Treasury. Act §1882(c), amending Code §3121(w)(2). Moreover, if any church or organization fails to provide the required information on remuneration to employees for two years or more and fails to furnish previously required information when requested by the Treasury, the Secretary must revoke the election. An involuntary revocation will be retroactive to be beginning of the two year period for which the information was not furnished.

D. Application of the Federal Unemployment Compensation Tax to Indian Tribal Governments

The Act provides an exemption from FUTA taxes for services to Indian tribal governments which were not covered by any state unemployment compensation program as of June 11, 1986.[34] This amendment covers services rendered before January 1, 1988, including those performed before enactment of the Act, although there will be no refund of any FUTA taxes already paid. *See* Conference Report at II-833.

Chapter 59

FOREIGN TAX CREDIT: CHANGES AND REFINEMENTS

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Title XII of the 1986 Act,[1] Foreign Tax Provisions, contains seven subtitles dealing with various aspects of the U.S. taxation of foreign income and of U.S. source income earned by foreign or foreign controlled entities. Many of these are interrelated. This area is one of continuing concern and proliferating complexity as the number of multinational enterprises, both U.S. and foreign controlled, and the extent of their activities worldwide increases. This chapter is devoted primarily to the amendments made by the Act to §§902, 904, and 960,[2] all of which relate to the foreign tax credit. The 1986 Act also made numerous changes to other foreign tax provisions which directly affect the new features of the credit rules. These are largely beyond the scope of this chapter, and are discussed fully in Chapters 60-72 of this Section. They will, therefore, be described only briefly with a cross reference to the Chapter providing a more detailed analysis.

The purpose of the foreign tax credit is to eliminate or mitigate double taxation. The U.S. claims primary jurisdiction to impose income taxes on the worldwide income of its citizens and residents as well as the income of foreign nonresidents which is effectively connected with the conduct of a trade or business in the U.S. and certain items of passive income of such persons from U.S. sources. Various foreign governments also impose income taxes on the same income. The U.S. and most of its major trading partners with whom tax treaties are in force have agreed, generally, to the elimination or mitigation of double taxation in such cases through the credit mechanism. There are, of course, other sources of double taxation which the credit mechanism does not effectively reach as well as problems involving primary tax jurisdiction. These are usually dealt with by way of competent authority procedure. The foreign tax credit remains, however, the principal means for the elimination of double taxation. In theory, the credit, which has been part of U.S. tax law since 1918, is a relatively simple tax concept. Where the U.S. has primary tax jurisdiction over a person by reason of citizenship, residence or other jurisdictional connection with the U.S., such person may elect under §901[3] to credit any foreign income, excess profits or war profits tax paid or accrued during the taxable year against any tax imposed by title 1 of the Code. Taxes paid by a foreign corporation of which a domestic corporation owns at least 10% of the voting stock and which distributes dividends to the U.S. shareholder are, under §902, deemed paid by such U.S. shareholder to the extent attributable to the accumulated earnings and profits from which such dividends were paid. In other words, unless and until the foreign corporation's income is subject to U.S. tax by reason of a repatriation of such income, there is no credit allowed under §901. In addition, a deemed paid credit is allowed under §960 with respect to amounts included in the gross income of a U.S. shareholder of a controlled foreign corporation (CFC) under §951 (so called subpart F inclusions).

The credit mechanism itself is complex due primarily to the fact that the various foreign tax authorities impose different kinds of taxes on different kinds of income at different rates and under different basic concepts of taxation than those generally prevailing under the U.S. system. It is, thus, virtually impossible to mesh the U.S tax regime with that of another country with a high degree of precision.

Fundamental to the allowance of a credit for foreign taxes is the rule, first enacted in 1921, that the amount of the credit is limited to the amount of U.S. tax imposed on the item of income on which the foreign tax was imposed. Thus, if the U.S. tax rate on an item of $100 of foreign income is 34% and the foreign effective rate is 45%, the U.S. credit is limited to $34. If a credit were allowed for the full amount of foreign tax, $11 would be available to offset U.S. tax on other items included in U.S. income. In other words, the U.S. would subsidize the taxpayer's liability for foreign taxes imposed at an effective rate higher than the U.S. rate. This is not the purpose of the credit. Limitation of the amount of foreign tax credit allowable for a given taxable year is effected under §904(a), by restricting the credit to an amount equal to the U.S. tax imposed for the year on taxable income from all sources multiplied by a fraction the numerator of which is the taxpayer's taxable income from all foreign sources and the denominator of which is taxable income from all sources. This is referred to as an overall basis limitation. Beginning in the

1960's, after a post-War period during which the foreign tax credit provisions provided a number of incentives to foreign investment, Congress has substantially revised the credit rules with tax neutrality as the goal. The 1986 Act amendments about to be discussed may be seen as a continuation of this program. Underlying many of the foreign tax provisions of the 1986 Act is the awareness that its lowering of U.S. tax rates will exert pressure on U.S. taxpayers to avoid, insofar as planning permits, the generation or expiration of excess credits (*i.e.*, credits earned in excess of the amount allowable under the §904 limitation). The principal objective of the credit reform measures is the fine tuning of the limitation provisions to minimize opportunity for abusive manipulation and to prevent revenue loss from various flaws and anomalies in the existing rules.

At the core of most of the amendments to be discussed is the problem of credit averaging or cross-crediting. Given two items of foreign income distinct either by reason of character or source, one subject to an effective foreign tax rate lower than the U.S. rate, and the other subject to a rate higher than the U.S. rate, should the §904 limitation be applied separately to each item, or should they be combined for limitation purposes? One approach is to provide a separate limitation for income sourced in each foreign country. Such a per country limitation was either mandated or allowed under U.S. law for many years [4] but was finally dropped in 1976 because under a per country rule, a net loss sustained from sources in one country is applied directly to offset U.S. taxable income notwithstanding the allowance of credits for taxes imposed on income sourced in another country or other countries. This was seen as involving "double tax benefits" in the absence of a loss recapture rule, particularly where the loss country did not have a provisions similar to the U.S. net operating loss carryover.[5] Congress both repealed the per country limitation and adopted the loss recapture rules of §904(f) to deal with this problem. As a result, since 1976, §904 has been applied on an overall basis.

This, however, did not completely solve the problem outlined above. In lumping together income subject to high effective foreign rates and income subject to very low or no foreign taxes, the limitation provisions permitted the averaging of foreign rates. If total taxable income is 1000 of which 100 is subject to a foreign tax of 60 and 100 is foreign income subject to no tax, assuming a U.S. tax rate of 34%, all of the foreign tax may be credited against the U.S. tax on the foreign income of 68, leaving the U.S. with a residual tax of 8. Does this result violate the intent and purpose of the credit provisions, or are there circumstances under which the limitation should be applied separately to separate and discrete items of foreign income on some basis other than the country of source.

The question posed is not easily answered. It involves a number of complex issues of tax policy. If the 100 of untaxed foreign income was deliberately generated for the purpose of cross crediting, there is ground for imposing a separate limitation with respect to such income. If, for example, the U.S. taxpayer shifts investment funds from the U.S. or a foreign jurisdiction with tax rates similar to those of the U.S. to a tax-haven country, the net effect, or so it is viewed by Congress, is to abuse the credit mechanism by compelling the U.S. Treasury to subsidize foreign taxes imposed on other income at a rate or rates in excess of the U.S. rate. On the other hand, where there is no deliberate manipulation of the income source, as in a case where both items of taxable income are from countries in which business operations are actively carried on by a multinational domestic corporation, there is considerably less objection to averaging.

The first appearance of a separate limitation was in 1962 when it was required for "passive interest." [6] Such interest is easily manipulable, that is, can be generated in virtually any foreign country, and, further, is usually subject to low (or no) foreign taxes. By inflating the numerator and denominator of the limitation fraction, increasing its value, passive interest, if not subject to a separate limitation, could result in abusive averaging. Another separate limitation provision was enacted in 1975, providing special treatment under §907 for foreign oil related income. Per-country based limitation of the credit allowable for taxes on such income was prohibited. Instead, a separate overall limitation was applied to these taxes, with a provision for the recapture of losses sustained from such activity.[7] In addition to these items, separate limitations were subsequently required for DISC and former DISC dividends, foreign trade income of a FSC (foreign sales corporation) and distributions of a FSC or former FSC attributable to foreign trade income.[8] All of these items bear little, if any, foreign taxes.

Other problems are encountered in applying the deemed paid credit of §902 due to the dichotomy that exists between the credit mechanism as applied to foreign operations carried on directly or through a branch and those carried on through a foreign subsidiary. In respect of the latter, Congress eliminated the deferral of U.S. tax on various types of income earned by a subsidiary by taxing such it currently under the provisions of §§951-956 (generally referred to as the "subpart F" rules) as if it had been earned by a branch, with an appropriate deemed paid credit provided by §960. In contrast, the deemed paid credit allowable with respect to dividends distributed by a foreign corporation out of earnings not previously taxed by the U.S. to a 10% or more domestic corporate shareholder under

[4] The legislative history of the limitations provisions prior to 1976, when the present §904 rule was adopted, deserve brief mention. The original 1921 limitation was imposed on an overall basis. In 1932, the limitation was the lesser of that computed on an overall basis or a per country basis. In 1954, the limitation provisions were changed to utilize only the per country basis. In 1960, the law was again amended to allow the limitation to be computed on either basis. Finally, in 1976, present law was adopted mandating the use of an overall limitation.

[5] H.R. Rep. No. 658, 94th Cong., 2d Sess. 230 (1976) at 225.

[6] §904(d)(1)(A) as in effect prior to the 1986 amendments.

[7] Under present law, §907, unaffected by the 1986 Act, provides for (1) reducing the amount of foreign taxes paid on foreign oil and gas extraction income for all credit purposes by the excess of such taxes over the maximum which would be imposed under §11 (another reduction formula applies to individuals), and (2) in the case of oil related income, the limitation of creditable foreign taxes to an amount not materially greater than the foreign taxes imposed on income other than oil related or oil and gas extraction income; foreign taxes in excess of this amount are treated as deductions under foreign law.

[8] §904(d)(1)(B), (C), and (D) as in effect prior to the 1986 amendments, now redesignated as (F), (G), and (H).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

§902 often involves distortions, some favoring the taxpayer and some the Government, since the credit can be computed only by tracing the dividends to the earnings and profits from which paid. The fluctuations of foreign tax rates and rules from year to year sometimes place a premium on the precise timing of distributions offering special tax advantages to those who can manipulate them. In addition, net losses of the foreign corporation are carried back until exhausted for credit purposes with the result that credits for foreign taxes paid for years whose earnings and profits are eliminated under this rule may be lost forever. These problems were also attacked in the 1986 amendments.

As noted above, the foreign loss recapture rule of §904(f) was adopted in 1976. In effect, it is a change of source rule rather than a recapture rule, designed to insure that a foreign loss incurred in one year that reduces U.S. taxable income will be taken into account in a succeeding year to prevent what in effect is an unjustifiable credit. Prior to the rule, where a $100 foreign loss in year 1 reducing U.S. taxable income in that amount was followed by foreign gain of $100 in year 2 which, due to the lack of a counterpart of the U.S. net operating loss carryover rules, was fully taxed, a credit for the Year 2 foreign tax was allowed in full, even though, due to U.S. tax law, there was no net foreign income from Years 1 and 2 combined. The effect was viewed by Congress as tantamount to allowing a credit for a tax imposed on foreign income excluded from U.S. taxable income. The 1976 changes required the treatment of subsequent foreign income up to the amount of the loss as U.S. source income, reducing the limitation fraction numerator and, thereby, reducing the credit allowable. Under the prior separate limitations provisions, it was unclear how this recapture rule was to operate where a loss was sustained in one separate limitations category where there was overall foreign net income. Congress concluded that this required legislative clarification.

A number of the changes made to the credit provisions are directed to the prevention of abuse effected primarily by the manipulation of foreign income sources. A number are intended to protect U.S. tax revenues from subsidizing unduly foreign taxes imposed at rates substantially higher than U.S. rates (which are lowered by the 1986 ACT) The reform of the limitations provisions will result in many instances in the loss of immediately available credits, and quite possibly the inability to utilize any excess credits eligible for carryover before their expiration. It is too soon to judge the extent to which the effect of the restrictions will discourage foreign operations or simply render them less profitable after taxes. These effects may be offset to some extent by revisions by some of the U.S. trading partners of their own rates.

In this chapter are discussed three major areas of change, namely (I) the expansion of the separate limitations categories or "baskets," (II) the revision of 902 to provide an accumulated basis for the deemed paid credit, and (III) the clarification of the rules relating to separate limitation losses. There are also noted (IV) the legislative enactment of existing regulations regarding the noncreditability of taxes used to provide subsidies and limitations placed on the carryback of excess credits to pre-1987 years.

II. The Extension of Separate Limitations Categories

A. Background and Legislative History

Some of the legislative background of the separate limitations provisions of §904(d) as in effect prior to the 1986 changes has been set forth above. The separate limitation under §904(d)(1)(A) prevented use of easily manipulable passive interest bearing low foreign taxes artificially to inflate the §904 overall limitation fraction's value. Similar reasons support the separate limitations under §904(d)(1)(B), (C) and (D) for DISC and FSC income. Under prior law, passive interest (not a term used in the Code provisions) is interest defined by §904(d)(2) as any interest other than that derived from any transaction directly related to the active conduct by the taxpayer of a trade or business in a foreign country or possession or derived from the carrying on of a banking, finance or similar business. Also excluded is interest from a corporation in which the taxpayer (or any member of a consolidated group of which it is a member) owns at least 10% of the voting stock, or which is derived from obligations acquired from the disposition of an active foreign business or such 10% or more owned corporation. Paragraph (3) of §904(d) provides a look through rule under which dividends or interest paid by a "designated payor corporation" and attributable to any taxable year of the corporation are treated as passive interest to the extent that the aggregate amount of the dividends and interest do not exceed the payor's passive interest income for the year, reduced by the payor's deductions properly allocable to such interest. If the payor's net passive interest so determined does not exceed 10% of its earnings and profits for the year, it is deemed, under the *de minimis* rule of §904(d)(3)(C), not to have any passive interest.

Under the separate limitation rules, foreign taxes imposed on the foreign income in each separate limitation basket, or "category" in the terminology of the new provisions, may be credited against U.S. taxes imposed on the same income, but not against U.S. taxes imposed on income falling in other categories. Under separate limitations rules, foreign income is included either in one of the enumerated special separate categories or falls in the general overall category.

Experience with the foreign tax credit limitations provisions over the years convinced Congress that a number of amendments to 904 were called for. Under the overall limitation formula, leaving aside the separate limitations items enumerated, taxpayers could still obtain substantial tax advantages by averaging high and low foreign taxes. In many cases, the averaging effect, insofar as it did not result from essentially passive income, and did not result from manipulation by the U.S. taxpayer of foreign rates or foreign sources, merely reflected the fact that multinational operations involve a wide variety of tax regimes and rates. To this extent, Congress did not find such averaging or "cross-crediting" objectionable.[9]

On the other hand, the inclusion in the overall basket of certain types of foreign source income which (1) because of

[9] *See* S. Rep. No. 313, 99th Cong., 2d Sess. (1986), hereinafter referred to as "S. Rep.," at 302-303.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

its passive nature is easily manipulable as to source, and/or (2) bears unusually high tax rates, or (3) is subject to unusually low or no tax, was considered to result in averaging or cross crediting contrary to the basic intent and purpose of the limitation provisions. Not only was there a loss of tax revenue, but the tax advantages obtained provided incentives for the placing of new investments abroad in low tax countries instead of in the U.S. Such incentives would be exacerbated by the Act's reductions of U.S. tax rates.[10] These are the principal factors which led Congress to refine §904(d) by the addition of new separate limitation categories.

This problem existed with respect to both the "direct" credit allowed under 901 and the "indirect" or deemed paid credit allowed under 902 and 960 (for subpart F inclusions). With respect to the indirect credit for foreign taxes paid on income subject to separate limitations earned by U.S. controlled foreign corporations, a look-through rule was deemed appropriate similar to the look through provisions of §904(g), enacted by the 1984 TRA, maintaining the source of U.S. source income earned by U.S. owned corporations, and following to some extent, but with numerous modifications, the look through rules of §904(d)(3), also a 1984 TRA amendment, discussed above.

On the other hand, dividends and other payments from noncontrolled (more than 10- but not more than 50% U.S. owned) corporations in which the taxpayer owns sufficient stock to be eligible for allowance of a deemed paid credit under §902 were not viewed as properly subject to look through principles. One reason was the relative difficulty of the U.S. taxpayer in obtaining the information required to apply the look through rules. Another was that there is insufficient tax neutrality justification for treating such corporations consistently with the treatment of branches, as in the case of CFC's. It was thought more appropriate to place all dividends from such noncontrolled corporations, whatever the character of the earnings from which paid, in a separate limitation category on a corporation by corporation basis since there was no basis for permitting the cross crediting of taxes on income from controlling interests in foreign corporations against taxes on income from noncontrolling interests or from one noncontrolling interest against another noncontrolling interest. The Committee Report [11] states that the look through rule would not have been eliminated for such corporations, however, without the Act amendments providing for the inclusions in income of U.S. shareholders of passive foreign investment companies (PFIC's) under new §§1291-1297 of passive income earned by such corporations. As is discussed in Chapter 64, *infra*, PFIC income is included in the definition of passive income for separate limitation purposes and thus there will be little opportunity for the cross-crediting of taxes on income from active business activities against taxes on the income of noncontrolled foreign corporations whose income is predominantly passive.

It has been seen that while the amendments to §904 are declared to be needed to stem certain forms of tax avoidance, Congress was also motivated to some extent by certain nontax goals; disincentives to choosing foreign over U.S. investment, for example. Another example is found in the general exclusion from these separate limitation categories of foreign source interest derived from the financing of goods manufactured, grown, extracted, etc, by the taxpayer or a related person for export to or use in a foreign country. On the other hand, while most of the separate limitations categories involve low taxed income, it was thought necessary to segregate and provide special treatment for interest subject to abnormally high withholding taxes which are born to a large extent by foreign borrowers and result, in most instances, in the absorption by the credits generated of all U.S. tax on the net interest income and the application of the remaining excess credits against U.S. taxes on other income. Such high withholding tax advantages were seen as providing a strong incentive to lending to certain foreign persons since, by reason of the cross crediting of the high taxes, these loans would yield a higher after-tax return than loans made to U.S. borrowers.

B. Overview

1. The New Separate Limitation Categories

Section 1201 of the Act amends §904(d)(1) providing for separate limitation categories of foreign income, by (1) striking out paragraph (A) (relating to passive interest), and (2) redesignating paragraphs (B),(C),and (D) (relating to DISC and former DISC dividends and to certain FSC income) as paragraphs (F), (G) and (H), and paragraph (E), the overall category, as (I). There are then added five new categories of separate limitation income:

(A) passive income

(B) high withholding tax interest

(C) financial services income

(D) shipping income, and

(E) dividends from each noncontrolled §902 corporation.

2. Passive Income

Passive income is defined in §904(d)(2)(A) [12] as any income received by either a U.S. person or a foreign person which is *of a kind* that would be foreign personal holding company income as defined by §954(c). That is, income which would constitute foreign personal holding company income includible as foreign base company income in the hands of a CFC. This will be referred to herein as subpart F FPHC income, since §954(c) defines one of the five types of foreign base company income (FPHC, sales, services, shipping and oil related) included in subpart F income under the definition of that term in §952(a). Also included is foreign personal holding company income includible in income under §551 (*i.e.*, FPHC income as defined by

[10] *See* H. R. Rep. No. 426, 99th Cong., 2d Sess. (1985), hereinafter referred to as "H.R. Rep," at 333.

[11] Conf. R. No. 99-841, 99th Cong., 2d Sess. (1986), hereinafter referred to as "Conf. R.," at II-583.

[12] Prior law paragraphs (2) and (3) of subsection (d) (relating to passive interest inclusions) are stricken out).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

§553) [13] and amounts includible in gross income under §1293 (relating to foreign passive investment companies).[14]

Passive income does not include income subject to any of the other enumerated separate limitation categories ((B) through (E), *supra*). There are also excepted from passive income the following three items: [15]

Export Financing Interest;

High-Taxed Income;

Foreign Oil and Gas Extraction Income.

a. Export Financing Income

Export financing income receives special treatment throughout the Act's amendments to foreign tax provisions. It is defined as any interest derived from financing the sale (or other disposition) for use or consumption outside the United States of property manufactured, produced, grown or extracted by the taxpayer or a related person. Such property does not qualify if more than 50% of its fair market value (*i.e.*, its appraised value under §402 of the Tariff Act of 1930 (19 U.S.C. 1401(a)) is attributable to imported property.[16] As will be seen below, export financing income is not only excluded from the passive income category, but is also excluded from the separate limitation categories for high withholding tax interest and financial services income.[17]

b. High-Taxed Income

High taxed income is income that would otherwise be included as passive income, if the sum of the foreign income taxes (*i.e.*, taxes of the same type for which a credit is allowed under §902) paid or accrued by the taxpayer, and taxes deemed paid under §§902 or 960 by such taxpayer, exceeds the highest rate imposed by §1 or §11 (whichever applies) multiplied by the amount of such income (as grossed up under §78 where applicable). The exclusion of high taxed income from the passive income category is referred to in the Conference Committee report as the "high tax kick out."

The committee reports make it clear that in determining the effective rate of foreign tax, the expenses, losses and deductions of the U.S. recipient must be allocated to such income.[18] It is also made clear that the high tax kick out applies at the U.S. level only.[19] For further discussion of this rule, see the analysis in C, *infra*.

As noted, high taxed foreign income is income that, without the kick out, would be passive income. Where excluded, it will fall into the overall limitation category. It is not excluded from the other types of separate limitation income. Note that the same item can be both high withholding tax interest and high taxed income. In that case, in it is included in the high withholding tax separate limitation category and, for this reason, is excluded from financial services income, discussed below.

c. Foreign Oil and Gas Extraction Income

As noted above, foreign oil and gas extraction income is subject to its own special limitations rules provided under §907. These, as last amended by P.L. 97-248 (TEFRA) and P.L. 97-448 (Technical Corrections Act of 1982), will not be discussed herein.

3. High Withholding Tax Interest

The 1986 amendments place high withholding tax interest in a separate category and, in effect, separates it from all other types of interest (excepting export financing interest) [20] for limitation purposes. It is, therefore, not includible in other separate limitation categories (with the exception of shipping income) [21] and, for this reason, receives special treatment somewhat similar to that accorded oil and gas extraction income. Consequently, the withholding tax can be credited only against U.S. tax on the net interest includible in taxable income for tax credit limitation purposes (*i.e.*, gross interest reduced by the U.S. recipient's deductions allocable thereto). It is defined as any interest subject to a withholding tax (or other tax determined on a gross basis) imposed by a foreign country or U.S. possession where the rate is at least 5%.[22] Further, regulations are authorized under which other amounts may be treated as high withholding tax interest "where necessary to prevent avoidance of the purposes of this subparagraph." [23]

For purposes of determining the deemed paid credit under §902, high withholding tax interest paid by a noncontrolled §902 corporation, discussed in 5. below, is not

[13] Prior to the 1986 Act amendments, §954(c)(1) defined FPHC as consisting of the same items set forth in §553 with the modifications contained in paragraphs (2), (3) and (4). As amended, §954(c) omits reference to §553, and contains its own list of includible items with exceptions and special rules. These, as amended by the 1986 Act, as is explained in Chapter 63, *infra*, include (A) dividends, interest, rents, royalties, and annuities — excepting (1) active business derived rents and royalties from unrelated persons, and (2) dividends and interest from a same country related person and rents and royalties from a related person for use of property in the same country; neither of these exceptions ((1) and (2)) applies where payment reduces the payor's subpart F income, (B) gains over loss from sales of property generating passive (or no) income, (C) commodities gains over losses (including futures) unless they are hedges or incurred by a commodities dealer, (D) foreign currency gains over losses not related to business needs, (E) income equivalent to interest (commitment fees, etc.).

[14] §904(d)(2)(A)(ii). The new FPIC provisions are discussed in Chapter 64, *infra*.

[15] §904(d)(2)(A)(iii)(II), (III), and (IV).

[16] §904(d)(2)(G). A "related person" for this purpose has the same meaning given the term by §954(d)(3), also amended by the Act (*See* Chapter 63, *infra*), with one modification, as will be more fully explained below.

[17] Among the 1986 Act's amendments to §954(c)(defining FPHC for subpart F purposes) is the termination of the exclusion under prior law from PFHC income of interest derived from the carrying on of a banking, finance or similar business; such interest is now includible in foreign base company income and taxable under subpart F. However, §954(c)(2)(B) provides that PFHC does not include interest derived from banking which is export financing interest as defined by §904(d)(2)(G).

[18] Presumably, under Regs. §1.861-8. *See* Conf. Rep. at p. II-567-8.

[19] *Id.* at p. II-568.

[20] §904(d)(2)(B)(ii).

[21] Income which is both subpart F FPHC income (which includes all interest except that paid by a same country related person whose payments do not reduce its subpart F income) and shipping income is treated as shipping income for limitations purposes. Conf. Rep. at II-565. There is no statutory exception from shipping income of interest, high withholding or other. If includible as shipping income under §954(f), high withholding interest is apparently included in the shipping income category.

[22] §904(d)(2)(B)(i).

[23] §904(d)(2)(B)(iii).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

treated as a foreign tax to the extent the tax rate exceeds 5%.[24] However, it is separate limitation income in the hands of a CFC subject to the look through provisions of §904(d)(3), discussed below.[25]

The effective date provisions of Act §1201(e) contain complex transitional rules relating to the treatment of interest as high withholding tax interest where such interest is paid with respect to loans made to residents certain developing countries. These will be discussed in C, of the Detailed Analysis below.

4. Financial Services Income

In the House version of the separate limitation provisions, a separate limitation was created for banking and insurance income. The Senate version provided for no separate limitation for such income. The treatment for limitations purposes, of income from banking, financing and similar services and from insurance takes into consideration the amendments made to §954(c) defining personal holding company income for subpart F inclusion purposes. Under prior law §954(c)(3), dividends, interest, and gains from the sale of stock and securities, which would otherwise be FPHC income, derived by banks in the conduct of a banking business was generally excluded from FPHC income as was the same type of income derived by an insurance company from investment of unearned premiums and required reserves, so long as such income was not received from a related person. Under §954(c), as revised by the 1986 Act, there is no similar exclusion. Therefore, without a separate limitation for financial services income, the income of a bank or insurance company would generally be either passive income or overall limitation income. Financial services income, as defined by §904(d)(2)(C) for separate limitation purposes, means income which is not passive income determined without regard to subparagraph (A)(iii)(I). This subparagraph excludes from the term "passive income" income falling into categories (B) through (E), *i.e.*, high withholding interest, financial services income, shipping income, and dividends from noncontrolled §902 corporations. In other words, there is excluded from the category financial services income [26] all items of subpart F FPHC income, §551 FPHC income, and §1293 PFIC income, excepting only export financing interest, high taxed income and foreign oil and gas extraction income. Thus, financial services income excludes, generally, such items as interest, dividends, rents and royalties from unrelated persons, gains from the sale of property generating passive income (or no income), commodities futures and foreign currency transactions gains. It *does include* income derived in the active conduct of a banking, financing or similar business, or derived from the investment by an insurance company of its unearned premiums and ordinary and necessary reserves.[27] Also included is insurance income of the kind defined in §953(a)(as amended by the Act) and also includes insurance income from the same country in which the insurance company was organized or created.

The Conference Committee points out that the term "financial services income" (substituted for the House's "banking and insurance income") is intended to indicate the breadth of the term's scope which, in the case of banks, includes income attributable to the activities listed in present Regs. §1.954-2(d)(2)(ii)(A) plus various kinds of income generally associated with and realized by persons carrying on banking and financing businesses, including fees and charges for a wide variety of bank or financial services. However, rentals or fees charged for the use of a bank's property, essentially passive income, would not be included.[28] Also included is income of captive offshore insurance companies subjected to current taxation under the 1986 Act amendments to §953(c).

A special rule is provided for entities "predominantly engaged" in a banking, insurance, financing, or similar business.[29] Regulations will set forth the criteria for determining whether an entity is "predominantly engaged" in such activities, based on guidelines provided by the Conference Committee report, discussed in the detailed analysis at C, *infra*.

Under this special rule, financial services income *includes passive income* (including, for this purpose, passive shipping income and dividends from noncontrolled §902 corporations). The statute clarifies that in this case, the term "shipping income" does not include any income characterized as financial services income. Thus, if an item of income received by a corporation predominantly engaged in banking is both passive income and shipping income, it is classified as financial services income.

Both export financing interest and high withholding interest are excluded from financial services income irrespective of whether the "predominantly engaged" qualification is met.[30]

5. Shipping Income

For purposes of the separate limitations provisions, the term "shipping income" means income of a kind which would be foreign base company shipping income under §954(f) (as amended by the 1986 Act).[31] Such shipping income includes both passive items and items derived from the active conduct of a shipping business. All are swept into this category, as a general rule, if they are described in §954(f) even though some may also qualify as some other category of separate limitation income. One exception is passive shipping income of a person predominantly engaged in banking, insurance, financing, etc., as noted above.

6. Dividends From Noncontrolled §902 Corporations

The last category of separate limitation income added by the 1986 amendments is dividends from a noncontrolled foreign corporation with respect to which the taxpayer meets the stock ownership requirements of §902(a) (or, for purposes of applying §904(d)(3) (the look through rules, discussed below), the requirements of §902(b)).[32] This sepa-

[24] §904(d)(2)(E)(ii).
[25] Conf. Rep. at p. II-587.
[26] The statute is somewhat circuitous in this respect. Interest derived from a financing business is passive income as defined without the financial services exception and is, therefore, excluded from the general definition of financial services income provided by §904(d)(2)(C)(i).

rate limitation category includes only dividends paid out of earnings and profits for any period during which the distributing corporation was not a "controlled foreign corporation." [33]

Under §902(a), a deemed paid credit is allowed to any domestic corporation which owns 10% or more of the voting stock of a foreign corporation from which it receives dividends in any taxable year. Under §902(b), where such 10% or more owned corporation (the first tier corporation) owns 10% or more of the voting stock of a second corporation from which it receives dividends, the first tier corporation is deemed to have paid the same portion of the second corporation's foreign taxes as it would under §902(a) if the first tier corporation were a domestic corporation. A similar deemed paid rule applies to taxes paid by a third tier foreign corporation 10% or more of whose stock is owned by the second tier corporation.

This limitation is applied on an entity by entity basis. Its operation in conjunction with the look through rules is discussed below. The exclusion, for deemed paid credit purposes, from treatment as foreign taxes of high withholding taxes paid on interest by a noncontrolled §902 corporation to the extent they exceed 5% of gross interest was discussed above.

7. Related Person

For purposes of paragraph (2) of §904(d), a "related person" has the meaning given such term by §954(d)(3), substituting "the person with respect to whom the determination is being made" for "controlled foreign corporation" each place it appears.[34] The term "related person" is used in the provisions discussed above only in defining export financing interest.[35] Section 954(d)(3) was amended by the 1986 Act. Applied under §904(d)(2)(H) in its amended form, a corporation is related to another corporation if one controls the other or if both are controlled by the same person. For this purpose. "control" means ownership of *50% or more* of the voting power of all stock entitled to vote or of the total value of all stock outstanding.[36] Note that the definition of "controlled foreign corporation" in §957(a), as amended by the 1986 Act, for subpart F purposes, requires ownership by U.S. shareholders of *more than 50%* (more than 25% in the case of certain insurance companies under §957(b)) of the voting power or value of the CFC's stock. The House bill provided a 50% or more threshold, but this was not in the Senate or Conference bill. A "U.S. shareholder," in turn, is defined by §951(b) means a U.S. person who owns 10% or more of the voting power of a foreign corporation's stock. This definition was not amended by the Act.

8. Transitional Rule

Section 904(d)(2)(I) provides a transitional rule. Under it, taxes paid or accrued in a pre-1987 taxable year on passive interest separate limitation income under the pre-amendment §904 provisions (§904(d)(1)(A)) are treated as taxes paid on passive income as defined by §904(d)(1)(A) of the amended statute.[37] Taxes paid or accrued in a pre-1986 taxable year with respect to overall limitation income under the pre-amendment §904 provisions (§904(d)(1)(E)) are treated as paid or accrued with respect to overall limitation income under the amended statute (§904(d)(1)(I)), except to the extent that the taxpayer can establish that the taxes were paid on shipping income or, in the case of an entity predominantly engaged in a banking, insurance, financing, etc. business, it is established that the taxes were paid with respect to financial services income.[38] Lastly, taxes paid or accrued pre-1987 with respect to any other category of separate limitation income under the pre-amendment §904 are treated as paid with respect to the corresponding category under the amended statute. These rules apply to excess credit carryovers to be applied on a separate limitation by separate limitation basis.

9. The Look-Through Rules

a. Introduction

As noted above in the general background remarks, Congress concluded that there should be consistency between the application of the separate limitation rules in the case of income earned directly by a foreign branch or other entity and income earned through a controlled foreign corporation. The same considerations led to the adoption of a look-through rule provided by §904(d)(3) under prior law with respect to separate limitation passive interest. A look-through rule is also provided by §904(g) (relating to the maintenance of U.S. source with respect to dividends and interest paid a CFC with U.S. source income) The Conference Committee adopted what was essentially the Senate version of look through principles, embodying the basic technique of the former §904(d)(3) and the §904(g) source maintenance provisions, with substantial modifications. In their final form, these rules are simpler than those provided by the Senate bill due, in large measure, to the decision to make the rules as consistent as possible with those relating to subpart F income. An analysis of the House and Senate versions will help in understanding these rules, and will be set forth in the detailed analysis in C. below.

b. Dividends, Interest, Rents and Royalties; Subpart F Inclusions

(1) In General

The general rule of §904(d)(3)(A) is that dividends, interest, rents and royalties received or accrued by the taxpayer (and which would usually constitute separate limitation passive income) from a CFC of which the tax-

[33] A controlled foreign corporation, for purposes of these provisions, is defined by §904(d)(4)(A) as having the meaning given the term by §957 (taking into account §953(c)). Under §957(a), as amended by Act §1222(a), control exists where U.S. persons own more than 50% of the voting power of all classes of stock or of the total value of all stock outstanding. Section 957(b) provides a special definition of control for purposes of taking into account insurance income described in §953(a); control exists if U.S. persons own more than 25% of the foreign corporation's stock (voting power or value). The same definition of control is provided by §953(c) (relating to captive insurance companies). The Committee Report in discussing such noncontrolled §902 corporations refers to them as 10 to 50% U.S. owned, but the statute definitely makes provision for more than 25% U.S. ownership control in the case of insurance income.

[34] §904(d)(2)(H).

[35] §904(d)(2)(G).

[36] §954(d)(3).

[37] §904(d)(2)(I)(i).

[38] §904(d)(2)(I)(ii)(I) and (II).

payer is a U.S. shareholder [39] shall not be treated as income in a separate category.

Paragraph (B) provides that any amount included in income under §951(a)(1)(A), that is, basically the U.S. shareholder's pro rata share of the CFC's subpart F income (but *not* its investment in U.S. property which is includible under §951(a)(1)(B)), shall be treated as income in a separate category to the extent the amount so included is *attributable to* income in such category. Section 904(d)(3)(G) makes it clear that amounts includible under §951(a)(1)(A) include any §78 gross up attributable to such inclusion.

Under paragraph (C), it is provided that any *interest, rent or royalty* (but not dividend) received or accrued from a CFC in which the taxpayer is a U.S. shareholder is treated as income in a separate category to the extent it is properly *allocable* (under regulations prescribed by the Secretary) to income of the CFC in such category.

Dividends paid out of the earnings and profits of a CFC to a U.S. shareholder (including amounts includible in income under §951(a)(1)(B), relating to amounts invested in U.S. property),[40] are treated as income in a separate category *in proportion to the ratio* of the portion of the earnings and profits *attributable to* income in such category, to total earnings and profits.

Note: To fully understand these rules and the source or interest netting rule of §904(c), to be discussed below, it must be borne in mind that in determining taxable income from sources without the U.S. for the purpose of computing the amounts included in the §904 limitation formula, Regs. §1.861-8 require the apportionment and allocation of the U.S. taxpayer's deductions, losses and expenses (referred to as "deductions") to each item of such income. Similarly, in determining the amount of foreign base company income includible in gross income of th U.S. shareholder of a CFC, §954(b)(5) requires that the CFC's expenses, including taxes, be allocated to such income. Regs. §1.861-8 are to be applied for this purpose as well.[41] The term "allocable (under regulations prescribed by the Secretary) to income of," or similar terminology, where used in the provisions under discussion, refers to the Regs. §1.861-8 allocation rules. The House committee report contains an example of the allocation process:

> *Example:* A wholly owned CFC earns $85 of gross income consisting of $60 from manufacturing in its country of incorporation and $25 of interest on a loan to an unrelated foreign person. The manufacturing income is not subject to a separate limitation. The interest income is separate limitation passive income. The CFC incurs expenses of $115 of which $85 are attributable to manufacturing and $30 is interest paid to its U.S. owner. The CFC thus has a net operating loss of $30. It owns assets worth $500 of which $300 are manufacturing assets and $200 is a receivable from the foreign debtor. To determine how much of the $30 in interest paid to the U.S. owner is treated as separate limitation passive income, the payments must be allocated to gross separate limitation passive income and gross overall limitation income of the CFC. The asset method is used to allocate interest. Thus, $18 of the interest paid ($30 × $300 ÷ $500) is allocated to the CFC's $60 of gross manufacturing income and $12 of the $30 interest paid allocated against the CFC's $25 of interest income. As a result, $12 of the $30 interest payment to the U.S. parent is treated as separate limitation passive income.[42]

The term "attributable to" implies identification with a specific item of income, essentially a tracing process. The reason that inclusions under §951(a)(1)(B) (investments in U.S. property) are treated as dividends for purposes of the look through rules is that it is impossible to identify such inclusions with or trace them to any specific items of income of the CFC.[43]

(2) Subpart F Rules Applied

Section 954(b)(3)(A), as amended by §1223 of the Act, provides that if the sum of foreign base company income (before allocations required by §954(b)(5)) is less than the lesser of (i) 5% of gross income or (ii) $1,000,000, then no part of gross income for the taxable year is treated as foreign base company income, the so-called *de minimis* rule. Paragraph (B) provides that where the foreign base company income plus gross insurance income for the year exceeds 70% of gross income, the entire gross income for the year is treated as foreign base company or insurance income, whichever is appropriate.

It was concluded that the *de minimis* rule (but not the more than 70% rule) should be incorporated into the look through provisions. Section 904(d)(3)(E) provides that where a CFC meets the requirements of §954(b)(3)(A), for any taxable year, then *none* of its income for the year is treated as income in a separate category. It follows from this that where the *de minimis* rule applies, dividends, interest, rents and royalties paid or accrued by a CFC to a U.S. shareholder are automatically treated as overall limitation income. The Conference Committee report states, ". . . the subpart F *de minimis* rule also functions as a *de minimis* rule for the separate limitations for passive, financial services, and shipping income, and the separate limitations for high withholding tax interest . . . and dividends from a 10- to 50% U.S. owned foreign corporation." [44] On the other hand, where the CFC's foreign base company

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

income exceeds 70% of its gross income, this fact will have no effect on the operation of the look through principles.

Another subpart F rule, §954(b)(4), as amended by §1221(d) of the Act, provides that for purposes of determining foreign base company income and insurance income under §953, these items do not include any item received by a CFC if the taxpayer establishes that such income was subject to an effective foreign tax rate greater than 90% of the maximum rate specified in §11. This does not apply to "downstream" oil related income. With regard to this rule, *solely for purposes of applying the look through principles to dividends paid by a CFC* (but not for purposes of interest, rents and royalties), income (*other than high withholding tax interest and dividends from a noncontrolled §902 corporation*) is not treated as separate category income if the requirements of §954(b)(4) are met with respect to such income.[45]

Note: The operation of §954(b)(4), without §904(d)(3)(E), would not automatically result in eliminating as items of separate limitation income such items as financial services or shipping income for separate limitation purposes. Its operation is limited to the elimination of those items to which it applies from foreign base company income for purposes of inclusion in income under §951(a)(1)(A). Under the Senate bill, the §954(b)(4) exclusion for separate limitation purposes would have applied only to passive income. The exclusion was expanded by the Conference Committee to conform the look through principles insofar as practicable to subpart F principles. The exception for high withholding tax interest seems obvious; its exclusion under §904(b)(4) principles would defeat the purpose of the separate limitation for this item which is easily manipulable. The exception for dividends from noncontrolled §902 corporations is based on the fact that such items are not, as such, foreign base company income, and exclusion is thus not called for under the subpart F conformity goal.[46] There is, however, a passage in the Conference Committee report that appears to require comment. There it is stated that if a controlled foreign corporation makes the §954(b)(4) election[47] with respect to high withholding tax interest or dividends from a 10- to 50% U.S. owned foreign corporation and the controlled foreign corporation qualifies for the subpart F *de minimis* exception for the year, the income remains high withholding tax interest or separate limitation dividend income (as the case may be) for look through purposes.[48]

This statement is to be contrasted with the other statement mentioned above that the *de minimis* rule functions as a *de minimis* rule for the separate limitations for high withholding tax interest and dividends from noncontrolled §902 corporations.

Example: X Corporation, a CFC, is wholly owned by U.S. corporation A. In 1987, X receives a dividend from M Corporation, a foreign corporation organized in another country, in which it has a 20% stock interest. The remainder of M's stock is owned by foreign persons. Since M is not a CFC, and since, under §902(b), X is deemed to have paid the foreign taxes paid by M attributable to the dividend, the dividend qualifies as separate limitation noncontrolled §902 corporation dividend income. As subpart F FPHC income, it appears to be includible under §951(a)(1)(A) in gross income of A. However, A establishes that the earnings from which the dividend was paid were subject to foreign taxes at an effective rate of more than 90% of the U.S. §11 rate. The dividend is, therefore, excluded from foreign base company PHC income under §954(b)(4).

Assume that X has small amounts of other subpart F income, and that the requirements of §954(b)(3)(A) are satisfied. X distributes a dividend to A. Is any portion of the dividend to be characterized as separate limitation noncontrolled §902 corporation dividend income? The Conference Committee report statement appears to mean that the general rule that the *de minimis* rule functions with respect to all separate limitation categories does not apply where the satisfaction of the rule's requirements is due to an election under §904(b)(4) with respect to high withholding interest or noncontrolled §902 corporation dividends.

Thus, the *de minimis* rule for look-through purposes must be applied by taking into account the other rule that the §954(b)(4) election does not operate with respect to these two categories of separate limitation income. In the example above, if the dividend income, when added to other items of foreign base company income (and gross insurance income) exceeds the lesser of 5% of gross income or $1,000,000 amounts, while the *de minimis* rule may apply for subpart F purposes generally, it does not apply for the §904(d)(3) look-through principles.

(3) Examples

These statutory provisions are illustrated by the examples provided in the Conference Committee report.[49]

Example (1): A wholly owned CFC has gross (and net) income of $100 of which $75 is shipping income and $25 is non-subpart F services income. The shipping income includes $10 of FPHC rental income which, under the rules explained above, is treated as shipping, and not passive, income. The more than 70% full, inclusion rule applies, and all $100 of the CFC's income is included in the U.S. shareholder's gross income for the year under subpart F. However, only $75 of the §951(a)(1)(A) inclusion is attributable to the shipping income, and under the look through rules, this is treated as separate limitation shipping income for §904 purposes. The remaining $25 is overall limitation income.

Example (2): The next year, the CFC has another $100 of gross income. Of this, $4 is portfolio interest, clearly passive income. Another $96 is manufacturing income. The *de minimis* rule applies. The CFC pays $10 in interest to the U.S. shareholder. This is overall limitation income, as are any future dividends paid out of that year's earnings and profits.

[45] §904(d)(2)(E).
[46] *See* Conf. Rep. at p. II-575.
[47] That an election must be made is implied by the words "if it is established by the taxpayer."
[48] Conf. Rep. at II-576.
[49] Conf. Rep. at II-576-77.

Example (3): Another year, the CFC earns $100 of which $50 is foreign base company shipping income, and $50 is a dividend from a corporation, incorporated in a different country, of which the CFC owns 45% of the stock and foreign persons own the remainder. No deductions are allocable to these items of income. While the dividend, at first glance, would appear to be passive income, it is recalled that passive income does not include any of the other four new categories of separate limitation income. (*i.e.*, high withholding tax, financial services, shipping, and noncontrolled §902 corporation dividends).[50] The items of income received by the CFC are taxed by the CFC's country at an effective rate of 40%. It can, thus, be established by the taxpayer that the effective foreign rate exceeds 90% of the U.S. statutory rate (assumed, here, to be 34%, the highest rate imposed under §11), and §954(b)(4) applies to exclude these items from subpart F income. The CFC pays out all of the $100 remaining after taxes as a dividend. Half of the dividend is attributable to shipping income and half to noncontrolled §902 corporation dividends. The latter half must be classified as noncontrolled §902 corporation dividend separate limitation income, since the §954(b)(4) exclusion rule does not apply for purposes of the look through principles to such separate limitation income. The other half of the dividend is overall limitation income.

10. Definitions; Regulations Authorized

Paragraph (4) of §904(d) provides definitions for "controlled foreign corporation" and "United States shareholder" for purposes of §904(d). A CFC has the same meaning given the term in §957 (more than 50% [51] of the voting power or value of the stock owned by U.S. persons) taking into account §953(c)(substituting "25% or more" for "more than 50%" in the §957 definition in the case of a "captive" insurance company — refer to Chapter 63, *infra*). U.S. shareholder has the same meaning given the term by §951(b)(ownership of 10% or more of the voting power of a foreign corporation).[52] Here §953(c) is also taken into account. Under this subsection, relating to "captive" insurance companies, a U.S, shareholder is a U.S. person who owns any stock of a foreign corporation.

Section 904(d)(5) authorizes regulations "as may be necessary or appropriate for the purposes of this subsection" including regulations:

For the application of the paragraph (3) look through rules and the loss recapture provisions of §904(f)(5) (discussed below) in the case of income paid or loans made through one or more entities or two or more chains of entities.

(i) Preventing the manipulation of the character of income to avoid the separate limitations rules, and

(ii) Providing for look-through rules applicable to interest, rents, and royalties paid by entities which would be CFC's if they were corporations.

11. The "Source Rule"

Section 954(b)(5) has been discussed above. It requires that each element of foreign base company income be reduced under regulations prescribed by the Secretary to take into account deductions (including taxes) properly allocable to such income. As was seen above, these regulations, Regs. §1.954-1(c), provide for allocations of expenses, taxes, and other deductions to the gross income in a manner similar to that set forth in Regs. §1.861-8.[53] The Senate version of the bill contained "stacking" rules, under which in determining the extent to which they should be treated as s separate limitation income, dividends, interest, rents and royalties received by the U.S. shareholder of a CFC would be allocated first to passive income, and then, in order, to other categories of separate limitation income. In lieu of this, there was adopted a general look-through allocation rule with respect to interest, rents, and royalties and an apportionment rule with respect to dividends, similar to the rules of §904(g) for determining the extent to which subpart F, §551 FPHC, and §1293 [54] inclusions and dividends and interest paid or accrued by a U.S. owned foreign corporation (50% or more stock ownership, by voting power or value, by U.S. persons) with U.S. source income are treated as U.S. sourced.

However, the look through rules adopted by the Conference Committee did not entirely deal with the problems the Senate bill was designed to resolve. Cross crediting of taxes on overall limitation income with the usually relatively light taxes on passive interest income could be achieved by a loan to the CFC by the parent or a related person to the parent followed by a reinvestment by the CFC of the loan proceeds, *i.e.*, a back-to-back loan. The interest payment made by the CFC could be allocated under Regs. §1.861-8 principles in accordance with the fair market values of the assets generating taxable income.[55] This could result, at least in part, in an allocation of the interest expense to income other than FPHC passive income. To counter this, §954(b)(5) is amended to add that except to the extent provided by regulations, any interest paid or accrued by a CFC to any U.S. shareholder or any CFC related [56] to such shareholder, shall be allocated first to FPHC income which is passive income of the CFC to the extent thereof. This rule, termed a "netting rule" by the Conference Committee [57] is to be applied in conjunction with the §904(g) maintenance of source rules, and adopts a similar rule contained in §904(d)(3) of prior law §904(d)(3) (relating

[50] §904(d)(2)(A)(iii)(I).

[51] The House bill would have required ownership of 50% or more; *Cf.* §904(g)(6) definition of U.S. owned corporation for purposes of the source rules and §954(d)(3) defining control for purposes of the definition of "related person."

[52] The Act did not add a value ownership provision to this definition as it did in the case of §957 and other amendments relating to control and relationship factors.

[53] Which are specifically made applicable to §954(b)(4); Regs. §1.861-8(f)(1)(v).

[54] As amended by §1235(f)(4) of the Act.

[55] Under §864, as amended by §1215 of the Act, allocations and apportionments of interest expenses are to be made on the basis of assets only, and not on the basis of gross income (as was permitted under the regulations in certain cases). *See* discussion in Chapter 61, *infra*.

[56] The Conference Committee Report, Conf. Rep. at II-580, states that the term "related" used in these provisions has the meaning given the term by §954(d)(3). *See* B, 7, *supra*.

[57] Conf. Rep. at II-578.

to the separate limitation for passive interest).[58] There are authorized regulations which may provide that the same rule applies to interest paid by the CFC to other persons.

Under this rule, the CFC cannot generate passive income for the purpose of taking advantage of the allocation principles described. Any interest paid by it to the U.S. shareholder (or another related CFC) must be netted against its subpart F FPHC income to the extent thereof both for subpart F and foreign tax credit limitation purposes.[59] The Committee report states that it is anticipated that this rule will be extended to U.S. controlled noncorporate payors and U.S. controlled 80/20 companies to the extent that look through treatment is provided to such entities by regulations.[60]

This netting rule is referred to in the Act as the "source rule." [61] As will be further explained in the analysis below, the look through rules are, essentially, technically similar to the source rules of §904(g) and the look through principles of §904(d)(3) as in effect prior to the Act. These principles were expanded in the Senate version of the look through separate limitation rules applying the stacking technique, as noted above. The amendment to §954(b)(5) also authorized regulations providing that the netting of interest may also apply to interest paid or accrued to persons other than a U.S. shareholder or a related person to such shareholder. The Conference Committee report states that it decided not to expand the authorized scope of these regulations to require netting in the case of rent and royalty payments (which would more closely follow the Senate bill) until further experience with the new separate limitation rules indicates a need for such rules.

12. Effective Dates

The above described amendments to §904(d) apply to taxable years beginning after December 31, 1986.[62]

Transitional rules are provided by subsection (e) of Act §1201 relating to the application of the separate limitation provisions for high withholding interest. They are not to apply to interest received or accrued by any taxpayer during any taxable year beginning after December 31, 1986, and before January 1, 1990, on any "pre-1990 qualified loan." Also, they do not apply to the "phase-out percentage" of such interest after December 31, 1989 on any "post-1989 qualified loan."

Phase-out percentages are tabulated for the years 1990 through 1994 (a 5 year period) as follows: 80, 60, 40, 20 and 0.

A "pre-1990 qualified loan" is a qualified loan outstanding during any year before 1990 to the extent that any foreign taxes that would be creditable (disregarding §904) with respect all such loans do not exceed the "applicable credit limit" for such taxable year. This limit is equal to 110% of the "base credit amount" times the "applicable interest rate adjustment" for pre-1990 loans. For post-1989 loans a post-1989 interest rate adjustment is applied. The base credit amount is the principal amount of qualified loans held by the taxpayer on November 16, 1985 multiplied by the product of: (1) the interest rate applicable on such loan on that date and the foreign withholding tax rate applicable to interest payable on the loan on that date.

The "interest rate adjustment" is the ratio of the weighted average 6 month LIBOR for the taxable year to LIBOR on November 15, 1985 (8.25%).[63] For post-1989 loans, it is the LIBOR on the last day of the taxpayer's first taxable year beginning after December 31, 1988, to LIBOR on November 15, 1985.

A "qualified loan" is a loan made to any of 23 enumerated developing countries or any resident thereof for use in such country.

It is finally provided that no benefit is allowable under these transitional rules for any withholding tax imposed on qualified loan interest to the extent the rate exceeds the withholding tax applicable to interest on such loan on November 15, 1985.

A special transitional rule is provided for an unnamed Minnesota corporation, the provisions of which are not of sufficient general interest for inclusion herein.

C. Detailed Analysis

As the committee reports indicate, both tax related and nontax related reasons impelled Congress to expand and refine the provisions of §904(d). One of these was the general lowering of U.S. tax rates which will exert pressure on tax planners to avoid any resulting excess credit positions with little possibility of ultimate absorption by way of carryover. One of the most often used avoidance devices has been the generation of lightly taxed foreign source income to increase the value of the §904 limitation fraction and achieve the cross crediting effect the separate limitations provisions are intended to minimize. Another professed goal of these provisions was to eliminate existing incentives to the shifting of certain types of investment to foreign jurisdictions. This is an application of the well-known principle of tax neutrality; U.S. tax laws should not make it more advantageous for a given investment or business operation to be made or carried on outside of the U.S. The determining factors should be nontax related insofar as practicable. These provisions must, therefore, be scrutinized to determine whether they operate merely to frustrate tax motivated transactions or pose substantial burdens on international operations of U.S. persons.

1. The Expansion of the Separate Limitations Categories

a. Passive Income: Exceptions

The most sweeping of the five new categories of separate limitation income is passive income, income, generally, of a type which, if earned by a CFC, will be included in income of its U.S. shareholders under §951 as foreign base company personal holding company income or under §551 as foreign personal holding company income. As the term implies, it is income which can usually be sourced by the

[58] *See* General Explanation of the Revenue Provisions of DEFRA of 1984, Joint Committee on Taxation, December 31, 1984 at 355.
[59] Conf. Rep. at. p. II-578.
[60] *Id.*
[61] Heading of Act §1201(c).
[62] Act §1201(e).
[63] *See* Conf. Rep. at II-588.

controlling interests in whatever foreign jurisdiction is most favorable from a tax viewpoint and is usually lightly taxed. The reasons for requiring a separate limitation for such income are basically the same as those which gave rise to the separate limitation for passive interest under §904(a)(1)(A) under prior law. Its principal component, subpart F FPHC, is a category of income substantially expanded by amendments to §954(c).[64] Also included is FPHC income as defined under§551 and inclusions under new §1293 (Added by Act §1235(a)).[65]

There are two groups of income excepted from the passive income category even though some portion of such income would otherwise be classified as passive. First, there are the other four categories of separate limitation income, namely, high withholding tax interest, financial services income, shipping income, and dividends from noncontrolled §902 corporations, each of which was discussed in B, *supra*. These exceptions may be termed the (2)(A)(iii)(I) exceptions. The second group consists of export financing interest, high taxed income and foreign oil and gas extraction income.

Some points that merit emphasis:

(1) Export Financing Interest

It was already noted that export financing interest is excluded from both the high withholding tax interest and financial services separate categories. Such interest includes not only interest received by the person whose products are exported abroad but persons related to such person. This exception has as its sole purpose the fostering of export trade, and, because it is excluded from high withholding tax interest and will generally be included in the overall basket, it offers a window for advantageous cross crediting to those in a position to take advantage of the exception.

(2) High-Taxed Income

The high-taxed income exception, applicable only to passive income, may cause problems since for such income to qualify, the taxpayer must establish the effective foreign rate. The "kick-out" operates only at the U.S. taxpayer level. In other words, the high tax refers to a foreign tax for which the recipient of the income is entitled to a credit against U.S. taxes. Determining the effective foreign rate will necessitate an allocation of the recipient's deductions in the manner prescribed by Regs. §1.861-8.[66] The Conference Committee agreement does not mandate separate application of the kick-out to individual items of income which the IRS determines may be grouped without diminishing its intended effect, *i.e.*, unduly permitting cross crediting of the high taxes and the relatively low taxes on passive income, taking administrative convenience into account.[67] However, the report indicates that passive income items from one CFC subject to high tax on a grouping basis may not be grouped with such income items of another CFC not subject to high tax, and that, generally, dividends paid by a CFC, which will usually not be passive income, are not to be grouped with any other items. Passive income items of a branch may also be grouped in appropriate circumstances if the IRS so rules, and it is suggested that this treatment might be based on treating as a branch a "qualified business unit," a term used in the provisions relating to foreign currency exchange gain or loss.[68] High-taxed foreign income received by a CFC will usually qualify for exclusion from subpart F FPHC under §954(b)(4) if the taxpayer so elects. If this is done, the kick-out will apply only at the time credits are computed with respect to the repatriation of the income as a dividend.

The report also notes that regulations are to prescribe rules for applying the high-tax kick-out with respect to distributions of previously taxed subpart F income where such distributions are subject to a high foreign tax. The Committee notes that adjustments to tax liability with respect to such distributions will normally be made in the year of distribution and not the year of inclusion under subpart F, referring to the special rules of §960. In any event, with respect to *all* separate limitations, it is intended that any foreign taxes imposed on such distributions, to the extent creditable, be assigned to the same limitation basket or baskets as the prior subpart F inclusions to which they relate.

The high-tax kick-out introduces a very substantial degree of complexity into these provisions. To determine whether a given item of income was subject to a foreign tax at an effective rate higher than the highest U.S. statutory rate, two steps are necessary. First, the foreign tax applicable to that item must be determined. This may be a very difficult task. It will often require an analysis of the foreign tax laws to ascertain (1) the amount of such income included in the foreign tax base net of deductions, exemptions, etc. allowable under foreign tax laws, and (2) where the structure of the foreign tax system provides for different rates on different types of income, it may not always be evident how much of the total foreign tax is attributable to a particular item of passive income. Once a determination has been made, as to the quantum of foreign tax imposed on the item, the U.S. taxpayer must allocate deductions to the item under Regs. §1.861-8. Only when the amount of the item net of such allocation has been determined can the effective rate of foreign tax be computed. This process may involve very burdensome recordkeeping, to say nothing of the task of analyzing foreign tax laws. It is perhaps for these reasons that the Senate bill made no provision for the kick-out, replacing it with authority to promulgate regulations to prevent abusive manipulation of the character of income to avoid the consequences of the separate limitations provisions.

b. High Withholding Tax Interest

As is noted in the Finance Committee report [69] it was well known in the financial community that a greater

[64] *See*, Chapter 63, *infra*.

[65] *See* Chapter 64, *infra*, relating to gains from the disposition of stock in a foreign passive investment company, FPIC. It is to be noted that under §951(d), if an item is both foreign base company PHC income and §551 FPHC income, it is treated as the former. Also, under §551(g), as added by Act §1235(c), if income is includible in income under §551(a) and new §1293, it is treated as included under §551(a). Thus, in applying the look through rules, apparently both §551 FPHC income and inclusions under §1293 are treated as inclusions under subpart F.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

after-tax yield could be realized from loans to certain developing countries imposing high gross withholding taxes on interest than from similar loans made elsewhere due to the fact that (1) because of this impost, borrowers would have to pay a higher rate of interest for lenders to realize an after-tax amount equal to market rates, and (2) taking into account the lender's cost of the money lent, the effective rate of tax on net interest income in such a case would generally be greater than the U.S. rate, generating foreign tax credits available for use against U.S. taxes imposed on other lightly taxed foreign income. As noted above, separate category treatment for such income generally overrides other separate categories [70] but recipients of export financing interest may include all of such interest in the overall category whether or not it is subject to high withholding tax. High withholding tax is defined as a tax on gross interest of 5% or more.[71] This, of course, leaves open the possibility of arranging for rates of 4.9% which, when net interest is taken into account, could easily exceed the new 34% corporate rate. It is to be noted also that the provision applies for look through purposes and not, as in the case of high taxed income, only at the U.S. level. How this operates was illustrated in the discussion of the statutory provisions in B, *supra*.

It was noted in B, *supra,* that under §904(d)(2)(E)(ii), if a foreign corporation is a noncontrolled §902 corporation with respect to the taxpayer, taxes on high withholding interest, to the extent they exceed 5% are not treated as foreign taxes for §902 deemed paid purposes. The Conference Committee report [II-587] provides an example of how such interest received by a noncontrolled §902 corporation is treated.

> *Example:* Assume that an offshore bank has a 40% U.S. owner and a 60% foreign owner. It earns $2,000 of gross interest income and incurs $1,700 of interest expense. On thousand dollars of the interest income is subject to a 10% gross withholding tax and is, therefore, high withholding tax interest.
>
> The foreign corporation incurs no other expenses and earns no other income. Its earnings and profits are $200 ($2,000 gross interest income less $1,700 interest expense less $100 withholding tax). It pays the full $200 out as dividends. Its U.S. shareholder receives $80 (40%) of the $200. The provision treats as noncreditable that portion of the 10% withholding tax exceeding 5%. Therefore, $50 (5% of $1,000) of the $100 withholding tax is noncreditable. The U.S. shareholder's deemed-paid credit with respect to the $80 dividend it receives is therefore reduced from $40 (40% of $100) to $20 (40% of $50).[72]

The transitional rule outlined in B, is somewhat complex. It differs from a similar rule contained in the Senate bill. Since the rule applies to interest on loans to less developed countries and their residents, it, in effect, covers almost all high withholding interest situations. The provision is phased out over a five years period beginning with the first taxable year after 1989 on post-1989 (new) qualified loans. What is a new loan is to be determined applying the provisions of §1001.[73] As to pre-1990 loans, exemption from the high withholding tax interest limitation is determined as follows: First, the "base credit amount" is determined. To obtain this, the principal amount of all qualified (LDC) loans in existence on November 16, 1985, is determined. Assume, for example, that this is $5,000,000. This amount is multiplied by the product of (1) the interest rate applicable to such loans on November 16, 1985, and (2) the withholding tax rate applicable to such interest.[74] Apparently this is to be done with each such loan. Thus, if there is one loan with a principal amount of $500,000, an interest rate of 11% per annum and a withholding rate of 7% on gross interest, the base credit amount is $3,850. The applicable credit limit is then determined by multiplying the latter figure by the interest rate adjustment. Assume that the year is 1988 and the weighted average LIBOR rate is 9.5% for that year. The same LIBOR rate on November 15, 1985, was, as was stated above, 8.25%. The ratio is 1.25. This is multiplied by $4,235 (110% of $3,850) to obtain a product of $5,294. The is the "applicable credit limit." [75] This process is applied to each loan outstanding during 1988 not to exceed the November 16, 1985, high-water mark.

The result is the total amount of foreign tax credit allowable on all high withholding interest qualified loans for the year. A similar process is applied to post-1989 loans subject to the five year phase out. Interest not treated as high withholding tax interest by reason of this transitional rule is passive income (subject to the high-tax kick-out) unless it is received by an entity predominantly engaged in the active conduct of a banking, insurance, financing or similar business, in which case it is financial services category income.[76] One may assume that most of the beneficiaries of this transitional rule will qualify as predominantly engaged in banking.

Note: The transitional rule provisions worked out in committee with representatives of lenders with substantial amounts of such loans seems technically flawed. The intended beneficiaries of the seemingly very generous relief measure are probably mostly large banks and financial institutions who are experiencing well publicized problems with these LDC loans. Since the transitional rule is not of general interest, no attempt will be made here to discuss its details.

Under the transitional rule, no relief is provided with respect to any foreign tax imposed on interest payable with respect to qualified loans to the extent the tax rate exceeds the withholding rate applicable on November 16, 1985.[77]

[70] The Conference Committee Report states that the separate high withholding interest limitation applies to *all* interest recipients (subject to the export exception)." But the wording of the statute does not appear to make it applicable to shipping income.

[71] §904(d)(2)(B)(i)(II).

[72] Note that under this shorthand computation, the noncreditable tax is treated as an allocable expense. On other $250 net interest income, the bank is deemed to pay a tax of $50, resulting in an effective rate of 20%. The $80 dividend grossed up to $100 ($80 ÷ .8) is multiplied by the 20% effective foreign rate to obtain the credit.

c. Financial Services Income

Income includible in this category as derived in the active conduct of a banking, financing, or similar business would, normally, include income attributable to any of the activities listed in Regs. §1.954-2(d)(2)(ii)(A) through (G).[78] The Conference Committee adds to this list a number of other types of what it considers to be financial service related items which would qualify.[79] Financial services also includes insurance income consisting of premium and other insurance income. It includes such income of offshore captive insurance companies whose U.S. owners are taxed currently under 1986 Act amendments to §957.[80]

Where an entity is predominantly engaged in such activities (banking, insurance, financing, etc.) its passive and shipping income is swept into the financial services basket. It is intended that a person so engaged be able to cross credit taxes imposed on all of its various types of income related to the predominant banking, etc. business operations. But, where the banking or financing is merely a sideline (perhaps created in an attempt to obtain the cross crediting privilege) passive and shipping income retain their separate limitation status. Regulations will prescribe rules for determining the circumstances under which an entity will be treated as predominantly engaged. In many cases, this will be clear at a glance. In others, the determination may well give rise to considerable controversy.

The Conference Committee Report relates that the conferees intend that the predominantly engaged test will be met if either the U.S. income recipient or the related payor of the foreign income independently satisfies it.[81] Thus, income of a U.S. shareholder in a foreign bank treated as predominantly engaged will, whether included under subpart F or received as a dividend distribution, be treated under the look through rules as all financial services separate limitation income. The same holds true where the U.S. shareholder is a bank. It follows that income which would qualify as passive or shipping income under the look through rules will be treated as financial services income. Such financial services income is exempt from the high-tax kick-out (but not the high withholding tax exclusion).

Finally, the Committee Report notes that income from such activities as equipment leasing, precious metals and commodity trading, and virtually all financing activity, where such activities are integrally related to the active conduct of banking, etc., will be included in financial services income where the predominantly engaged qualification is met. On the other hand, income from activities having no relationship to financial services will not be so characterized solely by reason of the recipient's meeting the predominantly engaged qualification. Examples of such unrelated income are income from data processing services, the sale of goods, or the providing of nonfinancial services.

2. The Look-Through Rules

a. Conformity With Subpart F Rules

In drafting the look through rules of §904(d)(3) it was intended by Congress, as already noted, to mesh the subpart F rules and the separate limitation rules insofar as possible. The new categories of separate limitation income are all items that would normally be included in foreign base company income as redefined by 1986 Act amendments. Where received by a CFC, these items are automatically included in the U.S. shareholder's gross income, after allocation of the CFC's expenses under §954(b)(5), and fall into their separate limitation categories as if received directly by the shareholder without the intermediation of the CFC. Under §904(d)(3)(B), each item of such net foreign base company income so included is attributable to the foreign base company income of the CFC. Thus, if the CFC has $19,000 of net interest from an unrelated corporation qualifying as FPHC income under §954(c), includible, as such, in the U.S. shareholder's gross income under §951(a), and the U.S. shareholder has no deductions properly allocable to such income, the $19,000 is passive income subject to the separate limitation of §904(d)(a)(1)(A), provided it is not subject to the high-tax kick-out.

Note: If the income is high taxed income in the hands of the CFC, an election can be made under §954(b)(4) to exclude such income from inclusion under §951. In such a case, for purposes of the dividend look through rule of §904(d)(3)(D), the income is not treated as income in a separate limitation category.[82] Thus, when it is subsequently distributed as a dividend, to the extent the dividend is deemed, under the apportionment rule of §904(d)(3)(D), to have been made from such income, it is overall limitation income in the hands of the U.S. shareholder.[83]

Since the income is category (A) passive income, the U.S. shareholder must compute separately the §904(a) limitation with respect to any foreign tax paid on this income. Assume that under §960 there is deemed paid a foreign tax of $5,000 on the $19,000, and that the same U.S. shareholder receives another $20,000 in interest from a loan to an unrelated foreign entity subject to a withholding tax of $800. The subpart F inclusion grossed up for the deemed paid tax is $24,000. The $20,000 in other interest is added to the $24,000 in computing the separate limitation for passive interest. Assume that there was no other foreign income, that the U.S. shareholder's total taxable income was $3,000,000 and that its U.S. tax was $680,000. The limitation applicable to the passive income is $9,973, amply sufficient to absorb the $5,800 in foreign tax, with an excess credit available for carryover (but only to offset U.S. tax on future passive income) of $4,173. Assume, next, that the U.S. entity's $3,000,000 in taxable income included $1,200,000 in dividends from foreign corporations, both CFC's and noncontrolled §902 corporations engaged in manufacturing, none of which is passive income under the look through rules. Foreign taxes deemed paid on such income total $500,000. Of the U.S, corporation's deductions, $50,000 is allocable to this dividend income under the §861 regulations. The §904(a) limitation with respect to the credits under §902 is $260,667. None of the excess credit computed under the passive income separate limitation may be applied to offset the residual U.S. tax on the dividend income. It must be carried forward for application

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

against U.S. taxes on passive income in future years, to the extent the §904(a) limitation permits.

The rule that passive, financial services or shipping income of a CFC which is excluded from subpart F income by §954(b)(4) because such income bears foreign taxes greater than 90% of the U.S. rate, is automatically treated as overall limitation income has been discussed in the Note above. However, under §904(d)(3)(E), this rule does not apply to either high withholding tax income or dividends from a noncontrolled §902 corporation. In the latter case, the nonapplication is explained by the fact that such noncontrolled corporation income bears no relation to subpart F income categories. Also, as has been explained, where high withholding tax or noncontrolled §902 corporation dividend income is excluded from foreign base company income under the provisions of §954(b)(4) and, for the same taxable year the CFC is deemed, by virtue of the *de minimis* provisions of §954(b)(3), not to have any foreign base company income, the normal rule that distributions of earnings and profits for a CFC year to which the *de minimis* rule of §954(b)(3)(A) applies are treated as overall limitation income is inoperative. Where high withholding tax interest or a noncontrolled §902 corporation dividend previously excluded under §904(b)(4) is repatriated by a dividend, such income retains its character for purposes of applying the apportionment rule of §904(d)(3)(D). Thus, if 50% of the CFC's earnings and profits from which the dividend is made consists of such previously excluded high witholding tax interest or noncontrolled §902 corporation dividends, 50% of the dividend will be classed as income in these separate limitation categories to the extent thereof.

The source of amounts included in a U.S. shareholder's income under §951(a)(1)(B),[84] with respect to the investment of earnings in U.S. property cannot be determined. The funds so invested could come from any one of the CFC's activities. Thus, notwithstanding the fact that a CFC could have only one income generating activity, such inclusions are treated for the look through rule purposes as dividends.

b. Dividends

The look through rule for dividends from a CFC is that a dividend is separate limitation income in the same proportion that the earnings and profits from which the dividend was paid were attributable to the various categories of separate limitation income. Such earnings and profits are broken down into their separate limitation income components, and each such component is divided by total earnings and profits to determine its percentage of the whole. The percentage obtained is then applied to the amount of the dividend. Where the dividend is made up in whole or in part of earnings and profits which were included in the shareholder's gross income under §951, and, for this reason, is excluded from income under §959(a), §959(d), as amended by the Act, provides that the distribution, to this extent, is treated as a distribution that is not a dividend but shall be applied to reduce the earnings and profits of the CFC. It is, therefore, not a dividend for look through purposes. As a result, in applying the look through rules to dividends distributed by the CFC, in allocating the dividend on a proportional basis to earnings and profits in each separate limitation category, the numerator or denominator (as the case may be) of the ratio is reduced by earnings and profits attributable to previously taxed subpart F income that has been distributed.

Where previously taxed subpart F income is distributed by the CFC, such distribution may itself attract a foreign tax. If so, the high tax kick out rule may apply. Regulations are to be issued dealing with this situation.[85] But any adjustment to tax liability will be made only for the year of distribution.[86] Further, where a foreign tax is imposed on distributions of previously taxed subpart F income, the Conference conferees intend that any such taxes be assigned to the separate limitation baskets in which such previously taxed income was included.[87] This may well pose some tracing difficulties unless an allocation method is provided by the regulations.

The Conference Report also makes it clear that gain from the sale of stock in a foreign investment company treated as ordinary income under §1246 is not a dividend for look through purposes (as it was under the House and Senate bills) but is treated as passive income. However, gains taxed under §1248 are treated as dividends.[88] Dividends include, of course, the §78 gross up, but, as already explained, gross up attributable to a subpart F inclusion is not treated as a dividend but as part of the subpart F inclusion for look through purposes.

c. Interest, Rents and Royalties

Interest, rents, and royalties are subject to an allocation rule. For purposes of determining their separate limitation category status in the hands of the U.S. shareholder recipient, these amounts are treated as expenses of the CFC allocable to the CFC's gross income under the rules of Regs. §1.861-8. Thus a payment of rent, for example, is treated as separate limitation income to the extent it is allocable, under the §861 rules, to a category of separate limitation income of the distributing CFC. This general rule, however, is subject to the income netting rule of §904(c), discussed below, which overrides the normal allocation rules. Thus, where the CFC pays or accrues interest to a U.S. shareholder, this interest is allocated first to *any FPHC income of the CFC which is passive income* and is, therefore, passive income, to the extent it is so allocable, in the hands of the recipient. Following this, if interest is allocable to manufacturing or some other overall limitation category, it is overall limitation income in the recipient's hands.[89]

[84] Technically, this is not subpart F income which is defined by §952. The amount of the inclusion is determined under §956.

[85] Conf. Rep. at II-569.

[86] *Id.*

[87] *Id.*

[88] Conf. Rep. at II-581.

[89] In the case of interest, under the fundability theory, there will not be a case in which it is definitely unrelated to any of the CFC's income. Under the §861 regulations, it will be treated as definitely related to all of the payor's income. However, as noted above, under §864, as amended by the Act, interest is allocated and apportioned on the basis of the payor's assets rather than on the basis of gross income. §864(e)(2).

d. The Source or "Netting" Rule

It should be understood that this netting rule, added to §954(b)(5), which is part of the subpart F provisions, applies both for foreign tax credit purposes and for subpart F purposes. This may be extended by regulations to interest payments of the CFC to other unrelated persons.[90] In addition, it may be extended to noncorporate U.S. owned payors and 80/20 corporations to the extent that look through rules are applied to them by regulations.[91]

Where the CFC has subpart F FPHC income and pays interest to a U.S. shareholder, the reduction under §954(b)(5) is applied by according the interest priority in the allocation process, as if it were determined that the interest, irrespective of the value of the assets generating other types of income, was definitely related to the generation of all passive income to the extent thereof. Rents and royalties are allocated to the CFC's income to which they definitely relate and then are ratably apportioned among other types of income unless there is definitely no relation to such income.[92] Usually, therefore, such payments will be treated as overall limitation income in the U.S. shareholder's hands, since rents and royalties usually relate to income from carrying on some form of active business. This, however, may not always be the case. Thus, if the royalties are paid with respect to intangibles which the CFC had, in turn, sublicensed, the royalty payments would be allocated to the licensing income and would be treated as passive income in the hands of the U.S. shareholder recipient. The §861 regulations, therefore, seem to prevent any separate limitation avoidance by way of back-to-back rental or royalty arrangements. For this reason, the Committee Report notes that it was decided that the extension of regulatory authority to prescribe netting rules for rent and royalty payments was not necessary. However, it was added that existing regulation could be amended to remove any doubt in this respect if needed.[93]

The Committee Report notes that the interest netting rule is to be applied also for purposes of the rule of §904(g)(3) maintaining the source of U.S. source income. Thus, interest paid to a U.S. shareholder by a CFC with U.S. source passive income will, for purposes of determining its source, first be allocated to such passive income, rather than, as under prior law, following the §861 regulations, on the basis of the value of the assets generating the CFC's income.[94] This application of the netting rule to the source maintenance rule will, in addition to the separate limitations amendments, further adversely affect the foreign tax credit position of many U.S. taxpayers.

e. Miscellaneous Amendments

It should be noted that §1201(b) of the 1986 Act which repealed §904(d)(2) and (3) effective for years after 1986, amended these provisions relating to the separate limitation for passive interest effective for taxable years prior to 1987. The *de minimis* rule of §904(d)(3)(C), applicable where a designated payor corporation's passive interest is less than 10% of its earnings and profits, is amended to provide that this does not apply to amounts includible under §551 or §951. Also, §904(d)(2), defining passive interest, is amended to add that interest (after application of (d)(3)) received from a designated payor by a person owning less than 10% of the voting stock is treated as passive interest only to the extent it would be so treated if the look-through principle did not apply.

III. Amendments to the Deemed Paid Credit

A. Background and Legislative History

Section 902, as in effect prior to the 1986 amendments, provided that, for purposes of §901, where a domestic corporation receives a dividend from a foreign corporation (whether or not a CFC) and, at the time the dividend was received, the domestic corporation owns 10% or more of the voting stock of such corporation, it is deemed to have paid the foreign taxes imposed on the distributing corporation with respect to the earnings and profits out of which the dividend was paid. Thus, if in Year 1, the foreign corporation had total taxable income of $1,000,000, computed under U.S. tax accounting principles, and paid total foreign income, war profits or excess profits taxes on such income of $360,000 (an effective foreign rate of 36%) and, if in Year 4, the corporation distributed as a dividend to a domestic corporation owning 100% of the foreign corporation's stock at the time of the distribution, $200,000 of its accumulated (post-tax) earnings and profits attributable to Year 1, the dividend recipient was deemed to have paid a portion of the $360,000 in Year 1 foreign taxes imposed on the distributor. The amount was determined by multiplying the total foreign taxes imposed on the accumulated profits from which the dividend was paid (that is, the pre-tax taxable income for the year) by a fraction, the numerator of which was the amount of the dividend and the denominator of which was the accumulated profits in excess of the foreign tax. Under the facts assumed above, the credit is computed as follows:

$$\$360{,}000 \text{ (foreign tax)} \times \$200{,}000/\$640{,}000 \text{ (post-tax Year 1 income)}$$

In the example, the foreign tax deemed paid is equal to $112,500. This is creditable, subject to the §904 limitation, but the taxpayer must include in income the grossed up dividend, that is the amount of the distribution plus the foreign tax deemed paid. Where the dividend is attributable to the earnings and profits of more than one year, the above formula must be applied to each such year. The dividend must, therefore, be traced to post-tax earnings and profits. However, a dividend paid within the first 60 days of the distributor's taxable year is deemed made from the previous year's (or years') income.

Another way to determine the deemed paid tax is simply to determine the effective foreign rate, here 34%, and apply that to the dividend. Thus, grossing up the dividend to reflect pre-tax taxable income ($200,000 ÷ .64) yields $312,500. This equals the pre-tax earnings to which the dividend is attributable. The taxes deemed paid are

34% of this amount, $112,500. Then, under §78, the grossed up dividend is included in the shareholder's gross income, and the $112,500 credit applied, subject to the limitation of §904(a), to offset the shareholder's U.S. taxes on its U.S. taxable income for the year. A similar gross up under §78 applies in the case of an inclusion under §951.[95]

Under §960, a similar rule is adopted with respect to the foreign taxes paid by a CFC on that portion of its earnings and profits included in the gross income of the U.S. shareholder under §951. The amount of the credit is the tax paid by the CFC times the amount of the §951 inclusion divided by the CFC's earnings and profits (after-tax income) for the year. In this case, however, since such income is included currently under §951, there is no need to trace the provenance of the inclusion.

Under §902(b)(1) and (2), the deemed paid rules are extended to taxes paid by first and second tier subsidiaries of the 10% or more owned foreign corporation. That is, where the first foreign corporation receives a dividend from a second tier foreign corporation in which it has a 10% stock interest at the time of the distribution, such first corporation is deemed to have paid the foreign taxes imposed on the second tier corporation with respect to the accumulated profits from which the dividend was paid. In the same manner, taxes paid by a foreign corporation in which the second tier corporation has a 10% stock interest are deemed paid by the latter upon receipt of dividends from such third tier corporation, but the deemed paid rule does not extend to taxes paid by fourth and lower tier entities. The deemed paid rules apply to the lower tier foreign corporations, however, only if a 5% stock ownership condition, set forth in §902(b)(3)(A) and (B), is met, as will be explained below.

In the case of inclusions under §951, where a second or lower tier corporation is a CFC (applying the attribution rules of §958), the income is included directly in the gross income of the U.S. shareholder. A deemed paid credit is allowed in this case under §960 without dilution by passing through intermediate subsidiaries, but, as in the case of the §902 deemed paid rules, (a) no tax payments by a corporation lower than the third tier are taken into account, and (b) for tax paid by a second or third tier corporation to be treated as deemed paid by the domestic entity, the 5% stock ownership rule is applied.

This method presents two problems. First, the dividend must be traced to its source, the particular accumulated profits from which it was paid, for a credit to be allowed. Distributions were deemed to be made first out of the most recently accumulated profits, but, under a special rule, distributions made during the first 60 days of a taxable year were treated as made from the prior year's accumulated profits. This rule applied also for purposes of §960. The tracing presented a number of difficulties, especially where the 10% stockholder was a minority shareholder without easy access to the distributor's books and records, or where dividends were infrequent and tracing was required to earnings for several years prior to the year of distribution. Aside from these difficulties, there was a major technical problem. In Rev. Rul. 74-550, 1974-2 C.B. 209, the Service ruled that in determining "accumulated profits in excess of the foreign tax," where the foreign corporation sustained a net operating loss (computed under U.S. tax rules), there could be no "accumulated profits" for that year. Further, such loss must be carried back to reduce accumulated profits for all previous years to the extent of the loss.[96] The result was in many instances to deny or substantially reduce the credit allowable for foreign taxes paid on what was treated as taxable income under the applicable foreign tax law but was treated as zero or a reduced amount of income for U.S. tax purposes.

These rules produced another difficult to justify result. For various reasons, effective foreign tax rates can change from year to year. It was seen that the amount of the credit allowable with respect to distributions from the earnings and profits of a given taxable year of the foreign corporation depends on the effective foreign rate for that year. If the foreign corporation has pre-tax earnings of 100 for each of two years, and the effective foreign tax rate on the first year is 20% and that for the second is 50%, leaving it with a total of 130 in after-tax earnings, a distribution of 50 made at the end of the second year will be treated as made from the earnings of the high tax year with a correspondingly greater credit than if treated as distributed from the low tax year's earnings after tax. U.S. shareholders with interests in two or more foreign corporations could maximize their credit position by causing high tax year profits to be distributed at such a time as to obtain the highest credit which could then be averaged with low tax year distributions of some other corporation, a planning device referred to as the "rhythm method." The tracing of dividends to discrete taxable years under these rules was viewed by Congress as anomalous since in the case of dividends from CFC's they produced tax credit results sometimes dramatically different from those which would obtain were the foreign business operations giving rise to the dividends conducted directly or through a foreign branch.

B. Overview

1. Pooling of Post-1986 Earnings and Profits and Foreign Taxes

The problems and incongruous results under prior law discussed above were eliminated by the pooling of all post-1986 earnings and profits of the foreign corporation distributing the dividend and by the corresponding pooling of all post-1986 creditable foreign taxes imposed on the accumulated profits of all post-1986 years.

Section 1202(a) of the 1986 Act amends §902(a) to provide that the amount of foreign taxes deemed paid by the 10% shareholder of a foreign corporation which makes a dividend distribution is determined by multiplying the foreign corporations post-1986 foreign taxes by a fraction; the numerator of which is the amount of the dividend (determined before any §78 gross up) and the denominator

[95] In determining the amount of earnings and profits for purposes of calculating the foreign taxes deemed paid under §960 with respect to an inclusion under §951, the regulations allow departures from U.S. tax accounting principles and U.S. accounting standards where not "material." Regs. §1.964-1(a).

[96] *See, e.g., Champion Int'l Corp. v. Comr.*, 81 T.C. 424 (1983) [cited in Sen. R. at 298].

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

of which is the aggregate of the foreign corporations undistributed post-1986 earnings. A similar rule is provided under amended §902(b)(1) and (2) for second and third tier foreign corporations as under prior law.

Amended §902(b) retains the prior law 5% stock interest requirement of §902(b)(3)(A) and (B)). Thus, the §902(b) deemed paid provisions apply only, in the case of a second tier corporation, if the percentage of stock owned by the domestic corporation in the first tier corporation multiplied by the percentage ownership of the first tier corporation in the second tier corporation equals at least 5%. This condition is met if, for example, the domestic corporation owns 25% of the first tier corporation's stock, and the latter owns a 20% interest in the second tier corporation.[97] A similar minimum stock ownership condition applies for application of the deemed paid rules to dividends distributed by a third tier corporation to the second tier corporation.[98]

Post-1986 earnings and profits means the amount of the earnings and profits of the foreign corporation (computed in accordance with §964 and new §986 (requiring that earnings and profits be computed in the functional currency of the foreign corporation and then translated into U.S. dollars)) accumulated in taxable years beginning after December 31, 1986—

> as of the close of the calendar year of the foreign corporation distributing the dividend, and
>
> without diminution by reason of dividends distributed during the year.[99]

Post-1986 foreign income taxes means the sum of—

> foreign income taxes imposed for the taxable year of the foreign corporation in which the dividend was distributed, and
>
> foreign income taxes for all prior post-1986 years to the extent they were not deemed paid with respect to post-1986 dividend distributions.[100]

Foreign taxes means income, war profits and excess profits taxes paid to any foreign country or U.S. possession.[101]

For purposes of determining other amounts of foreign taxes paid a by a foreign corporation, the term includes taxes deemed paid; a third tier corporation is not deemed to have paid any foreign taxes.[102]

2. Special Rule for Post-1986 Acquisitions

Where the 10% or more stock ownership of a foreign corporation necessary for the deemed paid credit rules to apply to subsequent dividends is acquired after December 31, 1986, the pooling of earnings and profits and foreign taxes is effected by taking into account only periods beginning on and after the first day of the first taxable year in which such ownership requirements are met.[103] This rule extends to the acquisition of stock by a first tier in a second tier, and by a second tier in a third tier foreign corporation.[104]

3. Accounting Periods

Where foreign taxes eligible for the credit are determined on the basis of an accounting period of less than one year, the term "year" as used in the §902 provisions means such accounting period.[105]

4. Distributions From Pre-1987 Earnings

The provisions of §902 as in effect prior to the amendments made by the 1986 Act are to apply to all dividends paid out of accumulated profits for any taxable year prior to the first taxable year taken into account in determining the post-1986 undistributed earnings of the distributor.[106]

Any dividend in a taxable year beginning after December 31, 1986, is to be treated as made out of post-1986 undistributed earnings to the extent thereof.

5. Conforming the §960 Credit

Section 960 is amended to conform it, generally, with the amendments made to §902. It is provided in amended §960(a)(1) that, except to the extent provided in regulations, the domestic corporation (in whose gross income earnings and profits of a CFC are included under §951(a)) shall be deemed to have paid a portion of such foreign corporation's post-1986 income taxes determined under §902 in the same manner as if the amount so included were a dividend paid by the foreign corporation (determined by applying §902(c) in accordance with §904(d)(3)(B)).

As seen above, §902(d)(3)(B) is the look through rule applicable to subpart F inclusions. The §902(c) rules outlined above are to be applied, therefore, to each item of separate limitation income.

6. Regulatory Authority

The Secretary is granted broad authority to issue regulations "necessary or appropriate to carry out the provisions of this section" including provisions "which provide for the separate application of this section and §960 to separate types of income or loss." What Congress intended to be provided in these regulations will be discussed below.

7. Effective Date

Act §1202(e) provides that the amendments made to §§902 and 960 (as well as technical amendments to §6038) apply to distributions by foreign corporations out of, and to inclusions under §951(a) attributable to earnings and profits for taxable years beginning after December 31, 1986.

C. Detailed Analysis

1. General Observations

The pooling of post-1986 earnings and profits and the related taxes offers a substantial simplification of the §902 taxes deemed paid rules. Pooling is triggered by the acquisi-

[97] As under prior law §902, the percentage of ownership is based on voting power alone, not value.

tion by a U.S. shareholder of a 10% (or more) stock interest in a foreign corporation at any time during a taxable year of the corporation beginning after 1986. Pooling is effective beginning on the first day of such taxable year. Generally, all undistributed earnings and profits (including those for the year of the dividend or §951 inclusion undiminished by such dividend or inclusion) are added up and all foreign income taxes in excess of those deemed paid are totaled for the pooling period. Any dividend is treated as paid from the most recently added earnings and profits and the deemed paid credit is computed using as the effective foreign rate the average rate imposed during the pooling period. If for year 1 of the period, there were accumulated profits of 1000 on which a foreign tax of 300 was imposed, and if 700 was distributed and 233 of the 300 in tax was deemed paid by the distributee, there would remain for pooling purposes 300 in undistributed earnings and 67 of foreign taxes to be taken into account.

Both House and Senate bills included pooling provisions. The Senate bill provided for a 10-year moving pool, however. The Finance Committee Report [107] notes that if a dividend is paid by a lower tier to an upper tier foreign subsidiary, present law is to apply to determine the year in which the dividend is included in earnings and profits of the recipient. Thus a post-effective date dividend from a second tier to a first tier corporation increases the latter's earnings and profits for the year of the dividend. The recipient's deemed paid taxes are computed on the basis of the payor's most recent post-effective date pool of accumulated earnings and related taxes.[108]

It is made clear that pooling applies only for purposes of determining the deemed paid credit. The amount that can be included in income under §951 remains limited to the CFC's earnings and profits for the current year of inclusion. However, the amount of foreign tax deemed paid with respect to such inclusion is determined on the basis of the average rate for the pooled foreign taxes. Thus, the effect of pooling cannot be avoided by creating subpart F income.[109]

2. Regulations: The Separate Limitations Problem

The interaction between the pooling rules and the separate limitation rules is somewhat complex and will have to be addressed by regulations.

To apply the separate limitations provisions of §904(d), income (and losses) falling under each of the separate limitations categories will have to be pooled separately together with the related taxes. In the case of subpart F income, the §951 inclusion will be characterized on a prorata basis, that is, attributed to the underlying items of foreign base company income by category of separate limitation income. This does not apply to inclusions under §951(a)(1)(B)(investments in U.S. property) which are treated as dividends. The foreign tax imposed on each such category is determined on the basis of the accumulated pool of each such category of income and the related taxes. Under the anticipated regulatory rules, then, if there is a subpart F inclusion of passive income, and the average rate of foreign tax on the pooled passive income from which the distribution is deemed made is low, the foreign tax deemed paid with respect to this category of income should reflect that fact.

Obviously, the rules to be issued will involve a number of technical provisions to carry out the intent of both the pooling of income and taxes for purposes of the deemed paid credit and the purposes of the separate limitations provisions. At present, it is too early to speculate on their exact contents.

3. Repeal of the Subpart F "Chain Deficit Rule"

While discussed in detail in Chapter 23, *infra*, it is noted here that the repeal of the so-called "chain deficit rule" of former §952(d), and the amendment of the provisions of §952(c) relating to limitations of the application of CFC deficits to offset subpart F income of later years implement the separate limitations provisions. Under the provisions of §952(d), the so-called "chain deficit rule," if a CFC had a deficit in current earnings, another CFC in the same chain of ownership could apply the deficit (subject to certain limitations) to offset the subpart F income of another CFC. Further, under the rule (retained in the Act) of §952(c)(1) that a CFC's subpart F income cannot exceed its earnings and profits, current deficits in any income category could, under prior law, offset income in another, and a CFC's deficit in earnings and profits in a prior year could offset its subpart F income in a current year.

Act §1221(f) repealed §952(d). Further, it amended §952(c) to restrict the application of deficits of prior years to income of the current year. Such application is permitted only as to earnings from "qualified activities" and only to the extent of a "qualified deficit." Qualified activities are those giving rise to shipping income, oil and gas related income, insurance income of a qualified insurance company and FPHC income of a qualified financial institution. Qualified insurance companies and financial institutions must be "predominantly engaged" (*see*, discussion above relating to the separate limitation for financial services income) in insurance or the active conduct of banking, financing, etc, respectively. Under these new rules, separate limitation income of a CFC (which is usually subpart F income) is not eliminated by deficits of other CFC's or by deficits arising from previous years attributable to activities which do not generate the same category of separate limitation income. Note that, with the exception of qualified financial institutions, a deficit in an activity generating passive income in one year does not offet passive income in a later year. The Conference Report states that: "Preserving separate limitation income (otherwise eliminated by deficits) for foreign tax credit limitation purposes absent the indicated subpart F changes would necessitate more frequent application of the look through rule to dividends paid by controlled foreign corporations with passive income." [110] Conf. Rep. at II-578.

IV. Clarification of the Treatment of Foreign Losses

A. Background and Legislative History

As was noted above, in 1976 Congress enacted the provisions of §904(f), since amended, providing for the recapture of foreign losses. The recapture rule provides, generally, that where the taxpayer sustains an overall foreign loss in any taxable year, foreign source income recognized in a succeeding taxable year is recharacterized as U.S. source income for foreign tax credit purposes to the extent of such foreign loss previously allowed. However, the "recapture" is limited to 50% of the foreign income recognized in any taxable year until the loss account has been exhausted. The taxpayer can elect to apply a greater amount. The purpose of this general rule is to prevent what Congress perceived to be a double tax benefit in the case where the overall foreign loss reduced U.S. taxable income and where the foreign tax law did not provide for a deduction similar to the U.S. net operating loss carryover, the taxpayer obtained a benefit from the application of the foreign loss to reduce U.S. taxable income, and in the succeeding year was allowed a credit for taxes paid on the income (which, under U.S. tax principles, would be eliminated by the carryover) reducing U.S. tax a second time. Thus a credit was allowed for foreign taxes paid on what under U.S. tax law was zero taxable income. The change of source rule was enacted to cure this defect.

When separate limitation categories were enacted by §904(d), the question arose as to whether a net loss sustained in a separate limitation category (including the overall category) should be applied directly to offset U.S. taxable income, or whether it should be applied to reduce foreign income in other categories. The provisions of §904(f) as in effect prior to the 1986 amendments did not address this issue. However, §907(c)(4) provides that overall foreign extraction loss must first be applied against the taxpayer's other foreign income and then the taxpayer's U.S. taxable income. Such losses are subject to a separate recapture rule under which subsequent foreign extraction income is recharacterized as other foreign income to the extent of the extraction losses applied to such other income in the overall extraction loss year(s). Where an overall foreign loss is made up, in part, of an extraction loss, both recapture rules apply to subsequent years.[111] Congress was persuaded that in cases involving a U.S. taxpayer with net losses in one or more separate limitation categories, if separate basket losses could be used to offset directly U.S. taxable income without first being applied to other foreign income, substantial revenue loss could result, especially in cases where there was no subsequent income in that separate limitation loss category to which the change of source rule of §904(f) could be applied.[112]

B. Overview

1. Foreign Loss Allocation and Recharacterization Rules

Act §1203(a) amends §904(f) by adding new paragraph (5). Under the new provisions, the amount of the separate limitation losses for a taxable year must first be applied to reduce, pro rata, foreign income in other separate limitation categories, and only then may it be applied to reduce U.S. taxable income.[113] Where a separate limitation loss (assume for purposes of this explanation, a loss in category A) is allocated under the above rule to separate limitation income in another category (assume it was applied to income in categories B and C), and there is income in category A for a subsequent year, then such income, to the extent it does not exceed the separate limitation losses not previously recharacterized, is recharacterized as income from categories B and C in proportion to the previous reductions not previously taken into account.[114] The statute specifies that nothing in the recharacterization rules shall be construed as recharacterizing any tax.

2. U.S. Loss Allocation Rule

Subparagraph (D) of new §904(f)(5) contains rules applicable to U.S. source losses. Any U.S. source loss, to the extent it does not exceed the separate limitation incomes for the year, is to be allocated among, and reduce, such incomes on a proportionate basis. This rule is applied *after* the allocation of foreign separate limitation losses under §904(f)(5)(B), *supra*.

3. Definitions

Subparagraph (E) defines "income category," "separate limitation income," and "separate limitation loss." The latter term means, with respect to any separate limitation category, the loss from such category determined under the principles of §907(c)(4)(B) (relating to oil and gas extraction losses).

4. Effective Date

These amendments to §904(f)(5) apply to losses incurred in taxable years beginning after December 31, 1986.

C. Detailed Analysis

The Conference Committee report contains an example which seems adequately to explain the operation of the rules for the allocation and recharacterization of foreign losses:

> *Example:* A U.S. corporation earns $200 of U.S. source income and $20 of foreign income in the limitation category for FSC distributions. It also has a $20 overall limitation loss and a $5 shipping income category loss. Applying the proportionate allocation rule, $16 of the overall loss is applied to offset the $20 of FSC separate limitation income ($20 ÷ $25 × $20 = $16), and $4 of the shipping loss is so applied ($5 ÷ $25 × $20 = $4). The remaining $4 of the overall loss and $1 of the shipping loss are applied to reduce U.S. taxable income to $195. There is no foreign income for tax credit purposes. If the corporation earns sufficient overall limitation income in later years, then, after application of the general recapture rule of §904(f), $16 of such income is subject to recharacterization as

[111] *See* Sen. R. at 300-1.
[112] *Id.*
[113] §904(f)(5)(A) and (B).
[114] §904(f)(5)(C).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

FSC separate limitation income. The same applies to subsequent shipping limitation income.[115]

The Committee further clarifies application of the general foreign loss recapture rule in the light of the new separate limitations provisions. It is intended that foreign income earned in a year following an overall foreign loss year be recharacterized as U.S. source income only to the extent that the foreign income is of the same limitation category as the previous loss.[116] This may, admittedly, result in a much slower absorption of the foreign loss than under prior rules. For example, assume that a U.S. corporation incurs a $100 overall limitation loss and earns $300 of U.S. income in a taxable year. The full $100 loss is an overall foreign loss subject to recapture in a later year because U.S. income is offset by the full amount of the loss. In the following taxable year, the taxpayer earns $50 of overall limitation income, $150 of passive limitation income, and $250 of U.S. income. The conferees intend that the present-law 50% limitation (§904(f)(1)(B)) on the amount of foreign income that must be recharacterized as U.S. income in a taxable year be applied to the full amount of the corporation's foreign income, $200, as it would be under present law. Thus, up to $100 of foreign income can be recharacterized as U.S. income under the 50% limitation. However, the corporation has only $50 of income of the same limitation type (overall) as the prior year foreign loss. Only that $50 then is to be recharacterized as U.S. income under the overall foreign loss recapture rule. Thus, for foreign tax credit limitation purposes, the corporation has $150 of passive limitation income, $300 of U.S. income, and no overall limitation income for the taxable year. Up to $50 of overall limitation income earned in a subsequent year will be subject to recapture because only $50 of the $100 overall foreign loss incurred in the first taxable year has been recaptured.[117]

It was also thought necessary to clarify in the Conference Committee report the interaction between the new U.S. loss recharacterization rule of §904(f)(5)(D), outlined above, and the other rules relating to the allocation and recharacterization of foreign losses. The example provided in the report explains this clarification:

The taxpayer sustains a $100 U.S. source loss and a $50 overall category loss. It also has $600 of shipping category and $400 of passive income category foreign income. The foreign loss allocation rule is applied before the U.S. loss allocation rule. Thus, $30 of the overall loss is applied to reduce the shipping income and $20 is applied against passive income, reducing these amounts, respectively, to $570 and $380. Under the conference agreement, $60 of the $100 U.S, loss is applied to the shipping income and the remaining $40 to the passive income.

The following year, the taxpayer has a U.S. loss of $780. It also has $200 of overall limitation foreign income and $600 of shipping income. The U.S. loss allocation rule applies before the foreign loss allocation rule. Thus, $195 of the U.S. loss reduces the overall limitation income, and the remainder reduces the shipping income. For the year then, the taxpayer has no U.S. income, $5 of overall limitation income and $15 of shipping income before the application of the foreign loss allocation rule. Under the latter rule, $3 of the overall limitation income is recharacterized as shipping income, and $2 is recharacterized as passive income, since in the prior year $30 of shipping and $20 of passive income were eliminated by the $50 overall limitation loss.

Finally, in the current year, there is no U.S. income, $18 of shipping income and $2 of passive income. If overall limitation is earned in later years, up to $45 ($50 − $5) will be subject to the loss recharacterization rule.[118]

These "clarifications" will undoubtedly be set forth in regulations to be issued at a later date. The report states that these should provide for application of the foreign loss recharacterization rules to an entity that is a successor entity to the one that benefited from the previous application of the rule.

Other clarifications:

(1) The foreign loss allocation and recharacterization rules are to be applied on an affiliated group basis in the case of such a group which files a consolidated return.

(2) These rules also apply to net operating loss carryovers. The report posits a U.S. corporation operating mostly abroad with a $200 NOL attributable to activities that would generate overall limitation income, and which, the following year, has $180 of overall limitation income and $30 of passive income. In carrying the NOL forward, applying the foreign loss allocation rule, the carryover absorbs $180 of overall limitation income first (since the loss was sustained in that category) and the $20 remainder reduces the passive income. If $220 of overall limitation income is earned the following year, $20 of this is recharacterized as passive income.[119]

(3) As under the House and Senate versions of these rules, it is emphasized in the report that they in no way provide for a recharacterization of foreign taxes. Thus, where foreign income in basket A is recharacterized as income from basket B, the foreign taxes imposed on the income in the A basket are not to be treated as imposed on income in the B Basket in computing the limitations under §904(a).

(4) Finally, §952(c) (relating to limitations on the applications of deficits in determining subpart F income, discussed at II.C. above) was amended by adding paragraph (2) which provides that where a deficit in earnings and profits of a CFC is applied to offset the subpart F income of a later year, any excess of the earnings and profits for any subsequent taxable year over the subpart F income of the corporation for such year is to be recharacterized as subpart F income under rules similar to those of §904(f)(5). The amendments made to §952 are discussed in chapter 63, *infra*.

V. Other Foreign Tax Credit Related Provisions

A. Codification of Regs. §901-2(e)(3): Taxes Used as Subsidies

1. Statutory Provisions

Act §1204 adds a new subsection (i) to §901 (redesignating prior (i) as (j)) to provide that otherwise creditable foreign income taxes are not to be treated as taxes for credit purposes to the extent that the amount thereof is used (directly or indirectly) to provide a subsidy by any means to the taxpayer, a related person (within the meaning of §482) or any party to the transaction or to a related transaction.

The amendment applies to foreign taxes paid or accrued in taxable years beginning after December 31, 1986.

2. Committee Report Comments

The Conference Report [120] points out that the above codification of Regs. §1.901-2(e)(3) [121] is not intended to modify Regs. §1.901-2(f)(2)(i) which provides that a tax is treated as paid by the taxpayer for credit purposes even if another party to the transaction with the taxpayer agrees, as part of the transaction, to assume liability for the tax.

An example of such a subsidy situation is contained in the Finance Committee Report (page 325). Assume that a U.S. bank lends money to foreign development bank B which relends the money to residents of its country. B's country of residence imposes a withholding tax on the interest paid to the U.S. bank. Of such tax, half is credited by the tax authorities to an account of B which amount B is obligated to pay over to the resident borrowers. This is a subsidy to the borrowers from B based on the amount of the withholding tax imposed on its payments to the U.S. entity. As such, it is not creditable under the codified regulations set forth above.[122]

The Conference Committee conferees intend that the amount of any withholding tax paid be "positively established through documentation" provided in accordance with §905(b) and Regs. §1.905-2. It is emphasized that the fact that withholding actually took place does not necessarily constitute proof of the amount of tax paid.[123]

The conferees expressed concern over possible abuses under the rule set forth in *Lederman v. Comr.*, 6 T.C. 991 (1946) suggesting that payment is proved ipso factor by the act of withholding.[124] In the case of a "net loan," for example, the agreement between the parties provides that the U.S., lender is to be paid a certain amount of interest net of any withholding by the tax authorities of the country of the borrower. Receipt of payment by the lender is not in and of itself proof that any amount has actually been withheld or the amount thereof.

The Report refers to cases in which amounts purportedly withheld are retained by the withholding agent, in whole or in part, with the explicit approval of the foreign government. It is therefore considered necessary in granting credit for taxes withheld on interest payments that a receipt or other positive proof of payment be submitted by the taxpayer.[125]

B. Limitations on Carrybacks to Pre-1987 Years

Due to the dramatic changes in U.S. tax rates and the elimination of the capital gains preferential tax rate, Congress deemed it necessary to provide special rules for the carryback of foreign excess foreign tax credits generated in years after 1986 to pre-1987 years. Act §1205(a)(1) provides that any such excess credits generated in post-1986 years may be carried back under §904(c) to pre-1987 years only to the extent that they are not attributable to the rate reductions effected by the 1986 Act. Also, regulations are authorized prescribing "proper adjustments" to the carrybacks authorized under Act §1205(a)(1) to take into account: (1) the repeal of the zero bracket amount, and (2) changes in the treatment of capital gains.[126]

Act §1205(b) provides that foreign taxes paid or accrued in a taxable year beginning after 1986 which, after the application of the above carryback rules, are treated as paid in a pre-1987 year will be treated as imposed on overall limitation income (under pre-enactment §904(d)). However, no carryback to pre-1987 years is permitted with respect to high withholding taxes imposed on interest. The Conference Committee added this provision to avoid the defeat of the purpose of the separate limitation for high withholding tax interest.

[120] Conf. Rep. at II-594.

[121] The Finance Committee Report, S. Rep. at 325, notes that the validity of these regulations is presently being challenged by a petition in the Tax Court, and states that no inference is to be drawn from this codification as to the validity of the regulations in question.

Addendum to Chapter 59

INTERNAL REVENUE SERVICE ADVANCE NOTICE 87-6, ON TRANSITION RULES RELATING TO FOREIGN TAX CREDIT PROVISIONS OF THE TAX REFORM ACT OF 1986, RELEASED DEC. 24, 1986 (TEXT)

Part III — Administrative, Procedural, and Miscellaneous

Transitional Rules Relating to Amendments to the Foreign Tax Credit Provisions under the Tax Reform Act of 1986

Notice 87-6

The Internal Revenue Service today announced guidance relating to several aspects of the amendments made to the foreign tax credit rules by the Tax Reform Act of 1986 (the Act). The rules contained in this announcement will be incorporated in regulations to be issued under the 1986 Act. Taxpayers may rely on the rules provided herein for the purposes specified until regulations are issued.

Specifically, this announcement provides guidance with respect to: (1) the effective date of the amendments to section 904(d) generally; (2) the characterization of distributions and section 951(a)(1)(B) inclusions out of earnings and profits of a foreign corporation accumulated in a taxable year beginning before January 1, 1987, during taxable years of both the payor and recipient beginning after December 31, 1986, and the application of the rules for characterizing associated taxes paid or accrued by a foreign corporation; (3) the application of the effective date provisions and the look-through rules under section 904(d)(3) to distributions (including deemed distributions) and payments by a foreign corporation to a recipient during a taxable year of either the payor or the recipient that begins after December 31, 1986, and a taxable year of the other that begins before January 1, 1987; (4) transitional issues affecting the computation of the indirect foreign tax credit; (5) the grouping of items of income for purposes of determining whether income is high-taxed income under section 904(d)(2)(A)(iii)(III); and (6) clarification of the U.S. tax rate to be used in order to determine whether income is high-taxed income.

1. Application of the Effective Date Provision of Section 904(d)

Section 1201(e) of the Act provides that the amendments to section 904(d) are generally applicable to taxable years beginning after December 31, 1986. For purposes of applying the look-through rules under section 904(d)(3), the amendments to section 904(d) shall apply to distributions and section 951 inclusions of earnings and profits of a controlled foreign corporation derived during the first taxable year of the controlled foreign corporation beginning after December 31, 1986, and thereafter, and to payments made by a controlled foreign corporation during such taxable years, without regard to whether the corresponding taxable year of the recipient of the distribution or payment or of one or more of the U.S. shareholders of the controlled foreign corporation begins after December 31, 1986.

2. Characterization of Distributions and Section 951(a)(1)(B) Inclusions of Earnings of a Foreign Corporation Accumulated In Taxable Years Beginning Before January 1, 1987 During Taxable Years of Both the Payor Foreign Corporation and the Recipient Which Begin After December 31, 1986

Section 904(d)(2)(I) provides transition rules relating to the treatment of foreign tax credit carryovers from taxable years beginning before January 1, 1987. In general, those rules provide that pre-effective date unused foreign taxes on income subject to the general limitation shall be carried over to post-effective date years to reduce U.S. tax only on income subject to the general limitation. A special rule provides, however, that pre-effective date foreign taxes unused in pre-effective date years by reason of the general limitation may be used to reduce U.S. tax on post-effective date financial services income or shipping income, as the case may be, if the taxpayer establishes that these taxes were in fact paid or accrued with respect to that type of income. Taxes paid or accrued with respect to pre-effective date separate limitation interest income shall be carried over to offset U.S. tax on post-effective date income in the passive category. Taxes paid or accrued on any other type of pre-effective date separate limitation income (*e.g.*, DISC or FSC distributions) shall be carried over to offset U.S. tax on that type of income.

The effective date provisions of section 1201(e) of the Act do not provide rules relating to the characterization of distributions or section 951(a)(1)(B) inclusions out of earnings and profits accumulated in taxable years of a foreign corporation beginning before January 1, 1987, that occur after the effective date of the Act as applied to both the foreign corporation and the distributee or U.S. shareholder. Rules comparable to the rules contained in section 904(d)(2)(I) shall be applied for purposes of characterizing such distributions and section 951(a)(1)(B) inclusions and for purposes of characterizing foreign taxes deemed paid with respect to such distributions or section 951(a)(1)(B) inclusions.

As an initial matter, income derived by a foreign corporation in taxable years beginning before January 1, 1987, is characterized in the foreign corporation's hands under subparagraphs (A) or (E) of section 904(d)(1) (as in effect prior to the effective date of the Act) after application of the de minimis rule of section 904(d)(3)(C) (as in effect prior to the effective date of the Act). When, in a taxable year after the effective date of the Act, earnings and profits attributable to such income are distributed, or included in the gross income of a U.S. shareholder under section 951(a)(1)(B), the ordering rules of section 904(d)(3)(D), as in effect after the effective date, shall be applied to determine initially the character of the income of

the distributee or U.S. shareholder. Thus, a proportionate amount of a distribution described in this section will be initially characterized as separate limitation interest income in the hands of the distributee based on the ratio of the separate interest limitation earnings and profits out of which the dividend was paid to the total earnings and profits out of which the dividend was paid. The distribution or section 951(a)(1)(B) inclusion must then be recharacterized in the hands of the distributee or U.S. shareholder on the basis of the following principles:

(a) Distributions and section 951(a)(1)(B) inclusions that are initially characterized as income described in section 904(d)(1)(A) (as in effect prior to the date of enactment of the Act).

(b) Distributions and section 951(a)(1)(B) inclusions that the initially characterized as income described in section 904(d)(1)(E) (as in effect prior to the effective date of the Act) shall be treated as income described in section 904(d)(1)(I) (as in effect on and after the effective date of the Act), unless the taxpayer establishes to the satisfaction of the Commissioner that the distribution or section 951(a)(1)(B) inclusion is attributable to: (i) earnings and profits accumulated with respect to shipping income, as defined in section 904(d)(2)(D) (as in effect on and after the effective date of the Act); or (ii) in the case of an entity meeting the requirements of section 904(d)(2)(C)(ii) (an entity that is predominantly engaged in the active conduct of a banking, insurance, financing, or similar business), earnings and profits accumulated with respect to financial services income, as defined in section 904(d)(2)(C)(ii) (as in effect on and after the effective date of the Act).

(c) In order for a taxpayer to establish that distributions or section 951(a)(1)(B) inclusions that are attributable to earnings and profits that would otherwise be considered accumulated with respect to the general limitation in a particular taxable year beginning before January 1, 1987, are attributable to earnings and profits accumulated with respect to shipping or financial services income, the taxpayer must establish the amount of foreign taxes paid or accrued with respect to those earnings and profits that are to be treated as taxes subject to the separate limitation for shipping or financial services income, as the case may be, under section 904(d)(2)(I) (as in effect on and after the effective date of the Act). Conversely, in order for a taxpayer to establish the amounts of general limitation taxes paid or accrued in a taxable year beginning before January 1, 1987, that are to be treated as taxes paid or accrued with respect to shipping or financial services earnings and profits, as the case may be, the taxpayer must establish the amount of any distributions or section 951(a)(1)(B) inclusions that are attributable to earnings and profits that are accumulated with respect to shipping or financial services income.

3. Application of Look-through Rules to Distributions (Including Deemed Distributions) and Payments by a foreign Corporation to a Recipient When One's Taxable Year Begins Before January 1, 1987 and the Other's Taxable Year Begins After December 31, 1986

The effective date provisions of section 1201(e) of the Act do not include rules relating to the application of the look-through rules under section 904(d)(3) to payments made by a controlled foreign corporation during its taxable year beginning after December 31, 1986, but received in a taxable year of the recipient beginning before January 1, 1987. The provisions also do not address distributions (including deemed distributions) or payments made by a foreign corporation during its taxable year beginning before January 1, 1987, and received in a taxable year of the recipient beginning after December 31, 1986. This section provides rules to be applied in characterizing such distributions or payments.

(a) If interest, rents, or royalties are paid or accrued on or after the effective date of the look-through rules under new section 904(d)(3) as applied to the payor, but prior to the start of the recipient's first taxable year beginning after January 1, 1987, such interest, rents, or royalties shall initially be characterized in accordance with the new look-through rules. To the extent that interest payments in the hands of the recipient are initially characterized as passive income under these rules, they will be treated as separate limitation interest in the hands of the recipient. To the extent that rents or royalties in the hands of the recipient are initially characterized as passive income under these rules, they will be recharacterized as general limitation income in the hands of the recipient.

(b) If interest, rents, or royalties are paid or accrued before the effective date of the new look-through rules of section 904(d)(3) as applied to the payor, but on or after the start of the recipient's first taxable year beginning after January 1, 1987, the income in the recipient's hands shall be initially characterized in accordance with section 904(d)(3) as in effect prior to the effective date of the Act. To the extent interest income is characterized as separate limitation interest income under these rules, that income shall be recharacterized as passive income in the hands of the recipient. Rents or royalties will be characterized as general limitation income.

(c) If dividends are paid or accrued or section 951(a)(1) inclusions occur before the effective date of the new look-through rules of section 904(d)(3) as applied to the payor, but on or after the start of the first taxable year of the distributee or U.S. shareholder beginning after January 1, 1987, the dividends or section 951(a)(1) inclusions in the hands of the distributee or U.S. shareholder shall be initially characterized in accordance with section 904(d)(3) as in effect prior to the effective date of the Act, including the ordering rules of section 904(d)(3)(A) and (G). Therefore, under section 904(d)(3)(A) of prior law, dividends and section 951(a)(1) inclusions are considered to be paid or derived first from earnings attributable to separate limitation interest income. To the extent the dividend or section 951(a)(1) inclusion is initially characterized under these rules as separate limitation interest in the hands of the distributee or U.S. shareholder, the dividend or section 951(a)(1) inclusion shall be recharacterized as passive income in the hands of the distributee or U.S. shareholder. The portion, if any, of the dividend or section 951(a)(1) inclusion that is not characterized as passive income shall be characterized according to the rules in section (2). Therefore, a taxpayer may establish that income that would

otherwise be characterized as general limitation income is shipping or financial services income. Rules comparable to the rules contained in section 904(d)(2)(I) shall be applied for purposes of characterizing foreign taxes deemed paid with respect to distributions and section 951(a)(1) inclusions covered by this section.

The following examples illustrate the application of these principles:

Example (1). X is a domestic corporation that is a fiscal year taxpayer (July 1-June 30). FS, a controlled foreign corporation, is a wholly-owned subsidiary of X and has a calendar taxable year. On June 1, 1987, FS makes a $100 interest payment to X.

Because the payment is made after January 1, 1987 (the first day of FS's first taxable year beginning after December 31, 1986), the look-through rules of new section 904(d)(3) apply to characterize the payment made by FS. To the extent, however, that the interest payment to X is allocable to passive income earned by FS, the payment will be included in X's separate limitation for interest as provided in section 904(d)(1)(A) before the 1986 Act.

Example (2). X is a domestic corporation that is a calendar year taxpayer. FS, a controlled foreign corporation, is a wholly-owned subsidiary of X and has a July 1-June 30 taxable year. On June 1, 1987, FS makes a $100 interest payment to X.

Because the payment is made prior to July 1, 1987 (the first day of FS's first taxable year beginning after December 31, 1986), the look-through rules of new section 904(d)(3) do not apply. Assume that, under old section 904(d)(3), the interest payment would be characterized as separate limitation interest income. For purposes of determining X's foreign tax credit limitation, the interest payment will be included in X's separate limitation for passive income as provided in section 904(d)(1)(A) as amended by the 1986 Act.

Example (3). The facts are the same as in example (2) except that on June 1, 1987, FS makes a $100 dividend distribution to X.

Because the dividend is paid prior to July 1, 1987 (the first day of FS's first taxable year beginning after December 31, 1986), the look-through rules of new section 904(d)(3) do not apply. Assume that, under old section 904(d)(3), FS's earnings and profits for the taxable year ending June 30, 1987 consist of $200 of earnings attributable to general limitation income and $75 of earnings attributable to separate limitation interest income. The portion of the dividend that is attributable to FS's separate limitation interest and is treated as separate limitation interest income under old section 904(d)(3) is $75. The remaining $25 of the dividend is treated as general limitation income under old section 904(d)(3). For purposes of determining X's foreign tax credit limitation, $75 of the dividend will be recharacterized as passive income. The remaining $25 of the dividend will be characterized as general limitation income, unless X can establish that the general limitation portion is attributable to shipping or financial services income.

Although, in certain instances, income may be treated as passive or separate limitation interest income under this section, the rules provided in section 1205(b) of the Act operate independently of the rules discussed in this section. Section 1205(b) of the Act provides rules relating to foreign tax credit carrybacks with regard to taxes paid in taxable years beginning after 1986. Foreign taxes paid or accrued in a taxable year beginning after 1986 with respect to income other than high withholding tax interest that are carried back to a taxable year beginning before 1987 are treated as imposed on general limitation income without regard to whether the underlying income is, in fact, general limitation income.

4. Transitional Issues Affecting the Computation of the Indirect Foreign Tax Credit

Section 1202(a) and (b) of the Act amends sections 902 and 960 of the Code by replacing the annual ordering rules of prior law with ordering rules for post-1986 earnings and taxes based on perpetual pools. Subject to qualifications similar to those of prior law, post-1986 foreign income taxes paid by a foreign corporation may be treated as paid by a 10 percent domestic corporate shareholder in the same proportion as dividends that are paid out of post-1986 earnings bear to the foreign corporation's post-1986 undistributed earnings. As under prior law, post-1986 foreign income taxes paid by 2nd-tier or 3rd-tier foreign corporations are also deemed paid by a domestic corporate shareholder if certain qualifications contained in section 902(b) are met.

Section 902(c)(1) defines the term "post-1986 undistributed earnings" as the amount of earnings and profits of the foreign corporation (computed in accordance with sections 964 and 986) accumulated in taxable years beginning after December 31, 1986, determined as of the close of the taxable year of the foreign corporation in which the dividend is distributed without diminution by reason of dividends distributed during the taxable year. Section 902(c)(2) defines the term "post-1986 foreign income taxes" as the sum of (1) foreign income taxes with respect to the taxable year of the foreign corporation in which the dividend is distributed, and (2) the foreign income taxes with respect to prior taxable years beginning after December 31, 1986, to the extent such foreign taxes were not deemed paid with respect to dividends distributed by the foreign corporation in prior taxable years.

Section 1202(e) of the Act provides that the amendments made by section 1202 of the Act shall apply to distributions by foreign corporations out of, and to inclusions under section 951(a) of the Code attributable to, earnings and profits for taxable years beginning after December 31, 1986.

The following rules will apply with respect to the computation of the deemed-paid foreign tax credit under sections 902 and 960 as amended by the Act.

(a) *Sixty-day rule.* The sixty-day rule set forth in section 902(c) of the Internal Revenue Code, as in effect prior to the date of enactment of the Act, is not applicable to dividends paid during the first sixty days of a foreign corporation's first taxable year beginning after December 31, 1986.

(b) *Effective date rules for translating into U.S. dollars certain inclusions and indirect foreign tax credits.* For purposes of establishing the amount or character of income under sections 902, 951(a)(1)(B), and 1248, and the amount of indirect foreign tax credits under sections 902 and 960, earnings and profits of a foreign corporation accumulated in taxable years of the foreign corporation beginning before January 1, 1987, and foreign taxes deemed paid or accrued with respect to such earnings and profits under section 902 or 960, shall be determined and translated into dollars under the law in effect before the enactment of the Act. This rule applies regardless of the taxable year such amount is included in gross income by any shareholder of the foreign corporation.

(c) *Transition rules for certain distributions through tiers of foreign corporations.* For purposes of sections 902 and 960—

(i) Distributions by a 2nd-tier corporation with a functional currency (as defined in section 985(b)) other than the U.S. dollar that are out of earnings and profits accumulated in taxable years beginning after December 31, 1986, and included in the gross income of a 1st-tier corporation for any taxable year of the 1st-tier corporation beginning before January 1, 1987, shall be translated as necessary into the appropriate currency under the law in effect before the enactment of the Act. The foreign taxes paid or accrued by the 2nd-tier corporation with respect to such earnings and profits which are deemed paid by the 1st-tier corporation shall also be translated under the law in effect before the enactment of the Act.

(ii) Distributions by a 2nd-tier corporation that are out of earnings and profits accumulated in its taxable years beginning before January 1, 1987, and included in gross income of a 1st-tier corporation for any taxable year of the 1st-tier corporation beginning after December 31, 1986, shall be treated as post-1986 undistributed earnings (as defined in section 902(c)(1)) of the 1st-tier corporation. If the books and records of the 2nd-tier corporation are not kept in U.S. dollars, the foreign taxes paid or accrued by the 2nd-tier corporation with respect to such earnings and profits which are deemed paid by the 1st-tier corporation shall be translated into U.S. dollars at the spot rate for the date of distribution by the 2nd-tier corporation and treated as post-1986 foreign income taxes (as defined in section 902(c)(2)) of the 1st-tier corporation.

(iii) The rules in (i) and (ii) apply to a distribution from a 3rd-tier corporation to a 2nd-tier corporation by substituting "3rd-tier" for "2nd-tier" and "2nd-tier" for "1st-tier" in the preceding sentences.

5. Grouping of Items of Income for Purposes of the High-Tax "Kick Out"

Section 1201(a) of the Act amends section 904(d) of the Code by replacing the separate limitation for interest income with a separate limitation for passive income generally. under section 904(d)(2)(A)(iii)(III), high-taxed income is excluded from the category of passive income. Section 904(d)(2)(F) defines high-taxed income as any income which would otherwise be passive income but is not so treated because the sum of the foreign income taxes paid and deemed paid by the taxpayer with respect to that income exceeds the highest rate of tax specified in Section 1 or 11 of the Code multiplied by the amount of such income. Income is to be tested after allocation of expenses at the taxable level.

The following rules apply for purposes of grouping items of income in order to determine whether the items of income as grouped are high-taxed income:

(a) All interest, rents, and royalty payments received or accrued by the taxpayer from a particular controlled foreign corporation during the taxable year that are characterized (after application of the look-through rules of section 904(d(3)) as passive income shall be treated as one item of income:

(b) All passive income (determined after application of the look-through rules of section 904(d)(3)) included in the gross income of a U.S. shareholder under section 951(a)(1)(A) for a particular taxable year from each separate controlled foreign corporation shall be treated as a separate item of income.

(c) All passive rents and royalties not described in (a) or (b) that are received or accrued by a taxpayer during the taxable year shall be treated as one item of income; and

(d) All other passive income not described in (a), (b), or (c) that is received or accrued by a taxpayer during the taxable year shall be treated as one item of income.

The grouping rules described in (c) and (d) shall apply separately with respect to income attributable to each qualified business unit (as defined in section 989(a)) of a taxpayer if a taxpayer has more than one qualified business unit.

6. Applicable United States Tax Rate for 1987 with Respect to Determination of High-Taxed Income.

Section 904(d)(2)(F) defines high-taxed income with reference to the highest rate of tax specified in section 1 or section 11 of the Code. Similarly, section 954(b)(4) defines high-taxed income with reference to the section 1 or section 11 rates. For 1987, the tax rates in section 1 and section 11 are "blended" by virtue of the operation of section 15. Therefore, for purposes of sections 904(d)(2)(F) and 954(b)(4), the applicable tax rate for 1987 is the highest blended rate that applies to the taxpayer.

For further information contact Carol DuPuy (202-566-3289) or Marnie Carro (202-566-3499) regarding sections (1), (2), (3), (5) and (6), Kenneth Wood (202-566-6276) regarding section (4)(a) and Scott Farmer (202-566-3407) regarding sections (4)(b) and (c).

I. Overview

A. Introduction

Prior to the Tax Reform Act of 1986 (the "Act"), there was no comprehensive set of rules governing the U.S. tax treatment of gain or loss from fluctuations in the value of foreign currency ("exchange gain or loss"). Guidance on such fundamental issues as the timing, amount, character and source of exchange gain and loss was provided, if at all, by a patchwork quilt of often inconsistent, sometimes confusing Internal Revenue Service rulings, court decisions and scattered Internal Revenue Code provisions and Treasury regulations. No clear authority existed even as to the characterization of currency as "foreign" in respect of a particular taxpayer's operations. Controversy surrounded such technical issues as the appropriate method to account for and translate the results of foreign currency-denominated branch operations; the appropriate exchange rates for translating branch remittances; dividends from, earnings and profits of, and foreign taxes paid or accrued by foreign subsidiaries; the includibility, character, and source of exchange gains or losses recognized on the repayment of foreign currency borrowings; and the proper characterization of foreign currency swaps and similar transactions.

The need for a comprehensive rationalization of the U.S. tax rules applicable to foreign currency was broadly addressed for the first time in December 1980, in the Treasury Department's *Discussion Draft on Taxing Foreign Exchange Gains and Losses*. The *Discussion Draft*, borrowing and elaborating on the "functional currency" concept first introduced in the same year as part of the Financial Accounting Standard Board's *Statement of Financial Accounting Standards No. 52: Foreign Currency Translation*, proposed fundamental changes in the tax rules governing both the translation of foreign branch and subsidiary results and the treatment of particular types of foreign currency transactions. Although provisions of the Economic Recovery Tax Act of 1981, the Technical Corrections Act of 1982, the Tax Equity and Fiscal Responsibility Act of 1982, and the Deficit Reduction Act of 1984, either were aimed at or had an impact upon particular types of foreign currency transactions, the prospect of comprehensive legislation in the area did not resurface in earnest until May 1985, when the *President's Tax Proposal to the Congress for Fairness, Growth and Simplicity* (Treasury II) singled out the area as a key tax reform priority and outlined a series of specific proposals building on the foundation earlier established in the *Discussion Draft*. An exhaustive study of the area, including a detailed response to the Administration's specific proposals, was issued by the Joint Committee Staff in July 1985. By year-end, the process which had begun five years earlier culminated in passage of the House Bill version of the foreign currency provisions and ultimately in enactment of a slightly modified version of those provisions as part of the 1986 Act.

The Act generally preserves the basic principles developed under the judicial authorities to the effect that foreign currency is "property" for U.S. tax purposes and that exchange gain or loss must be computed and reported separately and apart from the gain or loss on any underlying transaction. However, the Act amplifies such principles as relevant in both the translation and transactional contexts by providing a comprehensive set of rules designed to rationalize and clarify the state of the law in respect of foreign currency-denominated transactions and to establish consistent rules to govern the translation of foreign currency-denominated taxes and earnings and profits for foreign tax credit and related purposes.

B. Summary

1. Functional Currency

The Act generally requires a taxpayer to identify the primary operating currency (*i.e.*, "functional" currency) for each "qualified business unit" ("QBU") and to determine the unit's income or loss in the first instance in that currency. The use of a functional currency other than the U.S. dollar generally will preclude the recognition of exchange gain or loss in respect of the QBU's functional currency transactions, although gain or loss may be triggered by nonfunctional currency transactions or when the operations are liquidated or its profits are distributed. A QBU's functional currency is "the currency of the economic environment in which a significant part of such unit's activities are conducted and which is used by such unit in keeping its books and records." Such functional currency will be the U.S. dollar if the QBU's activities are "primarily" conducted in U.S. dollars or, if they are not, the

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

determination generally will turn (subject to certain exceptions) on a facts and circumstances test as applied under the statute's "economic environment" standard. A QBU is defined as any "separate and clearly identified unit of a trade or business of a taxpayer which maintains separate books and records." If the facts and circumstances could support more than one currency as the functional currency, the QBU generally may use any of such currencies as its functional currency so long as it maintains its books and records in such currency.

Even if a QBU's functional currency is other than the U.S. dollar, a taxpayer may elect, to the extent provided in regulations, to use the U.S. dollar as the QBU's functional currency if the QBU uses a method of accounting which approximates the separate transactions method or if its books and records are maintained in U.S. dollars. The election to use the U.S. dollar is effective for the taxable year when made and all subsequent taxable years, unless revoked with consent of the Secretary.

Any change in the functional currency of a QBU is treated as a change in method of accounting for §481 purposes, and may be subject to such additional conditions as the Secretary may prescribe.

2. Foreign Currency Transactions

The Act provides rules for determining the tax treatment of nonfunctional currency transactions ("§988 transactions"). The term "§988 transaction" means any of the following types of transactions if such transactions are denominated in a nonfunctional currency or are determined by reference to the value of one or more nonfunctional currencies:

(a) Acquisition of or becoming the obligor under a debt instrument, which, to the extent provided in regulations, includes preferred stock;

(b) Accruing (or otherwise taking into account for income tax purposes) any item of expense or gross income or receipt which is to be paid or received after the date in which so accrued or taken into account; or

(c) Entering into or acquiring any forward contract, futures contract, option or similar financial instrument (including a currency swap) if such instrument is not marked to market at the close of the taxable year under §1256. §988(c)(1)(B).

The term §988 transaction also includes the disposition of a nonfunctional currency, which for purposes of this definition includes coin or currency and nonfunctional currency-denominated demand or time deposits or similar instruments issued by a bank or other financial institution. The Act does not change the basic principle that for U.S. tax purposes, foreign currency is treated as "property" and gain or loss thus arises on its disposition to the extent of the difference between the basis of the currency and the amount realized. §988(c)(1)(C).

