Chapter 15. Income: Withholding Tax §1501. Income Tax Withholding Tables

A. - C.1.b. ...

- 2. Adjustments to Wage Bracket Tables
- a. Each table provides for the appropriate withholding amount for single or married personal exemptions with up to six dependency credits. There is no provision for withholding based on head-of-household status and these taxpayers may claim only a single withholding personal exemption.
- b. When an employee has more than six dependents, the amount may be determined by reducing the tax shown in the column for six dependents by the amount shown below for the applicable payroll period multiplied by the number of dependents over six.

Payroll Period	Amount of Reduction
Daily	\$0.07
Weekly	\$0.36
Biweekly	\$0.71
Semimonthly	\$0.77
Monthly	\$1.55

c. When the employee claims only credit for dependents and no withholding personal exemption, the amount to be deducted and withheld should be determined by reducing the amount selected under the column for employees claiming no exemption or credits by the amount in Subparagraph b above multiplied by the number of dependents claimed.

D. Income Tax Withholding Formulas. The overall structure of the formulas used to compute the withholding tax is to calculate the tax on the total wage amount and then subtract the amount of tax calculated on the personal exemptions and dependency credits the taxpayer claims for withholding purposes. The correct withholding formula depends upon the number of personal exemptions claimed and annual wages.

- 1. Effective on or after January 1, 2022:
- a. Withholding Formulas for Single or Married Taxpayers Claiming 0 or 1 Personal Exemption:

W is the withholding tax per pay period.

S is employee's salary per pay period for each bracket.

X is the number of personal exemptions; X must be 0 or 1.

Y is the number of dependency credits; Y must be a whole number that is 0 or greater.

N is the number of pay periods.

A is the effect of the personal exemptions and dependency credits equal to or less than \$12,500;

 $A = .0185(((X * 4500) + (Y * 1000)) \div N).$

B is the effect of the personal exemptions and dependency credits in excess of \$12.500:

B= $.0165((((X * 4500) + (Y * 1000)) - 12,500) \div N).$

If annual wages are less than or equal to \$12,500, then W=.0185(S) - (A+B).

If annual wages are greater \$12,500, but less than or equal to \$50,000, then

 $W=.0185(S) + .0165(S - (12,500 \div N)) - (A + B).$

If annual wages are greater than \$50,000, then W= .0185(S) + .0165(S - (12,500 \div N)) + .0075(S - (50,000 \div N)) - (A + B).

b. Withholding Formulas for Married Taxpayers Claiming 2 Personal Exemptions:

W is the withholding tax per pay period.

S is employee's salary per pay period for each bracket.

X is the number of personal exemptions; X must be 2.

Y is the number of dependency credits; Y must be 0 or greater.

N is the number of pay periods.

A is the effect of the personal exemptions and dependency credits equal to or less than \$25,000;

 $A = .0185(((X * 4500) + (Y * 1000)) \div N).$

B is the effect of the personal exemptions and dependency credits in excess of \$25,000;

 $B = .0165((((X * 4500) + (Y * 1000)) - 25,000) \div N).$

If annual wages are less than or equal to \$25,000, then W=.0185(S) - (A+B).

If annual wages are greater \$25,000, but less than or equal to \$100,000, then

 $W = .0185(S) + .0165(S - (25,000 \div N)) - (A + B).$

If annual wages are greater than \$100,000, then

 $W=.0185(S) + .0165(S - (25,000 \div N)) + .0075(S - (100,000 \div N)) - (A + B).$
