**Specifications for
Form IT-540-2D (2022)**

Differences between this document and last year's final version are marked as follows:

General Requirements

The 2022 Louisiana Resident Individual Income Tax Return (IT-540) is a scannable form processed on high-speed scanners. All substitute returns (IT-540-2D) **MUST** incorporate variable data fields in **exact placement** as specified on Pages 3 through 27 of this document and a **2-D barcode** as specified on Pages 27 through 41 of this document. All 4 pages of the return and any applicable schedules and/or worksheets **MUST** be submitted by the taxpayer(s) for proper processing. Please note it is critical that all 4 pages of the return be submitted. Any return received that is missing any page will **not** be processed and will be returned to the taxpayer as an unapproved form. Also, the signature(s) of the taxpayer(s) on the substitute form must be original.

Software Developer Identification Number: Each software developer who develops a substitute of Form IT-540, must have a four-digit software developer's identification number approved by the Louisiana Department of Revenue. This number remains the same each year. If you do not have an approved identification number or are unsure what yours is, please send a request/inquiry by email to La.LDRVendor.Inquiries@la.gov and Shanna.Kelly@la.gov.

Paper Requirements: All pages of the return, schedules, and worksheets, must be printed on 8-1/2" x 11" white paper. The minimum weight of the paper used should be 20-pound bond. Recycled paper should not be used. Your end users should be instructed on the minimum requirements.

Printers: To print a readable barcode, a printer capable of 200 dots per inch (DPI) **minimum** is required; however, **300 DPI or higher is recommended.**

Ink: Black ink only must be used to print the form.

Grid Line and Position Numbers: Grid line numbers are based on **6 lines per vertical inch** (pica spacing)—66 lines per 11-inch page length. Grid position numbers are based on **10 characters per horizontal inch** (10-pitch spacing)—85 characters per 8-1/2-inch page width.

Fonts: The only acceptable font for the printed variable data fields and document identification numbers is **12-point Courier (MUST be 10 characters per inch)**. It is requested that this font be set as the default.

Printed Variable Data: The printed variable data fields must be positioned exactly as specified on Pages 3 through 27 of this document and meet the following criteria:
- 12-point Courier font (**must** be 10 characters per inch).
- Uppercase only.
- No punctuation, symbols, or decimal points.
- Right-justify all dollar amounts; left-justify all other fields, unless specifically instructed otherwise.
- Round all dollar amounts to the nearest whole dollar—no cents allowed.
- Dollar amounts of the return and schedules should **not** be left blank. Use "0" (zero) as the default. This does not apply to the worksheets.
- Negative amounts are **not** allowed, except for Line 1 of Schedule E. In order to denote the value on Schedule E Line 1 (Federal AGI) as a loss, **do not** use a negative sign or parentheses. For the required specifications of the related printed fields and 2-D barcode fields, see Pages 20 and 40 of this document, respectively.

Document Identification Numbers: A document identification number has been assigned to each page of the return and each accompanying schedule and worksheet. The numbers must be printed in a **bold 12-point Courier font** and positioned on Line 63 in Positions 76-80 of each page. The following are the numbers assigned to Form IT-540-2D:

2-D Barcode Specifications:

Requirements:

- The 2-D barcode should be placed on Page 4 of the return on Lines 31-39 in Positions 35-80. The barcode must fit within this area of the form.

- Use a carriage return <CR> to delimit fields. Each barcode field should have a carriage return, even if no information is contained in the field. This carriage return should measure as 1 byte of data.

- No punctuation is allowed in any field. No hyphens, dashes, parentheses, or other separators should be used.

- All alpha characters must be in uppercase.

- If a field is not applicable, leave it blank unless specifically instructed otherwise.

- Negative amounts are not accepted. If less than zero, enter zero unless specifically instructed otherwise.

- Only whole dollar amounts should be entered.

- Do not include supplemental information in the barcode.

- Error correction level should be set to 4.

Barcode Layout:

1. Header Information
2. Government Specific Data
3. Trailer

Header Information – This information is placed first in the barcode data stream. The first six fields in the barcode comprise the official header. This information must be consistent among all barcodes and is defined below.

- **Header Version Number** will be incremented each time the standards group alters the physical structure of the barcodes that were created using multiple header formats. This value is static for all barcodes and is currently T1.

- **Developer Code** is a four-digit code used to identify the software developer whose application produced the barcode. The purpose of the field is to allow forms to be traced to the vendor producing them. Software developer codes are assigned through the NACTP and may differ from software developer ID for the form that is assigned by LDR.

- **Jurisdiction** is an alphanumeric identifier indicating the taxing jurisdiction. Use the U.S. Postal Service's official state abbreviations. For Louisiana, use LA.

- **Description** is an alphanumeric identifier used to describe the form being processed. Use 62350 for the 2022 Louisiana resident form (IT-540-2D).

- **Specification Version** is a number that identifies the version of the specifications used to produce the form barcode. These specifications are provide by the jurisdiction processing the form and describe the data layout in the barcode. Draft versions of the specifications are not assigned version numbers. The final version shall be "0"; revisions thereafter will increase numerically.

- **Software/Form Version** is a vendor-defined version number that reflects the software and form revision used to produce the barcode.

Government Specific Data – For a detailed layout of the government specific data, see Pages 29 through 39 of this document.

Trailer – The trailer is the last field in the barcode data stream. The trailer is used to indicate the end of data has been reached. A static string of *EOD* is used as the trailer value.

Example of 2-D Barcode:

T1<CR>	(Header Version Number)
9999<CR>	(Developer Code)
LA<CR>	(Jurisdiction)
6063<CR>	(Description)
0<CR>	(Specification Version)

Information to Provide to Customers: We are requesting that all participating vendors provide to their customers a few short statements that describe what a two-dimensional barcode is and why it is being utilized. The following information should be provided to the customer:

Louisiana Resident (IT-540) and Nonresident (IT-540B) Individual Income Tax Forms

The Louisiana Department of Revenue is utilizing two-dimensional (2-D) barcode technology. The barcode contains the information that was entered into your return. You will find this barcode on Page 4 of your completed return. Below, is an example of the 2-D barcode.