Foreign currency gain or loss is defined in §988(b) to include any gain or loss from a §988 transaction to the extent such gain or loss does not exceed gain or loss realized by reason of changes in exchange rates on or after the booking date and before the payment date. This definition of foreign currency gain or loss, as elaborated on in the Conference Report, appears to modify the prevailing view under pre-Act law that fluctuations in the value of foreign currency should be treated as a "separate transaction" producing taxable gain or loss separate and apart from any gain or loss attributable to the underlying transaction. The discussion in the Conference Report, at II-664, provides that "foreign currency gain or loss is recognized only to the extent of the total gain or loss, taking into account gain or loss on an underlying transaction." The significance of this language seems to be that, where there is a gain or loss on the underlying transaction, as well as offsetting foreign currency loss or gain, the two should be netted and only the excess amount of foreign currency loss or gain, if any, should be reported "separately." Such a netting approach could result in substantially different tax consequences than those produced under the pre-Act "separate transaction" method in regard to, for example, the character or source of the total gain or loss with respect to the transaction, as well as in regard to those Code provisions the operation of which is dependent on the gross income in respect of one or more transactions.

Foreign currency gain or loss attributable to §988 transactions generally is treated under the Act (subject to a narrow capital treatment election) as ordinary income or loss. The source of foreign exchange gain or loss treated as ordinary income or loss is to be determined by reference to the residence of the taxpayer or QBU on whose books the particular asset, liability, income or expense item is properly reflected.

The Act provides special rules for so-called "§988 hedging transactions," defined as a transaction entered into for the primary purpose of reducing risk of currency fluctuation with respect to property which is held or to be held, borrowings made or to be made or obligations incurred or to be incurred by the taxpayer, and which are identified by the Secretary or the taxpayer as a hedging transaction. To the extent provided in regulations, such transactions are to be integrated and treated as a single transaction or otherwise treated consistently. As explained in the Conference Report,[1] it is anticipated that the form of those hedging transactions which are part of an integrated economic package will be disregarded and that the various components of such transactions will be collapsed and treated in a manner consistent with the economic substance of the transaction. As to those hedging transactions which are not part of an integrated economic package, but rather are designed only to limit a taxpayer's exposure in a particular currency, the Conference Report anticipates that the form of the transaction may be respected but that regulations will provide for consistent treatment with respect to character, source and timing.

3. Foreign Currency Translation

The earnings and profits of a foreign corporation will be determined under the Act in the first instance in the corporation's functional currency. A foreign corporation which uses a functional currency other than the U.S. dollar is required to calculate its earnings and profits in such

[1] H.R. Rep. No. 841, 99th Cong., 2d Sess. (1986) ("Conference Report") at II-666.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

functional currency using the profit and loss method (rather than a net worth or specific transaction method) with only the resulting functional currency net profit or loss then being translated into U.S. dollars at the appropriate exchange rate.

In regard to actual distributions from a foreign corporation (and deemed distributions under §1248), the exchange rate on the date the distribution is included in income must be used to translate the amount of the distribution and the foreign corporation's earnings and profits from which the distribution is derived (*i.e.*, the post-1986 "pool" of earnings and profits per amended §902). Deemed distributions under Subpart F, personal holding company income and amounts included under §1293(a) are required to be translated using the weighted average exchange rate for the taxable year of inclusion. Further, a separate exchange gain or loss must be recognized if the exchange rate fluctuates between the time of a deemed distribution and an actual distribution of §959 or 1293 previously taxed earnings and profits. Any such gain or loss is to be treated as ordinary income or loss and sourced by reference to the source of the income which previously was deemed distributed.

In determining the amount of the deemed paid credit under §902 or 960, any foreign income taxes paid by a foreign corporation are to be translated into U.S. dollars using the exchange rate as of the time of payment. In the case of an upward adjustment in foreign taxes with respect to a prior year, the foreign taxes are required to be translated at the date the additional amount of taxes are paid. A refund or credit of foreign taxes with respect to a prior year is required to be translated using the exchange rate as of the time of original payment of such foreign taxes.

A foreign branch's taxable income or loss must be determined separately for each QBU in its functional currency. In addition, taxpayers are required to use the profit and loss method to translate the income or loss of a branch into U.S. dollars using weighted average exchange rates for the taxable year. The Conference Report, at II-675, contemplates that regulations will provide rules that, "in the case of a branch using a functional currency other than the [U.S.] dollar, will limit the deduction of branch losses to the taxpayer's dollar basis in the branch."

Under the Conference Report, at II-675, it is anticipated that remittances (whether of currency or other property) will trigger exchange gain or loss to the extent the value of the currency at the time of the remittance differs from the value when earned. Post-1986 remittances are deemed to be derived from post-1986 accumulated earnings on a pro rata basis. Any exchange gain or loss under the above rules is characterized as ordinary income or loss, sourced by reference to the source of the underlying income from which such remittance is derived. Foreign taxes paid in respect of branch operations are translated in the same manner as discussed above in regard to foreign taxes imposed on foreign corporations. §987(3) and (4).

4. Miscellaneous Provisions

A "position" for purposes of the §1092 straddle provisions is defined under the Act to include an obligor's interest in a nonfunctional currency-denominated debt obligation. In addition, for purposes of the "actively traded" requirement in respect of the definition of personal property under §1092(d)(1), foreign currency for which there is an active interbank market is presumed to be actively traded. Act §1261(b). The banking exception under §1256(e)(4) from certain requirements of the §1256(e) hedging exception is repealed. Act §1261(c).

Treasury is instructed to prescribe regulations:

(a) setting forth procedures to be followed by taxpayers with QBUs using a net worth method before the enactment of the Act's foreign currency provisions;

(b) limiting the recognition of losses in regard to certain remittances from QBUs;

(c) providing for the recharacterization of interest and principal payments with respect to obligations denominated in certain hyperinflationary currencies;

(d) providing for alternative adjustments to the application of §905(c); and

(e) providing for the appropriate treatment of related party transactions (including transactions between qualified business units of the same taxpayer). §989(c).

C. *Effective Date*

The above provisions generally are effective for taxable years beginning after December 31, 1986, but for purposes of claiming a deemed paid foreign tax credit under either §902 or 960, the provisions apply only to earnings and profits of a foreign corporation for taxable years beginning after 1986 and to foreign taxes paid or accrued by the foreign corporation with respect to such earnings and profits. Act §1261(e).

II. Detailed Analysis

A. *Functional Currency*

Section 1261 of the Act adds new Code §985, which adopts the concept of a functional currency by providing in general that all determinations for U.S. income tax purposes are to be made in a taxpayer's functional currency.

1. Background

Prior to the Act, there were no statutory rules permitting the selection of a currency other than the U.S. dollar as a base currency or frame of reference for use in determining the income or loss of a foreign operation, whether in corporate or noncorporate form, for U.S. tax purposes.[2] Stated differently; there were no definitive criteria for characterizing a currency other than the U.S. dollar as a "home" currency, or medium of exchange, whose extrinsic value would be considered fixed over time, so that transac-

[2] Various methods of translating the income or loss of foreign operations into U.S. dollars, including the net worth and profit and loss methods, have been approved by the IRS and the courts; *see, e.g.*, Rev. Rul. 75-107, 1975-1 C.B. 32; Rev. Rul. 75-106, 1975-1 C.B. 31; *American Pad and Textile Co. v. Comr.*, 16 T.C. 1304 (1951); *Frederick Vietor & Achelis v. Salt's Textile Mfg. Co.*, 26 F.2d 249 (D. Conn. 1928) but there is no authority with respect to the selection of a base or home currency for the initial reporting of such operations prior to conversion to the U.S. dollar.

tions in such currency would not give rise to the recognition of exchange gain or loss.

While the profit and loss method perhaps most closely approximated a "home" currency concept, that method was never codified, was susceptible of widely divergent applications in practice, was but one of several optional methods for accounting for the results of foreign operations, and was unavailable to controlled foreign corporations (CFCs). In the later connection, CFC operations were required to be accounted for under a combination net worth and specific transactions method that had the effect of treating the CFC from the foreign currency standpoint as if it were a mere extension of its dollar-based U.S. shareholders. Under applicable rulings, non-CFC foreign corporations were in effect similarly treated for earnings and profits purposes. Moreover, there was no clear guidance as to when a particular foreign operation became sufficiently identifiable as a separate economic unit to permit its results to be determined for U.S. tax purposes under a profit and loss method on the basis of a "home" currency different from the currency of other related economic units.

The provisions of §985 were designed to resolve these and related issues by establishing a general rule that all determinations for U.S. income tax purposes (*e.g.*, computations of taxable income or loss, earnings and profits) are to be made by a taxpayer in a base or home currency to be known as the taxpayer's "functional currency." The functional currency concept was originally introduced in a Financial Accounting Standards Board Exposure Draft issued in August 1980 ("the Exposure Draft").[3] The Exposure Draft, which outlined a comprehensive proposal with respect to accounting for foreign currency transactions, was later adopted as Statement of Financial Accounting Standards No.52 ("FASB No. 52").[4] The functional currency principle of the Exposure Draft was adopted by the Treasury, without substantial modification, in a Discussion Draft issued on December 8, 1980 outlining a proposal for the taxation of foreign currency gains and losses, and later became part of the President's Tax Proposals issued in May 1985.[5]

The basic premise underlying the functional currency concept of §985 is that the income or loss of a business unit is most accurately computed using the currency of the economic environment in which such unit operates. Unrealized exchange gain or loss resulting from the balance sheet impact of exchange rate fluctuations between the functional currency and the U.S. dollar is not taken into account because under the functional currency approach income or loss is determined on the basis of the functional currency income statement. Exchange gain or loss thus can arise, and will be taken into account in determining profit or loss, only when realized upon the settlement of nonfunctional currency transactions or upon the distribution of profits or the liquidation of the operation.

The functional currency of a particular business operation generally is determined with reference to the "economic environment" in which such business operation is conducted. Although each separate business operation ("qualified business unit") may have only one functional currency, a particular taxpayer can have more than one functional currency if it operates within more than one economic environment. As noted, transactions in a currency other than the functional currency may (and generally will) give rise to exchange gain or loss measured in functional currency terms. However, no exchange gain or loss is recognized as a result of functional currency transactions; rather, income or loss is determined in the first instance in functional currency terms and is only then (in the case of U.S.-owned foreign operations) translated into U.S. dollars at appropriate exchange rates. For example, if the functional currency of a Swiss branch of a U.S. corporation is the Swiss franc, income or loss of the branch would be determined initially in francs based on the branch's Swiss franc income statement and then translated into U.S. dollars for purposes of determining (among other things) U.S. dollar income or loss. Transactions conducted by the branch in currencies other than the franc, including U.S. dollar transactions, would trigger recognition of exchange gain or loss, measured in franc terms, that would be reflected in the branch's income statement and thereby taken into account in determining net income or loss for U.S. tax purposes.

2. *General Rules*

Section 985(a) requires that all determinations for U.S. income tax purposes are to be made in a taxpayer's functional currency, unless otherwise provided in regulations. Section 985(b)(1) provides that a taxpayer's functional currency is either (i) the U.S. dollar or, (ii) in the case of a "qualified business unit" ("QBU"), "the currency of the economic environment in which a significant part of such unit's activities are conducted and which is used by such unit in keeping its books and records." In effect, §985(b)(1) requires taxpayers to use the U.S. dollar as the functional currency in respect of all foreign operations that do not satisfy the statutory definition of a QBU. Where a particular foreign operation *does* satisfy the QBU definition, the functional currency of such QBU generally will be the currency of the "economic environment" in which its operations are conducted, provided the QBU also maintains its books and records in such currency.

An election to use the U.S. dollar as the functional currency is available under §985(b)(3), subject to certain conditions, to taxpayers whose operations might otherwise be required to use another currency. The choice of a functional currency is treated under §985(b)(4) as a method of accounting, which can be changed only with the consent of the Secretary.

3. *Definition of a QBU*

A QBU is defined by §989(a) as "any separate and clearly identified unit of a trade or business of a taxpayer which maintains separate books and records." The Senate

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Report indicates that a single taxpayer can have more than one QBU.[6]

In order to constitute a "separate and clearly identified unit of a trade or business of a taxpayer" within the meaning of §989(a), both the House and Senate Reports[7] indicate that the unit must include every operation that forms a part of the process of earning income. In other words, the unit must constitute an independent economic enterprise carried on for profit, encompassing every constituent operation or step in the enterprise's income-generating process, including the collection of income and the payment of expenses. The House Report provides the following example to illustrate the principle that a unit will not qualify as a QBU where it does not include every operation that forms a part of the process of earning income:

> For example, assume a corporation that manufactures and sells product X in the United States decides to establish an office in France. The French office maintains one salesperson whose only function is to solicit orders for product X, and the remaining sales functions continue to be conducted in the United States. On these facts, the activity of the French office would not be viewed as giving rise to a qualified business unit of the corporation.[8]

It is not necessary that the operations of a business unit be considered a separate trade or business within the meaning of §446(d) in order for the unit to constitute a QBU. Stated differently, a QBU will not necessarily qualify as a separate "trade or business" for purposes of permitting a taxpayer to use different methods of accounting. Rather, the statutory definition of a QBU may be satisfied on the basis of vertical, functional or geographic divisions of a single trade or business, if each such division is capable of independently producing income.[9] Because the QBU definition is narrower in scope than the §446(d) concept of a trade or business, different QBUs of a taxpayer may be permitted to utilize different functional currencies but nevertheless may be required to adhere to the same accounting methods for all other purposes.

Section 989(a) also requires that a business operation maintain separate books and records in order to constitute a QBU (as discussed below).

4. Economic Environment of QBU

Section 985(b)(1) provides that if a business unit satisfies the QBU definition of §989(a), its functional currency will be "the currency of the economic environment in which a significant part of such unit's activities are conducted."

a. U.S. Dollar Economic Environment

(1) Business Conducted Primarily in U.S. Dollars

Section 985(b)(2) provides that the economic environment of a QBU conducting its business primarily in U.S. dollars is deemed to be the United States and therefore the U.S. dollar must be used as the functional currency of the QBU. The House and Senate Reports provide two examples, originally set forth in the Exposure Draft, which illustrate the principle that a QBU conducting its business primarily in U.S. dollars must use the dollar as its functional currency:[10]

> *Example*: A U.S. taxpayer incorporates a wholly owned subsidiary in Switzerland. All books of record are maintained in Swiss francs, and the Swiss franc is used as the functional currency for financial reporting purposes. The Swiss company is primarily a base company selling the exports of its U.S. parent corporation, and virtually all of its income is foreign base company sales income within the meaning of §954(d). Most of its transactions are denominated in U.S. dollars or, less frequently, in foreign currencies other than the Swiss franc.

Under the Act, the U.S. dollar is the functional currency of the Swiss company even though its books of record are maintained in Swiss francs and the Swiss franc is the functional currency for financial reporting purposes. This result obtains because the Swiss company's activities are primarily conducted in U.S. dollars.

> *Example*: A bank incorporated and with its head office in the United States has a branch in a foreign country. Although the foreign country requires the branch to keep books in the local currency, the branch customarily fixes the terms of its loans to local customers by reference to a contemporary London Inter-Bank Offered Rate (LIBOR) on dollar deposits (*e.g.*, the interest rate on outstanding loan principal equals LIBOR plus 2% and outstanding loan principal is adjusted to reflect changes in the dollar value of the local currency). Local lending is, in turn, typically funded with dollar-denominated funds borrowed from the head office, other branches and subsidiaries of the same bank, and independent lenders. In turn, the branch lends dollars. The bank elects to use the dollar, not the local currency, as the functional currency of the branch for federally mandated financial reporting purposes.

In this instance, although the branch maintains its books and records of operation in foreign currency, the branch's activity is conducted primarily in the U.S. dollar. Under the Act, the branch is a qualified business unit and the dollar is the functional currency for tax purposes.

(2) "Sufficient Commitment" Rule

The Senate Report, at 456, indicates that a QBU will be considered to operate in a non-U.S. dollar economic environment, and thus will be permitted to adopt a non-U.S. dollar functional currency, only if the QBU represents a "sufficient commitment" (alternatively described in the Senate Report as a "long-term commitment") to the economic environment of the host country. If the required commitment to the local jurisdiction does not exist, the economic environment of a QBU operated by a U.S. corporation is deemed, in effect, to be the United States and thus the functional currency of the QBU will be the U.S. dollar.

[6] S. Rep. No. 313, 99th Cong., 2d Sess. 457 (1986) ("Senate Report").
[7] H.R. Rep. No. 426, 99th Cong., 1st Sess. 472 (1985) ("House Report"); Senate Report at 457.

[9] House Report at 472; Senate Report at 457.
[10] House Report at 473; Senate Report at 458.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

In this regard, a foreign operation of limited duration conducted by a U.S. corporation ordinarily will not be viewed as meeting the "sufficient commitment" test and thus the economic environment of the operation ordinarily will be considered the United States. The Conference and Senate Reports give as an example of such an operation an offshore construction project undertaken by a U.S. taxpayer.[11] Although not specifically addressed in the legislative history, the "sufficient commitment" rule would also seem to require a QBU operated by a foreign person to adopt the functional currency of such person if the QBU did not have a sufficient commitment to another local jurisdiction.

The Conference Report does note, however, that the *existence* of a QBU (as distinguished from its "economic environment") does not turn "solely" on the time frame of a foreign activity.[12] The Report states that "in appropriate circumstances (*e.g.*, if the activity is subjected to tax in the host country), an activity of sufficient duration (*e.g.*, 12 months) may support the finding of the existence of a QBU."[13] Although this statement is directed at the QBU definition itself, rather than at the economic environment test for determining such QBU's functional currency, it nevertheless could be read to provide indirect support for the proposition that the determination of the economic environment of a QBU should be based on all relevant facts and circumstances and that the duration of (or the payment of local taxes by) a foreign operation should be considered together with other factors in determining the sufficiency of the business operation's commitment to the local jurisdiction for purposes of the economic environment test. It remains to be seen, however whether Treasury and the IRS ultimately will concur in this interpretation.

(3) The "Integral Extension" Exception

The Conference Report provides that the economic environment of a QBU will be deemed to be the same as that of the U.S. corporation that owns the QBU, and thus that the QBU's functional currency will be the same as the U.S. corporation's, if the QBU is merely an "integral extension" of such U.S. corporation.[14] The Report cites as examples (based on examples contained in the Exposure Draft, footnote 2 *supra*) of operations that would be viewed as integral extensions of a U.S. operation: (i) a foreign corporation whose sole function is to act as a financing vehicle for affiliated U.S. corporations, and (ii) a foreign corporation used to hold portfolio stock investments or similar passive assets that could as easily be held by the U.S. parent corporation.[15] The "integral extension" rule would also seem to apply where a QBU is an integral extension of a foreign corporation or other foreign person. In this regard, the Senate Report provides that if a business unit is an integral part of a larger operation, the economic environment of the larger operation governs the choice of the business unit's functional currency.[16]

Although not specifically mentioned in the legislative history, paragraph 70 of the Exposure Draft (footnote 2 *supra*) provides the following additional examples of situations in which a particular foreign operation is considered (for financial accounting purposes) to be an integral extension of a U.S. operation:

> *Example 1*: A foreign division, branch, or subsidiary that primarily manufactures a subassembly that is then shipped to a U.S. plant for inclusion in a product sold to customers located in the United States or in different parts of the world.
>
> *Example 2*: A foreign shipping subsidiary that primarily transports ore from the U.S. company's foreign mines to the United States for processing in the U.S. company's U.S. smelting plants.
>
> *Example 3*: A foreign sales branch or subsidiary of a U.S. manufacturer that primarily takes orders from foreign customers for U.S. manufactured goods, that bills and collects from foreign customers, and that might have a warehouse to provide for timely delivery of the product to those foreign customers. (In substance, this foreign operation may be the same as the export sales department of a U.S. manufacturer).

b. Facts and Circumstances Test

The economic environment of a QBU (if not deemed to be the United States pursuant to the rules described above) generally is determined under a facts and circumstances test.[17] In making the required determination, the Senate Report provides that the factors to be taken into account should include (but are not limited to): (i) the currency in which the unit's books and records are maintained; (ii) the principal currency in which revenues and expenses are generated; (iii) the principal currency in which the unit borrows or lends; and (iv) the functional currency of related business units and the extent to which the unit's operations are integrated with related business units.[18] (Because the maintenance of books and records in a particular currency is a statutory prerequisite for treating such currency as a functional currency, the "books and records" requirement technically should not be viewed as part of the "facts and circumstances" test employed to determine an economic environment, but rather as a separate requirement which must be satisfied in order that the currency of the economic environment qualifies under §985(b)(1)(B) as the functional currency.)

The Senate Report cites FASB No. 52 (footnote 3 *supra*) and indicates that the factors enumerated above generally correspond to those used in making the determination for financial accounting purposes. The factors are stated somewhat differently in FASB No. 52, at paragraphs 80 and 81 thereof, as follows:

> "80. In the first class [where the functional currency is a foreign currency] are foreign operations that are relatively self-contained and integrated within a particular country or economic environment. The day-to-day operations are not dependent upon the economic environment of the parent's functional currency; the foreign operation primarily generates and expends

foreign currency. The foreign currency net cash flows that it generates may be reinvested or converted and distributed to the parent.

"81. In the second class [where the functional currency is the U.S. dollar] are foreign operations that are primarily a direct and integral component or extension of the parent company's operations. Significant assets may be acquired from the parent enterprise or otherwise by expending dollars and, similarly, the sale of assets may generate dollars that are available to the parent. Financing is primarily by the parent or otherwise from dollar sources In other words, the day-today operations are dependent on the economic environment of the parent's currency, and the changes in the foreign entity's individual assets and liabilities impact directly on the cash flows of the parent company in the parent's currency."

If the facts and circumstances could support treatment of more than one jurisdiction as the QBU's economic environment, and thus ultimately could support the use as a functional currency of any of two or more qualifying currencies, the Senate Report indicates that a taxpayer may adopt any of such currencies as the QBU's functional currency at its discretion.[19] The Senate Report describes the following situation as an example illustrating the operation of this principle:

"A U.S. parent corporation, P, has a wholly owned U.S. subsidiary, S, whose head office is in the United States, although its primary activity is extracting natural gas and oil through a branch in a foreign country. Sales of natural gas and oil are billed in both U.S. dollars and local currency, and significant liabilities and expenses (*e.g.*, loan principal and interest) are denominated in both dollars and local currency. The foreign country requires the branch to keep its books and records in the local currency. In filing federally mandated financial statements, P and S elect to use the dollar, not the local currency.

"Absent other factors pointing to the predominance of the dollar (such as a high volume of intercompany activities with dollar-based affiliates or a U.S. sales market), the facts do not clearly require the specification of a particular currency. In such a case, the taxpayer would have discretion in choosing between the dollar and the local currency." [20]

c. Volume of Local Currency Activities

It is not clear under the "economic environment" standard of §985(b)(1)(B) whether a QBU which is located in a foreign jurisdiction, but which conducts no (or virtually no) business activity in the currency of such jurisdiction, could nevertheless adopt the local currency as its functional currency. Under the House Bill (H.R. 3838), a QBU's functional currency was determined not by reference to the *economic environment* in which a significant part of its business activities are conducted, but to *the currency* in which a significant part of such operations are conducted, and it therefore seems clear that under the House Bill substantial business activities in the local currency would have been required.

Although the "economic environment" standard of the Senate bill was adopted in Conference, the Conference Report could be read to contemplate local currency activity; it states that "[i]n general, the rule for QBUs will apply where the foreign operation constitutes a trade or business, a significant part of the activities of which are conducted in the local currency." [21] On the other hand, it may be that the Conference Report language was intended only to reflect the general rule and that, in appropriate situations, no local currency activity is required in order to meet the economic environment test. Such an interpretation also could be supported by the Senate Report, which notes that a taxpayer may be eligible to account for the results of a foreign operation by measuring income or loss in the currency of the host country (or, in appropriate circumstances, another foreign country).[22] The meaning of the parenthetical reference to another foreign currency is not clear, however, and may refer only to the situation in which a foreign operation is an integral part of the operations of another foreign operation and (as earlier discussed) would be required to use as its functional currency the currency of such other operation.

5. Books and Records Requirement

In order for a currency to constitute the functional currency of a QBU, §985(b)(1)(B) requires the QBU to maintain its books and records in such currency. If books and records are not so maintained, the operation will not qualify as a QBU and thus its functional currency will be the U.S. dollar (or other foreign currency in the case of a non-U.S. dollar owner of the foreign operation).

If the economic environment of a QBU is the local jurisdiction and the QBU is required by such jurisdiction to maintain local currency books and records, then (subject to the election to use the U.S. dollar discussed at 6 *infra*) §985(b)(1)(B) generally requires the QBU to use the local currency as its functional currency. On the other hand, if the QBU is not required to maintain local currency books and records, it can, in effect, elect to use either the local currency or the U.S. dollar as its functional currency. If local currency books and records are maintained, §985(b)(1)(B) requires the QBU to use the local currency. If, on the other hand, the QBU does not maintain local currency books and records, the §985(b)(1)(B) requirement will not be satisfied and the general rule of §985(b)(1)(A) will mandate the use of the U.S. dollar (or, in appropriate cases, other foreign currency) as the functional currency.

Where the economic environment of a QBU is not the local jurisdiction, but is another foreign country (or the economic environment is unclear and the QBU elects the economic environment of another foreign country), the functional currency of the QBU is the currency of such other country, provided the QBU maintains its books and records in such currency. If the QBU is required by the local jurisdiction (or elects) to keep local currency books

[19] *Id.*
[20] Senate Report at 458.
[21] Conference Report at II-660.
[22] Senate Report at 456.

and records, then the U.S. dollar is the QBU's functional currency (since the QBU failed to maintain books and records in the currency of its economic environment) unless (i) the QBU is allowed under §985(b)(1)(B) to satisfy the functional currency requirement by maintaining a second set of books and records in the appropriate currency or (ii) books and records maintained in the appropriate currency by the parent or other affiliate, if any, of the QBU could be attributed to the QBU for purposes of satisfying the books and records requirement. The legislative history does not address the issue of whether a second set of books can be maintained by a QBU in order to satisfy the requirements of §985(b)(1)(B) for adoption of a non-dollar functional currency. It is clear, however, that a second set of books and records is contemplated under §985, with respect to a QBU required to keep local currency books and records, in order for such QBU to make the U.S. dollar functional currency election (discussed at 6 *infra*). The requirements of §985(b)(1)(B) literally would be satisfied if a second set of books and records were maintained and no sound reason is evident why a local currency books and records requirement should be determinative of a QBU's functional currency. Section 985(b)(1)(B), in referring to the books and records requirement applicable to a QBU, provides that the functional currency of the QBU is "the currency . . . which is *used by such unit* in keeping its books and records." It would seem, therefore, based on the language of the statute, that each QBU must actually maintain the appropriate books and records and that maintenance of such books and records by the parent or other affiliate of the QBU would not suffice.

If the economic environment of a QBU is the United States, pursuant to the rules discussed above (*e.g.*, the QBU is an integral extension of a U.S. business), §985 does not seem to require that the QBU maintain books and records in U.S. dollars. If books and records are not maintained by the unit in dollars, the technical requirements of §985(b)(1)(B) (*i.e.*, currency of economic environment and books and records are the same) are not satisfied and the functional currency is deemed to be the U.S. dollar pursuant to the general rule of §985(b)(1)(A) (which does not, however, require the local unit to maintain U.S. dollar books and records). Books and records in dollars would have to be developed (if not currently maintained) and maintained by either the QBU or its U.S. affiliate, however, so that the QBU's income or loss could be computed, as required by the Act, on the basis of its functional currency profit and loss statement.

6. Election to Use U.S. Dollar

Section 985(b)(3) allows a taxpayer, to the extent provided in regulations, to elect to use the U.S. dollar as the functional currency of any QBU if the QBU keeps its books and records in dollars or, in certain limited situations (discussed below), the taxpayer uses a method of accounting to translate the income of the QBU that approximates a separate (or specific) transactions method. As stated above, a taxpayer operating in a local jurisdiction that does not require the maintenance of local books and records can, in effect, elect to use the U.S. dollar as the functional currency of the QBU by keeping its books and records in dollars (or in any currency other than the currency of the economic environment in which the QBU operates). Section 985(a)(3) was probably designed, therefore, to cover the situation where a QBU whose economic environment is the local jurisdiction is required under local law to maintain its books and records in local currency. In such a case, the taxpayer would satisfy the literal requirements of §985(b)(1)(B) and, absent the exception, would be required to use the local currency as its functional currency.

The Senate and Conference Reports [23] indicate that a QBU will satisfy the statutory requirement for election of the dollar (*i.e.*, that it maintain books and records in U.S. dollars) only if such books and records compute income or loss in U.S. dollars on a transaction-by-transaction (*i.e.*, separate or specific transactions) method. If a QBU does not maintain its books and records in U.S. dollars in accordance with this method of accounting, it may still elect the dollar as its functional currency if the U.S. dollar income of the QBU is computed using "a method of accounting that approximates a separate transactions method." The Conference Report states, however, that the Secretary may condition the application of this "approximate method" exception to the dollar-based books requirement by requiring the comparison of year-end balance sheets using historical exchange rates for all balance sheet items.[24]

More fundamentally, the Conference Report also makes clear that the election to use the U.S. dollar as the taxpayer's functional currency based on an "approximate separate transactions" method was aimed primarily at taxpayers operating in hyperinflationary economies.[25] In regard to operations in such economies, the Conference Report indicates that local currency based accounting might not accurately reflect the income or loss of a taxpayer with substantial fixed plant and equipment because the local currency depreciation charge (which is based on historical cost) will become insignificant in relation to operating income.[26] The Conference Report states that the election should not be generally available outside the hyperinflationary economy area.[27]

As stated above, the ability of a taxpayer to elect the U.S. dollar by keeping dollar books and records or invoking the "approximate separate transactions" method exception is subject to regulations to be promulgated. Although the intended scope of such regulations is unclear, the Conference Report specifies that the Secretary may condition the election to use the U.S. dollar on the taxpayer's making such election for all QBUs (on a worldwide basis).[28]

Section 985(b)(3) provides that an election to use the U.S. dollar is effective for the taxable year for which made and all subsequent taxable years, unless revoked with the consent of the Secretary. The Conference Agreement established rules with respect to the procedure and timing of such election. For a U.S. person, the election is to be made on the return for the first taxable year for which a QBU

exists, by making a statement that the QBU elects the U.S. dollar as its functional currency for U.S. tax purposes. For a foreign person, the election is to be made in the U.S. owner's return for the first taxable year in which the U.S. owner acquires at least a 50% ownership interest in the foreign person by making a statement that the foreign person's QBU elects the U.S. dollar as its functional currency for U.S. tax purposes. If there is no 50% U.S. shareholder, regulations are to provide a mechanism for the election on the occurrence of a significant event (*i.e.*, an event having U.S. tax consequences).[29]

7. Exception to General Rule That Transactions Be Accounted for in Functional Currency Terms

Section 985(a) grants to the Secretary the regulatory authority to except certain transactions from the general rule that all determinations for U.S. tax purposes are to be made in functional currency terms. The Conference Report indicates that the authority should be used to prescribe rules for the accrual of original issue discount and bond premium in nonfunctional currency terms.[30] The Report also states that pending the issuance of such regulations, original issue discount and bond premium with respect to foreign currency obligations are to be determined in terms of units of the nonfunctional currency, with such units being translated into the taxpayer's functional currency using an average exchange rate for the accrual period.[31] The Conference Report also provides that where appropriate, the Secretary may require that dollar transactions by a QBU with a non-dollar functional currency be accounted for in dollars.[32]

8. Functional Currency Treated as an Accounting Method

Section 985(b)(4) provides that any change in the functional currency or currencies of a taxpayer is treated as a change in method of accounting subject to the rules of §481. In addition, the Conference Report indicates that any such change is subject to such conditions as the Secretary may prescribe.[33] The Senate Report indicates that regulations are to be promulgated to cover the situation where the functional currency of a taxpayer involuntarily changes,[34] presumably as the result of a change in the economic environment in which such taxpayer is operating.

Because a trade or business may consist of a number of QBUs, each with a different functional currency (and thus under §985(b)(4) a different method of accounting), §985(b)(4) is a departure from the general rule that all components of a single trade or business must use the same method of accounting. In an apparent effort to ensure a measure of consistency between QBUs in the same trade or business, however, the Senate Report provides that a taxpayer must use consistent criteria for identifying the functional currency of QBUs engaged in similar activities in different countries.[35] While each QBU comprising a single trade or business of a taxpayer is allowed to use a different functional currency, all other methods of accounting for all QBUs conducting a single trade or business must be consistent.

B. Foreign Currency Transactions

1. Background

The Act provides the first set of comprehensive statutory rules regarding the tax treatment of foreign currency transactions (*i.e.*, nonfunctional currency transactions). Prior to the Act, the rules regarding the tax treatment of such transactions were in many instances inconsistent and in some respects confused, with such fundamental issues as the timing, amount, character and source of exchange gain or loss in regard to a variety of transactions remaining unsettled. The inconsistency and confusion surrounding such rules in many instances were the result of the application of two "basic principles" in regard to foreign currency transactions which have been developed in the relevant judicial authorities.

One such "basic principle" is that foreign currency is treated as "property" for U.S. tax purposes.[36] As property, a taxpayer establishes a basis in foreign currency for U.S. tax purposes and may recognize gain or loss under normal §1001 principles if the amount realized in respect of a disposition of the foreign currency exceeds or is less than such basis. Since U.S. taxpayers generally engage in foreign currency transactions in which the foreign currency is used as a medium of exchange rather than as property, the U.S. tax rules applicable to property transactions in many instances produced either inappropriate or unclear consequences under pre-Act law. The Act does not alter the "currency as property" principle, but rather provides a set of rules which clarify the consequences of particular foreign currency transactions.

The second "basic principle" which has been developed in the relevant judicial authorities is that exchange gain or loss should be reported separately and apart from any gain or loss in respect of any underlying transaction (*i.e.*, the "separate transaction" principle).[37] Thus, for example, in

KerbaughEmpire Co.*, 271 U.S. 170 (1926) (repayment of foreign currency borrowing held not to result in taxable gain or loss.); *Coverdale v. Comr.*, 4 T.C.M. 713 (1945); *B.F. Goodrich Co. v. Comr.*, 1 T.C. 1098 (1943), acq., 1943 C.B. 10, nonacq., 1974-2 C.B. 5 (original acquiescence withdrawn). There are two well recognized exceptions to the separate transaction principle: (i) a dealer in foreign exchange can use the lower of cost or value to determine foreign currency inventory (Rev. Rul. 75-104, 1975-1 C.B. 18), and (ii) a foreign branch of a U.S. taxpayer may translate unremitted foreign currency denominated profits into dollars at the exchange rate in effect at the end of a taxable year (under pre-Act law) or using the weighted average exchange rate (under the Act).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

respect of a U.S. dollar taxpayer's foreign currency-denominated purchase of inventory on credit, a separate exchange gain or loss attributable to any fluctuation in the U.S. dollar value of the foreign currency principal amount of the obligation between the date it was incurred and the date it is repaid must be recognized, rather than being incorporated into the basis of the purchased inventory. The "separate transaction" principle has been codified in §988(a)(1)(A), but (as discussed below) the legislative history of the Act suggests that Congress intended to modify its operation in respect of transactions covered under the Act.

2. Transactions Covered Under the Act

The Act rules apply to "§988 transactions," a defined term which includes any of the following types of transactions if such transactions are denominated in a nonfunctional currency or are determined by reference to the value of one or more nonfunctional currencies:

(i) Acquisition of or becoming the obligor under a debt instrument, which, to the extent provided in regulations, includes preferred stock;

(ii) Accruing (or otherwise taking into account for purposes of subtitle A of the Internal Revenue Code, relating to income taxes) any item of expense or gross income or receipt which is to be paid or received after the date in which so accrued or taken into account;

(iii) Entering into or acquiring any forward contract, futures contract, option or similar financial instrument (including a currency swap) if such instrument is *not* marked to market at the close of the taxable year under §1256; or

(iv) Disposition of a nonfunctional currency, which for purposes of this definition includes coin or currency and nonfunctional currency denominated demand or time deposits or similar instruments issued by a bank of other financial institution.[38]

As explained in the legislative history of the Act, the above reference to transactions which are "denominated" in a nonfunctional currency makes clear that a §988 transaction need not require or even permit repayment with a nonfunctional currency.[39] Rather, a §988 transaction includes any transaction determined by reference to the value of nonfunctional currency; thus, multi-currency contracts (*e.g.*, contracts pursuant to which a taxpayer can elect the desired currency of payment (or repayment)) are covered under the Act. Prior to the Act, some commentators suggested that certain adverse tax consequences associated with foreign currency gains and losses could be avoided by arranging to repay a foreign currency loan in U.S. dollars equivalent in value (at the time of repayment) to the borrowed currency.[40] The new provision would appear to foreclose any such opportunities.

As mentioned above and as can be readily determined by an examination of the definition of a §988 transaction, the rules of the Act do not apply to all types of transactions. First, §988(c)(1) provides that the Secretary may prescribe regulations excluding expenses or items of gross income from the definition of a §988 transaction if the inclusion of such items is "not necessary to carry out the purposes of this section by reason of the small amounts or short periods involved, or otherwise." The Senate Report provides as examples of such items receivables and payables that have a maturity of 120 days or less, and any other receivables or payables with a maturity of six months or less if such receivables or payables would be eligible for exclusion under §1274.[41]

The rules also do not apply to stock transactions (other than preferred stock to the extent provided in regulations), investments in plant, equipment or other fixed assets, or the cash purchase acquisition of inventory. In addition, the definition of a §988 transaction includes forward contracts, futures contracts, option contracts or other similar financial instruments only if such instruments are not marked to market for the taxable year. §988(c)(1)(B)(iii). Thus, the Act does not alter, for example, the §1256(a)(3) "60/40" treatment of capital gains and losses under the mark to market rules of §1256.

Finally, a §988 transaction includes a transaction entered into by an individual only if the expenses attributable to the transaction would be deductible under §162 or §212 and are not expenses incurred in connection with the determination, collection or refund of taxes.[42] The legislative history of the Act states that, for example, §988 would not apply to foreign currency gain or loss recognized by a U.S. individual residing outside the United States upon the repayment of a foreign currency denominated mortgage on the individual's principal residence.[43]

As to the above transactions which are not considered §988 transactions and thus are not covered under the Act, pre-Act law continues to apply.

3. General Consequences Associated with §988 Transactions

a. Timing and Amount of Exchange Gain or Loss

(1) Definition of Foreign Currency Gain or Loss

For purposes of §988, §988(b)(1) defines foreign currency gain as "any gain from a section 988 transaction to the extent such gain does not exceed gain realized by reason of changes in exchange rates on or after the booking date and before the payment date." Foreign currency loss is defined under §988(b)(2) to mean "any loss from a §988 transaction to the extent such loss does not exceed the loss

[38] §988 (c)(1)(B) and (c)(1)(C).

[39] Senate Report at 460.

[40] Committee on Foreign Activities of U.S. Taxpayers, Section of Taxation, American Bar Association, "Report on the U.S. Treasury Department Discussion Draft on Taxing Foreign Exchange Gains and Losses," 36 Tax L. Rev. 425, 441 (1981). For a contrary view, *see* Newman, "Tax Consequences of Foreign Currency Transactions: A look at Current Law and an Analysis of the Treasury Department Discussion Draft" 36 Tax Law. 223, 236 (1983); *see also American Air Filter Co. v. Comr.*, 81 T.C. 709 (1983) (where a loan agreement provided that a liability payable in foreign currency could be converted to one payable in another currency, the conversion to a U.S. dollar liability was treated as a realization event); GCM 39294 (June 15, 1984) (where the IRS noted that repayment in U.S. dollars instead of foreign currency does not alter the tax consequences).

[41] Senate Report at 460.

[42] §988(e).

[43] Conference Report at II-669.

realized by reason of changes in exchange rates on or after the booking date and before the payment date."[44] For the above purposes, "booking date" in the case of a §988(c)(1)(B)(i) transaction (*i.e.*, involving the acquisition of a debt instrument or becoming the obligor under a debt instrument) means the date of acquisition or the date on which the taxpayer becomes the obligor, respectively. Booking date as to a §988(c)(1)(B)(ii) transaction (*i.e.*, the accruing, or otherwise taking into account, of an item of expense or gross income or receipt to be paid or received after the date on which so accrued or taken into account) is the date on which such transaction is accrued or otherwise taken into account. The payment date for such a transaction is the date on which payment is made or received. §988(c)(2) and (3).

The booking date for §988(c)(1)(B)(iii) transactions (*i.e.*, entering into or acquiring a forward contract, futures contract, options contract or similar financial instrument) is the date on which the position is entered into or acquired, while the payment date in respect of such transactions is the date on which payment is made or received or the date on which the taxpayer's rights with respect to the position are terminated. Since the payment date in respect of such transactions includes only the date on which payment is made or received or the date on which the taxpayer's rights were terminated, §988 makes clear, for example, that it was anticipated that entering into an offsetting position would result in foreign currency gain or loss only if an actual closeout is effected at such time. If the offsetting position is simply an economic offset of an existing position, no foreign currency gain or loss exists for purposes of §988.

Finally, in respect of a §988 transaction involving the disposition of a nonfunctional currency, "acquisition date" is substituted for the booking date, and "disposition" is substituted for payment date in §988(b)(1) and (2).[45]

(2) Realization Events in Respect of §988 Transactions

As can be seen from the definition of exchange gain or loss, the above rules generally do not alter the existing law in regard to the requirement that a realization event is required before exchange gain or loss is taken into account for U.S. tax purposes.[46] In this regard, foreign currency gain or loss is defined under §988(b)(1) and (2) as "gain" or "loss" *to the extent* such gain or loss does not exceed the realized gain or loss attributable to movements in exchange rates. Thus, the statute appears to incorporate existing law realization principles because it requires gain or loss to be present and then defines such gain or loss as foreign currency gain or loss to the extent such gain or loss is attributable to movements in exchange rates. For example, a foreign currency borrowing must be repaid before exchange gain or loss is taken into account for U.S. tax purposes, and foreign currency itself (like other property) must be sold or otherwise disposed of in order for any appreciation or depreciation of the foreign currency to be taken into account for U.S. tax purposes.

The rules of the Act do, however, affect normal realization principles in two instances. The Act "clarifies" that the use of a nonfunctional currency to establish a demand or time deposit denominated in the same currency or the conversion of such a deposit to another deposit in the same currency is not a realization event. This is because the definition of a §988 transaction, which generally includes the disposition of a "nonfunctional currency," provides that a nonfunctional currency for such purposes includes not only the currency itself but also demand or time deposits or similar instruments issued by a bank or other financial institution.[47] One technical question which arises, however, is whether the establishing or converting of a time or demand deposit or similar instrument might be considered a realization event once excluded from the definition of a §988 transaction. In other words, since §988 does not alter the general principle that foreign currency is property, the determination of whether a realization event has occurred for U.S. tax purposes in respect of a non-§988 transaction arguably must be determined under general principles and, under such principles, a realization event may have occurred.

Section 988 also applies special rules for so-called §988 hedging transactions. As discussed in more detail at 4, g *infra*, §988(d) provides that all transactions which are part of §988 hedging transactions, if fully hedged, are, to the extent provided in regulations, to be integrated and treated as a single transaction. As explained in the Conference Report at II-666, the intended effect of such integration is to treat the predetermined future cost of the currency pursuant to the hedge (which cost is based on expected movements of the currency) as a current expense or income item in respect of the integrated transaction. Thus, for example, the premium reflected in the forward rate of forward purchase contracts used to fully hedge the principal amount of a borrowing in a strong currency (relative to the taxpayer's functional currency) is taken into account over the term of the borrowing notwithstanding that the forward contract will not be closed out (and thus the premium will not be paid) until the maturity of the borrowing. (*See* Example in 4, g, (2) *infra*.) Under normal realization principles, a gain or loss would not arise until the contract is actually terminated (*e.g.*, by sale or offset) or, if the closeout is effected by delivery, the time at which the acquired currency is transferred. The rules under §988 therefore alter pre-Act realization principles in respect of §988 hedging transactions.

By contrast, the final Treasury proposal would have required that taxpayers accrue currently anticipated exchange gains or losses as to both financial hedging transactions *and* nonhedging transactions.[48] Under such an anticipated exchange gain or loss approach, the taxpayer would have been required to use an objective index (*i.e.*, the applicable federal rate) in order to determine the expected value of the currency during the term of a nonhedging

[44] The Conference Report states, at II-663, that foreign currency denominated items are to be translated into U.S. dollars using the exchange rate that most properly reflects income and that generally such exchange rate will be the free market rate.

[45] §988(c)(1)(C)(i)(II).

[46] Conference Report at II-663.

[47] §988(c)(1)(C)(ii).

[48] U.S. Treasury, *The President's Tax Proposals to the Congress for Fairness, Growth and Simplicity* 417-418 (May 1985).

transaction. Such expected value would have been required to be accounted for currently as an adjustment to interest expense or interest income associated with the transaction, with any "unexpected" movement in the exchange rates being accounted for as unanticipated exchange gain or loss at the time of a realization event under normal principles.

The theory behind anticipating exchange gain or loss in respect of financial transactions is that the difference between the interest rates in the various currencies is attributable to expected exchange gains or losses which will offset such interest differential. Thus, a taxpayer which borrows a strong currency (*e.g.*, the Swiss franc) at a 5% interest rate at a time when U.S. interest rates are 9% expects an exchange loss which will approximately offset the 4% differential between the cost of U.S. dollars and the cost of Swiss francs. The problems with such an approach, and apparently the reasons the approach was not adopted by Congress in the Act are (i) an anticipated gain or loss based on an external index does not reflect other factors which may determine the differential in respect of a particular taxpayer's transactions (*e.g.*, industry projections, the particular taxpayer's market share or credit standing), and (ii) such an approach is extremely difficult to apply and administer as a practical matter.[49]

(3) Separate Transaction Principle

As discussed above, the separate transaction principle generally has been incorporated into §988(a)(1)(A), which provides that foreign currency gain or loss attributable to a §988 transaction shall be computed "separately." The Conference Report, however, provides that "foreign currency gain or loss is recognized only to the extent of the total gain or loss, taking into account gain or loss on the underlying transaction." [50]

Under the Conference Report examples (at II-664), the significance of this language seems to be that where there is a gain or loss on the underlying transaction, as well as offsetting foreign currency loss or gain, the two should be "*netted*" and only the excess amount of *foreign currency* loss or gain, if any, should be reported "separately" under §988(a)(1)(A). The example in the Conference Report used to illustrate this point is as follows: If a taxpayer whose functional currency is the U.S. dollar acquires a debt obligation that is not part of a §988 hedging transaction for 100 pounds when the exchange rate is 1 pound = $1 and sells the obligation for 200 pounds when the exchange rate is 1 pound = $2, $100 of the taxpayer's $300 gain ($400 sales price less $100 basis) is foreign currency gain attributable to difference between U.S. dollar value of sterling principal at date of acquisition ($100) and date of sale ($200). This is calculated by multiplying the difference in exchange rates between the booking date (1 pound = $1) and the payment date (1 pound = $2) by the units of functional currency originally booked by the taxpayer (100 pounds) . . . . In the above example, if the exchange rate had fallen to 1 pound = $.5, the taxpayer would have had no foreign currency (or nonforeign currency) gain or loss; if the exchange rate had fallen to 1 pound = $.75, the taxpayer would have had a $50 nonforeign currency gain; if the exchange rate had fallen to 1 pound = $.25, the taxpayer would have had a $50 foreign currency loss.

As modified, the "separate transaction" principle seems to be limited to requiring that exchange gain or loss not be characterized entirely as gain or loss from the underlying transaction in all cases. To the extent that there is inconsistent movement in the intrinsic and currency values in respect of the underlying transaction, however, the foreign currency gain or loss is not considered separate from the gain or loss in respect of the underlying transaction for purposes of §988. Such treatment is difficult to justify considering that the gain or loss in respect of the underlying transaction in many instances (if not most instances) would have virtually no relationship with the movement of exchange rates, and the consequences regarding, for example, the source and character of the total gain or loss in respect of a particular transaction (and possibly the amount of Subpart F income from a particular transaction) could be altered rather dramatically because of such treatment.[51]

b. Character of Section 988 Transaction Exchange Gain or Loss

Section 988(a)(1)(A) provides that foreign currency gain or loss in respect of §988 transactions is to be treated as ordinary income or loss.[52] Under prior law, the character of exchange gain or loss was, as a general proposition, determined by reference to the character of the gain or loss in respect of the underlying transaction,[53] or to the character of the currency itself in the case of a disposition of currency. Thus, unless the property was determined to fall within one of the exceptions enumerated in §1221 or within an established judicial exception, the gain or loss would be considered capital gain or loss. In many cases, the result was to ignore the factors which created the exchange gain or loss (*e.g.*, interest rate differentials) and simply to characterize the gain as capital because the gain or loss from the underlying transaction was capital gain or loss.

The Act apparently has, however, continued prior law in respect of certain hedging transactions. Under prior law, the principal judicial exception for purposes of determining the character of exchange gains and losses evolved through a series of early cases and IRS rulings principally involving commodity hedging transactions,[54] and which ultimately culminated in *Corn Products Refining Co. v. Comr.*, 340

[49] Senate Report at 452-453; House Report at 466-467.

[50] Conference Report at II-663-664.

[51] In addition, the modified separate transaction principle could have an effect on provisions applied by reference to the gross amount of a taxpayer's income (*e.g.*, "80-20" status).

[52] The capital gain or loss distinction will continue to have relevance for taxpayers under the new law until the first taxable year in which the taxpayer is subject to the 34% (corporations) or 28% (individuals) rate, and also for purposes of determining the deductibility of capital losses.

Comr.*, 41 B.T.A. 247 (1940); GCM 17322, XV-2 C.B. 151 (1934).

U.S. 46 (1955). In that case, the taxpayer, engaged in the production of distilled products from corn, purchased corn futures to protect itself against future price increases in the raw corn needed in its manufacturing operations. In holding that the gains realized on the closeouts of the futures contracts constituted ordinary income, the Court noted that the futures transactions "were vitally important to the company's business," and that "Congress intended that profits and losses arising from everyday operation of a business be considered as ordinary income or loss rather than capital gain or loss." [55]

In applying the *Corn Products* doctrine to foreign currency hedging transactions, the authorities generally have required that the exchange gain or loss in respect of the hedging transaction be determined by reference to the character of the gain or loss of the hedged item.[56] As discussed below in more detail, the rules for §988 hedging transactions provide that, where appropriate, the character (and source) of exchange gain or loss in respect of a "partial hedge" be consistent with the character of exchange gain or loss on the hedged item.[57]

The general characterization of exchange gain or loss as ordinary in character followed the Senate approach, while the House would have treated such gain or loss as interest income or interest expense for all purposes of the Code except §§871(a), 881, 1441, 1442 and 6049. H.R. 3838, §661(a). The Senate Report states that such an approach offers a "pragmatic solution" to an issue with respect to which "tax scholars and practitioners" could not agree.[58] (The primary reasons for rejecting an interest characterization for exchange gains and losses are basically the same as the reasons (discussed above) for rejecting the notion of anticipated gain or loss.)

One possible criticism of such an approach is that exchange gain or loss does not necessarily reflect only movements in interest rates. Even if one adopts the position that exchange gain or loss should be the equivalent of interest (*i.e.*, ordinary income or expense) to the extent such gains or losses reflect differences in interest rates as to different currencies, the treatment of §988 exchange gains and losses as entirely ordinary income or loss will distort the character of the income or loss from a transaction to the extent the exchange gain or loss does not reflect interest rate differentials (*i.e.*, the so-called unanticipated exchange gain or loss under the Treasury Department's proposal). Moreover, as at least one commentator has already pointed out, since §988 applies to only a limited universe of transactions, gains or losses in respect of transactions which fall outside of §988 (*e.g.*, futures contracts governed by §1256) may reflect the same movement of exchange rates as gains or losses in respect of transactions which fall within §988 (*e.g.*, foreign currency denominated bonds), but the character of the income or loss could well be capital in the former situation but ordinary in the latter.[59]

In some instances, the disparate character treatment of similar transactions which fall within and without §988 is eliminated under §988(a)(1)(B), which provides the taxpayer with an election to treat any foreign currency gain or loss attributable to a forward contract, futures contract, or option contract which falls within §988 (*i.e.*, a contract which is *not* marked to market under §1256) as capital gain or loss if the contract is not part of a straddle as defined under §1092(c) (without regard to the exception therein for qualified covered calls and optioned stock). The taxpayer must make the election and identify the transaction before the close of the day on which such transaction is entered into (or such earlier time as the Secretary may prescribe). Thus, in respect of such transactions, the taxpayer may elect to receive consistent character treatment of any exchange gain or loss for functionally similar transactions which for technical or other reasons fall within and without §988.

c. *Interest Income or Interest Expense Characterization*

Although the Act did not adopt the House approach regarding a general interest income or expense characterization for foreign currency gains and losses, respectively, §988(a)(2) provides that, to the extent provided in regulations, amounts treated as ordinary income or loss under the above rules are to be treated as interest income or interest expense, as the case may be. The Conference Report states that the regulations may apply such treatment for selected purposes only.[60] (As discussed above, the House Bill would have treated foreign currency gain or loss as interest income or interest expense for all purposes of the Code except for purposes of taxing nonresident aliens or foreign corporations (*i.e.*, §§871, 881, 1441 and 1442) and for purposes of the information reporting provisions (*i.e.*, §6049)).

Since foreign currency gain generally is not income of the type subject to taxation on a gross basis (*i.e.*, fixed or determinable annual or periodical income), presumably such gain will not be treated by regulation as interest income for purposes of the taxation of nonresident aliens or foreign corporations (*i.e.*, §§871, 881, 1441, and 1442). However, where payments have been fixed based on expected movements in exchange rates and thus the overall "exchange" gain or loss associated with the transaction has been predetermined, characterization as interest income (or interest expense) may well be appropriate. In this regard, the Senate Report states that an example of an appropriate circumstance in which foreign currency gain or loss should

be treated as interest income or expense, respectively, is in the case of hedging transactions where a taxpayer's expectations about future exchange rates are reflected at the outset in the overall costs of the transaction.[61] In addition, the Conference Report states that the Secretary will address the appropriate treatment of payments made to a counterparty under a swap transaction for purposes of the withholding tax provisions (*i.e.*, §§871 and 881).[62]

d. Source of §988 Transactions Exchange Gain or Loss

(1) Prior Law

The source of exchange gain and the allocation and apportionment of exchange loss was perhaps the most unsettled issue regarding foreign currency transactions under pre-Act law. For example, as to the disposition of foreign currency itself, the applicable rule technically would be the "title passage" test in regard to foreign currency gain.[63] Obvious difficulties arise in determining the location of the passage of "title" in regard to "property" which is used as a medium of exchange such as foreign currency. In addition, special re-sourcing rules applicable to dispositions of personal property could well have applied in determining the source of exchange gain or loss in respect of a disposition of currency.[64]

Similarly, the allocation and apportionment of losses from a disposition of currency generally required a strained analysis of existing rules regarding property dispositions. Regs. §1.861-8(e)(7) provides that losses from the disposition of capital or §1231(b) assets "shall be allocated directly to the class of gross income to which the property (*i.e.*, the foreign currency) ordinarily gives rise in the hands of the taxpayer." Again, because foreign currency typically is used as a medium of exchange, it does not "ordinarily" give rise to any particular class of gross income in the hands of U.S. taxpayers. Assuming the absence of a class of income to which the losses could be directly related, an argument might be made that the class of income generated by the activities for which the currency was used should be the income to which the currency ordinarily gives rise (*i.e.*, a "look through" approach). However, there was no authority which supported such an approach even in the context of fully hedged transactions, where tracing would appear to be the most logical solution.[65] Moreover, since the rules for losses (as with gains) required a determination of the status of the currency as a capital or §1231(b) asset, the above rules in effect incorporated the additional uncertainty (discussed above) under pre-Act law regarding the determination of the character of exchange gain or loss.

If the losses were not definitely related to any class of gross income, under pre-Act law the taxpayer would have been required to allocate the losses to all classes of gross income and apportion the losses between foreign and U.S. sources in accordance with the ratios of foreign and U.S. source gross income, respectively, to worldwide gross income.[66] Such an allocation would be virtually identical to the pre-Act "gross income" method for allocating interest expense [67] and probably would be more consistent with the nature of the loss than the approach of Regs. §1.861-8(e)(7). Indeed, such an approach generally would have been consistent with the approach taken under the House Bill, which would have allocated and apportioned exchange losses (and exchange gains) in the same manner as interest expense (and interest income).

(2) Act Rules

Under the Act, exchange gains and losses treated as ordinary income or loss under §988 are, except as otherwise provided in regulations, to be sourced by reference to the residence of the taxpayer (or the QBU of the taxpayer) on whose books the asset, liability or item of income or expense giving rise to such gain or loss is properly reflected.[68] (For this purpose, the election under §988(a)(1)(B) to treat exchange gains or losses as capital gains or losses is disregarded.[69]) Residence in the case of an individual is his or her tax home and in the case of a corporation, partnership, trust or estate which is (i) a U.S. person, the United States or (ii) a non-U.S. person, a country other than the United States. The residence of a QBU (including a QBU of an individual) is the country in which the principal place of business of such QBU is located.[70]

Sourcing exchange gain or loss in accordance with the taxpayer's residence is consistent with the treatment of foreign currency as property and the general amendments to the sourcing rules in regard to other types of property (except inventory) under §1211 of the Act. The Senate Report, at 453, states that sourcing exchange gains or losses in accordance with residence will "tend to neutralize the effect of exchange gain or loss on the calculation of foreign tax credits (unlike present law, under which wide swings in exchange rates can result in unpredictable reductions in net foreign source income.)" It is not clear, however, that such treatment will "neutralize" the effect of exchange gains or losses on the calculation of the foreign tax credit unless the taxpayer has offsetting gains and losses, whether as a result of a particular transaction (*i.e.*, hedged transactions) or on an overall basis. (As discussed at g *infra*, consistent treatment of the sourcing of exchange gains and losses in respect of certain hedging transaction is required under the Act.)

(3) Resourcing Rule for Related Party Transactions

Section 988(a)(3)(C) provides a special "resourcing" rule in regard to certain loans by a United States person or a related party to a 10%-owned foreign corporation. The "resourcing" rule requires that affected loans be marked to market on an annual basis and interest income earned on the loan during each respective year be treated as U.S. source income for §904 purposes to the extent a loss is determined to exist by virtue of such treatment. As explained in the Senate Report, the "resourcing" rule was included because of concern that the general rule that looks to residence could be manipulated to artificially increase foreign source income for purposes of computing allowable foreign tax credits.[71]

Loans with respect to which such treatment is required are loans by a U.S. person or a related person (*e.g.*, a foreign subsidiary) to a 10%-owned foreign corporation, which loan is denominated in a foreign currency and bears interest at a rate at least 10 percentage points higher than the applicable federal rate (at the time the loan was entered into) for mid-term obligations. For the purposes of this special "resourcing rule," "related person" has the meaning given such term by §954(d)(3) except that "United States person" is substituted for "controlled foreign corporation" in §954(d)(3) wherever such term appears.[72] The term 10%-owned foreign corporation means any foreign corporation in which the United States person owns directly or indirectly at least 10% of the voting stock.[73]

The Conference Report, at II-668, states that the Secretary is provided regulatory authority to apply rules similar to the rules for related party loans "to loans to U.S. persons." The regulatory authority apparently is granted pursuant to §989(c)(5), which provides regulatory authority for the appropriate treatment of "related party transactions." The situations in which such authority is to be used, however, are not clear. One situation may be in respect of loans to "80-20" corporations, which may generate foreign source interest income that is expected to be offset by an exchange loss. Under the Act, the offsetting interest expense within the consolidated group would be allocated on the basis of consolidated group assets and thus such interest expense may not entirely offset the interest income earned by the shareholder or related party.

4. Consequences of Selected §988 Transactions

a. Currency Transactions

As discussed above, §988 did not affect the present law principle that foreign currency is treated as property with respect to which the taxpayer establishes a basis, with gain or loss upon a "sale or other disposition" of the foreign currency being realized under §1001 in the amount by which such basis differs from the proceeds of such sale or other disposition.[74] Such sales or other dispositions of the currency may occur in connection with other transactions (*e.g.*, borrowing or lending) or simply result from the sale of the currency in exchange for the taxpayer's functional currency.

Assume, for example, that a U.S. parent corporation with the U.S. dollar as its functional currency acquired 165,000,000 Swiss francs at a cost of U.S. $100,000,000, and loaned the Swiss francs to its Swiss subsidiary in exchange for a two year note after holding the Swiss francs for 30 days. Assume further that the 165,000,000 Swiss francs were worth U.S. $98,000,000 at the time the loan to the Swiss subsidiary was made and were worth U.S. $110,000,000 at the time the loan was repaid. Finally, assume that the parent held the Swiss francs repaid by the subsidiary for 15 days prior to converting the currency into U.S. $107,000,000.

Three taxable events occurred in the above example, two of which were a result of the disposition of the currency itself. The first taxable event occurred at the time the Swiss francs were loaned to the subsidiary, because (as property) the foreign currency was deemed to have been "sold" for the subsidiary's note. The parent realized an exchange loss of U.S. $2,000,000 in respect of such sale, the difference between its basis in the loaned Swiss francs (U.S. $100,000,000) and the U.S. dollar proceeds from its sale (U.S. $98,000,000). As discussed in more detail below, the parent realized a U.S. $12,000,000 exchange gain on the repayment of the loan by the subsidiary, which is equal to the difference between the U.S. dollar value of the Swiss francs at the time the loan was made (U.S. $98,000,000) and the U.S. dollar value of the Swiss francs upon repayment of the subsidiary loan (U.S. $110,000,000). Finally, the parent realized a loss at the time it converted the Swiss francs into U.S. dollars. The amount of such loss was U.S. $3,000,000, the difference between the U.S. $110,000,00 basis in the Swiss francs which the parent acquired at the time the subsidiary loan was repaid and the U.S. $107,000,000 realized on its conversion of the Swiss francs into U.S. dollars.

Although the above analysis is the same as under pre-Act law [75] (as discussed above), §988 provides new rules in regard to the character and source of the exchange gain and loss resulting from the transaction. The character of the losses in regard to the "sales" of Swiss francs would be ordinary under §988(a)(1)(A) and the losses (assuming the parent was not operating through a QBU) would be allocated and apportioned entirely to U.S. source income.[76] Similarly, as discussed below, the parent's gain in respect of the repayment of the loan would be ordinary and U.S. source.

Under pre-Act law, the gains and losses would be capital in character unless a statutory exception under §1221 or (more likely) a judicially created exception to capital gain or loss treatment such as *Corn Products* applied. The source of the exchange losses attributable to dispositions of the Swiss franc likely would be determined under the strained application (discussed above) of the source provisions in respect of property transactions (or,

[71] Senate Report at 468.

[72] §988(a)(3)(C) (flush language).

[73] §988(a)(3)(D).

[74] The Act, adding §988(b) to the Code, provides that foreign currency gain or foreign currency loss will exist for §988 purposes to the extent the gain or loss realized on a currency disposition is attributable to movements in exchange rates between the acquisition date (*i.e.*, the booking date in respect of such a transaction) and the date of disposition (*i.e.*, the payment date in respect of such a transaction).

[75] *See KVP Sutherland Paper Co. v. U.S.*, fn. 37 *supra*.

[76] §988(a)(3). It is also assumed that the special resourcing rule of §988(a)(3)(C) does not apply.

alternatively on a gross income apportionment basis). The source of the exchange gain in respect of the repayment of the loan would be determined under the "title passage" rule, unless the special resourcing rule under former §904(b)(3)(C) applied.[77]

b. Accounts Payable and Accounts Receivable

If a taxpayer agrees to be paid or agrees to pay a nonfunctional currency for the sale of goods or performance of services, it will take into account exchange gain or loss under the Act equal to the difference between the functional currency value of the receivable or payable on the date it arose and the date it is paid, respectively.[78] Under pre-Act law, the character of any exchange gain or loss attributable to the fluctuation in the U.S. dollar value of the payable or receivable itself, any such gain or loss attributable to the currency used to repay the borrowing, and any such gain or loss attributable to any obligation incurred to finance the acquisition of any underlying property was ordinary in character.[79]

The source of any exchange gain or loss in respect of accounts payable or accounts receivable usually was determined by reference to the source of the underlying transaction (*e.g.*, an exchange gain in respect of accounts payable resulting from the performance of services was sourced by reference to the place where the services were performed). The Senate and House Reports raise a question, however, whether under pre-Act law the separate transaction principle would have required that the exchange gain or loss in respect of such transactions be sourced separately from the underlying transaction.[80]

The character of exchange gain or loss in respect of accounts payable or accounts receivable under the Act is (as under pre-Act law) ordinary in character.[81] As discussed above, any such exchange gain or loss would be sourced by reference to the taxpayer's residence which, in the case of a QBU, is the country in which the principal place of business of the QBU is located.[82]

c. Foreign Currency Debt Instruments

(1) General Rules Applicable to Foreign Currency Debt Instruments

(a) Amount of Exchange Gain or Loss in Respect of Debt Instruments

As discussed above, the amount of foreign currency gain or loss required to be taken into account under §988 on the repayment of debt instruments is equal to the gain or loss on such repayment to the extent that such gain or loss does not exceed gain or loss *realized* by reason of changes in exchange rates on or after the booking date and before the payment date. (For §988 purposes, "debt instrument" means a bond, debenture, note, certificate or other evidence of indebtedness. In addition, to the extent provided in regulations, such term also will include preferred stock.)[83] Thus, the amount of exchange gain or loss realized in respect of such repayment must first be determined under general principles, and then such gain or loss must be characterized as gain or loss for §988 purposes to the extent attributable to the movement in exchange rates between the relevant dates.

One problem with such an approach is that the amount of exchange gain or loss realized under "normal" principles in respect of the repayment of a foreign currency obligation is unsettled. One approach (which has been adopted by the IRS in TAM 8435006 and accompanying GCM 39294) is to compute the amount of such gain or loss by subtracting the basis of the currency used to repay the borrowing from the U.S. dollar value of the foreign currency at the time borrowed. Under this approach (hereinafter referred to as the "single-step" approach), the amount realized with respect to the currency used to repay the borrowing is the U.S. dollar value of the foreign currency at the time borrowed, and thus the fair market value of such currency at the time the borrowing is repaid is irrelevant in determining the amount of gain or loss realized on such repayment.

The courts and the IRS clearly have applied the "single step" approach in the context of nonrecourse borrowings. The most prominent authority in the context of nonrecourse borrowings is the *Tufts*[84] decision, in which the Supreme Court held that the amount realized with respect to property used to extinguish a nonrecourse U.S. dollar liability is the face amount of such borrowing, notwithstanding that the fair market value of the property was admittedly less than such face amount. In this regard, some commentators believe that the amount realized with respect to the repaid currency on the repayment of a foreign currency borrowing should be the same as the "amount realized" with respect to property which extinguishes a nonrecourse liability, since as to both types of borrowings the parties have agreed at the time the borrowing is entered into that an amount of property, whatever its value, will be deemed sufficient to extinguish the debt at maturity.[85] It is not clear, however,

[77] As discussed above, a §988 transaction does not include the establishing of a demand deposit, time deposit or similar instrument issued by a bank or other financial institution or the conversion of such instruments into other such instruments denominated in the same currency. As a result, unless (as discussed above) the taxpayer is considered to have disposed of the currency outside the context of §988, the taxpayer will not realize any exchange gain or loss in respect of such currency transactions.

[78] *See Bennett's Travel Bureau, Inc., v. Comr.*, 29 T.C. 198 (1956) (where the taxpayer accrued a deduction for accounts payable in Norwegian kroner but, in a later year, settled the account at less than the U.S. dollar amount it had deducted); *Foundation Co. v. Comr.*, 14 T.C. 1333 (1950) (where the taxpayer performed service in Peru and accrued Peruvian soles, and the currency's value at the time of payment was lower than when the income was accrued).

[79] See *American-Southeast Asia Co. v. Comr.*, footnote 37 *supra* at 201 (1956); *Church's English Shoes, Ltd. v. Comr.*, footnote 53 *supra* (where the taxpayer imported goods on credit, the purchase of foreign currency to settle the account payable was viewed as part of the taxpayer's ordinary business, and, thus, an exchange gain was taxable as ordinary income). *See also* Code §1221(4) (an account receivable acquired for services rendered or sales of property in the ordinary course of business is excluded from the definition of a capital asset).

[84] *Tufts v. U.S.*, 461 U.S. 300 (1983).

[85] O'Neill and Lee, Federal Income Tax Treatment of Foreign Currency Denominated Debt, 12 Int'l Tax J. (Winter 1986).

that the analysis in the nonrecourse authorities such as *Tufts*, which appears to accord significant weight to the fact that the face amount of the debt was included in the basis of the property so transferred (*i.e.*, a "tax benefit" analysis), applies generally to the repayment of a foreign currency borrowing.

Further, in the context of recourse liabilities, there is no clear authority which addresses the situation where the fair market value of the property used to repay the borrowing was admittedly less than the face amount of the retired debt.[86] Finally, it should be noted that the "single step" analysis would seem to be inconsistent with *Kentucky and Indiana Terminal Railroad v. U.S.*,[87] in which the Sixth Circuit held that gain on the repayment of a foreign currency borrowing is attributable to the borrowing itself (rather than the property (*i.e.*, the foreign currency) used to repay the borrowing) and thus such gain qualified as "cancellation of indebtedness" income.

An alternative approach is to determine the amount realized with respect to the currency used to repay the debt by reference to its fair market value, which is the same as the U.S. dollar value of the borrowing at its maturity. Under this approach, gain or loss attributable to the borrowing itself is also realized, and is computed by reference to the difference in the U.S. dollar value of the borrowing at the time borrowed and the U.S. dollar value of the borrowing at its maturity date.

Such an approach in effect bifurcates the gain or loss on the repayment of a foreign currency borrowing into two elements: (i) gain or loss attributable to the currency (*i.e.*, the property) used to repay the borrowing (computed by reference to the difference between the basis and fair market value of the currency so used) and (ii) gain or loss attributable to the borrowing itself (computed by reference to the difference in the U.S. dollar value of the borrowing at the time of the borrowing and at its maturity date).

As compared with the "single-step" approach, the bifurcation analysis arguably reflects the economic realities of the transaction because it accounts for the fair market value of the currency used to repay the borrowing, rather than simply attributing to such currency the initial U.S. dollar value of the borrowing. By taking into account the fair market value of the currency so used, the bifurcation approach in turn reflects the fact that the principal amount of the foreign currency borrowing itself has "fluctuated" in U.S. dollar terms. This should be contrasted with the analysis of a U.S. dollar borrowing for U.S. tax purposes, the value of which is not considered to fluctuate.

Such an approach would also appear to reflect the analysis of the Tax Court in *National Standard Co. v. Comr.*,[88] In *National Standard*, the IRS argued before the Tax Court that the amount of the loss on the repayment of the foreign currency borrowing, which was argued to be capital, should be computed by "calculating the amount realized as the U.S. dollar value of the francs at the time borrowed, less the adjusted basis calculated as the U.S. dollar value of the francs at the time the respective debts were repaid." [89] The majority of the Tax Court disagreed and stated that "the amount petitioner realized was not the U.S. francs when borrowed. Rather, it was the extinguishment of a debt at a time that debt had a U.S. dollar value equal to the cost of the francs used to pay off the debt." [90] The Tax Court also noted that the determination of the amount realized with respect to the currency used to repay the borrowing was inconsistent with the fact that the taxpayer had acquired the currency immediately prior to the loan repayment, and thus "the loss did not result from the transfer of depreciated property in satisfaction of a debt." [91] Finally, the Tax Court majority stated that the loss on the repayment of the borrowing "was due to the fact that the amount of the debt itself had increased in terms of U.S. dollars." [92]

Under the above analysis, it seems relatively clear that at least in the Tax Court's opinion a taxpayer would realize a separate exchange gain or loss with respect to the foreign currency borrowing itself to the extent that a difference exists between the U.S. dollar value of the currency at the time borrowed and the U.S. dollar value of the currency at the maturity of the borrowing. Further, although the facts of *National Standard* did not present the issue, it would seem to necessarily follow from the Tax Court's rationale that the borrower would have a separate gain or loss with respect to the currency used to repay the borrowing if (and only if) there is a difference between the basis of such currency and the U.S. dollar value of the borrowing at its maturity.[93]

The bifurcation approach would also seem to be consistent with the analysis of the Tax Court in *Danenburg v. Comr.*[94] *Danenburg* involved a taxpayer who had incurred bank debt with respect to the financing of real estate, farm equipment and the harvesting of crops. The taxpayer collateralized the loans with various properties, including all the stock owned by the taxpayer in a cattle company. The taxpayer failed to pay the loans and the bank exercised its right to the collateral. Except for the stock of the cattle company, all the property was sold by the taxpayer and the proceeds forwarded to the bank in order to reduce the outstanding debt. The cattle company stock was transferred to the bank in kind.

The Commissioner argued that the entire remaining amount of the original borrowing (after being reduced to the extent of the cash proceeds from the sales of the other collateral) was realized by the taxpayer in exchange for the stock. The Tax Court, however, found that the fair market value of the stock represented only a small fraction of the remaining amount of the original borrowing, and held that the lesser fair market value of the stock was the amount of the original borrowing realized with respect to the stock

[86] *See, e.g., Peninsula Properties Co. v. Comr.*, 47 B.T.A. 84 (1942), acq. 1942-2 C.B. 141; *Est. of Whitthorne v. Comr.*, 44 B.T.A. 1234 (1941), aff'd *per curiam*, 148 F.2d 825 (9th Cir. 1944); *Fifth Ave.-Fourteenth St. Corp. v. Comr.*, 147 F.2d 453 (2d Cir. 1944).

transferred. Further, the Tax Court held that the amount of the remaining debt in excess of the fair market value of the stock was cancellation of indebtedness income. (In this regard, *see* Regs. §1.1017-1(b)(5), which provides that a taxpayer realizes cancellation of indebtedness income to the extent the fair market value of property transferred to retire debt is exceeded by the adjusted issue price of the debt.)

Considering that §988 measures foreign currency gain or loss in respect of a debt obligation by reference to the movement in exchange rates between the date on which the taxpayer becomes the obligor (*i.e.*, the booking date) and the date on which payment is made (*i.e.*, the payment date),[95] the "bifurcation" approach would appear to be more consistent with the general approach of that section. On the other hand, considering the modifications to the separate transaction principle discussed earlier, any exchange gain or loss in respect of the currency in any event may have to be netted with the exchange loss or gain in respect of the debt instrument itself, thereby in effect adopting the "single-step" approach.

Since (as discussed above) both the character in respect of any exchange gain or loss attributable to the debt instrument and any exchange loss or gain in respect of the currency itself would be ordinary under §988, the potential difference in the character of such gains and losses under pre-Act law is not continued under §988. By contrast, the difference in gross amounts of foreign and U.S. source gains and losses may well have an effect on the computation of the foreign tax credit limitation. As a result, there may be significant foreign tax credit consequences attached to whether the single step or bifurcation analysis is adopted by a taxpayer for purposes of §988 (or, if the bifurcation analysis is applied in the first instance, whether the gains and losses in respect of the currency and the borrowing are netted under the modified separate transaction principle). In addition, the choice of the proper analysis to be applied may well have an impact on limitations (or other provisions) under the Code which are implemented by reference to the amount of a taxpayer's gross income.[96]

At least until further clarification is provided regarding the intended application of §988, the above issues will remain unsettled.

(b) Timing of Exchange Gain or Loss in Respect of Debt Instruments

As discussed above, §988 does not alter the general principle under U.S. tax law that a realization event is required in order for exchange gain or loss to be taken into account for U.S. tax purposes. The realization event in respect of a foreign currency debt instrument is its repayment (either actual or constructive).[97] Subject to certain statutory and judicial exceptions (discussed below), a U.S. taxpayer also *recognizes* an exchange gain or loss attributable to a debt instrument for U.S. tax purposes at the time the debt instrument was paid.

Under pre-Act law, it was possible for taxpayers to defer exchange gain attributable to the repayment of a foreign currency borrowing by electing to reduce the basis of its depreciable assets in an amount equal to the gain (§§108 and 1017). (By making such election, the gain would be included in income over the average life of the depreciable assets on which bases had been reduced.) This result was supported by the Sixth Circuit's decision in *Kentucky and Indiana Terminal Railroad Co.*,[98] which characterized such gain as cancellation of indebtedness income. Since there was no corresponding deferral in respect of exchange losses, taxpayers could have deferred exchange gains in respect of foreign currency borrowings while receiving a current deduction for exchange losses. (*See* discussion below, however, regarding the possible deferral of such losses under §1092).

It is clear from the Senate and House Report that exchange gain from a foreign currency borrowing is not considered cancellation of indebtedness income under the Act and thus a taxpayer cannot defer such exchange gain under §§108 and 1017. Thus, the Act reverses the result reached in *Kentucky & Indiana*. In this regard, the Senate Report, at 461, states that gain realized on the repayment of a borrowing is to be attributed first to foreign currency gain and only the balance will be considered cancellation of indebtedness income. Moreover, §822 of the Act limits the ability to defer income from discharge of indebtedness to insolvent taxpayers. The combination of the reversal of *Kentucky & Indiana Terminal Co.* and the insolvency limitation for deferral of cancellation of indebtedness income means that the result under prior law will be reached only if (i) the taxpayer repays the less foreign currency than the foreign currency principal amount of the the foreign currency obligation (in which case the total gain on the repayment would exceed any exchange gain in respect of the borrowing) *and* (ii) the taxpayer is insolvent.

Another exception to the general rule that a taxpayer must recognize exchange gain or loss in respect of foreign currency debt repayments is the application of the §1092 straddle rules under the Code. Pre-Act law was unclear as to whether a foreign currency obligation was considered a "position" potentially subject to the loss deferral rules of §1092. In this regard, although the foreign currency itself could well be traded, it was not clear that a taxpayer had a position in such property by virtue of its own debt obligation. Post-1986 Act §1092(d)(7)(A) makes it clear that foreign currency debt obligations constitute positions for purposes of §1092 and thus may be subject to the loss deferral rules of that section.

[95] §988(b)(1) and (b)(2).

[96] For example, the determination of "80-20" status, which is based on the relationship between gross foreign source income and gross worldwide income could be affected by which analysis is applied.

[97] Conference Report at II-663. For an example of a constructive repayment of a borrowing *see American Air Filter Co. v. Comr.*, 81 T.C. 709 (1983) (where conversion from Dutch guilders to U.S. dollars under a loan agreement which provided that a liability payable in foreign currency could be converted to a U.S. dollar liability was treated as a realization event).

[98] *Kentucky and Indiana Terminal Railroad Co. v. Comr.*, 54 F.2d 738 (1932), cert. denied, 286 U.S. 557 (1932); *see also Gillin v. U.S.*, 423 F.2d 309 (Ct. Cl. 1970). In GCM 39294, the IRS criticized the result reached in *Kentucky and Indiana* on the grounds that the exchange gain in respect of the repayment of a foreign currency is gain from the sale or exchange of property (*i.e.*, the currency itself) under §61(a)(3) and not gain attributable to the discharge of indebtedness under §61(a)(12).

(c) Character of Exchange Gain or Loss in Respect of Borrowings

As discussed above, exchange gain or loss in respect of a foreign currency borrowing is considered ordinary in character under §988(a)(1)(A). Under pre-Act law, the character of an exchange gain or loss in respect of a foreign currency borrowing was the subject of controversy that culminated in the Sixth Circuit's *National Standard* decision (footnote 37 *supra*). In *National Standard*, the Sixth Circuit held that the repayment of a foreign currency borrowing does not involve a "sale or exchange." Since there must be a sale or exchange in order for gain or loss to be capital in character, all exchange gains and losses would be ordinary under the Sixth Circuit's rationale in *National Standard*. On the other hand, in TAM 8435006 and GCM 39294 (June 15, 1984), the IRS set forth its view that the repayment of a foreign currency borrowing constitutes a sale or exchange, and that the use of the proceeds of the borrowing determines whether any exchange gain or loss in respect thereof is ordinary or capital.[99]

(d) Source of Exchange Gain or Loss in Respect of Borrowings

Under pre-Act law, the source of exchange gain or loss in respect of the repayment of a foreign currency borrowing was extremely unsettled. As discussed at 3, (d), (1) *supra*, a number of approaches could have been used under pre-Act law, including (i) the application of the "title passage" rules for property transfers in regard to foreign currency gains (as modified by the special sourcing rule of §904(b)(3)(C)), (ii) adjusting interest expense or interst income, or (iii) a direct allocation under the rules of Regs. §1.861-8(e)(7) in respect of losses from the sale or other dispositions of property. The Act provides certainty with respect to the source of exchange gains or losses in respect of foreign currency borrowings: such gains and losses are U.S. source if the residence of the taxpayer is in the U.S. and foreign source if such residence is outside the U.S.[100] Residence in the case of an individual is his or her tax home and in the case of a corporation, partnership, trust or estate which is (i) a U.S. person, the United States, or (ii) a non-U.S. person, a country other than the United States. The residence of a QBU (including a QBU of an individual) is the country in which the principal place of business of such QBU is located.[101]

(2) Deductions for Interest and Discount in Respect of Foreign Currency Borrowings

(a) Stated Interest

The Act clarifies generally the treatment of foreign currency denominated stated interest obligations by providing that an exchange gain or loss arises to the extent that the U.S. dollar value of foreign currency stated interest expense fluctuates between the accrual date and the payment date. In this regard, a §988 transaction is defined to include the accruing of an item of expense prior to the payment of such item.[102] In addition, exchange gain or loss in respect of such expenses is defined as gain or loss attributable to such expenses to the extent such gain or loss does not exceed the gain or loss realized by reason of exchange rate changes occurring on or after the date the expense was accrued and before the date it is paid.[103] By contrast, under pre-Act law, there was no clear authority as to whether any gain or loss attributable to movements in exchange rates after the accrual and before the payment of interest expense should be viewed as exchange gain or loss or as an upward (loss) or downward (gain) adjustment to interest expense.

Example: Assume a calendar year U.S. dollar functional currency taxpayer borrowed for three years a principal amount of 100,000,000 Swiss francs at an annual stated interest rate of 5% on September 30th (Year 1). Assume also that on December 31 of Year 1, the Swiss franc exchange rate was SFr 1.66:$1 and therefore the accrued interest expense as of such date in U.S. dollar terms was approximately U.S. $753,00 (SFr interest expense for three months (SFr 1,250,000) times the spot rate (SFr 1.66:$1)).[104] If the exchange rate on September 30th (Year 2) were SFr 1.50:$1, the Swiss franc interest expense accrued in Year 1 (1,250,000) would translate into approximately U.S. $833,000. Under pre-Act law, the U.S. $80,000 difference between the U.S. dollar accrual and payment amounts arguably would have been deductible (and, for example, sourced for foreign tax credit purposes) as additional interest expense. Under the Act, however, it is clear that the U.S. $80,000 difference will be considered an exchange loss. Similarly, if the accrued interest expense had decreased in U.S. dollar terms between the accrual and payment dates (to, for example, U.S. $700,000), under pre-Act law such "gain" arguably would have reduced the amount of interest expense in Year 2. Under the Act, the taxpayer's net interest expense attributable to the SFr 1,250,000 accrued in Year 1 probably would be the Year 1 U.S. dollar accrual of U.S. $753,000, and the taxpayer will probably recognize a separate gain of U.S. $53,000 on the payment date (*i.e.*, Year 2) in respect of such accrued amount.

Under the modified separate transaction principle discussed earlier, however, it is possible that the exchange gain

[99] The IRS based its position on authorities which have held that the repayment of a debt obligation with property (but not foreign currency) resulted in a "sale or exchange." *See, e.g., Kenan v. Comr.*, 114 F.2d 217 (2d Cir. 1940) (where property was transferred in satisfaction of a legatee's claim against an estate); *Rogers v. Comr.*, 103 F.2d 790 (9th Cir. 1939), cert. denied, 308 U.S. 580 (1939) (where property was transferred in return for cancellation of a note representing part of the purchase price); Rev. Rul. 76-111, 1976-1 C.B. 214.

[100] §988(a)(3)(A).

[101] §988(a)(3)(B).

[102] §988(c)(1)(B)(ii).

[103] §988(b)(1) and (b)(2); §§988(c)(2)(B) and (c)(3)(A).

[104] There is some question whether the spot rate on the accrual date is the appropriate exchange rate to determine the U.S. dollar accrual as of such date. Since interest accrues on a daily basis, an argument might be made that an amount based on the average daily exchange rate is a more appropriate accrual amount. Although §988 does not address this question directly, it does provide for exchange gain or loss in respect of the difference between the U.S. dollar value of the interest expense on the accrual date and the U.S. dollar value of such expense on the payment date. Thus, it seems clear that the statute was based on the assumption that expenses would be accrued based on the spot rate on the accrual date. Since such treatment applies to all expenses (and income items and receivables), the statutory approach does not provide a clear indication that an expense such as interest, which accrues on a daily basis, was explicitly considered.

may be required to be netted with the Year 2 interest expense on the basis that the annual payment of stated interest should be viewed as a single transaction for purposes of applying such principle. On the other hand, the netting of such amounts arguably would not be appropriate because the Year 2 exchange gain is attributable to the Year 1 interest expense accrual and not the Year 2 interest expense amount. Since interest expense is allocated for foreign tax credit purposes under the Act on the basis of assets and exchange gain is sourced by reference to a taxpayer's residence, a netting versus separate transaction approach could (for example) have a significant impact on a taxpayer's §904 foreign tax credit limitation.[105]

(b) Original Issue Discount

Post-Act §985(a) requires that, unless otherwise provided in regulations, all determinations for federal income tax purposes must be made in a taxpayer's functional currency. The Senate Report states that, pursuant to such authority, it is anticipated that the Secretary will issue regulations providing for the determination of original issue discount ("OID") on foreign currency obligations.[106] The Report also states that pending the issuance of such regulations, it is intended that OID for any accrual period will be determined in units of foreign currency and translated into U.S. dollars based on the average exchange rate in effect during the accrual period.[107] The U.S. dollar amount deducted for an accrual period using the average exchange rate is, according to the Senate Report, the amount added in determining the adjusted issue price of the obligation for purposes of determining the amount of exchange gain or loss on its repayment.[108] Similar rules are to be applied in determining the amount of premium for an accrual period.[109] Under the Act, premium (like discount) is required to be computed on a constant rate basis.[110]

The following example illustrating the computation of OID is provided in the Senate Report:

> *Example:* On December 31, 1986, the taxpayer issues for 85.82 Deutsch marks (DM) a bond which provides for semiannual coupons of 1 DM and a final payment at maturity, on December 31, 1988, of DM100.00. The exchange rate on the date of issuance is $0.25/DM, so the amount of the borrowing initially is $21.45. The yield to maturity of the obligation, in terms of DM, is 5%, semiannually.
>
> The accrual period is 6 months, commencing with the date of issuance. At the end of the first accrual period, on June 30, 1987, the first 1 DM coupon is paid. Stated interest payments are translated at the exchange rate in effect on the payment date. If the DM appreciates to $0.35 at the end of the first accrual period, the dollar amount of stated interest is $.35 (1 DM times $0.35/DM). Accrued OID is DM3.29 (5% of DM85.82, less stated interest of 1 DM). This amount is translated into dollars using the average exchange rate during the accrual period. If the average value of the DM during the first accrual period is $0.30, the dollar amount of OID accrued on June 30, 1987 is $0.99 (DM3.29 times $0.30/DM). The taxpayer deducts the dollar amount of accrued OID (in addition to interest paid translated at the payment date) and increases its dollar basis in the bond by the same amount (from $21.45 to $22.44).
>
> As a result of the appreciation of the DM, the taxpayer has an accrued currency loss of $8.75, the difference between the dollar basis of the bond, $22.44 and the DM basis translated at the currency exchange rate, $31.19 (DM89.11 times $0.35/DM). This accrued currency loss is not recognized until the taxpayer discharges its indebtedness. The currency loss is treated as ordinary income, and is allocated by reference to the issuer's residence.[111]

Although there was no authority addressing the point, one approach taken by taxpayers prior to the Act was to compute the amount of OID in U.S. dollar terms on the basis of the exchange rate on the date the borrowing was incurred (the "issue date" approach). Any exchange gain or loss in respect of the principal amount would also be determined by reference to such exchange rate (*i.e.*, by taking the difference between the U.S. dollar amount of the obligation at the time it was incurred and the time of payment). As compared to the pre-Act approach, the Act approach would adjust the amount of OID expense upward if the foreign currency appreciated during the term of the borrowing and adjust such amount downward in the case of a depreciating foreign currency. For example, if the exchange rate on the date of issuance ($.25/DM) had been used to calculate the OID in the first accrual period, the amount of OID would have been approximately $.82 (5% of DM 85.82 (the issue price) less stated interest of lDM times the $.25/DM exchange rate) in lieu of the $.99 accrued under the Act. Thus, as contrasted with the issue date approach, the Act approach accounts for the appreciation in the DM from the date of issue ($.25/DM) through the accrual period ($.35/DM).

The higher U.S. dollar amount of OID is added to the original issue price in order to determine the adjusted issue price. Thus, under the example, the issue price in U.S. dollar terms increased from $21.45 (the U.S. dollar value of the original issue price) to $22.44 because of the $.99 OID amount computed on the basis of the average exchange rate for the accrual period. Since the amount of the exchange gain or loss at the ultimate maturity of the borrowing will be determined by reference to the adjusted issue price, the effect of using the Act approach in the example (as compared to the issue date approach) is to reallocate (and accelerate) part of the exchange loss which under the issue date approach would have been recognized at the time the borrowing is repaid.

The *total* amount of OID plus exchange loss (or less exchange gain) is the same under the Act approach and the issue date approach. The Act, however, has the effect of

[105] The U.S. dollar amount of the interest expense attributable to the SFr 3,750,000 accrued in year 2 would be the Swiss franc amount converted to U.S. dollars based on the payment date spot rate.

equating (at least to some degree) the determination of the amount of OID with the determination of the amount of interest on a stated interest borrowing (which as discussed above does take into account movements in exchange rates during the period the interest is accrued). Moreover, the Act approach arguably is more consistent with economic reality than the issue date approach to the extent the issue date approach would capture the exchange gain or loss in respect of the discount amount as an exchange gain or loss attributable to the principal repayment. On the other hand, since the discount amount is not paid until the maturity of the obligation, the taxpayer arguably has not suffered an economic detriment or realized an economic advantage until such repayment; thus the tax consequences under the Act approach arguably do not reflect the economic costs of the transaction.[112]

d. Foreign Currency Loans

(1) General Rules Applicable to Foreign Currency Loans

(a) Amount of Exchange Gain or Loss in Respect of Loans

The amount of exchange gain or loss under §988 to a lender in respect of foreign currency loans is equal to the gain or loss (under normal principles) in respect of the repayment of such a loan to the extent that such gain or loss does not exceed gain or loss realized as a result of changes in exchange rates on or after the booking date and before the payment date. Under normal principles, the gain or loss in respect of a foreign currency borrowing is equal to the difference between the U.S. dollar value of the loan at time made and the U.S. dollar value of the loan on the repayment date. The amount of such gain or loss should be the same as the determination of the amount of §988 exchange gain or loss, since such gain or loss is also is measured by movements in exchange rates between the date the loan was acquired (*i.e.*, the booking date under §988(c)(2)(A)) and the date the loan was repaid (*i.e.*, the payment date under §988(c)(3)(A)). (*See* 4, a *supra* for an example of the computation of exchange gain or loss in respect of a foreign currency loan.)

(b) Timing of Exchange Gain or Loss in Respect of Loans

The Act did not change the general principle that a lender realizes an exchange gain or loss at the time of the loan repayment. A lender also normally *recognizes* such a gain or loss at such time subject to two exceptions. First, as with foreign currency debt obligations, the §1092 straddle rules could operate the defer any such loss. In addition, in respect of foreign currency loans between related parties, §267 may operate to defer or deny any exchange loss.

In this regard, §267 generally provides that losses arising from the "sale or exchange" of property between related parties will in certain circumstances be deferred or denied. Section 267(f)(3)(C) provides that, to the extent provided in regulations, the general rule of §267(a)(1) (*i.e.*, that losses be denied in respect of a sale or exchange of property between related parties) does not apply to an exchange loss arising from the repayment of a loan made by a member of a controlled group to another member if such loan is "payable or denominated" in a foreign currency.

Temporary regulations provide that §§267(a)(1) and (f)(2) (relating to the deferral of loss in respect of the sale or exchange of property between members of the same controlled group)) will not apply to a foreign currency loss in respect of the repayment of a loan if (i) the loss is sustained by a member on the repayment to it of a loan made to another member; (ii) the loan is payable or denominated solely in a foreign currency; and (iii) the loss is attributable to a reduction in value of the foreign currency in which the loan is payable or denominated.[113]

The Conference Agreement states that the Secretary should, in light of the new Act rules, review its regulations in respect of exchange losses resulting from the repayment of a foreign currency loan made to a related party, "with a view towards conforming the regulatory exception and determining the appropriateness of applying the exception to every case that is covered by the current temporary regulations."[114] As an example, the Conference Report states that the regulations should take into account not only loans that are "payable or denominated solely in a foreign currency" but also (consistent with the coverage of multicurrency contracts under §988) loans where the principal amount is determined by reference to the value of a nonfunctional currency.[115] In addition, the Secretary is instructed to determine the extent to which the scope of the §267 regulatory exception should be narrowed.[116] In this regard, the Conference Report states that any §267 exceptions be narrowly drawn.[117]

(c) Character of Exchange Gain or Loss in Respect of Loans

Under §988, the character of exchange gains and losses in respect of foreign currency loans is ordinary.[118] By contrast, under prior law, the character of such exchange gains and losses was capital unless a statutory exception to §1221 or other judicial exception applied.[119]

---

[112] The determination of whether the OID provisions apply in respect of a particular transaction is complicated by the treatment of foreign currency as property for U.S. tax purposes. Section 1803(a)(10) of the Act (a technical correction to the Tax Reform Act of 1984 (1984 TRA) clarifies that 1273(b)(3) applies in determining the issue price of obligations that involve actively traded foreign currency. As a result, §1274, which pursuant to §1274(c)(3) does not apply to transactions covered under 1273(b)(3), does not operate to impute interest in respect of such loan. Similarly, §1803(a)(14)(B) of the Act clarifies that §483 does not apply to any debt instrument for which an issue price is determined under 1273(b)(3) and thus 483 does not apply to loans involving actively traded foreign currency. Sections 7872 (involving below market loans) and 482 may, however, still apply to impute interest in respect of foreign currency loans. In this regard, the proposed regulations provide that, in the case of a debt instrument the repayment of which is denominated in a foreign currency, the adjusted federal rate is the analogous foreign currency rate of interest. Prop. Regs. §1.7872-11(f). *See* Prop. Regs. 1.482-2(a)(2)(iii)(E).

[117] *Id.*

[118] §988(a)(1)(A).

[119] A sale or exchange is imputed with respect to repayment of certain debt instruments under §1232(a)(1) (prior to the 1984 TRA) or under §1271(a)(1) (following the 1984 Act). For transactions not covered under

(d) Source of Exchange Gain or Loss in Respect of Loans

Under §988, any exchange gain or loss in respect of a foreign currency loan will be sourced by reference to the residence of the person on whose books such loan is properly reflected.[120] (Residence in the case of an individual is his or her tax home and in the case of a corporation, partnership, trust or estate which is (i) a U.S. person, the United States, or (ii) a non-U.S. person, a country other than the United States. The residence of a QBU (including a QBU of an individual) is the country in which the principal place of a business of such QBU is located.)

As discussed above (*see* 3, d, *supra*), pre-Act law regarding the sourcing of exchange gains and losses was extremely unsettled. In respect of a foreign currency loss, the imputed sale or exchange by the holder upon its receipt of the repayment of a foreign currency loan under §1271(a)(1) (or §1232(a)(1) prior to the 1984 TRA) may well have triggered the rules of Regs. §1.861-8(e)(7), with interest income possibly being the income normally produced by the property (*i.e.*, the loan receivable). On the other hand, consistent with the separate transaction principle, the currency could have been the "property" the income from which needed to be traced. Again, the fact that currency might not "ordinarily" have given rise to any particular class of gross income in the hands of a taxpayer would indicate that the application of Regs. §1.861-8(e)(7) was inappropriate. Thus, a general allocation of the loss to all classes of gross income and an apportionment between foreign and U.S. sources in accordance with the ratios of the taxpayer's foreign and U.S. source gross income, respectively, to worldwide gross income may have been the more appropriate allocation and apportionment.[121] In respect of an exchange gain, a strained application of the title passage rule may have been the proper approach, with the possible application of the §904(b)(3)(C) resourcing rule in the case where title passed outside the U.S.

(2) Stated Interest and OID

The discussion in c, (2), (a) and (b) *supra* regarding the determination of the amount of stated interest expense and OID deductions in regard to foreign currency borrowings applies equally to the determination of the amount of stated interest income and OID income in respect of a foreign currency loan.[122]

e. Forward, Futures and Options Contracts

(1) General Rules

(a) §988 Transactions

Section 988(c)(1)(B) defines a §988 transaction to include entering into or acquiring any forward, futures or option contract or similar financial instrument, if such contract or instrument is not marked to market under §1256. Contracts that are marked to market under §1256 continue to be governed by the separate taxing scheme of that section and are not covered by §988. In order to determine, therefore, whether a forward, futures or options contract is covered by §1256, it is necessary to determine whether such contract is outside the scope of §1256.

The mark to market rules of §1256 do not apply to hedging transactions (with respect to which the requirements of §1256(e) are satisfied) and therefore these transactions are covered (as discussed below) under the rules applicable to §988 hedging transactions. The Conference Report makes clear that the definition of a §988 transaction includes all "§1256 contracts" excluded from the coverage of that section by virtue of the mixed straddle election of §1256(d), since such contracts are not marked to market under the rules of §1256.[123] In addition, all forward, futures and options contracts and similar financial instruments denominated in a nonfunctional currency, other than "regulated futures contracts," "foreign currency contracts," "nonequity options" and "dealer equity options," all as defined in §1256(g), are outside the scope of §1256 and therefore are §988 transactions.

In order for a futures contract to constitute a "regulated futures contract,"§1256(g)(1)(B) provides that the contract must be traded on or subject to a "qualified board or exchange." The term "qualified board or exchange" is defined by §1256(g)(7) to include only certain domestic exchanges (*i.e.*, national exchanges registered with the SEC) and boards of trade (*i.e.*, those designated by the Commodity Futures Trading Division), and such other exchange, board of trade or market as is designated in regulations promulgated by the Secretary. At present, the only foreign exchanges that constitute "qualified boards of exchange" within the meaning of §1256(g)(7) are the Mercantile Division of the Montreal Exchange and the International Futures Exchange (Bermuda) Ltd.[124] All futures contracts denominated in a foreign currency and not traded on either an appropriate domestic exchange or board of trade or a foreign exchange (presently only the two listed above) designated by the Secretary would therefore be covered by §988.

A contract to purchase or sell foreign currency is a "foreign currency contract," within the meaning of §1256(g)(2), only if such contract is denominated in a currency traded on a "qualified board or exchange" (as defined above). Currently, only the British pound, Canadian dollar, Dutch guilder, ECU (European currency unit), French franc, German mark, Japanese yen, and Swiss francs are so traded. Therefore, exchange gain or loss attributable to a forward or other contract denominated in any other currency would be covered by §988. Section 1256(g)(2) also provides, in effect, that §1256 applies only to a contract which is traded in the interbank market. Therefore, a contract denominated in one of the eight currencies discussed above, but which is not interbank traded (*e.g.*, in the case of a currency swap and possibly a long-term forward contract), also is not a §1256 contract and therefore is covered by §988.

such sections, the Supreme Court's decision in *Fairbanks v. U.S.*, 306 U.S. 436 (1939), which held that the repayment of a debt does not involve a sale or exchange in respect of the creditor, would control.

[120] §988(a)(3)(A).

[122] *See also* footnote 112 *supra*, regarding the application of the §1274 deferred payment rules and §7872 below market interest rules to foreign currency obligations.

[123] Conference Report at II-663.

[124] Rev. Rul. 86-7, 1986-4 I.R.B. 6; Rev. Rul. 85-72, 1985-1 C.B. 286.

An option denominated in a foreign currency is a "nonequity option" under §1256(g)(3) if such option does not relate to stock (or to the value of stock) and is traded on a "qualified board or exchange" (as defined above). Any option denominated in foreign currency (*e.g.*, an option to acquire a foreign currency-denominated debt instrument) which is not traded, or is not traded on a "qualified board or exchange," is not a "nonequity option" within the scope of §1256 and thus is covered by §988.

A "dealer equity option," which is the final category of transactions covered by §1256, is defined, in general, as any listed option which is (i) an option to buy or sell stock (or an option the value of which is determined by reference to a stock or stock index); (ii) purchased or granted by an options dealer in the normal course of its options-dealing activity; and (iii) traded on a "qualified board or exchange" on which such dealer is registered. §1256(g)(4). Any foreign currency-denominated equity option (*e.g.*, a sterling denominated stock option) held by an options dealer, if such option is not a "dealer equity option" within the meaning of §1256(g)(4), is covered by §988. Taking into consideration the above definition of "dealer equity option," §988 applies to options (denominated in a nonfunctional currency) held by an options dealer which were not acquired in the normal course of the dealer's option-trading activity, or are not traded on a "qualified board of exchange" (as discussed above) on which the options dealer is registered.[125]

(b) Amount and Timing of Exchange Gain or Loss

As discussed above, §988 did not effect normal realization principles under the Code and therefore such principles apply in determining if (and when) any gain or loss exists in respect of a forward contract, futures contract, or option contract. In this regard, a taxpayer may realize gain or loss in respect of a forward, futures or option contract if such contract is sold, or terminated by offset (assuming a closeout is effected) or cancellation.[126] The amount of such realized gain or loss will be measured by reference to the spot rate at the time of such sale or termination and the forward rate (or strike price) in respect of the contract.[127]

As relevant to forward, futures and option contracts, §988 defines exchange gain or loss as gain or loss realized under normal principles to the extent that such gain or loss is attributable to movements in exchange rates between the date on which the position is entered into or acquired (*i.e.*, the booking date in respect of such a transaction) and the date on which payment is made or received, or the date the taxpayer's rights with respect to the position are terminated (*i.e.*, the payment date in respect of such a transaction).[128] Thus, in respect of a gain or loss arising from the sale or termination by offset or cancellation of forward, futures or options contracts, the gain or loss would be considered foreign currency gain or foreign currency loss subject to the §988 rules.

If the closeout is effected by delivery, however, the realization event is not the closeout of the contract itself but rather the disposition of the currency acquired (in the case of, for example, a forward purchase contract) or "sold" (in the case of, for example, a forward sale contract) pursuant to the contract. The amount of the gain or loss in respect of such disposition is the difference between the taxpayer's functional currency basis in the nonfunctional currency and the amount of functional currency realized in respect of its disposition. The gain or loss therefore is attributable to the disposition of the currency and not attributable to the contract itself. As such, the disposition qualifies as a §988 transaction under §988(c)(1)(C) (*i.e.*, as a disposition of currency) and the amount of §988 foreign currency gain or loss is equal to the realized gain or loss disposition of the currency to the extent that such gain or loss is attributable to movements in exchange rates between the time the currency was acquired (*i.e.*, the booking date in respect of such a transaction) and the time of disposition of the currency (*i.e.*, the payment date in respect of such a transaction).[129]

Since the amount of the gain or loss in respect of the disposition of the currency is determined by reference to the forward rate (or strike price), it is entirely possible that the gain or loss in respect of the currency disposition will not (at least in part) be attributable to movements in exchange rates *after* the acquisition date. Rather, such gain or loss may be determined primarily by the movement of the spot rate relative to the forward rate (or strike price) *before* the disposition (in the case of, for example, a forward sale or put option) or acquisition (in the case of, for example, a forward purchase or call option) of the currency pursuant to the contract. Thus, arguably most (if not all) of the gain or loss in respect of a closeout by delivery of a forward, futures or option contract technically may not be foreign currency gain or loss for purposes of §988 and as a result will be subject to the rules (and uncertainties) of pre-Act law in respect of the character and source of the gain or loss.

It does not appear that Congress intended to exclude gains or losses related to the close out by delivery of a forward, futures, or option contract. The statute, however, may need to be amended in order to include such gains and losses within the definition of §988 foreign currency gains or foreign losses.

(c) Character of Exchange Gain or Loss

Section 988(a) provides, in effect, that exchange gain or loss attributable to a §988 transaction will generally be characterized as ordinary income or loss. A limited excep-

[125] The Act, §1261(c), repeals the provisions of pre-Act §1256(e)(4), which allowed a bank to elect hedging treatment without satisfying the requirements of §1256(e)(A)(i) or (ii) (*i.e.*, that the hedging transaction was entered into to reduce the risk of price change or currency fluctuations with respect to property held or to be held, or that such transaction was entered into to reduce the risk of interest rate or price changes or currency fluctuations with respect to borrowings made or to be made, or obligations incurred or to be incurred). As a result of the amendment, if a bank executes a foreign currency forward, futures or options contract or other similar financial instrument which does not meet the requirements of §1256(e)(A)(i) or (ii), such contract or instrument will be covered by §988.

[126] In respect of contract subject to §1256, however, a taxpayer may be required to mark to market the contract prior to a closeout of the contract.

[127] The §1092 straddle rules may operate to defer any loss in respect of such instruments.

[128] §988(c)(2)(C) and (3)(B).

[129] §988(c)(1)(C)(i)(I) and (II).

tion to this general rule is available to an electing taxpayer with respect to exchange gain or loss attributable to a forward, futures or option contract if such contract is a capital asset and is not part of a "straddle" (within the meaning of §1092(c)). In such case, a taxpayer can elect to treat the gain or loss attributable to the contract as capital gain or loss if the taxpayer makes an election which identifies the transaction related to the contract on or before the close of the day on which such transaction is entered into. §988(a)(1)(B). As discussed above, the election, subject to regulations to be promulgated, presumably was included to allow for consistent treatment as to character between a non-§1256 contract which is a capital asset (and which would be a §1256 contract but for the technical requirements of the statute (*e.g.*, must be traded on a "qualified board or exchange")) and a §1256 contract.

(d) Source of Exchange Gain or Loss

Section 988(a)(3) clarifies the rules as to source of exchange gain or loss by providing that such gain or loss is sourced by reference to the residence (determined pursuant to the rules discussed at 3, d, (2) *supra*) of the taxpayer or the QBU on whose books the §988 transaction is properly reflected. The Conference Report, at II-668, makes clear that amounts treated as capital gain or loss (pursuant to the election discussed above) are also sourced by reference to residence of the taxpayer.

f. Currency Swaps

(1) General Consequences of §988 Swaps

(a) Swaps as §988 Transactions

Section 988 applies to the entering into or acquiring of any forward contract, futures contract, option or "similar financial instrument" if such instrument is *not* marked to market at the close of the taxable year.[130] It is clear from the legislative history of the Act that currency swaps were intended to be covered as "similar financial instruments" and since currency swaps are not traded and therefore do not fall within the definition of a §1256 contract, such swaps will be considered §988 transactions.[131]

(b) Timing and Amount of Swap Exchange Gain or Loss

A currency swap is a contractual arrangement pursuant to which two parties agree to make payments to each other in different currencies. A swap party normally will either be receiving or delivering its functional currency and both parties normally will make a series of annual payments followed by a single lump sum payment.

As discussed above, §988 did not affect normal realization principles under the Code. The application of such realization principles to a swap, however, first depends upon the U.S. tax characterization of such an agreement. If a swap is considered to be a series of purchases (in the case where the swap party is acquiring a nonfunctional currency) or sales (in the case where a swap party is disposing of a nonfunctional currency) the same analysis (and uncertainties) discussed above in regard to forward, futures and options contracts closed out by delivery applies to swap payments. If the swap is terminated prior to its maturity, however, any income or loss realized in respect of any early termination payment from or to a swap party would likely be a §988 foreign currency gain or loss to the extent it is attributable to movements in exchange rates after the date the swap was entered into (*i.e.*, the booking date in respect of the swap itself) and before the parties rights were terminated (*i.e.*, the payment date in respect of the swap itself).

A swap may also be viewed as a series of gross payments (*e.g.*, interest payments, financial service fees or other nondescript income or expense under §§61 and 162, respectively). As such, the payments would be deductible and includible and would result in exchange gain or loss for §988 purposes consistent with such characterization. Thus, if viewed as interest payments on loans, the interest expense and income attributable to the annual swap payments would generate §988 exchange gain or loss only if exchange rates moved between the accrual and payment dates. (*See* example in c, (2), (a) *supra.*) In addition, as repayments of loans, the final swap payments could produce §988 foreign currency gain or loss attributable to exchange rate movement between the date the loan was incurred and the repayment date. (*See* discussion in d, (1), (a) *supra.*) As under the "purchase" or "sale" characterization discussed above, an early termination payment from or to a swap party would likely be viewed as §988 foreign currency gain or loss to the extent such gain or loss is attributable to movements in exchange rates between the date the swap was entered into and the date the rights of the swap parties were terminated.

(c) Character of Swap Exchange Gain or Loss

To the extent that gain or loss in respect of a swap is considered to be §988 foreign currency gain or loss, such gain or loss would be treated as ordinary income or loss under §988(a)(1)(A).[132] In respect of exchange gains and losses from currency swaps which are not considered §988 foreign currency gains or losses, the character of such gain or loss would be ordinary unless the swap was characterized as a series of purchases and sales, in which case the gain or loss would be capital unless a statutory exception to §1221 or a judicial exception to capital gain or loss treatment applied.

(d) Source of Swap Exchange Gain or Loss

The source of any exchange gain or loss from swaps would be determined by reference to the residence of the swap party to the extent such gain or loss qualified as §988 foreign currency gain or loss. (*See* discussion in 3, d, (2) *supra*, regarding the residence of a taxpayer for purposes of the §988 sourcing rules.) To the extent the swap gain or loss falls outside of §988, the confused source (and allocation and apportionment) rules for property dispositions (discussed in 3, d, (1) *supra*) would apply.

[130] §988(c)(1)(B)(iii).

[131] *See, e.g.*, Senate Report at 460; §1256(g)(1) and (2); §988(c)(1)(B)(iii).

[132] The capital gain and loss election under §988(a)(1)(B) does not apply to "other financial instruments" such as currency swaps. §988(a)(1)(B) and (c)(1)(B)(iii).

(2) Withholding Tax Implications of Swap Payments

The Conference Report states that "the Secretary will address the appropriate treatment of payments made to a counterparty under a swap transaction for purposes of withholding under sections 871 and 881."[133]

g. Hedging Transactions

(1) Definition of §988 Hedging Transactions

Section 988(d)(1) requires that, to the extent provided in regulations, if a §988 transaction is part of a §988 hedging transaction, all transactions which are part of the hedging transaction shall be integrated and treated as a single transaction, or otherwise treated consistently for §988 purposes. A §988 hedging transaction is any transaction identified by the Secretary or the taxpayer as being a §988 hedging transaction and entered into by the taxpayer primarily to (i) reduce risk of currency fluctuations with respect to property which is held or to be held by the taxpayer or (ii) reduce the risk of currency fluctuations with respect to borrowings made or to be made, or obligations incurred or to be incurred by the taxpayer.[134]

The definition of a §988 hedging transaction tracks the definition of such a transaction under §1256(e), except that a §988 hedging transaction need not be entered into in the "normal course" of a taxpayer's trade or business and the gain or loss from the hedging transaction need not be treated as ordinary income or loss.[135] The Conference Report states that regulations will require taxpayers to clearly identify a hedging transaction before the close of the day the transaction is entered into in order to claim increased deductions attributable to a hedge, while the Secretary may identify the transaction at a later date.[136]

Section 988(d)(1) also provides that the determination of whether any transaction is a §988 transaction is made without regard to whether the transaction is marked to market under §1256. Absent this modification, a §988 transaction would (and therefore a §988 hedging transaction may) exclude transactions which are marked to market.[137] Section 988(d) also provides that §§1256 and 1092 do not apply to a transaction which meets the definition of a §988 hedging transaction. In addition, §988(d) makes clear that §988 hedging transactions do not include transactions with respect to which a §988(a)(1)(B) capital gain or loss election has been made.

It is not entirely clear under the definition of a §988 hedging transaction whether all transactions which are part of such transaction must fall within the definition of a §988 transaction. In this regard, §988(d) provides that "if any section 988 transaction is *part* of a §988 hedging transaction *all* transactions which are *part* of such §988 hedging transaction" shall be integrated or otherwise treated consistently (emphasis added). Thus, on its face, the statute would appear not to require that all transactions which are part of the §988 transaction be §988 transactions, but rather only that §988 transactions form part of such hedging transactions.

(2) Fully Hedged Transactions

As discussed above, §988(d) requires that §988 hedging transactions will, to the extent provided in regulations, be "integrated and treated as a single transaction or otherwise treated consistently" for purposes of §988. The legislative history divides hedging transactions into two categories: fully hedged transactions, which, to the extent provided in regulations, will be "integrated and treated as a single transaction," and partial hedges, which, to the extent provided in regulations, will be treated "consistently."[138] In this regard, the legislative history provides that fully hedged transactions are the "narrow class" of transactions that are part of an integrated economic package through which the taxpayer has locked in its functional currency cash flow, thus making exchange rate movements irrelevant.[139] As to such fully hedged transactions, the legislative history states that, to the extent provided in regulations, the form of the transaction will be disregarded and the various legs of the hedging transaction will be collapsed and treated in a manner consistent with the substance of the transaction.[140]

An example of a fully hedged transaction in the Conference Report is a fully hedged foreign currency borrowing in which a U.S. dollar functional currency taxpayer borrows foreign currency and enters into a series of forward contracts (or a currency swap) which will assure the taxpayer of a fixed U.S. dollar cost for the foreign currency necessary to service the interest and principal payments in respect of the borrowing. The Conference Report states that such a borrowing will be treated under the regulations as a U.S. dollar borrowing with U.S. dollar interest payments. Conference Report at II-666.

The following example illustrates the proposed Act treatment of a borrowing fully hedged by a series of forward contracts.

Example: Assume a U.S. dollar functional currency taxpayer enters into a series of forward purchase contracts (*i.e.*, contracts which require the taxpayer to pay U.S. dollars for Swiss francs) to hedge its exchange exposure associated with a 5-year 170,000,000 (net proceeds 166,000,000) Swiss franc borrowing carrying a 5% rate of interest. Assume the borrowing and the forward contracts produce the following U.S. dollar and Swiss franc cash flows.

	SFr (Proceeds) Interest and Principal	Forward (Spot) Rate	(Proceeds and Forward Purchase Contracts
Borrowing Date	(166,000,00)	(1.66)	($100,000,000)
Year 1	8,500,000	1.62	5,246,900
Year 2	8,500,000	1.58	5,379,700
Year 3	8,500,000	1.54	5,519,400
Year 4	8,500,000	1.49	5,704,700
Year 5	8,500,000	1.44	5,902,700
Year 6	170,000,000	1.44	118,055,000

[137] §988(c)(1)(B)(ii); §988(d)(1).
[138] Conference Report at II-666. Prompt regulatory guidance is expected with respect to typical fully hedged transactions (*e.g.*, a fully hedged foreign currency borrowing).
[139] Conference Report at II-666.
[140] Senate Report at 464-465; House Report at 475-476.

Since the taxpayer has entered into forward purchase contracts to hedge each of its Swiss franc outflows (both principal and interest), the borrowing has been fully hedged into U.S. dollars. Since the Swiss franc is a "strong" currency, the U.S. dollar cost of the Swiss francs necessary to service the interest payments increases gradually over the term of the borrowing in order to account for the interest differential between the U.S. dollar and the Swiss franc. (In other words, since a person could invest U.S. dollars at a rate of interest higher than it could invest Swiss francs, the premium built into the forward rate is necessary to compensate for the delayed U.S. dollar payment which will be made to acquire the Swiss franc.) [141] The same premium also is reflected in the difference between the U.S. dollar value of the proceeds of the borrowing ($100,000,000) and the U.S. dollars cost of Swiss francs necessary to service the principal amount ($118,055,000).

The Act contemplates that the forward purchase contracts entered into for the purpose of hedging the interest and principal payments in respect of the Swiss franc borrowing be integrated with such borrowing and that the combined transaction be treated as a U.S. dollar borrowing. As such, the U.S. dollar payments made pursuant to the forward contracts would be considered the interest expense associated with the borrowing for U.S. tax purposes and the difference between the U.S. dollar issue price of the debt ($100,000,000) and the redemption price ($118,000,000) will be treated as original issue discount for U.S. tax purposes. Moreover, characterized as a U.S. dollar borrowing, there will be no exchange gain or loss associated with the repayment of the borrowing. Under pre-Act law, the taxpayer would not receive any benefit in respect of the premium paid to acquire the Swiss franc principal amount until such amount was paid, at which time the taxpayer would acquire a basis in the Swiss franc that would reduce any exchange gain or increase any exchange loss in respect of the repayment of the borrowing.

By contrast, if the taxpayer borrowed in weak currency relative to its functional currency and hedged such borrowing back into its functional currency, the effect of the integration of the two transactions would be to reduce current interest deductions for the premium which the taxpayer will earn in the transaction. Thus, as contrasted with pre-Act law, the approach under the Act will accelerate income in respect of weak currency borrowings fully hedged with forward contracts and will accelerate deductions in respect of strong currency borrowings fully hedged with forward contracts.

The §988 hedging transaction rules apply not only to forward contracts but also to currency swaps, cross-currency interest rate swaps and virtually any other contract to buy or sell a nonfunctional currency.[142] It is not clear whether currency options used to offset downside currency exposure (but which continue the upside potential) will also be accorded hedging treatment, although at least one commentator has argued that such instruments should be so treated.[143] The Conference Report clarifies that the hedging transaction rule is not limited to U.S. dollar denominated transactions, but may also be applied where a U.S. dollar functional currency taxpayer enters into several positions to establish a foreign currency position.[144] Finally, the legislative history makes it clear that the §988 hedging transaction rules apply to nonfunctional currency investments which are hedged back into the taxpayer's functional currency.[145]

(3) Partial Hedges

As discussed above, the legislative history states that, to the extent provided in regulations, partial hedges will be treated "consistently." [146] A partial hedge is defined as a series of transactions which are not entered into as an integrated economic package but rather are designed to limit a taxpayer's exposure in a particular currency.[147] The Conference Report provides as an example of a partial hedge the acquisition of a foreign currency denominated liability to offset exposure with regard to a foreign currency denominated asset. In respect of partial hedges, the Conference Report states that the regulations need not provide for complete integration but should provide for consistent treatment with respect to character, source and timing. Partial hedges, like fully hedged transactions, must be identified by the taxpayer (or by the Secretary) in order to qualify as §988 hedging transactions.[148]

5. Effective Date

Section 988 is effective generally for taxable years beginning after December 31, 1986. It is not certain whether foreign currency transactions entered into prior to the general effective date but which produce tax consequences after the general effective date will be covered under §988. The tax consequences in respect of, for example, the repayment of a foreign currency borrowing entered into prior to the general effective date and repaid after such date almost certainly will be covered under §988. A more difficult question arises, however, in respect of transactions such as hedging transactions with respect to which the tax treatment depends substantially on the initial purpose for the transaction. Another concern may be that covering certain transactions (*e.g.*, a currency swap where one or more payments were made on or prior to December 31, 1986) could result in disparate consequences in respect of identical parts of the same transaction. On the other hand, considering the substantial uncertainty under prior law (discussed above) in respect of the proper tax treatment of foreign currency transactions, any such disparate treatment may be outweighed by the advantage of additional clarity in respect of such transactions.

in a foreign currency, the operating results of the foreign business must be translated into U.S. dollars for U.S. tax purposes. In the case of a foreign branch, profit or loss must be translated into U.S. dollars and included currently in the computation of taxable income of the U.S. taxpayer. In the case of a foreign subsidiary, any actual or deemed distributions and the earnings and profits from which they are derived must be translated into U.S. dollars to determine taxable income of the U.S. parent corporation in respect of such distributions.

Taxable income in U.S. dollars in respect of a foreign business may consist of (i) operating profit or loss computed in foreign currency and translated into U.S. dollars at an appropriate exchange rate, and (ii) foreign exchange gain or loss arising from the translation of foreign currency financial statement items into U.S. dollars or the remittance of capital from the foreign business.[149] The extent to which foreign exchange gain or loss in respect of foreign operations of a U.S. taxpayer is recognized currently for U.S. tax purposes depends upon the method used to translate the results of those operations. Under rules in effect prior to the Tax Reform Act of 1986, translation methods varied depending primarily upon the form in which foreign activities were conducted and the magnitude and continuity of foreign currency denominated transactions. In certain circumstances, U.S. taxpayers were entitled to choose from among optional translation methods, and substantially different U.S. tax consequences often resulted, depending upon the method ultimately selected.

b. Determination of Allowable Foreign Tax Credits

Translation of foreign currency into U.S. dollars is also relevant to the computation of a U.S. taxpayer's credit against U.S. tax for foreign taxes incurred in respect of foreign operations. In the case of foreign branch operations, the key question is what exchange rate should be used to translate into U.S. dollars foreign taxes paid or accrued. The answer to this question becomes more complicated where the exchange rate changes between the time the foreign tax is accrued and the time it is paid, or where the amount of foreign taxes originally paid or accrued is later adjusted. In the case of foreign operations conducted through a foreign subsidiary, additional foreign tax credit questions relate to the appropriate exchange rate to be used to translate into U.S. dollars actual or deemed distributions and earnings and profits of the foreign subsidiary.

2. Profit or Loss of Foreign Branch

a. Prior Law

Under prior law, if a U.S. taxpayer conducted activities abroad but did not maintain separate books and records for such activities, realized exchange gains and losses resulting from each non-U.S. dollar denominated transaction generally were required to be recognized (under the so-called "specific transactions" method) when the transaction was closed.[150] In the case of a foreign branch, however, local currency tends to lose its character as property because it is dealt with as money, and the U.S. dollar becomes an inappropriate measure of the effect of exchange rate changes. Thus, from the outset, U.S. taxpayers were permitted, as alternatives to the specific transactions method in respect of foreign branch operations, either to recognize currently exchange gains and losses in respect of foreign branch operations (under the so-called "net worth" or "balance sheet" currency translation method) [151] or to defer recognition of such gains and losses until realized when capital ultimately was remitted to the U.S. and converted into U.S. dollars (under the so-called "profit and loss" currency translation method).[152] The implicit eligibility requirement for avoiding the recognition of exchange gains and losses under a specific transactions method was the existence of a foreign branch operation the books and records of which were maintained in foreign currency.[153]

(1) Net Worth Method

Under the net worth method of accounting for taxable income or loss in respect of a foreign branch, in broad terms the difference between the foreign branch's beginning and ending net worth, as translated into U.S. dollars, for any year was deemed to be the annual profit or loss of the branch for U.S. tax purposes.[154] Current assets and liabilities in practice typically were translated at current rates, whereas fixed assets and long-term liabilities were translated at historical rates (*i.e.*, the rate in effect when the asset was purchased or the liability incurred). Remittances from the branch to the home office were translated at the exchange rate in effect on the date of remittance and added to the increase in net worth for purposes of determining taxable income in respect of the branch. No precise rules were provided for purposes of determining the source or character of income attributable to a branch.

Under the net worth method, the increase or decrease in the dollar equivalent of net worth for any taxable year encompasses both operating profit or loss and any exchange

[149] In general, the term "foreign exchange gain or loss" embraces gain or loss that arises when a transaction is denominated (requires settlement) in a foreign currency and the value of the foreign currency changes between the time the transaction is entered into and the time it is closed (*i.e.*, realized exchange gain or loss) as well as translation gain or loss (also commonly referred to as unrealized exchange gain or loss), which arises from the translation of foreign currency financial statement items into U.S. dollars. *See, e.g.*, Department of the Treasury, Office of the Secretary, "Taxing Foreign Exchange Gains and Losses," 45 Fed. Reg. 81711 (Dec. 11, 1980). Although translation gains and losses are often referred to as unrealized, they may consist of both realized and unrealized amounts. For example, if the value of foreign currency declines relative to the U.S. dollar, the sale of a foreign currency denominated investment security results in a realized exchange loss under closed transaction principles, whereas the holding of foreign currency between balance sheet dates results in an unrealized exchange loss.

[150] *See* discussion in II, B *supra*.

[152] O.D. 550, 2 C.B. 61 (1920), superseded by Rev. Rul. 75-107, 1975-1 C.B. 32. *See also American Pad & Textile Co. v. Comr.*, 16 T.C. 1304 (1951), acq., 1951-2 C.B. 1.

[153] Rev. Rul. 75-109, 1975-1 C.B. 69.

[154] There are several variations of the net worth method depending upon the rates selected to translate particular balance sheet items. The only method accurately described as the net worth method converts *all* foreign currency assets and liabilities into dollars at the rates in effect at the beginning and the end of the year, respectively. *See* O.D. 489, footnote 151 *supra*, fn. [3].

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(balance sheet translation) gain or loss for the year. Exchange gain or loss in respect of any balance sheet item translated at historical rates was deferred, whereas such gain or loss in effect was recognized currently in respect of items translated at current rates. Although the method thus simulated the results produced by a specific transactions method, the net worth method failed to separate operating profit or loss from exchange gains and losses and resulted in current recognition of unrealized as well as realized exchange gains and losses. The recognition of unrealized exchange gains and losses, of course, represented a departure from the normal tax accounting principle that gains must be realized before being recognized.

(2) Profit and Loss Method

Under prior law, the profit and loss method of accounting for branch income started with the profit and loss statement prepared for the branch in local currency. Profit retained by the foreign branch was translated into U.S. dollars at the rate of exchange in effect as of the reporting date, while current profits remitted to the home office were translated at the rate of exchange in effect at the date of the remittance. Accordingly, taxable income in respect of the branch amounted to the U.S. dollar equivalent of the branch profit as expressed in foreign currency, and foreign exchange gains and losses were deferred until capital ultimately was remitted to the U.S. home office and converted into U.S. dollars.

Prior law did not provide precise rules for determining exchange gain or loss under the profit and loss method when remittances from a foreign branch exceeded current annual profits. For example, it was not entirely clear under the profit and loss method whether exchange gain or loss should be deferred until a branch was liquidated or whether it should be recognized whenever remittances exceeded current profits. There also were no specific rules applicable to the translation of branch losses or to the determination of the source or character of gains or losses attributable to branch remittances.

(3) Specific Transactions Method

Under prior law, a U.S. taxpayer that conducted foreign operations through a foreign branch was also permitted to use a specific transactions method of accounting for its foreign branch. This was most appropriate where the foreign investment was temporary or dependent on the U.S. dollar economy.[155] In such a case, closed transaction principles required purchases and sales and payments and receipts of the foreign branch to be translated into U.S. dollars at the rate of exchange existing at the date of the respective transactions, and the U.S. home office realized and recognized currently for U.S. tax purposes exchange gains and losses as transactions were closed by its foreign branch. In practice, the specific transactions method by definition was impracticable, and therefore seldom used, where the volume of foreign currency transactions was more than minimal or where the foreign branch was conducted as a substantially independent operation.

[155] *See Comr. v. American Metal Co.*, 221 F.2d 134 (2d Cir. 1955), cert. denied, 350 U.S. 829.

Before the Tax Reform Act of 1986, the primary limitation on a U.S. taxpayer's selection of a foreign currency translation method was whether the method selected resulted in the clear reflection of income. Once a method was selected, any change in that method was considered a change in method of accounting to which the provisions of §§446 and 481 applied.[156]

b. Overview of Changes

Section 1261 of the Tax Reform Act of 1986 adds new §§985-989 to the Code, which consolidate and substantially revise prior rules applicable to the translation into U.S. dollars of the operating results of foreign branches.

Under new §987, U.S. taxpayers with branch operations abroad constituting qualified business units ("QBUs") that use a functional currency other than the U.S. dollar generally are required to use a modified version of the profit and loss translation method of prior law.[157] Under this method, profit or loss determined in the foreign functional currency is to be translated into U.S. dollars, pursuant to new §989(b)(4), using a weighted average exchange rate. In addition, under new §987(3), exchange gain or loss is to be recognized on remittances made by a foreign branch to the U.S. taxpayer's home office to the extent that the value of the foreign functional currency relative to the U.S. dollar when remitted differs from the value when earned. Such exchange gains or losses will be treated as ordinary and sourced by reference to the income giving rise to post-1986 accumulated earnings (generally the residence of the branch, unless its income is derived from U.S. sources).[158]

c. Reasons for Changes

Before the U.S. abandoned the gold standard, multinational enterprises were confronted with an international economic environment typified by prolonged and steady declines in the value of foreign currencies relative to the U.S. dollar. In such an environment, currency movement typically had a permanent impact on the U.S. dollar value of a foreign investment, and current recognition of foreign exchange gains and losses therefore was key to any accurate reflection of operating results. By contrast, with the advent of floating exchange rates, mere transitory movements in currency value arguably lack the lasting economic impact on long-term investment positions that previously justified current recognition of exchange gains and losses.

The legislative history of the Tax Reform Act of 1986 evidences a congressional concern that in a world of floating exchange rates it is inappropriate for a U.S. taxpayer conducting branch operations abroad primarily in a foreign

[156] *See American Rod & Tackle Co. v. Comr.*, 16 T.C. 1304 (1951), acq., 1951-2 C.B. 1; Rev. Rul. 75-106, 1975-1 C.B. 106.

[157] Under the new law, taxpayers operating abroad other than through a QBU will generally be required to use a specific transactions method in respect of non-U.S. dollar denominated transactions. The net worth method of prior law has been eliminated.

[158] It is not entirely clear at this time how distributions from pre-1987 accumulated earnings of a foreign branch will be treated for U.S. tax purposes. Preliminary indications are that an attempt will be made to retain the integrity of prior law treatment with respect to such distributions. U.S. taxpayers may be required to retain their existing accounting methods to account for distributions from pre-1987 earnings.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

currency to recognize exchange gain or loss before property is repatriated to the U.S. from the foreign environment. However, certain foreign currencies continue to be marked by constant depreciation relative to the U.S. dollar, which would perhaps justify the continued ability of U.S. taxpayers operating in those environments to recognize currently exchange losses in order to reflect accurately their income for U.S. tax purposes. There are indications in both the House and Senate Committee Reports on tax reform that Congress was not unmindful of this fact.[159] Nevertheless, there apparently was an overriding concern that if, as under prior law, U.S. taxpayers were permitted to choose between optional translation methods, they would elect the net worth method for branch operations in countries with a weak currency (to accelerate losses) and the profit and loss method for operations in countries with a strong currency to defer gain).[160] The net worth method also was heavily criticized for causing the recognition of certain exchange gains and losses prior to their realization and for failing to characterize accurately certain items of income or loss that are subject to special U.S. tax rules.[161]

d. Detailed Analysis

Under new §987, a U.S. taxpayer that has a foreign branch operation constituting a "qualified business unit" ("QBU") with a functional currency other than the U.S. dollar must use the profit and loss method to translate into U.S. dollars the results of operations of the QBU. The net worth method, which resulted in current recognition of both realized and unrealized exchange gains and losses, is no longer permitted in determining taxable income or loss in respect of foreign branch operations. In this connection, new §989(c)(1) requires Treasury to issue regulations setting forth procedures to be followed for purposes of changing from a net worth method of accounting for branch operations for years prior to 1987 to the profit and loss method prescribed by new §987. The regulations are to include provisions to prevent a mismatching of exchange gains and losses by taxpayer's switching to the profit and loss method.[162]

Under the version of the profit and loss method adopted under the new law, a U.S. taxpayer must compute the taxable income or loss separately for each QBU in its functional currency and translate such income or loss at the "appropriate exchange rate" for the period. Thus, by contrast to the profit and loss method under prior law, the entire amount of profit or loss of a foreign branch is taken into account at the appropriate exchange rate for the taxable year, without regard to remittances during the year. Under prior law, profit retained by a foreign branch was translated into U.S. dollars at the rate of exchange in effect as of the reporting date, whereas current profits remitted to the home office were translated at the rate of exchange in effect at the date of remittance.[163]

Under new §989(b)(4), the appropriate exchange rate in respect of foreign branch operations is the weighted average exchange rate for the taxable year. A weighted average rate of course has meaning only as it relates to a particular item or items of profit or loss. Congress, unfortunately, has provided no clear guidance with respect to the determination of an appropriate weighted average rate for this purpose.

The House Report provides that "[u]nder regulations, in most cases, the appropriate exchange rate is the weighted average exchange rate for a period (*i.e.*, the rate that would produce approximately the same U.S. dollar amount if each gross receipt were translated on the booking date)." [164] The Senate Report contains no similar language, but does state that, "in most cases, the bill requires the use of weighted average exchange rates (similar to the present law requirements applicable to CFCs)." [165] The Conference Report is silent on this matter.

As noted above, under the §964 translation rules of prior law, a weighted average exchange rate was determined in respect of each item reflected separately on a CFC's financial statements, such as sales and accounts receivable.[166] The translation rules under §964 were often criticized for their rigidity. On the other hand, it seems totally inappropriate to focus solely on gross receipts for purposes of determining a weighted average exchange rate to be used in determining taxable income or loss of a foreign branch. First, "gross receipts" generally is not a meaningful yardstick in the measurement of profit or loss of an accrual basis taxpayer, which recognizes income when earned rather than when received. Moreover, the objective of requiring the use of a weighted average exchange rate for translation purposes was to reflect the fact that net income or loss is realized continuously during a taxable year.[167] A weighted average rate that is developed based solely upon gross receipts may distort net income or loss to the extent that, as typically is the case, expense items do not bear a consistent ratio to gross receipts throughout the

[159] House Report at page 469; Senate Report at 454.

[160] *Id.* This of course assumes that the foreign branch would be in a net current asset position so that a decline in foreign currency relative to the U.S. dollar always would produce an exchange loss.

[161] *Id.* For example, since taxable income or loss was determined by subtracting the ending net worth of a foreign branch from beginning net worth, an unlimited deduction thereby was allowed for capital losses of the branch. Cf. §1211(a).

[162] Conference Report at II-677. There is no elaboration in the Conference Report with respect to the situations in which a "mismatching" of exchange gains and losses might arise upon conversion to a profit and loss method.

[163] The use of a year-end exchange rate tends to distort income for a reporting period, since it does not reflect the fact that profit or loss is realized continuously during the period. The use of a weighted average rate is designed to simulate results produced by a specific transactions method.

[164] House Report at page 477. By comparison, The President's Tax Proposals provided:

> "The average exchange rate for a period is a rate which, if used to translate total gross receipts of an entity during the period, would produce approximately the same dollar amount as would have been obtained had each gross receipt of the entity been translated at the exchange rate for the date the receipt was recorded for tax purposes. A taxpayer would be permitted to use any reasonable procedure, consistently applied, to determine an appropriately weighted exchange rate for the period."

"The President's Tax Proposals to the Congress for Fairness, Growth, and Simplicity" (May 1985) at 421. The Treasury Discussion Draft on "Taxing Foreign Exchange Gains and Losses" also failed to address this issue specifically. 45 Fed. Reg. 81711 (Dec. 11, 1980).

[165] Senate Report at 454.

[166] Regs. §§1.964-1(d)(2)(i) and (iii).

[167] Senate Report at 454.

year. It appears that guidance from Treasury will be necessary to resolve this matter.

New §987(3) requires that, in determining taxable income of a foreign branch, a U.S. taxpayer make "proper adjustments" (as prescribed by regulations) in respect of "transfers of property between qualified business units of the taxp ing different functional currencies." This broad st was intended to encompass, among other things, possible limitations on the recognition of exchange loss on remittances from a foreign branch to its home office (to prevent selective recognition of exchange losses). It also was contemplated that rules be prescribed for the recognition of gain or loss on contributions of appreciated property to the branch.[168]

In the case of remittances, a U.S. taxpayer is required to recognize exchange gain or loss (without regard to whether remittances are converted into U.S. dollars) to the extent that the value of currency or property at the time of remittance differs from the value when earned (*i.e.*, the applicable weighted average exchange rate used to translate the branch's taxable income or loss). Under new §987(3)(A), post-1986 remittances of foreign branch earnings (and post-1986 interbranch transfers involving branches with different functional currencies) are treated as made on a pro rata basis out of post-1986 accumulated earnings for purposes of determining exchange gains or losses in respect of such remittances or transfers.[169] Moreover, new §987(3)(B) provides that such exchange gains and losses are to be treated as ordinary income or loss and sourced by reference to the source of income giving rise to the post-1986 accumulated earnings. The Conference Report states that the source of such income is generally the residence of the QBU, unless the income of the QBU is derived from U.S. sources.[170] The Conference Report also states that contributions of appreciated property to a QBU may be treated under regulations as a recognition event where appropriate.[171]

Using facts set forth in an example in the Senate Report, the tax consequences of a remittance from a foreign branch may be illustrated as follows:

> *Example:* Assume that a domestic corporation organizes a foreign branch in year one. Assume further that the branch is a qualified business unit, and the branch's functional currency is K.

	Income	Foreign Taxes/ Credit	Exchange Rate
Year 1	100K/$50	23K/$11.50	2K:$1
Year 2	100K/$80	23K/$18.40	1.25K:$1
Year 3	100K/$100	23K/$23	1K:$1

> *Remittance of after-tax earnings in year three.*— Under the bill, the remittance of 231K would trigger $53.90 of exchange gain (attributable to the difference between the current exchange rate (*i.e.*, rate on date of remittance) and the rates in effect for the years in which earned), which is treated as ordinary income:
>
> 1. 77K at 2K:$1 = $38.50 (difference of $38.50).
> 2. 77K at 1.25K:$1 = $61.60 (difference of $15.40).
> 3. 77K at 1K:$1 = $77 (no difference).[172]

Under new §989(c)(5), Treasury is to provide appropriate rules for related party transactions, including transactions between QBUs of the same taxpayer. For example, the Conference Report, at II-675, clarifies that the rule for triggering exchange gain or loss on remittances does not apply to transactions involving the use of related party assets or liabilities, such as the deposit and withdrawal of funds in a branch in the case of a bank. Treasury also is empowered to provide for the recharacterization of interest and principal payments with respect to obligations denominated in certain hyperinflationary currencies.[173]

New §989(c)(2) requires the Treasury to prescribe regulations limiting the recognition of foreign currency losses on certain remittances from QBUs.[174] These regulations specifically are intended to prevent selective recognition of exchange gains and losses by a U.S. taxpayer on remittances from a foreign branch. In addition, the Conference Report indicates that regulations will limit the deduction of losses in respect of a foreign branch using a non-U.S. dollar functional currency to the U.S. taxpayer's U.S. dollar basis in the branch (*i.e.*, original U.S. dollar investment plus subsequent capital contributions and advances, unremitted earnings, and indebtedness for which the taxpayer is liable).[175]

3. *Translation of Earnings and Profits and Distributions of a Foreign Corporation*

a. Prior Law

Under prior law, the rules for translating into U.S. dollars earnings and profits and distributions (actual or deemed) of a foreign corporation that maintained books and records in a foreign currency depended on whether or not the foreign corporation was a "controlled foreign corporation" ("CFC").[176]

[168] *Id.* at 473; Conference Report at II-675.

[169] As noted above, it is not entirely clear at this time how distributions from pre-1987 accumulated earnings will be treated for U.S. tax purposes. If, as it has been suggested, an effort is made to retain the integrity of prior law treatment with respect to such remittances, it may be that exchange gain or loss will be deferred with respect to pre-1987 accumulated earnings until branch operations are terminated.

[170] Conference Report at II-675. In adopting this sourcing rule for exchange gains and losses, the Conference Committee rejected both the separate foreign tax credit limitation approach taken by the House and the U.S. source rule adopted by the Senate.

[173] §989(c)(3). The Conference Report indicates at II-677, that the conferees specifically desired to curtail the use of tax shelters premised on the creation of debt in a hyperinflationary currency.

[174] *Id.*, at 675.

[175] *Id.*

[176] In either case, earnings and profits of the foreign corporation first had to be converted to a U.S. tax accounting basis before being translated into U.S. dollars.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

In contrast to prior law, tax treatment accorded a U.S. taxpayer in respect of foreign currency transactions entered into through a foreign branch, U.S. shareholders of a foreign subsidiary generally were not required to recognize exchange gains and losses currently for U.S. tax purposes. Instead, except to the extent that the Subpart F provisions of the Code applied (as discussed below), those gains and losses were deferred until realized by the domestic corporation upon the disposition of its interest in the foreign subsidiary.[177] This tax treatment follows generally from the premise that a U.S. corporation and its foreign subsidiary are distinct legal entities and that exchange gains and losses arising from the foreign subsidiary's operations therefore should not be attributed to the U.S. corporation.

Under the so-called "foreign corporation" translation method, earnings and profits and dividends in foreign currency were required to be translated at the exchange rate on the date of the dividend. Thus, to the extent annual profits were distributed currently, the foreign corporation method produced substantially the same results as the profit and loss method applicable to branch operations.

The enactment of Subpart F of the Code (§§951 through 964) significantly reduced the deferral opportunities formerly available to certain U.S. shareholders in respect of their foreign subsidiaries. In this regard, a "U.S. shareholder" of a CFC may be subject to current U.S. tax on some or all of the income earned by the CFC, whether or not such income is distributed currently.[178] The Subpart F provisions thus narrowed the gap between the U.S. tax treatment accorded domestic corporations in respect of their foreign branch versus subsidiary operations.

Primarily for purposes of rationalizing the U.S. tax treatment in respect of foreign branches and CFCs, the Treasury prescribed an accounting method pursuant to which U.S. shareholders of a CFC were required to recognize currently exchange gains and losses in respect of the CFC.[179] A complete analogy could not, however, be drawn to the U.S. tax treatment of foreign branch operations since all the income in respect of a foreign branch is subject to tax currently in the U.S., whereas only certain defined categories of income are subject to current tax under Subpart F. Thus, the net worth method of accounting for foreign branch income, which fails to identify separately operating income and translation gains and losses, could not be adopted on a wholesale basis for Subpart F purposes. Instead, the regime ultimately developed for calculating exchange gain or loss under Subpart F combined characteristics of both the net worth and the profit and loss methods of accounting for foreign branch operations.

In order to isolate the amount of exchange gain or loss in respect of a CFC for any taxable year, total profit or loss (including any exchange gain or loss) first was determined by applying the following basic formula:

Ending retained earnings
Less: Beginning retained earnings
Equals: Total profit or loss.[180]

The amount of retained earnings was determined by translating each balance sheet item into U.S. dollars at appropriate exchange rates so that exchange gains and losses were recognized currently in respect of "financial" assets and "current" liabilities.

The amount of any exchange gain or loss was isolated by subtracting operating profit or loss as translated into U.S. dollars from "total income," as determined pursuant to the above-described rules. In this connection, each profit and loss item was translated into U.S. dollars at an appropriate rate (generally a weighted average rate) to simulate results produced under a specific transactions method.[181]

The amount of any exchange gain or loss increased or decreased the CFC's current earnings and profits for purposes of determining the amount of income subject to current tax under Subpart F. The amount of exchange gain or loss was also allocated between Subpart F income and

[177] Rev. Rul. 75-108, 1975-1 C.B. 69. Although not separately identified, exchange gain or loss was also realized to the extent that the value of foreign currency changed between the date profits were earned and later distributed.

[178] A CFC may be defined generally under post-1986 Act law as a foreign corporation more than 50% of the voting power or value of which is owned by "U.S. shareholders." §957(a). A "U.S. shareholder" is a U.S. person that owns at least 10% of the voting power of the foreign corporation. §951. In general, Subpart F income includes, among other things, certain income from the sales of goods between related persons, certain income from the performance of services for related persons, passive investment income, income from the insurance of non-same country risks, and certain types of foreign shipping and foreign oil-related income. §§952, 953 and 954. (*See also* special rules applicable to "insurance captives" under §953(c).) Income is also passed through under Subpart F where earnings of a CFC are invested in certain U.S. property. §§951, 956.

[179] The Treasury could, of course, have adopted a profit and loss approach for Subpart F purposes. However, at the time Subpart F was enacted, many major foreign currencies had displayed a history of declining in value relative to the U.S. dollar. Thus, use of a translation method that reflected currently exchange losses in respect of working capital was generally advantageous to U.S. taxpayers. The Subpart F translation method was designed to prevent taxation under Subpart F of undistributed income of a CFC in excess of the U.S. dollar earnings and profits available for distribution.

[180] Regs. §1.964-1(e)(2)(i)-(iii). Retained earnings equals assets less the sum of liabilities and paid-in capital. For simplicity, this discussion assumes that no distributions were made during the year.

[181] Regs. §1.964-1(d). Where the foreign currency fluctuated "substantially" within a translation period, each item of profit and loss was required to be translated at a rate representing either the simple average or a weighted average, depending upon which average rate would produce a result more representative of that which would have been produced by translating the individual transactions, reflected in each total amount to be translated, at the closing rate for each month to which such transaction related. The choice between the weighted average and simple average depended mainly upon the extent to which the volume of transactions in any class of items varied from month to month; *i.e.*, the greater the volume varied, the more representative was the weighted average. Whether the degree of currency fluctuation was "substantial" was a facts and circumstances issue depending upon, among other things, the variation in the volume of transactions between months. In general, the degree of fluctuation was considered substantial if the closing rate for any calendar month ending within the translation period varied by more than 10% from the closing rate for any preceding calendar month in such period. The foregoing procedures for translating foreign currency into U.S. dollars were subject to an important qualification. Regs. §1.964-1(d)(7) required that if any transaction involved the payment or receipt of U.S. dollars, or the conversion into or from U.S. dollars, such transaction or conversion had to be reflected in the income statement by the amount of U.S. dollars involved. However, that regulation also provided that no such transaction or conversion was required to be taken into account in U.S. dollars unless the amount of U.S. dollars involved in such transaction or conversion was material.

non-Subpart F income and, to the extent allocable to the former, increased or reduced the amount of income required to be "passed through" and included in gross income currently by the CFC's U.S. shareholders.[182] Accordingly, the results produced under the Subpart F translation method resembled the results under the net worth method, although exchange gains and losses were not separately identified under the net worth method for translating the results of foreign branch operations.

b. Overview of Changes

Section 1261 of the Tax Reform Act of 1986 adds new §§985-989 to the Code, which provisions change prior rules applicable to the translation into U.S. dollars of earnings and profits, and distributions of CFCs and other foreign corporations to coordinate those rules with the new rules adopted for translating into U.S. dollars the operating results of foreign branches. The new provisions are intended to establish approximate U.S. tax parity between domestic corporations operating abroad through foreign subsidiaries and through foreign branches, respectively.

Under new §§986(a) and 989, both a foreign corporation (whether or not a CFC) and a foreign branch using a functional currency other than the U.S. dollar are required to account for and translate their results of operation for U.S. tax purposes under a prescribed variation of the profit and loss method. As a general proposition, unrealized (balance sheet translation) exchange gains and losses of a CFC are no longer to be taken into account. However, under §986(c), exchange gain or loss with respect to distributions of previously taxed earnings (within the meaning of §959) attributable to movements in exchange rates between the date such earnings are included in a U.S. shareholder's income and the date they are actually distributed are to be recognized by the U.S. shareholder and treated as ordinary income or loss from the same source as the associated income inclusion.[183]

c. Reasons for Changes

The Subpart F translation method of prior law closely resembled the net worth translation method applicable to foreign branch operations, and, as discussed at 2, a *supra* (describing U.S. taxation in respect of foreign branches), Congress had a number of concerns regarding the appropriateness of the U.S. tax consequences produced under the net worth method. In addition to those concerns, Congress was troubled by the fact that CFCs enjoyed an implicit election to recognize exchange losses and thereby reduce current Subpart F pass-through exposure and increase current use of the deemed-paid foreign tax credit.[184] In this connection, the notion of providing CFCs with an irrevocable election to choose between the modified net worth and profit and loss methods was considered but expressly rejected. In considering this option, both the House Ways and Means and Senate Finance Committees noted that a taxpayer could use the net worth method in the case of operations in a country with a weak currency (to recognize currently exchange losses) and the profit and loss method for operations in other countries (to defer potential exchange gains).[185]

d. Detailed Analysis

The same accounting and translation rules now generally apply to determine the earnings and profits of a foreign corporation (whether or not a CFC) and the profit and loss of a foreign branch. Under new §§986(a) and 989(b), for purposes of determining the U.S. tax in respect of a foreign corporation, the earnings and profits of the foreign corporation must first be determined in the corporation's functional currency. In the case of a non-CFC, the earnings and profits as so determined are to be translated into U.S. dollars at the current rate of exchange in effect on the date a distribution is included in income. A similar rule is provided in respect of gain from a sale or other disposition of CFC stock that is treated as a dividend under §1248. Thus, contrary to the approach taken in the House bill, no exchange gain or loss is recognized on changes in the U.S. dollar value of the foreign functional currency between the time earnings arise and the time a distribution is included in income.

In the case of a CFC, a deemed distribution of Subpart F income is to be translated pursuant to new 989(b)(3) at the weighted average exchange rate for the CFC's taxable year.[186] Under new §986(c), exchange gain or loss is required to be recognized upon a distribution of previously taxed income to the extent of the change in exchange rates between the date the earnings were included in income of a U.S. shareholder and the date actually distributed. Such gain or loss is treated as ordinary income or loss from the same source as the associated income inclusion.[187] The Treasury is charged with the responsibility of prescribing rules for the treatment of distributions of previously taxed income through tiers of foreign corporations.

Under §1202 of the Tax Reform Act of 1986, amending §902, for purposes of computing the indirect foreign tax credit, treatment of distributions from a foreign corporation as dividends is determined by treating distributions as made from a post-1986 pool of the distributor's earnings and profits. This pooling approach is also to be used to compute

---

[182] Regs. §1.964-1(e)(1). *See* §1.952-1(c)(2)(v).

[183] Although not separately identified, realized exchange gains and losses in respect of non-CFCs will also be reflected, since actual distributions are translated at the current rate of exchange in effect on the date the distribution is made.

[184] In the case of a CFC, a taxpayer in certain circumstances effectively was able to elect to recognize currently foreign exchange losses by structuring transactions of the CFC (*e.g.*, §956 loans to the CFC's U.S. shareholders) to produce current realization of income under Subpart F of the Code. As discussed in a separate section below, the recognition of exchange losses reduces earnings and profits for purposes of the indirect foreign tax credit under §960, thereby artificially increasing the amount of that credit.

[185] House Report at 469; Senate Report at 454. This generally assumes that the foreign branch would be in a net current asset position and therefore would experience exchange losses under the net worth method in the face of a depreciating local currency.

[186] The weighted average exchange rate is also used to translate foreign personal holding company income (§551(a)) and certain amounts included in current income under the new "passive foreign investment company" rules (§1293(a)). As discussed at 2, d *supra*, no clear guidance has been provided regarding the manner in which the weighted average rate is to be derived.

[187] These rules also apply to current income inclusions under the new "foreign passive investment company" rules. *See* §§986(c)(1) and 1293(c).

exchange gain or loss on distributions by a CFC of previously taxed income. As discussed at 2, d *supra*, a pooling approach was also adopted for purposes of determining exchange gain or loss in respect of remittances by foreign branches.[188] Thus, the Act coordinates the taxation of exchange gains and losses in respect of distributions from CFCs and remittances from foreign branches.

Under §1504(d), a domestic corporation may elect to treat certain wholly-owned subsidiaries organized under the laws of Canada or Mexico as domestic corporations, and include such so-called contiguous country corporations in a consolidated tax return. In view of the steady decline in recent times in the value of the currencies of Mexico and Canada relative to the U.S. dollar, this treatment typically resulted in the current recognition of exchange gains and losses under prior law where the net worth method was used to account for contiguous country operations. It was contemplated by the conferees on the Tax Reform Act that the IRS will allow corporations to elect out of §1504(d) status as a result of the statutory repeal of the net worth method of accounting.[189] Any election out from §1504(d) status will generally produce the same tax consequences as under prior law.[190] In addition, "safeguards" are to be provided to limit recognition of exchange losses upon revocation of a §1504(d) election. Further, §243(d) will generally apply to distributions by a contiguous country corporation out of earnings accumulated while a §1504(d) election was in effect. Thus, such a distribution would qualify for the 100% dividends received deduction, provided that a valid §243(b) election is timely made and that no §1562 election was in effect during the year(s) in which the earnings were accumulated.[191]

4. Foreign Tax Credit

Foreign currency translation also affects the direct and indirect foreign tax credit. The focus here is not only on the appropriate exchange rate to be used for purposes of translating foreign taxes in the case of the direct credit, and dividends, earnings and profits, and foreign taxes in the case of the indirect credit, but also on the effects of exchange gain or loss on the foreign tax credit.

a. Prior Law

(1) Direct Foreign Tax Credit

For purposes of the direct foreign tax credit, under prior law cash basis taxpayers were required generally to translate the amount of foreign income taxes paid into U.S. dollars at the rate of exchange for the date of payment, and accrual basis taxpayers were required to use the year-end rate for the year of accrual (or the exchange rate for the date of payment if the taxes were paid in the year accrued).[192] If the amount of foreign taxes accrued differed from the amount paid or if taxes paid later were refunded, the foreign tax credit had to be redetermined in accordance with §905(c). These rules were applied by comparing the U.S. dollar value of taxes accrued and paid. Exchange gain or loss was taken into account in respect of such adjustments to, or refunds of, foreign taxes.[193]

These rules generally applied in respect of foreign taxes paid by U.S. taxpayers in the case of isolated transactions abroad as well as in the case of foreign branch operations.[194]

(2) Indirect Foreign Tax Credit

Dividend distributions to a 10% or greater U.S. shareholder of a foreign corporation generally carry with them a proportionate amount of the foreign taxes paid or accrued by the foreign corporation. In the case of a non-CFC, the indirect foreign tax credit under §902 is determined by multiplying the amount of foreign taxes paid or accrued with respect to the earnings from which a dividend is paid by the ratio of the amount of the dividend to the amount of accumulated profits from which the dividend is paid. Under prior law, each component of the §902 fraction was translated at the exchange rate for the date that the dividend was paid.[195] However, where a foreign corporation kept its books in U.S. dollars, authority existed for translating foreign taxes into U.S. dollars at the rate of exchange as of the date the taxes were paid.[196]

In the case of a CFC, the indirect foreign tax credit under §960 was determined under prior law by multiplying the amount of foreign taxes paid or accrued in respect of earnings to which a Subpart F inclusion related by the ratio of the amount of the Subpart F inclusion to the CFC's current earnings and profits. For purposes of the §960 fraction, the Subpart F inclusion and earnings and profits were translated into U.S. dollars at average rates, as described above in connection with the discussion of the translation of earnings and profits and distributions of CFCs. Thus, the denominator of the §960 fraction, unlike the denominator of the §902 fraction, reflected exchange gain or loss. For this reason, if earnings of a CFC were not passed through fully under Subpart F, when a CFC made an actual distribution, a reconciliation was necessary to determine the amount of the foreign tax credit under §902 attributable to the actual distribution.

b. Overview of Changes

Section 1261 of the Tax Reform Act of 1986 adds new §§985-989 to the Code, which provide a single set of rules for the translation of foreign taxes, and any adjustments thereto or refunds thereof, for foreign tax credit purposes.

[188] As in the case of treatment of remittances from foreign branches, no guidance has been provided with respect to the proper treatment of distributions from pre-1987 earnings and profits.

[189] Conference Report at II-673.

[190] Specifically, in addition to the corporation's being subject to §367(a), the revocation of a §1504(d) election will, among other things, trigger any excess loss accounts (under Regs. §1.1502-19) and the foreign loss recapture rules under §904(f).

[191] Conference Report at II-673.

[192] Rev. Rul. 73-491, 1973-2 C.B. 268. Under §905(a), cash basis taxpayers are allowed to elect to claim a credit for foreign taxes in the year accrued. Cash basis taxpayers making such an election were required to translate foreign taxes under rules applicable to accrual basis taxpayers.

[193] Rev. Rul. 73-506, 1973-2 C.B. 268; Rev. Rul. 58-237, 1958-1 C.B. 534.

[194] However, in certain cases, foreign taxes of a U.S. taxpayer with foreign branch operations accounted for on a profit and loss method were translated for foreign tax credit purposes at the same rate used to translate profits of the branch operations.

[195] Regs. §1.902-1(g)(1); *Bon Ami Co. v. Comr.*, 39 B.T.A. 825 (1939). Foreign tax credits in respect of constructive dividends under §1248 also were determined under §902. Regs. §1.1248-1(d)(1). *See* GCM 37133 (May 24, 1977) concerning a controversy that existed with respect to appropriate exchange rates to be applied to the components of the §902 fraction in that case.

[196] *Commissioner v. American Metal Co.*, 221 F.2d 134 (2d Cir. 1955), cert. denied, 350 U.S. 829.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Under new §986(b)(1)(A), for purposes of determining foreign taxes deemed paid under either §902 or §960, foreign taxes must be translated using the exchange rate for the date the taxes were paid. If foreign taxes paid are later adjusted, new §986(b)(1)(i) requires the adjustment to be translated at the exchange rate in effect as of the adjustment is made. However, pursuant to new §986(b)(1)(B)(ii), any refund of foreign taxes is to be taken into account at the exchange rate in effect as of the date the taxes refunded were originally paid. Under new §987(4), foreign taxes taken into account by a U.S. taxpayer in respect of branch operations are to be translated under these same rules.

Under new §986(a), earnings and profits taken into account for purposes of computing the §960 indirect credit will no longer reflect balance sheet exchange gains and losses.

c. Reasons for Changes

The *Bon Ami* [197] approach to translating components of the §902 fraction under prior law preserved the historic ratio between foreign taxes and accumulated profits. This can be illustrated as follows:

> *Example:* Assume that a French subsidiary corporation has accumulated profits of 400 French francs before French tax and that a French tax of 100 francs was paid. Assume further that the profits were earned, and the tax paid, when the French franc was worth $.20. Thus, a French tax with a value of $20 was paid with respect to $80 of income, resulting in an effective tax rate of 25%. If the earnings are distributed after the franc's value has fallen to $.10, the parent corporation would be deemed to have paid $10 of French tax ($30/$30 x $10). If the franc's value rose to $.25, the parent corporation would be deemed to have paid $25 of French tax ($75/$75 x $25). In either case, the amount of French tax eligible for credit would equal 25% of the U.S.-dollar value of the accumulated profits before tax; however, the U.S.-dollar cost of the French tax paid would be understated or overstated, depending on whether the franc's value depreciated or appreciated.[198]

Thus, the *Bon Ami* approach produced a U.S. tax benefit if foreign functional currency increased in value relative to the U.S. dollar and a disadvantage if the foreign currency decreased in value. This result has been criticized over the years in part because the deemed-paid foreign tax credit is affected by foreign currency fluctuations even after foreign taxes have been paid and tax liability in terms of U.S. dollars fixed.[199] The Tax Reform Act changes bring the foreign tax credit results in respect to a foreign subsidiary corporation more in line with those obtained by U.S. taxpayers operating abroad through a foreign branch.

In the case of the §960 fraction, exchange gain or loss in respect of working capital was taken into account in the determination of earnings and profits. During a year in which a CFC incurred and exchange loss, the denominator of the §960 fraction (earnings and profits) would be reduced, thereby increasing the allowable deemed-paid foreign tax credit relative to the credit that otherwise would have been allowable under §902 had the CFC made an actual distribution equal in amount to the Subpart F inclusion for the year. In this connection, Congress was troubled by the fact that in certain circumstances a U.S. shareholder of a CFC could control whether foreign tax credits would be determined under §902 or §960. This ability to manipulate the indirect credit was, for the most part, limited to CFCs that did not generate Subpart F income in the ordinary course of business and could in their discretion trigger a Subpart F inclusion (and a §960 credit) by, for example, extending a loan to a U.S. shareholder with a term of more than one year.[200]

d. Detailed Analysis

Under new §986(b)(1)(A), for purposes of determining foreign taxes deemed paid under §902 or §960, any foreign income taxes paid by a foreign corporation must be translated into U.S. dollars using the current exchange rate as of the time of *payment*.[201] The U.S. dollar amount of the translated tax is "grossed-up" under §78. Further, under new §986(b)(1)(B), any refund of foreign tax is to be translated into U.S. dollars using the exchange rate as of the time the refunded taxes originally were paid. Any other adjustment of the amount of foreign income taxes paid (*e.g.*, an additional assessment) must be translated at "the appropriate exchange rate as of when such adjustment is made." (Emphasis added.) The Conference Report states that increases in tax are to be translated at the current exchange rate in effect on the date of payment of the additional tax.[202]

The use of date of payment exchange rates for foreign taxes and date of distribution exchange rates for actual distributions and earnings and profits could result in a wide disparity between the effective rate of tax at the time of payment compared to the effective rate of the tax at the time the foreign tax calculation is made. For example, assume a U.K. subsidiary of a domestic corporation pays a U.K. tax of £40 on annual earnings of £100. If the U.K. subsidiary distributes 100% of its earnings as of year-end when the exchange rate is £1:$1.50, the amount of the dividend and earnings and profits as translated into U.S. dollars will be $150 and U.K. tax will be $60, producing a $60 indirect foreign tax credit. Such credit reflects the 40%

[197] Footnote 195 *supra*.
[198] Senate Report at 449.
[199] *See Id.*

[200] §§951(a)(1)(B), 956(b)(1)(C) and (2)(F); Regs. §1.956-2(b).
[201] This rule applies to prepaid taxes (*e.g.*, payment of estimated taxes or withholding taxes) and each installment payment of tax. If a tax is paid by offset against an overpayment in another year, the transaction is split into its component parts for translation purposes, that is, (i) an adjustment of tax for the first year, and (ii) a payment of tax for the second year. House Report at 478.
[202] Conference Report at II-672. It was clear under the House bill that any increases in the amount of foreign tax were to be translated at the exchange rate in effect on the date of adjustment. House Report at 478. After stating that the Conference agreement follows the House bill for purposes of determining the amount of foreign taxes deemed paid under §902 or §960, the Conference Report expressly states: "An increase to foreign taxes is translated on the date of the payment of additional tax." It seems that the conferees intended that the date of payment of additional taxes, rather than the date of adjustment, controls the translation of additional taxes.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

effective U.K. tax rate actually borne by the U.K. subsidiary. However, if the U.K. subsidiary accumulates earnings and pays a dividend when the exchange rate is £1:$3.00, a 100% distribution would yield a dividend and earnings and profits of $300, but the U.K. tax as translated into U.S. dollars would remain $60 as would the indirect foreign tax credit, reflecting an effective tax rate of only 20%.

Under new §987(4), the translation of payments of, and subsequent adjustments to, foreign taxes incurred by a foreign branch is governed by the same rules applicable to the translation of foreign taxes paid by a foreign corporation for purposes of §§902 and 960. The House Report supplies an illustration:

> "Assume a branch pays a tax of 100 Swiss francs in year one. In year two, the branch's tax liability is 50 francs, and the year one tax is adjusted downwards to 60 francs (so there was an overpayment of 40 francs). The 40-franc overpayment from year one is applied against the 50-franc liability for year two. In year three, the 50-franc tax paid in year two is refunded. On these facts, (1) regarding the reduction in the tax paid in year one, the 40 francs are translated at the exchange rate used to translate the tax in year one, and exchange gain or loss (as the case may be) is realized if there is any difference between that exchange rate and the appropriate exchange rate for year two, (2) regarding the crediting of the 40-franc overpayment against the 50-franc tax liability for year two, the entire 50-franc tax is translated at the rate in effect on the date the taxpayer is treated as having paid such tax, and (3) on refund of the year-two 50-franc tax in year three, the refund is translated at the same rate that was used to translate the tax payment in year two, and exchange gain or loss (as the case may be) is realized if there is any difference between that exchange rate and the appropriate exchange rate for year three."[203]

New §989(c)(4) requires the Treasury to prescribe regulations for providing alternative adjustments to the application of §905(c). For example, the Conference Report states that as opposed to any redetermination of taxes required by 905(c), the Treasury may provide for the adjustment of a dollar-based pool of taxes.[204]

Addendum to Chapter 60

INTERNAL REVENUE SERVICE'S ADVANCE NOTICE 87-11, ON CERTAIN FULLY HEDGED FOREIGN CURRENCY TRANSACTIONS, RELEASED DEC. 31, 1986 (TEXT)

Part III - Administrative, Procedural, and Miscellaneous

Guidance Is Provided Under Section 988(d) of the Internal Revenue Code With Respect To Certain Fully Hedged Foreign Currency Transactions

Notice 87-11

SECTION 1. INTRODUCTION

The Internal Revenue Service announces that it will issue regulations under section 988(d) of the Internal Revenue Code regarding certain fully hedged foreign currency transactions. Section 988(d) provides that to the extent provided in regulations, if any section 988 transaction is part of a 988 hedging transaction, all transactions which are part of such 988 hedging transaction shall be integrated and treated as a single transaction or otherwise treated consistently. The regulations to be issued will set forth the consequences of integrating and treating as a single transaction all transactions that comprise a fully hedged section 988 hedging transaction that is an integrated economic package. The regulations generally will follow the provisions of sections 2 through 6 of this notice and will integrate a section 988 hedging transaction only with respect to the taxpayer that enters into the transaction. Until such regulations are issued, taxpayers may rely on this notice with respect to transactions entered into after December 31, 1986, that occur in taxable years beginning after December 31, 1986.

SECTION 2. TRANSACTIONS TO WHICH THIS NOTICE APPLIES

(a) *Qualified Hedging Transaction - (1) In General.* This notice applies only to qualified hedging transactions as defined in this section 2. A qualified hedging transaction is an integrated economic package, as provided in paragraph (d) of this section, consisting of a qualifying transaction, as defined in paragraph (b) of this section, and a section 988 hedge, as defined in paragraph (c) of this section, provided that--

(i) the interest rate (fixed or floating) on the qualifying transaction is set and all exchange rates on the section 988 hedge are fixed on the same calendar day (the trade date, as defined in paragraph (e)(7) of this section) such that the cost or return with respect to such qualified hedging transaction is not affected by movements in exchange rates after the trade date, and

(ii) all transactions that comprise the qualified hedging transaction are entered into on or before the settlement date (as defined in paragraph (e)(8) of this section).

(2) *Exceptions.* This notice shall not apply with respect to--

(i) A qualified hedging transaction that creates a synthetic asset or liability denominated in a currency other than the dollar if the rate that approximates the Federal short-term rate in such currency is at least 20 percentage points higher that the Federal short-term rate (determined under section 1274(d)) on the trade date, or

(ii) A transaction that would be a qualified hedging transaction but for the fact that a component transaction is terminated prior to maturity.

(3) *Service solicits comments.* The Service solicits comments on the application of section 988(d) under the rules prescribed in this notice. The Service also solicits comments as to the possible application of section 988(d) to transactions not described in this notice, including:

(i) Transactions in which the interest rate with respect to the qualifying transaction is set and the exchange rates with respect to the hedge are fixed on different calendar days,

(ii) Transactions in which either the hedge or the qualifying transaction is terminated prior to maturity,

(iii) Transactions that are partially hedged.

(b) *Qualifying transaction - (1) Definition.* A qualifying transaction is a borrowing under a debt instrument or the purchase of a debt instrument if the entire amount which the taxpayer (or qualified business unit of the taxpayer) is required to pay or is entitled to receive as a result of the transaction--

(i) Is denominated in terms of a functional currency, or

(ii) Is denominated in terms of a nonfunctional currency.

(2) *Exceptions.* A qualifying transaction does not include a borrowing under a debt instrument or the purchase of a debt instrument if the payment or receipt of interest and principal is denominated in more than one currency.

(c) *Definition of a section 988 hedge.* A section 988 hedge (hereinafter referred to as a "hedge") is a spot contract, a swap agreement or agreements, forward contract, series of

forward contracts or combination thereof that fixes the cost or return with respect to a qualifying transaction (or transactions) in terms of a currency other than the currency in which such qualifying transaction is denominated such that the cost or return is not affected by movements in exchange rates after the trade date (as defined in section 2(e)(7) of this notice).

(d) *Definition of integrated economic package.* (1) *In general.* For purposes of this notice, a qualifying transaction and a hedge are an integrated economic package if--

(i) The qualifying transaction and the hedge are a package as defined in paragraph (d)(2) of this section, and

(ii) The qualifying transaction and the hedge make up one of the economically integrated transactions enumerated in paragraph (d)(3) of this section.

(2) *Definition of a package.* A qualifying transaction and a hedge are a package if all the requirements of this section 2(d)(2) are satisfied as follows--

(i) The interest rate (fixed or floating) on a qualifying transaction that is a borrowing under a debt instrument or the rate of return (fixed or floating) on a qualifying transaction that is the purchase of a debt instrument is set, and the exchange rates on the hedge are fixed, on the trade date.

(ii) None of the parties to the qualifying transaction or hedge are related as defined in section 2(e)(4) of this notice.

(iii) The identification requirements of section 3 of this notice are satisfied.

(iv) Except with respect to a transaction described in section 2(d)(3)(vi), the total initial amount borrowed under a debt instrument or the total initial amount paid to acquire a debt instrument that is the qualifying transaction is hedged at an exchange rate determined on the trade date.

(v) All subsequent interest and principal amounts paid with respect to a qualifying transaction that is a borrowing or all subsequent interest and principal amounts received with respect to a qualifying transaction that is the purchase of a debt instrument are hedged throughout the term of the qualifying transaction at an exchange rate determined on the trade date.

(vi) The qualifying transaction matures on the same day the hedge expires. (A hedge expires on the last day a payment is made or received under the terms of the hedge.)

(vii) In the case of a qualified business unit with a residence, as defined in section 988(a)(3)(B) of the Code, outside of the United States, or a qualified business unit resident in the United States with a functional currency other than the dollar, both the qualifying transaction and the hedge are entered into by the same qualified business unit and the interest income or expense from the qualified hedging transaction is properly reflected on the books of such qualified business unit throughout the term of the qualified hedging transaction.

(viii) Subject to the limitations of section 2(d)(2)(vii) of this notice, both the qualifying transaction and the hedge are entered into by the same individual, partnership, trust, estate, or corporation. With respect to a corporation, the same corporation must enter into both the qualifying transaction and the hedge whether or not such corporation is a member of an affiliated group of corporations that files a consolidated return.

(ix) With respect to a foreign person engaged in a U.S. trade or business that enters into a qualifying transaction or hedge through such trade or business, all items of income and expense associated with the qualifying transaction and the hedge, would have been effectively connected with such U.S. trade or business throughout the term of the qualified hedging transaction had the provisions of this notice not applied.

(3) *Economically integrated transactions.* A qualifying transaction and a hedge are economically integrated if--

(i) The hedge effectively converts a qualifying transaction that is a nonfunctional currency borrowing into a functional currency borrowing. A nonfunctional currency borrowing is effectively converted into a functional currency borrowing if--

(A) The entire principal amount of nonfunctional currency received from the borrowing is sold or exchanged for functional currency on the settlement date at a rate fixed on the trade date, and

(B) The terms of the hedge provide for the acquisition of the borrowed nonfunctional currency, in exchange for functional currency, on the calendar day when interest and principal payments are due on the borrowing and in an amount which equals such interest and principal payments.

(ii) The hedge effectively converts a qualifying transaction that is a borrowing in one nonfunctional currency (first nonfunctional currency) into a borrowing in a second nonfunctional currency. A borrowing in one nonfunctional currency is effectively converted into a borrowing in a second nonfunctional currency if —

(A) The entire principal amount of the first nonfunctional currency received from the borrowing is sold or exchanged for a second nonfunctional currency on the settlement date at a rate fixed on the trade date, and

(B) The terms of the hedge provide for the acquisition of the borrowed nonfunctional currency (i.e., the first nonfunctional currency), in exchange for the second nonfunctional currency, on the calendar day when interest and principal payments are due on the borrowing and in an amount which equals such interest and principal payments.

(iii) The hedge effectively converts a qualifying transaction that is a functional currency borrowing into a nonfunctional currency borrowing. A functional cur-

rency borrowing is effectively converted into a nonfunctional currency borrowing if--

(A) The entire principal amount of functional currency received from the borrowing is sold or exchanged for nonfunctional currency on the settlement date at a rate fixed on the trade date, and

(B) The terms of the hedge provide for the acquisition of the borrowed functional currency, in exchange for that nonfunctional currency on the calendar day when interest and principal payments are due on the borrowing and in an amount which equals such interest and principal payments.

(iv) The hedge effectively converts a qualifying transaction that is the purchase of a nonfunctional currency denominated debt instrument into a functional currency denominated debt instrument. The purchase of a nonfunctional currency denominated debt instrument is effectively converted into the purchase of a functional currency denominated debt instrument if--

(A) In exchange for functional currency, the purchaser acquires on the trade date (at a rate set on such date), for delivery on the settlement date, an amount of nonfunctional currency equal to the purchase price of the debt instrument and exchanges such nonfunctional currency for the debt instrument on the settlement date, and

(B) The terms of the hedge provide for the sale or exchange of the nonfunctional currency denominated interest and principal payments received under the debt instrument for functional currency, at a rate fixed on the trade date, on the calendar day when such payments are received.

(v) The hedge effectively converts a qualifying transaction that is the purchase of a debt instrument denominated in one nonfunctional currency into the purchase of a debt instrument denominated in a second nonfunctional currency. The purchase of a debt instrument denominated in one nonfunctional currency (first nonfunctional currency) is effectively converted into a debt instrument denominated in a second nonfunctional currency if--

(A) In exchange for functional currency, the purchaser acquires on the trade date (at a rate set on such date), for delivery on the settlement date, an amount of the first nonfunctional currency equal to the purchase price of the debt instrument and exchanges that nonfunctional currency for the debt instrument on the settlement date, and

(B) The terms of the hedge provide for the exchange of the first nonfunctional currency denominated interest and principal payments received under the debt instrument for a second nonfunctional currency, at a rate fixed on the trade date, on the calendar day such payments are received.

(vi) The hedge effectively converts a qualifying transaction that is the purchase of a functional currency denominated debt instrument into a nonfunctional currency denominated debt instrument. The purchase of a functional currency denominated debt instrument is effectively converted into the purchase of a nonfunctional currency denominated debt instrument if--

(A) The purchaser acquires the functional currency denominated debt instrument for functional currency, and

(B) The terms of the hedge provide for the sale or exchange of the functional currency denominated interest and principal payments received under the debt instrument for nonfunctional currency, at a rate fixed on the trade date, on the calendar day when such payments are received.

(e) *Other definitions.*

(1) *Functional currency.* For the definition of functional currency, see section 985 of the Code.

(2) *Nonfunctional currency.* A nonfunctional currency is any currency other than a functional currency.

(3) *Qualified business unit.* For the definition of qualified business unit, see section 989 (a) of the Code.

(4) *Related.* The term "related" means the relationships defined in section 267(b) and section 707(b)(1) of the Code.

(5) *Swap Agreement.* A contract in which two parties agree to exchange simultaneously one currency for another at a predetermined rate, in which each party's obligation to perform is contingent upon the other party's performance.

(6) *Spot contract.* A contract for the purchase or sale of currency which requires delivery in two business days or less.

(7) *Trade date.* The one calendar day on which both —

(i) The interest rate (fixed or floating) on a qualifying transaction that is a borrowing under a debt instrument or the rate of return (fixed or floating) on a qualifying transaction that is the purchase of a debt instrument is set, and

(ii) All exchange rates on the hedge are fixed.

(8) *Settlement date.* The first calendar day on which--

(i) With respect to a qualifying transaction that is a borrowing, proceeds of the borrowing are credited to the taxpayer's account, otherwise made available so that the taxpayer may draw upon such proceeds at any time, or actually received by the taxpayer, or

(ii) With respect to a qualifying transaction that is the purchase of a debt instrument, the debt instrument is available for delivery to the taxpayer or is credited to the taxpayer's account.

(9) *Debt Instrument.* The term debt instrument means a bond, debenture, note, certificate or similar financial instrument but does not include–

(i) Accounts payable, accounts receivable or similar items of expense or income, or

(ii) A debt instrument issued as part of a transaction subject to sections 483 or 1274 of the Code. For

purposes of applying sections 483 and 1274, currency (functional or nonfunctional) shall not be considered property.

(10) *Purchase.* The term purchase includes an extension of credit.

SECTION 3. IDENTIFICATION REQUIREMENTS

(a) *In general.* In order to satisfy the identification requirements of this section, a taxpayer must:

(1) Identify a qualified hedging transaction on its books and records in accordance with paragraph (b) of this section before the close of the trade date, and

(2) Verify in accordance with paragraph (c) of this section that the interest rate on the qualifying transaction was set and the exchange rates on the hedge were fixed on the trade date.

In the case of an individual, the close of the trade date is midnight (local time) in the location of the individual's principal residence. In the case of any qualified business unit of a taxpayer, the close of the trade date is midnight (local time) in the location of such unit's principal place of business.

(b) *Identification on books and records of the taxpayer or qualified business unit.* A taxpayer, or qualified business unit of a taxpayer, must establish a separate account on its books and records designated "Qualified Hedging Account." Before the close of the trade date, such person must enter into the account--

(1) A description of the qualifying transaction including the interest rate and the date such rate was set,

(2) A description of all elements of the hedge including the exchange rates and the date such exchange rates were fixed, and

(3) A summary of the cash flows resulting from the qualified hedging transaction.

(c) *Verification that the interest rate was set and the exchange rates were fixed on the same day--*

(1) *Presumption.* A taxpayer is presumed to have verified that the interest rate on the qualifying transaction was set and the exchange rates on the hedge were fixed on the trade date if the taxpayer receives independent verification as defined in paragraph (c)(3) of this section from one or more persons with respect to all of the information identified on its books and records pursuant to paragraph (b) of this section.

(2) *Corroborating evidence.* If the presumption of paragraph (c)(1) of this section does not apply, the burden shall be on the taxpayer to establish that the interest rate on the qualifying transaction was set and the exchange rates on the hedge were fixed on the trade date. If the taxpayer fails to provide evidence other than the information entered on its books and records in accordance with paragraph (b) of this section and its own testimony, the identification requirements of this section shall not be satisfied unless the taxpayer shows good cause for such failure.

(3) *Independent verification.* Independent verification means:

(i) A written confirmation received from the person or persons (including an underwriter in a firm commitment underwriting) with respect to whom the qualifying transaction or the hedge is entered into, or

(ii) A written contract (*e.g.* a swap contract) signed and dated by the parties to the transaction.

(d) *Identification by the Commissioner.* If--

(1) A person enters into a qualifying transaction and a hedge but fails to comply with one or more of the requirements of sections 2 and 3 of this announcement, and

(2) On the basis of all the facts and circumstances, the Commissioner concludes that the qualifying transaction and the hedge are, in substance, a qualified hedging transaction,

then the Commissioner may treat the qualifying transaction and the hedge as a qualified hedging transaction for all purposes of this notice. The Commissioner may identify a qualifying transaction and a hedge as a qualified hedging transaction even though the qualifying transaction and the hedge are entered into by different related corporations (as defined in section 2(e)(4) of this notice), or by a domestic corporation and a qualified business unit with a residence outside the United States. With respect to a qualifying transaction and a hedge that are treated by the Commissioner as a qualified hedging transaction under this section 3(d), the qualifying transaction and the hedge each remain, at the discretion of the Commissioner, subject to the rules of sections 1092 and 263(g).

SECTION 4. TAXATION OF QUALIFIED HEDGING TRANSACTIONS

(a) *In general — (1) General rule.* If a transaction constitutes a qualified hedging transaction as defined in section 2 of this announcement, the qualifying transaction and the hedge are integrated and treated as a single transaction with respect to the taxpayer that has entered into the qualified hedging transaction. Except as provided in section 3(d) of this notice, neither the qualifying transaction nor the hedge that make up the qualified hedging transaction shall be subject to section 263(g) 1092 or 1256.

(2) *Special rule for income or expense of foreign persons effectively connected with a U.S. trade or business.* Interest income of a foreign person resulting from a qualified hedging transaction entered into by such foreign person that satisfies the requirements of section 2(d)(2)(ix) of this notice shall be treated as effectively connected with a U.S. trade or business. Interest expense of a foreign person resulting from a qualified hedging transaction entered into by such foreign person that satisfies the requirements of section 2(d)(2)(ix) of this notice shall be allocated and apportioned under section 1.882-5 of the regulations.

(3) *Special rule for foreign persons that enter into qualified hedging transactions giving rise to U.S. source income not effectively connected with a U.S. trade or business.* If a foreign person enters into a qualified hedging transaction that gives rise to U.S. source interest income (determined under the source rules for synthetic asset transactions as provided in this section) not effectively connected with a U.S. trade or business of such foreign persons, for purposes of sections 871(a), 881, 1441, 1442 and 6049, the provisions of this notice shall not apply and such sections of the Code shall be applied separately to the qualifying transaction and the hedge. To the extent relevant to any foreign person, if the requirements of this notice are otherwise met, the provisions of this notice shall apply for all other purposes of the Code (*e.g.*, for purposes of calculating the earnings and profits of a controlled foreign corporation that enters into a qualified hedging transaction through a qualified business unit resident outside the United States, income or expense with respect to such qualified hedging transaction shall be calculated under the provisions of this notice).

(b) *Income tax effects of integration.* The income tax effects of integrating and treating a transaction as a single transaction are determined under paragraphs 1 through 6 of this section 4(b).

(1) *Qualified hedging transaction that effectively converts a nonfunctional currency borrowing into a functional currency borrowing.* The income tax effects of integrating a qualified hedging transaction described in section 2(d)(3)(i) of this notice are as follows —

(i) *Deemed functional currency borrowing.* The integration of the nonfunctional currency denominated borrowing and the hedge results in a deemed functional currency borrowing with respect to the borrower. The amount deemed to be borrowed equals the total amount of functional currency received under the terms of the hedge in exchange for the total amount of the nonfunctional currency-borrowed. The total amount of interest and principal deemed to be paid equals the total amount of functional currency paid under the terms of the hedge to acquire the nonfunctional currency necessary to make interest and principal payments on the nonfunctional currency borrowing.

(ii) *Determination of interest expense of the borrower.* The interest expense deductible by the borrower shall be determined as follows--

(A) The issue price and stated redemption price at maturity of the deemed functional currency borrowing shall be determined under the provisions of section 1273 and the regulations thereunder in units of the functional currency.

(B) If the deemed functional currency borrowing has original issue discount (OID) within the meaning of section 1273(a)(1), then the rules of section 163(e) and the regulations thereunder shall govern the manner in which such discount is deductible by the borrower.

(C) Any interest expense other than OID with respect to the deemed functional currency borrowing shall be deductible from gross income under section 163(a) (subject to any limitations on deductibility contained in other sections of the Code) in accordance with the borrower's regular method of accounting.

(iii) *Allocation and apportionment of interest expense.* The interest expense determined pursuant section 4(b)(1)(ii) of this notice shall be allocated and apportioned under sections 1.861-8 and 1.882-5 of the regulations as the case may be (subject to section 864(e) of the Code).

(2) *Qualified hedging transaction that effectively converts a borrowing in one nonfunctional currency into a borrowing in a second nonfunctional currency.* The income tax effects of integrating a qualified hedging transaction described in section 2(d)(3)(ii) of this notice are as follows-

(i) *Deemed borrowing in the second nonfunctional currency.* The integration of the nonfunctional currency borrowing (i.e., first nonfunctional currency) and the hedge results in a deemed borrowing in the second nonfunctional currency. The amount deemed to be borrowed equals the total amount of the second nonfunctional currency received under the terms of the hedge in exchange for the total amount of the first nonfunctional currency borrowed. The total amount of interest and principal deemed to be paid equals the total amount of the second nonfunctional currency paid under the terms of the hedge to acquire the first nonfunctional currency necessary to make interest and principal payments on the first nonfunctional currency borrowing.

(ii) *Determination of interest expense of the borrower.* The interest expense deductible by the borrower shall be determined as follows--

(A) The issue price and stated redemption price at maturity of the deemed borrowing in the second nonfunctional currency shall be determined by applying the provisions of section 1273 and the regulations thereunder directly to the units of the second nonfunctional currency used to make the interest and principal payments under the deemed borrowing.

(B) If the deemed borrowing in the second nonfunctional currency has original issue discount (OID) within the meaning of section 1273(a)(1), then the rules of section 163(e) and the regulations thereunder shall govern the manner in which the amount of such discount denominated in units of the second nonfunctional currency is determined. The amount of discount deductible by the borrower in his functional currency shall be the amount determined in the manner described in the preceding sentence, translated into the borrower's functional currency using the weighted average exchange rate for the accrual period. Any amounts of qualified periodic interest (as defined in § 1.1273-1(b)(1)(ii) of the proposed regulations) shall be translated into the borrower's functional currency at the spot rate on the date of payment and deduct-

ed from gross income in accordance with the borrower's regular method of accounting.

(C) Any interest expense other than OID with respect to the deemed second nonfunctional currency borrowing shall be determined under section 163(a) in units of the second nonfunctional currency (subject to any limitations on deductibility contained in other sections of the Code). The interest expense deductible by the borrower in his functional currency shall be the amount determined in the manner described in the preceding sentence, translated into the borrower's functional currency at the spot rate on the date of payment and deducted in accordance with the taxpayer's regular method of accounting.

(iii) *Allocation and apportionment.* The interest expense determined pursuant to section 4(b)(2)(ii) of this notice shall be allocated and apportioned under sections 1.861-8 and 1.882-5 of the regulations as the case may be (subject to the section 864(e)).

(iv) *Deemed borrowing in the second nonfunctional currency is a position under section 1092.* The deemed borrowing in the second nonfunctional currency referred to in this section (4)(b)(2) is a position as defined in section 1092 (d)(2).

(3) *Qualified hedging transaction that effectively converts a functional currency borrowing into a nonfunctional currency borrowing.* The income tax effects of integrating a qualified hedging transaction described in section 2(d)(3)(iii) of this notice are as follows--

(i) *Deemed nonfunctional currency borrowing.* The integration of the functional currency borrowing and the hedge results in a deemed nonfunctional currency borrowing. The amount deemed to be borrowed equals the total amount of nonfunctional currency received under the terms of the hedge in exchange for the total amount of functional currency borrowed. The total amount of interest and principal deemed to be paid equals the total amount of nonfunctional currency paid under the terms of the hedge to acquire the functional currency necessary to make interest and principal payments on the functional currency borrowing.

(ii) *Determination of interest expense of the borrower.* Interest expense deductible by the borrower shall be determined in the manner described in section 4(b)(2)(ii) of this notice by substituting the phrase "nonfunctional currency" for the phrase "second nonfunctional currency."

(iii) *Allocation and apportionment.* The interest expense determined pursuant to section 4(b)(3)(ii) of this notice shall be allocated and apportioned under sections 1.861-8 or 1.882-5 of the regulations as the case may be (subject to section 864(e)).

(iv) *Deemed nonfunctional currency borrowing is a position under section 1092.* The deemed nonfunctional currency borrowing referred to in this section 4(b)(3) is a position as defined in section 1092 (d)(2).

(4) *Qualified hedging transaction that effectively converts the purchase of a nonfunctional currency denominated debt instrument into a functional currency denominated debt instrument.* The income tax effects of integrating a qualified hedging transaction described in section 2(d)(3)(iv) of this notice are as follows--

(i) Deemed functional currency denominated debt *instrument.* The integration of the nonfunctional currency denominated debt instrument and the hedge results in a deemed functional currency denominated debt instrument with respect to the holder. The purchase price of the deemed functional currency denominated debt instrument is the amount of the functional currency paid to acquire the nonfunctional currency used for the purchase of the nonfunctional currency denominated debt instrument. The total amount of interest and principal deemed received by the holder equals the total amount of functional currency received under the terms of the hedge in exchange for the nonfunctional currency interest and principal payments received pursuant to the terms of the nonfunctional currency denominated debt instrument.

(ii) *Determination of interest income.* The interest income of the holder shall be determined as follows--

(A) The issue price and stated redemption price at maturity of the deemed functional currency denominated debt instrument shall be determined under section 1273 and the regulations thereunder in units of the functional currency.

(B) If the deemed functional currency denominated debt instrument has OID, then the interest income includible by the holder shall be determined pursuant to the provisions of section 1272 and the regulations thereunder.

(C) If the deemed functional currency denominated debt instrument does not have OID, then the interest shall be includible in gross income under section 61 in accordance with the holder's regular method of accounting.

(iii) *Source.* The source of the deemed interest income shall be determined by reference to the source, as determined under sections 861(a)(1) and 862(a)(1), of the interest income that would have been received under the terms of the qualifying transaction had such transaction not been integrated pursuant to sections 2 and 4 of this notice.

(5) *Qualified hedging transaction that effectively converts the purchase of a debt instrument denominated in one nonfunctional currency into the purchase of a debt instrument denominated in a second nonfunctional currency.* The income tax effects of integrating a qualified hedging transaction described in section 2(d)(3)(v) of this notice are as follows--

(i) *Deemed purchase of a debt instrument denominated in the second nonfunctional currency.* The integration of the debt instrument denominated in the first nonfunctional currency and the hedge results in a deemed debt instrument denominated in the second nonfunctional currency (referred to as deemed second nonfunctional currency debt instrument) with respect to the holder. The purchase price of the deemed second

nonfunctional currency denominated debt instrument is the amount of the first nonfunctional currency used to purchase the first nonfunctional currency denominated debt instrument on the settlement date translated into the second nonfunctional currency at the forward exchange rate between the two currencies (as determined on the trade date) with respect to the period between the trade date and the settlement date. The total amount of interest and principal received by the holder of the deemed second nonfunctional currency denominated debt instrument equals the total amount of the second nonfunctional currency received under the hedge in exchange for the first nonfunctional currency interest and principal payments.

(ii) *Determination of interest income.* The interest income of the holder shall be determined as follows--

(A) The issue price and stated redemption price at maturity of the deemed second nonfunctional currency denominated debt instrument shall be determined by applying the provisions of section 1273 and the regulations thereunder directly to the units of the second nonfunctional currency to be received in exchange for the interest and principal payments to be received under the debt instrument.

(B) If the deemed second nonfunctional currency denominated debt instrument has OID, then the rules of section 1272 and the regulations thereunder shall govern the manner in which the amount of such discount denominated in units of the second nonfunctional currency is determined. The amount of discount includible by the holder in his functional currency under section 1272 shall be the amount determined in the manner described in the preceding sentence, translated into the holder's functional currency at the weighted average exchange rate for the accrual period. Any amounts of qualified periodic interest (as defined in §1.1273-1(b)(1)(ii) of the proposed regulations) shall be translated into the holder's functional currency at the spot rate on the date of payment and included in gross income in accordance with the holder's regular method of accounting.

(C) Any interest income other than OID with respect to the deemed second nonfunctional currency denominated debt instrument shall be determined in units of the second nonfunctional currency. The interest income includible by the holder in his functional currency shall be the amount determined in the manner described in the preceding sentence, translated into the holder's functional currency at the spot rate on the date of payment.

(iii) *Source.* The source of the deemed interest income shall be determined by reference to the source, as determined under section 861(a)(1) and 862(a)(1), of the interest income that would have been received under the terms of the qualifying transaction had such transaction not been integrated pursuant to sections 2 and 4 of this notice.

(iv) *Deemed debt instrument is a position under section 1092.* The deemed debt instrument referred to in this section 4(b)(5) is a position as defined in section 1092 (d)(2).

(6) *Qualified hedging transaction that effectively converts the purchase of a functional currency denominated debt instrument into a nonfunctional currency denominated debt instrument.* The income tax effects of integrating a qualified hedging transaction described in section 2(d)(3)(vi) of this notice are as follows--

(i) *Deemed purchase of a nonfunctional currency denominated debt instrument.* The integration of the functional currency denominated debt instrument and the hedge results in a deemed nonfunctional currency denominated debt instrument. The purchase price of the deemed nonfunctional currency denominated debt instrument is the amount of functional currency used to purchase the functional currency denominated debt instrument on the settlement date translated into nonfunctional currency at the forward exchange rate between the two currencies (as determined on the trade date) with respect to the period between the trade date and the settlement date. The total amount of interest and principal received by the holder equals the total amount of nonfunctional currency received under the terms of the hedge in exchange for the functional currency interest and principal payments.

(ii) *Determination of interest income.* Interest income shall be determined in the manner described in section 4(b)(5)(ii) of this notice by substituting the phrase "nonfunctional currency" for the phrase "second nonfunctional currency."

(iii) *Source.* The source of the deemed interest income shall be determined by reference to the source, as determined under sections 861(a)(1) and 862(a)(1), of the interest income that would have been received under the terms of the qualifying transaction had such transaction not been integrated pursuant to sections 2 and 4 of this notice.

(iv) *Deemed nonfunctional currency debt instrument is a position under section 1092.* The deemed nonfunctional currency debt instrument referred to in this section 4(b)(6) is a position as defined in section 1092 (d).

(c) *Examples.*

Example (1). Synthetic functional currency liability (nonfunctional currency borrowing hedged with a swap). X, a U.S. corporation, has currency A as its functional currency. (The term "currency A" is used to designate a functional currency which, subject to the limitations of section 985, can be the United States dollar or any other currency.) On December 24, 1987 (the trade date), X agrees to close the following transaction on December 31, 1987 (settlement date). X will borrow from an unrelated party on December 31, 1987, 100 units of currency B for 3 years at a 10 percent rate of interest, payable annually, with no principal payment due until the final installment. x will also enter into a swap agreement with an unrelated counterparty under the terms of which - - (1) X will swap, on December

31, 1987, the 100 units of currency B obtained from the borrowing for 100 units of currency A, and (2) X will exchange currency A for currency B pursuant to the following table in order to obtain the units of currency B necessary to make payments on the currency B borrowing:

DATE	CURRENCY A	CURRENCY B
December 31, 1988	8	10
December 31, 1989	8	10
December 31, 1990	108	110

The interest rate on the borrowing is set and the exchange rates on the swap are fixed on December 24, 1987.

On December 31, 1987, X borrows the 100 currency B units and swaps such units for 100 currency A units. Assume X has satisfied the identification and verification requirements of section 3 of this notice.

The currency B borrowing (which constitutes a qualifying transaction under section 2(b) of this announcement) and the swap agreement (which constitutes a hedge under section 2(c)) are a qualified hedging transaction as defined in section 2(a). Accordingly, the currency B borrowing and the swap are integrated and treated as one transaction with the following consequences: (1) The integration of the currency B borrowing and the swap results in a deemed currency A borrowing in an amount equal to the 100 currency A units received on December 31, 1987 in exchange for the 100 units of currency B. Accordingly, the issue price under section 1273(b)(2) is 100 currency A units. (2) The total amount of interest and principal paid by X with respect to the deemed currency A borrowing is equal to the currency A payments made by X under the swap agreement (i.e., 8 currency A units in 1988, 8 currency A units in 1989 and 108 currency A units in 1990). (3) The stated redemption price at maturity (defined in section 1273(a)(2) and § 1.1273-1(b)(1) of the proposed regulations as the amount payable at maturity other than a payment of qualified periodic interest) is 100 currency A units. Since the stated redemption price equals the issue price, there is no OID on the deemed currency A borrowing. (4) X may deduct the annual interest payments of 8 currency A units under section 163(a) (subject to any limitations on deductibility imposed by other provisions of the Code) according to its regular method of accounting. X has also paid 100 currency A units as a return of principal in 1990. (5) X must allocate and apportion its interest expense under section 1.861-8 of the regulations (subject to section 864(e) of the Code).

Example (2). Synthetic functional currency liability (nonfunctional currency borrowing hedged with forward contracts) — higher interest rate currency. X, a U.S. corporation, has currency A as its functional currency. (The term "currency A" is used to designate a functional currency which, subject to the limitations of section 985, can be the United States dollar or any other currency.) On December 24, 1987 (the trade date), when the spot rate is one unit of currency A equals one unit of currency B, X agrees to close the following transaction on December 31, 1987 (settlement date). X will borrow 100 units of currency B from an unrelated party on December 31, 1987 for three years at 10 percent interest, payable annually, with no principal payment due until the final installment. X also enters into a series of contracts with a bank to: (1) sell forward the 100 units of currency B for 99.96 units of currency A on December 31, 1987, and (2) buy forward for currency A, the amount of currency B required to make the interest and principal payments due under the currency B borrowing according to the following schedule:

DATE	CURRENCY A	CURRENCY B
December 31, 1988	9.81	10
December 31, 1989	9.64	10
December 31, 1990	104.07	110

The interest rate on the borrowing is set and the exchange rates on the forward contracts are fixed on December 24, 1987.

On December 31, 1987, X borrows 100 currency B units end exchanges such units for 99.96 currency A unite. Assume X satisfies the identification and verification requirements of section 3 of this notice.

The currency B borrowing (which constitutes a qualifying transaction under section 2(b) of this announcement) and the series of forward contracts (which constitute a hedge under section 2(c)) are a qualified hedging transaction under section 2(a). Accordingly, the currency B borrowing and the forward contracts are integrated and treated as one transaction with the following consequences: (1) The integration of the currency B borrowing and the forward contracts results in a deemed currency A borrowing in an amount equal to the 99.96 currency A units received on December 31, 1987 for the 100 units of borrowed currency B. Accordingly, the issue price under section 1273 (b)(2) is 99.96 currency A units. (2) The total amount of interest and principal paid by X with respect to the deemed currency A borrowing is equal to the currency A payments made by X under the forward purchase contracts (i.e., 9.81 currency A units in 1988, 9.64 currency A units in 1989 and 104.07 currency A units in 1990). (3) The deemed currency A borrowing is an installment obligation within the meaning of section 1.1273-1(b)(2)(i) of the proposed regulations and its stated redemption price at maturity (defined in section 1273(a)(2) and § 1.12731(b)(2)(ii) of the proposed regulations as the sum of all payments to be made under the borrowing other than qualified periodic interest) is 99.96 currency A units (i.e., under § 1.1273-1(b)(1)(ii), 8.00 units of the currency A payment in 1988, 7.86 units of the currency A payment in 1989, and 7.71 units of the currency A payment in 1990 are treated as qualified periodic interest payments). Since the stated redemption price at maturity is equal to the issue price, under section 1273(a)(1) there is no OID on the deemed currency A borrowing. (3) The yield to maturity (as defined in § 1.1272-1(f) of the proposed regulations) of the deemed currency A borrowing is 8.00 percent, compounded annually. (4) Therefore, assuming X is a calendar year taxpayer, it may deduct as interest expense under section 163(a) (subject to any limitations on deductibility imposed by other provisions of the Code) 8.00 currency A units in 1988, 7.86 currency A units in 1989, and 7.71 currency A units in 1990. The remainder of each payment is a return of principal. (5) X must allocate and apportion

its interest expense under section 1.861-8 of the regulations (subject to section 864(e) of the Code).

Example (3). Synthetic functional currency liability (nonfunctional currency borrowing hedged with forward contracts) - - lower interest rate currency. The facts are the same as example 2, except the interest rate on the currency B borrowing is 6 percent, payable annually, and the amount of currency A units received in exchange for the proceeds of the currency B borrowing pursuant to the terms of the forward contract is 100.04. X purchases currency B forward, in exchange for currency A, pursuant to the following schedule:

DATE	CURRENCY A	CURRENCY B
December 31, 1988	6.12	6
December 31, 1989	6.23	6
December 31, 1990	112.16	106

The currency B borrowing (which constitutes a qualifying transaction under section 2(b)) and the series of forward contracts (which constitute a hedge under section 2(c)) are a qualified hedging transaction under section 2(a). Accordingly, the currency B borrowing and the forward contracts are integrated and treated as one transaction with the following consequences: (1) The integration of the currency B borrowing and the forward contracts results in a deemed currency A borrowing in an amount equal to the currency A units received on December 31, 1987 for the 100 units of borrowed currency B. Accordingly, the issue price under section 1273(b)(2) is 100.04 currency A units. (2) The total amount of interest and principal paid by X with respect to the deemed currency A borrowing is equal to the currency A payments made by X under the forward purchase contracts (i.e., 6.12 currency A units in 1988, 6.23 currency A units in 1989, and 112.16 currency A units in 1990). (3) The deemed currency A borrowing is treated as an installment obligation within the meaning of § 1.1273-1(b)(2)(i) of the proposed regulations, and its stated redemption price at maturity (defined in section 1273(a)(2) of the Code and § 1.1273-1(b)(2)(ii) of the proposed regulations as the sum of all payments to be made under the borrowing other than qualified periodic interest) is 106.15 currency A units (i.e., under § 1.1273-1(b)(1)(ii), 6.12 units of the currency A payments in 1988, 1989 and 1990 are qualified periodic interest payments). Since the stated redemption price at maturity exceeds the issue price, under section 1273(a)(1) the deemed currency A borrowing has OID equal to 6.11 currency A units. (4) The yield to maturity of the deemed currency A borrowing is 8.00 percent, compounded annually. Assuming X is a calendar year taxpayer, it may deduct as interest expense 8.00 currency A units in 1988, (of which 1.88 currency A units constitutes OID), 8.15 currency A units in 1989, (of which 2.03 currency A units constitutes OID), and 8.32 currency A units in 1990, (of which 2.20 currency A units constitutes OID). The amount of the final payment in excess of the total interest expense is a return of principal and a payment of previously accrued OID. (5) X must allocate and apportion its interest expense under section 1.861-8 of the regulations (subject to section 864(e) of the Code).

Example (4). Synthetic functional currency asset (nonfunctional currency denominated debt instrument hedged with forward contracts) - - higher interest rate currency. X, a U.S. corporation, has currency A as its functional currency. (The term "currency A" is used to designate a functional currency which, subject to the limitations of section 985, can be the United States dollar or any other currency.) On December 24, 1987, (the trade date) when the spot rate is one unit of currency A equals one unit of currency B, X enters into a forward contract to purchase 100 units of currency B forward from a bank in exchange for 99.96 units of currency A for delivery on December 31, 1987. The 100 units of currency B is to be used for the purchase of a currency B denominated debt instrument on December 31, 1987. The instrument will have a term of 3 years, an issue price of 100 currency B units, and will bear interest at 10 percent, payable annually, with no repayment of principal until the final installment. X also enters (on December 24, 1987) into a series of forward contracts to sell the currency B interest and principal payments for currency A according to the following schedule:

DATE	CURRENCY A	CURRENCY B
December 31, 1988	9.81	10
December 31, 1989	9.64	10
December 31, 1990	104.07	110

The rate of return on the currency B denominated debt instrument and the exchange rates on the forward contracts are fixed on December 24, 1987. On December 31, 1987, (the settlement date) X takes delivery of the 100 units of currency B and purchases the currency B denominated debt instrument. Assume X satisfies the identification and verification requirements of section 3 of this notice.

The purchase of the currency B denominated debt instrument (which constitutes a qualifying transaction under section 2(b) of this announcement) and the series of forward contracts (which constitute a hedge under section 2(c)) are a qualified hedging transaction under section 2(a). Accordingly, the currency B denominated debt instrument and the forward contracts are integrated and treated as one transaction with the following consequences: (1) The integration of the currency B denominated debt instrument and the forward contracts results in a deemed currency A denominated debt instrument in an amount equal to the currency A units exchanged under the forward contract to purchase the units of currency B necessary to acquire the currency B denominated debt instrument. Accordingly, the issue price is 99.96 currency A units (section 1273(b)(2) of the Code). (2) The total amount of interest and principal received by X with respect to the deemed currency A denominated debt instrument is equal to the currency A units received under the forward sales contracts (i.e., 9.81 currency A units in 1988, 9.64 currency A units in 1989, and 104.07 currency A units in 1990). (3) The deemed currency A denominated debt instrument is an installment obligation within the meaning of section 1.1273-1 (b)(2)(i) of the proposed regulations, and its stated redemption price at maturity (defined in section 1273(a)(2) of the Code and §1.1273-1(b) (2)(ii) of the proposed regulations as the sum

of all payments to be made under the debt instrument other than qualified periodic interest) is 99.96 currency A units, (i.e., under § 1.1273-1(b)(1)(ii) 8.00 units of the currency A payment in 1988, 7.86 units of the currency A payment in 1989, and 7.71 units of the currency A payment in 1990 are treated as qualified periodic interest payments). Since the stated redemption price at maturity is equal to the issue price, under section 1273(a)(1) there is no OID on the deemed currency A denominated debt instrument. (4) The yield to maturity (as defined in §1.1272–1(f) of the proposed regulations) of the deemed currency A denominated debt instrument is 8.00 percent, compounded annually. Assuming X is a calendar year taxpayer, it must include interest income of 8.00 currency A units in 1988, 7.86 currency A units in 1989 and 7.71 currency A units in 1990. The remainder of each payment received is a payment of principal. (5) The source of the interest income (stated in (4) above) shall be determined by applying sections 861(a)(1) and 862(a)(1) with reference to the currency B denominated interest income that would have been received had the transaction not been integrated.

Example (5). Synthetic functional currency asset (nonfunctional currency denominated debt instrument hedged with forward contracts) - -lower interest rate currency. The facts are the same as in example 4, except the interest rate on the currency B denominated debt instrument is 6 percent, compounded annually, and on December 24, 1987 (the trade date), X enters into a forward contract to purchase 100 units of currency B in exchange for 100.04 units of currency A for delivery on December 31, 1987. X sells forward the amount of currency B that will be received under the terms of the currency B denominated debt instrument according to the following schedule:

DATE	CURRENCY A	CURRENCY B
December 31, 1988	6.12	6
December 31, 1989	6.23	6
December 31, 1990	112.16	106

The currency B denominated debt instrument (which constitutes a qualifying transaction under section 2(b) of this announcement) and the series of forward contracts (which constitute a hedge under section 2(c)) are a qualified hedging transaction under section 2(a). Accordingly, the currency B denominated debt instrument and the forward contracts are treated as one transaction with the following consequences: (1) The integration of the currency B denominated debt instrument and the forward contracts result in a deemed currency A denominated debt instrument in an amount equal to the currency A exchanged under the forward contract to purchase the units of currency B necessary to acquire the currency B denominated debt instrument. Accordingly, the issue price of the deemed currency A denominated debt instrument is 100.04 currency A units (section 1273(b)(2) of the Code). (2) The total amount of interest and principal received by X with respect to the deemed currency A denominated debt instrument is equal to the currency A units received under the forward sales contracts (i.e., 6.12 currency A units in 1988, 6.23 currency A units in 1989, and 112.16 currency A units in 1990). (3) The deemed currency A denominated debt instrument is an installment obligation within the meaning of § 1.1273–1(b)(2)(i) of the proposed regulations, and its stated redemption price at maturity (defined in section 1273(a)(2) of the Code and § 1.1273-1(b)(2)(ii) of the proposed regulations as the sum of all payments to be made under the debt instrument other than qualified periodic interest) is 106.15 currency A units (i.e., under § 1.1273-1(b)(1)(ii) of the proposed regulations, 6.12 units of the currency A payments in 1988, 1989, and 1990 are qualified periodic interest payments). Since the stated redemption price at maturity exceeds the issue price, under section 1273(a)(1) the deemed currency A denominated debt instrument has OID of 6.11 currency A units. (4) The yield to maturity of the deemed currency A debt instrument is 8.00 percent, compounded annually. Assuming X is a calendar year taxpayer, it must include interest income of 8.00 currency A units in 1988 (of which 1.88 currency A units constitutes OID), 8.15 currency A units in 1989 (of which 2.03 currency A units constitutes OID), and 8.32 currency A units in 1990 (of which 2.20 currency A units constitutes OID). The amount of the final payment received by X in excess of the interest income includible is a return of principal and a payment of previously accrued OID. (5) The source of the interest income (stated in (4) above) shall be determined by applying section 861(a)(1) and 862(a)(1) with reference to the currency B denominated interest income that would have been received had the transaction not been integrated.

SECTION 5. TREATMENT OF A QUALIFYING TRANSACTION AND A HEDGE THAT FAIL TO QUALIFY AS A QUALIFIED HEDGING TRANSACTION

Application of sections 263(g), 1092 and 1256. Sections 63(g), 1092 and 1256 of the Code and the regulations thereunder apply to a qualifying transaction and a hedge that fail to qualify under section 2 of this announcement as a qualified hedging transaction.

SECTION 6. APPLICATION OF SECTIONS 1441 AND 1442

The provisions of this notice do not affect the obligation of any person to withhold under sections 1441 and 1442 with respect to actual interest payments on a qualifying transaction.

SECTION 7. CONTACT PERSONS

For further information, contact Jeffrey Dorfman or Alice Armitage Neff at the Office of the Associate Chief Counsel (International), Internal Revenue Service, 1111 Constitution Avenue, N.W., Washington, D.C. 20224 (Attn: CC:INTL:Br5); Telephone 202-566-3407 (not a toll free call). For information regarding the application of the original issue discount rules to transactions described in this announcement, contact Theresa Bearman at the same address and phone number.

SECTION 8. PAPERWORK REDUCTION ACT

The collection of information in this notice has been submitted to the Office of Management and Budget in accordance with the Paperwork Reduction Act of 1980 and has been approved by O. M. B. (Control No. 1545-0983).

Chapter 61

MODIFICATIONS TO THE SOURCE OF INCOME AND DEDUCTIONS RULES

C. David Swenson, Esq.
Baker & McKenzie
Washington, D.C.

I. Introduction

The United States system of international taxation contains rules designed to identify items of income and expense derived from both United States and foreign sources. The rules relating to the source of income and deductions are among the most important set of rules found in the Internal Revenue Code. The source of income and expenses has a direct impact on the United States federal income taxation of United States citizens and residents, as well as on foreign persons deriving either passive income from the United States or active business income from a trade or business conducted within the United States. Thus, the rules impact virtually every taxpayer that earns income related in one way or another to the United States.

Over the years, the source of income and deduction rules have remained relatively unchanged. Recently, however, the Tax Reform Act of 1984 [1] provided a number of significant modifications to the source rules. In particular, the 1984 Tax Reform Act amended the source of transportation income rules and provided new rules relating to the resourcing of United States source income for purposes of the foreign tax credit limitation rules set forth in §904,[2] as well as to the recharacterization of certain income as interest for foreign tax credit purposes. Despite the extensive changes brought by the Tax Reform Act of 1984, Congress decided to enact in 1988 perhaps the most significant set of modifications to the source rules that has occurred since their inception.

II. Treasury Department Recommendations

A. *Introduction*

The primary origin of the 1986 changes to the source rules was proposals recommended to President Reagan by the Treasury Department in 1984. Despite the recent enactment of the Tax Reform Act of 1984 and its significant changes to the source of income rules, in November of that year, the Treasury Department made extensive proposals for amending the Code, including provisions modifying the source of income and deduction rules. The Treasury Department's proposals relating to the source rules were contained in a report to the President,[3] and set forth four basic changes regarding (i) sales income, (ii) income from sales of intangible property, (iii) so-called "80-20 corporation" rules dealing with interest and dividends, and (iv) the allocation and apportionment of interest expense rules.

The Treasury Department was of the view that the existing source rules should be changed to conform to the following basic principles:

• ***Economic Activity.*** Appropriate source of income rules should allocate income to the place where the economic activity generating the income occurs. Income derived from the use of property or capital should be sourced where the property or capital is used.[4]

• ***Neutrality.*** The source rules should be neutral in the sense that the United States should have no ground for objection if its source of income rules were applied by other countries. International norms for source of income determinations should be followed to the extent such norms exist.[5]

• ***Clear and Ready Application.*** The source rules should also be clear and readily applied. In that regard, the Treasury Department was of the view that adoption of a *per country* foreign tax credit limitation would increase the need for such clarity by requiring that the source of income be identified with specific foreign countries, rather than simply requiring allocation between domestic and foreign sources.[6] The Treasury Department was concerned that the existing source rules failed to satisfy these standards, at least as such rules applied to sales income, dividend and interest income from 80-20 companies, and the allocation of interest expenses.[7]

In particular, with respect to sales income, Treasury was concerned that under the existing title passage test, the source of income derived from the sale of goods bears no necessary relationship to the economic activity generating

that income. Because the place of title passage may be arbitrarily determined by affected taxpayers, Treasury was of the view that the existing rule permitted artificial manipulation of the foreign tax credit limitation and the United States tax base. The possibility of such manipulation was particularly troublesome to Treasury in connection with transactions between related taxpayers.[8]

In connection with sales of *intangible* property, the Treasury Department noted that income derived from the sale of such property is sourced under a title passage test while income derived from the license of such property is sourced by reference to the place where the property is used. Since the economic distinction between a sale and a license of intangible property is often elusive, Treasury was of the view that clarity and uniformity of treatment would be served by applying the same source of income rules to all transactions involving intangible property.[9]

The existing source rules applicable to dividend income focus on the domicile of the corporation distributing the income. Such rule, or a close variant thereof focusing on the corporation's place of management, is followed in the tax systems of most countries. Treasury thought that the rule is clear and easily applied and otherwise satisfies the characteristics of appropriate source rules. However, the exception to such general rule for so-called 80-20 companies was much more questionable to Treasury. In particular, the Treasury Department thought such exception alters a sound, well accepted, rule under circumstances where most foreign countries do not assert a competing source-based claim to tax the income. Consequently, this could, in Treasury's view, result in total tax exemption of the dividend both in the United States and the relevant foreign country, and could facilitate tax haven opportunities for taxpayers.[10]

Treasury also thought that, just as with dividends, the 80-20 exception to the general source rule applicable to interest income alters an accepted rule in the absence of competing source-based claims of foreign countries. Accordingly, Treasury stated that the 80-20 company rule, as applied to interest income, gives rise to tax haven type opportunities for some taxpayers and to opportunities for manipulation of the foreign tax credit limitation.[11]

Finally, in the case of interest expense, Treasury stated that the separate company method of allocation enables taxpayers to limit artificially the interest expense allocated to foreign source income by manipulating the corporate structure of the related group. As a result, there may be an unwarranted increase in the amount of foreign tax credit available to a related group of corporations.[12]

Based on these fundamental principles and the perceived inadequacies in the existing rules, the Treasury Department recommended to President Reagan four basic changes to the source rules.

B. Source Rules Relating to Sales Income

The Treasury Department proposed that, in general, income derived from the purchase and resale of inventory-type goods should be sourced in the country of the taxpayer's residence. An exception to this general rule would be provided if the predominant portion of the selling activity generating the income is carried on through a fixed place of business located outside the taxpayer's country of residence.[13] In such a case, the income would be sourced in the country where the fixed place of business is located. The place where title to the goods passes to the buyer, the place where purchasing activity is carried out, and the place of ultimate destination of the goods all would be irrelevant for purposes of determining the source of sales income. Treasury believed that this rule would correlate the source of sales income more closely with the location of the underlying selling activity, without necessitating in every case an administratively complex determination of where the relevant sales activity occurs.

Treasury also proposed that similar changes be made in the rules for determining the source of income derived from the manufacture and sale of products. The existing practice of sourcing one-half of such income on the basis of the place of manufacturing would continue. The remaining one-half of the income would be attributed to sales activity and would be sourced on the basis of the residency rules described above. Further, Treasury recommended that the title passage test be abandoned. Accordingly, no portion of the income derived from the manufacture of products in the United States and the sale of such products abroad would be sourced in a foreign country, *unless* the predominant selling activity giving rise to the sales income is carried out through a fixed place of business in that foreign country. The option of applying an independent factory price in allocating divided source income would be retained, provided that the predominant portion of the relevant sales activity is conducted through a fixed place of business outside the country of manufacture.[14]

C. Income Derived from Sales of Intangible Property

In connection with income from the sale of intangible property, the Treasury Department suggested that the rules relating to royalty income derived from licenses of intangible property be retained in their present form. Source rules relating to sales of intangible property would be modified to correspond generally to the rules relating to licenses. Accordingly, under Treasury's proposal, intangible property-related sales income generally would be sourced on the basis of where the underlying property is used.[15]

D. 80-20 Corporation Rules Relating to Interest and Dividends

Further, the Treasury Department proposed repeal of the 80-20 corporation exceptions to the general source rules applicable to dividend and interest income. Thus, dividend income would be sourced on the basis of the place of incorporation of the corporation paying the dividend. (An 80-20 corporation is a U.S. corporation which receives more

than 80% of its income from foreign sources.) Interest income received from all United States residents and domestic corporations would be sourced on the basis of the residence of the payor, without examining the underlying source of the payor's income. Treasury recommended that the provisions of the existing source rules relating to interest income, designed to provide tax exemptions for particular activities, should not be repealed but should be restructured as overt exemption provisions in the interest of establishing neutral source rules.[16]

E. Allocation of Interest Expense

In addition, Treasury suggested that interest expense should be required to be allocated to income from various sources on a combined group basis, rather than on a separate company-by-company basis. Thus, manipulations of the corporate structure of a related group would not necessarily limit the amount of interest expense allocated to foreign sources.[17]

The Treasury Department's proposals were designed to create a set of rules for determining the source of income that is less subject to manipulation and more reflective of real underlying economic activity than the existing rules. Treasury said the new rules would also be more suitable to the computation of the foreign tax credit limitation on a per country basis. Treasury anticipated that under its proposals greater amounts of the income derived from sales of products to destinations located outside the United Sates would be treated as domestic source income. Consequently, certain amounts of foreign tax credits on income from United States economic activity might not be available under Treasury's proposed rules. In Treasury's view, the United States should retain the primary taxing right over this income.[18]

III. The President's Tax Proposals

A. Introduction

Based in part on the Treasury Department's recommendations, President Reagan delivered to Congress, in May 1985, a fundamental set of changes to the Code, including amendments to the source of income and deduction rules.[19] The President's proposals relating to the source rules differed from the Treasury Department recommendations in several important respects.[20]

The President's proposals were based on several basic principles that should be applied in formulating rules for determining the source of income. In particular, the Administration was of the view that appropriate source of income rules should reflect the location of the economic activity generating the income and the source of legal protections facilitating the earnings of that income. Income derived from the use of property or capital ordinarily should be sourced where the property or capital is used, under this view. Second, agreeing with the Treasury, the President proposed that the rules be neutral in the sense that the United States should have no ground for objection if its source of income rules were applied by other countries. Unless there are sufficient reasons to the contrary, international norms for source of income determinations should be followed to the extent such norms exist, according to the President's Report.[21]

Third, the President's Report stated that the rules should not allow erosion of the legitimate United States tax base through taxpayer manipulation of the source rules or of the foreign tax credit limitation. In the Administration's view, the rules should generally preserve the residence country's taxing right in cases where other countries typically do not assert a source basis claim to tax the income. Fourth, to the extent possible the rules should operate clearly and not require difficult factual determinations on a transaction-by-transaction basis. Clarity and ease of application would be even more important under the President's proposals to calculate the foreign tax credit limitation on a *per country* basis because of the requirement that income be sourced to specific foreign countries.[22]

With respect to the existing rules, the President's Report noted that such rules are deficient in the following respects:

• ***Sales Income.*** Under the existing title passage test, according to the President's Report, the source of income derived from the sale of goods bears no necessary relationship to the economic activity generating that income. Particularly where property manufactured in the United States is sold to a sales subsidiary abroad, half or more of the income from the sale may be treated as foreign source income even though only a negligible portion of the seller's relevant economic activity may occur outside the United States.

Because the place of title passage may be arbitrarily determined by affected taxpayers, the President's Report stated that the existing rule permits artificial manipulation of the foreign tax credit limitation and the United States tax base.[23] Most foreign countries do not tax sales income merely because title passes in that country. Thus, according to the Administration, the existing United States source rule surrenders United States primary taxing jurisdiction over sales in many situations where the income is not taxed abroad. Under the foreign tax credit limitation provisions, a zero foreign tax on such income may be averaged with foreign source income that is highly taxed by a foreign country. The President's Report stated that such averaging artificially increases the amount of the foreign taxes imposed by a high tax country that may be credited against United States tax liability and thereby permits the credit for the foreign tax to reduce United States tax otherwise due on income derived from what is essentially domestic economic activity.[24]

• ***Sales of Intangible Property.*** Income derived from the sale of intangible property is generally determined under a title passage test while income derived from the license of such property is determined by reference to the place where the property is used. Existing rules that treat sales and licenses similarly are limited in their scope. The Administration was of the view that the title passage rule is no more satisfactory when applied to sales of intangible property than when it is applied to sales of tangible property. Moreover, the principal factor giving intangible property value is the legal protection afforded that property in the country where it is used, a factor arguing for a source rule based on the place of use in all transactions involving intangible property.[25]

• ***Dividend Income.*** The existing source rule applicable to dividend income focuses on the place of incorporation of the corporation distributing the dividend income. The Administration stated that the exception to this general rule for so-called 80-20 companies alters a sound, well accepted rule under circumstances where most foreign countries do not assert a competing source-based claim to tax the income. Because foreign countries normally do not tax such dividends, the treatment of the 80-20 company dividend as foreign source may have the effect of making what would otherwise be excess foreign tax credits usable. This occurs despite the fact that a full foreign tax credit is available with respect to the foreign tax on the 80-20 corporation's operating income. The Administration was of the view that frequently the result will be the total exemption of the 80-20 dividend from shareholder level tax either in the United States or in the country where the earnings were derived. Moreover, the Administration said that foreign taxpayers may be able to use an 80-20 holding company to convert distributions by United States operating subsidiaries into foreign source income and thereby avoid United States withholding tax on those distributions.[26]

• ***Interest Income.*** As in the case of dividends, the Administration stated that the 80-20 exception to the general source rule applicable to interest income alters an accepted rule in the absence of competing source-based claims of foreign countries. The 80-20 rule for interest therefore gives rise to the same type of United States withholding tax avoidance and total United States and foreign tax exemption as does the 80-20 dividend rule. Where it is desirable to provide a United States tax exemption for specific classes of interest income, the Administration was of the view that such exemption should be done directly rather than through modifications to the source rules.[27]

• ***Transportation Income.*** Under current rules, large portions of transportation services income are treated as earned in international waters or skies and outside the generally asserted source taxing jurisdiction of any country. The Administration was concerned that such income may therefore go totally untaxed as a result of the foreign tax credit mechanism. Section 861(e) modifies the general source rule for income and related expenses derived from United States-produced vessels and aircraft leased to United States persons. The general source rule is abandoned solely to provide an indirect subsidy for users of United States-produced ships and aircraft by allocating losses on the lease of such ships and aircraft to the United States, so as to avoid a reduction in the foreign tax credit limitation. The Administration was of the view that this subsidy is inappropriate in a system of neutral source rules, and an appropriate source rule would reflect the economic activity generating the income.[28]

• ***Allocation and Apportionment of Interest Expense.*** Under current Treasury Regulations, treatment of a single taxpayer's interest expense under the fungibility approach generally apportions interest expense to income based on the relative value of assets used to generate the income. The Treasury Regulations also permit allocation on the basis of gross income provided the result does not depart significantly from the result of an asset-based allocation. The Administration stated that it is inappropriate, however, to apply the fungibility concept on a separate company basis when a taxpayer is a member of an affiliated group and is included in a consolidated return. The Administration was also concerned that the separate company method of allocation enables taxpayers to limit artificially the interest expense allocated to foreign source income by simply manipulating the location of borrowing within the consolidated group. According to the Administration, this may result in an unwarranted increase in the amount of foreign tax credit available to a consolidated group of corporations.[29]

Further, the President's Report stated that the inclusion of tax-exempt interest and assets generating tax-exempt interest in the allocation formula has similarly provided opportunities for artificial inflation of the foreign tax credit limitation. The inclusion of exempt United States source income and assets in the expense allocation increases the amount of expense allocated to United States source income even though the income generated is not subject to United States tax. The President's proposed change complements the Administration proposal to deny deductions to all taxpayers for interest incurred to carry tax-exempt obligations. However, the change in expense allocation rules would have been justified, in the Administration's view, in the absence of a change in the rules relating to deductibility of the expense.[30]

Based on the above-described principles and deficiencies in the existing source rules, President Reagan recommended to Congress changes in five primary areas, each of which is discussed below.

B. Source Rules Relating to Sales Income

The Administration proposed that income derived from the sale of personal property be divided into three broad categories for purposes of determining source: (i) income from sales of inventory-type property in the ordinary course of business; (ii) income from sales of non-inventory property used in a trade or business; and (iii) income from sales of other personal property including personal financial proper-

ty, such as stocks, bonds and commodities contracts.[31] Under the President's recommendation, income derived from the purchase and resale of inventory-type goods would have been sourced in the country of the taxpayer's residence. An exception to the general rule would apply if the seller maintained a fixed place of business located outside of its country of residence and that fixed place of business participated materially in generating the income. In such a case, the income would be sourced in the country where the fixed place of business is located. However, all sales to a taxpayer's foreign subsidiaries and affiliate would be sourced at the seller's residence even if the seller maintains a fixed place of business in another country. For these purposes, a fixed place of business maintained by an independent distributor would not be attributed to the seller for purposes of the source rule. The place where title to the goods passes to the buyer, the place where purchasing activity is carried out, and the place of ultimate destination of the goods all would be irrelevant for purposes of determining the source of sales income.

The Administration's proposal modified the original Treasury Department recommendation by requiring only that a foreign fixed place of business participate materially in a sale, rather than conduct the predominant portion of the selling activity, in order to qualify for the exception to the residence-based source rule. Such change would have made the source rule correspond to the principles of existing §864(c)(4)(B)(iii) and could assist in avoiding disputes over the relative contribution of sales activity conducted in two places of business. The Administration was of the view that its proposal would correlate the source of sales income with the location of the underlying selling activity more closely than does existing law.[32]

Under the Administration's proposal, similar changes would have been made in the rules for determining the source of income derived from the manufacture and sale of inventory-type products. The existing practice of sourcing an arbitrary percentage of such income on the basis of the place of manufacture would have continued, but the remaining portion of the income would be attributed to sales activity and would be sourced on the basis of the rules described above. Thus, the title passage test would have been eliminated for inventory-type products.

As a result, under the Administration's proposal, no portion of the income derived from the manufacture of products in the United States and the sale of such products abroad would have been sourced in a foreign country unless the seller maintained a fixed place of business in that foreign country and that place of business participated materially in the sale. Similarly, the sale of property manufactured by the taxpayer in the United States to a foreign sales subsidiary or affiliate would have generated no foreign source income.

Current law arbitrarily divides income between manufacturing and sales activities on a fifty/fifty basis. The Administration was concerned that such division overallocates income to selling activity in many cases. Therefore, the Administration stated that it would consider whether a fixed percentage allocation apportioning greater income to manufacturing activity would more appropriately be applied as a general rule to divide the income. Under the Administration's proposals the special manufacture-sale rules in the existing regulations relating to United States possessions would have been eliminated and the rules described above would be applied to such sales.[33]

C. Income Derived from Sales of Intangible Property

Under the Administration's proposals, the rules relating to royalty income derived from licenses of intangible property would have been retained in their present form. Source rules relating to sales of intangible property, however, would be modified to correspond to the rules relating to licenses. Accordingly, under the President's recommendations, income derived from the sale of intangible property, other than passive investment property, would be sourced on the basis of where the underlying property was to be used.[34]

D. 80-20 Corporation Rules Relating to Interest and Dividends

Under the Administration's proposals, the 80-20 corporation exceptions to the general source rules applicable to dividend and interest income would be repealed. Thus, dividends received from a domestic corporation earning most of its income outside the United States would be sourced on the basis of the place of incorporation of the corporation paying the dividend. Interest income received from all United States residents and domestic corporations would be sourced on the basis of the residence of the payor without looking to the underlying source of the payor's income. As in the case of dividends, the provisions of the existing source rules relating to interest income that are designed to provide tax exemptions for particular activities would not have been repealed, but would be restructured as overt exemption provisions in the interest of establishing neutral source rules. As a result, under the Administration's proposals, interest paid on deposits in United States banks would be treated as United States source income, but would be exempt from tax if the interest was paid to a nonresident alien individual or foreign corporation and was not effectively connected with the conduct of a trade or business in the United States.[35]

E. Transportation Income

The Administration also proposed that consideration be given to modifications to the rules relating to transportation income in order to cause those rules to reflect more accurately the underlying economic activity, to more fully exercise United States taxing jurisdiction over income not taxed abroad, and to make those rules operate in a manner consistent with a per country foreign tax credit limitation. Specifically, the Administration recommended that more general application of the 50% convention applied to possessions-related transportation income be considered.[36]

F. Allocation of Interest Expense

Under the Administration's proposals, interest expense incurred by a corporation joining in filing a United States consolidated return would be required to be allocated to income from various sources on a consolidated group basis. The assets or gross income of all members of the consolidated group would be aggregated for purposes of determining the percentage of interest expense to be allocated to foreign income. That percentage would then be applied to the interest expense of each member of the group in calculating the foreign tax credit under the consolidated return regulations. The Administration recommended that the separate company basis of allocation be retained for taxpayers not filing a consolidated return.

Only deductible expenses are required to be allocated between foreign and domestic sources in calculating net taxable income from foreign sources. In order to reach the "proper" result when a portion of a taxpayer's interest expense is not deductible because it is incurred to carry tax-exempt obligations, the President's Report recommended that tax-exempt interest income, and assets generating tax-exempt interest income, be considered in allocating interest expense to foreign source income for purposes of the foreign tax credit calculation.[37]

G. Basis for Proposals

The Administration was of the view that these proposals would create a set of rules for determining the source of income that more clearly reflects the situs of relevant economic activity than do the existing rules. The proposals regarding the source of sales income and the source of interest and dividends paid by 80-20 companies would also limit the circumstances in which the United States cedes its primary tax jurisdiction by treating income that is not ordinarily taxed by foreign countries as a foreign source income for United States tax purposes.

According to the Administration, these rules would appropriately restrict the ability of United States taxpayers to "average down" high foreign tax rate income and to use foreign tax credits to offset United States tax on income derived from domestic economic activity. The source rule proposals also complemented the Administration's proposed modifications to the foreign tax credit limitation and provided rules more suitable to separate country sourcing of income.[38]

IV. Tax Reform Act of 1985: Proposals by the House to Modify the Source Rules

A. Introduction

Based on the proposals set out in the Treasury Department Report to President Reagan and on the Administration's recommendations to Congress, the House of Representatives passed, in late 1985, the Tax Reform Act of 1985 (H.R. 3838). The Tax Reform Act of 1985 (hereinafter the "House Bill") provided significant changes to the foreign income tax area of the Code, including the source of income and deduction rules.

[37] 1985 President's Report at 484.
[38] 1985 President's Report at 485.

Specifically, the amendments contained in the House Bill to the source rules related to the following six areas: (i) determination of the source of income derived from sales of personal property; (ii) limitations on the 80-20 company rules; (iii) source rules for transportation income; (iv) source rules for space and certain ocean activities; (v) allocation and apportionment of expenses to foreign source income; and (vi) modifications to the rules on allocation of research and experimental expenditures.

B. Determination of Source of Income Derived from Sales of Personal Property

The House Bill provided significant changes to the rules relating to income arising from sales of personal property, inventory property, depreciable personal property, and intangible property.

1. Income from the Sale of Personal Property: In General

The House Bill provided that income derived from the sale of personal property, tangible or intangible, by a United States resident is generally sourced in the United States. Similar income derived by a nonresident was treated in the House Bill as foreign source. For purposes of the House Bill, the term "sale" included an exchange or other disposition. Also, any possession of the United States was treated as a "foreign country." [39]

The House Bill generally provided that an individual is a resident of the United States if the individual has a tax home (as defined in §911(d)(3)) in the United States. The House Bill provided that any corporation, partnership, trust, or estate which is a United States person (as defined in §7701(a)(30)) generally is a United States resident. All other individuals and entities were generally nonresidents for purposes of the source rules.

However, the House Bill contained an exception to the above-described residence rules for United States citizens and resident aliens (within the meaning of §7701(b)) in determining their residency for source purposes. The exception provided that a United States citizen, or a resident alien, will not be treated as a resident of another country with respect to any sale of personal property unless the gain from the sale is actually taxed by such country.[40] Thus, under the House Bill, a United States citizen or resident alien could not maintain a tax home in another country, sell his personal property, claim residency in such country, and generate foreign source income unless he or she actually paid tax on the income from such sale to that country.

The House Bill provided further exceptions to the general rule for determining residency when income is effectively connected with the conduct of a trade or business. If an item of income was "effectively connected" with the conduct of a trade or business in the United States by a nonresident, the nonresident was treated as a United States resident for purposes of determining the source of such income.[41]

[39] H.R. Rep. No. 426, 99th Cong., 1st Sess. 362 (1985) (hereinafter "House Report").
[40] House Report at 362.
[41] House Report at 363.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Similarly, the House Bill provided that if an item of income was "effectively connected" with the conduct of a trade or business in a foreign country under United States effectively connected principles, a United States resident would be treated as a nonresident of the United States for purposes of determining the source of such income.[42] However, the residence rule did not apply to any inventory property that was produced in whole or in part in the United States. As stated at page 363 of the House Report:

> Assume, for example, a corporation is incorporated under the laws of the United States and is engaged in the exploration and development of oil and natural gas. Part of its operations include the exploration and development of an oil and gas deposit in a foreign country. Under United States effectively connected principles, the corporation is engaged in a trade or business in the foreign country and the income from the sale of oil and gas derived from that country is effectively connected with such trade or business. Under the bill, the corporation is a nonresident of the United States for purposes of determining the source of its income derived from the sale of oil and gas from its deposits in that foreign country. It is not a nonresident of the United States, however, for purposes of determining the source of oil and gas income derived from the sale of oil and gas deposits in the United States.

The House Ways and Means Committee was apparently aware that some of the source rules in the House Bill would conflict with source rules prescribed in United States income tax treaties. The source rules in the House Bill reflected the committee's policy that income not taxed, or not likely to be taxed, by a foreign country should not be treated as foreign income for purposes of the foreign tax credit limitations. The House Ways and Means Committee did not intend that the treaty source rules should apply in a manner which would frustrate the policy underlying the source rules contained in the House Bill that untaxed income not increase a United States taxpayer's foreign tax credit limitation.[43]

2. Income from the Sale of Inventory Property

Under the House Bill, income derived from the sale of inventory property (as defined in §1221(1), relating to stock in trade or other property primarily held for sale to customers in the ordinary course of its business), produced in whole or in part by the taxpayer, would have been allocated between production activity and sales activity for sourcing purposes. The income allocated to production activity would have been sourced where the activity occurs (as under present law). The income allocated to sales activity, however, would have been generally sourced under the residence-of-the-seller rule described above.[44]

Income from the sale by a United States resident of inventory property produced by such United States resident that would be allocated to sales activity, and income from the purchase and sale of inventory property by a United States resident, would have been sourced outside the United States only if (i) the property sold was for use, consumption, or disposition outside the United States, (ii) an office or other fixed place of business, outside the United States, of the United States resident materially participated in the sale, and (iii) the sale was not made to an affiliate of the United States resident.[45] Thus, under the provisions of the House Bill, a United States resident would generate foreign source income on the sale of inventory property when a foreign office of the United States resident conducted a material part of the sales activity, the sale was to an unrelated person, and the property was not sold for use, consumption, or disposition in the United States. The House Bill also provided, however, that a United States resident's office or fixed place of business in a foreign country would be disregarded for purposes of determining the source of the United States resident's inventory sales income in the event a treaty prevented such country from imposing income tax on the income. In such a case, the income would have been United States source income.[46]

3. Income from the Sale of Depreciable Personal Property

The House Bill provided that gain, to the extent of prior depreciation deductions, from the sale of depreciable personal property would be sourced in the United States if the depreciable deductions giving rise to such income were previously allocated against United States source income. If the deductions giving rise to such income were previously allocated against foreign source income, gain from such sales (to the extent of prior deductions) would be sourced without the United States. Any gain in excess of prior depreciation deductions would be sourced pursuant to the rule relating to the country of the residence of the seller.[47]

Depreciation deductions, as defined in the House Bill, were any depreciation or amortization or any other deduction allowable under any provision of the Code which treats an otherwise capital expenditure as a deductible expense. Depreciable personal property, as defined in the House Bill, was any personal property if the adjusted basis of the property included depreciation adjustments. Depreciation adjustments were defined as adjustments reflected in the adjusted basis of any property on account of depreciable deductions (whether allowed with respect to such property or other property and whether allowed to the taxpayer or to any other person).

The House Bill also provided a rule of convenience for purposes of determining the source of income from the sale of certain depreciable personal property. This rule provided that if the property was either used predominantly in the United States or predominantly outside the United States for any taxable year, the taxpayer was required to treat the allowable deductions for such year as being allocable entirely against United States source or foreign source income, as appropriate. Such rule was provided so as not to require a segregation of previously allowable deductions if

[42] *Id.* However, the residence rule did not apply to any inventory property that was produced in whole or in part in the United States.

[43] *Id.*

[44] *Id.*

[45] *Id.* In this regard, an affiliate would have been any person bearing a relationship to the United States resident that is described in §482 of the Code.

[46] House Report at 364.

[47] *Id.*

the person knew the property was used predominantly in the United States.[48]

4. Income from the Sale of Intangible Property

With respect to intangible property, the House Bill provided that income derived from the sale of such property, to the extent the payments were not contingent on the productivity, use, or disposition of the intangible, was sourced under the general rule relating to personal property sales. That is, income derived from such sales would be sourced in the country of the seller's residence. If payments were contingent on productivity, use, or disposition, the source rules applicable to royalties would apply. For purposes of the House Bill, the term "intangible property" was defined to mean any patent, copyright, secret process or formula, goodwill, trademark, trade name or other like property. Notwithstanding the general rule, income attributable to goodwill would have been sourced where the goodwill was generated.[49]

The House Bill also repealed §871(e) of the Code (relating to the treatment of certain payments from the sale of intangible property to the extent that such payments are contingent on the productivity, use, or disposition of such property). The House Bill provided that, for purposes of determining whether a withholding tax is due, taxpayers were required to segregate the gain from the sale or exchange of applicable intangible property into gain contingent on the productivity, use, or disposition of such property and gain which is not so contingent.[50]

C. Limitations, Dividends and Interest Paid by 80-20 Companies

Under the House Bill, interest paid by an 80-20 company would have been generally United States source income. The House Bill also provided, at p. 367, that dividends from an 80-20 company (other than a corporation that had an election in effect under §936) were to be treated as United States source income.

The House Bill provided an exception from the United States source rule for certain interest received by a "financial institution" (as described in §§581 or 591) or by a similar foreign financial institution. Under such exception, interest income was foreign source if: (i) the interest paid by the payor corporation was attributable to the active conduct of a trade or business in a foreign country by the payor corporation, a subsidiary or chain of subsidiaries of the payor corporation (or a partnership of which the payor corporation was a partner), and the payor corporation was an 80-20 company, (ii) the payor corporation was not related to the financial institution, and (iii) the interest received by the financial institution was "effectively connected" with the conduct of a trade or business of the financial institution in a foreign country.[51] Thus, for example, under the House Bill, an 80-20 company engaged in an active trade or business in a foreign country would pay foreign source interest to a branch of an unrelated United States bank or other United States or foreign financial institution as long as such interest was effectively connected with the financial institution's trade or business in the foreign country.[52]

The House Bill further provided that certain interest paid by an 80-20 company, though treated as United States source, would be exempt from withholding. Such exemption applied to interest paid (to a nonresident alien individual or other foreign person) by an 80-20 corporation if that interest was attributable to the active conduct of a trade or business in a foreign country by the 80-20 corporation, a subsidiary or chain of subsidiaries of that corporation, or a partnership of which the 80-20 company was a partner. Thus, under the House Bill an 80-20 company conducting an active trade or business in a foreign country generally could borrow from a foreign person and not withhold United States tax on the interest payments as long as the interest was "effectively connected" with the 80-20 company's business.[53]

The House Ways and Means Committee intended that the exemption from withholding apply to interest of an 80-20 corporation that was in a "start-up" phase of an active trade or business in a foreign country. The corporation could pay interest and not withhold United States tax as long as the interest was related to the corporation's start-up activities, the 80-20 company was not foreign owned, and the interest was not paid to related persons.[54]

The House Bill further provided that certain other interest, although treated as United States source, was not subject to the withholding tax provided in §§871 and 881. Such interest, whether received by a nonresident alien individual or other foreign person, included interest on deposits with persons carrying on the banking business, interest on deposits or withdrawable accounts with a Federal or State chartered savings institution (as long as such interest was a deductible expense to the savings institution under §591), and interest on amounts held by an insurance company under an agreement to pay interest thereon. This rule applied, however, only if such interest was not "effectively connected" with the conduct of a trade or business within the United States by the recipient of the interest.[55] Under present law, these types of interest income are treated as foreign source income and thus are generally not subject to United States tax if paid to foreign persons. The House Bill, however, treated such income as United States source income, but excluded this income from withholding.

---

[48] House Report at 364-365. A segregation of allowable deductions was required, however, for certain personal property generally used outside the United States (personal property described in §48(a)(2)(B)). That is, the rule of convenience did not apply to such property. House Report at 365.

[49] House Report at 365.

[50] House Report at 365. Withholding would have been required only with respect to United States source payments that were contingent on the productivity, use or disposition of such property.

[51] House Report at 367.

[52] House Report at 367-368.

[53] House Report at 368. This exemption from withholding by an 80-20 company did not apply, however, if the 80-20 company was 50% owned (by voting power for all classes of stock entitled to vote or by value) by nonresident alien individuals or other foreign persons, and the interest was paid to a recipient who was a related party to the payor. Thus, interest payments by a foreign-owned 80-20 company made to a related party would be subject to United States withholding tax.

[54] *Id.* A business was in a "start-up" phase if substantially all of its other expenditures were start-up expenditures (as described in §195).

[55] *Id.* The House Bill also exempted from withholding tax the income derived by a foreign central bank of issue from bankers' acceptances.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

D. Source Rule for Transportation Income

The House Bill provided that 50% of all "transportation income" attributable to transportation which begins or ends in the United States would be United States source income. The House Bill did not change the present law definition of transportation income. Also, as under present law, the House Ways and Means Committee did not intend to subject services performed in a foreign country that have an indirect connection with the transportation that begins or ends in the United States to the provisions of the House Bill.

The House Bill also repealed the special rule in §861(e), relating to the lease or disposition of vessels, aircraft, or spacecraft which are constructed in the United States, and the special rule relating to the lease of an aircraft to a regularly scheduled United States air carrier.[56] The source of such transportation income would be determined under the general rule described above.

The House Bill only applied to transportation income attributable to transportation that begins or ends in the United States. Thus, for example, under the House Bill, if a voyage that begins in the Far East has intermediate stops before it arrives in the United States, 50% of the income that is attributable to the cargo (or persons) carried from its port of origin to the United States would be United States source income.[57]

The House Ways and Means Committee intended round-trip travel of persons (or cargo) by a carrier to be treated as transportation income attributable to transportation that begins (for the outbound portion) or ends (for the inbound portion) in the United States under the provisions of the House Bill. Thus, 50% of the income attributable to the outbound transportation and 50% of the income attributable to the inbound transportation would be United States source.[58]

The House Bill's provision for income from transportation into the United States was intended to apply regardless of whether a foreign country treated the income from such transportation as within its taxing jurisdiction. For example, if a voyage from a foreign country to the United States was treated by the foreign country as income from domestic sources, 50% of the income from the voyage would still be United States source income.

The House Bill also provided definitive rules for when a foreign person was considered to have income which is "effectively connected" with the conduct of a United States trade or business.[59] Section 613(b) provided that the foreign person was considered to have transportation income "effectively connected" with the conduct of a United States trade or business if the person had a fixed place of business in the United States which assists in earning the transportation income, and substantially all of the person's United States source gross transportation income was attributable to regularly scheduled transportation.[60]

E. Source of Income Rule for Space and Ocean Activities

Under the House Bill, all income from space or ocean activities would have been sourced in the country of residence of the person generating the income: income derived by a United States resident would be United States source income and income derived by a nonresident would be sourced outside the United States. For these purposes, the terms "United States resident" and "nonresident" had the same meaning as assigned to such terms in the House Bill.[61]

Space or ocean activities as defined by the House Bill included any activities for the use (or hiring or leasing for use) of a spacecraft and any activities conducted on or beneath water not within the jurisdiction (as recognized by the United States) of any country including the United States or its possessions. The term "ocean activities" also included any activities performed in Antarctica.[62]

Under the provisions of the House Bill, space or ocean activities did not include any activity which gives rise to transportation income, or any activity with respect to mines, oil and gas wells, or other natural deposits to the extent the mines or wells were located within the jurisdiction (as recognized by the United States) of any country, including the United States and its possessions.

The House Bill also provided an anti-conduit provision in the case of certain foreign corporations. In particular, a foreign corporation would be treated as a United States resident if 50% or more in value of the corporation is owned, or considered as owned, by United States persons.[63] Thus, United States persons could not incorporate a foreign corporation in order to be taxed as a nonresident of the United States.[64]

F. Allocation and Apportionment of Expenses to Foreign Source Income

In the context of the source rules relating to deductions, the House Bill provided, in general, that for purposes of the foreign tax credit limitation of §904, the taxable income of each member of an affiliated group from sources outside the United States would be determined by allocating and apportioning all interest expenses as if all members of the group were a single corporation. In effect, taxpayers would be required to disregard stock of affiliates and interaffiliate debt in allocating interest expenses.[65] The House Ways and Means Committee intended that regulations would provide appropriate treatment to effectively eliminate interest payments among members of an affiliated group that join (or

[56] §863(c)(2)(B); House Report at 370-371.

[57] House Report at 371.

[58] *Id.* For example, 50% of the income attributable to the first and last legs of round-trip travel by a cruise ship, originating in the United States, calling on foreign ports, and ending in the United States was intended to be United States source. Similarly, 50% of the income attributable to both legs of an air carrier traveling from the United States to a foreign country, and back to the United States (or from a foreign country to the United States, and back to a foreign country), was intended to be United States source. *Id.*

[59] §613(b) of the House Bill.

[60] House Report at 371.

[61] §611 of the House Bill.

[62] House Report at 382.

[63] "Owned" is defined at page 382 of the House Report as within the meaning of §958(a) and (b).

[64] House Report at 382. The provision applied regardless of the number of persons interposed between the corporation earning the income and its ultimate owners. *Id.*

[65] House Report at 377.

could join) in the filing of a consolidated return. Therefore, the only interest expense taken into account would be interest paid to non-members of the group. The House Bill did not change the treatment of non-recourse debt that the current regulations treat as definitely related to specific property.[66]

As indicated at page 377 of the House Report, the House Bill also applied a similar rule in the case of expenses other than interest, but granted regulatory authority to the Secretary of the Treasury to provide exceptions, if any, as appropriate. For this purpose, too, taxpayers were, in effect, to disregard stock of affiliates and interaffiliate debt. The House Ways and Means Committee anticipated that regulations would modify the separate company system of current law to provide look-through rules where appropriate to properly reflect all foreign source income earned by all members of the group.[67]

In addition, the House Bill specified that taxpayers were to allocate and apportion interest expense on the basis of assets rather than gross income. That is, the House Bill prevented taxpayers from using the optional gross income method under the current regulations (or any similar method) for allocating and apportioning interest.

With respect to tax-exempt assets, the House Bill provided that such assets and income associated therewith would not to be taken into account in allocating or apportioning any deductible expense. For this purpose, 85% of the basis (or value, if the taxpayer used the fair market value method) of stock that paid dividends that were eligible for the 85% dividends received deduction would be treated as a tax-exempt asset.[68]

Further, the House Bill provided a new rule for purposes of allocating and apportioning expenses on the basis of assets when the asset was stock in one of certain foreign corporations. In general, the adjusted basis of any asset which was stock in a controlled foreign corporation in the hands of a 10% United States shareholder was to be increased by the amount of the earnings and profits of the foreign corporation attributable to that stock and accumulated during the period the taxpayer held such stock.[69] In the case of a deficit in earnings and profits of the foreign corporation that was attributable to the stock that arose during the period when the 10% United States shareholder held the stock, such deficit was to reduce the adjusted basis of the asset in the hands of the United States shareholder. In that case, however, the deficit could not reduce the adjusted basis of the asset below zero.

The House Bill's one-taxpayer rule also provided new treatment under the asset method for stock in affiliated United States companies. The House Ways and Means Committee intended that stock of affiliates and intercompany debt between affiliates be disregarded under appropriate rules prescribed by the Treasury Department. Therefore, as members of an affiliated United States group earned income that was retained, such income would be reflected in assets whose tax basis would be considered in the allocation of expenses under the asset method.[70] The treatment was comparable, therefore, to the treatment given the stock of foreign corporations.

Example: A United States parent company borrowed $360 with an obligation to pay annual interest of $36. The debt was recourse debt. The United States parent borrower owned two assets. One of its assets was stock of a domestic subsidiary, which stock had a basis in the parent's hands of $800. The United States subsidiary in turn owns the following assets: United States assets which had a basis in its hands of $700, and foreign assets which had a basis in its hands of $100. The other asset of the United States parent (the borrower) was stock in a foreign corporation. The basis of the stock in the foreign corporation in the hands of the United States owner was $100. The foreign corporation also had retained earnings of $100.

Under the House Bill, after a transition period, the interest expense allocation rules would operate on the basis of the affiliated group consisting of the United States parent corporation and its United States subsidiary. The parent would be treated in effect as owning directly the $700 of United States assets owned by the United States subsidiary, and the $100 of foreign assets owned by the United States subsidiary. In addition, the parent would be treated as owning $200 of foreign assets by virtue of its $100 basis in the stock of the foreign subsidiary increased by the $100 of earnings and profits of the foreign subsidiary. Thus, the parent would be treated as owning $700 of United States assets and $300 of foreign assets for the purpose of the asset method. Therefore, 70% of the parent's interest expense ($700/$1,000) would reduce United States source gross income. The parent corporation would allocate $10.80 (30% of $36) against foreign source income and $25.20 (70% of $36) against United States source income. The same result would obtain if the United States subsidiary had borrowed the money and paid the interest.[71]

The House Bill also contained an exception to the rule requiring treatment of an affiliated group as if all members of the group were one taxpayer for purposes of allocating and apportioning interest expense. The general rule would not apply to any financial institution if the business of the financial institution was predominantly with persons other than related persons or their customers, and if the financial institution was required by State or Federal law to be operated separately from any other entity which is not a financial institution. If such exception applied, the financial institution would not be treated as a member of the group for purposes of applying the House Bill's general "one taxpayer" rule to other members of the group. The other members of the group would still be treated as one taxpayer for interest expense allocation purposes.[72]

[66] *See* Regs. §1.861-8(e)(2)(iv).

[67] House Report at 377.

[68] *Id.* As the 85% deduction changed in amount, the percentage of stock treated as a tax exempt asset would also change.

[69] House Report at 378. For this purpose, the adjusted basis of stock in a controlled foreign corporation would also to reflect capital contributions.

[70] House Report at 378.

[71] *Id.*

[72] House Report at 379. The financial institution would still be part of the group that the House Bill treated as one taxpayer for expenses other than interest.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

G. *Modification to Rules on Allocation of Research and Experimental Expenditures*

Under the House Bill, for taxable years beginning generally after August 1, 1985, and on or before August 1, 1987, the application of the Treasury Regulations research expense allocation rules[73] were effectively liberalized in three respects. Such liberalizations applied notwithstanding other changes made by the House Bill in the Code's expense allocation rules.[74] As detailed at page 387 of the House Report, the House Bill retained the regulatory rule[75] under which research expenditures are allocated entirely to one geographic source if such expenditures were incurred to meet legal requirements imposed with respect to improvement or marketing of specific products or processes and cannot reasonably be expected to generate income (beyond *de minimis* amounts) outside that geographic source.

For the specified two-year period, the House Bill provided that 50% of all remaining amounts allowable as a deduction for qualified research and experimental expenditures would be apportioned to United States source income and deducted from such income in determining the amount of taxable United States source income. Thus, the House Bill had the effect of increasing the automatic place-of-performance apportionment percentage for United States-based research expense from 30% to 50%. Under the House Bill, a taxpayer will be able to apportion to United States source income 50% of the United States-based research expense remaining after any allocation of such expense incurred to meet legal requirements.[76]

Further, the House Bill provided that, for the specified two-year period, the portion of those amounts allowable as a deduction for qualified research and experimental expenditures that remain after any legal requirements allocation and the 50% automatic place-of-performance apportionment would be apportioned on the basis of sales or gross income. Thus, the House Bill made automatic place-of-performance apportionment available temporarily to taxpayers who would elect to apportion expenses using the optional gross income method, as well as to taxpayers choosing the standard sales method of apportionment. The House Bill also had the effect of temporarily suspending the regulatory rule that prohibits taxpayers from using the optional gross income method to reduce allocation of research expense to foreign source income by more than 50% over what the allocation to foreign source income would be under the standard sales method.[77]

The House Bill's temporary modifications to the research expense allocation rules applied for purposes of computing taxable income from United States sources and from sources partly within and partly without the United States. The modifications applied only to the allocation of research and experimental expenditures for the purposes of geographic sourcing of income. Such rules did not apply to any expenditure for the acquisition or improvement of land, or for the acquisition or improvement of depreciable or depletable property to be used in connection with research or experimentation.[78]

V. The Senate Amendment to H.R. 3838: Modifications to the Source Rules

The proposals set forth in the House Bill relating to modifications in the source of income and deductions rules provided the basis for the changes suggested in the Senate Amendment to H.R. 3838.[79] In the area of the source rules, the Senate addressed each of the items covered by the House Bill, but in a number of cases, the Senate proposed substantial modifications.

A. *Source of Income from Sales of Personal Property*

1. *In General*

The Senate Amendment to H.R. 3838 provided that income derived from the sale of personal property, tangible or intangible, other than inventory property and depreciable personal property, by a United States resident generally would be sourced in the United States. Similar income derived by a nonresident generally would be treated as foreign source. For purposes of the Senate Amendment, the term sale included an exchange or other disposition. Income that United States persons derived from the sale of inventory property (as defined in Code §1221(1)) continued to be sourced under present law (*i.e.*, under the title passage rule).[80]

The Senate Amendment generally provided that an individual was a resident of the United States if the individual had a tax home[81] in the United States. The Senate Amendment also provided that any corporation, partnership, trust, or estate which is a United States person generally was a United States resident. All other individuals and entities generally were considered nonresidents for purposes of the source rules under the Senate Amendment.

2. *Special Rules for United States Persons*

Unlike the House Bill, the Senate Amendment contained an exception to the above-described residence rules for United States citizens and resident aliens. As stated at page 311 of the Senate Report, the exception provided that United States citizens and resident aliens would not be treated as nonresidents with respect to any sale of personal property unless the gain from the sale was actually taxed at a rate equal to or exceeding 10% in a foreign country. Thus, a United States citizen or resident alien could not maintain a tax home in another country, sell his personal property, claim residency in such country, and generate foreign source income unless the person actually pays tax on the income from such sale to a foreign country at a 10% rate or higher.[82]

[82] Senate Report at 331.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The Senate Amendment also provided two special rules for gains derived by United States residents. The first special rule provided that United States residents deriving income from sales of personal property (other than inventory property) attributable to an office or other fixed place of business maintained outside the United States generate foreign source income. Such rule did not apply, however, if the income from the sale was not actually taxed at a 10% rate or higher in a foreign country. This special rule was designed to reflect the Senate Finance Committee's general intention that the source of income from substantive operations should be the location of those operations.[83]

The second special rule provided that if a United States resident sold stock of an affiliate in the foreign country in which the affiliate derived from the active conduct of a trade or business more than 50% of the gross income for the 3-year period ending with the close of the affiliate's taxable year immediately preceding the year during which the sale occurred, any gain from the sale would be foreign source. The term "affiliate," for this purpose, was defined to mean any corporation (including a foreign corporation) whose stock (both voting power and value) is at least 80% owned.[84]

3. Income Derived from the Sale of Depreciable Personal Property

Subject to a special rule, the Senate Amendment provided that gain, to the extent of prior depreciation deductions, from the sale of depreciable personal property would be sourced in the United States if the depreciation deductions giving rise to such income had been allocated previously against United States source income. If the deductions giving rise to such income had been allocated previously against foreign source income, gain from such sales (to the extent of prior deductions) would be sourced outside the United States. Any gain in excess of prior depreciation deductions would be sourced pursuant to present law, *i.e.*, sourced pursuant to the title passage rule.[85]

As in the case of the House Bill, the Senate Amendment provided a special rule for purposes of determining the source of income from the sale of certain depreciable personal property. Such rule provided that if personal property was either used predominantly in the United States or predominantly outside the United States for any taxable year, the taxpayer must treat the allowable deductions for such year as being allocable entirely against United States source or foreign source income, as appropriate. This rule was provided so as not to require a segregation of previously allowable deductions if the person knew the property was used predominantly in the United States or predominantly outside the United States.[86]

4. Income Derived from the Sale of Intangible Property

Similar to the House Bill, the Senate Amendment provided that in the case of income derived from the sale of intangible property, to the extent the payments were not contingent on the productivity, use, or disposition of the intangible, the general rule for sourcing income from personal property sales would apply. Specifically, income derived from such sales would be sourced in the country of the seller's residence. If payments were contingent on productivity, use, or disposition, the source rules applicable to royalties would apply.[87]

5. Income Derived from the Sale of Personal Property by Foreign Persons

In the case of nonresidents, the Senate Amendment repealed the title passage rule with respect to sales of all personal property (except for foreign tax credit purposes). The term nonresident was defined pursuant to the bill's general definition. The Senate Amendment provided that income derived from sales of personal property that were attributable to an office or other fixed place of business maintained in the United States by a nonresident was generally treated as United States source income (except for foreign tax credit purposes). Pursuant to the Code's general rules defining "effectively connected" income, such income was considered effectively connected and would be subject to United States tax. The Senate Amendment provided, however, that if a source country imposed a tax on such income, the income would be treated as foreign source for purposes of §906 (so as to allow the nonresident a foreign tax credit).[88]

Income derived by nonresidents that would be treated as United States source by the rules described above would not be treated as United States source, however, if the property was sold or exchanged for use, consumption, or disposition outside the United States, and an office or other fixed place of business maintained outside the United States by such person materially participates in the sale.

The Senate Amendment clarified that gain from the sale of stock in a controlled foreign corporation by a United States shareholder that is treated under §1248(a) as a dividend would be sourced pursuant to the source provisions governing dividends (*i.e.*, generally, such income would be sourced in the residence of the payor). Further, the Senate Amendment provided that regulations were to be prescribed by the Treasury Department for carrying out the purposes of its provisions including the application of the rules to income derived from trading in futures contracts, forward contracts, options contracts, and similar securities.[89]

B. 80-20 Dividend and Interest Rules

The Senate Amendment provided that interest and dividends paid by an 80-20 company are subject to a

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

lookthrough rule that bases the source of those dividends and interest on the source of the income earned by the 80-20 company. Such look-through rules were to apply to both foreign and United States recipients.

In the case of interest paid by an 80-20 company, the amount treated as United States source would be the ratio of gross income derived from United States sources, for the three-year period (or for the period of the corporation's existence, if shorter) ending with the close of the taxable year of such corporation preceding the year of payment of such interest to total gross income of the company. For interest treated as United States source, the Code's general tax and withholding rules would apply. That is, United States source interest paid to foreign persons would be subject to taxation under §871 and 881, and the withholding provisions of §§1441 and 1442.[90]

In the case of dividends paid by an 80-20 company, the amount of the dividend treated as United States source would be determined by the ratio of the 80-20 company's gross income derived from United States sources for the three-year period (or for the period of the corporation's existence, if shorter) ending with the close of the taxable year of such corporation preceding the year of declaration of the dividends, to total gross income of the company. The Senate Amendment's look-through rule did not apply to dividends paid by a corporation that had an election in effect under Code §936.[91]

The Senate Amendment similarly applied a look-through rule for interest paid by a resident alien individual who derives more than 80% of his gross income from foreign sources. For interest payments made by such individuals, the amount treated as United States source would be the ratio of gross income derived from United States sources by such individuals for the three-year period ending with the close of the taxable year of such individuals preceding the payment of the interest, to total gross income of the individuals.[92]

The source rules in the Senate Amendment applied before the application of the resourcing rules enacted in the Tax Reform Act of 1984. If a greater amount was treated as United States source under those provisions, however, such amount would be treated as United States source (but only for foreign tax credit limitation purposes).[93]

C. Income from Transportation Activities

1. Source of Transportation Income

As explained at page 341 of the Senate Report, the Senate Amendment provided that 50% of all transportation income attributable to transportation which begins or ends in the United States would be United States source. This provision applied equally to U.S. and foreign persons. The Senate Amendment modified present law by excluding from transportation income the performance of services by alien seamen or airline employees with respect to transportation that begins or ends in the United States. Income from the performance of services would still be transportation income for transportation that begins and ends in the United States and for transportation between the United States and a United States possession. The Senate Finance Committee intended, however, that transportation income not include income derived from the lease of a vessel if such vessel was not used to transport cargo or persons for hire.[94]

The Senate Amendment applied only to transportation income attributable to transportation that begins or ends in the United States. Cargo or passengers on a voyage beginning outside the United States, which were off-loaded at intermediate ports before arrival in the United States, would not give rise to United States source income.[95]

2. Gross-Basis Tax

The Senate Amendment generally provided for a four percent gross-basis income tax on the United States source transportation income of foreign persons. The tax was to be applied to gross United States source transportation income defined under present law, with modifications. The Senate Amendment provided that the four percent tax applied if the Code's 30% tax (under §§871 and 881) would otherwise apply (for example, to bareboat charter income).

The Senate Amendment provided, however, consistent with present law, that if a foreign person is engaged in a trade or business in the United States and the foreign person's transportation income is effectively connected with that trade or business, the foreign person must, in lieu of paying the four percent gross-basis tax, file a United States tax return and pay tax on the basis of its net income. If a foreign person's transportation income were effectively connected with the conduct of a United States trade or business, such income, like other effectively connected income, would also be subject to the Senate Amendment's branch profits tax.[96] Similarly, however, if a foreign person's income were exempt from either the gross tax or net-basis tax because of a reciprocal exemption or treaty exemption, such income would also be exempt from the branch profits tax.

The Senate Amendment also provided that individuals or corporations resident of a country that the Treasury Department determines imposes a gross-basis tax on transportation income of United States persons would not be eligible to be taxed on a net basis. Thus, the gross tax was to apply to residents of such countries even if their income would ordinarily be effectively connected with a United States trade or business. The Senate Amendment provided that a foreign corporation would be considered to be resident of a "listed" country if the corporation was organized in such a country, or if 50% or more of the value of the stock of such corporation was beneficially owned under §958(a) and (b) by individuals who are residents of such countries.[97]

[93] Senate Report at 336.

[94] Senate Report at 341. In such instances, the Committee intended such income to be characterized as ocean activity income and be sourced in the country of residence of the person earning the income.

[95] Senate Report at 341.

[96] *See* §951 of the Senate Amendment.

[97] Senate Report at 342. The Senate Finance Committee intended that, in determining ultimate residence for purposes of allowing net basis taxation, United States shareholders of controlled foreign corporations

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Under the Senate Amendment, foreign persons who were not resident of a listed country could elect to treat United States source transportation income not effectively connected with the conduct of a United States trade or business under general Code rules (*i.e.*, income from bareboat charters) as income which is effectively connected with the conduct of a United States trade or business.[98] Failure to make such election meant that the four percent gross tax applied to such income, unless otherwise exempt (as, for example, under the reciprocal exemption).

The Senate Amendment's gross-basis tax was to be collected by return. However, the Senate Finance Committee stated that it would continue to study whether alternate, potentially more effective, methods of collecting the tax were feasible. Finally, the gross-basis tax in the Senate Amendment was not intended to override United States income tax treaties with foreign countries. Therefore, a foreign person that was able to avail itself of a treaty exemption would not be subject to such tax.[99]

3. Reciprocal Exemption

The Senate Amendment also modified the present law reciprocal exemption by requiring foreign persons to be resident of a foreign country that reciprocally exempts United States persons, rather than determining exemption based on the place of registry or documentation. The Senate Amendment provided that an alien individual must be a resident of a foreign country which grants United States citizens and domestic corporations an equivalent exemption in order for the alien individual to avail himself of the reciprocal exemption. The Senate Finance Committee intended that a country which, as a result of a treaty with the United States, exempts United States citizens and domestic corporations from tax in that country on income derived from the operation of ships or aircraft, should be considered to have an equivalent exemption, even though the treaty technically contains certain additional requirements other than residence, such as United States registration or documentation of the ship or aircraft.[100]

Under the Senate Amendment, a foreign corporation must be organized in a foreign country which grants United States citizens and domestic corporations an equivalent exemption in order for the corporation to avail itself of the reciprocal exemption. However, the Senate Amendment further provided that, in the case of a foreign corporation claiming a reciprocal exemption, if 50% or more of the ultimate individual owners of the foreign corporation determined under §958(a) and (b) are not residents of a foreign country that grants United States persons equivalent exemption (either by treaty or by reciprocal exemption), the foreign corporation would not able to claim the reciprocal exemption.[101]

Further, the Senate Amendment provided that the residence-based reciprocal exemption applies to gross income. Therefore, the residence-based reciprocal exemption provisions apply to the gross-basis tax. The Senate Amendment also expanded the reciprocal exemption to include income derived from the lease of vessels or aircraft as long as a foreign country exempts United States persons from its tax on comparable income. The Senate Amendment also provided regulatory authority to extend the reciprocal exemption by agreement on a partial basis.[102]

D. Source of Income from Space and Certain Ocean Activities

The Senate Amendment provided that all income derived from space or ocean activities should be sourced in the country of residence of the person generating the income. The Senate Amendment provided, however, an anti-conduit provision in the case of certain foreign corporations. A foreign corporation would be treated as a United States person if 50% or more in value, or in voting power, of the corporation is owned, or considered as owned, by United States persons.[103]

As explained at page 358 of the Senate Report, space or ocean activities included any activities conducted in space and on or beneath water not within the jurisdiction (as recognized by the United States) of any country including the United States or its possessions. For example, the Senate Finance Committee intended that the term "space or ocean activities" include the performance and provision of services in space or on or beneath the ocean, the leasing of equipment including spacecraft located in space or equipment located on or beneath the ocean, the licensing of technology or other intangibles for use in space or on or beneath the ocean, and the manufacturing of property in space or on or beneath the ocean. The Senate Finance Committee also intended the term ocean activities to further include activities performed in Antarctica and the leasing of a vessel if such vessel did not transport cargo or persons for hire between ports-of-call.[104]

The Senate Amendment also provided for regulations to describe other activities that could be considered space or ocean activities. For example, the Senate Finance Committee intended that underwriting income from the insurance of risks on activities conducted in space or on or beneath

would not be considered residents of a listed country. Moreover, a corporation the stock of which is primarily and regularly traded on an established securities exchange in the country in which the corporation is organized would be considered to be a resident of that country. In addition, if a parent corporation is organized in the same country as its subsidiary and its shares are primarily and regularly traded in the country in which its wholly-owned subsidiary is organized, both corporations would be considered resident of such country.

[98] Senate Report at 343. Such election was intended to allow operators or lessors of vessels or aircraft to account for their expenses in determining their United States tax liability.

[99] *Id.*

[100] *Id.*

[101] *Id.* For purposes of applying the 50% test to a foreign corporation (or other type of entity), if the foreign corporation was a United States controlled foreign corporation, the United States shareholders of the foreign corporation would be treated as residents of the foreign country in which the corporation was organized.

[102] Senate Report at 344. For example, if the United States and a foreign country agreed that only regularly scheduled transportation would be exempted from tax, then the Code's exemption could apply.

[103] Senate Report at 358.

[104] Senate Report at 358-359. For example, the income earned by a lessor of a vessel chartered by a corporation that is to engage only in research activities in the ocean would be high-seas income. In these circumstances, the Senate Finance Committee did not intend the lessors to earn transportation income since the operators of the vessels would not be engaged in transporting cargo or persons between ports-of-call.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the ocean be treated as space or ocean activities. However, the Committee did not intend the selling of property on the high seas to be considered space or ocean activity. Thus, the bill did not override the title passage rule.

The Senate Amendment also excluded from the definition of space or ocean activities "international communications income." The Senate Amendment provided that such income would be sourced 50% in the United States and 50% foreign to the extent the income was attributable to communications between the United States and a foreign country. If the communication was between two points within the United States, the income attributable thereto would be entirely United States source.

This result would follow even if the communication were routed through a satellite in space, regardless of the satellite's location. If the communication was between the United States and an airborne plane or a vessel at sea, the Senate Finance Committee also intended the communication to be treated as between two United States points, and, thus, to be sourced in the United States. Further, if the communication was between two foreign locations, the Committee intended income attributable thereto to be foreign source.[105] The Senate Finance Committee intended that international communication income include income attributable to any transmission between two countries of signals, images, sounds, or data transmitted in whole or in part by buried or underwater cable or by satellite.

E. Allocation and Apportionment of Expenses to Foreign Source Income

1. Interest Expenses

As a general rule, money is a fungible asset, and interest expenses can be prorated on the asset method. However, the Senate Amendment treated interest expense of a United States member of a corporate group as supporting only assets of the borrower, absent a guarantee or similar arrangement. More specifically, a United States company that borrows without a guarantee would be treated as using its interest expense to support only its assets, including, on a look-through basis, assets of corporations whose stock it owns. Absent a guarantee, its debt is not treated as supporting assets of upper-tier corporations (or brothersister corporations). However, in the case of an unguaranteed debt, an "equalizing" rule operates to return the allocation of related parties' expenses to an approach consistent with fungibility.[106]

The Senate Report indicates at p. 350-351 that, for purposes of interest expense allocation, the Senate Amendment included within the affiliated group whose interest expenses and assets enter the allocation determination not only members of the United States consolidated group (or corporations eligible to consolidate), but also foreign corporations that would be eligible to consolidate were such entities not foreign, and §936 companies (possessions corporations) that would be eligible to consolidate absent statutory prohibition. The Senate Amendment did not allow United States corporations to deduct interest expense incurred by foreign corporations. Nonetheless, the Senate Amendment considered foreign-born interest expenses in allocating the interest deduction of the United States members of the group. Thus, interest expense allocated to foreign source income under the one worldwide taxpayer rule of the Senate Amendment would be reduced by any interest expense incurred by a foreign member of the worldwide affiliated group if that foreign-born interest would have been allocated or apportioned to foreign source income of that foreign corporation under the principles of the Senate Amendment if applied separately to such foreign members of the group.

> *Example:* A United States parent company operated directly a United States business and owned a foreign operating subsidiary. The United States business and the foreign subsidiary each had $100 of assets. The foreign subsidiary earned $25 of net (pre-interest and pre-tax) foreign source income, but incurred $5 of interest expense. It distributed $20 to the parent as a dividend, and the parent had $20 of United States source income (pre-interest and pre-tax) from its United States business. The parent had no foreign income other than the dividend from its foreign subsidiary. The parent incurred $15 of interest expense that was not directly attributable to any particular income.
>
> Under present law, the $15 of interest expense would be evenly divided between the parent's United States income and foreign income ($7.50 each). The parent, therefore, had $12.50 of taxable United States income, and $12.50 of taxable foreign income. If both corporations were a single corporation, their combined $20 of interest expense would be allocated $10 against United States income and $10 against foreign income. Under the Senate Amendment, therefore, the interest expense allocated against foreign income would be $5. ($20 of worldwide interest expense multiplied by 100/200, the ratio of foreign assets to worldwide assets, and reduced by the $5 of interest directly incurred by the foreign subsidiary.) The remaining $10 of the parent's interest expense would be allocated to United States sources. The parent had $10 of net taxable United States income, and $15 of taxable foreign income. The $5 of interest expense that the foreign subsidiary incurs does not reduce United States tax, but enters into the allocation calculation.[107]

The Senate Amendment also specified that taxpayers were to allocate and apportion interest expense on the basis of assets rather than gross income. That is, the Code would no longer allow taxpayers to use the optional gross income method of the current regulation (or any similar method) for allocating and apportioning interest.

The Senate Amendment provided a special rule for certain unguaranteed debt of United States members of a group below the top corporate tier. In general, a United States corporation that was a member of an affiliated

[105] Senate Report, at 359. The Senate Finance Committee intended that international communication income include income attributable to any transmission between two countries of signals, images, sounds, or data transmitted in whole or in part by buried or underwater cable or by satellite. For example, the term includes income derived from the transmission of telephone calls.

[106] Senate Report at 350.

[107] Senate Report at 351.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

group and that incurred interest expense with respect to qualified debt (generally defined below to mean debt not guaranteed by a related party) could elect to allocate and apportion interest incurred with respect to that qualified indebtedness under the general rules of the Senate Amendment as though the corporation incurring the expense were the ultimate United States parent corporation of an affiliated group consisting of that United States corporation and its direct and lower-tier subsidiaries. For this purpose, qualified indebtedness included borrowing from unrelated parties that was not guaranteed or in any other way facilitated by any corporation within the same worldwide affiliated group as the borrower.[108]

The Senate Amendment also granted regulatory authority to treat other amounts that are economically the equivalent of interest as interest. Similarly, the Senate Finance Committee intended that amounts denominated as interest, but that are not interest as an economic matter, should not be treated as interest. In particular, the Committee recognized that deductions of life insurance companies described in §807(c)(1), (2), (3), and (6) should not be treated as interest expenses for such purpose.[109]

2. Expenses Other Than Interest

In the case of expenses other than interest (or research) that are not directly allocable to specific income producing activities, the Senate Amendment effectively treated the United States affiliated group as one taxpayer, but granted regulatory authority to the Treasury Department to provide exceptions, if any, as appropriate. That is, taxpayers were, in effect, to disregard stock of affiliates and interaffiliate debt. The Senate Finance Committee believed that this intended result would be achieved under regulations that retain the separate company method of allocation of current law, but that, unlike current law, treat stock in domestic subsidiary corporations as a foreign asset to the extent the domestic corporation (or its subsidiaries on a look-through basis) earns foreign source income.[110]

The Senate Finance Committee noted that when a corporation owns stock in subsidiaries, it may incur some expenses that are allocable to specific income producing activities. For instance, a corporation that owns stock in subsidiaries may also conduct direct operations on its own behalf. Expenses incurred to conduct those operations were allocable under the Senate Amendment to the income from those operations. If a corporation incurs expenses that werenot directly allocable to specific income producing activities, the Senate Amendment generally required the allocation of those expenses under the "one-taxpayer" principles that apply to interest expenses.[111]

The Senate Amendment also provided that tax-exempt assets and income associated therewith should not be taken into account in allocating or apportioning any deductible expense. This rule applied to all expenses including interest.[112] For this purpose, 80% of stock that paid dividends that are eligible for the 80% dividends received deduction would be treated as a tax-exempt asset.

The Senate Bill provided a new rule for purposes of allocating and apportioning expenses on the basis of assets when the asset is stock in one of certain corporations. In particular, if a corporation is not included in the worldwide affiliated group (generally a corporation that is more than 10 but less than 80% owned), then, in general, for this purpose, the adjusted basis of an asset which is stock in such corporation in the hands of a United States shareholder (or in the hands of a foreign subsidiary that is part of the group), would be increased by the amount of the earnings and profits of the corporation attributable to that stock and accumulated during the period the taxpayer held the stock.

Further, the Senate Amendment required the Treasury Department to prescribe such regulations as may be necessary to carry out the provisions discussed above. In particular, the Senate Finance Committee intended that, in the case of an affiliated group of corporations that is eligible to file a consolidated return but that does not do so, the foreign source income of any member of the group should not exceed the amount of foreign source income that would be attributable to that member if the group were a single corporation.[113] In addition, the Committee intended that regulations provide appropriate safeguards to prevent the transfer of assets from one consolidated group member to another to achieve a fair market value basis without recognition of gain (until the assets leave the group).

The Senate Finance Committee also intended that regulations provide for the apportionment of interest allocated to foreign source income among the various categories of foreign source income described in §904(d)(1), such as passive income and active (overall limitation) income. In particular, the Committee indicated that the regulations should provide that interest expense should be allocated against the type of income (such as "active" overall limitation income or separate limitation passive income) that a particular corporation earns.[114]

VI. Tax Reform Act of 1986: Modifications to the Source of Income and Deductions Rules

A. Introduction

The changes set forth in the Tax Reform Act of 1986 [115] relating to the source of income and deductions rules are

[108] Senate Report at 351-352. If one U.S. member of an affiliated group makes the election, the "look-down" treatment applied to all qualified interest of all U.S. members of the group.

[113] Senate Report at 355.

[114] Senate Report at 355-356.

[115] P.L. 99-514 (hereinafter the "1986 Act"). Title XVIII of the Tax Reform Act of 1986 also contained technical corrections to a number of pieces of prior tax legislation, including certain foreign provisions in the Tax Reform Act of 1984 (P.L. 98-369). The technical amendments to the 1984 Act's foreign provisions included modifications to the source rules related to (i) the resourcing of United States source income under §904, (ii) the recharacterization of dividend income as interest income under such section, and (iii) related party factoring under §864. Such technical corrections to the source rules in the 1984 Act are not discussed in this chapter.

based on the original 1984 Treasury Department proposals, President Reagan's 1985 recommendations to Congress, and compromises between the House and Senate versions of the legislation. The final bill contains significant amendments to the source rules which directly impact foreign tax credit calculations and the taxation of United States source income of foreign persons.

B. Determination of Source of Income Relating to Sales of Personal Property

1. Introduction

Section 1211 of the 1986 Act significantly alters the rules relating to the source of income derived from sales of personal property. Under current law, income derived from the purchase and resale of tangible and intangible personal property is sourced where title to the property passes to the purchaser. To the extent that personal property is depreciable or subject to other basis adjustments, gain attributable to the recapture of such adjustments is also sourced where title passes to the purchaser.

Further, under current law, income derived from the manufacture and sale of personal property is treated as having a divided source. Under Treasury Regulations, one-half of such income is generally sourced in the country of manufacture, and one-half of the income is sourced where title passes to the purchaser. The division of the income between manufacturing and selling activities must be made on the basis of an independent factory price, rather than on a 50/50 basis, if such a price exists.

2. General Rules

Section 1211 of the 1986 Act adds new §865 to the Code, providing new source rules for sales of personal property. As a general rule, §865 provides that the income from the sale of personal property shall be sourced as follows:

(i) if a United States resident sells the personal property, the income shall be sourced in the United States;[116] or

(ii) if a nonresident sells the personal property, the income shall be sourced outside of the United States.[117]

Thus, as a general matter, the source of income from the sale of property now depends directly on the residence of the seller.

For these purposes, the term "United States resident" means:

(i) any individual who has a tax home (as defined in §911(d)(3)) in the United States, and

(ii) any corporation, partnership, trust, or estate which is a United States person (as defined in §7701(a)(30)).[118]

In turn, the term "nonresident" means any person other than a United States resident.[119]

A special rule applies in the case of United States citizens and resident aliens in certain circumstances. In particular, such individuals will not be treated as nonresidents with respect to any sale of personal property unless an income tax equal to at least 10% of the gain derived from such sale is actually paid to a foreign country with respect to such gain.[120]

3. Sales of Inventory

Section 865(b) provides an exception to the above general rule in the case of income derived from the sale of inventory property. In the case of such income, §865 does not apply, and the income is sourced under the current rules set forth in §§861(a), 862(a), and 863(b).[121] Thus, income arising from sales of inventory is generally sourced under the current title passage rules, regardless of the actual source of residence of the seller.

For these purposes, the term "inventory property" means personal property described in §1221(1), relating to property held primarily for sale to customers in the ordinary course of business.[122] Further, for purposes of §865, the term "sale" includes an exchange or any other disposition.[123]

4. Depreciable Personal Property Exception

a. In General

New §865(c) provides a separate set of rules for depreciable personal property. In particular, §865(c) provides, generally, that gain (not in excess of depreciation adjustments) from the sale of "depreciable personal property" shall be allocated between sources in the United States and sources outside the United States in the following manner:

(i) by treating the same proportion of such gain as sourced in the United States as the United States depreciation adjustments with respect to such property bear to the total depreciation adjustments,[124] and

(ii) by treating the remaining portion of such gain as sourced outside the United States.[125]

Thus, gain from the sale of depreciable personal property will be sourced under this special sourcing rule and will be sourced in direct relation to the United States depreciation adjustments.

For these purposes, the term "depreciable personal property," means any personal property if the adjusted basis of such property includes depreciation adjustments.[126] Further, the term "depreciation adjustments" means adjustments reflected in the adjusted basis of any property on account of depreciation deductions, regardless of whether allowed with respect to such property or other property and whether allowed to the taxpayer or to any other person.[127]

[116] §865(a)(1).
[117] §865(a)(2).
[118] §865(g)(1)(A).
[119] §865(g)(1)(B).
[120] §865(g)(2).
[121] §865(b)(2).
[122] §865(h)(1).
[123] §865(h)(2).
[124] §865(c)(1)(A).
[125] §865(c)(1)(B).
[126] §865(c)(4)(A).
[127] §865(c)(4)(B).

In turn, the term "depreciation deductions" means any deductions for depreciation or amortization or any other deduction allowable under any provision which treats an otherwise capital expenditure as a deductible expense.[128]

b. Special Rule for Gain in Excess of Depreciation

If the sale of depreciable personal property generates gain in excess of the depreciation adjustments, such gain shall be sourced as if the property were "inventory property." [129] In such case, the gain will be sourced under the rules of §§861(a)(6), 862(a)(6), and 863(b), as appropriate under the circumstances.[130]

c. United States Depreciation Adjustments

For purposes of the depreciable personal property exception, the term "United States depreciation adjustments" means the portion of the depreciation adjustments to the adjusted basis of the property which are attributable to the depreciation deductions allowable in computing taxable income from sources in the United States.[131] There is, however, a special rule for property used predominantly inside or outside the United States. In particular, except in the case of property of a kind described in §48(a)(2)(B),[132] if for any taxable year:

(i) such property is used predominantly in the United States, or

(ii) such property is used predominantly outside the United States,

then all of the depreciation deductions allowable for such year shall be treated as having been allocated to income from sources in the United States, or, as the case may be, outside the United States.[133]

5. Special Rules for Intangible Property

Section 865(d) provides a special set of rules relating to the sale of intangible property. More specifically, in the case of any sale of an "intangible," the rules of §865 apply only to the extent that the payments in consideration of such sale are *not* contingent on the productivity, use, or disposition of the intangible.[134] In the event that such payments are so contingent, the source of such payments is determined as if such payments were royalties.[135] Thus, the payments will be sourced generally based on the location of use of the intangible.[136]

A separate rule applies with respect to the sale of goodwill. Payments in consideration of a sale of goodwill shall be treated as from sources in the country in which such goodwill was generated.[137]

6. Sales of Personal Property Through Offices or Fixed Places of Business

a. Sales by United States Residents

If a United States resident maintains an office or other fixed place of business *outside* of the United States, income from the sale of personal property attributable to such office or other fixed place of business shall be sourced *outside* the United States.[138] Such rule does *not* apply if the income is sourced under one of the following special rules set forth in §865:

(i) inventory property (§865(b));

(ii) depreciable personal property (§865(c));

(iii) intangibles (§865(d)); or

(iv) stock of affiliates (§865(f)).

Thus, the special rule relating to an office or other fixed place of business applies only to sales of personal property outside the ambit of these categories.

However, such rule does not apply unless an income tax equal to at least 10% of the income from the sale is actually paid to a foreign country with respect to such income.[139] Congress did not want to encourage the establishment of offices in "pure" tax havens in order to change the source of the income from the sale of personal property.

b. Sales of Personal Property by Nonresidents

If a nonresident of the United States maintains an office or other fixed place of business in the United States, income attributable to such location from *any* sale of personal property, *including inventory property,* shall be sourced in the United States.[140] Thus, regardless of the nonresident's place of residence or the type of property sold (*e.g.*, intangibles, stock of affiliates, inventory), income attributable to the nonresident's office or fixed place of business in the United States shall be sourced in the United States.

Such source rule does *not* apply, however, for purposes of §971, relating to export trade corporations.[141] Further, such rule does *not* apply to any sale of inventory property which is sold for use, disposition, or consumption outside the United States if an office or other fixed place of business of the taxpayer *outside* the United States materially participated in the sale.[142] In addition, the rule does not apply to any amount included in gross income of a United States shareholder under §951(a)(1)(A).[143]

For purposes of determining (i) whether a taxpayer has an office or other fixed place of business, and (ii) whether a sale is attributable to such location, the principles of §864(c)(5) apply.[144]

[128] §865(c)(4)(C).
[129] §865(c)(2).
[130] §865(b).
[131] §865(c)(3)(A).

7. Sales of Stock in Foreign Affiliated Companies

Special rules apply in the case of sales of stock in foreign affiliated corporations. In particular, if a United States resident sells stock in an "affiliate" which is a foreign corporation, under certain circumstances, any gain from such sale shall be sourced outside of the United States.[145] However, such rule does not apply unless:

(i) the affiliate is engaged in the active conduit of a trade or business,[146] and

(ii) the sale occurs in the foreign country in which the affiliate derived more than 50% of its gross income for the three year period ending with the close of the affiliate's taxable year immediately preceding the year during which such sale occurred.[147]

For these purposes, the term "affiliate" means a member of the same affiliated group within the meaning of §1504(a), applied without regard to §1504(b).[148]

8. Losses from Sales of Personal Property

Section 865 also authorizes the Treasury Department to prescribe such regulations as may be necessary or appropriate to carry out the purposes of §865 generally, including regulations relating to the treatment of losses from sales of personal property.[149] In addition, the Treasury Department is authorized to issue regulations applying the rules of §865 to income derived from trading in futures contracts, forward contracts, option contracts, and other instruments.[150]

9. Effective Dates

As a general rule, the amendments discussed above apply to taxable years beginning after December 31, 1986.[151] There is, however, one exception. In the case of any foreign person (other than any controlled foreign corporations), the amendments apply to transactions entered into after March 18, 1986.[152]

10. Treasury Department Study on Sales of Inventory Property

Because the prior title passage rules were generally retained with respect to inventory property, Congress directed the Treasury Department to conduct a study of the source rules relating to sales of inventory property.[153] Such study must be submitted to Congress no later than September 30, 1987, together with such recommendations as Treasury Department deems advisable.[154]

C. Special Rules for Transportation Income

1. Introduction

Under existing law, Regs. §1.863-4 generally allocates transportation services income between United States sources and foreign sources in proportion to the expenses incurred in providing the services. Expenses incurred outside the three-mile limit of the United States territorial waters are treated as foreign for purposes of such calculation. Income and losses from transportation that begins and ends in the United States are sourced in the United States.

The United States does not tax foreign persons' earnings from the operation of ships and aircraft registered in foreign countries that grant equivalent tax exemptions to United States citizens and United States corporations. Further, the United States (in contrast to a number of countries) does not impose a gross basis tax on domestic source shipping income of foreign persons.

Section 1212 of the 1986 Act significantly alters these general rules by enacting modifications to the source of income rules related to transportation income and the eligibility requirements for the reciprocal exemption. In addition, this section applies a four-percent "gross basis tax" on United States source transportation income of foreign persons.

2. Source of Transportation Income

Section 1212(a) of the 1986 Act amends §863(c)(2) to provide that, in general, 50% of all transportation income attributable to transportation which begins *or* ends in the United States shall be treated as from sources in the United States.[155] For these purposes, the term "transportation income" means any income derived from, or in connection with, the use of a vessel or aircraft, or the performance of services directly related to the use of a vessel or aircraft.[156]

Section 863 also provides a special rule for personal service income. Specifically, the above-stated rule does *not* apply to any transportation income which is income derived from personal services performed by the taxpayer, *unless* such income is attributable to transportation which begins in the United States and ends in a possession of the United States, or begins in a possession of the United States and ends in the United States.[157]

3. Four Percent Gross Basis Tax

Section 1212(b) of the 1986 Act imposes a new tax on "gross transportation income" by enacting new §887 of the Code. Under §887, in the case of any nonresident alien individual or foreign corporation, a tax equal to four percent of such taxpayer's United States source gross transportation income is imposed for each taxable year of such taxpayer.[158] For these purposes, the term "United States source gross transportation income" means any gross income which is transportation income (as defined in

[155] §863(c)(2)(A). All transportation income that begins *and* ends in the United States is treated as United States source income. §863(c)(1).
[156] §863(c)(3). The term "vessel or aircraft" includes any container used in connection with a vessel or aircraft. *Id.*
[157] §863(c)(2)(B).
[158] §887(a).

§863(c)(3)), to the extent such income is treated as from sources in the United States under §863(c).[159] However, such term does not include any income taxable under §871(b) or §882.[160] Thus, "effectively connected" income is excluded from the gross basis tax under §887.

In that regard, transportation income of any taxpayer shall *not* be treated as "effectively connected" with the conduct of a trade or business within the United States unless:

> (i) the taxpayer has a fixed place of business in the United States involved in the earning of transportation income, and
>
> (ii) substantially all of the United States source gross transportation income of the taxpayer is attributable to regularly scheduled transportation. [161]

In the case of income from the leasing of a vessel or aircraft, if the income is attributable to a fixed place of business in the United States, then such income will satisfy the second requirement noted above.[162]

In order to prevent the imposition of more than one level of tax, new §887 also provides that any income taxable under such section shall not be taxable under §871, §881, or §882.[163]

4. Reciprocal Tax Exemption

Under existing law, the United States does not tax the earnings of foreign persons derived from the operation of ships and aircraft registered in foreign countries that grant equivalent tax exemptions to United States citizens and United States corporations. Section 1212(c) of the 1986 Act modifies such rule by providing that the exemption shall apply to gross income derived by an individual resident of a foreign country from the operation of a ship or ships if such foreign country grants an equivalent exemption to citizens of the United States and to corporations organized in the United States.[164]

Further, the exemption applies to gross income derived by an individual resident of a foreign country from the operation of aircraft, if such foreign country grants an equivalent exemption to citizens of the United States and to corporations organized in the United States.[165] Thus, the reciprocal exemption now turns on whether a foreign person's country of residence provides the equivalent exemption, not on whether the country where the ship or aircraft is registered provides such an exemption.

It should be noted that the income to which the above rules apply includes income which is derived from the rental on a full or bareboat basis of a ship, ships, or aircraft.[166]

Rules similar to those for individuals under §872 are also provided for foreign corporations under §883.[167] In addition, certain additional rules are provided in the case of foreign corporations. More specifically, the reciprocal exemption does not apply to any foreign corporation if 50% or more of the value of the stock of such corporation is owned by individuals who are not residents of such foreign country or another foreign country satisfying the requisite requirements.[168] Further, the rules applicable to shipping operations do not apply to any controlled foreign corporations.[169]

There is, however, an exception to the §883(c) rule for publicly traded corporations. In particular, the general rule of §883(c)(1) does not apply to any foreign corporation:

> (i) the stock of which is primarily and regularly traded on an established securities market in a foreign country in which such corporation is organized, or
>
> (ii) which is wholly owned by another corporation satisfying such requirements and is organized in the same foreign country as such other corporation.[170]

For these purposes, stock owned, directly or indirectly, by or for a corporation, partnership, trust or estate shall be treated as being owned proportionately by its shareholders, partners, or beneficiaries.[171]

5. Effective Dates

In general, the amendments set forth in §1212 of the 1986 Act apply to taxable years beginning after December 31, 1986.[172] Special effective date rules apply, however, with respect to leased property and certain ships leased by the United States Navy.[173]

D. Special Source Rules for Space and Certain Ocean Activities and International Communications Income

Under current law, income derived by United States residents from activities conducted in space or outside the territorial waters of any country generally is treated as foreign source income. Section 1213(a) of the 1986 Act amends §863 of the Code by adding a new subsection (d), related to special source rules for space and certain ocean activities. Section 1213(a) of the 1986 Act also adds a new subsection (e) to §863 of the Code relating to international communications income.

1. Space and Certain Ocean Activities

Under §863(d), any income derived from a space or ocean activity, if derived by a United States person, shall be sourced in the United States.[174] Conversely, any income derived from such activities, if derived by a person other than a United States person, shall be sourced outside the United States.[175] For these purposes, the term "space or ocean activity" means:

---

[159] §887(b)(1).
[160] §887(b)(2).
[161] §887(b)(3).
[162] *Id.*
[163] §887(c).
[164] §872(b)(1).
[165] §872(b)(2).
[166] §872(b)(5).
[167] §883(a)(1), (2).
[168] §883(c)(1).
[169] §883(c)(2).
[170] §883(c)(3).
[171] §883(c)(4).
[172] 1986 Act §1212(f)(1).
[173] 1986 Act §1212(f)(2), (3).
[174] §863(d)(1)(A).
[175] §863(d)(1)(B).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(i) any activity conducted in space, and

(ii) any activity conducted on or under water not within the jurisdiction (as recognized by the United States) of a foreign country, possession of the United States, or the United States.[176] The term also includes any activity conducted in Antarctica.

On the other hand, the term "space or ocean activity" does *not* include any activity giving rise to transportation income, as defined in §863(c).[177] Further, the term does not include any activity giving rise to international communications income, as defined in §863(e)(2), or any activity with respect to mines, oil and gas wells, or other natural deposits to the extent within the United States or any foreign country or possession of the United States.[178] In that connection, for purposes of applying §638, the jurisdiction of any foreign country shall not include any jurisdiction not recognized by the United States.[179]

2. International Communications Income

Under §863(e), in the case of any United States person, 50% of any "international communications income" shall be sourced in the United States and 50% of such income shall be sourced outside of the United States.[180] With respect to foreign persons deriving international communications income, any such income shall be sourced outside of the United States.[181] The 1986 Act also provides a special rule for income earned by a foreign person that is attributable to an office or fixed place of business in the United States.

More specifically, in the case of any person, other than a United States person, who maintains an office or other fixed place of business in the United States, any international communications income attributable to such office or other fixed place of business shall be sourced in the United States.[182] For purposes of §863(e), the term "international communications income" includes all income derived from the transmission of communications or data from the United States to any foreign country or from any foreign country to the United States.[183]

3. Effective Dates

The amendments added by §1213 of the 1986 Act applies to taxable years beginning after the December 31, 1986.[184]

E. Limitations on the Special Treatment of 80-20 Corporations

1. Introduction

The existing source rules provide that dividend and interest income is generally sourced in the country of the residence of the payor. However, if a United States corporation derives more than 80% of its income from foreign sources, all dividends and interest paid by such corporation are treated as foreign source income. A similar exception applies to interest paid by resident alien individuals who derive more than 80% of their income from foreign sources.[185] Treating such income as foreign source income frequently increases the foreign tax credit limitation of United States recipients and precludes imposition of United States withholding tax for foreign recipients.

Another exception to the residence of the payor rule applies to dividends paid by United States corporations that have elections in effect under §936. Dividends paid by possessions corporations are treated as foreign source income. Other exceptions to the general sourcing rules for interest income function as exemptions from United States tax for limited classes of income earned by foreign persons. For example, interest on United States bank accounts and deposits held by foreign persons is generally treated as foreign source income, and, consequently, is not subject to United States withholding tax.

2. Modifications to the 80-20 Rules

Section 1214 of the 1986 Act amends these existing rules in a number of significant respects. Under new §861(a)(1)(5), interest from a resident alien individual or domestic corporation will be treated as foreign source income only if such individual or corporation satisfies the 80% foreign business requirements set forth in §861(c)(1).[186] Such requirements, in general, are satisfied by an individual or corporation if it is shown to the satisfaction of the Secretary of Treasury that at least 80% of the gross income from all sources of such individual or corporation for the relevant "testing period" is *active* foreign business income.[187]

For these purposes, the term "active foreign business income" means gross income which is derived from sources outside the United States, and is attributable to the active conduct of a trade or business in a foreign country or possession of the United States by the individual or corporation.[188] Further, the term "testing period" means the three year period ending with the close of the taxable year of the individual or corporation immediately preceding the payment. If the individual or corporation has no gross income for such three year period, the "testing period" shall be the taxable year in which the payment is made.[189]

New §861(c) also provides certain "look-through" rules where related persons receive interest.[190] In particular, in the case of interest received by a related person from a resident alien individual or domestic corporation meeting the 80% foreign business requirement test, subsection (a)(l) of §861 applies only to a percentage of such interest equal to the percentage which:

---

[176] §863(d)(2)(A). The term also includes any activity conducted in Antarctica.
[177] §863(d)(2)(B)(i).
[178] §863(d)(2)(B)(ii), (iii).
[179] §863(d)(2)(B) (last sentence).
[180] §863(e)(1)(A).
[181] §863(e)(1)(B)(i).
[182] §863(e)(1)(B)(ii).
[183] §863(e)(2).
[184] 1986 Act §1213(b).

[185] A corporation satisfying the requirements of such exception is generally referred to as an "80-20" company, and an individual who satisfies such exception is frequently referred to as an "80-20" individual.
[186] §861(a)(1)(B).
[187] §861(c)(1)(A).
[188] §861(c)(1)(B).
[189] §861(c)(1)(C).
[190] §861(c)(2).

(i) the gross income of such individual or corporation for the testing period from sources outside the United States, is of

(ii) the total gross income of such individual or corporation for the testing period.[191]

For purposes of the look-through rules, the term "related person" has the same meaning as such term is given in §954(d)(3), except that (i) such subsection is applied by substituting the "individual or corporation making the payment" for "control foreign corporation" each place that such term appears, and (ii) such section is applied by substituting "10%" for "50%" each place such percentage appears.[192]

With respect to the treatment of dividends paid by 80-20 corporations, §1214(b) of the 1986 Act amends §861(a)(2)(A) to provide that dividends paid by a domestic corporation shall be United States source income except if such domestic corporation has an election in effect under §936.[193] The effect of such amendment is to repeal the special sourcing rule under existing law for dividends paid by 80-20 companies. Further, the 1986 Act amends §861 to provide that if a foreign corporation has no gross income from any source for the three year period specified in §861(a)(2)(B), the requirements of the subsection shall be applied with respect to the taxable year of such corporation in which the payment of the dividend is made.[194]

Section 1214 of the 1986 Act also amends §§871 and 881 to provide that no withholding tax is to be applied with respect to certain interest and dividends.[195] More specifically, §871 is amended by adding a new subsection (i). The new sub section provides that no tax shall be imposed under §871 on any amount described in §871(i)(2).[196] The amounts described therein include:

(i) Interest on deposits, if such interest is not effectively connected with the conduct of a trade or business within the United States.

(ii) A percentage of any dividend paid by a domestic corporation meeting the 80% foreign business requirements test.

(iii) Income derived by foreign central bank of issue from bankers' acceptances.[197]

For these purposes, the term "deposits" means amounts which are deposits with persons carrying on the banking business, and deposits or withdrawable accounts with savings institutions chartered and supervised as savings and loan or similar associations under federal or state law, but only to the extent that amounts paid or credited on such deposits or accounts are deductible under §591.[198] The term "deposits" also means amounts held by an insurance company under an agreement to pay interest thereon.[199]

Section 1214(c) of the 1986 Act also amends §881, relating to foreign corporations, to provide that no tax shall be imposed under §881 on any amount described in §871(i)(2). In addition, conforming amendments are made under §§1441 and 6049(b)(5) to take into account the changes enacted in §871(i)(2).[200]

An example of the following provisions follows.

Example: Assume that a United States corporation and an unrelated foreign corporation jointly incorporate a second United States corporation to operate a mining business in a foreign country. The second United States corporation earns $450 of income, all of which is foreign source, from the mining operations in its first year and $50 of United States source income from investments in the United States. At the end of the year, the second corporation distributes a $100 dividend to each of its two shareholders. The first United States corporation in turn distributes $50 to its shareholders, all of whom are foreign residents. The new provisions treat the $100 dividend to the first United States corporation as entirely United States source. The $100 dividend to the foreign shareholder is treated as 90% foreign source and as 10% United States source.

In the above example, since the United States foreign corporation owns a controlling interest in the second United States corporation, the second corporation's active foreign business is attributed to the first corporation. Therefore, assuming that the first corporation has no other interest, the first corporation satisfies the new 80% active foreign business requirement test. Even though the dividend is treated as United States source income, the dividend from the second corporation retains the same character as the income of the second corporation in determining the source of dividends paid by the first corporation.

Accordingly, under the new section, since the first corporation in the above example has no other income, 90% of the first corporation's dividends paid to its shareholders are foreign source and 10% are United States source. If, however, for example, the first United States corporation had $13 or more of non-foreign active business income in that year, the first corporation would *not* satisfy the 80% foreign active business requirement test, and, therefore, its dividend payments would all be U.S. source.
and would, therefore, pay all United States source dividends.

The amendments discussed above generally apply to payments made after December 31, 1986.[201] There are, however, certain special rules for payments of interests and dividends, as well as two sets of transitional rules, for years after 1987 and years before 1988. For example, in applying the amendments made by §1214 of the 1986 Act to any payment made by a corporation in a taxable year beginning

[191] §861(c)(2)(A).
[192] §861(c)(2)(B).
[193] §861(a)(2)(A).
[194] §861(a)(2)(B).
[195] 1986 Act §1214(c).

after December 31, 1987, the "testing period" for purposes of §861(c) shall *not* include any taxable year beginning before January 1, 1987.[202]

F. Allocation and Apportionment of Interest and Other Expenses to Foreign Source Income

1. Introduction

Under the current Treasury Regulations, taxpayers generally allocate interest and other expenses between gross United States and gross foreign source income on a separate, company-by-company basis, even if such companies are members of the same affiliated group. It has been argued that the separate company allocation rule conflicts with a Court of Claims case decided under the law in effect prior to the effective date of the Treasury Regulations, which case indicates that expenses that are not definitely allocable against United States and foreign gross income should be deducted from gross income on a consolidated group basis.[203] *See* Conference Report at II-604.

Generally, under the Treasury Regulations, interest expense is allocated between United States and foreign income on the basis of the value of the taxpayer's assets that generate United States and foreign source income. For affiliates, only stock basis is taken into account. In limited cases, interest on non-recourse debt is directly allocated against the income from the asset financed by such debt. In addition, optional gross income methods for apportioning interest expense are also available under the Treasury Regulations.

Further, taxpayers generally may take into account tax exempt income and assets in allocating deductible interest and other expenses. Since tax exempt income and interest are generally United States-based, taxpayers frequently derive a second tax benefit from ownership of tax exempt assets, *i.e.*, higher foreign income and hence a higher foreign tax credit limitation.

Section 1215 of the 1986 Act amends §864 of the Code by adding a new subsection (e) relating to rules for allocating interest and other expenses to foreign source income.

2. New Rules for Allocating Interest and Other Expenses

Under new §864(e), the taxable income of each member of an affiliated group from sources outside the United States shall be determined by allocating and apportioning interest expense for each member as if all members of such group were a single corporation.[204] For these purposes, all allocations and apportionments of interest expense shall be made on the basis of assets rather than gross income.[205] Thus, the so-called "gross income method" may no longer be used for allocating or apportioning interest.

Further, for purposes of allocating and apportioning any deductible expense, any tax-exempt asset (and any income from such an asset) shall not be taken into account.[206] In addition, a similar rule shall apply in the case of any dividend for which a deduction is allowable under §§243 or 245(a) and any stock the dividends on which would be so deductible and would not be qualifying dividends.[207]

New §864(e) also provides rules relating to the basis of stock in certain corporations that is adjusted for earnings and profit changes.[208] In particular, for purposes of allocating and apportioning expenses on the basis of assets, the adjusted basis of any asset which is stock in a corporation which is not included in the "affiliated group" and in which members of the affiliated group own 10% of more of the total combined voting power of all classes of stock entitled to vote in such corporation shall be:

> (i) increased by the amount of the earnings and profits of such corporation attributable to such stock and accumulated during the period the taxpayer held such stock, or
>
> (ii) reduced (but not below zero) by any deficit in earnings and profits of such corporation attributable to such stock for such period.[209]

For these purposes, the term "affiliated group" has the meaning given such term by §1504 of the Code, determined without regard to §1504(b)(4).[210]

In addition, certain special rules are applied with respect to financial institutions. For these purposes, a corporation is considered a financial institution if such corporation is a financial institution described in §§581 or 591, the business of such financial institution is predominantly with persons other than related persons or their customers, and such financial institution is required by state or federal law to be operated separately from any other entity which is not such an institution.[211] Any such corporation shall be treated as an includible corporation for purposes of §1504 only for purposes of applying such section separately to corporations so described.[212]

Finally, expenses other than interest which are not directly allocable and apportioned to any specific income producing activity shall be allocated and apportioned as if all members of the affiliated group were a single corporation.[213] Thus, such expenses can no longer be allocated and apportioned on a separate, company-by-company basis.

3. Treasury Regulations

Section 864(e)(7) provides that the Treasury Department shall prescribe regulations necessary or appropriate to carry out §864(e), including regulations relating to the resourcing of income of any member of an affiliated group, and the direct allocation of interest expense incurred to

carry out an integrated financial transaction.[214] Further, the Treasury Department is authorized to prepare regulations relating to the apportionment of expenses allocated to foreign source income among the members of an affiliated group and the various categories of income described in §904(d)(1).[215]

4. Effective Dates and Transitional Rules

New §864(e) is generally effective for taxable years beginning after December 31, 1986.[216] However, the immediate impact of §864(e) is substantially ameliorated by transitional rules in §1215(c)(2) of the 1986 Act. The transitional rules provide different applicable periods for different subsections of new §864(e).

a. General Three Year Rule

In the first three taxable years of the taxpayer beginning after December 31, 1986, §864(e) will apply only to the following percentages of the interest expenses paid or accrued during the taxable year:

First year: 25% of "Transition Rule Current Debt" will be subject to the new regime; 75% will not be subject to such rules. Debt *in excess* of Transition Rule Current Debt will be 100% subject to the new rules.[217]

Second year: 50% of Transition Rule Current Debt will be subject to the new rules; 50% will not.

Third year: 75% of Transition Rule Current Debt will be subject to the new rules; 25% will not.[218]

b. Special 4 and 5 Year Transition Rules for Consolidated Pool Calculations

In addition, there are two sub-transition rules affecting only that portion of Transition Rule Current Debt subject to apportionment on a consolidated pool basis under §864(e)(1). The first such rule deals with a "debt increase" occurring from January 1, 1984 through May 28, 1985. ("1984-1985 Debt Increase"). The second rule deals with a debt increase occurring in 1983. Debt not assigned to the consolidated pool will nonetheless remain partially subject to the new rules in the separate taxpayer to whom the debt belongs. All debt in the consolidated pool is 100% subject to the new rules.

(1) January 1, 1984—May 28,1985 Debt Increase

Debt equal to the following portions of Transition Rule Current Debt is allocated to the consolidated pool, in the case of the first five taxable years of the taxpayer beginning after December 31, 1986:

First year: 16⅔% of "1984-85 Debt Increase"
Second year: 33⅓% of "1984-85 Debt Increase"
Third year: 50% of "1984-85 Debt Increase"
Fourth year: 66⅔% of "1984-85 Debt Increase"
Fifth year: 83⅓% of "1984-85 Debt Increase"

The remainder, if any, in each year is left in the separate taxpayer's pool, to be apportioned by that taxpayer under the new enhanced asset method.[219]

(2) 1983 Debt Increase

Any Transition Rule Current Debt in excess of the 1984—1985 Debt Increase, in the case of the first four taxable years of the taxpayer beginning after December 31, 1986, is next allocated to the consolidated pool, to the extent of the following percentages of the "1983 Debt Increase":

First year: 20% of "1983 Debt Increase"
Second year: 40% of "1983 Debt Increase"
Third year: 60% of "1983 Debt Increase"
Fourth year: 80% of "1983 Debt Increase"

The remainder, if any, is left in the separate taxpayer's pool to be allocated under the new regime's enhanced asset method.[220]

In addition, there are special transitional rules for specific corporations. For example, there are special rules for a certain financial corporation incorporated in Delaware on August 20, 1959, and a subsidiary incorporated on February 11, 1975 with Japanese yen notes and Swiss franc bonds currently outstanding.[221]

G. Allocation and Apportionment of Research and Experimental Expenditures

The current Treasury Regulations require taxpayers with foreign source income from products in a product area in which the taxpayer does United States research to allocate part of their research expense to foreign source income.[222] As part of the Economic Recovery Tax Act of 1981, Congress suspended such rule for two years, so that all United States research expenditures generally offset United States source income. In the Tax Reform Act of 1984, Congress extended the moratorium for an additional two years.

The House Bill provided that taxpayers were required to apportion 50% of their United States-incurred research expense to domestic source income, and to apportion the remainder on the basis of gross sales or gross income. The Senate Amendment followed the House Bill, except it required taxpayers to apportion 75% of their United States-incurred research expense to domestic source income, and to apportion the remainder on the basis of gross sales or gross income.

Section 1216 of the 1986 Act enacts a one-year moratorium on Regs. §1.861-8(e) which generally follows the House Bill and provides that, notwithstanding §864(e):

(i) 50% of all amounts allowable as a deduction for qualified research and experimental expenditures shall be apportioned to income from sources within the United States and deducted from such income in deter-

[214] §864(e)(7)(A), (B).
[215] §864(e)(7)(C).
[216] 1986 Act §1215(c)(1).
[217] The term "Transition Rule Current Debt" is not defined in the Code or the 1986 Act, but is defined herein as an amount of *current debt equal to or less than* debt existing on November 16, 1985.
[218] 1986 Act §1215(c)(2)(A).
[219] 1986 Act §1215(c)(2)(B)(i).
[220] 1986 Act §1215(c)(2)(B)(ii).
[221] 1986 Act §1215(c)(4), (5).
[222] Regs. §1.861-8(e)(3).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

mining the amount of taxable income from sources within the United States, and

(ii) the remaining portion of such amounts shall be apportioned on the basis of gross sales or gross income.[223]

However, such rule does not apply to any expenditures described in Regs. §1.861-8(e)(3)(i)(B), relating to research undertaken solely pursuant to legal requirements.

For these purposes, the term "qualified research and experimental expenditures" means amounts (i) which are research and experimental expenditures within the meaning of §174, and (ii) which are attributable to activities conducted in the United States.[224] The new rules are applicable only to taxable years beginning after August 1, 1986, and on or before August 1, 1987.[225]

Thus, for the relevant time period, 50% of all qualified research and experimental expenditures must be apportioned to United States source income and must be deducted from such income in determining the amount of taxable income from sources within the United States. The remaining 50% is then apportioned on the basis of gross sales or gross income.[226]

Chapter 62

NEW BRANCH PROFITS TAX

George B. Delta, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Section 1241 of the Tax Reform Act of 1986 (the "TRA") adds §884 to the newly designated Internal Revenue Code of 1986, creating a branch profits tax, repeals the sourcing rules for interest in §§861(a)(1)(C) and (a)(1)(D), and modifies the sourcing rule for dividends in §861(a)(2)(B).[1] As a result, the second level withholding tax for interest is eliminated except in the case of certain tax treaties, the threshold for the application of the second level withholding tax on dividends is lowered, and the branch level tax is imposed.

II. Present Law

Under present law, the United States seeks to tax foreign corporations that operate in the United States in the same way as U.S. corporations that operate in the United States. Thus, if the recipient of dividends and interest from a foreign corporation is a U.S. person, the United States imposes a tax at the regular graduated tax rates. If the recipient of the dividends and interest is a foreign person, however, taxation becomes more complex.

A U.S. corporation that pays dividends to a foreign person not engaged in a trade or business within the United States must withhold tax at the rate of 30 percent, absent a contrary treaty provision.[2] The United States imposes the tax at a flat 30% rate because it is not feasible to collect a graduated tax from foreign persons who may have minimal contacts with the United States. Bilateral income tax treaties reduce the withholding tax on dividends paid to residents of the treaty country to as little as 5% and also reduce or eliminate the tax on interest paid to residents of the treaty country.

Similarly, a foreign corporation, most of whose operations are in the United States, that pays dividends or interest of the types that are taxable if paid by a U.S. corporation to a foreign person, must withhold a portion of such payments. A foreign corporation is liable for this second level withholding tax only when more than half of its gross income for the 3-year period ending with the close of the taxable year preceding the payment of the interest or the declaration of the dividends is effectively connected with a U.S. trade or business.[3] The second level withholding tax (or lower treaty rate) applies to the allocable portion of the interest or dividend payments attributable to income of the foreign corporation that is effectively connected with its U.S. trade or business. The second level withholding tax exists primarily because its elimination would give an unfair advantage to a corporation which conducts substantially all of its business in the United States. Moreover, the second level withholding tax also attempts to treat payments by foreign corporations with significant operations in the United States like payments by U.S. corporations.

III. Detailed Analysis

A. Tax Base — The Dividend Equivalent Amount

New §884 substitutes a branch level tax at the rate of 30% on the "dividend equivalent amount" in place of the second level withholding tax. The "dividend equivalent amount" is the foreign corporation's earnings and profits that are effectively connected with the conduct of a trade or business in the United States for the taxable year, with two adjustments.[4] This tax base ("dividend equivalent amount") is adjusted as follows:

(1) it is reduced by any increase in "U.S. net equity"; and

(2) it is increased by any decrease in "U.S. net equity."[5]

The increases and decreases in "U.S. net equity" are calculated by comparing the net equity at the close of the taxable year with the net equity at the close of the previous taxable year.[6] "U.S. net equity" is defined as U.S. assets, reduced (including below zero) by U.S. liabilities. The term U.S. assets is defined as the money and the aggregate adjusted bases of property of the foreign corporation that is treated as effectively connected with the conduct of a trade or business in the United States under regulations prescribed by the Secretary of Treasury. The adjusted tax basis of any property shall be its adjusted basis for purposes of computing earnings and profits.[7] The term U.S. liabilities is defined as the liabilities of the foreign corporation that are treated as effectively connected with the conduct of a trade or business in the United States under regulations prescribed by the Secretary of Treasury.[8] Such regulations are to be consistent with the principles used in allocating

interest deductions under §882(c)(1).[9] U.S. assets include cash necessary to meet the day-to-day operating requirements of the branch, receivables from the sale of goods or services, inventories, property, plant, and equipment used in the business, investments (as long as the income from such investments is effectively connected with the conduct of a U.S. trade or business), and other assets necessary to operate the business.[10] U.S. liabilities include the day-to-day payables and short-term obligations, long-term obligations incurred to purchase assets that are used in the business, and other liabilities necessary to meet business obligations.[11]

Since the tax base is computed with respect to the earnings and profits of the branch that are effectively connected with the conduct of a U.S. trade or business, the computation of net equity, as the base used to determine the amount of the deemed remittances of the profits of the branch, is also based on the value of the branch's assets and liabilities for purposes of earnings and profits. If the value for purposes of earnings and profits is different than the adjusted tax basis, the former value shall govern. Therefore, if a branch claims accelerated depreciation on its assets in calculating taxable income, it will be required to calculate net increases or decreases in equity by using the basis of the assets for earnings and profits purposes.[12] Because the tax base should be decreased for increases in net U.S. equity, the Conference Report also provides that the tax base should be decreased in stock acquisition cases if the branch tax would not have been imposed had assets rather than stock been acquired. Treasury regulations may provide, therefore, that where a branch acquires control of a U.S. corporation with its profits, it may be inappropriate to impose the branch tax.[13] The tax base is reduced by the increase in "U.S. net equity," because of the assumption that such increase in net equity results from a reinvestment of current after-tax earnings which should not be taxed again. Similarly, the tax base must be increased by the decrease in "U.S. net equity," because of the assumption that such decrease results from a disinvestment of previously reinvested earnings which should be taxed.[14] Thus, a tax is due upon subsequent disinvestment of reinvested earnings.[15]

It would appear that, under a literal reading of §884, the branch tax would be due upon liquidation of the foreign corporation or upon termination of its U.S. activities. The Service has announced, however, that pursuant to its authority to prescribe regulations under §884, it will provide that no branch tax will be imposed for the year in which a foreign corporation completely terminates its U.S. trade or business.[16] Subject to an anti-abuse rule, a foreign corporation that terminates its U.S. trade or business (for example, by selling all of its U.S. trade or business assets and investing the proceeds in U.S. obligations) will not have a decrease in U.S. net equity as of the end of the taxable year nor will it have income that is effectively connected to the conduct of a U.S. trade or business for purposes of the branch tax. Therefore, the foreign corporation will not be liable for the branch tax.

Comment: For purposes of Notice 86-17, a corporation with more than one U.S. branch will be deemed to have a single U.S. trade or business. Thus, a foreign corporation must cease all activities in all of its branches in order to terminate completely its U.S. trade or business and avoid the branch profits tax by relying on Notice 86-17. Under the anti-abuse rule, a foreign corporation will be subject to the branch profits tax nonetheless, if it completely terminates its U.S. trade or business and then conducts a U.S. trade or business, directly or through a related person, with the assets of the terminated trade or business, or reinvests any of the proceeds from the sale of the assets of the terminated trade or business in a U.S. trade or business.

Observation: Regulations under §884 will also provide that the incorporation of all of the U.S. trade or business activities of a foreign corporation into a wholly owned U.S. subsidiary in a §351 transaction will not be treated as a decrease in U.S. net equity of the foreign corporation. As a result, the dividend equivalent amount will not be increased, and no branch tax will be imposed.[17]

The "dividend equivalent amount" (increased or decreased by net U.S. equity) is based on the earnings and profits of the branch, to achieve greater parity between the remittance of branch profits and the distribution of the earnings of a subsidiary.[18] Thus, the tax base is reduced by Federal and foreign income taxes, by capital losses not allowed in computing taxable income, and by any other adjustments that affect the amount of earnings that could be repatriated as a dividend if the branch operated as a corporation.[19] The earnings and profits of the branch are measured pursuant to general Code principles, but are limited to the activities of the branch.[20] Since the branch profits tax applies to earnings and profits that are effectively connected with a U.S. trade or business, the tax applies, for example, to foreign corporations that are partners in a partnership that derives effectively connected income and to foreign corporations that own vessels and aircraft that generate effectively connected income.[21]

Because the computation of earnings and profits is to be consistent with the computation of a subsidiary's earnings and profits, the branch's earnings and profits include income that would be effectively connected with the conduct of a U.S. trade or business if such income were taxable. Thus, tax exempt interest received or accrued by the branch is included in the earnings and profits limitation, even though such interest is not included in the branch's income that is effectively connected with the conduct of a U.S. trade or business.[22] Moreover, current earnings that are not reinvested in a branch's trade or

business assets are subject to the tax, even though the branch has incurred deficits in prior years. Consistent with the taxation of a subsidiary's distributions, the dividend distributions of a foreign corporation during a year do not reduce the earnings and profits of a branch for purposes of determining the tax base of the branch.[23]

New §884 explicitly excludes five items from income in determining effectively connected earnings and profits of a branch:

(1) certain earnings derived by foreign sales corporation (income described in §§921(d) and 926(b));

(2) earnings derived by foreign transportation carriers that are exempt from U.S. tax pursuant to treaty or reciprocal exemption;

(3) earnings derived from the sale of any interest in U.S. real property holding corporations;

(4) earnings derived by certain captive insurance companies that elect to treat their income as effectively connected with a trade or business; and

(5) earnings derived by corporations satisfying certain ownership and income requirements that are organized in certain U.S. possessions (described in §881(b)).[24]

The Conference Report states at II-648 that the exclusion for earnings and profits of a U.S. possessions corporation is intended to be mirrored to prevent the application of the branch tax to U.S. corporations operating in U.S. possessions.

B. Branch Tax — The Branch Level Interest Tax

Congress has also sought to equalize the taxation of branch interest with the taxation of a subsidiary's interest.[25] Thus, any interest paid by a branch of a foreign corporation engaged in a trade or business in the United States will be treated as if it were paid by a U.S. corporation for purposes of §§871, 881, 1441, and 1442.[26] In addition, to the extent the amount of interest allowable as a deduction under §882 in computing the effectively connected taxable income of the foreign corporation exceeds the interest that is deemed paid under the provisions enumerated in the preceding sentence, such excess interest shall be treated as interest paid by the branch to its foreign parent on the last day of the foreign corporation's taxable year.[27] The rate of tax on branch level interest is 30%, absent a treaty reduction of the tax rate.[28]

The Secretary has authority to promulgate regulations to clarify the scope of the branch level tax on interest. The Conference Report states that the regulations may provide that where the indebtedness of the home office is attributed to the branch, the excess interest is treated as incurred on each type of external borrowing by the foreign corporation and determined by reference to the relative principal amounts of each type of external borrowing, taking into account the average interest rate on each such type of borrowing.[29] For example, in the case of a bank, the excess interest will not necessarily be treated as interest paid on a bank deposit. The Conference Report also questions the legitimacy of any attempts between a branch and its foreign parent, or between two branches, to establish bona fide debtor-creditor relations, because only one legal entity is involved. If a branch succeeds in structuring its interbranch loans artificially in a manner different from its external liabilities, it will be able to reduce or eliminate the tax on its excess interest. The regulations are expected to address this concern. Should companies be able nonetheless to establish bona fide debtor-creditor relationships, the regulations may treat excess interest as an interbranch loan.[30]

C. Relationship with Tax Treaties

A unique aspect of the branch profits tax imposed by §884 is its interaction with U.S. bilateral tax treaties. These tax treaties fall into three different categories, and §884 treats each category differently. The three categories are treaties that prevent the imposition of the branch tax, treaties that permit the imposition of a branch tax, and treaties that are silent on the issue.

Newer treaties and those based on the United States 1981 Model Tax Treaty contain nondiscrimination clauses that prohibit the branch tax, because the imposition of such tax, which is not incurred by U.S. corporations, results in more burdensome taxes than those imposed by the United States on U.S. corporations. Thus, the Conference Report states that the Treasury Department interprets Article 24(3) (and similar provisions in other treaties) of the United States 1981 Model Tax Treaty to preclude the branch profits tax.[31] The TRA provides that if such treaty prohibits the branch tax, the branch tax will not apply.[32] If the treaty allows the second level withholding tax on dividends, the withholding tax will apply as under prior law, instead of the branch tax.[33] The report of the Senate Finance Committee states that the Treasury Department interprets Article 10(5) (and similar provisions in other treaties) of the United States 1981 Model Tax Treaty to permit the imposition of a second level dividend tax by the United States.[34] Thus, for example, if the withholding tax on dividends applies when the foreign corporation derives 50% or more of its income from sources within the United States, and the foreign corporation does derive 50% or more of its income from the United States, the second level withholding tax will apply under the terms of the treaty. If the foreign corporation does not derive 50% of its income from U.S. sources, however, neither the branch tax nor the withholding tax will apply.[35]

Treaty benefits will be disallowed (notwithstanding the fact that a treaty does not allow the branch tax) if the foreign corporation seeking to take advantage of such benefits is treaty shopping. Treaty shopping exists (i) if

[35] §884(e)(1)(A); S. Rep. at 405.

more than 50% in value of the stock of the foreign corporation seeking to take advantage of the tax treaty is beneficially owned, actually or constructively under §958, by persons who are not residents of the foreign country party to the treaty, or (ii) if 50% or more of the foreign corporation's income is used, directly or indirectly, to meet liabilities to persons who are not residents of the foreign country party to the treaty or the United States.[36] If the foreign corporation's stock is primarily and regularly traded on an established securities exchange in the country under whose treaty it claims benefits as a resident, the TRA provides that it shall be considered a resident of that country for purposes of §884, notwithstanding the general stock ownership rule.[37] In addition, if the foreign corporation's parent is organized in the same country as the foreign corporation, the subsidiary corporation is wholly owned by the parent (directly or indirectly), and the parent corporation's shares are primarily and regularly traded in that country, the subsidiary corporation will also be considered a resident of that foreign country for purposes of the country's treaty with the United States.[38] The Secretary of Treasury has authority to prescribe regulations that treat a corporation as a resident of a foreign country, if such corporation meets any requirements that the Secretary establishes to ensure that individuals who are not residents of such foreign country are not treaty shopping.[39]

In a treaty shopping situation, where the treaty allows the second level withholding tax on dividends but disallows the branch tax, the withholding tax will apply under the terms of the treaty, if the withholding tax is triggered. For example, if the withholding tax on dividends applies when the foreign corporation derives 50% or more of its income from sources within the United States, and the foreign corporation does derive 50% or more of its income from the United States, the second level withholding tax will apply under the terms of the treaty. In the event that the foreign corporation in the above example does not derive 50% of its income from U.S. sources, however, it will not be subject to the withholding tax, and, therefore, the branch tax will apply.[40] Treaties with Belgium, Italy, Japan, Korea, and the United Kingdom prohibit the branch tax.

Bilateral treaties that allow the imposition of the branch tax are harmonious with §884. If such treaties reduce the rate of the branch tax, such reduced rate will apply.[41] Treaties with Australia, Barbados, Canada, France, New Zealand, Poland, Rumania, South Africa, the U.S.S.R., and Trinidad and Tobago allow a branch tax. In treaty shopping cases, however, the 30% statutory rate will apply.[42] Finally, if the treaty between the United States and the country in which the corporation resides permits a branch profits tax, but contains a different calculation of the tax, or subjects the branch tax to restrictions that are not in §884, the treaty will apply, unless the corporation is treaty shopping.[43]

Example: Article X(6) of the United States tax treaty with Canada provides a different calculation of the branch profits tax. Under the Canadian treaty, a branch profits tax is imposed at the rate of 10% on the earnings of the branch (permanent establishment). Earnings consist of business profits (including gains from the sale of property in the country where the branch is located, if such property forms part of the business property of the branch), less the sum of (a) business losses attributable to such branch, (b) all taxes imposed by the country where the branch is located (other than the branch tax), (c) the profits of the branch that are reinvested in the country where the branch is located, and (d) five hundred thousand Canadian dollars ($500,000) or the equivalent amount in United States dollars.[44] Unless the Canadian corporation is treaty shopping, this treaty calculation of the branch tax will apply.

If a treaty between the United States and the country in which the foreign corporation resides does not specifically provide for a branch tax, but does otherwise permit such a tax, the treaty's direct investment dividend rate will apply to the branch tax base.[45] If the corporation is treaty shopping, the 30% rate under §884(a) will be used.[46] Treaties with Austria, Denmark, Greece, Ireland, Luxembourg, the Netherlands Antilles, Pakistan, Sweden, Switzerland, and West Germany appear to fall into the category of treaties that do not specifically provide for the branch tax, but do otherwise permit such tax.

A treaty may modify or eliminate the branch tax on excess interest as defined in §884(f)(1)(B), provided there is no treaty shopping.[47] In determining whether a treaty reduces or eliminates the branch tax on interest, the applicable treaty is generally the one between the United States and the country of the corporation's home office. As with the branch tax on the dividend equivalent amount, any treaty benefits are subject to the treaty shopping prohibition of §884(e)(3)(B).[48] In the case of withholding tax on interest actually paid by a branch, §884 effectively treats the branch as a U.S. corporation; therefore, the appropriate treaty is the one between the United States and the country of the foreign recipient. Treaty benefits will be unavailable in instances of treaty shopping.

D. Coordination with the Second Level Withholding Tax

The TRA revokes the sourcing rules for interest found in §§861(a)(1)(B) and (C). In addition, the TRA reduces the threshold at which the second level withholding tax on dividends applies.[49] As a result, dividend income will be U.S. source if at least 25% of the foreign corporation's gross income from worldwide sources is effectively connected with with the conduct of a trade or business within the United States during the 3-year period ending on the close

[48] *Id.*
[49] TRA §1241(b)(1)(B) and (b)(2).

of the taxable year preceding the payment of the dividends.[50]

The TRA does not allow a tax credit for the branch profits tax. Instead, the TRA expands the current deduction for dividends received from a foreign corporation. Consequently, if a corporation is subject to the branch profits tax for any taxable year, any second level withholding tax imposed by §§871(a), 881(a), 1441, or 1442 will not apply to any dividends paid by such corporation for the taxable year, though the branch tax for the taxable year may be zero.[51] Thus, if a branch reinvests its after-tax earnings in a trade or business during a taxable year so that no branch tax is due that year, but the branch's business income exceeds 25% of the foreign corporation's total income and the corporation distributes dividends during that year, no withholding tax applies. Only if the tax treaty of the country where the foreign corporation resides precludes the branch tax and permits the withholding tax will the withholding tax apply.[52] If the foreign corporation is treaty shopping, however, it cannot claim any benefits under the treaty with respect to dividends that the foreign corporation pays and on which it must withhold under §§1441 or 1442, nor can it claim treaty benefits with respect to dividends that it receives, if such dividends meet the new 25% threshold of §861(a)(2)(B).[53]

Under present law, if a foreign corporation's U.S. subsidiary sells real estate, such sale may be subject to a corporate level tax as well as a tax on the amount that is repatriated as a dividend. The Conference Report makes it clear that the withholding tax on dividends will apply in addition to the branch profits tax in instances where the branch sells real property and pays a dividend to its parent corporation.[54] The TRA does not modify the portion of dividends treated as U.S. source.

E. Regulations

Section 884(g) grants the Secretary of Treasury authority to prescribe regulations necessary to carry out the purposes of the statute. The regulations are to address several potential abuse situations. One such situation is the temporary increase in the "U.S. net equity" of a branch at the end of the year, in order to decrease the branch profits tax. Other such abuses are the use of back-to-back loans by persons who are not residents of the treaty country to avail themselves of benefits under the treaty, and the improper characterization of interbranch funds, by both treaty and nontreaty residents, to avoid U.S. tax. Congress has instructed the IRS to collapse back-to-back loans, and, if the ultimate recipient is not protected by a treaty, he will be subject to U.S. tax.[55] Similarly, the IRS will scrutinize interbranch transactions to make sure that they have substance.[56] Regulations are also to address the extent to which a decrease in "U.S. net equity" may not indicate that a branch has remitted its profits during the taxable year. The Conference Report contains a warning to taxpayers that the tax-writing committees of Congress will monitor collections and compliance with the new provisions to ensure that there are no abuses. Congress intends to cure any such abuses with additional legislation.[57]

F. Effective Date

Section 1241 of the TRA is effective for taxable years beginning after December 31, 1986.[58]

IV. Consequences of the Branch Profits Tax

A. Interaction and Conflict with Treaties

There is a conflict between the second level branch tax and the nondiscrimination clauses of some recent U.S. tax treaties. Treaties with Belgium, Italy, Japan, Korea, and the United Kingdom clearly preclude the additional level of U.S. tax (the branch profits tax) on permanent establishments in the United States of the five treaty countries, because the imposition of such tax, which is not incurred by U.S. corporations, results in more burdensome taxes than those imposed by the United States on U.S. corporations. While the second level branch tax is intended to be a substitute for the secondary withholding tax, the five treaties mentioned above do not permit corporations and their shareholders to be lumped together in determining whether discrimination exists.

A similar problem also exists under the language of the nondiscrimination clauses in some of our older treaties. These treaties preclude the additional level of tax on "citizens" of each party to the treaty (including all juridical persons, partnerships, and associations), leaving open the question of whether a branch that is a permanent establishment in one country of a corporation which is a "citizen" of the other country is eligible for relief under the nondiscrimination clause of these older treaties. The policy underlying nondiscrimination clauses would seem to dictate that such clauses be applied to branches. If these treaties are in the category of treaties that do not provide for a branch profits tax, but otherwise permit such tax, the TRA may create the same problem as the original version of the branch profits tax of the House Bill by unilaterally overriding such treaties. If it is clear that such treaties prohibit the branch profits tax, the tax would not override the treaties except in treaty shopping situations. Such clauses exist in treaties with Austria, Denmark, Greece, Ireland, Luxembourg, the Netherlands Antilles, Pakistan, Sweden, Switzerland, and West Germany.

Treaties with Australia, Barbados, Canada, France, New Zealand, Poland, Rumania, South Africa, the U.S.S.R., and Trinidad and Tobago permit the branch level tax, but limit the rate of such tax. These treaties only permit the branch level tax on the profits or taxable income of the branch. To the extent that the branch tax imposes a tax on interest payments attributable to a U.S. branch, it conflicts even with this category of treaties in a treaty shopping situation.

The TRA attempts to resolve the conflict with treaties

by providing that, in the event a particular treaty with a foreign country does not allow the second level branch tax, but does allow the existing second level withholding taxes on dividends, to that extent, the second level withholding tax will continue to apply.[59] Most of the treaties referred to above prevent the second level withholding tax on dividends, in addition to precluding the second level branch tax. In these situations, where both the branch level tax and the withholding tax are made inapplicable by the treaty, if there is treaty shopping, the statute overrides the treaty, and the branch tax will apply.[60] As explained at III, C, *supra*, a foreign corporation is treaty shopping where more than 50% by value of the stock of such corporation is beneficially owned, actually or constructively under §958, by persons who are not residents of the foreign country party to the treaty, or where 50% or more of the foreign corporation's income is used, directly or indirectly, to meet liabilities to persons who are not residents of the foreign country party to the treaty or the United States. In treaty shopping situations, the branch tax overrides any treaty.[61]

The potential for treaty shopping arises, in particular, under the current treaty with the Netherlands Antilles.[62] Under the Netherlands Antilles tax treaty, the second level branch tax could be avoided by conducting the business of a U.S. branch through a corporation organized in the Netherlands Antilles, which has a treaty with the United States that prohibits both the branch tax and the secondary withholding tax. The recently signed treaty with the Netherlands Antilles contains a provision preventing treaty shopping. However, as the treaty is currently signed, the rules preventing treaty shopping will not apply in certain limited circumstances to a corporation that is a Netherlands Antilles resident and which derives income from the ownership of real estate in the United States.[63] Currently, the old Netherlands Antilles tax treaty is in effect and the treaty shopping provisions of the branch tax override that treaty. Should the new treaty be ratified subsequent to the date the current tax bill becomes law, its provisions would override the branch profits tax. The United States and the Netherlands Antilles negotiated the new treaty on the basis of current tax law, however, and, in notes signed at the same time as the treaty, agreed that they would reopen negotiations to assess the impact of the legislation on the treaty and to negotiate any necessary amendments. Therefore, it is possible that the United States may seek renegotiation of the exemption from the treaty shopping rules (and, as a result, from the branch profits tax) that the new treaty gives Netherlands Antilles real estate corporations.

Observation: The 50% local ownership rule, the most integral part of the definition of treaty shopping, may have the unintended effect of taking away a treaty's nondiscrimination protection from enterprises that were intended to benefit from such protection in the past. In fact, many European concerns are owned by residents of more than one country and may fail the 50% test, even if each owner is a resident of a different treaty country that has the same nondiscrimination protection under a bilateral treaty with the United States. Treaty shopping seems unlikely in the last scenario, because most of our treaty partners are higher tax jurisdictions.[64]

B. Technical Problems with the Branch Profits Tax

The statute creates some technical problems. One such important problem is inherent in its use of the concept of "U.S. net equity" to measure the reinvestment or disinvestment of profits in the United States. Insofar as the branch tax base is increased for reductions in net equity and decreased for increases in net equity, taxpayers can manipulate the tax base. However, Congress expects the regulations adopted pursuant to the statutory authority it has given to the Secretary of Treasury to prevent the year-end manipulation of the tax base. Such regulations should also prescribe the necessary adjustments to bring the calculation of the tax base in conformity with the concept of corporate earnings and profits. In this regard, the regulations would have to make adjustments in computing "U.S. net equity" to reflect the rules of §312, which deals with adjustments in computing earnings and profits.

Another technical problem with the statute is that an increase in U.S. liabilities without a corresponding increase in U.S. assets would reduce "U.S. net equity" and trigger the branch tax, even though there are no corresponding earnings. In the situation above, the TRA limits the tax base to earnings and profits, thereby decreasing the likelihood that an increase in liabilities without an increase in earnings will trigger the branch tax. Such an anomalous increase in the tax base runs contrary to the well-established tax principle that taxpayers should not incur a tax if they do not receive the funds with which to pay such tax.[65]

Observation: There is no definition of "branch" in §884. Generally, a branch is an integrated trade or business under the Code or a permanent establishment under tax treaties. There are certain circumstances in which a foreign corporation of a treaty country may not have a permanent establishment in the United States, but may be conducting business here nonetheless under the Code. For example, a foreign corporation may be conducting business in the United States through an independent agent and not have a permanent establishment here. It is unclear whether the branch profits tax would apply in such a case where the foreign corporation did not have a permanent establishment in the United States but was still conducting business here. Congress has left this definitional gap in the statute to the regulations that will be promulgated pursuant to the Secretary's authority.

[59] §884(e)(1)(B).

Comment: The reports of the Ways and Means Committee and the Senate Finance Committee characterize the branch tax as a tax on the profits of U.S. branches of foreign corporations.[66] The branch becomes liable for the tax when it remits its profits to its foreign home office. The characterization of the branch tax as a tax on profits is only accurate, however, if the branch remits such profits in the taxable year that it earns them. If the profits that the branch realizes are not remitted to its home office until a later year, then the branch tax is not simply an additional tax on profits, but, in actuality, a tax on capital. This result follows because under our system of annual accounting, income of a taxable year becomes capital on the close of such taxable year in which it is earned or accrued.[67] Since the United States generally taxes income rather than capital, the branch tax seems to be a departure from this norm.

Chapter 63

THE SCOPE OF SUBPART F RULES BROADENED [ACT §§1221, 1222, 1223, and 1224]

George B. Delta, Esq.
Silverstein and Mullens
Washington, D.C.

I. Pre-TRA 1986 Law

In general, no current U.S. tax is imposed on the foreign income of a foreign corporation, and a U.S. investor in a foreign corporation is taxed only when income is distributed to him. This deferral of tax on the income of a foreign corporation that is U.S. owned does not apply to certain types of passive income. Under Subpart F of the Internal Revenue Code, §§951-964, the U.S. will impose a current tax on such passive income of a U.S. person who owns at least 10% of the total combined voting power of a foreign corporation that is a controlled foreign corporation ("CFC"). Under pre-TRA §957, a corporation is a CFC if such U.S. persons (10% U.S. shareholders) own more than 50% of the combined voting power of all of the stock of such corporation on any day during the taxable year.

Subpart F income generally includes foreign personal holding company (FPHC) income, consisting mostly of several types of passive income under Code §553. FPHC income consists of dividends, interest, royalties, annuities, gains from the sale of stock or securities (excluding the gains of regular dealers in stock or securities), gains from commodities transactions (excluding gains or losses from certain hedging transactions), gains from the sale or other disposition of an interest in an estate or trust and other amounts includible in the income of the foreign corporation by virtue of Subchapter J (§641 and following), amounts received by a corporation under a personal services contract, amounts received by a corporation by a shareholder owning 25% or more in value of its stock for use of its property, and rents.[1] This definition of FPHC income for purposes of Subpart F excludes other types of FPHC Subpart F income that are passive in nature. Subpart F income also includes foreign base company sales income, foreign base company shipping income (excluding shipping income invested in shipping operations), foreign base company services income, foreign base company oil related income and income derived from the insurance of U.S. risks. A CFC's earnings from insuring foreign risks of unrelated persons escape tax under Subpart F. Interest, dividends, and securities gains received by foreign insurance companies from the investment of premiums and reserves are also not subject to tax under Subpart F.

[1] Code §954(c)(1) and §553, prior to the passage of the Tax Reform Act of 1986 ("TRA") P.L. 99-514 (October 22, 1986).

II. Overview

A. Gain From the Sale of Property That Does Not Generate Income

As a general rule, Code §954(c) has been expanded to include several other types of passive income to the definition of FPHC income for purposes of Subpart F. Dividends, interest, rent, royalties, and annuities earned by a CFC continue to be FPHC income.[2] However, rents and royalties which are derived in the active conduct of a trade or business and which are not received from a related person, do not constitute FPHC income.[3]

In addition to the excess of gains over losses from sales and exchanges of stock and securities (which have been treated as Subpart F income historically, subject to some exceptions relating to banks and insurance companies), the TRA provides that the excess of gains over losses from the sale or exchange of certain other passive investment property is also FPHC income. Code §954(c)(1). Passive investment property is property that produces no income, or produces either (1) dividend and interest income (except as excluded from Subpart F under the active business exception for banks and insurance companies), (2) rents and royalties (excluding active rents and royalties from unrelated third parties), or (3) annuity income. There is an exception to Subpart F treatment if the property is inventory or other dealer property.[4]

Gain from the sale of land that is used by the seller in an active trade or business of the seller at the time of the sale is not Subpart F income.[5] On the other hand, gain on the sale of diamonds held for investment purposes prior to their disposition would be FPHC income. The distinction made in Code §954(c)(1)(B) is demonstrated further by the Senate Report, which states that "gain from the disposition of a patent that gave rise to unrelated party, active business royalties would not be treated as FPHC income,

[2] Code §954(c)(1)(A). *See also* Act §1221. All citations are to sections of the Internal Revenue Code, as amended by the TRA, unless otherwise indicated.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

while gain from the sale of a patent licensed to a person related to the seller would be so treated." [6]

Code §954(c) also retained the pre-TRA law exception from current taxation for securities gains of regular dealers and extended this exception to the broader category of passive gains described above. Thus, the sale of a painting by an art dealer does not generate FPHC income for purposes of Subpart F, but the gain generated by a company holding a painting as an investment prior to its sale does generate FPHC income for purposes of Subpart F, because the painting did not give rise to income before its disposition.[7]

B. Gains From Commodity Transactions

The excess of gains over losses from commodities transactions, including income from futures and forward contracts, constitutes FPHC income.[8] Just as under pre-TRA law, gains by a producer, processor, merchant or handler of a commodity which arise from *bona fide* hedging transactions reasonably necessary to the conduct of its business in the manner in which such business is customarily and usually conducted by others are not FPHC income.[9] Moreover, an additional limitation for active business gains or losses of a CFC substantially all of whose business is that of an active producer, processor, merchant, or handler of commodities is also provided.[10] This exception applies only to CFCs that are actively engaged in commodities businesses, not corporations primarily engaged in financial transactions such as the trading of futures.[11] Income from foreign currency transactions is not taken into account in determining the gains from commodity transactions, because income from such transactions is covered under a separate provision discussed in Part II, C below.[12]

In determining whether a company actively engages in the commodities business, regularly taking delivery of physical commodities will generally indicate the existence of such a business, but it will not be conclusive.[13] Other characteristics of companies actively engaged in the commodities business include: engaging in substantial processing activities and incurring substantial expenses with respect to commodities prior to their sale (*e.g.*, refining, concentrating, mixing, crushing, aerating, and milling), engaging in significant activities and incurring substantial expenses relating to the physical movement, handling and storage of commodities, owning and operating facilities used in the activities described above, owning vessels or vehicles for transporting commodities, and producing the commodities sold.[14]

C. Foreign Currency Gains

TRA 1986 adds to the definition of FPHC income for Subpart F the excess of foreign currency gains over losses attributable to a Code §988 transaction.[15] A Code §988 transaction is any one of the three listed below, if the taxpayer is entitled to receive or is required to pay an amount denominated by a currency other than the U.S. dollar (in most instances):

(1) Acquiring or becoming the obligor under a debt instrument.

(2) Accruing or otherwise taking into account any item of expense, gross income, or gross receipts that is to be paid or received at a later date.

(3) Entering into a forward contract, futures contract, option, or similar financial instrument that is not marmarked-to-market (treated as though sold at fair market value).[16]

Foreign currency gains do not constitute FPHC income in the case of a transaction directly related to the business needs of a CFC. Therefore, active foreign currency gains or losses arising from a CFC's business as an active foreign currency dealer are excluded from FPHC income under Subpart F.[17]

D. Income Equivalent to Interest

Any income that is the equivalent of interest will be treated as FPHC income. TRA 1986 does not define what constitutes the equivalent of interest.[18] For this purpose, commitment fees for a loan constitute interest equivalent income.[19] Congress added Code §954(c)(1)(E) to Subpart F, because taxpayers were sheltering passive interest type of income by rearranging the form of the passive investment so that the income generated was not traditional interest income.[20] Passive leasing income is FPHC income as well.[21]

E. Dividends, Interest and Gains of Banks and Insurance Companies

Under pre-TRA law, there was an exclusion for interest, dividends, and gains from the sale of stock or securities received from unrelated persons in the conduct of a banking, financing, or similar business, or derived from the investments made by an insurance company of its unearned premiums or reserves that were ordinary and necessary for the proper conduct of its insurance business.[22] Under TRA 1986, Subpart F income will include all FPHC income of banks and insurance companies. However, FPHC income will not include any interest which is derived in the conduct of a banking business and which is export financing interest pursuant to Code §904(d)(2)(G).[23] Export financing interest is defined under §904(d)(2)(G) to mean any interest derived from financing the sale or other disposition for use or consumption outside the U.S. of any property which is manufactured, produced, grown, or extracted in the U.S. by the taxpayer or a related person, if not more than 50% of

the fair market value of such property is attributable to products imported into the U. S.[24] Thus, if more then 50% of the value of the property is attributable to products imported into the U.S., the exception for export financing is unavailable.

F. Related Person Exceptions

Subpart F income does not include certain dividends, interest, rents and royalties received by a CFC from a related person under Code §954(c). However, the amendments made by TRA 1986 restrict the pre-TRA rule, excluding from Subpart F such types of income received from a related person. The post-TRA related party exclusion allows a CFC to exclude from Subpart F income dividends and interest that it receives from a related person which is (i) created or organized under the laws of the same foreign country under the laws of which the CFC is created or organized, and (ii) which uses a substantial part of its assets in its trade or business in such foreign country.[25] In addition, the CFC may also exclude from Subpart F income rents and royalties that it receives from a related person for the use of, or the privilege of using, property within the country under the laws of which the CFC is created.[26] Under TRA 1986, however, interest, rent, and royalty payments do not qualify for the related person exclusion to the extent that such payments reduce the Subpart F income of the payor.[27] As a result, if the income of the payor corporation is entirely non-Subpart F income, then the related person exclusions of Code §§954(c)(3) will apply as under pre-TRA law. To the extent that the payor corporation has Subpart F income that is reduced by its payments of interest, rent or royalties, then such income will be treated as Subpart F income to the recipient, notwithstanding the general rules of Code §954(c).

Example: A CFC receives $100 of interest from a related party that is excluded from Subpart F income under Code §954(c)(3). The payee corporation also earns foreign base company services income currently taxable to its shareholders under Subpart F. None of the expenses of the payee corporation are allocable to the $100 of interest in determining the payee's net income subject to income tax under Subpart F. The related party payor of the interest, also a CFC, earns $5,000 of gross manufacturing income that is not subject to tax under Subpart F, and $500 of gross portfolio dividend income that is subject to tax under Subpart F. The payor uses the asset method to allocate its $100 of interest expense for purposes of computing its Subpart F income and, under this method, allocates $90 to its gross manufacturing income and $10 to its gross portfolio dividend income. Since $10 is used to reduce the payor's Subpart F income, $10 of the interest income received by payee CFC is Subpart F income to the payee's U.S. shareholders. This look-through rule will operate in the same manner as in this example for rent, royalty or other similar income otherwise excluded from taxation under Subpart F.[28]

G. Insurance Income

Pre-TRA Code §953(a) currently defines insurance income for purposes of Subpart F to include only income received from the insurance of U.S. risks. TRA 1986 expands the definition of insurance income under Subpart F to include income from insuring those risks situated in a country other than that in which the insurer is created or organized. Thus, for purposes of Subpart F, insurance income means any income that is attributable to the issuing or reinsuring of any insurance or annuity contract in connection with property in, liability arising out of activity in, or in connection with the lives or health of residents of, a country other than the country under the laws of which the CFC is created or organized.[29] In addition, Subpart F will apply to income attributable to an insurance contract in connection with risks located in the insurer's country of organization as the result of an arrangement under which another corporation receives a substantially equal amount of premiums or other consideration for insuring risks outside the insurer's country of organization.[30] The amount of income that is subject to tax as Subpart F insurance income is the amount that would be taxed under Subchapter L of the Code, if it were the income of a domestic insurance corporation (subject to the modification Code §953(b)).[31] Thus, Code §953(a) subjects to U.S. taxation the investment income of an insurance company, as well as its premium income. TRA 1986 repealed the *de minimis* rule of pre-TRA Code §953(a)(1), which excluded income from the insurance of U.S. risks that would otherwise have been subject to Subpart F, if such income constituted 5% or less of the total premium type of income of an insurance company. Thus, any income of a CFC from the insurance of risks located in other countries will be subject to current taxation under Subpart F in accordance with Subchapter L (as modified). However, the modified Subpart F *de minimis* rule of Code §954(b)(3) (discussed in greater detail in Part II, Q below) has been extended to apply to insurance income.

H. Captive Insurance Company Income

TRA 1986 also includes a special provision for captive insurance companies. Generally, a captive insurance company is one organized by one or more persons primarily to provide insurance protection to its owners or persons related to its owners. Offshore captives provide significant tax benefits if the premiums are deductible as *bona fide* insurance premiums, because generally no current tax is imposed on the premium income in the hands of the captive. In many instances, courts have found that there was no shifting of risk in the captive insurance company situation and have denied the parent a deduction for the amount paid as a premium to its captive.[32] However, under Rev. Rul. 78-338, 1978-2 C.B. 107, U.S. persons were able to secure a deduction for premiums paid to a captive and escape current U.S. tax by spreading out the ownership of the

captive insurer among several persons. The purpose of post-TRA Code §953(c) is to subject the related person insurance income of offshore captive insurance companies that previously avoided tax because of a relatively widespread dispersal of U.S. ownership to current U.S. tax.

Insurance income that is related person insurance income will be taxable currently to an expanded category of U.S. persons. Related person insurance income is any insurance income that is attributable to a policy of insurance or reinsurance with respect to which the primary insured is a U.S. shareholder in the foreign corporation or a related person (within the meaning of §954(d)(3)) to such U.S. shareholder.[33] A U.S. shareholder, with respect to a foreign corporation, is any shareholder who is a U.S. person who owns, actually or constructively, under Code §958(a), any stock of the CFC.[34] For purposes of taking into account this related person insurance income, the U.S. ownership threshold for CFC status is ownership of 25% or more of the combined voting power of all of the corporation's stock or 25% or more of the total value of such stock (not 50% or more).[35] The definition of insurance income for captive insurance companies is the same as under Code §953(a), therefore, the investment income of a captive insurance company, as well as its premium income are subject to current taxation. Premium income also includes income attributable to officers' or directors' insurance if the U.S. shareholders of the CFC receiving such income (or persons related to such shareholders) pay the premiums directly or indirectly, and the insureds are officers or directors of the U.S. shareholders (or persons related to such U.S. shareholders).[36]

There are three exceptions to the current taxation of related person insurance company income. First, such income is not currently taxable if the CFC's gross related person insurance income for the year is less than 20% of all of its gross insurance income for the year.[37] The definition of insurance income is the same as under Code §953(a)(1), except that the exclusion of income attributable to the insurance of same-country risks is inapplicable.[38] The purpose of this exception is to exclude from the operation of Code §953(c), foreign insurance companies with 25% or more U.S. ownership that do not earn a significant proportion of related person insurance income.[39]

Second, related person insurance income of a CFC will not be currently taxable if less than 20% of the total combined voting power of all the classes of stock entitled to vote and less than 20% of the total value (stock and policies) of such corporation during the taxable year are owned (directly and indirectly) by persons who are the primary insureds under any policy of insurance or reinsurance or by persons who are related to such primary insureds.[40]

Third, related person insurance income will not be currently taxed as Subpart F income if the CFC elects to treat it as income effectively connected with the conduct of a U.S. trade or business taxable under Code §882.[41] While this election generally subjects the related person insurance income to current taxation, it also allows the CFC to receive the same tax benefits that similarly situated U.S. insurers enjoy with respect to related person insurance income. Thus, for example, an electing offshore captive insurer that incurs net operating losses from meeting large claims may carry such losses back three years and forward 15 years under Code §172.[42] The availability of loss carryovers provides a great benefit to insurers of those risks with respect to which the Code does not permit deductions for reserves. The election under §953(c)(3)(C) is to be made at such time and such manner as the Secretary of Treasury prescribes and will be effective in the year made and all subsequent years. The election is revocable only with the Secretary's consent.[43] In order for the election to be effective, the CFC must waive all benefits available under an income tax treaty with respect to related person insurance income. The election is only effective if the electing CFC meets such requirements as the Secretary prescribes to ensure that the tax on related person insurance is collected.[44]

Post-TRA Subpart F rules for offshore captive insurance companies apply to mutual insurance companies as well as stock insurance companies with the policyholders treated as the stockholders.[45] The Secretary is empowered to promulgate regulations to adapt the application of this rule providing for current taxation of related person insurance income to mutual insurance companies.

Comment: Foreign mutual insurance companies insuring a substantial number of U.S. persons will have significant amounts of related person insurance income, solely because a mutual insurance company is owned by its policyholders. As long as such income is effectively connected with the conduct of a U.S. trade or business, it is taxed by the U.S. as if the policyholders have permanent establishments in the U.S.[46] As such, the related person insurance income is taxed outside of the Subpart F rules, and the revised definition of related person insurance income under §953(c) will have no impact on foreign mutual insurance companies.

The Secretary has been given broad authority to promulgate regulations under Code §953(c), including regulations preventing the avoidance of the revised rules of Code §953(c) through cross-insurance agreements.[47]

Example: A foreign insurance company is owned by 35 unrelated U.S. persons who are engaged in similar businesses. In profitable years, the company will have related person insurance income that is currently taxable as Subpart F income under Code §953(c).[48] Assume that instead

of one CFC, two CFCs, one owned by 18 U.S. persons, the other by the remaining 17 U.S. persons, are formed. The primary business of the first CFC is to insure the risks of the owners of the second CFC; the primary business of the second CFC is to insure the risks of the owners of the first CFC. The Conference Report states that this cross-insurance arrangement is the same as the standard captive insurance arrangement, and that the income of both CFC's will be taxed under Subpart F as related person insurance income.[49]

I. Foreign Base Company Shipping Income

Under pre-TRA law Code §954(b)(2), foreign base company shipping income is excluded from Subpart F income to the extent that the amount of foreign base company shipping income is reinvested in foreign base company shipping operations.[50] Act §1221(c) of TRA 1986 repeals §954(b)(2) and (g), therefore, any income that constitutes foreign base company shipping income is taxable as Subpart F income, regardless of the CFC's use of the income. In addition, Code §954(f), defining foreign base company shipping income, is broadened to include any income derived in space, on the oceans, or Antarctica.[51]

J. Foreign Corporation Not Used to Reduce Taxes

Under pre-TRA law Code §954(b)(4), foreign base company income does not include any income received by a CFC if the creation of such CFC and the transaction giving rise to such income did not have as a "significant purpose" the substantial reduction or avoidance of tax. Code §954(b)(4) does not apply to foreign base company oil related income. This subjective tax avoidance test is replaced with an objective test. Under the post-TRA test, Subpart F income will not include items of foreign base company income received by a CFC, if the CFC establishes, to the satisfaction of the IRS, that the income was subject to an effective rate of income tax imposed by a foreign country that is at least 90% of the maximum U.S. corporate tax rate under Code §11.[52] Code §954(b)(4) still does not apply to foreign base company oil related income.[53]

Although the revised rule applies separately to every item of income received by a CFC, the IRS is expected to promulgate regulations grouping items of income that bear substantially equal effective tax rates in a given country.[54] For example, all interest income of a CFC from sources in its country of incorporation may be treated as one item of income.[55]

Comment: The reason for the change is to make the rule of Code §954(b)(4) more certain. Because moveable income could be earned through a U.S. corporation as easily as through a CFC, a U.S. taxpayer may use a CFC to earn such income if it can obtain significant tax savings. If no significant tax savings exist in routing income through a CFC, however, there is little reason to impose a tax under Subpart F. Since most countries have higher corporate tax rates than the U.S., amended §954(b)(4) is aimed at corporations receiving income from tax haven countries.

K. Definition of Related Person

Under pre-TRA Code §954(d)(3), a related person is defined as an individual, partnership, trust or estate which controls the CFC, a corporation which controls or is controlled by the CFC, or a corporation which is controlled by the same persons that control the CFC. A partnership, trust, or estate in which the CFC holds an interest is not a related person. Control of a corporation is defined as direct or indirect ownership of stock possessing more than 50% of the total combined voting power of all of the classes of stock entitled to vote.

TRA 1986 expands the definition of a related person in Code §954(d)(3).[56] A partnership, trust or estate that controls or is controlled by a CFC, as well as a partnership, trust or estate which is controlled by the same persons controlling the CFC are related persons.[57] Control of a corporation is expanded to include direct or indirect ownership of 50% or more of the voting power of all classes of stock entitled to vote, or direct or indirect ownership of 50% or more of the total value of stock of such CFC.[58] In the case of a partnership, trust or estate, control is direct or indirect ownership of 50% or more of the total value of the beneficial interests in such entity.

L. Repeal of the Chain Deficit Rule and Modification of the Accumulated Deficit Rule

The "chain deficit rule" of pre-TRA Code §952(d), under which a CFC could reduce its earnings and profits by a deficit in the earnings and profits of a commonly owned CFC in the same chain of ownership, has been repealed.[59] TRA 1986 also limits the present law rule known as the accumulated deficit rule, permitting a CFC to reduce its Subpart F income (as defined §952(a)) by the sum of its prior year deficits in earnings and profits.[60]

The Conference Report, provides several reasons for restricting the use of deficits to reduce Subpart F income. First, Congress has sought to simplify the operation of the separate limitation look-through rules for CFCs by conforming them and the Subpart F rules more closely. Secondly, the present law deficit rules allow U.S. taxpayers operating abroad through CFCs to shelter too much income earned in tax haven countries from current U.S. tax. Under the chain deficit rule of Code §952(d), a loss incurred anywhere in a chain of CFCs eliminates U.S. tax on an equal amount of income earned elsewhere in the chain even though the loss may be in a non-Subpart F income category, or bear little or no relation to the income that it offsets. Similarly, the accumulated deficit rule of pre-TRA §952(c) allows a CFC to avoid tax on Subpart F income by offsetting that income with prior year deficits incurred in non-Subpart F or unrelated income categories. Were this rule not modified, in many cases, taxpayers could shelter

from U.S. tax, income from passive investment simply by moving those investments into CFCs with prior year deficits.[61]

Observation: Deficits in earnings and profits incurred by foreign corporations before their acquisition by a U.S. corporation may be used to shelter post-acquisition Subpart F income of the U.S. corporation from tax under pre-TRA law, unless the IRS can show under Code §269 that the acquisition was made to evade or avoid income tax. Selling the losses of a CFC is not restricted by any rule corresponding to the special rule that limits the carryover of losses found in Code §382 that is applicable to U.S. corporations. The TRA's repeal of the chain deficit rule and its modifications to the accumulated deficit rule limit the use of acquired deficits.

Another problem that led to the repeal of the chain deficit rule is the ability that the provision confers upon certain taxpayers to effectively utilize the same deficits twice. Assume, for example, that a U.S. corporation controls two foreign corporations. One of these CFCs owns the other CFC. One of the CFCs, the loss corporation, has a current deficit in earnings and profits of $100. To fund that deficit the U.S. corporation makes an additional $100 contribution to the loss corporation's capital. That capital contribution increases by $100 the U.S. corporation's basis in its stock and in the loss corporation. Under the chain deficit rule, the $100 deficit reduces the second CFC's currently taxable Subpart F income in the year in which the deficit arises. In the following year, the U.S. corporation's stock in the loss corporation becomes worthless. Under the rules governing the deduction of losses for worthless securities, Code§165(g), that stock is a capital asset and the U.S. corporation may therefore deduct in full its basis in the stock, including the $100 component of that basis corresponding to the prior year's additional capital contribution. Therefore, the loss corporation's $100 deficit in earnings and profits reduces the U.S. corporation's taxable income twice, once in the first year under the chain deficit rule, and then again in the following year under the rule allowing a loss deduction for worthless securities. A similar result may be achieved when debt is used to fund a CFC's loss and is later written off.[62]

As a general rule, post-TRA §952(c) provides that foreign base company shipping income, foreign base company oil related income, Subpart F insurance income, or FPHC income may be reduced only by accumulated deficits in earnings and profits which are attributable to activities that give rise to foreign base company shipping income, foreign base oil related income, Subpart F insurance income, or FPHC income, respectively.[63] Other categories of Subpart F income may not be reduced by accumulated deficits under post-TRA Code §952(c).[64] Under the rule in post-TRA Code §952(c), Subpart F insurance income may be reduced by an accumulated deficit from insurance activities only if the CFC receiving such income was predominantly engaged in the active conduct of an insurance business (within the meaning of post-TRA Code §904(d)(2)(C)(ii)), in both the year in which the income was earned and the year in which the deficit arose.[65] FPHC income may be reduced under the post-TRA accumulated deficit rule only if the CFC receiving such income was predominantly engaged in the active conduct of a banking, financing, or similar business, within the meaning of post-TRA §904(d)(2)(C)(ii), in both the year in which the income was earned and the year in which the deficit arose.[66] Accumulated deficits may only be used once.[67] In order to be eligible for use under the rule, an accumulated deficit must arise in a year for which the foreign corporation incurring such deficit is a CFC.[68] As under pre-TRA law, accumulated deficits that cannot be used in one year may be carried over indefinitely for possible use in later years. Under the accumulated deficit rule, as modified, accumulated deficits for taxable years beginning before 1987 may not be carried forward to reduce Subpart F income.[69]

A U.S. shareholder in a CFC may reduce its Subpart F inclusion with respect to that CFC only by the shareholder's *pro rata* share of accumulated deficits.[70] A U.S. shareholder's *pro rata* share of any accumulated deficit is to be determined under rules that are similar to the rules which limit Subpart F inclusions to a shareholders *pro rata* share of Subpart F income under §951(a)(2), for whichever of the following yields the smaller share: (i) the close of the current taxable year or (ii) the close of the year in which the deficit arose.[71] Under this rule, the use of accumulated deficits will be limited by the size of the U.S. shareholder's interest in a CFC in the current year and in the year in which the deficit was incurred. Under pre-TRA law, Subpart F and §1248 inclusions are similarly limited by the size of a shareholder's interest in the CFC when the relevant earnings and profits arose.[72]

Under post-TRA §952(c), pre-acquisition deficits of an acquired corporation to which a CFC in the acquiring group succeeds will not reduce its post-acquisition Subpart F income of a CFC's shareholders, except to the extent that such shareholders had ownership interests in the acquired corporation when the deficits arose.[73] Similarly, pre-merger deficits of a foreign corporation merged into a CFC will not reduce post-merger Subpart F income of the CFC's shareholders, except to the extent that such shareholders had ownership interests in the merged corporation when the deficits arose.[74] The Conference Report states that the Secretary of the Treasury is to promulgate regulations implementing the above rules, including regulations that limit the use of deficits in connection with other reorganizations.

The pre-TRA rule that permits current deficits in earnings and profits in any income category including

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

non-Subpart F income categories, to reduce Subpart F income for the taxable year is retained.[75] However, if Subpart F income of a CFC is reduced by reason of §952(c)(1)(A) any excess of the earnings and profits of that corporation over its Subpart F income in any subsequent taxable year will be recharacterized as Subpart F income under rules similar to the separate limitation loss recharacterization rule of Code §904(f)(5), and thus, will be currently included in the income of the CFC's U.S. shareholders in such year of recharacterization.[76] Under this recharacterization provision, Subpart F-type income that is recaptured for foreign tax credit limitation purposes under the separate limitation loss recharacterization rule is effectively recaptured for Subpart F purposes as well.[77] For example, income of a CFC that is passive after application of the separate limitation loss recharacterization provision is also FPHC income currently taxable to the CFC's U.S. shareholders under Subpart F. The Subpart F recharacterization provision thus helps to integrate Subpart F and the separate foreign tax credit limitation rules.[78] The operation of the foregoing rules is demonstrated by the following four examples.

Example (1): The application of the accumulated deficit rule may be demonstrated as follows. Assume that a CFC, wholly owned by a U.S. corporation, incurs a $100 deficit in earnings and profits in a taxable year. Also assume, that gross income, net taxable income, and earnings and profits are the same. Sixty dollars of the deficit is attributable to activities that, when profitable, generate foreign base company shipping income. The other $40 of the deficit is attributable to activities that, when profitable, generate foreign base company oil related income. In the following year, the CFC earns $90 of foreign base company shipping income, $20 of foreign oil related income, and $10 foreign base company services income. The full $60 portion of the accumulated deficit attributable to base company shipping activity can be used to reduce the U.S. parent's base company shipping income inclusion with respect to the foreign corporation. Thus, the foreign base company shipping income is reduced to $30. Twenty dollars of the $40 portion of the accumulated deficit attributable to base company oil related activity can be used to eliminate the $20 of base company oil related income. The remaining $20 of accumulated deficit cannot be used to reduce the U.S. parent's base company services income or remaining base company shipping income since this deficit amount did not arise from base company services or shipping activity. For the year, therefore, the U.S. parent's Subpart F income with respect to the foreign corporation after the accumulated deficit is applied consists of $30 of base company shipping income, $10 of base company services income and no base company oil related income. The $20 portion of the accumulated deficit attributable to foreign oil related activity which is not used may be carried over for possible use in characterizing distributions from the foreign corporation in later years.[79]

Example (2): Assume, that a foreign manufacturer, wholly owned by a U.S. corporation, incurs a $100 deficit in earnings and profits in a taxable year. The manufacturing operations of a CFC, when profitable, generate non-Subpart F income. In the following year, the U.S. parent sells through the foreign manufacturer to third country buyers goods that a U.S. subsidiary of the U.S. parent produces. With respect to these sales, the foreign corporation receives $30 of foreign base company sales income, currently taxable to its U.S. parent under Subpart F. The foreign corporation also earns $80 of non-Subpart F manufacturing income. The amendment to the accumulated deficit rule limits to $80 the amount of the $100 accumulated deficit which may be used in this year. Since the accumulated deficit arose in a non-Subpart F income category, it may offset only the $80 of non-Subpart F income. For the year, therefore, the Subpart F income after the accumulated deficit is applied consists of $30 of foreign base company sales income. The $20 portion of the accumulated deficit not used may be carried over by the foreign corporation to reduce non-Subpart F earnings and profits in later years.[80]

Example (3): Assume that a foreign corporation, wholly owned by a U.S. corporation, incurs a $100 deficit in earnings and profits in a taxable year. The CFC is predominately engaged in the active conduct of a banking business during that year. When profitable, the CFC earns primarily FPHC income, as that category of Subpart F income is expanded by the statute. The deficit arises from activities that generate FPHC income. On the first day of the following year, 40% of the stock of the CFC is sold to a second U.S. corporation. The CFC earns $300 of FPHC income and no other income during that taxable year. It is predominantly engaged in the active conduct of a banking business during that year. The second U.S. corporation's share of the Subpart F income is $120, 40% of $300. The second U.S. corporation cannot reduce its Subpart F inclusion by any portion of the $100 accumulated deficit, because it owned no stock in the CFC in the preceding year, when the deficit was incurred. The first U.S. corporation can reduce its $180 (60% of $300) share of the Subpart F income by $60 (60% of $100) of the accumulated deficit; under the accumulated deficit rule, as modified, its *pro rata* share of the deficit is determined for the close of the current year because such determination yields a smaller *pro rata* share than a determination of such share for the close of the deficit year. The $40 portion of the accumulated deficit not utilized may be carried over for possible use by the first U.S. corporation in later years.[81]

Example (4): The interaction of the new Subpart F recharacterization rule, the Subpart F earnings and profits limitation, and the foreign loss allocation and separate limitation loss recharacterization is illustrated as follows.[82] Assume a CFC wholly owned by a U.S. corporation has a $100 overall limitation loss, and $200 of FPHC (passive) income under Subpart F before allocation of the loss. Earnings and profits equal income. Under the foreign loss allocation rule (which mirrors the earnings and profits

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

limitation under Subpart F), the $100 loss reduces the CFC's passive income for the year to $100. The Subpart F earnings and profits limitation reduces the income currently taxable to the CFC's U.S. shareholders correspondingly to $100. The following year, the CFC earns $250 of FPHC (passive) income under Subpart F and $1,500 of overall limitation (*i.e.*, non-Subpart F) income. Under the separate limitation loss recharacterization rule, an amount of this overall limitation income equal to the prior year's overall limitation loss that reduced FPHC passive income, $100, is recharacterized as passive income. As a result, for foreign tax credit limitation purposes, the CFC has $1,400 ($1,500 - $100) of overall limitation income and $350 ($250 + $100) of passive income in the second year. The Subpart F recharacterization rule provides that the recaptured $100 of passive income is also FPHC income for purposes of Subpart F, because Subpart F FPHC income the year before was reduced by $100 under the earnings and profits limitation and, in the current year, earnings and profits exceed tentative Subpart F income by at least that amount. Therefore, the Subpart F inclusion of the CFC's shareholders is $350 in the second year.[83]

M. Effective Date — TRA 1986 §1221

The provisions discussed in II, A-L, *supra*, all amended by TRA 1986 §1221, are generally effective for taxable years of foreign corporations beginning after December 31, 1986. The effective date for the repeal of the exclusion for reinvested shipping income, however, is for taxable years ending on or after January 1, 1992. In addition, in the case of the first three taxable years of a qualified controlled foreign insurer beginning after December 31, 1986, the amendments made by §1221 do not apply to the phase-in percentage of any qualified reinsurance income.[84]

N. New Definition of Controlled Foreign Corporations [TRA 1986 §1222(a)]

A corporation is a CFC, under pre-TRA law, only if more than 50% of the total combined voting power of the corporation is owned by U.S. shareholders that each own at least 10% of that voting power.[85] Under this definition of a CFC, taxpayers could structure their investments to avoid Subpart F by ensuring that they did not own more than 50% of the voting power of a corporation, even if they owned the majority of its value in nonvoting stock. TRA 1986 changed the definition to provide that a corporation is a CFC if more than 50% of the total combined voting power of all classes of stock of such corporation entitled to vote, or the total value of the stock of such corporation, is owned (directly or indirectly under Code §958(a)) by U.S. shareholders on any day during the taxable year.[86] The definition of a U.S. shareholder continues to be any U.S. person who owns (directly or indirectly under Code §958(a)) 10% or more of the total combined voting power of all classes of stock entitled to vote.[87] A corresponding amendment was made to Code §957(b) (relating to the definition of a CFC for purposes of taking into account insurance income under Code §953(a)), which defined a CFC as a corporation of which more than 25% of the voting power or value is owned by U.S. shareholders on any day during the taxable year, if the gross amount of premiums or other consideration described in TRA 1986 Code §953(a)(1) exceeds 75% of the gross amount of all premiums or other consideration in respect to all risks.[88]

O. Definition of Foreign Personal Holding Company [TRA §1222(b)]

Under pre-TRA law, a corporation is a FPHC, only if more than 50% of the value of such corporation is owned by five or fewer U.S. individuals.[89] This provision was expanded so that a corporation is a FPHC if more than 50% of the value of its stock, or the total combined voting power of all classes of stock entitled to vote, is owned (directly or indirectly) by five or fewer U.S. individuals.[90]

P. Effective Dates — TRA §1222(c)

The amendments to the definitions of CFCs and FPHCs are effective for taxable years beginning in 1987. However, for purposes of applying Code §§951(a)(1)(B) and 956, the definition of a CFC takes effect on August 16, 1986.[91] Property acquired by the CFC before August 16, 1986 need not be taken into account under Code §956(b).[92]

Q. Subpart F De Minimis Rule [TRA §1223]

The Subpart F *de minimis* rule now extends to insurance income as well. Thus, gross income of a CFC that is foreign base company income under Code §954(a) or insurance income under Code §953(a) is excluded from Subpart F income under Code §954(b)(3), if the sum of foreign base company income and gross insurance income is less than the lesser of (i) 5% of gross income, or (ii) $1,000,000.[93] Previously, the *de minimis* rule exempted foreign base company income if it was less than 10% of gross income, and a separate *de minimis* rule applied to insurance income which excluded such income from Subpart F if the premiums or other consideration received in connection with the insurance of U.S. risks did not exceed 5% of all premiums or other consideration in respect to insurance of all risks.[94] Code §954(b)(3)(B) provides that if the sum of foreign base company income and gross insurance income for the taxable year exceeds 70% of gross income, then the entire gross income constitutes Subpart F income. Previously, this 70% full inclusion rule did not include insurance income.[95] The TRA 1986 Subpart F *de minimis* rule applies for foreign tax credit limitation purposes as well.[96]

R. Effective Date — TRA §1223(c)

The amendments to the Subpart F *de minimis* rule and the full inclusion rule apply to taxable years beginning after December 31, 1986.

S. Repeal of Special Treatment for Possessions Corporations [TRA §1224]

Corporations chartered in U.S. possessions or Puerto Rico were not treated as CFCs if at least 80% of such corporation's gross income for the three year period immediately preceding the close of the taxable year was derived from sources within a U.S. possession or Puerto Rico, and at least 50% of such corporation's income during such period was derived from the active conduct of a trade or business constituting fishing, the manufacture or processing of certain goods, the processing of agricultural or horticultural products, or the ownership of hotels in a U.S. possession or Puerto Rico.[97] Therefore, U.S. shareholders of possessions corporations that were previously exempt from tax because such corporations were not CFCs under the special rule, now face U.S. taxation of the current earnings and profits of these corporations.

[97] Pre-TRA Code §957(c), repealed by TRA §1224(a).

T. Effective Dates — TRA §1224(b)

The repeal of Code §957(c) is effective for taxable years of foreign corporations beginning after December 31, 1986.[98] However, for purposes of applying Code §§951(a)(1)(B) and 956, the repeal takes effect on August 16, 1986.[99] Property acquired by the possessions corporations before August 16, 1986 need not be taken into account under Code §956(b).[100]

Chapter 64

NEW RULES GOVERNING THE TREATMENT OF CERTAIN PASSIVE FOREIGN INVESTMENT COMPANIES [ACT §1235]

Deborah M. Beers, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Prior to the passage of the Tax Reform Act of 1986, [1] the foreign source income of a foreign corporation generally was not subject to U.S. taxation unless, by reason of the control of the foreign corporation by U.S. persons, the corporation met the definition either of a controlled foreign corporation, a foreign personal holding company or a foreign investment company.[2] A foreign corporation meeting the definition of one of the foregoing types of entities is subject to tax on a current basis, at the shareholder level, on all or a part of the foreign corporation's earnings and profits. Each entity has different requirements related to its ownership and income, some of which overlap.

A. Foreign Personal Holding Companies

The foreign personal holding company (FPHC) provisions [3] have been part of the Internal Revenue Code since 1937 when they were enacted as a complement to the personal holding company (PHC) legislation of 1934 to prevent the abuse known as the foreign "incorporated pocketbook", whereby United States shareholders would accumulate in foreign corporations certain types of passive income without incurring any U.S. tax liability. Since the United States has no jurisdiction over a foreign corporation which does not have any U.S. source income, the FPHC rules require "United States shareholders" of the foreign corporation to include in gross income their proportionate share of the corporation's "undistributed foreign personal holding company income" (UFPHCI). "United States shareholders" [4] may include U.S. citizens or residents, U.S. corporations, U.S. partnerships, or estates and trusts (other than those estates and trusts whose gross income includes only income from sources within the United States) without regard to percentage of ownership.

For purposes of determining which corporations meet the definition of FPHC, Code §552 sets forth both a "gross income requirement" and a "stock ownership requirement." Under the gross income test, at least 50% (60% initially) of the gross income of a foreign corporation for the taxable year must be foreign personal holding company income (generally passive types of income including interest, dividends, rents and royalties). For taxable years beginning prior to January 1, 1987, the stock ownership test requires that at any time during the taxable year more than 50% in value of the outstanding stock of a foreign corporation must be owned directly or indirectly by or for not more than five individuals who are citizens or residents of the United States (the "United States group").[5] For taxable years beginning after December 31, 1986, ownership of more than 50% in value *or* voting power will satisfy the stock ownership requirement.[6] For purposes of determining the ownership of stock, the attribution rules of Code §554 apply.

B. Controlled Foreign Corporations

1. Current Inclusion of E&P in Income of U.S. Shareholders

Subpart F (Code §§951-964) was added to the Internal Revenue Code in 1962. [7] The avowed purpose of the Subpart F provisions was to prevent the use of "tax havens" to reduce or eliminate tax liabilities of United States persons both at home and abroad.[8] Under Subpart F, a United States person who owns, or is considered to own, 10% or more of the total combined voting power of all classes of stock entitled to vote of a "controlled foreign corporation" (CFC)[9] is required to include in gross income his *pro rata* share of certain types of income of the CFC. In general, the includible income consists of: (1) the *pro rata* share of the CFC's "Subpart F income" (including foreign personal holding company income) for the year; (2) the *pro rata* share of the CFC's previously excluded "Subpart F income" withdrawn from investments in less developed countries; (3) the *pro rata* share of the CFC's previously excluded "Subpart F income" withdrawn from foreign base company shipping operations for such year; and (4) the *pro*

rata share of the CFC's increase in earnings invested in U.S. property.[10]

As defined in §957 of the Code, a CFC is any foreign corporation of which, for taxable years beginning prior to January 1, 1987, more than 50% of the total combined voting power of all classes of stock entitled to vote is owned, actually or constructively, by "United States shareholders" on any day during the taxable year of such foreign corporation. As with FPHCs, the stock ownership test is modified for years beginning after December 31, 1986, to include ownership of more than 50% in voting power *or* value of a foreign corporation.[11] The term "United States shareholder" is defined under Code §951(b) as those United States persons actually or constructively owning 10% or more of the total combined voting power of all classes of stock entitled to vote of the foreign corporation.[12] For purposes of determining constructive ownership of stock in a CFC, attribution rules are contained in §958 of the Code. These rules closely mirror the attribution provisions of §318 of the Code, except that stock owned by non-resident alien individuals may not be attributed to a U.S. person.[13]

As a result of the foregoing ownership requirements, if 11 unrelated U.S. persons each own more than 9%, but less than 10%, of the voting power or value of a foreign corporation, that corporation will not be a CFC (although it may be an FPHC). In addition, if four U.S. persons each own 11% of the voting power of a foreign corporation and non-U.S. persons own the rest, the U.S. persons will be U.S. shareholders but the foreign corporation will not be a CFC because the total voting power owned by U.S. persons is less than 50%.

2. *Ordinary Income Treatment of Gain on Sale or Exchange of CFC Stock*

In addition to current inclusion in income of U.S. shareholders of a controlled foreign corporation, a portion of the gain on the sale or exchange (including deemed exchanges under §§302 and 331) of CFC stock recognized by a 10% or more U.S. shareholder may be treated as ordinary dividend income (eligible for the deemed paid foreign tax credit) under §1248 of the Code.[14] The portion treated as ordinary income is equal, with adjustments, to the post-1962 earnings and profits of the CFC accumulated during the period of ownership of the U.S. shareholders. Section 1248 generally does not apply to U.S. shareholders owning stock in a foreign corporation which has not been a CFC within five years preceding the sale date.[15] It is thus theoretically possible for shareholders of the CFC to obtain long-term capital gains treatment on appreciation of the CFC stock by arranging to decontrol the CFC at least five years prior to the sale date of the stock.

C. *Foreign Investment Companies*

The provisions relating to foreign investment companies (FICs) [16] were added to the Code in 1962 at the same time as the CFC provisions. In enacting the FIC provisions, Congress intended to stop the avoidance of tax by investors in foreign investment companies.[17] In 1962, as today, a domestic investment company was required to distribute at least 90% of its earnings in order to escape the imposition of a corporate level tax.[18] Shareholders of a domestic regulated investment company therefore paid a single tax on the earnings of the company. A foreign investment company and its shareholders, however, generally paid no U.S. income tax on a current basis, since U.S. tax was imposed on foreign corporations only on income derived from sources within the United States, and such companies generally had no U.S. securities and distributed no dividends. The U.S. shareholders therefore were subject to a U.S. tax on their investment in the foreign investment company only when their stock was sold, enabling them to convert the ordinary earnings of the corporation into capital gains. In addition, those U.S. shareholders who held their stock in foreign investment companies until death could completely escape U.S. tax on the stock since a basis step-up would occur at date of death.

To remedy these abuses, §1246 of the Code provides that, upon sale or exchange of FIC stock by a stockholder, the taxpayer's ratable share of post-1962 earnings and profits up to the amount of the gain recognized is to be treated as ordinary, nondividend income. Unlike §1248, which treats the post-1962 E&P of a CFC as dividend income on sale of stock, no deemed paid foreign tax credits are available to a corporate taxpayer which holds 10% or more of the FIC's stock.[19] In addition, to limit the permanent avoidance at death which otherwise would be available on the sale of FIC stock, §1246(e) provides that the basis of stock received from the estate of a decedent must be reduced by the amount of the decedent's ratable share of the earnings and profits of the company accumulated after December 31, 1962. Upon sale of the stock, the heir would receive ordinary income in the amount of such earnings and profits but would be allowed a deduction for any estate tax paid which was attributable to inclusion in the decedent's estate of the amount taxed as ordinary income.[20]

A FIC is defined in §1246(b) to include: (1) any foreign corporation (a) registered under the Investment Company Act of 1940 as a management company or a unit investment trust (registered FIC) or, (b) if not so registered, any foreign corporation engaged in the business of investing, reinvesting or trading in securities (unregistered FIC); where (2) 50% or more of the total combined voting power of all classes of stock entitled to vote or the total value of all classes of stock is held directly or indirectly (by applying constructive ownership rules contained in §§318(a) and 958(a) [21] by United States persons. control test applicable to FICs under §1246(b) differs slightly, therefore, from that applicable to FPHCs and CFCs, in that status as a FIC will be triggered at any time when "50% or more", as opposed to "more than 50%" of the voting power or value or stock is held by U.S. persons. In addition, the U.S. persons holding FIC stock, as opposed to "U.S. shareholders" holding CFC stock, do not individually have to hold any specified percentage of the FIC stock in order for the foreign corporation to qualify as a FIC.

Unlike §1248, it is not possible, under §1246, to remove the taint of FIC stock by decontrolling it. Therefore, once the existence of control by U.S. persons and the investment business tests are met at any time during a U.S. stockholder's holding period, the later transfer of control to non-resident aliens will not enable a shareholder in a FIC to realize capital gain on sale under §1246. However, for sales or exchanges of FIC stock after August 13, 1981, a selling shareholder's ratable share of post-1962 earnings and profits does not include earnings and profits attributable to any year within the taxpayer's holding period in which the corporation was not a FIC, provided it was not a FIC in any year before such year and the corporation became a FIC because of its investment activities (*i.e.*, an unregistered FIC under §1246(b)(2)). Thus, the gain realized by a U.S. shareholder selling or exchanging stock of an unregistered FIC constitutes ordinary income only to the extent of the shareholder's ratable share of the corporation's E&P attributable to years after the corporation first became a FIC.

There is a means available to registered FICs, but not unregistered FICs, to have their U.S. stockholders exempt from taxation under §§1246, 1248 and Subpart F.[22] In order to avoid these provisions, the registered FIC must have elected, before 1963, to distribute to its stockholders 90% or more of its net worldwide income in each post-1962 year. The U.S. stockholders of electing FICs are entitled to pass-through treatment on the electing FIC's capital gains and to a deemed paid credit for foreign taxes paid by the FIC. The election places the FIC in a position comparable to that of a domestic regulated investment company.

II. Overview

All of the foregoing provisions, designed to prevent the deferral or avoidance of U.S. tax on the ordinary earnings from investments by U.S. shareholders in foreign corporations, might be avoided by any U.S. citizen who invested in a foreign corporation more than half of the stock of which was owned, taking into account constructive ownership rules, by non-resident alien individuals. For this reason,[23] Congress enacted new Code §§1291-1297 which prescribe new rules governing the treatment of certain passive foreign investment companies (PFICs).[24]

In general, the Tax Reform Act provides that U.S. shareholders who invest in a PFIC must pay both the U.S. tax and an interest charge related to the value of the tax deferral on the shareholder's investment at the time that the shareholder either disposes of his investment or receives an "excess distribution" from the PFIC. All gains recognized on disposition and all distributions received by the PFIC shareholder are taxed as ordinary income and are not eligible for the deemed paid foreign tax credit under §902.[25] Sections 1291 and 1293 provide some relief to U.S. shareholders who invest in PFICs which are "qualified electing funds." If a PFIC, under rules described below, elects to be a "qualified electing fund," the U.S. shareholders must include in gross income a share of the PFIC earnings and profits on a current basis and pay a shareholder level tax on those amounts. Where income is included currently under this election, the U.S. shareholder may retain the long-term capital gain character of income derived by the foreign corporation.

The new PFIC provisions do not repeal §§1246 and 1247. However, the PFIC provisions are not applicable to any corporation for which a §1247 election is in effect. In addition, §1246 shall not apply to the earnings and profits of any company for any taxable year beginning after December 31, 1986 if such company is a PFIC for such taxable year.[26] Since many foreign investment companies currently taxable as FICs under §1246 may be expected to meet the definition of PFIC contained in the new Code provisions, §1246 should be of limited application for taxable years beginning after December 31, 1986.

III. Detailed Analysis

A. Definition of PFIC

Section 1296 of the Code defines the term "passive foreign investment company" as any foreign corporation if (a) 75% or more of the gross income of such corporation for the taxable year is passive income or (b) the average percentage of assets by value held by the corporation during the taxable year which produced passive income or were held for the production of passive income is at least 50%. The PFIC thus is defined solely on an income and asset basis, as opposed to a stock ownership basis, defeating the attempts of U.S. shareholders to avoid the provision by placing 50 percent or more of the ownership of the foreign corporation in the hands of non-resident alien individuals.

1. Passive Income Defined

The term "passive income" is generally to have the same meaning as that term is used in amended Code §904, which defines passive income for purposes of the separate tax credit limitation.[27] Section 904 in turn refers to income of the type which would be "foreign personal holding company income" as defined in §954(c) of the Subpart F rules. Section 954(c), as amended by the Tax Reform Act,[28] defines the term "foreign personal holding company income" to include dividends, interest, rents, royalties and annuities.[29] In addition, foreign personal holding company income will include gains from the sales of property which does not generate active income, gains from certain commodity transactions, foreign currency gains not directly

[22] Code §1247.
[23] *See* Conf. Rep. No. 841, 99th Cong., 2d Sess., II-640-641 (1986)(hereinafter "Conf. Rep.").
[24] TRA §1235.
[25] *See* Code §1291(a)(5).

[27] Code §1296(b)(1).
[28] TRA §1221(a).
[29] Code §954(c)(1)(A).

attributable to a transaction related to the business needs of the corporation, and any income "equivalent to interest."[30] The term "passive income" within the meaning of §954(c), however, does not include rents and royalties received from an unrelated person if derived from the active conduct of a trade or business, interest derived in the conduct of a banking business which is "export financing interest" as defined in §904(d)(2)(G), and certain "same country" dividend, interest, rent and royalty income received from a related person to the extent that such income does not reduce the payor's Subpart F income.[31]

The PFIC rules also contain an exception to the term "passive income" for (1) income derived in the active conduct of a banking business by an institution licensed as a bank in the United States, and (2) income derived in the active conduct of an insurance business by a corporation which would be subject to U.S. tax if it were a domestic corporation.[32] In addition, the conferees state that it is expected that bona fide underwriters of securities (who might otherwise be classified as PFICs because their assets consist of dividend-producing property) will be excluded from classification as a PFIC by reason of the dealer exception in §954(c)(1)(B), and because most of their income consists of commission income, which is not Subpart F income under §954(c).[33]

2. Look-Through Rule

In order that a foreign corporation should not be determined to be a PFIC merely by reason of holding stock in another foreign corporation, the statute provides a "look-through" rule in §1296(c) so that if a foreign corporation owns at least 25% in value of the stock of another corporation it will be treated as if it held its proportionate share of the assets of that corporation and received directly, rather than as a dividend, its proportionate share of the income of that corporation.

3. Start-Up Year Corporations and Corporations Changing Businesses

The statute provides relief from classification as a PFIC for those corporations which either are just beginning in business or changing businesses. Thus, under §1297(b)(2) a corporation will not be treated as a PFIC for the first taxable year in which it has gross income if: (a) no predecessor of the corporation was a PFIC; (b) it is established to the satisfaction of the Secretary that the corporation will not be a PFIC for either of the first two taxable years following the start-up year; and (c) such corporation is not in fact a PFIC for either of the first two taxable years following the start-up year. Similarly, under §1297(b)(3) a corporation which was not a PFIC for any prior taxable year, and which has disposed of one or more active trades or businesses within the taxable year (giving rise to substantially all of its passive income) shall not be treated as a PFIC by reason of investment of the proceeds of that disposition during the taxable year if it is established to the satisfaction of the Secretary that the corporation will not be a PFIC for either of the first two taxable years following the disposition year, and such corporation is not in fact a PFIC for either of such two taxable years.

This exception provides a breathing period for newly formed corporations and those which have sold all of their operating assets in anticipation of reinvesting the cash received on the disposition in a new trade or business. Such corporations may purchase portfolio securities in the interim period between the receipt of cash and its investment in operating assets. The provision thus adopts the approach of the District Court in *SEC v. Fifth Avenue Coach Lines, Inc.*[34] In this case a defendant corporation in October 1966 received $11.5 million in payment of a condemnation award for its operating assets. It placed the award in interest-bearing bank deposits. During October, November and December 1966, it purchased various portfolio securities. From January 1967 through June 1967 it continued to buy portfolio securities and, by June 1967, its cash balance declined to $1.6 million. In determining whether the corporation had violated the Investment Company Act of 1940 by failing to register as an investment company during 1966, the District Court noted that a company which has suddenly come into possession of a substantial amount of cash is entitled to a reasonable time to decide what to do with it without violating the Investment Company Act.[35] However, the court decided that, while the corporation was not an investment company at the end of 1966, it had become one by June of 1967.

A corporation which does not intend to become a PFIC and is considering the sale of its assets should plan to reinvest the proceeds of sale as quickly as possible in operating assets. The statute suggests a black-line test pursuant to which the corporation will have only the disposition year (or the start-up year) in which it may safely invest in passive assets.

B. Taxation of Shareholders of PFICs

1. General

Where it is established that PFIC status exists, every United States person who either receives an "excess distribution" or disposes of his stock in a PFIC during the taxable year must pay the United States tax attributable to the distribution or disposition *plus* an interest charge based on the value of the tax deferral as of the time of the distribution or disposition.[36] An interest charge is imposed on the value of the deferral, rather than taxing the earnings and profits of the PFIC directly to the U.S. shareholders as under the CFC rules, for the reason that U.S. persons taxable under the PFIC rules may not have, by reason of lacking control of the foreign corporation, the information necessary to determine the earnings and profits of the corporation or to force a distribution of such earnings and profits should the information be available.[37]

Where the taxpayer has received an excess distribution or has disposed of his stock in the PFIC, then under §1291(a) the amount of the excess distribution or the

amount of gain recognized on the disposition is considered to be allocated *pro rata* over the shareholder's holding period of his stock in the PFIC. Under §§1291(a) and (c), the tax due in the year in which the excess distribution or proceeds of disposition is received is the sum of (1) the tax imposed on the amount of the distribution or gain which is attributable to (a) the year of receipt (or disposition), (b) years in which the foreign corporation was not a PFIC, and (c) years prior to January 1, 1987; plus (2) the tax computed at the highest rate of U.S. tax for the investor on income attributed to prior years in which the foreign corporation was a PFIC; plus (3) interest on the deferred tax described in (2). All amounts so taxed are taxed as ordinary income. Where, however, the distribution or gain is not deemed to be an "excess distribution," the amount distributed will be subject to tax in the year of receipt under normal Code rules, with the exception referred to above, that distributions from a PFIC will not be eligible for the deemed paid foreign tax credit under §902 of the Code.

a. Excess Distributions

A distribution is an "excess distribution" to the extent that it represents a distribution in excess of 125% of the average amount of distributions in respect of the stock during the three preceding taxable years.[38] If the taxpayer did not hold the stock during the three preceding taxable years, then the 125% amount is calculated on the basis of the average amount received during the period that the taxpayer did hold the stock, before the taxable year. The statute provides, however, that there shall be no excess distribution with respect to stock in a PFIC during the year in which the taxpayer's holding period begins.[39]

(i) Allocation of Excess Distribution

An excess distribution is allocated to each day in an investor's holding period with respect to each share of stock for purposes of determining the amount of tax and interest due on receipt of the excess distribution.[40] The conferees explain that this rule is necessary since an investor may have different holding periods with respect to his or her investment and a fund may distribute earnings more than once during a taxable year.[41] While the statute states that determinations with respect to holding period and annualization of distributions are to be made pursuant to regulations (*see* §1291(f)), the conferees provide an example of the application of the rule in a case where distribution is made on two different days of the taxable year as follows:[42]

"... [A]ssume an investor's average distributions for the three prior years are $100 and the investor receives a $100 distribution in the first month of the year and a $50 distribution in the 11th month of the year. The total excess distribution of $25 is to be allocated two-thirds to the first month and one-third to the 11th month for purposes of attributing the excess distribution to the current year and prior years for computing the investor's deferred tax and interest." [43]

The taxpayer in the foregoing example presumably thereafter would compute the aggregate increase in taxes and the aggregate amount of interest attributable to the excess distribution by making two separate computations. In the first computation, two-thirds of the $25, or approximately $16.65, would be allocated to the first month of the year and prorated on a daily basis over the taxpayer's holding period for the stock. The remaining one-third, or approximately $8.35, would be allocated to the 11th month, and prorated on a daily basis over the taxpayer's holding period for the stock. The example would become even more complex in a case where the taxpayer had different holding periods for different portions of his stock. In that case, additional computations would be required to further break down the allocation of the excess $25.

(ii) Computation of Deferred Tax Amount

If the taxpayer determines that he has received an excess distribution for the taxable year (*i.e.*, if the amount of the distribution is greater than 125% of the average amount received in respect of such stock during the three preceding taxable years), the second step is to determine the "deferred tax amount" attributable to the excess distribution.[44] First, as noted above, the excess distribution is allocated on a daily basis to each day of the taxpayer's holding period. That portion of the excess distribution which is attributable to the current year is subject to tax in the current year under normal Code rules, as is that portion of the distribution which is not "excess." The remainder is allocated to previous taxable years during which the taxpayer has held the stock and is subject to tax at the highest rate of tax in effect for each such taxable year during the holding period.[45] The taxpayer then computes the amount of interest on the amounts attributed to prior taxable years during which the taxpayer held the stock using the interest rate which was in effect under §6621 for underpayments of tax for each such period. Interest is determined beginning on the due date for filing the return for each taxable year during the holding period and ending on the due date for the taxable year with or within which the distribution or disposition occurs.[46]

The foregoing rule may be illustrated by the following example, in which it is assumed that a $1,500 distribution was received on December 31, 1991. In this example, the investor's average distribution for the three prior taxable years was $1,000. The taxpayer has held all shares of stock for a total of five taxable years beginning on January 1, 1987, during all of which years the corporation was a PFIC. The total excess distribution in this case is $250 ($1,500 received during the taxable year less $1,250 [125% times $1,000]). Approximately $50, or one-fifth of the excess distribution, should be allocated, on a daily basis, to each of the five taxable years (including the current year) during which the taxpayer held the stock. Therefore, the

tax due on the distribution should be computed by adding the sum of the tax due on $50 (from 1987) plus interest compounded for four years, the tax due on $50 (from 1988) plus interest compounded for three years, the tax due on $50 (from 1989) plus interest compounded for two years, the tax due on $50 (from 1990) plus interest compounded for one year, and the tax due on $1,300 ($1,250 non-excess distribution plus $50 excess distribution attributable to 1991) on which no interest would be due. If, during 1987, the corporation had not been a PFIC, the $50 from year one would be added to the current year's income with no interest charge being imposed on such amount.[47] The same result would ensue if the taxpayer's holding period had included years prior to January 1, 1987 and the corporation became a PFIC on that date.[48]

The rules for calculating the "deferred tax amount", as illustrated in the above example, represent a change by the conferees from the Senate version of H.R. 3838. Under the Senate version, the entire $1,500 received in year five would have been allocated to current and past years in the approximate amount of $300 per year.[49] In incorporating the "excess distribution" concept, the conferees intended to give relief to investment funds which currently distribute all of their ordinary earnings, for which there is no tax deferral.[50]

While the "excess distribution" concept is used to determine the amount of the inclusion in the taxpayer's gross income for the current year of any distribution received with respect to PFIC stock, for purposes of claiming any withholding tax as a foreign tax credit, the total amount of the distribution, including any excess, is included in gross income in the year of receipt.[51]

b. Dispositions

Section 1291(a)(2) of the Code states that gain recognized from the disposition of stock in a PFIC is to be treated in the same manner as if such gain were an "excess distribution". The amount of the gain, therefore, presumably should be allocated ratably to each day in the taxpayer's holding period for the stock, ending on the date of disposition.[52] In the above example, had the taxpayer recognized a $1,500 gain on the sale of PFIC stock on the last day of the taxable year, and if the taxpayer had held the PFIC stock for five taxable years, then the gain would be deemed to have been earned $300 in each of years one through five and would generate a tax and interest charge calculated in the same manner as an excess distribution.

(i) "Deemed Dispositions"

The Code states that the term "disposition" shall include the pledge of any stock in a PFIC as security for a loan.[53] A "disposition" also will be deemed to occur where a United States person who is treated as holding stock in a PFIC by reason of the constructive ownership rules discussed below is no longer treated as holding such stock either because he has disposed of his interest in an intervening entity through which the stock of the PFIC was attributed to him or because the person or entity from which ownership of the PFIC stock was attributed to the taxpayer has disposed of such stock.[54]

If the taxpayer owns stock in a PFIC on the first day of a taxable year beginning after December 31, 1986, in which the PFIC elects to become a "qualified electing fund" (as discussed below) the taxpayer may elect to recognize gain as if he had disposed of his stock on the first day of such taxable year for its fair market value ("mark to market election").[55] The taxpayer making this election must pay all prior deferred tax and interest attributable to the stock over the period of his holding period, and may acquire a new basis and holding period in the PFIC, and thereafter be taxed under the special rules applicable to qualified electing funds.[56] A taxpayer electing to mark to market his PFIC stock in this manner may increase the basis of his stock in the PFIC by the gain recognized as a result of the election.

The Code does not otherwise define the term "disposition", and it is anticipated that regulations will be needed to further define that term. Under §§1246 and 1248, for example, gain from a "deemed" sale or exchange under §§302 and 301 will be taxed as ordinary income. If a §302 distribution from a PFIC is treated as a "disposition", then the amount of gain recognized would be apportioned between current and past years under the statute. If, however, the §302 distribution is treated as a dividend, it presumably would fall within the rules applicable to distributions, and that portion of the entire distribution in excess of 125% of the three prior years' average distributions would be allocated between current and past years.

(ii) Basis and Holding Period

In determining the amount of gain which shall be treated as an excess distribution upon any disposition of PFIC stock by a taxpayer, the Code provides that basis is to be determined by reference to rules in effect with respect to FICs under §1246 and the taxpayer's holding period is to be determined under the general rules of §1223.[57] Under the principles of §1246, stock, the basis of which is determined by reference to stock of a PFIC, will also be considered PFIC stock, and the holding period for such stock will include the holding period of the prior owners.[58] If a taxpayer's holding period includes the holding period of prior owners, distributions received by the prior owners shall be taken into account in determining the amount of any excess distribution received by the taxpayer.[59]

The Code requires a reduction in the basis of stock in a PFIC which is acquired by bequest, devise or inheritance amounting to fair market value at date of death reduced by

the adjusted basis of the stock immediately before the decedent's death.[60] This reduction is not to apply, however, in the case of a decedent who was a non-resident alien at all times during his holding period in the stock.[61] The basis deduction is designed to prevent the avoidance of U.S. income tax on PFIC stock by holding such stock until death in anticipation of receiving a step-up in basis.

C. Taxation of Qualified Electing Funds

Under new §1293 of the Code, every United States person who owns, actually or constructively, stock of a "qualified electing fund" at any time during the taxable year must include in income his *pro rata* share of the ordinary earnings and net capital gain of the fund for each year. The provision thus treats a PFIC which is a qualified electing fund in a manner similar to CFCs and FPHCs in that earnings of the foreign corporation will be taxed on a current basis to the actual or constructive owners of the foreign corporation's stock. The advantages to an investor of including income on a current basis generally are two-fold: first, the investor may retain the long-term capital gain character of income derived at the PFIC level; and second, 10% corporate shareholders of a PFIC which is a qualified electing fund are permitted under §1293(f) to claim the deemed paid foreign tax credit under §960 of the Code.

Amounts included in the income of a shareholder of a qualified electing fund increase the shareholder's basis in his stock.[62]

1. Previously Taxed Amounts

If a PFIC makes a distribution of earnings which were previously included in income of any shareholder under the general rule applicable to qualified electing funds, then the distribution is tax-free to the recipient.[63] However, the shareholder's basis in his PFIC stock is reduced in the amount of the previously taxed distribution.[64] This rule highlights the importance of tracing the previous ownership, earnings and tax history of PFIC stock, since the purchaser of such stock who receives a distribution may otherwise be unable to determine whether such distribution was previously subject to tax while held by another person.

Under new Code §986(c), gain or loss realized as the result of currency fluctuations between the time of a deemed distribution from a qualified electing fund and the time of actual distribution must be recognized as ordinary income or loss at the date of distribution. The gain or loss will be sourced in the same manner as the related income inclusion.

2. Manner of Making Election

Under §1295 of the Code a PFIC may make an election to be a qualified electing fund for any taxable year. Once made, the election shall apply to all subsequent taxable years of the corporation for which it is a PFIC, and may be revoked only with the consent of the Secretary.[65] An election may be made for any taxable year at any time before the 15th day of the third month of the following taxable year. Since the PFIC amendments apply generally to taxable years of foreign corporations beginning after December 31, 1986, corporations will have over a year from the enactment date of the TRA (October 22, 1986) in which to decide whether to elect to be a qualified electing fund.

Under §1295(a), PFIC making the election must comply with such requirements as the Secretary may prescribe by regulation for purposes of determining the ordinary earnings and net capital gain of the corporation for the taxable year and ascertaining the ownership of its outstanding stock. In explaining this requirement, the conferees stated that "it was essential to allow the Internal Revenue Service adequate access to information about U.S. investments in foreign investment funds before U.S. shareholders of those funds receive flow-through of capital gain income and attribution of ordinary income to a particular taxable year."[66] The conferees further state that if a qualified electing fund fails to meet its compliance obligations (to be prescribed by regulation at some future date), it is intended that all U.S. investors be treated as having disposed of their stock in the fund and that the corporation's election to be a qualified electing fund be revoked.[67]

3. Shareholder Level Election to Extend Time for Payment of Tax on Undistributed Earnings

Section 1294 of the Code allows a taxpayer who is an investor in a PFIC which is a qualified electing fund to defer, subject to an interest charge, U.S. tax on amounts to be included in income for which no current distributions are received. The reason for this election is that U.S. investors may not have sufficient ownership in the PFIC to compel distributions.[68] If the shareholder makes this election, then the tax must in all events be paid at such time that the stock in the PFIC is disposed of or the PFIC ceases to be a qualified electing fund. If a shareholder receives a distribution which is not includible in income by reason of having been included in income for a prior year (§1293(c)), but the taxpayer had deferred the tax on such amount in the prior year by means of the election, then the deferral on such amount terminates at the time for filing the return for the year of distribution.[69]

A shareholder may make an election to defer the tax not later than the time prescribed by law (including extensions) for filing his return for the taxable year.[70] The running of the statute of limitations is suspended with respect to the tax on the undistributed amounts during the period of the deferral.[71] As with any extension under Code §6165, the Secretary may require a bond conditioned upon the payment of the amount of the tax extended. In addition,

if the Secretary believes that the collection of the tax is in jeopardy, he may immediately terminate the extension with respect to such amount and notice and demand for payment may be made.[72]

An election is not available to a shareholder with respect to any undistributed PFIC earnings of a qualified electing fund which are required to be included in income currently under the FPHC rules (§551) or the Subpart F rules (§951).[73] U.S. shareholders of FPHCs or CFCs by definition have control of the foreign corporation, and thus the rationale for permitting the election (*i.e.*, lack of power to compel distributions) does not apply.

D. Attribution Rules

The PFIC provisions, like those applicable to FPHCs, CFCs and FICs, contain their own set of attribution rules pursuant to which a shareholder in a PFIC will be taxed on its earnings according to his proportionate share of direct and indirect ownership in the foreign corporation.[74] The PFIC attribution rules are much less extensive, however, than those applicable to other foreign entities. The reason for this undoubtedly is that control of the foreign corporation is irrelevant to the determination of PFIC status, and the only purpose of the attribution rules, therefore, is to determine the amount of income of the PFIC which is to be taxed to United States persons.

First, §1297(a) states that the attribution rules, except to the extent provided in regulations, shall only apply to attribute stock of a PFIC to a United States person and not to treat stock owned actually or constructively by a United States person as owned by any other person. The rules therefore provide only for attribution from corporations, partnerships, estates and trusts to their shareholders, partners or beneficiaries. The result is to prevent the avoidance of the PFIC rules through the interposition of a foreign entity between the U.S. person and a PFIC. Unlike the FPHC and CFC rules, there is no family attribution under the PFIC rules.

1. Attribution From Corporations

a. Attribution From 50% Owned Corporations

Section 1297(a)(2)(A) of the Code provides that in determining stock ownership, a U.S. person is considered to own his proportionate share of the stock of a PFIC owned by any corporation if the U.S. person owns 50% or more of the value of such corporation's stock. For example, if a U.S. person owns 60% of the stock of corporation X (a non-PFIC), and corporation X owns 20% of corporation Y (a PFIC), then the U.S. person will be considered to own 12% (60% times 20%) of corporation Y. Therefore, if the PFIC is a qualified electing fund, the United States person will be required to include in income 12% of the ordinary earnings and net capital gain of such fund for the year.[75]

As noted above, §1297(b)(5) of the Code also provides that any disposition by a United States person, or the person holding stock attributed to a United States person, which results in the United States person being treated as no longer holding such stock, shall be treated as a disposition by the United States person of stock in the PFIC. In the foregoing example, therefore, if the United States person to whom 12% of the ownership of corporation Y (a PFIC) was attributed, were to dispose of his stock in corporation X (a non-PFIC), presumably 12% of the gain recognized by the United States person on disposition of the X stock would be taxed under the PFIC rules. The Code does not, however, provide rules for the taxation of dividend distributions under the "excess distribution" rules reflected in §1296, where a U.S. person to whom the stock of a PFIC is attributed (through a non-PFIC corporation) receives a distribution from the intervening corporate entity. Clearly, the intervening corporate entity would be required, under §1291, to include and allocate on a ratable basis to each day in its holding period any distribution from the PFIC. Whether this distribution is also to be considered to be received by the U.S. person owning stock in the intervening corporation is unclear from the statute.

b. Attribution From Less Than 50% Owned Corporations

If follows from the above passage that where the U.S. person does not own at least 50% in value of the stock of a non-PFIC corporation, any PFIC stock owned by that corporation will not be attributed to the U.S. person. Therefore, in the foregoing example, if the U.S. person had owned 20% of the stock of corporation X (a non-PFIC) and corporation X had in turned owned 60% of the stock of corporation Y (a PFIC), the stock of corporation Y would not be attributed to the 20% owner of corporation X. There is one exception to this rule, however, contained in §1297(a)(2)(B) of the Code. Under this exception, if corporation X is a PFIC, then the 50% limitation is disregarded for purposes of determining whether the U.S. shareholder is treated as owning stock owned directly or indirectly by corporation X.

2. Attribution From Partnerships, Trusts and Estates

Section 1297(a)(3) states that stock owned directly or indirectly by or for a partnership, estate or trust shall be considered as being owned proportionately by its partners or beneficiaries. Unlike corporate attribution described above, there is no 50% limitation applicable to ownership of a partnership, estate or trust.

3. Reattribution

The Code provides in §1297(a)(4) that stock which is owned by a person indirectly by reason of attribution from a corporation, partnership, estate or trust shall be considered as actually owned by such person for purposes of reattribution. For instance, if a U.S. person owned 20% of partnership A, which in turned owned 60% of corporation X (a non-PFIC), which in turned owned 20% of corporation Y (a PFIC), then the 12% ownership attributed to partnership A (*see* example above) by reason of Code §1297(a)(2)(A), would be reattributed to the U.S. partner of partnership A under §1297(a)(3) in the amount of his proportionate ownership of partnership A. This attribution would amount to 2.4% (20% times 12%).

[74] Code §1297.
[75] Section 1293(a)(1)(A) and (B).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

4. Separate Interests Treated as Separate Corporations

Section 1297(b)(4) of the Code states that pursuant to regulations, separate classes of stock (or other interests) in a corporation may be treated as interests in separate corporations. The reason for this provision, as stated in the Senate Report,[76] is that the ownership attribution rules of the bill might otherwise be circumvented in a case where a U.S. person owned less than 50% of a corporation which was not a PFIC. Such a corporation could issue a separate class of stock and use the proceeds to invest in a PFIC (or invest directly). The corporation, if engaged in an active trade or business, probably still would not be a PFIC under the general definition contained in §1296. However, the Senate states, in these instances, "it may be necessary to treat the separate issue of stock as a separate corporation ... In that event, the separate corporation will in all likelihood be a PFIC and the attribution rules will attribute any lower-tier PFIC stock to the ultimate U.S. investors." [77]

E. Coordination With Other Code Sections

As noted above, numerous other sections deal with the tax treatment of foreign corporations owned in part by U.S. persons. In many cases, these sections will overlap with the new PFIC provisions. This will be particularly true where five or fewer U.S. persons own 50% or more of the vote or value of a PFIC. The Act therefore provides several rules to coordinate the application of these sections with the PFIC rules.

First, where income would be includible in the gross income of a United States shareholder under both the Subpart F and the PFIC rules, it shall be includible only under Subpart F.[78] This situation may be expected to occur in any case in which five or fewer U.S. persons own 50% or more of the vote or value of a PFIC.

Second, amounts includible under both the PFIC and the FPHC provisions shall be includible only under the FPHC provisions.[79] This situation may be expected to occur where more than 50% in value of the outstanding stock of a PFIC is owned directly or indirectly by or for not more than five individuals who are citizens or residents of the United States.

Third, §1246, which governs the taxation of FICs as opposed to PFICs, shall not apply to the earnings and profits of any company for taxable years beginning after December 31, 1986 if such company is a PFIC for such taxable year.[80] A FIC may be a PFIC in any taxable year in which 75% or more of the gross income of the FIC is passive income or the average percentage of assets by value held by the FIC during the taxable year which produce, or are held to produce, passive income is at least 50%. Since FICs are by definition engaged in the business of investing, reinvesting and trading in securities, many FICs will fall into the PFIC category. The TRA also amends §1246 to clarify that that section does not apply to any gain to the extent that it is treated as ordinary income under §1248. [81]

F. Miscellaneous

Section 1235(f) of the TRA makes several amendments to clarify that a PFIC is not to be subject to the accumulated earnings tax [82] and is not to be subject to the personal holding company (PHC) provisions [83] or the regulated investment company (RIC) provisions.[84] The Act also contains a rule to resource PFIC income inclusions as U.S. source if the PFIC is a United States-owned foreign corporation and the PFIC receives U.S. source income.[85]

G. Regulations Needed

Numerous sections of the TRA provisions on PFICs indicate the need for regulations to be prescribed by the Secretary within the near future. Among the areas of concern are the following:

1. The manner in which the excess distributions are to be determined on a share-by-share basis;

2. The manner in which proper adjustments shall be made for stock splits and stock dividends;

3. The manner in which distributions received during the taxable year will be annualized in cases where the taxpayer does not hold the stock during the entire taxable year;

4. The manner in which distributions received by another person shall be taken into account by the taxpayer where the taxpayer's holding period includes periods during which the stock was held by that other person;

5. The manner in which distributions received in foreign currency shall be treated;

6. The extent to which gain shall be recognized under the PFIC provisions on any disposition which otherwise might be a non-recognition transaction under another section of the Code;

7. The manner in which the ordinary earnings and net capital gain (as well as the E&P) of PFIC are to be determined;

8. The reporting requirements applicable to qualified electing funds;

9. The extent to which stock owned or treated as owned by a United States person may be attributed to any other person;

10. The extent to which separate classes of stock (or other interests) in a corporation shall be treated as interests in separate corporations;

11. The extent to which a disposition of stock by a United States person to whom ownership in a PFIC is attributed, or a disposition of such stock by the entity from which stock is attributed to a United States person, is

treated as a disposition of PFIC stock by the United States person;

12. Clarification of what transactions are to be treated as dispositions as opposed to distributions for purposes of determining the amount, if any, of "excess distributions" which must be allocated to current and prior taxable years; and

13. Coordination of the attribution rules with §1291 of the Code where excess distributions are received by non-PFIC entities from which the stock of a PFIC is attributed to a U.S. person, or where excess distributions are received by U.S. persons from non-PFIC entities from which the stock of a PFIC is attributed to such persons.

Although §1246 was enacted in 1962, no Treasury Regulations under §1246 have been issued or proposed.

H. Effective Date

The PFIC amendments to the Code are applicable to taxable years of foreign corporations beginning after December 31, 1986. [86] With respect to qualified electing funds, the Code provides that the year of inclusion for a shareholder in such funds shall be the taxable year of the shareholder in which the taxable year of the fund ends.[87] It is probable, therefore, that calendar-year shareholders of non-calendar-year PFICs which elect to become qualified electing funds will have no inclusion in income of earnings of the fund until taxable year 1988. Further, pre-effective date earnings of PFICs are not treated as excess distributions for purposes of allocating distributions or gain on dispositions to current and prior years, and thus no interest charge is imposed on them.

Chapter 65

NEW RULES GOVERNING THE TREATMENT OF DUAL RESIDENT COMPANIES [ACT §1249]

Deborah M. Beers, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The United States imposes a tax on the worldwide income of its "domestic corporations," defined as any corporation created or organized in the United States or under the law of the United States or any State.[1] In the United Kingdom, however, which imposes a worldwide tax on the income of its resident corporations, the place of incorporation is not determinative of a corporation's residence for tax purposes. Instead, a corporation is considered to be resident in the country where its "central management and control" is situated. It is possible, therefore, for a corporation incorporated in the United States but managed and controlled in the United Kingdom to be subject to a worldwide tax on income, with corresponding tax credits, in both jurisdictions.

In the United States, a domestic corporation which is a member of an affiliated group may file a consolidated return on income with other members of the group, thus offsetting the income of one member against the losses of another.[2] The term "affiliated group" in turn means one or more chains of "includible corporations" connected through 80% or more stock ownership with a common parent corporation.[3] Only domestic corporations (*i.e.*, those incorporated in the United States or in any State) are eligible to be "includible corporations."[4] A dual resident corporation, since it is by definition incorporated in the United States, therefore would be permitted to consolidate with its U.S. affiliates.

A similar rule prevails in the United Kingdom where "group relief" is available to a company which is a member of a group of companies or is owned by a consortium.[5] Thus, losses of a corporation which is considered both a U.S. and U.K. resident (dual resident corporation) may be deducted twice — once against the consolidated income of the U.S. corporate group and once against the consolidated income of the U.K. corporate group. This practice, which is known as "double dipping" has encouraged the isolation of expenses in dual resident companies so that they may be used twice for tax purposes.

For example, a U.K. corporation, which is a member of a U.K. affiliated group which wishes to purchase a U.S. operating company, may do so by incorporating a subsidiary in the United States (dual resident company) which borrows money (usually from a U.K. bank) to finance the purchase. The interest incurred by the dual resident company on the amount borrowed to finance the purchase is, in effect, deductible twice — once against the income of the U.K. parent with which it is affiliated by reason of being operated and managed in the United Kingdom, and once against the income of the U.S. operating subsidiary. The same result would ensue should a U.S. company incorporate a dual resident company to acquire the assets of a U.K. operating subsidiary, as happened frequently in the 1970's when certain U.S. oil companies set up dual resident (U.K. managed but U.S. incorporated) subsidiaries to extract North Sea oil.

II. Overview

Section 1249 of the Tax Reform Act of 1986[6] amends §1503 of the Code to provide that the "dual consolidated loss" for any taxable year of any corporation shall not be allowed to reduce the taxable income of any other member of the affiliated group for the taxable year or any other taxable year. The term "dual consolidated loss" is defined to mean any net operating loss of the domestic corporation which is subject to an income tax of a foreign country on its worldwide income or is subject to such a tax on a residence basis. It does not, however, include any loss which, under the foreign income tax law, may not be used to offset the income of another foreign corporation. The provision, as enacted, probably will affect only dual residents of the United States and the United Kingdom and Australia, although it is drafted in terms of general application.

As drafted by the Senate,[7] the amendment would have prohibited dual resident corporations from consolidating with other U.S. corporations when the income of the foreign corporation against which the dual resident corporation's loss might be used was itself not subject to U.S. tax.

As enacted, however, the provision prohibits the dual use of all losses, whether or not the foreign corporation against whose income the loss may be used will be subject to U.S. tax. This extension, as expressed by the conferrees,[8] was enacted both for reasons of fairness and to diffuse criticism of the Senate provision as discriminating against foreign-controlled U.S. entities by imposing on those entities a requirement for loss sharing not imposed on U.S.-controlled U.S. entities.[9] The conferees note, however, that if the provision is somehow found to conflict with the anti-discrimination provisions of any treaty, then the provision is to be effective notwithstanding the treaty.[10]

III. Detailed Analysis

A. General

As noted above, new Code §1503(d) prevents the use by any corporation of a "dual consolidated loss" to reduce the taxable income of any other member of the affiliated group for the taxable year or any other taxable year. A dual consolidated loss is defined to include:

> "[A]ny net operating loss of a domestic corporation which is subject to an income tax of a foreign country on its income without regard to whether such income is from sources in or outside such foreign country, or is subject to such a tax on residence basis."[11]

The effect of this provision is to prevent the use of any loss by a dual resident corporation to reduce the income of other members of the affiliated group. The provision does not, however, prevent the use of the loss to offset income of the dual resident corporation in other years, by means of a carryover of such loss against the separate income of that corporation.[12]

The provision adopts a rule preventing the use of the loss rather than preventing consolidation, as the Senate provision had suggested, since a rule preventing consolidation would have prohibited, in many cases, the application of the consolidated return rules to the U.S. subsidiaries of dual resident corporations under current regulations.[13] The effect of the amendment is therefore similar to the required application of the separate return limitation year (SRLY) rules[14] to prohibit the carryover or carryback of losses incurred by one member of a consolidated group against the income of other members of the group in separate return years.

B. Exception

Although the provision is targeted at those corporations which engage in "double dipping," it is not drafted in such a way as to exempt from its rules those dual resident companies which voluntarily do not transfer tax benefits to foreign affiliates as by, for example, foregoing "group relief" in the United Kingdom. However, there is a special rule which will apply, to the extent provided in regulations, to exempt from the definition of "dual consolidated loss" any loss which, *under foreign income tax law*, does not offset the income of any foreign corporation.[15] As an example of when this exception should apply, the conferees state that a U.S. corporation which resides in a foreign country, but has no affiliates in that country whose foreign tax its losses may reduce, and whose losses do not otherwise reduce the foreign tax of a foreign corporation should not be denied the use of the loss in its U.S. consolidated return.[16] Again, however, the exception is phrased in terms of whether the dual consolidated loss offsets the income of any foreign corporation "under the foreign income tax law," and not as a result of the voluntary choice of the dual resident corporation to forego the use of that loss. The exception would also appear not to apply in cases in which the loss was not used to reduce the income of the foreign affiliated group by reason of the foreign affiliated group's already being in a loss position for the taxable year. Instead, the exception appears to be restricted only to those situations in which the loss is unusable due to legal, as opposed to economic, factors.

C. Treaty Considerations

One difference between the final version of the bill and the Senate version is that the Senate version would have prohibited the use of the dual resident corporation's loss only where that loss could have been used to reduce the income of a foreign corporation all of the income of which was not subject to U.S. tax — generally foreign-controlled corporations. In contrast, the Act prohibits the use of all losses incurred by a dual resident corporation where such loss may be used to reduce the income of a foreign corporation, whether or not the foreign corporation is subject to U.S. tax. The application of this rule can be seen by the different results which would obtain under the Senate and final version of the TRA in a series of examples contained in the Senate Report.[17]

> *Example 1.* — A U.S. corporation owns a U.S.-U.K. dual resident corporation. The U.S.-U.K. dual resident company owns a U.S. subsidiary. The U.S.-U.K. dual resident company, a loss company, effectively transfers the U.K. tax benefit from its loss to its U.K. parent.
>
> *Example 2.* — A U.S. corporation owns a U.S.-U.K. dual resident corporation. The U.S.-U.K. dual resident company owns a U.K. subsidiary. The U.S.-U.K. dual resident company, a loss company, effectively transfers the U.K. tax benefit from its loss to its U.K. subsidiary.
>
> *Example 3.* — A U.K. corporation owns a U.S.-Australian dual resident corporation. The U.S.-Australian dual resident company owns a U.S. subsidiary and an Australian subsidiary. The U.S.-Australian dual resident company, a loss company, effectively transfers the Australian tax benefit from its loss to its Australian subsidiary.
>
> *Example 4.* — A widely held U.S.-U.K. dual resident corporation owns a chain of U.S. subsidiaries, a chain

of U.K. subsidiaries, and a number of third country corporations. The U.S.-U.K. dual resident company, the ultimate parent, is a loss company. It effectively transfers the U.K. tax benefit from its loss to its chain of U.K. subsidiaries.

Example 5. — A U.S. corporation owns a U.K. corporation. The U.K. corporation owns a U.S.-U.K. dual resident corporation. The U.K. dual resident company, a loss company, effectively transfers the U.K. tax benefit from its loss to its U.K. parent.

Example 6. — A U.K. corporation with a U.S. permanent establishment and U.K. operations owns a U.S.-U.K. dual resident corporation. The U.S.-U.K. dual resident company owns a U.S. subsidiary. The U.S.-U.K. dual resident company, a loss company, effectively transfers the U.K. tax benefit from its loss to its U.K. parent.

The Senate bill would have disallowed consolidation, and thus the use of the loss against the income of U.S. affiliates, only in Examples 1 and 6 above, because in those examples the foreign-controlled entities would not have been subject to U.S. tax on all of their income. In contrast, under the TRA as enacted, the use of the loss is disallowed in all six factual situations. The reasons given by the conferees for extending the prohibition against use of the loss were first, that the extension was fair, and second, to diffuse criticism that the Senate provision discriminated against foreign-controlled U.S. entities by imposing on those entities some requirement for loss sharing not imposed on U.S.-controlled U.S. entities.[18]

As is the case with most income tax treaties, the U.S.-U.K. Tax Treaty, Article 24(5), prohibits the imposition of more burdensome requirements or taxation on foreign-controlled entities as opposed to domestic-controlled entities by stating that:

> "(5) Enterprises of [the United States], the capital of which is wholly or partly controlled, directly or indirectly, by one or more residents of [the U.K.], shall not be subjected in the [United States] to any taxation or any requirement connected therewith which is other or more burdensome than the taxation and connected requirements to which other similar enterprises of [the United States] are or may be subjected."

Critics of the provision as enacted point out that even though §1503(d) does not discriminate as between U.S.-controlled dual resident corporations and U.K.-controlled dual resident corporations, it nevertheless discriminates between the latter group of corporations and a similar group of U.S.-controlled U.S. corporations against which the U.K.-controlled dual resident corporation and its affiliates must compete. The conferees claim to find no merit in this argument,[19] for the purported reason that U.S.-controlled domestic corporations are not "similar enterprises" to U.K.-controlled dual resident corporations. This approach, however, is contradicted by the legislative history of the Treaty which suggests that dual resident corporations were specifically intended to be covered by the antidiscrimination clause of Article 24(5).[20] The conferees state that if the provision is somehow found to conflict with any treaty, the provision is to be effective notwithstanding the treaty.[21]

Despite criticism that the TRA provision discriminates against U.K.-controlled entities in violation of the tax treaty, there is some evidence that the United Kingdom also may take action to eliminate the benefits of the so-called "Delaware link" under the U.K. system of taxation.[22] Although originally reluctant to move against dual resident multinationals because such companies tended to borrow funds in London to finance their acquisitions of U.K. and U.S. operating companies, the Inland Revenue (the U.K. equivalent of the Internal Revenue Service) now estimates that exploitation of the benefits of dual residence causes a tax loss of about 200-300 million pounds a year.[23] It is likely, therefore, that some action against dual residents will be taken in next year's Finance Act.[24] If such legislation is phrased in such a way as to prevent the use of the loss of a dual resident U.S.-U.K. corporation to offset the income of any U.K. corporation, the effect of this provision under §1503(d)(2)(B) of the Code may be to permit the use of the loss against the consolidated income of the dual resident's U.S. group.

D. Effective Date

The amendment is effective in general with respect to net operating losses incurred in taxable years beginning after December 31, 1986. The conferees note that carryforwards attributable to losses incurred in years prior to 1987 by a dual resident corporation will be available to offset income that another member of the affiliated group earns in years beginning after 1986.[25] Losses incurred by a dual resident corporation in taxable years beginning after December 31, 1986 may, however, be carried forward only against the income of the dual resident corporation, and not against that of other members of its affiliated group.

Chapter 66

MODIFICATIONS TO §936 [ACT §1231]

Deborah M. Beers, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

A. Background

In 1940, Puerto Rico inaugurated "Operation Bootstrap" to encourage the growth of manufacturing enterprises within the Commonwealth. In pursuance of this goal, Puerto Rico has enacted a series of Industrial Incentive Acts, the most recent of which passed in 1978,[1] which exempt qualifying businesses from income and property taxes at the rate of 90% during the first five years of operation and decreasing thereafter in five-year intervals to 50%. The Puerto Rican incentives, taken together with those incentives provided by the Internal Revenue Code, encouraged the location of manufacturing enterprises, particularly in the pharmaceutical industry, in Puerto Rico, and thus contributed to the growth of employment in that Commonwealth.

Special provisions applicable to the taxation of possessions corporations have been a part of the Internal Revenue Code since 1921.[2] Under these provisions, a U.S. corporation which derived 80% or more of its gross income from a possession, and 50% or more of its gross income from the active conduct of a trade or business in the possession, was exempt from tax on all income derived from sources outside the United States, although dividends paid by a possessions corporation to its U.S. parent were fully taxable. This provision, substantially unchanged from its appearance in the Revenue Act of 1921, was enacted as §931 of the Internal Revenue Code of 1954.[3] Under §931, 80% or more of the gross income of the U.S. corporation had to be derived from sources within a possession of the United States [the "gross income test"], and 50% or more of its gross income had to be derived from the active conduct of a trade or business within a possession of the United States [the "active business test"], in order for the income exclusion to apply. The testing period was the 3 years immediately preceding the close of the taxable year (or that part of the 3-year period immediately preceding the close of the taxable year as may be applicable). As under the Revenue Act of 1921, under §931, no dividend exclusion was available to the corporate shareholder of a §931 corporation,[4] although its earnings could be distributed to the parent tax-free in the event of liquidation of the §931 corporation.[5] Therefore, a §931 corporation had no incentive to repatriate its earnings.[6] The determination of whether to use the §931 exclusion was made on an annual basis.

B. Section 936

Taxation of possessions corporations remained essentially unchanged until the Tax Reform Act of 1976.[7] The Act added a new §936 to the Code which provided a tax credit (in lieu of the exclusion under §931) of 100% of the U.S. tax due with respect to certain income received from those possessions corporations that make an election to benefit from the credit.[8]

1. Election

In order for a domestic corporation to be eligible for the §936 credit, an election must be made on Form 5712 on or before the date on which the corporation's federal tax return is due.[9] Once made, the election applies to the first taxable year for which such election is made (and thereafter until revoked)[10] for which the corporation satisfies a gross income and active business test for possessions corporations status under §936 (discussed below). Revocation before the election has been in effect for 10 years is possible only with the consent of the Secretary.[11] Revocation after the ten-year period is possible without the Secretary's consent.[12] Once the §936 election is made, a possessions corporation is ineligible to join in the filing of the consolidated return for any year in which the election is in effect.[13]

2. Eligibility for §936 Credit

The eligibility requirements for the §936 credit are similar to those for the §931 exclusion, *i.e.*:

a. Gross Income Test: 80% or more of the gross income of the possessions corporation for the 3-year period (or part thereof if the corporation has not been in existence for three years) immediately preceding the close of the taxable year must be derived from sources within a possession of the United States; and

b. Active Business Test: 65% or more of the gross income of the possessions corporation for such 3-year period or applicable part thereof must be derived from the active conduct of a trade or business within a possession of the United States.[14]

3. Amount of the Credit

If the possession corporation satisfies both the gross income and active business tests and elects the benefits of the §936 credit, it is allowed to credit against the U.S. income tax which is otherwise due on its worldwide income an amount equal to that portion of the U.S. tax which is attributable to the sum of:

a. The taxable income, from sources without the United States, from (1) the active conduct of a trade or business within a possession or the United States, or (2) the sale or exchange of substantially all of the assets used by the taxpayer in the active conduct of such trade or business; and

b. The qualified possession source investment income (QPSII).[15]

A provision which was enacted in the forerunner of §931[16] and which carried over to §936 provides that, in determining the amount of taxable income for which a credit is available, any income received in the United States, whether it was derived from sources within or without the United States, is treated as income from sources within the United States, and thus is not eligible for the credit.[17]

"Qualified possession source investment income" is defined to mean gross income from sources within a possession in which an active trade or business is conducted if the taxpayer establishes to the satisfaction of the Secretary that the income is attributable to the investment or reinvestment in the possession, for use in the possession, of funds derived from the active conduct of a trade or business in the possession, less the deductions allocable thereto.[18] The regulations provide specific rules relating to the qualification of interest earned by a possessions corporation with respect to deposits with certain Puerto Rican financial institutions.[19] This special treatment for qualified investment income was provided so that the possessions would not lose (by the enactment of §936) a significant source of capital which they had available to them for the financing of government development programs and private investment.[20] The requirement that such income be derived from possessions sources was designed to ensure that the income would be used to promote the economy of the possession and to prevent the transfer of money from the United States to Puerto Rico to shelter it.

To prevent corporations from obtaining a double tax benefit, no credit or deduction is allowed with respect to any tax of a foreign country or possession that is paid or accrued with respect to taxable income taken into account in determining the §936 credit.[21]

4. Definition of "Possession of the United States"

The term "possession of the United States", as it appears in §936(d)(1) of the Code, includes the Commonwealth of Puerto Rico but does not include the Virgin Islands of the United States. For other purposes, "possessions" have been defined to include Midway Islands, Palmyra, Johnston Island, Kingman Reef, Wake Island, Howland Island, Baker Island, Jarvis Island and American Samoa.[22] However, for all practical purposes, the corporations availing themselves of the credit operate almost exclusively in Puerto Rico. In 1982, for example, the reduction in U.S. federal tax provided under §936 to all possessions corporations was approximately $1.66 billion, of which approximately $1.5 million was attributable to possessions corporations operating in locations other than Puerto Rico.[23]

C. Intercompany Transfer Pricing and Treatment of Intangibles

1. Section 482

In determining the transfer price for the sale of goods from a possessions corporation to a United States affiliate, the provisions of §482 are applied to require arm's length pricing. In 1963, the Service issued "guidelines"[24] to be followed in the application of §482 in cases involving the allocation of income and expense between U.S. companies and their manufacturing affiliates in Puerto Rico.

The Service specifically provided, however, that the guidelines did not deal with the problems that might be present in cases involving the transfer of income-producing intangibles to a Puerto Rican affiliate.[25] For that reason, the price received from a third party sale of goods manufactured in Puerto Rico might involve an allocation back to the U.S. parent if, for example, a part of the gross income received by the possessions corporation related to tangible or intangible property actually belonging to the United States parent.[26] The Service did provide pricing examples with respect to cases where the intangibles had been determined to belong to the U.S. parent, the possessions corporation, or to both the parent and the possessions corporation.[27]

[14] Pre-TRA §§936(a)(2)(A) and (B).
[15] Pre-TRA §936(a)(1). Note, however, that the credit is not allowed against minimum tax (§56), the accumulated earnings tax (§531), the personal holding company tax (§541), or the tax imposed by reason of a recovery of foreign expropriation losses (§1351), *see* Pre-TRA §936(a)(3).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

However, the question of whether intangibles belonged to the U.S. parent or the possessions corporation was a question "to be decided under the facts and circumstances of each particular case." [28] In *Eli Lilly Company and Subsidiaries v. Comr.*,[29] for example, the Internal Revenue Service unsuccessfully attempted to disregard the transfer, under §351 of the Code, of certain patents from a U.S. parent to its possession subsidiary for purposes of determining an arm's length price, under §482, for pharmaceutical products sold by the subsidiary to the U.S. parent.

Regulations under §482 with respect to the transfer or use of intangible property provide for an arm's length consideration to be paid which reflects the form (usually a royalty) which unrelated parties would have adopted in the circumstances.[30] The arm's length standard is consistent with that applied to determine the appropriate price of tangible property in sales between related parties.

In the case of sales of tangible property, the regulations set forth four methods of determining the arm's length price of a particular product. The first of these is the "comparable uncontrolled price method." [31]

The comparable uncontrolled price method fixes the arm's length price at the amount for which other unrelated buyers and sellers are trading the product in question. This method presupposes that other, uncontrolled sales of an identical product are taking place between unrelated buyers and sellers. While some courts have required a virtual identity of product and circumstance,[32] others have recognized that, in an imperfect market, an uncontrolled price may be determined where independent sales are "similar" although not identical to controlled sales.[33]

The second method prescribed by the regulations is the "resale price method." [34] This method is used where there are no comparable uncontrolled sales by the manufacturer. It is used most often where a controlled manufacturer sells a product to a controlling distributor which, without alteration or adding to the value of the product, resells it in the open market. The arm's length price is determined by reducing the price at which the product is resold by the distributor by an applicable percentage. This percentage is equal to the percentage of gross profit derived by the distributor on resales of similar products to unrelated third parties.

The third method described in the regulations is the "cost plus method." [35] The cost plus method is used when neither of the other two are appropriate. The arm's length price is determined by increasing the manufacturer's cost by a certain percentage which is equal to the manufacturer's gross profit percentage on similar products. The cost plus method differs from the resale price method in that it focuses on the manufacturer's customary profit percentage rather than on the distributor's. While this method is generally more suitable than the resale price method in cases in which the distributor performs important functions adding to the value of the product, it would not be appropriate where the manufacturer made no similar uncontrolled sales.[36]

Fourth, and finally, the regulations state that:

"Where none of the three methods of pricing described [above] can reasonably be applied under the facts and circumstances as they exist in a particular case, some appropriate method of pricing other than those described [above], or variations on such methods can be used." [37]

2. Code §367(d)

Prior to the amendment of Code §367 by TEFRA, intangible property could be transferred to a possessions corporation in an exchange under §351 of the Code without obtaining an advance ruling, since possessions corporations are domestic corporations. In 1982, TEFRA §213(d) amended Code §367 effective for all transfers after August 14, 1982 by a possessions corporation of any "intangible property." [38] Such transfers, whether made directly or indirectly, were treated, under the TEFRA amendments, as made pursuant to a plan having as one of its principal purposes the avoidance of Federal income taxes.[39] Thus, the Service could impose a "toll charge" on such transfer.

The Tax Reform Act of 1984 [40] again removed transfers of intangible property to possessions corporations from the scope of §367, effective for transfers or exchanges after 1984, in taxable years ending after 1984. Instead, the 1984 Act treats any transfer of intangibles to a foreign corporation (but not a possessions corporation) pursuant to §351 or §361 as a sale of the intangibles in exchange for "payments which are contingent upon the productivity, use or disposition of such property." [41] Section 367 thus incorporates the concept of an "arm's length" royalty payment from the regulations under §482.[42] Under these regulations, as described above, where intangible property is transferred for less than an arm's length consideration, the Commissioner may make appropriate allocations to reflect an arm's length consideration for the use of the property. Pursuant to Regs. §1.482-2(d)(4), the Commissioner will not make allocations, however, where there exists a "bona fide cost sharing arrangement" pursuant to which two or more members of a controlled group agree, in writing, to provide for sharing the costs and risks of developing intangible property in return for an interest in any intangible property which may be produced.

3. Code §936(h)

In 1982, Congress, concerned about abuses alleged to be inherent in the transfer of intangibles to Puerto Rico, particularly in the pharmaceutical industry,[43] added a new §936(h) to the Code.[44] Generally, under §936(h), when a domestic corporation elects the application of §936, so-called "intangible property income" will be included, on a *pro rata* basis, in the gross income of all U.S. shareholders of the corporation.[45] Income which is not allocated to a shareholder because such shareholder is not a U.S. person or would not be subject to U.S. tax is treated as income of the possessions corporation which is derived from sources within the United States. Such income is subject to U.S. tax and no foreign tax credit is available with respect to the tax due on such income.

Generally stated, intangible property income consists of that portion of the gross earnings of the possessions corporation which is attributable to "intangible property". Such property includes so-called "manufacturing intangibles," such as patents, inventions and formulas,[46] as well as so-called "marketing intangibles", such as trademarks, trade names and brand names.[47] The statute assumes that such property was developed in the United States by the U.S. parent, still belongs to the U.S. parent, and therefore properly is subject to current domestic taxation. Thus, under the general rule of §936(h)(1) the only portion of the earnings of the possessions corporation which will be available for the §936 credit is that amount of income which a third party manufacturing entity would realize as a result of its performance of contract manufacturing services. Stated otherwise, the general rule of §936(h) represents a "cost plus method" (*see* discussion above) of determining taxable income.[48]

The Code offers two options as alternatives to the cost plus rule of §936(h)(3)(C). One of these is described as "cost sharing" [49] and the other as "profit split." [50] To be eligible to elect either the cost sharing or the profit split method, a possessions corporation must maintain a "significant business presence" in a U.S. possession.[51] To be eligible to elect the profit split method, corporations must also be engaged in "manufacturing" within the meaning of Code §954(d)(1)(A) (as if the possessions corporation were a controlled foreign corporation).[52]

a. Significant Business Presence Test

To meet the significant business presence test, one of three alternatives must be satisfied. Thus, the possessions corporation must incur in the U.S. possession in which the products are produced: (a) at least 25% of the total production costs (as defined); (b) not less than 65% of the direct labor costs; or (c) with respect to purchases and sales of products not produced by or sold to an affiliated member, at least 65% of the total direct labor costs.[53] Recently issued regulations [54] supply additional details concerning satisfaction of the significant business presence test.

b. Election Out

The election to apply either the profit split or the cost sharing method is treated under §936(h)(5) as an "election out" (*i.e.*, out of the "general rule" of §936(h)). Specific rules, contained in §936(h)(5)(F), prescribe the time and manner of making the election or a revocation thereof. This may occur with the filing of the return (including returns for which an extension of time has been granted) of the possession corporation. An election so made is binding (1) until revoked with the consent of the Commissioner or, (2) until the possession corporation fails to meet the significant business presence test, or (3) (in the case of an election to use the cost sharing method) until the cost sharing payment is not made at the time the return is filed (including returns for which an extension has been granted) and such failure is due to fraud or willful neglect.[55]

c. Cost Sharing Method

The cardinal principle of §936(h)(5) is a requirement that the possessions corporation share with its affiliates income earned on sales to the extent that such income relates to intangible property. "Sharing" is achieved, in the case of the cost sharing method, by the payment for a portion of the research, development, experimental and related costs to the appropriate domestic affiliates of the possessions corporation. Upon making this payment from the possession to the United States to account for the use of so-called "manufacturing intangibles", the possessions corporation is "treated as the owner" of the intangible property which relates to the units produced or the service rendered in the possession.[56] As deemed owner, the possessions corporation "will be entitled to the full return" on the products or services, but will be required to utilize §482 regulations, discussed above, to determine its applicable pricing.[57] The possessions corporation will not be treated as a contract manufacturer with respect to the intangibles for which the cost sharing payment is made.[58] Further, it may use the resale price method to determine its intercompany price even though more than an insubstantial value may

[47] Pre-TRA §936(h)(3)(B)(iii). Intangible property is defined in Pre-TRA §936(h)(3)(B)(i)-(vi).

[48] The possessions corporation is allowed a "reasonable profit" with respect to the products sold. *See* Pre-TRA §936(h)(3)(C). Recently promulgated regulations (T.D. 8090, 51 Fed.Reg. 21518 *et seq.*, June 13, 1986) state that certain taxpayers who have been permitted by the Internal Revenue Service in taxable years beginning before January 1, 1983 to use the cost plus method of pricing without reflecting a return from intangibles, but including the cost of materials in the cost base, will not be precluded from doing so. In addition, the Service has stated that if there is no intangible property related to a product produced in whole or in part by the possessions corporation, the taxpayer may compute its income using the appropriate method as provided under §482 and the regulations thereunder. [58] *Id.*

have been added to the product by the purchasing affiliate.[59]

Section 936(h)(5)(C)(i)(I) articulates a mechanical formula for the determination of the amount of the cost sharing payment. Such amount is a fraction of the cost of the "product area research" paid or accrued by the affiliated group. "Product area research" includes the following items: (a) research, development and experimental cost;[60] (b) losses; (c) expenses; and (d) other "related deductions" which include (but presumably are not limited to) (1) amounts paid or accrued for research or "similar activities" performed by "another" (*i.e.*, presumably unrelated) person; (2) qualified research expenses within the meaning of §30(b); (3) amounts paid or accrued (such as through a license arrangement) for the use of, or the right to use, research or a patent, invention, formula, process, design, pattern or know-how;[61] or (4) a proper allowance for amounts incurred for the acquisition of any of the items in (3).[62]

All of the foregoing expenses are apportioned and allocated to the product area in which the possession corporation conducts its activities. The resulting "product area research" expenditures are thereafter multiplied by a fraction, the numerator of which is "possession sales" and the denominator of which is "total sales." The term "possession sales" includes the "aggregate sales or other dispositions" by any member of the affiliated group to unrelated parties of products produced in whole or in part by the possessions corporation (a) in the possession, and (b) within the product area.[63] "Possession sales" also include services rendered in whole or in part by the possessions corporation: (a) in the possession, (b) in the product area, and (c) to unrelated parties.[64] "Services" also include services "sold" by any U.S. or foreign affiliate to third parties if the services are rendered by the possessions corporation in the possession.[65] Effectively, "possession sales" (the numerator of the fraction) represents worldwide sales of possessions corporation products and services produced or rendered in the possession. Of course, interaffiliate sales are eliminated.[66]

The denominator of the fraction, or "total sales," is comprised of the "aggregate sales or other dispositions" to unrelated parties by any member of the affiliated group of all products or services rendered in the product area.[67] Again, the sales of products and services which are taken into account are those sales to unrelated parties by any member of the affiliated group. Thus (as in the case of the numerator), interaffiliate sales are eliminated.[68]

An example which calculates the cost sharing amount is as follows:

Product Area Research

R&D	100
Losses	10
Interest	10
Other Expenses	20
Indirect Expenses (G&A)	10
	150
Possession Sales	500
Other Sales	500
Total Sales	1,000

$500/1{,}000 \times 150 = 75$ (cost sharing payment)

Results:

a. Possession income = 500 (possession sales) - 75 = 425.

b. The U.S. parent will have its deductions decreased by 75 and its earnings and profits increased by 75.[69]

The statute expressly provides that the amount of the cost sharing payment, including any increased amount resulting from an adjustment upon audit,[70] is not treated as income to the domestic or foreign recipient. In lieu thereof, the amount of the payment reduces the deductions otherwise available if the cost sharing payment were not made. The amount of such payment also reduces the amount which would otherwise constitute a reduction in earnings and profits of any domestic (or foreign) recipient of the payment because of the deduction for research expenses.

d. Profit Split Method

A possessions corporation that has not made an "election out" of the cost plus method by making an election of the cost sharing method may elect the 50-50 "profit split" alternative. To be eligible for this alternative, a possessions corporation must meet the significant business presence test as is required for the cost sharing alternative,[71] plus its own §954 test.[72]

The possessions corporation's taxable income which is available for the profit split alternative is specifically limited to the amount of the corporation's taxable income which is derived from the active conduct of a trade or business in a possession. Thus, the taxable income derived from investment income (for example, dividends and/or interest derived from the investment of retained earnings) will not be eligible for the profit split alternative, but will be eligible for the §936 credit in its entirety.

[67] Pre-TRA §936(h)(5)(c)(i)(I)(d).
[68] H. Rep. No. 760, 97th Cong., 2d Sess. 507 (1982).

[69] Special treatment is provided for product area research paid or accrued solely by the possessions corporation. Such amounts reduce the electing corporation's cost sharing payment. Therefore, in the example above, if the possessions corporation has paid 20 (of the 100) R&D expenses to unrelated persons for work on its behalf, the $75 cost sharing payment would be reduced by 20 to 55 and the possession income would equal 445 (500 - 55), while the U.S. parent's deductions would be reduced by 55 and its earnings and profits increased by 55.

[71] Pre-TRA §936(h)(5)(B)(i).
[72] Pre-TRA §936(h)(5)(B)(ii)(III).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The statute clearly establishes that the profit split alternative applies to taxable income derived with respect to "units of a product produced or type of service rendered" in whole or in part by the possessions corporation in a possession.[73] Combined taxable income is computed "separately" (*i.e.*, on a product by product basis) for each product produced or type of service rendered by the possessions corporation in a possession.[74] In computing combined taxable income, the gross income of the affiliated group (other than foreign affiliates) must be determined. The only includible income is that gross income derived from "covered sales", *i.e.*, sales of a particular product or service by members of the affiliated group (other than foreign affiliates) to unrelated parties or foreign affiliates.[75]

From the gross income derived with respect to covered sales there are deducted (i) those expenses, losses and other deductions which are "properly apportioned or allocated" to gross income, and (ii) a "ratable part" of those expenses, losses or other deductions which "cannot definitely be allocated" to some item or class of gross income, but which are incurred by any member of the affiliated group other than a foreign affiliate.[76]

Assuming that a valid profit split election is made, the possession corporation will be deemed to have derived from the active conduct of a trade or business in a possession 50% of the combined taxable income computed in the manner described above.[77] Such amount is of course eligible for the benefits of the §936(a) credit. On the other hand, there is allocated to the "appropriate" domestic member of the affiliated group the "balance" of the combined taxable income. For this purpose, however, combined taxable income is separately computed by determining combined taxable income using research, development and other expenses actually allocable to the product rather than the expenses which would have been allocable under the cost sharing formula, and which are used to determine combined taxable income for purposes of the profit split, and deducting from this amount income allocable to the possessions corporation. An example of the application of the profit split method appears in *Eli Lilly Company and Subsidiaries v. Comr.*[78] Although decided under §931, rather than §936, the decision in *Lilly* applied the principles of §936(h) to determine the combined taxable income of Eli Lilly and its Puerto Rican affiliate and to apportion such income between the two. The result was very close to the 50-50 profit split alternative under §936(h).

II. Overview

The Tax Reform Act of 1986 [79] makes five substantial modifications to the possessions tax credit as follows. (Authority for the following statements is given in the Detailed Analysis section which follows.) The changes include:

A. Modifications to Cost Sharing Payment

The cost sharing payment required by those possessions corporations electing to use the cost sharing method must equal the greater of (a) 110% of the payment required under pre-TRA law, or (b) an arm's length royalty which must be determined according to the principles of §§482 and 367. These two sections have in turn been amended by the Tax Reform Act to require that income with respect to intangibles transferred to a foreign related party must be commensurate with the income attributable to the intangibles.

B. Profit Split Method Modifications

Those corporations electing to use the 50-50 profit split method are required to increase by 20% the amount of product area research expenditures used for purposes of computing combined taxable income. The effect of this requirement will be to increase the amount of income allocable to U.S. affiliates by approximately the amount of increase under the Act for companies that elect the cost sharing option. The Act also makes a technical correction to the computation of combined taxable income under this method.

C. Receipt of Income Within the United States

The Act amends subsection (b) of §936 by modifying the requirement that income received within the United States (not including possessions thereof) is not eligible for the credit. Under the Act, a credit will not be denied simply by reason of such receipt, so long as the income is received from an unrelated party.

D. QPSII Redefined

The Act changes the definition of QPSII to include interest attributable to loans made by the Government Development Bank of Puerto Rico (GDB) and certain other financial institutions for investments or reinvestments in active business assets or development projects located in qualified Caribbean Basin Initiative (CBI) countries. The amendment thus expands QPSII to include income from investments in financial institutions which otherwise would be prohibited by the active business requirement of Code §936(b)(2).

E. Modification to Gross Income Test

The requirement of §936(a)(2)(B) that over 65% of the gross income of the possessions corporation must be from the active conduct of a trade or business in order for an electing corporation to claim the credit has been increased by the Act to 75% However, the present law requirement that 80% or more of gross income over a three-year period be derived from sources within the possession is unchanged.

Other miscellaneous changes, discussed elsewhere in this portfolio, include the repeal of the exemption of possessions corporations from the Subpart F provisions,[80] and the inclusion of the U.S. Virgin Islands in the definition of the term "possession of the United States."[81]

III. Detailed Analysis

In formulating their proposals for the revision of the Internal Revenue Code, both the Treasury Department [82] and the President [83] recommended that the possessions tax credit be repealed and replaced with either a permanent (in the case of the President's proposal) or a phased-out (in the case of the Treasury) wage credit. The reason given for the suggested repeal of the credit was that it was very costly and inefficient in that the average tax benefit per employee for all §936 corporations was approximately $22,000 in 1982, more than 50% more than the $14,210 average wage of possessions corporations employees.[84] In addition, it was noted that 14 corporations, which accounted for 4% of the §936 corporations for which employment data was available in 1982, derived 29% of the combined tax benefits from the credit, representing an average of $100,000 per employee.[85] In addition to being extremely costly and inefficient, the President and the Treasury noted that §936 was also exceedingly complex and difficult to administer, whereas a wage credit, by comparison, would prove much simpler to administer.

In amending, rather than repealing, the possessions tax credit, Congress was motivated in large part by representations made by the Government of Puerto Rico that it intends to pursue a certain "twin plant initiative" plan, currently in draft form, [86] pursuant to which the Government of Puerto Rico will guarantee $100 million annually of new funds for direct private investment in qualified Caribbean Basin countries. Under the twin plant initiative, corporations utilizing §936 in Puerto Rico would establish "twin plants" employing less skilled labor in nations in the Caribbean Basin for each Puerto Rican plant benefitting from §936. The modifications made by the Tax Reform Act to §936 therefore are directed at eliminating the more egregious abuses of that section by both reducing the amount of passive income eligible for the credit and increasing the amount of revenue derived from those corporations electing either the cost sharing or profit split method of computing income with respect to intangibles.[87]

A. Modifications to Cost Sharing Payments

Section 1231(a)(1) of the Act amends §936(h)(5)(C)(i)(I) of the Code by requiring the amount of the cost sharing payment for companies that elect that option to be at least 110% of the possessions corporation's share of product area research expenditures as computed under present law. In addition, under the same Code section, to the extent that this payment would be less than that required under amended §§367 or 482, a possessions corporation which elects the cost sharing option will be required to determine the size of that payment according to the principles of §§367 and 482.

In the example in I,C,3,c above, the effect of the required increase in the cost sharing payment would be as follows:

Product Research Expenditures	=	150
Possession Sales	=	500
Other Sales	=	500
Total Sales	=	1,000
Cost Sharing Payment Under Pre-TRA Law	=	75 (500/1,000 × 150)
Cost Sharing Payment Under TRA	=	82.5 (500/1,000 × 150 × 110%)

Results Under Pre-TRA Law

a. Possessions income = 500(possession sales) - 75 = 425.

b. The U.S. parent has its deductions decreased by 75 and its earnings and profits increased by 75.

Results Under TRA

a. Possessions income = 500 - 82.5 = 417.5.

b. The U.S. parent has its deductions decreased by 82.5 and its earnings and profits increased by 82.5.

The end result in the foregoing example is that 7.5 of income is shifted from the possession to the U.S. parent. However, if the determination of the cost sharing payment under this method would result in such payments being less than would have been required had the cost sharing payment been calculated under amended §§367(d)(2)(A)(ii) or 482, then the principles of those sections would have to be applied.

Under §§367(d)(2)(A) or 482, as amended by the Act,[88] where there is any transfer or license of intangible property, the income with respect to such transfer or license must be "commensurate with the income attributable to the intangible." [89] Under this standard, taxpayers will not be able to take into account only the facts and circumstances in existence at the time of the transfer of the intangible, but must reconsider, at intervals, the amount of the payment or royalty, given the actual profit experience realized as a consequence of the transfer.[90] Thus, if the IRS determines, based on hindsight, that the actual income attributable to an intangible from the manufacture and sale of a product is substantially greater than anticipated at the time of the transfer of the intangible it may increase the royalty income of the transferor at that time. It is unclear whether the taxpayer similarly may use hindsight to decrease the

[89] *Id.*

[90] House Report, 425.

royalty income attributable to the use of an intangible in those cases in which the income turns out to be substantially less than anticipated. At any rate, the addition of this factor to the computation of the cost sharing payment introduces an element of considerable uncertainty into the computation of the payment, and it may be anticipated that the cost sharing option will become less attractive in the future. The conferees do state, however, that in revising §482, it was not intended to preclude the use of certain bona fide research and development cost sharing arrangements as an appropriate method of allocating income attributable to intangibles among related parties.[91]

B. Profit Split Method Modifications

As noted above, §1231(a)(2) of the Act amends §936(h)(5)(C)(ii)(II) of the Code to provide that those corporations electing to use the 50-50 profit split method are required to increase to 120% the amount of product area research expenditures used for purposes of computing combined taxable income, an increase of 20%. Therefore, in the above example, product area research expenditures would be increased by $30 (20% x 150) to $180. Thus, the amount of income allocable to the U.S. parent would be increased at most by $15 (50% of $30) for a company electing the profit split option in this example. Although the legislative history of the Act indicates that, under the profit split option, the amount of income allocable to non-possession affiliates is increased by no more than the increase under the Act for companies that elect the cost sharing option,[92] in actual operation, as can be seen by the foregoing example, the increase in the amount of income allocated to non-possession affiliates is greater than under the cost sharing option since the 10% increase in product area research expenditures required by the Act is thereafter multiplied by a fraction, the numerator of which is possessions sales and the denominator of which is total sales, as described in Code §936(h)(5)(C)(i)(I). Although the profit split option may result in a larger portion of R&D expenses being allocated to non-possession affiliates, it still may represent the more attractive alternative, since, under the cost sharing option, there is the overlay of uncertainty produced by the incorporation of the §§482 and 367 requirements, discussed above.

The Act at §1231(f) also makes a technical amendment to §936(h)(5)(C)(ii)(II), relating to the computation of combined taxable income under the profit split method.

In addition to the foregoing, the conferees state that, in cases in which the possession product is leased rather than sold (or is used in the trade or business of a member of an affiliated group) regulations to be issued under §936(h)(7) can permit the use of the cost sharing and profit split methods, but only if (1) an independent sales price can be determined for the product from comparable uncontrolled transactions, and (2) the appropriate member of the group agrees to be treated as having sold the possession product at such price. The conferees further state that they intend that an exception to the first requirement will be provided under conditions deemed appropriate by the Secretary, which may restrict relief to situations where (1) the cost sharing payment is no less than 100% of the product area research cost incurred by the affiliated group, and (2) the deemed sale of the possession product units is treated as made at a price which produced a profit to the appropriate member of the group equal to the possessions corporation's tax-exempt profit with respect to the same units (computed without regard to the cost sharing payment), reduced by one-half of the cost sharing payment allocable to such units.[93]

C. Receipt of Income Within the United States

Section 1231(b) of the Act amends §936(b) to provide that the §936 credit is not denied with respect to otherwise eligible active business income solely by reason of its receipt in the United States where such income is received from an unrelated party. However, present law is retained for investment income (QPSII) and for business income received from related parties.

D. QPSII Redefined

Section 1231(c) of the Act amends §936(d) by adding a new paragraph 4 entitled "Investment in Qualified Caribbean Basin Countries" which expands the categories of qualified possession source investment income (QPSII) eligible for the credit. Under this change, QPSII includes interest attributable to loans made by the Government Development Bank of Puerto Rico (GBD) and other financial institutions for investments in development projects and active business assets located in qualified Caribbean Basin initiative (CBI) countries. Although not defined in the statute, the Senate Report indicates that "development project" generally means an infrastructure investment such as a road or water treatment facility that directly supports industrial development, while "active business assets" generally means plant, equipment and inventory associated with the manufacturing operation.[94] Qualified CBI countries include any "beneficiary" country within the meaning of §212(a)(1)(A) of the Caribbean Basin Economic Recovery Act.[95] However, a CBI country may not be qualified unless there is in effect between that country and the United States an agreement providing for the exchange of information between the United States and such country and there is *not* in effect a finding by the Secretary that the tax laws of such country discriminate against conventions held in the United States.[96]

In addition, the investment must be made in accordance with a specific authorization by the GBD pursuant to regulations to be issued by the Secretary of the Treasury of Puerto Rico.[97] The person in whose trade or business the investment is made and the financial institution also must certify to the Secretaries of the Treasuries of the United

[91] *See* H.R. Rep. No. 841, 99th Cong., 2d Sess. II-634 (1986) (hereinafter "Committee Report").

[92] *See* House Report, 418, and Senate Report, 383.

[93] *See* Committee Report, II-634.

[94] Senate Report, 384.

[95] *See* 19 USCA §2702(a) and (b) (1986 Supp.). These include Anguilla, Antigua and Barbuda, the Bahamas, Barbados, Belize, Costa Rica, Dominica, Dominican Republic, El Salvador, Grenada, Guatemala, Guyana, Haiti, Honduras, Jamaica, Nicaragua, Panama, St. Lucia, St. Vincent and the Grenadines, Suriname, Trinidad and Tobago, Cayman Islands, Montserrat, Netherlands Antilles, St. Christopher-Nevis, Turks and Caicos Islands, and British Virgin Islands.

States and Puerto Rico that the proceeds of the loan will be promptly used to acquire active business assets or to make other authorized expenditures and must permit the examination of their books and records by the Secretaries of the Treasuries of the United States and Puerto Rico as necessary to ensure compliance with the requirements of §936(d)(4).[98]

E. Modification to Gross Income Test

Section 1231(d) of the Act amends §936(a)(2)(B) by increasing the percentage of gross income of the possessions corporation which must be derived from the active conduct of a trade or business from 65 to 75%. This change accords with the general intent of the Act to ensure that a significant portion of the income eligible for the possession tax credit is generated from active investments.[99] However, since the amendments to §936 are effective generally for taxable years beginning after December 31, 1986, and since the 75% figure is computed by reference to a three-year average, the amount of income attributable to the active conduct of a trade or business in the first two taxable years beginning after 1986 may in fact have to be higher than 75%. Unlike the TEFRA amendments, which raised the active trade or business percentage from 50 to 65% over a three-year period, no transition rule appears in the TRA 86 amendments.

[98] TRA §936(d)(4)(C)(i) and (ii).
[99] Senate Report, 383.

IV. Effective Dates

In general, the amendments made to §936 are effective for taxable years beginning after December 31, 1986. The Act, however, provides a special rule applicable to the transfer of intangibles under §936(h)(5)(C) (cost sharing option) pursuant to which the requirement that income with respect to the transfer must be commensurate with the income attributable to the intangible will apply for taxable years beginning after 1986, without regard to when the transfer was made.[100]

In addition, the Act contains a special transition rule for possessions corporations which produced an end product form in Puerto Rico on or before September 3, 1982 and began manufacturing a component of such product in Puerto Rico in its taxable year beginning in 1983 and with respect to which Puerto Rican tax exemption was granted on June 27, 1983. Such corporations, believed to be restricted to Eli Lilly and Company, may treat such components as a separate product for such taxable year for purposes of determining whether such corporation had a significant business presence in Puerto Rico with respect to such product and the income with respect to such product.[101]

[100] Act §1231(g)(2)(B). Transfers made to foreign corporations under §367 and transfers to which §482 (relating to allocation of income and deductions among taxpayers) applies are subject to the new rules with respect to transfers of intangibles only with respect to transfers after November 16, 1985 or licenses granted after such date. Act §1231(g)(2)(A).
[101] Act §1231(g)(4).

Chapter 67

DEDUCTIONS FOR DIVIDENDS RECEIVED FROM FOREIGN CORPORATIONS

John P. Warner, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

Prior to the 1986 TRA, U.S. corporate shareholders were not entitled to a dividends received deduction for any dividend paid by a foreign corporation unless the foreign corporation (1) were subject to federal income tax, (2) had engaged in a U.S. trade or business for at least 36 consecutive months prior to the end of the taxable year during which the dividend was paid (or, if shorter, for its entire existence), and (3) received at least 50% of its gross income from income effectively connected with its U.S. trade or business during such 36 month period. The amount of such dividends to which the 85% or 100% dividends received deduction applied was proportional to the portion of the foreign corporation's gross income during the period in which it engaged in a U.S. trade or business that was effectively connected to such trade or business.[1]

Although this system avoided substantial double corporate level taxation of U.S. earnings of certain foreign corporations having substantial U.S. operations when those earnings were repatriated to U.S. corporate shareholders, the system arbitrarily disfavored U.S. earnings of foreign corporations which did not meet the 50% U.S. trade or business test. In such a case, no dividends received deduction was available even with respect to the proportionate amount of dividends attributable to income effectively connected with the U.S. trade or business.

Example: Corporation X, a U.S. corporation, owned all of the stock of Corporation FS, a foreign corporation with U.S. and foreign operations. For each of its taxable years 1980 through 1982, Corporation FS earned $250 in world-wide gross income, $150 of which was derived from foreign businesses and $100 of which was derived from U.S businesses. For its 1982 taxable year, Corporation FS generated $50 of income effectively connected with its U.S. businesses, which income was subject to a U.S. tax (assuming for simplicity a 46% tax rate) of $23 (and no foreign income tax); and foreign source income not effectively connected with a U.S. business of $75, on which $34.50 of foreign income taxes were paid. In 1982, Corporation FS distributed to Corporation X as a dividend an amount equal to $67.50, all of its earnings and profits arising in 1982. Because less than one-half of Corporation FS's gross income for the years 1980 through 1982 was effectively connected with its U.S. business, Corporation X was not entitled to a dividends received deduction even with respect to the $27 in 1982 earnings and profits attributable to Corporation FS's 1982 income that had been subject to U.S. tax. Because Corporation X received as a dividend all of the 1982 earnings and profits of Corporation FS, Corporation X would, for foreign tax credit purposes, be deemed under §902 to have paid the $34.50 in foreign income taxes that Corporation FS paid on its 1982 earnings. For §904 purposes, all $67.50 (plus the $34.50 of foreign income taxes deemed to be paid by Corporation X under §78) of the dividend would be treated as foreign source income.[2] Thus, Corporation X would compute its U.S. tax liability in respect of the dividend based on $102 of gross income, resulting in a tentative U.S. tax liability of $46.92. However, because all of the dividend was treated as from foreign sources, all $34.50 in foreign income taxes deemed paid by Corporation X would be eligible for the foreign tax credit. Thus, total U.S. and foreign taxes on the $125 pre-tax 1982 earnings of Corporation FS would be $69.92 ($23 plus $34.50 plus $12.42).[3]

If, in the above example, Corporation FS had (i) earned from U.S. sources $150 of its $250 1980 through 1982 gross income; (ii) earned $75 in taxable income in 1982 that was effectively connected with its U.S. businesses and paid $34.50× of U.S. income tax thereon; (iii) earned $50× net income in 1982 before taxes from foreign sources not effectively connected with its U.S. business and paid $23 in foreign income taxes thereon; and (iv) distributed a $67.50 dividend to Corporation X, the following would result: Because more than 50% of Corporation FS's gross income for the years 1980 through 1982 was effectively connected with its U.S. businesses, Corporation X would be eligible for the 85% dividends received deduction under former §245(a) with respect to 60% of the $67.50 dividend actually paid, or $40.50. Thus, its taxable income attributable to the dividend would be $56.08 [($40.50 plus $27 plus $23) less (.85 × $40.50)]. Its tentative U.S. income tax liability at 46% would be $25.80. Under §904 it would have $6.08 ($40.50 minus $34.42) in U.S. source taxable income and $50 of foreign source taxable income and would be

[1] Former Code §245(a).

[2] *See* §861(a)(2)(B).

[3] Corporation X would also have an excess foreign tax credit of $12.42× attributable to such dividends.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

permitted a foreign tax credit of $20.50 ($23 × $50/$56.08). Thus, total U.S. and foreign income taxes on Corporation FS's $125 in pre-tax net income would be $62.80 ($34.50 plus $23 plus $5.30).

Section 1226(a) of the 1986 TRA substantially modifies and expands the scope of the §245(a) deduction for dividends paid by foreign corporations to U.S. corporate shareholders. Revised §245(a) in general permits U.S. corporate shareholders owning at least 10% of the stock value and voting power of a foreign corporation to deduct 80% (and, in some cases, 100%) of the dividends received from foreign corporations to the extent those dividends are attributable to post-1986 income effectively connected with a foreign corporation's U.S. business or to post-1986 dividends paid by 80%-owned U.S. subsidiaries of the dividend paying foreign corporation.[4]

II. Analysis of Revised Section 245(a)

A. Qualified 10% Owned Foreign Corporation

Under revised Code §245(a), not all dividends attributable to U.S. earnings of foreign corporations are eligible for the applicable dividends received deduction. Revised §245(a)(1) specifies that only dividends received from a "qualified 10-percent owned foreign corporation" are so eligible. Revised §245(a)(2) defines the term "qualified 10-percent owned foreign corporation" as any foreign corporation — other than a foreign personal holding company or a passive foreign investment company [5] — at least 10% of the stock value and voting power of which is held by the U.S. corporate shareholder receiving such dividend. Although the statute is not explicit in this regard, it would appear that the stock ownership requirement need be met only on the date that the dividend is received. There are no stock ownership attribution rules. Thus, holdings of less than 10% by each of two or more related U.S. corporations cannot be aggregated to meet the 10% stock voting and value requirement.

B. U.S. Source Portion

Under revised Code §245(a)(1), in order to ensure that only the portion of dividends from foreign corporations attributable to U.S. taxed business earnings are eligible for the deduction, only the U.S. source portion of dividends received from qualified 10% owned foreign corporations is eligible for the dividends received deduction. Revised §245(a)(3) defines the term "U.S. source portion" as the ratio of the dividend payor's "post-1986 undistributed U.S. earnings" to its "total post-1986 undistributed earnings." Essentially, in computing this ratio, the foreign corporation's earnings and profits, computed in accordance with §§964 and 986 principles, arising in taxable years beginning after 1986 that were not distributed prior to the taxable year at issue must be computed.[6]

The U.S. source portion of such total earnings and profits is the portion "attributable to" either (1) income of the dividend payor that was effectively connected with a U.S. business and subject to income tax or (2) dividends received (directly or through a wholly owned foreign corporation) from U.S. corporations at least 80% of the stock value and voting power of which is owned by the dividend payor (directly or through one or more tiers of such wholly-owned foreign subsidiaries).[7]

Computation of the U.S. source portion of a dividend received from a qualified 10% owned foreign corporation is determined on a rolling average basis.[8] (For simplicity, a 46% tax rate is assumed.)

> *Example*: Corporation X owns 20% of the stock of Corporation FS, a foreign corporation, which in its taxable year beginning January 1, 1987, earns (i) $50 in income effectively connected with its U.S. trade or business on which it pays $23 in U.S. income taxes and (ii) $75 in foreign source non-U.S. business income, on which it pays $34.50 in foreign income taxes. Corporation FS's earnings and profits computed under §§964 and 986 principles for 1987 are $67.50, of which $27 is attributable to its U.S. business income. If, on December 31, 1986, Corporation FS pays $50 in dividends to its shareholders, including $10 to Corporation X, the U.S. source portion of the dividends paid to Corporation X would be $4 ($10 × $27/$67.50). (Note that the total U.S. source portion of the $50 distribution was $20, *i.e.*, $50 × $27/$67.50.)

Assume further that during 1988 Corporation FS earns $50 in U.S. business income on which it pays $23 in U.S. income tax, earns $50 in foreign source non U.S. business income on which it pays $23 in foreign income taxes, and has $54 in earnings and profits. If on February 1, 1988, Corporation FS pays $17.50 in dividends, of which Corporation X receives $3.50, the U.S. source portion of the dividend paid to Corporation X would be $1.47 ($3.50 × [($27 - $20) plus $23] divided by ($17.50 plus $54)). Had a last-in, first out method been used, the U.S. source portion of the dividend paid to Corporation X would have been $1.49 [$3.50 × ($23/$54)]. Had a pure first-in, first-out method been used, the U.S. source portion of the dividend paid to Corporation X would have been $1.40 [$3.50 × ($7/$17.50)].

Comment: Even as revised, §245(a) does not permit a dividends received deduction for U.S.-taxed business earnings of lower-tier foreign subsidiaries. §245(a)(5) treats as U.S. earnings eligible for the deduction only the U.S. business income of the qualified 10% owned foreign corpo-

---

[4] §611(a) of the 1986 TRA amends §243(a) to reduce from 85% to 80% the amount of a dividend received by a corporation from an unaffiliated corporation that can be deducted. Code §245(a) incorporates §243(a) by reference.

[5] Code §1296, enacted by §1235(a) of the 1986 TRA, defines a passive foreign investment company as any foreign corporation 75% or more of whose gross income for a given year is passive income within the meaning of §904(d)(2)(A) (*i.e.*, dividends, interest, rents, royalties, annuities and certain other forms of income) or at least 50 % of the value of whose assets is held for the production of such passive income.

[6] Revised Code §245(a)(4), which refers to Code §902(c)(1) for the definition of "total post-1986 undistributed earnings."

[7] Revised Code §245(a)(5). *See also* H.R. Rep. No. 841, 99th Cong., 2d Sess. II-629 (1986).

[8] *See* footnote 6, *supra*. Act §1226(b) amends Code §959(d), which treats non-taxable distributions by controlled foreign corporations of previously taxed income as non-dividend distributions, to provide that such distributions will reduce the distributing corporation's earnings and profits.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

ration itself and dividends paid to such corporation (directly or indirectly through wholly owned foreign corporations) by its U.S. — but not its foreign — subsidiaries operating in the U.S.

In determining the portion of a dividend received from a qualified 10% owned foreign corporation by a U.S. corporate shareholder, only those post-1986 earnings and the U.S. source portion thereof arising in the taxable year during which the foreign corporation became a qualified 10% owned foreign corporation with respect to the U.S. corporation shareholder and thereafter are taken into account.[9] Thus, if a U.S. corporation first acquires 10% of the stock value and voting power of a calendar year foreign corporation on July 1, 1988, the foreign corporation's earnings and U.S. source earnings for 1988 and after — but not before — would be relevant in determining the amount of dividends paid to the U.S. corporate shareholder that were eligible for the deduction. As this provision is drafted, it could lead to problems where, during the year of sale but prior to the sale, dividends are paid to those who sell their stock in a foreign corporation to a U.S. corporation which thereby becomes a 10% shareholder.

Example: Corporation FS is a calendar year foreign corporation with U.S. and foreign operations. During 1987, Corporation FS has $500 in total earnings and profits of which $200 represents the U.S. source portion. During 1988, Corporation has $1000 in total earnings and profits of which $500 represents the U.S. source portion. From January 1, 1987 through July 1, 1988, Corporation A, a U.S. corporation, owns 10% of the stock value and voting power of Corporation FS. On February 1, 1988, Corporation A receives a $75 dividend from Corporation FS. On July 1, 1988, Corporation A sells its entire interest in Corporation FS to Corporation B, another U.S. corporation. On December 31, 1988, Corporation FS distributes a $75 dividend to Corporation B. The U.S. source portion of the dividend paid to Corporation A takes into account Corporation FS's 1987 and 1988 earnings, and is thus $35 [$75 × ($700/$1,500)]. The U.S. source portion of the dividend paid to Corporation B takes into account only Corporation FS's 1988 earnings, and is thus $37.50 [$75 × ($500/$1,000)]. However, the combined U.S. source portions of the dividends paid to Corporations A and B — $72.50 — exceeds the 10% of the total $700 U.S. portion of the earnings of Corporation FS from which the dividends were paid.

C. *Coordination with Foreign Tax Credit Rules*

Revised Code §245(a)(8) denies a foreign tax credit for any foreign tax paid by a qualified 10% owned foreign corporation attributable to the U.S. source portion of a dividend to a U.S. corporation. This rule is designed to prevent 10% U.S. corporate shareholders of foreign corporations from getting a double benefit from the U.S. source portion of such dividends. Without this rule, not only would the shareholder receive the dividends received deduction but in addition would be entitled to a foreign tax credit on foreign taxes paid by the qualified 10% owned foreign corporation with respect to the U.S. portion of such dividends because the foreign taxes paid by the qualified 10% owned foreign corporation would be deemed to have been paid by the U.S. corporate shareholder under §902.[10]

Revised Code §245(a)(9) provides that, for purposes of the §904 limit on the amount of foreign taxes for which the foreign tax credit is available, the U.S. source portion of any dividend received from a qualified 10% owned foreign corporation is treated as income from U.S. sources. This in general continues the pre-1986 TRA rule contained in Code §861(a)(2)(B), which treated as U.S. source income 100/85 of the amount of a §245(a) dividends received deduction.

D. *Effective Date*

The rules of revised §245(a) are generally effective with respect to dividends paid by qualified 10% owned foreign corporations out of earnings and profits from all taxable years beginning after 1986. Act §1226(c)(1). As noted earlier, however, only the U.S. source portion of earnings arising during and after the taxable year in which a U.S. corporate shareholder first meets the stock ownership requirements is taken into account in determining the dividends received deduction available to such shareholder.

[9] Revised Code §245(a)(6).

[10] As this provision is drafted, it may have the effect of denying the foreign tax credit otherwise available but still requiring the 10% U.S. corporate shareholder to increase its gross income by the amount of foreign tax attributable to the U.S source portion of the dividend. Revised Code §245(a)(8) does not literally override Code §902(a), which treats a U.S. shareholder as having paid the foreign taxes actually paid by a qualified 10% owned foreign corporation that pays a dividend to it; §245(a)(8) merely disallows a credit for those taxes under Code §901. However, §78 requires a corporation to increase its gross income by the amount of foreign taxes that it is deemed to have paid under §902.

Chapter 68

INTERCOMPANY TRANSFER PRICING: INTANGIBLES; IMPORTS

Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Background and Legislative History

This chapter discusses the amendments made by the Tax Reform Act of 1986 [1] to §§367, 482 and 936 of the Code [2] relating to the transfer, sale or licensing of intangible property. The principal focus of this discussion is the amendment made to §482, which is incorporated by reference into the amendments made to §§367 and 936.

A. Background — Transfer Pricing Theories under §482

To obtain proper perspective on the implications of the amendment to §482 it is necessary first to go into the background of the statute at some length.

Section 482, which has appeared substantially in its present form in U.S. internal revenue laws for more than 50 years, provides the Commissioner authority to "distribute, apportion, or allocate" items of gross income, deductions, credits, or allowances between or among commonly controlled organizations, trades or businesses when deemed necessary to prevent the evasion of taxes or clearly to reflect their income. Its legislative history suggests that the principal purpose for its enactment was to prevent tax evasion by U.S. taxpayers by effectively shifting income earned or generated by their activities in the U.S. to foreign jurisdictions. The foreign sales company appears to have been the principal tax avoidance model: the selling of property produced or purchased in the U.S. to a foreign sales subsidiary for a price which would enable the subsidiary to garner a disproportionate share of the combined net profit from the production and sale of the property in question. The reach of the statute is extremely broad. It has long been well settled that no intent to avoid tax or distort income need be established as a basis for its application. It applies not only to sales of property but to low interest loans, the rendition of services, and the use of property, both tangible and intangible. In the period prior to World War II, the statute was interpreted, generally, and in accordance with the implication of its operative terms, to authorize, at the Commissioner's discretion, the allocation among the members of a commonly controlled group (most often a parent and subsidiary or two sister corporations) the net income (or loss) realized by the group for a taxable year in transactions with persons outside the group.[3] It was also applied to allocate an item of loss or deductible expense from the member claiming it to the member which the Commissioner determined had actually benefitted from the expense involved or had actually sustained the loss claimed. In other words, for an allocation to be made, there had to be either a quantum of group net income or an item of expense or loss to be allocated. The general rule was that where no income had been realized, there was nothing to allocate.[4]

1. The Unitary Approach

As the taxation of U.S. persons carrying on foreign operations came increasingly under scrutiny after the war, it was perceived that numerous long tolerated abuses were seriously eroding the U.S. tax base. Among these was intercompany transfer pricing of the kind §482 could prevent if properly enforced. Enforcement, however, posed a number of difficulties of a conceptual or theoretical kind. The policing of transfer pricing involves two distinct and opposed approaches, often termed "unitary" and "separate entity." The unitary approach reflects the general interpretation of the statute described above. Under it, the members of the commonly controlled group are viewed as an economic unit; transfer pricing should result in an allocation of the unit's net profit (or loss) for a given taxable period among the members in accordance with their respective economic contributions or activities. In the case of the manufacturer of goods and its foreign sales subsidiary, the apportionment of the net income is based on such economic factors as capital invested, the degree of sales activity, risks incurred, and the like. Many states have adopted a version of this approach in determining the portion of a multistate or multinational entity's total profits attributable to its activities within the state, using a formula giving each relevant economic factor a fixed weight. This method sometimes referred to as "formulary apportionment." In applying §482 under the unitary approach, however, the weighting of economic factors is based on facts and circumstances.

This unitary approach was found unsatisfactory for a number of reasons. Essentially it calls for the determination

[1] P.L. 99-514, approved by the President October 22, 1986, hereinafter referred to as the Act or 1986 TRA.

[2] "Section" as used herein refers to sections of the 1954 Internal Revenue Code as in effect before the enactment of P.L. 99-514 or to sections of the 1986 Internal Revenue Code, the official designation of the Code as revised by the Act, depending on the context in which used. *See* §2 of P.L. 99-514.

[3] On occasion, allocation was also made of gain or loss realized in inter-member transactions where one of the members was subject to a foreign tax jurisdiction. *See Asiatic Petroleum Corp. v. Comr.*, 79 F.2d 234 (2d Cir. 1935), cert. denied, 296 U.S. 645 (1935).

[4] *See Asiatic Petroleum v. Comr., supra.*

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

of a reasonable profit split between or among entities which are often engaged in extremely complex transactions. What apportionment of profit is "reasonable" was deemed too vague a criterion for the application of tax laws. Formulary methods were believed unsatisfactory because they failed to take into consideration the sometimes substantially different factors affecting different kinds of businesses and economic factors in different parts of the world. Another defect was that in many instances, intercompany transactions often involved only one or a small group of items. To apply the unitary method, the net profit or loss from the transaction(s) in question had to be traced. In the case of an interest-free loan, for example, it was virtually impossible to attribute a given quantum of the borrower's profits to the use of the funds. Again, where property was sold for a bargain price, no allocation was possible until it had been resold or placed in service by the purchaser to generate income or deductions. This might involve the allocation of income or loss realized or sustained in one or more taxable years to a different year than the year of the transaction giving rise to the adjustment. This involved difficulties with the annual accounting period basis for determining taxable income.

2. The Separate Entity Approach

In the early 1960's, the Treasury Department, having decided to launch an international enforcement program based on vastly increased use of of §482 to police transfer pricing of all kinds, was persuaded that while the unitary approach need not be abandoned altogether, the separate entity or arm's length method promised a much more effective and easily administered set of principles for carrying out the intent of §482. This approach assume that for each intercompany transaction, one can usually determine the terms to which unrelated persons, dealing at arm's length, would have agreed in entering into an identical or closely similar transaction. In the case of a loan, one need only consult the market interest rates prevailing at the time of the loan. In the case of the sale of goods, it was assumed that on the basis of sales of the same or similar goods to unrelated persons, or from other data available to the IRS, a "comparable uncontrolled price" could be determined. Once the appropriate arm's length price applicable to a given transaction had been determined, the §482 adjustment called for was to increase the taxpayer's income (and correlatively to decrease the other controlled person's income) in an amount equal to the difference between the transfer price actually charged and the arm's length price. This method had the virtue of applying objective standards in lieu of the vague reasonable profit split standard. It eliminated tracing. This method was embodied in Regs. §1.482-2 and, with the one exception noted below, *must* be applied by the IRS in making allocations under §482, subject to certain "safe haven" deemed arm's length prices or charges.

3. IRS Practice

While the IRS continues to use the term "allocation" to describe adjustments under the separate entity method, no allocation (or apportionment or distribution) is actually involved. The adjustment is made whether or not any profit or loss, net or gross, is realized by the group or by either party to the transaction. While the Tax Court initially resisted this interpretation of the statute, the IRS eventually prevailed in the courts of appeal, and there is no longer any serious question as to the validity of arm's length or separate entity "allocations" under §482.

The regulations referred to do not, however, completely abandon the unitary method. In certain circumstances, where comparable uncontrolled transaction data are impossible to obtain, Regs. §1.482-2(e) permits use of a "fourth method," which is generally understood to permit what are essentially unitary method allocations.[5] Over the years, however, the IRS has found that, with a few exceptions, the determination of appropriate arm's length prices based on a comparable uncontrolled transactions is vastly more difficult than had been assumed. Resort to the the fourth method, therefore, despite regulations elaborating in fine detail the arm's length rules, is applied with increasing frequency and has on numerous occasions been upheld by the courts as a valid application of the statute.

B. Transfers of Intangible Property: Prior Law

The transfer of intangible property, typically patent rights, trade secrets, trademarks, and the like, by a U.S. taxpayer who has developed or otherwise acquired the property to a related foreign entity has long been a cause of concern to the IRS. Such transfers can be effected in three different ways, each of which, prior to the 1986 TRA amendments, had different tax consequences. The transfer could be in the form of a license, usually calling for the payment of royalties by the transferee. It could be in the form of a sale of all the substantial rights of the owner, either for a lump sum amount or for an amount contingent on the income derived by the transferee from the exploitation or use of the intangible property. Lastly, the transfer could take the form of a contribution to the capital of a controlled corporation which, under §351, is accorded nonrecognition of gain or loss, or, more rarely, there could be a nonrecognition transfer within the provisions of §361 as part of a reorganization.

1. Section 482

In the case of a license or a sale, Regs. §1.482-2(d), relating to the transfer or use of intangible property, was applied. The regulations authorize appropriate allocations where intangible property or an interest therein is transferred, sold, assigned, loaned, or otherwise made available in any manner by one member of a group of controlled entities to another for other than an arm's length consideration. Despite certain language seemingly to the contrary in *Eli Lilly & Co. v. Comr.*,[6] it seems clear that these regulations have no application to a §351 transfer since, in this context, arm's length consideration is irrelevant.

Intangible property is defined to consist of the following items, provided they have substantial value independent of the services of individual persons:

(a) Patents, inventions, formulas, processes, designs, patterns and other similar items;

(b) Copyrights, literary, musical or artistic compositions, and other similar items;

[5] *See, e.g., DuPont v. U.S.*, 608 F.2d 445 (Ct. Cl. 1979), cert. denied, 100 S. Ct. 1648 (1980).

[6] 84 T.C. 996, 1128-29 (1985).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(c) Trademarks, trade names, brand names and other similar items;

(d) Franchises, licenses, contracts and other similar items;

(e) Methods, programs, systems, procedures, campaigns, surveys, studies, forecasts, estimates, customer lists, technical data and other similar items.[7]

The regulations adopt, as do the other sections of Regs. §1.482-2, the position that arm's length consideration is to be determined on the basis of comparable uncontrolled transactions entered into either by the taxpayer or by another similarly situated transferor. Where a sufficiently similar transaction involving an unrelated party cannot be found, Regs. §1.482-2(d)(2)(iii) lists 13 factors which should be considered in arriving at an approximation to an arm's length price.

Note: These regulations would, by implication, seem to rule out resort to a "fourth method" or profit split approach, in view of these elaborate instructions for the determination of arm's length consideration. That is, the absence of comparable uncontrolled transaction data does not authorize proceeding immediately to basing of an allocation on the profit split or other unitary methods. The factors enumerated, some of which will always be quantifiable to a degree, must be applied to arrive at a hypothetical uncontrolled price. Note that in *Lilly*, *supra*, where the court agreed that a profit split approach was authorized under the regulations and case law, the §482 adjustments involved were based on Regs.§1.482-2(e) (sales of tangible property) rather than on §1.482-2(d). The possessions affiliate was determined by the IRS to have been a contract manufacturer which overcharged its U.S. parent for the goods manufactured using the parent's intangibles and sold to the latter.

The Ways and Means Committee report [8] expresses concern that §482 may not be operating to assure adequate allocations of income to U.S. taxpayers who transfer intangibles to related foreign entities. The report notes that "Many observers have questioned the effectiveness of the 'arm's length' approach of the regulations under §482," and identifies as a recurring problem the absence of comparables.

The problem is particularly acute, according to the report,[9] where the intangible transferred has a high profit potential.

Comment: Aside from the technical difficulties in applying the separate entity approach to transfers or licenses of intangible property, while not emphasized in the report, one factor apparently underlying the IRS's continuing concern with this area is that since the research and development costs associated with any intangible are usually deducted currently under §174 by the U.S. developer, the U.S. should at the least be entitled to "recapture" these deductions as the intangible generates income, irrespective of the technicalities of ownership. It is submitted that a far greater concern was the fact that intangibles, arguably the country's principal industrial assets, create not only tax revenue but jobs and export income, all objects of past and current tax laws. The transfer abroad of intangibles results in a permanent loss of these valuable elements of the economy. While the committee reports do not clearly articulate this, some radical disincentive to such transfer would seem to have been contemplated by Congress.

The report refers to *United States Steel Corporation v. Comr.*,[10] a case in which the Second Circuit ruled that an arm's-length charge for the transportation to the taxpayer's domestic facilities from South American mining sites of iron ore on vessels owned by its subsidiary was sufficiently established to prevail over a profit split allocation made by the Tax Court, where the charges relied on for this purpose related to certain transportation furnished to an unrelated entity making up only a very small (less than 5%) portion of the subsidiary's operations. The Committee expressed concern that "such decisions may unduly emphasize the concept of comparables even in situations involving highly standardized commodities or services," [11] a somewhat surprising statement in view of the above cited regulations of long standing requiring allocations to be made on the basis of arm's length pricing determined by reference to comparable uncontrolled transactions or an approximation thereof.

2. Sections 367 and 936

Another Code provision affecting the tax consequences of transfers of intangibles by U.S. persons to foreign entities is §367(d), enacted by P.L. 98-369 (Tax Reform Act of 1984). Prior to enactment of §367(d), §351 applied to confer nonrecognition of gain where intangibles were transferred by a U.S. parent to its foreign subsidiary as a contribution to capital where the intangibles were to be used by the subsidiary in the active conduct of a trade or business and where they were not to be used in a U.S. trade or business or for manufacturing products to be sold or consumed in the U.S.[12] In such a case, the foreign corporation would be recognized as a corporation under §367 (and, hence, the provisions of §351 applied) since the transfer would not be deemed to have as a principal purpose the avoidance of U.S. tax.

Section 367(d) provides that, except as provided by regulations, if a U.S. person transfers intangible property to a foreign corporation in an exchange described in §§351 or 361, the transfer is treated as a sale in exchange for payments over the useful life of the intangible made on an annual basis reflecting the amounts that would have been received under an agreement providing for payments contingent on use, productivity, or disposition of the property.[13] Amounts included in income under these provisions are treated as ordinary income; the transferee is entitled to deduct the same from earnings and profits.

The intangibles subject to these rules are intangible property within the meaning of §936(h)(3)(B). The items

[13] §367(d)(2)(A), as in effect prior to enactment of the Act.

enumerated in that subparagraph are essentially the same items as those enumerated in Regs. §1.482-2(d)(3)(ii)(a) through (e) set forth above.

These rules are to have no application in a case where the IRS determines that an adjustment under §482 is appropriate because the foreign transferee obtained the use of the property without sufficient compensation. Further, §367(d) is to have no application to bona fide cost sharing arrangements described in Regs. §1.482-2(d)(4), as amplified by any elaborations Treasury deems appropriate. The House committee report cited above also noted that these special §367 rules were not completely adequate to deal with the problem of tax avoidance and/or U.S. revenue loss stemming from transfers of intangibles.

Finally, transfers of intangibles to U.S. possessions corporations are subject to special rules by §936. Since these are U.S. corporations, §367 does not apply to the transfers. As noted in the House report, it was unclear how transfers of intangibles to possessions corporations as contributions to capital (the usual form of transfer) should be treated. The *Lilly* case, cited above, involved such a typical transfer. The years involved were all prior to 1982. The offshore affiliate received the parent's manufacturing intangibles, manufactured the products and sold them to the parent for resale to its customers under its trade name. Thus, the marketing intangibles were retained by the parent/transferor. In *Lilly*, the IRS took the position (also typical in such situations) that despite the form of the transfer, the possessions corporation was merely a contract manufacturer, and that all of its income, less an allowance for its manufacturing expenses plus a reasonable mark-up, should be treated as earned by the parent. The court, while rejecting this position, on the ground that the IRS was bound by §351 and must recognize ownership of the transferred intangible by the transferee, nevertheless allocated to the parent an amount of the subsidiary's profits equal to what it considered would have been demanded as contributions to the parent's ongoing basic research and development expenses from an unrelated transferee or licensee of the intangibles, a decision somewhat difficult to square with the §482 regulations. In effect, despite the rationale given for the holding, the court would appear to have arrived at what was basically a profit split application of the statute, based on its view of the related members' economic contributions to the net combined profits of both.

In 1982, §936 was amended to provide specific rules for the allocation of intangibles income between a U.S. parent and its possessions subsidiary in cases of the *Lilly* type. Generally, all income attributable to the transferred manufacturing intangibles is allocated to the parent transferor unless one of two specified options is elected. Under the first, the cost sharing option, the possessions corporation is treated as the earner of the income attributable to manufacturing intangibles (but not, generally, marketing intangibles) provided it makes payments to the parent of a portion of the latter's research and development costs under a formula provided in the statute. Under the second, the parties may elect a 50/50 profit split. However, §482 may still be applied to the transfer prices charged by the subsidiary in sales to the parent where they are not arm's length. Section 482 may also be applied to allocate income attributable to marketing intangibles.

Congress felt that neither §367 nor §936 provided significantly better protection that did §482 against revenue loss from the shifting of income through transfers of intangibles, especially those with high profit potential, to foreign (or possessions) entities.

C. The House Bill

Section 641 of The Ways and Means Committee's bill amended both §936 and 367.

Under the amendments to §936, the cost sharing payment required for companies electing the cost sharing option (with respect to intangibles the possessions corporation was treated as owning) was revised to an amount equal to 110% of the amount required under prior law or, if greater, the royalty payment that would be due under §367 as modified by the Act.

The amendment to §367 was to add to §367(d)(2)(A) (discussed above) the provision that amounts taken into account under clause (ii) shall be "commensurate with the income attributable to the intangible." Further, in the case of any transfer in a transaction not qualifying under §351 or §361 to a foreign entity (*e.g.*, a transfer by a corporation to a commonly controlled sister corporation), rules similar to these rules are to be applied for purposes of §482. The House report states that its approach applies both with respect to outright transfers of ownership of the intangibles (whether by sale, contribution to capital or otherwise) and licenses or other arrangements for the use of intangibles.[14]

The House bill did not apply to inbound transfers. It, therefore, contained no provisions applicable to the amount deductible as royalty expenses by a U.S. corporation to which intangibles had been transferred by a foreign entity, or the amount includible in such foreign entity's taxable income as computed under U.S. tax principles (where applicable).

The Senate bill contained no provisions relating to the transfer of intangibles to foreign entities.

II. Overview

Section 1231(e)(1) of the Act amends §482 by adding an additional sentence: "In the case of any transfer (or license) of intangible property (within the meaning of §936(h)(3) (B)), the income with respect to such transfer or license shall be commensurate with the income attributable to the intangible."

Section 1231(e)(2) of the Act amends §367(d)(2) by adding at the end a new sentence: "The amounts taken into account under clause (ii) shall be commensurate with the income attributable to the intangible."

Section 1231(a)(1) of the Act amends §936(h)(5)(C)(i) (I) to provide that if an election is made under the cost sharing option, the amount payable by the transferee of the intangibles (the possessions corporation) of product area research of the group is not to be less than 110% of its proportionate share based on the ratio of

[14] H. R. Rep. at 425.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

possessions sales to total sales of the group. In other words, prior law is retained except for the addition of the 110% factor. However, the subclause is further amended to provide that, in the case of intangibles described in subsection (h)(3)(B)(i) which the electing corporation is treated as owning under subclause II, the payment required is not to be less than the inclusion or payment that would be required under §367(d) (2)(A)(ii) or §482 if the corporation were a foreign corporation.

Thus, the standard "commensurate with the income attributable to the intangible" is applied under all three of these amended Code sections.

The amendments made by Act §1231(e) apply to taxable years beginning after December 31, 1986, but only with respect to transfers after November 16, 1985 or licenses granted after that date (or before such date with respect to property not in existence or owned by the taxpayer on such date).[15]

For purposes of §936(h)(5)(C), the amendments made by Act §1231(e) apply to taxable years beginning after December 31, 1986 without regard to when the transfer (or license) was made.[16]

In addition, a technical correction of the profit split rules of §936(h)(5)(C)(ii)(II), applicable to taxable years after December 31, 1982,[17] strikes out "all products produced and types of services rendered" and replaces these words by "all products and types of services, within such product area, produced or rendered." [18]

In many instances, U.S, importers of goods claim transfer prices exceeding the amounts claimed in customs declarations. Congress concluded that where a U.S. taxpayer imports property in a transaction with a related person, the basis or inventory cost of such property should not exceed the value placed on the property for customs purposes as a general rule. This matter is separate and distinct from the problems involving intangibles discussed above. Act §1248 adds §1059A to the Code, providing that where property is imported into the United States in a transaction (directly or indirectly) between related persons (within the meaning of §482), the amount of any costs taken into account in determining basis by the purchaser which are also taken into account in computing the customs value of the property are not to exceed such latter costs. "Customs value" means the value taken into account in determining any duties imposed on the importation of property. "Import" means the entering or withdrawal from a warehouse for consumption, except as may otherwise be provided by regulations.

These provisions apply to transactions entered into after March 18, 1986.[19] Comments on §1059A are provided in III, F, below.

[15] Act §1231(g)(2)(A).

III. Detailed Analysis of Provisions Concerning Transfers of Intangibles

A. General Observations

In the simplest terms, the amendment to §482 (and, by implication, the amendments to §§367 and 936) adopt the "profit split" approach to the allocation of income attributable to intangibles, whether transferred in a nonrecognition transaction, by sale, or used by a commonly controlled entity under a licensing agreement. In addition, the provisions, as the Conference Committee report makes clear, are to apply to all transfers or licenses between commonly controlled entities irrespective of whether the transferee/licensee is a U.S. or a foreign entity.[20]

One major change from the previous rules under §§482 and 367 is the so-called "second look" rule. Under prior law, if the royalties payable (or payments of the sale price based on income derived from the intangibles) constituted an arm's length charge at the time the licensing or sale agreement was entered into, then, unless the agreement provided for revision by either or both parties (options to terminate on notice, for example) at some specified period(s) prior to the end of the payout or royalty term, no adjustment was permissible based on subsequent changes in circumstances.[21] Under the language of the amendment, the House report states that: "the inquiry as to appropriate compensation for the intangible [is not] limited to the question of whether it was appropriate considering only the facts in existence at the time of the transfer. The committee intends that consideration also be given the actual profit experience realized as a consequence of the transfer. Thus, the committee intends to require that the payments made for the intangible be adjusted over time to reflect changes in the income attributable to the intangible." [22] The report indicates that the income attributable to the intangibles is to be reviewed on an annual basis, and, if there are "major variations" in the facts and circumstances, the formula or basis for allocating income attributable to the intangibles may also be changed.[23] This applies irrespective of whether the licensing agreement provides for termination at the option of either party. Two questions are left unanswered: (1) what is meant by "major variation?"; (2) do these comments contemplate retroactive adjustments?

The Conference Committee concedes that "many important and difficult issues under section 482 are left

[20] Conf. Rep. No. 841, 99th Cong., 2d Sess. (hereinafter referred to as "Conf. Rep.") at II-637: "The concerns addressed in the House bill originated in connection with transfers of intangibles from U.S. parties to foreign affiliates, particularly those operating in low-tax foreign countries. Consequently, the provisions of the House bill only were applied to transfers of intangibles from U.S. persons to their foreign affiliates. In view of the fact that the objectives of these provisions — that the division of income between related parties reasonably reflect the relative economic activity undertaken by each — applies equally to inbound transfers, the conferees concluded that it would be appropriate for these principles to apply to transfers between related parties generally if income must otherwise be taken into account." The language "reflect the economic activity undertaken by each" is a pure expression of the unitary method discussed above.
[21] *See, e.g. French v. Comr.*, 60 T.C. 836 (1973).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

unresolved." It is recommended that the IRS conduct a study of the intercompany pricing rules and that careful consideration should be given to whether existing regulations should be modified in any respect.[24]

Comment: Obviously, the amendment to §482 invalidates most of Regs. §1.482-2(d), requiring allocations based on the use of intangibles to be based on comparable uncontrolled transactions. These regulations will obviously have to be rewritten. The language in the committee report cited would thus appear, by implication, to contemplate a reconsideration of the arm's length standard approach under *other* subsections of Regs. §1.482-2 as well. If, as some commentators seem to feel, the unitary or profit split method for applying §482 should be given official recognition (other than the brief and somewhat restricted authority to resort to a "fourth method" in Regs. §1.482-2(e)), the federal transfer pricing rules may move closer to the state unitary methods which, up until the present time, the federal authorities have attempted to persuade the states to abandon.

B. *What Does "Commensurate With the Income Attributable to the Intangible" Mean?*

The words, "the income with respect to such transfer or license shall be commensurate with the income attributable to the intangible," read without the background of the regulations under §482 and the many cases involving their application to concrete fact patterns, conveys a somewhat vague principle. The House report, commenting on this language, declares that it does not mandate the use of the "contract manufacturer" or "cost plus" methods of allocating income, or of any other particular method.[25] Thus, presumably, the "developer" (to use the term employed in Regs. §1.482-2(e)) of the intangible will not necessarily be deemed to have earned *all* of the income attributable to its use, leaving to the user only a reasonable profit margin on its manufacturing expenses.[26] The House report suggests as factors to be considered in applying the new profit split rule are "the extent to which the transferee bears real risks with respect to its ability to make a profit from the intangible, or, instead, sells products produced with the intangible largely to related persons (which may involve little sales risk or activity) and has a market essentially dependent on, or assured by, such related parties' marketing efforts."

The report emphasizes, however, that primary weight is to be given "the profit or income stream generated by or associated with intangible property."[27] Risks and sales efforts have often been weighed in determining arm's length prices, not only for the use or transfer of intangible property, but also for services and, most often, for the sales of goods. The methods used in applying the separate entity or arm's length approach and the unitary or profit split approach overlap to a considerable extent, a fact that has caused much confusion in the courts and on the part of IRS examiners attempting to follow the regulations. The one important difference under the revised statutory language is that the "functional analysis" will no longer be undertaken to determine an arm's length price, as seems to be its principal purpose in IRM 42(33)-1, but to match profit sharing with "economic activity."

C. *Cost Sharing*

The Conference Report[28] emphasizes that there is no intention of precluding "the use of certain bona fide research and development cost sharing arrangements as an appropriate method of allocating income" where consistent with the purposes of the provision that the income allocated among the parties reasonably reflect the actual economic activity undertaken by each. The report further states that the cost sharer would be expected to bear its share of such R&D costs "on unsuccessful as well as successful products within an appropriate product area,[29] and the costs of research and development at all relevant development states would be included."

It is contemplated that, consistent with the language of the amendment, "the allocation of R&D cost-sharing arrangements generally should be proportionate to profit as determined before deduction for research and development." This language reflects the suggestion for the Joint Committee's problem regarding the potential for "cherrypicking forwarded to Treasury officials by a law firm.[30] The term "cherrypicking" means contributions by the foreign user of the intangibles to selected potentially highly profitable research and development projects only. If costs are shared proportionate to gross profits (rather than gross sales as under §936(h)(5)(C)(i) and under proposed Regs. §1.482-2(d) issued in 1966), the cost sharer must assume the same risks as the developer within the product area. This is reinforced by the requirement that the costs of both unsuccessful as well as successful research projects must be shared.

Comment: A more precise definition of "product area" and details regarding cost sharing principles will have to be provided by regulations. One problem which will have to be faced, however, is the extent to which cost sharing payments qualify as deductible expenses under the tax laws of the foreign country in which the subsidiary carries on its operations. Royalty payments are closely scrutinized by foreign tax authorities as potential devices for the distribution of dividends.

---

[24] Conf. Rep. at II-638.

[25] H. R. Rep. at 426. Of course, if the user of the intangibles is, in fact, a contract manufacturer, the normal §482 methods, following Regs. §1.482-2(b), based on arm's length charges for the services rendered will, presumably, apply.

[26] This "contract manufacturer" approach was the basis for the §482 adjustments in *Lilly*, supra. Tax Management understands that this approach is often employed by IRS international examiners despite the mandate of Regs. §1.482-2(d) that comparable uncontrolled transaction data be used wherever feasible. Under these regulations, any allocation must be based on the hypothetical charge that would have been made in an uncontrolled transaction. The "cost plus" method is just a variation of this; it allocates to the user a mark up on costs incurred to the exclusion of any of the profit attributable to the use of the intangible.

[27] *Id.*

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The risk factor is made clear by the Committee's comment that to the extent that one party contributes funds toward R&D at a significantly earlier time than another, or is putting its funds at risk to a greater extent than another, "it would be expected that an appropriate return would be required to such party to reflect its investment."

Cost sharing arrangements established under Regs. §1.482-2(d)(4) will have to be reviewed and, where necessary, amended in the light of the Committee's comments.

D. Double Taxation Problems

One problem that looms on the horizon in taxable years after 1986 is the reaction of foreign tax authorities to deductions claimed by affiliates of U.S. taxpayers based on the amendments hereunder discussed. Most of our major trading partners are members of the OECD [31] whose Committee on Fiscal Affairs issued a report in 1979 [32] taking unequivocally the position that adjustments to transfer prices made by the member states should be based on the separate entity or arm's length method. The unitary method is viewed in the report as, generally, unacceptable except as a reference point to test the reasonableness of the arm's length prices determined, or, alternatively, as an aid in determining arm's length prices. While not binding on any member state, the report is well known to tax officials involved in transfer pricing disputes, notably the competent authorities charged with carrying out the mutual agreement procedures of the various tax treaties to which the U.S. is a party.

Where an allocation is made by the U.S. exceeding what would be an arm's length royalty charge under OECD and former §482 principles, foreign tax authorities may be expected to refuse, categorically, to grant a correlative adjustment to the foreign entity. Further, it is unrealistic to expect that the IRS can persuade foreign tax authorities, in competent authority proceedings, to grant even partial correlative adjustment relief in such cases. Should a §482 adjustment (or an adjustment under §367(d)) be made increasing the gross income of a U.S. taxpayer, economic double taxation will result. Due, in part, to the lowering of U.S. tax rates and tightening, generally, of the limitations provisions of §904 by the Act (*See* Chapter 59), such double taxation will in all probability not be mitigated to any substantial degree by the allowance of foreign tax credits.[33] This problem may well be exacerbated by the treatment by foreign tax authorities of any remittances allowed tax-free under Rev. Proc. 65-17, 1965-1 C.B. 833 under U.S. law, as dividends subject to withholding tax. A similar problem will exist where the foreign entity actually makes payment to its U.S. parent of superroyalties. Many countries place strict limitations on the amounts of royalties payable by resident affiliates to their foreign parents. Superroyalty payment may either be blocked completely or treated as dividends. Further, complications with substantial U.S. tax consequences may arise in the case of related foreign entities where one uses intangibles developed by the other. Their earnings and profits and effective foreign tax rates will have to be recomputed for all U.S. tax purposes.

It is extremely difficult even to guess at how these problems will be dealt with. Unilateral concession by the IRS, as under obsolete Rev. Proc. 64-54, 1964-2 C.B. 1008, would frustrate the purpose of the amendments. On the other hand, intolerable double tax burdens would dampen any incentives to exploit U.S. technology abroad.

Comment: May one surmise that this is exactly what Congress foresees? If it be assumed that the major U.S. industrial assets are basically advanced technology, the operation of the amendments under discussion will exert very compelling pressure to utilize manufacturing intangibles in the U.S. and export the products rather than export the intangibles for exploitation abroad. If this purpose informed the new provisions, the committee reports reveal nothing of it. This is understandable, perhaps, in view of the many influential interests who will be affected.

Note also Act §1216, intended to provide tax incentives to U.S. research and development activities by providing that 50% of all amounts deductible as qualified R&D expenses be apportioned to U.S. source income with the remainder to be apportioned on the basis of gross sales or gross income. This, in effect, will increase the value of the limitation fraction under §904 for most affected taxpayers with a correspondingly greater currently usable foreign tax credit. This supersedes the prior law moratorium on all R&D apportionment and is to take effect in taxable years beginning after August 1, 1986, and on or before August 1, 1987. The Conference Committee [34] directs the IRS to undertake a study of the effectiveness of this incentive and of alternative incentives to U.S. R&D activities and of the compatibility of any such incentives as may be provided in regulations with foreign tax systems.

Comment: There is another side to the coin. Given the language of the new provisions and the committee reports, U.S. affiliates of foreign companies may reap substantial tax benefits in the form of increased deductions for royalties where foreign developed intangibles are used here. This is another of the facets of the amendments whose ultimate effect can only be guessed at.

E. Conclusions

The amendments under discussion, while taking up only a few lines of the voluminous 1986 Act, may well be one of the most significant changes in terms of total economic effect. They certainly do not bring any closer the day when some universally acceptable set of transfer pricing rules are adopted by the U.S. and its trading partners. While the committee reports justify the changes as necessary to prevent the loss of U.S. tax revenues via the exportation of intangibles, the costs of which were deducted by their U.S. developers, and mention the unsatisfactory and uncertain operation of the provisions of prior §§367,

[31] Organization for Economic Cooperation and Development.

[32] *Transfer Pricing and Multinational Enterprises*, Paris, 1979.

[33] In order to obtain any credit for the foreign taxes paid with respect to the amount treated as a superroyalty, the U.S. taxpayer will have to exhaust all "effective and practical remedies" to obtain a refund of such taxes from the foreign government and, failing this, relief through competent authority procedure. Rev. Rul. 80-231, 1980-2 C.B. 219. However, the IRS may well recognize that in most cases, pursuit of these remedies will be futile. Such foreign taxes will, therefore, normally be creditable. This, however, will be of little comfort to the taxpayer who cannot use the excess credits generated.

[34] Conf. Rep. at II-608.

482, and 936 in subjecting to U.S. tax income which was economically earned in the U.S. or should be so considered, there may be, as indicated above, even more compelling but unexpressed goals. The relocation by numerous large U.S. manufacturing concerns of their operations abroad to take advantage of cheaper labor and benign regulatory conditions coupled with troublesome trade imbalance caused by the importation of foreign made products has long been a cause of concern. Since technology is an ever increasing factor in the production of goods, provisions which at the same time discourage the use abroad of intangibles developed by U.S. concerns and encourage the use here of intangibles developed by foreign companies have a strong appeal totally unrelated to the generation of tax revenues.

To those U.S. corporations which continue to utilize foreign subsidiaries or branches to manufacture goods, the new rules will present burdensome uncertainties. The amendments will almost certainly cause litigation, and their meaning will probably have to be settled by the courts. Further, there is no question but that considerable additional recordkeeping and reporting costs will result. The implications of these amendments are indeed very broad and, to a large degree, incalculable. The Conference Committee's observation, quoted above, that many difficult problems remain unresolved is quite true. The estimated budget effects of the amendments under discussion set forth in Table A.2 of the Conference Committee report, predicting increased revenues of $410 million for the period 1987-1991 appear to be extremely modest.

IV. Detailed Analysis of Valuation of Imports Provisions

The relevance of values claimed by importers of property purchased from related persons for customs purposes in determining an arm's length price has never been clearly established. It was held inconclusive in *Ross Glove Co. v. Comr.*,[35] and *Brittingham v. Comr.*[36] In deciding to enact §1059A, Congress was aware that customs valuation principles are somewhat different from those applicable under Regs. §1.482-2(e). It was thus stated in the Conference report that the Secretary is expected to issue regulations providing rules for coordinating customs and tax valuation principles taking into consideration freight charges, items of American content returned, and sales commissions where relevant. Tax Management was informed that a substantial discrepancy between customs valuations claimed and the price paid for automobiles imported by the U.S. distributor from a commonly controlled Japanese entity gave rise to the investigation underlying the administrative summonses involved in *U.S. v. Toyota Motor Corp.*[37] Had §1059A been in effect during the years involved in that case, the IRS may have been able to proceed directly to making an allocation under §482 on the basis of the customs valuation alone without the need for further investigation.

Chapter 69

FOREIGN COMPLIANCE PROVISIONS

Patricia R. Lesser, Esq.
Silverstein and Mullens
Washington, D.C.

I. Information Returns With Respect to Certain Foreign-Owned Corporations

A. Introduction

Code §6038A was added by TEFRA [1] to impose reporting requirements for certain foreign-owned corporations (hereafter "reporting corporations"). Reporting corporations to which the requirements of §6038A apply are, in general, both U.S. corporations and foreign corporations engaged in trade or business in the U.S., but only if such corporations are controlled by a foreign person. The control test is met if a foreign person owns 50% or more of the stock of the reporting corporation, either by value or by voting power.[2] The reporting corporation must satisfy these conditions at any time during a taxable year.[3] Prior to the 1986 TRA, the information to be disclosed related to each corporation which was a member of the same controlled group as the reporting corporation during its taxable year. A controlled group was defined in §6038A(c)(2) to generally include brother-sister corporations as well as the reporting corporation's parent or subsidiaries.

The information to be disclosed on each corporation pertains to the name, principal place of business, nature of business and country or countries in which organized or a resident; the manner in which the reporting corporation is related to each member corporation with whom it has a transaction; and to transactions between the reporting corporation and each foreign corporation which is a member of the same controlled group as the reporting corporation.[4]

The reporting requirements of §6038A were originally adopted to allow the Service to obtain sufficient information to closely monitor transactions involving foreign owned corporations and related parties in order to detect and challenge abusive transactions aimed at avoiding U.S. tax. As originally adopted, §6038A concerned only reporting with respect to the reporting corporation's transactions with other corporations in the same controlled group. Congress felt that the existing requirements were too narrow to prevent abuse because they did not apply to noncorporate related parties:[5]

> "The committee believes that transactions with noncorporate related persons, like transactions with related corporations, may be subject to transfer pricing and other abuses, and, therefore, that similar reporting requirements should apply to transactions with noncorporate related persons. The absence of parallel reporting rules may encourage taxpayers to include noncorporate related persons in their chain of ownership, so as to defeat the intended operation of section 6038A."

B. Overview

Section 1245 of the 1986 TRA amends §6038A(b) to provide that the information to be reported by U.S. corporations or foreign corporations doing business within the U.S. which are controlled by foreign persons, will relate to each person (not just corporations) which is a related party to the reporting corporation and which had any transaction with the reporting corporation during its taxable year. The amendment applies to taxable years beginning after December 31, 1986. Act §1245(c).

C. Detailed Analysis

Pursuant to §6038A(b), as amended, reporting corporations must disclose the required information with respect to each person which is a related party (as defined below) and which had any transactions with the reporting corporation during its taxable year. A "person" includes not only corporations but also partnerships, trusts, and individuals. A "related party" is defined as any person who is related to the reporting corporation within the meaning of §§482 (regarding allocation of income and deductions among taxpayers owned or controlled by the same interests), 267(b) (regarding nondeductibility of losses, expenses, and interest with respect to transactions between related taxpayers) or 707(b)(1) (relating to nondeductibility of losses in respect of losses from sales or exchanges of property between partners and the partnership).[6] The latter two sections were put into the Conference Agreement in order to provide objective related party tests.

Any two or more organizations, trades or businesses (whether or not incorporated, whether or not organized in the U.S., and whether or not affiliated) owned or controlled directly or indirectly by the same interests, are related parties for Code §482 purposes.

The following are related persons for purposes of 267(b):

---

[1] Tax Equity and Fiscal Responsibility Act of 1982 ("TEFRA"), P.L. 97-248, §339.
[2] §6038A(c)(1); Regs. §1.6038-2(b) and (c).
[3] §6038A(a).
[4] §6038A(b); Regs. §1.6038-2(f) and (g).
[5] S. Rep. No. 313, 99th Cong., 2d Sess. 413 (1986).
[6] §6038A(c)(2).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

(1) Members of a family, as defined in subsection (c)(4);

(2) An individual and a corporation more than 50% in value of the outstanding stock of which is owned, directly or indirectly, by or for such individual;

(3) Two corporations which are members of the same controlled group (as defined in subsection (f));

(4) A grantor and a fiduciary of any trust;

(5) A fiduciary of a trust and a fiduciary of another trust, if the same person is a grantor of both trusts;

(6) A fiduciary of a trust and a beneficiary of such trust;

(7) A fiduciary of a trust and a beneficiary of another trust, if the same person is a grantor of both trusts;

(8) A fiduciary of a trust and a corporation more than 50% in value of the outstanding stock of which is owned, directly or indirectly, by or for the trust or by or for a person who is a grantor of the trust;

(9) A person and an organization to which §501 (relating to certain educational and charitable organizations which are exempt from tax) applies and which is controlled directly or indirectly by such person or (if such person is an individual) by members of the family of such individual;

(10) A corporation and a partnership if the same persons own—

(a) more than 50% in value of the outstanding stock of the corporation, and

(b) more than 50% of the capital interest, or the profits interest, in the partnership;

(11) An S corporation and another S corporation if the same persons own more than 50% in value of the outstanding stock of each corporation; or

(12) An S corporation and a C corporation, if the same persons own more than 50% in value of the outstanding stock of each corporation.

For purposes of 707(b)(1), related parties are (1) a partnership and a person owning, directly or indirectly, more than 50% of the capital interest, or the profits interest, in such partnership, or (2) two partnerships in which the same persons own, directly or indirectly, more than 50% of the capital interests or profits interests.

As under prior law, the information that the reporting corporation must furnish for each person related to the name, principal place of business, nature of business, country or countries in which the person is organized or resident, manner in which the reporting corporation is related to each person, and transactions between the reporting corporation and all related foreign parties, whether or not a corporation. The reporting corporation may also have to disclose any other information as the Secretary may require for purposes of carrying out the provisions of §453C which relates to restrictions on the use of the installment method for certain sales.[7] The Conference Report notes that the limitations imposed by §6103, relating to confidentiality of information, will apply with respect to such information.[8]

II. Information Returns Required of U.S. Citizens and Residents Abroad

A. Introduction

U.S. citizens who are resident abroad and resident aliens are required to file U.S. tax returns and pay U.S. tax on their worldwide income. Aliens living abroad, under certain circumstances, may be considered as residents and, therefore, subject to these same duties. A number of provisions designed to avoid double taxation may reduce or eliminate the U.S. tax liability of U.S. citizens and resident aliens living abroad. For example, pursuant to §911 U.S. citizens or residents living abroad may elect to have their foreign earned income excluded, within limits, from gross income, and §901 may provide a tax credit against U.S. tax for foreign taxes paid on foreign source income.

Evidence gathered by the General Accounting Office shows that noncompliance with the filing requirements is much higher among U.S. citizens and residents living abroad than among those living in the U.S. The Senate Report [9] classifies nonfilers into two basic categories: negligent nonfilers, *i.e.*, those who assume that their residence overseas exempts them from U.S. tax or that a zero U.S. tax liability exempts them from their duty to file a return, and fraudulent nonfilers. Congress felt that the filing of a new Internal Revenue Service information return would help reduce the number of nonfilers in both categories, by providing notification of their duties to inadvertent nonfilers and by providing the IRS with information on U.S. citizens and residents living abroad to enable it to contact nonfilers and, if necessary, initiate collection actions. In the language of the Senate Report, "U.S. persons would no longer be able to move overseas and drop out of the U.S. tax system entirely." [10] A former purely voluntary IRS information return to be filed by passport applicants was discontinued because such applicants frequently refused to file the return.

B. Overview

Section 1234(a)(1) of the 1986 TRA adds §6039E which provides that an IRS information return must be filed in conjunction with a U.S. citizen's passport application or renewal and with an application for a permanent resident visa ("green card") in accordance with the immigration laws.[11]

The reporting requirement applies to passport and green card applications filed after December 31, 1987. If, however, regulations are adopted at an earlier date, the provision will apply as of the effective date of the regulations, but not before January 1, 1987. Act §1234(a)(3).

C. Detailed Analysis

The information to be disclosed in the return includes the taxpayer's identification number, if any, any foreign

[7] §6038A(b)(4). *See* Chapter 18, *supra*, for further discussion of §453C.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

residence of a passport applicant, whether a green card applicant has been required to file a U.S. return for his/her most recent three taxable years, and any other information as prescribed by the Secretary.[12]

In addition to any other applicable penalties imposed by the Code, a penalty of $500 will apply for each case of noncompliance with the filing requirement, unless noncompliance is shown to be due to reasonable cause and not to willful neglect.[13] In this respect, the Senate Report indicates that it expects that the instructions accompanying the new information returns will clearly explain the filing requirements applicable to U.S. citizens and residents living abroad, thereby reducing the number of cases of negligent nonfilers.[14]

Notwithstanding any other provision of law, agencies which collect (or are required to collect) the new information returns must provide the returns to the Secretary as well as the name and any other identifying information they may have on individuals who refuse to file the return as required.[15]

The Secretary is authorized to exempt by regulation classes of individuals from the filing requirements if he determines that the information return is not necessary to carry out the purpose of this new section.[16]

III. Withholding on Certain Deferred Payments Outside the United States

A. Introduction

Section 3405 provides for withholding by the payors of periodic distributions (including annuities and pensions),[17] and nonperiodic distributions.[18] These withholding provisions are voluntary,[19] *i.e.*, the payee has the right to make an election not to have any amount withheld.

Section 3405 had originally been adopted with the purpose of finding a partial solution for the problems of collection of delinquent taxes due by pensioners, mostly of modest means, who found themselves unable to pay their income tax liabilities. The collection of tax problems are enhanced when pension payments are made to U.S. persons resident overseas. The IRS is frequently unable to collect tax in a foreign country and enforcement is therefore limited to locating assets within the U.S. which can be seized to satisfy the taxpayer's tax liability. Because the Code §911 exclusion does not apply to pension payments made to U.S. persons abroad, these persons are relatively likely to owe U.S. tax on such income. The Senate committee felt that withholding at source would, therefore, be particularly appropriate in this situation.[20]

B. Overview

Section 1234(b) of the 1986 TRA creates §3405(d)(13) which in effect imposes mandatory withholding on U.S. pension payments delivered outside of the U.S., unless the recipient certifies to the payor that he or she is not a U.S. citizen who is a bona fide resident of a foreign country or a tax avoidance expatriate under §877.

The mandatory withholding provisions apply to payments made after December 31, 1986. Act §1234(b)(2).

C. Detailed Analysis

New §3405(d)(13) provides that the general election for payees of periodic or nonperiodic distributions is not available in the case of periodic or nonperiodic distributions which are delivered outside the U.S. The election, however, will continue to be available if the recipient certifies to the payor that he or she is not a U.S. person resident overseas or a tax avoidance expatriate to whom §877 applies. The forms prescribed by the Secretary for the use of payees making the election not to have tax withheld under §3405, should be modified to enable payees living abroad to make such a certification.[21]

IV. Withholding Tax on Amounts Paid by Partnerships to Foreign Partners

A. Introduction

Foreign persons receiving U.S. source income are under certain circumstances subject to withholding at source by the payor. Withholding is generally required with respect to passive income paid to foreign persons because such persons generally have limited contacts with the U.S. By contrast, no withholding is required with respect to income which is effectively connected with the conduct of a U.S. trade or business since such persons generally have a substantial presence in the U.S. In such case, foreign persons are taxed essentially in the same way as U.S. persons.

Because partnerships are not taxable entities, if a foreign person invests in the U.S. through a partnership, the withholding rules that applied to partnership distributions prior to the 1986 TRA were determined by reference to the types of income earned by the partnership. If the income earned by the partnership would not have been subject to withholding if earned directly by a foreign person, then no withholding was imposed when that income was earned and distributed by a partnership. Thus, income effectively connected with a U.S. trade or business was not subject to withholding, whether earned by a foreign person directly or through a partnership.

Congress felt that this structure allowed passive investors to escape U.S. taxation. Foreign investors frequently buy interests in a partnership as a portfolio investment, representing the functional equivalent of stock investments. These investments generally "do not represent the type of substantial and continuing U.S. presence that justifies the absence of a withholding." [22]

B. Overview

The 1986 TRA adds Code §1446 to require that U.S. and foreign partnerships engaged in a U.S. trade or business deduct and withhold tax at the 20% rate on distributions to foreign partners. A limitation is provided if less than 80% of gross income is effectively connected with a U.S. trade or business.[23]

The new provisions apply to distributions after December 31, 1987, or, if earlier, the effective date provided under regulations but not before January 1, 1987. Act §1246(d).

C. Detailed Analysis

1. In General

The 1986 TRA imposes a 20% withholding tax on any amount distributed to a partner who is not a U.S. person, by a partnership which has any income, gain, or loss which is effectively connected or treated as effectively connected with the conduct of a trade or business in the U.S.[24]

As passed by the Senate, the withholding requirement applied only with respect to distributions from U.S. partnerships, but under the Act as finally enacted, the requirement applies to all partnerships, whether U.S. or foreign.

The withholding agent is any person described in Code §1441(a), *i.e.*, all persons in whatever capacity acting (including lessees or mortgagors of real or personal property, fiduciaries, employers, and all officers and employees of the U.S.) having the control, receipt, custody, disposal or payment of partnership distributions to foreign partners. The Senate report clarifies that where interests in a publicly traded partnership are held through one or more nominees, the withholding agent is the last U.S. person in the chain of ownership following the principles of Code §1441(a).[25]

The Conference Report states that the Secretary will provide in regulations who is the proper withholding agent in the case of tiers of partnerships.[26]

Amounts withheld in excess of a foreign person's tax liability are treated as an overpayment of tax.[27]

The Secretary of the Treasury is granted general regulatory authority to implement the provisions of new Code §1446.

2. Limitation

A provision limiting the withholding on partnership distributions was included in the Conference agreement, as follows:

If less than 80% of the partnership's total gross income over the three-year tax period preceding a distribution is income effectively connected (or treated as effectively connected) with a U.S. trade or business over the same three-year period, then withholding is required only on the proportion of current distributions that the partnership's gross income effectively connected with its U.S. trade or business bears to the total gross income of the partnership during the previous three taxable years.[28] This proportion between the effectively connected gross income and total gross income over a three-year period is termed the "effectively connected percentage." Regulations will provide which are the withholding requirements in the case of a partnership which has effectively connected income for the first time.

The withholding under §1446(a) does not apply to distributions with respect to which a tax is required to be deducted and withheld under Code §§1441 or 1442, or would be required to be withheld but for a treaty.[29]

Section 1446, therefore, does not affect the provisions under Code §§1441 and 1442 generally requiring withholding of tax at a 30% rate. The Senate Report clarifies that any distribution by a partnership with effectively connected income is considered to come first out of dividends, certain interest, etc., received by the partnership. The remaining partnership distributions are subject to withholding at 20%.[30]

Regulations will coordinate the amount of tax to be withheld under new Code §1446(a) to take into account amounts deducted and withheld for FIRPTA purposes under Code §1445.[31]

Unless otherwise provided in regulations, the withholding requirements do not apply to partnerships with respect to which substantially all income which is effectively connected with a U.S. trade or business is properly allocated to U.S. partners under Code §704(b) and regulations thereunder.[32]

Chapter 70

CHANGES AFFECTING U.S. POSSESSIONS

Patricia R. Lesser, Esq.
Silverstein and Mullens
Washington, D.C.

I. Treatment of Interest on Obligations of the United States Received by Banks in Guam

A. Introduction

Section 882(e) generally provides that interest income from U.S. Government obligations, of corporations created or organized in or under the laws of a U.S. possession which carries out the banking business in a U.S. possession, is deemed to be effectively connected with the conduct of a U.S. trade or business. This income is, therefore, subject to U.S. tax on a net basis regardless of whether the corporation is engaged in a trade or business in the U.S.

B. Overview

Section 1236 of the Tax Reform Act of 1986 ("Act") amends §882(e) to provide that Guamanian banks are exempt from U.S. tax on interest from U.S. Government obligations if the Guamanian bank is treated as not being a foreign corporation pursuant to §881(b)(1), as amended, for the taxable year. The amendments to §882(e) apply to taxable years beginning after November 16, 1985. Act §1236(b).

C. Detailed Analysis

The 1986 TRA repeals the rule pursuant to which Guamanian banks are taxed on a net basis on interest paid on U.S. Government obligations. Interest on U.S. Government obligations paid to a Guamanian bank will not be deemed effectively connected with the conduct of a trade or business in the U.S. if the Guamanian corporation is not treated as a foreign corporation under §881(b)(1). Section 881(b)(1), as amended [1] contains anti-conduit rules which apply to corporations organized in Guam, American Samoa, the Northern Mariana Islands and the Virgin Islands.

II. Authority of Guam, American Samoa and Northern Mariana Islands to Enact Revenue Laws

A. Introduction

The income tax laws in effect in the U.S. are in force in Guam, the Commonwealth of the Northern Mariana Islands ("CNMI"), the U.S. Virgin Islands, and American Samoa, as their local income tax systems. The U.S. Internal Revenue Code is transformed into a taxing statute for each one of these jurisdictions (termed "possessions" of the U.S. for tax purposes) by substituting the name of each possession for the name "United States," where appropriate in the Code. This word substitution is known as the "mirror system." In applying the mirror system, possessions are generally treated as foreign countries with respect to the U.S. for U.S. tax purposes and the U.S. is generally treated as a foreign country with respect to each possession for possession tax purposes.

Even though the possessions apply the mirror system of taxation, the rules applicable to the U.S. tax relationship with the possessions varied among them.

Guam had no internal income tax law until 1950, when Congress enacted the Organic Act of 1950. Section 31 of this Act provided that "the income tax laws in force in the United States of America and those which may hereafter be enacted shall be held to be likewise in force in Guam." In 1951, Treasury declared Guam's tax to be a separate and distinct territorial tax, subject to the word substitution system, thereby imposing the mirror system in Guam.[2]

With regard to the Virgin Islands, the Naval Appropriations Act of 1921 provided that the income tax laws in force in the U.S. are "likewise in force in the Virgin Islands, except that the proceeds of such taxes shall be paid into the treasury of the said islands." [3] This Act was interpreted to impose a mirror system of taxation. In 1976, the Naval Appropriations Act of 1921 was amended to provide the Virgin Islands with some degree of tax home rule. Congress permitted the Virgin Islands to impose up to a 10% surtax on the mirror system tax. No other local taxes on income could be imposed. The Virgin Islands was generally prohibited from reducing or rebating taxes imposed under the mirror system.

The Northern Mariana Islands has been a self-governing commonwealth since 1976. It is affiliated to the U.S. by a "Covenant" [4] which is the basis for applying the mirror system in the CNMI. The Covenant provides that the mirror system will apply in the CNMI in the same manner as those laws which are in force in Guam.[5] Section 601(c) of the Covenant provides that any reference in the Internal

Revenue Code to Guam is deemed also to apply to the CNMI. A certain degree of tax autonomy is allowed under the Covenant which provides that the CNMI by local law may impose additional taxes and permit tax rebates, but only with respect to taxes on local source income.[6]

American Samoa, by contrast with the other U.S. possessions, is allowed to exercise autonomy over its own income tax system. In spite of this, American Samoa adopted the U.S. Internal Revenue Code as its local law in 1963, and has amended it only in a few instances to adapt it to local needs.

There have been several attempts to bring the U.S. possessions within the fold of the federal income tax system and to eliminate the mirror theory under which they operate. A plan was considered to extend the federal tax jurisdiction to the U.S. possessions so that taxpayers situated there would file their returns with the Internal Revenue Service (IRS) as if they were a resident in a state of the United States.

In late 1981, the Office of Management and Budget announced that the 1983 budget would include the elimination of the mirror system of income taxation. Although such proposal was dropped from the 1983 budget proposals, a confidential IRS memorandum stated that the Reagan administration was planning "sweeping changes" in the territorial tax systems. The memo stated that OMB had asked Treasury to draft a bill which would give the territories the full responsibility for creating their own local income taxes rather than using the current mirror system. Following this route, the 1986 TRA gives the U.S. possessions autonomy to create their own tax laws while coordinating the possessions' tax systems with the U.S. tax system to prevent them from becoming tax havens.[7]

Congress felt that the mirror system, which entails imposing the Code in its entirety as local law of each possession, may be totally inappropriate for the island economies of the U.S. possessions. The mirror system entails ambiguities which foster tax evasion and avoidance. It has some inherent problems which may have substantial adverse effects in the possessions. For example, amendments to the Code which are intended to be revenue-neutral in the U.S., might have adverse effects in the possessions because the revenue of these jurisdictions is collected from a different group of taxpayers than that of the U.S. In addition, the possessions lack the resources needed to enforce the mirror systems effectively.

The House committee stated its belief that the possessions should be provided with more local autonomy. At the same time, the committee did not intend to allow the possessions to be used as tax havens and therefore gave the authority to the possessions to reduce their tax on local income without, however, allowing them to be used to avoid U.S. tax.[8]

B. Overview

Act §1271 provides that nothing in the laws of the U.S. shall prevent Guam, American Samoa, or the CNMI from enacting tax laws, which shall apply in lieu of the mirror system with respect to income (1) from sources within, or effectively connected with the conduct of a trade or business within the possession, or (2) received or accrued by a resident of such possession.[9] Act §1271 does not apply to the Virgin Islands.

The grant of authority is, however, contingent upon an implementing agreement being in effect between the U.S. and each possession to alleviate certain problems relating to tax administration.[10]

C. Detailed Analysis

Act §1271(a) grants authority to Guam, American Samoa and the CNMI to determine their own income tax laws rather than applying the mirror system. In this way, Guam and the CNMI are placed at a par with American Samoa which already has authority over its local tax system. The authority to enact local taxes may be exercised by the CNMI without regard to any action that Guam might take.[11]

In an effort to coordinate the possessions tax systems with the U.S. tax system, the grant of authority is made contingent upon an implementing agreement being in effect (and so long as it is in effect) between the U.S. and each possession. The agreement must provide for (a) elimination of double taxation of income between the possession and the U.S.; (b) establishment of rules to prevent evasion or avoidance of U.S. income tax; (c) exchange of information between the possession and the U.S. for purposes of tax administration; and (d) resolution of other problems arising in connection with the administration of the tax laws of the possession or the U.S. Act §1271(b)(1)-(3).

In the event that an implementing agreement is not executed within a year of enactment, the Conference Report specifies that the House Committee on Ways and Means, the Senate Committee on Finance and the House Committee on Interior and Insular Affairs, are to receive a report from the Secretary on the status of negotiations and the reasons for not executing them.[12]

The local tax laws of the possessions may not discriminate against U.S. persons or any resident (corporate or otherwise) of any other possession.[13]

The revenue raised from the local tax laws by the possessions during the year of implementation (*i.e.*, the first fiscal year of the possession in which the local tax laws take effect) and the following four fiscal years, may not be less than the revenue (adjusted for inflation) raised during the last fiscal year in which the mirror system was in effect.[14]

Under certain conditions, the Secretary of the Treasury may waive this requirement for a specific period. Act §1271(e)(2).

A procedure is devised to reinstate the "mirror system" of taxation in case that a possession fails to comply with the revenue raising or the nondiscrimination provisions.[15] For purposes of this section of the Act, the mirror system is defined as the provision of law (in effect before the date of enactment of the Act) which make the provisions of the income tax laws of the U.S. (as in effect from time to time) in effect in a possession of the U.S. Act §1271(f)(2).

D. Effective Date

These provisions are generally effective for taxable years beginning after December 31, 1986, provided, however, that an implementing agreement between the U.S. and the possession is in effect. Act §1277(a).

III. Exclusion of Possessions Source Income from the Gross Income of Certain Individuals

A. Introduction

Until 1972, application of the mirror system in Guam made Guam residents subject to U.S. tax on their U.S.-source income under §§871 and 932, frequently at a gross 30% withholding rate. In 1972, Congress enacted §935 which, in effect, provides that a Guam citizen is not a nonresident alien for U.S. tax purposes and a U.S. resident is not a nonresident alien for Guam tax purposes. An individual resident of Guam or the U.S. is required to file, with respect to income tax liability to those jurisdictions, only one tax return in the U.S. or Guam depending on whether the taxpayer was a U.S. or a Guamanian resident on the last day of the year ("the single filing rule"). Code §935(b). Withheld and estimated taxes paid to the jurisdiction in which a return is not filed may be claimed as a credit in the jurisdiction where a return is filed. §935(d).

Individuals who are residents of the CNMI are taxed in substantially the same way by virtue of the fact that Code references to Guam are deemed to include the CNMI.

American Samoa uses the U.S. Code as a model, with some modifications. Natives of American Samoa are still classified as nonresident aliens for U.S. tax purposes under §§932 and 871. Before the 1986 TRA, American Samoa was the only possession to which §931 still applied. Section 931 provided that, in effect, U.S. citizens who met certain threshold of possessions-source income were exempt from U.S. tax on all foreign source income. Any Samoa income which did not qualify for the §931 exclusion, could be credited under the §901 foreign tax credit rules, subject to the §904 limitation. A similar system applied with respect to Samoa citizens who met the threshold of U.S. source income.

B. Overview

Act §1272(a) amends Code §931 to provide that, for U.S. income tax purposes, the gross income of individuals who are bona fide residents of a specified possession during the entire taxable year will not include (1) income derived from sources within the specified possession, and (2) income effectively connected with the conduct of a trade or business by such individual within that possession.

The possessions to which §931, as amended, applies are Guam, the CNMI and American Samoa. It does not apply to the Virgin Islands. Amended §931(c).

C. Detailed Analysis

For U.S. income tax purposes, gross income of bona fide residents of Guam, American Samoa or the CNMI during the entire taxable year does not include income derived from sources within any one of the three possessions or income effectively connected with the conduct of a trade or business by that individual within any of the three possessions.[16] Amounts paid to a possession resident for services performed as an employee of the U.S. or one of its agencies are not excluded from gross income under §931(a).[17] Deductions (other than the personal exemptions under §151) and credits properly allocated and apportioned with the excluded income are not allowed for U.S. tax purposes.[18]

Residents of any of the three specified possessions are therefore generally required to file a tax return in the U.S. and to pay U.S. tax on a net basis on income which is not possession-source income (*i.e.*, U.S. or foreign source income). A possessions resident, however, is not required to file a U.S. tax return if his non-possession source income is less than the amount that gives rise to a filing requirement under generally applicable U.S. rules.[19]

Congress grants authority to the Secretary to prescribe by regulation under what circumstances income will be possession source income or deemed effectively connected to a possession trade or business,[20] and to determine when an individual is a bona fide resident of one of the possessions.[21] The House committee expects that the Secretary will use this authority to prevent abuse.

Act §1277(e) provides that, except as otherwise prescribed in regulations by the Secretary, a U.S. person who becomes a resident of Guam, American Samoa, or the CNMI will be subject to the rules of Code §877(c) for a period of 10 years from the date such person became such a resident. Under §877(c) such a U.S. person would have to pay tax to the U.S. on U.S. source income, income effectively connected with a U.S. trade or business, and gains from sales of certain assets with a U.S. connection. The Conference Report clarifies that the Secretary may provide exceptions in cases where he determines that adequate tax will be collected. No regulatory exception may contain a subjective standard which might consider a taxpayer's intent.[22]

Act §1272(b) amends Code §876 to provide that an alien individual who is a bona fide resident of Puerto Rico,

Guam, American Samoa or the CNMI is subject to U.S. income tax as provided under §1, *i.e.*, they are taxable on worldwide income under §1 as any other individual who is a resident alien of the U.S. Before the TRA 1986, this provision applied only with respect to aliens who were residents of Puerto Rico.

Act §1272(c) amends §3401(a)(8) so as to eliminate from the definition of wages subject to withholding, any remuneration paid to a U.S. citizen for services performed within a U.S. possession for the U.S. or one of its agencies to the extent the U.S. or its agencies withholds taxes under an agreement with the possession.

Act §1272(d) repeals §932 relating to treatment of citizens of possessions of the U.S. for U.S. income tax purposes and §935 relating to coordination of U.S. and Guam individual income taxes. Reference to §931 is deleted from §32(c)(1)(C) relating to individuals who are not eligible for the earned income credit.

D. Effective Date

Amendments made by Act §1272 apply to taxable years beginning after December 31, 1986. The changes regarding §877(c) with respect to U.S. persons becoming residents of the specified possessions, apply to dispositions after December 31, 1985, in taxable years ending after such date.

IV. Treatment of Corporations Organized in Guam, American Samoa, or the Northern Mariana Islands

A. Introduction

1. Definition of "U.S. Person" for Subpart F Purposes

For Subpart F purposes, it must be determined whether a foreign corporation has as its owners at least one U.S. person and if so, it must be determined whether U.S. persons are U.S. shareholders. The term "United States person" has the meaning assigned to it under §7701(a)(30), with some exceptions provided under §957(d).[23] Section 7701(a)(30) provides that "U.S. person" means a U.S. citizen or resident, a domestic partnership, a domestic corporation, and any estate or trust (other than a foreign estate or trust) within the meaning of §7701(a)(31).

Under §957(c), "U.S. person" does not include an individual citizen of the U.S. who is a resident of Puerto Rico, but only with respect to a corporation organized under the laws of Puerto Rico and only if dividends from that corporation are for purposes of §933(1) treated as income from sources within Puerto Rico.

Before the 1986 TRA, "U.S. person" did not include a U.S. citizen who was a resident of the Virgin Islands, with respect to a Virgin Islands corporation, if the individual paid income tax to the Virgin Islands on his worldwide income, nor did it include an individual who was a resident of any other U.S. possession, with respect to a corporation organized under the laws of the possession of which he was a resident, provided the individual was entitled to the benefits of Code §931(a). §957(d).

Pre-1986 TRA §931(a) provided that a U.S. citizen could exclude from gross income non U.S.-source income if during a three-year period 80% or more of the individual's gross income was from sources within a U.S. possession and if 50% or more of his gross income was derived from the active conduct of a trade or business within a U.S. possession, either on his own account or as an employee or agent of another.[24]

2. Exemption from Withholding Tax

Section 881(b) provides rules to prevent foreigners from using Virgin Islands or Guam corporations to avoid the U.S. 30% withholding tax on certain types of U.S. source income not effectively connected with a U.S. trade or business. Before the 1986 TRA, Code §881(b)(1) provided that a corporation created or organized under the laws of Guam or the Virgin Islands would not be treated as a foreign corporation if at all times during the taxable year less than 25% in value of its stock was owned directly or indirectly by foreign persons and if at least 20% of its gross income over a three-year period was derived from sources within Guam or the Virgin Islands.

B. Overview

A U.S. citizen who is a bona fide resident of Guam, American Samoa, or the CNMI is not a U.S. person with respect to a corporation organized under the laws of Guam, American Samoa, or the CNMI, for Subpart F purposes, if (1) 80% or more of the gross income of the corporation for a three-year period was derived from sources within the possession or was effectively connected with the conduct of a trade or business in the possession, and (2) 50% or more of the gross income of the corporation during such period was derived from the conduct of an active trade or business within the possession.[25]

Corporations organized or created in Guam, American Samoa, the CNMI, or the Virgin Islands or under the law of any such possession are not treated as foreign corporations for any taxable year, for purposes of the 30% withholding tax or the new branch profits tax under §884, if (1) less than 25% in value of the stock of such corporation is beneficially owned (directly or indirectly) by foreign persons at all times during the taxable year; (2) at least 65% of the gross income of such corporation is shown to the satisfaction of the Secretary to be effectively connected with the conduct of a possession or U.S. trade or business for the three-year period ending with the close of the corporation's taxable year; and (3) if no substantial part of the corporation's income is used (directly or indirectly) to satisfy obligations to persons who are not bona fide residents of such a possession or the U.S.[26]

These amendments are generally effective for taxable years beginning after December 31, 1986. However, the

[23] Act §1224 redesignates subsection (d) as subsection (c). For a further discussion *see* Chapter 63, *supra*.

[24] *See* III, *supra*.

[25] Section 957(c), as amended by Act §§1224 and 1273(a).

[26] Section 881(b) as amended by Act §1273(b).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

amendments made with respect to Guam, American Samoa and the CNMI are effective only if and so long as an implementing agreement is in effect between the U.S. and the possession.[27]

C. *Detailed Analysis*

The Act implements anti-abuse provisions to prevent the use of corporations in Guam, American Samoa and the CNMI to avoid U.S. tax. For purposes of Code §957(c), as amended, the Secretary is granted regulatory authority to determine whether income is derived from sources within a possession, is effectively connected with the conduct of a trade or business or is derived from the active conduct of a trade or business in the possession.[28]

The post-1986 TRA rules under §881(b) to prevent foreigners from using possessions corporations as conduits to avoid U.S. withholding tax are applicable to Guam, American Samoa, the CNMI, as well as the Virgin Islands. The anti-conduit rules are tightened by substituting a requirement that 65% of a corporation's income be effectively connected with a trade or business in a possession or in the U.S., in place of the former 20% source of income requirement.

The Act also provides that no substantial part of a corporation's income can be used (directly or indirectly) to satisfy obligations to persons who are not bona fide residents of such a possession or the U.S. Act §1273(b). This new requirement prevents corporations from substantially reducing their taxable income with payments to persons not residents in one of the possessions or the U.S.

The provisions of Code §881(b), as amended, also apply to determine whether a Guam, American Samoa, CNMI or Virgin Islands corporation is a foreign corporation for purposes of the new branch profits tax under §884.

Section 1442 is amended to conform to the new requirements of Code §881(b)(1).

V. Coordination of U.S. and Virgin Islands Income Taxes

A. *Introduction*

Income taxation in the U.S. Virgin Islands results from the mirror system of taxation.[29] In addition, Congress enacted in 1954 the Virgin Islands Revised Organic Act which superimposed on the "mirror" system a rule which in effect exempted from U.S. tax an "inhabitant" of the Virgin Islands as long as the inhabitant paid tax to the Virgin Islands on its worldwide income.[30] Congress' intent when enacting this provision was to divert taxes on U.S. source income, paid by Virgin Islands residents, into the Virgin Islands Treasury. Before the 1986 TRA, therefore, bona fide inhabitants of the Virgin Islands reported and paid taxes on their worldwide income to the Virgin Islands, which, in turn, satisfied their U.S. income tax obligations.

The taxpayer resident in the Virgin Islands found himself in a unique position. Although every other U.S. person, wherever resident, is liable for U.S. taxation on his worldwide income, the U.S. person resident in the Virgin Islands completely escaped U.S. taxation by filing with and paying tax to the Virgin Islands government. Since the Virgin Islands taxed him as an alien or foreign entity, many of the advantages of the Code designed to attract foreign investment were applicable to his situation.

The interaction of Virgin Islands and U.S. tax law, in the words of the District Court of the Virgin Islands, raised the prospect of the Virgin Islands becoming the "ultimate tax shelter."[31] The Senate Report cited this case as an example of how the interaction of the U.S. and Virgin Islands tax laws exempted from all tax, in both the U.S. and the Virgin Islands, U.S. source income earned by a U.S. corporation qualifying as a Virgin Islands inhabitant.[32]

In addition, the Virgin Islands had a certain authority to adopt their own local tax laws either to impose a surtax of up to 10% of the mirror tax or to rebate its mirror tax on its resident individuals and on U.S. and Virgin Islands corporations that operate primarily in the Virgin Islands.

Finally Code §934A reduced the 30% withholding tax on certain payments to foreign persons (including U.S. persons) on Virgin Islands source income to 10%.

B. *Overview*

The Act revises the mirror system of taxation applicable in the Virgin Islands; it grants Treasury regulatory authority to implement the new rules; and provides for coordination between the U.S. and Virgin Islands tax systems.

Act §1274(a) provides that an individual who is a U.S. citizen or resident (other than a bona fide resident of the Virgin Islands) who derives Virgin Islands-source income or income effectively connected with a Virgin Islands trade or business, must file tax returns with both the U.S. and the Virgin Islands, and pays a pro rata amount of tax to each.[33]

Individuals who are bona fide residents of the Virgin Islands must file a tax return on their worldwide income in the Virgin Islands. A Virgin Islands resident will not incur tax liability towards the U.S. if he includes all items of income in his or her Virgin Islands tax return and if he identifies the source of each.[34]

The Virgin Islands is granted authority to enact nondiscriminatory local income taxes and any such taxes will be treated in the same manner as state and local taxes for U.S. income tax purposes. Act §1274(b).

These provisions apply to taxable years beginning after December 31, 1986. Act §1277(a).

C. *Detailed Analysis*

The mirror system is amended so that for purposes of determining the tax liability of an individual who is a

[33] Amended §932(a) and (b).
[34] Amended §932(c).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

citizen or resident of the U.S. or the Virgin Islands, the U.S. is deemed to include the Virgin Islands (for purposes of determining U.S. tax liability) [35] and, under the Virgin Islands mirror Code, the Virgin Islands is deemed to include the U.S. (for purposes of determining Virgin Islands tax liability.) [36] A corporation organized in one jurisdiction, however, will continue to be treated, where relevant, as a foreign corporation for purposes of individual income taxation in the other jurisdiction.

1. Treatment of U.S. Citizens or Residents with Virgin Islands–Source Income

A U.S. citizen or resident (who is not a bona fide resident of the Virgin Islands at the close of the taxable year) who has Virgin Islands–source income or income effectively connected with the conduct of a Virgin Islands trade or business [37] (or an individual filing a joint return for the taxable year with such a U.S. citizen or resident [38]), must file two identical tax returns for the taxable year, one with the U.S. and one with the Virgin Islands.[39]

A portion of the U.S. tax liability will be paid to the Virgin Islands in lieu of applying the mirror system of taxation. This portion (*i.e.*, the "applicable percentage") is based on the ratio of Virgin Islands adjusted gross income to worldwide adjusted gross income. Only income derived from sources within the Virgin Islands and deductions properly allocated and apportioned, are taken into account to determine Virgin Islands adjusted gross income.[40] A credit against total U.S. tax liability will be granted for any tax paid on the individual's portion of Virgin Islands tax liability.[41]

2. Treatment of Virgin Islands Residents

An individual who is a bona fide resident of the Virgin Islands at the close of the taxable year (or an individual filing a joint return with such a resident), must file a tax return for the taxable year with the Virgin Islands. He will be liable, under the mirror system, to pay tax to the Virgin Islands on his worldwide income. Such individual reporting income from all sources on his Virgin Islands tax return and who identifies the source of each item of income, will not be required to include in gross income those items of income for purposes of determining his U.S. tax liability.[42] Therefore, a Virgin Islands individual resident who declares and identifies all sources of income in his Virgin Islands tax return will have no final tax liability for such year to the U.S.

In the case of a joint return, where only one spouse qualifies as a resident of the Virgin Islands, the residence of both spouses will be determined by that of the spouse with the greater adjusted gross income (determined without regard to community property laws) for the taxable year. New §932(d).

[35] New §932(a)(3).
[36] New §932(c)(3).
[37] New §932(a)(1)(A).
[38] New §932(a)(1)(B).
[39] New §932(a)(2).
[40] New §932(b)(1) and (2).
[41] New §932(b)(3).
[42] New §932(c)(4).

3. Authority to Impose Local Income Taxes

In addition to applying the mirror system of taxation, the Virgin Islands is given authority to enact nondiscriminatory local income taxes. Act §1274(b) clarifies that for purposes of determining U.S. tax liability, any such local taxes will be treated as state and local income taxes under Code §164 and not as foreign taxes creditable under §901. Before the 1986 TRA, the authority to impose local taxes was limited to a surtax of up to 10% of the mirror system tax.

Congress grants regulatory authority to the Secretary of the Treasury to determine, after consultation as appropriate with officials of the Virgin Islands, which of the Code provisions will not be applicable in the Virgin Islands, *i.e.*, which provisions will not be subject to the mirror system of taxation. Act §1274(c). The House Report anticipates that among the provisions which will not be mirrored will be those making references to possessions of the U.S.[43]

VI. Virgin Islands Corporations Allowed Possessions Tax Credit

A. Introduction

Code §936 provides an incentive for U.S. corporations to invest in certain U.S. possessions. The pre–1986 TRA definition of "possession" for §936 purposes did not include the Virgin Islands because of the unique system of taxation which operated in the Virgin Islands, *i.e.*, the mirror system of taxation as amended by §28(a) of the Revised Organic Act of the Virgin Islands.[44]

Even though §936 did not apply to the Virgin Islands, a similar result was achieved under Code §934(b) in conjunction with §28(a).

Because of §28(a), an "inhabitant" of the Virgin Islands was exempt from U.S. tax as long as the inhabitant paid tax to the Virgin Islands on its worldwide income. The term "inhabitant" in this context is generally interpreted to include individuals resident of the Virgin Islands, corporations organized under the laws of the Virgin Islands, and non-Virgin Islands corporations which have sufficient contacts with the Virgin Islands to be considered as "residents" of the Virgin Islands.

Section 934 denies the right to the Virgin Islands to make any grant, subsidy, or other payment which has the effect, either directly or indirectly, of reducing tax liability incurred to the Virgin Islands, except to the extent specifically provided in §934. Before the 1986 TRA, this prohibition did not apply to the extent a corporation (whether a U.S. or a Virgin Islands corporation) derived its income from sources without the United States provided the gross income and active business tests of 934(b) were satisfied.

B. Overview

The 1986 TRA, in effect, repeals the "inhabitants" rule. It provides that the Revised Organic Act will have no effect on any person's tax liability to the U.S.[45]

[43] House Report at 488.
[44] P.L. 83-517, 83d Cong., 2d Sess. §28(a) (1954).
[45] Act §1275(b) amending §7651(5)(B).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Corporations operating in the Virgin Islands are eligible for the possessions tax credit provided under §936.[46]

The Virgin Islands is authorized to reduce Virgin Islands tax liability resulting from the application of the mirror system of taxation on income derived from sources within the Virgin Islands except if derived by U.S. citizens or residents subject to tax under §932(b) as amended.[47] The Virgin Islands may also reduce Virgin Islands tax liability incurred by certain foreign corporations with non-U.S. source income.[48]

C. *Detailed Analysis*

1. *Repeal of the Inhabitants Rule*

Amended §7651(5)(B) provides that §28(a) of the Revised Organic Act of the Virgin Islands will be deemed to have been enacted before the enactment of the Code, so that in case of conflict the Code controls. Furthermore, §28(a) of the Revised Organic Act will have no more effect on a person's income tax liability towards the U.S. Thus, for example, a U.S. person treated as an inhabitant of the Virgin Islands will continue to be fully subject to U.S. tax.

2. *Possessions Tax Credit*

Section 936, which provides a tax credit for corporations operating in Puerto Rico and certain other U.S. possessions, is extended to apply to corporations operating in the Virgin Islands.[49]

3. *Reduction of Virgin Islands Tax Liability*

The Virgin Islands is generally prohibited from reducing Virgin Islands tax liability resulting from application of the mirror system.

Under Act §1275(c)(2)(B), however, the Virgin Islands is given the authority to reduce or rebate Virgin Islands tax attributable to income derived from sources within the Virgin Islands or income effectively connected with a Virgin Islands trade or business.[50] The authority to reduce Virgin Islands tax liability applies regardless of whether the affected taxpayer derives any minimum specified percentage of its income from the Virgin Islands, as was the case under §934(b) before the 1986 TRA.

The authority to reduce taxes does not extend to the portion of U.S. tax liability payable to the Virgin Islands by individuals who are citizens or residents of the U.S. as determined under §932(b), as amended.[51]

The authority to reduce Virgin Islands taxes applies also with respect to tax liability of qualified foreign corporations attributable to non-U.S. source income and income which is not effectively connected with the conduct of a U.S. trade or business. A "qualified foreign corporation" for this purpose is any foreign corporation if less than 10% of the total voting power of its stock and the total value of its stock is owned or treated as owned (within the meaning of §958), by one or more U.S. persons.[52]

The authority to reduce taxes applies only to non-U.S. source income and income not effectively connected with a U.S. trade or business. Treasury is granted regulatory authority to determine when income is sourced in the U.S. or the Virgin Islands and when it is effectively connected with a U.S. or a Virgin Islands trade or business.[53] Congress anticipates that the regulations will contain anti-abuse provisions. The House and Senate Reports give examples of abuses to be prevented. A mainland resident, for example, who moves to the Virgin Islands while owning appreciated personal property and who sells that property in the Virgin Islands, should not escape all tax, both in the U.S. and the Virgin Islands, on that appreciation. Similarly, a resident of the Virgin Islands who owns financial assets such as stocks or debt of companies organized in, but the underlying value of which is primarily attributable to activities performed outside the Virgin Islands, should not escape tax on the ordinary income from those assets.[54] To prevent abuse, the Secretary may treat an individual as not a bona fide resident of the Virgin Islands.

Note that the authority to reduce Virgin Islands tax liability is granted on the condition that an agreement is in effect between the U.S. and the Virgin Islands containing safeguards against the avoidance or evasion of U.S. income tax.[55] Congress anticipates that the agreement will contain provisions to coordinate the tax administration in the U.S. and the Virgin Islands and will provide for exchange of information.

D. *Conforming Amendments*

As a consequence of the amendments described above, Code §934A relating to income tax rates on Virgin Islands source income is repealed.[56] Reference to Code §934(b) in §28(d)(3) (regarding the special limitation on the credit for foreign clinical testing expenses) is deleted.

E. *Effective Dates*

The amendments described above are generally effective for taxable years beginning after December 31, 1986. However, as indicated above, the authority to reduce Virgin Islands tax liability (and other conforming amendments of §1275(c) of the Act) are contingent upon an implementing agreement being in effect between the U.S. and the Virgin Islands. Act §1277(a).

If an implementing agreement is not executed within one year from the date of enactment, the Secretary of the Treasury must report to the Committee on Finance of the Senate, the Committee on Ways and Means, and the Committee on Interior and Insular Affairs of the House of Representatives, on the status of negotiations and the reasons for not having executed the agreement.[57]

The amendments to Code §7651(5)(B) clarifying the treatment of Virgin Islands inhabitants for U.S. income tax purposes are effective for taxable years beginning after December 31, 1986, and any pre-1987 open year,[58] (*i.e.*, any taxable year beginning before January 1, 1987 if on the date of enactment of the Act, the assessment of a deficiency of income tax for such a taxable year is not barred by any law or rule of law [59]) but only with respect to income which is not derived from Virgin Islands sources or effectively connected with a Virgin Islands trade or business.[60]

To the extent that the Virgin Islands either collects tax by the date of enactment or, pursuant to an assessment issued by August 16, 1986, collects tax by January 1, 1987, on non-Virgin Islands source, non-Virgin Islands effectively connected income of a Virgin Islands inhabitant is subject to U.S. tax for pre-1987 taxable years, that Virgin Islands tax is to be creditable against the U.S. tax liability on that income. To the extent that Virgin Islands tax is imposed on U.S. income, it is to be creditable against U.S. tax on that particular income notwithstanding the general limitations on the foreign tax credit.[61]

An exception to the repeal of the inhabitants rule for pre-1987 open years is provided in favor of domestic corporations incorporated in Delaware on March 31, 1983, if such corporations were actively engaged, directly or through a subsidiary, in a trade or business in the Virgin Islands relating to marine activities.[62] Another exception is provided, within a certain limitation, for income derived from certain transactions carried out by corporations formed in Delaware on or about March 6, 1981 which have owned one or more office buildings in St. Thomas, Virgin Islands for at least five years before the Act's enactment date.[63]

VII. Amendments to Section 7654

A. Introduction

Federal statutes do not permit federal employers to withhold territorial income taxes. However, pre-1986 TRA §7654 provided an exception in the case of Guam. Pursuant to this section, the U.S. generally "covers over" (*i.e.*, transfers) to the treasury of Guam certain tax collected from individuals on Guamanian source income and withholding tax on military personnel in Guam. Similarly, Guam covers into the treasury of the U.S. certain tax collected from individuals on U.S. source income. Section 7654 and regulations thereunder set forth the general procedures to be followed by the governments of the U.S. and Guam in the division between the two governments of revenue derived from collections of the income taxes with respect to certain individuals to whom §935 applied and military personnel in Guam. Section 7654(a) provides that net collections on income tax attributable to U.S. source income were covered into the U.S. Treasury; net collections attributable to Guam source income were covered into the treasury of Guam; and any other net collections of such taxes were to be covered into the treasury of the jurisdiction in which the taxpayer was required to file a tax return under Code §935(b).

B. Overview

The 1986 TRA amends Code §7654 to provide that the U.S. will cover over to the treasuries of specified possessions (*i.e.*, Guam, American Samoa, the CNMI, and the Virgin Islands) all U.S. income tax paid by an individual who is a bona fide resident of one of the specified possessions.[64] In addition, the U.S. will cover over to the treasuries of Guam, American Samoa, the CNMI or the Virgin Islands, amounts of tax withheld on the compensation of U.S. Government personnel, including military personnel stationed or resident in one of the specified possessions.[65]

These provisions are effective for taxable years beginning after December 31, 1986. However, with respect to Guam, American Samoa, and the CNMI they will be in effect only if an implementing agreement, as provided under Act §1277 is in effect between the U.S. and the possession.

C. Detailed Analysis

The U.S. must collect income tax for each taxable year with respect to individuals to which §§931 or 932(c), as amended, applies. Individuals to whom §931 applies are bona fide residents of Guam, American Samoa or the CNMI. The gross income of these individuals for U.S. tax purposes does not include possessions-source income or income effectively connected with a possession trade or business.[66] The U.S. is, therefore, to cover over to the treasuries of the specified possessions, non-possession income.

An individual to whom §932(c), as amended, applies is a bona fide resident of the Virgin Islands (or an individual filing a joint return with a bona fide resident) on the last day of the taxable year. Such individuals must file a tax return in the Virgin Islands and are liable to the Virgin Islands for tax on their worldwide income. Such individuals have no final tax liability for such year to the U.S. Any taxes withheld and deposited in the U.S. from payments to such an individual, and any estimated tax payments properly made by such an individual to the U.S., will be covered over to the Virgin Islands Treasury and will be credited against the individual's Virgin Islands income tax liability.[67]

As under pre-1986 TRA law, the amounts to be transferred are net collections of tax imposed under Chapter 1 of the Code, properly adjusted for any credits allowed against the tax liability and any refunds made of income taxes for the year.[68] The transfers of tax must continue to be made at least annually.[69]

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The cover over amounts of taxes deducted and withheld by the U.S. under Chapter 24 on compensation paid to members of the Armed Forces is extended to apply with respect to individuals stationed in Guam, American Samoa, the CNMI and the Virgin Islands. The U.S. must also cover over to the Treasuries of the possessions amounts deducted and withheld with respect to amounts paid to other employees of the U.S. (or an agency thereof) for services rendered in a specified possession, unless §931 or §932(c) applies.[70]

The Secretary is granted regulatory authority to implement the amendments to §7654 (as well as §§931 and 932), including regulations prohibiting the rebate of taxes which are covered over and attributable to U.S. source income. The regulations will also specify the type of information which will have to be furnished by individuals to whom such sections may apply.[71]

MISCELLANEOUS FOREIGN PROVISIONS

Deborah M. Beers, Esq.
Patricia R. Lesser, Esq.
Harrison B. McCawley, Esq.
Silverstein and Mullens
Washington, D.C.

I. Foreign Personal Holding Stock Ownership Test Modified [Act §1222(b)]

A. Background—Pre-1986 TRA Law

The foreign personal holding company (FPHC) provisions have been part of the Internal Revenue Code since 1937 when they were enacted as a complement to the personal holding company (PHC) legislation of 1934 to prevent the abuse known as the foreign "incorporated pocketbook," whereby United States shareholders would accumulate in foreign corporations certain types of passive income without incurring any U.S. tax liability. The FPHC rules require "United States shareholders" of the foreign corporation to include in gross income their proportionate share of the corporation's "undistributed foreign personal holding company income" (UFPHCI). "United States shareholders" [1] may include U.S. citizens or residents, U.S. corporations, U.S. partnerships, or estates and trusts (other than those estates and trusts whose gross income includes only income from sources within the United States).

For purposes of determining which corporations meet the definition of FPHC, Code §552 sets forth both a "gross income test" and a "stock ownership test." Under the gross income test, at least 60% of the gross income of a foreign corporation for the taxable year must be foreign personal holding company income for it initially to qualify as an FPHC.[2] After the initial qualification as an FPHC, the gross income test will be satisfied if the corporation in any subsequent year has foreign personal holding company income equal to at least 50% of its gross income during the taxable year.[3] Foreign personal holding company income, under Code §553, includes most types of passive investment income such as dividends, interest, rents, and royalties.

The "stock ownership test" requires that at any time during the taxable year more than 50% in value of the outstanding stock of a foreign corporation must be owned directly or indirectly, by or for not more than five individuals who are citizens or residents of the United States (the United States group).[4] For purposes of determining the ownership of stock under this section, the attribution rules of Code §554 apply.

The stock ownership test, for purposes of the FPHC rules, is similar, although not identical, to that which appears in Code §957(a) which defines the term "controlled foreign corporation" (CFC). A CFC includes any foreign corporation of which more than 50% of the total combined voting power of all classes of stock entitled to vote is owned, actually or constructively, by United States shareholders on any day during the taxable year of such foreign corporation. For purposes of determining whether the 50% ownership test is met, the constructive ownership rules of §958 apply.

B. Detailed Analysis of 1986 TRA Provisions

Section 1222(b) of the Act amends the definition of foreign personal holding company with respect to the stock ownership requirement of §552(a)(2) to state that, if, at any time during the taxable year, more than 50% of the total combined voting power of all classes of stock of the corporation entitled to vote, *or* more than 50% of the total value of the stock of the corporation is owned directly or indirectly by or for not more than five individuals who are citizens or residents of the United States, the the corporation will be a foreign personal holding company, assuming the gross income requirements also are met.

A similar amendment to the CFC rules is contained in §1222(a) of the Act, so that ownership by United States shareholders of more than 50% of the total combined voting power *or* the total value of the stock of a foreign corporation will result in that corporation being considered a CFC during the taxable year. The Act thus coordinates to a greater extent the ownership requirements under the FPHC and CFC provisions.[5] However, under Code §951(d), as

[1] Code §551(a).
[2] Code §552(a).
[3] *Id.* The gross income percentage will rise to 60% again after three consecutive taxable years expire in each of which less than 50% of the corporation's gross income is FPHCI or until the taxable year during the whole of which the stock ownership test is not satisfied. *See* Regs. §1.552-2(a)(2)(ii).
[4] Code §552(a)(2).
[5] The CFC and FPHC ownership requirements still are not identical, however, since the "more than 50% of the vote or value" test must be applied, in the case of a CFC, by taking into account only the ownership of stock by "U.S. shareholders" (generally ten percent owners). Thus, a foreign corporation in which four unrelated U.S. individuals each owned nine percent of the stock and another U.S. individual owned 20% would satisfy the stock ownership requirements for a FPHC but not for a CFC.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

amended by the Tax Reform Act of 1984,[6] a CFC's Subpart F income will be taxable under Subpart F, but not under the FPHC rules, to the extent that it otherwise would be taxable under both.

The conferees rejected a House proposal under which the threshold for imposition of tax under the FPHC and CFC rules would be changed from "more than 50%" of the vote or value to "50% or more" of the vote or value of the corporation.[7] The conferees' reason for rejecting a change in the threshold percentage was that the Internal Revenue Service can, pursuant to Regs. §1.957-1(b), deem foreign corporations effectively controlled by ten percent U.S. shareholders to meet the "more than 50%" ownership test even though that requirement is otherwise not technically met.[8] Despite this regulatory authority, however, the amendment made by the Act reflects a concern on the part of Congress that taxpayers could manipulate a single factor test.[9]

C. Effective Date

The amendments to the FPHC stock ownership requirements apply to taxable years of foreign corporations beginning after December 31, 1986. However, where the FPHC also qualifies as a CFC, the amendments take effect on August 16, 1986, for purposes of determining whether the gross income of the United States shareholders of the CFC includes their pro rata share of the corporation's increase in earnings invested in United States property for the year.[10]

II. Foreign Personal Holding Company Taxable Income Includes Effectively Connected Gain or Loss Only [Act §1225(b)]

A. Background—Pre-1986 TRA Law

Section 541 of the Code imposes a 50% tax on the undistributed personal holding company income (as defined in §545 of the Code) of every personal holding company (PHC). This tax, like the accumulated earnings tax described in III, below, designed to discourage shareholders from accumulating earnings, taxable at the (under pre-1986 TRA law) generally lower corporate rate, in their closely-held corporations. The PHC tax is imposed only on those corporations meeting both an ordinary gross income requirement and a stock ownership requirement. Under the gross income test, at least 60% of the adjusted ordinary gross income of a corporation for the taxable year must be PHC income. Under the stock ownership test, a corporation will be considered a PHC if, at any time during the last half of the taxable year, more than 50% in value of its outstanding stock is owned directly or indirectly by or for not more than five individuals.

The PHC tax is imposed on "undistributed personal holding income" which is calculated by making several adjustments to the regular taxable income of a corporation, including deductions for net capital gains (and certain capital losses).[11] The reason for the deduction for net capital gains is that there is little incentive for a shareholder to accumulate capital gains in a corporation.

Foreign corporations generally are subject to the PHC tax only if they have shareholders that would be subject to federal income tax on a distribution from the PHC. However, in determining the PHC tax on the income of a foreign corporation, only U.S. source income is taken into account. For this purpose, net capital gain income realized by a foreign corporation trading in stock, securities or commodities will not be considered U.S. source income since it is not effectively connected with a U.S. trade or business.[12] Therefore, although such capital gains may be deducted in determining the personal holding company income of a foreign corporation (thus reducing the PHC tax), they would not otherwise be subject to U.S. tax.

B. Detailed Analysis of 1986 TRA Provisions

Section 1225(b) of the Act amends Code §545 by adding paragraph (7) to §545(b)(relating to adjustments to taxable income for purposes of computing the personal holding company tax) to provide that, in the case of a foreign corporation, only capital gains and losses which are effectively connected with the conduct of a trade or business within the United States, and are not exempt from tax under treaty, may be taken into account in computing undistributed personal holding company income. The reason for the change, as noted above, is that capital gains which are not effectively connected to a United States trade or business are not subject to U.S. tax, but, prior to the amendment, they could nevertheless reduce the personal holding company tax of the foreign corporation. By allowing a reduction in undistributed personal holding company income only with respect to capital gains that are effectively connected with the conduct of a U.S. trade or business and not exempt from taxation by treaty, this potential for abuse is eliminated.[13]

C. Effective Date

The amendment is effective for gains and losses realized on or after March 1, 1986.[14]

III. Accumulated Taxable Income of Foreign Corporations Effectively Connected Gain Only Taken Into Account [Act §1225(a)]

A. Background—Pre-1986 TRA Law

Similar to the personal holding company tax described in II above, the accumulated earnings tax of §531 of the Code imposes a tax of (i) 27½% on the accumulated

[6] P.L. 98-369, §132(c)(1).

[13] *See* H. R. No. 426, 99th Cong. 1st Sess., pp. 436-437 (1985)("House Report"); Senate Report at pp. 431-432 (1986); and Conference Report at p. II-628 (1986).

[14] Act §1225(c). This effective date (March 1, 1986) appears in the language of the bill as printed in the Conference Report at p. I-500 (1986). The "Statement of Managers" portion of the Conference Report, however, contains a January 1, 1986 effective date at p. II-628.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

taxable income of a corporation not in excess of $100,000 plus (ii) 38½% of the accumulated taxable income of the corporation in excess of $100,000. As with the PHC provisions, in computing the "accumulated taxable income" of a corporation, certain adjustments, described in §535(b) of the Code, are taken into account. Among these are adjustments for net capital gains and certain capital losses of the corporation.[15]

As is the case with the PHC, foreign corporations generally are subject to the accumulated earnings tax only if they have shareholders that would be subject to a U.S. tax on a distribution from such corporation. Again, only U.S. source income, which does not include capital gains and losses not effectively connected to the conduct of a United States trade or business,[16] is subject to the accumulated earnings tax. Nevertheless, capital gains that are not subject to U.S. tax may reduce accumulated taxable income under §535 of the Code.

B. Detailed Analysis of 1986 TRA Provisions

Section 1225(a) of the Act amends Code §535 by adding paragraph (9) to §535(b)(relating to adjustments to taxable income for purposes of computing the accumulated earnings tax) to provide that, in the case of a foreign corporation, only capital gains and losses which are effectively connected with the conduct of a trade or business within the United States and are not exempt from tax under treaty may be taken into account in computing accumulated taxable income.

C. Effective Date

The amendment is effective for gains and losses realized on or after March 1, 1986.[17]

IV. Section 911 Exclusion Modified

A. Introduction

U.S. citizens and residents are generally subject to U.S. tax on their worldwide income. To prevent double taxation, a tax credit is allowed under §§901-908 for foreign taxes paid on foreign income. Under certain conditions, however, Code §911 allows U.S. citizens or residents to exclude foreign earned income from their gross income subject to U.S. tax.

U.S. citizens whose tax home is in a foreign country and who satisfy certain physical presence abroad or bona fide foreign residence tests and U.S. residents whose tax home is in a foreign country and who satisfy certain physical presence abroad tests, may elect to exclude from gross income their foreign earned income up to a certain amount and foreign housing costs exceeding a certain base amount.[18]

The maximum amount of foreign earned income which could be excluded for taxable years beginning in 1986 and 1987 was $80,000, and it was scheduled to increase to $85,000 in 1988, $90,000 in 1989 and $95,000 in 1990 and subsequent years.[19] This scheduled increase in the exclusion results from the Tax Reform Act of 1984, which delayed until 1988 the increases that the Economic Recovery Act of 1981 had scheduled to begin in 1984. P.L. 98-369, §17.

B. Overview

Pursuant to the 1986 TRA, the maximum amount of foreign earned income which may be excluded from gross income by U.S. citizens and residents who live and work abroad is reduced to $70,000 per year.[20]

The §911 exclusion is not available to U.S. citizens violating Federal travel restrictions.[21]

These amendments are in effect for taxable years beginning after December 31, 1986. Act §1233(c).

C. Detailed Analysis

1. Foreign Earned Income Exclusion Amount

The reduction of the limitation on the foreign earned income exclusion follows the lowering of tax rates for U.S. citizens and residents and the corresponding repeal or restriction of a number of tax preferences. The amount of the exclusion will continue to be computed at the annual rate on a daily basis. Code §911(b)(2)(A).

2. Disallowance for Violation of Foreign Travel Restrictions

If an individual engages in travel (or any transaction in connection with such travel) in a foreign country in violation of the law, (a) any foreign earned income for Code §911 purposes will not include income from sources within the foreign country attributable to services performed during the period of illegal travel; (b) housing expenses will not include expenses allocable to such period for housing in the foreign country or for housing of the spouse or dependents of the taxpayer in another country while the taxpayer is present in the foreign country; and (c) the taxpayer will not be treated as a bona fide resident of, or as present in, a foreign country for any day during which the individual violates the law.[22]

The travel restrictions are those which result from regulations adopted under the Trading with the Enemy Act (50 U.S.C. App. 1 *et seq.*) or the International Emergency Economic Powers Act (50 U.S.C. 1701 *et seq.*) and which include provisions generally prohibiting citizens and residents of the U.S. from engaging in transactions related to travel to, from, or within a foreign country, including any such prohibitions adopted in the future.[23]

The Senate Report lists five countries (*i.e.*, North Korea, Cuba, Vietnam, Kampuchea, and Libya) with re-

[15] *See* Code §535(b)(5) and (6).
[16] *See* Code §864(b)(2)(A)(ii).
[17] Act §1225(c). The March 1, 1986 date appears in the language of the bill as printed in the Conference Report at p. I-500. The "Statement of Managers" portion of the Conference Report, however, contains a January 1, 1986 effective date at p. II-628.
[18] *See* Code §911(a), (b), and (c); Conference Report, p. II-636. Note that certain types of income, including compensation from the U.S. government or agency, are not eligible for the exclusion. *See* §911(b)(1)(B).
[19] Code §911(b)(2)(A).
[20] Act §1233(a), amending Code §911(b)(2)(A).
[21] Act §1233(b), amending Code §911(d) by redesignating paragraph (8) as paragraph (9) and by inserting a new paragraph (8) after paragraph (7).
[22] Code §911(d)(8), as amended.
[23] Code §911(d)(8)(B); Senate Report at 389.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

spect to which Treasury regulations restrict transactions related to travel of U.S. citizens and residents, except if otherwise authorized by the Treasury Department.[24]

The disallowance provisions of Code §911(d)(8), as amended, do not apply to an individual if such individual's activities in a foreign country where travel restrictions apply are not in violation of the law.[25] The travel restrictions are, in certain cases, subject to exceptions which vary with each foreign country. The Senate Report mentions a few examples of such exceptions. Thus, the restrictions applicable to travel in Cuba do not extend to travel in order to visit close family members. The restrictions concerning Libya apply to all travel transactions after January 31, 1986, unless necessary to effect the individual's departure from that country or for journalistic activities.[26] Individuals to which these exceptions apply are not denied the tax benefits of Code §911(a).

V. Income of Foreign Governments

A. Introduction

The basic provisions dealing with the tax treatment of foreign governments and international organizations are contained in Code §892 and regulations thereunder.

Prior to the 1986 TRA, Code §892 provided that foreign governments and international organizations did not include in gross income, and were therefore exempt from tax on income received from investments in the United States in stocks, bonds, or other domestic securities, owned by such foreign governments or by international organizations, or from interest on deposits in banks in the United States of moneys belonging to such foreign governments or international organizations, or from any other source within the United States.

However, the regulations provide that income derived by an integral part or controlled entity of a foreign sovereign from commercial activities in the U.S. is not income of a foreign government for purposes of the Code §892 exemption and is therefore taxed under the appropriate provisions of the Code.[27]

The regulations define a "foreign government" as consisting only of integral parts (such as agencies or bureaus) or controlled entities (such as corporations) of a foreign sovereign to the extent not engaged in commercial activities in the U.S. A controlled entity is one which is wholly owned and controlled, directly or indirectly through one or more controlled entities, by a foreign sovereign. The net earnings of an integral part or a controlled entity of a foreign government must be credited to their own accounts or to other accounts of the foreign government, with no portion inuring to the benefit of any private person.[28]

Commercial activities are defined as activities conducted in the U.S. which are ordinarily conducted with a view towards the current or future production of income, whether or not such income is from sources within the U.S.[29] However, the regulations clarify that investments in stocks (whether or not a controlling interest investment) bonds or other securities, loans, net leases on real property, land which is not producing income, or the holding of deposits in banks, are not commercial activities. All the facts and circumstances are considered to determine whether an activity relating to the above properties constitutes an investment. An activity will not cease to be an investment solely because of the volume of transactions of the activity.[30]

The regulations further provide that performances and exhibitions within the U.S. of amateur athletic events and events devoted to the promotion of the arts by cultural organizations are not commercial activities.[31]

A foreign central bank of issue that failed to qualify for the Code §892 exemption could still be exempt from tax on the items of income enumerated in Code §895.

The extent of the exemption under Code §892 was not clear. Confusion also existed with respect to a foreign government's status vis-a-vis income tax treaties, in particular those treaties which do not include provisions specifically dealing with income earned by governments. Because recent treaties generally allow protection only to residents of the treaty partner country, a determination had to be made as to whether a government was a "resident" within the definitions given under the treaties. *See* Senate Report at 416.

Congress felt that the foreign government exemption on investment income, which extended to business corporations wholly owned by foreign governments, discriminated against privately-owned foreign corporations which are subject to U.S. tax on U.S. source investment income.[32]

Furthermore, prior to the 1986 TRA, income (such as dividends and interest) derived by foreign governments or governmental entities from U.S. businesses that they control was exempt. For example, if a foreign government bought a controlling interest in a U.S. corporation, dividends and interest payments from that corporation to the foreign government escaped U.S. shareholder level tax. Congress felt that payments to a controlling entity are in the nature of a return on a direct investment not on a portfolio investment, and should therefore not be exempt.[33]

B. Overview

The 1986 TRA codifies the rule limiting the foreign government tax exemption of Code §892 to investment income and makes taxable the commercial activities of foreign governments. The Act does not affect the current system of taxation of international organizations.

The provisions of revised §892 are effective for payments received on or after July 1, 1986, but no withholding will be required by reason of the amendment on payments

made before the date of enactment of the Act (October 22, 1986). Act §1247(b).

C. *Detailed Analysis*

1. *Investment Income*

Code §892(a)(1) lists the types of income received by foreign governments which may be excluded from gross income and which are therefore exempt from U.S. income taxation. As under prior law, these cover income from investments in the U.S. in stocks, bonds, or other domestic securities owned by such foreign governments, or from interest on deposits in banks in the U.S. of money belonging to such foreign governments. It is extended to cover income from investments in financial instruments held by foreign governments in the execution of governmental financial and monetary policy. The statutory language of the exemption under revised §892(a) no longer refers to income from "any other source" within the United States. This language was too vague and gave rise to uncertainty concerning the exact scope of the exemption. In particular, it was not clear whether the statute was intended to exempt income from commercial sources.

2. *Commercial Income*

The foreign government exemption does not extend to income received directly or indirectly by a foreign government from commercial activities. The 1986 TRA therefore codified the rule already provided by Regs. §1.892-1 that income from commercial activities is not investment income and therefore is not exempt from U.S. tax. The Treasury's position resulted from a narrow reading of the "income from any other source within the U.S." language of former Code §892.

Income excluded from the exemption is income (a) derived from the conduct by a foreign government of any commercial activity, whether within or outside the U.S., or (b) received from or by a controlled commercial entity (including, for example, dividend and interest payments).[34]

A commercial activity is therefore defined to include ownership of a controlling interest in a corporation or other entity engaged in trade or business in the U.S. As drafted by the Senate, the foreign government exemption was denied to any entity controlled by a foreign government if any other entity controlled by that government engaged in commercial activity. This provision was deleted from the Act. However, the Conference Report anticipates that regulations to be adopted by the Secretary will address the potential risk of shifting of income from commercial arms of foreign governments to other related entities and will provide rules to replace the Senate provision that attributed commercial activity of one controlled entity to other controlled entities.[35]

If a controlled entity is itself engaged in commercial activity anywhere in the world, its income is treated like the income of a privately owned entity. If the controlled entity is not itself engaged in commercial activity, the Act provides tax exemption for certain investment income earned by that entity and for interest and dividends paid from the entity to the government.[36]

The Senate Report expresses its belief that income derived by foreign governments' athletic teams and cultural groups should not be treated differently from similar income earned by privately-owned foreign professional teams or groups.[37]

The Senate Report clarifies that it intends that, for treaty purposes, a foreign government (as well as agencies, bureaus or controlled corporations) be treated as a resident of its country, unless it does not grant reciprocal treatment to the U.S.[38]

3. *Controlled Commercial Entity*

The foreign government exception does not apply to controlled entities that engage in any commercial activity anywhere in the world. However, for purposes of this definition, a central bank of issue is treated as a controlled commercial entity only if it is engaged in commercial activities within the U.S. Code §892(a)(2).

A foreign government has a controlling interest in an entity (whether U.S. or foreign) if it holds directly or indirectly, an interest of 50% or more, by vote or value, in that entity or any other interest that allows or would allow effective control of such entity.[39]

4. *International Organizations*

As drafted by the Senate, the amendments to Code §892 also applied with respect to international organizations, as described in Code §7701(a)(18). Section 1247 of the Act, as finally enacted, does not affect the tax treatment of international organizations. The statutory provisions applicable to these organizations are now contained in Code §892(b), which makes no changes to the tax regime which applied prior to the Act.

The Secretary is granted general regulatory authority to implement the provisions of Code §892, as amended. Code §892(c).

VI. Effectively Connected Income Will Retain its Character in Subsequent Years

A. *Pre-1986 TRA Law*

The characterization of a foreign person's income as effectively connected with the conduct of a U.S. trade or business changes the manner in which such income is taxed in the U.S. Income that is effectively connected with a U.S. trade or business is taxed in the U.S. on a net basis at graduated rates. Income that is not effectively connected is generally subject to a 30% withholding tax (or lower treaty rate) on the gross amount, although certain types of such income, such as portfolio interest income, are exempt from U.S. tax. Non-effectively connected capital gains of foreign taxpayers are generally not subject to U.S. tax, with some exceptions such as for real property gains.

[34] Code §892(a)(2)(A). *See* Senate Report at 416-417.
[35] Conference Report, p. II-655.
[36] *Ibid.*
[37] Senate Report at 418.
[38] *Ibid.*
[39] Code §892(a)(2)(B).

The regulations contain rules to determine whether income, gain or loss of a nonresident alien individual or a foreign corporation that is engaged in a U.S. trade or business in the U.S. at any time during the taxable year is effectively connected income for that year.[40] Regs. §1.864-3(a) provides that no income, gain or loss of a nonresident alien individual or a foreign corporation that is at no time during the taxable year engaged in a U.S. trade or business is to be treated as effectively connected for the taxable year with the conduct of a U.S. trade or business. The regulations further provide that this rule applies even though the income, gain or loss would have been treated as effectively connected if such income, gain or loss was attributable to an earlier taxable year when the taxpayer was engaged in a U.S. trade or business.[41]

The application of the effectively connected income concept on a strict annual basis enabled foreign taxpayers to avoid having income or gain characterized as effectively connected by, for example, effecting a sale on the installment basis. Installment payments received in years after the cessation of the U.S. trade or business were not treated as effectively connected. Congress expressed its belief that income earned by a foreign person's U.S. trade or business should be taxed as such, regardless of whether recognition of that income is deferred until a later taxable year. Similar considerations apply with respect to the performance of services. Similarly, unrealized gains on appreciated property used in a foreign person's U.S. trade or business could escape U.S. tax liability if sold or exchanged after the U.S. trade or business had ceased to exist.[42]

B. Overview

Act §1242 amends §864(c) to provide two cases in which a foreign person's income or gain effectively connected with a trade or business in the U.S. will retain its character in years after the foreign taxpayer ceases to conduct the U.S. trade or business.

The provisions of amended §864(c) apply to taxable years beginning after December 31, 1986. Act §1242(c).

C. Detailed Analysis

Income or gain of a nonresident alien individual or foreign corporation is treated as effectively connected with a U.S. trade or business if it is attributable to a sale or exchange of property or the performance of services (or any other transaction) in any other taxable year if it would have been so treated if such income or gain had been taken into account in that other year.[43] Thus, deferring the recognition of income until a later taxable year in which the foreign taxpayer is no longer engaged in a U.S. trade or business will not change the manner in which the U.S. taxes that income.

Any income or gain of a foreign person from the sale or exchange of property which was used or held for use in connection with the conduct of a U.S. trade or business, which takes place after the cessation of that trade or business, will be treated as effectively connected with a U.S. trade or business if the sale or exchange of such property occurs within 10 years after such cessation. The income or gain will therefore be taxed as though the sale or exchange had taken place right before ceasing to conduct the U.S. trade or business.[44]

In these two cases, the effectively connected income concept will no longer be applied on a strict annual basis, as was provided by the regulations.

As drafted by the Senate, the removal (*i.e.*, physical departure) of a business asset from U.S. jurisdiction would have been treated as a taxable disposition of those assets. However, this provision was omitted from the final version of the Act. *See* Conference Report, p. II-651.

VII. Tax Free Exchanges of Tax Avoidance Expatriates

A. Introduction

If a U.S. citizen renounces his/her U.S. citizenship and one of the principal purposes of such renunciation is to avoid U.S. Federal income or estate and gift taxes, then for a period of up to 10 years such tax avoidance expatriate is subject to tax under Code §877(b). Tax determined under §877(b), however, applies only if it exceeds the amount of tax that would be payable under §871, *i.e.*, the rules generally applicable to nonresident aliens.[45]

Section 877(b) treats expatriates like resident aliens in that they can neither take advantage of the §871 30% tax rate on U.S. source investment type income nor benefit from the 183-day rule prescribed in §871(a)(2) for U.S. source capital gains. At the same time, §877(b) treats expatriates like nonresident aliens in that they are subject to tax only on U.S. source income (not effectively connected with a U.S. trade or business) and income effectively connected with a U.S. trade or business.[46] Section 877(b) is complemented by §877(c), which provides special source rules for purposes of determining the tax under §877(b). Under §877(c), gain derived from the sale of: (i) property (other than stock or debt obligations) located in the United States; (ii) stock of a domestic corporation, and (iii) debt obligations issued by U.S. persons or Federal, state, or local governments, are U.S. source income regardless of the property source of income rules prescribed in §§861(a)(6) and 862(a)(6).

The impact of Code §877(b), therefore, is to tax expatriates on their U.S. source income on a net basis at graduated rates, regardless of how such income would be taxed to nonresident aliens. Because Code §877(b) subjects tax avoidance expatriates to U.S. tax only on U.S. source income and not on foreign source income, expatriates could escape U.S. tax liability by exchanging U.S. property for foreign property in a tax-free exchange and then selling the foreign property obtained in the exchange. The sale of the U.S. property would have been subject to U.S. tax, whereas the sale of the foreign property obtained in exchange of the U.S. property would not have been subject to tax prior to the 1986 TRA. Congress intended to close this loophole

[40] Regs. §§1.864-3 and 1.864-4 through 1.864-7.

[46] Code §872(b)(1).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

which enabled tax avoidance expatriates to accomplish indirectly what they were prohibited from doing directly.[47]

B. Overview

The gain realized by tax avoidance expatriates from the sale or exchange of property the basis of which is determined in whole or in part by reference to the basis of property located in the U.S. is treated as the gain from the sale of U.S. property.[48]

Amended Code §877(c) applies to sales or exchanges of property received in exchanges after September 25, 1985. Act §1243(b).

C. Detailed Analysis

Section 1243 of the 1986 TRA adds a new sentence at the end of Code §877(c) to provide that, for purposes of that section, gain on the sale or exchange of property which has a basis determined in whole or in part by reference to U.S. property located in the U.S., stock issued by a U.S. corporation or debt obligations of a U.S. person, including Federal, state and local governments, is treated as gain from such U.S. property subject to tax in the U.S.

Note: The 1986 TRA does not prevent tax avoidance expatriates from making tax-free exchanges of U.S. property for foreign property. However, if the expatriate subsequently disposes of the foreign property received in the tax-free exchange, any gain recognized on the disposition will be subject to U.S. tax as if the expatriate had disposed of U.S. property.

VIII. Transfer Prices for Imports

In a number of cases, U.S. taxpayers have paid related foreign entities prices for goods exceeding the value of the property as declared to U.S. customs. Under §482, where one entity is charged by another commonly controlled entity a price for goods in excess of an arm's length price, the IRS is authorized under Regs. §1.482-2(e) to increase the gross income of the entity paying the excessive price to reflect what it would be if an arm's length price had been paid.

The IRS has sometimes taken the position that the basis or inventory value of goods imported by a U.S. entity from a related (in the §482 sense) foreign entity, insofar as it is based on costs taken into account in computing the customs value of the property, should not exceed the latter. This position, however, has seldom been supported by the courts where the U.S. taxpayer has been able to offer other evidence of an arm's length price. Congress decided that the IRS position had sufficient merit to warrant its inclusion in the Code as a specific rule. *See* Conference Report at II-656. Under new §1059A, enacted by 1986 TRA §1248, if any property is imported into the U.S. in a transaction (directly or indirectly) between "related persons (within the meaning of §482) "[49] the amount of any costs which are taken into account both in computing the basis or inventory value of such property and in computing its customs value are not to exceed the amount of such costs taken into account in computing its customs value. This provision is effective as to transactions entered into after March 18, 1986. Act §1248(c).

New §1059A is discussed in greater detail in Chapter 68 which deals primarily with the 1986 Act's amendment to §482 relating to transfers of intangible property.

IX. Treatment of Certain Persons in Panama [Act §1232]

A. Background

On September 7, 1977, the United States and the Republic of Panama signed the Panama Canal Treaty (T.I.A.S. No. 10030), which was ratified by the Senate on April 17, 1978, and took effect on October 1, 1979. Under the Treaty, the Panama Canal Zone is subject to the sovereign jurisdiction of Panama, while the United States retains the right to manage and operate the Canal until the year 2000. The agency operating the Canal on behalf of the United States is the Panama Canal Commission, the employees of which are employees of a U.S. government agency.[50] Under an agreement implementing Article III of the Panama Canal Treaty (Implementation Agreement T.I.A.S. No. 10031) there is the statement that "United States citizen employees and dependents shall be exempt from any taxes, fees, or other charges on income received as a result of their work for the Commission." Because of this statement, many U.S. employees of the Commission have taken the position that their salaries are exempt from both United States and Panamanian income taxation.[51]

Several of these taxpayers have sought refunds of U.S. taxes paid on Panama Canal Commission salaries. In *Copeland v. United States*,[52] the Court of Appeals for the Federal Circuit held that the Implementation Agreement did not exempt U.S. citizens from U.S. taxation on such salaries. In the Eleventh Circuit, however, the appeals court determined that such income was exempt from U.S. taxation.[53] In making its determination, the court stated that the "plain language" of the Treaty required a complete exemption from all taxes.

Certain U.S. government employees stationed abroad, not including those of the Panama Canal Commission, are permitted to exclude from gross income certain housing, cost of living and other allowances under Code §912. These exclusions are granted under specifically enumerated statutory provisions such as the Foreign Service Act of 1980.[54] In 1984, Congress amended the Panama Canal Act to allow the Defense Department to grant quarters allowances to its

[47] House Report at 438; Senate Report at 410.

[48] Code §877(c), as amended by §1243 of the Act.

[49] This is the language of the statute. Actually, §482 does not refer to "related" persons, but organizations which are controlled by the same interests.

[50] *See* 22 USCA §3611, 3612 (1986 Supp.), and Panama Canal Treaty Article III, §3, T.I.A.S. No. 10030.

[51] *See* Code §894(a) which states that "[i]ncome of any kind, to the extent required by any treaty obligation of the United States, shall not be included in gross income and shall be exempt from taxation under this subtitle."

[52] 761 F.2d 688 (Fed. Cir. 1985).

[53] *See Harris v. Comr.*, 768 F.2d 1240 (11th Cir. 1985).

[54] *See, e.g.*, §912(1)(a).

employees in Panama, but §912 was not amended to cover such allowances.[55]

B. Detailed Analysis

Section 1232 of the Tax Reform Act of 1986 adds a non-Code rule which states that nothing in the Panama Canal Treaty, or in any implementing agreement, shall be construed as exempting any citizen or resident of the United States from any U.S. income tax. In addition, employees of the Panama Canal Commission and civilian employees of the Department of Defense stationed in Panama will be permitted to exclude from their gross income allowances which are comparable to the allowances excludible under §912(1) of the Code by employees of the State Department of the United States stationed in Panama.

Shortly after the enactment of the Tax Reform Act change, the Supreme Court issued its decision in *O'Connor v. United States*,[56] in which it held that the exemption from taxes granted by the Implementation Agreement to the Panama Canal Treaty applied only to Panamanian taxes and not to U.S. taxes. Hence, citizens of the United States employed by the Panama Canal Commission who had filed refund claims on the theory that such agreement exempted such income from U.S. taxes were denied refunds. The Supreme Court noted that the treaty had been consistently applied by the Executive Branch and that the Panama Canal Commission had consistently withheld U.S. income taxes from the petitioners and others similarly situated. The Court did not rely in its decision on the Tax Reform Act of 1986, although that Act, as explained below, was retroactive for all taxable years whether beginning before, on or after the date of enactment.

C. Effective Dates

The amendment subjecting all income of U.S. persons employed by the Panama Canal Commission in Panama to U.S. income taxation applies, as explained above, retroactively to all taxable years whether beginning or, before or after the date of enactment of the Tax Reform Act of 1986.[57] Although the provision is retroactive, the recent decision of the Supreme Court in *O'Connor v. United States*, which concerned refund claims dating back to the year in which the Panama Canal Treaty took effect (1979), may, as a result of its interpretation of the Treaty, avoid the constitutional question relative to retroactive income taxation which might otherwise be posed by the Act.[58]

Despite the fact that the foregoing amendment subjecting all income of U.S. persons employed by the Panama Canal Commission to U.S. taxation is retroactive, the amendment providing that allowances paid to such persons are excludible under §912(1) of the Internal Revenue Code is effective only in taxable years beginning after December 31, 1986.

X. Study of U.S. Reinsurance Industry

A. Introduction

An excise tax is imposed on each policy of insurance, indemnity bond, annuity contract, or policy of reinsurance issued by any foreign insurer or reinsurer with respect to U.S. risks.[59] The policies covered are those to or for or in the name of a U.S. corporation or partnership, or a U.S. resident individual with respect to risks wholly or partly within the U.S. or to or for or in the name of any foreign person engaged in business within the U.S. with respect to risks within the U.S.[60]

The excise tax is imposed at varying rates, as follows: (1) Four cents on each dollar of premiums charged on casualty insurance and indemnity bonds; (2) one cent on each dollar of premiums charged on life insurance, sickness and accident policies and on annuity contracts; and (3) one cent on each dollar of premiums charged on policies of reinsurance of contracts taxable under (1) or (2) above.[61] The tax is collected by return.[62]

Exemptions are provided under the Code in the case of any policy, indemnity bond, or annuity contract signed or countersigned by an officer or agent of the insurer in a State, territory or the District of Columbia in which such insurer is authorized to do business, or any indemnity bond required to be filed by any person to secure payment of any pension, allowance, allotment, relief, or insurance by the U.S., or to secure a duplicate for, or the payment of, any bond, note, certificate of indebtedness, war-saving certificate, warrant or check issued by the U.S.[63]

Furthermore, a number of recent U.S. tax treaties, such as the treaties with Barbados, Cyprus, France and the United Kingdom, contain provisions which may waive imposition of the excise tax on payments to some insurers and reinsurers.

Although premiums received by certain persons may be exempt from the excise tax (whether by treaty or by statutory exception), such exceptions generally do not waive the excise tax for subsequent reinsurance transactions covering insurance of U.S. risks under which premiums are paid to and received by a nonexempt person. *See* Senate Report at 411.

The excise tax is imposed on foreign reinsurers only to the extent that they are not subject to U.S. income tax. Foreign reinsurers generally are subject to U.S. income tax on income derived from the reinsurance of U.S. risks if that income is effectively connected with the conduct of a U.S. trade or business. *See* Senate Report at 410. A foreign reinsurer of U.S. risks ordinarily will not be viewed as conducting a U.S. trade or business and will therefore not be subject to U.S. income tax, unless the foreign reinsurer has a U.S. office or agent in the U.S. *See id.* Tax treaties may further limit the circumstances in which foreign reinsurers are subject to U.S. income tax. By contrast, U.S.

[59] Code §4371.
[60] Code §4372(d).
[61] Code §4371.
[62] Code §4374.
[63] Code §4373.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

reinsurers, like other U.S. persons, are generally subject to U.S. tax on worldwide income on a net basis.

The Senate Report expressed its concern that U.S. reinsurers may be at a competitive disadvantage vis-a-vis foreign reinsurers of U.S. risks as a result of the disparate income tax treatment of U.S. and foreign reinsurers. Furthermore, the excise tax on insurance premiums paid to foreign insurers, which should mitigate these inequities in certain cases, is frequently not imposed on foreign insurers because of exemptions under tax treaties.[64]

B. Overview

The Secretary of the Treasury is to study the effect that existing tax treaties have on domestic reinsurance corporations and whether these are placed at a significant competitive disadvantage vis-a-vis foreign reinsurance corporations. The Secretary must report the results of the study to the Senate Finance Committee and the House Ways and Means Committee before January 1, 1988.[65]

C. Detailed Analysis

The study to be conducted by the Secretary or his delegate must consider the provisions of existing tax treaties between the U.S. and other countries and must specifically identify those treaties which create a significant competitive disadvantage on U.S. reinsurance corporations. The Senate Report indicates that if the study concludes that U.S. reinsurance corporations are at such a competitive disadvantage, the Secretary should renegotiate the relevant treaties to eliminate that disadvantage.[66]

As originally drafted, the House bill proposed to amend the present excise tax system of imposing one tax on the direct insurance of a U.S. risk and another tax on the reinsurance of a U.S. risk, to ensure that an excise tax would be collected in all events to the extent that a U.S. risk was being insured, whether directly or indirectly, by a foreign insurer that was not subject to U.S. income tax or otherwise exempt from the excise tax.[67] The tax would have been levied by withholding and the tax rate differentiation would have been eliminated. The House bill's provisions were very similar to provisions included in the Senate version of the Tax Reform Act of 1984 which were subsequently deleted in conference. *See* House Report at 440-41. These amendments were again deleted in conference and are not part of the text of the 1986 TRA as finally enacted.

Chapter 72

TECHNICAL CORRECTIONS TO THE FOREIGN PROVISIONS

Deborah M. Beers, Esq.
Silverstein and Mullens
Washington, D.C.

The Tax Reform Act of 1986 [1] contains numerous technical, clerical and conforming amendments to the Tax Reform Act of 1984 [2] affecting the foreign tax provisions of the Code. These amendments, outlined below, are to take effect as if included in the provisions of the Tax Reform Act of 1984, except as otherwise provided.[3]

I. Maintaining the Source of Income [Act §1810(a)]

A. Background

Over the years, U.S. taxpayers with excess foreign tax credits have devised a number of techniques for absorbing the excess credits. One popular technique is the conversion of U.S. source income into low taxed foreign source dividend income by utilizing a foreign tax haven corporation.

The dividend source of income rules are contained in Code §§861 and 862. As a general rule, the source of dividend income is governed by the payor's place of incorporation. Thus, dividends paid by a corporation incorporated in the United States (excluding possessions) are U.S. source income,[4] and dividends paid by a corporation incorporated outside the 50 States and the District of Columbia are foreign source income.[5] There are, however, a number of exceptions to this general rule. (*See* Chapter 61, *supra*) For example, interest and dividends paid by a domestic corporation that earns less than 20% of its gross income from U.S. sources over a three-year period (an "80/20 company") are foreign source under Pre-TRA 1986 Code §§861(a)(1)(B) and 861(a)(2)(A). Therefore, under the Code, a U.S. taxpayer can convert U.S. source income into foreign source income by routing it through a 80/20 company, as long as the company's U.S. source gross income remains below the 20% threshold.[6]

B. The Tax Reform Act of 1984

The Tax Reform Act of 1984 (P.L. 98-369) added to the foreign tax credit rules under §904, new rules which recharacterized as U.S. source income the Subpart F income, the undistributed foreign personal holding company income, the foreign source dividend income, and the foreign source interest income derived from a 50% U.S.-owned foreign corporation to the extent such inclusions in the income of U.S. shareholders are attributable or allocable to U.S. source income of the foreign corporation. The recharacterization rule applies for purposes of §904 only, and, for all other purposes of the Code, the income retains its foreign source character.

In the case of dividend or interest income derived from a U.S.-owned foreign corporation, however, §904(g)(5), as amended by the Tax Reform Act of 1984, provides a *de minimis* exception. According to this exception, foreign source dividends or interest derived from a U.S.-owned foreign corporation are not recharacterized as U.S. source income if: (i) the foreign corporation has earnings and profits for the relevant taxable year, and (ii) less than ten percent of such earnings and profits is attributable to U.S. sources.

The 1984 Act contained several transition rules,[7] one of which provided that "qualified interest" shall not be taken into account under §904(g), and, hence, will escape recharacterization as U.S. source income if received or accrued by an "applicable CFC" [8] before January 1, 1992. "Qualified interest" [9] is defined to include interest received or accrued by an applicable CFC during any taxable year on "United States affiliate obligations" [10] held by an applicable CFC multiplied by a limiting fraction. The limiting fraction is equal to the aggregate principal amount of U.S. affiliate obligations held by the CFC on March 31, 1984 (but not in excess of the applicable limit, *i.e.*, the CFC's capitalization on March 31, 1984) [11] divided by the average daily principal amount of U.S. affiliate obligations held by the applicable CFC during the taxable year. In no event may the limiting fraction exceed one.

An "applicable CFC" is any CFC which was in existence on March 31, 1984, the principal purpose of which was the issuance of CFC obligations and the holding of short-term obligations and lending the proceeds of such obligations to affiliates.[12]

A "United States affiliate obligation" is any obligation of a U.S. person related (within the meaning of Code §482) to an applicable CFC holding the obligation. Interest paid on an obligation of a foreign person is not subject to the source maintenance rules.[13]

C. Technical Corrections

Section 1810(a) of the Tax Reform Act of 1986 (P.L. 99-514) amends §121 of the Tax Reform Act of 1984 (P.L. 98-369) to provide that an 80/20 company will be treated as a U.S.-owned foreign corporation, subject to the rules

[1] P.L. 99-514, 99th Cong., 2d Sess. (Oct 22, 1986).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

maintaining the source of U.S. income, thus preventing U.S. taxpayers from using 80/20 companies to convert U.S. source income to foreign income.[14] The amendment with respect to the 80/20 companies is to take effect on March 28, 1985.[15] However, in the case of any taxable year of an 80/20 company ending after March 28, 1985, only income received or accrued by the 80/20 company during that portion of the taxable year after that date generally will be taken into account for purposes of the new source maintenance rules. For purposes of the ten percent *de minimis* exception added to §904(g)(5) by the Tax Reform Act of 1984, however, all income received or accrued by the 80/20 company during the taxable year is to be taken into account.[16]

Section 1810(a)(2) of the 1986 Act amends §121(b)(2) of the 1984 Act by providing that certain U.S. source interest paid to an applicable CFC by an affiliated corporation on an obligation of that corporation issued before March 31, 1984 will be subject to the resourcing provisions to the same extent that interest so paid by an affiliated U.S. corporation would be so subject. This rule is available only if at least 50% of the foreign corporation's gross income for the three-year period ending on or before March 31, 1984, and with the close of its taxable preceding the payment of the interest in question, was effectively connected with U.S. trade or business.

Section 1810(a)(3) of the 1986 Act amends §121(b)(2)(D) of the 1984 Act (defining "applicable CFC") by including in that term any CFC in existence on March 31, 1984, the principal purpose of which on that date consisted of (1) issuing CFC obligations and shortterm borrowing *from non-affiliated persons*, and (2) lending the proceeds to affiliates.

In addition to the foregoing, the 1986 Act, §1810(a)(4), makes clear that the source maintenance rules apply notwithstanding any contrary U.S. treaty obligation, even if entered into after the effective date of the 1986 Act (October 22, 1986), unless the treaty expresses a clear intent to override the rules by specific reference to them.[17]

II. Maintaining the Character of Income [Act §1810(b)]

A. Introduction

Since many foreign countries do not impose any income tax on interest income earned by foreigners, a U.S. taxpayer might consider generating foreign source income, and thus utilizing its excess foreign tax credits, by exporting cash to such a foreign country and earning interest income on it. This possibility, however, is foreclosed by §904(d), which provides for a separate §904 limitation on all foreign source interest income. This limitation was greatly expanded in the Tax Reform Act of 1986.[18] Because of §904(d), foreign taxes imposed on non-interest income do not offset U.S. tax that applies to low-tax foreign source interest income.

Prior to the enactment of the Tax Reform Act of 1984 (P.L. 98-369), however, a U.S. person might circumvent the §904(d) separate limitation on interest income in at least two ways. First, a U.S. person might create a foreign corporation and lend money through such corporation to borrowers resident in countries which impose little or no income tax on interest paid to foreigners. The interest income earned by the foreign corporation would generally be included in the gross income of U.S. shareholders currently as a dividend either under the foreign personal holding company provisions (§§551-558) or the Subpart F provisions (§§951-964) of the Code. This simple technique, therefore, enabled a U.S. taxpayer to convert potential interest income into dividend income. Second, a U.S. person might buy shares in a U.S. corporation (*i.e.*, a mutual fund) which invests in foreign securities, the interest income from which bears little or no foreign tax. If the U.S. corporation earns more than 80% of its gross income from foreign sources, the dividends received by the U.S. person from such corporation would be characterized as foreign source income.[19]

B. Tax Reform Act of 1984

Cognizant of this manipulation of the character of income, Congress enacted §122 of the Tax Reform Act of 1984 adding a new "look-through rule" in §904(d)(3) which provides for the maintenance of the character of income as interest (which is subject to a separate limitation) when such income is earned through a foreign corporation or a regulated investment company and distributed (whether actually or constructively) to the U.S. shareholders as dividends or interest. Under the general rule of §904(d)(3), as amended by the Tax Reform Act of 1984, when a "designated payor corporation" (50% or more U.S.-owned foreign corporation, regulated investment company, or a foreign corporation in which the taxpayer is a ten percent U.S. shareholder) pays or accrues dividends or interest, such payments are treated as interest (subject to the separate limitation) in the hands of the U.S. recipients, but only to the extent that the payor corporation's earnings and profits for the relevant taxable year include separate limitation interest. Under a *de minimis* exception contained in the 1984 Act, however, if the designated payor corporation has earnings and profits for a particular taxable year and the separate limitation interest is less than ten percent of such earnings and profits, dividends and interest paid or accrued by such corporation are not recharacterized as interest which is subject to the separate §904(d)(2) limitation.

The types of payments made or accrued by a designated payor corporation which are recharacterized as interest under the 1984 Act are: (i) interest;[20] (ii) constructive dividends under §551 (undistributed foreign personal holding income);[21] (iii) constructive dividends under §951 (Subpart F income and certain other income);[22] (iv) §1246 gain (gain derived by U.S. stockholders on the sale or exchange of stock in a foreign investment company);[23] and (v) §1248

dividend (gain recognized on the sale or exchange of stock of a controlled foreign corporation by a ten percent U.S. person).[24]

Under the 1984 Act, interest received by a designated payor corporation from another corporation (whether domestic or foreign) which is a member of the same affiliated group within the meaning of §1504, is not separate limitation interest unless such interest is attributable directly or indirectly to the separate limitation interest of the designated payor corporation.[25]

The 1984 Act also eliminated an exception previously available at the shareholder level for interest earned on investments of working capital. Since regulated investment companies earn primarily passive investment income, their income generally cannot qualify for the working capital exception, and dividends paid by such companies generally are treated as interest subject to the separate limitation (to the extent that the regulated investment company earns separate limitation interest) whether the recipient shareholder's investment is one of working capital or not.[26]

C. *Technical Corrections*

The Tax Reform Act of 1986 amends §122 of the Tax Reform Act of 1984 as follows:

First, §1810(b)(1) of the 1986 Act provides that the 1984 Act *de minimis* rule does not apply to prevent the maintenance of the character of interest income which is includible in the gross income of shareholders of a foreign corporation under §551 (foreign personal holding companies) or §951 (controlled foreign corporations).

Next, §1810(b)(2) of the 1986 Act clarifies that when a designated payor corporation receives dividends or interest from another member of the same affiliated group (within the meaning of §1504), that amount shall be treated as separate limitation interest if (and only if) the amount is attributable (directly or indirectly) to separate limitation interest of *any other member* of the group (not just the payor corporation).

Third, the Act provides that dividends and interest received by a shareholder that owns directly or indirectly less than ten percent of the voting stock of a regulated investment company will not be treated as interest subject to the separate limitation for interest if derived from any transaction which is directly related to the active conduct by the shareholder of a trade or business in a foreign country or U.S. possession.[27]

Fourth, and finally, the Act clarifies the definition of "designated payor corporation" to include any other corporation formed or availed of for purposes of avoiding (through structuring the ownership of a corporation in such a manner as to place that corporation technically outside the present law definition of designated payor corporation) the recharacterization rules.[28] Thus, U.S. taxpayers will not be permitted, in violation of the purpose of the look-through rule, to convert interest income to non-interest income by earning that income through a foreign banking subsidiary or similar entity formed or availed of for that purpose which, absent the anti-abuse rule, would not be subject to the separate foreign tax credit limitation for interest by reason of being earned in the conduct of a similar banking business.[29]

The 1986 Act also expands the definition of designated payor corporation to include any 80/20 company,[30] an amendment designed to prevent U.S. taxpayers from using 80/20 companies to circumvent the separate foreign tax credit for interest income.[31]

D. *Effective Dates*

The anti-avoidance amendment to the definition of designated payor corporation generally takes effect on December 31, 1985.[32] The amendment expanding the definition of designated payor corporation to include any 80/20 company takes effect generally on March 28, 1985 except that for any taxable year of a corporation treated as a designated payor corporation ending after the indicated date, only income received or accrued by the corporation during that portion of the taxable year after that date generally is to be taken into account for purposes of the look-through rule. However, all income received or accrued by the corporation during that taxable year is to be taken into account in determining whether the ten percent *de minimis* exception applies. The legislative history states that a corporation formed on or before December 31, 1985, but availed of after that date to avoid the look-through rule, will be subject to the rule.[33]

III. Related Party Factoring Income [Act §1810(c)]

A. *Introduction*

When goods or services are sold on credit, the seller generally takes from the purchaser a receivable, which is a transferable promise to pay cash in the future. The seller may cash the receivable prior to its maturity date by selling it to a third party, a "factor" (*i.e.*, a finance company), at a discount. The seller's income realized from the sale of goods or services in such a case is reduced by the amount of the discount. When the receivable is paid, the factor realizes income in the amount of the discount.

Prior to the passage of the Tax Reform Act of 1984, the practice of factoring by foreign subsidiaries of trade accounts receivable of U.S. parent companies (and of U.S. and foreign affiliates) was very popular. In employing this technique, the U.S. multinational companies hope to achieve numerous tax advantages including the repatriation of untaxed foreign earnings accumulated abroad by a controlled foreign corporation ("CFC") and the shifting of a portion of the income (*i.e.*, equal to the discount income) earned by the U.S. parent (or a foreign affiliate) from a sale of goods or services out of the United States (or high tax foreign) taxing jurisdiction to a low or zero tax jurisdiction. Among the tax issues involved in the typical factoring

[33] Senate Report at 938.

arrangement was the treatment of the purchase by the foreign factoring company of the trade accounts receivable of its U.S. parent and other U.S. affiliates as a potential investment in U.S. property under §956 of the Code.

Under §956, any U.S. shareholder of a CFC was taxed currently on its pro rata share of the increase in the taxable year of the CFC's earnings in "United States property." The term "United States property", as defined in §956(b)(1), includes "an obligation of a U.S. person." Section 956(b)(2)(F), however, provides that the term "United States property" does not include the obligation of an unrelated U.S. corporation. Since, in a typical factoring arrangement, the foreign factoring subsidiary factored the obligations of unrelated U.S. (and foreign) corporations, the U.S. parent of the subsidiary had no potential exposure under §956.

B. Tax Reform Act of 1984

Section 123 of the Tax Reform Act of 1984 (P.L. 98-369) added a new paragraph (3) to subsection (b) of §956 and a new subsection (d) to §864. Section 956(b)(3) provides a strict rule that treats the trade accounts receivable acquired from related U.S. parties under which the obligor is a U.S. person as "United States property" for purposes of §956(a). Consequently, U.S. taxpayers are not able to repatriate untaxed foreign earnings from investments in such receivables tax-free. Section 864(d) insures that the discount income earned by the foreign factoring subsidiary is taxed currently to the U.S. shareholders of the subsidiary under either the foreign personal holding company provisions of the Code (§§551-558) or under the Subpart F provisions of the Code (§§951(a)(1), 952(a)(2) and 954(c)).

The provision in §956(b)(3) overrode the exceptions to the investment in U.S. property rules, including the exclusion from U.S. property of an amount of assets equal to post-1962 earnings and profits previously excluded from Subpart F income, on the ground that the United States already had subjected those amounts to tax directly as effectively connected income.[34] Under §864(d), moreover, discount income earned by a foreign factoring subsidiary would be currently taxable even when the receivable was acquired from an entity that was organized under the laws of the same country as the acquirer, and that had a substantial part of its assets used in its trade or business located in that same country.[35]

In addition to the foregoing, under the 1984 Act, related person factoring income is treated as interest described in §904(d)(2), subject to the separate foreign tax credit limitation for interest under that section. Section 904(d)(3)(J), however, contains an exception to this treatment of related person factoring income treated as interest where such interest was received or accrued by a designated payor corporation from another member of the same affiliated group (unless such interest was attributable directly or indirectly to separate limitation interest of such member).

[34] §956(b)(2)(H).
[35] *See* Senate Report at 939.

C. Technical Corrections

1. Investment in U.S. Property

The Tax Reform Act of 1986 amendments to §123 of the 1984 Act[36] provide that the existing exclusion from U.S. property of an amount of assets equal to the controlled foreign corporation's post-1962 earnings and profits excluded from Subpart F income under §952(b)[37] will apply to the acquisition of a trade or service receivable that otherwise constitutes U.S. property.

2. Current Inclusion of Factoring Income

The 1986 Act applies the "same country" exception to factoring income where a related person acquires a factored receivable from an entity that is organized under the laws of the same foreign country as the acquirer, and that has a substantial part of its assets used in its trade or business located in that same country.[38] This exception does not apply, however, where the person transferring the receivable would have derived any foreign base company income (without regard to the 20% *de minimis* exception) or income effectively connected with a U.S. trade or business, had it collected the receivable.[39]

3. Separate Limitation Treatment

Section 1810(c)(3) of the 1986 Act amends §864(d)(5)(A) to require that related person factoring income treated under the Act as interest (although exempt from current inclusion in income by reason of the amendments to §864(d)) is nevertheless subject to the separate limitation for interest without regard to the exception to the definition of separate limitation interest for interest received from members of the same affiliated group (Code §904(d)(3)(J)).

IV. Repeal of Withholding Tax on Portfolio Interest [Act §1810(d)]

A. Introduction

Prior to the Tax Reform Act of 1984, the United States imposed a flat 30% tax (subject to reduction under an applicable tax treaty provisions) on the gross amount of U.S. source income (*e.g.*, dividends, interest, rents and royalties) and certain other income (*e.g.*, OID, gains described in §§402(a)(2) and 403(a)(2)) derived by a nonresident alien individual or a foreign corporation, provided such income was not effectively connected with a U.S. trade or business of such individual or corporation.[40] This 30% tax is generally collected by withholding at the source by the person making the payment (*i.e.*, the withholding agent) and, therefore, is referred to as the "30% withholding tax."[41]

B. Tax Reform Act of 1984

The 1984 Act repealed the 30% tax with respect to (1) portfolio interest paid on obligations issued in registered form for which the U.S. payor (or U.S. person whose duty

it would otherwise be to withhold the tax) received a statement that the beneficial owner of the obligation was not a U.S. person [42] and (2) portfolio interest received by a controlled foreign corporation ("CFC") from a person other than a related person. (Section 881(c)(4), however, provides rules which effectively insure that such interest will be taxed currently in the hands of the CFC's U.S. shareholders.)

The 1984 repeal of the 30% withholding tax with respect to U.S. source investment income did not apply to interest paid to foreign persons having a direct ownership interest (ten percent or greater) in the U.S. payor.[43] In determining whether the ten percent or greater ownership exists, the stock attribution rules of §318(a) of the Code apply. Under one of these rules, a corporation generally is deemed to own stock that its 50% or greater owned subsidiary owns in proportion to the corporation's share of its subsidiary stock.[44] Similarly, a 50% or greater owned subsidiary generally will be deemed to own the stock that its parent owns.[45] In determining whether direct ownership exists for purposes of the repeal of the withholding tax, the first of these rules is applied without regard to the 50% limitation, but the second is not.[46] Thus, an affiliated group of corporations may circumvent the direct ownership exception to the 30% tax repeal by having a U.S. member pay interest to an affiliated foreign corporation that is as much as 49% owned by a substantial foreign shareholder in the U.S. member, rather than directly to that substantial shareholder.[47]

C. *Technical Corrections*

Section 1810(d)(3) of the 1986 Act amends §871(h)(2)(B)(ii) and §881(c)(2)(B)(ii) to clarify that the beneficial owner of a registered obligation under that section may claim a refund of any tax withheld where the required non-U.S. person statement is provided after, rather than before, one or more interest payments are made. Claims for such refunds are to be subject to the general statute of limitations rules for refund claims contained in §6511.[48]

TRA 1986 also amends the definition of portfolio interest to exclude interest that would not have been subject to the 30% tax prior to the 1984 Act.[49] Thus, interest received by CFCs will be eligible for any otherwise applicable Subpart F exceptions unless such interest would have been subject to the 30% tax in the absence of the repeal.[50]

The 1986 Act [51] also amends Code §871(h)(3)(C) by adding a new subsection which provides that, in determining whether direct ownership exists for purposes of the repeal, §318(a)(3)(C) (relating to attribution of stock owned by the parent of a 50% or greater owned subsidiary) is to be applied without regard to the 50% ownership limitation. In applying this rule, however, the foreign interest recipient is treated as owning the stock that its foreign shareholders own in proportion to that shareholder's ownership interest in the foreign interest recipient.[52]

V. OID Income and Deduction for Foreign Persons [Act §1810(e)]

A. *Introduction*

Under §1273(a)(1) of the Code the term "original issue discount" ("OID") means, with respect to any obligation, the excess (if any) of such obligations "stated redemption price at maturity" over its "issue price." Under the rules generally applicable to OID instruments, if OID exists, the holder of the obligation will be required to include in income an amount equal to the sum of the daily portions of the OID for each day during the taxable year in which the obligation is held.[53] Similarly, the obligor may deduct, under §163(e) of the Code, the aggregate daily portion of the OID that accrues during the taxable year. However, because an accrual method obligor on an OID instrument held by a foreign investor is entitled to deduct the OID periodically during the life of the instrument while the foreign investor, under §§871(a)(1)(C) and 881(a)(3), recognizes OID income only upon the payment of any stated interest or upon the sale, exchange or retirement of the instrument, the issuance or sale of OID instruments to foreign investors prior to the Tax Reform Act of 1984 resulted in a mismatching of OID income and deductions that worked to the disadvantage of the government.

B. *Tax Reform Act of 1984*

In the Tax Reform Act of 1984 (P.L. 98-369), Congress added to the provisions of the Act relating to OID derived by foreign investors a new rule delaying the obligor's deduction for OID accrued but not paid with respect to an OID instrument held by a related foreign person until the time of actual payment. In effect, the provision put accrual method taxpayers on the cash method for purposes of determining the interest deduction for OID on instruments held by related foreign persons.[54] The term "related foreign person" is defined as any person (1) that is not a United States person, and (2) that is related to the issuer within the meaning of §267(b).[55]

Under the Tax Reform Act of 1984, the term "interest" as it appears in §§871(a)(1)(A) and 881(a)(1) of the Code (governing the U.S. tax treatment of income derived by non-resident aliens and foreign corporations from U.S. sources), does not include OID (as defined in §1273), so that the taxation of OID is governed exclusively by the specific rules contained in Code §§871(a)(1)(C) and 881(a)(3). These sections impose a 30% withholding tax on U.S. source OID that is not effectively connected with a U.S. business and that accrues on an obligation while such obligation is held by a non-resident alien or foreign corporation. If the obligation is interest-bearing, accrued OID is

[42] §871(h)(2)(B).
[43] §871(h)(3).
[44] §318(a)(2)(C).
[45] §318(a)(3)(C).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

subject to U.S. withholding tax at the time interest is paid. Otherwise OID is subject to tax at the time the obligation is sold, exchanged or retired. In the case of a taxable interest payment on an OID obligation, a foreign investor is taxable on an amount equal to the OID accrued on the obligation since the last payment of interest thereon. In the case of the sale, exchange or retirement of the OID obligation, the foreign investor is taxable on the amount of any gain not in excess of the OID accruing while the foreign investor held the obligation (to the extent not previously taxed).[56]

C. *Technical Corrections*

Section 1810(e)(1) of the Tax Reform Act of 1986 amends §163(e) of the Code to provide that the rule delaying the obligor's deduction for OID accrued but not paid with respect to an OID instrument held by a related foreign person does not apply to the extent that the OID income is effectively connected with the lender's conduct of a U.S. trade or business, unless such OID is exempt from tax (or is subject to a reduced rate of tax) pursuant to a treaty obligation of the United States.

The 1986 Act also amends §§871(a)(1)(C) and 881(a)(3) to provide that when a foreign investor receives a payment on an OID obligation the amount taxable is equal to the OID accrued on the obligation that has not previously been taxed, whether or not such OID accrued since the last payment of interest. Similarly, if the OID instrument is sold, exchanged or retired, the foreign investor is taxable on the previously untaxed amount of the OID accruing while the foreign investor held the obligation, whether or not such amount exceeds the foreign investor's gain on the transaction.[57]

VI. Amendments to FIRPTA [Act §1810(f)]

A. *Introduction*

The Foreign Investment in Real Property Tax Act of 1980 ("FIRPTA") generally taxes the gains realized by non-resident aliens and foreign corporations upon the disposition of U.S. real property interests. Prior to the enactment of FIRPTA, tax on the disposition of a U.S. real property interest would have been imposed only if the gain were effectively connected with a U.S. trade or business, or, in the case of non-resident alien individuals, the seller was present in the U.S. for 183 days or more during a taxable year.

U.S. real property interests include certain holdings in U.S. real property holding corporations ("U.S. RPHC").[58] As defined in §897(c)(2), a "U.S. RPHC" is any corporation (whether foreign or domestic) the fair market value of whose U.S. real property interests is at least 50% of the sum of the fair market value of its U.S. real property interests, its interest in foreign real property, and its interest in any other assets used in a trade or business during the taxable year.[59] Any interest in a domestic corporation, other than an interest solely as a creditor, is treated as a U.S. real property interest unless the taxpayer establishes that the corporation was at no time a U.S. RPHC during the period after June 18, 1980, during which the taxpayer held the interest, or the five-year period preceding the disposition of the interest, whichever is shorter (the "test period").[60]

B. *Tax Reform Act of 1984*

Prior to the Tax Reform Act of 1984, Congress envisioned relying on information reporting requirements to enforce FIRPTA provisions. The Tax Reform Act of 1984 added new §1445 to the Code, which requires any transferee to withhold tax on the disposition of a U.S. real property interest (as defined in §897(c)) by a foreign person. The normal withholding rate under §1445 is ten percent of the amount realized on the disposition.

Under §1445(b), no withholding is required if one of five exemptions applies to a transaction. First, a transferee will be relieved of any withholding obligation if the transferor furnishes to the transferee an affidavit by the transferor stating, under penalty of perjury, (1) that the transferor is not a foreign person and (2) the transferor's U.S. taxpayer identification number ("non-foreign affidavit"). Second, no withholding will be required upon the disposition of an interest in a domestic corporation if the domestic corporation furnishes to the transferee an affidavit stating, under penalty of perjury, that the domestic corporation is not and has not been a U.S. RPHC during the test period specified in §897(c)(1)(A)(ii). Third, a transaction is exempt from withholding if the transferee of a U.S. real property interest receives a "qualifying statement" from the IRS that either the transferor is exempt from tax under FIRPTA, the transferor or the transferee has provided adequate security for payment of the tax, or the transferor or the transferee has made other arrangements for the payment of the tax. Fourth, a transferee who acquires property for use by him as a residence will not be required to withhold FIRPTA tax if the total purchase price of the property does not exceed $300,000. Fifth, no withholding is required on a disposition of shares of a class of stock that is regularly traded on an established securities market.

Under §1445(b)(7), a transferor's agent or a transferee's agent who has actual knowledge that a non-foreign affidavit or an affidavit that a domestic corporation is not a U.S. RPHC is false, but fails to notify the transferee that the affidavit is false, may be liable for withholding to the extent of the agent's compensation derived from the transaction. In the case of a transferor's agent whose principal is a foreign corporation, the agent will be liable to the extent of his compensation for failure to notify the transferee that the transferor's affidavit is false, even in the absence of actual knowledge on the part of the agent.

The 1984 Act provided several special rules relating to corporations, partnerships, trusts and estates. A domestic or foreign partnership, trust or estate must withhold tax equal to ten percent of the fair market value of any U.S. real property interest distributed to a foreign partner or beneficiary if the distribution is subject to FIRPTA tax.[61] The transferee of an interest in a partnership, trust or estate

[56] §§871(a)(1)(C) and 881(a)(3).
[57] P.L. 99-514, §1810(e)(2).
[58] §897(c)(1)(A)(ii).
[59] §897(c)(2).
[60] §897(c)(1)(A)(ii).
[61] §897(g).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

also may be required to withhold tax equal to ten percent of the amount realized by the transferor on the disposition of an interest in the partnership, trust or estate. A domestic partnership, the trustee of a domestic trust, or the executor of a domestic estate must withhold tax equal to ten percent of any amount in its custody that is attributable to the disposition of a U.S. real property interest and is includible in the income of a foreign partner or beneficiary. A foreign corporation is required to withhold tax equal to 28% of the amount of net gain recognized on a distribution to shareholders under §§897(d) or 897(e). If a domestic corporation that is or has been a U.S. RPHC during the test period specified in §897(c)(1)(A)(ii) redeems stock from a foreign shareholder in a transaction taxable under §302 or makes a liquidating distribution to a foreign shareholder, the corporation must withhold tax equal to ten percent of the amount realized by the foreign shareholder.

If a foreign corporation holds a U.S. real property interest, and under any treaty obligation of the U.S. is entitled to nondiscriminatory treatment with respect to that interest, then the foreign corporation may elect to be treated as a U.S. corporation for purposes of FIRPTA substantive and reporting provisions.[62] This election is not available, however, with respect to the withholding requirements of §1445.

The Tax Reform Act of 1984 generally repealed the information reporting requirements of FIRPTA. However, it amended §6039C to authorize the IRS to prescribe regulations requiring reporting by foreign persons holding direct investments in U.S. real property interests. A foreign person will be treated as holding a direct investment in U.S. real property interests if the foreign person did not engage in a trade or business in the U.S. at any time during the calendar year and the foreign person directly held, at any time during the calendar year, U.S. real property interests with a fair market value of at least $50,000.

C. Technical Corrections

The Tax Reform Act of 1986 [63] makes numerous technical and conforming amendments to the FIRPTA provisions as follows:

1. Election To Be Treated As A Domestic Corporation

The 1986 Act amends §897(i) of the Code to provide that foreign corporations electing to be treated as domestic corporations for purposes of FIRPTA substantive and reporting provisions may also elect to be treated as a domestic corporation for withholding purposes. Thus, electing foreign corporations may provide non-foreign affidavits. The reason for this amendment, as stated in the Senate Report [64] is that, since enactment of the 1984 Act, the IRS has developed a procedure, pursuant to regulations, that would provide U.S. buyers with reasonable assurance that a non-foreign affidavit received from a foreign corporation is valid.[65]

2. Withholding Exemptions for Transfers of Stock in Certain Domestic Corporations

Section 1810(f)(2) of the 1986 Act amends paragraph (3) of §1445(b) (relating to non-publicly traded domestic corporations furnishing affidavit that it is not a U.S. RPHC) to provide that withholding is not required on the disposition of an interest (other than an interest solely as a creditor) in a non-publicly traded domestic corporation if the corporation furnishes an affidavit to the transferee stating under penalties of perjury either (1) that the domestic corporation is not and has not been a U.S. RPHC during the test period specified in §897(c)(1)(A)(ii) or (2) that as of the date of the disposition, interests in the corporation are not U.S. real property interests by reason of §897(c)(1)(B). Under that section, interests in a corporation are not U.S. real property interests if the corporation is not holding any U.S. real property interests at the time of disposition and if the corporation disposed of all U.S. real property interests held during the test period described in §897(c)(1)(A)(ii) in transactions in which the element of gain was recognized.[66]

3. Foreign Corporate Transferors — Notice-Giving and Withholding Responsibilities of Agents

As noted above, agents of a transferor foreign corporation are liable under the 1984 Act to the extent of their compensation for failure to notify the transferee that the transferor's non-foreign affidavit is false, even in the absence of proof of actual knowledge on the part of the agent. Section 1810(f)(3) of the 1986 Act clarifies, through amendment to §1445(d)(1)(B) of the Code, that the agent of a foreign corporate transferor of a domestic corporation's stock will not be charged with actual knowledge of the falsity of a false non-U.S. real property interest affidavit furnished by the domestic corporation in the absence of such knowledge.[67] The agent of a foreign corporate transferor will be charged with knowledge of the falsity only of a false non-foreign affidavit furnished by his or her principal.

4. Treatment of Certain Domestic Partnerships, Trusts and Estates

Section 1810(f)(4) of the 1986 Act amends §1445(e)(1) of the Code to provide that a domestic partnership, a trustee of a domestic trust, or an executor of a domestic estate is to withhold a tax equal to 28% of the gain realized on the disposition by the entity of a U.S. real property interest to the extent that such gain is allocable to a foreign person who is a partner or beneficiary of such partnership, trust or estate, or is allocable to a portion of the trust treated as owned by a foreign person under the grantor trust rules of Subchapter J.

The Senate Report states that withholding liability under this special rule is not limited to the gain realized on the disposition that is in custody of the partnership, trustee or executor, although a partnership, trustee or executor that does not have sufficient sales proceeds to satisfy its withholding liability from the proceeds in its custody may request a qualifying statement from the IRS authorizing it to withhold the lesser amount.[68] The Senate Report notes, however, that withholding on the basis of gain is feasible in

[62] §897(i).
[63] P.L. 99-514, §1810(f).
[64] Senate Report at 944.
[65] *See* Temp. Regs. §§1.1445-2T(b)(2)(ii), 1.1445-5T(b)(3)(ii)(C), and 1.1445-7T(a).
[66] *See* Senate Report at 947.
[67] *See* Senate Report at 947.
[68] *Id.* at 948.

this case because, unlike the buyer in the usual withholding situation (who may not know the seller's basis) the withholding agent under §1445 — a partnership, trustee or executor — knows what the foreign taxpayer's gain on the disposition will be since the agent itself must compute the amount of that gain.[69]

The 28% withholding rate reflects the maximum 28% capital gains rate for corporations prior to the abolition of the rate differential between ordinary income and capital gains.[70] The corporate capital gains rate under TRA 86 generally is 34%.[71]

There is a special effective date applicable to the treatment of domestic partnerships, trusts and estates. Modifications to these provisions will be effective for dispositions of U.S. real property interests beginning after the day 30 days after the date of enactment (October 22, 1986).[72]

5. *Distributions by U.S. RPHCs to Foreign Shareholders*

Under the 1984 Act, as noted above, if a domestic corporation is or has been a U.S. RPHC during the test period specified in §897(c)(1)(A)(ii), and such corporation redeems stock from a foreign shareholder in a transaction taxable under §302 or makes a liquidating distribution to a foreign shareholder, it must withhold tax equal to ten percent of the amount realized by the foreign shareholder. The 1986 Act clarifies that no withholding is required on certain liquidations and redemptions that are not taxed under the substantive FIRPTA rules.[73] Thus, no withholding will be required on a corporate liquidation or redemption when interests in the corporation are not U.S. real property interests by reason of Code §897(c)(1)(B) on the date of distribution. This section excludes from the definition of U.S. real property interests interests in a corporation that (1) is not holding U.S. real property interests at the time the corporate interest is disposed of, and (2) disposed of all U.S. real property interests held during the §897(c)(1)(A)(ii) test period in transactions in which the full amount of gain was recognized.[74]

6. *Taxable Distributions by Partnerships, Trustees and Executors*

Section 1810(f)(5) of the 1986 Act amends paragraph (4) of §1445(e) to clarify that a distribution to a foreign person of a U.S. real property interest by a domestic or foreign partnership, trustee or executor is subject to withholding if such distribution is taxable under *any* of the substantive FIRPTA rules, not just Code §897(g).

7. *Miscellaneous*

The 1986 Act[75] amends the penalty provisions (Code §6652(g)) that govern failure to provide FIRPTA information returns to conform with the revised information reporting rules of the 1984 Act which limited the circumstances under which the Secretary could require information reporting.

The Act[76] also clarifies that persons required to withhold tax under the FIRPTA withholding rules, like persons having substantive FIRPTA tax liability, are to pay the tax to and file the necessary returns with either the U.S. or the Virgin Islands, depending upon the location of the real property interest involved.[77]

VII. Outbound Transfers Under §367 [Act §1810(g)]

A. *Introduction*

Subchapter C of the Code (specifically §§332, 351, 354, 355, 356 and 361) provides for non-recognition of gain to a transferor of assets or stock in connection with certain exchanges involving the organization, reorganization or liquidation of a corporation. However, where such an exchange involves the transfer by a U.S. person to a foreign corporation (*i.e.*, a so-called "outbound" transfer), §367(a) of the Code may deny such non-recognition treatment by denying corporate status to the foreign transferee. Prior to amendments made by the Tax Reform Act of 1984, non-recognition treatment was generally denied under §367(a)(1) in respect of such outbound transfers unless the U.S. transferor timely requested and obtained a ruling from the Internal Revenue Service to the effect that the transfer did not have a principal tax avoidance purpose.

B. *Tax Reform Act of 1984*

In the Tax Reform Act of 1984, the tax avoidance purpose standard and the ruling requirement were eliminated. Instead, under the 1984 Act, gain generally must be recognized on a transfer of appreciated property to a foreign corporation pursuant to one of the "tax-free" exchanges described in §367(a). The principal exception to this general "automatic toll charge" rule is for transferred property that will be used by the transferee in the "active conduct of a trade or business outside the United States."[78]

The 1984 Act also added Code §367(e) pursuant to which a domestic corporation must recognize gain under §336 on a liquidating distribution of appreciated property to any foreign person (not just corporate transferees) under rules similar to those applicable to transfers to foreign corporations. Although the applicability of §355 (distribution of stock or securities of controlled corporations) also does not depend upon whether the distributee is a corporation, §367(e) did not include a provision requiring recognition of gain by a U.S. transferor with respect to distributions to foreign persons pursuant to Code §355.[79] Instead, such distributions were subject to §367 only if made to a foreign corporate shareholder under the general rule of §367(a).

C. *Technical Corrections*

The Tax Reform Act of 1986, §1810(g)(3)(B), amends §367(e) to provide that transfers of stock by domestic corporations to foreign persons pursuant to Code §355 will

give rise to recognition of gain under §367(e) to the extent provided in regulations. The 1986 Act thus provides the statutory basis for including §355 distributions of stock or securities to non-corporate foreign shareholders within the general rule of §367. The effective date of this change is for transfers or exchanges after 12/31/84, in taxable years ending after that date. *See* 1986 Act §1810(g)(4)(B) and 1984 Act §131(g).

Note: Amended §367(e) does not apply to the treatment of distributions described in §336 since, under the 1986 Act,[80] the general rule of §336 was changed to provide that gain or loss is recognized by a liquidating corporation on a distribution of property in complete liquidation as if such property were sold to the distributee at its fair market value.[81] Under the 1986 Act, §631(d)(1), Code §367(e) covers distributions of stock pursuant to §355 and, (effective generally for liquidating distributions after July 31, 1986, unless the corporation is completely liquidated before January 1, 1986—*see* 1986 Act §633(a)) distributions in liquidations under §332 (where the 80% distributee is a foreign corporation).

VIII. Amendments to FPHC Rules [Act §1810(h)]

A. Introduction

Section 551(a) of the Code requires a U.S. shareholder of a foreign personal holding company ("FPHC") to include in his gross income his proportionate share of the FPHC's "undistributed foreign personal holding company income." An FPHC is defined by reference to both a gross income requirement and a stock ownership requirement.[82] Under the gross income requirement, at least 50% of the gross income of the FPHC (60% initially) must be "foreign personal holding company income" (as defined in §553). Such income generally will encompass income from passive investments such as interest, dividends, rents and royalties. Under the stock ownership requirement of §552(a)(2)(as amended by the 1986 Act), more than 50% in the value of the outstanding stock of the corporation or more than 50% of the voting power of all classes of stock entitled to vote must be owned by five or fewer individuals who are citizens or residents of the U.S.

B. Tax Reform Act of 1984

1. Same Country Dividend and Interest Rule

Section 552(c) of the Code, added by §132(c)(2) of the Tax Reform Act of 1984 [83] excepts from the definition of both gross income and foreign personal holding company income any dividends and interest which are described in §954(c)(4)(A) of the controlled foreign corporation ("CFC") rules and which are received from a related person which is not a foreign personal holding company. Dividends or interest described in §954(c)(4)(A) include dividends and interest received from a related person created or organized under the laws of the same foreign country as the CFC, which had a substantial part of its assets used in its trade or business located in that same foreign country. The 1984 Act did not define the term "related person" for purposes of §552(c).

2. Stock Held Through a Foreign Entity

Prior to the Tax Reform Act of 1984, the "United States shareholders" required to include the undistributed foreign personal holding income of the FPHC in their gross incomes included only those individuals or entities which actually owned stock in the FPHC. Therefore, a U.S. person could avoid the requirement of inclusion of undistributed foreign personal holding company income in income by interposing a foreign partnership, foreign operating corporation (other than an FPHC) or a foreign estate or trust between the U.S. person and the FPHC. Section 132(b) of the Tax Reform Act of 1984 amended §551 of the Code by redesignating subsection (f) as subsection (g) and by adding a new subsection (f) to provide that stock of an FPHC owned by a foreign partnership, estate or trust or by a foreign corporation which is not a foreign personal holding company is considered to be owned proportionately by its partners, beneficiaries or shareholders.

C. Technical Corrections

1. Same Country Dividend and Interest Exception

The Tax Reform Act of 1986, §1810(h)(1), amends §552(c) to adopt, for purposes of that section, the definition of "related person" contained in §954(d)(3) of the Code (except that for purposes of §552, the term "foreign personal holding company" is substituted for the term "controlled foreign corporation"). This provision is effective for taxable years of foreign corporations beginning after March 15, 1984. *See* 1986 Act §1881 and 1984 Act §132(d)(2)(B).

Note: The 1986 TRA, §1221(e)(1) amended §954(d)(3), effective, pursuant to 1986 TRA §1221(g)(1), for taxable years of foreign corporations beginning after December 31, 1986. Therefore, presumably, the 1986 TRA version of §954(d)(3) is used for §552(c) purposes for taxable years beginning after December 31, 1986, and the the 1984 TRA version of §954(d)(3) is used for §552(c) purposes for taxable years beginning after March 15, 1984, but before January 1, 1987.

Under §954(d)(3), as amended by the 1986 TRA, §1221(e)(1), a person is a related person with respect to an FPHC if the person is (1) an individual who controls the FPHC or a corporation, partnership, trust or estate which controls or is controlled by the FPHC; or (2) a corporation, partnership, trust, or estate controlled by the same person or persons which control the FPHC. "Control" of a corporation means the direct, indirect and constructive ownership of stock possessing 50% or more of the total combined voting power of all classes of stock entitled to vote or 50% or more of the value of the stock. "Control" of a partnership, trust, or estate means the direct, indirect and constructive ownership of 50% or more (by value) of the beneficial interests in partnership, trust, or estate.

Under §954(d)(3), prior to amendment by the 1986 TRA, a person is a related person with respect to a FPHC if the person is (1) an individual, partnership, trust, or estate which controls the FPHC; (2) a corporation which controls or is controlled by the FPHC; or (3) a corporation which is controlled by the same person or persons which

[80] P.L. 99-514, §631(a).
[81] §336(a).
[82] §552(a)(1) and (2).
[83] P.L. 98-369.

control the FPHC. "Control" means the direct, indirect and constructive ownership of stock possessing more than 50% of the total combined voting power of all classes of voting stock.

2. Stock Held Through Foreign Entity

The Tax Reform Act of 1986 clarifies that under §551(f), the tracing rule applies to *all* foreign trusts and estates interposed between U.S. taxpayers and FPHCs.[84] This provision applies generally to taxable years of foreign corporations beginning after December 31, 1986. *See* 1986 TRA §1881 and 1984 TRA §132(d)(1).

IX. Amendments to Code §1248(i) [Act §1810(i)]

A. Introduction

Under §1248(a) of the Code, gain recognized upon the sale or exchange of stock in a controlled foreign corporation ("CFC") by a U.S. shareholder (a U.S. person who owns directly, indirectly or constructively at least ten percent of the total combined voting power of all voting stock) is included in gross income of such U.S. shareholder as a dividend to the extent of the earnings of the CFC accumulated in post-1962 years during the period the stock was held by the U.S. shareholder. The purpose of §1248 is to prevent U.S. taxpayers from accumulating earnings free of U.S. tax in a CFC and then disposing of the stock at capital gains rates for a price that reflects the accumulated earnings and profits (which would be taxable as ordinary income if repatriated as dividends).

B. Tax Reform Act of 1984

Section 133(a) of the Tax Reform Act of 1984 (P.L. 98-369) added a new subsection (i) to §1248 which was designed to eliminate a specific technique utilized by certain taxpayers to avoid §1248. The technique involved the acquisition of a widely-owned U.S. parent's stock by a CFC in exchange for its own shares and small amounts of cash. Section 1248(i) provides that, for purposes of §1248, where any shareholder of a U.S. corporation which is a ten percent or more corporate shareholder in a foreign corporation exchanges stock in a U.S. corporation for stock in the foreign corporation, the foreign corporation's stock will be treated as if it has been issued to the ten percent U.S. corporate shareholder and then distributed to the exchanging shareholder of such ten percent corporate shareholder in redemption of his stock. The term "ten percent corporate shareholder" means any domestic corporation which, as of the day before the exchange, satisfied the stock ownership requirements of §1248(a)(2).[85]

Thus, under §1248(i), when U.S. shareholders of a U.S. corporation exchange stock in the U.S. corporation for newly issued or Treasury stock of the foreign corporation in which the U.S. corporation is a ten percent or more owner, the transaction will be recast. For purposes of applying §1248, the foreign corporation will be viewed as having issued the stock to the U.S. corporation and the U.S. corporation will be treated as having distributed that stock to its U.S. shareholders in redemption of their stock. Under §1248, the U.S. corporation, therefore, would be required to recognize dividend income equal to the difference between the fair market value of the stock received by the shareholders of the U.S. corporation and the U.S. corporation's basis for its stock in the foreign corporation, to the extent of the foreign corporation's post-1962 accumulated earnings and profits.

Section 133(b) of the Tax Reform Act of 1984 also added a new subsection (e) to §959 and a new subsection (j) to §1248 which, taken together, provide that whenever a U.S. shareholder sells or exchanges stock in a CFC (or a U.S. corporate shareholder sells or exchanges the CFC stock in a §311, §336 or §337 transaction) and recognizes gain which is characterized as ordinary dividend income under §1248(a) (or §1248(f)), then any subsequent distribution of earnings and profits previously taxed as a §1248(a) or §1248(f) dividend to the selling or exchanging shareholder's successor in interest will be tax-free. Taxpayers were given an election to apply this provision retroactively to transactions occurring after October 9, 1975.[86]

C. Technical Corrections

Section 1810(i) of the Tax Reform Act of 1986 amends §133 of the Tax Reform Act of 1984 to provide that whenever, under Code §1248(i), an indirect transfer is recast, it may be recast either as a distribution, redemption or liquidation, whichever is appropriate.[87] This provision applies to exchanges after July 18, 1984, in taxable years ending after that date. *See* 1986 TRA §1881 and 1984 TRA §133(d)(1).

The 1986 Act also extends the period during which the election relating to previously taxed earnings can be made until one year after enactment of the Technical Corrections provisions.[88]

X. Stapled Stock Provisions of §269B Amended [Act §1810(j)]

A. Introduction

"Stapled stock" transactions have in the past provided a unique opportunity to decontrol certain foreign corporations where control of a corporation by U.S. persons may have a significant impact on the tax liability of the controlled corporation and its shareholders. In a "stapled stock" transaction, stock of a foreign subsidiary of a U.S. corporation is distributed pro rata to the shareholders of the U.S. parent and then paired or "stapled" to the stock of the parent by restricting the transfer of the stock of one corporation without the transfer of the stock of the other. In some cases, the stock certificates of the stapled entities are printed on both sides of a single document. If stock ownership of the domestic U.S. parent corporation is sufficiently widely-held, then the pro rata distribution of the stock of the foreign subsidiary to the shareholders of the U.S. parent will in most cases avoid the concentration of control in a few U.S. shareholders which is necessary for the corporation to be treated as a foreign personal holding company (FPHC) or controlled foreign corporation (CFC).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

B. Tax Reform Act of 1984

The Tax Reform Act of 1984 added a new §269B ("stapled entities") to the Code, pursuant to which, if a domestic and foreign corporation are stapled entities, the foreign corporation will be treated as a domestic corporation, subject to U.S. taxation on its worldwide income.[89] A "stapled entity" is *any* group (whether or not owned by U.S. persons) of two or more entities if more than 50% in value of the beneficial ownership in each consists of stapled interests (*i.e.*, an interest which is subject to transfer in connection with the interest to which it is stapled).

Section 269B(b) directs the Secretary to prescribe regulations necessary to prevent avoidance or evasion of Federal income tax through the use of stapled entities, including regulations providing the extent to which one of such entities is to be treated as owning the other entity (to the extent of the stapled interests).[90] Under the 1984 Act, however, the regulations to be prescribed need not specify how the tax to be imposed on the "stapled" foreign entity is to be collected.

C. Technical Corrections

Section 1810(j) of the 1986 Act amends subsection (b) of §269B to direct the Secretary to prescribe regulations providing that any tax imposed on the stapled foreign corporation, if not paid by such corporation, may be collected from the domestic corporation to which it stapled or from the shareholders of such foreign corporation.

The Tax Reform Act of 1986 also limits the stapled entity rules, so that a foreign corporation will not be treated as a domestic corporation, where it is established to the satisfaction of the Secretary of the Treasury that both the stapled foreign corporation and the U.S. corporation to which it is stapled are foreign-owned. §269B(e)(1). For this purpose, a corporation is considered to be foreign-owned if less than 50% of the total combined voting power of all classes of stock entitled to vote and the total value of the stock of a corporation is held directly or indirectly by U.S. persons.[91] This amendment is consistent with the purpose of §269B, which is to prevent avoidance of tax rules applicable to U.S.-controlled corporations,[92] not foreign-controlled corporations.

Note: A corporation may be a controlled foreign corporation within the meaning of §957(a) of the Code only if *United States shareholders* (*i.e.*, those U.S. persons who own ten percent or more of the total combined voting power of the voting stock of the foreign corporation) [93] own *more than 50%* of the voting power or value of the stock of the foreign corporation. Under §269B(e) of the Code as added by the 1986 Act, however, a foreign corporation may be subject to the rules on stapled stock if U.S. persons (who may own less than ten percent of the voting power of the foreign corporation) own *50% or more* of the voting power or value of the foreign corporation or the domestic corporation to which it is stapled.[94]

XI. Foreign Base Company Services Income Provisions Clarified [Act §1810(k)]

A. Introduction

Under §957(a) of the Code, as amended by the Tax Reform Act of 1986, any foreign corporation of which more than 50% of the total combined voting power of all classes of stock entitled to vote or of which more than 50% of the value is owned, actually or constructively, by U.S. shareholders (generally those shareholders with a ten percent or greater interest in the voting stock of the corporation) on any day during the taxable year of such foreign corporation will be a "controlled foreign corporation" ("CFC"). U.S. shareholders of a CFC are required to include in gross income their pro rata share of certain types of income of the CFC including the CFC's "Subpart F" income. The term "Subpart F income" includes, among other things, the "foreign base company services income" of a CFC.[95]

Under §954(e) of the Code the term "foreign base company services income" means income (whether in the form of compensation, commissions, fees or otherwise) derived in connection with the performance of technical, managerial, engineering, architectural, scientific, skilled, industrial, commercial or like services which (1) are performed for or on behalf of any related person within the meaning of §954(d)(3) (essentially a 50% control test),[96] and (2) are performed outside the country under the laws of which the CFC is created or organized.[97] The first of these requirements may be referred to as the "related person" test, and the second as the "foreign performance" test.

Although the performance of insurance services for a 50% related person would satisfy the first, or related person, test, the place of performance of services, under Treasury regulations interpreting the second, or foreign performance, test, is generally where the person performing the services is physically located when performing his duties.[98] Since insurance personnel employed by a CFC would customarily be physically located in the country of organization of the CFC, the practical effect of this rule, prior to the Tax Reform Act of 1984, was that the foreign performance condition of §954(e)(2) would seldom be satisfied for insurance services, and thus the income derived from the performance of such services for a related party was largely immunized from current taxation.

B. Tax Reform Act of 1984

Section 137 of the Tax Reform Act of 1984 amended §954(e) of the Code by adding, at the end thereof, a sentence stating that, for purposes of the foreign performance test of §954(e)(2), services performed with respect to a policy of insurance with respect to which the primary insured is a "related person" will be treated as having been

[95] §954(a)(3).
[96] For taxable years of foreign corporations beginning on or before December 31, 1986 "control" of a corporation means ownership of more than 50% of the voting power of the corporation. For taxable years of foreign corporations beginning after December 31, 1986, "control" means ownership of 50% or more of the voting power or value of the foreign corporation. P.L. 99-514, §1221(e) and (g).
[97] §954(e)(1) and (2).
[98] Regs. §1.954-4(c).

performed in the country within which the risk of loss against which the related person is insured is located. Thus, the effect of the physical location rule of the regulations is nullified in the case of insurance services. The term "related person," as it applies to the 1984 amendment, has the same meaning as it has in §864(d), where a ten percent or more ownership interest causes two parties to be related.

The purpose of expanding the scope of the term "related person" was "to impose tax on an insurance company owned (directly or indirectly) by a relatively small number of U.S. shareholders that use it in whole or in part to insure their foreign risks or foreign risks of parties related to them." [99] This purpose was not achieved, however, because the narrower meaning of "related person" given in Code §954(d)(3) (which uses a 50% test) was retained in the 1984 Act for purposes of the related party test of §954(e)(1). Since services must satisfy both the related party and foreign performance tests in order for the income therefrom to be "foreign base company services income," income from services performed in insuring the foreign risks of a ten percent affiliate of a CFC or its parent, where those risks are located outside the country of organization of the CFC, are not technically "foreign base company services income." Although such services satisfy the foreign performance test of §954(e), since they would be deemed to be performed outside the CFC's country of organization under the sentence added by the 1984 Act to Code §954(e), they would not satisfy the related party test.

C. Technical Corrections

The Tax Reform Act of 1986 amends §954(e) of the Code to provide that, in applying the rule that treats income from services performed with respect to insurance or reinsurance for or on behalf of related persons as "foreign base company services income," the primary insured will be treated as a related person if it is related within the meaning of §864(d)(4) of the Code — the rule that reaches ten percent U.S. shareholders and persons related to them.[100] This rule applies to taxable years of CFCs beginning after July 18, 1984. *See* 1986 Act §1881 and 1984 Act §137(b).

XII. Amendments to the Definition of a Resident Alien [Act §1810(l)]

A. Introduction

The United States applies a special tax regime to non-resident alien individuals. For example, a non-resident alien individual not engaged in a U.S. trade or business is subject to tax at a flat 30% rate, collected by withholding at the source [101] on the gross amounts of U.S. source fixed or determinable, annual or periodical (FDAP) income,[102] and certain other types of income.[103] A non-resident alien individual engaged in a U.S. trade or business, who does not maintain an office in the United States, is subject to U.S. tax at graduated rates on the net amounts of all U.S. source income [104] except the amounts described in §871(a), which are not effectively connected with the alien's U.S. trade or business.[105] If a non-resident alien individual, who is engaged in a U.S. trade or business, maintains an office in the United States, specific categories of such individual's foreign source income are also treated as income effectively connected with the U.S. trade or business and, thus, fall within the U.S. tax net.[106]

Resident alien individuals on the other hand, are taxed by the United States at graduated rates applicable to U.S. citizens on net income derived from U.S. as well as foreign sources. Due to the differences in the tax regimes applicable to resident and non-resident alien individuals, the amount of U.S. tax liability varies under the two regimes depending upon the income mix (both as to source and type of income) of the individual. Thus, under one set of facts, the tax regime applicable to non-resident alien individuals may yield a lower U.S. tax while, under a different set of facts, the tax regime applicable to resident alien individuals may yield a lower U.S. tax. Consequently, an alien may desire to be classified as "resident" or a "non-resident" alien of the United States depending upon which regime yields a lower U.S. tax. However, while the concept of "residence" occupies a highly significant place in the U.S. tax scheme applicable to aliens, the term "residence" was not defined anywhere in the Code prior to the Tax Reform Act of 1984.

B. Tax Reform Act of 1984

Section 138 of the Tax Reform Act of 1984 (P.L. 98-369), inserted Code §7701(b) to provide, for the first time, a statutory definition of the term "resident." Under §7701(b), as added by the 1984 TRA, an alien individual is treated as a resident of the United States for a calendar year if such individual satisfies either of the following two tests:

1. The alien is a lawful permanent resident of the United States under the immigration laws at any time during the calendar year (*i.e.*, the green card test);[107] or

2. The alien satisfies the "substantial presence" test.[108]

Under the substantial presence test, an alien individual who was present in the U.S. on at least 31 days of the calendar year generally will be treated as a resident of the United States for a calendar year in either of the two following situations:[109]

> (i) The alien is physically present in the United States for 183 days or more during the calendar year; or
>
> (ii) The sum of the following equals or exceeds 183 days: (A) the number of days the alien is physically present in the United States during the current calendar year, plus (B) one-third of the number of days the alien is physically present in the United States during the first preceding calendar year, plus (C) one-sixth of the number of days the alien is physically present in the

[99] H.R. Rep. No. 861, 98th Cong., 2d Sess. 965-966 (1984).
[100] P.L. 99-841, §1810(k). Senate Report at 954.
[101] §§871(a)(1) and 1441(a).
[102] §871(a)(1)(A).
[103] §§871(a)(1)(B), (C) and (D).
[104] §§871(b), 864(c)(1), (2) and (3).
[105] Such income remains subject to the withholding tax at a rate of 30% (or the lower treaty rate) unless exempt under the Code or applicable treaty.
[106] §864(c)(4).
[107] §7701(b)(1)(A)(i).
[108] §7701(b)(1)(A)(ii).
[109] §7701(b)(3)(A).

United States during the second preceding calendar year.

For purposes of the "substantial presence" test, an alien individual's presence in the United States in the following capacities is disregarded:

(i) As a foreign government-related individual (A-visa and G-visa holders);[110]

(ii) As a teacher or trainee (but only up to a maximum of two years);[111]

(iii) As a student (but only up to a maximum of five years);[112]

(iv) By reason of a medical condition which arose while the alien was present in the U.S.;[113] and

(v) As a commuter from Mexico or Canada.[114]

Finally, §7701(b) does not override U.S. tax treaties. Consequently, if an alien individual is treated as a resident of a foreign country under the tie-breaking rules of a U.S. tax treaty, such individual is a non-resident alien of the United States under §7701(b), but only for purposes of applying the treaty provisions.

C. Technical Corrections

Section 1810(l) of the Tax Reform Act of 1986 amends §138 of the Tax Reform Act of 1984 (§7701(b) of the Code) to increase the exemption period for teachers and trainees from two years to a maximum of four calendar years. Under revised §7701(b)(5)(E)(i), days spent working in the United States as a teacher or trainee during four calendar years in any seven calendar year period do not count as days of U.S. presence for purposes of the substantial presence test if all of the individual's compensation is described in Code §872(b)(3) (relating to compensation of participants in certain exchange or training programs). *See* Senate Report at 955. This provision applies generally to taxable years beginning after 1984. *See* 1986 TRA §1881 and 1984 TRA §138(b)(1)-(3).

The Act also permits certain individuals to elect to be treated as a U.S. resident in a calendar year ("the election year") in which the individual is not otherwise treated as a U.S. resident, if the individual meets the "substantial presence" test for the following calendar year. Revised Code §7701(b)(4). In order to qualify for the election the alien individual (1) must not be a resident of the United States in the year preceding the election year; (2) must be present in the United States for at least 31 consecutive days in the election year; and (3) must be present in the United States during the period beginning with the first day of the 31-day presence and ending with the last day of the election year for a number of days equal to or exceeding 75% of the number of days in such period. In applying this test, an individual will be treated as present in the United States for up to five days during which he or she actually was absent from the country.[115] Under §7701(b)(4)(C), an alien individual making the election will be treated as a U.S. resident only for that portion of the election year which begins on the first day of the earliest presence period for which the individual can satisfy both the 31-day and 75% tests. For purposes of both such tests, an individual will not be treated as present in the United States in any day during which such individual is (i) a foreign government-related individual; (ii) a teacher or trainee; (iii) a student; or (iv) a professional athlete who is temporarily in the United States to compete in certain charitable sports events.[116]

The election to be treated as a U.S. resident during a calendar year must be made on the qualifying alien individual's tax return for the election year, but may not be made before the individual has met the "substantial presence" test for the calendar year following the election year. Once an election is made it remains in effect for the election year unless revoked with the consent of the IRS.[117]

The Senate Report contains the following example of the operation of the election provision:

> "An alien individual vacations in the United States from January 1 through January 31, 1986. He returns to the United States on October 15, 1986, and begins working on a permanent basis for a U.S. company on that day. For the remainder of 1986, he is absent from the country for ten days only, from December 20 through December 29. He satisfies the substantial presence test in 1987. He was not a U.S. resident in 1985.
>
> "The individual may elect to be treated as a U.S. resident for 1986 under the new provision. His residency starting date is October 15, 1986, because that is the first day of the earliest period in 1986 for which both the 31-day and 75% tests are satisfied. (The 75% test is not satisfied with respect to the presence period commencing on January 1, 1986)." [118]

This provision applies generally to taxable years beginning after 1986. *See* 1986 TRA §1881 and 1984 TRA §138(b)(1)-(3).

XIII. Technical Amendments to the FSC Provisions [Act §1876]

A. Introduction

The 1986 TRA contains numerous technical amendments to both the Foreign Sales Corporation (FSC) and interest charge Domestic International Sales Corporation (DISC) provisions enacted by the Tax Reform Act of 1984.[119] The following discussion highlights some of the more important changes and clarifications which are included in the 1986 Act. Since the conference agreement follows the Senate version of H.R. 3838,[120] the legislative history is derived from the Senate Report. These technical corrections are generally effective as if included in the provision of the 1984 Act to which the amendment relates.[121]

B. Foreign Sales Corporations

1. Clarification of Corporate Preference Reductions

The 1986 Act clarifies that, in the case of a corporate shareholder, the cutback of corporate preferences under Code §291 (when calculating the exempt portion of the foreign trade income of an FSC) applies at the FSC level instead of the shareholder level.[122] This clarification is intended to reflect Congress' original intention [123] that the reduction occur at the FSC level in order to reduce the portion of the FSC's foreign trade income which is exempt from tax at the FSC level. Moreover, in cases in which all of the stock in an FSC is not held by one or more C corporations throughout the taxable year, the Service is granted regulatory authority to require proper adjustments in the application of the FSC level cutback to take into account stock held by persons other than C corporations.[124] Thus, where ownership of the FSC is composed of both regular corporations and other persons, Treasury may issue regulations to adjust the portion of exempt foreign trade income between the various rates.

2. Dividends Received Deduction for Certain Distributions Out of Earnings and Profits

A United States corporation, under pre-1986 TRA law, receives a 100 percent dividends-received deduction with respect to those dividends which are distributed out of earnings and profits attributable to the foreign trade income of the distributing FSC.[125] As amended by the 1986 Act, §245 provides for an 85% dividends-received deduction for distributions out of earnings and profits which are attributable to "qualified interest and carrying charges" received or accrued by the distributing FSC.[126] For this purpose, the term "qualified interest and carrying charges" is defined as "any interest or carrying charges (as defined in §927(d)(1)) derived from a transaction which results in foreign trade income." [127] However, the Senate Report indicates that passive income which is not directly related to foreign trade income is not eligible for the dividends-received deduction treatment.[128]

The 100% and 85% dividends-received deductions described above are in lieu of the deductions which are allowable under Code §245(a) and (b). §245(c)(1), last sentence. This coordination of deductions is accomplished by excluding gross income giving rise to earnings and profits with respect to which a dividends-received deduction is allowed under §245(c) when making the dividends-received deduction under §§245(a) and (b). §245(c)(3). For example, gross income from the qualified interest and carrying charges of an FSC will not be taken into account in determining whether a dividend attributable to other FSC income allows a dividends-received deduction because half or more of the FSC's gross income is effectively connected with a United States trade or business.[129] Finally, no dividends-received deduction under §245(c) is permitted with respect to the FSC's non-exempt income. §245(c)(2). Under Code §923(a)(2), non-exempt income is that amount of foreign trade income which does not qualify for the 32% exemption where administrative pricing rules do not apply.

The distributions from an FSC (or former FSC) out of earnings and profits which are attributable to qualified interest and carrying charges are also made subject to a separate foreign tax credit limitation by the 1986 Act.[130] Thus, the imposition of a full United States tax at two levels on that type of income is eliminated, in response to practitioners' concerns over the treatment of FSC carrying charges. In addition, the provision is designed to prevent such income from absorbing foreign tax credits from other income and to prevent other income from absorbing foreign tax credits, if any are allowable, on such income.[131]

3. Exchange of Information Requirements

The special rules contained in Code §927(e) which relate to the exchange of information requirements for a host country of a FSC are amended to create a requirement that there currently be a bilateral (or multilateral) agreement or income tax treaty between the host country and the United States.[132] Thus, if the foreign nation in which the FSC is incorporated ceased to qualify as a host country for FSCs, the corporation could not continue to qualify for FSC status. However, the Senate Report indicates that, under Treasury regulations, such corporations may continue to be eligible for FSC benefits for a six month grace period following the determination that the host country has ceased to qualify.[133]

Section 927(e) is also amended to clarify that, regardless of whether a corporation is eligible to be a beneficiary of the Caribbean Basin Initiative (CBI), a country may qualify as a host country by entering into an agreement on the exchange of information which is similar to that qualifying under the CBI.[134] In order to be acceptable for FSC purposes, an exchange of information agreement must require disclosure of confidential information, since §927(e)(3)(A) specifies that the national security exception under §274(h)(6)(C)(ii) (relating to the Caribbean Basin Initiative) does not apply for purposes of the FSC provisions.[135]

Another amendment to Code §927(e) revises the statute by splitting §927(e)(3)(B) into two requirements, numbered (i) and (ii). The first requirement clarifies that an income tax treaty will allow a country to qualify as a host country for an FSC only if the Secretary of the Treasury certifies (and has not revoked such certification) that the treaty contains an exchange of information program which is satisfactory in practice for purposes of the Internal

Revenue Code.[136] Thus, in practice, the program should provide to the United States such information as may be relevant to the determination of a United States tax liability or whether a tax-related criminal offense has been committed.[137] The second requirement clarifies that the income tax treaty must contain an exchange of information program to which that particular FSC is subject.[138] For example, a corporation incorporated in a treaty partner country, but not subject to the treaty's exchange of information program because it is not resident in the treaty partner, does not qualify for FSC status.[139]

Comment: Some countries require that, in addition to performing services, a corporation must be managed and controlled in that country in order to qualify as a resident. Thus, this provision will effectively preclude multinationals from using a "passive FSC" in a treaty country by incorporating it there because they have existing affiliates which could perform services on behalf of the FSC.

4. Maintenance of Principal Bank Accounts

Under the 1986 Act, the principal bank account of the FSC must be maintained at all times during the taxable year either in a foreign country which meets the information requirements of §927(e)(3) or in a possession of the United States.[140] This change is effective for periods after March 28, 1985.[141]

5. Taxation by United States Possessions

The two year "tax holiday" special rule under Code §927(e)(5), which precludes United States possessions from taxing FSCs on foreign trade income, is modified by the 1986 Act to permit taxation of foreign trade income generated from export sales to customers in the possessions. The moratorium on taxation, which ends on January 1, 1987, is lifted for all periods (including prior to that date) and permits the possessions to tax any income attributable to the sale of property or the performance of services for ultimate use, consumption, or disposition within the possession.[142] For example, the U. S. Virgin Islands is not prohibited from imposing a tax on the income derived from the sale of goods by a United States company (through its FSC located in the U.S.V.I.) to customers in the U.S. Virgin Islands.[143] To more clearly reflect Congressional intent in the 1984 Act, the 1986 Act clarifies that a U.S. possession may exempt from tax any foreign trade income or passive income of a FSC.[144]

Finally, the 1986 Act clarifies that no provision of law may be construed as requiring any income tax imposed by the United States on an FSC to be covered over or otherwise transferred to any United States possession.[145]

C. Changes in DISC Treatment

1. Corporate Preference Reduction

As in the case of FSCs, the corporate preference reduction in the case of certain distributions to corporate shareholders is clarified. *See* Senate Report at 1053-1054. Also, §995(b) (relating to deemed distributions from a DISC) and §996(a)(2) (relating to "qualifying" distributions) are amended to provide in effect that, in the case of a shareholder that is a C corporation, sixteen-seventeenths (16/17) of a DISC distribution to meet the qualified export receipts requirement is treated as coming out of accumulated DISC income, while one-seventeenth (1/17) is treated as coming out of previously taxed income.[146] Moreover, the amount by which the international boycott factor is multiplied is changed to sixteen-seventeenths (16/17) of the excess referred to in §995(b)(1)(F)(i).[147] These changes are intended to reflect the post-1984 Act treatment of DISC income attributable to a shareholder that is a C corporation, which deems only one-seventeenth (1/17) to be distributed and taxed currently.[148]

2. Interest Charge on Former DISC

The 1986 Act clarifies Code §995 to make it clear that an interest charge on deferred income (attributable to $10 million or less of qualified export receipts) is to be imposed on the deferred income of a former DISC in the same manner as it is imposed on a DISC.[149] Thus, taxpayers are precluded from operating an interest charge DISC for several years and then revoking the DISC election in order to avoid paying the interest charge on the accumulated DISC income of the former DISC.

3. Changes in Treatment of Old DISCs

Treatment of accumulated DISC income under the 1984 Act resulted generally in tax-exemption for such income derived before January 1, 1985, by treating actual distributions made after December 31, 1984 to be previously taxed income which was deemed distributed. The unresolved issue of how to treat distributions in liquidation is clarified in the 1986 Act, which amends §805 of the 1984 Act to include distributions in liquidation in the term "actual distribution." [150]

The other issue relating to accumulated DISC income left unresolved by the 1984 Act is the treatment of a liquidating distribution for purposes of computing the earnings and profits of any corporate shareholder of a DISC. The 1986 Act resolves this question by amending the 1984 Act to provide that the earnings and profits of a corporation receiving such a distribution must be increased by the amount of that distribution (since it is not included in income because it is treated as previously taxed income).[151]

[149] §995(f)(7), added by P.L. 99-514, §1876(g). The new subsection simply provides that the term "DISC" includes a former DISC. *See also* Senate Report at 1058.
[150] P.L. 98-369, §805(b)(2)(A), as amended by P.L. 99-514, §1876(h). *See also* Senate Report at 1058.
[151] P.L. 98-369, §805(b)(2)(A), as amended by P.L. 99-514, §1876(h). *See also* Senate Report at 1058.

4. Effective Date of Tax Year Conformity Requirement

The 1984 Tax Reform Act created a conformity rule which required that the taxable year of any DISC must be the taxable year of its owner (if there is more than one shareholder, the taxable year of the plurality of voting power controls.) The 1986 Act amends §805 to make the conformity rule apply to taxable years beginning after December 31, 1984.[152] This change is intended to apply to interest-charge DISCs, whether or not newly formed.[153]

XIV. Estimated Tax for Nonresident Aliens [Act §1841]

A. Introduction

Section 6654 of the Code imposes a penalty on individuals who do not pay their quarterly estimated income tax payments by the due dates. The penalty is basically a non-deductible interest charge based on the rate for underpayment of income tax in §6621. Prior to the enactment of the Tax Reform Act of 1984, there were four exceptions to the general underpayment penalty. Under these exceptions, no penalty was imposed on a taxpayer if total tax payments for the year (including withholding and estimated tax payments) equaled or exceeded an installment based on: (1) the preceding year's tax liability (if a return showing a liability for tax was filed for the preceding year); (2) 80% of the taxes which would be due if the income already received during the current year were placed on an annual basis; (3) 90% of the tax which would be due on the income actually received from the beginning of the year to the computation date; or (4) the tax computed by using the facts shown on the prior year's return under the current year's tax rates and exemptions.[154] While the first installment of estimated tax generally was due on April 15, certain non-resident alien individuals were not required to make their first payment until June.[155]

B. Tax Reform Act of 1984

The Tax Reform Act of 1984 consolidated a number of existing statutory provisions relating to penalties for underpayment of estimated tax as well as making certain basic changes. For example, two of the penalty exceptions noted above, those which considered 90% of the actual tax due by the date of the installment and the tax based on the prior year's income using the current year's rates and exemptions, were repealed. In addition, estimated tax payments were required for the alternative minimum tax. *See* §6654.

In making the foregoing changes, the 1984 Act inadvertently repealed the rule, contained in §6073 of the Code, which permitted non-resident alien individuals to make estimated tax payments in three rather than four installments, with the first such installment being due in June, rather than on April 15.

C. Technical Corrections

Section 1841 of the Tax Reform Act of 1986 amends §6654 of the Code by adding subsection (j) to restore the rule pursuant to which certain non-resident aliens will continue to be required to make estimated tax payments in three rather than four installments. One-half of the estimated tax required to be paid by the non-resident alien will be due on June 15, with the remaining two payments due on September 15 and January 15 of the following taxable year. This provision applies generally to taxable years beginning after 1986. *See* 1986 TRA §1881 and 1984 TRA §414(a).

Chapter 73

MISCELLANEOUS AMENDMENTS PERTAINING TO EXCISE TAXES

John F. Lefevere, Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction — Pre-1986 TRA Law

A. Gasoline and Gasohol Tax

1. Manufacturer's Excise Tax on Gasoline

a. Imposition of Tax

A manufacturer's excise tax on gasoline is imposed at the rate of 9 cents per gallon on the sale of gasoline sold by a producer or importer,[1] based upon the number of gallons invoiced to the purchaser. For this purpose, the term "producer" is defined to include a refiner, compounder, blender, dealer regularly selling exclusively to gasoline producers, and any person who regularly sells gasoline to aircraft owners, operators or lessees.[2] The mere use of the gasoline by the producer or importer is considered to be a sale for purposes of applying the tax.[3] Prior to incurring any liability for the excise tax, any person who will be subject to it must register with the Service.[4] The gasoline tax is scheduled to expire on and after October 1, 1988.[5]

Section 4221 of the Code provides that a manufacturer's sale on which tax would otherwise be imposed is exempted from such tax if the sale (or first retail sale) is for further manufacture, for export, for use to supply aircraft or vessels, to a state or local government (for its exclusive use), or to a nonprofit education organization (for its exclusive use).[6]

b. Exemptions

Under Code §6427(e), taxicabs which are rated at above-average fuel economy and whose drivers are not precluded from offering ride-sharing were entitled to a 4 cents per gallon exemption from the gasoline excise tax. This exemption was available through either a refund or credit. Its expiration date was extended by the Tax Reform Act of 1984 to October 1, 1985.[7]

2. Manufacturer's Excise Tax on Gasohol

"Gasohol" is any mixture of gasoline if at least 10% of the mixture is alcohol.[8] The term "alcohol" is defined to include methanol and ethanol, but to exclude alcohol produced from petroleum, natural gas, or coal.[9] A manufacturer's excise tax of 3⅓ cents per gallon is imposed on the sale of gasoline used in the production of gasohol and 3 cents per gallon on the sale of gasohol itself. This tax is effective on January 1, 1985, as a result of amendment of Code §4081 by the Tax Reform Act of 1984.[10] A gasohol producer is any person who regularly buys gasoline and alcohol in bulk quantities in the ordinary course of its trade or business for blending for resale or for use in its trade or business.[11] Any producer who has purchased gasoline for blending purposes on which the 9 cents gasoline tax (described above) has already been paid is entitled to an income tax credit of 4 5/9 cents per gallon under §6427.[12] However, if the claim for overpayment is for tax of $200 or more in any of the first three quarters of the taxpayer's taxable year (or is a claim by a governmental unit or tax-exempt organization), then a claim for refund may be made instead.[13] However, no interest is payable on the refund claim. *See* §6427(f)(1).

If the purchaser of gasohol separates the gasoline out, it is treated as a producer and taxed at 5⅔ cents per gallon on any gasoline no longer in its possession.[14]

B. Diesel Fuel Tax

1. Imposition of Tax

Under Code §4041, any liquid (other than gasoline or gasohol) which is sold for use or actually used in a diesel-powered highway vehicle is taxed at a 15 cents per gallon rate.[15] The 1984 Tax Reform Act increased the tax from 9 cents per gallon to 15 cents per gallon.[16] This retail excise tax is collected from the retailer who sold the fuel to the owner, lessee or operator of a diesel-powered highway vehicle. *See* Regs. §48.4041-1(a). However, Code §4041 does not define the term "retailer," although the Temporary Regulations do define it as "any person who sells diesel

fuel for use as a fuel in a diesel-powered highway vehicle." [17]

2. Exemption From Tax

Taxicabs meeting certain fuel economy and ride sharing requirements discussed in A, 1, b, *supra*, for purposes of receiving a partial exemption from the gasoline tax, also qualify under §6427(e)(1)(B) for a 4 cents per gallon exemption from the diesel fuel and special motor fuel [18] excise taxes. These exemptions are also available as refunds or credits and expired October 1, 1985.[19]

Intercity, local and school buses using diesel fuel also receive an exemption, in the form of a refund, pursuant to §6427(b). Although the 1984 Act increased the tax rate to 15 cents per gallon under §4041(a), the refund amount was limited to 12 cents per gallon by §6427(b), except for certain qualified subsidized intracity buses which receive the full 15 cents.[20] A qualified subsidized intracity bus is one which seats at least 20 passengers, is under contract to the state or local government (or where such government pays more than a nominal subsidy) and offers regular scheduled routes to the general public.[21] Thus, with the exception of such qualified local buses, all intercity, local and school buses began paying a 3 cent per gallon diesel fuel tax effective August 1, 1984, as a result of the 1984 Act.[22]

3. Light Weight Diesel Vehicle Credit

In order to afford some relief to purchasers of diesel-powered vehicles weighing 10,000 pounds or less who would otherwise have been subject to the full 15 cents per gallon diesel fuel tax, the drafters of the 1984 Act created a one-time income tax credit.[23] The amount of the credit depends upon the diesel fuel differential amount set forth in Code §6427 and is available to the original purchasers of such vehicles who purchased after January 1, 1985 and before January 1, 1988 (or held such a vehicle as of January 1, 1985, if purchased before that date).[24] Unless the person claiming the credit is eligible to file a claim for refund under §6427(j), the the credit must be claimed as an income tax credit.[25]

C. Retail Excise Tax On Piggyback Trailers or Semitrailers

Under Code §4051, a 12% retail excise tax is imposed on the first retail sale of certain automobile truck chassis, truck bodies, trailers and semitrailers. However, the chassis and bodies of such trailers and semitrailers are exempt from the tax if they are designed for use as both highway vehicles and railroad cars, but not if they are so-called "piggyback trailers or semitrailers." [26] The Tax Reform Act of 1984 created a special one-year reduction from 12% to 6% covering the first retail sale of a piggyback trailer or semitrailer chassis and bodies (and parts and accessories) sold between and including July 18, 1984 and July 17, 1985.[27] However, the 1984 Act also provided that if the trailer or semitrailer was actually used or resold for a non-qualified use, such use or resale is treated as an original retail sale to which an additional 6% excise tax is added. Thus, such a use or resale is effectively taxed at the full 12% rate.[28]

II. Overview of 1986 TRA Changes

The Tax Reform Act of 1986 imposes the gasoline tax at the earlier of the removal of gasoline, blend stocks or additives from the refinery or upon its first sale. A floor stocks tax is imposed on gasoline which is held by a dealer for sale on January 1, 1988 (and which has not previously been taxed by the gasoline tax). Taxes imposed on sales for certain exempt purposes are to be refunded without interest. Moreover, the partial exemption from the gasoline tax for taxicabs is extended until September 30, 1988.

The timing of the taxation of gasohol is made consistent with the taxation of gasoline by imposing the gasohol tax at the earlier of removal or sale. A special rule is created for a gasohol credit refund claim which expedites the refund process and forces the Service to pay interest if not refunded promptly.

An alternate method of collecting the diesel fuel excise tax is created by allowing a qualified retailer (with the consent of the wholesaler) to have the tax collected from the wholesaler. Qualification for the full diesel fuel credits for school buses is permitted and the one-time credit for diesel-powered highway vehicle owners and holders is clarified by adding it to the list of refundable §34 fuel credits. There is also a cut-off point established beyond which the recapture of the retail excise tax will not be imposed on the sale or resale of a piggyback trailer or semitrailer for a non-qualified use.

Miscellaneous changes include the clarification of the term "newly discovered oil" for windfall profit tax purposes, relaxed rules for the drawback of non-beverage distilled spirits imports, and the extension of the retail fuel and air transportation tax exemption for helicopters used in the development or removal of hard minerals, oil and gas.

The 1986 Act also makes technical amendments to the Tax Reform Act of 1984 with respect to the definition of "passenger automobile" in connection with both the §280F restrictions on recovery deductions and the imposition of the gas guzzler tax. The gas guzzler tax is also amended to exempt small manufacturers which lengthen existing automobiles. The provisions relating to listed property are also modified to account for the leasing of such property (including computers) and to exclude from the listed property definition any property if substantially all of its use is in the trade or business of providing for hire to unrelated persons the transportation of persons or property.

III. Detailed Analysis

A. *Gasoline Excise Tax Revised*

1. *Imposition of Tax*

The 1986 Act imposes the 9 cents per gallon gasoline tax when gasoline is removed from the refinery, manufacturing plant (or from the custody of customs), or upon its sale, if earlier.[29] This provision applies to gasoline removed after December 31, 1987.[30] The definition of "removal" added to Code §4082 states that if a refiner, importer, terminal operator, blender, or compounder uses gasoline, refined, imported, blended, or compounded by him, then such use is considered to be removal.[31] However, use in the production of gasoline or special fuels referred to in Code §4041 is not considered "removal" under the statute.[32] A statutory exception to the definition of "removal" is also made where there is a bulk transfer from the refiner or importer to the terminal operator of a registered terminal.[33] However, the terminal operator is liable for collection of the tax upon the subsequent removal of the gasoline, gasoline blend stocks, or additives from the terminal.[34]

For purposes of this rule, the term "gasoline" includes, to the extent that the Service prescribes by regulations, both gasoline blend stocks and products commonly used as additives in gasoline.[35]

The impetus for the earlier imposition of the gasoline excise tax came in part from a July 15, 1986 hearing of the Oversight Subcommittee of the House Ways and Means Committee into the scope of evasion from the tax. Deputy Assistant Treasury Secretary for Tax Policy O. Donaldson Chapoton remarked at that time that the primary problem with the gasoline excise tax system is the deferral of collection from the point of initial sale to a later date when a sale is made to the retailer or even to the ultimate consumer.[36] Although the exact magnitude of the revenue loss is unclear, it became apparent at the hearings that the tax could easily be avoided through the implementation of "daisy chain" corporations which passed title from entity to entity (often by computer) until a sale was made to a retailer. The retailer's receipt would be marked "all taxes paid," and when the government would ultimately discover that the taxes were unpaid, it would be unable to collect from the fraudulent entities.[37] Chapoton's testimony indicated that imposing the tax at the point which it is imposed by the new law would shorten the audit trail by reducing the number of audited taxpayers to 200 or 300 from 8,000.[38]

The pre-TRA requirement of Code §410 that everyone subject to the tax under §4081 register with the Service is retained,[39] and the Service is given the additional power to require the registrant to give a bond in such sum as it may require.[40] Moreover, the Service is permitted to register industrial users of gasoline blend stocks or additives as terminal operators in order to allow them to purchase such products tax-free.[41]

Code §6427 is amended to provide that if any blend stock or additive is not used by any person to produce gasoline (and such person so establishes that the ultimate use is not to produce gasoline), the Service must pay a refund, without interest, equal to the aggregate amount of tax imposed on that person with respect to the blend stock or additive.[42] It is not clear, however, in what situations blend stocks or additives would not be used to produce gasoline.

Revised §4081 also imposes a 9 cents per gallon tax on gasoline which has been removed or sold by the blender (other than registered gasohol blenders who blend at the terminal) [43] or compounder of the gasoline.[44] However, if the tax has previously been imposed, the blender or compounder is entitled to a credit in the amount of the tax paid, to the extent that the amount can be established.[45] The credit is only available to the extent that the blended gasoline (*i.e.*, gasoline, blend stocks or additives) is not used as a fuel and the refund is predicated upon the purchaser establishing that the ultimate use is not as a taxable fuel.[46]

A floor stocks tax of 9 cents per gallon is imposed on gasoline which is held by a dealer for sale on January 1, 1988 and on which no §4081 tax has previously been imposed.[47] For this purpose, the term "gasoline" has the same meaning that it does under §4082(a), so that it includes to the extent provided in regulations, blend stocks and additives.[48] The term "dealer" includes a wholesaler, jobber, distributor or retailer.[49] Moreover, gasoline is deemed to be "held by a dealer" if title has passed to him, regardless of whether it has been delivered, and if, for purposes of consumption, title has not passed on to any person other than the dealer.[50]

The floor stocks tax must be paid before February 16, 1988.[51] If there is an overpayment of the tax, the person paying the tax is entitled to a refund or credit through the application of Code §6416.[52] Finally, in determining the amount of floor stocks tax transferred to the Highway

Trust Fund for any period, such tax is treated as if it were imposed under §4081 of the Code.[53]

The 1986 Act also provides that the Treasury Department will conduct a study of the incidence of the evasion of the gasoline tax and report its findings to the House Ways and Means Committee and Senate Finance Committee not later than December 31, 1986.[54]

2. Exemption

The 1986 Act amends Code §6421, which formerly dealt only with gasoline used by local transit systems and for nonhighway purposes, to add a requirement that where gasoline has been sold to a person for certain exempt purposes under Code §4221, the Service must refund, without interest, an amount equal to the product of the number of gallons of gasoline sold multiplied by the rate at which the §4081 tax was imposed.[55] The exempt purposes are (1) for export or resale for export,[56] (2) for use by the purchaser as supplies for aircraft or vessels,[57] (3) for the exclusive use of a state or local government,[58] or (4) to a nonprofit educational organization for its exclusive use.[59]

The partial exemption from the gasoline excise tax of 4 cents per gallon for qualified taxicabs is extended for 3 years, so that it will expire on September 30, 1988.[60] Citing the energy savings achieved as a result of the partial exemption, the House Report noted that those taxpayers who will be eligible for refunds from October 1, 1985 will be able to follow the same refund procedure which was in effect prior to that date.[61] Although no effective date is supplied, the House Report indicates that the extension is effective as of October 1, 1985.[62]

B. Changes in Gasohol Tax

Revised Code §4081 retains the statutory definitions of gasohol and alcohol. However, in line with the change in taxation of gasoline, the 3 cents per gallon tax on gasohol is imposed at the time of either removal or sale of any gasoline for use in the production of gasohol.[63] Moreover, the 5⅔ cents per gallon tax imposed on a person who separates gasoline from gasohol on which the 3 cents per gallon tax has already been paid is retained, but the statute is amended to reflect the fact that the person who does the separation will be treated as the refiner of the gasoline (rather than the producer as under the old statute).[64] The conferees indicated that while registered gasohol blenders are permitted to purchase gasoline at 3 cents per gallon if blending takes place at the terminal, unregistered blenders must, like all other purchasers, purchase gasoline and gasoline blend stocks tax-paid.[65] As was the case under pre-TRA law, the tax on gasohol does not apply to removal or sale after December 31, 1992.[66]

The Act also creates a special rule for a gasohol credit refund claim. As amended, Code §6427(h) provides that a claim for refund which is for $200 or more can be filed if the period for which the refund is sought is not less than one week.[67] Moreover, if the Service has not paid the claim within 20 days of its filing, it must pay interest from that date using the rate determined under Code §6621.[68]

Note: All of the amendments discussed in this section apply to gasoline removed after December 31, 1987.[69]

C. Alternate Method of Collecting Diesel Fuel Tax Created

1. Imposition of Tax

An alternate method of imposing the diesel fuel tax is created by the 1986 Act through the addition of a subsection (n) at the end of Code §4041,[70] providing that, on the written consent of the wholesaler, the tax on the sale to a "qualified retailer" will be collected from the wholesaler instead of the retailer under regulations to be prescribed by the Service.[71] The statute defines "retailer" as any person who sells diesel fuel for use as a fuel in a diesel-powered highway vehicle, but not a person who sells diesel fuel primarily for resale.[72] For purposes of the alternate collection scheme, a "qualified retailer" is a retailer who: (1) elects, under terms and conditions prescribed by the Service, to have the alternate tax apply to all sales of diesel fuel to him by any person; and (2) agrees to notify the seller in writing that the collection of tax by the seller applies to all sales of diesel fuel by the seller to him.[73] The Service will prescribe the period or periods for which such notice and election will be effective.[74] "Diesel fuel" is defined as any liquid on which the §4041(a)(1) tax would be imposed if sold to a person who would use it in a diesel-powered vehicle,[75] unless the retailer certifies in writing to the seller that the liquid will not be sold for such use.[76]

If the retailer does not provide notice to the wholesaler that he is using the alternate collection method under Code §4041(n), the alternate method will not apply during the period in which the failure continues and any diesel fuel sold by the retailer during the period is treated as if sold by him at retail on the date he purchased it.[77] Moreover, the retailer must pay, upon notice and demand of the Service, a penalty of 5% of the diesel fuel tax imposed by §4041(a), unless the retailer can show that his failure was due to reasonable cause and not to willful neglect.[78] Finally, no

[78] Code §6652(j), as added by Act §1702(b). Pre-TRA subsection (j) was redesignated as subsection (k).

exemption from the §4041(a) tax applies to a sale where the retailer elected to have the wholesaler collect the diesel fuel tax, or where the retailer elected but failed to provide notice of the election to the wholesaler.[79]

The amendments made by the 1986 Act apply to sales of diesel fuel after the first calendar quarter beginning more than 60 days after the date of enactment of the Act (*i.e.*, after the first calendar quarter of 1987).[80]

2. Changes in Exemptions

As amended by the 1986 Act, the full 15 cents per gallon refund or credit is extended to school buses, *i.e.*, buses engaged in the transportation of students and employees of schools (as defined in the last sentence of §4221(d)(7)(c)).[81] As a technical correction to the Tax Reform Act of 1984, this provision is effective as if included in that provision of the 1984 Act to which it relates.[82]

The exemption from the §4041 diesel fuel and special motor fuels tax for qualified ethanol and methanol is repealed and replaced by a "reduced" excise tax exemption, resulting in a tax of 3 cents per gallon.[83] This change takes effect on January 1, 1987.[84]

The applicability of the one-time credit available to owners (or holders) of diesel-powered highway vehicles weighing 10,000 pounds or less is clarified by adding it to the list of refundable fuel credits contained in Code §34.[85] This change takes effect as if included in the provision of the 1984 Act to which it relates.[86]

C. Change in Recapture of Piggyback Excise Tax

The Act provides a cut-off on the recapture of tax upon the nonqualified use or resale for such use. As amended, no tax will be imposed if either event occurs more than six years after the date of the first retail sale.[87] This provision is also effective as if included in the provision of the Tax Reform Act of 1984 to which it relates.[88]

D. Other Changes in Excise Taxes

1. Definition of "Newly Discovered Oil" for Windfall Profit Tax Purposes

The 1986 Act provides that a production property will not be treated as having produced oil in commercial quantities during calendar year 1978 if (1) the aggregate amount of oil produced from the property, whether or not it was sold, did not exceed 2,200 barrels in calendar year 1978, and (2) no well on the property was in production for more than 72 hours in that calendar year.[89] The change is designed to clarify the test well exception described in the legislative history to the Crude Oil Windfall Profit Tax Act of 1980.[90] The conferees indicated that no other inferences are intended in applying similar principles in areas other than §4991(e)(2).[91] For purposes of applying this rule, a dual completion will be treated as two separate wells, *i.e.*, one well for each horizon.[92] The provision is retroactively effective for oil removed after February 29, 1980.[93]

2. Non-beverage Distilled Spirits Imports

Section 7652 is amended to provide relaxed rules for "drawbacks" of medicinal alcohol, medicinal preparations, food products, flavors, or flavoring extracts containing distilled spirits which are unfit to use as beverages and are imported into the United States from Puerto Rico or the Virgin Islands. Under the revised rule, Subpart F is applied as if the use and tax determination described in §5131(a) had occurred in the United States by a United States person at the time the article was is brought into the United States and the rate were the rate applicable under §7652(f).[94] This means that, as a practical matter, the imported spirits are treated as if a United States product were involved. However, no amount is covered into the treasuries of Puerto Rico or the Virgin Islands.[95] This amendment applies to articles brought into the United States after the date of enactment of the 1986 Act (*i.e.*, after October 22, 1986).[96]

A special statutory rule is also set forth which states that §7652 (other than subsection (f)) shall not prevent the payment to Puerto Rico or the Virgin Islands of the excise taxes on the non-beverage distilled spirits noted above which were brought into the United States from either location on or before the date of enactment (*i.e.*, on or before October 22, 1986).[97] However, this rule only applies to articles brought into the United States after September 27, 1985, if the Treasury is satisfied that the amounts paid to Puerto Rico or the Virgin Islands under the rule are being repaid to the proper persons who used the distilled spirits in such articles[98] (*i.e.*, to the producers of the spirits).

3. Retail Fuel and Air Transportation Tax Exemption for Helicopters

The wording of the exemptions for helicopters from noncommercial aviation fuel excise tax and the air transportation tax is changed so that the exemption extends also to use in the development or removal of hard minerals, oil or gas.[99] This change applies as if included in the provision of the 1984 Act to which it applies.[100]

[98] Act §1879(i)(3)(B).
[99] Code §4041(l)(1) and Code §4261(e)(1), as amended by Act §1878(c)(1) and (2), respectively.
[100] Act §1881. In the case of the fuel tax the effective date was April 1, 1984. P.L. 98-369, §1018(c)(1). The transportation tax was effective for transportation beginning after March 31, 1984 and paid for after that date. *Id.* §1018(c)(2).

4. Sport Fishing Tax Clarification

The sport fishing equipment excise tax provisions are corrected to indicate that they apply also to fish hook disgorgers (rather than fish "hood" disgorgers).[101] This clarification is effective on the date on which the original provision of the 1984 Act was effective.[102]

5. Alcohol, Tobacco and Firearms Return Filing

The Treasury is given regulatory authority to prescribe the place for filing of any tax return related to alcohol, tobacco, or firearms.[103] This authority is effective on the first day of the first calendar month which begins more than 90 days after the date of enactment (*i.e.*, such date falling after October 22, 1986, or February 1, 1987).[104]

6. Technical Amendments To Passenger Automobile Listed Property Rules And Gas Guzzler Tax

a. Passenger Automobile Definition

For purposes of the limitation on the investment credit and depreciation on luxury automobiles, the 1986 Act modifies the definition of "passenger automobile" in §280F so that the term refers to any four-wheeled vehicle which is manufactured primarily for use on public streets, roads and highways and is rated at 6,000 pounds *unloaded gross vehicle weight* or less.[105] The change to *unloaded* gross vehicle weight clarifies the intent of the 1984 Act that defining the term by reference to the weight of the automobile should not include the weight of the passengers or the weight of any cargo.[106] However, the pre-TRA definition ("6,000 pounds gross vehicle weight or less") is retained for trucks and vans.[107]

The same clarification of the definition of passenger automobile is made with respect to the "gas guzzler" tax (§4064).[108] A transition rule, designed by General Motors, exempts station wagons if the station wagon was a 1985 or 1986 model manufactured before November 1, 1985 and is originally equipped with more than six seat belts.[109] Moreover, an exception is made if the manufacturer under §4064 is a small manufacturer (defined generally in §4064(d)(4) as a producer who manufactured fewer then 10,000 automobiles in the latest two model years) and would be treated as a manufacturer for purposes of the gas guzzler tax solely because it lengthens an existing automobile in a model year in which it is a small manufacturer.[110] This exemption excepts the small manufacturer from the definition of "manufacturer" for purposes of imposing the gas guzzler tax.

b. Listed Property

The 1986 Act clarifies the listed property requirements in three respects. First, use in a trade or business for purposes of determining the allowable investment credit or recovery deduction for listed property is expanded to include any deduction allowable to the employee for rentals or other payments under a lease of the listed property.[111] This is in addition to the existing requirements that the use of the listed property be both for the convenience of the employer and required as a condition of employment.

The exception from the definition of the term "listed property" which is provided for any computer or peripheral equipment used exclusively at a regular business is clarified by the 1986 Act to require that the computer or equipment also be owned or leased by the person operating the business establishment.[112] This rule presumably applies also to computers and peripheral equipment used in a home office which is used as a regular business establishment.[113]

The definition of "listed property" is also clarified with respect to that portion of the definition which includes "any other property used as a means of transportation". This definition is amended to exclude property if substantially all of its use is in the business of providing services consisting of the transportation of persons or property for hire to unrelated persons.[114]

The luxury automobile, listed property and gas guzzler modifications generally take effect as if included in the provision of the Tax Reform Act of 1984 to which they relate.[115] However, the amendment for small manufacturers which lengthen existing automobiles applies as if made included in the amendments made by §201 of Public Law 95-618 (the gas guzzler provisions of the Energy Tax Act of 1978), except that in the case of qualifying station wagons, the amendment exempting manufacturers which lengthen automobiles (without regard to whether they are small manufacturers) does not apply.[116]

Chapter 74

CHANGES AFFECTING FINANCIAL INSTITUTIONS

Christine L. Vaughn, Esq.
Vinson & Elkins
Washington, D.C.

I. Limitations on Bad Debt Reserves

A. Commercial Banks

1. Introduction

For over 65 years, commercial banks have been permitted to establish reserves for bad debts for income tax purposes, as an alternative to a deduction for specific debts which become worthless. Under the law prior to enactment of the 1986 legislation, virtually all commercial banks computed their bad debt deductions in the form of additions to their reserves for bad debts, using methods specified in §585 of the Internal Revenue Code.

The size of a bank's bad debt reserve is determined by using either the "percentage of eligible loans" method or the "experience" method.[1] In both cases, the maximum reserve level is set by the tax code and banks have no discretion to exceed that maximum, although they can choose to set the reserve at a lower level, and can, in effect, switch between the methods from year to year.

Under a bad debt reserve approach, at the end of the year a bank computes the total amount of loans actually charged-off. That figure is deducted from the reserve account balance. Similarly, any amounts recovered on loans previously charged-off are added to the reserve account balance. After these adjustments, the bank is permitted to claim a tax deduction in an amount necessary to bring the reserve balance back to an amount no larger than the maximum permitted level.[2]

If a bank chooses to use the percentage of eligible loans method, then the maximum level of the reserve permitted in 1986 is 0.6% of "eligible loans" plus an amount determined under the experience method for loans other than eligible loans.[3] If a bank uses the experience method, the maximum reserve level is determined by analyzing the bank's actual charge-off experience over a six-year period (the current tax year, plus the preceding five taxable years).[4]

A commercial bank which does not account for bad debts through the reserve approach is allowed to deduct for tax purposes an amount equal to the actual charge-offs it incurred during the taxable year.[5]

2. Overview

Section 901(a) of the Act prohibits "large banks" from deducting any additions to a reserve for bad debts. Moreover, existing reserves must be "recaptured," either under an elective cut-off method or spread over a four-year period. A special mechanism which "suspends" recapture is provided for "financially troubled" banks.

Section 903(b) of the Act provides a special 10-year carryback for certain net operating losses (NOLs) attributable to a bank's deductions for bad debts pursuant to §166(a) of the Code.

3. Detailed Analysis

a. General Rule

Section 901(a) of the Act amends §585 to make its provisions inapplicable to "large banks." Any bank as defined in §581 of the Code will be prohibited from maintaining a reserve for bad debts if, for the taxable year or for any preceding taxable year beginning after December 31, 1986, the average adjusted bases of all its assets exceeded $500 million or it was a member of a controlled group (described in §1563(a)(1)) and the average adjusted bases of the group's assets exceeded $500 million.[6]

Bad debts of large banks subject to the new rules must be deducted when they become wholly or partially worthless within the taxable year under §166(a) of the Code.

In connection with repeal of bad debt reserves for taxpayers other than financial institutions under §805 of the Act, the Conference Report directs the Secretary of the Treasury to study "appropriate criteria" to be used to determine if a debt is worthless for federal income tax purposes. The report is supposed to "consider under what

[1] §585(b)(1). All references to the Internal Revenue Code are to the Internal Revenue Code of 1954 as it existed immediately prior to the enactment of the Tax Reform Act of 1986, P.L. No. 99-514 (1986) (hereinafter referred to as the "Act"). All references to the Internal Revenue Code, as amended, are to the Internal Revenue Code of 1986, as modified by the Act.

[2] §585(b); Regs. §1.585-2.

[3] For taxable years 1976 through 1981, the maximum reserve was 1.2% of eligible loans; for the 1982 tax year the maximum reserve was 1. 0%. Section 585(b)(2)(B) permits a bank with eligible loans at least as great as the amount of such loans outstanding at the end of a "base year" (1982 for taxable years beginning thereafter) to maintain a reserve at the level it was at the close of the base year, which for many banks will be greater than 0.6% of the taxable year's eligible loans.

circumstances a rule providing for a conclusive or rebuttable presumption of the worthlessness of an indebtedness is appropriate." [7] Presumably the report, which is to be completed by January 1, 1988, will include some consideration of bank bad debts.[8]

b. Recapture

The provisions of new §585(c) are treated as a change in method of accounting for the "disqualification year" that is made with the consent of the Secretary.[9] The net amount of adjustments which must be taken into account under §481(a) of the Code is to be spread over a four-year period. A bank not electing to use the cut-off method (described below) must under new §585(c)(3) include 10% of its reserve balance in income in the first taxable year for which the provision is in effect. A bank has the flexibility to designate a greater amount (up to 100% of its reserve balance) for recapture in the first year. Any balance in the reserve must then be taken into income by including 2/9 of it in income the second year, 1/3 in the third year, and 4/9 in the fourth year.[10]

A bank which desires to "run off" its existing bad debt reserve can elect the cut-off method provided in new §585(c)(4). A bank under this rule maintains its reserve as of the first day of the "disqualification year" and charges against it any losses resulting from loans held as of the same day. The disqualification year is a large bank's first taxable year beginning after December 31, 1986, if the bank maintained a bad debt reserve for the preceding taxable year.[11] The balance in a bank's reserve account under the cut-off method can be reduced only to zero. Any excess charge-offs, and any recoveries with regard to such loans, will be items of income and expense in the year of charge-off or recovery, as if the bank had always used the specific charge-off method.[12]

A "financially troubled bank" can elect to suspend the inclusion in income of its bad debt reserve for any year in which it qualifies under new §585(c)(3)(B).[13] The term financially troubled bank means any bank whose "nonperforming loan percentage" exceeds 75% for the taxable year. In the case of a parent-subsidiary controlled group (described in §1583(a)(1)), this test is applied to the group as a whole. The percentage is determined by dividing the sum of the outstanding balance of nonperforming loans for each quarter by the sum of the "amounts of equity of the bank" as of the close of each corresponding quarter.[14] Nonperforming loans are those considered to be such by the bank's "primary Federal regulatory agency," and a bank's equity is its equity "as determined for Federal regulatory purposes." [15]

c. Net Operating Losses Attributable to Bad Debts

Section 903(b) of the Act amends §172(b) of the Code to allow a 10 year net operating loss carryback and a five year carryforward for the portion of a bank's net operating loss "attributable to" its bad debt deduction under §166(a), that is, its actual charge-offs. The portion of a net operating loss attributable to a bank's deductions for losses on bad debts will be the excess of its NOL for the taxable year over the NOL computed "without regard to any deductions for losses on bad debts." [16] This special rule applies to NOLs for taxable years beginning after December 31, 1986, and before January 1, 1994.[17]

4. Effective Date

The changes made by §901 of the Act apply to taxable years beginning after December 31, 1986.[18]

B. Thrift Institutions

1. Introduction

Mutual savings banks, domestic building and loan associations and certain cooperative banks have been permitted to establish reserves for bad debts for income tax purposes since Congress subjected these institutions to the corporate income tax.[19] Under the law prior to the 1986 legislation, a thrift institution computes its reserve for losses on qualifying real property loans by using any of three methods: the experience method, the percentage of eligible loans method, or the percentage of taxable income method. The reserve for losses on nonqualifying loans is computed under the experience method.[20]

The experience and percentage of eligible loans methods apply in generally the same manner as they do in the case of commercial banks.[21]

Under the percentage of taxable income method, a thrift may deduct a percentage of its "taxable income" [22] for the year. This method is not available to a thrift whose "qualified assets" (primarily residential mortgages)[23] are less than 60% of the institution's total assets. This percentage is cut back to the extent a thrift's qualified assets are less than 82% of total assets (72% for certain mutual savings banks).[24] For taxable years beginning in 1979 or thereafter, the statutory percentage has been 40%.

The deduction for any year for an addition to a thrift's bad debt reserve cannot exceed the greater of the amount determined under the experience method or the amount by which 12% of the thrift's total year-end deposits exceed the sum of its surplus, undivided profits and reserves at the beginning of the year.[25]

Finally, §291 has subjected any bad debt reserve deduction in excess of the amount allowable under the experience method to a 20% reduction, and an amount equal to 59-5/6% of such excess has constituted a tax preference item for purposes of the corporate minimum tax.[26]

2. Overview

Section 901(b) of the Act amends §593, retaining the experience method and a modified percentage of taxable income method for computing a thrift institution's bad debt reserve, but eliminating the percentage of eligible loans method.

3. Detailed Analysis

Section 901(b) of the Act amends §593(a) to permit any domestic building and loan association, mutual savings bank, or cooperative bank without capital stock and organized and operated for mutual purposes and without profit to deduct reasonable additions to a reserve for bad debts. Section 901(b) of the Act also modifies the percentage of taxable income method by amending §593 to reduce the applicable percentage from 40% to 8% of taxable income.

New §593(a) will only apply to a thrift which meets the 60% of total assets test set out in §7701(a)(19)(C). A thrift which *fails* the 60% asset test of §593(a)(2) will be subject to §585(a) if the thrift meets the definition of a "bank" under §581. Domestic building and loan associations are expressly considered banks for this purpose, as presumably are mutual savings banks and cooperative banks.[27] If such thrift does not qualify as a large bank, it may maintain its reserves under §585, as amended (*i.e.*, the percentage of taxable income method is unavailable).[28] A thrift with more than $500 million in assets which cannot qualify under §593 apparently will have to recapture its reserves under new §585(c)(2). The statute does not expressly deal with the situation where a thrift subject to recapture subsequently re-qualifies under §593. Presumably, a large thrift which fails the 60% asset test but intends to requalify to maintain its reserves under §593 would elect §585 recapture under the cut-off method, which retains the reserve for some period of time.

Finally, §901(b)(4) of the Act removes reserves of thrift institutions from the list of preference items subject to the 20% cutback under §291 of the Code. However, the excess of the deduction under the percentage of taxable income method over the deduction allowed on the experience method will be a preference item for corporate minimum tax purposes.[29]

4. Effective Date

The changes made by §901(b) of the Act apply to taxable years beginning after December 31, 1986.[30]

II. Interest Incurred to Carry Tax-Exempt Bonds

A. Introduction

Until 1982, commercial banks, thrifts and other financial institutions generally could hold tax-exempt obligations without losing a deduction for interest paid on their deposits.[31] With the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA), Congress imposed a 15% cutback on corporate preference items, including interest of financial institutions allocable to debt incurred or continued to purchase or carry tax-exempt obligations acquired after December 31, 1982.[32] This percentage was raised to 20% for taxable years beginning after December 31, 1984.[33]

B. Overview

Section 902 of the Act amends §265 to prohibit a deduction for any portion of a financial institution's interest expense allocable to tax-exempt interest. The Act retains the 20% reduction in a financial institution's interest deduction under §291 for certain qualifying obligations.

C. Detailed Analysis and Effective Dates

Effective for taxable years ending after December 31, 1986, §902(c) of the Act terminates the 20% reduction in a financial institution's deduction for interest allocable to tax-exempt obligations under §291 of the Code by limiting its application to tax-exempt obligations acquired after December 31, 1982 and before August 8, 1986.[34]

Interest allocable to tax-exempt obligations acquired after August 7, 1986 generally will not be deductible under new §265(b) of the Code, for taxable years ending after December 31, 1986.[35] Bonds acquired after August 7, 1986, in taxable years *ending* in 1986 are subject to the 20% disallowance rule of current law for the taxable year ending in 1986, but are subject to new §265(b) for subsequent taxable years.

The acquisition date of an obligation is the date the holding period of the acquiring financial institution begins. Thus, bonds acquired in a tax-free reorganization will not be new acquisitions for purposes of the disallowance rule.[36] Tax-exempt obligations subject to the new rules include shares of stock in a regulated investment company which distributes exempt-interest dividends during the holder's taxable year.[37]

The new rules do not apply to "qualified tax-exempt obligations" acquired after August 7, 1986, which remain subject to the 20% disallowance rule.[38] These tax-exempt obligations cannot be "private activity bonds." For purposes of this exception, qualified §501(c)(3) bonds within the meaning of §145 are not treated as private activity bonds. Qualified tax-exempt obligations must be designated as such by the issuer, which, with all its "subordinate

entities," must reasonably anticipate that it will issue not more than $10 million of governmental and qualified §501(c) (3) bonds during the calendar year. Refundings of outstanding bonds may qualify for this exception.[39]

Section 265(b)(2) allocates a taxpayer's interest expense to tax-exempt interest in generally the same manner as had been required for purposes of §291(a)(3) of the Code. That is, interest expense will be allocated by the ratio the average adjusted bases of tax-exempt obligations acquired after August 7, 1986 bears to the average adjusted bases of all the taxpayer's assets.[40] This proportional disallowance approach, which is mandatory, overcomes the difficulty of tracing funds within a financial institution or assessing its "purpose" in accepting particular deposits.[41] "Interest expense" means the aggregate amount allowable as a deduction determined without regard to §§265 and 291, and includes amounts paid in respect of deposits, investment certificates, or withdrawable or repurchasable shares, whether or not such amounts are actually designated as interest.[42]

Section 265(b) applies even to current interest expenses which must be capitalized. Where a portion of a financial institution's interest expense relates to preproduction expenses (such as construction period interest) which must be capitalized under §263A, the disallowance under §265(b) applies first.[43] The House Ways and Means Committee Report provides an example which shows that application of this rule results in a smaller current deduction than if the new rules applied only to deductible interest expenses.[44]

Financial institutions subject to §265(b) include those which accept deposits from the public in the ordinary course of trade or business and are subject to Federal or State supervision as a financial institution. In addition, foreign banks doing business within the United States (as defined in §585(a)(2)) also are covered.[45]

Section 902(b) of the Act also repeals the special rule of present law regarding face-amount certificate companies contained in §265(2).

Finally, a transition rule provides an exception from 100% disallowance for interest on tax-exempt obligations acquired after August 7, 1986 pursuant to a direct or indirect written commitment to purchase or repurchase such obligations.[46]

III. Special Loss Carryover Rules

A. Introduction

Financial institutions, including mutual savings banks, domestic building and loan associations, and cooperative banks, have enjoyed special rules permitting net operating losses (NOLs) to be carried back to the prior 10 taxable years and forward to the succeeding five taxable years.[47] Other corporate taxpayers may carry NOLs back three years and forward 15 years.[48]

B. Overview

Section 903 of the Act repeals the special net operating loss carryover rules for financial institutions.

Under a special rule, the carryforward period for net operating losses incurred by thrift institutions has been extended from five to eight years for taxable years beginning after December 31, 1981, and before January 1, 1986.

A special rule for net operating losses attributable to commercial bank bad debt reserves also has been provided. This is discussed above in part I, A of this chapter.

C. Detailed Analysis

1. General Rule

Section 903 of the Act limits the applicability of §172(b)(1)(F), (G), and (H) to losses for any taxable year beginning before January 1, 1987. Financial institution net operating losses for years after that date will be subject to the general rule of §172, reflecting the view expressed in the Ways and Means Committee report that net operating losses incurred by financial institutions should be treated in the same manner as NOLs incurred by other taxpayers.[49]

2. Special Thrift Carryforward

Section 903 of the Act adds a new subparagraph to §172(b)(1) to permit thrift institutions to treat net operating losses for any taxable year beginning after December 31, 1981 and before January 1, 1986 as a carryback to each of the 10 preceding taxable years and a carryover to each of the following eight taxable years. This provision applies to organizations to which §593 applies, that is, mutual savings banks, domestic building and loan associations, and cooperative banks.[50]

Congress extended the carryforward period because of the concern that net operating losses incurred by thrift institutions in the early 1980s might expire before they could be utilized, and that institutions facing this situation either might engage in "overly risky activities" in the attempt to generate sufficient taxable income to utilize the losses, or might be forced to seek tax-motivated reorganizations.[51]

It is not clear whether a thrift institution with a five-year carryforward for net operating losses generated in 1986 will be able to utilize such losses in 1990 and 1991 where income in those years is absorbed by NOLs from 1982 through 1985 being carried forward for eight years.[52]

D. Effective Dates

The termination of the special 10-year carryback rule for financial institutions applies to losses incurred in taxable years beginning after December 31, 1986.[53]

The additional carryforward period for thrift institution losses applies to losses incurred in taxable years beginning after December 31, 1981 and before January 1, 1986.

IV. Repeal of Special Thrift Reorganization Rules

A. Introduction

The Economic Recovery Tax Act of 1981 provided special rules permitting acquisitions of certain financially troubled thrift institutions to qualify as tax-free bankruptcy reorganizations under §368(a)(1)(G).[54] These provisions were adopted to facilitate mergers of financially troubled thrifts into stronger institutions.[55]

The ERTA changes allowed tax-free reorganizations of building and loan associations, cooperative banks, and mutual savings banks undertaken in connection with a case under the jurisdiction of the Federal Home Loan Bank Board or Federal Savings and Loan Insurance Corporation (or an equivalent state authority) without regard to the "continuity of interest" requirement.[56] Application of the judicially created continuity of interest doctrine, which requires that the taxpayer's ownership interest in the prior organization continue in a meaningful fashion in the reorganized enterprise,[57] was unclear under pre-ERTA law in the case of certain reorganizations involving mutual savings and loan associations.[58]

Under §368(a)(3)(D), no stock or securities in the transferee corporation need be received or distributed in the transaction. Substantially all of the assets of the transferor must be acquired by the transferee and substantially all the liabilities of the transferor immediately before the transfer, including deposits, must become liabilities of the transferee. The provision applies only if the appropriate regulatory authority certifies that the transferor thrift is insolvent, cannot meet its obligations currently, or will be unable to meet its obligations in the immediate future, as set forth in §1464(d)(6)(A)(i), (ii), or (iii) of Title 12 of the United States Code.[59] An acquisition of a troubled thrift institution which satisfies these rules allows the acquiring corporation to succeed to the tax attributes of the troubled thrift, including its net operating losses and a carryover basis in its assets.

B. Overview

Section 904(a) of the Act repeals the special reorganization rules for troubled thrift institutions in §368(a)(3)(D), with a delayed effective date.

The treatment by the Act of net operating losses in thrift reorganizations is discussed in connection with the changes to §382 of the Code, which is found in Chapter 35.

C. Detailed Analysis

Section 904(a) of the Act amends §368(a) by deleting §368(a)(3)(D)(II) and (III).

Once these changes become effective, reorganizations involving troubled thrift institutions must satisfy the general reorganization rules in order to obtain tax-free treatment.[60] In the absence of special rules, the continuity of interest requirement presents an obstacle in the case of the merger of a stock association into a mutual association. The equity position of the stock association shareholders is exchanged for a savings account in the mutual association. Since passbook savings accounts in a mutual thrift are "cash equivalents" with an insubstantial equity interest, an interest as a depositor does not satisfy the continuity of interest requirement.[61]

With §904 of the Act, Congress determined that "financially troubled thrift institutions should no longer receive the preferential tax treatment accorded by the 1981 Act," on the grounds that the ERTA rules are inconsistent with general tax principles and unfairly benefit a selected class of taxpayers.[62]

The House bill would have repealed the special thrift reorganization rules for acquisitions after December 31, 1985.[63] However, the conference agreement provided a delayed effective date for this provision, presumably because the conferees recognized that the thrift industry may not have "fully recovered from" the economic conditions which gave rise to the ERTA provisions. In addition, as a result of §904 of the Act, the FSLIC may be forced to increase its assessments of the thrift industry for deposit insurance, and a delayed effective date provides a transition period for the FSLIC to change its deposit insurance premiums.[64]

D. Effective Date

The amendments to §368(a)(3)(D) removing the special rules applicable to thrift reorganizations apply to acquisitions after December 31 1988, in taxable years ending after that date.[65]

E. Treatment of FSLIC Payments

Since ERTA, under §597 certain payments from the Federal Savings and Loan Insurance Corporation (FSLIC) to financially troubled thrift institutions have been excluded from income and not subject to the general requirement that capital contributions received from nonshareholders reduce basis.[66] The Act repeals §597 for transfers

after December 31, 1988 in taxable years ending after that date. The Act provides a transition rule for FSLIC payments made after 1988 pursuant to pre-1989 acquisitions.[67]

The Act also clarifies that no deduction shall be disallowed under §265(a)(1) by virtue of the fact that the deduction is allocable to FSLIC assistance payments excluded from income under §597.[68]

V. Deductibility of Losses on Deposits in Insolvent Institutions

A. Introduction

A taxpayer's ability to deduct a loss in connection with a deposit in a financial institution rests under prior law on principles applicable to bad debts generally under §166. In order to be deducted currently, a debt must become worthless within the taxable year. That is, based on all pertinent facts and circumstances, no prospect for recovery can exist.[69] Moreover, under §166(d), any debt not connected with the taxpayer's trade or business is treated as a nonbusiness debt which, to be deductible, must be totally worthless.[70] The loss on a nonbusiness bad debt is treated as a short-term capital loss which an individual can deduct only to the extent of $3, 000 plus his or her capital gains for the year (a carryforward of the excess loss is available).[71]

B. Overview

With the 1986 Act, Congress changed the treatment of certain losses on deposits by permitting a taxpayer to elect to treat such losses as casualty losses.[72] Congress chose to provide more favorable treatment to losses on deposits in insolvent financial institutions on the grounds that such losses can be distinguished from other debts, since in most cases funds are deposited with the expectation they can be withdrawn on demand, and that such losses can be better viewed as casualty losses.[73]

C. Detailed Analysis

Section 905 of the Act amends §165 of the Code to permit a taxpayer to elect casualty loss treatment for a loss incurred on a "qualified individual's deposit" on account of the bankruptcy or insolvency of a "qualified financial institution," where the amount of the loss can "reasonably be estimated." [74]

New §165(l) defines the term qualified financial institution to mean any bank, mutual savings bank, savings and loan, credit union, or any similar State or Federally chartered institution. A qualified individual is any individual other than an owner of one percent or more of the value of the stock of the qualified financial institution, an officer of such institution, or any sibling or related person of such individual (within the meaning of §267(b)). The term deposit includes deposits, withdrawable accounts or withdrawable or repurchasable shares.

An election covers all losses on deposits in the institution with respect to which the election is made.[75] The election must be made on the individual's tax return and, once made, cannot be changed without the consent of the Internal Revenue Service.[76]

Casualty losses may only be deducted to the extent they exceed $100. Moreover, §165(h) allows a casualty loss deduction only to the extent net losses exceed 10% of the individual's adjusted gross income. No carryforward is allowed. Taxpayers thus must consider whether to treat losses on deposits as short-term capital losses, thereby obtaining a $3,000 deduction with a carryforward, or to elect casualty loss treatment.

Subsequent to the adoption by the House and Senate of the conference report, the House agreed to a concurrent resolution to correct the enrollment of the bill. Among other things, the resolution contained a change affecting §905.[77] The resolution would have amended that section to provide a taxpayer with an alternate election of ordinary loss treatment where the deposit giving rise to the loss was not insured under federal law. A taxpayer's aggregate losses from each institution could not exceed $20, 000 ($10, 000 for a married individual filing separately). The resolution also made the effective date of this provision one year earlier. However, the House and Senate failed to agree to other provisions of the resolution, and it was not enacted.

D. Effective Date

The election of casualty loss treatment is available for taxable years beginning after December 31, 1982.[78]

E. Treatment of Interest on Frozen Deposits

The Act also provides a special rule covering the treatment of interest on deposits which a taxpayer cannot withdraw because of the bankruptcy or insolvency, or the threat thereof, of a qualified financial institution.[79] Section 451 has been amended to limit the inclusion in gross income of interest on frozen deposits to the net amount withdrawn by the individual during the year plus the amount "withdrawable." [80] This latter amount must be determined without regard to any penalties for premature withdrawal. Any amount not included in income is treated as credited in the next calendar year. New §451(f)(3) defers the deduction otherwise allowable to the financial institution until the interest is includible in gross income, although a special effective date provision suspends application of this rule. This provision generally applies to taxable years beginning after December 31, 1982, and before January 1, 1987, only if the taxpayer elects to have it apply for all four years.[81]

TAXATION OF INSURANCE COMPANIES AND POLICYHOLDERS

William B. Harman, Jr., Esq.
John T. Adney, Esq.
Gail B. Wilkins, Esq.
Joseph F. McKeever, III, Esq.
Davis & Harman
Washington, D.C.

I. Introduction

A. Background

The provisions of Title X of the 1986 Tax Reform Act, together with relevant portions of Title VII (relating to the alternative minimum tax) and Title XVIII (relating to technical corrections), constitute the major revisions in the tax rules governing insurance companies and their products brought about by the Act. As many and varied as these revisions are, their sweep was relatively confined in the case of life insurers — relative, that is, to the degree of change wrought by the Act upon many other classes of taxpayers. The reason, it appears, lies primarily in recent history.

The tax treatment of life insurance companies, that is, corporations taxed as life insurers under the rules of Part I of Subchapter L of Chapter 1 of the Code (Code §§801-818), was subjected to change (principally of a temporary nature) by the Tax Equity and Fiscal Responsibility Act of 1982 ("TEFRA") [1] and then to comprehensive revision by the 1984 Tax Reform Act ("1984 TRA"),[2] essentially replacing the structure created by the Life Insurance Company Income Tax Act of 1959 (the "1959 Act"). This was equally true of the companies' products in the hands of their policyholders and beneficiaries.[3] Thus, when the President made his tax reform proposals in May, 1985,[4] their enactment with respect to life insurers would have constituted the third major alteration in the governing tax rules in as many Congresses.

The life insurance industry protested this. Indeed, the industry made efforts to "stay the course" of life insurance taxation in the face of significant proposed revisions. The tax reform plan, for example, called for the current taxation of cash value increments (the annual increase in cash value in excess of premiums paid) of life insurance and annuity contracts — the so-called "inside buildup." It also proposed greatly limiting the insurer's deduction (currently granted under Code §807) for the reserves for such contracts. Under the tax reform plan, only the insurer's reserves reflecting cash values, if any, would have been deductible. In addition, the President proposed the repeal of the 20% "special life insurance company deduction" of Code §806(a) and the "small life insurance company deduction" of Code §806(b), enacted in the 1984 TRA.

When this problem of continuing proposed change was coupled with the fact that the 1984 TRA already called for further study by the Treasury Department of the life insurance rules, with a reporting date in 1989,[5] the industry's point was viewed as well taken, especially in view of the costs and benefits to the government of making the specific proposed changes. Generally, only when buffeted by the larger issues of tax reform respecting such topics as pensions, the minimum tax, the time-value-of-money, and the overall tax rate structure did the life insurance industry tax rules undergo significant alteration.

This was not the experience of most taxpayers, of course, and the segments of the insurance industry not taxed under subchapter L, Part I, found themselves partaking of the more common experience. Insurers taxed as property and casualty (or "P/C") companies had for some time anticipated extensive tax reform proposals, although none quite so severe in effect as the President's suggestion that the tax accounting for companies' unpaid losses follow a "qualified reserve account" (sometimes shortened to "QRA") methodology. Adoption of the QRA proposal would have meant, for the first time, a mandatory reflection of the time value of money in P/C loss reserve accounting, even though such reserves generally are not "discounted" on insurers' State regulatory reports, *i.e.*, their "annual statements" filed on forms prescribed by the National Association of Insurance Commissioners (or "NAIC"). It would also have led to an effective denial of an insurer's loss deductions to the extent matched or "prorated" against tax-exempt interest or deductible dividends received.

In truth, however, adoption of the QRA proposal would have meant much more: a virtual denial of any deduction for a reserve as such, in that the QRA approach endeavored to produce a tax result equivalent to granting a deduction

for losses only when and as paid. Recognition of this fact fostered the proposal's strong opposition by the property and casualty insurance industry (and by the life insurance industry, too, which also would have been affected by the QRA's adoption) and probably was significant in leading to its rejection by Congress. However, the tax changes ultimately made with respect to P/C insurers (with, again, some effect on life insurers) by the Act might well be understood as reflections of the industry and congressional reaction to the QRA proposal, for even in its rejection it helped shape the changes made just as surely as did the congressional desire for added tax revenues from P/C companies.

The P/C company taxpayers were joined in this tax overhaul experience by a number of insurers that hitherto were formally non-taxpayers, perhaps the most notable of which were the tax-exempt Blue Cross and Blue Shield ("Blue Cross" or "BCBS") organizations. That historic exemption was removed by the Act, premised on shifts in the marketing of Blue Cross insurance products that brought those products into increasing competition with the offerings of fully taxed commercial insurers. Not surprisingly, the search for added revenues also played a role in this determination.

B. Overview and Effective Dates

The following discussion will begin with a description of the relatively dramatic changes that the 1986 TRA made in the tax rules governing property and casualty insurance companies as well as certain exempt organizations providing insurance. Thus, the discussion at II, *infra*, will cover the changes made in the tax treatment of P/C companies by the following Act sections:

(A) §1021, restricting the deduction for the annual increase in unearned premiums to 80% thereof, and clarifying the rules relating to title insurance;

(B) §1022, imposing "proration" requirements by cutting back the otherwise allowable loss reserve deduction by 15% of a company's tax-exempt interest and deductible dividends received;

(C) §1023, limiting the loss reserve deduction to an amount that reflects discounting based on prescribed assumptions, a TRA-enacted rule also made applicable to the loss reserves of life insurers; and

(D) §§1024 and 1025, combining the rules for mutual and stock companies (eliminating a special deferral for mutuals and mandating a study of their taxation) and providing uniform special treatment for small companies.

The foregoing rule changes generally take effect for taxable years beginning after December 31, 1986. A similar effective date governs the 1986 TRA alternative minimum tax rules, the application of which to P/C companies is reviewed at II, *infra*. A final segment of the discussion below describes the non-Code amendment made by Act §1031, effective when the Act was signed (October 22, 1986), prescribing the tax treatment of payments made by members to an "eligible physicians' and surgeons' mutual protection and interindemnity arrangement or association."

Next, III, *infra*, reviews the rules provided in §§501(m) and 833 of the Internal Revenue Code of 1986, as added by §1012, effective for taxable years beginning after December 31, 1986. §501(m) generally denies tax exemption under Code §501(c)(3) or (4) to an organization if a substantial part of its activities consists of providing "commercial-type insurance," and also subjects to tax under the rules of Subchapter L (in lieu of Code §511) the commercial-type insurance activities of an organization that remains exempt under §501(c)(3) or (4). Post-1986 TRA Code §833 removes the tax exemption of Blue Cross organizations and taxes them as stock P/C insurance companies, albeit subject to a number of special rules designed to limit their tax burden. The effective date provision of Act §1012 contains a variety of specific exceptions to the TRA-enacted policy of denying tax exemption in the case of commercial-type insurance, and also mandates a study of one of the exceptions — certain fraternal beneficiary associations which remain tax-exempt (under Code §501(c)(8)), despite the substantial nature of their insurance activities.

The discussion in IV and V, *infra*, turns to the life insurance related provisions grouped at the outset of Title X of the Act, together with the pertinent 1986 TRA minimum tax rules of Act Title VII and the technical corrections of the 1984 TRA (and, in one case, of the insurance provisions of TEFRA) appearing in 1986 TRA §§1821-1830. Thus, IV, *infra*, will cover these changes in the corporate tax rules affecting life insurers:

(i) The repeal of the 20% special life insurance company deduction of Code §806(a) brought about by §1011 of the Act. While enactment of this aspect of the President's tax reform plan may be explained as a logical consequence of the general decrease in corporate tax rates (*i.e.*, the provision's effective reduction of the 46% rate to 36.8% was rendered "unnecessary" by the decision to cap the overall corporate rate at 34%), such an explanation fails to reckon with the fact that the timing of the repeal precedes the timing of the rate reduction, leaving life insurers with the same "blended" 40% maximum rate levied on other corporations for 1987. This repeal, however, was not accompanied, as the tax reform plan had suggested, by repeal of the Code §806(b) small life insurance company deduction.

(ii) The provision of limited transitional relief by §1011(d) of the Act, respecting the preservation of a lower tax rate on capital gains subsequently realized by certain life insurers on their investments in bonds purchased at a market discount.

(iii) The imposition of the revised alternative minimum tax on corporations, focusing on the "book income" and "current earnings" adjustments.

(iv) A variety of technical changes, including numerous alterations in the complex proration rules (made by §1821(i) and (p) of the Act), clarification of the Phase III tax rules (made by §1821(k)), refinements in the variable contract provisions (made by §1821(m) and (t)), and elaboration on the TEFRA §255 "grandfather" provision relating to certain pre-1982 modified coinsurance contracts.

Aside from the technical corrections, which generally bear effective dates as if they had been enacted as part of the

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

1984 TRA (or TEFRA), these changes are effective for life insurers' taxable years beginning after December 31, 1986

The discussion at V, *infra*, covers these changes affecting life insurance and annuity policyholders and beneficiaries:

(i) Several significant 1986 TRA rules governing life insurance policyholder treatment — nothing quite so sweeping in effect as would have resulted from enactment of the proposal to tax the inside buildup on a current basis — but including an amendment made to Code §264 (by Act §1003) limiting the deductibility of policy loan interest by business taxpayers, and a complete overhaul of the Code §7702(f)(7)(B) partial withdrawal rule (by Act §1825).

(ii) Corrections and clarifications of the 1984 TRA amendments concerning group-term life insurance under Code §79 (made by Act §1827).

(iii) Another set of major revisions in the rules respecting nonqualified annuity contracts, refining and somewhat complicating the treatment of annuitized payments, broadening the impact of the Code §72(q) penalty tax on premature withdrawals and increasing its rate from 5 to 10%, generally taxing currently the inside buildup of annuities owned by other than natural persons, and technically correcting the 1984 TRA rules relating to annuities (changes made by Act §§1122, 1123, 1135, and 1826, respectively).

(iv) Adjustments in the structured settlement rules embodied in Code §130 (made by Act §§1002 and 1826).

(v) Correction of a 1984 TRA error relating to tax-free exchanges of insurance contracts under Code §1035 (made by Act §1828).

Aside from the elements of these changes which constitute technical corrections of the 1984 TRA provisions, and which therefore take effect as if they had been enacted as part of that Act, the effective dates vary considerably. The Act §1003 amendment of Code §264, for example, is effective with respect to life insurance contracts purchased after June 20, 1986, the date that the provision was adopted on the Senate floor; the structured settlement changes made by Act §1002 apply to liability assignments entered into after December 31, 1986; and the changes respecting annuities, while frequently effective beginning in 1987, do not follow uniform effective date rules (as detailed below).

II. Property and Casualty Insurance Company Provisions

A. Unearned Premiums

Prior to the Act, Code §832(b)(4)(B) (and its predecessor provisions dating back many years) effectively allowed a property and casualty insurance company to deduct any increase in its "unearned premiums" during the taxable year in computing its taxable income. This was technically accomplished by requiring the company, in calculating its "premiums earned" (an element of "underwriting income" and hence of the company's gross income) for a given taxable year, to add unearned premiums on outstanding business at the preceding taxable year-end and deduct unearned premiums on outstanding business at the end of that taxable year. Such unearned premiums, which are shown on an insurer's NAIC annual statement and are generally described by the Income Tax Regulations as amounts reflecting the unexpired portion of insurance coverage for which premiums have been received by the annual statement reporting date, are defined by §832(b)(4) itself to include any "life insurance reserves" within the meaning of Code §816(b) that are held by the insurer.

During their consideration of the Act, both the House and the Senate weighed the propriety of continuing the historic treatment of unearned premiums against the fact that policy acquisition expenses are also fully deductible on a current basis by virtue of pre-TRA §832(b)(3) and (6). The Committee Reports underlying the Act in both houses complained that:

> "Present law permits a deferral of unearned premium income, while the expenses of earning the deferred income (*e.g.*, premium acquisition expenses) may be deducted currently. Several proposals for tax reform in the area of property and casualty insurance have suggested that permitting a deferral of an undiscounted portion of unearned premium income while allowing a current deduction for associated costs of earning the deferred income also produces a mismatching of income and expenses, and a resulting mismeasurement of income." [6]

The "several proposals for tax reform" to which the Reports referred were said by footnote to be the President's tax reform plan, a predecessor to that plan published by the Treasury Department in 1984, and a study reported by the General Accounting Office ("GAO Report") early in 1986.[7] The GAO Report turned out to be of considerable influence in this and other areas of tax reform for P/C companies.

The solution adopted by Congress with respect to unearned premiums, enacted as Act §1021, was to limit their deductibility to 80% of the annual increase. Specifically, effective for taxable years of P/C companies beginning after December 31, 1986, post-TRA §832(b)(4)(B) provides that premiums earned will be computed by adding 80% of the unearned premiums on outstanding business at the preceding taxable year-end and deducting 80% of the unearned premiums on outstanding business at the end of the taxable year. This reduction in the deductible amount, which has a parallel in the Canadian income tax provisions respecting insurers, is said by the legislative history to be done "in a manner intended to reflect costs of earning the deferred amounts." [8] The same history acknowledges that, if there is a decrease in unearned premiums in a taxable year beginning after 1986, the amended statutory provision

[6] H.R. Rep. No. 426, 99th Cong., 1st Sess. 669 (1985) (also cited as "House Report"); S. Rep. No. 313, 99th Cong., 2d Sess. 496 (1986) (also cited as "Senate Report"). One or more of these Reports (together with the Conference Report — *see* below) are referred to as the "Committee Reports" or the "legislative history."

[8] House Report at 669; Senate Report at 496.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

results in a reduction of the amount includible in income (*i.e.*, only 80% of it would increase gross income).

Since the amendment made by Act §1021 provided different accounting rules for unearned premiums in 1987 and thereafter than those effective through the close of 1986, it was necessary for the Act to address the treatment of the 1986 year-end balance as well. One possibility, following the lead of 1984-TRA when it altered the tax rules regarding deductible life insurance reserves, was to provide a "fresh start," that is, to disregard the difference between the closing balance of the unearned premiums under prior law and the new opening balance and forego tax on any income arising from the change in law.[9] This approach, which was utilized in the cases of the loss reserve and title insurance reserve changes (as discussed below), was rejected in this instance (largely with insurance industry support) due to revenue considerations. Instead, the excess of the 1986 year-end balance of unearned premiums over the 80% allowable under the law as amended — 20% of that balance, technically described as the "unearned premiums on outstanding business at the end of the most recent taxable year beginning before January 1, 1987" — is brought back into income ratably over a six-year period. Thus, as prescribed by post-TRA 1986 Code §832(b)(4)(C), 3⅓% of that balance is included in a P/C company's "premiums earned" in each of its taxable years beginning after December 31, 1986 and before January 1, 1993.[10]

Act §1021(b) provides a series of special rules for applying the foregoing to:

Life insurance reserves. "Life insurance reserves" as defined for purposes of Part I of Subchapter L, which are accounted for under Code §832 as an element of unearned premiums, are excluded from the 80% limitation and the 20% inclusion by virtue of post-TRA §832(b)(7)(A). The committee reports base the propriety of this on the fact that such reserves "are calculated under [Code] §807 in a manner intended to reduce the mismeasurement of income resulting from the mismatching of income and expenses."[11] This refers to §807's requirement that life insurance reserves be computed for tax purposes using a preliminary term method.

Securities insurance. A 90% limitation under post-TRA §832(b)(4)(B), and a 10% inclusion under post-TRA §832(b)(4)(C) (*i.e.*, inclusion of the closing pre-1987 balance at the rate of "1⅓" per year over six years), apply in the case of unearned premiums attributable to insurance against default in payment of principal or interest on certain debt securities. For the unearned premiums to qualify for treatment under this exception, provided by post-TRA §832(b)(7)(B), the covered securities must be described in Code §165(g)(2)(C) and have maturities of more than five years (the committee reports say that the maturities must be "five years or more").[12] Unearned premiums attributable to coverages on securities with shorter maturities are subject to the generally applicable limitation and inclusion.

Title insurance. In an effort to clarify a situation seemingly growing more confused with time,[13] post-TRA §832(b)(8) endeavors to prescribe the treatment of reserves for land title insurance. The general approach of post-TRA §832(b)(4)(B) and (C) is made inapplicable to unearned premiums in the case of title insurance, which the legislative history of the Act likens instead to loss reserves since any loss covered by a title insurance policy is "mature" at the time the coverage is issued.[14] Accordingly, the unearned premiums are subjected to discounting requirements, in a manner similar to loss reserves under Act §1023, to determine the deductible amount for purposes of post-TRA §832(b)(4)(B). These requirements are reviewed below. In addition, pursuant to Act §1021(c)(2), this change is accorded the "fresh start" and earnings-and-profits increase more generally provided in connection with the loss reserve discounting rules under Act §1023(e)(3) (also reviewed below).

A company that ceases to be taxed as a P/C company. Such a company, whether the cessation of P/C company status is due to acquiring life company status or losing tax treatment as an insurer altogether, is required by post-TRA §832(b)(7)(C) to bring into income for the last taxable year of P/C company status the entire remaining amount that it would have had to include under post-TRA §832(b)(4)(C) through taxable years beginning before 1993 had it remained taxable as a P/C company (though cessation due to corporate readjustment, under which a successor P/C is subject to Code §381(c)(22), is excused from this requirement). Thus, if a calendar year taxpaying company's closing unearned premium balance at 12/31/86 stood at $1 million, and in 1990 it ceased being taxable as a P/C company, for its taxable year ending in 1989 it would be required to include in income $133,333 (*i.e.*, the sum of 3⅓% of $1 million for each of the years 1989-1992). A question apparently left unanswered by this provision relates to the treatment of a company that did not have P/C company status in its taxable year beginning immediately before 1987 but subsequently acquired such status and then lost it again (before 1993). Is such a company required to include in income under post-TRA §832(b)(4)(C) and (7)(C) a portion of any unearned premium balance it may have had at the time the law changed, and if so, how much? As written, the post-TRA statute seems to require lump-sum inclusion of 3⅓% of that balance multiplied by the remaining number of years until 1993.

B. Proration

Unlike life insurance companies, prior to the Act, property and casualty insurance companies were permitted reserve deductions unreduced by "proration" requirements with respect to tax-exempt interest and deductible dividends received. The House Report on the Act took exception to this situation, explaining that this could be viewed as allowing a "double deduction" (or a deduction matched against excludable income):

> "No reduction in the [Code §832(b)(5)] loss reserve deduction is required, under present law, to take account of the fact that deductible additions to reserves may come out of income not subject to tax. Unlike life insurance companies, property and casualty insurance companies are not required to allocate or prorate investment income (including tax-exempt investment income) so as to take account of the possibility of a double deduction where deductible additions to reserves are funded with tax-exempt income (or with the deductible portion of dividends received).
>
> * * *
>
> "The committee believes that . . . [t]he amount of the addition to reserves that is deductible should be reduced by a portion of such tax-exempt income to reflect the fact that reserves are generally funded in part from tax-exempt interest or from wholly or partially deductible dividends." [15]

Accordingly, Act §1022 imposes a proration rule on P/C companies, requiring the deduction for losses incurred under post-TRA §832(b)(5) (which includes unpaid loss reserves) to be reduced by 15% of a company's tax-exempt interest and deductible dividends received. The 15% proration factor was chosen by Congress, rather than a higher percentage, out of concern that a more onerous proration requirement would effectively force P/C companies away from future purchases of instruments paying tax-favored income.

The reduction provisions, which appear as post-TRA subparagraphs (b) through (e) of Code §832(b), contain a series of special rules designed to avoid the proration of certain dividends from affiliates to the extent such dividends are not out of tax-exempt interest or non-affiliate dividends received by the affiliates. These provisions parallel rules provided for life insurance companies under Code §805(a)(4) by the 1984 TRA, as further amended by the technical corrections title of the TRA 1986 (specifically, by Act §1821(p)). Under post-TRA §832(b)(5)(B), the limitation on proration of affiliate dividends — referred to as "100% dividends," defined as any dividend 100% of which is deductible under Code §§243, 244, or 245(b), and including certain similar dividends received by foreign corporations — applies specially to two different types of dividends:

> *Dividends from non-insurance company affiliates.* Only the portion of such 100% dividends "attributable to prorated amounts," *i.e.,* attributable to tax-exempt interest and non-100% dividends received by the payor of the 100% dividends, is subject to proration under Code §832(b)(5)(B)(ii)(II). The legislative history clarifies (for these dividends as well as dividends from insurance subsidiaries, discussed next) that for this purpose, "dividends are treated as paid first out of current or accumulated earnings and profits attributable to prorated amounts; that is, it is treated as paid first out of tax-exempt income of the paying company (such as interest or the deductible portion of dividends received)." [16]
>
> *Dividends received from insurance company subsidiaries.* In addition to the foregoing, the limitation rule defined by the last sentence of post-TRA §832(b)(5)(B), together with post-TRA §832(b)(5)(E), reduces the proration (if any) of 100% dividends when those dividends are paid by an insurance company (whether the payor subsidiary is taxed as a life company or a P/C company). This reduction, which is intended to preclude proration of the same income at multiple levels within an affiliated group, is technically determined as an amount (not exceeding the payee company's share of the prorated income) equal to the payor company's share of the prorated income — whether computed under the life company or P/C company provisions — for the payee's taxable year in which the 100% dividend is received. Thus, if the payor's deductions are reduced by the applicable proration provisions by $1,000, and if the payee's deductions are so reduced (without regard to this limitation) by $400, then this anti-double proration rule relieves the payee of any reductions; but if the payee's deductions are otherwise reduced by $1,200, then this rule limits such reduction to $200.[17]

The new proration requirements are effective for P/C companies' taxable years beginning after December 31, 1986. However, by virtue of a "grandfather" exception provided in post-TRA §832(b)(5)(C), income from stock or obligations acquired before August 8, 1986, is not subjected to proration. Further, in the case of 100% dividends, any prorated portion thereof is treated as received on stock acquired on the later of (1) the date the payor of the 100% dividends acquired the instrument giving rise to its tax-favored income, or (2) the date that the payor became an affiliate of the payee. Thus, if a subsidiary is acquired after August 7, 1986, none of the prorated amounts under the dividends paid by the subsidiary is exempted from proration by the grandfather rule. Also, in the case of a subsidiary acquired on or before that date which acquires stock or obligations after that date, none of the prorated amounts attributable to such stock or obligations is exempted by the grandfather rule.[18]

[15] House Report at 670.

[16] Conference Report at II-357. In addition, the portion of 100% dividends attributable to prorated amounts is to be determined without reducing the earnings and profits for federal income taxes.

[17] House Report at 671. The similarly constructed anti-double proration rule applicable in the case of a life insurance company payee is explained in the House Report at 958 and in the Senate Report at 978. Under post-TRA §805(a)(4)(D)(v), dividends paid by a P/C company to a life company are to receive relief from double proration under "[r]ules similar to the rules of this subsection . . . .

[18] *See* House Report at 671-672; Conference Report at p. II-357. The latter also indicates that the transfer of tax-exempt bonds among affiliates after August 7, 1986, is treated as an acquisition of the bonds after that date.

C. Loss Reserve Discounting

1. *Overview; Scope of Discounting Requirement*

As noted in the introduction to this chapter, Act §1023 requires, for the first time, the discounting of loss reserves for tax purposes. Thus, as provided by Act §1023(a) and (b), the net annual increase (or decrease) in reserves for unpaid losses reflected in the post-TRA §832(b)(5) deduction for P/C companies' losses incurred, and the similar amounts reflected in life insurance companies' reserves described in post-TRA §807(c)(2) (as well as in the Code §805(a)(1) deduction), are limited to the "discounted unpaid losses" as defined in post-TRA Code §846.[19] This was done, as the Senate Report explained, to provide that the tax deductible amounts incorporate a recognition of the time value of money:

> "The loss reserves currently taken into account for tax purposes, and for State regulatory reporting on the annual statement prescribed by the National Association of Insurance Commissioners ("NAIC"), are determined for the most part as the arithmetic sum of anticipated claims payments in future years. The committee believes that present law does not accurately measure the income of property and casualty insurers. Unlike other taxpayers, property and casualty insurance companies are permitted to deduct losses prior to the time the loss is paid or accrued. The committee believes that the present-law treatment of property and casualty companies thereby permits such companies to overstate the true current cost of the insured loss; the deduction for such losses is overstated by the amount by which the nominal dollar value of a loss exceeds the present value of the insurance company's liability to pay the resulting claim." [20]

Expressly excluded from the mandated discounting are "losses on life insurance contracts," [21] and implicitly excluded by the statutory structure (as expressly confirmed by the legislative history) are those amounts which meet the requirements for "life insurance reserve" treatment under Part I of Subchapter L. In these cases, it was not deemed necessary to apply a new set of discounting rules. Life insurance reserves in particular, which include certain reserves for noncancellable accident and health ("A&H") insurance, were acknowledged by the legislative history to be subject to their own, fully implemented discounting rules.[22]

Also made subject to the discounting requirements, however, were the unpaid loss adjustment expenses ("LAEs") of P/C companies. This was accomplished by redefining unpaid losses to include LAEs, simultaneously excluding them from their historic place in Code §832(b)(6). On the other hand, according to the legislative history, life insurance companies (unlike P/C companies) may not deduct even the discounted amounts of LAEs unless the latter qualify for deduction under the normal tax accrual standards.[23]

The TRA-enacted definition of "discounted unpaid losses" in post-TRA §846, setting forth the fairly complex methodology by which the discounted amounts are to be computed, concludes with a grant of authority to the Treasury to write "necessary or appropriate" regulations implementing the new provision. Included within this grant is a specific direction to deal with the "proper treatment" of salvage and reinsurance recoverable with respect to unpaid losses, a subject which, though relevant to the computation of unpaid losses generally, is extraneous to discounting.[24]

2. *Discounting Methodology*

Under post-TRA §846, the discounting is generally to be accomplished by applying discount factors to a company's loss reserves as shown on its annual statement for the taxable year — referred to as the "undiscounted unpaid losses" — using a separately computed factor for each "accident year" for each "line of business." The computation of the factor for each of these, which is described in §846 as if it were to be made by the taxpayer even though Congress said it expects the Treasury to promulgate the newly applicable set of factors each year,[25] is to provide an approximation of the present value of the reserve amount at the taxable year-end employing (1) a statutorily prescribed interest rate and (2) a loss payment pattern based on certain annual statement data. To understand what is meant by this, certain definitions are necessary:

> *Undiscounted unpaid losses.* While the amount of unpaid losses (together with LAEs) shown on a company's annual statement ultimately limits the amount of the discounted unpaid losses for a given line of business and accident year; [26] in undertaking the computation of the discounted amount the company is permitted to "back out" any discounting already performed in arriving at the annual statement figure. Thus, in making the post-TRA §846 computation, a discounted annual statement reserve (such as one for workers' compensation) may be "grossed up" before applying the tax discount factor to it, provided that the

[19] This is technically accomplished, in the case of P/C companies, by changing the deduction of post-TRA §832(b)(5)(A)(ii) (as already amended by §1022 of the Act) from "unpaid losses" to "discounted unpaid losses (as defined in §846." In the case of life insurance companies, the change was made by adding a new sentence at the end of post-TRA §807(c) specifying that the amounts of the unpaid losses under paragraph (2) thereof, together with any such amounts deductible under §805(a)(1), are to be the "discounted unpaid losses as defined in section 846."

[20] Senate Report at 499-500.

[21] The unpaid losses on life insurance contracts are excluded by means of a parenthetical phrase appearing in the new final sentence of post-TRA §807(c) added by Act §1023(b).

[22] Referring, of course, to the requirements of post-TRA §807(d). *See* Senate Report at 501; Conference Report at II-361. As previously noted, such life insurance reserves held by a P/C company are accounted for as part of unearned premiums under Code §832(b)(4). For a life company, they are described in §§807(c)(1) and 816(b).

[23] *Compare* Act §1023(a)(2) (changing the definition of unpaid losses "[f]or purposes of this subchapter") *with* Conference Report at p. II-361.

[24] *See* post-TRA §846(g); Senate Report at 501.

[25] Senate Report at 504. Adoption of this approach may constitute one of the few true simplifications achieved by the 1986 Act. As discussed below, however, a taxpayer may elect to make the computations (based on its own loss payment experience).

[26] Technically, under post-TRA §846(a)(3), the limit is the aggregate amount thereof included on the company's annual statement filed for the year ending "with or within" the taxable year. The imposition of this limit is explained as a measure to curb possible "abuse" of the general approach of beginning the discounting computation with "undiscounted" reserves (even though these may exceed the annual statement reserves). *See* Senate Report at 503.

amount and rate of the annual statement discount are ascertainable from information filed on or with the statement itself.[27]

Accident year. Following industry usage, post-TRA §846(f)(1) defines an accident year as the calendar year in which an incident occurs that gives rise to the related unpaid loss. Schedules O and P of the fire and casualty annual statement (on which the design of post-TRA §846 was based) segment the reserves by accident year, with the number of years shown in a loss development being dependent on whether a particular line of business (*see* below) is considered to have a "short tail" (with virtually all claims arising in a given year being paid out in a few years) or a "long tail" (with claims payments being made many years into the future).

Line of business. Also adhering to industry usage, post-TRA §846(f)(4) defines a line of business to mean a loss category reported on the fire and casualty annual statement. Thus, the legislative history refers specifically to the lines reported on Schedule O, which principally involve short tail business such as fire and auto collision but which include certain longer tail disability income coverages, and to the Schedule P lines, which are comprised of long tail business. On a given annual statement, the Schedule O lines show a three-year development of reserves, dividing into the reserves for the accident year concurrent with the statement (the "AY"), those for the immediately preceding accident year ("AY+1"), and those for all prior years ("AY+2"). The Schedule P lines — which the legislative history identifies as consisting of five categories (one of which, "multiple peril," is treated as a single line) — show the reserve development over 11 years, or from AY through AY+10 (the last of which represents "all prior" accident year reserves).[28]

Thus, for each new accident year as it emerges, there will be (since the interest rate potentially changes each year) 11 new discount factors for each Schedule P line of business and three new discount factors for each Schedule O line of business.[29] As the accident year for the particular line of business ages from one taxable year to the next, the "discounted unpaid losses" relating thereto will be computed by multiplying the relevant "undiscounted unpaid losses" by the next succeeding factor in the series determined at the outset of that accident year. In other words, once the factors are computed, their recomputation with reference to subsequent experience is neither required nor permitted.[30] Under Act §1023(e)(2), the factors determined for the 1987 accident year are also to be applied in discounting the reserves for all prior accident years.

3. Interest Rate

Under post-TRA §846(c), the interest rate used in computing the discount factors for a given new accident year is an average of "applicable Federal mid-term rates" effective as of the beginning of each of the calendar months in a "test period." For this purpose, the rates in question are those defined in post-TRA §1274(d), converted to a rate based on annual compounding, and the test period refers to the most recent 60 calendar months ending before the beginning of the new accident year. However, to avoid the retroactive effect of employing interest rates that predated the congressional judgment to impose discounting requirements, the test period is deemed not to include any month before August, 1986.

By virtue of the foregoing definition, the interest rate to be used in discounting the reserves for an accident year (in their first year and as they age) will be known by the beginning of that accident year. As a transitional matter (as already indicated), the interest date applicable to the 1987 accident year, based on the last five months of 1986, will apply as well to pre-1987 accident years.[31] That rate is expected to be approximately 7.2%.

4. Loss Payment Pattern

While the Secretary of the Treasury is expected to announce the discount factors, it is really the loss payment patterns that post-TRA §846(d) requires the Secretary to announce. Under §846(d), these patterns are to be determined for each line of business once every five years, beginning in 1987 (with 1987 and each fifth year thereafter being referred to as a "determination year"), based on the most recently published aggregate annual statement data available at the beginning of each determination year. Given the typical lags in filing and compilation of annual statement data, this means that 1985 data will be used for the 1987 determination, 1990 data will be used for the 1992 determination, and so forth. Again, once a pattern (through the series of discount factors) attaches to an accident year, it continues to govern the discounting of the reserve for that year as it ages.[32]

The Secretary is specifically required to announce, for each line, the "historical" loss payment pattern. The statute does not expressly define this term, but its meaning is relatively clear from the Committee Reports as well as from the model on which this aspect of the methodology was based, *i.e.,* the discounting discussion in the GAO Report.[33] The intention here is to have the Secretary (or an electing taxpayer under post-TRA §846(e), as discussed below) determine a loss payment pattern from the reserve development appearing in the applicable annual statement data (under Schedule O or Schedule P, as the case may be), and then to apply this pattern prospectively to the reserve development for the five accident years beginning with the determination year. The implicit assumption is that a recent loss pattern (showing payments made in 1985 for accident years 1985, 1984, 1983, etc.) would be a sufficiently appropriate indicator of how the loss reserves

[27] Post-TRA §846(b); Senate Report at 503.

[28] Senate Report at 501-502.

[29] At this writing (mid-December, 1986), it is unclear whether the Schedule P lines will have 11 factors or, in certain cases due to special "long tail" rules discussed below, more than 11 factors. *See* Conference Report at II-363. Since there are 11 amounts reported on the annual statement for each line of business, it would appear sensible to terminate the computation at the 11th factor.

[30] *See* Senate Report at 504.

[31] Conference Report at p. II-360 (modifying Senate Report at 504).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

held in a later (*e.g.*, 1988) would subsequently be paid out for accident years of then comparable age (*e.g.*, accident years 1988, 1987, 1986, etc.). To translate this into symbols, a payment pattern would permit discount factors to be developed for a Schedule P line for AY, AY+1, AY+2 ... AY+10, viewed from the standpoint of the applicable statement data available at the outset of a determination year, and those factors would then apply to determine the discounted reserves for AY, AY+1, AY+2 ... AY+10, viewed from the standpoint of the annual statement for the taxable year. Of course, as discussed above, the factors for each succeeding accident year would also reflect the applicable interest rate for that year.

The data that the Secretary is to use in promulgating loss payment patterns (and discount factors) is aggregate, insurance industry-wide data. The legislative history identifies the sources of this data as: (1) for most cases, the "Aggregates and Averages" compendium published by A. M. Best & Company, summarizing industry payout patterns by line of business and accident year as reported on Schedules O and P of the annual statement; and (2) for title insurance, comparable information published by the American Land Title Association (which the Senate Report says it expects to show payment patterns at least as long as the Schedule P patterns).[34] Under post-TRA §846(d)(3)(F), if longer payout patterns than those presently reported in such data ultimately become available — *e.g.*, if Schedule P's reporting is extended such that AY+10 becomes a free-standing accident year and a new AY+11 becomes the "all prior" category — the Secretary is directed to take the additional data into account in performing the discounting computations.

After specifying the basic external data to be employed in determining its loss payment patterns, post-TRA §846 goes on to provide certain "computational rules" (sometimes arbitrary ones) to be followed in constructing the final, official patterns. These include:

- An assumption that claims are paid in the middle of the year.
- For Schedule O lines, an assumption that losses paid after the first year following the accident year are paid equally in the two following years.
- For Schedule P lines, in certain circumstances a division of the the "all prior" category (AY+10) into discrete accident years, according to a statutory formula is permissible. Under the formula, if the losses which would otherwise be treated as paid in the 10th year following the accident year (the "normal" rule) exceed those treated as paid in the ninth year, the payment pattern is extended as if the losses continued to be paid at the ninth year rate. In any event, this extension of the pattern beyond the period of the normal rule is capped at five years. Still other refining rules specify how the deemed extension is to function if the ninth year payment rate is zero or negative.[35]

[34] Senate Report at 505.

[35] The extension rule is discussed at some length on pages 506-507 of the Senate Report and is illustrated on pages II-362-366 of the Conference Report.

5. Special Rules

Not surprisingly, exceptions are provided to one or more aspects of all of the foregoing rules of post-TRA §846. The general loss payment pattern determination under §846(d) is overriden in three specific cases: (1) if the company so elects, choosing in a determination year to follow its own annual statement experience for the five accident years beginning with that determination year (§846(e)); (2) in the case of the "international" and "reinsurance" lines of business appearing on Schedule O (§846(d)(3)(E)); and (3) in the case of title insurance (§832(b)(8), as added by Act §1021(b)). Some comment on each of these is appropriate.

The §846(e) election is permitted out of a recognition that the use of industry-wide data to determine the discount factors may not always be appropriate in the case of a particular company's loss reserves. To avoid requiring any company to reduce its loss reserve deduction by an amount greater than necessary to reflect the time value of money, §846(e) allows a company to make a periodic election (irrevocable absent the Secretary's consent) to use its own loss reserve payment data in computing the discount factors for *all* of its lines of business. The loss payment data to be used by an electing company in computing the factors for any accident year (which, once computed, may not be redetermined by the company) is that drawn from its then most recently filed annual statement, although the methodology employed in making the computations is generally the same as that used by the Secretary (as modeled on the illustration in the GAO Report). Regulations are authorized to prevent abuse of the provision if a company does not possess sufficient historical loss payment data or if multiple corporations are used (to avoid the "all-or-nothing" nature of the election), and in no event may the election apply to the international and reinsurance lines or to A&H business.[36]

A special rule was provided in the case of the international and reinsurance lines of business to prevent possible abuse. The loss reserves reported on these lines in Schedule O optionally may be reported in other Schedule O or P lines to which the reserves relate; as a result, some of the coverages involved have longer payment tails than Schedule O lines generally. Accordingly, the discounting provisions are required to be implemented, for reserves reported for these lines, on the basis of (presumably three) composite discount factors derived by combining the payment patterns for all Schedule P lines. In addition, the Secretary is authorized by post-TRA §846(g)(1) to issue regulations addressing "the proper treatment of allocated reinsurance," thereby providing a means of precluding distortions in the loss payment patterns due to individual companies' decisions to allocate reinsurance to specific lines or to report it, unallocated, on the Schedule O reinsurance line.[37]

The title insurance discounting rules, while formally representing more than a mere exception to the general loss payment patterns rules, in practicality amount to such. The title insurance unearned premiums under post-TRA

[36] Senate Report at 508-509; Conference Report at II-361.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

§832(b)(8)(B), like the loss reserves under Code §846(a)(2), are converted to a discounted figure by computing the present value of the undiscounted amounts (in the title insurance case, drawn from the annual statement without exception) for each new calendar year's worth of premiums using the §846(c) interest rate determined for that year and "applicable statutory premium recognition pattern." Thus, basically, only with respect to the statutory premium recognition pattern does the scheme for discounting unearned premiums on title insurance diverge from the general §846 rules, and the legislative history makes it clear that other title insurance reserves, namely, the known claim or "case" reserves, are to be discounted applying the general rules.[38] The same history specifies that the reference to "statutory" in connection with the premium recognition pattern means State statutes: the rate and amount of inclusion of the unearned premiums in a company's income for State statutory accounting purposes determine the timing and amount of releases from the unearned premium reserve which are included in income for tax purposes. (The subjection of title insurance unearned premiums to discounting also carries with it the benefit of a "fresh start," as explained below.)

A final exception, even more sweeping in nature, is provided with respect to certain A&H loss reserves under post-TRA §846(f)(6). Some A&H reserves are life insurance reserves within the requirements of Part I of Subchapter L, and of course, these are not touched by the §846 rules. The remaining A&H reserves are described in the legislative history as relating primarily to cancellable disability insurance and medical reimbursement coverage, and of these, only the reserves for credit disability insurance are left subject to the general discounting rules.[39]

The rest of the disability reserves are to be discounted, according to post-TRA §846(f)(6)(A), following a methodology similar to that prescribed in §807(d) for noncancellable disability insurance reserves.[40] In specific terms, the discounted amounts of these reserves are to be computed using the general rules of §807(d) applicable to noncancellable A&H contracts, including the §807(d)(4) "prevailing State assumed interest rate" relevant to such contracts. Nonetheless, three differences are provided:

- The prevailing interest rate is determined in this context on an accident year basis, rather than with reference to the year of contract issuance.
- The limitation of the tax deductible amount of the reserve to no more than the amount showing on the annual statement (whether or not discounted) is based on the §846(a)(3) aggregate approach rather than on a contract by contract approach (as under §807(d)(1)).
- Recognizing that, at this time, there does not appear to be any generally used mortality or morbidity table applicable to cancellable A&H coverages, the mortality or morbidity experience to be employed in the discounting is the company's own experience.

Apart from the loss reserves for disability coverages, the remaining A&H loss reserves, mainly involving medical reimbursement claims, are required by post-TRA §846(f)(6)(B) to be discounted using the general §846 rules with the exception that, in lieu of a loss payment pattern, the discounting is to be done assuming that all claims for which the reserves are held at any year-end will be paid one-half year later.

6. Effective Date; Fresh Start

The 1986 TRA discounting requirements are effective for taxable years beginning after December 31, 1986. As a transitional matter, Act §1023(e)(2) specifies that the unpaid losses and LAEs at the end of the year preceding the first year under the new requirements are to be redetermined as if they had already been discounted in accordance with §846. Act §1021(c)(2) makes similar provision with respect to title insurance unearned premiums.

Act §1023(e)(3) (together with Act §1021(c)(2)) then grants the affected taxpayers a "fresh start," that is, no income is allowed to arise from the change in the tax reserve figure due to the transition. That provision further specifies that a company's earnings and profits are increased by the amount of such change. However, to combat possible abuse of the fresh start (by a taxpayer's arbitrary increase in the reserves prior to the change for the sole purpose of expanding the fresh start benefit), the forgiveness of income is denied to the extent of any "reserve strengthening in a taxable year beginning in 1986." The legislative history endeavors to shed some light on the meaning and effect of the foregoing phrase, though with limited success.[41] It seems fairly certain that this forbidden reserve strengthening includes "additions" to reserves for accident years prior to 1986, along with any other unallocated or unspecified additions. It is less than clear, however, exactly what differences from historic assumptions that a company might use in determining unpaid losses for the 1986 accident year that would cause a portion of the new reserve to fall on the unfavorable side of the line. As to the effect of this rule, it appears (albeit with room for debate) that the decline in a reserve at the point of the new statute's transition would, to the extent of the strengthening, count as part of the reserve after the statute takes effect so as to lessen the overall reserve deduction (*i.e.*, producing income) at that time.

D. Other Significant Changes and Studies

Through enactment of Act §§1024 and 1025, Congress sought to achieve, with respect to P/C companies, some streamlining of the tax rules for now (especially with regard to mutual companies) and the commencement of studies to facilitate further changes in the future. Act

[38] Conference Report at p. II-366-367.

[39] Senate Report at 508. Credit disability insurance was carved out of the A&H exception because Congress considered it to be "more in the nature of a property and casualty" coverage. *Id.* The major difference that this means for credit disability reserves, as compared with their non-credit counterparts, is that they will be discounted using a typically higher interest rate (the "new money" type of rate prescribed under §846(c)).

[40] This exception was made largely out of deference to the fact that a great portion of the affected reserves are those held by life companies, rather than P/C companies. Life companies are already familiar with the §807(d) rules, and the manner in which life companies compute their loss reserves for cancellable disability coverages frequently is not dissimilar to that used in computing the reserves for noncancellable business.

[41] *See* Senate Report at 510; Conference Report at p. II-367.

§1024, in particular, is a lengthy, hyper-technical provision which does not require detailed review here. However, these highlights of Act §§1024 and 1025 are worth noting:

Repeal of "PAL" account. Act §1024 repeals Code §824, which essentially provided a rolling five-year deferral of certain amounts by mutual P/C companies under the rubric of the Protection Against Loss, or "PAL," Account. Congress reasoned that this deferral was no longer appropriate, particularly since the provision did not condition the availability of its benefit on a company's setting aside of the tax deferred amounts as a "cushion" in its surplus. The repeal is effective for taxable years beginning after December 31, 1986, except that amounts in PAL accounts at the point of the repeal are required to be recovered and included in income in accordance with the Code §824 rules.[42]

Adoption of uniform small company relief provisions. In lieu of the complicated series of exemptions, special rates, and special deductions for small mutual companies, an exemption is provided under post-TRA §501(c)(15) for stock and mutual P/C companies if a given company's net or direct written premiums (whichever is greater) does not exceed $350,000 — taking account of all such premiums received by affiliates within the company's "controlled group" as defined in post-TRA §831(b)(2)(B)(ii). In addition, for a stock or mutual P/C company with greater premium income that still does not total beyond $1.2 million (again taking into account affiliates' premiums), post-TRA §831 permits the company to elect to be taxed only on its investment income. The effective date, again, is for taxable years beginning after December 31, 1986.

Restructuring of Parts II and III of Subchapter L. Parts II and III of Subchapter L under prior law are consolidated into Part II, relating to *all* P/C companies, and Code §§822 and 826 are redesignated as Code §§834 and 835, respectively. *See* Act §1024. Thus, Part II now consists of §§831 (tax imposed), 832 (determination of taxable income), 833 (Blue Cross organizations, discussed below), 834 (determination of taxable investment income), and 835 (election by reciprocal). Post-TRA §846, along with §§841-846, make up redesignated Part III of Subchapter L.

Multiple studies. Act §1025 is designed to keep the Treasury Department fully employed over the next few years with consideration of, and report-writing on, P/C companies' taxation. Specifically, the Secretary is required to report to the tax-writing committees of both houses of Congress, and to the Joint Committee on Taxation, the results of studies and recommendations pertaining to (1) the treatment of policyholder dividends by mutual P/C companies (*i.e.*, addressing whether an "ownership differential" provision similar to Code §809, applying to mutual life insurers, should be imposed on mutual P/C companies), (2) the treatment of P/C companies under the new alternative minimum tax rules (discussed next), and (3) the operation and effect, and revenue raising record, of the P/C amendments made by the Act. These reports are due January 1, 1989.

E. Alternative Minimum Tax

The revised corporate alternative minimum tax imposed by Title VII of the Act is reviewed in detail in Chapter 33 of this portfolio and, as it applies to life insurance companies, later in this chapter. This totally restructured and far stronger "income tax inside of an income tax" applies to P/C companies, and, in so applying, makes use of the same "net book income" and "adjusted current earnings" rules as govern the treatment of life companies. With regard to the latter, however, the legislative history records two rules specific to P/C companies: (1) the post-TRA §831(b) election allowing a small company to be taxed on its investment income does not apply, and (2) the capitalization and amortization of policy acquisition expenses beginning in 1990 is not required of P/C companies because of the unearned premium deduction limitation imposed by Act §1021.[43]

F. Certain Physicians' and Surgeons' Associations

In a lengthy non-Code amendment, Act §1031 prescribes the treatment (under the general rules of the Code) of an "eligible physicians' and surgeons' mutual protection and interindemnity arrangement or association," defined to be an arrangement or association operating under state law (other than state insurance law) prior to 1984, effective after the date of enactment of the Act (October 22, 1986). The main thrust of this otherwise curious provision — which may have some interest for those concerned with the tax treatment of capital paid into mutual insurers and of the returns on that capital paid out by such insurers — is the clarification of the treatment of amounts that might be considered "founders' capital." Under the provision, contributions to such an eligible pooled medical malpractice association are currently deductible by the member-insureds under Code §162 to the extent that they do not exceed the cost of a commercial insurance premium for comparable annual coverage (as determined by the Secretary). Also, such contributions, to the extent deductible, are included in the income of the association. On the other hand, the non-deductible portion of an "initial payment" (applying the foregoing rules) is not income to the association, nor is its return (as measured by specified ordering rules) deductible by the association. Refunds of deductible payments are, of course, included in a recipient member's gross income.

III. Exempt Organizations Providing Insurance

A. Organizations Providing Commercial-Type Insurance

Section 501(c) of the pre-1986 Code provides various standards that an organization must meet to qualify for

[42] House Report at 676-677; Senate Report at 510-511; Conference Report at p. II-369-370.

[43] Conference Report at p. II-277. As an interesting historical point, it should be noted that the net book income element of the new minimum tax rules was foreshadowed by a P/C company provision in the House version of the Act. That provision was deleted in favor of the new loss reserve discounting rules and in recognition of the broad application of the post-TRA tax rules.

exemption from federal income tax. Such an organization, however, generally is taxed on any income from a trade or business that is unrelated to the organization's exempt purposes. In recent years, a number of 501(c) organizations began to engage in insurance activities to such a degree that their commercial activities were competing directly with taxable insurance companies. Although the Service had examined the activities of some of these organizations, their tax-exempt status had not been revoked and, by and large, the insurance activities of such organizations were not subjected to the unrelated trade or business tax.

In the 1986 TRA, Congress examined the conduct of insurance activities by such organizations and concluded that certain exempt charitable and social welfare organizations were engaged in insurance activities to such a degree that their commercial activities should preclude tax-exempt status.

Act §1012 amends Code §501 to provide that a Code §501(c)(3) organization [44] (*i.e.*, a "charitable" organization) or a Code §501(c)(4) organization [45] (*i.e.*, a social welfare organization) will be exempt from federal income tax only if no substantial part of such organization's activities consists of providing commercial-type insurance. Post-TRA Code §501(m)(2) provides that, in the case of charitable or social welfare 501(c)(3) or (4) organizations, the activity of providing commercial-type insurance will be treated as an unrelated trade or business under Code §513. Such insurance trade or business will, however, be taxed under the rules relating to insurance companies under Subchapter L, not under the unrelated trade or business rules of Code §513.

For these purposes, commercial-type insurance is generally any insurance of a type (including the issuance of annuity contracts) provided by commercial insurance companies. Post-TRA Code §501(m)(3) specifically provides that commercial-type insurance does not include (1) insurance provided at substantially below cost to a class of charitable recipients and (2) health insurance provided by health maintenance organizations (HMOs) that is customarily provided by such organization and that is incidental to the HMO's principal activity of providing health care. In addition, the term does not include property and casualty insurance or retirement and welfare benefits provided directly or through a wholly owned corporation by a church or an organization of churches for the church or organization or, in the case of retirement and welfare benefits, for the employees of the church or organization and the beneficiaries of such employees.

B. Blue Cross and Blue Shield Organizations Similar Organizations

Act §1012(b) amends the Code to make Blue Cross and Blue Shield organizations existing on August 16, 1986, and new Blue Cross and Blue Shield organizations that meet certain requirements discussed below, subject to tax generally as stock property and casualty insurance companies under Part II of Subchapter L of the Code (as amended by the Act). Such organizations, however, will be entitled to special treatment not otherwise accorded taxable property and casualty companies. First, 1986 Code §833 provides a special deduction for such organizations equal to 25% of the year's annual claims and administrative expenses attributable to health insurance business, less the adjusted surplus at the beginning of the year. The expenses attributable to health business are those incurred during the taxable year in connection with the administration, adjustment, or settlement of claims under health business.[46] The 25% special deduction, however, may not reduce taxable income attributable to health business for the year (without regard to the special deduction) below zero.[47]

For organizations eligible for this deduction, the amount of the adjusted surplus for the first year of the deduction is the surplus reported on the annual statement at the close of the preceding year.[48] In the case of organizations eligible for the deduction in the first taxable year beginning after December 31, 1986, Act §1012(c)(3)(B) requires that surplus be adjusted by not taking into account distributions (such as distributions to shareholders, or contributions or loans to affiliates that reduce surplus, but not including ordinary and necessary expenses or deductible policyholder dividends) after August 16, 1986, and before January 1, 1987.

Code §833(b)(3) requires that the initial surplus amount be adjusted for all eligible organizations at the close of each taxable year by adding the taxable income or loss of the organization for the year (determined without regard to net operating loss carryovers and without regard to this special deduction) plus net exempt income for the year. Code §833(b)(3)(E) defines net exempt income to mean dividends for which the dividends received deduction was allowed, and interest that is tax-exempt, less the expenses of earning the tax-exempt interest that were disallowed under Code §265, and less the adjustment that was made for proration of tax-exempt income under Code §805(a) or Code §832(b)(5). If an organization eligible for the special deduction does not take the deduction in any year, adjusted surplus must be calculated for the intervening years between the last year the organization took the deduction and the next year in which it takes the deduction, so as to take account properly of the calculation of the deduction in the later year.

The 25% special deduction applies only for purposes of the regular tax. Thus, the deduction is specifically treated as a preference item for purposes of the corporate alternative minimum tax under Code §56(c)(3).[49]

In addition to the special deduction, eligible organizations will not be required to include in income 20% of unearned premium reserves annually, as is generally required of property and casualty insurance companies under Act §1021.[50] Finally, such organizations will be entitled to a

[44] A Code §501(c)(3) organization is a corporation, community chest, fund, or foundation organized and operated exclusively for religious, charitable, scientific, literary, educational or certain other purpose.

[45] A Code §501(c)(4) organization is a civic league or organization not operated for profit but operated exclusively for the promotion of social welfare.

special basis adjustment. Act §1012(c)(3)(A) provides that the basis of the assets of existing Blue Cross and Blue Shield organizations and certain new Blue Cross and Blue Shield organizations will be equal to the amount of the assets' fair market value on the first day of the organization's taxable year beginning after December 31, 1986. This basis step-up, which is intended to ensure that such formerly tax-exempt organizations would not be taxed on unrealized appreciation that accrued during the period the organizations were not subject to tax, is provided only for purposes of determining gain or loss upon sale or exchange of the assets.

As noted earlier, these special provisions (*i.e.*, 25% deduction, exemption from the unearned premium reserve provision, and special basis adjustment) apply only to "existing" Blue Cross and Blue Shield organizations and certain new organizations substantially all of the activities of which are providing health insurance. Code §833(c)(2) defines an "existing Blue Cross and Blue Shield organization" as one: (1) which was in existence on August 16, 1986; (2) which was tax-exempt for the last taxable year beginning before January 1, 1987; and (3) where no material change has occurred in its structure or operation after August 16, 1986. According to the Conference Report, a material change does not include a merger or split-up of one or more Blue Cross and Blue Shield organizations.[51] In addition, the Conference Report provides that:

> if an existing Blue Cross/Blue Shield organization acquires a new line of business or is acquired by another business (other than a health business), the acquisition does not constitute a material change in operations or structure of the organization if (1) the assets of the other business are a de minimis percentage (*i.e.*, less than 10%) of the assets of the existing Blue Cross/Blue Shield organization at the time of the acquisition, or (2) the taxpayer can demonstrate to the Secretary of the Treasury that, based on all the facts and circumstances, the acquisition does not constitute a material change in operations or structure of the existing Blue Cross/Blue Shield organization.[52]

A material change in operations does occur, however, if an existing Blue Cross and Blue Shield organization drops its high risk coverage or substantially changes the terms and conditions under which high risk coverage is offered by the organization from the terms and conditions in effect as of August 16, 1986. High risk coverage generally means the coverage of individuals and small groups to the extent the organization (1) provides such coverage under specified terms and conditions as of August 16, 1986, or (2) meets the statutory minimum definition of high risk coverage for new organizations discussed below. A material change in operations does not occur if an existing organization alters its operations to provide high risk coverage that meets the minimum standards required of new Blue Cross and Blue Shield organizations.

Other organizations (*i.e.*, Blue Cross and Blue Shield organizations not existing on August 16, 1986) are eligible for the special provisions outlined above if they meet six requirements set forth in Code §833(c)(3).

First, substantially all of the activities of such organizations must involve the providing of health insurance.[53]

Second, at least 10% of the health insurance (determined as a percentage of the total number of individuals covered annually) provided by the organization must be provided to individuals and small groups (not taking into account Medicare supplemental coverage).[54] Code §833(c)(3)(B) defines small group as the lesser of 15 individuals or the number of individuals required for a small group under the state law where the covered groups are located.

Third, the organization must provide continuous full-year open enrollment (including conversions) for individuals and small groups.[55]

Fourth, any individual seeking health insurance must be offered coverage which includes coverage of preexisting conditions, and the coverage must become effective within a reasonable waiting period after the time it is sought.[56] According to the Conference Report, a reasonable waiting period is intended to be not more than three months.[57] Further, health insurance coverage must be provided without regard to the age, income, or employment status of persons under age 65.

Fifth, at least 35% of the organization's health insurance premiums must be determined on a community-rated basis.[58] This percentage is determined as a percentage of the total number of persons covered on an annual basis.

Finally, the organization must be organized and operated so that no part of the net earnings inures to the benefit of any private shareholder or individual.[59]

C. Effective Date, Special Rules, and Study

In general, Act §1012(c)(1) provides that the changes made by Act §1012 (relating to repeal of tax-exempt status for certain organizations providing commercial-type insurance) are effective for taxable years beginning after December 31, 1986.

Act §1012(c)(4), however, provides that the TRA provision will not apply to certain named organizations. First, that portion of the business of Mutual of America and Teachers Insurance Annuity Association-College Retirement Equities Fund attributable to pension business will retain its tax-exempt status.[60] For this purpose, Act §1012(c)(4)(D) defines pension business to mean the administration of qualified pension plans (Code §401(a) or 403(a)), tax-sheltered annuities (Code §403(b)), unfunded

deferred compensation plans of state and local governments (Code §457), and individual retirement arrangements (Code §408).

Additional special rules provide that the TRA provision does not apply to the YMCA retirement fund, to administrative services performed by tax-exempt municipal leagues, to the Missouri Hospital Association, or to dental benefit coverage by Delta Dental Plans Association through contracts with independent service providers so long as the provision of such coverage is the principal activity of such Association.[61]

Act §1012(c)(2) requires that the Treasury Department conduct a study of fraternal beneficiary organizations (described in Code §501(c)(8)) that received gross insurance premiums in excess of $25 million in taxable 1984. The results of this study must be provided to the Ways-and Means Committee, the Finance Committee, and the Joint Committee on Taxation no later than January 1, 1988.

IV. Life Insurance Company Provisions

A. Repeal of Special Deduction

Under the 1959 Act, a life insurance company's net taxable income for any year was determined, in the case of a mutual life insurance company, after allowance of the deductible portion of policyholder dividends and, in the case of a stock company, after taking into account the deductible portion of policyholder dividends (if any), the deductible portion of the "special" deductions under former Code §§809(d)(5) and (6), and the 50% deferral of any excess of gain from operations over taxable investment income. One of the principal objectives of these provisions was to moderate the tax burden imposed on the life insurance industry.

Like the 1959 Act, the 1984 TRA was fashioned with an eye to moderating the tax burden on life insurance companies so that they would not be taxed in a manner that was disproportionate in comparison with the taxation of other financial institutions.[62] Under the 1984 Act, this was accomplished by allowing a company two deductions under Code §806: the "special life insurance company deduction" and (if applicable) the "small life insurance company deduction."

Under Code §§804(2) and 806(a), a life insurance company was entitled to a "special life insurance company deduction" equal to 20% of the excess of its "tentative LICTI" for the taxable year over the amount (if any) of its "small life insurance company deduction" for the year. A life insurance company's tentative LICTI did not take into account any items attributable to a noninsurance business. The effect of the special life insurance company deduction was to reduce the tax rate on a life insurance company's income from its insurance business from the general corporate rate of 46% to 36.8%.

The 1986 TRA amends the rate structure for corporate income by replacing the five-bracket graduated rate structure with a three-bracket graduated rate structure:

Taxable Income	Tax Rate (percent)
$50,000 or less	15
Over $50,000 to $75,000	25
Over $75,000	34

An additional 5% tax is imposed on income between $100,000 and $335,000, thereby phasing-out the benefit of graduated rates for corporations with taxable income of $335,000 or more. Thus, corporations with taxable income of $335,000 or more will pay tax at a flat rate of 34%.

Because of these rate reductions, the 1986 Act repeals the special life insurance company deduction.[63] The House Report explains that "In light of the overall reduction of corporate tax rates contained in other provisions of the bill, the committee believes that the 20% special life insurance company deduction is no longer necessary." [64]

The repeal of the special life insurance company deduction applies to taxable years beginning after December 31, 1986.[65] The post-1986 TRA corporate rate structure, however, is effective for taxable years beginning on or after July 1, 1987, and income in taxable years that include July 1, 1987 is subject to blended rates determined under Code §15. Thus, corporations with a calendar year taxable year and taxable income of $335,000 or more will pay a flat rate of 40% in 1987. In the case of a life insurance company with a calendar year taxable year and taxable income of at least $335,000, its marginal rate will increase from 36.8% for 1986 to 40% for 1987 and then go down to 34% for 1988.

B. Market Discount Bonds

Under Code §811(b)(3), a life insurance company may elect not to accrue market discount on any bond, as defined in Code §171(d). If a company makes such an election, one of the effects typically is that market discount will be taxed as a capital gain. Prior to enactment of the Act, a corporation's net capital gain was taxed at a preferential alternative rate of 28%.Thus, life insurance companies which made the election not to accrue market discount were generally able to have market discount on their bonds taxed at a 28% rate rather than a 36.8% rate. The Act,[66] however, repealed the preferential 28% rate and taxes corporate net capital gain at the same rate as other corporate income, with a maximum rate of 34%.

The Act contains a special transitional rule continuing the benefit of prior law for certain bonds held by 15 named life insurance companies.[67] Specifically, in a non-Code amendment, the Act provides that, notwithstanding the repeal of the preferential corporate capital gains rate, any gain recognized by one of the 15 named companies on the redemption at maturity of any bonds issued before July 19,

1984, and acquired by the company on or before September 25, 1985, "shall be subject to tax at the rate of 28 percent." [68]

C. *Operations Less Deduction of Insolvent Life Insurance Company*

Under the 1959 Act, certain amounts excluded or deducted from a stock life insurance company's taxable income were added to a deferred tax account referred to as the Policyholders Surplus Account.[69] The Policyholders Surplus Account represented amounts that were not taxed previously because they might be needed for policyholders. Under the 1984 Act, amounts are no longer added to a Policyholders Surplus Account, but Code §815(a) requires a stock life insurance company to maintain its Account. In addition, under the 1984 Act a company's tax under Code §801 is increased by any distributions to shareholders from the Policyholders Surplus Account.

The 1986 Act contains a provision [70] which allows a life insurance company that satisfies certain conditions to reduce a distribution to its shareholders from its Policyholders Surplus Account by its loss from operations and unused operations loss carryovers. The conditions which must be satisfied are: (1) the life insurance company must have been insolvent on November 15, 1985, (2) pursuant to the order of a court in a title 11 or similar case (as defined in §368(a)(3) of the 1954 Code) the company must be liquidated, and (3) as a result of the liquidation, the company's tax under Code §801 would otherwise be increased under Code §815(a). The provision is limited to liquidations which occur on or after November 15, 1985. The provision prohibits a carryover of any loss from operations of the company arising during, or prior to, the year of liquidation from being used in any subsequent taxable year. The committee reports note that this prohibition applies "regardless of whether the amount of the loss exceeds the amount of the distribution" from the Policyholders Surplus Account.[71]

D. *Alternative Minimum Tax*

Under pre-1986 TRA law, corporations were subject to a minimum tax on certain items of tax preferences.[72] The minimum tax was structured as an "add-on" tax, *i.e.*, the amount of the minimum tax liability was in addition to the corporation's regular tax liability. The minimum tax was equal to 15% of the amount by which the sum of the corporation's tax preferences exceeded the greater of $10,000 or the regular income tax the corporation paid.[73] The principal corporate tax preference items included

(1) The excess of accelerated over straight-line depreciation for real property;

(2) The excess of 60-month amortization over the otherwise allowable depreciation for certified pollution control facilities;

(3) Percentage depletion to the extent in excess of the property's adjusted basis; and

(4) 18/46ths of the corporation's net capital gain.

The 1986 Act replaced the add-on minimum tax with a revised alternative minimum tax.[74] The revised alternative minimum tax is equal to 20% of the excess of alternative minimum taxable income over the exemption amount of $40,000.[75] (The exception is reduced by 25% of the alternative minimum taxable income in excess of $150,000, and it is completely eliminated when alternative minimum taxable income equals or exceeds $310,000.) Alternative minimum taxable income consists of taxable income recomputed with certain adjustments and increased by certain items of tax preference.[76] Although the tax imposed by revised Code §55 is technically equal to the excess of the "tentative minimum tax" for the year over the regular tax for the year, the substantive effect is that a corporation will pay federal income tax equal to the greater of its alternative minimum tax or its regular tax.

The Senate Report explains that the revised minimum tax is intended to "serve one overriding objective: to ensure that no taxpayer with substantial economic income can avoid significant tax liability by using exclusions, deductions, and credits." [77] Given that one of the purposes of the extensive 1984 TRA revisions in the taxation of life insurance companies was to impose a tax on the true economic income of such companies, one might not expect the revised alternative minimum tax to affect in any significant manner the tax liabilities of life insurance companies. Nevertheless, unlike the add-on minimum tax of prior law, the revised alternative minimum tax is likely to have a substantial effect on the tax liability of a number of life insurance companies.

1. *Alternative Minimum Taxable Income — In General*

Code §55(b)(2) defines "alternative minimum taxable income" to mean a corporation's taxable income for a year "determined with the adjustments provided in §56 and §58" and "increased by the amount of the items of tax preference described in §57."

a. *Adjustments*

Code §56(a) specifies that the following adjustments are to be made by *all taxpayers* in determining alternative minimum taxable income:

(1) *Real property* placed in service after December 31, 1986, generally must be depreciated over 40 years using the straight-line method.[78]

(2) *Personal property* placed in service after December 31, 1986, generally must be depreciated using the

150% declining balance method, but switching to the straight-line method in the first year in which that method would yield a higher deduction.[79]

(3) *Mining exploration and development costs* must be capitalized and amortized ratably over a 10-year period beginning with the year of the expenditure.[80]

(4) *Income from long-term contracts* entered into after March 1, 1986, must be determined under the percentage-of-completion method of accounting (as modified by Code §460(b)).[81]

(5) *In lieu of the net operating loss deduction* allowed under §172, the alternative tax net operating loss deduction (defined in Code §56(d)) must be used.[82]

(6) *Pollution control facilities* placed in service after December 31, 1986 are treated in the same manner as other personal property for purposes of determining alternative minimum taxable income.[83]

(7) *Income from installment sales* of certain property must be determined without regard to the installment method under Code §§453 or 453A and all payments to be received from the sale are deemed received in the year of the sale.[84]

Code §56(c) directs that the following adjustments are to be made by *corporations* in determining alternative minimum taxable income:

(1) *Merchant Marine Capital Construction Funds.* Alternative minimum taxable income must be computed without a deduction for contributions to a capital construction fund and the earnings on the amounts in the fund must be included in alternative minimum taxable income.[85]

(2) *Blue Cross Blue Shield Organizations* must compute their alternative minimum taxable income without the special deduction allowed with respect to their health business under Code §833(b) for 25% of the claims and expenses incurred during the taxable year, less the adjusted surplus at the beginning of the year.[86]

(3) *Book Income or Adjusted Earnings and Profits.* Alternative minimum taxable income must be adjusted (1) for "book income" for taxable years beginning in 1987, 1988 and 1989, and (2) for "adjusted earnings and profits" for taxable years beginning after 1989. These two adjustments are discussed, *infra*.[87]

b. Items of Tax Preference

Code §57 specifies that the following items are to be treated as items of tax preference which must be added to a corporation's taxable income:

(1) *Percentage Depletion.* The excess of the percentage depletion deduction over the adjusted basis of the property.[88]

(2) *Intangible Drilling Costs.* Excess intangible drilling costs to the extent they exceed 65% of net income from oil, gas, and geothermal properties. Excess intangible drilling costs equal the excess of intangible drilling costs paid or incurred and deducted over the amount that would have been deductible if such costs had been capitalized and amortized over 10 years.[89]

(3) *Bad-debt Reserves.* The excess of the bad-debt deduction allowed over the amount that would have been deductible if actual experience had been used.[90]

(4) *Tax-exempt Interest.* Interest on specified private activity bonds reduced by any deduction which would have been allowable if the interest were includible in gross income.[91]

(5) *Charitable Contribution of Appreciated Property.* The excess of the charitable contribution deduction under Code §170 over the amount that would be allowed if the deduction for capital gain property were taken into account at its adjusted basis.[92]

(6) *Depreciation.* For real property placed in service prior to January 1, 1987, the excess of accelerated over straight-line depreciation, using the useful life appropriate for the year the property was placed in service, is a preference item. The preference for personal property, placed in service prior to January 1, 1987, is unchanged by the Act.[93]

c. Alternative Minimum Tax Credit

To prevent a taxpayer from being taxed twice on the same transaction, where the regular tax liability of a corporation exceeds its alternative minimum tax liability, the corporation is allowed to credit against such excess the alternative minimum tax paid in prior years. Such minimum tax credit may be carried forward indefinitely, but may not be carried back.[94]

2. Alternative Minimum Tax — The Book Income Adjustment

For any taxable year beginning in 1987, 1988, or 1989, the alternative minimum taxable income of a corporation will be adjusted to include 50% of the excess of the "adjusted net book income" of the corporation over its alternative minimum taxable income for the taxable year (determined without regard to the book income adjustment and the alternative tax net operating loss deduction).[95] The "adjusted net book income" of a corporation equals the net income (or loss) of the corporation which is set forth in the corporation's "applicable financial statement," taking into account certain adjustments.[96]

a. The Applicable Financial Statement

A corporation's financial statement is generally expected to include an income statement, a balance sheet setting forth the amount of the corporation's assets, liabilities and owners' equity, a statement of changes in owners' equity, and other appropriate information.[97] In the case of a corporation which has more than one financial statement, *e.g.*, a statement computed under generally accepted accounting principles and an NAIC annual statement, the statute establishes rules of priority for determining which financial statement is to be considered the "applicable financial statement."

Specifically, Code §56(f)(3) provides that the highest priority shall be given to a financial statement filed with the Securities and Exchange Commission.[98] Thus, the applicable financial statement for a stock life insurance company, the stock of which is publicly traded, will be the financial statement the company files with the SEC. The next highest priority is accorded to a "certified audited income statement" to be used for purposes of a statement or report (1) for credit purposes, (2) to shareholders, or (3) for any substantial nontax purpose.[99] If a corporation has certified audited income statements prepared for more than one of these enumerated purposes, priority is given to the statement serving the purpose first listed, *e.g.*, a statement for credit purposes takes precedence over a statement to shareholders.[100] A financial statement is considered to be "certified" for these purposes "if it is accompanied by an opinion of a professional accountant stating that the financial statement generally is consistent with the taxpayer's accounting principles."[101] Thus, the applicable financial statement for a life insurance company which does not file a statement with the SEC but which does have a financial statement prepared in accordance with generally accepted accounting principles will be the GAAP financial statement. In either event, however, the applicable financial statement will be one which will have capitalized and amortized policy acquisition expenses, in contrast to the current expensing of such items in computing regular taxable income. The consequence of this will vary from company to company but, for a growing company, the result generally will be that alternative minimum taxable income will be higher than regular taxable income. Note also that, in the case of a company eligible for the small company deduction under Code §806, that deduction will not be present in the applicable financial statement, thereby further increasing any differential between alternative minimum taxable income and regular taxable income.

The third highest priority is given to "an income statement required to be provided to" (1) the federal government or a federal agency, (2) a state government or a state agency, and (3) a political subdivision of a state or an agency thereof.[102] If a corporation has none of the above financial statements, then the applicable financial statement is an income statement used for the purposes of a statement or report (1) for credit purposes, (2) to shareholders, or (3) for any other substantial nontax purpose.[103] Thus, a life insurance company which files neither an income statement with the SEC nor a certified audited income statement, *e.g.*, a mutual life insurance company, will generally use as its applicable financial statement its NAIC annual statement. In this regard, the Conference Report states that "[i]n the case of an insurance company whose applicable financial statement is the financial statement prepared for regulatory purposes, the conferees intend that the measure of pre-tax book income is the amount of net gain from operations after dividends to policyholders and before Federal income taxes."[104]

b. Adjustments to Net Book Income

After having identified a corporation's applicable financial statement, certain specified adjustments must be made to the net book income (or loss) set forth in such statement.[105] The adjustments are as follows:

1. Income Taxes

Net book income must be adjusted to eliminate federal income taxes and income, war profits, or excess profit taxes imposed by any foreign country or U.S. possession which are taken into account as either income or expense items on the applicable financial statement. To the extent that a corporation does not claim a foreign tax credit under Code §901, however, and thus deducts any foreign or U.S. possession taxes, such taxes will not be eliminated from the applicable income statement.[106] The Senate Report states that "[a]ny provision for state and local taxes is considered allowable" and that no adjustment is to be made to remove these items from the applicable financial statement.[107]

2. Related Corporations

If a taxpayer files a consolidated federal income tax return, the taxpayer's adjusted net book income for that year will take into account items from the corporations with which the taxpayer files the consolidated tax return, irrespective of whether the taxpayer files a consolidated financial statement with those corporations. Similarly, if a taxpayer's applicable financial statement is consolidated with the financial statement of other corporations with which it does not file a consolidated tax return, the taxpayer's adjusted net book income for that year will not take into account items from those corporations.[108] The Senate Report explains with respect to this adjustment that:

> it is anticipated that this adjustment will be accomplished by removing the net income and any related consolidating eliminations of companies that are included for financial statement purposes but not for Federal

income tax purposes, and by adding in the net income and related consolidating eliminations of companies that are excluded for financial statement purposes but included for Federal income tax purposes. In determining the consolidating eliminations of companies included for Federal income tax purposes but not for financial statement purposes, the method of consolidation that the taxpayer normally uses for financial statement purposes will be followed.[109]

A special rule is also provided with respect to dividends from related corporations. If a corporation is not included on a consolidated return with the taxpayer, the taxpayer's adjusted net book income is to take into account the earnings of such other corporation only to the extent of the dividends the taxpayer receives from such other corporation and other amounts with respect to the earnings of such other corporation that are properly includible in gross income.[110] The Senate Report states that "[i]f the taxpayer includes its ownership of the other corporation for financial purposes using another method, such as by consolidation or by the equity method, an adjustment to reverse the inclusion of the other corporation is required." [111] According to the Senate Report, the nature of the reversing adjustment depends on whether the taxpayer includes its ownership of the other corporation in its financial statement under the consolidation method or the equity method.[112] In the former case, the contribution to book income of the corporation which has not been included in the consolidated tax return is reversed by removing the net income and any consolidating eliminations of the corporation.[113] In the latter case, where the corporation is not consolidated in either the tax return or in the financial statement, but the taxpayer's interest is accounted for by use of the equity method, the Senate Report explains that "the taxpayer's net book income is adjusted to remove the effect of the corporation's inclusion under the equity method." [114]

c. Statements Covering Different Periods

Code §56(f)(2)(D) provides that "appropriate adjustments" to net book income should be made if the applicable financial statement covers a period other than the taxable year. The Senate Report explains that the financial accounting and tax accounting years should be conformed by requiring the corporation "to include a pro rata portion of each financial statement accounting year that includes the Federal income tax taxable year." [115]

d. Miscellaneous Adjustments to Net Book Income

Net book income must also be adjusted with respect to patronage dividends,[116] dividends received from corporations eligible for the Code §936 credit,[117] and certain other items in the case of Alaska Native Corporations.[118] In addition, the Secretary of the Treasury is granted authority to issue regulations to prevent the omission or duplication of any item in the computation of adjusted net book income.[119] The Senate Report gives several examples of areas in which it is anticipated that this authority will be exercised, including (1) to prevent charging items directly to the financial statement asset, liability, or equity accounts where the items are properly includible as items of income or expense, and (2) to prevent the use of asset, liability or equity accounts to offset items of income or expense where such treatment would not otherwise be allowed.[120]

3. Alternative Minimum Tax — Adjusted Current Earnings

For taxable years beginning after 1989, the book income adjustment will be replaced with a current earnings adjustment. Specifically, starting in 1990, the alternative minimum taxable income of a corporation will be *increased* by 75% of the excess (if any) of (1) the "adjusted current earnings" of the corporation over (2) the alternative minimum taxable income (determined without regard to this adjustment and the alternative tax net operating loss deduction).[121] Further, the alternative minimum taxable income of a corporation will be *decreased* by 75% of the excess (if any) of (2) over (1).[122] Any such decrease, however, cannot exceed the excess (if any) of (1) the aggregate increases in alternative minimum taxable income under the current earnings adjustment for prior taxable years over (2) the aggregate decreases in alternative minimum taxable income pursuant to the preceding sentence for prior taxable years.[123] The Conference Report explains that, for these purposes, a "positive amount is always considered to be in excess of a negative amount and a smaller negative amount in excess of a larger negative amount." [124]

"Adjusted current earnings" is defined in Code §56(g)(3) to mean alternative minimum taxable income for the taxable year determined after taking into account specified adjustments and without taking into account the current earnings adjustment and the alternative tax net operating loss deduction.[125] Thus, in general, adjusted current earnings are computed using the same treatment that an item receives in computing alternative minimum taxable income, except for specified additional adjustments. These adjustments are as follows.

a. Inclusion of Items Included in E&P

Items of income that are included in the computation of earnings and profits for purposes of Subchapter C of the Code but which are not otherwise includible in alternative minimum taxable income are includible in determining adjusted current earnings.[126] Two examples listed in the Conference Report are interest on tax-exempt bonds and the portion of dividends excluded under the dividends received deduction.[127] Expenses that are not allowable for

alternative minimum tax purposes because they relate to income not includible in alternative minimum taxable income will be allowed in computing adjusted current earnings where the income to which the expenses relate are includible in determining adjusted current earnings.[128] For example, interest on tax-exempt bonds is includible in computing adjusted current earnings, and therefore the costs incurred to carry tax-exempt bonds are allowable as a deduction.[129] If, however, the deduction for such carrying costs would be subject to limitations in the computation of taxable income even if the income to which they relate were fully taxable, the Conference Report states that the costs will be similarly limited in computing adjusted current earnings.[130] The Conference Report also states that, for purposes of computing adjusted current earnings, the original issue discount rules and the market discount rules applicable to taxable bonds will apply to tax-exempt bonds.[131]

b. Inclusion of Inside Buildup

Code §56(g)(4)(B)(ii) specifically requires that the inside buildup of life insurance and annuity contracts be included in adjusted current earnings. In the case of a life insurance contract, adjusted current earnings will include "the income on such contract" for the taxable year determined under Code §7702(g), but with a deduction allowed for the "portion of any premium which is attributable to insurance coverage." [132] Code §7702(g) provides rules for the taxation of the inside buildup of a life insurance policy which fails to qualify as a life insurance contract for federal tax purposes. "Income on the contract" for purposes of Code §7702(g) includes the "cost of life insurance protection provided under the contract during the taxable year," and this cost is determined under Code §7702(g)(1)(D). Code §7702(g)(1)(D) provides that the cost of life insurance protection is the lesser of (1) the cost of insurance determined on the basis of premiums (computed on the basis of five-year age brackets) to be prescribed by regulations and (2) the mortality charge (if any) stated in the contract. Presumably, for purposes of determining adjusted current earnings, the "portion of any premium which is attributable to insurance coverage," and for which a deduction is allowed, will be deemed equal to the "cost of life insurance protection" determined under Code §7702(g)(1)(D). The effect of this would be to require the inclusion in adjusted current earnings of the increase in the life insurance contract's net surrender value during the year. (Net surrender value for purposes of §7702(g), and thus for purposes of determining adjusted current earnings also, equals the contract's cash value reduced by any applicable surrender charges.) [133]

In the case of an annuity contract, adjusted current earnings will include "the income on such contract" for the taxable year determined under Code §72(u)(2).[134] §72(u)(2), which was added to the Code by the Act, provides rules for the taxation of the inside buildup of an annuity contract which is not held by a natural person. The operation of this provision is discussed, *infra*, at V, C, 1.

c. Acquisition Expenses and the Small Company Deduction

A special rule requires that, in computing adjusted current earnings, the acquisition expenses of life insurance companies be capitalized and amortized in accordance with generally accepted accounting principles.[135] The Conference Report clarifies that such treatment should be in accordance with the method generally required (at the time the costs are incurred) by the Financial Accounting Standards Board.[136] If the FASB has not published such a method, however, guidelines issued by the American Institute of Certified Public Accountants should be followed.[137] The Conference Report also explains that, in calculating adjusted current earnings, it is to be assumed that a life insurance company's acquisition expenses have been capitalized and amortized in accordance with this provision in prior years, *i.e.*, a "fresh start" is provided.[138] Finally, the Conference Report states that, in computing adjusted current earnings, the small life insurance company deduction under Code §806 is not available.[139]

d. Disallowance of Items Not Deductible for E&P Purposes

In determining adjusted current earnings, no deduction is allowed for any item if the item would not be deductible in computing earnings and profits for purposes of Subchapter C.[140] The Conference Report cites as an example of this rule that the dividends received deduction generally is not allowed in determining adjusted current earnings.[141] An exception is made for deductions allowed under Code §§243 or 245 for a 100% dividend if the corporation paying such dividend and the corporation receiving such dividend could not file a consolidated return because of Code §1504(b).[142] The exception is limited, however, to the extent that the 100% dividend "is attributable to income of the paying corporation which is subject to tax under [chapter 1 of the Code] (determined after the application of §§936 and 921)." [143] This exception should be available to insurance companies which are precluded from filing a consolidated return by reason of Code §1504(b)(2).

e. Miscellaneous Adjustments

Several other adjustments must be made in determining adjusted current earnings. First, for property placed in service after 1989, depreciation is computed using the slower of the method used in the corporation's applicable financial statement or straight-line depreciation over the ADR midpoint life.[144] Other rules apply to property placed

in service before 1989.[145] Second, no loss will be recognized on the exchange of pools of substantially similar debt pool obligations for purposes of adjusted current earnings.[146] Finally, a rule is provided for intangible drilling costs, and the special adjustments to earnings and profits under Code §312(n), *e.g.*, for construction period carrying charges, generally are made applicable to the computation of adjusted current earnings.[147]

4. Alternative Minimum Tax Treasury Department Study

The Act directs the Secretary of the Treasury to conduct a study of the operation and effects of the book income and current earnings and profits adjustments.[148] The study is to be completed by January 1, 1989.[149]

E. Technical Corrections — Reserves

1. Contracts Without Life Contingencies

Under the 1984 Act, net increases or decreases in reserves are taken into account in computing life insurance company taxable income (LICTI).[150] Included in the items for which increases or decreases are taken into account in computing LICTI are amounts (discounted at the appropriate rate of interest) necessary to satisfy the obligations under insurance and annuity contracts, but only if such obligations do not involve (at the time with respect to which the computation is made) life, accident, or health contingencies.[151] The Act provides that, in computing the increases or decreases of such discounted amounts not involving life contingencies, the amount taken into account for any contract will not be less than the net surrender value of the contract.[152] The Senate Report states, however, that, as is the case with life insurance reserves, "the amounts taken into account cannot exceed the amounts that would be taken into account with respect to such contract as of such time in determining statutory reserves (as defined in §809(b)(4)(B))."[153]

2. Contracts Without Standard Tables

Under the 1984 Act, the "prevailing commissioners' standard table" with respect to a contract means the most recent commissioners' standard table prescribed by the NAIC which is permitted to be used in computing reserves for that type of contract by 26 states at the time the contract is issued.[154] If a prevailing commissioners' standard table as of any January 1 (the "year of change") differs from the prevailing table as of the preceding January 1, the "old" table may be used with respect to contracts issued during the three-year period beginning on January 1 of the year of the change.[155]

The 1984 Act also provided that, if there are no commissioners' standard tables applicable to a contract when it is issued, the mortality and morbidity tables to be used in computing the federally prescribed reserve under Code §807(d)(2) is to be determined under regulations.[156]

The 1986 TRA provides that, when the regulations change the table applicable to a contract, the "new" table is to be treated (for purposes of the "three-year rule" and for purposes of determining the contract's issue date) as if it were a new prevailing commissioners' standard table adopted by the 26th state as of the date specified in the regulations, although no earlier than the date the regulation making the change is issued.[157]

3. Election Not to Have Reserves Recomputed

Under the 1984 Act, certain small life insurance companies may elect to have their Code §807(c)(1) reserves for contracts issued after the beginning of their first taxable year commencing after December 31, 1983, and before January 1, 1989, equal their annual statement reserves for the contracts (with a modification similar to the geometric Menge formula in effect under TEFRA). This provision of the 1984 Act applies only to a company with tentative LICTI at or below $3,000,000 and assets (taking affiliates into account) at or below $100,000,000.[158]

The 1986 TRA amends this election to specify that, in determining whether a company is eligible to make the election, the company must compute its tentative LICTI taking into account reserves as though the election were in effect.[159] In addition, the Act clarifies that the geometric Menge adjustment should be applied to opening and closing statutory reserves in computing net increases or decreases in life insurance reserves.[160] Finally, the Act provides that, if a company makes the election, its reserve for a contract will be the greater of the statutory reserve, as adjusted by the geometric Menge formula, or the net surrender value of the contract.[161]

4. Net Level Reserves for Non-Cancellable A&H Contracts

Under the 1984 Act, the federally prescribed reserve for a noncancellable accident and health insurance contract must be computed using a two-year full preliminary term method.[162] The 1984 Act, however, contained an exception to this rule which treated a company as meeting the federally prescribed reserve method with respect to a noncancellable accident and health insurance contract for a taxable year if the company (1) uses the net level reserve method to compute its tax reserves on such contracts for that taxable year, (2) was using the net level reserve method to compute its statutory reserves on such contracts as of December 31, 1982, and (3) has continuously used such method for computing such reserves on such contracts after December 31, 1982, and through such taxable year.[163]

The Committee Reports explain that, because the provision contained in the 1984 Act "is impractically narrow, and would not result in any taxpayer making the election," the provision has been modified.[164] Under the 1986 Act, the exception will apply to any directly written noncancellable accident and health insurance contract (whether under an existing or new plan of insurance) written by a company if (1) the company used the net level reserve method to compute at least 99% of its statutory reserves on such contracts as of December 31, 1982, (2) the company received more than half its total direct premiums in 1982 from directly written noncancellable accident and health insurance, (3) after December 31, 1983, the company has continuously used the net level reserve method for at least 99% of its tax and statutory reserves on such contracts, and (4) for any such contract for which the company does not use the net level reserve method, the company uses the same method for computing tax reserves and for computing statutory reserves.[165]

F. Technical Corrections — Ownership Differential

1. Equity Base

Code §809(b)(2) defines the equity base for purposes of determining the Code §809 differential earnings amount as a company's surplus and capital increased by (1) nonadmitted financial assets, (2) the excess of statutory reserves over tax reserves, (3) the amount of any mandatory securities valuation reserve, (4) the amount of any deficiency reserve, (5) the amount of any voluntary reserve or similar liability, and (6) 50% of the amount of any provision for policyholder dividends (or other similar liability) payable in the following taxable year. The Act amends Code §809(b)(2) to clarify that no item shall be taken into account more than once in determining a company's equity base.[166] The committee reports explain that this "clarification is made to ensure that items which are specifically included in the equity base are not counted a second time because they may be indirectly included under another item which is included in the equity base." [167]

2. Definition of 50 Largest Stock Companies

The Act modifies in several respects the Secretary's authority under Code §809(d)(4)(C) to exclude companies from the 50 largest stock companies.[168] First, the Act requires any company with a negative equity base to be excluded from the 50 largest stock companies, both for purposes of determining the base period stock earnings rate and for purposes of determining the current stock earnings rate. Second, the authority of the Secretary to exclude by regulation additional companies from the 50 largest stock companies if the inclusion of those companies would, because of the small equity base of the companies, seriously distort the stock earnings rate, is modified to limit the number of companies which could be excluded because of their distorting effects. Specifically, if no company were excluded from the 50 largest stock companies because of a negative equity base, a maximum of two distorting companies could be excluded; if one company with a negative equity base were excluded, one distorting company could be excluded; and if two or more companies with negative equity bases were excluded, no distorting companies could be excluded.

3. Domestic Companies Only

The Act also amends the definition of the "50 largest stock companies" to exclude from that group any foreign stock life insurance company.[169] In addition, the Act specifies that only domestic mutual life insurance companies shall be taken into account in determining the average mutual earnings rate.[170]

4. Statement Gain or Loss from Operations

Under the 1984 Act, a company's "statement gain or loss from operations" for purposes of Code §809 means the company's net gain or loss from operations set forth in its annual statement (1) determined with regard to policyholder dividends, as defined in Code §809, but without regard to federal income taxes, (2) determined on the basis of tax reserves rather than statutory reserves, and (3) properly adjusted for realized capital gains and losses and other relevant items.[171] The Act amends the definition of statement gain or loss from operations to specify that the net gain or loss from operations in the annual statement must be determined by substituting for the amount shown for policyholder dividends on the annual statement the amount of the deduction for policyholder dividends determined under Code §808 prior to the reduction of such amount by the differential earnings amount determined under Code §809.[172]

5. Estimated Taxes

Under the 1984 Act, the differential earnings amount is equal to a mutual life insurance company's average equity base for the taxable year, multiplied by the differential earnings rate for such taxable year.[173] The differential earnings rate for a taxable year is the excess of the imputed earnings rate for the taxable year over the average mutual earnings rate for the second calendar year preceding the calendar year in which the taxable year begins.[174] The Secretary of the Treasury publishes the differential earnings rate after collecting all the data upon which computation of the rate depends. In addition, under the 1984 Act the differential earnings amount for a year is recomputed when the Secretary has received sufficient tax return information to determine the differential earnings rate for that year on the basis of the average mutual earnings rate for that year.[175]

The Act makes two changes to prevent imposition of additions to tax under Code §6655 for underpayments of estimated taxes as a consequence of the operation of Code §809. First, the Act provides that, for purposes of determin-

ing compliance with the installment payment requirements for estimated taxes under Code §6655, the amount of tax shall be determined by using the lesser of (1) the differential earnings rate for the second taxable year preceding the taxable year for which the installment is made, or (2) the differential earnings rate for the taxable year for which the installment is made.[176] Second, the Act provides that, if a mutual life insurance company's income tax liability for a taxable year is increased (or decreased) as a result of the recomputed differential earnings rate, the company's liability for estimated tax payments for that taxable year will not be affected by that increase (or decrease).[177]

6. High Surplus Mutual

The 1984 Act contained a special transition rule for mutual life insurers which had more surplus in relation to their assets than was characteristic of the mutual segment of the industry. Under Code §809(i), in the case of such a "high surplus" mutual life insurance company no differential earnings amount is computed with respect to a portion of the company's "excess equity base." Code §809(i)(2) defines such excess equity base. The Act provides that in the case of a certain mutual life insurance company, the amount of the company's excess equity base will equal $175,000,000. *See* Act §1821(q).

G. Technical Corrections — Proration

Under the 1984 Act, as under prior law, net investment income must be allocated between the company's share and the policyholders' share. Net investment income equals 90% of gross investment income. The company's share of net investment income is the excess (if any) of net investment income over the sum of (1) required interest at the prevailing state assumed rate for Code §807(c) reserves (other than unearned premiums and unpaid losses); (2) the deductible portion of excess interest; (3) the deductible portion of amounts not taken into account under (1) or (2) which are credited to a policyholder's fund under a pension plan contract for employees (except retired employees) or to a deferred annuity contract before the annuity starting date; and (4) a fraction (the "minifraction") of the deductible portion of policyholder dividends, but not including the deductible portion of any amounts included under (2) or (3), and not including the deductible portion of the premium and mortality charge adjustments under contracts paying excess interest during the taxable year.

The numerator of the minifraction is gross investment income for the taxable year, less the amounts taken into account under (1), (2), and (3). (Items (1), (2), and (3) are referred to as "policy interest.") The denominator of the minifraction is life insurance gross income (including tax-exempt interest) less the increase (if any) in Code §807(c) reserves. *See* Code §812.

Although the deduction for dividends received is prorated between the company and its policyholders in the manner described above, "100% dividends" are not so prorated. In general, "100% dividends" are dividends received from subsidiaries more than 80% owned by the life insurance company. However, 100% dividends are subject to proration to the extent that the dividends themselves are derived (wholly or in part) from tax-exempt interest or dividends that are not 100% dividends at the paying subsidiary's level.

The Act makes a number of technical corrections to these proration provisions. First, the Act amends the definition of required interest on reserves for purposes of determining the company's share of net investment income to provide that, where a company has not used the prevailing state assumed rate "another appropriate rate" is to be used.[178] The Act also adds to the items included in policy interest interest on amounts left on deposit with the company.[179] The committee reports cite as an example of this item "interest paid on deposit administration contracts that provide no permanent purchase rate guarantees . . . ."[180]

The Act redefines the denominator of the minifraction to eliminate a circularity problem in the computation.[181] The definition of net investment income is also amended to provide that, in the case of gross investment income attributable to assets held in segregated asset accounts for variable contracts, net investment income equals 95% of gross investment income.[182] The Act provides several special rules for interest received by a life insurance company with respect to a securities acquisition loan as defined in Code §133(b). Specifically, interest received from such ESOP loans is not to be included in either "gross investment income" or "tax-exempt interest" for purposes of the proration formula or for purposes of computing net increases or decreases in reserves under Code §807(a) and (b).[183] In addition, interest on such loans is not includible in life insurance gross income for purposes of the mini-fraction's share of the deductible portion of policyholder dividends.[184] The Act also restores a rule of prior law with respect to treatment of dividends within an affiliated group filing a consolidated return. This rule requires that a company compute its policyholders' share of net investment income as if the company had not filed a consolidated return.[185] Finally, the Act adds a special rule to prevent the "double proration" of 100% dividends received from an insurance company subsidiary.[186]

H. Technical Corrections — Variable Contracts

1. Variable Life: The "Look Through" Rule

Under the 1984 Act, the investments in a segregated asset account underlying variable life insurance contracts and variable annuity contracts must be adequately diversified for the contracts to be treated as life insurance contracts or annuity contracts, respectively. Code §817(h) provides a statutory safe-harbor for diversification, a special rule for variable life insurance contracts based on a segregated asset account investing in United States Treasury obligations, and a special rule for investments in

[186] Act §1821(p); Code §805(a)(4).

regulated investment companies or trusts which allow investments only by insurance companies or segregated asset accounts. Under this last rule, the "look through" rule, a segregated asset account is treated as owning a pro-rata share of the underlying investments in the regulated investment company or trust.

The Act clarifies the special rule for variable life insurance contracts based on segregated asset accounts which invest in securities issued by the United States Treasury.[187] The Act provides that, with respect to such contracts, the segregated asset account will be treated as adequately diversified to the extent it is invested in securities issued by the United States Treasury.[188] The Act broadens the look-through rule to allow shares or units of an underlying fund to be held by the general account of an insurance company or by a fund manager.[189] Thus, the look-through rule will continue to apply as long as all the units or shares of the underlying fund are held by (1) insurance companies or affiliated companies, or (2) fund managers or affiliated companies, in connection with the creation or management of the regulated investment company or trust.

2. Variable Contracts with Guarantees

In recent years, insurers have developed annuity and pension plan contracts that combine separate account features with guarantees. Net premiums paid for such contracts are placed in a separate account and the amount paid in, or the amounts paid out, vary directly with the investment return and market value of the separate account assets. Additionally, these contracts provide that if assets in the account are insufficient to meet stated guarantees, the insurer will make payments from the general account to satisfy the guarantees.

Questions had arisen concerning whether, because of the guarantees, such contracts satisfied the condition for variable contract treatment contained in Code §817(d)(3)(A) which requires, in the case of an annuity contract, that the amounts paid in, or the amounts paid out, reflect the investment return and market value of the segregated asset account. In addition, assuming such contracts were described in Code §817(d), questions arose concerning the proper tax treatment of the contracts where the assets in the account became insufficient to satisfy the insurer's liability for amounts guaranteed under the contracts.

The Act amends Code §817(d) to resolve these issues.[190] The Act provides that variable contracts will be taxed in accordance with the rules of §817 even though the contracts contain guarantees. Thus, the amendment assures that such contracts will continue to be accounted for in accordance with Code §817 where, because of the guarantees, the insurer's total obligation under the contract exceeds the value of the separate account assets. In addition, the amendment clarifies that in such situations the portion of the total obligation attributable solely to the guarantees will be accounted for as part of the general account. Under a special effective date rule, this amendment applies to contracts issued after December 31, 1986 and, if the contract was treated as a variable contract on the company's tax return, to contracts issued before January 1, 1987.[191]

I. Technical Corrections — Fresh Start

1. In General

Under the 1984 Act, a life insurance company (except for purposes of qualification) was required to compute its reserves for its first taxable year beginning after December 31, 1983, as if the federal reserve standards under the 1984 Act applied with respect to all then-existing contracts when they were issued. Absent special relief, this provision would have caused virtually all companies to have experienced income (from the reserve decrease). To avoid such a problem, the 1984 Act provided, as a general rule, that any change in reserve (or accounting) methods attributable solely to the 1984 Act was not to be treated as a change in reserve (or accounting) method.[192] Thus, a "fresh start" was provided, and the flow of reserve decreases into gross income was precluded. The fresh start, however, did not apply to certain reserves, including (a) any reserve transferred pursuant to a reinsurance agreement entered into, or modified, after September 27, 1983, and before January 1, 1984, and (2) any reserve subject to a "reserve strengthening" reported for federal income tax purposes after September 27, 1983, for a taxable year ending before January 1, 1984. The 1984 Act also changed the deduction for dividends to policyholders from the amount of policyholder dividends paid during the taxable year plus the increases (or less the decreases) in the reserve for policyholder dividends that were payable during the year following the taxable year to the amount of policyholder dividends paid or accrued during the taxable year.[193] Under the fresh start rule, this change in the policyholder dividend deduction was not treated as a change in method of accounting and companies received a fresh start in computing that deduction. The Act makes several changes with respect to the fresh start provisions of the 1984 Act.

2. Accelerated Policyholder Dividends

First, the Act amends Code §808 to add a provision which limits the benefits of the fresh-start adjustment by reducing a company's deduction for policyholder dividends (prior to any differential earnings amount reduction under Code §809) if the company accelerates its policyholder dividends by changing its business practices. Specifically, a company's policyholder dividend deduction is reduced by the amount of the "accelerated policyholder dividends deduction," but not in excess of the "1984 fresh start adjustment for policyholder dividends." The latter amount is, in general, the amount held at year-end 1983 as a reserve for dividends to policyholders, but reduced by dividends which had accrued by that date and by dividends which would not have deductible under former Code §809(f). With respect to the "accelerated policyholder dividends deduction," the committee reports explain that:

> The term "accelerated policyholder dividends deduction" means the amount that would be determined for

[187] Act §1821(m).
[188] Code §817(h)(3).
[189] Code §817(h)(4).
[190] Act §1821(t).
[191] Act §1821(t)(2).
[192] 1984 Act §216(b).
[193] Code §808(c).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

the taxable year as policyholder dividends paid or accrued, but which would have been determined for a later taxable year under the business practices of the company as in effect at the close of the preceding taxable year. Thus, the types of changes in business practices that would result in an accelerated policyholder dividends deduction include guaranteeing of policy dividends on termination for a particular product line or changing the actual payment date of policy dividends (for example, by making such dividends available upon declaration). On the other hand, changes in plans of insurance being sold or the development of new products will not be treated as resulting in an accelerated policyholder dividends deduction. For example, the introduction and sale of a universal life insurance product that credits excess interest to the cash surrender value on a monthly basis and that may depart from prior business practices of selling traditional participating life insurance policies that pay policy dividends at the policy anniversary date is not the type of change in business practice covered by this provision.[194]

The 1986 TRA limitation does not apply (1) to a simple change in the amount of policyholder dividend, *e.g.*, a change in dividend scale, (2) to policyholder dividends with respect to a policy issued after December 31, 1983, and (3) to policyholder dividends with respect to group policies issued in connection with employee welfare benefit plans.[195]

3. Other Changes With Respect to Fresh Start

The Act clarifies that with respect to reserves for which a fresh start is denied, *e.g.*, a reserve transferred by a reinsurance agreement, the change is to be taken into account under the 10-year spread of Code §807(f) if such amount would have been taken into account over 10 years under former Code §810(d).[196] The Act also clarifies the treatment of reserves which were subject to the former Code §818(c) election after September 27, 1983, and which were excepted from the 1984 Act rule providing that such elections generally were ineffective.[197] In addition, the Act provides a further exception to such rule.[198] The Act also clarifies the application of the 1984 Act's limitation on fresh start with respect to reserves transferred pursuant to reinsurance transactions in the case of a reinsurer which has a taxable year other than a calendar year.[199] Finally, the Act specifies the taxable year in which the fresh start adjustment shall be taken into account in determining an insurance company's earnings and profits.[200]

J. Technical Corrections — Miscellaneous

The Act makes a number of additional miscellaneous technical corrections to the 1984 Act's provisions with respect to the taxation of life insurance companies. These changes are detailed below.

(1) The definition of excess interest in Code §808(d)(1)(B) is amended to provide that excess interest with respect to a contract refers only to the amount of interest in excess of the prevailing state assumed rate for such contract.[201]

(2) The Act specifies the manner in which a foreign life insurance company conducting business in the United States should compute its life insurance company taxable income if there is an increase under Code §813 in the company's income effectively connected with the conduct of an insurance business within the United States. The Act provides that any such increase shall be included in gross investment income and added to life insurance gross income before computing the amount of the small life insurance company deduction and the special life insurance company deduction.[202]

(3) The Act restores to the Code a provision of prior law (former Code §819(b)) which sets out rules applicable to distributions from Policyholders Surplus Accounts of foreign life insurance companies doing business in the United States.[203]

(4) The Act clarifies that an "indirect distribution" from a Policyholders Surplus Account does "not include any bona fide loan with arm's-length terms and conditions."[204] The committee reports provide the following commentary:

> [A]n indirect distribution will be treated as occurring whenever policyholders surplus account funds are used to benefit the shareholders indirectly. For example, this may occur by using such funds to purchase stock of a parent or an affiliated company or by using such funds to make loans within an affiliated group for less than adequate consideration. Whether or not a loan is made with arm's-length terms and conditions may be determined by reference to §482 (relating to the allocation of income and deductions among taxpayers) and the regulations thereunder.[205]

Absent arm's-length terms and conditions, the amount which will be treated as an indirect distribution from the Policyholders Surplus Account is limited to the forgone loan made before March 1, 1986, unless the loan is renegotiated, extended, renewed, or revised after February 28, 1986.[206]

(5) The Act restores a provision of prior law which excludes deficiency reserves from the definition of life insurance reserves and total reserves for purposes of the qualification ratio of §816 and for purposes of the computation of surplus held by a foreign life insurance company doing business in the United States under Code §813(a)(4)(B).[207]

(6) The 1984 Act contained a relief provision applicable to corporations which made underpayments of estimat-

ed tax because of the insurance company subtitle of the 1984 TRA.[208] The 1986 Act contains a relief provision of general applicability and the insurance subtitle relief provision of the 1984 Act is therefore repealed.[209] In addition, the Act provides that no interest shall be payable for any period before July 19, 1984, on any underpayment of tax imposed by the Code to the extent such underpayment was attributable to the insurance company subtitle of the 1984 Act.[210]

(7) The Act extends the definition of a pension plan contract set out in Code §818(a)(6) to include an eligible state deferred compensation plan within the meaning of Code §457(b).[211]

(8) TEFRA enacted a "grandfather" provision with respect to the treatment of modified coinsurance contracts for taxable years prior to 1982. Under the grandfather provision, except in the case of fraud, (1) any determination as to whether a contract met the requirements of former Code §820 was to be made solely by reference to the terms of the contract, and (2) the treatment of such a contract was to be determined under the Treasury regulations in effect on December 31, 1981. In 1986, the Service issued certain audit "guidelines" with respect to the treatment of modified coinsurance contracts for taxable years prior to January 1, 1982. The guidelines concerned (1) the date on which modified coinsurance contracts became effective, and (2) the rate at which investment income was transferred under the contracts. In response to the guidelines, the Act contains a clarification of the TEFRA grandfather.[212] The Conference Report explains this "great grandfather" as follows:

> The provision clarifies the intent of Congress that, for taxable years prior to January 1, 1982, the IRS should give full and complete effect to the terms of a modified coinsurance contract. Accordingly, under the provision, the IRS is to respect the manner in which the terms of a modified coinsurance contract have been reflected on the tax return. In particular, the provision requires the IRS to recognize the investment income rate terms and the effective date terms stated in the contract.[213]

V. Policyholder Provisions

A. *Life Insurance Contracts*

1. *Withdrawals*

As enacted in the 1984 TRA, Code §7702, which sets forth the definition of a life insurance contract for federal tax purposes, contained two provisions with respect to changes in the terms of a contract. Code §77O2(f)(2)(A) provided that, in the event of a change in the future benefits (or in any other terms) under the contract which had not been reflected in previous computations under Code §7702, there were to "be proper adjustments in future determinations" under the section. The adjustments were to be made pursuant to regulations. In addition, pursuant to Code §7702(f)(7)(5), any change in the terms of a contract which resulted in the reduction of the future benefits under the contract was to be treated as an exchange. The effect of this rule, according to the 1984 TRA committee reports, was to bring such a change within the ambit of Code §1035. Code §1035 generally provides that gain or loss is not to be recognized on the exchange of one life insurance contract for another, but also provides that, if cash or other property is distributed in connection with an otherwise tax-free exchange of contracts, gain is to be recognized to the extent of the cash or other property distributed, as specified in Code §1031.[214]

The scope of the deemed exchange rule of Code §7702(f)(7)(B) was unclear. The 1984 TRA committee reports explained that the genesis of the rule lay in the Treasury's desire to provide for "gain out first" taxation of amounts distributed from a life insurance contract because of a reduction in the guideline premium limitation due to a change in a universal life insurance contract from an "option 2" death benefit pattern (a death benefit equal to the cash surrender value at death plus a level amount of pure insurance protection) to an "option 1" pattern (a level face amount). It was uncertain however, whether Treasury would limit the scope of the rule in this manner, or whether it would adopt regulations taking a more expansive reading altering the traditional recovery of basis first rules of Code §72(e). In particular, concern arose that, if a partial withdrawal was made from a universal life policy, or if a paid-up addition under a participating policy was surrendered, the cash distributed might be taxable.

In response to this uncertainty, the 1986 TRA made several significant changes in Code §7702(f)(7). First, the Act amended Code §7702(f)(7)(A) to delete the express authority of the Treasury to issue regulations governing adjustments. Second, the Act amended Code §7702(f)(7)(B) to delete the deemed exchange rule and to substitute specific rules — tied to the Code §7702 definitional test applicable to the contract — for determining the extent to which a reduction in benefits will result in income being recognized by the policyholder. The revised rules provide generally that, if a change in benefits within the scope of Code §7702(f)(7)(A) reduces benefits, and a cash distribution is made to the policyholder "as a result of such change," the portion of such distribution which does not exceed the applicable "recapture ceiling" is includible in income to the extent of the income in the contracts as measured under the rules applicable to annuity contracts.[215] This rule applies only to changes occurring within 15 years of the issue date of the contract. Thereafter, the historic rules applicable to life insurance contracts under Code §72(e), *i.e.*, recovery of investment first, apply.

Section 7702(f)(7)(B) contains two different "recapture ceilings." The first, defined in Code §7702(f)(7)(C),

[208] 1984 TRA §218.
[209] Act §§1824, 1879(a).
[210] Act §1829.
[211] Act §1821(n).
[212] Act §1830.
[213] Conference Report, p. II-848.
[214] S. Rep. 98-169, 98th Cong., 2d Sess. 578 (1984); H.R. Rep. No. 432, 98th Cong., 2d Sess. 1448 (1984).
[215] Specifically, §72 (other than subsection (e)(5) thereof) applies to the cash distribution to the extent it does not exceed the applicable recapture ceiling.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

applies where the change in benefits occurs during the first five years after the contract is issued. The second recapture ceiling, defined in Code §7702(f)(7)(D), applies where the change occurs after the first five years and before the sixteenth year after issue.

The recapture ceiling applicable to changes during the first five contract years depends on which of the two definitional tests of Code §7702 the contract is meeting. If a contract is qualifying as a life insurance contract under the cash value accumulation test of Code §7702(a)(1), the recapture ceiling equals the excess of the contract's cash surrender value immediately before the benefit reduction over the "net single premium" for the contract immediately after the reduction. If a contract is qualifying under the guideline premium and cash value corridor tests of Code §7702(a)(2), the recapture ceiling is the greater of (1) the excess of the sum of the premiums paid under the contract immediately before the benefit reduction over the guideline premium limitation for the contract immediately after the reduction, and (2) the excess of the cash surrender value immediately before the reduction over the cash value corridor limitation of Code §7702(d) immediately after the reduction. The Senate Report states that the guideline premium limitation after the benefit reduction shall be determined by using an "attained-age-decrement" method. The committee reports explain this method as follows:

> Under this method, when benefits under the contract are reduced, the guideline level and single premium limitations are each adjusted and redetermined by subtracting from the original guideline premium limitation a "negative guideline premium limitation" which is determined as of the date of the reduction in benefits and at the attained age of the insured on such date. The negative guideline premium limitation is the guideline premium limitation for an insurance contract that, when combined with the original insurance contract after the reduction in benefits, produces an insurance contract with the same benefit as the original contract before such reduction.[216]

The recapture ceiling applicable to changes during years six through 15 is the same irrespective of whether the contract is qualifying under the cash value accumulation test or the guideline premium and cash value corridor tests. During these years, the recapture ceiling equals the excess of the contract's cash surrender value immediately before the benefit reduction over the cash value corridor limitation of Code §7702(d) immediately after the reduction.[217]

The Act also contains a special rule providing that, in certain circumstances, cash distributions from contracts which are made in "anticipation of benefit reductions" will be treated as being made as a result of the benefit reduction and will therefore be subject to the above rules. Specifically, Code §7702(f)(7)(E) provides that such rules shall apply, under Treasury regulations, "to any distribution made in anticipation of a reduction in benefits under the contract." In addition, in all circumstances, any distribution which is made within two years before a reduction in benefits under the contract and which reduces the cash surrender value of the contract will be treated as made "in anticipation of such reduction" and thus subject to such rules.[218]

The foregoing changes apply only to life insurance contracts to which Code §7702 is applies, *i.e.*, generally, contracts issued after December 31, 1984. These changes, however, are effective retroactively to the effective date of Code §7702.

2. Policy Loans

a. Consumer Interest

The Act phases out over a four-year period the deduction for consumer interest by individuals. Specifically, in the case of a taxpayer other than a corporation, no deduction will be allowable after the phase out is complete for "personal interest." Personal interest means any interest other than (1) interest on indebtedness incurred or continued in connection with the conduct of a trade or business (other than as an employee); (2) interest on indebtedness incurred or continued to purchase or carry property held for investment, *i.e.*, investment interest which is subject to separate limitations; (3) interest taken into account in connection with the limitations on losses from passive activities under Code §469; (4) qualified residence interest; and (5) interest on certain estate tax payments.[219] In 1987, 35% of the otherwise allowable interest deduction is disallowed, 60% in 1988, 80% in 1989, and 90% in 1990. Thereafter, no personal interest deduction is allowed.

b. Revised Code Section 264 Limit

In addition to the general limitations on the deduction of personal interest described above, the Act imposed a revised limit on the deductibility of interest on business life insurance policy loans.[220] Specifically, the Act amended Code §264(a) to disallow the deduction of interest on "indebtedness with respect to" any life insurance policy which a taxpayer owns and which insures an officer or employee of, or a person with a financial interest in, any trade or business carried on by the taxpayer, but only to the extent the indebtedness with respect to a particular insured exceeds $50,000.[221] The Conference Report explains that the $50,000 limit is applied on a "per insured" and not a "per business" basis. Thus, the Report states that:

> if an employee of a business of the taxpayer is also an officer in two other businesses of the taxpayer, the $50,000 of permitted borrowings by the taxpayer with respect to life insurance covering the person is determined by aggregating all policies covering his life with respect to which the taxpayer has borrowed.[222]

The Conference Report also contains the following statement:

> Under the conference agreement, the fact that the proceeds of a loan under a life insurance contract are used in a trade or business does not affect the deduct-

[219] Act §511(b); Code §163(h).
[220] Act §1003.
[221] Code §264(a)(4).
[222] Conference Report, p. II-341.

> ibility of interest paid on the loan. Therefore, for example, if a sole proprietor borrows under a life insurance policy on the sole proprietor's life, the interest paid on the loan (to the extent the loan exceeds $50,000) is not deductible even though the proceeds of the loan are used in the sole proprietor's trade or business.[223]

While the Conference Report thus seems to provide that the purpose of a policy loan does not alter the limitations imposed by Code §264(a)(4), it does not directly address whether pledging the policy as collateral or other borrowing by the owner could result in a disallowance of an interest deduction under this provision. This question of "tracing" was discussed during the floor-debate on the Act, but there appears to be disagreement between the House and the Senate.[224]

The amendment is effective with respect to contracts purchased after June 20, 1986.[225] There were several discussions of this effective date during and after the floor consideration of the Act.[226] There appears to have been agreement in these discussions that, if an application had been made on or before June 20, 1986, the contract is considered to have been purchased before the effective date of the amendment. There was disagreement between the House and the Senate, however, as to whether certain changes, or exchanges, after June 20, 1986, would be considered to result in the purchase of a new contract subject to the limits of Code §264(a)(4). As a result, there is continuing uncertainty about the consequences under this rule of changes in, and exchanges of, contracts purchased on or before June 20, 1986.

c. Single Premium Contracts

Under Code §264(a)(2), no deduction is allowable for interest on indebtedness incurred "to purchase or carry" a single premium life insurance, endowment, or annuity contract. A single premium contract is a contract where "substantially all" the premiums for the contract are paid within four years, or where an amount is deposited with the insurance company for payment of a "substantial number" of future premiums for the contract.[227] Although H.R. 3838 as reported from the Ways and Means Committee did not amend these rules for single premium contracts, the House Report did discuss the Committee's view of the scope of the rules. In particular, the Report observed that "indebtedness secured by a single premium life insurance contract is generally subject to the rule of §264(a)(2). Section 264(a)(2) also applies to all contracts other than those where the nonpayment of premiums would cause the policy to lapse."[228] The House Report also stated that it had "come to the Committee's attention that some practitioners may characterize a universal life insurance policy as a policy that provides for annual premiums due for purposes of the four out of seven rule" of Code §264(c)(1).[229] Some life insurance companies expressed concern that this language implied that universal life insurance contracts should be viewed as single premium life insurance contracts for purposes of Code §264(a)(2). In response to this concern, the Conference Report "restates the present-law rule" of Code §264 with respect to single premium contracts and, in so doing, observes that

> Generally, §264(a)(2) also applies to contracts other than those where the nonpayment of premiums would cause the policy to lapse, but no inference is intended that universal life insurance policies are always treated as single premium contracts.[230]

3. Installment Payments of Death Benefits

Amounts paid under a life insurance contract by reason of the death of the insured generally are excludible from gross income. Where the insurer agrees to hold the death proceeds on deposit and to make payments over a period of time, a prorated amount of each payment is treated as a payment of the death benefit excludible from gross income and a portion is includible in gross income.[231] Under an exception to the latter rule, however, the first $1,000 in excess of the amount treated as a payment of the death benefit received by a surviving spouse is excludible from gross income each year. The amount treated as held as by the insurer is the amount that equals the value of the agreement to make payments at a later date, or dates, determined as of the date of the insured's death and discounted on the basis of the interest rate and mortality tables used by the insurer in calculating payments under the agreement.

The Act makes two changes in the treatment of death benefits paid under such installment agreements. First, the Act repeals the annual exclusion from gross income for the first $1,000 in excess of the amount payable as death benefits to a surviving spouse.[232] Second, the Act requires that the value of the amount held by the insurer be determined on the basis of mortality tables to be prescribed in regulations, rather than the tables actually used by the insurer.[233] The Senate Report explains that it is expected that the mortality tables prescribed in the regulations will be gender-neutral.[234] These changes apply to amounts received with respect to deaths occurring after the date of enactment of the Act.[235]

4. Definition of Life Insurance — Technical Corrections

The Act makes several amendments to the definition of a life insurance contract set forth in Code §7702. First, the

second computational rule under Code §7702(e) is clarified to provide that the maturity date, including the date on which any endowment benefit is payable, shall be deemed to be no earlier than age 95 and no later than age 100.[236] As enacted in 1984, this rule could have been viewed as actually requiring the contract to mature between those dates, rather than simply assuming such a maturity date for purposes of determining compliance with the statutory tests. In addition, a computational rule is added which states that the death benefits shall be deemed to be provided until the maturity date determined under the second computational rule.[237] The committee reports explain that:

> This rule combined with the second computational rule will generally prevent contracts endowing at face value before age 95 from qualifying as life insurance. However, it will allow an endowment benefit at ages before 95 for amounts less than face value.[238]

Also, the Act clarifies that the computational rules do not apply in determining whether a contract satisfies the cash value corridor test of Code §7702(d).[239]

The Act also adopts a special rule allowing contracts which were purchased to cover payment of burial expenses, or which were purchased in connection with prearranged funeral expenses, to take into account limited increases in the amount of the death benefit in determining compliance with the cash value accumulation test.[240] The exception is limited to contracts with an initial death benefit of $5,000 or less and a maximum death benefit of $25,000 or less. In addition, the initial death benefit is to be determined by aggregating all the contracts issued to the same contract owner.

The Act also clarifies the rule in Code §7702(g) for measuring the income on a life insurance policy which fails to qualify as a life insurance contract for federal tax purposes.[241] Specifically, the amendment provides that the income in the contract is computed without reduction by the amount of policyholder dividends paid under the contract during the taxable year. The committee reports explain that this change was necessary to prevent overstating the income in the policy.[242]

As a result of the amendments made in Code §7702(f)(7), described previously, the Act amends the defintion of "premiums paid" in Code §7702(f)(1). The amendment provides that for purposes of Code §7702, the premiums paid under a "life insurance contract shall be reduced by amounts included in the policyholder's income under Code §7702(f)(7) because of a reduction in benefits under the contract.

Finally, the Act amends two transition rules under the 1984 Act with respect to the definition of a life insurance contract. The Act provides that any life insurance policy issued during 1984 which meets the requirements of Code §7702 will be treated as meeting the requirements of Code §101(f) which were applicable in 1984.[243] In addition, the Act clarifies a transition rule provided for certain increasing death benefit policies.[244]

B. Group-Term Life Insurance-Technical Corrections

Act §1827 contains a number of technical clarifications to the 1984 TRA amendments[245] to Code §§79 and 83(e).

1. Determination of Cost for Discriminatory Plans

Code §79(d)(1)(B) was amended, by Act §1827(a), to provide that, in the case of a discriminatory group-term life insurance plan, the cost of group-term life insurance on the life of any key employee shall be the *greater* of the actual cost of the insurance or the amount specified in the uniform premiums table (the "Table I" rates in Regs. §1.79-3(d)(2)). Prior law required key employees to include only the actual cost of the insurance. The Joint Committee Blue Book accompanying the 1984 TRA indicated that such a technical correction was necessary to reflect congressional intent. This amendment is effective for taxable years ending after the date of enactment of the 1986 Act.

2. Definition of Key Employee

Act §1827(c) amends the definition of "key employee" for group-term life insurance purposes (Code §79(d)(6)) to include any retired employee who was a key employee at the time of retirement or separation from service. An employee is key employee at separation from service if the employee was a key employee for the year in which the separation occurs or for any of the four preceding years (see Code §416(i)(1)).

3. Separate Treatment of Former Employees

Act §1827(d) amends Code §79(d), relating to the nondiscrimination requirements applicable to the group-term life insurance provisions, by adding paragraph (8). This paragraph clarifies that, to the extent provided in regulations, the nondiscrimination rules are to be applied separately with respect to former employees and active employees. This statutory provision is consistent with the Blue Book explanation accompanying the 1984 TRA which indicated that separate treatment of retired and active employees would be appropriate because employers often provide lower group-term benefits to retirees.

4. Coordination with Code Section 83

Act §1827(e) makes a clerical correction to Code §83(e)(5), which coordinates that section with Code §79. This correction provides that §83 shall not apply to "group-term life insurance to which §79 applies." Prior law excepted only the cost of such group-term life insurance. Basically, this correction attempts to clarify that, if §79 group-term life insurance is involved, then §79, rather than §83, controls.

5. Clarification of Effective Date

Act §1827(b) provides several clarifications and an amendment to 1984 TRA §223(d)(2), the effective date

[236] Act §1825(a)(1)(A); Code §7702(e)(1)(B).
[237] Act §1825(a)(1); Code §7702(e)(1)(C).

provision relating to the inclusion of former employees in the case of existing group-term insurance plans. Section 223(d)(2)(C) of the 1984 TRA, relating to benefits provided to certain individuals who retired before January 1, 1987 not being taken into account for purposes of determining whether a plan is discriminatory, was amended to permit such retired individuals to be disregarded at the employer's election.[246]

The several clarifications relate to what qualifies as a comparable successor plan and what individuals were grandfathered under 1984 TRA §223(d)(2). A comparable successor plan includes, with respect to a grandfathered individual, any plan that does not provide increased benefits. If, however, the grandfathered individual's benefits are increased, the individual loses his grandfather protection.[247] It is clarified that individuals who retired before January 2, 1984, (whether or not they had attained age 55 as of such date) are grandfathered. Moreover, it is made clear that the grandfather provisions apply only to individuals who reached age 55 before January 2, 1984 (and not to any employer group-term life insurance plan in existence on January 1, 1984) and who were employed by such employer, or a predecessor employer, at any time during 1983.[248]

C. *Nonqualified Annuity Contracts*

In TEFRA and again in the 1984 TRA, Congress made a substantial number of revisions to the tax treatment of nonqualified deferred annuity contracts to restricting the use of annuities as retirement savings, as opposed to short-term investment vehicles. The 1986 Act expands on this general theme and, in addition, directly addresses the use of nonqualified annuity contracts in deferred compensation arrangements. Congress adopted these changes in part out of a concern that the pre-1986 Code provided an incentive for employees to use nonqualified annuity contracts in deferred compensation arrangements in lieu of providing such benefits under qualified pension plans, which are subject to greater restrictions including nondiscrimination rules and limits on contributions.

1. Nonindividual Owners

Under the pre-1986 Code, an annuity policyholder is not taxed currently on the interest credited to his or her annuity contract (the "inside buildup") until such policyholder receives these amounts either directly or constructively. Code §72(e) provides that amounts received under an annuity contract before the "annuity starting date" are considered withdrawals of income credited to the contract to the extent of such investment income (a "LIFO" rule). In the case of amounts received after the "annuity starting date," the policyholder is taxed at ordinary income rates on the interest income under an "exclusion ratio."

Under the 1986 Code, the inside buildup on individually owned annuity contracts continues to not be taxed until such amounts are received, either directly or constructively. The 1986 Code, however, would subject to current taxation the inside buildup on non-individually owned contracts.

Act §1135(a) adds Code §72(u) which provides that, if an annuity contract is held by a corporation, trust, or any person who is not a "natural person," such contract will, for all federal income tax purposes not be treated as an annuity contract.[249] If, however, the contract's nominal owner is not a natural person but the beneficial owner is a natural person, the contract will be treated as held by a natural person.[250] Because of the general concern over the use of nonqualified annuities in deferred compensation arrangements, the committee reports note that this exception will not be available if an employer is the nominal owner and the beneficial owner is an employee.[251]

If the contract is not an annuity contract under Code §72(u), the income on the contract for any taxable year of the policyholder will be treated as ordinary income received or accrued by the policyholder during that year. For this purpose, Code §72(u)(2) provides that the income on the contract is the amount by which (1) the sum of the net surrender value of the contract at the end of the taxable year and any amounts distributed under the contract for all years exceeds (2) the amount of premiums paid, less any policyholder dividends or the aggregate amounts received under the contract that have not been included in income. To prevent tax avoidance, the Service is given the authority to substitute the contract's "fair market value" for its net surrender value in the foregoing computation.

Code §72(u)(3) provides five specific exceptions to the tax on the inside build-up on contracts not held by natural persons. The provision does not apply to (1) annuity contracts acquired by a decedent's estate due to his or her death; (2) annuity contracts held (a) by a qualified pension, profit-sharing, or annuity plan, (b) under a tax-sheltered annuity, or (c) under an individual retirement plan; (3) annuity contracts used to fund structured settlement agreements; [252] (4) annuity contracts purchased by an employer upon termination of a pension plan and held by such employer until such time as the employee separates from service with that employer; and (5) immediate annuities. Code §72(u)(4) defines immediate annuity as an annuity contract purchased with a single premium or annuity consideration, the annuity starting date [253] of which commences no later than one year from the date of the purchase of the contract.

Code §72(u) is effective as to contributions for annuity contracts after February 28, 1986.[254]

---

[246] Act §1827(b)(2).
[247] Act §1827(b)(3).
[248] Act §1827(b)(2).

[249] The statutory language in Code §72(u)(1)(A) provides that such a contract will not be treated as an annuity contract "for purposes of this subtitle." Thus, the contract apparently will not be treated as an annuity for company tax purposes (such as for qualification purposes under Code §816 or for diversification purposes under Code §817(h)), as well as for policyholder purposes under Code §72.
[250] House Report at 704; Senate Report at 567.
[251] *Id.*
[252] The structured settlement exception applies to qualified funding assets purchased by structured settlement companies under Code §130 and to contracts which meet the definition of qualified funding assets under Code §130(d) but are purchased and held directly by property-casualty companies to fund periodic payments for damages.
[253] Annuity starting date is defined in Code §72(c)(4) as "the first day of the first period for which an amount is received as an annuity under the contract."
[254] Act §1135(b).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

2. Penalty Tax

In TEFRA and in the 1984 TRA, Congress amended Code §72 to provide for a penalty tax on certain "premature" distributions (*e.g.*, those prior to age 59½) from annuity contracts. The tax is equal to 5% of the amount includible in income. This penalty did not apply, however, to a distribution that is (1) made after the policyholder reaches age 59½; (2) made to a beneficiary on or after the death of the annuitant; (3) attributable to the policyholder becoming disabled; (4) one of a series of substantially equal periodic payments for life or at least five years (the 60-month rule); (5) from a qualified pension plan; or (6) allocable to an investment before August 14, 1982.

In Act §1123(b), Congress revised the penalty tax for certain "premature" distributions from annuity contracts as part of the overall effort to provide substantially uniform treatment for early withdrawals from all retirement products, including both qualified contracts (including IRAs) and nonqualified contracts.

Act §1123(b) amends Code §72(q) to increase the penalty tax from 5% to 10% of the amount includible in income and to revise the exceptions from the penalty tax in Code §72(q)(2), including the elimination of the pre-1986 TRA law exception for distributions made over a period of at least 60 months. As revised, Code §72(q)(2) provides that the 10% penalty tax does not apply to (1) distributions made on or after the policyholder attains age 59½; (2) in the case of distributions made after April 22, 1987, distributions made on or after the death of the holder of the contract (or where the holder is not an individual, the death of the primary annuitant);[255] (3) distributions attributable to the policyholder becoming disabled; (4) substantially equal periodic payments over the life (or life expectancy) of the taxpayer or the joint life (or joint life expectancy) of the taxpayer and his or her beneficiary; (5) distributions from a qualified pension plan; (6) distributions attributable to contributions before August 14, 1982; (7) distributions from a qualified funding asset under a structured settlement agreement;[256] (8) distributions under an immediate annuity as defined in post-1986 TRA Code §72(u)(4) discussed *infra*; and (9) distributions from an annuity purchased by an employer upon termination of a qualified plan held by the employer until the employee separates from service with the employer.

If distributions to an individual are not subject to the tax because of application of the substantially equal payment exception described above, the tax will nevertheless be imposed if the individual changes the distribution method prior to age 59½ to a method which does not qualify for the exception. The additional tax will be imposed in the first taxable year in which the modification is made and will be equal to the tax that would have been imposed had the exception not applied. Further, this "recapture" tax will apply if an individual does not receive payments under a method that qualifies for the exception for at least five years, even if the method of distribution is modified after the individual attains age 59½.[257]

In general, the revised penalty tax and the revised exceptions thereto are effective for distributions after December 31, 1986.[258]

Act §1123(e) provides a limited exception for distributions from contracts, if as of March 1, 1986, the individual was receiving benefits under the contract pursuant to a written election designating a specific schedule of benefit payments. According to the committee reports:

> this exception, will be available if (1) the annuity contract provides for only one form of distribution or (2) the contract provides that, in the absence of an election to the contrary, an individual will be paid benefits according to the automatic form of payment specified in the contract and the individual is, in fact, receiving benefits in that form. Further, the committee intends that, if the exception applies to an individual, the rules of present law apply to the amounts received. Therefore, if benefits paid would be subject to the 5% additional income tax under present law, that tax will apply to the benefits paid under the exception.[259]

3. Tax on Annuitized Payments

Under the pre-1986 Code §72, in the case of amounts received after the annuity starting date, the annuity policyholder is subject to tax on the interest income under an "exclusion ratio," whereby each payment is treated, in part as a return of the individual's contributions and, in part, as gross income.[260] This exclusion ratio is used over the life of the contract. Thus, if an individual died prior to the expiration of his or her anticipated life expectancy, no deduction was provided for any unrecovered basis. An individual whose actual life was longer than anticipated, however, effectively was able to exclude from income an amount in excess of his or her basis in the contract.

Act §1122(c)(2) amended Code §72(b) to limit the total amount that an individual may exclude from income to the individual's basis in the contract. If an individual outlives his or her life expectancy and hence recovers his or her entire basis in the contract, each subsequent payment would be fully taxable as income. On the other hand, if the individual dies early (*i.e.*, prior to recovering the entire basis), he or she would be allowed a deduction for the amount of the unrecovered basis. This provision applies to individuals whose annuity starting date is after December 31, 1986.

---

[255] The pre-1986 TRA law exception for distributions made on or after the death of the annuitant is available for distributions prior to April 22, 1987, but not thereafter.

[256] Act §1826(d). This exception is identical to the Code §72(u) exception discussed above.

[257] In all cases, the additional tax will not be imposed on amounts distributed after attainment of age 59½.

[258] As noted earlier, the penalty tax exception for distributions made on the death of the *holder* is effective as of April 22, 1987 (*i.e.*, six months after date of enactment).

[259] House Report at 705; Senate Report at 569. Although the statutory language provides that the exception is available for "employees" who separate from service and "employees" in pay status, the same statutory language was a part of the original House and Senate bills. Both committee reports accompanying such bills also stated that the exception applies to nonqualified annuity contracts.

[260] Pre-1986 Code §72(b).

4. Other Annuity Provisions [261]

a. Transfers for Inadequate Consideration

As noted earlier, under Code §72(e), amounts received under an annuity contract before the annuity starting date are treated as coming first from the income credited to the contract to the extent of such income (a "LIFO" rule) and then from the investment in the contract. Also, Code §72(c)(4) provides that any loan against the cash value of an annuity contract, or an assignment or pledge of such a contract, is to be treated as an amount "not received as an annuity" (and thus subject to the LIFO rule governing withdrawals).

Under Act §1826(b)(3), the Code §72(e) LIFO partial distribution rules are expanded to provide that the transfer of an annuity contract without adequate consideration (*e.g.*, by gift) is treated as a surrender by the transferor. Thus, the amount includible in the income of the transferor is equal to the excess of the cash surrender value of the contract at the time of the surrender over the investment in the contract at that time. Correspondingly, the basis in the contract in the hands of the transferee is increased by the amount includible in the income of the transferor.[262]

The revised gift rule is effective for contracts issued after April 22, 1987, does not apply to any transfer to which Code §1041(a) applies (*i.e.*, to transfers of property between spouses or incident to divorce).

b. Mandatory Distribution Rules

In 1984, Congress added Code §72(s) which provides that, for any annuity contract (including qualified contracts) to be treated as such under the Code, it must contain language specifying certain methods of distribution in the event of the contract holder's death. Under this rule, the contract must provide that, if the contract holder dies before the annuity starting date, the entire interest will be distributed within five years after the date of death of the contract holder, or will be annuitized within one year after the date of death over a period equal to the life of the designated beneficiary (or over a period not exceeding the life expectancy of such beneficiary). In the event that the contract holder dies after the annuity starting date but before the entire interest in the contract has been distributed, the contract must provide that the remaining portion of such interest will be distributed at least as rapidly as the distribution method in effect as of the time of the contract holder's death. The distribution requirements of Code §72(s) do not apply, however, in the case of a spousal beneficiary who, in effect, steps into the shoes of the deceased contract holder.

The 1986 Act §1826 revises the distribution rules in the event of the "holder's" (owner's) death with respect to the application of the provision to qualified contracts, to nonindividual holders, and to joint holders. First, the Act added Code §72(s)(5) which provides that the holder mandatory distribution rule shall not apply to any tax sheltered annuity under §403(b), any individual retirement annuity or any annuity under a qualified plan. The effective date of this technical correction to the 1984 Act relates back to the original effective date of Code §72(s) — contracts issued after January 18, 1985.

Section 72(s)(7) of the 1986 Code provides that, if the holder of the annuity contract is not an individual, the "primary annuitant" is treated as the holder. If the primary annuitant is changed, the situation is treated as if the holder died and thus a Code §72(s) distribution is triggered. For purposes of the Code §72(s) distribution rules, the term "primary annuitant" is defined as "the individual, the events in the life of whom are of primary importance in affecting the timing or amount of the payout under the Code." [263]

Finally, Act §1826(b)(2) amends Code §72(s) to provide that, if there is more than one holder of an annuity contract (*e.g.*, joint owners) the mandated distribution must be triggered on the death of the first of them.

The nonindividual distribution rule and the joint holder distribution rule are effective for contracts issued after April 22, 1987.

D. Structured Settlements

Code §104(a)(2) excludes from the gross income of an individual the amount of any damages received on account of personal injury or sickness, whether by suit or agreement and whether as a lump sum or as periodic payments. If not taken in a lump sum, the injured party and a defendant, (*e.g.*, a property-casualty company) may agree to provide for periodic payments through a structured settlement agreement. In such cases, the defendant's property-casualty company will fund its liability by directly purchasing an annuity contract or will assign its liability for periodic settlement payments to a third party assignee (which may be an insurance company) who, in turn, funds its obligation by purchasing an annuity contract (a "qualified assignment").

In the case of such a qualified assignment, Code §130 provides that the third party assignee may exclude from gross income amounts received in consideration for its liability assumption to the extent such amounts are invested in a "qualified funding asset." Code §130(d) defines qualified funding asset as any annuity contract issued by an insurance company or any obligations of the United States. Code §130 further provides that the third party assignee's basis in the annuity contract (*i.e.*, its investment in the contract under Code §72) is reduced by the amount of this excluded income.

Under the Code §72 exclusion ratio, the third party assignee must include all annuity receipts in gross income. Such assignee can offset, however, its Code §72 income with a Code §162 deduction for the periodic payments it makes to the injured party. A qualified assignment under Code §130(c) is limited to assignments to make periodic payments on account of personal injury or sickness.

[261] Act §1826 contains a number of technical corrections to the annuity provisions of the 1984 Act. The technical corrections to the penalty tax in Code §72(q) were addressed under the general penalty tax section. The discussion that follows is of those technical corrections not addressed earlier.

[262] 1986 Code §72(e)(4)(C)(iii).

[263] Code §72(s)(6)(B).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

Act §1002(a) amends Code §130(c) to provide that qualified assignments under Code §130 will be limited to those assignments requiring the payment of damages on account of a claim for personal injuries that involve physical injury or physical sickness of the claimant. According to the Conference Report, personal injuries that involve physical injury or physical sickness include "damages on account of a claim for wrongful death arising from physical injury or sickness, provided the assignments meet all other applicable requirements." [264] Claims involving defamation of a third party or invasion of privacy, however, do not involve physical injury or physical sickness and thus are ineligible to be treated as a structured settlement agreement under Code §130.[265]

The Conference Report further provides that in the case of multiple claims in physical injury actions:

> [t]he conferees do not intend that allocation of damages is necessary among such multiple claims. Rather, if the action has its origin in a physical injury, then all damages that flow therefrom are included.[266]

This provision is effective for qualified assignments entered into after December 31, 1986.

Under Act §1135(a), annuity contracts used as qualified funding assets under Code §130(d), without regard to whether there is a "qualified assignment," are exempt from the tax on the inside buildup on nonindividually owned annuity contracts. Thus, the inside buildup on a corporate-owned annuity used to fund a structured settlement agreement will not be subject to current taxation if (1) such contract is a qualified funding asset held by a third party assignee under Code §130 or (2) such contract is a qualified funding asset but is purchased and held directly by a property and casualty insurance company. Further, such contracts funding structured settlement agreements are exempt from the Code §72(q) penalty tax for "premature" withdrawals.[267]

[264] Conference Report, p. II-339-340.
[265] *Id.*
[266] 1986 Code §72(u)(3)(C).

E. Exchanges Under §1035

Under Code §1035, no gain or loss is recognized on the exchange of (I) a life insurance contract for another life insurance contract or for an endowment contract or an annuity contract; (2) an endowment insurance contract for another endowment contract with the same or earlier payment date or for an annuity contract; or (3) an annuity contract for another annuity contract. For purposes of this exchange rule, an endowment contract and a life insurance contract are defined under Code §1035(b)(1) to include only contracts issued by an insurance company taxable under subchapter L of the Code.

Act §1828 amends Code §1035(b)(1) to delete the requirement that the life insurance contract or endowment contract be issued by a company taxed under subchapter L of the Code. Thus, under the 1986 TRA, for purposes of Code §1035, an endowment or life insurance contract includes any contract issued by an insurance company, whether or not such company is a taxable entity under the Code.

Chapter 76

REAL ESTATE OVERVIEW

A. L. Suwalsky, Jr., Esq.
Silverstein and Mullens
Washington, D.C.

I. Introduction

The Tax Reform Act of 1986 ("1986 TRA" or the "Act") [1] was signed into law on October 22, 1986, thus establishing the Internal Revenue Code of 1986. This lengthy revenue act, called by some legislators the most significant change to the Code since the enactment of the first income tax law, follows by little more than two years the Tax Reform Act of 1984, [2] a massive and still undigested piece of legislation which might be said to have signaled a declaration of war on real estate tax shelters.[3]

If the Tax Reform Act of 1984 fired the opening salvos at the favored position of real estate investments, the 1986 TRA might be said to have administered the *coup de grace*. It is generally acknowledged that, aside from the corporate tax, real estate was chosen to bear the main burden of tax reform and revenue raising — some $50 billion worth in the case of real estate. Clearly, no other revenue act has had the broad impact on real estate ownership and investment that the 1986 TRA will have.

Since lower marginal rates are being paid for in substantial part by reducing the advantages of real estate ownership, it is ironic that a perusal of H.R. 3838 finds real estate directly mentioned only in Title II, Subtitle F, containing Act §251, limiting the rehabilitation credit, and Act §252, instituting the low-income housing credit. Thus, it is necessary for the real estate tax professional to look carefully at the entire Act.

The foregoing notwithstanding, numerous statutory changes affecting real estate investments, investors, and property owners were brought forward during the debates on the Treasury and President's proposals, the predecessor bills, and finally the 1986 Act. The issues discussed in this chapter, while not all-inclusive, reflect the broad coverage of real estate matters by the 1986 TRA.

Note that master limited partnerships, the "hottest" item in the current inventory of tax shelter vendors, are not dealt with in the Act. Sources within the Treasury have indicated that an agreement was reached with the tax-writing committees that the "association" issue (Code §7701(a)(3)) would not be pursued at this time. No such agreement was reported concerning the administrative characterization of income from master limited partnerships as portfolio income, however.

A summary treatment of the major issues relating to real estate follows; these issues are discussed in greater depth in other chapters of this Portfolio, as noted.

II. Real Estate Issues in 1986 TRA

A. Rate Reduction for Individuals

(Chapter 10, Part II, this Portfolio; Act §101, amending Code §1; effective 12/31/86, with a "blended rate" applicable for the transition year of 1987 (maximum 38.5%); Conf. Rep. p. II-1)

The Act reduces the 15 bracket system of 1986 with marginal rates of from 14% to 50% to a nominal two bracket system in 1988.[4] Even though the true top marginal rate is 33% for a family of four with up to $192,930 taxable income, the maximum overall rate of 28% for families with incomes that exceed this figure is substantially lower than the current rate and cannot help but influence the conduct of real estate investors. Since a deduction is worth less after 1986, the risk of loss is greater.

At the beginning of the Reagan administration (and earlier), the Treasury took 70% of the risk of investments in tax shelters, leaky or otherwise. Now, the bulk of the funds at risk are the taxpayer's own and most investors will seek income rather than deductions. In particular, many taxpayers locked into shelters that produce so-called "passive" losses (discussed at II, C, *infra*) will seek offsetting passive income.

Naturally, the lowering of marginal rates does not signify the end of investments that produce tax losses or that investors will no longer seek to reduce their taxes. Many of those with sources of "passive" income will doubtless seek to match such income against leveraged investments that provide cash flow and produce tax "losses" through depreciation deductions. The emasculation of the "at-risk rule" (discussed at II, D, *infra*) by continuing to allow real estate investors to take advantage of the leverage produced by nonrecourse financing leaves the door at least partially open to the sheltering of income.

[4] In transition year 1987, five brackets - 11% to 38.5% - will exist.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

B. Elimination of the Capital Gains Differential for Individual Taxpayers

(Chapter 2, Part V, this Portfolio; Act §§301 and 302, repealing Code §1202 and adding Code §1(j), effective for TYBA [5] 12/31/86; Conf. Rep. p. II-105)

Effective for taxable years beginning after December 31, 1986, the 60% capital gains deduction for individuals is repealed and long term capital gains will be taxed as ordinary income. The formerly deductible amount is no longer a tax preference. However, in (transition year) 1987, when the top marginal rate is 38.5%, long term capital gains will be taxed at a maximum rate of 28%.

The relatively high rate of tax on capital gains and the absence of a differential between long term gains and ordinary income is bound to influence real estate investment patterns, particularly in the near future and when combined with other provisions of the 1986 TRA such as installment sale changes. However, the threat of huge budget deficits has led many persons, especially members of Congress, to openly discuss the need to raise more revenue. The Conference Report states (at II-106) that: "The current statutory structure for capital gains is retained in the Code to facilitate reinstatement of a capital gains rate differential if there is a future tax rate increase."

Note also that individual taxpayers may still offset only $3,000 of capital losses against other income, but may carry losses forward indefinitely.

C. Limitations on Deductibility of Losses and Credits from Passive Activities

(Chapter 17 (losses) and Chapter 15, Part II (credits), this Portfolio; Act §501, adding Code §469, generally effective for TYBA 12/31/86 with special rule for low-income housing; Conf. Rep. p. II-137)

The 1986 Act's principal weapon against real estate (and other) tax shelters is contained in Act §501, which limits the use of losses and credits from so-called passive activities to offset "positive income" from other sources, such as earned income and portfolio income. The Senate Finance Committee Report [6] contains a lengthy discussion of the deleterious effects of tax shelters and postulates that, in order to maintain the integrity of the tax system and to retain the confidence of the public that the system is essentially fair, positive income of individuals should be subject to tax without offset for losses not arising out of the activity that produced the income.

The Senate Report goes on to say that: ". . . the committee believes that it is appropriate to treat losses of the [passive] activity as not realized by the investor prior to disposition of his interest in the activity." [7] This, then, is the basic rationale which culminated in the passive loss provisions contained in new Code §469 and is likely to guide the interpretation of the law by the Service.

The limitations on the deduction of passive losses apply to individuals, estates, trusts, partnerships, S corporations, and personal service corporations. Closely held corporations may offset passive losses against active business income but not portfolio income. While widely owned C corporations have no such restriction, such deductions could increase the corporation's exposure to the alternative minimum tax.[8]

Under the 1986 Code rules, losses from passive investments can only be used against gains from like activities, and credits are generally usable only against taxes generated by passive activities. An individual or entity subject to the passive loss rules may be deemed to be engaged in two or more separate activities with the result that income or loss may have to be allocated among activities rather than netted out and may be characterized differently depending upon the activity generating it. Whether a taxpayer will be permitted to assert that his proprietorship or partnership is engaged in separate activities when it is to the taxpayer's advantage to do so is open to question. Some practitioners fear that the Service will vigorously resist taxpayers' attempts to create passive income, for instance.

Disallowed ("suspended") losses and credits may be carried forward indefinitely and suspended losses may generally be allowed in full against other income upon the complete taxable disposition of the passive investment; unused credits may not be utilized against taxes arising out of other income, however, and such credits disappear at death. It is unclear whether gain from the disposition of a passive activity can be used to offset passive losses of another activity.

Loss producing activities subject to the new rules are not confined to rental real estate or tax shelters. For an individual to be entitled to take losses as active business losses, he must "materially participate" in the operation of the business. Limited partners, *per se*, are deemed not to materially participate, regardless of their employment in the business. Inactive S corporation shareholders and other like beneficiaries of pass-through entities do not materially participate in the operation of the business of the entity. The material participation determination is a "facts and circumstances" test based on such criteria as the amount of time devoted to the business, physical presence at the place of business, knowledge and experience, management authority, etc.

With the exception described below, rental activities are considered passive in nature whether or not an individual actively participates in the operation of the rental activity. A concession was made to small real estate operators [9] who are allowed to use up to $25,000 of passive losses (or to claim an equivalent amount of credit) arising out of rental real estate activities in which they "actively participate" as an offset against other income. For married couples filing a joint return, this $25,000 of losses phases out completely for adjusted gross incomes of between $100,000 and $150,000.[10]

[5] "TYBA" (taxable years beginning after).

[6] S. Rep. No. 313, 99th Cong., 2d Sess., at 713-46.

[7] *Id.* at 716-17. The Senate Report notes that a 1985 Treasury study revealed that in 1983, out of 260,000 tax returns reporting "total positive income" in excess of $250,000, 32% paid no more than 10% of that income in taxes. For returns reporting "total positive income" in excess of $1 million, 30% paid no more than 10% of that income in taxes. (S. Rep. at 714.)

[8] *See* Chapter 32, this Portfolio.

[9] An example of a person falling under this exception might be an investor who owns a few rental houses or an apartment or two which he manages himself.

[10] For example, only $12,500 would be available to a couple with a gross income of $125,000.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

On death, suspended losses may be utilized on the final return of the decedent to the extent that they exceed the amount of the step-up in basis given the asset at death. When an interest in property with which suspended losses are associated is exchanged or given away, the suspended losses are not triggered [11] but are allowed upon the taxable disposition of the interest.

The passive loss provisions have a substantial interconnection with the installment sales provisions, at-risk rules, low-income housing credit, rehab credit, alternative minimum tax, basis rules, investment interest limitations, related party rules, and other Code provisions.

The disallowance (suspension) of passive losses is phased in over four years (65%, 40%, 20%, 10%, 0% allowable) beginning in 1987 and is retroactive in the sense that investments made before 1987 are not grandfathered.

The application and interpretation of the passive loss rules appears difficult and uncertain at this time, particularly in view of the Congressional mandate to Treasury to promulgate legislative regulations:

> ". . . necessary or appropriate to carry out the provisions of [Code §469], including regulations —
>
> (1) which specify what constitutes an activity, material participation, or active participation, for purposes of this section,
>
> (2) which provide that certain items of gross income will not be taken into account in determining income or loss from any activity (and the treatment of expenses allocable to such income),
>
> (3) requiring net income or gain from a limited partnership or other passive activity to be treated as not from a passive activity,
>
> (4) which provide for the determination of the allocation of interest expense for purposes of this section, and
>
> (5) which deal with changes in marital status and changes between joint returns and separate returns." [12]

The grant of authority given the Treasury could hardly be broader. The Conference Report states that the authority is to be exercised to "protect the underlying purpose of the passive loss provision, *i.e.*, preventing the sheltering of positive income sources through the use of tax losses derived from passive business activities." [13] Some of the more pessimistic tax practitioners have voiced the fear that the Service will use its expansive authority to classify most losses and credits as passive and most income as active, thus preventing offsetting, even within the same type of activity. One example frequently given is the popular master limited partnership which could be deemed to produce portfolio income and passive losses.

It is conceivable that the characterization of income issue could clog the courts with factual disputes.[14] Further, the Act introduces "material participation" and "active participation" standards which seem incapable of precise definition. A major challenge for tax practitioners in the next several years may be to find unassailable ways in which to characterize or recharacterize income as passive.

Because of the broad scope and complexity of the passive loss rules, the reader is referred to the detailed discussions to be found in Chapters 17 (losses) and 15, Part II (credits) of this Portfolio, and to Madden, "The Passive Loss Rules: A New Day for Real Estate," 2 *Tax Mgmt Real Est. J.* 264 (Dec. 1986).

D. Extension of At-Risk Limitations to Real Property

(Chapter 16, this Portfolio; Act §503, amending Code §465, generally applicable to losses incurred after 12/31/86 with respect to property placed in service after 12/31/86 (a special rule applies to pass-through entities); Conf. Rep. p. II-134)

The amount that a taxpayer is deemed to have "at risk" in an activity is one limitation on the deductibility of losses arising from that activity. The amount is computed by aggregating the following: (i) cash contributed; (ii) the adjusted basis of contributed property other than cash; (iii) amounts borrowed for use in the activity with respect to which the taxpayer has personal liability or has put up collateral not used in the activity; and (iv) his pro rata share of "qualified nonrecourse financing." The amount at risk is increased by income and contributions and decreased by withdrawals and losses. The amount at risk is not the same as the amount of the taxpayer's basis in the activity but either amount can operate as a limit on the deductibility of losses arising out of the activity. Note also the interaction of the at risk rules with the passive loss rules.

The "at-risk" concept is not new in the tax code, having been applied to leveraged investments in personal property since the enactment of the Tax Reform Act of 1976.[15] That this rule was finally made applicable to real estate demonstrates the intensity of the government's war on tax shelters. That a loophole "big enough to drive a truck through" (in the words of one member of Congress) by way of the "qualified nonrecourse financing" exception [16] was inserted reveals the power of the real estate industry and the latent fears of Congress that a serious recession might be engendered as a result of pushing too hard against real estate.

The qualified nonrecourse financing exception includes financing secured by real property for which the owners are not personally liable if the creditor is a governmental entity or someone guaranteed by a governmental entity or "qualified person" (as defined in Code §469(b)(6)(D)). A qualified person includes pension trusts and financial institutions but excludes any person from whom the property was acquired (or a person related to such person), any person related to the taxpayer (unless the terms of the loan are commercially reasonable and comparable with loans made to unrelated persons), or any person (such as a promoter) who receives a fee in connection with the investment in the property.

---

[11] Except to the extent of taxable boot in an exchange.

[12] Code §469(k).

[13] Conf. Rep. at II-147.

[14] It is easy to imagine the courts declaring that such cases are without precedential value since each is "distinguishable on its facts" — shades arise of reasonable compensation, hobby loss and profit motive disputes, giving rise to long judicially originated lists of "factors" or "tests," none of which is in itself determinative.

[15] P.L. 94-455.

[16] Act §503(b), adding Code §465(b)(6).

This exception for qualified nonrecourse financing has been seen as providing numerous traps for the unwary and substantial uncertainty, although the case law and regulations developed with respect to personal property investments would seem to apply. The question of guarantees, indemnities, and stop-loss provisions is a difficult one. A separate but related question concerns basis in the partnership context. Partnership level nonrecourse financing may increase the amount a partner is deemed to have at risk without causing a corresponding increase in the basis of his partnership interest. The rules in this area are many and complex and, in some instances, unestablished. Meaningful anomalies exist, such as that provided by the rule that a lender who is the seller of the property cannot provide "qualified" nonrecourse financing. While the purpose of such a rule is recognized, its scope appears overbroad since it would seem to preclude *bona fide* financial institutions disposing of foreclosed properties from financing the purchase of the properties.

E. Installment Sales

(Chapter 18, Parts I and III, this Portfolio; Act §811, adding Code §453C, generally effective for TYEA [17] 12/31/86 with respect to dispositions after 2/28/86 (numerous exceptions and transition rules); Conf. Rep. p. II-293)

Real property held by a "dealer" for sale to customers, used in a trade or business, or held for the production of rental income, when sold on the installment method for an aggregate selling price of $150,000 or more will generate "applicable installment obligations" subject to a set of new rules, termed collectively the "proportionate disallowance rule." Under these rules, income is imputed to the seller each year under a formula based on his outstanding business debt as if he had pledged a portion of the installment obligations and received cash.[18]

Another important term introduced by the Act is "applicable installment indebtedness" or "AII." The amount of a taxpayer's AII for a taxable year is treated as a payment received immediately before the close of the taxable year on the applicable installment obligations generated in such year and outstanding at the end of such year. AII is computed by dividing the face amount of applicable installment obligations outstanding at the end of the taxable year by a sum equal to the face amount of *all* installment obligations held plus the aggregate adjusted bases of all business assets held by the taxpayer.

The resulting fraction is multiplied by the taxpayer's average (quarterly or annual, as applicable) indebtedness. The amount deemed received currently is determined by subtracting AII attributable to applicable installment obligations received in prior years from current AII. The gain to be recognized currently is computed by applying the seller's gross profit ratio to the deemed payment. An individual does not take into account certain farm property or personal use property (*e.g.*, his home) or indebtedness secured by such excluded property. The Treasury is given broad regulatory authority to disallow the use of the installment method when the effect of the proportionate disallowance rule would be avoided through the use of related parties, pass-through entities, or intermediaries.

If the taxpayer disposes of his entire interest in an activity through an installment sale, suspended losses are allowed each year in proportion to the gain recognized in each year. Suspended losses may be used against the gain required to be recognized currently as a result of the proportionate disallowance rule, recapture, or encumbrances in excess of basis.

In subsequent years, a taxpayer is not required to recognize gain attributable to applicable installment obligations from a prior year to the extent that payments do not exceed the amount of AII attributable to such obligations. Payments received in a year reduce the AII attributable to the obligation and payments in excess of AII are accounted for under ordinary installment sale rules. Thus, there is no double counting. Sellers owning low basis property with substantial debt may be unable to derive any benefit from an installment sale and, in any case, must be careful to demand a downpayment sufficient to pay tax on the gain required to be recognized.

A good bit of the impetus behind the enactment of the proportionate disallowance rule for installment sales apparently originated in a perceived "abuse" by builders of residential housing arising out of the issuance of "builder bonds," a transaction in which a builder pledges the purchase money mortgages received from homebuyers in return for a loan equal to most of his costs and profits from the sale of the underlying property while reporting income on the installment basis as mortgage payments are received. Although the result is the deferral of taxes on money received in hand, such a system quickly recycles housing construction funds and promotes broader home ownership. Dealers in personal property offering revolving credit plans were also thought to be taking undue advantage of installment sales. Like many provisions of the Act, however, a substantial purpose of the amending legislation doubtless was to raise revenue. This may account for the overbroad scope of the provision which has the potential to result in mismatches of cash receipts and tax liability, contrary to generally accepted tax principles.

F. Limitations on the Deduction of Investment Interest

(Chapter 5, this Portfolio; Act §511(a), amending Code §163(d), generally effective for TYBA 12/31/86 with phase-in; Conf. Rep. p. II-153)

The investment interest limitation has been refashioned as part of the characterization of income, expenses, and credits into categories such as personal, consumer, passive, positive, business, investment, and portfolio. The purpose of defining different types of income, expenses, and credits is to maximize taxable income and reduce offsetting deductions and losses, *i.e.*, to produce mismatches between certain types of income, deductions, and credits so that the benefit of deductions, credits, and losses is postponed or even eliminated. The boundaries between categories are shadowy and the Treasury has been given a broad grant of authority under the passive loss rules to recategorize in-

[17] "TYEA" (taxable years ending after).

[18] Debt from sales of personal property by a dealer in same is subject to similar rules but will not be discussed here.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

come and deductions even in a single activity.[19] The interest expense rules of Act §511 are closely tied in with the Act's passive loss provisions and incorporate significant references to those provisions. Accordingly, the investment rules should be studied in conjunction with the passive loss rules when evaluating ongoing or proposed real estate operations.

Following is a brief description of some of the particulars of the investment interest rules. Perhaps the most conspicuous change is the repeal of the $10,000 allowance for investment expense under Code §163(d). Subject to a five year phase-in, the first dollar of investment interest not offset by investment income becomes non-deductible (but unlike consumer interest, it can be carried forward indefinitely). However, the Act expands the definition of investment income to include gain on the disposition of investments.

Generally, investment interest is all interest except consumer interest and qualified residential interest on debt not incurred in connection with an active trade or business. However, as to the individual taxpayer, the allocable share of interest expense from a business in which the taxpayer does not "materially participate" is investment interest. If the business activity is a "passive activity" or a rental real estate operation, however, the interest ceases to be investment interest and is subsumed as an expense of that activity or operation. If a passive activity has portfolio income, interest expense that can be allocated to carrying the portfolio investments will be investment interest. Of course, the income from portfolio investments owned by the passive activity cannot be used to offset other expenses of the passive activity.

There is a significant relationship between the passive loss limitations and the excess investment interest limitations during the four year phase-in period (65%, 40%, 20%, 10%, 0% allowable) starting in 1987. Investment income is reduced by the allowable portion of the passive loss (*e.g.*, 65% of that portion not attributable to rental real estate activity in which the taxpayer actively participated in 1987 (subject to the $25,000 ceiling)), but that is only the starting point for computing the amount disallowed. *See* Code §§163(d)(4)(E) and 163(d)(6) for the formula, and Conference Report at II-156-57 for an example. The greater the amount of passive losses, the more investment interest disallowed, but the result is not linear.

An extremely important and as yet unanswered question has arisen with respect to the use of loan proceeds. The tax treatment of the interest paid with respect to both personal and business loans could be determined by several methods producing varying results, including: (1) *pro rata* allocation among business and/or personal debts; (2) correlating the tax treatment to the source of the borrowed funds; and (3) actual tracing of the use of loan proceeds. No single method proposed seems likely to accomplish such disparate objectives as fairness, ease of administration, maximum production of revenue, and full taxpayer compliance. The question looms especially large and immediate in the real estate context because of the common practice of refinancing appreciated properties and distributing the equity to the owners or partners. Because of the large amounts of revenue involved, this is an issue which should be addressed immediately by the Treasury.

For a further discussion of the rules applicable to investment and consumer interest, *see* Chapter 5 of this Portfolio. *See also* Weiner, "A Few Matters of Interest Under the Tax Reform Act of 1986," 2 *Tax Mgmt. Real Est. J.* 270 (Dec. 1986).

G. Disallowance of Consumer Interest

(Chapter 5, this Portfolio; Act §511(b), adding Code §163(h), generally effective for TYBA 12/31/86; Conf. Rep. p. II-154)

Subject to the four-year phase-in rule (65%, 40%, 20%, 10%, 0% allowable) starting in 1987, no deduction is allowed for consumer or personal interest, *i.e.*, interest which is not business interest, investment interest, or qualified residence interest, *e.g.*, interest on credit card purchases, auto loans, and tax deficiencies. There is no carryforward for disallowed consumer interest.

Deductible qualified residence interest is the mortgage interest on the taxpayer's primary residence plus one other residence (apparently including a boat!) selected by him. For mortgages placed before August 17, 1986, all interest will be deductible to the extent of fair market value of the property. Interest on mortgages placed after August 16, 1986 will be deductible to the extent of the original cost (not the basis) of the residence plus the cost of any home improvements, plus interest on borrowings made for qualified medical or educational purposes with the property pledged as security, the total qualifying indebtedness again being limited to fair market value.

Most laymen are aware of the interplay between the consumer interest limitations and the residential interest limitation so there is substantial room for maneuvering for many taxpayers who refinanced before August 17, 1986, or those who have not refinanced but whose remaining mortgage balance is less than the cost of the property plus improvements. Renters and first time home buyers are not in this advantageous position and it is likely the issue of fairness will be raised in future tax debates.

Numerous unanswered questions have already arisen regarding future taxpayer compliance if a tracing requirement is instituted to preclude the use of interest-deductible home mortgage proceeds for consumer-type purchases or obligations the interest attributable to which would not otherwise be deductible. In contrast, certain taxpayers will wish to claim an interest deduction on amounts in excess of their cost plus improvements ceiling on post-August 16, 1986 loans when the proceeds are invested in an active business.

H. Depreciation Changes - Modified ACRS System

(Chapter 4, this Portfolio; Act §201, amending Code §168 and other sections, generally applicable to property placed in service after 12/31/86 in TYEA 12/31/86 (*see also* Act §203); Conf. Rep. p. II-39)

The latest system of depreciation has been styled the modified ACRS system (accelerated cost recovery system). Lives of 27-1/2 years and 31-1/2 years for property placed

[19] *See* Code §469(k).

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

in service after 1986 have been assigned to residential (including low-income housing) and non-residential real property, respectively. The problem of mixed use office/-residential or hotel/residential property is addressed by requiring at least 80% of gross rents to come from the leasing of dwelling units (excluding hotel or transient accommodations) to qualify the property for the 27-1/2 year schedule. Depreciation is calculated using the straight-line method and the mid-month convention.

No provision has been made for indexing for inflation. There is no ordinary income recapture on the disposition of residential or non-residential property. Capital gain on disposition is treated under the capital gains rules now applicable. Since the underpinnings of the system of capital gains taxation have been retained in the Code, recapture may again be a concern if tax rates are raised.[20]

Taxpayers may elect the Alternative Depreciation System to recover the cost of residential and non-residential real property over 40 years on a straight-line basis. An automatic tax preference will result from the use of 27-1/2 and 31-1/2 year lives for real property in that depreciation in excess of the 40 year straight-line method is a tax preference for purposes of the alternative minimum tax.

Changes have been made in the rules for depreciating leasehold improvements and lease acquisition costs. Buildings erected on leased land are to be depreciated using 27-1/2 or 31-1/2 year lives, and other improvements are to be depreciated over the ACRS recovery period, regardless of the remaining length of the lease. Gain or loss is to be measured upon the expiration of the lease.

I. Mortgage Backed Securities; Real Estate Mortgage Investment Conduits ("REMICs")

(Chapter 42, this Portfolio; Act §§671-675, adding new Code §§860A-860G, 6049(d)(7) and 7701(i), and amending Code §§582(c), 593(d), 856(c), 1272(a), and 7701(a), generally effective for TYBA 12/31/86, except that the provisions for taxable mortgage pools take effect on 1/1/92; Conf. Rep. p. II-222)

Although virtually unknown even to sophisticated laymen who purchase "Ginnie Maes" for their retirement accounts, the secondary mortgage market and the mortgage-backed securities it offers are, respectively, the engine and the fuel for the housing industry in America. The secondary mortgage market recycles lenders' funds, thus making mortgage money available for the purchase of homes over and over again. The Act, in new Code §§860A-860G, brings new order to, and reduces uncertainties in connection with, the issuance of mortgage-backed securities ("MBS") by creation of the "Real Estate Mortgage Investment Conduit" or "REMIC."

There are many advantages inherent in investing in MBS and one significant disadvantage — there is no way to predict with certainty the rate at which the underlying mortgages will be paid off. If mortgages are taken out during a period of abnormally high interest rates, many of them will be paid off and refinanced when interest rates go down. Conversely, mortgages taken out during a period of favorable interest rates tend to be cherished by homeowners and passed along to new buyers if the terms of the instrument permit. The multiple class MBS attempts to resolve this uncertainty by issuing securities with short, intermediate, and long maturities based upon a pool of mortgages with the same maturity, *e.g.,* 30 years. Principal and interest from all mortgages in the pool are used first to pay off the earliest maturing class or "tranche" of "regular interests" when due and then applied to successive classes of interests. The "residual interest" holders take whatever the pool is able to earn in excess of its fixed obligations.

The REMIC was devised as a pass-through entity to assemble mortgages and issue multiple class securities because Treasury determined that taxation at the entity level could not be avoided without specific legislative authorization. Accordingly, Code §7701 was amended to provide for the organization of REMICs. The Act provides a grace period ending December 31, 1991, during which any vehicle can be used for issuing MBS that are multiple class debt obligations. Thereafter, entities issuing any securities other then REMICs are to be characterized as "taxable mortgage pools" and subject to two levels of taxation. For a MBS such as a pass-through MBS, any vehicle can continue to be used.

In form, a REMIC may be any legal entity allowed under state law, *e.g.,* a corporation, partnership, or trust, whose assets consist primarily of a pool of mortgages and that elects REMIC status on a federal partnership tax return for its first taxable year. Despite the flexibility allowed sponsors of a REMIC in choosing its superficial form of entity, the rules for REMICs are tightly drawn. It is a single-purpose, relatively short-lived and self-liquidating entity created by a sponsor that holds mortgages, for example, the Federal National Mortgage Association ("Fannie Mae"). Rather than being an ongoing business which conducts day-to-day operations, the REMIC is basically a pool of similar assets which have been contributed to the REMIC in exchange for certificates representing "interests" in the pool that are ultimately sold through established financial channels.

Holders of regular interests are treated (and taxed) as holding debt instruments regardless of the nominal form in which these interests are issued. Further, regardless of their method of accounting, the holders must recognize income on the accrual basis. The original issue discount rules of Code §1272 are applicable to REMIC securities issued at a discount. The holder of a residual interest in a REMIC is required to recognize his ratable portion of the taxable income or loss of the REMIC for each day during the taxable year he held such interest.

The REMIC itself is a pass-through entity generally not subject to federal taxation, although state tax laws may differ. However, a REMIC is subject to a 100% tax on prohibited transactions, such as receipt of fees in compensation for services and the receipt of income attributable to an asset which is neither a qualified mortgage interest nor a permitted investment.

REMICs have advantages which have caused many to predict that they will quickly become the dominant vehicle

[20] With a reinstitution of the capital gains differential, the recapture amount might be the difference between depreciation under the modified ACRS system and the Alternative Depreciation System.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

for issuing MBS, even before 1992. Some of these advantages include:

1. With certainty of tax treatment, a REMIC can assemble a multi-million dollar pool of similar mortgages and issue in exchange therefor classes of debt instruments with different fixed maturities and interest rates, and a single class of "residual interests" deemed to be equity interests. The holders of the residual interests are entitled to everything left in the pool when the holders of all regular interests have been paid off.

2. Regular and residual interests in REMICs constitute qualifying real estate assets for financial institutions and REITs.

3. Elimination of the over-collateralization required to structure collateralized mortgage obligations as true debt for tax purposes and elimination of the reinvestment risk inherent in accumulating and reinvesting monthly mortgage payments prior to the quarterly date on which investors are paid. Payments from a REMIC can be made monthly.

4. Pass-through MBS containing mortgages originated on or before July 18, 1984 held by a REMIC are not taxed to foreign investors, even in the absence of a suitable treaty provision.

5. Issuers of MBS will be able to structure the transaction as a financing or an asset sale. For example, a grantor trust can be used to issue REMIC securities, thus resulting in the sale of an asset, or off-book accounting treatment. Conversely, a CMS debt instrument can be used in order to obtain a liability on the books without recognizing the income associated with a sale.

REMIC rules are discussed in greater detail in Chapter 42 of this Portfolio and in Silversmith, "REMICs: A Major Change in the Rules for Issuing Mortgage Backed Securities," 2 *Tax Mgmt. Real Est. J.* 294 (Dec. 1986). The reader is also referred to Mr. Silversmith's forthcoming Tax Management Portfolio, 117 T.M., *Mortgage Backed Securities,* for a full discussion of all tax issues involved.

J. Cancellation of Indebtedness

(Chapter 3, this Portfolio; Act §§405, 822, amending Code §§108, 1017, generally effective for discharges after 12/31/86 (farmers - for TYEA 4/9/86); Conf. Rep. pp. II-115 and II-324)

The Act repeals the provision allowing an election to exclude income from the discharge of business indebtedness from gross income in exchange for a reduction in basis of the taxpayer's assets. The prior rule is continued for title 11 cases, cases of insolvency, and with respect to the treatment of a reduction of purchase money debt as a purchase price adjustment. *Bona fide* farmers may treat discharge of indebtedness income as if they were insolvent, resulting in forgiveness of such income after reduction in tax attributes and basis (including basis in farmland).

K. Investment Credit Repeal

(Chapter 11, Part I, this Portfolio; Act §211-213, adding new Code §49, generally effective as to property placed in service after 12/31/85, in TYEA 12/31/85; Conf. Rep. p. II-50)

The investment credit may be a substantial factor in real estate development for certain taxpayers. With transition rules, it is repealed for assets placed in service after December 31, 1985. Because of the retroactive nature of the repeal, a grace period to pay any additional estimated tax due because of repeal has been provided. Code §49 was added to provide detailed transition rules. Credit carryovers from years prior to 1986 are reduced (for calendar year taxpayers by 17.5% in 1987, and 35% thereafter) to take account of reductions in tax rates.

L. Reduction and Limitation of the Rehabilitation Credit

(Chapter 11, part III, this Portfolio; Act §§251, 501, amending Code §§46(b) and 48, generally effective as to property placed in service after 12/31/86, in TYEA 12/31/86, except the placed-in-service date is extended until 1/1/94 in the case of certain property subject to a binding contract on 3/1/86; Conf. Rep. pp. II-82, II-142)

A revision of the rehabilitation tax credit was made for property placed in service after December 31, 1986, with special transition rules for property subject to a binding contract on March 1, 1986 that is placed in service before 1994. Gone is the three tier credit structure and the restriction on non-historic residential buildings. A 20% credit for qualifying expenses is provided for certified historic structures, and a 10% credit for other buildings placed in service before 1936 is also available. Two alternative "wall tests" are provided for the 10% credit: (1) at least 75% of existing external walls are left in place as external walls, or (2) at least 50% of existing external walls are left in place as external walls, at least 75% of existing external walls are left in place as external or internal walls, and at least 75% of the building's internal structural framework is retained in place. Certain additional rules apply for the 20% credit, including the requirement that the Interior Department certify that the rehabilitation is consistent with the historic character of the building or historic district in which the building is located.

Like the low income housing credit, the availability of the rehab credit to offset tax on up to $25,000 of non-passive income [21] does not depend on the taxpayer's "active" or "material" participation in the enterprise and is phased-out (for taxpayers filing joint returns) at adjusted gross income levels between $200,000 and $250,000. Otherwise, the credit is useful only against taxes on passive income.

An assessment of the probable impact of changes in the rehabilitation credit may be found in Chapter 11, Part III of this Portfolio, and in Borod, "Tax Incentives for Rehabilitating Older Properties After the Tax Reform Act of 1986," 2 *Tax Mgmt. Real Est. J.* 276 (Dec. 1986). The reader is also referred to Mr. Borod's Tax Management Portfolio, 477 T.M., *Rehabilitation Tax Credit,* for an extensive discussion of all tax issues involved.

[21] For an individual in the 28% bracket, an allowance of $25,000 is equal to a $7,000 tax credit.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

M. Changed Low-Income Housing Incentives

(Chapter 12, this Portfolio; Act §252, amending Code §§38 and 55(c), and adding Code §42, applicable for buildings placed in service after 12/31/86, in TYEA 12/31/86; Conf. Rep. p. II-84)

A new scheme of incentives for low-income housing was devised for buildings placed in service after 1986 to replace the expiring five-year amortization of rehabilitation expenditures, the preferential depreciation provisions, and special treatment of construction period interest and taxes. The incentives consist of credits which may be claimed annually over 10 years with respect to qualifying expenditures on low-income units. A 9% credit is available for property placed in service in 1987 for new construction or rehabilitation expenditures of at least $2,000 per unit. The credit is reduced to 4% for new construction or rehabs financed with tax-exempt bonds or other federal subsidies. A 4% credit is available for acquisition costs which may be combined with the other credits. For buildings placed in service after 1987, the credit percentages will be adjusted based on the applicable Federal rate of interest in effect from time to time. The credit does not reduce the depreciable basis of the property. The credit is generally effective for property placed in service after December 31, 1986 and before 1990.

Restrictions which appear to reduce the attractiveness of such housing as an investment are provided, including potential recapture for up to 15 years and restriction of qualifying tenants to those whose income places them on the lowest rungs of the socio-economic ladder. The minimum set-aside requirements for low-income tenants are: (a) 20% of the residential units are to be leased to families with incomes of 50% or less of area median gross income, or (b) 40% of such units are to be leased to families with incomes of 60% or less of area median gross income, adjusted for family size and local income or housing costs; the rent charged to low-income tenants may not exceed 30% of qualifying income.[22]

The minimum set-aside requirements must be met within 12 months of the date the new or rehabilitated property is placed in service and continuously complied with for 15 years with severe penalties for failure to maintain compliance. The penalty for failure to maintain the set-aside is full recapture of the credit during the first 10 years and partial recapture thereafter. Even if the set-aside requirements are met but the units are not fully occupied with qualifying individuals, the credits are recaptured proportionately for the first 10 years and partially thereafter. The statute presents a full set of rules dealing with various situations that may be presented during the 15-year period.

Investors in low-income housing receive some measure of relief from the passive loss rules. An amount of the credit sufficient to offset tax on up to $25,000 of non-passive losses[23] is treated as arising from rental real estate activities in which the taxpayer "actively participates"; the credit phase-out is accomplished at incomes between $200,000 and $250,000, instead of the lower limits for regular rental real estate activities.

Some rather curious exemptions from the passive loss rules protect certain individuals whose investment in a project is being made in installments after 1983, provided at least half of the amount is due after 1986, or who, on August 16, 1986, held an interest acquired after December 31, 1983, in a project placed in service before August 16, 1986. This relief terminates on the earlier of seven years after the date of the initial investment or one year after the investor makes the last payment. Widely varying tax treatment for different investors will apparently result.

These issues are discussed in greater detail in Chapter 12 of this Portfolio, and in Delta, "Real Estate and Tax Reform 1986: The Low-Income Housing Credit," 2 *Tax Mgmt. Real Est. J.* 249 (Nov. 1986).

N. Limitations on the Issuance of Tax-Exempt Bonds

(Chapter 30, this Portfolio, Act §§1301-1302, 1311-1318, amending Code §§ 103, 141-150, repealing §103A, generally effective for bonds issued after 8/15/86, a date applicable to most other bond provisions, except that some arbitrage provisions are retroactive to 9/25/85 or 12/31/85; Conf. Rep. p. II-683)

Generally, municipal bond interest from bond issues used to finance operations of state or local governments remains tax-exempt under Code §103. Interest on state and local government bonds is taxable if the bonds are "private activity bonds," unless specifically exempted, provided, however, that interest on exempt private activity bonds issued after August 7, 1986 (except qualified §501(c)(3) bonds) is a tax preference for purposes of the alternative minimum tax. Private activity bonds can be loosely described as those whose proceeds are intended to be used to benefit entities other than state and local governments. Another significant development in this area is that banks and other financial institutions will no longer be able to deduct interest incurred to purchase or carry tax-exempts acquired after August 7, 1986.

Private activity bonds issued for the following purposes remain exempt provided they fit within the volume quotas (where applicable): qualified redevelopment bonds; qualified mortgage bonds; qualified veterans' mortgage bonds; qualified student loan bonds; qualified §501(c)(3) organizations' bonds; exempt facilities bonds; hazardous waste disposal facilities; and some small-issue industrial development bonds. The exemption for small-issue industrial development bonds expired at the end of 1986, except for manufacturing facilities and beginning farmers (both of which have been given an additional three years). No longer exempt are bonds issued for air and water pollution control facilities, industrial parks, sports arenas and convention centers, and parking lots.

[22] For example, the 50% and 60% limits contemplate a family of four. A single person's qualifying percentage for the 20/50 set-aside is 70% of 50% of area median income. Thus, if area median income were $20,000, an eligible single person would have an income not exceeding $7,000 per year (20/50 set-aside) or $8,400 per year (40/60 set-aside). Maximum rents could not exceed 30% of the qualifying income, about $175 or $210 per month. The problem is exasperated with typical inner city families requiring large apartments.

[23] For an individual in the 28% bracket, an allowance of $25,000 is equal to a $7,000 tax credit.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The greatest burden placed on issuers of tax-exempt bonds by the Act is probably the volume limitations placed on the issuance of private activity bonds rather than the establishment of the general rule that interest on private activity bonds is taxable unless specifically exempted. Until December 31, 1987, each state is limited to the issuance of $75 per capita or $250 million. Thereafter, the limits are $50 per capita or $150 million.

The volume limits apply to bonds having a separate limitation under existing law, except veterans' mortgage bonds which remain outside the new quotas. Also exempt from the volume limits are exempt-facility bonds for publicly owned airports, wharves, and docks. Qualified §501(c)(3) bonds other than hospital bonds are subject to a $150 million per institution limit on bonds outstanding at any given time. The 1987 limit is substantially less than the volume of bonds issued by most states for exempt private activity bonds in 1986. The competition among interests for a share of a state's exempt private activity bond pool seems likely to be quite heated.

Note also the rules governing limitations on arbitrage, issuance costs, advance refundings, extended maturities, and qualification of multifamily housing developments.

These issues are discussed in greater detail in Chapter 30 of this Portfolio, and in Lyles, Baber, and Stern, "Real Estate and Tax Reform 1986: Tax Exempt Bonds," 3 *Tax Mgmt. Real Est. J.* 3 (Jan. 1987).

O. Changes Affecting Foreign Ownership of U.S. Real Estate - The Branch Profits Tax

(Chapter 62, this Portfolio; Act §1241, adding Code §884, effective for TYBA 12/31/86; Conf. Rep. pp. II-646)

Although the Act contains a number of significant changes in both domestic and foreign tax areas which will affect the U.S. taxation of foreign investment in U.S. real estate, clearly the most significant change is the branch profits tax ("BPT") set out in Code §884 and effective for taxable years beginning after 1986.

The BPT generally will be 30% of the after-tax U.S. profits of a foreign corporation which are not reinvested in U.S. business assets, and could result in a maximum corporate tax rate in excess of 50% if not overridden by an income tax treaty. A significant feature of the BPT provisions is the anti-treaty shopping provision requiring a corporation otherwise exempt by virtue of the existence of a treaty to be subject to the BPT if it is not at least 50%-owned by treaty country residents. Thus, substantial inhibitions are placed on the use by third country nationals of the U.S.-Netherlands Antilles Treaty, for example, to avoid American taxes.

The repeal of the "General Utilities Doctrine" [24] should prove of major significance to foreign investors in U.S. real estate in that it will preclude the routine bailout of accumulated profits through a §337 liquidation.

A more detailed assessment of the probable impact of the Act on foreign investment in U.S. real property is set out in Chapter 62 and other chapters of this Portfolio, and in Hudson, "Planning for Foreign Investment in U.S. Real Estate After the Tax Reform Act of 1986," 2 *Tax Mgmt. Real Est. J.* 283 (Dec. 1986). The reader is also referred to Mr. Hudson's Tax Management Portfolio, 481 T.M., *Federal Taxation of Foreign Investment in U.S. Real Estate,* for an extended discussion of all tax issues involved.

P. Construction Costs — Capitalization of Indirect Costs

(Chapter 19, this Portfolio; Act §803, adding Code §263A, and repealing Code §189, generally effective for costs incurred after 12/31/86 in TYEA 12/31/86; Conf. Rep. p. II-302)

The Act establishes "uniform capitalization rules" for the purchase and manufacture of inventory, including real estate constructed for sale, and the capitalization of direct and indirect costs incurred in the construction of real property used in a trade or business or activity engaged in for profit. Code §189, which permitted 10-year amortization of construction period interest and taxes, was repealed. Some costs that have heretofore been deductible by real estate developers as period costs must now be capitalized. General and administrative costs and overhead must be capitalized and allocated. Taxable income will, of course, be increased as will accounting complexity and the possibility of disputes over allocation with the Service. In some cases, a portion of indirect costs may have to be allocated to land and will not be recoverable until the property is sold.

Complex rules are established with respect to the capitalization of interest on debt incurred or continued to finance construction. If the debt that can be directly traced to construction expenditures is deemed insufficient, interest on other debt of the taxpayer is to be allocated to construction interest. In the case of flow-through entities such as partnerships, the capitalization rule is applied first at the partnership level and then at the partner level. Treasury is given authority to issue regulations to prevent the use of related parties, pass-through entities, or intermediaries to avoid the rules. Such capitalized interest loses its character as investment interest, but when recovered through depreciation it is, of course, affected by the passive loss and at-risk rules.

Q. Contributions in Aid of Construction Received by Utilities

(Portfolio Chapter 1, Part II and Chapter 34, Part I; Act §824, amending Code §§118, 362(c), generally effective as to amounts received after 12/31/86 in TYEA 12/31/86; Conf. Rep. p. II-324)

Pre-1986 TRA law allowed power, gas, pipeline, water, and sewage utility companies to treat payments made or property transferred to them to induce the utility to render service to or for the benefit of the transferor as contributions to capital rather than gross income. Contributions received after 1986 must be included in gross income in the year received. This change will indirectly increase the price of utility hookups for developers.

R. Long-Term Contract Accounting

(Chapter 20, this Portfolio; Act §804, adding Code §460, generally effective for contracts entered into after 2/28/86; Conf. Rep. pp. II-310)

[24] Act §631, adding Code §§336 and 337 and amending §311.

Due to widespread publicity, the defense industry has been considered the major beneficiary of the completed contract method of accounting. However, many building contractors have also taken advantage of the extended tax deferral opportunities available when the completed contract method is used in conjunction with certain contracting and accounting techniques. Because of the large amount of revenue involved, the completed contract method became one of the most hotly lobbied issues during the debates on tax reform.

In the compromise reached in the Act, the completed contract method survives as one available alternative for 60% of the contract items under the "percentage of completion-capitalized cost method" and for certain "small" construction contracts. Except for these small contracts, companies must use one of two new methods of accounting for long term contracts entered into after 2/28/86: (1) the percentage of completion-capitalized cost method, or (2) the modified percentage of completion method.

The percentage of completion method is no longer based on an estimate of the percentage of the contract completed at the close of a year but is derived from the ratio of costs incurred during the year to total estimated contract costs. The percentage is applied to the total revenues expected from the contract and that amount is includible in income. All contract costs incurred during the year are deductible.

In the alternative, the percentage of completion-capitalized cost method takes into account 40% of income for the year (as computed) and 40% of the year's costs. The balance (60%) of income and costs are taken into account under the completed contract method or any other authorized method of accounting, subject to the new capitalization rules.[25]

An exception from the required use of the two approved methods described above applies to certain small contracts for the construction of improvements to real property expected to be completed within two years of the commencement date of the contract by a contractor with average gross receipts over the preceding three taxable years of no more than $10 million.

S. REIT Rules Changes

(Chapter 41, this Portfolio; Act §§661-669, amending Code §§856-860, 4981, and 6697, generally effective for TYBA 12/31/86, except that changes respecting the tax on undistributed income are effective for calendar years beginning after 12/31/86; Conf. Rep. p. II-214)

The changes in the taxation of income and losses from real estate investments made by the Act are intended to stimulate interest in REITs as a vehicle for real estate investment. If this proves to be the case, it will be the result of Code changes which ease the restrictions on REITs and impose new strictures on other forms of real estate investments, *e.g.*, the passive loss limitations, less favorable depreciation rules, elimination of the capital gains differential, and imposition of an "almost escape-proof" minimum tax. Although the basic requirements for qualification as a REIT remain in place, a number of restrictions on operation were eased.

The Act makes it easier to achieve REIT status by waiving the §856(a)(5) and (6) tests during the first year following election. If an entity otherwise meets the applicable qualification requirements, it may elect REIT status even though five or fewer persons own more than 50% of its stock or if it has fewer than 100 shareholders or holders of beneficial interests, providing that it was not a REIT in any prior year.

The penalty provisions of Code §4981 respecting failure to make required distributions of income before the end of the taxable year were considerably stiffened by: (1) increasing the base to which the nondeductible excise tax is applied to 85% of the REIT's ordinary income for the calendar year, plus 95% of the REIT's capital gain net income, plus any prior year's shortfall; (2) raising the excise tax rate to four percent; and (3) changing taxable year to calendar year. A one month grace period is provided. Another concession granted was the elimination of the §6697 penalty relating to deficiency dividends.

For the first time, REITs will be permitted to hold assets through subsidiaries. All assets, liabilities, and items of income, deduction, or credit of a wholly-owned "qualified REIT subsidiary" are to be treated as assets, etc. of the REIT. Additional flexibility is provided with the introduction of the concept of "qualified temporary investment income" from new equity capital. The income received from investment of the proceeds is deemed to be income from real estate assets.

The REIT rules now permit ownership of shared appreciation mortgages. Income derived therefrom is treated as income from a sale of the underlying property by the REIT and may qualify as 95% income. The REIT's holding period of the obligation to which the shared appreciation provision relates must be at least four years for the safe harbor of §857(b)(6)(C) to apply. The Act places REITs on the same footing as exempt organizations with respect to unrelated business taxable income. This means that the REIT need no longer engage an independent contractor to provide certain basic services ("customary services") with respect to the property. A REIT will now be allowed to treat certain rents or interest based upon the net income or profits of a tenant or debtor as rents from real property (or as interest from a debtor).

The Act reduces the 95% distribution requirement by the amount that the sum of certain noncash types of income exceed five percent of REIT taxable income determined without regard to the dividends paid deduction or the net capital gain. The former general rule that a REIT must recognize any capital gain for the taxable year (except to the extent that it pays a capital gain dividend) has been modified so that a REIT can compute its net capital gain without an offset for net operating losses. If the REIT elects to pay capital gains dividends in excess of its net income, the REIT's NOL carryover will be increased by the amount of the dividend.

[25] Note that the difference between income computed using the percentage of completion method and the percentage of completion-capitalized cost method becomes a tax preference for purposes of the alternative minimum tax.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

The prohibited transactions "safe harbor" provided by §857(b)(6)(C) permitting not more than five sales of property (other than foreclosure property) during the taxable year is raised to seven sales. The aggregate amount of permitted expenditures includible in the property's basis during the four years prior to sale was raised from 20% to 30% of the selling price. A REIT may make an unlimited number of property sales during the taxable year as long as the adjusted bases of the properties sold do not exceed 10% of the total adjusted basis of all its properties. Losses from prohibited transactions are not to be taken into account in determining net income from prohibited transactions but may be included in the computation of REIT taxable income.

T. Modifications to Cooperative Housing Rules

(Chapter 39, this Portfolio; Act §644, amending Code §216, generally effective for TYBA 12/31/86; Conf. Rep. p. II-212)

Cooperative housing corporations are governed by a strict set of tax rules under Code §216 which may be seen to contrast unfavorably with the alternate form of co-ownership of dwelling units, the condominium. Although the layman may consider these forms of co-ownership almost identical, there are very substantial legal and tax differences between cooperatives and condominiums. The condominium apartment owner possesses legal title to his dwelling in fee simple and may sell, pledge or encumber it. On the other hand, the coop apartment dweller owns only shares of stock in the cooperative corporation and is referred to formally as a "tenant- stockholder." Because of this, his right to income tax deductions for a portion of the coop's property taxes and interest payments is governed by special provisions of the Code.

Under the Act, a person other than an individual (*e.g.*, a corporation, partnership, or trust) is now permitted to own a cooperative apartment. This should greatly ease the pressure on a coop with unsold apartments or apartments owned by a financial institution because of foreclosure. Code §216(b)(5) and (6) (dealing with stock acquired through foreclosure by a lending institution and stock owned by persons from whom the corporation acquired its property) have been repealed.

Section 216(d) was added to provide that no deduction is allowable to any stockholder for amounts paid to the coop which are chargeable to the coop's capital account. Any such amounts must be capitalized and added to the shareholder's stock basis. Another provision (§216(c)) makes clear that in the case of a unit used by the shareholder in his trade or business, depreciation is limited to the adjusted basis of the stock owned. A further change to §216(b)(3) permits the coop to allocate to a shareholder an amount of interest and taxes proportionate to the value of his unit rather than basing the allocation solely upon the number of shares the stockholder owns. The change in the §1239 related party rules may have some effect on condominium converters since the Act includes in the definition of related parties a person and all entities more than 50% (formerly 80%) owned by the same persons.

U. Other Provisions Affecting Real Estate

Numerous other provisions of the Act affect real estate transactions directly or indirectly. The attention of the reader is invited to the following additional issues discussed elsewhere in this Portfolio:

1. The Alternative Minimum Tax.[26]

2. Limitations on the Use of the Cash Method of Accounting.[27]

3. Restrictions on Use of a Non-Calendar Fiscal Year by Pass-through Entities.[28]

4. Related Party Sales.[29]

5. *General Utilities* Doctrine Repeal: New Rules for Corporate Liquidations.[30]

6. Penalties and Reporting Requirements.[31]

III. Summary and Conclusions

The foregoing treatment has necessarily been broad and devoid of detail and multiple citations and does not attempt to duplicate the material contained in the chapters of this Portfolio and other sources referenced therein. Its purpose is to alert the reader to the issues raised by the 1986 TRA changes and to encourage further research.

Some general conclusions may be offered, the most obvious being that real estate ownership and investment will never be the same again. There can be no return to the abuses of the past — egregious overvaluation such as six-to-one, eight-to-one, and twelve-to-one writeoffs, abandonment or disposal of burned-out "negative basis" shelters without the reporting of income, outrageous fraud and egregious scams that in the end benefitted no one but the promoters, and the virtual election-out of the tax system by a substantial number of the more venturesome affluent taxpayers.

It is easy enough to predict that the lowering of tax rates, the institution of passive loss limitations, and the elimination of the capital gains differential will greatly reduce the advantages real estate has had over other types of investments thereby causing real estate investors to look

---

[26] *See* Chapter 32, this Portfolio, and Act §701, adding Code §53 and amending Code §§55-59, generally effective for TYBA 12/31/86 (with exception for charitable contributions made before 8/16/86). *See* Conf. Rep. p. II-249.

[27] *See* Chapter 22, this Portfolio, and Act §801, adding Code §448, generally effective for TYBA 12/31/86. *See* Conf. Rep. p. II-285.

[28] *See* Chapter 23, this Portfolio, and Act §§806 and 1403, amending Code §§441, 706(b), and 1378(a), and adding Code §645, generally effective for TYBA 12/31/86. *See* Conf. Rep. pp. II-317 and II-766.

[29] *See* Chapter 25, this Portfolio, and Act §§642, 1812(c), amending Code §1239 and §707(b), generally effective for sales after 6/20/86. *See* Conf. Rep. p. II-210.

[30] *See* Chapter 36, this Portfolio, and Act §§631-632, amending Code §§311, 336-338, 1363, 1366, 1374. The transition rules are complex: the repeal of *General Utilities* is generally effective for liquidating sales and distributions after 7/31/86, however, liquidations completed and S elections made before 1/1/87 are excluded. *See* Conf. Rep. p. II-198.

[31] *See* Chapter 44, this Portfolio, and Act §§1501-04, 1511-12, 1521, 1525, 1531-34, adding Code §§6651(d), 6721-24, 6012(d), 6045(e) and amending Code §§6621(c), 6651, 6653, 6661, 6111(c), 6707(a) and (b), 6708, generally effective for returns due after 12/31/86, but in some cases after the date of enactment (10/22/86). *See* Conf. Rep. p. II-777.

©Tax Management Inc., a subsidiary of The Bureau of National Affairs, Inc.

for solid values with positive cash flows instead of losses intended to shelter income and convert ordinary income into capital gain upon disposition. The fact is that the same properties exist waiting to be sold and resold. With the economics of real estate investment changed meaningfully, it seems not unlikely that property values will be affected and some individuals and entities will end up as losers. It is a considerable feat to take an untenanted "see-through" office building in overbuilt Houston, Texas and to convert it into a property generating positive cash flow and passive income. Someone (or rather many investors and lending institutions) is going to be left "holding the bag" in such instances.

In the short run, at least, what happens to the real estate investment industry will probably be largely dependent upon the regulations and rulings issued by Treasury within the next two years and the speed with which they are issued. If the government takes a hard line on what constitutes passive income and portfolio income and investment interest and personal interest, it is likely there will be a great deal of uncertainty and not a little hardship as taxpayers sit by with unusable passive losses and credits arising, at least in part, from real economic losses and negative cash flows.

Among the hardest hit will be highly compensated executives and professionals who have committed themselves to make future installment payments on leveraged investments, the losses from which may not be usable for a number of years. There have been some predictions that a large number of these installment pay-in type deals will come apart as investors refuse to send good money after bad. In the worst case scenario, this would result in a domino effect leading to the collapse of a large number of financial institutions which have bankrolled these investments during the installment pay-in period. As of this writing, there have been no reliable indications that this is going to happen. It was enough of a concern in the low-income housing area, however, that Congress added a provision exempting from the impact of the passive loss rules at least some low-income investors who were purchasing limited partnership interests on the installment basis.

Another substantial uncertainty produced by the Act is whether the new statutory scheme of incentives for low-income housing will result in any significant increase in the housing supply. Whether or not it is true, there is a widespread perception that individuals below the poverty line, particularly large inner city families headed by a single parent, tend to destroy property and leave it with little or no residual value (for, say, condominium conversion) after the statutory 15-year period for qualification for the credit ends. Unless there is substantial residual value, most investors feel that the economics of low-income housing are unfavorable.

A further negative factor is that the subsidy for low-income housing is in the form of a passive credit, the least desirable of all forms of "income" and one which can be utilized against positive income only in limited amounts and only by a small number of specially situated taxpayers. It is understood that some members of Congress have promised that if the 1986 TRA does not produce the required amount of low-income housing, tax incentives will be altered until they are deemed sufficient. The problem is, of course, that such a solution could mean the reintroduction of tax shelters and the undermining of public confidence in the inherent fairness of the tax system. Perhaps the best solution to the problem for providing decent housing for the poor does not lie in the tax area, but it is a problem which thus far has eluded a solution.

Numerous predictions have been made that various provisions of the Act will prove to be unworkable or inadequate and will be changed, including real estate, capital formation, and revenue raising provisions. The most frequent predictions are for increase in the tax rate and a return of the capital gains differential and the investment credit. It seems likely that the real estate industry will be viewed as a leading indicator of the economy in the next few years. The industry's health may signal whether extensive surgery will have to be conducted on the Tax Reform Act of 1986.
